EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the undeveloped property located on the north side of Flushing Avenue and Whipple Streets, as well as the north side of Bartlett Street, between Harrison Avenue to the west, and Throop Avenue to the east, in the Broadway Triangle section of the Borough of Brooklyn, New York City, Kings County, New York (hereinafter the “subject property”). The subject property is identified by the street addresses of 29-31 Bartlett Street, 663-667 Flushing Avenue, and 1-3 Whipple Street, and as Borough 3 – Block 2269 – Lot No. 52 and Block 2272, Lot Nos. 49, 51, 52, 53 and 108 on the New York City (NYC) tax maps.

The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions. Recognized environmental conditions are defined as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-13 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC’s proposal for services.

EBC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property was developed with approximately nine small 1- to 3-story buildings by at least 1887. These included residences, retail stores, a bakery, a sausage factory and a fur dresser. By 1904, the sausage factory was occupied by a carpenter’s shop and the Bartlett Street property was redeveloped with a 5-story retail building. The carpenter’s shop was a storage building and one of the retail stores along Flushing Avenue was identified as a junk shop by 1918. By 1935, the westernmost building along Flushing Avenue was occupied by a carpenter’s shop, with three additional single and multi-tenant retail stores along Flushing Avenue. An additional storage structure was also constructed north of the retail buildings. The Bartlett Street building was identified as a mixed-use (retail/apartment) building by 1947 and the carpenter’s shop (Flushing Avenue) again identified as a retail store. The easternmost building along Flushing Avenue was identified as a mixed-use (retail, manufacturing and residential) building by 1965. By 1977, the majority

of the Flushing Avenue parcels were shown as undeveloped, with only two mixed-use buildings at the southeastern portion. The remaining Flushing Avenue buildings were demolished between 1979 and 1980.

The subject property is currently undeveloped undeveloped and unpaved with sparse vegetation, except for the far southern portions of the 661 Flushing Avenue parcel, which are concrete-paved. This pavement appears attributable to encroachment by the developer of the western adjacent building, which was recently constructed. Northern portions of the 661 Flushing Avenue parcel are littered with construction debris (brick, concrete, wood and soil). The four remaining parcels along Flushing Avenue and Whipple Street are in use as a construction material/equipment storage yard, which appears to be associated with the eastern adjacent building. A large pile of associated trash and non-hazardous construction debris is present at the southern portion of these parcels. The site perimeters are enclosed with chain-link or wooden construction fencing, except for portions of the eastern boundary of 29 Bartlett Street and the eastern and western boundaries of the Flushing Avenue and Whipple Street parcels, which are boarded by adjacent buildings. Sidewalks are south of the site along Bartlett Street, Flushing Avenue and Whipple Street.

Based on the results of the site inspection, records review and interviews, it was determined that there were no REC or controlled recognized environmental conditions (CRECs) identified for the subject property. However, EBC identified the one historic recognized environmental condition (HREC) and several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]). The HREC, environmental concerns/BERs, and EBC's recommendations are summarized as follows:

- The subject property (29-31 Bartlett Street) was listed on the PBS-AST database as having one 3,000-gallon steel aboveground storage tank (AST) containing No. 2 fuel oil, closed/removed in 2012. The property was also cross-referenced on the NYSPILLS database related to one closed spill incident. This spill, which occurred in August 1995, is related to the release of approximately 40 gallons of fuel oil during a delivery. The spill was contained on the sidewalk area and cleaned using sorbents. The New York State Department of Environmental Conservation (NYSDEC) closed the spill within a week. Although, copies of the tank closure and/or the spill remediation reports were not provided, given the nature of the release and the closed status of the AST and spill, EBC considers the site's listing on the PBS-AST and NYSPILLS databases to be a HREC that does not warrant further investigation. A Freedom of Information Act (FOIA) request was made to the NYSDEC for additional information. A response is pending.

- As the majority of the subject property was formerly developed with multiple buildings, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site.

Experience with similar projects shows that typical urban fill materials (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, all urban fill material that is disturbed during any construction/redevelopment project may require sampling for proper disposal and handling.

- The subject property (each of the six parcels) is identified as having E-Air and/or Noise restrictions (E-238), which were determined during the Broadway Triangle Rezoning completed by the City in December 2009 (CEQR 09HPD019K). The Noise E-Designation applies to the five parcels located within Block 2272, and requires that any future residential/commercial development must provide a closed-window condition with a minimum 30 decibels (dBA) window/wall attenuation on all facades to achieve an acceptable indoor noise environment of 45 dBA. In order to maintain a closed-window condition, an alternative means of ventilation must also be provided. Alternative means of ventilation means, but is not limited to, central air conditioning, or through wall air conditioning sleeves fitted with an air conditioner. The Air E-Designation for these lots requires that any new residential and/or commercial development utilize natural gas for the heating, ventilation and air conditioning and that stacks must be 60 feet from the northern and western lot lines to avoid any potential significant adverse air quality impacts. The property at 29-31 Bartlett Street (Block 2269, Lot No. 52) also has an E-Designation for Air. The Air E-Designation for this parcel requires that any new residential and/or commercial development must utilize natural gas as the fuel for heating, ventilation and air conditioning with no stack set back requirements. The presence of E-Noise and Air designations is considered a BER.
- The site inspection identified the presence of small quantities of construction debris (brick, concrete, wood and soil) on the northern portions of the 661 Flushing Avenue parcel and a large pile of assorted trash and non-hazardous construction debris is present at the southern portion of the remaining Flushing Avenue parcels. The trash/debris appears related to un-going development of the eastern and western adjacent apartment buildings. Based on the nature of the observed debris, it is

unlikely that these materials have leached contaminants to the ground and impacted the site. However, EBC recommends these materials be removed and properly disposed in accordance with applicable regulations. In the event that soil impacts (e.g., visible staining) are noted, then EBC recommends soil sampling be conducted to determine the nature and extent of the impacts and determine if additional investigation and/or remediation is warranted.

1.0 INTRODUCTION

1.1 Purpose

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine recognized environmental conditions (RECs) and/or potential environmental concerns (PECs) in connection with the undeveloped property located on the north side of Flushing Avenue and Whipple Streets, as well as the north side of Bartlett Street, between Harrison Avenue to the west, and Throop Avenue to the east, in the Broadway Triangle section of the Borough of Brooklyn, New York City, Kings County, New York (hereinafter the “subject property”). The subject property is identified by the street addresses of 29-31 Bartlett Street, 663-667 Flushing Avenue, and 1-3 Whipple Street, and as Borough 3 – Block 2269 – Lot No. 52 and Block 2272, Lot Nos. 49, 51, 52, 53 and 108 on the New York City (NYC) tax maps (**Figures 1 through 4**). Representative site photographs are included in Appendix A.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society of Testing and Materials (ASTM) Practice E1527-13, inclusive of the United States Environmental Protection Agency (USEPA) “all appropriate inquiry” requirement published in the Federal Register on November 1, 2005. The USEPA “all appropriate inquiry” requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-13 is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute “all appropriate inquiry into the previous ownership and uses

of the property consistent with good commercial or customary practice” as defined in 42 U.S.C. §9601 (35)(B).

As stated in ASTM Practice E1527-13, the purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the process established by ASTM Practice E1527-13, “*recognized environmental conditions in connection with the subject commercial parcel.*”

The term *recognized environmental conditions*, as defined by ASTM Practice E1527-13 means “...*the presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*”

“*The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to human health and the environment.*”

This Phase I Environmental Site Assessment, as required by ASTM Practice E1527-13, specifically consists of the following four components:

1. Records Review;
 - a. Physical settings document review;
 - b. Regulatory database records search;
 - c. Local municipal agency records search; and
 - d. Historic use records search.
2. Site Reconnaissance;
3. Interviews with Past and Present Owners and Occupants; and
4. Evaluation and Reporting.

As stated in Practice E1527-13, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the

scope of ASTM Practice E1527-13. The issues are referred to as non-scope considerations. The following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-Based Paint;
- Asbestos-Containing Materials;
- Wetlands; and
- Mold and Water Damage.

1.3 Significant Assumptions

In preparation of the Phase I Environmental Site Assessment, it is assumed that information provided within the Environmental Database, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report;
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-13. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client;
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by Environmental Business Consultants (EBC);

4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document;
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions was not performed as part of this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation;
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others; and
7. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

1.5 User Reliance

This report was prepared in November 2019 by EBC at the request of Mr. Charles Stewart or St. Nick's Alliance, for use by St. Nick's Alliance, their legal and consulting representatives and other agents authorized to act on their behalf, in conjunction with the sale or lease of the subject property. EBC assumes no liability for use of this report by any person or entity other than those, for which it was prepared.

2.0 SITE DESCRIPTION

2.1 Property and Address Location

The subject property consists of six non-contiguous tax parcels located on the north side of Flushing Avenue and Whipple Streets, as well as the north side of Bartlett Street, between Harrison Avenue to the west, and Throop Avenue to the east, in the Broadway Triangle section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street addresses of 29-31 Bartlett Street, 663-667 Flushing Avenue, and 1-3 Whipple Street (**Figures 1 through 4**).

2.1.1 Tax Map Number

The subject property is designated as Borough 3 –Block 2269 – Lot No. 52 and Block 2272, Lot Nos. 49, 51, 52, 53 and 108 on the NYC tax maps.

2.1.2 Acreage and Building Size

According to New York City Tax Maps, the subject property consists of nine contiguous rectangular- and irregular-shaped tax parcels, totaling 0.33-acre (14,580 square feet). The subject property is currently undeveloped. The 29 Bartlett Street parcel is unpaved with some overgrown vegetation along the eastern perimeter. The 661 Flushing Avenue parcel is partially concrete paved (southern portion), which appears to be associated with the recently constructed building adjacent to the west. The northern portions of this parcel are unpaved, with some construction debris (concrete, brick, wood and soil). The four remaining parcels along Flushing Avenue and Whipple Street, are unpaved, sparsely vegetated and in use as a construction material/equipment storage yard which appears to be associated with the eastern adjacent building. The site perimeters are enclosed with chain-link or wooden construction fencing, except for portions of the eastern boundary of 29 Bartlett Street and the eastern and western boundaries of the Flushing Avenue and Whipple Street parcels, which are boarded by adjacent buildings. Sidewalks are south of the site along Bartlett Street, Flushing Avenue and Whipple Street.

2.1.3 Ownership

According to information maintained by the New York City Department of Finance, the current property owner is identified as NYC Housing Preservation and Development (HPD).

2.1.4 Zoning

According to the City of New York Zoning Maps, the subject property is zoned for residential (R7A) use.

2.2 Current Occupancy and Property Use

The subject property is currently vacant, undeveloped, and unpaved with sparse vegetation, except for the far southern portions of the 661 Flushing Avenue parcel, which are concrete-paved. This pavement appears attributable to encroachment by the developer of the western adjacent building, which was recently constructed. Northern portions of the 661 Flushing Avenue parcel are littered with construction debris (brick, concrete, wood and soil). The four remaining parcels along Flushing Avenue and Whipple Street are in use as a construction material/equipment storage yard, which appears to be associated with the eastern adjacent building. The site perimeters are enclosed with chain-link or wooden construction fencing, except for portions of the eastern boundary of 29 Bartlett Street and the eastern and western boundaries of the Flushing Avenue and Whipple Street parcels, which are boarded by adjacent buildings. Sidewalks are south of the site along Bartlett Street, Flushing Avenue and Whipple Street.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

As of the date of this report the Client did not engage EBC to perform a Chain of Title review nor was a Chain of Title provided for review.

3.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. The user has not made EBC aware of any environmental liens against the subject property and has not requested that EBC perform an environmental lien search for the subject property.

3.3 Specialized Knowledge

The user has not made EBC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject or surrounding properties.

