DEC Memo: "7/22/05: Closed out 9614390. Will clean up under this spill number. Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND PRIOR SPILL NUMBERS HERE - 9416269 9614390 6/7/2001 - Sangesland visited the site: Anton Junicic Ent. inc. (junk yard) with ECO Anthony Panipinto. The ground around the car dismantling area showed signs of petroleum pooling and saturation into the soil. Owners (brothers) Bernardo and Anton Jr. Junicic - 718-768-8884 Mr. Junicic presented drawings showing an oil/water separator which had been installed on the site in 1999. It is a buried unit with 2 stormwater drains leading into it. The water discharge goes into the NYC DEP sewer system. Oil is periodically pumped out of this unit and disposed of. Because the surface of the yard is soil (owner says it is cement 1' to 2' down) the rainwater had never been properly directed into the 2 drains. DEC wrote a DO WORK letter (6/8/2001) directing Mr. Junicic to: 1) Excavate the site (soil/gravel) down to either clean soil or a solid barrier (old cement floor). Contact DEC for a site inspection. 2) If DEC inspection goes well, regrade the property and pour a new cement floor. Contour this floor so rainwater from the whole property flows to the proper drains. 3) Reconfirm that the water discharge from the oil/water separator is properly hooked up to the city sewer system in accordance with the regulations of the NYCDEP. 4) Design the property layout to allow access to the Blue Cover on the separator unit. 5) Maintain a log book for the drainage of the oil out of the separator unit. On future inspections, this information will be requested to provide that the separator system has been maintained. Submit a written plan and schedule of how this work will be performed. This plan is due to DEC by July 31, 2001. 7/11/2001 Sangesland went back to the site. Mr. Junicic is completing the required work in phases. Today the north 1/3 of the site had been cleared and excavated. Sangesland saw one hot spot which was removed

S105057939

while there. After today's inspection, an 8 to 10 reinforced cement slab was going to be poured and contoured over the full north 1/3 of the property. 8/14/2001 Sangesland (from the street) could see that the north 1/3 of the lot had been cemented and Mr. Junicic had redeployed much of his equipment over this area. It appears that he is clearing out the south west 1/3 of the site. I assume this will be done soon. 4/15/2002 Sangesland could see that 2/3 of the site had been paved over. Mr. Junicic said he would move the container boxes (used for storage) and would pave the remainder of the site soon. 3/30/2006 Requires a site visit to confirm that the whole lot has been paved over with cement. 8/26/08 - Raphael Ketani. I made a site visit at the request of Steve Sangesland, case manager. I met one of the workers who told me that the boss and the supervisor were both away from the shop. The worker called his boss who told him that it would be alright for me to look around. The shop is very overcrowded with car parts. I inspected the northern part of the site first. There was a small pile of soil and fill under a few cars. A spot of bare concrete was visible next to the pile of material and I had the impression that there actually was concrete under the material. Next, I viewed the back of the site. There was concrete everywhere in plain sight. Lastly, I viewed the southern part of the site. Here there was a depressed area with a sharp border, but which had a historical fill base. The entrance to this part of the shop had bare historical fill and comprised an area of about 800 to 1000 square feet. The worker I had met told me that they ordered the concrete, but they are waiting on a contractor to install it. After this, I left. 8/21/2013 Someone from spills needs to make a final visit to this site. It's a junk yard on Third Ave under the elevated hwy. It's an open lot between 2 buildings. Steve worked with the owners back in the 2001-2004 time frame to scrape up most of the lot and pour a cement base. They did 1 quarter of the lot at a time. They have completed 3/4 of the work. I never saw the rear/southern quarter completed. They have been inspected several times, but this final quarter has not been done. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. alternate address: 776-778 3rd Ave PBS #: 2-610070. as per PBS record, the site has one 275 gal waste oil AST in contact with impervious barrier. the tank was installed in July 2001. other spills : 9416269, 9614390 spill # 9416269 was reported on 03/6/1995 due to possible contamination at the site. case was closed and merged with 9614390. spill # 9614390 was reported on 03/12/1997 by NYPD due to petroleum contamination at the site. case closed and merged with 0102524. 06/04/14-Hiralkumar Patel. 10:30 AM:- visited site. found new concrete in visible areas in most of the site, except southwest corner, where broken asphalt was noted. found petroleum stains on concrete surface. site was full of auto parts. Anton Junicic Ent. Inc. Attn.: Bernardo 776 3rd Avenue Brooklyn, NY 11232 PH. (718) 768-8884 based on observations during site visit earlier today and information available to date, no further action needed and case closed."

. Waste code: D000

. Waste name: Not Defined

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Site Description:

The Site is located in the Gowanus section of Brooklyn in a zoned manufacturing area. The site was formerly used by Moore McCormack Lines, a steamship company (dates of occupancy unknown). Subsequently, Continental Terminals used the pier shed to store and distribute cocoa beans into the late 1990s. The shed was removed and the pier was then used by American Warehousing for vehicle storage. The Site also contains a garage that was used for vehicle maintenance. The Site was recently paved. The northern portion of the Site is used for storage of sea containers by the New York City

Police Department, and a small electric power generating station operated by the New York Power Authority occupies the south part of the Site. Immediately northwest of the Site is Upper New York Bay/Gowanus Canal, immediately northeast is industrial/manufacturing, and immediately southeast are commercial and office buildings. The Site is approximately 98,010 square feet (2.2 acres) in size and is occupied by the NY Power Authority as well as the storage area for sea containers for NYPD. The nearest residential units are 0.12 miles (approx. 650 feet) to the east-southeast. There are no records of Petroleum Bulk Storage or Chemical Bulk Storage on the site. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Env Problem: Based upon investigations conducted to date, the primary contaminants of concern at the site include mercury, lead and copper. In July 2009, following discovery of petroleum contaminated soil during excavation to support repairs to the Site's bulkhead, three test pits were excavated to determine the extent of the petroleum impacts. A total of seven sidewall soil samples and one grab groundwater sample were collected from the test pits. One sample was also collected for waste classification from the stockpiled soil excavated from the initial excavation and the test pits. Sidewall samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, pesticides and Total Petroleum Hydrocarbons. The composite waste classification sample was analyzed for TCLP parameters as well. The following contaminants with maximum concentrations were observed in soil: 17 ppm mercury; 1,100 ppm lead; and 330 ppm copper. The Part 375 Industrial Use Soil Cleanup Objectives (SCOs) have been exceeded for mercury, and the Part 375 Commercial Use SCOs have been exceeded for lead and copper. Groundwater samples were all below applicable Groundwater Standards for VOCs and SVOCs, but were not analyzed for metals. Depth to groundwater is approximately 9-15' below grade and is likely influenced by tidal action due to the immediately adjacent Gowanus Bay. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. 10-12-2005 SVE and pump and treat systems are operated at the site. SVE system is extracting significant concentrations from the vadose zone. AZ 1/13/2006 Reviewed system report. Analytical results showed total VOCs concentrations in air samples at 550 ppb and 44.7 ppb in 1st sampling events. AZ 4-17-2006 Reviewed system report received in November 2006. Analytical results showed total VOCs concentrations in air samples at 1,832 ppb suggesting that SVE system continues to extract contaminants. URS recommended continuation of the groundwater extraction and treatment system. Groundwater sampling was performed. All wells except one showed exceedances ranging from 127 ppb to 19,100 ppb. Contaminant concentrations increased in wells MW-6,7,8,11 and 12. The average total VOC concentration increased from 6,297 ppb to 7,417 ppb. AZ 12/08/2006 Reviewed monitoring report dated

September 22, 2006 and received on September 27, 2006. This report covers April - June 2006. On January 1, 2006 Greyhawk was assigned responsibility for this site. The site has SVE and GWET systems. VOCs were detected in all nine monitoring wells with concentrations ranging from 30 ppb to 14,700 ppb in MW-06. concentrations increased in two monitoring wells MW-01 and MW-08. It appears that the SVE system is not functioning efficiently as evidenced by relatively low VOC mass removal and restricted wellhead vacuum- 0.001 to 0.052 water column. The carbon unit should be replaced. Relatively low pumping rate limits the capture zone of 3 pumping wells. An increase in pumping rates would expand the size of the capture zone and might improve effectiveness of the SVE system. Significant VOC contamination persist in 7 of the 9 monitoring wells. Roux suggested continue quarterly gw monitoring, verify depth and condition of the ventilation wells, collect samples from MW-3 which was previously removed from the sampling program but is located very close to two other wells with significant VOC concentrations. Evaluate methods to optimize SVE and GWET systems. DEC concurred. AZ 4/26/2007 Reviewed monitoring report for the period of July - September 2006, dated December 15, 2006, and received on December 21, 2006, and report for the period of October - December 2006, dated April 11, 2007, and received on April 26, 2007. October - December 2006 Report stated that the SVE system is approaching asymptotic levels. Vacuum levels in four observation wells are low - 0.01 -0.04 , GWET system has low pumping rate which limits the capture zone of of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations ranging from 2,252 ppb to 71, 110 ppb. Significant increase in concentration was observed in MW-10 from 9,010 to 71,100 of total VOC. In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. The following e-mail was sent to DDC/ROUX/Greyhawk: I have reviewed monitoring report for the period of October - December 2006, dated April 11, 2006, for this site. Vacuum levels in four observation wells of the SVE system are very low (0.01 -0.04). GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations in groundwater (up to 71, 100 ppb of total VOC in well MW-10). Significant increase in total VOC concentrations was observed in MW-10 (from 9,010 ppb to 71,100 ppb). In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks

evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and the systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. AZ 1-22-2008 Reviewed January - September 2007 Report submitted on November 13, 2007. GWET is ineffective due to the restricted pumping rates. The SVE and GWET systems are not operating efficiently. Sheen was detected in MW-04 and MW-06 in April 2007. Soil investigation was performed in July-August 2007. The highest VOC concentrations in soil were detected in RXSB-04 75,000 ppb at 0 to 2 feet bls. RXSB-01 - 49,400 ppb of total VOC at 23-25 feet bls. MW-06 contained 9,980 ppb of total VOCs, MW-10-5,220 ppb of total VOCs. MW-02 was destroyed. Roux proposed shutting down SVE and GWET systems, implement enhanced bioremediation. Contacted Brian Morrissey. The site requires hydraulic control over migrating groundwater plume. Proposals for a new groundwater treatment system are required ASAP. Brian will get back to me with a timetable. AZ 1-23-2008 Conference call with Brian Morrissey and Andy Leddins. Bioremediation as main remediation strategy is rejected by DEC since the plume must be hydraulically controlled. I requested plume delineation along 29th street and establishing of hydraulic control over the groundwater plume. Roux will install delineation wells within next two weeks, perform high vac test and confirmation studies of DPE system within next three to four weeks. After the studies are completed a DPE system will be installed. Permo OX Plus injection will be performed along Th Street as an IRM simultaneously with constructing a DPE system. Timely quarterly should be submitted for this site. AZ 7-22-2008 Reviewed January - October 2007 through March 2008 Report submitted on April 21, 2008. The quarterly report submittal was significantly delayed. The SVE and GWET systems are not operating efficiently and high level residual soil and groundwater (up to 11,790 ppb of the total VOCs) contamination remains at the site. DEC requested installation of two additional monitoring wells to delineate offsite extent of groundwater contamination in January 2008 but the wells have yet to be installed. DEC requested and Greyhawk/Roux concurred that high vac test and confirmation studies of DPE system should be performed. The test has not been conducted and the DPE system has not been installed. The remedial progress at the site is unsatisfactory. Quarterly Monitoring Reports should be submitted on time. DPE system should be installed, delineation wells and needed testing performed without delay. A timetable for the above activities should be submitted to DEC within a week. An e-mail describing the above requests was sent to DDC/Greyhawk/Roux/V.B. AZ 7-3-2008 Received an e-mail from Brian Morrissey/site update: 1.The 2 offsite wells (RXMW-01 and RXMW-02) were installed and developed in late June/early July. The well casings and building corners will be mapped by a licensed surveyor on Friday, July 25th. 2.Groundwater levels in on-site and off-site monitoring wells were gauged during the week on July 14th. 3.Groundwater samples were collected during the week on July 14th. We expect to see preliminary results during the first week of August. 4. We reviewed soil data from prior CMs and further evaluated subsurface conditions (contaminant levels in clay/silt areas). 5.We conducted a 2nd round of vacuum testing and vapor sampling on July 9th. 6.ADT installed 10 injection wells in late June/early July. Well development activities were completed during

S102233280

the week on July 7th. 7. PermeOx Plus injections commenced on July 21st (as an interim remedial measure). 8. Soil samples were collected for laboratory analyses during installation of the monitoring wells and injection wells. Samples at intervals with elevated PID readings were also sent for petroleum identification. Upon receipt of the results of the vapor sampling and soil analyses, Greyhawk and Roux Associates will develop the plan for modifying the existing remedial systems. Due to the priority status of this site, I will contact you at that time to discuss future remedial actions and a timetable. AZ 6-16-2009 I have reviewed a Monitoring Report dated March 19-2009 for the above site for the period of April 2008 through January 2009. According to the report, URS recommended excavating the isolated area of shallow soil contamination around MW-02. Apparently, this excavation has not been performed. In 2007 VOCs were detected in soil shallow zone (0'-2') at concentrations up to 75,000 ppb. The SVE and GWET systems are not operating efficiently. Groundwater and soil contamination remains at the site. Free phase product was detected on January 12, 2008 in RXMW-06 and identified as a mixture of gasoline and No.2 fuel (diesel). One round of bioremediation injection was performed on July 21, 2008. Post-injection monitoring has not been performed. The contamination has migrated off-site in a northerly direction to the other side of 29th Street. However, VOCs were non-detect in two off-site wells (MW-13 and MW-14) installed at DEC request. Roux proposed modification of the SVE system by applying full vacuum to one or two extraction wells and using packers. This proposal is approved. On-site 1,000 gallon emergency generator diesel UST and onsite heating oil tanks should be tested without delay in order to determine a source of contamination at the site. DEC has not received results of the post-injection monitoring. These results should be submitted to DEC without delay. GWET or DPE system modification/installation plans should be submitted to DEC. Remediation recovery system (GWET or DPE) should be capable of capturing the contaminant plume and preventing off-site migration. Working groundwater recovery system should be installed at the site. Additional bioremediation injection could be used only as interim remedial measure. AZ 10-21-2010 The site was discussed at October 19, 2010, meeting with DDC/LIRO. The SVE system has not been modified and currently shut off. 1,000 gal emergency generator tank was not located by Roux. 8,000 heating oil tank should be tested. Shallow excavation should be performed as it was discussed at the meeting. LiRo will develop low flow multi well groundwater remedial system. Geoprobe borings will be performed prior to the excavation. I called S. Frank on October 21, 2010, to confirm investigation details. Design report will be submitted in November 2010. AZ 10-25-2010 E-mail from S. Frank/ Liro: Alex, Thanks for your call on the 72nd precinct site status following up our discussion from the quarterly meeting on October 19, 2010. Just to make sure I didn't miss anything, we discussed the following: 1 You asked that the shallow excavation work near MW-02 that Roux/NYSDEC worked out, should be implemented. I advised you that we had recommended sampling at that location to confirm that contamination is still present. 2 You asked that we implement modifications to the SVE system (i.e., packers and applying full vacuum to 1 or 2 wells) that Roux had recommended. 3 You asked about the status 1,000-gallon diesel tank for the emergency generator. I advised you that Roux reported that they could not find the tank. 4 You requested the status of tank testing for the 8,000 gallon heating oil tank. I found the tank tightness test report from

S102233280

August 2009 and have attached it. AZ 10-4-2010 An e-mail was sent to LiRo/V.Brevdo/F.Ashkan: Dear Steve, I have reviewed Quarterly and Site Turn-Over Status Report with the proposals dated August 3, 2010. The report provides very detailed information and comprehensive analysis of the site status. According to the report, the SVE/GWET system is down since 2008. Roux conducted packer tests and recommended SVE system modifications. Groundwater contamination appears to have migrated off-site northeast across 29th Street. Roux performed two rounds of PermeOx injection after which VOC concentrations slightly decreased in groundwater. Heavy soil contamination and relatively high dissolved groundwater contamination exist at the site. There are four USTs closed in place. Based on the above, DEC requires the following: Actual USTs information should be reconciled with the Petroleum Bulk Storage (PBS) records and changes filed with the PBS section. I suggest that the tanks closed in place should be excavated, utilities and structures permitting. SVE/GWET system should be restarted. SVE portion of the system should be modified. Modifications should be based on the Roux's pilot test results. Hot spot excavation of soil should be performed around wells IP-09 and MW-02. Investigation of the piping associated with the former gasoline UST and the trench drain system should be performed. If additional soil investigation for the purpose of excavation is needed, it should be performed without delay. Additional rounds of in-situ chemical oxidation should be discontinued pending soil excavation and restart of the remedial system. The pump test is approved and should be performed if needed. Wells MW-05 and MW-15 should be added to the monitoring program. SVOC analysis of ground water could be performed, if LiRo considers it necessary. 600 gallon waste oil UST should be located. A detailed work plan with the implementation schedule should be submitted to DEC no later than in 30 days. AZ 3-1-2011 Remedial Action Plan submitted on Dec. 1, 2010 was reviewed. The following e-mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: Dear Steve, I have reviewed the Remedial Action Plan for the above site. A proposed excavation is approved. The excavation should include area around MW-07. The area of the excavation should be extended north, if feasible, to cover the contaminant plume. Tanks closed in place and associated piping should be excavated. Post excavation samples should be taken. Proposed GWET system should be modified to encompass contamination migrated across 29th Street. Contamination should be remediated on-site and off-site. SVE pilot test is approved. GWET system and SVE system should be developed after the excavation is performed and a monitoring round confirms the exact boundaries of contamination. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ 3-29-2011 Reviewed quarterly monitoring report dated Dec. 14, 2011. Well RXMW-05 was converted to injection but, nevertheless, sampled. Total VOC concentrations ranged from 73 ppb to 16,213 ppb. The pump test was conducted but on Sept. 2010, and indicated a limited flow capacity. Bioremediation sample results do not indicate a reduction of contaminate concentrations due to the bio-injections that were completed by Roux in July 2008 and September 2009. The results of the packer test were inconclusive. Soil contamination is present along the northern portion of the building and along 2nd St. (north side) extending 8' below the water table. MW-07 exhibit a significant increase in total VOCs. AZ 6-30-2011 Reviewed quarterly monitoring report dated March 1, 2011. Excavation in the vicinity of IP-09 and a former fill port is planned. Installation of SVE wells is

S102233280

scheduled. I contacted S. Frank and requested to repeat GPR test to locate closed in place tanks. GWET is being designed. The site has gross dissolved petroleum contamination (up to 18,634 ppb of total VOCs). This is the LiRo's highest priority site. AZ 10-25-2011 At the meeting with LiRo in-situ chemical oxidation (ISCO) pilot test described in a report dated October 13, 2011, was approved. An ISCO pilot plan will be prepared and submitted to DEC for review. AZ 10-25-2011 The following email was sent to S. Frank/F. Ashkan/V. Brevdo: Steve, You can request a FOIL information for sp.#0907094 and Langan's report related to this spill. The report stated that the source of the contamination at the site is 72nd Precinct. AZ 1-30-2012 Reviewed QMR and in-situ chemical oxidation pilot test work plan dated November 14, 2011. Second GPR survey was scheduled for November 2012. ISCO Pilot Test approved by DEC approved by DEC at October 25, 2011, meeting will be implemented. Two additional monitoring wells will be installed west/northwest of destroyed well MW-02. This area was previously inaccessible due to the SVE/GWET system trailer. Wells RXMW-02, RXMW-04 and RXMW-05 will be replaced. AZ 11-15-2012 Reviewed a quarterly monitoring report (October 2011-April 2012). Dissolved contaminat concentration increased significantly in two wells MW-07 (from 6518 ppb to 12,930 ppb)and MW-10 (from 1677 ppb to 4973 ppb). Discussed the site with S. Frank. 11-16-2012 An email from S. Frank: Alex, Monitoring wells for the 72nd Pct work were replaced as follows: RXMW-02, replaced by RXMW-02R RXMW-04, replaced by RXMW-04R RXMW-05, replaced by RXMW-05R The wells were replaced in Feb-March 2012. The soil results from the well installations were reported in the previous quarterly report (dated 6-18-12). Groundwater results for the replacement wells are included in the latest quarterly report. AZ 11-16-2012 An email was sent to S. Frank/V. Brevdo/F.Ashkan: Dear Steve, I have reviewed a quarterly monitoring report (October 2011- April 2012). LiRo completed the first ISCO injection on April 10, 2012. Nevertheless, dissolved contaminant concentrations increased significantly in two wells MW-07 (from 6,518 ppb to 12,930 ppb) and MW-10 (from 1,677 ppb to 4,973 ppb). It seems that ISCO injections are not effective enough to treat existing offsite contamination. LiRo could proceed with the remaining ISCO injections. However, alternative plans for treatment of the offsite contamination should be developed and submitted to DEC. Sincerely, Alexander Zhitomirsky 4-3-2013 Reviewed a quarterly monitoring report dated 11-13-2013. Post injection groundwater sampling indicates a reduction in total VOC concentrations in wells with the dissolved contaminant plume. Also, some total VOC spikes in post injection samples were recorded. The following e-mail was sent to S. Frank/V. brevdo/ F. Ashkan: Dear Steve, I have reviewed and discussed over the phone with you the above site. LiRo proposed to expand ISCO Pilot Test Program to the precinct side of 29th Street. This proposal is approved. If this remedial strategy is not effective, an alterative remedial strategy should be implemented. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alex Zhitomirsky 10-9-2013 Reviewed Quarterly Monitoring Report dated March 4, 2013. LiRo will perform additional injections following re-evaluation of the calculated quantities of hydrogen peroxide and catalyst. On January 3, 2013, in a Progress Summary Meeting, DEC agreed with LiRo's recommendation to complete an ISCO Pilot Test Program on the precinct side of 29th Street. AZ 10-18-2013 Reviewed Quarterly Monitoring Report dated June 4, 2013. A Work Plan for ISCO injection is included

in the report. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is pending available NYCDDC funding. AZ 5-20-2014 Reviewed Quarterly Monitoring Report dated October 9, 2013. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is tentatively scheduled. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. The total VOC concentrations on site ranged from 7 ppb to 18,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 302 ppb to 18,596 ppb. AZ 11-18-2014 Reviewed Quarterly Monitoring Report dated March 7, 2014 (Sept. 2013- January 2014). Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. In December 2013, LiRo collected soil and GW samples and sent them to FMC, as part of the treatability study (Klosur). The total VOC concentrations on site ranged from 11 ppb to 11,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 19 ppb to 12,460 ppb. Free phase product was reported in injection well LIP-02 in January 2014. According to LiRo, there is a possibility that this free phase product could be attributed to the business located at LIP-02 (Address 149 29th Street. It belongs to active beverage distributor with constant truck traffic and trucks parked on sidewalk). AZ 12-24-2014 The following email was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Quarterly Monitoring Report and Klosur Injection Work Plan for the above site, received on October 6, 2014. The Work Plan proposed injection of Klosur Persulfate. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on and off site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Alex Zhitomirsky - Engineering Geologist 2 2-26-2015 Reviewed a monitoring report dated 7/23/2014. The report stated that there is a possibility that an off-site source is present on the east side of 29th Street. LiRo has opened discussions with the 149 29th Street property owner (beverage center) and will attempt to reach an access agreement to complete an investigation within the building in the areas where previous investigation had identified petroleum impacts and a possible tank anomaly. AZ 5-05-2015 Reviewed a monitoring report dated 02/25/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Klosur Persulfate Injection Work Plan was approved by NYSDEC, however, implementation is delayed due to NYC DDC budget issues. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 1-06-2016 Reviewed a monitoring report dated

05/28/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 5-05-2016 Reviewed a monitoring report dated 09/16/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Four rounds of ISCO are anticipated. Some total VOC concentrations in groundwater reported significant increases. Total VOCs concentrations in groundwater were up to 12,000 ppb. Perdufate liberated/broke down the VOC sorbed onto the soil particles AZ 4-19-2017 Reviewed a monitoring report dated 09/29/2016. Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. In May 2016, damaged injection well LIP-05 was replaced. Total VOCs concentrations in groundwater were up to 4,100 ppb. AZ 6-6-2017 Reviewed a monitoring report dated 12/20/2016. On-site Post injection groundwater sampling results (August 2016) indicated the highest VOC concentrations in MW--06R2 (14,074 ppb). Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. AZ 9-13-2017 I have reviewed a report dated 3-01-2017. In 2016 soil borings were advanced onsite. The soil sampling results were compared with the previous results. In seven borings VOC concentrations in soil decreased. In four borings VOC concentrations increased up to 1,409,500 ppb. One soil boring was advanced off-site. Six soil samples were analyzed, none reported any VOCs exceedances. Groundwater samples reported no VOCs exceedances. LiRo will determine, based on the soil and groundwater data, the need for additional injections. AZ 12-8-2017 I have reviewed a report dated 6-09-2017. In October 2016 the fourth Klozur injection round was completed. Post-injection groundwater monitoring was completed on October 31, 2016. Soil sampling was performed in February 2017 - March 2017. 23 samples reported one or more VOCs at concentrations above CP-51 SCLs. Total VOCs concentrations ranged from 819 ppb to 1,334,300 ppb. Off-site investigation was performed in October 2016. A total of six samples analyzed, none reported any VOC exceedances. Two off-site groundwater samples were collected. VOCs and SVOCs concentrations were reported at 0.48-2 ppb. No petroleum contamination was identified in the soil and groundwater at the off-site property. AZ 2-15-2018 I have reviewed a report dated 8-22-2017. LiRo identified a possible UST (status unknown) at the

DEC Memo: "10-24-2014 email from S. Frank: Dear Alex, We discovered material that has been identified as transmission fluid in well BW-1 at the 72nd Precinct site. The well location is shown on the attached site plan. The well is in the middle of the driveway area and there is no transmission fluid storage in this portion of the site so we suspect the fluid may have been introduced from the surface rather than migrating through the ground. We have a Vac Truck scheduled to evacuate the product next Wednesday. Let me know if you would like us to report a new spill for this finding. Sincerely, Steve Frank
5-4-2015 Reviewed a report dated 2/26/2015. EFR via vacuum truck was performed at BW-01 on October 2014 and the product thickness was 0.34' in BW-01. On November 6 2014, the product thickness was 0.02'. Approximately 8-gallons of oil groundwater mixture was removed from the well. On December 4 and December 19, 2014, no free phase was recorded. I called S. Frank and requested that more monitoring events needed in order to determine if all free phase product was removed from the well. AZ 1-6-2016 Reviewed a report dated 5/28/2015. No free-phase product was measured in BW-01 since November 2014. The free-phase product was identified as transmission fluid. AZ 9-16-2016 Reviewed a report dated 3/10/2016. Spill Number 1407672 was reported as a result of free-phase product in well BW-01 which was identified as transmission fluid. LiRo performed fluid removal and has continued to monitor this well. No free-phase product was measured in BW-01 since November 2014. Based upon the monitoring data LiRo requested closure of Spill Number 1407672. I concur with this proposal. The following letter email was sent to S. frank and V. Brevdo on 9-19-16: Dear Steve, I have reviewed a Spill Closure Report dated March 3, 2016. The report stated that that spill #1407672 was reported as a result of discovery of free-phase product in well BW-01 which was identified as transmission oil. LiRo performed product removal and has continued to monitor this well. No free-phase product has been reported in well BW-01 since November 2014. Based upon this monitoring data, LiRo requested closure of this spill. This request is approved and the spill is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the

S102233280

Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky

DEC Memo: "7/15/2008 TTF sent to: District 2 Meba Building Corp. 652 4th Ave, Brooklyn, NY 11232 see eDocs 10/08/08- Protest sent the report. the Report included a closure letter and the results of the tightness test. On June 26,2008 Protest performed a tightness test on the above subject tank system and it failed with a wet leak. On september 26, 2008 Pro Test technicians broke the concrete floor above tank, excavated to the tank to isolate lines from the tank. Attached to the top of the tsnk was an old suction and return connection(8 inches of line still attached to the tank), with drop tubes, which was the cause of the wet leak indication. Our technicians removed the old suction and return partial lines and drop tubes and plugged the connections. We Re-tested the tank and system and the system passed. During the excavation our technicians found no visible evidence of contamination. Spill Closed "

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

- . Waste code: D000
- . Waste name: Not Defined
- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Name: Not reported
Spiller Company: FEDERAL POWER PLY GSA
Spiller Address: 26 FEDERAL PLAZA
Spiller Company: 001
Contact Name: Not reported
DEC Memo: "also know as 850 3rd Ave. see also 93-12153 & 94-07229. unable to reach a GSA contact. Possible remediation under 94-07229. Previous note by RDDECAND on 3/15/06 Spill transferred back to R-2 3/5/08 - Austin - Assigned to Ketani for further investigation - end 3/13/08 - Raphael Ketani. I began working on the case. Spill number 93-12153 was monitored by a former spills worker, Kerri O'Dowd. She didn't put in any case notes into the database. The spill was a 200 gal. overflow. It happened because someone had the wrong tank size. DEP was contacted at 10:30AM and GSA arrived at 2:15PM. Sand and Speedi Dri were applied to the spill. The case was closed on 1/15/94. The site address is 850 3rd Avenue, Brklyn. (29 St. & 3rd Ave.). Case 94-07229 was managed by Kerri O'Dowd. There were no case notes. Contaminated soil was discovered and was being removed as it was being excavated. She closed the case on 3/29/95. 3/17/08 - Raphael Ketani. A copy of the original August 1993 Site Characterization Report was found in the file cabinet. It was produced by Woodward-Clyde Consultants, Inc. It was prepared for Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, Brooklyn (212) 926-2878/(212) 594-2118. According to the soil analytical tables in the report, there was no significant contamination. Table 4-2 for the groundwater samples didn't list any significant contamination, either. There was a fold out site map which showed the locations of the six formerly active tanks. The PBS case is #2-601672. It shows that six tanks were closed in place on either 8/1/94 or 9/1/94. Four other tanks were installed on 9/1/94. Tank #7 is in service and tanks #8 to #10 are temporarily out of service. A note in the file that I did find said that there were records in the open file section of the storage area downstairs. I checked the file storage room, but found nothing. I also asked around in the Division of Environmental Remediation, but no one had heard of the case for the site. I checked the E-docs and found the following: The E-docs contained a transmittal letter dated 8/10/93 stating that this was the second revision of the Site Characterization Report. An estimated 2050 cu. yds of soil will be excavated and an additional 450 cu. yds. of oil contaminated soil. Tanks #3 and #4 are scheduled to be removed, along with an 1100 gal. tank. Two 20,000 gal. tanks will be abandoned in place. Groundwater remediation is not necessary based upon the analytical results. A second round of groundwater sampling will take place August 1993. The parties involved are: Woodward-Clyde Consultants (212) 594-2118 Roy Feinzig (914) 682-4895, Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, White Plains, NY, 10601 Charles Evans (718) 330-7474, Federal Building Manager, General Services Administration, Public Buildings Service, Contract Section, 26 Federal Plaza, rm. 1611, NY, 10278; GS0wP94CUC0055 A 10/4/93 E-doc note from Ms. O'Dowd states that they will install 3 new USTs. There are 6 USTs on site: 5 fuel oil (4 20,000 gal. tanks, 1 1100 gal. tank); 1 20,000 gal. gas tank. Groundwater is at 5.5' to 8.5' below grade. Nine soil borings will be done and 5 monitoring wells will be installed. MW-3G is in the area for the new UST. Groundwater is at 6' and dewatering will have to take place in order to install the new tank. USTs #3 and #4 are impacted. Fuel contaminated soil will have to be removed. A 8/9/93 E-doc note from Ms. O'Dowd states that MW-1

US GSA (Continued)

U001842028

has no VOC hits MW-2 has less than 5 ppb MW-3G has hexane 5.8 ppb, ethylbenzene <50 ppb, xylene ,50 ppb MW-6 has 3 ppb of hexane MW-9 has no VOCs There was a 10/18/94 letter from Environmental Data Consultants to the GSA requesting well installation locations and regarding the NYCFD and NYC Building Department violations. Environmental Data Consultants, Inc., 55 Alder Street, Ste 2, South Yonkers, NY, 10701, (914) 968-1508. Dewatering took place to install the new tanks, but a SPDES permit wasn't needed as the discharge rate was below the permit lower limit and the water wasn't contaminated. Soil samples need to be taken at all of the closed tanks and the PBS record needs to be updated. The 9/6/94 E-doc note states that there is 2 to 3 of oil in MW-3G. USTs #3 to #5 are to be removed. Wells MW-3 and MW-6 need to be replaced as they were destroyed. Many of the hits in Table 1 of the analyses summary table also appear in the blanks. So these analytes can be negated. I tried to contact Charles Evans, but the phone number was not in service. I tried to reach Environmental Data Consultants, but the phone number was not in service. I tried to reach Rose, Beaton & Rose, but the phone number belonged to another company. I tried to reach Woodward-Clyde, but the phone number belonged to another company. 3/18/08 - Raphael Ketani. I found a later case from 1999 for the same site - #9908767. It involves the test failure of three 30,000 gal. tanks. Contact people were listed on the spill report. They are: Steve Ferman (718) 340-5268, at the site; John Harris (718) 965-5147 of the General Services Administration; and Tom Burke (212) 264-0800 of the General Services Administration, Technical Services, 26 Federal Plaza, rm. 1611, NY. I tried to contact Mr. Burke, but could only leave a message. I tried to contact Mr. Harris, but no one picked up. I tried to contact Mr. Ferman, but the number was no longer in service. William (Bill) De Nyse (de-nice), Senior Industrial Hygienist, (212) 264-0506 called to ask what DEC had in the way of reports and documentation for the spill case. I told him we had the August 1993 Site Characterization Report that was produced by Woodward-Clyde, a Second Revision SCR and some small letters. He asked that DEC provide him the reports as he doesn't have them. He added that he was the contact person at the GSA and that he will try to help get the case closed. Mr. De Nyse asked what should happen if he can't find the closure reports. I told him that DEC will ask that a new investigation take place. I made copies of the reports and sent them to him. 4/11/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. His phone greeting said that he will be out until 4/21/08. I will try him then. 6/10/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. I got ahold of Mr. Burke. He said that right now they are putting the contract out for bid. He said it will take some time in order to get a contractor lined up and get the investigation started. I told him to keep me updated. He added that Mr. De Nyse is the point of contact. 6/12/08 - Raphael Ketani. Mr. De Nyse called back. He said he is the regional engineer and the project is now being handled by a field (local) engineer at the site. The person is Rashid Mattoo (718) 254-7141 at 10 Metro Tech, Brklyn. Mr. De Nyse said that Mr. Mattoo is the contact person from now on. He added that right now they are trying to get funding to do the investigation. They have a scope of work, also. 8/12/08 - Raphael Ketani. I tried to contact Mr. Mattoo regarding the site investigation, but could only leave a message. Mr. Burke called me back. He said that the contractor has been chosen and they expect to go to contract next week. He added that they will

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis notes: Operator found fuel blowing out of drain line on unit 2-2. He then checked waste oil tank and found tank overflowing from vents. It is suspected that this is mostly rain water from last night's rain. Miller Environmental has been called to pump out the tank. Estimated approximately 50 gallons spilled. As of 1630 hrs MEG crew completed clean up."

Remarks: "HEAVY RAINS CAUSED WASTE OIL TO OVERFLOW"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ 31-JUL-2001 14:40 HRS. REPORTS: WHILE P.SUDOL WAS ON LOCATION FOR INSPECTION WITH THE DEC HE FOUND: APPROX. 4 OZ OF TRANS FDR FLUID ON TO A SUPPORT BEAM THEN ON TO BLUE STONE IN CIRCULATION PLANT # C2 FROM OIL PUMP SEAL. EQUIPMENT IS DRIPPING APPROX. 1 DROP EVERY 10 MINUTES. SPILL IS NOT CONTAINED. NO SEWERS OR WATER WAYS AFFECTED. CLEANUP PENDING REPAIR. CONTAINER PLACED UNDER LEAK FILLED WITH OIL ABSORBENT UPDATE 31-JUL-2001 17:20 HRS. ASPER AN E-MAIL FROM M.ROSA : 13:48 hours During a DEC inspection of the Gowanus Substation, it revealed that within Cooling Plant C2, there was a minor oil leak from the Oil Motor / Pump #01 seals. Apparently through vibration of the motor the catch pan shifted slightly causing a leak of approximately four ounces of oil onto the bluestone. The pan was immediately reposition and consultations were in progress due to a previous E2MIS work order on that piece of equipment. 16:45 hours. Two catch pans placed beneath the Oil Motor/ Pump # 01. The support structure of the pump has been cleaned and the oily bluestone removed. A 5 gallon pail was created and labeled oily debris from CP 02. The drum identification number and the proper labels need to be applied. UPDATE 8/23/04 W.O.# 0000122854 has been complete by Michael Garcia#14564 and Nesbilt Santo # 14864. Pump needs to be repaired. Another Incident Report 140211 will capture the repairs on pump. This incident # will be closed because on inspection found two Incidents for the same problem."
Remarks: "4 oz spilled - clean up pending crew arrival spilled to bluestone & a support beam - no smoke/fire/private property con ed none at this time - - - -this is a NON pcb spill"

DEC Memo:

"Spill Comments: 1. This spill case was reassigned from Rommel (DEC) to Perez (DEC) on 04/21/2005. 2. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL . 3. This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 4. This spill site cleanup has been consolidated under Spill No. 9006424. 5. Reassigned from sullivan to sigona on 11/6/00. 6. PBS records indicate that 3 x 4,000 gallon and 11 x 550 gallon and 1 x 1,000 gallon USTs were closed or removed. 7. This spill case was reassigned from Sigona (DEC) to Perez (DEC) on 04/21/05. 08/30/2006 - RP's consultant sample the on-site soil gas points as outlined in the Feasibility Study (FS)the Investigation Work Plan A second round of soil gas samples will be taken by the end of the month (August 2006). RP continues to gauge and sample the on-site monitoring wells on a quaterly basis. By J. Perez. 11/10/2006 - RP submitted a Feasibility Study Report(FSR) and a supplemental subsurface investigation report. The FSR concluded that additional data would be required to assess the feasibility of implementing a full-scale system. By J. Perez. 01/15/2007 - DEC approved the Feasibility Study (FS) Report. The report recommends collection of additional data to develop full scale design or consider chemical oxidation as a remedial alternative. ExxonMobil will submit a supplemental FS work plan by early April. By J. Perez. 01/19/2007 - ExxonMobil submitted a site status update report and there is no major change in the concentration and distribution of the contaminants at the site. By J. Perez. 04/13/2007 - Exxonmobil submitted a Supplemental Feasibility Study & Investigation Report (SFSIR). (Perez) 04/19/2007 - ExxonMobil submitted a quarterly site status update report and there is no major change in the concentrations and the distribution of contaminants at the site. (Perez) 07/06/2007 - DEC approved the SFSIR. The report recommends collection of additional data in order to further evaluate the proposed system and consider other alternatives (i.e. chemical oxidation, ORC). (Perez) 03/10/2008 - Exxonmobil is conducting a subsurface investigation at the site and continues to gauge and sample the on-site monitoring wells on a quarterly basis. Exxonmobil's consultant were able to install one monitoring well and one monitoring point when an MTA inspector shut them down. Apparently they have new insurance requirements for 2008 and consultant, their subcontractor and the property owner did not have the right insurance. They have been working with the MTA and our insurance agent to make sure that everything is the way they want. (Perez) 06/04/2008 - Feasibility Study Report approved. ExxonMobil will submit a revised Remedial Action Pland (RAP) early July 2008. (Perez) 07/28/2008 - DEC approved the revised RAP. Implementation of RAP is scheduled to commence on October 2008. (Perez) 10/20/2008 - Consent Order (CO) was sent out to ExxonMobil for signature and should be returned by the end of the month. The CO will be necessary in order to commence with the implementation of the RAP. (Perez) 11/25/2008 - ExxonMobil sent the signed CO to the Department. MTA drilling issues were resolved, however, Exxonmobil is trying to resolve issues with the property owner. (Perez) 01/29/2009 - CO was executed by the Department. Exxonmobil is trying to resolve access issues with the property owner. (Perez) 03/26/2009 - This project was transfer to a new Klientfelder PM. ExxonMobil is trying to resolve access issues with the property owner. (Perez) 07/07/2009 - Delay is occurring while ExxonMobil tries to resolve access issues with the property owner. (Perez) 04/16/2010 - Construction of air sparge/extraction points on hold. During installation of points in the Western portion

of the site consultant hit multiple refusals. ExxonMobil to change drilling technology, MTA has requested that EM monitor for vibration on the adjacent subway line. ExxonMobil is currently preparing a vibration monitoring plan for MTA review and Approval. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 05/24/2010 - Subway Vibration Monitoring plan approved by MTA. Construction of air sparge/extraction points to commence the week of May 23, 2010. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 06/24/2010 - Construction of air sparge/soil vapor extraction system completed. System startup scheduled for June 25, 2010. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 07/27/2010 - AS/SVE system is operational and being monitored for effectiveness. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 08/26/2010 - AS/SVE system is operational(since June 2010) and being monitored for effectiveness. System performance/effectiveness will be reported on a quarterly basis. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 11/30/2010 - Site update report results are consistent with historical data for the site. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. (Perez) 05/25/2011 - AS/SVE system is operational(since June 2010) and being monitored for effectiveness. Site update report revealed dissolved phase concentrations of benzene, toluene, ethylbenzene, and total xylenes (total BTEX) are generally consistent with prior quarters, showing a gradual decrease over time. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. (Perez) 07/26/2011 - AS/SVE system is operational. July 2011-Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by October 2011.(Perez) 11/28/2011 - AS/SVE system is operational. October 2011 - Site Update Report revealed dissolved phase concentrations of total BTEX are the lowest (max. 2500 ppb) since sampling was initiated in the site. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by January 2012.(Perez) 02/23/2012 - Site transfer to Groundwater and Environmental (GES) consulting firm. GES will assume the role of remedial consultant for this spill. Awaiting for GES to discuss the Project. (Perez) 04/24/2012 - AS/SVE system is operational. October 2011 to December 2011- Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by the end of April 2012. (Perez) 05/23/2012 - AS/SVE system is operational. January 2012 to March 2012- Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time.

Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by the end of July 2012. (Perez) 08/13/2012 - AS/SVE system optimized to focus within the dissolved-phase plume area. Few air sparge wells were shut down to increase flow rate in certain wells. Additional adjustments may be made throughout the next reporting period to continue to focus on sparging near this area and GES will continue to monitor this sparging strategy to maximize hydrocarbon mass removal. (Perez) RP will to operate the system for a total of (6) six months on pulsing mode. After this time, a decision will be made whether to continue to operate the system or take further action. GES will continue to monitor this system to maximize hydrocarbon mass removal. (11-27-2012) AS/SVE system is operational (pulsing mode). October 2012 through December 2012 - Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. RP will continue to monitor the system to maximize hydrocarbon mass removal. (01-28-2013) AS/SVE system is operational (pulsing mode). January 2013 through March 2013 - Site Update Report revealed dissolved phase concentrations of total BTEX are consistently decreasing (Max. 311.28PPB BTEX). RP consultant submitted a Site Investigation Work Plan for NYSDEC approval to determine the extent of residual soil impacts at the Site. Work plan is currently under review. RP will continue to monitor the system to maximize hydrocarbon mass removal. (04-25-2013) Fieldwork activities completed per approved site investigation work plan. RP submitted a site investigation report and it is currently under review. The investigation results reported concentrations of VOCs contaminated soils above soil cleanup guidance values between 10 and 30 feet below ground surface. No impacts reported in the groundwater interface. The RP recommendation in the report is to shutdown existing system and excavation of impacted soils. RP continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. (07-25-13) The Site Investigation Report and the request to shut down the AS/SVE system has been approved. The RP will submit a Remedial Action Plan (RAP) addendum to remove the AS/SVE system and a RAP for the excavation of impacted soils. After the approval of the RAP, the RP will initiate the system decommission and excavation activities. Upon the completion of the implementation of the approved RAP, groundwater will be monitored for a minimum of two quarters to ensure that groundwater contamination trends continues to decrease and rebound is not occurring at the site. After this time, a decision will be made whether to continue to monitoring the site or take further action. (08-28-13) The RP submitted a Remedial Action Plan Addendum and is currently under review by the Department. (09-26-13) DEC approved the Remedial Action Plan. The plan proposes excavation of remaining soil impacts at the site, between 10 and 30 feet below ground surface. ExxonMobil has been working on the permitting with NYCDOB, NYCDOT and MTA, but has encountered some setbacks as this is an E-Designated site. A permit has been filed with the NYCDOB, but since this is an E-Designated site, it appears that the permit will be processed through NYC Office of Environmental Remediation. (11-15-13) Fieldwork on hold pending to final approval of MTA permit. (12-19-13) RP still waiting on the MTA permit for this job. They have been backlogged and have taken a while to review RP's submittals. Late last week, they received comments on their last

submittal and they are asking for revisions. They are planning on delivering the revisions this week. It is expected that they will be ready to proceed with the work early March; however, that is dependent on how quickly the MTA will review their latest submission. (02-25-14) Fieldwork activities completed per approved RAP. RP submitted a Closure Report and is under review by the Department. (08-13-2014) Comments on the Closure Report forwarded to the RP. (08-21-2014) The RP submitted a revised Closure Report and is currently under review by the Department. (09-11-2014) Spill closed on 09/16/2014. Groundwater analytical data collected over the past two years reveals that the concentration of the contaminants of concern in groundwater continues to naturally attenuate. During the source removal activities a total of approximately 2,010 tons of soil was removed from the excavation and disposed of off-site. Post-excavation soil samples reveals minor exceedances of NYSDEC RSCOs in 3 samples of 21 soil samples collected. However, the area above of the impacted soils was backfilled with clean material. Impact to groundwater is considered unlikely. There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. No further action letter sent to ExxonMobil. (09-17-14)"

Remarks: "CONTAMINATED SOIL DISCOVERED DURING SITE ASSESSMENT, WILL COMPLETE ASSESSMENT."

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSLEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Contact Name: MIKE SHERWOOD
DEC Memo: "03/12/07-Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC school authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals. 03/27/07-Hiralkumar Patel. received call from Amy Fonpana (845-492-3178). they are preparing closure report and will send by 04/15/07. 04/24/07-Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon. 06/19/07-Hiralkumar Patel. left message for Ms. Fonpana. 06/26/07-Hiralkumar Patel. received message from Ms. Fonpana. they are still working on-site and waiting for some documents. will send report once they get all documents. 06/27/07-Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr. Sharma to send all analytical data (for all samples done on-site till date) and detailed scaled site map with all sampling locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports. 06/28/07-Hiralkumar Patel. meet Bob Kanaparthi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II reports from Mr. Sherwood. abstract of Phase I: - the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street - previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing. - large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737) - site is approx. 20 ft above mean sea level - BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the depth of groundwater is approx. 37 ft bg and groundwater flow direction is to the northeast. <----- - major spill sites in neighbourhood: 1. Greenwood Cemetery (Spill #: 8710384, 8710694, 8902953, 9413808). all spill closed 2. Jackie Gleason Bus Depot (Spill #: 9106350, 9507015, 9705882, 9803068, 9902851, 9908589, 0211807, 0402205, 0413523, 0702197) 3. 971-975 4th ave (spill #: 9207015). groundwater contamination reported <----- 4. Mobile service station, 89-14 4th ave (Spill #: 0430002, 0330037, 8302631) reported groundwater contamination <----- 5. 987 4th AVE (spill #: 8706481). found groundwater contamination. abstract of Phase II report: - proposed design for school includes construction to a depth of approx. 18 ft bg - depth of groundwater was found to range from

1001113387

between 14 and 24 ft bg - total of 13 soil samples (LPB-1 to LPB-8, SPB-2,5,6,7 and 8) and 7 groundwater samples (LPB-1W, 5W and 8W, SPB-5,6,7 and 8) were collected for analysis - found heavy Trichlorethene (160,000 ppb) contamination in groundwater sample SPB-5 <----- - as found heavy TCE contamination in groundwater sample, did supplemental phase II - collected two soil sample from two borings (close to previous boring location SPB-5) and three groundwater sample from same two borings on-site and four groundwater sample from two off-site borings - also took 6 sub-slab soil-gas samples, because of heavy TCE contamination - found no contamination in any soil, groundwater or soil-gas samples during supplemental phase II investigation Michael Sherwood Shaw environmental PH. (914) 633-9324 (O) (516) 650-5290 (C) Fax (845) 492-3101 email: michael.sherwood@shawgrp.com Bob Kanaparthi NYC SCA Ph. (718) 472-8620 Drew Pardus NYC SCA Ph. (718) 752-5036 (O) (646) 577-8280 (C) during meeting Mr. Kanaparthi mentioned following: - entire site has been excavated to depth of 16 ft and groundwater is about two more feet deeper than existing excavation bottom. - during excavation, they removed total of five USTs (one 2000 gal fuel oil/diesel tank, one 1000 gal sugary mix tank, one 5000 gal tank, one 100 gal tank and one 1000 gal tank). - found contaminated soil around some tanks and has been removed - endpoint samples taken from contaminated zones - currently footing work for proposed building is going on at site - during construction found sheen on groundwater and gasoline odor - took groundwater samples from two different locations - found minor benzene (58 ppb) contamination in groundwater sample GW-1, along 35th street <--- - there will be two elevator pits, partially merged in groundwater - to work on elevator pit, they need to dewater those areas - due to high concentration of TCE in groundwater sample during first set of sampling, they will put vapor barrier and active SSDS under BASEMENT floor asked Mr. Pardus to do following: - installation of atleast three monitoring wells to define site specific groundwater flow direction and sampling soil and groundwater during this monitoring well installation. - samples must be analyzed for STARS 8260 & 8270 methods & report must include chlorinated compounds - no dewatering events until site-specific groundwater flow direction has defined (to prevent spreading contamination if dewatering points are downgradient to source of contamination) - no concrete/foundation work till full investigation completed - installation of one more monitoring well upgradient (once groundwater flow direction defined) to check any off-site migration - submission of soft copy of vapor barrier & SSDS design - monitoring wells atleast 5 ft below groundwater table - samples from monitoring wells must be taken using Low Stress (low flow) Purging and Sampling procedure (EPA guidance)

1001113387

gasoline tanks failed a test. PBS#: 2-157236. site had 14 tanks and were removed in 1990. from spill database, found that groundwater was impacted with gasoline spill and had free product in wells installed on-site at that time. groundwater is at 38 ft bg. case still open.

-*-* 07/05/07-Hiralkumar Patel. visited site on 07/02/07 as found heavy soil and groundwater contamination in neighbour's property at 129 34th Street, which is auto repair shop. spoke with Mr. Pardus today and asked him to install additional monitoring wells along 34th street (two wells on 34th street along property line: one at each corner and one well along boundry between park and construction site). these wells are just for monitoring purpose, in case any contamination from auto repair area touches the construction site. also asked Mr. Pardus to provide site addresses for neighbours on south and east side of construction site (assumed upgradient side) 07/16/07-Hiralkumar Patel. received call from Mr. Pardus regarding sample analysis for specific chlorinated compounds. asked Mr. Pardus to run all groundwater samples for compound that was found high (PERC) in previous investigation. 07/23/07-Hiralkumar Patel. received message from Mr. Pardus asking for meeting. spoke with Mr. Pardus and asked him to submit data for review prior to any meeting. 07/24/07-Hiralkumar Patel. received sample analyticals and site map with monitoring well locations, from Mr. Pardus. they installed four wells on site and one on sidewalk along 35th street. found very minor contamination. from monitoring wells, they found groundwater flow in south direction (from site which has heavy groundwater contamination: 129 34th street). monitoring well #1 installed close to area where they found high PERC in groundwater. Mr. Pardus asked for dewatering of site for construction activities. mentioned to Mr. Pardus that as no contamination found in any samples, they can do dewatering but they need permits from city agencies for that. asked Mr. Pardus to install one well in corner of property along park along 34th street (as found heavy soil and groundwater contamination at site 129 34th street). also asked him to monitore well # 4 until it knocked down. asked Mr. Pardus to submit entire report with boring logs, water depths etc. 07/25/07-Hiralkumar Patel. spoke with Mr. Pardus. told him that they can start dewatering from site (based on analytical data). also asked Mr. Pardus to install a permanent monitoring well on sidewalk along 34th street (close to property line between subject site and park) as subject site is exactly downgradient from contaminated site at 129 34th street. this well will be used as monitoring point to see any oil from 129 34th street site hit construction site or not. Mr. Pardus mentioned that they will install vapor barrier and sub-slab system. Mr. Pardus will schedule installation of one well on sidewalk along 34th street. 03/20/08-Hiralkumar Patel. received tank closure report from Shaw environmental. abstract: - site groundwater was encountered between 16 to 18 ft bg - installed four wells (MW-1, MW-2, MW-4 and MW-5) - no tidal influence noticed in wells MW-1, MW-2 and MW-5, via automatic data logger - groundwater level data from MW-4 shows rise in the water level; cause of this water level rise is unknown (no precepitation or on-site dewatering during or before water level measurement) - direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest) - removed four regulated (petroleum) USTs and

1001113387

one non-regulated (sugar) UST in Mar.-Apr. 2007 - four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100 gal - one 1000 gal sugar tank removed - 2000 gal tank was punctured during excavation and then spill reported - 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion - final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled - 100 gal UST was discovered immediately beneath the concrete slab of the former site building - 100 gal UST was found to be old and rusted with large openings - following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal - 5000 gal UST was abandoned-in-place with concrete - 5000 gal UST found to be slightly corroded but no holes were observed - final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled - no endpoint bottom samples collected after 5000 gal tank removal <----- - 1000 gal UST was discovered about 5 ft below and found to be rusted with a large hole where it appears that the weld separated <----- - final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled - groundwater samples collected from one geoprobe GW-1 and four monitoring wells (MW-1, MW-2, MW-4 and MW-5) - found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples - school design includes a vapor barrier and an active SSDS 06/03/08-Hiralkumar Patel. spoke with Mr. Pardus. he doesn't know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such. 06/06/08-Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not. 06/17/08-Hiralkumar Patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS. left message for Mr. Pardus for following: - submission of design specs of vapor barrier and SSDS - confirmation about installation of vapor barrier and SSDS - clarification for not taking endpoint bottom sample after 5000 gal tank removed 06/23/08-Hiralkumar Patel. left message for Mr. Pardus. 07/09/08-Hiralkumar Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the

Registry ID: 110004524907

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Site Description: See site C224163 Location: The 45,400 square foot site is located at 627-641 Smith Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a vacant 1-story warehouse and an asphalt-paved parking lot. The site warehouse is connected to the warehouse on the lot to the south. Current Zoning/Use(s): The site is currently zoned as M3-1 (manufacturing). Historical Use(s): The Site was occupied by Barrett Manufacturing Company, Storage and Shipping in the early 1900s. Later, Colonial Sand and Stone Company occupied the site in the 1950s. Black Diamond Cargo Line and Pittston Stevedoring Storage occupied the Site from the early 1960's to the 1990s. The original occupant, Barrett Manufacturing, utilized nine coal tar storage tanks and two gasoline underground storage tanks (USTs) as part of their production of coal tar and roofing material. Additionally, Barrett Manufacturing operations occupied the entire city block west of the site (Block 492). Block 492 currently consists of three Lots: Lot 1, Lot 15, Lot 20. Block 492, Lot 1 is a State Superfund Site: Chemtura 633 Court Street ID No. 224146. Site Geology and Hydrogeology: Soil borings conducted between 2005 and 2012 indicate there are alternating layers of sand and dense clay. Two to four separate

Env Problem: aquifers are present at the site, separated by clay confining layers. Groundwater is present at a depth of 2 ? 4 feet below grade. See site C224163 Nature and Extent of Contamination: Soil ? Coal tar related VOCs and SVOCs are present above Unrestricted Use SCOs. These include naphthalene (7,700 mg/kg), benzo(a)anthracene (280 mg/kg), benzo(a)pyrene (250 mg/kg), and benzo(b)fluoranthene (190 mg/kg). Contaminated soil is present on-site in the vicinity of the former tar storage tanks, and extends to the eastern property boundary, which is bordered by the Gowanus Canal. Additionally, the area of contaminated soil extends off-site to the south, and upgradient to the west. High soil VOCs and SVOCs upgradient and adjacent to Block 492 indicate that Block 492 may be a source of coal tar related VOCs and SVOCs. Groundwater ? VOCs and SVOCs are present above Class GA Standard in twenty monitoring wells. The groundwater plume has not been delineated to the south or to the west. VOC and SVOC contamination extends to the eastern property boundary, which is bordered by the Gowanus Canal. Napthalene is present at a concentration of up to 17,000 ug/l. Benzene is present at a maximum concentration of 11,000 ug/l. Toluene is present at a concentration of up to 7,300 ug/l. Soil Vapor ? Soil vapor samples have not been collected. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Site Description:

Location: The Red Hook Smith Street site is located in Brooklyn, in an urban area. The site is bounded by Smith Street to the west, the Gowanus Canal to the east and south, and an industrial property to the north. Site Features: The site encompasses two tax parcels (Block 493, Lot 1 and Block 495, Lot 1) and occupies approximately 85,400 square feet. Block 493 (the northern part of the site) is occupied by a vacant one-story warehouse and an asphalt-paved parking lot. The warehouse is connected to the warehouse on the lot to the south (Block 495, Lot 1). Block 495 is occupied by an approximate 40,000-square-foot vacant one-story warehouse. Current Zoning/Use(s): The site is zoned heavy manufacturing; M-3. M-3 zoning also allow certain retail and commercial uses. Currently the site is vacant. Past Uses of the Site: Barrett Manufacturing occupied Block 493 from circa 1900 to 1940 and utilized nine coal tar storage tanks as part of their production of coal tar and roofing material. After Barrett Manufacturing sold the property in the 1950's two gasoline underground storage tanks (USTs) were installed on the property. Barrett's manufacturing facility also extended to the west of the site (hydraulically up-gradient). Various manufacturing and storage companies occupied Block 495 (the southern part of the site). American Ice Company occupied Block 495 in the early 1900 s and Smith Street Dock Corporation and Seaboard Storage occupied lock 495 from around 1930 to 1950. Black Diamond Cargo Line and Pittston Stevedoring Cargo Storage occupied Block 495 from the late 1960 s to the 1990 s. Site Geology and Hydrogeology: The topography is relatively flat, gently sloping to the east-southeast towards the Gowanus Canal. The site is underlain by a discontinuous layer of historic urban fill that extends to approximately 12 feet below grade surface (bgs). The historic fill generally consisted of sand, silt, clay, gravel, cobbles, wood and brick fragments, cinder, and ash. The historic fill is underlain by fine sands and silts from 2 to 47 feet bgs. Discontinuous stiff clays lens and organic material were identified at varying depths (8 to 35 feet bgs). Bedrock was not encountered as part of this investigation, however, the Hartland Formation would be anticipated based on local investigations. The depth to groundwater is approximately five-feet below the ground surface and flows to the east-southeast towards the Gowanus Canal. Several environmental investigations and reports have been generated for this site; most recently the Department received a Draft Supplemental Investigation Report in February 2016. Observation described in the report detail the presence of tar-like material in

RED HOOK SMITH STREET (Continued)

S112818546

Health Problem: the soil and floating on the groundwater in portions of the site and immediately upgradient of the site. Groundwater is approximately five-feet below the ground surface (bgs). The tar-like material was encountered from near the ground surface to a maximum depth of 47 feet bgs. Sorbed and aqueous phase VOCs and SVOCs are present onsite and upgradient of the site at concentrations above the applicable SCGs. The VOCs identified as contaminants of concern include BTEX compounds with soil concentrations up to 361mg/kg and dissolved phase concentrations up to 1,210 ug/l. The most prevalent SVOC was naphthalene with the maximum soil concentration of 7,500 ug/kg and groundwater concentration of 17,000 ug/l.

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern because the site is vacant. Additional evaluation is needed to determine whether actions are needed off-site.

Site Description:

Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site is listed as Block 494, Lot 1 and is located on the south east corner of Court St. and Halleck St. in close proximity to the Gowanus Canal. Site Features: The site is currently a parking lot with a small building near the middle of the site occupying approximately 1/8th of the property acreage. Current Use: The site is currently leased from Red Hook Realty Co. by National Grid who is using the site as a parking lot for their service vehicles. Historical Use: The property was used for tar paper manufacturing as depicted in the 1886 Sanborn map which shows tar pitch storage areas on the corners of Smith St./Halleck St. and Court St./Halleck St. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be less than 5 feet bgs. Groundwater flow is anticipated to flow radially from the Gowanus Canal traveling north, northwest, west, southwest, and south. To the south and west of the site, the coastline is lined with sheet piling and to the east of the site, where groundwater enters, the coastline is lined with rip rap. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated to exist beneath the fill material with a thickness of approximately 8 feet.

Env Problem: This site has had several instances over the last decade of tar seeping out of the ground, getting cleaned up, and reappearing some time later. Further investigation is required to determine the nature and extent of tar beneath the surface.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:

Location: The site is located at 633 Court Street, Kings County, Brooklyn, New York within the Red Hook Industrial area of Brooklyn. The Site is located northeast of the Court Street and Halleck Street intersection. The site is immediately bordered to the south by Halleck Street and a National Grid truck facility, to the north by a paper street (Sigourney Street) and a petroleum cartage and storage (trucking) company. To the east there is small vacant lot and a warehouse. A recreational park (Red Hook Smith Recreational Park) is located directly across Court Street to the west of the site. Additionally, an oil terminal that is currently owned by Buckeye Partners, L.P. is located approximately one block to the south of the site. Site Features: The entire site is completely developed and covered with two connected adjoining buildings. The building's foundations are slab on grade concrete and there are no basements.

These buildings were formerly used by Chemtura's predecessor companies for chemical manufacturing and chemical laboratory operations. Current Zoning and Land Use: The site is currently active, and is zoned M3-1 for industrial use, however this zoning designation allows for certain commercial uses. Several tenants occupy the site including a wholesale food and food product supply warehouse and offices. The M3-1 does not allow for residential use at this site. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The park located to the west is zoned residential and is used exclusively for recreational purposes. The nearest residential structure is approximately one-half miles to the north. Past Use of the Site: In 1904 the site was owned by Barrett Manufacturing and was used for the manufacturing of tar paper. Barrett Manufacturing Company is a predecessor company to Honeywell International, Inc. Tar tanks, storage tanks, stills, a pitch shed and an oil house were located on-site. In the 1940s Doran Manganese Bronze Company, Inc. Foundry & Machine Shop occupied the site. In the 1940s to 1950s, Argus Chemical Laboratory, a predecessor company to Chemtura, purchased and operated the site. Argus Chemical Laboratory was subsequently purchased by Witco (also a predecessor company to Chemtura) in the early 1960s. Under Argus and Witco ownership, the plant produced metallic-organic soaps and salts, barium stearates, phosphites and epoxy plasticizers. During the 1950s and 1960s, aluminum paste was produced in a process on the roof of one of the buildings. This production ceased in the late 1950s to early 1960s and all plant operations were relocated to a parcel of land located to the southwest of the 688 Site. The laboratory and offices remained at the 633 Site until approximately 1990 when these functions were relocated to 688 Court Street. Site Geology and Hydrogeology: The Site is improved with impervious surfaces (concrete foundation of an active commercial building) which precluded extensive subsurface investigations. However, it is known that the Site and the surrounding area is reclaimed water front from what is now known as the Gowanus Canal. This historic fill material was observed from 0 to 12 ft below the ground surface (bgs). The fill material consisted primarily of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.). Underlying the fill materials, a silt-clay layer was encountered. This layer has a relatively low permeability and is believed to continue laterally across the site. This layer is gray in color and is believed to be about eight-feet thick. The Site is located approximately 400 feet west of the Gowanus Canal and ground water elevations ranges from approximately 3.5 to 6 feet bgs. Kings County lies within the Long Island aquifer system and overlies a sole-source aquifer.

Env Problem:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include toluene, ethylbenzene, xylene, semi-volatile organic compounds (SVOCs)/polycyclic aromatic hydrocarbons (PAHs), phenol, and metals. Soil: The VOCs toluene, ethylbenzene and xylene are found in soil from the surface to the water table. Benzene is found at 13 parts per million (ppm) at the center of the site and at 15 ppm at southern boundary of the site. This contamination is above the groundwater protection soil cleanup objective (SCO) of 0.06 parts per million (ppm) for benzene. PAHs are found throughout site soil. Benzo(a)pyrene is found in concentrations up to 62 ppm which is above

S113828311

the protection of groundwater SCO of 22 ppm. Metals are found throughout site soil. Lead was as high as 618 ppm, barium was found up to 590 ppm, cadmium was found up to 340 ppm, arsenic was found as high as 14.6 ppm and mercury was found as high as 2.4 ppm. Groundwater: Toluene, ethylbenze, xylene, naphthalene and benzene are found in groundwater at concentrations up to 240, 300, 530, 3,000 and 48 parts per billion (ppb), respectively which are all above the groundwater standards of 5, 5, 5, 10 and 1 ppb, respectively. SVOCs pyrene and naphthalene are found in groundwater at concentrations up to 200 and 6,400 ppb, respectively, which are above the groundwater guidance values of 50 and 10 ppb, respectively. Soil Vapor: Two rounds of sub-slab soil vapor sampling were performed. Based on the results DOH indicated that no further sampling or mitigation would be required.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not a concern for existing on-site buildings. An evaluation of the potential for soil vapor intrusion is recommended for any future on-site buildings. Surrounding properties are in various cleanup programs and the potential for soil vapor intrusion at those sites will be evaluated separately.

Assessment of Health:	Access to the site is restricted. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not occurring on-site and is not a concern for off-site buildings.

Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection. Site Features: The site is relatively flat and mostly covered with blacktop and concrete. A small area in the southeast corner has a soil cover. Several previously decommissioned site buildings were either removed or rehabilitated without the Department's approval. The site is occupied by several tenants including a garbage hauling company, a motor coach repair facility, an electronics distribution warehouse, a commercial laundry repair business, a stone cutting business and a sheet metal fabricator. The dual-phase extraction remedial system is not operational. The site is surrounded with a concrete wall of varying height. Current Zoning and Land Use: The site is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, National Grid and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and a Buckeye, LLC oil terminal. A recreational park (Red Hook Recreational) is located immediately to the north of the site. Past Use of the Site: Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process. Contamination at the site appears related to several historic operations, including materials handling from the chemical manufacturing processes, as well as releases to the environment from the hot oil system. Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. A clay layer of unknown thickness or continuity was encountered beneath the fill material. This layer is presumed to be the former base of the Gowanus Canal. The effectiveness of this layer as a low-permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site is unknown. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site is minimally influenced by the tide. Groundwater flow is radial with a high point in the central part of the site.

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Site Description: Located: The 13,700 square foot (0.31 acre) site is located at 471 20th Street in the Borough of Brooklyn in an urban area. The site is bordered by 20th Street and Greenwood Cemetery to the south, an institutional building (Diocese of Brooklyn) to the east and north, residential buildings to the north, and a parking lot and additional commercial/industrial uses to the west. Site transitioned to Brownfield Cleanup Program as Site #C224187. Please refer to that site number for accurate information.

Env Problem: Site transitioned to Brownfield Cleanup Program as Site #C224187. Please refer to that site number for accurate information.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:

Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site consists of two parcels listed as Block 492, Lots 15 (628 Smith Street) and Block 492, Lot 20 (182 Sigourney Street) on NYC tax maps. The site is at the intersections of Halleck Street, Smith Street and Sigourney Streets. The site is approximately 200-300 feet west of the Gowanus Canal. Site Features: The site is primarily covered with a multi-story brick building with courtyard parking accessible from Sigourney Street. Current Zoning and Land Use: The current site use is not known but appears to be occupied with commercial and/or industrial operations. Historical Use: The property was used for tar paper manufacturing. A 1904 Sanborn Insurance Map depicts coal tar products, asphalt tanks and various oil tanks (including a 14,000-gallon underground tank). The Sanborn Map indicates that this property was operated by Barrett Manufacturing Company. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be approximately 5 feet bgs. Groundwater flow is anticipated to flow toward the Gowanus Canal traveling east and/or southeast. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated beneath the fill material with a thickness varying up to eight feet.

Env Problem:

Investigations at adjacent properties indicate tar-like source material, light non-aqueous phase liquid (LNAPL) and petroleum VOCs are present in the soil and at the soil/groundwater interface. Downgradient and to the east of this potential site is the Red Hook Smith Street Brownfield Cleanup Program (volunteer) site (C224163) where tar-like material, metals, VOCs and SVOCs were identified. West of this potential site is the 633 Court St. (Chemtura #224146) site and the Red Hook Smith Recreation Area; tar-like material has been identified in each of these locations. A portion of the Red Hook

Smith Street BCP and the 633 Court Street (Chemtura) property were both previously part of the former Barrett Manufacturing property. To the south is a State Superfund P-site (224196) where tar boils have been identified on site, which was initially Mica Roofing Company. Investigation of this site is warranted.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:

Location: The Metropolitan Gas Works site is located at the intersection of 12th Street and Second Avenue in South Brooklyn. It is bounded on the west by the Gowanus Canal, on the north by 10th St., on the east by 2nd Avenue and on the south by 13th St. Site Features: The site is completely developed. The original plant footprint is occupied by a large home improvement center, a strip mall and parking lots that serve them. The surrounding neighborhood is primarily industrial and commercial, with some residential properties within a few blocks. Past use of the site: The site was occupied by a large manufactured gas plant (MGP) from the late 1800s to the late 1930s. The MGP converted coal and petroleum products to gas, which was used for heating, cooking, and lighting purposes in the surrounding areas. The process produced large amounts of coal tar wastes which have heavily contaminated the soils beneath the site. The southeastern portion of the plant was remediated in 2001 to 2003. The remediation consisted of the excavation of 3 gas holders and the installation of a DNAPL recovery system that is currently operating. The western third of the site (where the actual gas plant was located) is now occupied by a multi-story brick commercial building including a Pathmark grocery store. A Remedial Investigation was conducted in this area between 2009 and 2013. Site Geology and Hydrogeology: Soils on the site consist of fill that overlies a peat/silt/clay "meadow mat" marsh deposit that lies approximately 16 feet below ground surface (bgs). Beneath the meadow mat are sand and silt glacial outwash deposit. Bedrock is greater than 150 ft.bgs. Groundwater flow is southwest, toward the Gowanus Canal.

Env Problem:

Contaminants of concern The principal waste disposed on the site was MGP tar, which is a dark, oily liquid that is slightly denser than water. Large amounts of this tar escaped from the foundation of the gas holders, and appear to have migrated off site to the south and west of the site. The tar contains high levels of BTEX and PAH compounds. Both groups of compounds have been found in site soils and groundwater. Impacted media Soils and groundwater at the site are heavily impacted by BTEX and PAH compounds. The impacted soils are found at depths of 8-16 feet and greater beneath the Lowe s portion of the property; contaminated soils above this elevation were removed and replaced with clean backfill during the remedial action in 2002. No information is available on the Pathmark portion of the site. However, gross contamination was found within a few feet of the Pathmark foundation and it is likely that significant amounts of soil and groundwater contamination are present in this area also. Known

S108667326

SCG exceedances Soil and groundwater contain BTEX and PAH compounds at levels far in excess of SCGs. These exceedances represent a significant threat to the environment. Special Resources impacted No special resources identified. The adjacent portion of the Gowanus Canal is heavily contaminated from a variety of sources including other MGP sites nearby, but specific impacts from this particular MGP site have not been identified. The off site tar migration appears to be taking place at depths below the bottom of the canal.

Health Problem: Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in groundwater is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion on the site.

Site Description:

Location: The Site is located at the corner of 41st Street and 4th Avenue in the northwestern portion of Brooklyn. The site is bounded on the north by an active gasoline station, on the south by a fast food restaurant and on the east by a 3-story residential building. West of the site is 4th Avenue, the MTA Subway tunnel and the PS 136 Charles O'Dewey Elementary School. Site Features: The site is a vacant one-story building with no basement. The building covers approximately half of the 10,017 square-foot lot (0.23 acres) and was recently used as an auto repair business, a car wash and a small store. In addition to the existing building, there are tire racks, an oil change area, oil traps to a waste oil tank, car wash dry well, an office area, a car wash, hydraulic lifts, a 1,040 waste oil tank, a 1,040 gallon motor oil tank, an asphalt parking lot, and 6 potential underground storage tanks (USTs) identified on Sanborn Maps. Current Zoning/Use(s): The area is zoned C2-4. C2-4 districts serve the immediate needs of surrounding lower- and medium-density residential neighborhoods along streets that provide small local retail and service shops. Typical retail uses include neighborhood grocery stores, restaurants, beauty parlors, funeral homes and repair services. The Community Facility Use for C2-4 districts provides educational, health, recreational, religious or other essential services. Historical Use(s): The site has been an automobile garage, gas station, and car wash since 1926. From 1942-1995, three USTs were noted on Sanborn maps and two USTs (possibly removed) were identified on the 1926 Sanborn Map. Other uses are listed as an office/warehouse space for various tenants, taxi/limo parking and repair services. A Phase I Environmental Assessment was performed in July 2015 and a Phase II Environmental Assessment was performed in August 2015. Site Geology and Hydrogeology: The elevation of the property is approximately 55 feet above mean sea level. The general soil type consists of fine to coarse-grained sand and silty sand with gravel. Historic fill was encountered from grade to 15 feet below grade (deepest soil boring depth). The depth to water ranges from 18 feet

(MW-3) to 44 feet (MW-1). The depth to water observed in MW-3 may be attributed to influence from the car washing operations (dry well), which may be contributing water to the aquifer. The groundwater flow direction is northwest towards the Upper Bay/Gowanus Bay three blocks away.

Env Problem: Open On-site Spill No. 15-06140: This spill was originally reported on August 9, 2015 during a Phase II site investigation through the NYC OER Brownfield Program (No. 16EH-A108K). The Phase II included the installation and sampling of a series of soil probes, monitoring wells and soil vapor sampling points that showed impacted soil and groundwater. Nature of Contamination: Petroleum spill with soil and groundwater impacts as noted below, and elevated PCE in soil vapor. VOCs associated with gasoline constituents and chlorinated compounds are present beneath the southern and northern portions of the Site. VOCs indicative of petroleum were identified in both shallow and deep soil in the northwest portion of the property. This impacted soil is located at the former location of two (2) underground storage tanks (USTs) identified on the 1926 Sanborn Fire Rate Insurance Map. Strong petroleum odors were identified in soil from 0-14 feet deep. Organic vapors were detected with photoionization detector (PID) readings ranging from 0.3 ppm to a maximum of 36 ppm in the 8 to 10-foot depth. Soil: Installed 7 soil borings across the Site, and collected 14 soil samples with the following results: - VOCs: 1,2,4-trimethylbenzene (max of 180 parts per million [pp]) and 1,3,5-trimethylbenzene (max of 71 ppm), ethylbenzene (max of 42 ppm) exceeded restricted residential and protection of groundwater soil cleanup objectives (RRSCOs and PGWSCOs). - Metals: lead (108 ppm) and nickel (118 ppm) exceeded the unrestricted use soil cleanup objectives (UUSCOs) and trivalent chromium (39.2 ppm) exceeded the RRSCO. - No SVOCs, pesticides or PCBs were detected above UUSCOs. Groundwater: 3 wells were installed. No free product was identified on the water table. Maximum concentrations are noted below. - VOCs: 1,2,4-Trimethylbenzene (1,500 parts per billion [ppb]), 1,3,5-Trimethylbenzene (1,300 ppb), Benzene (1,100 ppb), Ethylbenzene (2,700 ppb), o-Xylene (5,800 ppb), p and m-Xylenes (13,000 ppb), and Toluene (1,800 ppb), and Tetrachloroethylene (4 ppb). - Metals (dissolved): Barium (2,700 ppb), Nickel (237 ppb), Selenium (20 ppb). Soil Vapor: Installed 5 soil vapor probes across the Site. Historic fill was encountered from grade to 15 feet below grade (deepest soil boring depth). The soil vapor probes were installed in the subsurface soil at 5 feet below surface grade. - Petroleum related compounds range from 3 to 54 micrograms per cubic meter (ug/m3). - PCE: 71 ug/m3, 66 ug/m3, 1,400 ug/m3, and 3,800 ug/m3. - TCE: detected in one sample (3.90 ug/m3).

Contact Name:

CARLOS QUINONEZ

DEC Memo:

"9/11/15-Zhune called Carlos Quinonez from Hydro Tech (631) 462-5866. Mary said he is not available and he will call me back.

1/14/16-Vought-This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo. 1/15/2016: Rashad 4013 4th Avenue has an alternate address of 401 41st Street. No additional spills found for site. 4013 4th Avenue has PBS#2-611076 for a 1,000 gallon waste/used oil AST. No documents found in D2. 1/19/2016: Rashad Sent email to Carlos: I have been reassigned 2 spills that list you as a contact, they are as follows: Spill#1305487 822 4th Ave, Brooklyn 11232, date received was 8/21/2013, Spill#1506140 4013 4th Ave, Brooklyn 11232, date received was 9/9/2015. I would appreciate any documentation/information you have on either of these sites. 1/20/2016: Rashad Carlos responded on 1/19 saying he will call me and give me an update on both sites. 3/10/2016: Rashad Sent email to Carlos: Can you please send me the Phase 2 investigation as well as any other reports you have for this site. 3/11/2016: Rashad Carlos responded on 3/10: Please see attached the report for the Phase II we performed. Any questions please let me know. thanks Phase 2 report was attached and uploaded to D2. Review of Phase 2 report: Depth to groundwater has been identified to range from 18 feet to 45 feet and the groundwater flow direction was identified to be northwest. No free product was identified on the water table. Dissolved VOCs indicative of petroleum were identified in groundwater beneath the southern and northern portions of the site at concentrations exceeding standards. Dissolved metals were also detected in groundwater. VOCs associated with gasoline constituents and chlorinated compounds are both present beneath the southern and northern portions of the site. The site is occupied by a 1 story building that consists of an auto repair business, car wash and a small store. The building does not have a basement. Building is heated with natural gas. A GPR, 7 soil probes, 3 groundwater monitoring wells and 4 soil vapor probes were taken. The GPR detected one anomaly in the western portion of the Site and one anomaly was detected in the northwestern portion of the site. According to historic sanborn maps there are 3 gasoline tanks located in the northwestern portion of the site. Soil probes SP-1 and SP-2 were installed in the approximate locations of 2 gasoline tanks in the northwestern portion of site. SP-3 and SP-6 were also installed near these tanks. SP-4 was installed in the approximate location of 3 gasoline tanks in the southwest portion of the site. SP-5 and SP-7 were installed in the eastern portion of the site in the vicinity of the former auto repair shop and active car wash. SP-1, SP-4, and SP-7 were installed to a depth of 12 feet. SP-2, SP-3, and SP-5 were installed to a depth of 14feet, SP-6 was installed to depth of 16 feet. Three monitoring wells MW1-MW3 were installed in the same locations as SP-1, SP-4, and SP-7 respectively. They were installed to a depth of 55ft, 60 ft and 55 ft. None of the wells contained free product. Depth to water ranged from 18.4 feet in MW3 to 44.5ft in MW1. Soil sample SP-2 taken 4-6ft had contamination as follows: 1,2,4 Trimethylbenzene - 95ppm, 1,3,5 Trimethylbenzene - 42ppm, Ethylbenzene - 3.2ppm, Naphthalene - 19ppm, Xylene - 17ppm, At 12- 14 ft: 1,2,4 Trimethylbenzene - 180ppm, 1,3,5 Trimethylbenzene - 71ppm, Ethylbenzene - 42ppm, Naphthalene - 32ppm, n-Butylbenzene - 26ppm, n-Propylbenzene-33ppm, Xylene-180ppm, Toluene-5.90ppm. Other soil locations did not have elevated concentrations. MW1 has a groundwater elevation of 51ft, contamination found in MW1 is as follows: 1,2,4 Trimethylbenzene-1500ppb, 1,3,5 Trimethylbenzene-1300ppb,

Acetone-57ppb, Benzene-1100ppb, Ethylbenzene-2700ppb, Isopropylbenzene-82ppb, Naphthalene-180ppb, xylene-13,000ppb, Toluene-1800ppb. MW2 had a groundwater elevation of 53ft, contaminates found in MW2 are as follows: 2-butanone-15ppb, acetone-32ppb, benzene-8ppb, xylene-4ppb. MW3 had a groundwater elevation of 78ft, the following contaminats were found in MW3: 1,2,4 Trimethylbenzene-510ppb, 1,3,5 Trimethylbenzene-100ppb, ethylbenzene-280ppb, isopropylbenzene-68ppb, Naphthalene-60ppb, xylene-1200ppb, toluene-96ppb. Soil Vapor samples were taken and are as follows for SV1: 1,2,4 Trimethylbenzene - 20ug/m3, 1,3 Butadiene-50, 2-butanoe-62, 2-hexanone-20, acetone-230, benzene-18, chloroform-16, cyclohexane-3, dichlorofluoromethane-7.7, ethylbenzene-14, methylene chloride-1.5, n-heptane-30, n-hexane-49, xylene-46, p-ethyltoluene-70, tetrachloroethylene-70, toluene-54. SV2 has similar readings to SV1. SV3 had tetrachloroethylene-1400 and SV4 had tetrachloroethylene-3800. According to the Phase 2: Depth of water in MW3 may be attributed to influence from the car washing operations, which may be contributing water to the aquifer Soil sample SP5 (4-6ft) - Tetrachloroethylene - 0.047ppm. MW3 has Tetrachloroethylene-4ppb. Sent email to Carlos: Thank you for the report, is this site a BCP or OER site? Also has a Remedial Action Work Plan been made yet and are there any plans for redevelopment? Brief review of the Phase 1 has subject property of one story auto laundry located in southern portion since 1926 and auto repair shop which contains the discussed tanks. 8/10/2016: Rashad Sent email to Carlos: See below questions, also is any work occurring on this site currently? Carlos responded: Yes indeed this site is an OER site. no further work has taken place to our knowledge since our submittal of the report. We did provide the client with a cost estimate letter but he didn t want to proceed after that. I will reach out to him and will try to get more information for you. 8/12/2016: Rashad Spoke to DEC Vought and I sent email to Shaminder from OER to see if he has any further info on site. Report receipt review letter should include - delineation of soil and groundwater, development plans, RAP approval warning before redevelopment. Shaminder responded that site was previously discussed with DEC O'Connell to enter BCP, I will email Jane to discuss case. 8/22/2016: Rashad Letter was prepared and will be sent to property owner as well as emailed to Carlos of Hydrotech to address petroleum contamination. Letter was uploaded to D2. 8/25/2016: Rashad Received call from Sam, who is property owners son. He wanted to discuss contaminated soil letter that was sent to him. At this time the car wash and lube center is still in service and they are planning to close the last day of this year and either redevelop or sell property. His email is samson414@gmail.com, phone number is 917-656-4676. DEC Potentially Requires: 1-BCP or OER 2-Future use - CAMP, depth of basement piping locations, vapor barrier, ssds with doh review 3-Possible delineation across 4th Ave and its affect with groundwater 4-RAP 5-BP station spills 6-Review Phase 1 for previous source of chlorinated solvent 7-Owner: Elsaun Inc, 125 42nd Street Brooklyn NY 11232 1/17/17 - Obligado - Spill assigned to Obligado from Omar as per Austin. 1/10/18 - Obligado - Spill transferred to from Obligado to Feng. 3/16/2018 - Durnin - DER mailed a P site Notification letter to the property owner on March 16, 2018. Environmental Assessment: Volatile organic compounds (VOCs) associated with gasoline constituents: Benzene (1,100 ppb), Ethyl Benzene (2,700 ppb), o?Xylene (5,800 ppb), p & m? Xylenes (13,000 ppb), and Toluene (1,800 ppb), were found in groundwater (groundwater

Site Description: Location: The 4.17 acre site is located at 98 Lorraine Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a portion of a public park (Red Hook Park) operated by the NYC Department of Parks and Recreation. This portion of the park contains 4 baseball fields (fields 5 through 8). Current Zoning and Land Use: The site is currently zoned as park land and is surrounded by other sections of Red Hook Par, as well as a large public housing development (Red Hook Houses). The site is bounded on the north by Lorraine Street and Red Hook Houses, to the east by Henry Street and Red Hook Park, to the south by Bay Street and Red Hook Park, and to the west by Hicks Street and multi-family residential buildings. Past Use of the Site: The site was occupied by a secondary lead smelter operated initially by Delevan Smelting and Refining Works and later by Columbia Smelting and Refining Works from at least 1929 to the late 1930s. By 1939 the smelting building was demolished. The site was redeveloped as part of Red Hook Park some time before 1947. Site Geology and Hydrogeology: Soil sampling has only been performed in the upper 2 feet of soil. Generally the soil consists of fill material. No groundwater samples were collected as part of the investigations to date; therefore depth to groundwater and groundwater flow direction are unknown. The

nearest water body (Gowanus Bay) is located approximately 1200 feet to the southeast of the site.

