1.0 INTRODUCTION

The Applicant, 737 4th Avenue, LLC, was accepted into the NYSDEC's Brownfield Cleanup Program (BCP) as a Volunteer as set forth in a Brownfield Cleanup Agreement (BCA), dated November 19, 2021, Site No. C224332. P.W. Grosser Consulting, Inc. (PWGC) has prepared the following Supplemental Remedial Investigation Report (SRIR) on behalf of the Applicant to document the results of the Supplemental Remedial Investigation (SRI) based upon the June 21, 2022 Supplemental Remedial Investigation Work Plan (SRIWP) approved by the NYSDEC on July 27, 2022. The purpose of the SRI was to delineate onsite contaminated soils throughout the site, confirm the likely bottom depth of the remedial excavations that will be proposed for the Remedial Action Work Plan (RAWP), facilitate the design of the support of excavation (SOE) elements required for remedial excavations to these depths, and delineate the source material around the RI boring SB007. In addition, the configuration of the proposed building has changed since the RIR was submitted to the NYSDEC due to utility hookup constraints on the northern side of the property where there are buried Con Edison transformer lines along 24th Street.

2.0 SUBJECT PROPERTY DESCRIPTION AND HISTORY

2.1 Subject Property Description

The subject property consists of one parcel located at 731 to 747 Atlantic Avenue in the Greenwood Heights neighborhood of Brooklyn, New York. The subject property is located in the Borough of Brooklyn and Kings County. The subject property is identified in the New York City Tax Map as Block 652, Lot 1. The subject consisted of two tax lots and was recently merged; the new lot will be referred to as Lot 1 and the former lots will be referred to as Former Lot 1 and Former Lot 7.

A Site Location Map is included as **Figure 1** and a Site Plan with is included as **Figure 2**.

2.2 Subject Property History

Historical usage of the subject property includes the following:

- 731 4th Ave (Former Lot 7) was first developed prior to 1888, used for residential purposes from at least 1888 to 1906, and for commercial/industrial purposes from 1906 to the present. Historical usage of the subject property indicative of potential recognized environmental conditions (RECs) includes usage as a junk yard, metal manufacturer, and an auto repair shop.
- 737 4th Ave (Former Lot 1) was first developed between 1906 and 1926, used as an auto garage and filling station for almost eight decades, and was redeveloped into a Dunkin Donuts around 2004. Historical usage of the subject property indicative of potential RECs includes usage as an auto body garage and filling station.

2.3 Regional Geology/Hydrogeology

The geologic setting of Long Island is well documented and consists of crystalline bedrock composed of schist and gneiss overlain by layers of unconsolidated deposits. Immediately overlying the bedrock is the Raritan Formation, consisting of the Lloyd sand confined by the Raritan Clay Member. The Lloyd sand is an aquifer and consists of discontinuous layers of gravel, sand, sandy and silty clay, and solid clay. The Raritan Clay is a solid and silty clay with few lenses of sand and gravel; abundant lignite and pyrite; and gray, red or white in color.

630 JOHNSON AVENUE, STE 7 BOHEMIA, NY 11716
LONG ISLAND • MANHATTAN • SARATOGA SPRINGS • SYRACUSE • SHELTON

Above the Raritan Clay lies the Magothy Formation. The Magothy Aquifer consists of layers of fine to coarse sand of moderate to high permeability, with inter-bedded lenses of silt and clay of low permeability resulting in areas of preferential horizontal flow. Therefore, this aquifer generally becomes more confined with depth. The Magothy Aquifer is overlain by the Upper Glacial Aquifer. The Upper Glacial Aquifer is the water table aquifer at this location and is comprised of medium to coarse sand and gravel with occasional thin lenses of fine sand and brown clay. This aquifer extends from the land surface to the top of the Magothy and, therefore, is hydraulically connected to the Magothy Aquifer.

2.4 Subject Property Geology/Hydrogeology

The subject property elevation ranges between approximately 32 feet and 42 feet above mean sea level with elevation increasing from the western corner (25th Street and 4th Avenue intersection) to the eastern corner (up 24th Street). The stratigraphy of the subject property, from the surface down, consists primarily of fill from grade ranging down to 2 to 10 feet below grade. The fill, including broken concrete and bricks, was underlain by native soils which primarily consisted of silt to fine-grained sands to at least 20 feet below grade. Groundwater was encountered at approximately 22 feet below grade in the southern section of the subject property and regional groundwater flow is anticipated to flow towards the northwest according to the United States Geological Survey (USGS) 2013 Groundwater Conditions on Long Island map. The presence of an adjacent subway line along 4th Avenue may impact the groundwater flow and depth to groundwater. Bedrock was not encountered. There are no public water supply wells within 1 mile of the subject property. Based on topographic maps, it appears the nearest permanent surface water body/wetland is the Gowanus Bay, located approximately ¼ mile west of the subject property.

2.5 Subject Property Features

The subject property is currently vacant and is improved as follows:

- 737 4th Avenue (Former Lot 1) measures approximately 15,017 square feet and is improved with a two-story frame commercial building (no longer in operation) measuring approximately 4,677 square feet and an asphalt paved parking lot. The building was most recently utilized as a Dunkin Donuts restaurant and is vacant.

- 731 4th Avenue (Former Lot 7) measures approximately 5,017 square feet and is improved with two one-story concrete block buildings (no longer in operation) with footprints measuring 2,508 and 1,528 square feet and one two-story building with a footprint measuring 1,003 square feet. The buildings occupy the entire lot. The two-story building is occupied by an auto body shop that is still occupied. The retail building has two vacant units and a deli in the third unit that is still occupied.

2.6 Future Subject Property Use

The Applicant proposes to demolish the existing structures at the proposed development Site and construct a new 14-story mixed-use development. The building will occupy the entirety of the Site on the first floor. A partial cellar will be constructed that will occupy approximately 11,000 square feet, extending approximately 60 feet east and 185 feet north of the southwest property corner. As part of development, the referenced Lots (1 and 7) were merged into Lot 1.

2.7 Previous Environmental Reports

The subject property's environmental history is based upon the following reports that have been prepared for the subject property:

Summaries of the reports are provided below.