3.4 Commonly Known or Reasonably Ascertainable Information

The user has not made EBC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Subject property, specific chemicals in use at the Subject property or any spills, chemical releases or environmental cleanups at the Subject property.

3.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

3.6 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Subject property as part of the due diligence to support the acquisition of the property by St. Nick's Alliance.

4.0 SITE GEOLOGY AND HYDROGEOLOGY

4.1 Topography and Site Characteristics

4.1.1 Elevation

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, NY Quadrangle (**Figure 4**). The elevation of the subject property is approximately 14 feet above mean sea level (amsl). The subject property is relatively flat with the general topographic gradient sloping downward to the northwest.

4.1.2 Surface Water Bodies

There are no surface water bodies on or adjacent to the subject property. The nearest natural surface water body is English Kills, located approximately 0.95 mile northeast of the subject property, at its closest point.

4.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the subject property is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinate soil types may be present in the general vicinity of the subject property. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix D).

4.2 Groundwater Characteristics

4.2.1 Depth to the Water and Groundwater Flow Direction

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2013 (**Figure 6**), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 14 feet amsl, the depth to groundwater in the vicinity of the subject property is approximately 9 feet below grade surface (bgs). Groundwater is expected to flow to the north-northwest, consistent with the regional trend.

A review of well data available from the USGS indicates that the nearest USGS monitoring well with groundwater measurement data (K1237.1) is located approximately one-eighth mile southeast of the subject property. The well has an unspecified elevation of and is screened in the Upper Glacial aquifer at a depth of 63 feet below grade. A total of 239 groundwater measurements were collected from this well between January 1941 and August 1953 with groundwater elevations ranging from -36.53 to -10.35 feet amsl.

4.3 Geology

According to the USGS Ground Water Atlas of the United States, New York region (1995) and the USGS Hydrogeologic Framework of Long Island, New York, the site is situated within the Coastal Plain physiographic province. The Coastal Plain physiographic province is characterized by layers of Cretaceous age sediments (primarily clay, sand and gravel) overlying igneous and metamorphic rocks that crop out in Connecticut. The surface of these rocks slopes to the southeast, and the overlying Coastal Plain sediments slope and thicken in the same direction. Quaternary glacial deposits (primarily outwash sand and gravel) cover the Coastal Plain sediments on Long Island to depths of as much as 600 feet. In the area of the site, bedrock is present at a depth of approximately 175 feet below grade and is overlain by the Lloyd Aquifer, the Gardiners Clay, and the Upper Glacial Aquifer, with the Magothy Aquifer absent from the geologic sequence. In addition, the site is located near the northern extents of the Raritan Confining Unit and Jameco Aquifer, which may also be present beneath the site (between the Lloyd Aquifer and the Gardiners Clay).

5.0 SITE HISTORY

5.1 Municipal Records Review

As the subject property is located in the Borough of Brooklyn, New York City, Kings County, on-line records searches were conducted or Freedom of Information Act (FOIA) requests were sent to the following agencies: New York City Department of Finance, New York City Registrar, New York City Department of Buildings, the New York City Fire Department, the New York City Department of Environmental Protection (NYCDEP), the New York City Department of Health (NYCDOH), and the New York State Department of Environmental Conservation (NYSDEC) requesting available regulatory information regarding the subject property. Regulatory agencies usually take six to eight weeks to process FOIA requests. Responses/information received to date are included in Appendix B. Any additional responses will be reviewed and forwarded upon receipt. As of the date of this report, the following information has been received:

New York City Department of Finance

The following is a summary of pertinent information obtained:

Tax Lot:	Borough 3 – Block 2269 – Lot No. 52
Address:	29-31 Bartlett Street
Owner:	NYC HPD
Lot Size:	50 by 100 feet – rectangular
Building Class:	V1 – Vacant land, zoned commercial
Zoning:	Residential (R7A) with a C2-4 commercial overlay

Tax Lot:	Borough 3 – Block 2272 – Lot No. 49
Address:	1-3 Whipple Street
Owner:	NYC HPD
Lot Size:	27.58 by 119 feet – irregular
Building Class:	V1 – Vacant land, zoned commercial
Zoning:	Residential (R7A) with a C2-4 commercial overlay

Tax Lot: Borough 3 – Block 2272 – Lot No. 51
Address: 667 Flushing Avenue
Owner: NYC HPD
Lot Size: 25 by 86 feet – irregular
Building Class: V1 – Vacant land, zoned commercial
Zoning: Residential (R7A) with a C2-4 commercial overlay

Tax Lot: Borough 3 – Block 2272 – Lot No. 52
Address: 665 Flushing Avenue
Owner: NYC HPD
Lot Size: 25 by 80 feet – rectangular
Building Class: V1 – Vacant land, zoned commercial
Zoning: Residential (R7A) with a C2-4 commercial overlay

Tax Lot: Borough 3 – Block 2272 – Lot No. 53
Address: 43 Bartlett Street
Owner: NYC HPD
Lot Size: 25 by 80 feet – rectangular
Building Class: V1 – Vacant land, zoned commercial
Zoning: Residential (R7A) with a C2-4 commercial overlay

Tax Lot: Borough 3 – Block 2272 – Lot No. 108
Address: Bartlett Street
Owner: NYC HPD
Lot Size: 25 by 20 feet – rectangular
Building Class: V1 – Vacant land, zoned commercial
Zoning: Residential (R7A) with a C2-4 commercial overlay

New York City Department Buildings

Computerized Property Profile Overviews (PPOs) available from the New York City Department of Buildings (NYCDOB) Building Information System (BIS) website were reviewed for information regarding the subject property. Pertinent information regarding the subject property is summarized below:

Block 2269, Lot No. 52 – 29-31 Bartlett Street

According to the PPO, 16 Actions are listed for this parcel: eight alteration permits, two undated and the others dated in 1902 (2), 1907, 1925 (2) and 1929; two elevator permits, both dated in 1933; one oil burner application, dated in 1929; two new building notices, both undated; one plumbing permit, dated in 1911; one plumbing repair slip, dated in 1929; and one unknown/unspecified item, dated in 1909.

Twenty-eight DOB violations and two Environmental Control Board (ECB) violations are listed for this parcel. Twenty-six of the DOB violations and both of the ECB violations are identified as closed/resolved. The two open DOB violations, dated 1962 and 1995, are related to an unspecified issue (1962) and an unsafe building (1995). While the open violation does not appear to represent an environmental concern, action should be taken to resolve them with the appropriate agency.

Four Complaints are listed for this parcel, dated between April 1995 and March 2018, and are related to an unsafe building, unpermitted sidewalk sheds (2) and a demolition issue. However, each of the Complaints is listed as closed/resolved.

Four Jobs/Filings and two ARA/LAA jobs are listed for this parcel. A summary of the Jobs/Filings and ARA/LAA jobs are provided with the DOB records in Appendix B.

Block 2272, Lot No. 49 – 1-3 Whipple Street

According to the PPO, 12 Actions are listed for this parcel: two alteration permits, dated in 1941 and 1965, one building notice, dated in 1961; one demolition permit, dated in 1941; one electric sign permit, dated in 1952; one plumbing repair slip, dated in 1948; two unsafe building notices, dated in 1940 and 1978; and three unknown/unspecified items, dated in 1919, 1973, and 1975.

Four DOB violations and no ECB violations are listed for this parcel. Each of the DOB violations is identified as closed/resolved.

No Complaints, Jobs/Filings, or ARA/LAA jobs are listed for this parcel.

Block 2272, Lot No. 51 – 667 Flushing Avenue

According to the PPO, two Building Identification Numbers (BINs) are listed for this parcel. Information associated with these BINs is as follows:

BIN No. 3815227

Twenty-five Actions are listed for this BIN: six alteration permits, dated in 1939, 1942, 1946, 1965, and 1970 (2); one Certificate of Occupancy (C/O), dated in 1971; one demolition permit, dated in 1979; one docket item, dated in 1975; one oil burner application, dated in 1947, one plumbing permit, dated in 1911, one plumbing and drainage permit, dated in 1946; and eight unknown or unspecified actions, three undated and the others dated in 1917, 1930, 1938 (2) , and 1970. The C/O indicate that the parcel was developed with a 1-story garage building for three cars (1923).

Six DOB violations and no ECB violations are listed for this BIN. Each of the DOB violations is identified as closed/resolved.

No Complaints, Jobs/Filings or ARA/LAA jobs are listed for this BIN.

BIN No. 3048320

Twenty-three Actions are listed for this BIN: 18 alteration permits, dated in 1916 (3), 1921 (2), 1931 (3), 1932 (4), 1935 (4), and 1961 (2); one building notice, dated in 1955; two C/Os, dated in 1935 and 1962; and two electric sign permits, both dated 1933. The C/Os indicates that the parcel was developed with a 5-story industrial (light manufacturing and storage) building with a basement (1935) and a 3-story retail/storage building with a basement (1962).

One DOB violation and no ECB violations are listed for this BIN. The DOB violation, dated in May 2019, is related to failure to file an energy benchmark report, and remains open/active. While the open violation does not appear to represent an environmental concern, action should be taken to resolve it with the appropriate agency.

One Complaint is listed for this BIN, dated in March 2018, and are related to construction work being conducted despite a stop work order. However, the Complaint is listed as closed/resolved.

No Jobs/Filings or ARA/LAA jobs are listed for this BIN.

Block 2272, Lot No. 52 – 665 Flushing Avenue

According to the PPO, 12 Actions are listed for this parcel: six alteration permits, dated in 1919, 1928 (3), 1929, and 1954; one C/O, dated in 1930; one demolition permit, dated in 1971; one fire escape permit, undated; one plumbing repair slip, dated in 1965; and two unsafe building notices, dated in 1966 and 1969.

The C/O indicates that the parcel was developed with a 3-story mixed-use (retail/residential) building with a basement (1930).

Two DOB violations and no ECB violations are listed for this parcel. Both of the DOB violations are identified as closed/resolved.

No Complaints, Jobs/Filings, or ARA/LAA jobs are listed for this parcel.

Block 2272, Lot No. 53 – 663 Flushing Avenue

According to the PPO, five Actions are listed for this parcel: two alteration permits, both dated in 1955; one C/O, dated in 1959; one demolition permit, dated in 1966; and one unsafe building notice, dated in 1970. The C/O indicates that the parcel was developed with a 5-story mixed-use (retail/residential) building with a basement (1959).

Block 2272, Lot No. 108 - Bartlett Street

No DOB records were available for this parcel.

Copies of the DOB records are included in Appendix B.

New York City Fire Department

Freedom of Information Law (FOIL) application FOIL applications were forwarded to the New York City Fire Department (FDNY) on November 19, 2019. Responses from the FDNY are pending.

New York City Department of Health

A FOIL application was forwarded to the New York City Department of Health (NYCDOH) on November 19, 2019. A response from this agency is pending.

New York City Department of Environmental Protection

A FOIL application was forwarded to the New York City Department of Environmental Protection (NYCDEP) on November 95, 2019. A response from this agency is pending.

New York State Department of Environmental Conservation

A FOIL application was forwarded to the New York State Department of Environmental Conservation (NYSDEC) on November 19, 2019. A response from this agency is pending.