Env Problem: Nature and Extent of Contamination: In 2012 USA Today published an article documenting sampling conducted at the park which showed elevated concentrations of lead in surface soil. As a result of that finding, NYC Parks collected their own samples for analysis, which generally mirrored the results reported by USA Today. NYC Parks and NYC Department of Health and Mental Hygiene performed some limited remediation (soil excavation, import of clean soil over bare soil areas, and hydroseeding). In 2014, USEPA implemented an investigation in support of an emergency removal action. The data below is from the USEPA investigation. Soil In surface soil (0 to 1 below grade) the highest concentration of lead was 980 ppm as compared to the restricted residential soil cleanup objective (RRSCO) of 400 ppm. In the 1 to 6 interval, the highest concentration was 2400 ppm. At depth (6 to 24 below grade) the highest concentration was 5700 ppm on-site and 8300 ppm off-site to the south. Other metals including antimony, arsenic, iron, copper and tin were found in association with the lead. USEPA concluded that the ratios of the various metals to lead were indicative of the smelting process as opposed to exclusively being attributed to historic fill. Groundwater No groundwater samples have been collected. Soil Vapor No soil vapor samples have been collected.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Date of Government Version: 11/18/2010	Source: NYC Department of City Planning

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Northwest Map:	6048959 JERSEY CITY, NJ
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Not Reported				

This map illustrates the rupture zone of the 1906 San Francisco earthquake, showing the extent of the fault and the distribution of seismic stations. The rupture zone is outlined in black and filled with a yellow diagonal hatching pattern. The map includes a grid of streets, with major streets labeled such as 17th St, 18th St, 20th St, 21st St, 22nd St, 23rd St, 24th St, 25th St, 26th St, 27th St, 28th St, 29th St, and 30th St. A red line with circular markers represents the rupture zone, extending from the northwest to the southeast. A red line labeled "Natural Gas" is also shown. Several seismic stations are marked with black triangles and labeled with letters: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z, AA, AB, AC, AD, AE, AF, AG, AH, AI, AJ, AK, AL, AM, AN, AO, AP, AQ, AR, AS, AT, AU, AV, AW, AX, AY, AZ, BA, BB, BC, BD, BE, BF, BG, BH, BI, BJ, BK, BL, BM, BN, BO, BP, BQ, BR, BS, BT, BU, BV, BW, BX, BY, BZ, CA, CB, CC, CD, CE, CF, CG, CH, CI, CJ, CK, CL, CM, CN, CO, CP, CQ, CR, CS, CT, CU, CV, CW, CX, CY, CZ, DA, DB, DC, DD, DE, DF, DG, DH, DI, DJ, DK, DL, DM, DN, DO, DP, DQ, DR, DS, DT, DU, DV, DW, DX, DY, DZ, EA, EB, EC, ED, EE, EF, EG, EH, EI, EJ, EK, EL, EM, EN, EO, EP, EQ, ER, ES, ET, EU, EV, EW, EX, EY, EZ, FA, FB, FC, FD, FE, FF, FG, FH, FI, FJ, FK, FL, FM, FN, FO, FP, FQ, FR, FS, FT, FU, FV, FW, FX, FY, FZ, GA, GB, GC, GD, GE, GF, GG, GH, GI, GJ, GK, GL, GM, GN, GO, GP, GQ, GR, GS, GT, GU, GV, GW, GX, GY, GZ, HA, HB, HC, HD, HE, HF, HG, HH, HI, HJ, HK, HL, HM, HN, HO, HP, HQ, HR, HS, HT, HU, HV, HW, HX, HY, HZ, IA, IB, IC, ID, IE, IF, IG, IH, II, IJ, IK, IL, IM, IN, IO, IP, IQ, IR, IS, IT, IU, IV, IW, IX, IY, IZ, JA, JB, JC, JD, JE, JF, JG, JH, JI, JJ, JK, JL, JM, JN, JO, JP, JQ, JR, JS, JT, JU, JV, JW, JX, JY, JZ, KA, KB, KC, KD, KE, KF, KG, KH, KI, KJ, KK, KL, KM, KN, KO, KP, KQ, KR, KS, KT, KU, KV, KW, KX, KY, KZ, LA, LB, LC, LD, LE, LF, LG, LH, LI, LJ, LK, LL, LM, LN, LO, LP, LQ, LR, LS, LT, LU, LV, LW, LX, LY, LZ, MA, MB, MC, MD, ME, MF, MG, MH, MI, MJ, MK, ML, MM, MN, MO, MP, MQ, MR, MS, MT, MU, MV, MW, MX, MY, MZ, NA, NB, NC, ND, NE, NF, NG, NH, NI, NJ, NK, NL, NM, NN, NO, NP, NQ, NR, NS, NT, NU, NV, NW, NX, NY, NZ, OA, OB, OC, OD, OE, OF, OG, OH, OI, OJ, OK, OL, OM, ON, OO, OP, OQ, OR, OS, OT, OU, OV, OW, OX, OY, OZ, PA, PB, PC, PD, PE, PF, PG, PH, PI, PJ, PK, PL, PM, PN, PO, PP, PQ, PR, PS, PT, PU, PV, PW, PX, PY, PZ, QA, QB, QC, QD, QE, QF, QG, QH, QI, QJ, QK, QL, QM, QN, QO, QP, QQ, QR, QS, QT, QU, QV, QW, QX, QY, QZ, RA, RB, RC, RD, RE, RF, RG, RH, RI, RJ, RK, RL, RM, RN, RO, RP, RQ, RR, RS, RT, RU, RV, RW, RX, RY, RZ, SA, SB, SC, SD, SE, SF, SG, SH, SI, SJ, SK, SL, SM, SN, SO, SP, SQ, SR, SS, ST, SU, SV, SW, SX, SY, SZ, TA, TB, TC, TD, TE, TF, TG, TH, TI, TJ, TK, TL, TM, TN, TO, TP, TQ, TR, TS, TT, TU, TV, TW, TX, TY, TZ, UA, UB, UC, UD, UE, UF, UG, UH, UI, UJ, UK, UL, UM, UN, UO, UP, UQ, UR, US, UT, UY, UZ, VA, VB, VC, VD, VE, VF, VG, VH, VI, VJ, VK, VL, VM, VN, VO, VP, VQ, VR, VS, VT, VU, VV, VW, VX, VY, VZ, WA, WB, WC, WD, WE, WF, WG, WH, WI, WJ, WK, WL, WM, WN, WO, WP, WQ, WR, WS, WT, WU, WV, WW, WX, WY, WZ, XA, XB, XC, XD, XE, XF, XG, XH, XI, XJ, XK, XL, XM, XN, XO, XP, XQ, XR, XS, XT, XU, XV, XW, XX, XY, XZ, YA, YB, YC, YD, YE, YF, YG, YH, YI, YJ, YK, YL, YM, YN, YO, YP, YQ, YR, YS, YT, YU, YV, YW, YX, YY, YZ, ZA, ZB, ZC, ZD, ZE, ZF, ZG, ZH, ZI, ZJ, ZK, ZL, ZM, ZN, ZO, ZP, ZQ, ZR, ZS, ZT, ZU, ZV, ZW, ZX, ZY, ZZ.

DEC Memo:	<p>"2/16/17 - Obligado - As part of an off-site investigation into 4th and 25th Spill cases #9305122, I conducted a complete file review and identified a tank test failure report for 207 25th street. According to the file, this site had a 550 gallon #2 diesel UST which failed a tightness test on 9/10/1993. As a result of this file review, the DEC under PIN # 93256 conducted a subsurface investigation around the former suspected tank with the current owner's permission. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil and groundwater contamination was identified in all 4 soil borings. Contamination was found as shallow as 8 ft bgs. The soil data and groundwater confirm that the 1993 tank test failure resulted in a petroleum discharge to soil and groundwater. 3/21/17 - Obligado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impated area and the volume of free product observed in the wells</p>

MAP FINDINGS

207 25TH STREET, 207 25TH STREET, BROOKLYN, NY (Continued)

over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/5/17 - Obligado - I spoke with Sandi Fung. I provided her a list of tank contractors and the tank closure document from 1994. 5/19/17 - Obligado - Tom Gallanger, GEM (914) 382 8673. He has been hired by Sandi Fung to investigate the tank. 6/12/17 - Obligado - I got an email from Sandi requesting additional time to due the investigation as her contractor was not responsive. I told her that was fine. 8/21/17 - Obligado - I reviewed the UST Investigation Findings submitted by Gallinger Environmental on behalf of PSJC LLC. GEM installed three soil borings in the utility closet, using a jackhammer, shovel, and portable electroc hammer driven Geoprobe Soil sampler. The soil borings were targeted in the approximate location of the suspected former fuel oil access port observed in the 1993 photograph and immediately surrounding areas. Elevated field screening readings were detected in the soils collected from soil boring S2 starting at a depth of 7-9 feet below the surface. GEM found what appeared to be a UL listing tank tag and other debris (i.e. rags, paper and plastic) in the hand excavated soils at the location S3. The presence of these backfilled materials confirms past excavation work at this location that may be related to a previous tank removal. GEM concluded they did not encounter a UST beneath the site. Elevated field screenings and odors were observed at 7-9 ft, at a depth consisted with a tank grave for a small fuel oil UST. Evidence of possible former tank removal activities were observed. Based on the GEM report it appears the LUST at 207 25th St was previously removed by others. 7/2/18 - Obligado - After Project Review conference call with RSE Randall Austin and Kevin Hale, Chief of Spill Response and Coordination Section in Central Office on 6/26/18, it was determined that former LUST at 207 25th Street is a

MAP FINDINGS

DEC Memo:	<p>"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 04/27/05- Bureau B, unassigned, due to low priority. Transferred from R-2. 12/20/06- reassigned to Chris Milack, Central Office (Milack) 12/29/06- Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93-05122. (Milack) 5/24/07- GW investigation report was received 5/18/07. Two wells were sampled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue. 7/2/08 - Haggerty: assumed project management from Chris Milack 9/19/08 - Haggerty: approved SI workplan 11/25/08 - Haggerty: SI workplan altered due to the presence of oil-cooled high pressure gas mains along 24th Street. See email and revised figure in edocs 4/20/09 - Haggerty: approved SIR with the following comments: 1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol. 2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email. 3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed. 6/19/09 - Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow-up May 2010 - Due to various underground utilities, off-site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of</p>

MAP FINDINGS

EXXONMOBIL, 740 5TH AVENUE, BROOKLYN, NY (Continued)

delineation at this time. Discontinued EFT events due to poor recovery, really tight soil July 2010 - EM granted access to off-site location to complete delineation August 2010 - Offsite well well installed 8/3 February 2011 - offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On-site contamination predominately MTBE June 2011 - SSUR overdue July 2011 - reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss August 2011 - sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11) Sept. 2011 - approved Feasibility study work plan for SVE/AS January 2012 - EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb) February 2012 - discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data came in April 2012 - EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over-excavation is the only viable solution to source removal. EM states they won't remove the tanks because some were sold to the owner. PM needs assistance from OGC August 2012 - With OGC's involvement, EM has agreed to drill through the tanks which will only prove that EM is responsible for removing the tanks December 2012 - Wells in the former tank area should have been installed at this point but I was unable to confirm with the GES PM. January 2, 2012 - according to GES Project Manager, installation of tank field wells was delayed. Installation will begin 1/8/13 May 2013 - OGC and EM legal contacted regarding this site. The groundwater is grossly contaminated (80,000ppb of VOCs). Dept. required EM to excavate the source (old tanks and associated contaminated soil) but EM won't sign a Consent Order or perform the work. EM already performed an SVE/AS pilot test which failed. Now, EM wants to perform another SVE pilot test October 28 2013 - ExxonMobil has agreed to sign the Consent Order and remove the tanks and contaminated soil. Workplan due in 30 days December 2013 - PM sent comment letter to ExxonMobil. The work plan was revised and resubmitted. Currently under review January 6, 2014 - revised workplan approved April 2014 - Excavation work plan approved in

MAP FINDINGS

EXXONMOBIL, 740 5TH AVENUE, BROOKLYN, NY (Continued)

January but we are still waiting on the access agreement with the property owner September 2014 - Haggerty: excavation per the RAP complete January 2015 - Haggerty: post-excavation MWs installed. PM required 4 quarters of performance groundwater monitoring."

Remarks: "TANK-TEST FAILURE. ISOLATE, REPAIR, AND RE-TEST."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #130838: 4/10/00 1415hrs 3/4gal transformer oil from 138KV Transformer #2 radiator manifold from coupling onto wall of transformer and pad. 1 cup entering bluestone. 7/27/00 1425hrs To remedy spill, the coupling was encapsulated until repairs were to be made as of 4/00. Encapsulation has failed and 1/2 cup leaked onto diapers that were originally placed. Will refer to S/S to reapply encapsulation, remove existing oil stained pads and apply new. This transformer is scheduled to be replaced 9/00. Permanent repairs not to be made at this time. Email sent by ROlando Betancourt

MAP FINDINGS

CONSOLIDATED EDISON, 258 23RD ST, BROOKLYN, NY 11215 (Continued)

indicates that spill was cleaned up on 4/10/00 at 2000hrs.

Transformer was replaced."

Remarks: "caller reported 3/4 gallon spill to concrete pad. con ed #130838."

closure. Prior to Sept, 2004 data translation this spill Lead_DEC
Field was O'CONNELL 4/29/03 Substation inspected. Equipment was found
wrapped. Pending repairs. (KMF) 7/25/08: Spill submitted for closure
by Con Ed - no information given on engineering controls. Returned
for more info. (JHO) Con Ed e2mis #132576: 7/27/00 1420hrs While on
inspections found 4oz non-PCB oil had leaked onto bluestone from
transformer #1 main body return line flange. Diapers and socks
placed. 8/25/00 1330hrs Hardcopy documentation provided by Tom
Kennison indicates that spill was cleaned up by SSO MTCE on 7/27/00
at 2100hrs by removing/recovering liquids/solids and using absorbants
to remove residual fluids and excavating contaminated bluestone/soil.
4/25/00 Maximo #0000205498 will capture all repair work on main body
return line."

6. Income and Expenses

Owners of income-producing properties that have an actual assessed value of more than \$40,000 are required to file annual Real Property Income and Expense (RPIE) statements with the Department of Finance(DOF). The DOF uses the information from these statements, or data from comparables, to estimate the market value of a property for tax purposes.

Dev

1. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Area of lot in square feet		5,017
FAR	x	1.65
Maximum usable floor area of building	=	8,278

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		8,278
Usable floor area	-	4,315
Unused buildable square feet ("air rights")	=	3,963

Opportunity by parcel		Very little opportunity	
	Above 250.000 sqft		30.000 - 60.000 sqft
	100.000 - 250.000 sqft		10.000 - 30.000 sqft
	60.000 - 100.000 sqft		Below 10.000 sqft

Residential FAR	1.65
Commercial FAR	1
Facility FAR	2.4
FAR as built	0.86

2. Zoning

New York City is divided into three basic *zoning districts*: residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

R	Residential district		Rezoning project area (Proprietary)
C	Commercial district		Rezoning project area (Current)
M	Manufacturing district		Rezoning project area (Recent)
			Rezoning project area (Early)

This map was created from the NYC [Department of City Planning's](#) online zoning map files. It includes updates found in those files through 2/8/2017.

Zoning Designation

Manufacturing **M1-1D**

Rezoning Projects

We have no information to indicate that there is a rezoning planned.
For more information about zoning district regulations, click [here](#).

Manufacturing

M1-1D

Parcel Vicinity

Frontage(s) **4 Av (wide)**
24 St (wide)

M1 districts range from the Garment District in Manhattan and Port Morris in the Bronx with multistory lofts, to parts of Red Hook or College Point with one- or two-story warehouses characterized by loading bays. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. [More info](#)

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the [NYC Planning](#) official source.

3. Planimetric Map

This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.

- Sidewalk
- Curb
- Pavement edge
- Roadbed
- Median
- Retaining wall
- Plaza
- Swimming pool
- Building footprint
- Garage
- Sky bridge
- Under construction
- Piers/seawall
- Boardwalk
- Recreational area
- Park/greenstreets
- Transport structure

BIN	3009586
Type	Building
Status	Constructed
Roof height	29 ft
Ground elevation	37 ft

Neighborhood

1. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found [here](#).

* Building class: **Predominant Retail with Other Uses (K4)**

- | | |
|----------------------------|---|
| Residential, 1 fam | Transportation facilities |
| Residential, 2 fam | Industrial |
| Condos | |
| Walkups | Places of public assembly (indoor) & cultural |
| Elevator | Schools |
| | Churches |
| Store + apts, lofts | Health & social care |
| Theatres & hotels | City buildings |
| Businesses | Outdoor recreation facilities & cemeteries |
| Offices | |
| Residential and commercial | Vacant lots |
| Residential and industrial | Misc |
| Commercial and industrial | Unknown |

* Stories: 1

3. HPD Alternative Enforcement Program

The HPD Alternative Enforcement Program map is based on the current month's HPD violations in a building divided by the number of units in the building. It takes in consideration the open hazardous and immediately hazardous violations (I/B/C class) in the last 5 years.

Properties over the HPD-AEP threshold

- More than 600% over
- 300% to 600% over
- Up to 300% over

Properties below the HPD-AEP threshold

- 80% to 99%
- 60% to 80%
- 50% to 60%

HPD-AEP threshold for buildings having:

- 3 to 14 units = 5 violations/unit
- 15 units or more = 3 violations/unit

For more information, visit the [HPD website](#).

4. Neighborhood Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
8/10/2017	DEP	Sewer	Catch basin clogged/flooding (use comments) (SC)	The Department of Environmental Protection inspected your complaint and cleaned the catch basin or inlet. If the condition returns, please call 311 (or 212-639-9675 if calling from a non-New York City area code) to submit a new complaint.	8/11/2017

Created	Agency	Type	Descriptor	Disposition	Closed
5/1/2017	DOT	Street condition	Pothole	The Department of Transportation inspected this complaint and repaired the problem.	5/5/2017
5/6/2015	DOT	Street condition	Pothole	The Department of Transportation determined that this complaint is a duplicate of a previously filed complaint. The original complaint is being addressed.	5/6/2015
4/28/2015	DOT	Street condition	Pothole	The Department of Transportation inspected this complaint and repaired the problem.	5/9/2015
1/23/2015	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and determined that police action was not necessary.	1/23/2015
9/18/2014	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	9/21/2014
9/15/2014	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded and upon arrival those responsible for the condition were gone.	9/15/2014
7/31/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	8/1/2014
7/10/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and took action to fix the condition.	7/10/2014
7/8/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department reviewed your complaint and provided additional information below.	7/8/2014
6/30/2014	DPR	Dead tree	Dead/dying tree	The Department of Parks and Recreation inspected and determined the issue was out of its jurisdiction.	7/6/2014
6/27/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department issued a summons in response to the complaint.	6/27/2014
11/12/2012	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded to the complaint and determined that police action was not necessary.	11/12/2012

5. Distance to Schools

Elementary School Proximity

This map shows zoned Elementary School and other public and private schools available in the area, with exact distances from the subject property to the school of interest.

Risk

1. Toxic Sites

Get a Phase I environmental report Site Assessment or a Home Environmental Database Report for this property directly from [Toxics Targeting](#).

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

Call [800-2-TOXICS](#) (800-286-9427 NYS only) or [607-273-3391](#) for more info.

Toxic Sites on the Property

None reported.

Toxic Sites near the Property

Spill	2
Haz waste generator or transporter	7
Petroleum bulk storage	1
Total neighboring toxic sites	10

Leaking Tanks and Spills:

-  MTBE Spill
-  Tank Failure
-  Tank Test Failure
-  Spill greater than 25 gal/lbs
-  Gasoline Spill
-  Spill

Superfund, Brownfields and Solid Waste:

-  US Superfund Priority Site
-  NY Superfund Site
-  US Superfund /CERCLIS Site
-  Brownfield Site
-  Hazardous Substance Study
-  Solid Waste Facility

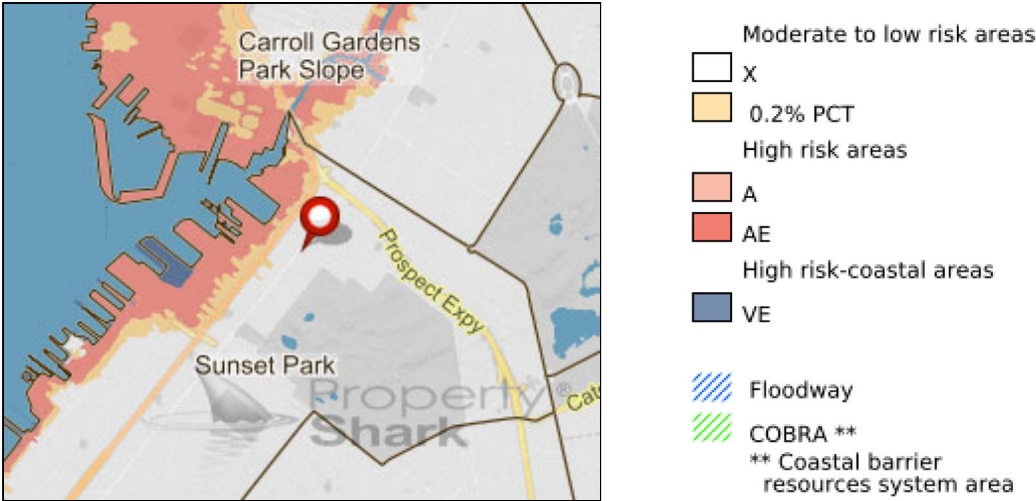

Other Toxic Sites:

-  NY Superfund Qualifying Site
-  Major Oil Storage Facility
-  Haz Waste Corrective Action
-  Has Waste Treatment/Storage /Disposal
-  Toxic Release Inventory Site
-  Legal Civil /Admin Docket
-  Hazardous Waste Violation
-  Air Discharge Facility
-  Historic Utility Site
-  Wastewater Discharge Site
-  Chemical Bulk Storage
-  Petroleum Bulk Storage
-  Haz Waste Generator or Transporter
-  Selected NYC Environmental Quality Review 'E' Designation

Map Disclaimer: Mapped locations are approximate; sites are identified based on current and/or historic information. Regulatory status of sites may have changed. Site symbols can refer to large properties, additional toxic sites are not mapped. Contamination problems can impact properties far

2. FEMA Flood Zones

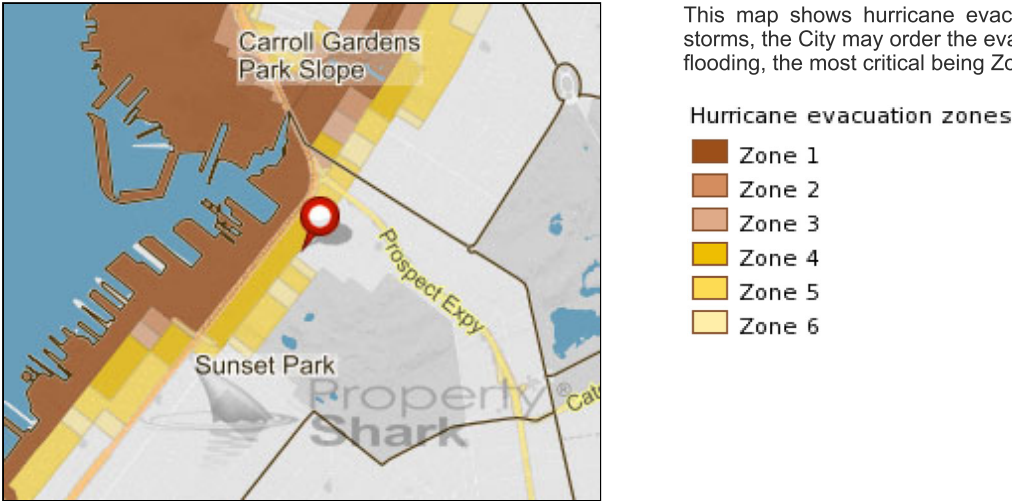

Use this map to determine if the property is in a flood zone.

Link to the map for this property at [FEMA's Map Service Center](#) (may not be available in all locations).

FEMA Flood Zoning		Distance to...	
FEMA flood zone(s)	X	Nearest distance to coastline (miles)	0.243
Coastal barrier resources system area (COBRA)	Out	Compass direction to coastline	141
Floodway	Out	Nearest distance to 100 year flood zone area (ft)	340
FEMA special flood hazard area	Out	Angle100	359
Map panel ID	3604970211G		
Map quaderant ID	40073-F8		

3. Hurricane Evacuation Zones

This map shows hurricane evacuation zones. In the case of coastal storms, the City may order the evacuation of neighborhoods in danger of flooding, the most critical being Zone 1.

Taxes

1. Tax Bill

Property tax bill for 7/1/2018 to 6/30/2019	\$39,421
---	----------

The tax bill is calculated based on the transitional assessed value of the property. If no changes are made to the way NYC computes property taxes, we estimate that the current assessed value will increase by approximately 20% per year until it reaches the maximum assessed value of **\$487,350**.

2. Key Values in Calculating the Bill

Tax class	4
Market value	\$1,083,000
Assessed value	\$487,350
Transitional assessed value	\$374,940
Exemption value	\$0
Tax abatements	\$0

3. Assessment Reductions & Open Petitions

New York City's Tax Commission is responsible for reviewing and determining the annual applications for corrections of assessments. Owners and other parties with legal interest can claim that they are incorrectly assessed or improperly denied an exemption from real property tax. There are four types of assessment claims subject to review and corrective action: excessive assessment, misclassification, unequal assessment and unlawful assessment. More information can be found on New York City [Tax Commission](#) website.

Open Petitions

If relief from tax commission is not obtained, the owner or other party with legal interest can file a petition with the New York State Supreme Court to keep the appeal open for further review. The information shown here represents only open petitions. The ones that are invalid or abandoned are closed.

Petition year	Petition Index	Petitioner	Attorney	Code description
2017	407486	731 4th Ave LLC	Martha Stark Esq.	
2014	403327	731 4th Ave LLC	Goldberg & Iryami, P.C.	
2013	406050	128 Merrick Realty LLC	Goldberg & Iryami, P.C.	Fifth-year extension under RPTL §718 agreed to with the Law Department

4. Property Tax Calculation

Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market values* that the City Assessor is almost always substantially lower.

For this property the City Assessor has assigned this market value:

Land market value		\$226,000
Building market value	+	\$857,000
Market value	=	\$1,083,000

Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

Market value		\$1,083,000
Assessment ratio	x	45%
Maximum assessed value	=	\$487,350

Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

Transitional value		\$374,940
Transitional exemption value	-	\$0
Transitional net assessed value	=	\$374,940

Taxable Value

The *taxable value*, for 2018/2019, is the smaller of the city's *maximum assessed value* and the *transitional net assessed value*.

Taxable value	=	\$374,940
---------------	---	-----------

Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the *tax rate*.

The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value	Tax rate as billed June 2018	Tax bill
Current tax	\$374,940	x 10.5140%	= \$39,421
Total abatements			- \$0
Property tax as billed June 2018			= \$39,421

After issuing the final tax assessment and issuing first quarter tax bills, the city typically adjusts the tax rate. This results in an adjustment to the property tax.

Tax description	Billable value	Final tax rate 18/19	Tax bill
Current tax	\$374,940	x 10.5140%	= \$39,421
Total abatements			- \$0
Property tax with final tax rate			= \$39,421

Property tax with final tax rate		\$39,421
Property tax as billed June 2018	-	\$39,421
Property tax adjustment	=	\$0

For more information, you can view this property's assessment, tax bill, and account statements by clicking [here](#) and entering the Borough, Block, & Lot.

5. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the [J-51 Program](#), [421a Program](#) and the [Cooperative and Condominium program](#).

We believe that no exemptions or abatements currently apply to this property.

6. Assessment History

Year	Building class	Market value	Assessed value	Taxable	Tax rate%	Base tax	Property tax
2018/19	K4	\$1,083,000	\$487,350	\$374,940	10.514%	\$39,421	\$39,421

Violations

1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified [here](#).

2. Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
10/25/2018	NYPD	Noise - commercial	Loud music/party	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	10/25/2018
8/9/2017	DEP	Industrial waste	Chemical spill (iac)		
5/24/2016	DCA	Consumer complaint	Overcharge	The Department of Consumer Affairs mailed you a complaint form. If you received the form and have not yet completed it, please do so. Be sure to follow the instructions on the form and return it to DCA with all required documentation. 311 can assist those who have not received the complaint form by creating a new Service Request. Additionally, 311 can assist those who returned the form but want to inquire about the status of the filed complaint.	6/9/2016
1/14/2016	DEP	Noise	Noise: alarms (NR3)	The Department of Environmental Protection did not observe a violation of the New York City Air/Noise Code at the time of inspection and could not issue a notice of violation. If the problem still exists, please call 311 and file a new complaint. If you are outside of New York City, please call (212) NEW-YORK (212-639-9675).	1/22/2016
12/14/2015	DOHMH	Food establishment	Food contaminated	The Department of Health and Mental Hygiene has sent official written notification to the Owner/Landlord warning them of potential violations and instructing them to correct the situation. If the situation persists 21 days after your initial complaint, please make a new complaint.	2/13/2016
8/14/2015	DCA	Consumer complaint	Billing dispute	The complaint was withdrawn per the customer's request.	8/18/2015
7/3/2015	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs is scheduling an inspection which will take place within 35 days. Please do not file duplicate complaints or call to check results during this time. After 35 days, call 311 with your Service Request Number and ask for Service Request Status - DCA.	7/7/2015
9/15/2014	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs is scheduling an inspection which will take place within 35 days. Please do not file duplicate complaints or call to check results during this time. After 35 days, call 311 with your Service Request Number and ask for Service Request Status - DCA.	9/17/2014

Created	Agency	Type	Descriptor	Disposition	Closed
8/25/2014	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs is scheduling an inspection which will take place within 35 days. Please do not file duplicate complaints or call to check results during this time. After 35 days, call 311 with your Service Request Number and ask for Service Request Status - DCA.	8/28/2014
5/22/2013	NYPD	Noise - commercial	Banging/pounding	The Police Department responded to the complaint and determined that police action was not necessary.	5/22/2013
5/14/2012	NYPD	Derelict vehicle	With license plate	The Police Department responded and upon arrival those responsible for the condition were gone.	5/14/2012
4/7/2011	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs inspected the business you named in your Service Request. To check results, call 311 with your Service Request Number and ask for Service Request Status - DCA.	7/13/2011

3. DOB Complaints

Date entered	Complaint	Complaint category	Disposition	Inspection
9/20/2016	3574825	Permit - none (building/PA/demo etc.)	No violation warranted for complaint at time of inspection	1/25/2017

Complaint status can be verified [here](#).

Subject: FOIL Request :: W046110-122718

Dear Jennifer:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/27/2018 and given the reference number FOIL #W046110-122718 for tracking purposes. You may expect the Department's response to your request no later than **1/28/2019**.

Record Requested: **Any information pertaining to environmental records, easements, chemical storage, oil tanks, permits, etc at the property located at 731 4th Avenue, Brooklyn, NY (aka 250-260 24th Street, Brooklyn). A search of the Spills, PBS, and Site Remediation databases did not identify known records.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1

EXECUTIVE SUMMARY

CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

MOORE MCCORMACK BUIL EPA ID:: NYR000147249	740 3RD AVE	NW 1/8 - 1/4 (0.166 mi.)	T171	372

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/13/2019 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 04/02/2019 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/13/2019 has revealed that there are 27 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 6 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/13/2019 has revealed that there are 28 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 84 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 03/07/2019 has revealed that there are 2 FUDS sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EPA Id: NYP004725917

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
USPS GOWANUS SITE. F	2ND AVENUE AND 12TH	N 1/2 - 1 (0.691 mi.)	306	712

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 11/18/99 12:10 Spoke to Tasha at DEP She indicated that a sewer manhole blew at 10:57 11/18/99 12:15 Albert Gorden from DEP called. The FDNY responded and took readings. By the time the city got there, there were no more obvious vapors in the manhole and they weren't getting any hits on the LEL meter. They are attributing the incident to a one-time dumping and are inspecting area service stations. They do not feel it is associated with the DEC PIN job. 11/18/99 12:17 Attempted to call Kieth Williams (DEP who inspected site) on his cell phone 917-769-0859. 2/13/2003 - Austin, As per directive to closeout spills with no recent history, closed out."
Remarks: "caller reporting a high level of hydrocarbons in the above manhole which lead to manhole blowing caller was unsure who the responsible spiller was and states that dec maybe monitoring this location "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 494958
DEC Memo: "2/16/17 - Obligado - As part of an off-site investigation into 4th and 25th Spill cases #9305122, I conducted a complete file review and identified a tank test failure report for 207 25th street. According to the file, this site had a 550 gallon #2 diesel UST which failed a tightness test on 9/10/1993. As a result of this file review, the DEC under PIN # 93256 conducted a subsurface investigation around the former suspected tank with the current owner's permission. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil and groundwater contamination was identified in all 4 soil borings. Contamination was found as shallow as 8 ft bgs. The soil data and groundwater confirm that the 1993 tank test failure resulted in a petroleum discharge to soil and groundwater. 3/21/17 - Obligado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impacted area and the volume of free product observed in the wells over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/5/17 - Obligado - I spoke with Sandi Fung. I provided her a list of tank contractors and the tank closure document from 1994. 5/19/17 - Obligado - Tom Gallanger, GEM (914) 382 8673. He has been hired by Sandi Fung to investigate the tank. 6/12/17 - Obligado - I got an email from Sandi requesting additional time to due the investigation as her contractor was not responsive. I told her that was fine. 8/21/17 - Obligado - I reviewed the UST Investigation Findings submitted by Gallinger Environmental on behalf of PSJC LLC. GEM installed three soil borings in the utility closet, using a jackhammer, shovel, and portable electroc hammer driven Geoprobe Soil sampler. The soil borings were targeted in the approximate location of the suspected former fuel oil access port observed in the 1993

207 25TH STREET (Continued)

S120702900

photograph and immediately surrounding areas. Elevated field screening readings were detected in the soils collected from soil boring S2 starting at a depth of 7-9 feet below the surface. GEM found what appeared to be a UL listing tank tag and other debris (i.e. rags, paper and plastic) in the hand excavated soils at the location S3. The presence of these backfilled materials confirms past excavation work at this location that may be related to a previous tank removal. GEM concluded they did not encounter a UST beneath the site. Elevated field screenings and odors were observed at 7-9 ft, at a depth consisted with a tank grave for a small fuel oil UST. Evidence of possible former tank removal activities were observed. Based on the GEM report it appears the LUST at 207 25th St was previously removed by others. 7/2/18 - Obligado - After Project Review conference call with RSE Randall Austin and Kevin Hale, Chief of Spill Response and Coordination Section in Central Office on 6/26/18, it was determined that former LUST at 207 25th Street is a more likely source for the oil observed in the 4th and 25th Street Site monitoring wells. As such PIN #07960 has been opened and O&M activities will continue under this PIN/Spill number. Call out number 134930 has been issued to EAR. 1/28/19 - Obligado - I sent a letter of responsibility to Phong Kinh Hua and a Stipulation Agreement for signature within 30 days. CC to Robinson & Associates, P.C., Sandi Fung, and OAG. 4/30/19 - Obligado - Stipulation Agreement has been received on 4/12/19 and executed on 4/29/19."