2.7.1 737-747 4th Avenue (Former Lot 1)

2.7.1.1 Phase I Environmental Site Assessment (March 2018; Updated August 2018)

PWGC prepared a Phase I ESA for the 737-747 4th Avenue (former Lot 1). Conditions determined to be RECs are detailed below:

- The subject property was historically utilized as a gasoline service station and auto repair shop for approximately 8 decades. This long history of usage has resulted in the subject property's inclusion in several environmental databases (USTs, LTANKS, and Liens) and the installation of numerous monitoring wells throughout the subject property and surrounding areas related to an active spill being investigated and remediated by the NYSDEC.
- Several off-site properties have been identified that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property, most notably in the form of spill #93-05122. Spill # 93-05122 was originally attributed to the subject property in part or in whole; however, further investigation by the NYSDEC identified a UST at the eastern neighboring site at 207 25th Street as the likely source of Spill #93-05122. Spill #93-05122 was closed and the further investigation and remediation of the spill beneath the subject property continued under spill #16-10374.
    - Remediation under Spill #93-05122 included the limited excavation of the tank pad area located on the northern side of Former Lot 1. Approximately eleven to fourteen 550-gallon USTs were removed, as well as 428 tons of petroleum contaminated soil. The excavation extended up to 11-feet below grade and is estimated to have been 700 sf.

2.7.1.2 Phase II Environmental Site Assessment (August 2018)

PWGC performed a Phase II ESA at 737-747 4th Avenue (Former Lot 1) between April and May 2018. The Phase II included:

- Drilling seven soil borings throughout the subject property.
- Screening soil for volatile organic compounds (VOCs) using a photoionization detector (PID).

P.W. GROSSER CONSULTING, INC.

- Collecting soil samples for laboratory analysis.
- Ten previously installed groundwater monitoring wells were gauged and sampled.

The findings of this investigation included:

- PID readings and olfactory observations indicated that impact was not observed in the vadose zone, but higher readings and stronger odors were obtained closer to the groundwater table.
- The highest PID readings were obtained at the groundwater table and in the borings closest to the upgradient side of the property.
- VOCs were detected at concentrations exceeding NYSDEC CP-51 Soil Cleanup Objectives (SCOs) in two of the soil borings, SB002 and SB004, which are located closest to 25th Street with the highest concentrations observed in SB004 (Total VOC concentration of 247.8 milligrams per kilogram [mg/kg]).
- Semi-volatile organic compound (SVOC) impact to soil was not identified.
- Light Non-Aqueous Phase Liquid (LNAPL) consisting of oil was observed in three of the groundwater monitoring wells located on the upgradient side of the property or on the adjacent sidewalk, measuring between 0.85 feet and 1.42 feet.
- Groundwater analytical results indicated that VOC impact to the groundwater is limited to the upgradient portion of the property and SVOC impact is observed site-wide at low-level concentrations exceeding the groundwater quality standard (GQS).

2.7.2 731 4th Avenue (Former Lot 7)

2.7.2.1 Phase I Environmental Site Assessment Report (April 2013)

Middleton Environmental Inc. (MEI) prepared a Phase I ESA for 731 4th Avenue in April 2013. The findings were as follows:

- No RECs were identified in connection with the subject property.
- The site reconnaissance, interviews and review of records did not find the presence or possible presence of hazardous substances or petroleum-related products that could indicate an existing

release, past release or significant threat of a release into structures on the property, into ground, groundwater or surface water.

2.7.2.2 Phase I Environmental Site Assessment Report (January 2019; updated July 2019)

PWGC prepared a Phase I ESA for the site in July 2019. PWGC identified the following RECs for the subject property:

- The subject property was historically utilized as a metals manufacturer, a junk yard, and an auto repair shop; use as an auto body repair shop has continued to the present day. The majority of these activities appeared to have been conducted in the rear portion of the property along 24th Street. Petroleum compounds and chemical solvents are typically associated with these activities; therefore, the subject property's historical and current use was a REC.
- Several off-site properties were identified with petroleum spills that have the potential to affect environmental conditions beneath the subject property related to the migration of groundwater and soil vapor beneath the subject property. Due to the open status of these spills, their presence was considered a REC.

2.7.2.3 Limited Phase II Environmental Site Assessment Report (March 2019)

PWGC conducted a Limited Phase II investigation for the subject property on February 24, 2019 to determine if a potential volatile organic source of contamination existed beneath the subject property. The purpose was to further evaluate RECs identified in a Phase I ESA by obtaining sound, scientifically valid data concerning actual property conditions.

As access to the property was not granted, the Limited Phase II ESA included the following task:

- Soil Vapor Quality Evaluation

As New York State has not developed standards or guidance levels for soil vapor concentrations, soil vapor samples were evaluated as a whole. The findings of the sub-slab vapor investigation were as follow:

P.W. GROSSER CONSULTING, INC.

PWGROSSER.COM BOHEMIA, NY 11716
LONG ISLAND • MANHATTAN • SARATOGA SPRINGS • SYRACUSE • SHELTON

- Multiple VOCs were detected in each soil vapor sample collected from the subject property. Petroleum related compounds, such as benzene, ethylbenzene, toluene, and/or xylenes were detected in each soil vapor sample at relatively low concentrations.
- Compounds for which NYSDOH has established soil vapor/indoor air decision matrices (carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, trichloroethene (TCE), methylene chloride, tetrachloroethene (PCE), 1,1,1-trichloroethane and vinyl chloride) were not detected at concentrations greater than the laboratory method detection limits (MDLs).

2.7.3 731-737 4th Avenue (Full Site)

2.7.3.1 Phase II Environmental Site Assessment Report (July 2021)

PWGC conducted a Phase II ESA for 731 to 737 4th Avenue on May 13, 2021 to evaluate soil conditions beneath the buildings. A total of five soil borings were conducted and ten soil samples collected. Samples were collected from 0 to 2 feet and from the apparent 2-foot interval of the bottom of the fill layer. The fill layer ranged between 5 and 10 feet below grade.

- There were no VOC exceedances of Unrestricted Use SCOs; however, PCE was detected in one of the soil samples in the vicinity of where the PCE detection was in the soil vapor samples collected in 2019.
- SVOC exceedances were identified in each of the 0 to 2 foot samples and in one of the deeper samples. The SVOC exceedances generally consisted of polycyclic aromatic hydrocarbons (PAHs). Each of the six samples with exceedances exceeded the Unrestricted Use SCOs for one or more compounds. The samples collected from SB001 (0 to 2 feet) and SB003 (4 to 6 feet) contained the highest concentrations of total SVOCs, 386 mg/kg and 309 mg/kg, respectively.

  Metals were detected at concentrations that exceeded Unrestricted Use SCOs in eight of the ten samples and exceeded Restricted Residential SCOs in five of the ten samples. The compounds that exceeded Restricted Residential SCOs included arsenic (max 17.3 mg/kg), barium (max 517 mg/kg), lead (max 2,740 mg/kg), and mercury (3.57 mg/kg) and were generally observed in the

shallow 0 to 2 foot samples with the exception of the 4 to 6 foot sample from SB003 which also contained Restricted Residential SCOs. Other compounds detected included cadmium, copper, nickel, and zinc.