5.2 Historical Resources Review

5.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject property and immediate surrounding area. Fire Insurance Maps were provided for the years 1887, 1904, 1918, 1935, 1947, 1950, 1965, 1977, 1979, 1980, 1981, 1982, 1984, 1986, 1987, 1989, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007 (Appendix C). EBC's review of the Sanborn Maps is provided on the following table:

Date	Comments
1887-1904	<p>Subject Property: Shown as four tax parcels, each fronting south along either Flushing Avenue or Whipple Street, and developed with a single 3-story retail building. The western building is identified as a bakery and the two eastern buildings are identified as having two store fronts each. A residence and a small sausage factory are also present at the northeastern portions. The 29-31 Bartlett Street property is shown as two small parcels, each developed with a small 2-story residence. A fur dresser is also present at the northern portion of the 31 Bartlett Street parcel. The 1904 map shows the sausage factory as a carpenter's shop. In addition, the Bartlett Street parcels are being re-developed with a 5-story retail building.</p> <p>Surrounding Properties: The Flushing Avenue properties are bounded to the north, east and west by dense, low-rise retail and residential development, with Bartlett Street further to the north and Harrison Avenue further to the west. Flushing Avenue and Whipple Street are to the south, followed by dense, low-rise retail development. The Bartlett Street property is bordered to the north, east and west by low-rise retail and residential development, including a pickle factory (east) and a Teutonia Hall (north). Bartlett Street is to the south, followed by low-rise retail and residential buildings. The pickle factory is no longer depicted on the 1904 map and a wheelwright shop is shown north of the Bartlett Street parcel.</p>
1918	<p>Subject Property: Developed consistent with the 1904 map depiction, except that the carpenter's shop is shown as a storage building and one of the retail stores along Flushing Avenue is identified as a junk shop. The 5-story retail building at 29-31 Bartlett Street has been completed.</p> <p>Surrounding Properties: Also developed generally consistent with their 1904 map depictions, except that an undeveloped parcel is to the north and a bottling works is to the northeast of the Flushing Avenue parcels. In addition, the hall north of the Bartlett Street parcel is now identified as an armory. In addition, a tailor's shop is to the northeast and a soda water factory is further to the north.</p>
1935	<p>Subject Property: Developed consistent with the 1918 map depiction, except that the westernmost retail building along Flushing Avenue is now identified as a carpenter's shop. Two small 1-story storage structures are present north of the carpenter's shop and an additional 1-story structure has been constructed on the central portion of the 665 Flushing Avenue parcel.</p> <p>Surrounding Properties: Also developed generally consistent with their 1918 map depictions, except that a stone yard and retail store are to the north and a tin smith and mattress manufacturer are to the south of the Flushing Avenue parcels. The properties to the north and west of the Bartlett Street parcel have been redeveloped with a large garage.</p>

1947-1950	<p>Subject Property: Developed consistent with the 1935 map depiction, except that the westernmost building along Flushing Avenue is again identified as a retail store. The stone yard north of the Flushing Avenue parcels has been developed with a 1-story building associated with the adjacent bottling works. In addition, the Bartlett Street building is identified as a mixed-use (retail and apartment) building.</p> <p>Surrounding Properties: Also developed generally consistent with their 1935 map depictions, except that the tin smith and mattress works across Flushing Avenue are now identified as retail stores. The garage to the north and west of the Bartlett Street parcel are now identified as occupied by the Charles Pfizer & Co., Inc., including a carpenter shop. Properties further to the northwest (SE corner of Harrison Avenue and Gerry Street) are undeveloped. The 1950 map shows a storage shed northwest of the Pfizer facility.</p>
1965	<p>Subject Property: Developed consistent with the 1950 map depiction.</p> <p>Surrounding Properties: Also developed generally consistent with their 1950 map depictions, except that the bottling works north of the Flushing Avenue parcels is identified as a vacant office and an undeveloped parcel is to the northeast. The existing park is also visible further to the east. A retail dry cleaner is further west also Harrison Avenue. The Pfizer facility west of the Bartlett Street parcel has been expanded and subdivided to include a welding shop and a metal works in addition to the carpenter shop. A storage building is to the east of the Bartlett Street property.</p>
1977-1979	<p>Subject Property: Developed consistent with the 1965 map depiction, except that the northern and western portions of the Flushing Avenue parcels are now undeveloped. A commercial/retail building (667 Flushing Avenue) and an industrial/retail building (1-3 Whipple Street) remain at the southeastern portion.</p> <p>Surrounding Properties: A vacant building is north of the Flushing Avenue property, with a garage to the northeast. An undeveloped parcel is to the east, followed by retail stores, with Harrison Avenue beyond. Flushing Avenue and Whipple Street are to the south, followed by retail stores and an undeveloped parcel. An apartment building is to the east, followed by an undeveloped parcel and the existing park. Properties surrounding the Bartlett Street property are developed consistent with their consistent with the 1965 map depictions, except that a vacant building and several undeveloped lots are further to the east. The vacant building has been demolished by 1979.</p>
1980-1987	<p>Subject Property: Developed consistent with the 1979 map depiction, except that the remaining structures on the Flushing Avenue parcels have been demolished.</p> <p>Surrounding Properties: Developed generally consistent with their 1979 map depictions, except that additional undeveloped lots are visible further to the east and northeast of the Bartlett Street property. The properties to the east, west and northwest of the Flushing Avenue parcels are undeveloped beginning on the 1981 map. The properties north of the Flushing Avenue parcels are developed with a warehouse/office building beginning on the 1986 map.</p>
1989-1993	<p>Subject Property: Developed consistent with the 1987 map depiction.</p> <p>Surrounding Properties: Developed generally consistent with their 1987 map depictions, except that warehouse/office building north of the Flushing Avenue parcels is identified as an auto repair shop.</p>
1995-2007	<p>Subject Property: Developed consistent with the 1993 map depiction.</p> <p>Surrounding Properties: Developed generally consistent with their 1993 map depictions, except that the properties across Flushing Avenue to the south and southwest have been redeveloped with multiple apartment buildings.</p>

The Sanborn maps did not identify the presence of gasoline or other storage tanks on the subject property, and there is no evidence of historical industrial, agricultural or other environmentally sensitive (i.e., dry cleaner) usage which would indicate a potential environmental risk to the property. However, the maps from 1887 through 2007 show that the subject property was developed with one or more commercial/retail and/or

residential buildings. Following demolition, the building basements (if present) and/or foundations were backfilled to grade. Fill material may have included construction and demolition (C&D) debris associated with the building demolition and/or material from an unknown off-site source. As no documentation regarding the nature or source of the fill materials utilized to backfill the basements of the former buildings following their demolition was provided for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site. The potential presence of undocumented fill material is considered a Business Environmental Risk (BER).

5.2.2 Historic Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Aerial photographs were provided for the years 1924, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2006, 2009, 2013, and 2017 (Appendix C). However, given that the historical use of the site was established through a review of a Sanborn Maps, city directories and topographic maps, EBC determined that the historical use of the site has been properly assessed, and, therefore, the historic aerials were only briefly reviewed for evidence of significant differences and to fill in time gaps (if any).

The photographs do not show any evidence of historic water bodies, significant re-grading, mining or historic dumping activities, which would indicate a potential environmental risk to the property. In addition, due to the long term, dense urban use of the subject property and surrounding areas, the aerial photographs did not provide significant details regarding potential environmental concerns at the site or surrounding properties.

5.2.3 Historic Topographic Map Review

EBC reviewed the 2016 Brooklyn, NY USGS topographic quadrangle maps, as well as available historic topographic quadrangle maps provided by EDR. EBC's review of the topographic maps is provided on the following table:

Date	Comments
1897-1900	<p>Subject Property: Shaded black, indicating that it is developed with one or more structures, consistent with the dense low-rise retail and residential development depicted on the 1887 and 1904 Sanborn maps (see Section 5.2.1). Open yard areas are also visible at the rear of each parcel.</p> <p>Surrounding Properties: Shaded mostly black indicating they are densely developed with buildings. Narrow unshaded areas are in the center of most blocks to depict open yards. Surrounding roadways, including Gerry, Bartlett and Whipple Streets and Flushing, Harrison and Throop Avenues are visible consistent with their current configuration.</p>

1947	<p>Subject Property: The Bartlett Street parcel is shaded black, indicating that it is completely developed with one or more structures, consistent with the retail/residential building depicted on the 1947 Sanborn map. The Flushing Avenue parcels also appear densely developed; however, they are partially obscured by map text.</p> <p>Surrounding Properties: Shaded mostly black indicating they are densely developed with buildings. Narrow unshaded areas are in the center of most blocks to depict open yards. A school is further to the east (west side of Throop Avenue between Bartlett and Whipple Streets). Surrounding roadways, including Gerry, Bartlett and Whipple Streets and Flushing, Harrison and Throop Avenues are visible consistent with their current configuration. Subway lines are further east along Broadway and further west, along Union Avenue.</p>
1956-1995	<p>Subject Property: Shaded pink to indicate dense, urban development with no improvements depicted.</p> <p>Surrounding Properties: Shaded pink to indicate dense, urban development with no improvements depicted, except for a school (PS 168) to the east (west side of Throop Avenue between Bartlett and Whipple Streets). Surrounding roadways, including Gerry, Bartlett and Whipple Streets and Flushing, Harrison and Throop Avenues are visible consistent with their current configuration. Several churches are further to the east.</p>
2013-2016	<p>Subject and Surrounding Properties: The 2013 through 2016 maps do not depict any buildings or other structures. Surrounding roads are visible, consistent with their current configuration. A school is located further to the west, beyond Harrison Avenue.</p>

EBC's historic topographic map review did not reveal evidence of recognized environmental conditions in connection with the site or adjoining properties.

5.2.4 Historical City Directory Search

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (Appendix D) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Date	Comments
1928	<p>Subject Property: M. Rothkopf Store Fixtures (663); H Roofing & Tinsmith Supply (665); and the names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); OK Press (658); Jankowitz Store Fixtures (659); Horvath & Titelbaum Store Fixtures (661); Deluxe Mattress Co. (664); Gluckman Tobacco & Confectionary (668); S. Bieder Store Fixtures (669); Service Showcase Co. (670); Grossman Stationary (672); Popowitz Quilts (676); and the names of individuals</p>
1934	<p>Subject Property: M. Rothkopf Store Fixtures (663); F. Bieder Store Fixtures (665); H. and the names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); Gray & Tobias Plumbers (658); Jankowitz Store Fixtures (659); Capital Store and Office Fixture Co. (661); S. Siesser Store Fixtures (662); Deluxe Mattress Co. (664); Grossman Stationary and Flushing Metal Ceiling Co. (672); Popowitz Quilts (676); A. Locher Meats (24 Bartlett); Jacobs & Halpern Bottling Works (28 Bartlett); and the names of individuals</p>