Remarks:

"Subsurface investigation identified soil and groundwater contamination."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 8/00 transferred from tomasello to tippie see also 9108033, 9313792, 9505109, 9705158, 9814652. MCT 2/19/2002 Tipple found this spill inadvertantly closed out in this database today and immediately re-opened it. This is currently one of the region's most active remediations today. 8/23/05 - Raphael Ketani. Case transferred to Jeff Vought. 09/02/2005 - Transferred to Mark Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 9/29/11 - Raphael Ketani. Case transferred from O'Connell to Ketani. 12/21/11 - Raphael Ketani. I reactivated the spill/PIN case. There are 5 other associated cases, but only #9108033 has any documentation. All of these cases have been closed and referred back to this one. There are 3 full file draws with documentation. However, very little of it has been e-doc'd. The case started when oil (diesel fuel) was found to be dripping onto the R Line subway platform under 4th Avenue and between 25th Street and 26th Street, Brooklyn. The oil had also drained from the platform and onto the tracks. The DEC was notified by the NYCTA about the spill. The FDNY responded and put down absorbent sand. The date of the spill is 7/19/93. However, it wasn't called in until 7/24/93. A fingerprint analysis indicated that the oil was a mix of weathered diesel and/or #2 oil between 10 and 15 years old. The pool of oil was initially estimated to be greater than 100,000 gals. and was mostly being held in place by the subway wall. However, subsequent DEC contractors have indicated that the oil pool is much smaller. The recovery system was extensively damaged during the construction of the Dunkin Donuts. Mobile Hi-Vacs were used to collect the oil. Bright red #2 oil was

PACIFIC BRANCH (Continued)

U001839490

detected entering the pool of oil from upgradient. So it is believed that there is an ongoing source of unknown origin. Recent excavation beneath the surface of the site revealed that the soil is free of diesel with only minor gasoline contamination. The sources of the #2 oil may be a warehouse that is directly upgradient or other locations. A knee wall was installed on the subway platform to catch the seepage, but is sometimes overwhelmed during rain events. The source was eventually traced to the Eagle Service Station at 737 4th Avenue, Brooklyn, 11232. The site is owned by Ralph and Susan Guarino. Mr. Guarino bought the property during 1987. Though the new tanks that were installed by Mr. Guarino were not believed to be the source. The source was believed to be the old diesel tanks that were in existence when MOBIL owned the site up until 1987. Initially, Mr. Guarino was cooperative with the DEC contractors regarding the spill investigation. According to an August 5, 2001 NY Daily News article, Ralph and Susan Guarino were determined to be the responsible parties. Mr. Guarino was an FBI informant. He twice turned off the recovery system, which resulted in diesel leaking onto the platform. He threatened to pour concrete down the monitoring wells and for 8 months prevented remediation staff from coming onto his property to do their work. Eventually in 1999, the Attorney General went to court to get an emergency injunction against Mr. Guarino to prevent him from interfering. In 1999, Mr. Guarino agreed to let the remediation staff onto his property. The gas station was demolished and the site is now a Dunkin Donuts. According to the September 26, 2001 Second Demand Letter, Susan Guarino (128 Maitland Avenue, Altamonte Springs, FL, 32701-4902) is being held liable by the AG's office for \$1,924,150.68. Though, \$2,121,183 had been spent on the project by the DEC up to 2002. One of the previous DEC case managers, Mark Tibbe, sent me an e-mail regarding the history of the spill case. He wrote that nothing significant happened between 2001 and 2011. The DEC contractors were monitoring and bailing wells because the recovery system wasn't working. It was too old to repair and replacing it was too expensive. The subway was being monitored to make sure that product wasn't showing up. In the early 2000s there wasn't much product, but it showed up again. It was believed that the former service station was the primary source and that there was a fresh source of #2 oil. Later, I found the latest site report. It was written by Environmental Assessment and Remediations. The report was dated August 18, 2006 and covered the period from January 2006 to June 2006. Groundwater was generally found at 22 feet below grade. It was believed that the subway tunnel was affecting groundwater flow. The groundwater was moving through a layer of glacial till and outwash sediments. The outwash sediments contained sand and gravel. Discontinuous thin clay lenses were also present. During 2001, several wells showed increasing amounts of product. On 4/24/01, red oil appeared in well MW10A. Wells MW82, MW90, MW32B, and MW13A also had red oil at this time. At this time, MW9 showed signs of dark oil with sludge. There were several oil tanks in the neighborhood. The tank at 220 25th Street was a 2,500 gal. #2 oil UST. The system was tested and found to be sound. The property at 225 25th Street had a 10,000 gal. #6 oil AST. One private building at 228 25th Street had a 275 gal. oil tank, but nothing else was known. There was a 1,000 gal. UST at 217 25th Street, directly upgradient from the site, but it was never investigated. From 2002 and 2004, EAR continued to maintain the remediation system. In 2004, EAR received permission from the DEC to abandon 17 wells that weren't providing useful data. The wells were

PACIFIC BRANCH (Continued)

U001839490

abandoned from April to June of 2004. Throughout 2005, EAR continued to maintain the remediation system. During August 2005, renovations were made to the subway oil containment system. Weekly visits were made and spent absorbent was removed and replaced. The wells continued to be monitored on a weekly basis. On April 20, 2006, the recovery system was shut down to see how much product would appear. The recovery system remained off during the reporting period. Wells MW9, MW10, MW13, MW13A, MW23, MW23A, MW31, MW32B and MW82 showed a rebound of product. From January to April, a total of 26.99 gals. of liquids were recovered from all of the wells during. Product thickness on 6/22/06 was much less than 1 foot in the wells that were exhibiting oil. 12/22/11 - Raphael Ketani. Today I spoke to Dave Lorthioir of EnviroTrac (631) 924-3001, the DEC's consultant, regarding the project. He said that they have been monitoring and bailing wells on a weekly basis. However, they only deal with the wells in and immediately around the site. The water table is high right now and they haven't seen any product. However, in the spring of 2011, there had been a good amount of product. Before EnviroTrac took over the project a few years ago, they spoke to the previous DEC consultants. These consultants told them that there hadn't been any oil in the subway for some time. Mr. Lorthioir said that EnviroTrac hadn't seen oil in the subway, either. A report will be sent to the DEC soon. Later, Mr. Lorthioir sent me the 2011 groundwater monitoring data tables. Very few of the wells had shows of oil. Wells MW-8, MW-8A, MW-9 and MW-31 all had periods of from 2 to 7 consecutive months during which there were weekly shows of oil during 2011. A small number of other wells had sporadic shows of oil consisting of about several weeks during which oil was seen, but the weeks were not consecutive. Wells MW-8, MW-8A, MW-9 and MW-31 are all in the southern corner of the Dunkin Donuts property. MW-9 is directly over a rectangular figure in the well location diagram. Wells MW-40 and MW-41 were abandoned earlier. According to the case notes, seventeen wells were abandoned some time ago. Mr. Lorthioir also included a DRAFT 10/29/10 Status Report for the site. The report covered the years 2009 to 2010. I reviewed the report. The data inside indicated that the same wells that had oil in 2011 had oil during 2009 and 2010. There were also some other wells that had oil shows in and around the Dunkin Donuts store. 1/4/12 - Raphael Ketani. I received CAP 31 for EnviroTrac. The bill is DC2023.01-32 for the period 10/31/11 to 11/27/11. The date of the invoice is 12/13/11. The work consisted of project management, project coordination, generate internal work order, revise internal work order, prepare for monitoring event, travel to and from site, calls to technician at site, gauge 36 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiell by e-mail. 1/30/12 - Raphael Ketani. I received CAP 32 for EnviroTrac. The bill is DC2023.01-33 for the period 11/28/11 to 1/1/12. The date of the invoice is 1/16/12. The work consisted of project management, review data from last monitoring event, generate internal work order, revise internal work order, prepare for monitoring event, project management communication with DEC, calls to technician at site, decontaminate equipment, gauge 34 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, travel to and from site, purchase supplies. I found the pay package to be acceptable and notified Steve

Karwiel by e-mail. 2/21/12 - Raphael Ketani. I received CAP 33 for EnviroTrac. The bill is DC2023.01-34 for the period 1/2/11 to 1/29/12. The date of the invoice is 2/13/12. The work consisted of project management and coordination, prepare internal work order, do budget projections, project management communication with DEC, travel to and from site, calls to technician at site, well gauging and product recovery, tabulate gauging data from December 30, 2011 field activities, review and tabulate gauging and product recovery data from field activities during January 12, 2012, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 4/10/12 - Raphael Ketani. I received CAP 35 for EnviroTrac. The bill is DC2023.01-35 for the period 2/1/12 to 2/26/12. The date of the invoice is 3/15/12. The work consisted of project coordination. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 7/26/12 - Raphael Ketani. I received a request to abandon 16 wells at the site. I asked Mr. Lorthioir where the oil had appeared and what it had looked like. He said that it was NOT red oil, but looked weathered. He added that the oil sometimes appears in well MW-46, in the alleyway behind 753 4th Avenue. This is across the street and to the south (side gradient) of the site. Mr. Lorthioir said that it is hard to get to this well as the alleyway is usually locked and so he hadn't been back in a long time. Getting in involves getting ahold of the owner, which is difficult. One time he went through the back of a store in order to get to the well. 8/8/12 - Raphael Ketani. I sent an e-mail to Sandy Camacho of the NYFD requesting his help in finding any oil tanks at 751, 753 and 755 4th Avenue, and at 204, 214-216 and 220 25th Street. 10/1/12 - Raphael Ketani. I received CAP 41 for EnviroTrac. The bill is DC2023.01-36 for the period 7/30/12 to 8/26/12. The date of the invoice is 9/13/12. The work consisted of project management, produce work order, create monitoring schedule, review results of site inspection, obtain DOT permits for well abandonment, gauge wells, replace socks, product recovery, travel to and from site, use of low value equipment, sonic interface probe and light duty vehicles, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 10/25/12 - Raphael Ketani. I received CAP 42 for EnviroTrac. The bill is DC2023.01-37 for the period 8/27/12 to 9/30/12. The date of the invoice is 10/12/12. The work consisted of project management, calls to technician in the field, produce work order, review results of site inspection, compile and review data, gauge 37 wells, 1 well product recovery, hand bail wells as required, travel to and from site, use of low value equipment, sonic interface probe and light duty vehicles, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 11/29/12 - Raphael Ketani. I received CAP 43 for EnviroTrac. The bill is DC2023.01-38 for the period 10/1/12 to 10/28/12. The date of the invoice is 11/15/12. The work consisted of project management, prepare work order, obtain NYC DOT permits, prepare for well abandonment, travel to and from site, well gauging, product recovery, review and tabulate gauging and product recovery data, review latest monitoring data, abandon 11 wells, sidewalk restoration, calls to crew at site, use of light and heavy duty vehicles, low value equipment, sonic interface probe, generator, jack hammer, concrete cutter, concrete mixer and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 12/24/12 - Raphael Ketani. I received CAP 44 for EnviroTrac. The bill is

DC2023.01-39 for the period 10/29/12 to 11/25/12. The date of the invoice is 12/11/12. The work consisted of project management, project coordination, tabulation of gauging data, review latest data from monitoring event, travel to and from site, well gauging, product recovery, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 1/22/13 - Raphael Ketani. I received CAP 45 for EnviroTrac. The bill is DC2023.01-40 for the period 11/26/12 to 12/30/12. The date of the invoice is 1/14/13. The work consisted of project management, project coordination for upcoming activities, work order, generate internal work order, call to technician in the field, tabulation of gauging and product recovery data, review latest data from monitoring event, generate internal report, travel to and from site, gauging of 36 wells, product recovery from 3 wells, replaced 7 absorbent socks, use of light duty vehicle, low value equipment and sonic interface probe, and subcontractors and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 2/27/13 - Raphael Ketani. I received CAP 46 for EnviroTrac. The bill is DC2023.01-41 for the period 12/31/12 to 1/31/13. The date of the invoice is 2/11/13. The work consisted of project management, call to technician in the field, well gauging and product recovery, tabulation of gauging and product recovery data, review latest data and data from last 3 monitoring events, generate internal work order, travel to and from site, gauging of 34 wells, product recovery from 2 wells, replaced 6 absorbent socks, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 3/22/13 - Raphael Ketani. I received CAP 47 for EnviroTrac. The bill is DC2023.01-42 for the period 2/1/13 to 2/24/13. The date of the invoice is 3/13/13. The work consisted of project management, prepare internal work order, calls to technician in the field, well gauging and product recovery, calls regarding full drums, calculate product thickness for wells during 2011 and 2012, review and tabulate gauging and product recovery data, review 2011 and 2012 data, edit and prepare site map, generate internal work order, load vehicle, travel to and from site, gauging of 37 wells, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/1/13 - Raphael Ketani. I received CAP 48 for EnviroTrac. The bill is DC2023.01-43 for the period 2/25/13 to 3/31/13. The date of the invoice is 4/15/13. The work consisted of project management, generate internal work order, well gauging, bailing wells, install socks, calls to technician in the field, review and tabulate gauging and product recovery data, respond to emergency call - leaking drum enclosure, calls for removal of drums, load vehicle, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/23/13 - Raphael Ketani. I received CAP 49 for EnviroTrac. The bill is DC2023.01-44 for the period 4/1/13 to 4/28/13. The date of the invoice is 5/14/13. The work consisted of project management, generate internal work order, gauged 33 wells, bailed product from 3 wells, calls to technician in the field, calls to manager of Dunkin Donuts regarding possible garbage issue at the site, calls regarding drum removal, review and tabulate gauging and product recovery data, travel to and from site, use of light duty

vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 6/27/13 - Raphael Ketani. I received CAP 50 for EnviroTrac. The bill is DC2023.01-45 for the period 4/29/13 to 5/26/13. The date of the invoice is 5/26/13. The work consisted of project management, generate internal work order, gauged wells, bailed product from wells, calls to technician in the field, call to Dunkin Donuts tenant, review and tabulate gauging and product recovery data, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, use of AARCO Environmental subcontractor for product collection services, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 7/29/13 - Raphael Ketani. I received CAP 51 for EnviroTrac. The bill is DC2023.01-46 for the period 5/27/13 to 6/30/13. The date of the invoice is 7/15/13. The work consisted of project management, generate internal work order, gauged 33 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, PID meter, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 8/29/13 - Raphael Ketani. I received CAP 52 for EnviroTrac. The bill is DC2023.01-47 for the period 7/1/13 to 7/28/13. The date of the invoice is 8/14/13. The work consisted of project management, generate internal work order, gauged 37 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 10/2/13 - Raphael Ketani. I received CAP 53 for EnviroTrac. The bill is DC2023.01-48 for the period 7/29/13 to 8/25/13. The date of the invoice is 9/13/13. The work consisted of project management, generate internal work order, gauged 39 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 10/28/13 - Raphael Ketani. I received CAP 54 for EnviroTrac. The bill is DC2023.01-49 for the period 8/26/13 to 9/29/13. The date of the invoice is 10/14/13. The work consisted of project management, generate internal work order, gauged 37 wells, bailed product from 3 wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 12/4/13 - Raphael Ketani. I received CAP 55 for EnviroTrac. The bill is DC2023.01-50 for the period 9/30/13 to 10/27/13. The date of the invoice is 11/12/13. The work consisted of project management, generate internal work order, gauged 34 wells, bailed product from 1 well, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 12/19/13 - Raphael Ketani. Mr. Lorthioir sent me two pictures of the cover for well MW-87. The cover had been damaged during the snow plowing of the Dunkin Donuts property. He wrote that

PACIFIC BRANCH (Continued)

U001839490

he would like to fill in the void below ground which used to house equipment for the recovery system and then replace the large well cover with a small round one. I responded back that he should do this. 1/6/14 - Raphael Ketani. I received CAP 56 for EnviroTrac. The bill is DC2023.01-51 for the period 10/28/13 to 11/24/13. The date of the invoice is 12/13/13. The work consisted of project management, generate internal work order, gauged wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, call to landlord, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 1/17/14 - Raphael Ketani. Donna Amoscato of EnviroTrac sent an e-mail with pictures describing and showing a leaking drum. Speedi Dri was applied to the liquid (combination of water and product) which leaked in the drum storage area and which had spread to the sidewalk outside. Ms. Amoscato wrote that the spill was contained. Two pictures show Speedi Dri on the ground. The drum had leaked because it had become frozen. In the future, Ms. Amoscato wrote, the drums will be removed during the winter months. Some of the liquid had entered a vault nearby. I sent an e-mail to Ms. Amoscato stating that the vault had to be opened if it is not a Con Ed vault and cleaned out. If it is a Con Ed vault, then Con Ed must be notified about the incident. 2/4/14 - Raphael Ketani. I received CAP 57 for EnviroTrac. The bill is DC2023.01-52 for the period 11/25/13 to 12/29/13. The date of the invoice is 1/15/14. The work consisted of project management, generate internal work order for monitoring event, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, call to landlord, arrangements for repair of well cover, installed new well pad, cleaned up containment area, use of light duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 2/11/14 - Raphael Ketani. I reviewed the EnviroTrac Project Status Report dated 2/10/14 for the year 2013. During 2013, the product impacts to the wells were as follows: MW-8A - product during all but 3 weekly visits; product thickness from 0.02' to 1.31'; MOST IMPACTED well of the monitoring array MW-8 - product during all but 11 weekly visits; product thickness 0.01' to 0.41' MW-9 - product during 9 visits; 0.01' to 0.07' MW-10A - product during 11 visits; 0.01' to 0.07' MW-31 - product during 11 visits; 0.01' to 0.65' MW-6A - product during 6 visits; 0.01' to 0.47' MW-46 - product during 2 visits (due to locked gate); 0.08' to 0.09' MW-82 - product during 1 visit; 0.02' The other 29 wells never had product and MW-15 was always dry during the year. During 2013, gauging took place at 37 select wells. Wells MW-8A, MW-8 and MW-9 are located a little east of 4th Avenue and along the northern sidewalk for 25th Street. They are the main area for the occurrence of product. EnviroTrac recommends a trial period for EFRing wells MW-8A, MW-8 and MW-9. There would be EFR events every other week for 2 months (a total of 4 events). Then the wells would be gauged for the following 2 months and the data would be evaluated to see whether EFRing is effective in removing the product. Weekly gauging and product removal would continue for the other select wells. 3/4/14 - Raphael Ketani. I received CAP 58 for EnviroTrac. The bill is DC2023.01-53 for the period 12/30/13 to 1/31/14. The date of the invoice is 2/11/14. The work consisted of project management,

U001839490

project coordination, generate internal work order, gauged 33 wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, update CADD figures, draft 2013 summary letter, draft portions of 2013 Annual Report, travel to and from site, calls to field staff at site, call to landlord, e-mail to DEC and upload pictures, cleaned up containment area, use of light duty vehicle, use of heavy duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 3/26/14 - Raphael Ketani. I received CAP 59 for EnviroTrac. The bill is DC2023.01-54 for the period 2/1/14 to 2/28/14. The date of the invoice is 3/13/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, complete 2013 Annual Report and submit for internal review, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/5/14 - Raphael Ketani. I received CAP 60 for EnviroTrac. The bill is DC2023.01-55 for the period 3/1/14 to 3/31/14. The date of the invoice is 4/17/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 5/21/14 - Raphael Ketani. I received an e-mail from Mr. Lorthioir regarding the sudden increase in the thickness of product in well MW-31. Mr. Lorthioir wrote: The attached scan has three items. The first is a hydrograph showing product thickness in well MW-31 for 2013, the second for 2014 (to date). The last is a site plan showing the location of MW-31 and general groundwater flow direction. There was not much product observed in MW-31 in 2013. Only intermittently at the beginning of the year and a small amount (0.2 feet) in October. Since the beginning of 2014, however, and has twice been observed to be 10 inches or thicker. This re-appearance of product in MW-31 is what lead EnviroTrac to request the performance of EFR at the site. It is too early to tell if the EFR events have had the desired effect. If you look at the site plan, you can see that MW-31 is located in a slightly upgradient part of the site. The other wells which have been exhibiting product are MW-8, MW-8A and MW-9. These wells are all located in the sidewalk along 25th Street. These wells, especially MW-8 and MW-8A, have been exhibiting varying amounts of product for the last several years. Wells MW-8, 8A and 9 were located near the former tank locations and, given this, I can understand why they might still exhibit product. But MW-31 is farther away from the former tanks and there was no product observed for quite a while. I know a rising and falling groundwater table can cause the re-appearance of free product, but to go from no product to over 10 inches is, in my opinion, fairly extreme. Also of note, the change in water table elevation has not caused the re-appearance of free product in any of the wells near MW-31. Some of these wells are less

PACIFIC BRANCH (Continued)

U001839490

than 10 feet away and they should, in my opinion, also be exhibiting free product. My concern is that there could be another site impacting upon the Dunkin Donuts property. I am proposing that we collect product samples from MW-31 and MW-8 and have them analyzed for composition and age. We have been monitoring the upgradient wells on the street (MW-10, 10A and 11), and no product has been observed in them. The possibility exists, however, that petroleum is entering the site from underneath the building adjacent to the site, where there are no upgradient wells. 5/23/14 - Raphael Ketani. Mr. Lorthioir sent me an e-mail today. He stated that well VEFRing is taking place today. He remarked that well MW-31 had been free of product most of the year. So, it was surprising that 10 inches of product should suddenly appear. However, MW-8 (next to the subject well) has also often had some product. So Mr. Lorthioir does not believe this is a dumping incident. He added that his staff will knock on doors in order to find out whether someone has a fuel system problem nearby. 6/5/14 - Raphael Ketani. I received CAP 61 for EnviroTrac. The bill is DC2023.01-56 for the period 4/1/14 to 4/27/14. The date of the invoice is 5/13/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, VEFR product from wells, review and tabulate gauging and product recovery data, create data tables and enter data into them, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies, contracting with Metro Environmental Contracting for providing a vacuum truck for VEFRing the wells. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 6/10/14 - Raphael Ketani. Mr. Lorthioir called again (631) 924-3001. He said that they checked the wells last week that had shown the presence of product and found thick product again in some of the wells. The product was bailed. Mr. Lorthioir commented that he wanted to do two things to help resolve the sudden appearance of the product. One is to contact Mr. Comacho from the NYFD and find out whether the commercial facilities next door have or had fuel oil tanks. The other is to do Kryzinski tests on the wells with product in order to find out how thick the product may be outside the well bores. This test involves bailing out the product from a well and then measuring it every 30 seconds or so to see how fast it comes back. The results are put into a formula and the outside the well thickness measurement is generated. I told Mr. Lorthioir to go ahead with both tasks. Later, Mr. Lorthioir sent me an e-mail as a carbon copy. The e-mail was addressed to Mr. Camacho of the NYFD and asked for his assistance in locating any fuel oil tanks that may be in buildings next to the site. 6/12/14 - Raphael Ketani. Mr. Camacho responded to Mr. Lorthioir by e-mail with a list of other places that have tanks near the site. Later, Mr. Lorthioir sent me an e-mail with an attached map highlighting the addresses that Mr. Camacho had included in his list. The highlighted map showed a location at 209 25th Street which was only two properties upgradient from the site. Mr. Lorthioir stated that he thought this property may be the source of the newly appeared product in well MW-31 and the others. 6/13/14 - Raphael Ketani. I researched the following properties that are on 25th Street via the Spills database in order to see whether they had or do have spills: 207; 209; 217; 220; and 225. None of these properties appeared in the Spills database. So, all I could assume was that they never had a spill or that they had a spill, but it was unknown to the DEC. Next, I checked

U001839490

the PBS database. The location of 207 25th Street was not listed. As it was not listed on Mr. Camacho's list as ever having had a tank, I assumed that there was little likelihood of a spill coming from this location. I found that the tanks for the locations 220 and 225 25th Street were both registered in the PBS database. However, the tanks at the locations 209 and 217 25th Street had never been registered. I sent an e-mail to Mr. Lorthioir stating that the DEC will knock on doors and see what we can find out about the tank systems at the unregistered properties. Presently, 209 and 217 25th Street are in violation of the PBS regulations. I let Lezsek Zielinski, EE II and head of the PBS Unit, know about the unregistered tanks. He said that he will send someone out to inspect the properties in the very near future. 6/19/14 - Raphael Ketani. I spoke with Mr. Zielinski today. He stated that yesterday he had inspected the four facilities in question at 209, 217, 220 and 225 25th Street. He reported that the 220 and 225 25th Street facilities looked fine. Though, the 225 25th Street site may have more USTs than are listed on their PBS registration. So, he will have the owner come in for a meeting to settle this potential PBS violation. However, he told me that the 209 and 217 25th Street facilities have just a complete concrete floor. Mr. Zielinski did not see any remote fill ports, nor any piping that would lead him to believe that USTs were present. The owners stated that they never knew of any USTs below their buildings (though the NYFD records show that tanks were present at least at some time). The DEC doesn't have any spill or PBS violations pertaining to the 209 and 217 locations. So, there doesn't appear to be any leverage that the DEC can use to get the owners to do GPR or electromagnetic surveys in order to possibly find any tanks. I sent an e-mail to Mr. Lorthioir with this information and told him to just continue to collect the product that appears. 7/1/14 - Raphael Ketani. Today I received a non-hazardous waste manifest for the disposal of oil contaminated debris at Republic Environmental Systems in Hatfield, Pennsylvania. The representative from the receiving facility signed the document on 6/10/14. 7/3/14 - Raphael Ketani. I received CAP 62 for EnviroTrac. The bill is DC2023.01-57 for the period 4/28/14 to 5/25/14. The date of the invoice is 6/11/14. The work consisted of project management, project coordination, generate internal work order, load vehicle, mobilization to site, gauged wells, VEFR product from wells, review and tabulate gauging, product recovery and EFR data, create data tables and enter data into them, create 2013 and 2014 hydrographs for select wells and complete hydrographs, travel to and from site, calls to field staff at site, call to lab regarding doing age dating, e-mail to DEC regarding proposed work, review old reports from DEC regarding product history, review proposal of Triassic Labs regarding age dating oil, e-mail to DEC regarding doing age dating of newly appeared product, generate internal work order and e-mail to DEC, coordinate drum pickup for full absorbent drums, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies, contracting with Metro Environmental Contracting for providing a vacuum truck for VEFRing the wells. I found the pay package to be acceptable and notified Steve Karwiel by e-mail. 7/15/14 - Austin - This PIN project is being transferred from Ketani to Vought, for project consolidation and review purposes - end 8/5/14-Vought-Contract Payment Package (EnviroTrac)-(6/18/14 thru 6/29/14. Work performed included working on baildown test graphics/data entry and report writing, well monitoring and bailing, sock replacement, review and tabulation of gauging and EFR data,

U001839490

project coordination. 8/12/14-Vought-Called and spoke to NYSOAG Karpen and noted that DEC was performing full file review. NYSOAG noted a prior meeting with DEC where there was discussion of possible sources in addition to the Guarino site and the need for investigation of those possible additional sources. NYSOAG noted that Guarino still may be responsible for current onsite contamination if DEC still remediating that same contamination and as such no ISR was needed until additional responsible parties (if any) were found.

9/17/14-Vought-Contractor Application for Payment (EnviroTrac)-(6/30/14 thru 7/27/14). Gauged wells and bailed product, replaced absorbent socks, review and tabulation of gauging data, project coordination. 10/6/14-Vought-Contractor Application For Payment(EnviroTrac)- (7/28/14 thru 8/31/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, selecting and preparing files for submittal to NYSDEC, project coordination, File review by EnviroTrac at DEC offices from 8/11 thru 8/15, assembly of older data for submission to DEC, review of timeline generated by DEC, project management.

11/18/14-Vought-Contractor Application For Payment(EnviroTrac)- (9/1/14 thru 9/28/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, selecting and preparing files for submittal to NYSDEC, project coordination, project management.

12/9/14-Vought-Contractor Application For Payment(EnviroTrac)- (9/29/14 thru 10/26/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data.

12/9/14-Vought-Contractor Application For Payment(EnviroTrac)- (10/27/14 thru 11/30/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, removing broken sock and other debris from MW8

1/26/15-Vought-Contractor Application For Payment(EnviroTrac)- (12/19/14 thru 1/31/15). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination.

3/10/15-Vought-Contractor Application For Payment(EnviroTrac)- (12/19/14 thru 1/31/15). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination.

4/7/15-Vought-Contractor Application For Payment(EnviroTrac)- (2/1/14 thru 2/28/15). Work performed included: Site travel, monitoring and bailing of wells, replaced socks, review and tabulation of product recovery data, project coordination.

4/30/15-Vought-Contractor Application For Payment(EnviroTrac)- (2/1/14 thru 2/28/15). Work performed included: Site travel, Replacing vault cover with manhole cover and cleaning enclosure area, filled vault with concrete, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination.

5/28/15-Vought-Contractor Application For Payment(EnviroTrac)- (3/30/14 thru 4/26/15). Work performed included: Site travel, monitoring and bailing of wells,changing absorbent socks, project management and coordination.

6/19/15 - Obligado - Spill reassigned from Vought to Obligado.

7/7/15-Vought-Contractor Application for Payment(EnviroTrac)- (4/27/15 thru 5/31/15). Work performed included: Site travel, monitoring and bailing of wells, bailed and drummed product , changing absorbent socks, project management and coordination.

8/5/15 - Obligado - Sent payment approval for CAP #75 for weekly monitoring and bailing of wells. 8/12/15 - Obligado - I spoke to Dave Lorthior and requested gauging and product bailing be reduced to biweekly, due

PACIFIC BRANCH (Continued)

U001839490

to minimal product recovery. 9/15/15 - Obligado - I sent an email to David Lorthioir requesting that based on minimal product thickness less than 0.03 ft, monitoring be reduced to monthly. 11/17/15 - Obligado - Email from David Lorthioir on 11/16/15. Almost one foot of product found in MW31. Picture included. I called David and asked him to collect a product sample for forensics during the next visit. 11/20/15 - Obligado - Email to Lorthioir approving the workplan for repair of 4 damaged on-site well vaults. Corroded 2x2 Steel Vault covers to be removed. The vaults are to be filled with cement and a circular 10 Inch manhole to be installed around the well. 12/10/15 - Obligado - I inspected a potential source UST site at 276-280 24th Street. This site had a prior TTF failure, closed spill #0210214. According to the spill file, a 10k #2 fuel oil UST (empty since at least 1999) was abandoned in place in 2003. 3 soil samples were collected and below standards and the spill closed in 2006. The tank was never registered. I met Simon Liu, who is the current property owner. He runs a art supply warehouse/woodworking shop at the location. He recently purchased the property in 2013 and had no knowledge of any tanks at his property. Mr. Liu allowed me to inspect the basement, where I was able to discover an approx. 3 x 3 steel covered vault in the floor located towards the back of the basement of 276 24th St. MR. Liu had his workers open it for me with a crow bar. This vault was partially filled with concrete but contained piping which appeared to be remnants of a top of UST piping system. An apparent fill pipe was observed approximately 3 ft away from the sump. The fill pipe likely ran vertically to the ceiling than across the ceiling along the dividing/foundation wall between 276 and 280 24th St building parcels to the fill in the building wall. I informed Mr. Liu that the DEC would like to perform a geoprobe investigation in his basement around the suspect tank area. He had no objection and said the DEC could do whatever investigation we need to do. He signed a DEC access agreement form. 1/29/16 - Obligado - Conducted geoprobe investigation at 276-280 24th Street in vicinity of the 3 x 3 manhole. Prior to geoprobe a geophysical was done. Pipe runs which appeared to be related to fill piping were identified, however, no signal of the former tank was apparent in the basement. I inspected the vault and cleared out some of the debris in the vault and was able to more clearly see the piping components for the former tanks system. There were 2 transfer pumps inside the vault, which indicates that this 10k tank likely pumped product into 2 smaller tanks at some other location. No other tanks were identified on the premises. 4 geoprobe borings were conducted in the general area around the identified structures over the course of 2 days, however, no evidence of petroleum impact was encountered in the subsurface. All soils were free of any odors, staining, or PID readings. Due to the limited power of the small geoprobe rig we were using in the basement, all borings met with refusal due to very tight soils at approximately 10 ft bgs. However, absence of any apparent petroleum impacts in the shallow soil in this area of the basement suggest no spill occurred at this location. 4/25/16 - Obligado - I was provided with the Product Recovery and Gauging Results by EnviroTrack. 1/29 through 3/18/16 - Max LNAPL thickness MW8 - 0.14 ft (bailed 1.5 gallons LNAPL, replaced sock) MW8A - 0.32 ft (Bailed 1 gallon, replaced sock) MW9 - 0.02 ft (Bailed 1 gallon, replaced sock) MW31 - 0.14 ft (Bailed 1.5 gallons) 6/17/16- Obligado - I was provided with an updated Product Recovery and Gauging Results table by Envirotrac: April to May 2016 maximum LNAPL thickness MW8 - 0.10 ft MW8A - 0.74 ft MW9 -

U001839490

0.05 ft MW31 - ND 6/24/16 - Obligado - I re-reviewed the file to identify other potential sources. According to the file, 207 25th Street also had a 550 gal UST which failed a tank tightness test on 9-10-93. I looked further into this issue and found the actual tank tightness test report by Tanknology which was included in the April 11, 1994 Unico Subsurface Investigation Report. According to the test report, both bubble ingress and ullage ingress were detected. Bubble ingress indicates there was a leak below the tank product level and is indicative of a leaking tank. I tried to find additional information regarding investigation into this tank failure and identified a letter from State Environmental Services dated February 5, 1994 stating On February 5, 1994 State Environmental Services, Inc. permanently closed (1) 1000 gallon fuel oil storage tank. All work was done in accordance with DEC Regulations . No supporting documentation was included with the letter. It is not clear why this TTF was not investigated further. The file contained a correspondence between Unico and the DEC Project Manager proposing 3 monitoring wells around the suspect UST. No follow up to this correspondence could be found in the file. I also found photos of the 207 25th Street property taken on August 30, 1993 which show the location of the tank and 2 remote fills and 1 vent port. Red #2 heating oil spillage from overfills can be seen around and below the fill port on the wall and sidewalk. I searched the file for additional references to the 207 25th Street site and I found a Status Report dated May 1996-May 1997 prepared by F&N which documented an inspection performed by F&N personnel of up-gradient properties in search of potential sources. According to that report, 207 25th Street contained no UST on the property . I found another reference to 207 25th in a F&N Status Report dated December 28, 1999 which stated An inspection performed on February 28, 1997 identified that the properties located at 205, 207, and 215 25th Street did not contain fuel oil tanks and are therefore also not contributors to the contamination . These reports are clearly incorrect based on the photo documentation of the UST system in the file. The presence of this historic failed tank on the property and absence of any tank closure assessment warrants further investigation. I sent a letter to the current property owner requiring a GPR survey to identify the tank location and a subsurface investigation consisting of a minimum of 4 soil borings around the abandoned tank. A work plan is due to the Department within 30 days. Letter sent to the property owner listed on Acris: PSJC LLC, 207 25th Street, Brooklyn, NY via Certified Mail Receipt #7001 0320 0003 7416 8275. 6/27/16 - Obligado - Per USPS website, the item was delivered to an individual at the address at 12:40 pm on June 27, 2016 in BROOKLYN, NY 11232. 6/28/16 - Obligado - I received a phone call from Sandi Fung of PSJC who is the property owner of 207 25th Street, Brooklyn, NY in response to my letter. She said they purchased the property in 2008 and they had a phase 1 and phase II reports. She said she was unaware of any tanks. She said she will send me the reports tomorrow. She inquired about the 30 day deadline. I told her I would review the reports and let her know if any thing else needed to be done. 6/29/16 - Obligado - I received an email from Sandi Fung. She will send me the Phase 1. She doesn't have a Phase II and she doesn't know if one was prepared. I received Product Gauging Results from Envirotrac for June 2016 June 2016 LNAPL thickness MW8 - 0.02 ft MW8A - 0.03 ft 7/1/16- Obligado - I reviewed the invoice for the May gauging and bailing event provided by Envirotrac and found billing errors, which I relayed to Steve

U001839490

Karwiel. They billed us for a Hydrogeologist when the work was performed by a tech. Steve will make the adjustment on the payment. 7/13/16 - Obligado - I met Sandi Fung on the site. She provided me with access to the building. While the locations of the former fill ports were still apparent in the building exterior wall, no evidence of a UST could be seen inside the building. I provided her with the pictures of the tank and the failed tank tightness result from 1993. She said she had no knowledge of any tank when she purchased the property and the Phase 1 report did not identify any potential tanks or any need to do further investigation. We agree that she would provide access for the DEC to do a subsurface investigation around the former tank. 7/18/16 - Obligado - I met Dave Lorthioir at the site to discuss the planned investigation. 4 soil borings will be installed around the 550 UST area. 2 in the driveway, 1 in the sidewalk, and 1 downgradient on the D&D property. I provided Sandi with an access agreement. 7/25/16 - Obligado - I received the signed access agreement with Sandi. 7/26/16 - Obligado - Conference call with John Urda and Guarino's attorney Mr. Peterson. We requested access to put a well on the Guarino Property. Peterson said he saw no issues and would advise his client to sign and return the agreement. We discussed the status of the remediation and investigation. I told him there was residual free phase product in several wells in the southeast portion of the site which the DEC is removing via manual bailing once per month. He asked how long it would take to remove all the product, and I told him it would be impossible to know. He asked if it was ok if his client removed the former system enclosure. I told him the remedial system has been removed so there is no reason why they couldn't removed the fencing and the shed. I told him we just need a place to store one or two drums on the D&D property, which he said should not be a problem. I made another site visit with Dave Lorthior and his markout sub contractor for the geophysical survey. According to the tech, it was not possible to survey the suspect UST area in the utility closet do to physical constraints. He marked out all the subsurface utility lines and we discuss proposed well locations. 8/10/16 - Obligado - I continue to investigate the other remaining potential source UST. I reviewed a Phase 1 Investigation Report and a Vapor Investigation Report for 213-219 25th Street. The reports were prepared by AKRF on behalf of NYCSCA who is planning to build a pre-K at the site. the reports document the presence of petroleum VOCs in soil vapor as well as TCE and recommends installation of a SSDS system. The phase 1 found no evidence of a tank at the site, which is not correct, based on DEC Records which document the presence of at least 1 1000 gal tank. I sent a property access letter request to the property owner Buono Enterprises to perform investigation of their former 1000 gallon #2 fuel oil UST. Sent via certified mail #7014287000006085169. I emailed NYCSCA and recommended they submit SSDS plans to the DEC/DOH for review prior to construction. 8/22/16 - Letter returned undelivered. 8/29/16 - Obligado - Field Work - Met Envirotrac and Associated on site to install 4 borings/wells at and around the abandoned UST at 207 25th street. I observed evidence of petroleum impacted soil (based on odors and elevated PID readings) in all soil borings as shallow as 10 ft below grade and extending to the water table at ~23 ft. Envirotrac will install the 4 wells on the following day 8/30/16 - Obligado - I spoke to dave who said one of the 3 borings the hit refusal at 13 ft when trying to install the well. They will try again tomorrow 8/31/16 - Obligado - They hit refusal

U001839490

again at 13 ft. This well location will be abandoned. 9/8/16 - Obligado - Met Dave Lorthior on the site. Envirotrac was developing and sampling the 3 wells and repairing the sidewalk flag in front of 207 25th Street. Dave and I also met with Frank Buono at 217 25th Street. Representatives from SCA (MR. Ellis) were also at 217 25 to discuss issues related to their school construction. We looked at the former tank location went over potential boring locations. According to Frank, a tank closure assessment was performed in 1999 when he purchased the property, but he was unable to provide the soil boring results or the tank tightness testing results. He was only able to provide a tank closure affidavit and invoices of the work. Frank Buono signed the access agreement to allow DEC on site to perform soil boring investigation. I also requested SCA provide the SSDS plans. 9/9/16 - Obligado - I called Marisol at Riteway/PTC to inquire if they had any of the documentation of closure from 1999 for the 217 25th street site. They responded that all those files had been lost/purged when Riteway acquired PTC. I also sent an email to Frank Buono requesting the SSDS plans, at the request of SCA. 9/21/16 - Obligado - I met Envirotrac at 217 25th street site for the geoprobe investigation. At the time of the inspection, they were boring the location at the former UST. No evidence of contaminated soil (PID, odor, staining) was apparent in the vadose zone at B2 next to the tanks. Elevated PIDs and odors were apparent at the water table at 30 ft bgs. Based on the absence of contamination in the vicinity of the tank, this UST does not appear to be the source of Spill No. 9305122. 9/22/16 - Obligado - I sent an email to Frank Buono with cc to SCA notifying him that the UST at 217 25 this not the source of the spill. I still requested he provide the SSDS plans for the proposed school. 2/16/17 - Obligado - I completed my review of the data form the 207 25th street investigation. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil contamination above Soil Clean UP Guidance was found in all borings. Soil contamination was found as shallow as 8 ft bgs. Groundwater contamination above TOGs was found in all wells. Free phase product was not encountered. The soil data and groundwater confirm that the 1993 tank test failure of the heating oil tank at 207 25th street resulted in a petroleum discharge to soil and groundwater. As such, a new spill was opened for the 207 25th street site - Spill No. 1610374. 2/17/17 - Obligado - I sent an email to Sandi Fung notifying him that based on the soil data, the tank at her property did leak and may have contributed to the spill. 3/21/17 - Obligado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impated area and the volume of free product observed in the wells over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. With regards to the 276 -280 24th street building the subsurface investigation was inconclusive because although no evidence of soil contamination was observed, the soil probes were not installed deep enough to confirm the absence of soil contamination below the suspect tank. This was because the investigaiton was done with a small geoprobe due to access limitations which could not penetrate the

PACIFIC BRANCH (Continued)