2.7.3.2 Remedial Investigation (November 2022)

PWGC conducted a RI to delineate soil, groundwater, and soil vapor impact within the subject property boundary and to determine what, if any, impact may have migrated off-site. The following tasks were completed during this RI:

- The geophysical survey performed at the subject property did not identify subsurface anomalies in the areas scanned.
- A total of 11 soil borings were installed at the subject property and a total of 33 soil samples were analyzed.
    - Soils beneath the subject Site appear to contain elevated SVOCs, metals, pesticides, and/or polychlorinated biphenyls (PCBs) and are primarily contained within the first 11 feet below grade surface (bgs) of soil across the subject property.
    - Petroleum impacted soils were observed in two soil samples; one was adjacent to the eastern neighboring petroleum spill and the other was in the smear zone down-gradient of this area.
    - Herbicides and perfluoroakyl and polyfluoroakyl substances (PFAS) did not exceed Unrestricted Use SCOs or guidance values.
- One permanent groundwater monitoring well was installed and nine existing onsite groundwater monitoring wells were utilized to determine groundwater quality beneath the subject property.
    - VOCs were detected at concentrations exceeding their respective Ambient Water Quality standards (AWQSs) in six of the 10 groundwater samples analyzed. The five groundwater monitoring wells with exceedances of petroleum related compounds are located on the southern portion of the subject property in the vicinity of the eastern neighboring petroleum spill.

P.W. GROSSER CONSULTING, INC.

LONG ISLAND • MANHATTAN • SARATOGA SPRINGS • SYRACUSE • SHELTON

- SVOCs were detected at low level and sometimes estimated concentrations exceeding their respective AWQSs in each of the 10 groundwater samples.
- Dissolved metals in excess of AWQSs were limited to antimony, iron, magnesium, manganese, and/or sodium. These metals are generally found in background concentrations of groundwater within the region.
- Pesticides, PCBs, and 1,4-dioxane were detected at concentrations less than their regulatory groundwater standards.
- Perfluorooctanoic acid (PFOA) and/or perfluorooctanesulfonic acid (PFOS) were detected in each groundwater sample collected from the subject property. Five groundwater samples contained a PFOS concentration greater than its guidance value and eight samples contained a PFOA concentration greater than its groundwater guidance value. As PFOS and PFOA were identified in groundwater throughout the subject property, this indicates that the PFAS contamination is likely a regional issue and not related to historical site usage.
- LNAPL results identified a weathered fuel oil #2/diesel fuel in the vicinity of the leaking UST at the adjacent property and a mixture of coal tar/creosote and hydraulic/lubricating/motor oil beneath the drive-thru north of the Dunkin Donuts.
- There does not appear to be significant groundwater contamination migrating off-site from on-site contamination.

- Four sub-slab and six soil vapor samples were collected at the subject property, as well as three indoor air samples.
  - The indoor air samples contained minor detections of petroleum compounds and chlorinated solvents. Generally, the higher concentrations were observed in the active auto body shop compared to the sample from the deli.
  - Sub-slab soil vapor samples generally contained the highest concentrations of petroleum compounds beneath the active auto body shop. PCE was detected at low-level concentrations in three of the four sub-slab soil vapor samples; other chlorinated compounds were not detected.

  - Soil vapor samples generally contained low levels of petroleum compounds and did not contain detectable concentrations of chlorinated compounds.

- The fate and transport of contaminants identified during the RI is a function of the properties of the individual contaminants, the geology and hydrogeology of the subject property, and available pathways for the contaminants to migrate. Elevated concentrations of VOCs, SVOCs, metals, pesticides, and PCBs are present in subsurface soils at the subject property. Significant groundwater impact from on-site contamination has not been observed leaving the subject property. Transport mechanisms for identified impact include soil transportation as dust or suspended in stormwater runoff and migration of groundwater or soil vapor downgradient. As the subject property is currently capped with pavement or concrete, impacted shallow soils at the subject property are contained. There are currently no excavations on the subject property that would allow exposure to soil or groundwater at the subject property. VOCs in soil vapor appear to be emanating from subsurface soil contamination although additional off-site sources cannot be ruled out due to the industrial nature of nearby properties. Elevated concentrations were observed near the northern portion of the subject property and could potentially be migrating off-site.
- Possible subject property exposure pathways are by ingestion, inhalation, or dermal exposure by a person on the subject property. The subject property is currently capped with various buildings, asphalt and/or concrete which largely negates these exposure pathways. Prior to the cap being removed from the subject property, a locked perimeter fence will be installed which will limit access to the subject property to authorized personnel. As such, potential exposures would be limited to periods when ground intrusive work is being performed. Proposed remediation of the subject property will then include re-capping the property with impervious surfaces and/or clean fill material. There are no production wells or groundwater use on the subject property, so there is no route for ingestion or dermal exposure to groundwater except for when ground intrusive work is occurring if it extends to the groundwater table.

3.0 STANDARDS, CRITERIA, AND GUIDANCE (SCGS)

Based on previous investigations at the subject property, the primary chemicals of potential concern (COPC) encountered at the subject property are VOCs, SVOCs, and metals.

Applicable regulations at NYSDEC 6 NYCRR Part 375 provide SCOs for Unrestricted Use and Restricted Use based on the intended usage of the property. Restricted Use SCOs include: Residential, Restricted Residential (single-family houses not permitted), Commercial, or Industrial. The future intended usage of the property is intended to be for multi-family residential purposes; therefore, soil sample results are compared to the lower of Unrestricted Use SCOs, Protection of Groundwater SCOs, and Restricted Residential Use SCOs.

4.0 REMEDIAL INVESTIGATION

The primary objectives of the additional work detailed in this SRI were to delineate the onsite contaminated soils throughout the site, confirm the likely bottom depth of the remedial excavations that will be proposed for the RAWP, facilitate the design of the SOE elements required for remedial excavations to these depths, and delineate the source material around the RI boring SB007. In addition, the configuration of the proposed building has changed since the RIR was submitted to the NYSDEC due to utility hookup restraints on the northern side of the property where there are buried Con Edison transformer lines along 24th Street.

4.1 Soil Quality

Soil sampling was performed in accordance with DER-10 and with the NYSDEC approved SRIWP.