1940	<p>Subject Property: A&B Yarn Co. (663) and F. Bieder Store Fixtures (665)</p> <p>Surrounding Properties: Pachenker Mattresses (656); Jankowitz Store Fixtures (659); S. Siesser Store Fixtures (660); Kirshnerman Roofing & Tinsmith Supply (661); J. Joseph Store Fixtures (664); Gutstein Store Fixture Co. (668); Flushing Metal Ceiling Corp. and Five Boro Exterminators (670); Acme Soda Fountain Co. and Maltz & Ross, Inc. (672); Lefferts Mattress & Bedding Co. (676); J. Turkin Stationary (22 Bartlett); Jacobs & Halpern Beverages, and Jacobs Bottling Works (28 Bartlett); and the names of individuals</p>
1945	<p>Subject Property: A&B Yarn Co. (663)</p> <p>Subject Property: S. Siesser Store Fixtures (660); J. Joseph Store Fixtures (664); Kirshnerman Roofing & Tinsmith Supply (666); Stone Furniture Co. and New Deal Store Fixtures (668); Flushing Metal Ceiling Corp. and Five Boro Exterminators (670); Acme Fountain & Carbonic Gas Co. and Five Boro Soda Fountain Corp. (672); Old Reliable Store Fixture Co. (676); W. Koenig Stationary (22 Bartlett); Golden Rod Fruit Beverages, Jacobs & Halpern Beverages, and Jacobs Bottling Works (28 Bartlett); and the names of individuals</p>
1949	<p>Subject Property: A&B Yarn Co and F&K Store Fixture Co. (663); F. Bieder Store Fixtures (665); M. Ortiz Grocery (667); S. Siegal Grocery (29 Bartlett); and the names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); S. Siesser Store Fixtures (660 and 662); J. Joseph Store Fixtures (664); Kirshnerman Roofing & Tinsmith Supply (666); Liquid Soda Fountain Co. and C&F Store Fixture Co. (668); Flushing Metal Ceiling Corp. and Five Boro Exterminators (670); Modern Metal Craft, Lynch Plate Glass & Mirror Works and Konchan Metal Craft (671); Five Boro Soda Fountain Corp. (672); Harry Store Fixtures and Old Reliable Store Fixture Co. (676); W. Koenig Stationary (22 Bartlett); Pepsi Cola Metropolitan Bottling (28 Bartlett); and the names of individuals</p>
1960	<p>Subject Property: Dave's Luncheonette (658); F. Bieder Store Fixtures (665); Ball Glass Co. and S. Steckler Glass (667); S. Siegal Grocery (29 Bartlett); and the names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); Ideal Photo Service (659); Arista Foods (661); S. Siesser Store Fixtures (662); Greenberg Metal Ceilings and J. Joseph Store Fixtures (664); Kirshnerman Roofing & Tinsmith Supply (666); Ever Ready Kitchen Equipment (669); Metropolitan Acoustics; Flushing Metal Ceiling Co., Flushing Lumber & Builders Supply (670); Perfect Casting Co, and Frank & Son Dental Casting (671); Harry Store Fixtures and Old Reliable Store Fixture Co. (676); Asencio Candy Store (24 Bartlett); and the names of individuals</p>
1965	<p>Subject Property: F. Joseph Store Fixtures (664); Ever Ready Kitchen Equipment (669); Flushing Supply Corp. (670); Metropolitan Acoustics (672); Harry Store Fixtures and Old Reliable Store Fixture Co. (676); and the names of individuals</p>
1970	<p>Subject Property: El Encanto Barber Shop (667) and the names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); Dave's Luncheonette (658); J. Joseph Store Fixtures (664); Ever Ready Kitchen Equipment (669); Flushing Supply Corp. (670); Metropolitan Acoustics and Flushing Ceiling Co. (672); Harry Store Fixtures and Old Reliable Store Fixture Co. (676); and the names of individuals</p>
1973	<p>Subject Property: The names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); Ever Ready Kitchen Equipment, Commercial Refrigeration, and Acme Soda Fountain Co. (669); Flushing Supply Corp. (670); Old Reliable Store Fixture Co. (676); Lafayette Store Contractors (669); and the names of individuals</p>
1976	<p>Subject Property: The names of individuals</p> <p>Surrounding Properties: Pachenker Mattresses (656); Ideal Photo Service (659); Lafayette Store Contractors, Acme Soda Fountain, Harry Store Fixtures and Old Reliable Store Fixture Co. (676); Junior Men Hair Stylist (22 Bartlett) and the names of individuals</p>
1980	<p>Subject Property: "Address not Listed in Research Source"</p> <p>Surrounding Properties: Flushing Supply Corp. (670) and Harry Store Fixtures (676)</p>

1985	Subject Property: The names of individuals Surrounding Properties: Flushing Supply Corp. (670); Old Reliable Store Fixture Co. (676); Old Reliable Store Fixture Co. (676); Willie's Bus, Truck & Car Repair (28 Bartlett); Modern Carting Co. (30 Bartlett Street); and the names of individuals
1992	Subject Property: The names of individuals Surrounding Properties: Kent Store Equipment (664); OA Equipment (666); Flushing Supply Corp. (670); Old Reliable Store Fixture Co. (676); Alba Carting Co. (30 Bartlett Street); and the names of individuals
1997	Subject Property: Willie's Bus, Truck & Car Repair (28 Bartlett) and the names of individuals Surrounding Properties: Kent Store Equipment and Kent Kool Refrigeration (664); OA Equipment (666); Flushing Supply Corp. (670); Harry Store Fixtures and Old Reliable Store Fixture Co. (676); Clinton Hill Towing, Muffler Master, Inc., and Uniauto Repair Corp. (28 Bartlett) and the names of individuals
2000	Subject Property: "Address not Listed in Research Source" Surrounding Properties: Batista Refrigeration (664); Flushing Supply Corp. (670); Old Reliable Store Fixture Co. (676); Lurem Suppliers & Designers (24 Bartlett); Muffler Master, Inc., and Uniauto Repair Corp. (28 Bartlett); and the names of individuals
2005	Subject Property: "Address not Listed in Research Source" Surrounding Properties: MS USA (661); Greg Refrigeration (664); Flushing Supply Corp. (670); Old Reliable Store Fixture Co. (676); Harry Store Fixtures (676); Clinton Hill Towing, Muffler Master, Inc., and Uniauto Repair Corp. (28 Bartlett); and High Tech Auto Repair (30 Bartlett); and the names of individuals
2010	Subject Property: "Address not Listed in Research Source" Surrounding Properties: Los Conejos Social Club (658); El Utuadeno Social Club (659); M&S Demolition & Rubbish Removal (661); Batista Refrigeration and Freeport Construction (664); Normal Design and Children's Room of Brooklyn (666); Flushing Supply Corp. (668); Flushing Supply Corp. and Midway Distributing Corp. (670); National Building Centers (672); Imagine Ali.Com and Old Reliable Store Fixture Co. (676); Muffler Master, Inc., and Uniauto Repair Corp. (28 Bartlett) and High Tech Auto Repair (30 Bartlett)
2014	Subject Property: "Address not Listed in Research Source" Surrounding Properties: Supreme Appraisal Services (652); Los Conejos Social Club (658); Wyckoff Gift Thrift Shop (659); BB Refrigeration (664); Normal Design and Children's Room of Brooklyn (666); Flushing Supply Corp. (668); Flushing Supply Corp. and Midway Distributing Corp. (670); National Building Centers (672); Caja Design and Old Reliable Store Fixture Co. (676); B Auto Repair (24 Bartlett); and High Tech Auto Repair, A&M Auto Repair and J&M Auto Service (30 Bartlett)

Note: Addresses shown in () are on Flushing Avenue unless noted otherwise.

EBC's city directory review did not reveal evidence of recognized environmental conditions in connection with the subject property. EBC notes that the subject and nearby properties were identified as various commercial/retail, industrial and/or residential uses since 1928, including several manufacturing facilities, auto repair shops, and dry cleaners. Given the time of operation for these facilities and their potential prior use, the area cannot be confirmed of having no subsurface impacts; however, no specific operation or activity was noted that warrants additional investigation at this time. EBC notes that several of the adjacent/surrounding properties were listed on various regulatory databases indicating hazardous waste

generation, petroleum storage and/or petroleum releases; however, these listings are further discussed in Section 6, and determined unlikely to present a significant environmental concern to the subject property.

5.2.5 Previous Environmental Site Assessments

No previous ESAs or information regarding previous environmental investigations/reports for the subject property were provided to EBC for review by the property owner or their representatives.

5.2.6 Environmental Liens or Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject property, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issues identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDPC) and is commonly depicted on zoning maps with an “E” designation, as well as maintained within Chain of Title Records. For a site to be designated with an “E” restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a “Potential” or “Projected” re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an “E” designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an “E” designated site without approval from the New York City Office of Environmental Remediation (NYCOER). The subject property was identified with an “E” designation, which is further discussed in Section 6.2 of this report.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDPC and NYCOER websites.

The City of New York Environmental Quality Review (CEQR) Requirement Declarations and City of New York Zoning maps and website, as well as the EDR database report, indicate that the subject property (each of the six parcels) is identified as having E-Air and/or Noise restrictions (E-238), which were determined during the Broadway Triangle Rezoning completed by the City in December 2009 (CEQR 09HPD019K). The Noise E-Designation applies to the five parcels located within Block 2272, and requires that any future

residential/commercial development must provide a closed-window condition with a minimum 30 decibels (dBA) window/wall attenuation on all facades to achieve an acceptable indoor noise environment of 45 dBA. In order to maintain a closed-window condition, an alternative means of ventilation must also be provided. Alternative means of ventilation means, but is not limited to, central air conditioning, or through wall air conditioning sleeves fitted with an air conditioner. The Air E-Designation for these lots requires that any new residential and/or commercial development utilize natural gas for the heating, ventilation and air conditioning and that stacks must be 60 feet from the northern and western lot lines to avoid any potential significant adverse air quality impacts. The property at 29-31 Bartlett Street (Block 2269, Lot No. 52) also has an E-Designation for Air. The Air E-Designation for this parcel requires that any new residential and/or commercial development must utilize natural gas as the fuel for heating, ventilation and air conditioning with no stack set back requirements.

The Air and Noise E-designations requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a Business Environmental Risk (BER).

5.3 Summary of Site History

EBC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property was developed with approximately nine small 1- to 3-story buildings by at least 1887. These included residences, retail stores, a bakery, a sausage factory and a fur dresser. By 1904, the sausage factory was occupied by a carpenter's shop and the Bartlett Street property was redeveloped with a 5-story retail building. The carpenter's shop was a storage building and one of the retail stores along Flushing Avenue was identified as a junk shop by 1918. By 1935, the westernmost building along Flushing Avenue was occupied by a carpenter's shop, with three additional single and multi-tenant retail stores along Flushing Avenue. An additional storage structure was also constructed north of the retail buildings. The Bartlett Street building was identified as a mixed-use (retail/apartment) building by 1947 and the carpenter's shop (Flushing Avenue) again identified as a retail store. The easternmost building along Flushing Avenue was identified as a mixed-use (retail, manufacturing and residential) building by 1965. By 1977, the majority of the Flushing Avenue parcels were shown as undeveloped, with only two mixed-use buildings at the southeastern portion. The remaining Flushing Avenue buildings were demolished between 1979 and 1980.

The subject property is currently undeveloped and unpaved with sparse vegetation, except for the far southern portions of the 661 Flushing Avenue parcel, which are concrete-paved. This pavement appears attributable to

encroachment by the developer of the western adjacent building, which was recently constructed. Northern portions of the 661 Flushing Avenue parcel are littered with construction debris (brick, concrete, wood and soil). The four remaining parcels along Flushing Avenue and Whipple Street are in use as a construction material/equipment storage yard, which appears to be associated with the eastern adjacent building. A large pile of associated trash and non-hazardous construction debris is present at the southern portion of these parcels. The site perimeters are enclosed with chain-link or wooden construction fencing, except for portions of the eastern boundary of 29 Bartlett Street and the eastern and western boundaries of the Flushing Avenue and Whipple Street parcels, which are boarded by adjacent buildings. Sidewalks are south of the site along Bartlett Street, Flushing Avenue and Whipple Street.

6.0 REGULATORY AGENCY DATABASE SEARCH

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists.

6.1 Federal Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject property Listed?	No. of Sites within the Search Radius
National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	0 NPL 0 Proposed 0 Delisted
Superfund Enterprise Management System (SEMS) and SEMS Archive Sites	SEMS and SEMS-ARCHIVE	0.5 mile	No	0 SEMS 2 SEMS-ARCHIVE
Corrective Action Reports	CORRACTS	1.0 mile	No	2
Federal Facility Site Information	FFSI	1.0 mile	No	0
Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSD	0.5 mile	No	0
Resource Conservation and Recovery Act – Active and Former Hazardous Waste Generators	RCRA SQG/LQG/VSQG/ NonGen	Site & Adjoining	No	2 LQG 0 SQG 0 VSQG 1 NonGen
Land Use Control Information System	LUCIS	0.5 mile	No	0
Engineering Control Sites	USEC	Site	No	NA
Institutional Control Sites	USIC	Site	No	NA
Emergency Response Notification System	ERNS	Site	No	NA
Federal Brownfields Sites	US Brownfields	0.5 mile	No	0

In addition to the federal databases included on the table above, over 30 additional federal databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not

listed on the additional federal databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Superfund Enterprise Management System Archive (SEMS Archive): SEMS Archive (formally known as CERCLIS-NFRAP) listings are for properties removed from the SEMS list following an initial investigation because either no contamination was found or contamination was not serious enough to warrant Superfund Action or NPL consideration. Three SEMS Archive listing was identified within a one-half mile radius of the subject property. These listings are summarized as follows:

- Borden Chemicals & Adhesives, 56 Nostrand Avenue, approximately 1,990 feet west-southwest and hydraulically crossgradient of the subject property. The USEPA completed a Preliminary Assessment and inspection of this facility in October 1980 and the site was subsequently archived. The Borden site is also listed on the RCRA-NonGen, FINDS, and ECHO databases.