U001839490

tight clay formation below 10-12 ft. With regards to the 213th 25th Street site the report concludes that based on the absence of contamination in the shallow 213 B-1 boring, the abandoned 1000 gallon #2 fuel UST had not leaked prior to its abandonment 3/17/17 - Obligado - I received a DRAFT Remediation Alternatives Feasibility Study dated March 2017 which provides cost to closure estimates on various remedial alternatives to address the residual free product beneath the 4th and 25th Street site. 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/4/17 - Obligado - I sent an email to Erin Quell requesting EAR monitor and bail the product wells. 4/24/17 - Obligado - I received gauging results. Product thicknesses: MW9 - 0.01 MW94 - 0.27 MW-31 - 1.53 MW-9 - 0.11 MW-8 - 1.73 MW-8a - 1.16 4/27/17 - Obligado - I got an email from Erin Quell that D&D complained of rats in the former equipment shed. After discussion with Randall Austin, DEC will remove the shed and fencing. I issued an amended callout to EAR with an increased budget to remove the system enclosure. 5/16/17 - Obligado - Erin Quell provided gauging results for May 5, 2017 MW-91 - 0.02 MW-94 - 0.31 MW-31 - 1.08 MW-9 - 0.08 MW-8 - 0.93 MW-8A - 1.23 Absorbent socks were placed in the wells. 6/18/17 - Obligado - Erin Quell provided Case Studies in support of the applicability of KAPSDIDS injection at this site. 8/21/17 - Obligado - 207 25th Street UST investigation findings submitted. The report concludes evidence of tank removal activities were found but no tank was found. The report concludes the tank was previously removed by others. See Spill #1610374. 8/25/17 - Obligado - I received an email from Erin Quell. The system shed, fence, coned disconnection, and sidewalk restoration has been completed. 9/7/17 - Obligado - I received an email with gauging summaries from Erin Quell from 8/28/17 MW-7 - 0.27 ft LNAPL MW-8 - 0.61 ft LNAPL MW-8A - No Data MW-31 - 1.10 ft LNAPL MW32-A - 0.02 ft LNAPL MW87 - 0.19 ft LNAPL MW-82 - 0.02 ft LnAPL 9/27/17 - Obligado - I received an estimate for continuing site O&M bailing. 10/4/17 - Obligado - I sent an amended authorization for continued site monitoring and free product bailing. EAR will continue bailing product on a biweekly basis. 2/9/18 - Obligado - I reviewed a Field Activity Summary letter. The letter summarizes recent onsite activities, including gauging and recovery, system enclosure and well maintenance. The letter documents the removal of the former remediation system compound. All electrical service was disconnected and components removed. All remedial piping was cut below grade and capped. The vault for MW9 was replaced with 8 manhole. 9/24/18 - Obligado - Spill No. 9305122 is closed out. Remediation and monitoring to resume under Spill No. #1610374 / PIN #07960. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: '6/10/99 @ 2:20PM CALL STATION # 718 499-8788 PUMPS ARE SLOW SPOKE TO JUNIOR - STAND- IN MANAGER REPAIRS TOMORROW. 11/24/03 Reassigned from Vought to Foley. 12/1/03 Received Feasibility report for Soil Vapor Extraction. 12/3/03 Received Feasibility report for Multi-Phase Extraction. 4/6/04 Received RAP. SVE not an option due to low permeability soils limiting air movement. Multi-phase extraction is best option. LNAPL has consistently been identified since May 2002. Substantial contaminant mass remains in the vadose and saturated zones. Area of concern is located to the west and north of the kiosk building(area of former USTs) from approx 10'bgs to the water table at 20'bgs. This is likely to be the source of continued groundwater contamination. 19 Hg resulted in 90scfm over 43ft radius (ROI) from extraction well MW-3. In depressing water table, air flow and thus volatilization and subsequent extraction of VOCs will be achieved. Average liquid recovery rate of 1.33gpm for GW extraction and 0.04gpm for LNAPL. Based on 87,088ft3 of soil (radius=43ft, depth=15ft), and an average concentration of 310,255ppb total VOCs, an estimated mass is 2007lbs total VOCs in soil. Based on 0.77ft of LNAPL over 2,826ft2 at an avg porosity of 0.35 and conservative LNAPL saturation of 0.5, the estimated mass of LNAPL is 18,999lbs. Estimated that the proposed MPE can be installed and running by April 2004 upon approval. 4/7/04 Stip emailed and mailed to C. Wein and A. Lapine for use of multi-phase extraction system. 4/8/04 A. Lapine - trenching to begin as early as next week. 4/28/04 Copy of signed stipulation received with request to extend deadline to 90days from effective date to install multi-phase extraction system. 4/29/04 Stip fully executed by T. Kunkel. 5/7/04 During portfolio meeting it was discussed that this site is under redevelopment. Potential buyers will be building a self-storage facility. Dual phase system installation is in progress. Citgo station adjacent to property(now a Dunkin Donuts). 1Q04- 0.98' LNAPL in MW-1, 1.83' in MW-3 and 1.4' in MW-9. BTEX from ND(MW-11) to 121500ppb(MW-9). MTBE from 12ppb(MW-6) to 36600ppb(MW-8). 2Q04- 0.91' LNAPL in MW-1, 0.89' in MW-3, 0.45' in MW-9, 0.23' in MW-14. BTEX from ND(MW-5,6,11,12) to 90750ppb(MW-13). MTBE from 2ppb(MW-2) to 79200ppb(MW-15). 3Q04- 0.30' LNAPL in MW-1. BTEX from ND(MW-5,6,11,12) to 42520ppb(MW-7). MTBE from 3ppb(MW-6) to 63800ppb(MW-8). 4Q04- 0.75' LNAPL in MW-1. BTEX from ND(MW-11,12) to 9830ppb(MW-7). MTBE from 91ppb(MW-11)to 47900ppb(MW-10). 4/27/05 Portfolio meeting- MPE system running. 5 extraction wells on-site. Currently running 4 of 5 due to the cat-ox treatment being

S103938231

overwhelmed. 11/9/05 Reviewed the quarterly reports dated October 3 and 17, 2005. Nine wells were sampled on 1/26/05 and ten on 4/26/05. MPE system operating. 0.38 ft LNAPL in MW1 during first quarter, but no free product present during the second quarter. Max BTEX 48096ppb(MW-1) and max MTBE 32900ppb(MW-10). 11/25/06 3Q05- DTW 16.3-22.75' bgs. BTEX from ND(MW-11) to 55029ppb(MW-1). MTBE from 1ppb(MW-11) to 17800ppb(MW-2). 3/16/06 Met with BP and Delta. Source removed 2002. MPE active. Estimated 14000lbs total VOCs with 2368lbs removed so far. 5/1/06 4Q05 - DTW 15.42-22.35' bgs. BTEX from ND(MW-11, MW-12) to 14106ppb(MW-1). MTBE from 0.4ppb(MW-4) to 8340ppb(MW-2). MW-3,9,13,14,15 were not sampled b/c of system operation. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 7/27/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 5/25/2006, submitted by Delta. The site is former BP Station. As of sampling on 1/24/2006, groundwater flows to west-northeast at the depth of 15.94' to 22.63' bg. 10 monitoring wells were gauged and sampled. W-1, 8,001 ppb BTEX (8.2J ppb B, 203 ppb T, 1,220 ppb E, 6,570 ppb X), 72.6 ppb MTBE. W-2, 307 ppb BTEX (167 ppb B, 49.2 ppb T, 40.9 ppb E, 50.2 ppb X), 391 ppb MTBE. W-4, BTEX ND, 2.1 ppb MTBE. W-5, BTEX ND, 20.3 ppb MTBE. W-6, BTEX ND, less than 1 ppb MTBE. W-7, 140 ppb BTEX (10.3 ppb B, 5.9 ppb T, 44.5 ppb E, 78.8 ppb X), 514 ppb MTBE. W-8, 13.42 ppb BTEX, 452 ppb MTBE. W-10, 4,236 ppb BTEX (219 ppb B, 1,330 ppb T, 847 ppb E, 1,840 ppb X), 2,780 ppb MTBE. W-11, BTEX ND, 19.2 ppb MTBE. W-12, BTEX ND, 5.5 ppb MTBE. Noted that MPE is running. (RJF) 9/19/2006 - Feng - Meet with Delta, FPM Group and lawyers for current and new owner of the property. The site will be developed as a 4-story hotel and construction will be started sometime in year 2007. There will be no basement. The excavation will be down to 3' to 5' bg for foundation. A siteplan of the proposed area that the future hotel will be occupied was submitted. When the construction starts, MW-4, MW-11 and MW-12 will be destroyed. 3 new monitoring wells will be installed outside the footprint of the building. And the system will be relocated to northeast of the property. During the relocation of the system, DEC requires continue monitoring of groundwater. DEC suggest that during the excavation for re-piping, cover the soil and excavation. FPM Group did 7 test pits within the new hotel footprint area and took soil samples down to 5', no smell, no VOCs detected and no tanks have been found. Vapor barrier will be installed. DEC requires active venting system to be installed too. DEC also requires 2 soil borings include soil and groundwater samples to be collected from the former pump islands within the new building footprint area. (RJF) 1/4/2007 - Feng - 2Q2006, 11/28/2006, by Delta. Groundwater sampled and gauged 5/8/2006. 10/15 monitoring wells. DTW 14.29' to 25.26' bg. Flows west-northwest. No LNAPL. MW-1, 13,064 ppb BTEX, 1,600 ppb MTBE. MW-2, 7,275 ppb BTEX, 4,270 ppb MTBE. MW-4, ND BTEX, 1.7 ppb MTBE. MW-5, 3.89 ppb BTEX, 27 ppb MTBE. MW-6, ND BTEX, 511 00b MTBE. MW-7, 3,228 ppb BTEX, 1,910 ppb MTBE. MW-8, 2,237 ppb BTEX, 2,600 ppb MTBE. MW-10, 120 ppb BTEX, 512 ppb MTBE. MW-11, BTEX ND, 49 ppb MTBE. MW-12, ND BTEX, 0.64 ppb MTBE. (RJF) 1/4/2007 - Feng - 3Q2006, 11/20/2006, by Delta. Groundwater sampled and gauged 8/1/2006. 10/15 monitoring wells. DTW 15.23' to 21.74' bg. Flows West-northwest. No LNAPL. MW-1, 1,194 ppb BTEX, 7.5 ppb MTBE. MW-2, 560 ppb BTEX, 734 ppb MTBE. MW-4, ND BTEX, 0.52 ppb MTBE. MW-5, ND BTEX, 4.7 ppb MTBE. MW-6, 25.1 ppb BTEX, 52.7 ppb MTBE. MW-7, 5.91 ppb BTEX, 11.2 ppb MTBE. MW-8, 2.5 ppb BTEX, 91.6 ppb MTBE. MW-10, 5,240 ppb BTEX, 361 ppb MTBE. MW-11, ND BTEX, 0.83 ppb MTBE. MW-12, ND BTEX, 5.5 ppb MTBE. (RJF) 5/11/2007 - Feng - 4Q2006, 3/6/2007.

AMOCO STATION #5082 (Continued)

S103938231

Groundwater sampled and gauged 10/25/2006. 9/15 monitoring wells. DTW 16.19' to 22.19' bg. Flows to north. No LNAPL. MW-1, BTEX ND, 4.6 ppb MTBE. MW-2, 28.7 ppb BTEX, 111 ppb MTBE. MW-4 was not sampled. MW-5, BTEX ND, 1.4 ppb MTBE. MW-6, BTEX ND, 1.3 ppb MTBE. MW-7, 1.8 ppb BTEX, 2.5 ppb MTBE. MW-8, BTEX ND, 51.4 ppb MTBE. MW-10, 33.1 ppb BTEX, 26.1 ppb MTBE. MW-11, BTEX ND, less than 1 ppb MTBE. MW-12, BTEX ND, 7.7 ppb MTBE. 5/11/2007 - Feng - MPE O&M, 1Q2006, 1/9/2007. Influent Air sample 960 mg/m3 BTEX, recovery rate 0.183 lbs/hr. MTBE 57 mg/m3, recovery rate 0.0109 lbs/hr. Total recovered 287 lbs of total BTEX, 15.9 lbs of MTBE and 1,456 lbs of TPH after 422 hours of MPE system operation. 5/11/2007 - Feng - MPE O&M, 2Q2006, 1/9/2007. Influent Air sample 4/7/2006, 802 mg/m3 BTEX, recovery rate 0.171 lbs/hr, MTBE 74.3 mg/m3, recovery rate 0.0159 lbs/hr. Influent air sample 5/2/2006, 693 mg/m3 BTEX, recovery rate 0.122 lbs/hr, MTBE 50.8 mg/m3, recovery rate 0.00894 lbs/hr. Total recovered 319 lbs of total BTEX, 18.3 lbs of MTBE and 1,646 lbs of TPH after 581 hours of MPE system operation. 5/11/2007 - Feng - Reviewed the Comprehensive Environmental Site Assessment Report dated 3/7/2007, and the Exposure Assessment Report dated 3/20/2007, submitted by HydroTech on behalf of Reda Group. Groundwater samples indicated low contamination and no significant receptors of environmental concern were identified within the immediate site vicinity. HydroTech requested spill closure. The request of spill closure is denied for the reasons: 1) The MPE system is still running and recovering. DEC usually will need 4-8 quarters of monitoring after the remedial system is shutdown to show no rebounds. 2) The monitoring reports (4Q2006) indicated BTEX concentration trend is fluctuating, the downward trend is not stable yet. (RJF) 7/23/2007 - Feng - 1Q2007, 6/13/2007. Groundwater sampled 1/8/2007. 9/15 monitoring wells were sampled. DTW 10.82' to 27' bg. Flows to north. No LNAPL. MW-1, 0.75 ppb BTEX, 4.1 ppb MTBE. MW-2, 356 ppb BTEX, 119 ppb MTBE. MW-4, not accessible. MW-5, ND. MW-6, ND. MW-7, 107 ppb BTEX, 12 ppb MTBE. MW-8, 3.6 ppb BTEX, 27.3 ppb MTBE. MW-10, 0.46 ppb BTEX, less than 1 ppb MTBE. MW-11, BTEX ND, 6.1 ppb MTBE. MW-12, BTEX ND, 4 ppb MTBE. (RJF) 11/13/2007 - Feng - Replied to Yash Saha (HydroTech) inquiry. There is still MPE system running onsite and it is still recovering, and it will need to have 1-2 years of monitoring after the shutdown of the system. So the site is not closing based on this condition. If the site will be developed. Then a RAP addressing all the remaining contamination (soil, soil gas, gw) will be submitted for approval. The approved RAP will be implemented prior to or during the construction. (RJF) 12/17/2007 - Feng - 2Q2007, 8/23/2007. Vacant. The monitoring well network was gauged and sampled on 4/5/2007. The site is being remediated via the execution of Multi Phase Extraction events. Remediation events occurs at the site on a regular basis. 9/15 wells were gauged. DTW 17.12' to 21.44' bg. Flows to northwest. No LNAPL. 9/15 monitoring wells were sampled. BTEX range ND to 135 ppb (MW-2). MTBE range ND to 58.1 ppb (MW-2). (RJF) 1/8/2008 - Feng - Mark Robbin (HydroTech, 631-462-5866) called. The site will be developed. RAP with alternative groundwater remediation, soil excavation, and vapor mitigation design(vapor barrier and sub-slab venting system) will be submitted shortly. (RJF) 1/9/2008 - Feng - 3Q2007, 11/26/2007. Vacant. The monitoring well network was gauged and sampled on 7/17/2007. The site is being remediated via the execution of MPE events. 9/17 monitoring wells were gauged. DTW 16.73' to 20.31' bg. Flows to north. No LNAPL. 9 wells were sampled. BTEX range ND to 135 ppb (MW-2). MTBE range ND to 58.1 ppb (MW-2). (RJF) 3/7/2008 - Feng - Reviewed the architectural plans for the new

AMOCO STATION #5082 (Continued)

S103938231

building. The design for vapor mitigation effort wasn't located. Email to P. Stewart (ACT) for vapor mitigation design and the basement information. (RJF) 3/7/2008 - Feng - Spoke to D. Greffenius (Delta). BP wanted to make sure the developer has enough finance support for the development before they would pull out the existing MPE system. P. Stewart (ACT) has informed Delta that they got the demolition permit already. The MPE system would be pulled out in the next few weeks. BP will come up with remedial option for soil management and groundwater treatment. And may conduct EFR events on the MW-3 to remove product for a short term remediation. (RJF) 3/20/2008 - Feng - eDoc Quarterly Monitoring Report 4Q2007 and 1Q2008. (RJF) 6/16/2008 - Feng - 4Q2008, 2/28/2008, by Delta. Vacant site. The monitoring wells network was gauged and sampled on 10/2/2007. The site is being reemediated via the execution of MPE events. 10 out of 15 monitoring wells were gauged and sampled. DTW 17.1' to 21.03' bg. Flows to north. No LNAPL. BTEX range ND to 4,326 ppb (MW-2). MTBE range ND to 211 ppb (MW-2). 1Q2008, 3/6/2008, by Delta. Vacant. The monitoring wells network was gauged and sampled on 1/30/2008. The site is being remediated via the execution of the MPE events. 10 monitoring wells were gauged and sampled. DTW 15.54' to 21.1' bg. Flows to north. No LNAPL. BTEX range ND to 824 ppb (MW-2). MTBE range ND to 110 ppb (MW-2). (RJF) 6/18/2008 - Feng - Portfolio meeting with BP and Delta. The MPE system is pulled out and the station building and canopy are removed. Delta is submitting the IRAP within next 3 weeks. BP/Delta will contact Paul Stewart (ACT) in preparing the IRAP. (RJF) 11/18/2008 - Meeting with developer, Levenbaum, ACT, Delta and BP (called in). Agreed on: 1) review historical data to where contamination was, what have been remediated, what will be left behind after the construction and what remediation should be planned. 2) make sure the vapor barrier is compatible with hydrocarbon. (RJF) 11/25/2008 - Met with David Greffenius (Delta). Delta reviewed the historical data and calculated out that the contaminated soil found former SB-3 at 24 feet has been removed. Post excavation samples were taken B-1 to B-7. Lab results indicate soil contamination remains. Delta will excavate more on B-6 and B-7, the two middle sections. Delta will lay the infiltration pipes in the B-1 to B-5 area for future nutrients addition. 6 soil boring were proposed in the 1-story area and will go down 11 to 16 feet from what it is. Monitoring wells will be installed in the parking lot area. Delta will submit a letter plan for all these. (RJF) 12/3/2008 - Reviewed the memo from In-Line Plastics, LC and the MSDS from Chevron Phillips Chemical Company LP that Paul Stewart sent via email regarding the vapor barrier proposed for the new building. The vapor barrier is acceptable. Email to ACT, BP and Delta reminding them the MSDS of the vapor barrier indicating it may react with oxygen and strong oxidazing agents and this should be taken into account when consider post remediation options. (RJF) 12/17/2008 - Spoke with David Greffenius. The infiltration pipes were layed in the B-1 to B-5 sections and vapor barrier installed. Plan to pour foundation next week. The B-6 and B-7 sections were over excavated deeper down and endpoint samples were collected. Lab results are expected in a few days. (RJF) 12/18/2008 - visited the site and met with David Greffenius from Delta. Four schedule 40 PVC pipes were layed beneath the vapor barrier in the 2 sections near the back and the foundation was poured already. Half of the 2 middle sections was poured too. David said the middle 2 sections were over excavated 4-6 feet deeper and endpoint samples were taken, the results shall be

S103938231

back in a few days. 4 soil borings were done in the 1-story area. The portion near 4th Ave has not been excavated yet, but it might started in 3 weeks or 1 month. (RJF) 7/21/2009 - DEC received and reviewed the soil sampling results from the area of the site slated for construction of the one-story building portion. Analytical data indicated no VOCs exceeding criteria. DEC required installation of monitoring wells to implement groundwater quality monitoring during and post-construction. Site plan with wells location will be submitted shortly. (RJF) 9/30/2009 - email from Delta. attached a PBS registration form for the discovered 12 abandoned USTs. 12/17/2009 - Investigation Work Plan, dated 12/17/2009, by ARCADIS. ARCADIS proposes 2 wells and 1 soil borings in the parking lot, 2 wells at the sidewalk of 26th Street. The utility survey initial result indicate that underground utilities beneath the sidewalk along 4th Ave would likely preclude the installation of borings and monitoring wells in that sidewalk. 3/18/2010 - Project Status letter, dated 3/18/2010, by ARCADIS. The Construction schedule has been delayed and that access to the 26th Street sidewalk to install 2 of 3 remaining proposed wells may not be possible until May. ARCADIS requests extension for completion of the site characterization report until 7/2010. 6/12/2010 - email from ARCADIS Mark - during our meeting a couple of weeks ago, you asked us to look into why no soil samples were collected beyond 15 feet (final well depth was 22 feet) at MW-17A. The drillers encountered cobbles from 10 to 15 feet and broke a part on the GeoProbe. A field decision was made to continue to auger to final depth and install the well. 10/29/10: This spill case transferred from R. Feng to J. Kolleeny. - JK 12/15/10: Reviewed Subsurface Hydrocarbon Assessment Rpt by ARCADIS, dated 9/30/10 (in eDocs). Rpt summarizes install'n of add'l on- and off-site wells with soil & GW sampling. On-site wells MW-16A, MW-17A and MW-18A were installed in Jan. 2010; sidewalk wells MW-19A, MW-20A and MW-21A were installed in August 2010. Significant soil & GW contam were detected in wells MW-16A and MW-18A. Rpt concludes there are residual impacts beneath central & eastern portion of parking lot. Based on results, ARCADIS recommends ongoing quarterly GW monitoring, plus evaluation of remedial technologies, preparation of feasibility study and remedial action plan, and subsequent aggressive, targeted remediation. Due to limited space at site, they anticipate that remediation may involve injection of reagents into monitoring wells and infiltration lines installed under hotel foundation slab during construction. - J. Kolleeny 02/03/11: Reviewed 4th Quarter 2010 GW Monitoring Rpt by ARCADIS dated 1/19/11 (in eDocs). Rpt presents GW data for Oct 2010 showing residual GW contam in two wells: MW-16A had 29,000 ug/L total BTEX (up from 2,830 ug/L tBTEX when last sampled, in May 2010); MW-18A had 769 ug/L tBTEX (down from 3,050 ug/L when last sampled in May 2010). Rpt states that quarterly GW monitoring will continue, with next sampling event in Jan. 2011; also states that RAP is being prepared and will be submitted to DEC by end of Feb. 2011. After reviewing rpt, in late Jan. 2011 I spoke with Andrew Korik of ARCADIS about remedial options, he asked if chem ox injections into well MW-16A (since it's most upgradient contam well) would be acceptable; I said DEC would prefer that they not inject into monitoring well, as this could compromise future GW data from well. Andrew concurred after checking with his technical staff, that injecting into monitoring well is not acceptable. They will see if they can install injection well upgradient of MW-16A, in parking lot ramp; if not, they will explore other options. - JK 04/08/11:

Reviewed 1st Quarter 2011 GW Mon & Analysis Rpt by ARCADIS, dated 3/9/11 (in eDocs). Rpt presents results of Jan. 2011 GW sampling, showing well MW-16A had 8,180 ug/L total BTEX (down from 29,000 ug/L (J) in Oct. 2010), MW-18A had 25,000 ug/L tBTEX and 470 ug/L MTBE (up from 769 ug/L and 14 ug/L, resp.), and MW-21A had 1,600 ug/L MTBE (down from 2,400 ug/L in Oct. 2010). Rpt states that quarterly GW mon will continue, and that a RAP is in preparation and will be submitted to DEC in March 2011. - J. Kolleeny 4/11/2011 - Spill transferred back to JFeng. 04/19/11: Reviewed Remedial Action Work Plan for Anaerobic Biological Oxidation, by ARCADIS dated 2/28/11 (in eDocs). RAWP proposes injection of sulfate to address residual GW contam at site, using 3 infiltration galleries installed beneath hotel foundation slab plus 3 new injection wells - one upgrade of well MW-16A in sidewalk along 4th Ave. and 2 on either side of MW-21A, in sidewalk along 25th Street. I sent approval letter (in eDocs) to Jon Armstrong of BP, cc's to Andrew Korik and Gene Choquette of ARCADIS. - J. Kolleeny 5/25/2011 - email from Andy Korik Here is notification that injection wells were installed at 764 4th Ave. Brooklyn. eDoc the report. JF 5/31/2011 - received quarterly report 2Q2011. eDoc. JF 7/12/2011 - Sulfate Injection Well Installation Notification, dated May 25, 2011, by ARCADIS. As per the approved RAWP, 2 sulfate injection wells IW-05 and IW-06 were installed during the week of May 16, 2011. IW-07 was not installed due to the proximity of subway infrasture beneath 4th Ave, the NYMTA would not permit installation of an injection well in the sidewalk along 4th Ave. Injection volumes at the previously installed injection gallery (IW-01 through IW-04) will be adjusted to compensate for the absence of IW-07. They submitted the Inventory of Injection Wells package to EPA on 5/5/2011. Will notify DEC a week prior any field work. JF 7/14/2011 - 2Q2011, 5/31/2011, by ARCADIS. The report summarize some details of the excavation for the development. The majority of the site footprint was over-excavated to approximately 20-25 feet below its previous grade at street level, and all previously existing on-site monitoring wells were destroyed. The northern portion of the site coinciding with the parking garage was backfilled to 8 feet below street level. During the excavation, 12 unregistered 550-gallon USTs were found. These tanks were promptly registered with NYSDEC, closed and removed. Approximately 592 tons of petroleum-impacted soil were excavated and disposed off site as part of the tank removal. A total of approximately 10,000 tons of soil was removed during the development. The developer installed vapor barrier and SSDS. In addition, 4 horizontal injection pipes were installed beneath the building foundation. These injection pipes are connected to vertical risers, which along the west side of the new hotel building. The wells were gauged on April 4, 2011. NO LNAPL. DTW 12.16' to 20.63' bg. Fluctuation +/- less than one feet. Max BTEX 27,000 ug/L, MTBE 4,100 ug/L (MW-18A). Will continue quarterly monitoring. Remedial injection wells were installed in May and a report will be submitted. JF 5/8/12 - Raphael Ketani. Mr. Korik submitted a proposal to the DEC on 5/1/12 requesting to use sodium nitrate in place of sodium persulfate for treating the groundwater contamination at the site. After review by our technical staff, a number of comments and requests were submitted to me for forwarding to Mr. Korik. I put the comments and requests in a draft letter for the review of Hassan Hussein, EE III at Region 2 DEC. In brief, the letter approved the use of sodium nitrate and requested bacteria culture information, dosing information, nitrate enriched groundwater management

information, that the groundwater must be kept anoxic and a warning regarding the regulated use of sodium nitrate. Mr. Hussein approved the letter and it was sent out today. 5/30/12 - Raphael Ketani. Earlier, Mr. Korik had sent me an ARCADIS 5/23/12 response letter to the Department's 5/7/12 conditional approval letter regarding the use of sodium nitrate in place of sodium persulfate. I reviewed the response letter which addressed the 7 comments the Department had made. Their responses were as follows: 1) ARCADIS sent a letter dated 2/29/12 to the EPA indicating that they will use sodium nitrate in place of the sodium persulfate. However, they haven't had a response from the EPA. 2) The amounts of sodium nitrate that will be on site will be less than the 400 pound limit. For this site, 180 lbs. of the material will be stored on site at any given time. 3) Dosing information was presented and was deemed appropriate. 4) Quantitative polymerase chain reaction was used to evaluate the presence of *Dichloromonas* species bacteria. 5) By using appropriate amounts of the sodium nitrate chemical, the nitrate concentrations will be maintained in order to keep the groundwater environment anoxic. 6) The push pull method will be used to extract any groundwater. This method doesn't cause the reorientation of the soil grains which would result in a loss of the efficiency of the injections. They state that there will be minimal groundwater displacement. 7) The nitrate concentrations will decrease in two ways: first, nitrate reducing bacteria and reduced minerals will change the nitrate to nitrite and eventually to nitrogen gas. Secondly, the nitrate will be diluted by the downgradient groundwater. Estimates of the distance traveled by 1000 ppm nitrate groundwater until it becomes 10 ppm nitrate groundwater were included in a table. The nitrate enriched groundwater under the site will have to travel 16 feet in order to reach CP-51 levels. Later today, a conference call took place between Mr. Korik, other staff from ARCADIS, staff from BP and myself. The proposed use of sodium nitrate was discussed. Specifically, the ARCADIS 5/1/12 sodium nitrate proposal, the Department's comments in our 5/7/12 response letter and the information in the ARCADIS 5/23/12 response letter. I stated that the Department considered that ARCADIS, and thereby BP, had adequately responded to the Department's comments with the exception of item #7, monitoring nitrate concentrations in the groundwater. Mr. Korik explained that, for BP station #05082, there were monitoring wells downgradient of the injection locations. I stated that this was sufficient for monitoring the groundwater. The ARCADIS 5/23/12 response letter was found to be acceptable with the only comment being that they will have to frequently sample the groundwater in order to be sure that it does not exceed the CP-51 standards. If they find that the standards are exceeded, then they will have to propose a means for managing the excess nitrate. ARCADIS must submit a letter plan with a work schedule by June 29, 2012 for conducting the injections and submitting quarterly groundwater monitoring reports. I drafted a letter for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit. 5/31/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/19/2012 - meeting with ARCADIS. The downward trend of the groundwater is believed to be associated with the massive soil soil at the site. The owner of the site was reached for possibility of wells installation at the parking garage, but there is a layer of the stone and a impermeable layer, it will be hard to get a well in there. ARCADIS will do the pilot and then design the injection system for approval. 2 quarters of gw

S103938231

sampling to see the gw after the injection. Aim for TOG gw standard until reach the extent of feasible. 6/26/2012 - Reviewed Supplemental Letter Work Plan for Nitrate Injections, dated 6/19/2012, by ARCADIS. The Work Plan is intended to fulfill the Department's requirement of specific information (i.e. monitoring, reporting and injection details) regarding the injections as part of the Department's approval of the proposal to use sodium nitrate to treat the contamination on May 30, 2012. ARCADIS proposes to inject 5,300 gallons, 8,000 gallons, and 5,300 gallons of sodium nitrate solution at a concentration of 0.3% by weight into the injection wells for Site 654, Site 5082, and Site 17782, respectively. A groundwater monitoring program will be implemented subsequent to the application. Approves the Work Plan after discussed with Raphael Ketani. Report by 12/2012. 7/18/2012 - reviewed 1Q2012, 3/27/2012, by ARCADIS. The groundwater was gauged and sampled on 1/24/2012. DTW 11.38 (MW-17A) and 20.20 (MW-21A). NO LNAPL. MW-18A, 340 BTEX, 21 MTBE. MW-21A, BTEX ND, 960 MTBE. 8/27/2012 - site visit and met with Ryan McKinney and his partner. Saw them purging wells, baseline sampling, taking field parameters and mixing the nitrate. 2 bags of calcium nitrate, 50 lbs each, was mixed in the small tank before the the solution was pumped into the large tank mixing with rest of the water. The tanks were outside the building. 9/26/2012 - 2Q2012, 6/22/2012, by ARCADIS. The groundwater was gauged and sampled on April 10, 2012. DTW 12.08 (MW-16A) to 20.70 (MW-21A) below the top of casing. Water table is 0.5 to 1.27 feet lower than last quarter. MW-21A, BTEX ND, 1,100 MTBE. MW-16A, 41 BTEX, 1 MTBE. MW-18A, 3,800 BTEX, 140 MTBE. The next sampling will be in July 2012. ARCADIS plans to conduct a pilot injection into MW-18A during the 3rd quarter of 2012. 12/20/2012 - 3Q2012, 10/9/2012, by ARCADIS. The groundwater was sampled on July 16, 2012. DTW 11.74 (MW-16A) to 20.44 (MW-21A). The water table is 0.2 to 0.34 feet higher than the last quarter. NO LNAPL. Flows to northwest at hydraulic gradient of 0.005 feet per foot. Over the period of August 27 to August 30, 2012, approx 8,042 gallons of calcium nitrate solution (200 lbs calcium nitrate and 2.64 lbs of fluorescein dye) were injected into MW-18A. Post-injection response monitoring is on-going and will continue through early November. MW-16A, 240 BTEX. MW-18A, 510 BTEX, 10 MTBE. 5/13/2013 - 4Q2012, 1/16/2013, by ARCADIS. Monitoring was conducted on 10/11/2012. DTW 12.20 (MW-16A) to 20.81 (MW-21A). MW-16A, 3,200 BTEX. MW-18A, 750 BTEX, 37 MTBE. MW-21A, 1,200 MTBE. 1Q2013, 4/16/2013. Monitoring was conducted on 1/14/2013. DTW 12.59 (MW-16A) to 21.13 (MW-21A). MW-16A, 210 BTEX, 33 MTBE. MW-18A, 233J BTEX, 76 MTBE. MW-21A, 1,400 MTBE. The calcium nitrate injection pilot is almost in completion and a report will be presented under separate cover. 8/21/2013 - met with ARCADIS. Rebound of BTEX concentration has been observed. Will do another round of injection of Calcium Nitrate. If not working, then another alternative. 8/13/2014 - A site visit was conducted by J. Vought and J. Feng and met with ARCADIS technician and Peter Reyes, the general manager of the hotel. PID reading survey was conducted from the floor drains, sumps/drain pump-outs, and joints in the perimeter concrete walls and floor. PID readings were zero during the survey, and no odors were observed. 5/27/2015 - Spill history has been reviewed and as per previous discussion with J. Vought on 7/29/2014, spill is closed based on: 1) Source removal has been done. Tanks included (4) 4,000-gallon gasoline USTs and (6) pump islands were removed and a total of 256.88 tons of petroleum impacted soil from UST excavations was transported offsite and disposed. During

S103938231

site development, (12) 550-gallon USTs were removed and 592 tons of impacted soil was removed and disposed. 2) Additional soil excavation was done during the site development activities in 2008. Soil was excavated down to 15 to 25 feet and endpoint samples were collected. Over-excavation was conducted in the B-3, B-6 and B-7 area due to the high level of VOCs concentration at 19-19.5 feet. B-8, B-9, B-10 and B-11 were collected at 21.5-23 feet and the sampling results indicated the removal of the petroleum impacted soil. The sampling results did indicate the detection of VOCs but at levels that do not warrant further concerns. 3) Soil boring installed in the southwest portion of the site, i.e. the one one-story building portion of the hotel and the soil samples show minimal detection. The groundwater in MW-19A and MW-20A which located at the sidewalk of 26th Street show very low level of MTBE and do not warrant further action. 4) Before site development, there was a Multi Phase Extraction System operated from 5/2005 to mid 2007. The MPE removed 1,347 lbs of TPH and treated 6,182 gallons of groundwater. 5) The site has been developed into a 10-story Best Western Hotel with 2-story basement. Vapor barrier and SSDS have been installed to protect the occupants from possible soil vapor exposure. 6) No complaint of soil vapor has been received. A site visit was conducted on 8/13/2014. PID reading survey was conducted from the floor drains, sumps/drain pump-outs, and joints in the perimeter concrete walls and floor. PID readings were zero during the survey, and no odors were observed. 7) Monitoring wells network was re-established onsite and the sidewalk in 2010. In August 2012, 8,042 gallons of calcium nitrate solution were injected into MW-18A. Monitoring of the well network following the injection show downward trend in MW-16A and MW-18A. The data suggest residual contamination would be reduced or attenuated before reaching to the downgradient wells MW-18A and MW-17A via attenuation and source removal and remedy effectiveness. 8) Groundwater flows toward northwest to north and at depth of 20 feet below street level. MW-17A in the downgradient shows very minimal detection of BTEX and MTBE but most of the its monitoring quarters were non-detected which suggested the groundwater plume is contained in the northwest direction. Another sidegradient/downgradient MW-21A never show any detection of BTEX but MTBE. The MTBE concentration shows downward trend which suggested possible natural attenuation has occurred and the effectiveness of the implemented remedy. 9) Inclusion of remaining contamination language in the spill closure letter in case site is redeveloped. Spill closure letter to BP/ARCADIS. Spill is closed."

Remarks: "REPAIRS WILL BE MADE 6/11. CLEAN UP WILL BE DONE BY AMCCO."

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Duplicate spill #9514066. Water service was leaking at 214 23rd St. Plumber dug hole - feeder lost pressure, oil is coming up out of ground onto road. some ran into sanitary sewer, Con Ed diverted remainder into nearby manhole. Water service is shut off. Dielectric tankers were used to collect spilled oil. Con Ed is to clamp the feeder ASAP. Analytical results on the oil are due at 2-3 PM. PCB count unknown at this time. Will have cars moved, remove snow, clean street. Current pressure at 5 to 6 psi. Source of leak identified by Con Ed as a 1 leak in the water service line to 214 23rd St. water leaking from service line agitated sand near feeder, polishing cable finish off. DEP instructed the homeowner that it was their own responsibility to replace the water service line. Temporary clamp installed by 2:45 PM. Pressure reduced to 0 psi. Permanent weld to be made by midnight crew. PCB results - 4 ppm. (CAE) 2/13/95: Spoke with Joe Oliverto, S&TO - excavated 2-3 feet below feeder, collected 5 samples -to Karel Konrad. 6 recovery well installed by MEG. (CAE) APPENDIX B SITE NO. 62. 2/23/05 - Draft site investigation work plan, prepared by CDM, submitted for review. (JHO) 5/2/05: Comment letter sent to Con Ed - required modification of QAPP. (SKA) 6/7/05: Revised Final SIWP submitted. (JHO) 6/29/05: SIWP approved. (SKA) 8/2/06: Site Investigation and Remediation Plan submitted. Assigned to Shaun Bollers for review. (JHO) 9/20/06: Based on review of SIRP, no residual contamination from this incident was detected in soil or groundwater. Copy of report and no further action letter contained in eDocs. Close out. (JHO)"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 04/27/05- Bureau B, unassigned, due to low priority. Transferred from R-2. 12/20/06- reassigned to Chris Milack, Central Office (Milack) 12/29/06- Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93-05122. (Milack) 5/24/07- GW investigation report was received 5/18/07. Two wells were sampled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue. 7/2/08

- Haggerty: assumed project management from Chris Milack 9/19/08 - Haggerty: approved SI workplan 11/25/08 - Haggerty: SI workplan altered due to the presence of oil-cooled high pressure gas mains along 24th Street. See email and revised figure in edocs 4/20/09 - Haggerty: approved SIR with the following comments: 1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol. 2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email. 3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed. 6/19/09 - Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow-up May 2010 - Due to various underground utilities, off-site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of delineation at this time. Discontinued EFT events due to poor recovery, really tight soil July 2010 - EM granted access to off-site location to complete delineation August 2010 - Offsite well well installed 8/3 February 2011 - offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On-site contamination predominately MTBE June 2011 - SSUR overdue July 2011 - reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss August 2011 - sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11) Sept. 2011 - approved Feasibility study work plan for SVE/AS January 2012 - EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb) February 2012 - discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data came in April 2012 - EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over-excavation is the only fialbe solution to source removal. EM states they won't remove the tanks becuae some were sold to the owner. PM needs assistance from OGC August 2012 - With OGC's involvement, EM has agreed to drill through the tanks which will only prove that EM is responsible for removing the tanks December 2012 - Wells in the former tank area should have been installed at this point but I was unable to confirm with the GES PM. January 2, 2012 - according to GES Project Manager, installation of tank field wells was delayed. Installation will begin 1/8/13 May 2013 - OGC and EM legal contacted regarding this site. The groundwater is grossly contaminated (80,000ppb of VOCs). Dept. required EM to exacavate the source (old tanks and associated contaminated soil) but EM won't sign a Consent Order or perform the work. EM already performed an SVE/AS pilot test which failed. Now, EM wants to perform another SVE pilot test October 28 2013 - ExxonMobil has agreed to sign the Consent Order and remove the tanks and contaminated soil. Workplan due in 30 days December 2013 - PM sent comment letter to ExxonMobil. The work plan was revised and resubmitted. Currently under review January 6, 2014 - revised workplan approved April 2014 - Excavation work plan approved in January but we are still waiting on the access agreement with the property owner September 2014 - Haggerty: excavation per the RAP

HURLEY #18883 REPORTS FOUND 3-PHASES FROM ERICSON COUPLING.LEAKED APPROX 1-1/2 GALLONS OF UNKNOWN OIL ON SWICTH GEAR 2B21-2-NORTH.IT APPEARS TO BE CONTAINED AT THIS TIME NO SEWERS OR WATERWAYS EFFECTED AT THIS TIME.NO FIRE OR SMOKE.WILL GET BACK TO TELL US WHO WILL TAKE SAMPLE AND CLEANUP.ENVIR TAG #040-0111 PLACED.AREA CORDIN OFF. Update - 0520hrs - Hurley reports chem lab has been contacted to come and take sample. 4/18/03 15:15, Lab Sequence Number: 01-06169-001, <1ppm PCB 4/25/2003 13:05 As per confirmation from. P. Vieira, the station supervisor at the time of the spill, he confirms that the unknown was cable pulling grease, a water based substance similar to gojo. The Spill was cleaned up that day by the station operator who called it in Hurley # 18883. He used pads and placed marriage roll down until a crew would be able to get to the conduit and wrap all the joints. The leak occurred at the joint of two sections of a non-oil filled conduct and was a result of extreme temperatures. On June 5 all the joints were wrapped as a preventative measure of any more grease leaking during extreme temperature days. No repairs are required. The incident may be closed and submitted to the DEC."

inspection - address not found (based upon reported address the site is either a Con Edison sub-station or a Cemetery). A Citgo S/S is operating at 745 5th Avenue, this location was inspected and onsite representative (Bernard Mays) was interviewed. He states station currently operating as a Citgo was formerly a Shell, Pronto & Texaco is reverse chronological order. The station operator states that no paperwork is available prior to changing to Citgo as the operator has changed multiple times. The onsite representative was able to provide passing tank tightness testing records for all (5) tanks in operation at site - dates of test reports available for review onsite were 7/23/13 and 7/7/14. A review of PBS records (EDOCS) reveal multiple passing tank test reports for the same (5) UST's are part of the PBS (2-332720) file. As the address is incorrect and current passing tightness tests are available - no further action is required. Spill is administratively closed."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Central Station reports while Maintenance was performing work on Transformer # 2 Conservator Tank, the top blow-off overflowed 20 gallons of non-pcb dielectric oil onto side of transformer, concrete and bluestone underneath in Greenwood Station. No fire/smoke involved. No sewers or waterways were affected but bluestone was affected. Pigs and bolognies placed and clean up is in progress. Spill is contained at this time. Maintenance is on location and will be barreling clean up materials and affected bluestone along with washing down side of transformer. No sampling necessary. UPDATE 2/9/04 1500 Hours Mechanics Chang and Garzino were onsite to pickup affected bluestone. The cleanup was completed at 2100 hours the same day. UPDATE 8/12/04 T.Hunter #20132 notified me that the ELAN valve has been inverted on TR#2. I inspected TR#2 and found no leaking at this time. Leak Closed. - J. Suarez"

Remarks: "overflow of 20 gallons from conservator tank on transformer #2. Cleanup in progress. Note that this is NON-PCB oil."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

RODRIGUEZ DEC Notes: 4/29/03 During inspection, I noticed a valve on feeder 42232 which appeared to have been leaking over time. Valve was wet and sandbox underneath contained blackish soil. Wooden box was stained with oil. Con Ed to bag valve and tag it for repair. (KMF)
e2mis #148113: 4/29/03 0945hrs During DEC inspection, found spill of approx 4oz of non-PCB dielectric fluid that leaked from an isolation valve on a 3 riser that connects to the A & C phase of feeder 42232. Spill is contained in sandbox that is made specifically for leaks. Cleanup is underway by using a shovel to remove the affected sand and placing it into a 5gal can for disposal. 4/29/03 1020hrs 2 drops of non-PCB fluid leaked to bluestone. Affected bluestone was also placed into 5gal can for disposal. Cleanup is complete. On 4/30/03 TO crews cleaned and tightened packing nuts on leaking valves. Visual inspection performed and weep had stopped."