A total of 14 additional soil borings (SB012 through SB025) were installed throughout the property to supplement the previously installed borings during the RI and Phase II ESAs. Associated Environmental Services, Ltd. (AES) of Hauppauge, New York provided drilling services. PWGC and AES mobilized to the subject property on August 3, 2022 to install the 14 additional borings. Soil boring locations are shown on **Figure 3**.

Soil borings were installed utilizing a Geoprobe® direct-push 7822DT drill rig. The drill rig was outfitted with a dual-core sampler and dedicated acetate liners. Non-dedicated sampling equipment was decontaminated in accordance with the procedures specified in SRIWP.

Soils were field screened for the presence of volatile organic vapors using a photo-ionization detector (PID) and classified in accordance with the Unified Soil Classification System (USCS). Soils at the subject property consisted of soils mixed with brick, asphalt, and concrete ("fill") material from grade to approximately 8 feet bgs underlain by fine to medium grained sand with trace silt.

Elevated PID detections were observed in four of the 14 soil borings (SB019, SB021, SB024 and SB025). The maximum PID reading was 344 parts per million (ppm). These four borings are located in the vicinity of the petroleum spill investigated under spill numbers 93-05122/16-10374.

4.1.2 Sample Analysis

Samples collected during this SRI were placed in pre-cleaned, pre-preserved, laboratory-supplied glassware and stored on ice in a cooler for transport to the laboratory. Samples were submitted to York Analytical Laboratories of Stratford, Connecticut (YORK), a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory (ELAP ID: 10854).

Soil samples for supplemental characterization of the subject property were analyzed for the following:

- TCL VOCs by United States Environmental Protection Agency (USEPA) Method 8260, collected with terracore devices or equivalent.
- TCL SVOCs by USEPA Method 8270.
- TCL Pesticides/ PCBs by USEPA Method 8081/8082.
- Trivalent and Hexavalent Chromium by USEPA Method 7196.
- TAL Metals by USEPA Method 6010/7471.

4.1.3 Analytical Results

Soil sample results were compared to the Unrestricted Use, Protection of Groundwater, and Restricted Residential Use SCOs specified in 6 NYCRR Part 375, Environmental Remediation Programs (December 2006). Soil analytical data is summarized on **Tables 1** through **4** and laboratory reports are included as **Appendix B**. Soil analytical data from the SRI are included on the spider diagram as **Figure 3**.

A total of 19 soil samples were collected for VOC analysis. VOCs were detected at concentrations greater than their respective Unrestricted Use SCOs and/or Protection of Groundwater SCOs in two of the 19 soil samples analyzed; however, they did not exceed their respective Restricted Residential Use SCOs. In soil boring SB019 from 17 to 19 feet, 1,2,4-trimethylbenzene was detected at a concentration of 5 mg/kg, slightly exceeding its Unrestricted Use SCO and Protection of Groundwater SCO of 3.6 mg/kg. At this sample depth, the sample may have been collected from the smear zone of the groundwater table. In soil boring SB021 from 13 to 15 feet, 1,2,4-trimethylbenzene (36 mg/kg), 1,3,5-trimethylbenzene (11 mg/kg), ethylbenzene (2.9 mg/kg), n-propyl benzene (4.4 mg/kg), and total xylene (15 mg/kg) were detected at

concentrations slightly exceeding their respective Unrestricted Use SCOs and Protection of Groundwater SCOs. At boring SB025, no samples were collected; however, the soil was characterized and field screened with a PID. There was no physical evidence of contamination within the boring, but PID readings increased as groundwater was approached.

A total of 19 soil samples were collected for the analysis of SVOCs, pesticides, and PCBs analysis. SVOCs, pesticides, and PCBs were not detected at concentrations in contravention of their respective Unrestricted Use SCOs in each of the 19 soil samples.

A total of 19 soil samples were collected for metals analysis. Metals were detected at concentrations greater than Unrestricted Use SCOs in four of the 19 soil samples analyzed; however, they did not exceed their respective Restricted Residential Use SCOs. The compounds exceeding Unrestricted Use SCOs include lead, nickel, trivalent chromium, and zinc. Lead was detected at a concentration of 81.6 mg/kg in soil boring SB014 at 2 to 4 feet. Nickel and trivalent chromium were detected at concentrations exceeding their respective Unrestricted Use SCOs in soil borings SB015 and SB016 at 10 to 12 feet. Zinc was detected at a concentration of 148 mg/kg in the soil sample collected at SB024 at 5 to 7 feet.

4.2 Discussion of Results

The area of petroleum contamination in the southeastern section of the site has been delineated to the area between borings SB018 to the north, SB020 to the west, the property boundary to the south, and the property boundary to the east. This contamination appears to migrate down to the groundwater table. This contamination exceeds Protection of Groundwater SCOs and is also observed in the groundwater samples previously collected which exceeded their respective Ambient Water Quality Standards.

Additional metals contamination was encountered at several locations throughout the site in exceedance of Unrestricted Use SCOs and included lead, nickel, and trivalent chromium. An additional location contained a Restricted Residential SCO exceedance for mercury.

4.3 Community Air Monitoring and Reporting

Community air monitoring was performed during the SRI at the subject property during soil disturbance events. This included monitoring the site perimeter for dust and volatile organic vapors. The exclusion zone action level of 150 µg/m^3 greater than background for dust and 5 ppm for volatile organic vapors in the breathing zone were enforced during work.

One perimeter air monitoring station (downwind) was setup to continuously monitor air quality. The station was equipped with a dust meter and organic vapor meter. The meters were programmed to output results based on a 15-minute real-time average. The station was positioned based on the area(s) of the subject property being disturbed and current weather conditions. Field data sheets for the community air monitoring are included within the daily field reports and were submitted to the NYSDEC. It should be noted that telemetry issues were encountered during the SRI, including CAMP readings not being collected at the start of field activities and VOC readings were not collected at the up-gradient CAMP station; however, there was no visual or olfactory evidence of dust or VOCs migrating on-site or off-site during the SRI activities.

Daily reports with photographic logs were completed at the end of each day by the head field staff in charge for that day and reviewed by the PWGC project manager. There were no exceedances of dust or VOCs migrating off-site at the property boundaries. Copies of the daily field reports inclusive of air monitoring results are included in **Appendix C**.

4.4 Investigation Derived Waste

Investigation derived waste was not generated during the SRI. Excess soils from each boring were placed back into the boring location from where it originated.

5.0 QUALITY ASSURANCE / QUALITY CONTROL

The overall quality assurance quality control (QA/QC) objective for the field investigation was to develop and implement procedures that provide data of known and documented quality. QA/QC characteristics for data include precision, accuracy, representativeness, completeness, and comparability. The purpose of the QA/QC activities developed for this subject property were to verify the integrity of the work performed and data collected is of the appropriate type and quality for the intended use.