JB Slattery & Brothers, Inc., 171-187 Wallabout Street, approximately 1,750 feet west and hydraulically downgradient of the subject property. The USEPA completed a removal action at this site in November 1991 and the site was subsequently archived. The Slattery facility also listed on the RCRA-NonGen PRP, ICIS, FINDS, ECHO, and NYMANIFEST databases.

Based on the information in the database report, their distance and the presumed hydraulic gradient, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Federal RCRA CORRACTS: CORRACTS identify hazardous waste handlers with RCRA corrective action activity. Two CORRACTS facilities were identified within a one-mile radius of the subject property. These facilities are summarized below:

- Pfizer, 13 Bartlett Street, approximately 200 feet west and hydraulically crossgradient of the subject property. The database indicates that a RCRA Facility Assessment for the site was completed in September 1992 and the site was assigned a medium corrective action priority. Six RCRA violations are listed for the site, each of which is listed as closed/resolved. The Pfizer, Inc. site is also listed on the RCRA-LQG, RATTs, FINDS and ECHO databases.

- Toldos Yehuda LLC, 8 Walworth Street, approximately 2,430 feet west-southwest and hydraulically crossgradient of the subject property. The database indicates that a RCRA Facility Assessment for this site was completed in November 1985 and the site was assigned a medium correction action priority. Fourteen RCRA violations are listed for the site, each of which is listed as closed/resolved. The Toldos Yehuda LLC site is also listed on the NY Brownfields, RCRA-LQG, and MANIFEST databases.

Federal Resource Conservation and Recovery Act (RCRA): This database includes selective information on facilities which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Two RCRA facilities were identified adjacent to the subject property, and they are summarized as follows:

- Arlington Press/Pfizer (USEPA ID No. NYD001513779), 191 Harrison Avenue, adjacent to the east and west and hydraulically cross- to upgradient of the subject property (31 Bartlett). The facility is listed as operating as a RCRA-SQG or LQG generator from at least May 1989. The facility was not cross-referenced on the MANIFEST database, but is identified as generating ignitable, non-halogenated solvent and halogenated solvent wastes. No RCRA violations are listed, and this property is currently being redeveloped. Based on this information and the absence of violations, there is no reported evidence in the database search to suggest that this listing presents an environmental concern to the subject property.
- Tulip Grove Homes (USEPA ID No. NYR000203539), 661 Flushing Avenue, adjacent to the west and hydraulically cross- to upgradient of the subject property (662 Flushing). The facility is listed as operating as a RCRA-LQG generator from at least October 2013. The facility is cross-referenced on the MANIFEST database and is identified as generating lead wastes. No RCRA violations are listed. Based on this information and the absence of violations, there is no reported evidence in the database search to suggest that this listing presents an environmental concern to the subject property.

In addition, one RCRA-NonGen listing (Whipple Street & Flushing Avenue) was identified for an adjacent property. A NonGen facility is a former registered/regulator generator which does not presently generate hazardous waste. Information provided within the EDR report indicates that there are no listed violations for this facility. Therefore, it is unlikely that this facility represents a significant environmental concern to the subject property.

6.2 State Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject property Listed?	No. of Sites within the Search Radius
Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	6 SHWS 0 Delisted SHWS
Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	0
Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	1
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	2
Registered Recycling Facility List	SWRCY	0.5 mile	No	0
Registered Waste Tire Storage Facility List	SWTIRE	0.5 mile	No	0
Leaking Underground Storage Tanks	LTANKS	0.5 mile	No	33 LTANKS
Petroleum Bulk Storage - Underground and Aboveground Storage Tank Databases	PBS UST/AST	Site & Adjoining	Yes	2 UST 0 AST
Chemical Bulk Storage - Underground and Aboveground Storage Tank Databases	CBS UST/AST	0.25 mile	No	1
Major Oil Storage Facility - Underground and Aboveground Storage Tank Databases	MOSF UST/AST	Site & Adjoining	No	0
Registry of Engineering Controls	NYEC	Site	No	NA
Registry of Institutional Controls	NYEC	Site	No	NA
Voluntary Cleanup Agreements	VCP	0.5 mile	No	39
State Brownfields Site List	Brownfields	0.5 mile	No	11
E-Designation Site List	E-Des	0.125 mile	Yes	95
Spills Information Database	NYSPILLS	0.125 mile	No	35
Registered Drycleaning Facilities	DRYCLEANERS	0.25 mile	No	1

The subject property is listed on the, PBS-AST, NYSPILLS, and E-DES databases. These listings summarized as follows:

Petroleum Bulk Storage – Tank Facility Listings (TANKS) and Underground and Aboveground Storage Tank Databases (PBS-UST/AST): The inclusion on the PBS-UST/AST list means that a site has one or more registered underground/aboveground storage tank(s), regulated under regulated under 6 NYCRR Part 612 (NYSDEC Petroleum Bulk Storage) and/or the New York City Fire Department (FDNY). This database does not indicate leaks, spills, or other violations.

- NYCHPD (PBS ID No. 2-611766), 29-31 Bartlett Street. This facility is listed as having one 3,000-gallon steel AST containing No. 2 fuel oil, installed in 1990 and closed/removed in 2012. The property was not cross-referenced on the LTANKS or NYSPILLS databases and there is no evidence to suggest that this listing represents a significant environmental concern to the subject property (see Section 7.7.3). Although, a copy of the tank closure report was not provided, the tank is identified as closed/removed and there is no corresponding spill incident. As such, EBC considers the site's listing on the PBS database and the removed AST to be a HREC that does not warrant further investigation. A Freedom of Information Act (FOIA) request was made to the NYSDEC for additional information. A response is pending.

New York Spills (NYSPILLS) database: The subject property (29 Bartlett Street) is listed on the NYSPILLS database related to one closed spill incident, which is summarized as follows:

- Spill No. 95-06117 - Residence, 29 Bartlett Street. This spill, which occurred on August 17, 1995, is related to the release of approximately 40 gallons of fuel oil during a delivery. The spill was reportedly contained on the sidewalk and cleaned with sorbents. The NYSDEC closed the spill on August 24, 1995. Based upon this information, EBC considers the closed NYSDEC spill incident to be a HREC that does not warrant further investigation. A FOIA request was made to the NYSDEC for additional information. A response is pending.

NYCDCEP Environmental Designation Sites (E-DES): The subject property (each of the six parcels) is identified as having E-Air and/or Noise restrictions (E-238), which were determined during the Broadway Triangle Rezoning completed by the City in December 2009 (CEQR 09HPD019K). The Noise E-Designation applies to the five parcels located within Block 2272, and requires that any future residential/commercial development must provide a closed-window condition with a minimum 30 decibels (dBA) window/wall attenuation on all facades to achieve an acceptable indoor noise environment of 45 dBA. In order to maintain a closed-window condition, an alternative means of ventilation must also be provided. Alternative means of ventilation means, but is not limited to, central air conditioning, or through wall air conditioning sleeves fitted with an air conditioner. The Air E-Designation for these lots requires that any new residential and/or commercial development utilize natural gas for the heating, ventilation and air conditioning and that stacks must be 60 feet from the northern and western lot lines to avoid any potential significant adverse air quality impacts. The property at 29-31 Bartlett Street (Block 2269, Lot No. 52) also has an E-Designation for Air. The Air E-Designation for this parcel requires that any new residential and/or

commercial development must utilize natural gas as the fuel for heating, ventilation and air conditioning with no stack set back requirements.

The Air and Noise E-designations require the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER.

In addition to the New York State (NYS) databases included on the table above, over, ten additional NYS databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional State databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

State Inactive Hazardous Waste Sites (SHWS): SHWS records are New York State's equivalent to the CERCLIS. These properties may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. These records come from the New York State Department of Environmental Conservation (NYSDEC).

Four SHWS listings were identified within a one-quarter mile radius of the site, and they are summarized as follows:

- Former Techtronic Ecological Corporation Site B (ID No. 224259), 480 Flushing Avenue, approximately 2,410 feet west-southwest and hydraulically crossgradient of the subject property. This facility is a former paint and lacquer manufacturer and an auto body repair shop and cyanides were discovered at the site. Limited investigation conducted at this facility to date has revealed VOC and SVOC impacts to soil, groundwater and soil vapor. Investigation is on-going under the NYS Brownfields Cleanup Program. Based on the information in the database report, its distance in a dense urban area, the presumed hydraulic gradient, and that the site and surrounding utilize municipally-supplied potable water, it is unlikely that this facility presents a significant environmental risk to the subject property.

- Former Techtronic Ecological Corporation (ID No. 224239), 8 Walworth Street, approximately 2,430 feet west-southwest and hydraulically crossgradient of the subject property. This facility is a former plating facility. In 1982, abandoned drums and tanks of caustics, waste acids and cyanides were discovered at the site. The abandoned tanks and drums were removed by the City of New York. In addition, the building was demolished and contaminated soils were removed. The facility was subsequently removed from the SHWS sites list. Based on this information, its distance and the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the Site. The Technical Metal Finishers facility is also listed on the SEMS ARCHIVE and SHWS databases.
- Top Hat Cleaners (ID No. 224208), 152 Graham Avenue, approximately 2,490 feet north-northeast and hydraulically cross- to downgradient of the subject property. This facility is a mixed-use (retail/residential) building occupied by a dry cleaner. An investigation conducted at the site identified the presence of chlorinated solvent impacts to soil, soil vapor and groundwater which appear attributable to the dry cleaner. Investigation of this facility is ongoing. Based on the information in the database report, its distance in a dense urban area, the presumed hydraulic gradient, and that the site and surrounding utilize municipally-supplied potable water, it is unlikely that this facility presents a significant environmental risk to the subject property.
- Spencer Street GW (ID No. 224251), Spencer Street and Flushing Avenue, approximately 2,60 feet west and hydraulically crossgradient of the subject property. This facility is a former dry cleaning equipment supplier that operated from 1958 through 2002. The facility also stored dry cleaning solvents and generated hazardous solvent wastes. Sampling conducted in conjunction with the investigation of an adjacent property identified significant solvent impacts to soil vapor. This facility is being remediated under the NYS Brownfield Programs. Based on the information in the database report, its distance in a dense urban area, the presumed hydraulic gradient, and that the site and surrounding are utilized municipally-supplied potable water, it is unlikely that this facility presents a significant environmental risk to the subject property.

Two additional SWHS listings were identified between one-half and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Hazardous Substance Waste Disposal Sites (HSWDS): The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

One HSWDS site was identified within a one-half mile radius of the subject property. This listing is summarized as follows:

- Borden Chemical, 56 Nostrand Avenue, approximately 1,990 feet west-southwest and hydraulically crossgradient of the subject property. This facility was detailed previously in the SEMS ARCHIVE section, where it was determined unlikely to represent a significant environmental concern to the subject property.

Solid Waste Facilities/Landfill Sites (SWF/LF): This database is an inventory of soil waste disposal facilities or landfills in New York State. Two SWF/LF listings were identified within a one-quarter mile radius of the subject property. These listings are summarized as follows:

- Bedford Auto Sales, 984 Myrtle Avenue, approximately 1,980 feet southeast and hydraulically upgradient of the subject property. This facility is identified as an active vehicle dismantling facility, with no violations.
- Cooper Tank & Welding, 222-226 Seigel Avenue, approximately 2,220 feet northeast and hydraulically crossgradient of the subject property. This facility is identified as an inactive transfer station with no violations.