Remarks: "spill is actually 4oz. isolation valve 3 riser pipe feeder 42232 no fire, smoke or private property signal 4 ref#148113 "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

O'CONNELL e2mis no. 152503: approximately 2 gallons of dielectric fluid on top of approximately 15 gallons of water in Manhole 61672, Feeder 38B14. The spill is contained on the manhole. Chem Lab was notified of the incident and will collect samples of the substance for testing. Lab Sequence Number: 04-01974-001 TOTAL PCB 53 ppm Lab Sequence Number: 04-01975-001 Analysis indicates the presence of a substance similar to a dielectric fluid. Cleanup conducted by Clean Harbors. During cleaning of sump in manhole determined that manhole sump appears to have a earthen-crushed stone bottom. Clean Harbors removed several inches off the bottom. Arrangements will be made with the Chem Lab to sample the earthen bottom. Samples were taken after Clean Harbors removed several inches from the sump. Samples were taken of the water on the top of the sump (it was raining and some rainwater accumulated in the sump), and composites from surface to 6 inches and 6 to 12 inches, and analyzed for dielectric fluid (method 8100) and PCBs. Results are summarized below; complete lab report entered below. Sample Depth PCB concent Dielectric Fluid(method 8100) Surface (water) <1 PPM - 0-6 <1 <61.8 PPM 6-12 <1 169 (Sun 6) Lab Sequence Number: 04-02059-001 PCB < 1 ppm. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

O'CONNELL Con Ed e2mis #130396: 3/14/00 1025hrs Mike Rosa, Substation Operator, reports he found 3gal transformer oil leaked from 138kV transformer #1 main conservator tank onto pad underneath and onto bluestone beneath transformer pad. 1gal of this oil reached the bluestone on either side of pad covering 1sq yard on each side. Unit was installed 10 days ago. Blankets and socks placed to contain spill. 3/14/00 1800hrs Electronic documentation received from M. Moran(supervisor) indicating cleanup was completed on 3/14/00 1115hrs. Contaminated soil and bluestone were excavated and placed in two 55-gal drums. Leak was due to CMVM circuit which was not operating properly. Corrective actions will be taken during outage. 4/18/03 1600hrs As per conversation with Alfred Blanco, the transformer was taken offline that weekend (3/17 - 3/19/00) where crew tightened the diaphragm of the pressure relief device, preventing any future occurrences of release from the main tank conservator. The repairs have held up and there are no visible signs of any residue as per visual inspection on 4/16/03 by station supervisor. DEC Notes: 4/29/03 Equipment has been repaired. There is no evidence of a spill underneath conservator. Concrete pad was slightly stained, but I did not ask Con Ed to do any additional cleanup. (KMF)"

Remarks: "2 gallons on concrete 1 gallon on soil. con ed #130396. spill caused by leaking transformer. "

DEC Memo: "9/16/12 TJD Recall. DEC staff met onsite with Mike Pillig & Rob Duffy from Con Ed. Underground electric feeder cable is actively leaking and has caused an undertermined volume of oil to leak to subsurface soils and roadway surface - product has migrated along curblin and impacted a storm catch basin at the intersection of 23rd Street and 5th Avenue. NYCDEP representative (Andrew Kelly) issued a Commissioner's Order to repair leak and clean affected drainage structure. At the time of DEC inspection, suspected leak location was identified IFO 258 23rd Street which is immediately adjacent to the Greenwood Substation. Allstate Power Vac onsite cleaning roadway and impacted drainage structure. Con Ed representatives stated the line pressure on affected feeder was reduced from 200 psi to 40 psi to slow leak rate. Con Ed personnel are awaiting an emergency permit from DOT prior to proceeding with excavation work to expose and clamp leaking feeder cable. DEC requested Con Ed personnel notify DEC AH responder when clamp was installed and leak stopped. @1430 TJD received notification from Con ED (Rob Duffy) that the barrel clamp was in place. Environmental cleanup will resume once permanent repair is completed and required permits were obtained. Endpoint sampling is required. Estimated volume of discharge is 2,500 gallons. 4/9/13 TJD File review. All required closure documentation has been received. Leak was caused due to accelerated corrosion/failure due to direct contact between leaking water main and electric feeder. Contaminated soils were excavated to the extent practical due to site constraints

Hazardous Waste Summary:

- . Waste code: B002
- . Waste name: Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

- . Waste code: B005
- . Waste name: PCB articles, other than transformers, that contain 500 ppm or greater of PCBs, excluding small capacitors.

- . Waste code: B007
- . Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

- . Waste code: D006
- . Waste name: CADMIUM

- . Waste code: D007
- . Waste name: CHROMIUM

- . Waste code: D008
- . Waste name: LEAD

- . Waste code: X002
- . Waste name: POLYCHLORINATED BIPHENOLS (PCBs)

Tank Info:

Tank Number: 001
Tank Id: 63627
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

J00 - Dispenser - None
H00 - Tank Leak Detection - None
I00 - Overfill - None
D00 - Pipe Type - No Piping
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
G10 - Tank Secondary Containment - Impervious Underlayment

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: TRANSLAT
Last Modified: 04/14/2017
Material Name: waste oil/used oil

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "7/22/05: Closed out 9614390. Will clean up under this spill number. Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND PRIOR SPILL NUMBERS HERE - 9416269 9614390 6/7/2001 - Sangesland visited the site: Anton Junicic Ent. inc. (junk yard) with ECO Anthony Panipinto. The ground around the car dismantling area showed signs of petroleum pooling and saturation into the soil. Owners (brothers) Bernardo and Anton Jr. Junicic - 718-768-8884 Mr. Junicic presented drawings showing an oil/water separator which had been installed on the site in 1999. It is a buried unit with 2 stormwater drains leading into it. The water discharge goes into the NYC DEP sewer system. Oil is periodically pumped out of this unit and disposed of. Because the surface of the yard is soil (owner says it is cement 1' to 2' down) the rainwater had never been properly directed into the 2 drains. DEC wrote a DO WORK letter (6/8/2001) directing Mr. Junicic to: 1) Excavate the site (soil/gravel) down to either clean soil or a solid barrier (old cement floor). Contact DEC for a site inspection. 2) If DEC inspection goes well, regrade the property and pour a new cement floor. Contour this floor so rainwater from the whole property flows to the proper drains. 3) Reconfirm that the water discharge from the oil/water separator is properly hooked up to the city sewer system in accordance with the regulations of the NYCDEP. 4) Design the property layout to allow access to the Blue Cover on the separator unit. 5) Maintain a log book for the drainage of the oil out of the separator unit. On future inspections, this information will be requested to provide that the separator system has been maintained. Submit a written plan and schedule of how this work will be performed. This plan is due to DEC by July 31, 2001. 7/11/2001 Sangesland went back to the site. Mr. Junicic is completing the required work in phases. Today the north 1/3 of the site had been cleared and excavated. Sangesland saw one hot spot which was removed while there. After today's inspection, an 8 to 10 reinforced cement slab was going to be poured and contoured over the full north 1/3 of the property. 8/14/2001 Sangesland (from the street) could see that the north 1/3 of the lot had been cemented and Mr. Junicic had redeployed much of his equipment over this area. It appears that he is clearing out the south west 1/3 of the site. I assume this will be done soon. 4/15/2002 Sangesland could see that 2/3 of the site had been paved over. Mr. Junicic said he would move the container boxes (used for storage) and would pave the remainder of the site soon. 3/30/2006 Requires a site visit to confirm that the whole lot has been paved over with cement. 8/26/08 - Raphael Ketani. I made a site visit at the request of Steve Sangesland, case manager. I met one of the workers who told me that the boss and the supervisor were both

away from the shop. The worker called his boss who told him that it would be alright for me to look around. The shop is very overcrowded with car parts. I inspected the northern part of the site first. There was a small pile of soil and fill under a few cars. A spot of bare concrete was visible next to the pile of material and I had the impression that there actually was concrete under the material. Next, I viewed the back of the site. There was concrete everywhere in plain sight. Lastly, I viewed the southern part of the site. Here there was a depressed area with a sharp border, but which had a historical fill base. The entrance to this part of the shop had bare historical fill and comprised an area of about 800 to 1000 square feet. The worker I had met told me that they ordered the concrete, but they are waiting on a contractor to install it. After this, I left. 8/21/2013 Someone from spills needs to make a final visit to this site. It's a junk yard on Third Ave under the elevated hwy. It's an open lot between 2 buildings. Steve worked with the owners back in the 2001-2004 time frame to scrape up most of the lot and pour a cement base. They did 1 quarter of the lot at a time. They have completed 3/4 of the work. I never saw the rear/southern quarter completed. They have been inspected several times, but this final quarter has not been done. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. alternate address: 776-778 3rd Ave PBS #: 2-610070. as per PBS record, the site has one 275 gal waste oil AST in contact with impervious barrier. the tank was installed in July 2001. other spills : 9416269, 9614390 spill # 9416269 was reported on 03/6/1995 due to possible contamination at the site. case was closed and merged with 9614390. spill # 9614390 was reported on 03/12/1997 by NYPD due to petroleum contamination at the site. case closed and merged with 0102524. 06/04/14-Hiralkumar Patel. 10:30 AM:- visited site. found new concrete in visible areas in most of the site, except southwest corner, where broken asphalt was noted. found petroleum stains on concrete surface. site was full of auto parts. Anton Junicic Ent. Inc. Attn.: Bernardo 776 3rd Avenue Brooklyn, NY 11232 PH. (718) 768-8884 based on observations during site visit earlier today and information available to date, no further action needed and case closed."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Name: FORMER MOORE MCCORMACK LINES-CONTINENTAL TERMINALS
Address: 730 3RD AVENUE
City,State,Zip: BROOKLYN, NY 12201
Program: HW
Site Code: 439096
Classification: N
Region: 2
Acres: 18.54
HW Code: 224143
Record Add: 08/24/2010
Record Upd: 11/12/2010
Updated By: MOBARRIE
Site Description:

The Site is located in the Gowanus section of Brooklyn in a zoned manufacturing area. The site was formerly used by Moore McCormack Lines, a steamship company (dates of occupancy unknown). Subsequently, Continental Terminals used the pier shed to store and distribute cocoa beans into the late 1990s. The shed was removed and the pier was then used by American Warehousing for vehicle storage. The Site also contains a garage that was used for vehicle maintenance. The Site was recently paved. The northern portion of the Site is used for storage of sea containers by the New York City Police Department, and a small electric power generating station operated by the New York Power Authority occupies the south part of the Site. Immediately northwest of the Site is Upper New York Bay/Gowanus Canal, immediately northeast is industrial/manufacturing, and immediately southeast are commercial and office buildings. The Site is approximately 98,010 square feet (2.2 acres) in size and is occupied by the NY Power Authority as well as the storage area for sea containers for NYPD. The nearest residential units are 0.12 miles (approx. 650 feet) to the east-southeast. There are no records of Petroleum Bulk Storage or Chemical Bulk Storage on the site. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Env Problem:

Based upon investigations conducted to date, the primary contaminants of concern at the site include mercury, lead and copper. In July 2009, following discovery of petroleum contaminated soil during excavation to support repairs to the Site's bulkhead, three test pits were excavated to determine the extent of the petroleum impacts. A total of seven sidewall soil samples and one grab groundwater sample were collected from the test pits. One sample was also collected for waste classification from the stockpiled soil excavated from the initial excavation and the test pits. Sidewall samples were analyzed

for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, pesticides and Total Petroleum Hydrocarbons. The composite waste classification sample was analyzed for TCLP parameters as well. The following contaminants with maximum concentrations were observed in soil: 17 ppm mercury; 1,100 ppm lead; and 330 ppm copper. The Part 375 Industrial Use Soil Cleanup Objectives (SCOs) have been exceeded for mercury, and the Part 375 Commercial Use SCOs have been exceeded for lead and copper. Groundwater samples were all below applicable Groundwater Standards for VOCs and SVOCs, but were not analyzed for metals. Depth to groundwater is approximately 9-15' below grade and is likely influenced by tidal action due to the immediately adjacent Gowanus Bay. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

B01 - Tank External Protection - Painted/Asphalt Coating

Tank Number: 008
Tank ID: 58555
Tank Status: Tank Converted to Non-Regulated Use
Material Name: Tank Converted to Non-Regulated Use
Capacity Gallons: 550
Install Date: Not reported
Date Tank Closed: 07/01/2000
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0000
Common Name of Substance: Empty

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: JMKRIMGO
Last Modified: 04/14/2017

Equipment Records:

D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
C02 - Pipe Location - Underground/On-ground
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
H00 - Tank Leak Detection - None
I00 - Overfill - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 18804
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 01/01/1998
Capacity Gallons: 1500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 04/09/2012
Register: True
Modified By: NRLOMBAR
Last Modified: 04/14/2017

Spiller Name: STEVEN FRANK
Spiller Company: UNKNOWN
Spiller Address: 830 4TH AVE
Spiller Company: 999
Contact Name: STEVEN FRANK
DEC Memo: "10-24-2014 email from S. Frank: Dear Alex, We discovered material that has been identified as transmission fluid in well BW-1 at the 72nd Precinct site. The well location is shown on the attached site plan. The well is in the middle of the driveway area and there is no transmission fluid storage in this portion of the site so we suspect the fluid may have been introduced from the surface rather than migrating through the ground. We have a Vac Truck scheduled to evacuate the product next Wednesday. Let me know if you would like us to report a new spill for this finding. Sincerely, Steve Frank
5-4-2015 Reviewed a report dated 2/26/2015. EFR via vacuum truck was performed at BW-01 on October 2014 and the product thickness was 0.34' in BW-01. On November 6 2014, the product thickness was 0.02'. Approximately 8-gallons of oil groundwater mixture was removed from the well. On December 4 and December 19, 2014, no free phase was recorded. I called S. Frank and requested that more monitoring events needed in order to determine if all free phase product was removed from the well. AZ 1-6-2016 Reviewed a report dated 5/28/2015. No free-phase product was measured in BW-01 since November 2014. The free-phase product was identified as transmission fluid. AZ 9-16-2016 Reviewed a report dated 3/10/2016. Spill Number 1407672 was reported as a result of free-phase product in well BW-01 which was identified as transmission fluid. LiRo performed fluid removal and has continued to monitor this well. No free-phase product was measured in BW-01 since November 2014. Based upon the monitoring data LiRo requested closure of Spill Number 1407672. I concur with this proposal. The following letter email was sent to S. frank and V. Brevdo on 9-19-16: Dear Steve, I have reviewed a Spill Closure Report dated March 3, 2016. The report stated that that spill #1407672 was reported as a result of discovery of free-phase product in well BW-01 which was identified as transmission oil. LiRo performed product removal and has continued to monitor this well. No free-phase product has been reported in well BW-01 since November 2014. Based upon this monitoring data, LiRo requested closure of this spill. This request is approved and the spill is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and

ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. 10-12-2005 SVE and pump and treat systems are operated at the site. SVE system is extracting significant concentrations from the vadose zone. AZ 1/13/2006 Reviewed system report. Analytical results showed total VOCs concentrations in air samples at 550 ppb and 44.7 ppb in 1st sampling events. AZ 4-17-2006 Reviewed system report received in November 2006. Analytical results showed total VOCs concentrations in air samples at 1,832 ppb suggesting that SVE system continues to extract contaminants. URS recommended continuation of the groundwater extraction and treatment system. Groundwater sampling was performed. All wells except one showed exceedances ranging from 127 ppb to 19,100 ppb. Contaminant concentrations increased in wells MW-6,7,8,11 and 12. The average total VOC concentration increased from 6,297 ppb to 7,417 ppb. AZ 12/08/2006 Reviewed monitoring report dated September 22, 2006 and received on September 27, 2006. This report covers April - June 2006. On January 1, 2006 Greyhawk was assigned responsibility for this site. The site has SVE and GWET systems. VOCs were detected in all nine monitoring wells with concentrations ranging from 30 ppb to 14,700 ppb in MW-06. concentrations increased in two monitoring wells MW-01 and MW-08. It appears that the SVE system is not functioning efficiently as evidenced by relatively low VOC mass removal and restricted wellhead vacuum- 0.001 to 0.052 water column. The carbon unit should be replaced. Relatively low pumping rate limits the capture zone of 3 pumping wells. An increase in pumping rates would expand the size of the capture zone and might improve effectiveness of the SVE system. Significant VOC contamination persist in 7 of the 9 monitoring wells. Roux suggested continue quarterly gw monitoring, verify depth and condition of the ventilation wells, collect samples from MW-3 which was previously removed from the sampling program but is located very close to two other wells with significant VOC concentrations. Evaluate methods to optimize SVE and GWET systems. DEC concurred. AZ 4/26/2007 Reviewed monitoring report for the period of July - September 2006, dated December 15, 2006, and received on December 21, 2006, and report for the period of October - December 2006, dated April 11, 2007, and received on April 26, 2007. October - December 2006 Report stated that the SVE system is approaching asymptotic levels. Vacuum levels in four observation wells are low - 0.01 -0.04 , GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations ranging from 2,252 ppb to 71, 110 ppb. Significant increase in concentration was observed in MW-10 from 9,010 to 71,100 of total VOC. In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. The following e-mail was sent to DDC/ROUX/Greyhawk: I have reviewed monitoring report for the period of October - December 2006, dated

S102233280

April 11, 2006, for this site. Vacuum levels in four observation wells of the SVE system are very low (0.01 -0.04). GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations in groundwater (up to 71, 100 ppb of total VOC in well MW-10). Significant increase in total VOC concentrations was observed in MW-10 (from 9,010 ppb to 71,100 ppb). In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and the systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. AZ 1-22-2008 Reviewed January - September 2007 Report submitted on November 13, 2007. GWET is ineffective due to the restricted pumping rates. The SVE and GWET systems are not operating efficiently. Sheen was detected in MW-04 and MW-06 in April 2007. Soil investigation was performed in July-August 2007. The highest VOC concentrations in soil were detected in RXSB-04 75,000 ppb at 0 to 2 feet bls. RXSB-01 - 49,400 ppb of total VOC at 23-25 feet bls. MW-06 contained 9,980 ppb of total VOCs, MW-10-5,220 ppb of total VOCs. MW-02 was destroyed. Roux proposed shutting down SVE and GWET systems, implement enhanced bioremediation. Contacted Brian Morrissey. The site requires hydraulic control over migrating groundwater plume. Proposals for a new groundwater treatment system are required ASAP. Brian will get back to me with a timetable. AZ 1-23-2008 Conference call with Brian Morrissey and Andy Leddins. Bioremediation as main remediation strategy is rejected by DEC since the plume must be hydraulically controlled. I requested plume delineation along 29th street and establishing of hydraulic control over the groundwater plume. Roux will install delineation wells within next two weeks, perform high vac test and confirmation studies of DPE system within next three to four weeks. After the studies are completed a DPE system will be installed. Permo OX Plus injection will be performed along Th Street as an IRM simultaneously with constructing a DPE system. Timely quarterly should be submitted for this site. AZ 7-22-2008 Reviewed January - October 2007 through March 2008 Report submitted on April 21, 2008. The quarterly report submittal was significantly delayed. The SVE and GWET systems are not operating efficiently and high level residual soil and groundwater (up to 11,790 ppb of the total VOCs) contamination remains at the site. DEC requested installation of two additional monitoring wells to delineate offsite extent of groundwater contamination in January 2008 but the wells have yet to be installed. DEC requested and Greyhawk/Roux concurred that high vac test and confirmation studies of DPE system should be performed. The test has not been conducted and the DPE system has not been installed. The remedial progress at the site is unsatisfactory. Quarterly Monitoring Reports should be submitted on time. DPE system should be installed, delineation wells and needed testing performed without delay. A timetable for the above activities should be

75 PRECINCT NYPD -DDC (Continued)

S102233280

submitted to DEC within a week. An e-mail describing the above requests was sent to DDC/Greyhawk/Roux/V.B. AZ 7-3-2008 Received an e-mail from Brian Morrissey/site update: 1.The 2 offsite wells (RXMW-01 and RXMW-02) were installed and developed in late June/early July. The well casings and building corners will be mapped by a licensed surveyor on Friday, July 25th. 2.Groundwater levels in on-site and off-site monitoring wells were gauged during the week on July 14th. 3.Groundwater samples were collected during the week on July 14th. We expect to see preliminary results during the first week of August. 4. We reviewed soil data from prior CMs and further evaluated subsurface conditions (contaminant levels in clay/silt areas). 5.We conducted a 2nd round of vacuum testing and vapor sampling on July 9th. 6.ADT installed 10 injection wells in late June/early July. Well development activities were completed during the week on July 7th. 7.PermeOx Plus injections commenced on July 21st (as an interim remedial measure). 8.Soil samples were collected for laboratory analyses during installation of the monitoring wells and injection wells. Samples at intervals with elevated PID readings were also sent for petroleum identification. Upon receipt of the results of the vapor sampling and soil analyses, Greyhawk and Roux Associates will develop the plan for modifying the existing remedial systems. Due to the priority status of this site, I will contact you at that time to discuss future remedial actions and a timetable. AZ 6-16-2009 I have reviewed a Monitoring Report dated March 19-2009 for the above site for the period of April 2008 through January 2009. According to the report, URS recommended excavating the isolated area of shallow soil contamination around MW-02. Apparently, this excavation has not been performed. In 2007 VOCs were detected in soil shallow zone (0'-2') at concentrations up to 75,000 ppb. The SVE and GWET systems are not operating efficiently. Groundwater and soil contamination remains at the site. Free phase product was detected on January 12, 2008 in RXMW-06 and identified as a mixture of gasoline and No.2 fuel (diesel). One round of bioremediation injection was performed on July 21, 2008. Post-injection monitoring has not been performed. The contamination has migrated off-site in a northerly direction to the other side of 29th Street. However, VOCs were non-detect in two off-site wells (MW-13 and MW-14) installed at DEC request. Roux proposed modification of the SVE system by applying full vacuum to one or two extraction wells and using packers. This proposal is approved. On-site 1,000 gallon emergency generator diesel UST and onsite heating oil tanks should be tested without delay in order to determine a source of contamination at the site. DEC has not received results of the post-injection monitoring. These results should be submitted to DEC without delay. GWET or DPE system modification/installation plans should be submitted to DEC. Remediation recovery system (GWET or DPE) should be capable of capturing the contaminant plume and preventing off-site migration. Working groundwater recovery system should be installed at the site. Additional bioremediation injection could be used only as interim remedial measure. AZ 10-21-2010 The site was discussed at October 19, 2010, meeting with DDC/LIRO. The SVE system has not been modified and currently shut off. 1,000 gal emergency generator tank was not located by Roux. 8,000 heating oil tank should be tested. Shallow excavation should performed as it was discussed at the meeting. LiRo will develop low flow multi well groundwater remedial system. Geoprobe borings will be performed prior to the excavation. I called S. Frank on October 21, 2010, to confirm investigation details.

S102233280

Design report will be submitted in November 2010. AZ 10-25-2010 E-mail from S. Frank/ Liro: Alex, Thanks for your call on the 72nd precinct site status following up our discussion from the quarterly meeting on October 19, 2010. Just to make sure I didn't miss anything, we discussed the following: 1 You asked that the shallow excavation work near MW-02 that Roux/NYSDEC worked out, should be implemented. I advised you that we had recommended sampling at that location to confirm that contamination is still present. 2 You asked that we implement modifications to the SVE system (i.e., packers and applying full vacuum to 1 or 2 wells) that Roux had recommended. 3 You asked about the status 1,000-gallon diesel tank for the emergency generator. I advised you that Roux reported that they could not find the tank. 4 You requested the status of tank testing for the 8,000 gallon heating oil tank. I found the tank tightness test report from August 2009 and have attached it. AZ 10-4-2010 An e-mail was sent to LiRo/V.Brevdo/F.Ashkan: Dear Steve, I have reviewed Quarterly and Site Turn-Over Status Report with the proposals dated August 3, 2010. The report provides very detailed information and comprehensive analysis of the site status. According to the report, the SVE/GWET system is down since 2008. Roux conducted packer tests and recommended SVE system modifications. Groundwater contamination appears to have migrated off-site northeast across 29th Street. Roux performed two rounds of PermeOx injection after which VOC concentrations slightly decreased in groundwater. Heavy soil contamination and relatively high dissolved groundwater contamination exist at the site. There are four USTs closed in place. Based on the above, DEC requires the following: Actual USTs information should be reconciled with the Petroleum Bulk Storage (PBS) records and changes filed with the PBS section. I suggest that the tanks closed in place should be excavated, utilities and structures permitting. SVE/GWET system should be restarted. SVE portion of the system should be modified. Modifications should be based on the Roux's pilot test results. Hot spot excavation of soil should be performed around wells IP-09 and MW-02. Investigation of the piping associated with the former gasoline UST and the trench drain system should be performed. If additional soil investigation for the purpose of excavation is needed, it should be performed without delay. Additional rounds of in-situ chemical oxidation should be discontinued pending soil excavation and restart of the remedial system. The pump test is approved and should be performed if needed. Wells MW-05 and MW-15 should be added to the monitoring program. SVOC analysis of ground water could be performed, if LiRo considers it necessary. 600 gallon waste oil UST should be located. A detailed work plan with the implementation schedule should be submitted to DEC no later than in 30 days. AZ 3-1-2011 Remedial Action Plan submitted on Dec. 1, 2010 was reviewed. The following e-mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: Dear Steve, I have reviewed the Remedial Action Plan for the above site. A proposed excavation is approved. The excavation should include area around MW-07. The area of the excavation should be extended north, if feasible, to cover the contaminant plume. Tanks closed in place and associated piping should be excavated. Post excavation samples should be taken. Proposed GWET system should be modified to encompass contamination migrated across 29th Street. Contamination should be remediated on-site and off-site. SVE pilot test is approved. GWET system and SVE system should be developed after the excavation is performed and a monitoring round confirms the exact boundaries of contamination. The Responsible Party and

S102233280

Contractors are responsible for the safe execution of the Work Plan. AZ 3-29-2011 Reviewed quarterly monitoring report dated Dec. 14, 2011. Well RXMW-05 was converted to injection but, nevertheless, sampled. Total VOC concentrations ranged from 73 ppb to 16,213 ppb. The pump test was conducted but on Sept. 2010, and indicated a limited flow capacity. Bioremediation sample results do not indicate a reduction of contaminate concentrations due to the bio-injections that were completed by Roux in July 2008 and September 2009. The results of the packer test were inconclusive. Soil contamination is present along the northern portion of the building and along 2nd St. (north side) extending 8' below the water table. MW-07 exhibit a significant increase in total VOCs. AZ 6-30-2011 Reviewed quarterly monitoring report dated March 1, 2011. Excavation in the vicinity of IP-09 and a former fill port is planned. Installation of SVE wells is scheduled. I contacted S. Frank and requested to repeat GPR test to locate closed in place tanks. GWET is being designed. The site has gross dissolved petroleum contamination (up to 18,634 ppb of total VOCs). This is the LiRo's highest priority site. AZ 10-25-2011 At the meeting with LiRo in-situ chemical oxidation (ISCO) pilot test described in a report dated October 13, 2011, was approved. An ISCO pilot plan will be prepared and submitted to DEC for review. AZ 10-25-2011 The following email was sent to S. Frank/F. Ashkan/V. Brevdo: Steve, You can request a FOIL information for sp.#0907094 and Langan's report related to this spill. The report stated that the source of the contamination at the site is 72nd Precinct. AZ 1-30-2012 Reviewed QMR and in-situ chemical oxidation pilot test work plan dated November 14, 2011. Second GPR survey was scheduled for November 2012. ISCO Pilot Test approved by DEC approved by DEC at October 25, 2011, meeting will be implemented. Two additional monitoring wells will be installed west/northwest of destroyed well MW-02. This area was previously inaccessible due to the SVE/GWET system trailer. Wells RXMW-02, RXMW-04 and RXMW-05 will be replaced. AZ 11-15-2012 Reviewed a quarterly monitoring report (October 2011-April 2012). Dissolved contaminat concentration increased significantly in two wells MW-07 (from 6518 ppb to 12,930 ppb) and MW-10 (from 1677 ppb to 4973 ppb). Discussed the site with S. Frank. 11-16-2012 An email from S. Frank: Alex, Monitoring wells for the 72nd Pct work were replaced as follows: RXMW-02, replaced by RXMW-02R RXMW-04, replaced by RXMW-04R RXMW-05, replaced by RXMW-05R The wells were replaced in Feb-March 2012. The soil results from the well installations were reported in the previous quarterly report (dated 6-18-12). Groundwater results for the replacement wells are included in the latest quarterly report. AZ 11-16-2012 An email was sent to S. Frank/V. Brevdo/F.Ashkan: Dear Steve, I have reviewed a quarterly monitoring report (October 2011- April 2012). LiRo completed the first ISCO injection on April 10, 2012. Nevertheless, dissolved contaminant concentrations increased significantly in two wells MW-07 (from 6,518 ppb to 12,930 ppb) and MW-10 (from 1,677 ppb to 4,973 ppb). It seems that ISCO injections are not effective enough to treat existing offsite contamination. LiRo could proceed with the remaining ISCO injections. However, alternative plans for treatment of the offsite contamination should be developed and submitted to DEC. Sincerely, Alexander Zhitomirsky 4-3-2013 Reviewed a quarterly monitoring report dated 11-13-2013. Post injection groundwater sampling indicates a reduction in total VOC concentrations in wells with the dissolved contaminant plume. Also, some total VOC spikes in post injection samples were recorded. The following e-mail was sent

S102233280

to S. Frank/V. brevdo/ F. Ashkan: Dear Steve, I have reviewed and discussed over the phone with you the above site. LiRo proposed to expand ISCO Pilot Test Program to the precinct side of 29th Street. This proposal is approved. If this remedial strategy is not effective, an alternative remedial strategy should be implemented. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alex Zhitomirsky 10-9-2013 Reviewed Quarterly Monitoring Report dated March 4, 2013. LiRo will perform additional injections following re-evaluation of the calculated quantities of hydrogen peroxide and catalyst. On January 3, 2013, in a Progress Summary Meeting, DEC agreed with LiRo's recommendation to complete an ISCO Pilot Test Program on the precinct side of 29th Street. AZ 10-18-2013 Reviewed Quarterly Monitoring Report dated June 4, 2013. A Work Plan for ISCO injection is included in the report. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is pending available NYCDDC funding. AZ 5-20-2014 Reviewed Quarterly Monitoring Report dated October 9, 2013. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is tentatively scheduled. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. The total VOC concentrations on site ranged from 7 ppb to 18,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 302 ppb to 18,596 ppb. AZ 11-18-2014 Reviewed Quarterly Monitoring Report dated March 7, 2014 (Sept. 2013- January 2014). Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City. Potential off-site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. In December 2013, LiRo collected soil and GW samples and sent them to FMC, as part of the treatability study (Klosur). The total VOC concentrations on site ranged from 11 ppb to 11,056 ppb. The total off-site VOC concentrations in off-site wells ranged from 19 ppb to 12,460 ppb. Free phase product was reported in injection well LIP-02 in January 2014. According to LiRo, there is a possibility that this free phase product could be attributed to the business located at LIP-02 (Address 149 29th Street. It belongs to active beverage distributor with constant truck traffic and trucks parked on sidewalk). AZ 12-24-2014 The following email was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Quarterly Monitoring Report and Klosur Injection Work Plan for the above site, received on October 6, 2014. The Work Plan proposed injection of Klosur Persulfate. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on and off site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Alex Zhitomirsky - Engineering Geologist 2 2-26-2015 Reviewed a

Map ID

75 PRECINCT NYPD -DDC (Continued)

S102233280

monitoring report dated 7/23/2014. The report stated that there is a possibility that an off-site source is present on the east side of 29th Street. LiRo has opened discussions with the 149 29th Street property owner (beverage center) and will attempt to reach an access agreement to complete an investigation within the building in the areas where previous investigation had identified petroleum impacts and a possible tank anomaly. AZ 5-05-2015 Reviewed a monitoring report dated 02/25/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Klozur Persulfate Injection Work Plan was approved by NYSDEC, however, implementation is delayed due to NYC DDC budget issues. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 1-06-2016 Reviewed a monitoring report dated 05/28/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ 5-05-2016 Reviewed a monitoring report dated 09/16/2015. The report stated that off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Four rounds of ISCO are anticipated. Some total VOC concentrations in groundwater reported significant increases. Total VOCs concentrations in groundwater were up to 12,000 ppb. Perdufate liberated/broke down the VOC sorbed onto the soil particles AZ 4-19-2017 Reviewed a monitoring report dated 09/29/2016. Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. In May 2016, damaged injection well LIP-05 was replaced. Total VOCs concentrations in groundwater were up to 4,100 ppb. AZ 6-6-2017 Reviewed a monitoring report dated 12/20/2016. On-site Post injection groundwater sampling results (August 2016) indicated the highest VOC concentrations in MW--06R2 (14,074 ppb). Off-site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off-site injections utilizing Klozur Persulfate may be initiated following completion of the on-site treatment regime. AZ 9-13-2017 I have reviewed a report dated 3-01-2017. In 2016 soil borings were advanced onsite. The soil sampling results were compared with the previous results. In seven borings VOC concentrations in soil decreased. In four borings VOC concentrations increased up to 1,409,500 ppb. One soil boring was advanced off-site. Six soil samples were analyzed, none reported any VOCs exceedances. Groundwater samples reported no VOCs exceedances. LiRo will

determine, based on the soil and groundwater data, the need for additional injections. AZ 12-8-2017 I have reviewed a report dated 6-09-2017. In October 2016 the fourth Kloxur injection round was completed. Post-injection groundwater monitoring was completed on October 31, 2016. Soil sampling was performed in February 2017 - March 2017. 23 samples reported one or more VOCs at concentrations above CP-51 SCLs. Total VOCs concentrations ranged from 819 ppb to 1,334,300 ppb. Off-site investigation was performed in October 2016. A total of six samples analyzed, none reported any VOC exceedances. Two off-site groundwater samples were collected. VOCs and SVOCs concentrations were reported at 0.48-2 ppb. No petroleum contamination was identified in the soil and groundwater at the off-site property. AZ 2-15-2018 I have reviewed a report dated 8-22-2017. LiRo identified a possible UST (status unknown) at the off-site property, however, no petroleum contamination was identified in the soil and groundwater. PeroxyChem has revised the injection amounts and injection zones. A revised USEPA injection program was submitted on July 3, 2017. The highest total VOC concentration was 5,151 ppb in well MW-06R2. AZ 6-11-2018 Reviewed a report dated March 1, 2018, The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Work Plan for the above site. The plan proposed ISCO injections with Kloxur in the sidewalk area of the 149 29th Street property. This proposal is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 10-22-2018 I have reviewed a report dated 11-3-2017. In September 2017, a fifth injection was completed. The highest total VOC concentration was 3,049 ppb in well BW-01R ON 8/21/2017. AZ 1--2018 I have reviewed a report dated 6-11-2018. In December 2017, seven soil borings were advanced in the sidewalk area in front of the 149 29th Street property. Petroleum-related impacts were identified in several soil borings. The highest groundwater total VOC concentrations were encountered in well BW-01R on 8/21/2017 (3,049 ppb). AZ "

Remarks: "tank abandonment done there - while geo-probing found product believes it is the piping"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "7/15/2008 TTF sent to: District 2 Meba Building Corp. 652 4th Ave, Brooklyn, NY 11232 see eDocs 10/08/08- Protest sent the report. the Report included a closure letter and the results of the tightness test. On June 26,2008 Protest performed a tightness test on the above subject tank system and it failed with a wet leak. On september 26, 2008 Pro Test technicians broke the concrete floor above tank, excavated to the tank to isolate lines from the tank. Attached to the top of the tsnk was an old suction and return connection(8 inches of line still attached to the tank), with drop tubes, which was the cause of the wet leak indication. Our technicians removed the old suction and return partial lines and drop tubes and plugged the connections. We Re-tested the tank and system and the system passed. During the excavation our technicians found no visible evidence of contamination. Spill Closed "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "also know as 850 3rd Ave. see also 93-12153 & 94-07229. unable to reach a GSA contact. Possible remediation under 94-07229. Previous note by RDDECAND on 3/15/06 Spill transferred back to R-2 3/5/08 - Austin - Assigned to Ketani for further investigation - end 3/13/08 - Raphael Ketani. I began working on the case. Spill number 93-12153 was monitored by a former spills worker, Kerri O'Dowd. She didn't put in any case notes into the database. The spill was a 200 gal. overfill. It happened because someone had the wrong tank size. DEP was contacted at 10:30AM and GSA arrived at 2:15PM. Sand and Speedi Dri were applied to the spill. The case was closed on 1/15/94. The site address is 850 3rd Avenue, Brklyn. (29 St. & 3rd Ave.). Case 94-07229 was managed by Kerri O'Dowd. There were no case notes. Contaminated soil was discovered and was being removed as it was being excavated. She closed the case on 3/29/95. 3/17/08 - Raphael Ketani. A copy of the original August 1993 Site Characterization Report was found in the file cabinet. It was produced by Woodward-Clyde Consultants, Inc. It was prepared for Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, Brooklyn (212) 926-2878/(212) 594-2118. According to the soil analytical tables in the report, there was no significant contamination. Table 4-2 for the groundwater samples didn't list any significant contamination, either. There was a fold out site map which showed the locations of the six formerly active tanks. The PBS case is #2-601672. It shows

EPA ID Number

US GSA (Continued)

U001842028

that six tanks were closed in place on either 8/1/94 or 9/1/94. Four other tanks were installed on 9/1/94. Tank #7 is in service and tanks #8 to #10 are temporarily out of service. A note in the file that I did find said that there were records in the open file section of the storage area downstairs. I checked the file storage room, but found nothing. I also asked around in the Division of Environmental Remediation, but no one had heard of the case for the site. I checked the E-docs and found the following: The E-docs contained a transmittal letter dated 8/10/93 stating that this was the second revision of the Site Characterization Report. An estimated 2050 cu. yds of soil will be excavated and an additional 450 cu. yds. of oil contaminated soil. Tanks #3 and #4 are scheduled to be removed, along with an 1100 gal. tank. Two 20,000 gal. tanks will be abandoned in place. Groundwater remediation is not necessary based upon the analytical results. A second round of groundwater sampling will take place August 1993. The parties involved are: Woodward-Clyde Consultants (212) 594-2118 Roy Feinzig (914) 682-4895, Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, White Plains, NY, 10601 Charles Evans (718) 330-7474, Federal Building Manager, General Services Administration, Public Buildings Service, Contract Section, 26 Federal Plaza, rm. 1611, NY, 10278; GSOWP94CUC0055 A 10/4/93 E-doc note from Ms. O'Dowd states that they will install 3 new USTs. There are 6 USTs on site: 5 fuel oil (4 20,000 gal. tanks, 1 1100 gal. tank); 1 20,000 gal. gas tank. Groundwater is at 5.5' to 8.5' below grade. Nine soil borings will be done and 5 monitoring wells will be installed. MW-3G is in the area for the new UST. Groundwater is at 6' and dewatering will have to take place in order to install the new tank. USTs #3 and #4 are impacted. Fuel contaminated soil will have to be removed. A 8/9/93 E-doc note from Ms. O'Dowd states that MW-1 has no VOC hits MW-2 has less than 5 ppb MW-3G has hexane 5.8 ppb, ethylbenzene <50 ppb, xylene .50 ppb MW-6 has 3 ppb of hexane MW-9 has no VOCs There was a 10/18/94 letter from Environmental Data Consultants to the GSA requesting well installation locations and regarding the NYCFD and NYC Building Department violations. Environmental Data Consultants, Inc., 55 Alder Street, Ste 2, South Yonkers, NY, 10701, (914) 968-1508. Dewatering took place to install the new tanks, but a SPDES permit wasn't needed as the discharge rate was below the permit lower limit and the water wasn't contaminated. Soil samples need to be taken at all of the closed tanks and the PBS record needs to be updated. The 9/6/94 E-doc note states that there is 2 to 3 of oil in MW-3G. USTs #3 to #5 are to be removed. Wells MW-3 and MW-6 need to be replaced as they were destroyed. Many of the hits in Table 1 of the analyses summary table also appear in the blanks. So these analytes can be negated. I tried to contact Charles Evans, but the phone number was not in service. I tried to reach Environmental Data Consultants, but the phone number was not in service. I tried to reach Rose, Beaton & Rose, but the phone number belonged to another company. I tried to reach Woodward-Clyde, but the phone number belonged to another company. 3/18/08 - Raphael Ketani. I found a later case from 1999 for the same site - #9908767. It involves the test failure of three 30,000 gal. tanks. Contact people were listed on the spill report. They are: Steve Ferman (718) 340-5268, at the site; John Harris (718) 965-5147 of the General Services Administration; and Tom Burke (212) 264-0800 of the General Services Administration, Technical Services, 26 Federal Plaza, rm. 1611, NY. I tried to contact Mr. Burke, but could only leave a message. I tried to contact Mr. Harris, but no one picked up. I tried

to contact Mr. Ferman, but the number was no longer in service. William (Bill) De Nyse (de-nice), Senior Industrial Hygienist, (212) 264-0506 called to ask what DEC had in the way of reports and documentation for the spill case. I told him we had the August 1993 Site Characterization Report that was produced by Woodward-Clyde, a Second Revision SCR and some small letters. He asked that DEC provide him the reports as he doesn't have them. He added that he was the contact person at the GSA and that he will try to help get the case closed. Mr. De Nyse asked what should happen if he can't find the closure reports. I told him that DEC will ask that a new investigation take place. I made copies of the reports and sent them to him. 4/11/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. His phone greeting said that he will be out until 4/21/08. I will try him then. 6/10/08 - Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. I got ahold of Mr. Burke. He said that right now they are putting the contract out for bid. He said it will take some time in order to get a contractor lined up and get the investigation started. I told him to keep me updated. He added that Mr. De Nyse is the point of contact. 6/12/08 - Raphael Ketani. Mr. De Nyse called back. He said he is the regional engineer and the project is now being handled by a field (local) engineer at the site. The person is Rashid Mattoo (718) 254-7141 at 10 Metro Tech, Brklyn. Mr. De Nyse said that Mr. Mattoo is the contact person from now on. He added that right now they are trying to get funding to do the investigation. They have a scope of work, also. 8/12/08 - Raphael Ketani. I tried to contact Mr. Mattoo regarding the site investigation, but could only leave a message. Mr. Burke called me back. He said that the contractor has been chosen and they expect to go to contract next week. He added that they will start in a week or two. 8/18/08 - Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The new case manager should probably call Mr. Mattoo or Mr. De Nyse in a week or two to find out the status of the investigation."