5.1 QA/QC Samples

To assess the adequacy of the sample collection and decontamination procedures performed in the field, QA/QC samples were collected and analyzed throughout the field sampling program. In general, QA/QC samples confirmed that the procedures performed in the field were consistent and acceptable. QA/QC samples included trip blanks, field blanks, blind duplicates, matrix spike (MS), and matrix spike duplicates (MSD). Types and frequencies of field QA/QC samples are listed below.

Type	Frequency
Trip Blank	One per day (when VOC samples collected)
Equipment Blank	One per 20 samples per matrix
Blind Duplicate	One per 20 samples per matrix
MS/MSD	One per 20 samples per matrix

During the SRI, one equipment blank, one MS/MSD, and one blind duplicate were prepared and submitted for analysis in accordance with the project Quality Assurance Project Plan (QAPP). The laboratory did not provide a trip blank for the day of sampling; therefore, a trip blank was not analyzed.

The results of the QA/QC sampling indicates that sample collection procedures and/or ambient conditions are unlikely to have significantly impacted environmental samples collected from the subject property during implementation of the SRI.

5.2 Data Usability and Validation

In accordance with the approved SRIWP, independent third-party data validation was conducted by Environmental Data Usability of Dansville, NY. Full data validation was performed on 5% of the data generated or one sample per Sample Delivery Group (SDG), whichever was greater. Remaining data received a summary validation as detailed in the Data Usability Summary Report (DUSR A copy of the data validation is included in **Appendix D**.

Data were deemed acceptable by the data validator, with minor qualifications due to sample matrix or laboratory quality control outliers, with the exception of the rejection of the results for 1,4-dioxane and benzoic acid.

6.0 CONCEPTUAL TRANSPORT MODEL

Based upon the findings of this SRI and previous RI, a conceptual model detailing the transport of contaminants has been developed. Soils beneath the subject property appear to contain impacted petroleum related contamination and are additionally impacted with SVOCs, metals, pesticides, and PCBs. Groundwater with concentrations of VOCs, SVOCs, metals, and PFAS greater than AWQS or GVs is present and may be as a result of migration of contaminants from on-site soils and/or from off-site sources.

6.1 Surface Water

There is no surface water on the subject property. The nearest surface water body is the Gowanus Canal, located approximately 0.3-mile northwest of the subject property. Based upon the distance, it does not appear that contaminants on the subject property have impacted the surface water body.

6.2 Fish and Wildlife Resources

PWGC evaluated potential impact to fish and wildlife resources in accordance with DER-10 Section 3.10, a Fish and Wildlife Resources Impact Analysis (FWRIA), and DER-10 Appendix 3C, FWRIA Decision Key. A summary of the FWRIA is detailed below; a copy of the Decision Key is included in **Appendix F**.

Section 1: Is the site or area of concern a discharge or spill event? **Yes**. *For a "Yes" response, proceed to Section 13.*

Section 13: Does the contamination at the site or area of concern have the potential to migrate to, erode into or otherwise impact any on-site or off-site habitat of endangered, threatened or special concern species or other fish and wildlife resource? **No**. *For a "No" response, proceed to Section 14.*

Section 14: No Fish and Wildlife Resources Impact Analysis needed.

The result of the FWRIA for this SRI is the same as the RI.

7.0 QUALITATIVE HUMAN EXPOSURE ASSESSMENT

The overall purpose of the Qualitative Human Exposure Assessment is to evaluate and document how people might be exposed to contaminants on the subject property and to identify and characterize the potentially exposed population(s) now and under reasonably anticipated future use of the subject property. To evaluate if an exposure pathway exists, the exposure assessment should assess the quality, representativeness, and adequacy of the available data. In addition, the qualitative exposure assessment should consider the nature of populations currently exposed or that have the potential to be exposed to subject property contaminants both on the subject property and off the subject property and describe the reasonably anticipated future land use of the subject property and affected off subject property areas.

7.1 Contaminant Source

The subject property is located at 731 to 747 4th Avenue, Brooklyn, New York. Former Lot 7 was first developed prior to 1888 and was utilized for residential purposes from at least 1888 to 1906, and commercial/industrial purposes, including a junk yard, metal manufacturer, and an auto repair shop from 1906 to present. Former Lot 1 was first developed between 1906 and 1926, utilized as an auto garage and filling station for almost eight decades. The lot was redeveloped into a Dunkin Donuts around 2004. The onsite buildings are currently vacant.

Investigations at the subject property have identified the concentrations of VOCs, SVOCs, metals, pesticides, and PCBs exceeding Unrestricted Use and/or Restricted Residential Use SCOs scattered throughout the subject property with the highest concentrations detected in the northern portion of the subject property.

These elevated concentrations of contaminants were identified within the fill layer and also appear to be related to historical usage of the subject property.

7.1.1 Contaminant Release and Transport

Elevated levels of VOCs, SVOCs, metals, pesticides, and PCBs are present in subsurface soils at the subject property. The highest concentrations were observed on the northern portion of the subject property.

Significant groundwater impact has not been observed leaving the subject property with the exception of petroleum related contamination and LNAPL from the eastern neighboring spill. Transport mechanisms for identified impact include soil transportation as dust or suspended in storm runoff and migration of groundwater or soil vapor downgradient. As the subject property is currently capped with pavement or concrete, impacted shallow soils at the subject property are contained. There are currently no excavations on the subject property that would allow exposure to soil or groundwater at the subject property.

VOCs in soil vapor appear to be emanating from subsurface soil contamination although additional off-site sources cannot be ruled out due to the industrial nature of nearby properties. Elevated concentrations were observed near the northern portion of the subject property.

7.2 Points and Routes of Exposure

Possible exposure pathways are by ingestion of impacted soil, inhalation of dust or vapors from impacted soils, or dermal exposure to impacted soil by a person on the subject property. Currently, exposures are mitigated by the presence of concrete slabs across the subject property. During remediation, potential exposures would be limited to periods when ground intrusive work is being performed. Exposures to impacted soils will be mitigated during remediation through the presence of a locked perimeter fence, use of personal protective equipment (PPE) for onsite workers, and implementation of a Community Air Monitoring Plan (CAMP) to protect the downwind community. As the goal for remediation at the subject property is to achieve a Track 1 cleanup (i.e., removal of soils exceeding Unrestricted Use SCOs), it is not expected that exposure pathways will exist post-remediation; in the event that a Track 1 cleanup is not achieved, post-remediation exposures will likely be mitigated by a composite cover system at the subject property.