Based on the information provided in the database report, their distance and/or the presumed hydraulic gradient, these facilities are unlikely to represent a significant environmental concern to the subject property.

Leaking Underground Storage Tanks (LTANKS): Each of the 33 LTANKS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. In addition, none of the listed closed LTANKS sites is located adjacent to the subject property.

Petroleum Bulk Storage – Tank Facility Listings (TANKS), Underground and Aboveground Storage Tank Databases (PBS-UST/AST): Twenty-three PBS-UST and 67 PBS-AST sites are listed in the database report. The inclusion on the PBS-UST/AST list means that a site has one or more registered underground/aboveground storage tank(s), regulated under regulated under 6 NYCRR Part 612 (NYSDEC Petroleum Bulk Storage) and/or the New York City Fire Department (FDNY). This database does not indicate leaks, spills, or other violations.

Two of the listed PBS-UST sites are located adjacent to the subject property. These listings are summarized as follows:

- J&M Auto Service Corp. (PBS ID No. 2-610233), 30 Bartlett Street, adjacent to the north of the Flushing Avenue parcels, and hydraulically up- to crossgradient of the subject property. This site is listed on the PBS-UST database as having one 275-gallon steel UST containing waste oil, installed in 1998 and removed in 2012. This property was not cross-referenced on the LTANKS or NYSPILLS databases. Therefore, it is unlikely to represent a significant environmental concern to the subject property.
- Pfizer Site Band D. (PBS ID No. 2-612842), 60-66 Gerry Street, adjacent to west of the Bartlett Street parcel, and hydraulically crossgradient of the subject property. This site is listed on the PBS-UST database as having three 550-gallon steel USTs containing gasoline, closed/removed in 2018. This property was not cross-referenced on the LTANKS or NYSPILLS databases. Therefore, it is unlikely to represent a significant environmental concern to the subject property.

State Chemical Bulk Storage Sites (CBS): The inclusion of a facility on the CBS list means that a site has one or more registered storage tanks, regulated under 6NYCRR Part 595 - 599 (NYSDEC Chemical Bulk Storage) and has a total storage capacity equal to or greater than 185 gallons. This database does not indicate leaks, spills, or other violations. One CBS facility (Pfizer, Inc. - Brooklyn, 630 Flushing Avenue) was identified within a one-quarter mile radius of the subject property. The Pfizer facility was identified as having 23 ASTs that were closed or converted to a non-regulated use. This address was cross referenced on the NYSPILLS databases related to several closed petroleum spill incidents. Based on this information, the closed status of the spills, it distance and the presumed hydraulic gradient, it is unlikely that the listed CBS facility represents a significant environmental concern to the subject property.

Voluntary Cleanup Program (VCP) Sites: VCP sites are those facilities where the property owner has to investigate and remediate the site. New York's VCP is a cooperative program for lenders, developers and prospective purchasers to investigate and/or remediate contaminated sites and return them to productive use. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans and agrees to remediate the site to a level that is protective of public health and the environment for the present or intended use of the property. Investigation and remediation is carried out under oversight of the NYSDEC and the New York State Department of Health (NYSDOH) and the volunteer pays the State's oversight costs. When the volunteer completes work, a release from liability from the Department is provided with standard reservations.

Thirteen VCP sites were identified within a one-eighth mile radius of the subject property. These sites are summarized as follows:

- 11 Whipple Street (ID No. 17CVCP011K), 11 Whipple Street, adjacent to the east of the Flushing Avenue parcels, and hydraulically cross- to upgradient of the subject property. Information obtained from the NYCOER website indicates that this site was redeveloped with a 4-story residential building. Impacted soil/fill materials were excavated and removed from the site and a vapor barrier and active sub-slab ventilation system were installed below the new buildings. Remedial activities are complete and a Certificate of Completion issued in June 2013. Based on this information, its distance and/or the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.
- 687 Flushing Avenue (ID No. 18CVCP024K), 687 Flushing Avenue, approximately 300 feet east of the Flushing Avenue parcels, and hydraulically cross- to upgradient of the subject property. Information obtained from the NYCOER website indicates that this site was redeveloped with a 3-story residential building. Impacted soil/fill materials were excavated and removed from the site and a vapor barrier was installed below the new buildings. Remedial activities are complete and a Certificate of Completion issued in September 2019. Based on this information, its distance and/or the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.
- 661 Flushing Avenue (ID No. 13CVCP153K), 661 Flushing Avenue, adjacent to the east of the Flushing Avenue parcels and hydraulically cross- to downgradient of the subject property. Information obtained from the NYCOER website indicates that this site was redeveloped with a 3-

story residential building. Impacted soil/fill materials were excavated and removed from the site and a vapor barrier was installed below the new buildings. Remedial activities are complete and a Certificate of Completion issued in September 2019. Based on this information, its distance and/or the presumed hydraulic gradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

The 10 remaining VCP sites within one-eighth mile (59-71 Gerry Street, 82 Throop Avenue, 386-388 Wallabout Street, 390 Wallabout Street, 207 Harrison Avenue, 630 Flushing Avenue, 177 Harrison Avenue, 630 Flushing Avenue – Pfizer Organics/Suciac, 376-382 Wallabout Street, 78 Throop Avenue) are each located hydraulically crossgradient or downgradient, and as such, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Twenty-six additional VCP listings were identified between one-quarter and one-half mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental concern to the subject property.

New York State Brownfields Sites (BROWNFIELDS): In New York State, a Brownfields site is any real property in the State, whose redevelopment or reuse may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant, except those properties which are listed as Class 1 or 2 in the Registry of Inactive Hazardous Waste Disposal Sites (Class 2 sites owned by a Volunteer are eligible until July, 1, 2005); sites on the USEPA NPL; hazardous waste treatment, storage, or disposal facilities (TSDFs) permitted under ECL §27-0901 ("interim status" facilities are eligible); sites subject to a cleanup order or Stipulation under Article 12 of the Navigation Law (oil spill prevention, control, and compensation) or under Title 10 of ECL Article 17 (control of the bulk storage of petroleum); or sites subject to any on-going state or federal enforcement actions regarding solid/hazardous waste or petroleum.

One BROWNFIELDS site was identified within a one-eighth mile radius of the subject property. This listing is summarized as follows:

- Pfizer Site B (ID No. C224193), 57-71 and 73-87 Gerry Street, approximately 430 feet to the north and northwest, and hydraulically downgradient of the subject property. This site was historically occupied by a pharmaceuticals company, and is currently undeveloped. Preliminary investigations identified and delineated petroleum-impacted fill materials on and off-site. Approximately 4,700

tones of impacted soils and 18,000 gallons of groundwater were removed in 2002, along with nine USTs and other subsurface structures. A groundwater contaminant plume extends north from this property. Soil vapor investigation is on-going. Based on the information in the database report, its regulatory status, its distance, and the presumed hydraulic gradient, this facility is unlikely to represent a significant environmental concern to the subject property.

Nine additional BROWNFIELDS listings were identified between one-eighth and one-half mile from the subject property; however, based on the information in the database report, their distance in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area utilize municipally-supplied potable water, it is unlikely that this facility presents a significant environmental concern to the subject property.

NYCDCP Environmental Designation Sites (E-DES): Environmental "E" designation sites are those sites identified by the NYC Department of City Planning (DCP), which need to be evaluated to address potential issues related to hazardous materials, air quality and/or noise. This designation is typically associated with areas NYC has designated for re-development and/or re-zoning, and ensure that sampling and remediation (if warranted) or other measures implemented at the property if demolition, excavation and construction are proposed to be conducted.

Three types of E-DES listings (HazMat, Air and Noise) exist, although a property can be assigned multiple designations based on known or potential risks to redevelopment. However, only those with a HazMat designation are considered to present a concern based on their historic use/development (i.e., service station, dry cleaner, manufacturing facility, etc.). The HazMat designation indicates that projected and potential development of these sites requires an environmental assessment and review by the NYC Office of Environmental Remediation (NYCOER) to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

Sixty-eight E-DES listings were identified within a one-eighth mile of the subject property, six of which (Block 2269, Lot No. 1 and Block 2272, Lot Nos. 3, 6, 9, 45 and 54) are adjacent to the subject property. Each of these facilities are identified as HazMat and/or Air and Noise sites, and are included in the same designation area (E-238 – Broadway Triangle Rezoning) as the subject property. The Hazardous Materials Designation indicates that projected and potential development of this property requires the completion of an environmental assessment and review by the NYCOER to determine if the current and/or historic use of the property impacted the subsurface and if additional investigation and/or remediation is warranted. This

designation does not indicate the presence of contamination, nor does it indicate the presence/potential presence of offsite impacts. Therefore, there is no information in the database report that indicates the E-DES listings represent a significant environmental concern to the subject property.

Registered Drycleaning Facilities (DRYCLEANERS): One DRYCLEANERS site (Harrison/Yorktown/Ace Rapid Cleaners, 209 Harrison Avenue) was listed within a one-quarter mile radius of the subject property. This facility was cross-referenced on the RCRA database as current or former hazardous waste generator with no open/active violations. Based on the information listed in the database report, its distance, the absence of open/active violations, and the presumed hydraulic gradient, it is unlikely that the listed DRYCLEANERS sits represents a significant environmental concern to the subject property.

New York Spills Information Database (NYSPILLS): Twenty-eight of the 30 NYSPILLS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. One of the open NYSPILLS sites is located adjacent to the subject property, and it is summarized as follows:

- Spill No. 17-07889 – 58 Gerry Street LLC, 58 Gerry Street, adjacent to the east and west of the Bartlett Street parcel, and hydraulically cross- to downgradient. This spill, which occurred on March 26, 1997, is related to the discovery of three 550-gallon USTs and petroleum impacted soil during a construction project. The spill reportedly being remediated by a third-party contractor. However, the spill remains open/active. Based on the information listed in the database report, its distance, and the presumed hydraulic gradient, it is unlikely that this listing represents a significant environmental concern to the subject property.

A review of the information provided regarding the two remaining active NYSPILLS listings (58 Gerry Street and 655 Flushing Avenue), including the nature of the release, its distance and hydraulically crossgradient location, indicate that this spill is unlikely to represent an environmental concern to the site.

6.3 Tribal Records and EDR Proprietary Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject property Listed?	No. of Sites within the Search Radius
Indian Reservations	IRESERVE	1.0 mile	No	0
Indian Reservation - Leaking Underground Storage Tanks	ILTANKS	0.5 mile	No	0

Indian Reservation - Registered Underground Storage Tanks	IUST	0.25 mile	No	0
Indian Reservation – Voluntary Cleanup Program Sites	IVCP	0.5 mile	No	0
Indian Reservation – Open Dump Inventory Sites	IODI	0.25 mile	No	0
Manufactured Gas Plants	MGP	1.0 mile	No	5
Historic Cleaners	HISTCL	Site & Adjoining	No	0
Historic Auto Stations	HISTAS	Site & Adjoining	No	0

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the site:

Manufactured Gas Plants (MGPs)

Five Manufactured Gas Plant (MGP) sites (Skillman Station, Skillman Street between Flushing and Bedford Avenues; Nassau Gas, Skillman Avenue; Rutledge Station, Rutledge Street between Wythe and Kent Avenues; Keap Street Station, Keap Street between Wythe and Kent Avenues; and Scholes Street Station, Scholes and Bogart Streets) are listed in the database report. MGPs were industrial facilities at which gas was produced from coal, oil and other feedstocks. The gas was stored, and then piped to the surrounding area, where it was used for lighting, cooking, and heating homes and businesses. The first MGPs were constructed in the early 1800s, prior to the Civil War. Most were closed during the early-to-middle 1900s, and the last one ceased operations in 1972. The production of manufactured gas created wastes including coal tar and purifier waste (lime or wood chips treated with iron oxides, and used to remove cyanide and sulfur from the manufactured gas). These materials were often disposed of on the site resulting in soil and groundwater contamination. Given that the listed MGP facility is each over one-half mile and hydraulically cross- to downgradient, it is unlikely that this facility represents a significant environmental concern to the subject property.