Remarks: "SOIL SAMPLE SHOW ELEVATED T.P.H. - AUTHORITY ENGINEERS - MAIN CONTRACTOR (914)682-4850 ROY FONZING PRINCIPAL CONTACT - FEDERAL MANAGER BUILDING CHARLES EVANS (718)330-7474."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 12/7/98: Spoke with Christine Kovari (Con Ed SSO) - Phase II investigation for 2 purposes: 1) divestiture 2) to confirm underground pipe which was source of Appendix B spills - may be some type of drainage conduit. Pipe was plugged up at discharge end. Con Ed has no idea what pipe is or where it comes from. Phase II consisted of 6 borings along roadway and in vicinity of pipe. Two borings closest to entrance gate - found sheen in one. Three additional soil borings hit concrete refusal at 3 feet bg - they think it is the bulkhead structure. Don't know where to go from here. Also putting in perimeter borings on adjacent substation property to see if anything is migrating off substation. Took one VOA groundwater sample from area where sheen was encountered in boring, but sample is likely to be rejected by lab due to suspended sediment. (JHO) 3/21/02: Draft Site Investigation Report dated May 4, 1999 found no evidence of soil or groundwater contamination related to historic use, storage or spillage of petroleum at the site. A well was installed at the SB-5 location - no free product was noted in a number of gauging events. (JHO)"

Remarks: "WHILE BORING HOLES IN SOIL SPILL INITIALLY DISCOVERED ON 11-23-98 VENDOR DID NOT NOTIFY CON EDISON UNTIL 12-04-98 AT 10-45AM SAMPLES TAKEN. CON ED #121707"

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 1/18/96: Glen Katz spoke with Ron Santapaola, Con Ed - sheen between barges, boom in place. Sheen dissipated as of 1425 hrs. Divers are to investigate futher, will inspect barge for source. Divers en route as of 1425 hrs. UPDATE: divers found no source but collected sample for analysis possibly from sheen. 1/24/9, Engelhardt notes: Call from Lisa Primeggia, Con Ed - divers inspected bottom of canal, saw nothing. Avery Tom is Con Ed Environmental Affairs person assigned to case. Note: this burping up of oil occurred last on 11/27/95 (see spill #9510745). Call Al Fillipi, Con ed to find out if this happens a lot. 3/21/02: Information provided by Orion Power New York indicates this storm drain was sealed on or about July1, 1996. No recurrences of sheen emanating from the storm drain have been noted since then. (JHO) "

indicate that 3 x 4,000 gallon and 11 x 550 gallon and 1 x 1,000 gallon USTs were closed or removed. 7. This spill case was reassigned from Sigona (DEC) to Perez (DEC) on 04/21/05. 08/30/2006 - RP's consultant sample the on-site soil gas points as outlined in the Feasibility Study (FS) the Investigation Work Plan A second round of soil gas samples will be taken by the end of the month (August 2006). RP continues to gauge and sample the on-site monitoring wells on a quarterly basis. By J. Perez. 11/10/2006 - RP submitted a Feasibility Study Report (FSR) and a supplemental subsurface investigation report. The FSR concluded that additional data would be required to assess the feasibility of implementing a full-scale system. By J. Perez. 01/15/2007 - DEC approved the Feasibility Study (FS) Report. The report recommends collection of additional data to develop full scale design or consider chemical oxidation as a remedial alternative. ExxonMobil will submit a supplemental FS work plan by early April. By J. Perez. 01/19/2007 - ExxonMobil submitted a site status update report and there is no major change in the concentration and distribution of the contaminants at the site. By J. Perez. 04/13/2007 - Exxonmobil submitted a Supplemental Feasibility Study & Investigation Report (SFSIR). (Perez) 04/19/2007 - ExxonMobil submitted a quarterly site status update report and there is no major change in the concentrations and the distribution of contaminants at the site. (Perez) 07/06/2007 - DEC approved the SFSIR. The report recommends collection of additional data in order to further evaluate the proposed system and consider other alternatives (i.e. chemical oxidation, ORC). (Perez) 03/10/2008 - Exxonmobil is conducting a subsurface investigation at the site and continues to gauge and sample the on-site monitoring wells on a quarterly basis. Exxonmobil's consultant were able to install one monitoring well and one monitoring point when an MTA inspector shut them down. Apparently they have new insurance requirements for 2008 and consultant, their subcontractor and the property owner did not have the right insurance. They have been working with the MTA and our insurance agent to make sure that everything is the way they want. (Perez) 06/04/2008 - Feasibility Study Report approved. ExxonMobil will submit a revised Remedial Action Plan (RAP) early July 2008. (Perez) 07/28/2008 - DEC approved the revised RAP. Implementation of RAP is scheduled to commence on October 2008. (Perez) 10/20/2008 - Consent Order (CO) was sent out to ExxonMobil for signature and should be returned by the end of the month. The CO will be necessary in order to commence with the implementation of the RAP. (Perez) 11/25/2008 - ExxonMobil sent the signed CO to the Department. MTA drilling issues were resolved, however, Exxonmobil is trying to resolve issues with the property owner. (Perez) 01/29/2009 - CO was executed by the Department. Exxonmobil is trying to resolve access issues with the property owner. (Perez) 03/26/2009 - This project was transfer to a new Klientfelder PM. ExxonMobil is trying to resolve access issues with the property owner. (Perez) 07/07/2009 - Delay is occurring while ExxonMobil tries to resolve access issues with the property owner. (Perez) 04/16/2010 - Construction of air sparge/extraction points on hold. During installation of points in the Western portion of the site consultant hit multiple refusals. ExxonMobil to change drilling technology, MTA has requested that EM monitor for vibration on the adjacent subway line. ExxonMobil is currently preparing a vibration monitoring plan for MTA review and Approval. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 05/24/2010 - Subway Vibration

Monitoring plan approved by MTA. Construction of air sparge/extraction points to commence the week of May 23, 2010. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 06/24/2010 - Construction of air sparge/soil vapor extraction system completed. System startup scheduled for June 25, 2010. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 07/27/2010 - AS/SVE system is operational and being monitored for effectiveness. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 08/26/2010 - AS/SVE system is operational(since June 2010) and being monitored for effectiveness. System performance/effectiveness will be reported on a quarterly basis. ExxonMobil continues to gauge and sample the on-site/off-site monitoring wells on a quarterly basis. (Perez) 11/30/2010 - Site update report results are consistent with historical data for the site. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. (Perez) 05/25/2011 - AS/SVE system is operational(since June 2010) and being monitored for effectiveness. Site update report revealed dissolved phase concentrations of benzene, toluene, ethylbenzene, and total xylenes (total BTEX) are generally consistent with prior quarters, showing a gradual decrease over time. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. (Perez) 07/26/2011 - AS/SVE system is operational. July 2011-Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by October 2011.(Perez) 11/28/2011 - AS/SVE system is operational. October 2011 - Site Update Report revealed dissolved phase concentrations of total BTEX are the lowest (max. 2500 ppb) since sampling was initiated in the site. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by January 2012.(Perez) 02/23/2012 - Site transfer to Groundwater and Environmental (GES) consulting firm. GES will assume the role of remedial consultant for this spill. Awaiting for GES to discuss the Project. (Perez) 04/24/2012 - AS/SVE system is operational. October 2011 to December 2011- Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by the end of April 2012. (Perez) 05/23/2012 - AS/SVE system is operational. January 2012 to March 2012- Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. Concentrations of MTBE have decreased compared to prior quarters. ExxonMobil continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. Next report to be submitted by the end of July 2012.(Perez) 08/13/2012 - AS/SVE system optimized to focus within the dissolved-phase plume area. Few air sparge wells were shut down to increase flow rate in certain

wells. Additional adjustments may be made throughout the next reporting period to continue to focus on sparging near this area and GES will continue to monitor this sparging strategy to maximize hydrocarbon mass removal. (Perez) RP will to operate the system for a total of (6) six months on pulsing mode. After this time, a decision will be made whether to continue to operate the system or take further action. GES will continue to monitor this system to maximize hydrocarbon mass removal. (11-27-2012) AS/SVE system is operational (pulsing mode). October 2012 through December 2012 - Site Update Report revealed dissolved phase concentrations of total BTEX are generally consistent with prior quarters, showing a gradual decrease over time. RP will continue to monitor the system to maximize hydrocarbon mass removal. (01-28-2013) AS/SVE system is operational (pulsing mode). January 2013 through March 2013 - Site Update Report revealed dissolved phase concentrations of total BTEX are consistently decreasing (Max. 311.28PPB BTEX). RP consultant submitted a Site Investigation Work Plan for NYSDEC approval to determine the extent of residual soil impacts at the Site. Work plan is currently under review. RP will continue to monitor the system to maximize hydrocarbon mass removal. (04-25-2013) Fieldwork activities completed per approved site investigation work plan. RP submitted a site investigation report and it s currently under review. The investigation results reported concentrations of VOCs contaminated soils above soil cleanup guidance values between 10 and 30 feet below ground surface. No impacts reported in the groundwater interface. The RP recommendation in the report is to shutdown existing system and excavation of impacted soils. RP continues to gauge and sample monitoring wells and report system performance/effectiveness on a quarterly basis. (07-25-13) The Site Investigation Report and the request to shut down the AS/SVE system has been approved. The RP will submit a Remedial Action Plan (RAP) addendum to remove the AS/SVE system and a RAP for the excavation of impacted soils. After the approval of the RAP, the RP will initiate the system decommission and excavation activities. Upon the completion of the implementation of the approved RAP, groundwater will be monitored for a minimum of two quarters to ensure that groundwater contamination trends continues to decrease and rebound is not occurring at the site. After this time, a decision will be made whether to continue to monitoring the site or take further action. (08-28-13) The RP submitted a Remedial Action Plan Addendum and is currently under review by the Department. (09-26-13) DEC approved the Remedial Action Plan. The plan proposes excavation of remaining soil impacts at the site, between 10 and 30 feet below ground surface. ExxonMobil has been working on the permitting with NYCDOB, NYCDOT and MTA, but has encountered some setbacks as this is an E-Designated site. A permit has been filed with the NYCDOB, but since this is an E-Designated site, it appears that the permit will be processed through NYC Office of Environmental Remediation. (11-15-13) Fieldwork on hold pending to final approval of MTA permit. (12-19-13) RP still waiting on the MTA permit for this job. They have been backlogged and have taken a while to review RP s submittals. Late last week, they received comments on their last submittal and they are asking for revisions. They are planning on delivering the revisions this week. It s expected that they will be ready to proceed with the work early March; however, that is dependent on how quickly the MTA will review their latest submission. (02-25-14) Fieldwork activities completed per approved RAP. RP submitted a Closure Report and is under review by the Department.

(08-13-2014) Comments on the Closure Report forwarded to the RP.
(08-21-2014) The RP submitted a revised Closure Report and is currently under review by the Department. (09-11-2014) Spill closed on 09/16/2014. Groundwater analytical data collected over the past two years reveals that the concentration of the contaminants of concern in groundwater continues to naturally attenuate. During the source removal activities a total of approximately 2,010 tons of soil was removed from the excavation and disposed of off-site. Post-excavation soil samples reveals minor exceedances of NYSDEC RSCOs in 3 samples of 21 soil samples collected. However, the area above of the impacted soils was backfilled with clean material. Impact to groundwater is considered unlikely. There are no pathways considered complete or potential exposure to any identified sensitive receptors. Based on available documents, case closed. No further action letter sent to ExxonMobil. (09-17-14)"

Remarks: "CONTAMINATED SOIL DISCOVERED DURING SITE ASSESSMENT, WILL COMPLETE ASSESSMENT."

Contact Name: MIKE SHERWOOD
DEC Memo: "03/12/07-Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC school authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals. 03/27/07-Hiralkumar Patel. received call from Amy Fonpana (845-492-3178). they are preparing closure report and will send by 04/15/07. 04/24/07-Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon. 06/19/07-Hiralkumar Patel. left message for Ms. Fonpana. 06/26/07-Hiralkumar Patel. received message from Ms. Fonpana. they are still working on-site and waiting for some documents. will send report once they get all documents. 06/27/07-Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr. Sharma to send all analytical data (for all samples done on-site till date) and detailed scaled site map with all sampling locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports. 06/28/07-Hiralkumar Patel. meet Bob Kanaparathi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II reports from Mr. Sherwood. abstract of Phase I: - the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street - previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing. - large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737) - site is approx. 20 ft above mean sea level - BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the

*****
-*** Spill #: 8706481. 987 4th Ave, Brooklyn, NY. spill reported as
gasoline tanks failed a test. PBS#: 2-157236. site had 14 tanks and
were removed in 1990. from spill database, found that groundwater was
impacted with gasoline spill and had free product in wells installed
on-site a that time. groundwater is at 38 ft bg. case still open.
*****
*****
-*** 07/05/07-Hiralkumar Patel. visited site on 07/02/07 as found
heavy soil and groundwater contamination in neighbour's property at
129 34th Street, which is auto repair shop. spoke with Mr. Pardus
today and asked him to install additional monitoring wells along 34th
street (two wells on 34th street along property line: one at each
corner and one well along boundry between park and construction
site). these wells are just for monitoring purpose, in case any
contamination from auto repair area touches the construction site.
also asked Mr. Pardus to provide site addresses for neighbours on
south and east side of construction site (assumed upgradient side)
07/16/07-Hiralkumar Patel. received call from Mr. Pardus regarding
sample analysis for specific chlorinated compounds. asked Mr. Pardus
to run all groundwater samples for compound that was found high
(PERC) in previous investigation. 07/23/07-Hiralkumar Patel. received
message from Mr. Pardus asking for meeting. spoke with Mr. Pardus and
asked him to submit data for review prior to any meeting.
07/24/07-Hiralkumar Patel. received sample analyticals and site map
with monitoring well locations, from Mr. Pardus. they installed four
wells on site and one on sidewalk along 35th street. found very minor
contamination. from monitoring wells, they found groundwater flow in
south direction (from site which has heavy groundwater contamination:
129 34th street). monitoring well #1 installed close to area where
they found high PERC in groundwater. Mr. Pardus asked for dewatering
of site for construction activities. mentioned to Mr. Pardus that as
no contamination found in any samples, they can do dewatering but
they need permits from city agencies for that. asked Mr. Pardus to
install one well in corner of property along park along 34th street
(as found heavy soil and groundwater contamination at site 129 34th
street). also asked him to monitore well # 4 until it knocked down.
asked Mr. Pardus to submit entire report with boring logs, water
depths etc. 07/25/07-Hiralkumar Patel. spoke with Mr. Pardus. told
him that they can start dewatering from site (based on analytical
data). also asked Mr. Pardus to install a permanent monitoring well
on sidewalk along 34th street (close to property line between subject
site and park) as subject site is exactly downgradient from
contaminated site at 129 34th street. this well will be used as
monitoring point to see any oil from 129 34th street site hit
construction site or not. Mr. Pardus mentioned that they will install
vapor barrier and sub-slab system. Mr. Pardus will schedule
installation of one well on sidewalk along 34th street.

03/20/08-Hiralkumar Patel. received tank closure report from Shaw environmental. abstract: - site groundwater was encountered between 16 to 18 ft bg - installed four wells (MW-1, MW-2, MW-4 and MW-5) - no tidal influence noticed in wells MW-1, MW-2 and MW-5, via automatic data logger - groundwater level data from MW-4 shows rise in the water level; cause of this water level rise is unknown (no precipitation or on-site dewatering during or before water level measurement) - direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest) - removed four regulated (petroleum) USTs and one non-regulated (sugar) UST in Mar.-Apr. 2007 - four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100 gal - one 1000 gal sugar tank removed - 2000 gal tank was punctured during excavation and then spill reported - 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion - final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled - 100 gal UST was discovered immediately beneath the concrete slab of the former site building - 100 gal UST was found to be old and rusted with large openings - following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal - 5000 gal UST was abandoned-in-place with concrete - 5000 gal UST found to be slightly corroded but no holes were observed - final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled - no endpoint bottom samples collected after 5000 gal tank removal ----- - 1000 gal UST was discovered about 5 ft bg and found to be rusted with a large hole where it appears that the weld separated ----- - final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled - groundwater samples collected from one geoprobe GW-1 and four monitoring wells (MW-1, MW-2, MW-4 and MW-5) - found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples - school design includes a vapor barrier and an active SSDS
06/03/08-Hiralkumar Patel. spoke with Mr. Pardus. he doesn't know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such.
06/06/08-Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not.
06/17/08-Hiralkumar Patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS. left message for Mr. Pardus for following: - submission of design specs of vapor barrier and SSDS - confirmation about installation of vapor barrier and SSDS - clarification about not taking endpoint bottom sample after 5000 gal tank removed
06/23/08-Hiralkumar Patel. left message for Mr. Pardus.
07/09/08-Hiralkumar Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal

of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the southwest corner of the building foundation excavation, immediately below the former location of the 5,000 gallon UST. one sample was collected from a temporary geotechnical well (GW-2) already in place at the Site and the other was collected from standing water (SGW-1) that had pooled in that corner of the Site. no contamination found in groundwater samples. 5000 gal UST was removed in Apr. 2007 and groundwater samples were taken in June 2007 after contractor removed soil under water table as part of foundation work. based on submitted documents till date, case closed. **see Spill #: 0703584 & 0700836 also as reported to same site.**"

Remarks:

"School under construction; underground tank was hit. Tank was emptied and removed, as well as contaminated soil. Area was backfilled and end point sample was taken from excavation."

FINDS:

Registry ID: 110004524907

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FORMER BARRETT MANUFACTURING CO. (Continued)

S112818546

Site Description: See site C224163 Location: The 45,400 square foot site is located at 627-641 Smith Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a vacant 1-story warehouse and an asphalt-paved parking lot. The site warehouse is connected to the warehouse on the lot to the south. Current Zoning/Use(s): The site is currently zoned as M3-1 (manufacturing). Historical Use(s): The Site was occupied by Barrett Manufacturing Company, Storage and Shipping in the early 1900s. Later, Colonial Sand and Stone Company occupied the site in the 1950s. Black Diamond Cargo Line and Pittston Stevedoring Storage occupied the Site from the early 1960's to the 1990s. The original occupant, Barrett Manufacturing, utilized nine coal tar storage tanks and two gasoline underground storage tanks (USTs) as part of their production of coal tar and roofing material. Additionally, Barrett Manufacturing operations occupied the entire city block west of the site (Block 492). Block 492 currently consists of three Lots: Lot 1, Lot 15, Lot 20. Block 492, Lot 1 is a State Superfund Site: Chemtura 633 Court Street ID No. 224146. Site Geology and Hydrogeology: Soil borings conducted between 2005 and 2012 indicate there are alternating layers of sand and dense clay. Two to four separate aquifers are present at the site, separated by clay confining layers. Groundwater is present at a depth of 2 ? 4 feet below grade.

Env Problem: See site C224163 Nature and Extent of Contamination: Soil ? Coal tar related VOCs and SVOCs are present above Unrestricted Use SCOs. These include naphthalene (7,700 mg/kg), benzo(a)anthracene (280 mg/kg), benzo(a)pyrene (250 mg/kg), and benzo(b)fluoranthene (190 mg/kg). Contaminated soil is present on-site in the vicinity of the former tar storage tanks, and extends to the eastern property boundary, which is bordered by the Gowanus Canal. Additionally, the area of contaminated soil extends off-site to the south, and upgradient to the west. High soil VOCs and SVOCs upgradient and adjacent to Block 492 indicate that Block 492 may be a source of coal tar related VOCs and SVOCs. Groundwater ? VOCs and SVOCs are present above Class GA Standard in twenty monitoring wells. The groundwater plume has not been delineated to the south or to the west. VOC and SVOC contamination extends to the eastern property boundary, which is bordered by the Gowanus Canal. Napthalene is present at a concentration of up to 17,000 ug/l. Benzene is present at a maximum concentration of 11,000 ug/l. Toluene is present at a concentration of up to 7,300 ug/l. Soil Vapor ? Soil vapor samples have not been collected. Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

Update By: GWCROSS
Site Description:

Location: The Red Hook Smith Street site is located in Brooklyn, in an urban area. The site is bounded by Smith Street to the west, the Gowanus Canal to the east and south, and an industrial property to the north. Site Features: The site encompasses two tax parcels (Block 493, Lot 1 and Block 495, Lot 1) and occupies approximately 85,400 square feet. Block 493 (the northern part of the site) is occupied by a vacant one-story warehouse and an asphalt-paved parking lot. The warehouse is connected to the warehouse on the lot to the south (Block 495, Lot 1). Block 495 is occupied by an approximate 40,000-square-foot vacant one-story warehouse. Current Zoning/Use(s): The site is zoned heavy manufacturing; M-3. M-3 zoning also allow certain retail and commercial uses. Currently the site is vacant. Past Uses of the Site: Barrett Manufacturing occupied Block 493 from circa 1900 to 1940 and utilized nine coal tar storage tanks as part of their production of coal tar and roofing material. After Barrett Manufacturing sold the property in the 1950's two gasoline underground storage tanks (USTs) were installed on the property. Barrett's manufacturing facility also extended to the west of the

FORMER BARRETT MANUFACTURING CO. (Continued)

S112818546

site (hydraulically up-gradient). Various manufacturing and storage companies occupied Block 495 (the southern part of the site). American Ice Company occupied Block 495 in the early 1900 s and Smith Street Dock Corporation and Seaboard Storage occupied lock 495 from around 1930 to 1950. Black Diamond Cargo Line and Pittston Stevedoring Cargo Storage occupied Block 495 from the late 1960 s to the 1990 s. Site Geology and Hydrogeology: The topography is relatively flat, gently sloping to the east-southeast towards the Gowanus Canal. The site is underlain by a discontinuous layer of historic urban fill that extends to approximately 12 feet below grade surface (bgs). The historic fill generally consisted of sand, silt, clay, gravel, cobbles, wood and brick fragments, cinder, and ash. The historic fill is underlain by fine sands and silts from 2 to 47 feet bgs. Discontinuous stiff clays lens and organic material were identified at varying depths (8 to 35 feet bgs). Bedrock was not encountered as part of this investigation, however, the Hartland Formation would be anticipated based on local investigations. The depth to groundwater is approximately five-feet below the ground surface and flows to the east-southeast towards the Gowanus Canal.

Env Problem: Several environmental investigations and reports have been generated for this site; most recently the Department received a Draft Supplemental Investigation Report in February 2016. Observation described in the report detail the presence of tar-like material in the soil and floating on the groundwater in portions of the site and immediately upgradient of the site. Groundwater is approximately five-feet below the ground surface (bgs). The tar-like material was encountered from near the ground surface to a maximum depth of 47 feet bgs. Sorbed and aqueous phase VOCs and SVOCs are present onsite and upgradient of the site at concentrations above the applicable SCGs. The VOCs identified as contaminants of concern include BTEX compounds with soil concentrations up to 361mg/kg and dissolved phase concentrations up to 1,210 ug/l. The most prevalent SVOC was naphthalene with the maximum soil concentration of 7,500 ug/kg and groundwater concentration of 17,000 ug/l.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern because the site is vacant. Additional evaluation is needed to determine whether actions are needed off-site.

Site Description: Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site is listed as Block 494, Lot 1 and is located on the south east corner of Court St. and Halleck St. in close proximity to the Gowanus Canal. Site Features: The site is currently a parking lot with a small building near the middle of the site occupying approximately 1/8th of the property acreage. Current Use: The site is currently leased from Red Hook Realty Co. by National Grid who is using the site as a parking lot for their service vehicles. Historical Use: The property was used for tar paper manufacturing as depicted in the 1886 Sanborn map which shows tar pitch storage areas on the corners of Smith St./Halleck St. and Court St./Halleck St. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be less than 5 feet bgs. Groundwater flow is anticipated to flow radially from the Gowanus Canal traveling north, northwest, west, southwest, and south. To the south and west of the site, the coastline is lined with sheet piling and to the east of the site, where groundwater enters, the coastline is lined with rip rap.

The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated to exist beneath the fill material with a thickness of approximately 8 feet.

Env Problem: This site has had several instances over the last decade of tar seeping out of the ground, getting cleaned up, and reappearing some time later. Further investigation is required to determine the nature and extent of tar beneath the surface.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The site is located at 633 Court Street, Kings County, Brooklyn, New York within the Red Hook Industrial area of Brooklyn. The Site is located northeast of the Court Street and Halleck Street intersection. The site is immediately bordered to the south by Halleck Street and a National Grid truck facility, to the north by a paper street (Sigourney Street) and a petroleum cartage and storage (trucking) company. To the east there is small vacant lot and a warehouse. A recreational park (Red Hook Smith Recreational Park) is located directly across Court Street to the west of the site. Additionally, an oil terminal that is currently owned by Buckeye Partners, L.P. is located approximately one block to the south of the site. Site Features: The entire site is completely developed and covered with two connected adjoining buildings. The building's foundations are slab on grade concrete and there are no basements. These buildings were formerly used by Chemtura's predecessor companies for chemical manufacturing and chemical laboratory operations. Current Zoning and Land Use: The site is currently active, and is zoned M3-1 for industrial use, however this zoning designation allows for certain commercial uses. Several tenants occupy the site including a wholesale food and food product supply warehouse and offices. The M3-1 does not allow for residential use at this site. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The park located to the west is zoned residential and is used exclusively for recreational purposes. The nearest residential structure is approximately one-half miles to the north. Past Use of the Site: In 1904 the site was owned by Barrett Manufacturing and was used for the manufacturing of tar paper. Barrett Manufacturing Company is a predecessor company to Honeywell International, Inc. Tar tanks, storage tanks, stills, a pitch shed and an oil house were located on-site. In the 1940s Doran Manganese Bronze Company, Inc. Foundry & Machine Shop occupied the site. In the 1940s to 1950s, Argus Chemical Laboratory, a predecessor company to Chemtura, purchased and operated the site. Argus Chemical Laboratory was subsequently purchased by Witco (also a predecessor company to Chemtura) in the early 1960s. Under Argus and Witco ownership, the plant produced metallic-organic soaps and salts, barium stearates, phosphites and epoxy plasticizers. During the 1950s and 1960s, aluminum paste was produced in a process on the roof of one of the buildings. This

production ceased in the late 1950s to early 1960s and all plant operations were relocated to a parcel of land located to the southwest of the 688 Site. The laboratory and offices remained at the 633 Site until approximately 1990 when these functions were relocated to 688 Court Street. Site Geology and Hydrogeology: The Site is improved with impervious surfaces (concrete foundation of an active commercial building) which precluded extensive subsurface investigations. However, it is known that the Site and the surrounding area is reclaimed water front from what is now known as the Gowanus Canal. This historic fill material was observed from 0 to 12 ft below the ground surface (bgs). The fill material consisted primarily of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.). Underlying the fill materials, a silt-clay layer was encountered. This layer has a relatively low permeability and is believed to continue laterally across the site. This layer is gray in color and is believed to be about eight-feet thick. The Site is located approximately 400 feet west of the Gowanus Canal and ground water elevations ranges from approximately 3.5 to 6 feet bgs. Kings County lies within the Long Island aquifer system and overlies a sole-source aquifer.

Env Problem:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include toluene, ethylbenzene, xylene, semi-volatile organic compounds (SVOCs)/polycyclic aromatic hydrocarbons (PAHs), phenol, and metals. Soil: The VOCs toluene, ethylbenzene and xylene are found in soil from the surface to the water table. Benzene is found at 13 parts per million (ppm) at the center of the site and at 15 ppm at southern boundary of the site. This contamination is above the groundwater protection soil cleanup objective (SCO) of 0.06 parts per million (ppm) for benzene. PAHs are found throughout site soil. Benzo(a)pyrene is found in concentrations up to 62 ppm which is above the protection of groundwater SCO of 22 ppm. Metals are found throughout site soil. Lead was as high as 618 ppm, barium was found up to 590 ppm, cadmium was found up to 340 ppm, arsenic was found as high as 14.6 ppm and mercury was found as high as 2.4 ppm. Groundwater: Toluene, ethylbenzene, xylene, naphthalene and benzene are found in groundwater at concentrations up to 240, 300, 530, 3,000 and 48 parts per billion (ppb), respectively which are all above the groundwater standards of 5, 5, 5, 10 and 1 ppb, respectively. SVOCs pyrene and naphthalene are found in groundwater at concentrations up to 200 and 6,400 ppb, respectively, which are above the groundwater guidance values of 50 and 10 ppb, respectively. Soil Vapor: Two rounds of sub-slab soil vapor sampling were performed. Based on the results DOH indicated that no further sampling or mitigation would be required.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not a

S113828311

concern for existing on-site buildings. An evaluation of the potential for soil vapor intrusion is recommended for any future on-site buildings. Surrounding properties are in various cleanup programs and the potential for soil vapor intrusion at those sites will be evaluated separately.

Assessment of Health:	Access to the site is restricted. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not occurring on-site and is not a concern for off-site buildings.
Description:	<p>Location: The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection. Site Features: The site is relatively flat and mostly covered with blacktop and concrete. A small area in the southeast corner has a soil cover. Several previously decommissioned site buildings were either removed or rehabilitated without the Department's approval. The site is occupied by several tenants including a garbage hauling company, a motor coach repair facility, an electronics distribution warehouse, a commercial laundry repair business, a stone cutting business and a sheet metal fabricator. The dual-phase extraction remedial system is not operational. The site is surrounded with a concrete wall of varying height. Current Zoning and Land Use: The site is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, National Grid and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and a Buckeye, LLC oil terminal. A recreational park</p>

(Red Hook Recreational) is located immediately to the north of the site. Past Use of the Site: Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process. Contamination at the site appears related to several historic operations, including materials handling from the chemical manufacturing processes, as well as releases to the environment from the hot oil system. Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. A clay layer of unknown thickness or continuity was encountered beneath the fill material. This layer is presumed to be the former base of the Gowanus Canal. The effectiveness of this layer as a low-permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site is unknown. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site is minimally influenced by the tide. Groundwater flow is radial with a high point in the central part of the site.

Site Description: Location: The 13,700 square foot (0.31 acre) site is located at 471 20th Street in the Borough of Brooklyn in an urban area. The site is bordered by 20th Street and Greenwood Cemetery to the south, an institutional building (Diocese of Brooklyn) to the east and north, residential buildings to the north, and a parking lot and additional commercial/industrial uses to the west. Site transitioned to Brownfield Cleanup Program as Site #C224187. Please refer to that site number for accurate information.

Env Problem: Site transitioned to Brownfield Cleanup Program as Site #C224187. Please refer to that site number for accurate information.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site consists of two parcels listed as Block 492, Lots 15 (628 Smith Street) and Block 492, Lot 20 (182 Sigourney Street) on NYC tax maps. The site is at the intersections of Halleck Street, Smith Street and Sigourney Streets. The site is approximately 200-300 feet west of the Gowanus Canal. Site Features: The site is primarily covered with a multi-story brick building with courtyard parking accessible from Sigourney Street. Current Zoning and Land Use: The current site use is not known but appears to be occupied with commercial and/or industrial operations. Historical Use: The property was used for tar paper manufacturing. A 1904 Sanborn Insurance Map depicts coal tar products, asphalt tanks and various oil tanks (including a 14,000-gallon underground tank). The Sanborn Map indicates that this property was operated by Barrett Manufacturing Company. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be approximately 5 feet bgs. Groundwater flow is anticipated to flow toward the Gowanus Canal traveling east and/or southeast. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated beneath the fill material with a thickness varying up to eight feet.

Env Problem: Investigations at adjacent properties indicate tar-like source material, light non-aqueous phase liquid (LNAPL) and petroleum VOCs are present in the soil and at the soil/groundwater interface.

Downgradient and to the east of this potential site is the Red Hook Smith Street Brownfield Cleanup Program (volunteer) site (C224163) where tar-like material, metals, VOCs and SVOCs were identified. West of this potential site is the 633 Court St. (Chemtura #224146) site and the Red Hook Smith Recreation Area; tar-like material has been identified in each of these locations. A portion of the Red Hook Smith Street BCP and the 633 Court Street (Chemtura) property were both previously part of the former Barrett Manufacturing property. To the south is a State Superfund P-site (224196) where tar boils have been identified on site, which was initially Mica Roofing Company. Investigation of this site is warranted.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Record Upd: 08/21/2018
Updated By: JEBROWN

Site Description: Location: The Site is located at the corner of 41st Street and 4th Avenue in the northwestern portion of Brooklyn. The site is bounded on the north by an active gasoline station, on the south by a fast food restaurant and on the east by a 3-story residential building. West of the site is 4th Avenue, the MTA Subway tunnel and the PS 136 Charles O'Dewey Elementary School. Site Features: The site is a vacant one-story building with no basement. The building covers approximately half of the 10,017 square-foot lot (0.23 acres) and was recently used as an auto repair business, a car wash and a small store. In addition to the existing building, there are tire racks, an oil change area, oil traps to a waste oil tank, car wash dry well, an office area, a car wash, hydraulic lifts, a 1,040 waste oil tank, a 1,040 gallon motor oil tank, an asphalt parking lot, and 6 potential underground storage tanks (USTs) identified on Sanborn Maps. Current Zoning/Use(s): The area is zoned C2-4. C2-4 districts serve the immediate needs of surrounding lower- and medium-density residential neighborhoods along streets that provide small local retail and service shops. Typical retail uses include neighborhood grocery stores, restaurants, beauty parlors, funeral homes and repair services. The Community Facility Use for C2-4 districts provides educational, health, recreational, religious or other essential services. Historical Use(s): The site has been an automobile garage, gas station, and car wash since 1926. From 1942-1995, three USTs were noted on Sanborn maps and two USTs (possibly removed) were identified on the 1926 Sanborn Map. Other uses are listed as an office/warehouse space for various tenants, taxi/limo parking and repair services. A Phase I Environmental Assessment was performed in July 2015 and a Phase II Environmental Assessment was performed in August 2015. Site Geology and Hydrogeology: The elevation of the property is approximately 55 feet above mean sea level. The general soil type consists of fine to coarse-grained sand and silty sand with gravel. Historic fill was encountered from grade to 15 feet below grade (deepest soil boring depth). The depth to water ranges from 18 feet (MW-3) to 44 feet (MW-1). The depth to water observed in MW-3 may be attributed to influence from the car washing operations (dry well), which may be contributing water to the aquifer. The groundwater flow direction is northwest towards the Upper Bay/Gowanus Bay three blocks away.