Groundwater at the subject property is impacted with VOCs, SVOCS, metals, and PFAS. Regional groundwater beneath the subject property flows towards the northwest and may be influenced by localized dewatering near the subway tunnel beneath 4th Avenue. Groundwater in the vicinity of the subject property is not used as a potable water source and excavation for remediation or construction is not anticipated to extend into the groundwater table; as such, possible exposure pathways (ingestion, inhalation, or dermal exposure) are not anticipated. Identified groundwater impact appears likely to be

related to a regional issue and may also be related to historical usage of the subject property and/or the eastern neighboring petroleum spill.

7.3 Characterization of Potential Receptor Populations

The subject property is mostly vacant (two occupied units) and the buildings are secured with lock doors and/or gates which limits human receptors to occasional site visitors and workers involved in redevelopment activities. During remediation and site development, human receptors will be limited to construction workers and related personnel. Potential off-site receptors include workers and residents in surrounding commercial and residential properties.

7.4 Qualitative Human Health Exposure Assessment Summary Table

The following table provides a summary of the routes of exposure.

Environmental Media & Exposure Route	Human Assessment
Direct contact with surface soils	• Public access is restricted by fencing. • The source area soils will be removed during remediation. • Direct contact to surface soils may occur during ground intrusive work at the subject property. Such contact will be managed during remediation by implementing a Health & Safety Plan (HASP) and CAMP.
Direct contact with subsurface soils	• Direct contact to subsurface soils may occur during ground intrusive work at the subject property. Such contact will be managed during remediation by implementing a HASP and CAMP.
Direct contact with groundwater	• Direct contact to groundwater is unlikely to occur during ground intrusive work at the subject property; however, in the event that direct contact with the groundwater is possible, such contact will be managed during remediation by implementing a HASP and CAMP.
Ingestion of groundwater	• Groundwater is not utilized for drinking water. Drinking water is supplied by the municipal water supply. • There are no known domestic water supply wells in the area.
Inhalation of air	• The source area soils and grossly contaminated media will be removed during remediation. • Workers can come into contact if they complete ground intrusive work at the subject property. Such contact will be managed during remediation by implementing a HASP and CAMP.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 Supplemental Remedial Investigation

PWGC prepared an SRIWP dated June 2022 that was approved by NYSDEC. The purpose of the SRI was to delineate onsite contaminated soils throughout the site, confirm the likely bottom depth of the remedial excavations that will be proposed for the RAWP, facilitate the design of the SOE elements required for remedial excavations to these depths, and delineate the source material around the RI boring SB007. To perform this work, the following tasks were completed:

- A total of 14 soil borings were installed at the subject property and a total of 19 soil samples were analyzed.
    - The area of petroleum contamination in the southeastern portion of the subject property has been delineated and appears to extend to the groundwater table.
    - Additional metals impact was observed in multiple locations in Former Lot 1 at varying depths that exceeded Unrestricted Use SCOs. One of these locations contained a Restricted Residential SCO exceedance for mercury.
    - SVOCs, pesticides, and PCBs did not exceed Unrestricted Use SCOs.
- The fate and transport of contaminants identified during the SRI is similar to the RI and is a function of the properties of the individual contaminants, the geology and hydrogeology of the subject property, and available pathways for the contaminants to migrate. During this SRI, elevated concentrations of VOCs and metals were identified in subsurface soils at the subject property which supplements the prior findings of VOCs, SVOCs, metals, pesticides, and PCBs. Significant groundwater impact from on-site contamination has not been observed leaving the subject property. Transport mechanisms for identified impact include soil transportation as dust or suspended in storm runoff and migration of groundwater or soil vapor downgradient. As the subject property is currently capped with pavement or concrete, impacted shallow soils at the subject property are contained. There are currently no excavations on the subject property that would allow exposure to soil or groundwater at the subject property. VOCs in soil vapor appear to be emanating from subsurface soil contamination although additional off-site sources cannot

be ruled out due to the industrial nature of nearby properties. Elevated concentrations were observed near the northern portion of the subject property and could potentially be migrating off-site.

- Possible subject property exposure pathways are by ingestion, inhalation, or dermal exposure by a person on the subject property. The subject property is currently capped with various buildings, asphalt and/or concrete which largely negates these exposure pathways. Prior to the cap being removed from the subject property, a locked perimeter fence will be installed which will limit access to the subject property to authorized personnel. As such, potential exposures would be limited to periods when ground intrusive work is being performed. Proposed remediation of the subject property will then include re-capping the property with impervious surfaces and/or clean fill material. There are no production wells or groundwater use on the subject property, so there is no route for ingestion or dermal exposure to groundwater except for when ground intrusive work is occurring if it extends to the groundwater table.

8.2 Recommendations

Based upon the observations and data generated during the RI and SRI, PWGC recommends preparing a Remedial Action Work Plan (RAWP) which will include potential mitigation measures to address identified impacts at the subject property. The RAWP should address the following Remedial Action Objectives (RAOs):

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Sample and Data Qualifiers Relating to This Work Order

S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-SRD1	The serial dilution for this element was outside control limits.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis

Low Bias — Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

REVIEWER'S NARRATIVE
PWGC SDG 22H0306 737 4th Avenue Brooklyn, NY

The data associated with this Sample Delivery Group (SDG) 22H0306, analyzed by York Analytical Laboratories, Stratford, CT have been reviewed in accordance with assessment criteria provided by the New York State Department of Environmental Conservation following the review procedures provided in the USEPA Functional Guidelines for evaluating organic and inorganic data.

All analytical results reported by the laboratory are considered valid and acceptable except results that have been qualified as rejected, "R". Results qualified as estimated "J", or as non-detects, "U", are considered usable for the purpose of evaluating water and/or soil quality. However, these qualifiers indicate that the accuracy and/or precision of the analytical result is questionable. A summary of all data that have been qualified and the reasons for qualification are provided in the following data usability summary report (DUSR).

Two facts should be noted by all data users. First, the "R" qualifier means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the analyte is present or not. Values qualified with an "R" should not appear on the final data tables because they cannot be relied upon, even as the last resort. Second, no analyte concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

2.0 INTRODUCTION

This data usability summary report (DUSR) was prepared in accordance with guidance provided by the New York State Department of Environmental Conservation (NYSDEC). The DUSR is based on a review and evaluation of the laboratory analytical data package. Specifically, the NYSDEC guidance recommends review and evaluation of the following elements of the data package:

- Completeness of the data package as defined under the requirements of the NYSDEC Analytical Services Protocols (ASP) Category B or the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) deliverables,
- Compliance with established analyte holding times,
- Adherence to quality control (QC) limits and specifications for blanks, instrument tuning and calibration, surrogate recoveries, spike recoveries, laboratory duplicate analyses, and other QC criteria,
- Adherence to established analytical protocols,
- Conformance of data summary sheets with raw analytical data, and
- Use of correct data qualifiers.