6.4 Orphan Site Summary

The database report also includes 10 “orphan” sites, which are those properties where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject property. EBC reviewed additional information available from EDR regarding this site, as well as available USEPA and NYS data and maps to determine if the orphan site presents a significant environmental risk to the subject property. The listed Orphan sites do not appear to represent an environmental concern to the subject property.

7.0 SITE RECONNAISSANCE

7.1 Site Inspection

EBC representative Keith Butler inspected the subject property on October 10, 2019. No representatives of NYC HPD, the property owner, were present during the site inspection, however, EBC personnel did contact Mr. Charles Stewart, who arranged permission and for EBC to access the site.

7.2 Methodology and Limiting Conditions

Site reconnaissance included a visual inspection of exterior areas, sidewalk areas immediately adjoining the property, and the exteriors of adjacent properties. Due to the presence of overgrown vegetation, debris, building materials, vehicles and equipment visibility was limited in some areas of the site.

7.3 Site Description

The subject property consists of six non-contiguous tax parcels located on the north side of Flushing Avenue and Whipple Streets, as well as the north side of Bartlett Street, between Harrison Avenue to the west, and Throop Avenue to the east, in the Broadway Triangle section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street addresses of 29-31 Bartlett Street, 663-667 Flushing Avenue, and 1-3 Whipple Street, and as Borough 3 –Block 2269 – Lot No. 52 and Block 2272, Lot Nos. 49, 51, 52, 53 and 108 on the NYC tax maps.

The subject property is currently vacant, undeveloped, and unpaved with sparse vegetation, except for the far southern portions of the 661 Flushing Avenue parcel, which are concrete-paved. This pavement appears attributable to encroachment by the developer of the western adjacent building, which was recently constructed. The site perimeters are enclosed with chain-link fencing, except for portions of the eastern and western boundaries which are boarded by adjacent buildings. Northern portions of the 661 Flushing Avenue parcel are littered with construction debris (brick, concrete, wood and soil). The four remaining parcels along Flushing Avenue and Whipple Street are in use as a construction material/equipment storage yard which appears to be associated with the eastern adjacent building. The site perimeters are enclosed with chain-link or wooden construction fencing, except for portions of the eastern boundary of 29 Bartlett Street and the eastern and western boundaries of the Flushing Avenue and Whipple Street parcels, which are boarded by adjacent buildings. Sidewalks are south of the site along Bartlett Street, Flushing Avenue and Whipple Street.

7.4 Utilities

As the site is currently undeveloped, no utilities are directly provided to the property. The following table provides a list of utilities that are reportedly available in the site vicinity and the names of the suppliers:

Utility	Provider
Domestic Water	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer	NYCDEP
Storm Sewer	NYCDEP
Electricity	Con Edison
Natural Gas	Con Edison

7.5 Surrounding Land Use

The subject property is located in a densely developed, mixed-use urban area of Brooklyn, known as Broadway Triangle. The following surrounding land uses were observed during the Phase I ESA site inspection:

Bartlett Street Parcel

- North:** A mid-rise residential apartment building (under construction) (191 Harrison Avenue), followed by Gerry Street.
- South:** Bartlett Street, followed by residential apartment building under construction (16 Bartlett Street) and an undeveloped lot/construction site (24-28 Bartlett Street).
- East:** A 3-story commercial building (33 Bartlett Street), followed by undeveloped land.
- West:** A mid-rise residential apartment building (under construction) (191 Harrison Avenue), followed by Harrison Avenue, with undeveloped land beyond.

Flushing Avenue Parcels

- North:** An undeveloped lot/construction site (24-28 Bartlett Street), followed by Bartlett Street. An auto repair shop is to the northeast and an apartment building under construction is to the northwest.

South: Flushing Avenue and Whipple Bartlett Street, followed by residential apartments (652-660 Flushing Avenue) and several mixed-use (retail/residential) buildings (664-666 Flushing Avenue).

East: A residential apartment building under construction (11 Whipple Street), followed by NYC Park/Playground.

West: A 6-story apartment building (661 Flushing Avenue), followed by several mixed-use (retail/residential) buildings, including a thrift store, a restaurant and a dry cleaner (557-659 Flushing Avenue and 209-211 Harrison Avenue).

7.6 Interviews

Mr. Charles Stewart of St. Nick's Alliance, authorized site access, but was not present during the site inspection. Mr. Stewart also provided a brief site history and general site information. Pertinent statements made by Mr. Stewart are included throughout this report.

7.7 Summary of Environmental Site Features

7.7.1 Chemical Use and Storage

No hazardous substances or activities involving the use of any chemicals were observed onsite during the survey. In addition, the regulatory records review and interviews did not reveal evidence of operations involving the use of hazardous substances or petroleum products at the subject property.

7.7.2 Hazardous and Non-Hazardous Waste Storage and Disposal

No evidence that regulated hazardous materials and/or hazardous wastes are generated, treated, stored or disposed of at the site was observed on the date of the survey. In addition, the regulatory records review and interviews did not reveal evidence of any activities involving the production of hazardous wastes at the site.

As the property is vacant/undeveloped, no significant quantities of solid wastes are currently generated at the site. No RECs, associated with solid waste generation, storage, and disposal were identified at the subject property during the reconnaissance.

7.7.3 Underground and Aboveground Storage Tanks

No evidence of underground storage tanks (i.e. vent or fill pipes) were observed on the property at the time of the site inspection. The EDR database report indicates that the 29-31 Bartlett Street was listed on the PBS-AST database as having one 3,000-gallon steel AST containing No. 2 fuel oil, installed in 1990 and

closed/removed in 2012. The property was not cross-referenced on the LTANKS or NYSPILLS databases and there is no evidence to suggest that this listing represents a significant environmental concern to the subject property (see Section 6.2). Although, a copy of the tank closure report was not provided, the tank is identified as closed/removed and there is no corresponding spill incident. As such, EBC considers the site's listing on the PBS database and the removed AST to be a HREC that does not warrant further investigation. A FOIA request was made to the NYSDEC for additional information. A response is pending.

Additional information may be available in files maintained by the FDNY, NYCDEP and/or NYCOER, however, no responses to EBC's FOIL requests have been received to date. Any information received from these agencies will be reviewed upon receipt and pertinent information forwarded to the client.

7.7.4 Sanitary and Stormwater Disposal

As there are no on-site buildings, no sanitary wastewater is currently discharged from the property. The area surrounding the property is serviced by the NYC municipal sewer system.

Storm water flows overland to adjacent properties, to curbside drains along Gerry Street, Throop Avenue and Bartlett Street, and infiltrates to the ground in unpaved areas. Curbside drains discharge to the NYC municipal storm sewer system.

7.7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

No electrical transformers, hydraulic automotive lifts, elevators or other equipment suspected to contain PCBs were identified on the property at the time of the site inspection. In addition, because there are no buildings on the property, fluorescent light ballasts are not an environmental concern.

7.7.6 Debris, Dumping and Surficial Staining

No evidence of chemical spills, stains or odors was observed on the property at the time of the site inspection. Based on the review of historical and regulatory records, no evidence of landfills, and/or direct burial activities was observed on or proximate to the site. However, northern portions of the 661 Flushing Avenue parcel are littered with small quantities of construction debris (brick, concrete, wood and soil) and a large pile of assorted trash and non-hazardous construction debris is present at the southern portion of the Flushing Avenue parcels. The trash/debris appears related to un-going development of the eastern and western adjacent apartment buildings. No evidence of chemical spills, stains or odors was observed in the vicinity of the dumped debris or elsewhere on the property at the time of the site inspection.

In addition, as the property was formerly developed with multiple structures, there is a potential for fill materials to be present (utilized to backfill the foundation and/or basement of the former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site. The potential presence of fill materials is considered a BER.

7.7.7 Stressed Vegetation

No stressed vegetation was present at the time of inspection.

7.7.8 Other Environmental Concerns

EBC also inspected the subject property for evidence of the following potential environmental concerns:

OTHER AREAS OF CONCERN		
Area of Concern	Not Observed	Observed
Chemical/Petroleum Odors	X	
Pools of Liquid	X	
Stains or Corrosion	X	
Unidentified Containers	X	
Pits, Ponds, or Lagoons	X	
Monitoring or Other Wells	X	
Stained Soil or Pavement	X	
Air Quality	X	
Stressed Vegetation	X	

8.0 NON-SCOPE CONSIDERATIONS

8.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Brooklyn area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 51 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.75 pCi/L (first floor level) and 1.37 pCi/L (basements). Data indicate that approximately two percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level.

Additional data (October 2018) obtained from the NYSDOH indicates that 474 basement radon tests have been conducted in Kings County, with average radon basement concentration of 2.13 pCi/L. Based on these data, radon is not likely to represent an environmental concern for the site.

8.2 Lead-Based Paint

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces was conducted during the site inspection. As no buildings or other structures, except for perimeter fencing, lead-based paint (LBP) is not considered an environmental concern.

8.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). No suspected ACM were observed during the site inspection and no sampling for asbestos was conducted in conjunction with this Phase I ESA.

Thermal insulation, surfacing materials, and vinyl/asphalt floor materials installed before 1981 are presumed to contain asbestos. The Occupational Safety and Health Administration (OSHA) asbestos standards (effective October 1995) require owners of commercial or industrial buildings (constructed before 1981) to identify potential asbestos hazards, keep records about potential asbestos hazards, post signs to warn of asbestos hazards, and communicate information about the hazards.

8.4 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn, NY Quadrangle, indicates that there are no NYS freshwater wetlands located within a one mile radius of the subject property. ECB also reviewed NYSDEC Tidal Wetlands Maps available online at <https://www.dec.ny.gov/lands/4940.html>. The tidal wetlands map indicates that there are no NYS tidal wetlands located within a one-mile radius of the subject properties.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicates that that no potential federal wetlands are located within a one mile radius of the subject property. Additional information obtained from the FWS website is included in Appendix E.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject property is located within the 100-year or 500-year flood zones. The FIRMs showing the property (No. 3604970204F) indicates that entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the subject property.

8.5 Mold and Water Damage

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at the subject property during the site inspection.

8.6 Vapor Encroachment

As part of this assessment, EBC evaluated the potential for vapor encroachment into onsite structures following the general methodology outlined in ASTM E-2600-10 utilizing professional judgment. The Tier 1 screening assessment was employed to determine if a potential vapor encroachment condition (VEC) exists at the site. The site, adjoining properties and hydraulically upgradient properties were assessed for known or suspected contaminated facilities within approximate minimum search distances. A Tier 1 screening assessment generally consists of the following: a search distance test to identify if there are any known or suspected contaminated sites within the area of concern (AOC); a chemicals of concern (COC) test to determine if chemicals of concern exist at the known or suspected contaminated facilities and a plume test to determine whether or not COC in the contaminated plume may be within the critical distance (or AOC). The critical distance is defined as the linear distance in any direction from the nearest edge of the plume to the site. If the critical distance from the site to the nearest edge of a petroleum hydrocarbon plume is within 528 feet (1/10-mile) or within 1,760 feet (1/3-mile) for nonpetroleum COC (e.g., trichloroethylene, perchloroethylene, etc.), then it is assumed that COC are within the AOC and a potential VEC exists, and additional screening may be necessary. The critical distance and AOC may be modified using professional judgment based on hydraulic gradient direction and contaminant plume width.