Env Problem: Open On-site Spill No. 15-06140: This spill was originally reported on August 9, 2015 during a Phase II site investigation through the

NYC OER Brownfield Program (No. 16EH-A108K). The Phase II included the installation and sampling of a series of soil probes, monitoring wells and soil vapor sampling points that showed impacted soil and groundwater. Nature of Contamination: Petroleum spill with soil and groundwater impacts as noted below, and elevated PCE in soil vapor. VOCs associated with gasoline constituents and chlorinated compounds are present beneath the southern and northern portions of the Site. VOCs indicative of petroleum were identified in both shallow and deep soil in the northwest portion of the property. This impacted soil is located at the former location of two (2) underground storage tanks (USTs) identified on the 1926 Sanborn Fire Rate Insurance Map. Strong petroleum odors were identified in soil from 0-14 feet deep. Organic vapors were detected with photoionization detector (PID) readings ranging from 0.3 ppm to a maximum of 36 ppm in the 8 to 10-foot depth. Soil: Installed 7 soil borings across the Site, and collected 14 soil samples with the following results: - VOCs: 1,2,4-trimethylbenzene (max of 180 parts per million [pp]) and 1,3,5-trimethylbenzene (max of 71 ppm), ethylbenzene (max of 42 ppm) exceeded restricted residential and protection of groundwater soil cleanup objectives (RRSCOs and PGWSCOs). - Metals: lead (108 ppm) and nickel (118 ppm) exceeded the unrestricted use soil cleanup objectives (UUSCOs) and trivalent chromium (39.2 ppm) exceeded the RRSCO. - No SVOCs, pesticides or PCBs were detected above UUSCOs. Groundwater: 3 wells were installed. No free product was identified on the water table. Maximum concentrations are noted below. - VOCs: 1,2,4-Trimethylbenzene (1,500 parts per billion [ppb]), 1,3,5-Trimethylbenzene (1,300 ppb), Benzene (1,100 ppb), Ethylbenzene (2,700 ppb), o-Xylene (5,800 ppb), p and m-Xylenes (13,000 ppb), and Toluene (1,800 ppb), and Tetrachloroethylene (4 ppb). - Metals (dissolved): Barium (2,700 ppb), Nickel (237 ppb), Selenium (20 ppb). Soil Vapor: Installed 5 soil vapor probes across the Site. Historic fill was encountered from grade to 15 feet below grade (deepest soil boring depth). The soil vapor probes were installed in the subsurface soil at 5 feet below surface grade. - Petroleum related compounds range from 3 to 54 micrograms per cubic meter (ug/m3). - PCE: 71 ug/m3, 66 ug/m3, 1,400 ug/m3, and 3,800 ug/m3. - TCE: detected in one sample (3.90 ug/m3).

per DEC Demeo. 1/15/2016: Rashad 4013 4th Avenue has an alternate address of 401 41st Street. No additional spills found for site. 4013 4th Avenue has PBS#2-611076 for a 1,000 gallon waste/used oil AST. No documents found in D2. 1/19/2016: Rashad Sent email to Carlos: I have been reassigned 2 spills that list you as a contact, they are as follows: Spill#1305487 822 4th Ave, Brooklyn 11232, date received was 8/21/2013, Spill#1506140 4013 4th Ave, Brooklyn 11232, date received was 9/9/2015. I would appreciate any documentation/information you have on either of these sites. 1/20/2016: Rashad Carlos responded on 1/19 saying he will call me and give me an update on both sites. 3/10/2016: Rashad Sent email to Carlos: Can you please send me the Phase 2 investigation as well as any other reports you have for this site. 3/11/2016: Rashad Carlos responded on 3/10: Please see attached the report for the Phase II we performed. Any questions please let me know. thanks Phase 2 report was attached and uploaded to D2. Review of Phase 2 report: Depth to groundwater has been identified to range from 18 feet to 45 feet and the groundwater flow direction was identified to be northwest. No free product was identified on the water table. Dissolved VOCs indicative of petroleum were identified in groundwater beneath the southern and northern portions of the site at concentrations exceeding standards. Dissolved metals were also detected in groundwater. VOCs associated with gasoline constituents and chlorinated compounds are both present beneath the southern and northern portions of the site. The site is occupied by a 1 story building that consists of an auto repair business, car wash and a small store. The building does not have a basement. Building is heated with natural gas. A GPR, 7 soil probes, 3 groundwater monitoring wells and 4 soil vapor probes were taken. The GPR detected one anomaly in the western portion of the Site and one anomaly was detected in the northwestern portion of the site. According to historic sanborn maps there are 3 gasoline tanks located in the northwestern portion of the site. Soil probes SP-1 and SP-2 were installed in the approximate locations of 2 gasoline tanks in the northwestern portion of site. SP-3 and SP-6 were also installed near these tanks. SP-4 was installed in the approximate location of 3 gasoline tanks in the southwest portion of the site. SP-5 and SP-7 were installed in the eastern portion of the site in the vicinity of the former auto repair shop and active car wash. SP-1, SP-4, and SP-7 were installed to a depth of 12 feet. SP-2, SP-3, and SP-5 were installed to a depth of 14feet, SP-6 was installed to depth of 16 feet. Three monitoring wells MW1-MW3 were installed in the same locations as SP-1, SP-4, and SP-7 respectively. They were installed to a depth of 55ft, 60 ft and 55 ft. None of the wells contained free product. Depth to water ranged from 18.4 feet in MW3 to 44.5ft in MW1. Soil sample SP-2 taken 4-6ft had contamination as follows: 1,2,4 Trimethylbenzene - 95ppm, 1,3,5 Trimethylbenzene - 42ppm, Ethylbenzene - 3.2ppm, Naphthalene - 19ppm, Xylene - 17ppm, At 12- 14 ft: 1,2,4 Trimethylbenzene - 180ppm, 1,3,5 Trimethylbenzene - 71ppm, Ethylbenzene - 42ppm, Naphthalene - 32ppm, n-Butylbenzene - 26ppm, n-Propylbenzene-33ppm, Xylene-180ppm, Toluene-5.90ppm. Other soil locations did not have elevated concentrations. MW1 has a groundwater elevation of 51ft, contamination found in MW1 is as follows: 1,2,4 Trimethylbenzene-1500ppb, 1,3,5 Trimethylbenzene-1300ppb, Acetone-57ppb, Benzene-1100ppb, Ethylbenzene-2700ppb, Isopropylbenzene-82ppb, Naphthalene-180ppb, xylene-13,000ppb, Toluene-1800ppb. MW2 had a groundwater elevation of 53ft, contaminants found in MW2 are as follows: 2-butanone-15ppb,

acetone-32ppb, benzene-8ppb, xylene-4ppb. MW3 had a groundwater elevation of 78ft, the following contaminants were found in MW3: 1,2,4 Trimethylbenzene-510ppb, 1,3,5 Trimethylbenzene-100ppb, ethylbenzene-280ppb, isopropylbenzene-68ppb, Naphthalene-60ppb, xylene-1200ppb, toluene-96ppb. Soil Vapor samples were taken and are as follows for SV1: 1,2,4 Trimethylbenzene - 20ug/m3, 1,3 Butadiene-50, 2-butanone-62, 2-hexanone-20, acetone-230, benzene-18, chloroform-16, cyclohexane-3, dichlorofluoromethane-7.7, ethylbenzene-14, methylene chloride-1.5, n-heptane-30, n-hexane-49, xylene-46, p-ethyltoluene-70, tetrachloroethylene-70, toluene-54. SV2 has similar readings to SV1. SV3 had tetrachloroethylene-1400 and SV4 had tetrachloroethylene-3800. According to the Phase 2: Depth of water in MW3 may be attributed to influence from the car washing operations, which may be contributing water to the aquifer Soil sample SP5 (4-6ft) - Tetrachloroethylene - 0.047ppm. MW3 has Tetrachloroethylene-4ppb. Sent email to Carlos: Thank you for the report, is this site a BCP or OER site? Also has a Remedial Action Work Plan been made yet and are there any plans for redevelopment? Brief review of the Phase 1 has subject property of one story auto laundry located in southern portion since 1926 and auto repair shop which contains the discussed tanks. 8/10/2016: Rashad Sent email to Carlos: See below questions, also is any work occurring on this site currently? Carlos responded: Yes indeed this site is an OER site. no further work has taken place to our knowledge since our submittal of the report. We did provide the client with a cost estimate letter but he didn't want to proceed after that. I will reach out to him and will try to get more information for you. 8/12/2016: Rashad Spoke to DEC Vought and I sent email to Shaminder from OER to see if he has any further info on site. Report receipt review letter should include - delineation of soil and groundwater, development plans, RAP approval warning before redevelopment. Shaminder responded that site was previously discussed with DEC O'Connell to enter BCP, I will email Jane to discuss case. 8/22/2016: Rashad Letter was prepared and will be sent to property owner as well as emailed to Carlos of Hydrotech to address petroleum contamination. Letter was uploaded to D2. 8/25/2016: Rashad Received call from Sam, who is property owners son. He wanted to discuss contaminated soil letter that was sent to him. At this time the car wash and lube center is still in service and they are planning to close the last day of this year and either redevelop or sell property. His email is samson414@gmail.com, phone number is 917-656-4676. DEC Potentially Requires: 1-BCP or OER 2-Future use - CAMP, depth of basement piping locations, vapor barrier, ssds with doh review 3-Possible delineation across 4th Ave and its affect with groundwater 4-RAP 5-BP station spills 6-Review Phase 1 for previous source of chlorinated solvent 7-Owner: Elsaun Inc, 125 42nd Street Brooklyn NY 11232 1/17/17 - Obligado - Spill assigned to Obligado from Omar as per Austin. 1/10/18 - Obligado - Spill transferred to from Obligado to Feng. 3/16/2018 - Durnin - DER mailed a P site Notification letter to the property owner on March 16, 2018. Environmental Assessment: Volatile organic compounds (VOCs) associated with gasoline constituents: Benzene (1,100 ppb), Ethyl Benzene (2,700 ppb), o-Xylene (5,800 ppb), p & m-Xylenes (13,000 ppb), and Toluene (1,800 ppb), were found in groundwater (groundwater standard of 5 ppb). Chlorinated compound tetrachloroethylene (PCE) was detected in on-site soil vapor throughout much of the site between 66 ug/m3 and 3,800 ug/m3. (Durnin 3/29/2018) "

Updated By: JHOCONNE

Site Description: Location: The 4.17 acre site is located at 98 Lorraine Street in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a portion of a public park (Red Hook Park) operated by the NYC Department of Parks and Recreation. This portion of the park contains 4 baseball fields (fields 5 through 8). Current Zoning and Land Use: The site is currently zoned as park land and is surrounded by other sections of Red Hook Par, as well as a large public housing development (Red Hook Houses). The site is bounded on the north by Lorraine Street and Red Hook Houses, to the east by Henry Street and Red Hook Park, to the south by Bay Street and Red Hook Park, and to the west by Hicks Street and multi-family residential buildings. Past Use of the Site: The site was occupied by a secondary lead smelter operated initially by Delevan Smelting and Refining Works and later by Columbia Smelting and Refining Works from at least 1929 to the late 1930s. By 1939 the smelting building was demolished. The site was redeveloped as part of Red Hook Park some time before 1947. Site Geology and Hydrogeology: Soil sampling has only been performed in the upper 2 feet of soil. Generally the soil consists of fill material. No groundwater samples were collected as part of the investigations to date; therefore depth to groundwater and groundwater flow direction are unknown. The nearest water body (Gowanus Bay) is located approximately 1200 feet to the southeast of the site.

Env Problem: Nature and Extent of Contamination: In 2012 USA Today published an article documenting sampling conducted at the park which showed elevated concentrations of lead in surface soil. As a result of that finding, NYC Parks collected their own samples for analysis, which generally mirrored the results reported by USA Today. NYC Parks and NYC Department of Health and Mental Hygiene performed some limited remediation (soil excavation, import of clean soil over bare soil areas, and hydroseeding). In 2014, USEPA implemented an investigation in support of an emergency removal action. The data below is from the USEPA investigation. Soil In surface soil (0 to 1 below grade) the highest concentration of lead was 980 ppm as compared to the restricted residential soil cleanup objective (RRSCO) of 400 ppm. In the 1 to 6 interval, the highest concentration was 2400 ppm. At depth (6 to 24 below grade) the highest concentration was 5700 ppm on-site and 8300 ppm off-site to the south. Other metals including antimony, arsenic, iron, copper and tin were found in association with the lead. USEPA concluded that the ratios of the various metals to lead were indicative of the smelting process as opposed to exclusively being attributed to historic fill. Groundwater No groundwater samples have been collected. Soil Vapor No soil vapor samples have been collected.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

The EDR Vapor Encroachment Worksheet enables EDR's customers to make certain online modifications that effects maps, text and calculations contained in this Report. As a result, maps, text and calculations contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. Environmental Data Resources shall not be responsible for any customer's decision to include or not include in any final report any records determined to be within the relevant minimum search distances.

This report contains information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.**

Purchaser accepts this report "AS IS". Any analyses, estimates, ratings, or risk codes provided in this report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can produce information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Not Reported				

This map illustrates the rupture zone of the 1906 San Francisco earthquake, showing the extent of the fault and the distribution of seismic stations. The rupture zone is outlined in black and filled with a yellow diagonal hatching pattern. The map includes a grid of streets, with major streets labeled such as 17th St, 18th St, 20th St, 21st St, 22nd St, 23rd St, 24th St, 25th St, 26th St, 27th St, 28th St, 29th St, and 30th St. A red line with circular markers represents the rupture zone, extending from the northwest to the southeast. A red line labeled "Natural Gas" is also shown. Several seismic stations are marked with black triangles and labeled with letters: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z, AA, AB, AC, AD, AE, AF, AG, AH, AI, AJ, AK, AL, AM, AN, AO, AP, AQ, AR, AS, AT, AU, AV, AW, AX, AY, AZ, BA, BB, BC, BD, BE, BF, BG, BH, BI, BJ, BK, BL, BM, BN, BO, BP, BQ, BR, BS, BT, BU, BV, BW, BX, BY, BZ, CA, CB, CC, CD, CE, CF, CG, CH, CI, CJ, CK, CL, CM, CN, CO, CP, CQ, CR, CS, CT, CU, CV, CW, CX, CY, CZ, DA, DB, DC, DD, DE, DF, DG, DH, DI, DJ, DK, DL, DM, DN, DO, DP, DQ, DR, DS, DT, DU, DV, DW, DX, DY, DZ, EA, EB, EC, ED, EE, EF, EG, EH, EI, EJ, EK, EL, EM, EN, EO, EP, EQ, ER, ES, ET, EU, EV, EW, EX, EY, EZ, FA, FB, FC, FD, FE, FF, FG, FH, FI, FJ, FK, FL, FM, FN, FO, FP, FQ, FR, FS, FT, FU, FV, FW, FX, FY, FZ, GA, GB, GC, GD, GE, GF, GG, GH, GI, GJ, GK, GL, GM, GN, GO, GP, GQ, GR, GS, GT, GU, GV, GW, GX, GY, GZ, HA, HB, HC, HD, HE, HF, HG, HH, HI, HJ, HK, HL, HM, HN, HO, HP, HQ, HR, HS, HT, HU, HV, HW, HX, HY, HZ, IA, IB, IC, ID, IE, IF, IG, IH, II, IJ, IK, IL, IM, IN, IO, IP, IQ, IR, IS, IT, IU, IV, IW, IX, IY, IZ, JA, JB, JC, JD, JE, JF, JG, JH, JI, JJ, JK, JL, JM, JN, JO, JP, JQ, JR, JS, JT, JU, JV, JW, JX, JY, JZ, KA, KB, KC, KD, KE, KF, KG, KH, KI, KJ, KK, KL, KM, KN, KO, KP, KQ, KR, KS, KT, KU, KV, KW, KX, KY, KZ, LA, LB, LC, LD, LE, LF, LG, LH, LI, LJ, LK, LL, LM, LN, LO, LP, LQ, LR, LS, LT, LU, LV, LW, LX, LY, LZ, MA, MB, MC, MD, ME, MF, MG, MH, MI, MJ, MK, ML, MM, MN, MO, MP, MQ, MR, MS, MT, MU, MV, MW, MX, MY, MZ, NA, NB, NC, ND, NE, NF, NG, NH, NI, NJ, NK, NL, NM, NN, NO, NP, NQ, NR, NS, NT, NU, NV, NW, NX, NY, NZ, OA, OB, OC, OD, OE, OF, OG, OH, OI, OJ, OK, OL, OM, ON, OO, OP, OQ, OR, OS, OT, OU, OV, OW, OX, OY, OZ, PA, PB, PC, PD, PE, PF, PG, PH, PI, PJ, PK, PL, PM, PN, PO, PP, PQ, PR, PS, PT, PU, PV, PW, PX, PY, PZ, QA, QB, QC, QD, QE, QF, QG, QH, QI, QJ, QK, QL, QM, QN, QO, QP, QQ, QR, QS, QT, QU, QV, QW, QX, QY, QZ, RA, RB, RC, RD, RE, RF, RG, RH, RI, RJ, RK, RL, RM, RN, RO, RP, RQ, RR, RS, RT, RU, RV, RW, RX, RY, RZ, SA, SB, SC, SD, SE, SF, SG, SH, SI, SJ, SK, SL, SM, SN, SO, SP, SQ, SR, SS, ST, SU, SV, SW, SX, SY, SZ, TA, TB, TC, TD, TE, TF, TG, TH, TI, TJ, TK, TL, TM, TN, TO, TP, TQ, TR, TS, TT, TU, TV, TW, TX, TY, TZ, UA, UB, UC, UD, UE, UF, UG, UH, UI, UJ, UK, UL, UM, UN, UO, UP, UQ, UR, US, UT, UY, UZ, VA, VB, VC, VD, VE, VF, VG, VH, VI, VJ, VK, VL, VM, VN, VO, VP, VQ, VR, VS, VT, VU, VV, VW, VX, VY, VZ, WA, WB, WC, WD, WE, WF, WG, WH, WI, WJ, WK, WL, WM, WN, WO, WP, WQ, WR, WS, WT, WU, WV, WW, WX, WY, WZ, XA, XB, XC, XD, XE, XF, XG, XH, XI, XJ, XK, XL, XM, XN, XO, XP, XQ, XR, XS, XT, XU, XV, XW, XX, XY, XZ, YA, YB, YC, YD, YE, YF, YG, YH, YI, YJ, YK, YL, YM, YN, YO, YP, YQ, YR, YS, YT, YU, YV, YW, YX, YY, YZ, ZA, ZB, ZC, ZD, ZE, ZF, ZG, ZH, ZI, ZJ, ZK, ZL, ZM, ZN, ZO, ZP, ZQ, ZR, ZS, ZT, ZU, ZV, ZW, ZX, ZY, ZZ.

DEC Memo:	<p>"2/16/17 - Obligado - As part of an off-site investigation into 4th and 25th Spill cases #9305122, I conducted a complete file review and identified a tank test failure report for 207 25th street. According to the file, this site had a 550 gallon #2 diesel UST which failed a tightness test on 9/10/1993. As a result of this file review, the DEC under PIN # 93256 conducted a subsurface investigation around the former suspected tank with the current owner's permission. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil and groundwater contamination was identified in all 4 soil borings. Contamination was found as shallow as 8 ft bgs. The soil data and groundwater confirm that the 1993 tank test failure resulted in a petroleum discharge to soil and groundwater. 3/21/17 - Obligado - Final Phase II report received from Envirotrac. The report documents investigations at 3 properties - 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impated area and the volume of free product observed in the wells</p>

MAP FINDINGS

207 25TH STREET, 207 25TH STREET, BROOKLYN, NY (Continued)

over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release. 4/4/17 - Obligado - I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence. 4/5/17 - Obligado - I spoke with Sandi Fung. I provided her a list of tank contractors and the tank closure document from 1994. 5/19/17 - Obligado - Tom Gallanger, GEM (914) 382 8673. He has been hired by Sandi Fung to investigate the tank. 6/12/17 - Obligado - I got an email from Sandi requesting additional time to due the investigation as her contractor was not responsive. I told her that was fine. 8/21/17 - Obligado - I reviewed the UST Investigation Findings submitted by Gallinger Environmental on behalf of PSJC LLC. GEM installed three soil borings in the utility closet, using a jackhammer, shovel, and portable electroc hammer driven Geoprobe Soil sampler. The soil borings were targeted in the approximate location of the suspected former fuel oil access port observed in the 1993 photograph and immediately surrounding areas. Elevated field screening readings were detected in the soils collected from soil boring S2 starting at a depth of 7-9 feet below the surface. GEM found what appeared to be a UL listing tank tag and other debris (i.e. rags, paper and plastic) in the hand excavated soils at the location S3. The presence of these backfilled materials confirms past excavation work at this location that may be related to a previous tank removal. GEM concluded they did not encounter a UST beneath the site. Elevated field screenings and odors were observed at 7-9 ft, at a depth consisted with a tank grave for a small fuel oil UST. Evidence of possible former tank removal activities were observed. Based on the GEM report it appears the LUST at 207 25th St was previously removed by others. 7/2/18 - Obligado - After Project Review conference call with RSE Randall Austin and Kevin Hale, Chief of Spill Response and Coordination Section in Central Office on 6/26/18, it was determined that former LUST at 207 25th Street is a

MAP FINDINGS

DEC Memo:	<p>"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 04/27/05- Bureau B, unassigned, due to low priority. Transferred from R-2. 12/20/06- reassigned to Chris Milack, Central Office (Milack) 12/29/06- Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93-05122. (Milack) 5/24/07- GW investigation report was received 5/18/07. Two wells were sampled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue. 7/2/08 - Haggerty: assumed project management from Chris Milack 9/19/08 - Haggerty: approved SI workplan 11/25/08 - Haggerty: SI workplan altered due to the presence of oil-cooled high pressure gas mains along 24th Street. See email and revised figure in edocs 4/20/09 - Haggerty: approved SIR with the following comments: 1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol. 2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email. 3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed. 6/19/09 - Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow-up May 2010 - Due to various underground utilities, off-site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of</p>

MAP FINDINGS

EXXONMOBIL, 740 5TH AVENUE, BROOKLYN, NY (Continued)

delineation at this time. Discontinued EFT events due to poor recovery, really tight soil July 2010 - EM granted access to off-site location to complete delineation August 2010 - Offsite well well installed 8/3 February 2011 - offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On-site contamination predominately MTBE June 2011 - SSUR overdue July 2011 - reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss August 2011 - sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11) Sept. 2011 - approved Feasibility study work plan for SVE/AS January 2012 - EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb) February 2012 - discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data came in April 2012 - EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over-excavation is the only viable solution to source removal. EM states they won't remove the tanks because some were sold to the owner. PM needs assistance from OGC August 2012 - With OGC's involvement, EM has agreed to drill through the tanks which will only prove that EM is responsible for removing the tanks December 2012 - Wells in the former tank area should have been installed at this point but I was unable to confirm with the GES PM. January 2, 2012 - according to GES Project Manager, installation of tank field wells was delayed. Installation will begin 1/8/13 May 2013 - OGC and EM legal contacted regarding this site. The groundwater is grossly contaminated (80,000ppb of VOCs). Dept. required EM to excavate the source (old tanks and associated contaminated soil) but EM won't sign a Consent Order or perform the work. EM already performed an SVE/AS pilot test which failed. Now, EM wants to perform another SVE pilot test October 28 2013 - ExxonMobil has agreed to sign the Consent Order and remove the tanks and contaminated soil. Workplan due in 30 days December 2013 - PM sent comment letter to ExxonMobil. The work plan was revised and resubmitted. Currently under review January 6, 2014 - revised workplan approved April 2014 - Excavation work plan approved in

6. Income and Expenses

Owners of income-producing properties that have an actual assessed value of more than \$40,000 are required to file annual Real Property Income and Expense (RPIE) statements with the Department of Finance(DOF). The DOF uses the information from these statements, or data from comparables, to estimate the market value of a property for tax purposes.

Dev

1. Floor Area Ratio & Air Rights

There are many rules that limit what you can build on a lot and how large it can be. But the most important is the Floor Area Ratio, or FAR. The FAR is expressed as a ratio of the size of the building in square feet to the size of the lot in square feet. For example, if a lot is 2,000 square feet and has an allowable FAR of 4.0, then you cannot build a building larger than 8,000 square feet. Max FAR depends on several factors including zoning, location and use.

The maximum usable floor area is calculated by multiplying the size of the lot by the larger of the residential or commercial FAR.

Area of lot in square feet		5,017
FAR	x	1.65
Maximum usable floor area of building	=	8,278

Available Air Rights by Parcel

The building on this lot is smaller than the maximum set by the FAR. Thus it may be possible to add to the building (either more floors or an extension) or it may be possible to sell the "air rights" to a developer who owns a nearby lot. (Note: other factors may limit what you can do.)

Maximum usable floor area		8,278
Usable floor area	-	4,315
Unused buildable square feet ("air rights")	=	3,963

Opportunity by parcel		Very little opportunity	
	Above 250.000 sqft		30.000 - 60.000 sqft
	100.000 - 250.000 sqft		10.000 - 30.000 sqft
	60.000 - 100.000 sqft		Below 10.000 sqft

Residential FAR	1.65
Commercial FAR	1
Facility FAR	2.4
FAR as built	0.86

2. Zoning

New York City is divided into three basic *zoning districts*: residential (R), commercial (C) and manufacturing (M). These basic zoning districts are subdivided by the intensity of use. Development is governed by the use, bulk, and parking requirements of the zoning district.

R Residential district	Rezoning project area (Propri
C Commercial district	Rezoning project area (Curr
M Manufacturing district	Rezoning project area (Rece
	Rezoning project area (Earli

This map was created from the NYC [Department of City Planning's](#) online zoning map files. It includes updates found in those files through 2/8/2017.

Zoning Designation

Manufacturing **M1-1D**

Rezoning Projects

We have no information to indicate that there is a rezoning planned.
For more information about zoning district regulations, click [here](#).

Manufacturing

M1-1D

Parcel Vicinity

Frontage(s) **4 Av (wide)**
24 St (wide)

M1 districts range from the Garment District in Manhattan and Port Morris in the Bronx with multistory lofts, to parts of Red Hook or College Point with one- or two-story warehouses characterized by loading bays. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. [More info](#)

Map Disclaimer: Our maps are not official zoning maps. The print version of the NYC Zoning Resolution, which includes the zoning maps, together with any amendments adopted by the City Council subsequent to the most recent update to the print version, remains the official version of the Zoning Resolution. All zoning descriptions have been taken from the [NYC Planning](#) official source.

3. Planimetric Map

This planimetric map shows features such as retaining walls, sidewalks, medians, curbs, and roadbeds that have been digitized from aerial photography. These features must be taken into consideration when determining how a new building, or extensions to an existing building, are situated within the lot. They can also affect the maximum height that can be built.

- Sidewalk
- Curb
- Pavement edge
- Roadbed
- Median
- Retaining wall
- Plaza
- Swimming pool

Neighborhood

1. Building Class

The *building class* specifies how a property is used or what type of building is present on that property. Building classes range from A to Z (excluding X). There are at most 10 different sub-classes within each building class (ranging from 0 to 10). These building classes cover all property uses from residential and commercial to government buildings and parks.

The full list of building classes can be found [here](#).

* Building class: **Predominant Retail with Other Uses (K4)**

- | | |
|----------------------------|---|
| Residential, 1 fam | Transportation facilities |
| Residential, 2 fam | Industrial |
| Condos | Places of public assembly (indoor) & cultural |
| Walkups | Schools |
| Elevators | Churches |
| Store + apts, lofts | Health & social care |
| Theatres & hotels | City buildings |
| Businesses | Outdoor recreation facilities & cemeteries |

3. HPD Alternative Enforcement Program

The HPD Alternative Enforcement Program map is based on the current month's HPD violations in a building divided by the number of units in the building. It takes in consideration the open hazardous and immediately hazardous violations (I/B/C class) in the last 5 years.

Properties over the HPD-AEP threshold

- More than 600% over
- 300% to 600% over
- Up to 300% over

Properties below the HPD-AEP threshold

- 80% to 99%
- 60% to 80%
- 50% to 60%

HPD-AEP threshold for buildings having:

- 3 to 14 units = 5 violations/unit
- 15 units or more = 3 violations/unit

For more information, visit the [HPD website](#).

4. Neighborhood Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
8/10/2017	DEP	Sewer	Catch basin clogged/flooding (use comments) (SC)	The Department of Environmental Protection inspected your complaint and cleaned the catch basin or inlet. If the condition returns, please call 311 (or 212-639-9675 if calling from a non-New York City area code) to submit a new complaint.	8/11/2017

Created	Agency	Type	Descriptor	Disposition	Closed
5/1/2017	DOT	Street condition	Pothole	The Department of Transportation inspected this complaint and repaired the problem.	5/5/2017
5/6/2015	DOT	Street condition	Pothole	The Department of Transportation determined that this complaint is a duplicate of a previously filed complaint. The original complaint is being addressed.	5/6/2015
4/28/2015	DOT	Street condition	Pothole	The Department of Transportation inspected this complaint and repaired the problem.	5/9/2015
1/23/2015	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and determined that police action was not necessary.	1/23/2015
9/18/2014	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	9/21/2014
9/15/2014	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded and upon arrival those responsible for the condition were gone.	9/15/2014
7/31/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	8/1/2014
7/10/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department responded to the complaint and took action to fix the condition.	7/10/2014
7/8/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department reviewed your complaint and provided additional information below.	7/8/2014
6/30/2014	DPR	Dead tree	Dead/dying tree	The Department of Parks and Recreation inspected and determined the issue was out of its jurisdiction.	7/6/2014
6/27/2014	NYPD	Illegal parking	Blocked sidewalk	The Police Department issued a summons in response to the complaint.	6/27/2014
11/12/2012	NYPD	Illegal parking	Posted parking sign violation	The Police Department responded to the complaint and determined that police action was not necessary.	11/12/2012

Risk

1. Toxic Sites

Get a Phase I environmental report Site Assessment or a Home Environmental Database Report for this property directly from [Toxics Targeting](#).

This screening map, provided to PropertyShark by Toxics Targeting, shows environmental hazards such as toxic dumps, garbage landfills, leaking tanks, hazardous waste sites, and pollution discharges reported by local, state and federal government authorities.

Call [800-2-TOXICS](#) (800-286-9427 NYS only) or [607-273-3391](#) for more info.

Toxic Sites on the Property

None reported.

Toxic Sites near the Property

Spill	2
Haz waste generator or transporter	7
Petroleum bulk storage	1
Total neighboring toxic sites	10

Leaking Tanks and Spills:

-  MTBE Spill
-  Tank Failure
-  Tank Test Failure
-  Spill greater than 25 gal/lbs
-  Gasoline Spill
-  Spill

Superfund, Brownfields and Solid Waste:

-  US Superfund Priority Site
-  NY Superfund Site
-  US Superfund /CERCLIS Site
-  Brownfield Site
-  Hazardous Substance Study
-  Solid Waste Facility

Other Toxic Sites:

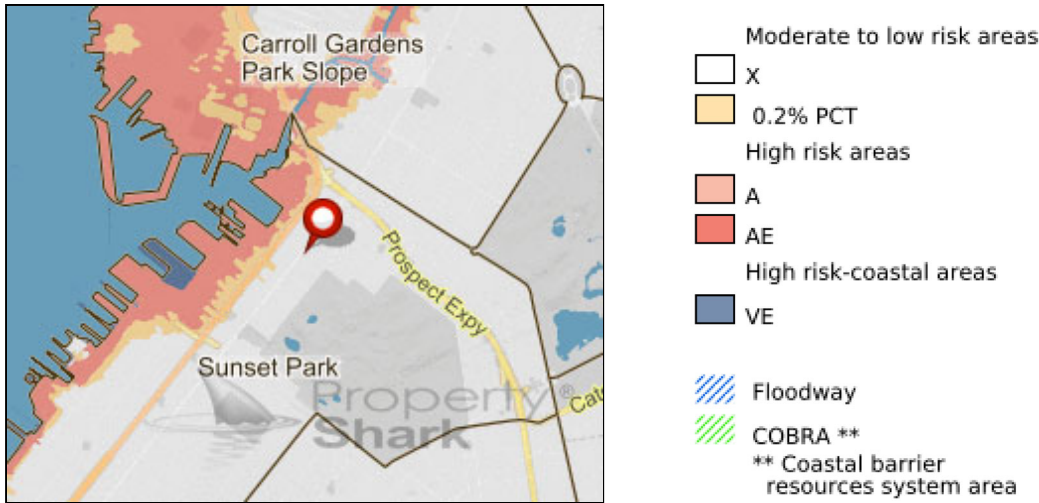

-  NY Superfund Qualifying Site
-  Major Oil Storage Facility
-  Haz Waste Corrective Action
-  Has Waste Treatment/Storage /Disposal
-  Toxic Release Inventory Site
-  Legal Civil /Admin Docket
-  Hazardous Waste Violation
-  Air Discharge Facility
-  Historic Utility Site
-  Wastewater Discharge Site
-  Chemical Bulk Storage
-  Petroleum Bulk Storage
-  Haz Waste Generator or Transporter
-  Selected NYC Environmental Quality Review 'E' Designation

Map Disclaimer: Mapped locations are approximate; sites are identified based on current and/or historic information. Regulatory status of sites may have changed. Site symbols can refer to large properties, additional toxic sites are not mapped. Contamination problems can impact properties far

from toxic sources. Sites include known and potential hazards.

2. FEMA Flood Zones

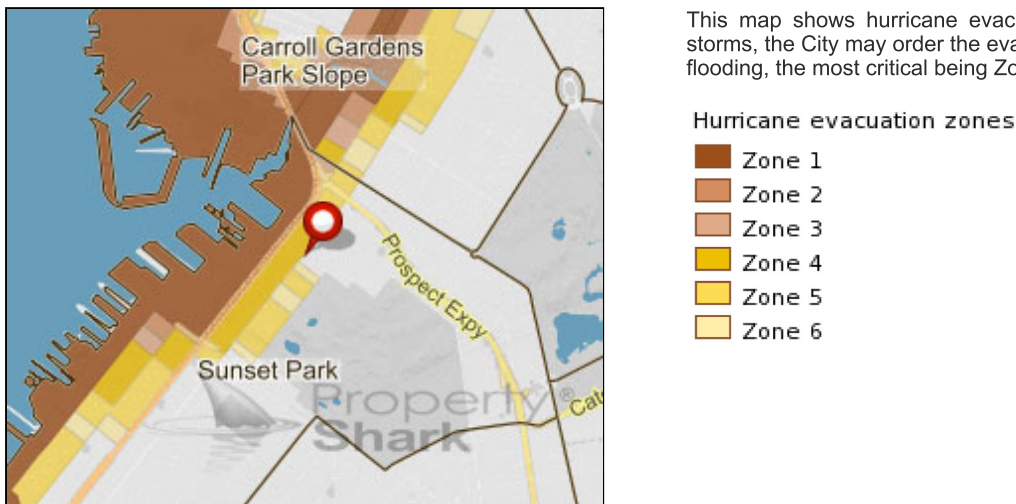

Use this map to determine if the property is in a flood zone.

Link to the map for this property at [FEMA's Map Service Center](#) (may not be available in all locations).

FEMA Flood Zoning		Distance to...	
FEMA flood zone(s)	X	Nearest distance to coastline (miles)	0.243
Coastal barrier resources system area (COBRA)	Out	Compass direction to coastline	141
Floodway	Out	Nearest distance to 100 year flood zone area (ft)	340
FEMA special flood hazard area	Out	Angle100	359
Map panel ID	3604970211G		
Map quaderant ID	40073-F8		

3. Hurricane Evacuation Zones

This map shows hurricane evacuation zones. In the case of coastal storms, the City may order the evacuation of neighborhoods in danger of flooding, the most critical being Zone 1.

- Hurricane evacuation zones
- Zone 1
 - Zone 2
 - Zone 3
 - Zone 4
 - Zone 5
 - Zone 6

Taxes

1. Tax Bill

Property tax bill for 7/1/2018 to 6/30/2019	\$39,421
---	----------

The tax bill is calculated based on the transitional assessed value of the property. If no changes are made to the way NYC computes property taxes, we estimate that the current assessed value will increase by approximately 20% per year until it reaches the maximum assessed value of **\$487,350**.

2. Key Values in Calculating the Bill

Tax class	4
Market value	\$1,083,000
Assessed value	\$487,350
Transitional assessed value	\$374,940
Exemption value	\$0
Tax abatements	\$0

3. Assessment Reductions & Open Petitions

New York City's Tax Commission is responsible for reviewing and determining the annual applications for corrections of assessments. Owners and other parties with legal interest can claim that they are incorrectly assessed or improperly denied an exemption from real property tax. There are four types of assessment claims subject to review and corrective action: excessive assessment, misclassification, unequal assessment and unlawful assessment. More information can be found on New York City [Tax Commission](#) website.

Open Petitions

If relief from tax commission is not obtained, the owner or other party with legal interest can file a petition with the New York State Supreme Court to keep the appeal open for further review. The information shown here represents only open petitions. The ones that are invalid or abandoned are closed.

Petition year	Petition Index	Petitioner	Attorney	Code description
2017	407486	731 4th Ave LLC	Martha Stark Esq.	
2014	403327	731 4th Ave LLC	Goldberg & Iryami, P.C.	
2013	406050	128 Merrick Realty LLC	Goldberg & Iryami, P.C.	Fifth-year extension under RPTL §718 agreed to with the Law Department

4. Property Tax Calculation

Market Value

The first step is for the City Assessor to determine the *market value* of the property. While the term *market value* would seemingly refer to how much the property would sell for on the open market, in reality the *market values* that the City Assessor is almost always substantially lower.

For this property the City Assessor has assigned this market value:

Land market value		\$226,000
Building market value	+	\$857,000
Market value	=	\$1,083,000

Assessed Value

Next, the market value is used to compute the assessed value, which is a percentage of the market value. The exact percentage is determined by the tax class of the property. Tax class 1 is assessed at 6% of the market value, and tax classes 2,3 and 4 are assessed at 45%.

Market value		\$1,083,000
Assessment ratio	x	45%
Maximum assessed value	=	\$487,350

Transitional Value

To protect property owners from sudden large increases in property tax, the state limits how quickly the city can increase the assessed value. Typically these limits are applied when the City Assessor makes a big increase to the market value. Without the limits the assessed value would increase by a similar percentage. Instead, the change to the assessed value is phased in over a number of years.

Transitional value		\$374,940
Transitional exemption value	-	\$0
Transitional net assessed value	=	\$374,940

Taxable Value

The *taxable value*, for 2018/2019, is the smaller of the city's *maximum assessed value* and the *transitional net assessed value*.

Taxable value	=	\$374,940
---------------	---	-----------

Property Tax

Current tax is calculated by multiplying the taxable value (the assessed value minus any exemptions) by the *tax rate*.

The city also grants some properties incentives called tax abatements, which are subtracted directly from the current tax. This results in the property tax, the amount the current owner pays.

Tax description	Billable value	Tax rate as billed June 2018	Tax bill
Current tax	\$374,940	x 10.5140%	= \$39,421
Total abatements			- \$0
Property tax as billed June 2018			= \$39,421

After issuing the final tax assessment and issuing first quarter tax bills, the city typically adjusts the tax rate. This results in an adjustment to the property tax.

Tax description	Billable value	Final tax rate 18/19	Tax bill
Current tax	\$374,940	x 10.5140%	= \$39,421
Total abatements			- \$0
Property tax with final tax rate			= \$39,421

Property tax with final tax rate		\$39,421
Property tax as billed June 2018	-	\$39,421
Property tax adjustment	=	\$0

For more information, you can view this property's assessment, tax bill, and account statements by clicking [here](#) and entering the Borough, Block, & Lot.

5. Exemptions and Tax Abatements

Both the City and State of New York offer property tax reductions through exemptions and abatements for residential property, commercial constructions, and properties used by governmental, industrial, and nonprofit organizations. Exemptions provide tax relief by reducing a property's assessed value, and abatements reduce taxes by applying credits to the amount of tax due. The information in this section presents a summary of the granted amounts and other related values of the benefit programs. Some of this data comes from NYC Department of Housing Preservation and Development (HPD) and the Department of Finance, departments which administer the [J-51 Program](#), [421a Program](#) and the [Cooperative and Condominium program](#).

We believe that no exemptions or abatements currently apply to this property.

6. Assessment History

Year	Building class	Market value	Assessed value	Taxable	Tax rate%	Base tax	Property tax
2018/19	K4	\$1,083,000	\$487,350	\$374,940	10.514%	\$39,421	\$39,421

Violations

1. HPD Violations

When excessive violations are present, this can adversely affect the support given by The NYC Department of Housing Preservation and Development (HPD). These violations can result in building-wide inspections, fees, and the requirement of extensive repair work to correct underlying conditions. In some cases, outstanding violations may result in a lien being placed on the property. It is also substantially more difficult to mortgage a building with extensive violations.

We do not have any record of violations in our database. Status can be verified [here](#).

2. Complaints

Created	Agency	Type	Descriptor	Disposition	Closed
10/25/2018	NYPD	Noise - commercial	Loud music/party	The Police Department responded to the complaint and with the information available observed no evidence of the violation at that time.	10/25/2018
8/9/2017	DEP	Industrial waste	Chemical spill (iac)		
5/24/2016	DCA	Consumer complaint	Overcharge	The Department of Consumer Affairs mailed you a complaint form. If you received the form and have not yet completed it, please do so. Be sure to follow the instructions on the form and return it to DCA with all required documentation. 311 can assist those who have not received the complaint form by creating a new Service Request. Additionally, 311 can assist those who returned the form but want to inquire about the status of the filed complaint.	6/9/2016
1/14/2016	DEP	Noise	Noise: alarms (NR3)	The Department of Environmental Protection did not observe a violation of the New York City Air/Noise Code at the time of inspection and could not issue a notice of violation. If the problem still exists, please call 311 and file a new complaint. If you are outside of New York City, please call (212) NEW-YORK (212-639-9675).	1/22/2016
12/14/2015	DOHMH	Food establishment	Food contaminated	The Department of Health and Mental Hygiene has sent official written notification to the Owner/Landlord warning them of potential violations and instructing them to correct the situation. If the situation persists 21 days after your initial complaint, please make a new complaint.	2/13/2016
8/14/2015	DCA	Consumer complaint	Billing dispute	The complaint was withdrawn per the customer's request.	8/18/2015
7/3/2015	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs is scheduling an inspection which will take place within 35 days. Please do not file duplicate complaints or call to check results during this time. After 35 days, call 311 with your Service Request Number and ask for Service Request Status - DCA.	7/7/2015
9/15/2014	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs is scheduling an inspection which will take place within 35 days. Please do not file duplicate complaints or call to check results during this time. After 35 days, call 311 with your Service Request Number and ask for Service Request Status - DCA.	9/17/2014

Created	Agency	Type	Descriptor	Disposition	Closed
8/25/2014	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs is scheduling an inspection which will take place within 35 days. Please do not file duplicate complaints or call to check results during this time. After 35 days, call 311 with your Service Request Number and ask for Service Request Status - DCA.	8/28/2014
5/22/2013	NYPD	Noise - commercial	Banging/pounding	The Police Department responded to the complaint and determined that police action was not necessary.	5/22/2013
5/14/2012	NYPD	Derelict vehicle	With license plate	The Police Department responded and upon arrival those responsible for the condition were gone.	5/14/2012
4/7/2011	DCA	Consumer complaint	Cars parked on sidewalk/street	The Department of Consumer Affairs inspected the business you named in your Service Request. To check results, call 311 with your Service Request Number and ask for Service Request Status - DCA.	7/13/2011

3. DOB Complaints

Subject: FOIL Request :: W046110-122718

Dear Jennifer:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 12/27/2018 and given the reference number FOIL #W046110-122718 for tracking purposes. You may expect the Department's response to your request no later than **1/28/2019**.

Record Requested: **Any information pertaining to environmental records, easements, chemical storage, oil tanks, permits, etc at the property located at 731 4th Avenue, Brooklyn, NY (aka 250-260 24th Street, Brooklyn). A search of the Spills, PBS, and Site Remediation databases did not identify known records.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.