Data deficiencies, analytical protocol deviations, and quality control problems identified using the review criteria above and their effect on the analytical results are discussed in this report.

3.0 SAMPLE AND ANALYSIS SUMMARY

The data package consists of analytical results for 1 soil sample collected on August 03, 2022. This sample was analyzed for Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Pesticides, PCBs, ICP Metals, Mercury, and Hexavalent Chromium (CR+6).

All laboratory analyses were submitted to York Analytical Laboratories, Stratford, CT and analyzed as SDG 22H0306. The analytical results were provided in NYSDEC ASP Category B format, which includes all raw analytical data and laboratory QC data.

4.0 GUIDANCE DOCUMENTS AND DATA REVIEW CRITERIA

The guidance documents appropriate for reviewing laboratory quality control (QC) data and assigning data qualifiers (flags) to analytical results were selected from those listed in Table 4-1. The QC limits established in the documents applicable to this data review were used to assess the quality of the analytical results. In some cases, however, QC limits established internally by the laboratory were taken into account to determine data quality.

The QC criteria considered for assessing the usability of the reported analytical results provided for each analyte type (i.e. VOCs, SVOCs, metals, etc.) are listed in Table 4-2. These criteria may vary with the analytical method utilized by the laboratory. These criteria comply with the guidance recommended in Section 2.0 above.

5.0 DATA VALIDATION QUALIFIERS

The letter qualifiers (flags) used to define data usability are described briefly below. These letters are assigned by the data validator to analytical results having questionable accuracy and/or precision as determined by reviewing the laboratory QC data associated with the analytical results.

The laboratory may also use various letters and symbols to flag analytical results generated when QC limits were exceeded. The meanings of these flags may differ from those used by the independent data validator. Those used by the laboratory are provided with the analytical results.

NOTE: The assignment of data qualifiers by the data reviewer (validator) to laboratory analytical results should not necessarily be interpreted by the data user as a measure of laboratory ability or proficiency. Rather, the qualifiers are intended to provide a measure of data accuracy and precision to the data user, which, for example, may provide a level of confidence in determining whether or not standards or cleanup objectives have been met.

U The analyte was analyzed for but was not detected at or above the sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the *approximate* concentration of the analyte in the sample. (The magnitude of any ± value associated with the result is not determined by data validation).

J+ The result is an estimated quantity and may be biased high.

J- The result is an estimated quantity and may be biased low.

UJ The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may inaccurate or imprecise.

R The sample result is rejected (i.e., is unusable) due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

The validated analytical results are attached to this report. Validation qualifiers (flags) are indicated in red print. Data sheets having qualified data are signed and dated by the data reviewer.

6.0 RESULTS OF THE DATA REVIEW

The results of the analytical data review are summarized in Tables 6-1 through 6-7. The tables list the samples where QC criteria were found to exceed acceptable limits and the actions taken to qualify the associated analytical results.

7.0 TOTAL USABLE DATA

For SDG 22H0306, one sample was analyzed and results were reported for 203 analyses. One result was rejected. Even though some results were flagged with a "J" as estimated, all other results (99.5 %) are considered usable. See the summary table for the analyses that have been rejected and qualified and the associated QC reasons.

REVIEWER'S NARRATIVE
PWGC SDG 22H0308 737 4th Avenue Brooklyn, NY

The data associated with this Sample Delivery Group (SDG) 22H0308, analyzed by York Analytical Laboratories, Stratford, CT have been reviewed in accordance with assessment criteria provided by the New York State Department of Environmental Conservation following the review procedures provided in the USEPA Functional Guidelines for evaluating organic and inorganic data.

All analytical results reported by the laboratory are considered valid and acceptable except results that have been qualified as rejected, "R". Results qualified as estimated "J", or as non-detects, "U", are considered usable for the purpose of evaluating water and/or soil quality. However, these qualifiers indicate that the accuracy and/or precision of the analytical result is questionable. A summary of all data that have been qualified and the reasons for qualification are provided in the following data usability summary report (DUSR).

Two facts should be noted by all data users. First, the "R" qualifier means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the analyte is present or not. Values qualified with an "R" should not appear on the final data tables because they cannot be relied upon, even as the last resort. Second, no analyte concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

2.0 INTRODUCTION

This data usability summary report (DUSR) was prepared in accordance with guidance provided by the New York State Department of Environmental Conservation (NYSDEC). The DUSR is based on a review and evaluation of the laboratory analytical data package. Specifically, the NYSDEC guidance recommends review and evaluation of the following elements of the data package:

- Completeness of the data package as defined under the requirements of the NYSDEC Analytical Services Protocols (ASP) Category B or the United States Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) deliverables,
- Compliance with established analyte holding times,
- Adherence to quality control (QC) limits and specifications for blanks, instrument tuning and calibration, surrogate recoveries, spike recoveries, laboratory duplicate analyses, and other QC criteria,
- Adherence to established analytical protocols,
- Conformance of data summary sheets with raw analytical data, and
- Use of correct data qualifiers.

Data deficiencies, analytical protocol deviations, and quality control problems identified using the review criteria above and their effect on the analytical results are discussed in this report.

3.0 SAMPLE AND ANALYSIS SUMMARY

The data package consists of analytical results for 1 soil sample and 1 equipment blank collected on August 03, 2022. These samples were analyzed for Volatile Organic Compounds (VOCs), Semi-volatile Organic Compounds (SVOCs), Pesticides, PCBs, ICP Metals, Mercury, and Hexavalent Chromium (CR+6).

All laboratory analyses were submitted to York Analytical Laboratories, Stratford, CT and analyzed as SDG 22H0308. The analytical results were provided in NYSDEC ASP Category B format, which includes all raw analytical data and laboratory QC data.

4.0 GUIDANCE DOCUMENTS AND DATA REVIEW CRITERIA

The guidance documents appropriate for reviewing laboratory quality control (QC) data and assigning data qualifiers (flags) to analytical results were selected from those listed in Table 4-1. The QC limits established in the documents applicable to this data review were used to assess the quality of the analytical results. In some cases, however, QC limits established internally by the laboratory were taken into account to determine data quality.

The QC criteria considered for assessing the usability of the reported analytical results provided for each analyte type (i.e. VOCs, SVOCs, metals, etc.) are listed in Table 4-2. These criteria may vary with the analytical method utilized by the laboratory. These criteria comply with the guidance recommended in Section 2.0 above.

5.0 DATA VALIDATION QUALIFIERS

The letter qualifiers (flags) used to define data usability are described briefly below. These letters are assigned by the data validator to analytical results having questionable accuracy and/or precision as determined by reviewing the laboratory QC data associated with the analytical results.

The laboratory may also use various letters and symbols to flag analytical results generated when QC limits were exceeded. The meanings of these flags may differ from those used by the independent data validator. Those used by the laboratory are provided with the analytical results.

NOTE: The assignment of data qualifiers by the data reviewer (validator) to laboratory analytical results should not necessarily be interpreted by the data user as a measure of laboratory ability or proficiency. Rather, the qualifiers are intended to provide a measure of data accuracy and precision to the data user, which, for example, may provide a level of confidence in determining whether or not standards or cleanup objectives have been met.

U The analyte was analyzed for but was not detected at or above the sample quantitation limit.

J The analyte was positively identified; the associated numerical value is the *approximate* concentration of the analyte in the sample. (The magnitude of any ± value associated with the result is not determined by data validation).

J+ The result is an estimated quantity and may be biased high.

J- The result is an estimated quantity and may be biased low.

UJ The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may inaccurate or imprecise.

R The sample result is rejected (i.e., is unusable) due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

The validated analytical results are attached to this report. Validation qualifiers (flags) are indicated in red print. Data sheets having qualified data are signed and dated by the data reviewer.

6.0 RESULTS OF THE DATA REVIEW

The results of the analytical data review are summarized in Tables 6-1 through 6-8. The tables list the samples where QC criteria were found to exceed acceptable limits and the actions taken to qualify the associated analytical results.

7.0 TOTAL USABLE DATA

For SDG 22H0308, two samples were analyzed and results were reported for 406 analyses. Three results were rejected. Even though some results were flagged with a "J" as estimated, all other results (99.3 %) are considered usable. See the summary table for the analyses that have been rejected and qualified and the associated QC reasons.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 04, 2022 and listed below. The project was identified as your project: **TOT2202/2101**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

Validator Qualifications

KENNETH R. APPLIN
Geochemist/Data Validator

Ph.D., Geochemistry and Mineralogy, The Pennsylvania State University

M.S., Geochemistry and Mineralogy, The Pennsylvania State University

B.A., Geological Sciences, SUNY at Geneseo, NY

Dr. Applin has over 35 years of experience working with the geochemistry of natural waters. His prior experience includes working as an Assistant Professor of Geology at the University of Missouri-Columbia and as Chief Hydrogeologist and Geochemist with a leading engineering firm in Rochester, NY. In 1993, he established KR Applin and Associates, a small consulting business that focuses on the geochemistry of natural waters, especially as applied to problems involving the contamination of groundwater and surface water.

Dr. Applin is also an experienced analytical data validator and has provided data validation services since 1994 to a variety of clients performing brownfield cleanup projects, hazardous waste remediation, groundwater monitoring at solid waste facilities, and other projects requiring third-party data validation. Dr. Applin has several years of hands-on experience with the laboratory analysis of natural waters and has successfully completed the USEPA Region II certification courses for performing inorganic and organic analytical data validation.

MICHAEL K. PERRY
Chemist/Data Validator

B.S. Chemistry, Georgia State University, Atlanta, GA

A.A.S., Chemical Technology, Alfred State College, Alfred, NY

Mr. Perry has over 30 years of experience in the analytical laboratory business. During his early career, he spent several years as a laboratory analyst performing the analysis of soil, water, and air samples for inorganic and organic chemical parameters. During his last 20 years in the environmental laboratory business, he managed and directed two major analytical laboratories in Rochester, NY. His management responsibilities included oversight of the daily operations of the lab, staff training and supervision, the selection, purchase, and maintenance of analytical instruments, the introduction of new laboratory methods, analytical quality assurance and quality control, data acquisition and management, and other business-related activities.

Mr. Perry has an extensive working knowledge of the methods and procedures used for sampling and analyzing both inorganic and organic analytes in soil, water, and air. He is an accomplished laboratory chemist and is familiar with the analytical methods and procedures established under the USEPA Contract Laboratory Protocols (CLP), the NYSDEC Analytical Services Protocols (ASP), and the NYSDOH Environmental Laboratory Approval Program (ELAP).

Appendix 3C Fish and Wildlife Resources Impact Analysis Decision Key	If YES Go to:	If NO Go to:
1. Is the site or area of concern a discharge or spill event?	13	2
2. Is the site or area of concern a point source of contamination to the groundwater which will be prevented from discharging to surface water? Soil contamination is not widespread, or if widespread, is confined under buildings and paved areas.	13	3
3. Is the site and all adjacent property a developed area with buildings, paved surfaces and little or no vegetation?	4	9
4. Does the site contain habitat of an endangered, threatened or special concern species?	Section 3.10.1	5
5. Has the contamination gone off-site?	6	14
6. Is there any discharge or erosion of contamination to surface water or the potential for discharge or erosion of contamination?	7	14
7. Are the site contaminants PCBs, pesticides or other persistent, bioaccumulable substances?	Section 3.10.1	8
8. Does contamination exist at concentrations that could exceed ecological impact SCGs or be toxic to aquatic life if discharged to surface water?	Section 3.10.1	14
9. Does the site or any adjacent or downgradient property contain any of the following resources? i. Any endangered, threatened or special concern species or rare plants or their habitat ii. Any DEC designated significant habitats or rare NYS Ecological Communities iii. Tidal or freshwater wetlands iv. Stream, creek or river v. Pond, lake, lagoon vi. Drainage ditch or channel vii. Other surface water feature viii. Other marine or freshwater habitat ix. Forest x. Grassland or grassy field xi. Parkland or woodland xii. Shrubby area xiii. Urban wildlife habitat xiv. Other terrestrial habitat	11	10
10. Is the lack of resources due to the contamination?	3.10.1	14
11. Is the contamination a localized source which has not migrated and will not migrate from the source to impact any on-site or off-site resources?	14	12
12. Does the site have widespread surface soil contamination that is not confined under and around buildings or paved areas?	Section 3.10.1	12
13. Does the contamination at the site or area of concern have the potential to migrate to, erode into or otherwise impact any on-site or off-site habitat of endangered, threatened or special concern species or other fish and wildlife resource? (See #9 for list of potential resources. Contact DEC for information regarding endangered species.)	Section 3.10.1	14
14. No Fish and Wildlife Resources Impact Analysis needed.