The decision to recommend additional screening, even if a potential VEC is determined by distance, is based on other criteria including existing and planned use of the property, type of structures potentially impacted, physical setting, hydraulic gradient, depth to groundwater, soil characteristics, activities in the surrounding area and the presence of natural or manmade conduits. Based on an evaluation of this collective criteria, the potential for a VEC from current and surrounding land use activities is considered low due to the available documentation which suggests no significant visual or olfactory evidence of petroleum hydrocarbon or VOC contamination that has migrated to the groundwater or which has significantly impacted the soil from current and surrounding activities at the site. A Tier 2 screen is not recommended at this time.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA has been prepared in conformance with the scope and limitations of ASTM Practice E1527-13 (inclusive of the USEPA all appropriate inquiry requirements) for the undeveloped property located on the north side of Flushing Avenue and Whipple Streets, as well as the north side of Bartlett Street, between Harrison Avenue to the west, and Throop Avenue to the east, in the Broadway Triangle section of the Borough of Brooklyn, New York City, Kings County, New York . The subject property is identified by the street addresses of 29-31 Bartlett Street, 663-667 Flushing Avenue, and 1-3 Whipple Street, and as Borough 3 – Block 2269 – Lot No. 52 and Block 2272, Lot Nos. 49, 51, 52, 53 and 108 on the NYC tax maps. Any exceptions to, or deletions from, this practice are described in the section of the report entitled Limitations and Exceptions.

Based on the results of the site inspection, records review and interviews, it was determined that there were no REC or controlled recognized environmental conditions (CRECs) identified for the subject property. However, EBC identified the one historic recognized environmental condition (HREC) and two environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]). The HREC, environmental concerns/BERs, and EBC's recommendations are summarized as follows:

- The subject property (29-31 Bartlett Street) was listed on the PBS-AST database as having one 3,000-gallon steel AST containing No. 2 fuel oil, closed/removed in 2012. The property was also cross-referenced on the NYSPILLS database related to one closed spill incident. This spill, which occurred in August 1995, is related to the release of approximately 40 gallons of fuel oil during a delivery. The spill was contained on the sidewalk area and cleaned using sorbents. The NYSDEC closed the spill within a week. Although, copies of the tank closure and/or the spill remediation reports were not provided, given the nature of the release and the closed status of the AST and spill, EBC considers the site's listing on the PBS-AST and NYSPILLS databases to be a HREC that does not warrant further investigation. A FOIA request was made to the NYSDEC for additional information. A response is pending.
- As the majority of the subject property was formerly developed with multiple buildings, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the

former structures following their demolition. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site.

Experience with similar projects shows that typical urban fill materials (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, all urban fill material that is disturbed during any construction/redevelopment project may require sampling for proper disposal and handling.

- The subject property (each of the six parcels) is identified as having E-Air and/or Noise restrictions (E-238), which were determined during the Broadway Triangle Rezoning completed by the City in December 2009 (CEQR 09HPD019K). The Noise E-Designation applies to the five parcels located within Block 2272, and requires that any future residential/commercial development must provide a closed-window condition with a minimum 30 decibels (dBA) window/wall attenuation on all facades to achieve an acceptable indoor noise environment of 45 dBA. In order to maintain a closed-window condition, an alternative means of ventilation must also be provided. Alternative means of ventilation means, but is not limited to, central air conditioning, or through wall air conditioning sleeves fitted with an air conditioner. The Air E-Designation for these lots requires that any new residential and/or commercial development utilize natural gas for the heating, ventilation and air conditioning and that stacks must be 60 feet from the northern and western lot lines to avoid any potential significant adverse air quality impacts. The property at 29-31 Bartlett Street (Block 2269, Lot No. 52) also has an E-Designation for Air. The Air E-Designation for this parcel requires that any new residential and/or commercial development must utilize natural gas as the fuel for heating, ventilation and air conditioning with no stack set back requirements. The presence of E-Noise and Air designations is considered a BER.
- The site inspection identified the presence of small quantities of construction debris (brick, concrete, wood and soil) on the northern portions of the 661 Flushing Avenue parcel and a large pile of assorted trash and non-hazardous construction debris is present at the southern portion of the remaining Flushing Avenue parcels. The trash/debris appears related to un-going development of the eastern and western adjacent apartment buildings. Based on the nature of the observed debris, it is unlikely that these materials have leached contaminants to the ground and impacted the site. However, EBC recommends these materials be removed and properly disposed in accordance with

applicable regulations. In the event that soil impacts (e.g., visible staining) are noted, then EBC recommends soil sampling be conducted to determine the nature and extent of the impacts and determine if additional investigation and/or remediation is warranted.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-13, inclusive of the USEPA “All Appropriate Inquiry” requirement published in the Federal Register on November 1, 2005. The USEPA “All Appropriate Inquiry” requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the site referenced above. EBC has developed and performed the “All Appropriate Inquiries” in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 11.0 contains the data gaps and deficiencies of the research data encountered during EBC’s preparation of this report.

**QUALIFICATIONS OF
ENVIRONMENTAL PROFESSIONAL**

ENVIRONMENTAL BUSINESS CONSULTANTS

Keith W. Butler, Senior Project Manager

PROFILE

Mr. Butler has extensive project management experience with respect to environmental due diligence and subsurface investigations. He is responsible for the preparation of project proposals, Phase I and II Environmental Site Assessments, Work Plans, Health and Safety Plans, Quality Assurance Project Plans, and investigation reports. Additionally, Mr. Butler has conducted and managed numerous Phase I and II ESAs. In these roles, Mr. Butler is responsible for applying the various state and local regulations, which govern environmental compliance and determine the need for additional investigation and/or remediation.

SELECTED PROJECTS

Madison National Bank, Various Sites, New York

Mr. Butler served as the Project Manager and principal contact for Madison National Bank. He was responsible for the preparation of Transaction Screen and Phase I/II Environmental Site Assessments (ESAs) at various sites throughout the New York metropolitan area, as required by the bank to satisfy client mortgage or construction loan requests.

Jewish Home & Hospital, Manhattan, NY

Most recently, Mr. Butler completed a Phase I ESA at their Bronx campus to obtain U.S. Housing and Urban Development (HUD) funding for a future construction project. Mr. Butler was also responsible for implementing a Remedial Action Work (RAW) Plan at the Bronx facility as required by the NYSDEC under a Voluntary Cleanup Agreement. The RAW included the preparation of contract documents, excavation of over 2,000 tons petroleum contaminated soils, installation of a Soil Vapor Extraction (SVE) system remedial oversight, and sampling.

Pulte Homes of New York, Patchogue, NY

Mr. Butler served as the Project Manager for the re-development of this six-acre site and was responsible for field oversight and coordination between remediation contractors and various regulatory agencies. Initial phases of the project included the completion of Phase I and II ESAs. Subsequent remediation consisted of UST removal, excavation of petroleum-impacted soils, closure of three NYSDEC spill numbers, removal of contaminated UIC sediment/sludge, the closure of commercial and residential UIC structures and the excavation of arsenic and metals contaminated soil. The project was conducted under approved Remedial Work and Soil Management Plans with oversight from the State, County and Village agencies.

Town of Islip, Blydenburgh Road Landfill, Hauppauge, NY

Mr. Butler served as the Project Manager for the groundwater and leachate monitoring program at the Blydenburgh Road Landfill - Cleanfills 1 and 2 and Leachate Impoundment Area. Mr. Butler was the principal contact for the Town's Resource Recovery Agency. He prepared the quarterly and annual monitoring reports, oversaw sampling efforts, and coordinated with the Town's analytical laboratory and data validation contractors. Mr. Butler was also responsible for preparing quarterly well condition reports and leachate quality reports for compliance with the Town's Suffolk County Discharge Certification Permit.

Ogden Aviation, Various Sites, JFK International Airport, Jamaica, New York

Mr. Butler served as the project manager for the rehabilitation of the satellite fuel farm recovery well system. Recovery wells at the fuel farm had become clogged with iron deposits and bacteria limiting product recovery efforts. Mr. Butler developed and supervised chemical cleaning and redevelopment of recovery wells under the approval of the NYSDEC. The chemical treatment has resulted in significant increases in product recovery volumes.

Brookhaven National Laboratory, Upton, NY

Mr. Butler has worked on a number of remediation system and monitoring well installation projects at BNL. His duties included oversight of installations, system pump tests, performance evaluations, and well development. He also provided oversight of soil borings, temporary well construction, soil and water sampling, and air monitoring for groundwater screening survey of two operable units in hazardous and radioactive waste storage areas. Mr. Butler also provided oversight for groundwater monitoring, well construction, well abandonment, and methane-monitoring wells for landfill closure.

metroPCS, Various Sites, New York

Mr. Butler served as the Project Manager for metroPCS' Long Island region telecommunications site acquisition and expansion program. Mr. Butler was responsible for the preparation of Phase I ESAs, the conduct of Phase II ESAs, including asbestos, lead paint and soil sampling, and coordination of National Environmental Policy Act (NEPA) reports and planning studies at various locations proposed for construction of new cellular telephone facilities. Reports and associated communications were transmitted electronically through metroPCS' data management system.

Dormitory Authority - State of New York, Harlem Hospital Center Modernization Project - Hazardous and Universal Waste Survey, Harlem Hospital, New York, NY

Mr. Butler served as the field team leader for conducting hazardous and universal waste surveys in multiple buildings affiliated with Harlem Hospital Center. The survey included the identification of hazardous and universal waste materials including chemicals, paints, fluorescent bulbs, high intensity discharge bulbs/fixtures, battery operated equipment, above and underground petroleum storage tank identification, PCB containing light ballasts and electrical equipment.

ENVIRONMENTAL BUSINESS CONSULTANTS

Keith W. Butler, Senior Project Manager

The hospital is comprised of a number of buildings, many that were abandoned and slated for demolition.

SVE Monitoring at Newark International Airport, Elizabeth, NJ

A routine leak detection test indicated that two 10,000-gallon underground storage tanks, which were used to store unleaded gasoline, had failed tightness tests. Follow-up investigation revealed that the product had impacted the subsurface environment. In response to this, a soil vapor extraction system was installed to reduce the residual concentrations of petroleum constituents in soil and groundwater and to minimize vapor migration into subsurface utility vaults. Mr. Butler was responsible for implementing the Remedial Action Work Plan, developed for the site by Ogden and the State of New Jersey. Activities conducted under the RAW include quarterly groundwater monitoring, air sampling, vacuum pressure monitoring, system maintenance and reporting.

Federal Express Site, Newark International Airport, Elizabeth, NJ

Mr. Butler worked with Ogden Aviation and the State of New Jersey to address outstanding environmental issues at the site related to a spill of jet fuel, which occurred during a construction accident. Mr. Butler performed a site assessment, which included groundwater monitoring, product gauging, and groundwater flow modeling. After reviewing these data, Mr. Butler determined that fill material at the site was contributing to soil and groundwater contamination and has petitioned the State for partial site closure. Mr. Butler is continuing to address the remaining area of concern through product recovery and continued monitoring.

Northrop Grumman, Various Sites

Mr. Butler conducted three Phase I ESAs and a Phase II investigation for the presence of PCBs in soil. He also inspected and supervised the removal of underground storage tanks, asbestos abatement projects, and sanitary system closures related to the facility decommissioning. Mr. Butler also conducted groundwater investigations and provided oversight during soil sampling, drilling and soil remediation activities.

New York City Department of Environmental Protection, Various Sites

Mr. Butler served as an Environmental Scientist for hazard investigation at seven sewage pump stations. Mr. Butler addressed a wide range of environmental concerns including asbestos, lead based paints, PCB oil, light ballasts, and other hazardous building materials. He conducted field investigations, sampling, and prepared Hazardous Materials Survey Reports for use during preparation of plans and specifications for proposed pump station construction projects.

Fresh Kills Landfill, Staten Island, New York

Mr. Butler participated in the field operations during pump and yield tests conducted on Cells 1 and 9. The tests were performed to determine the hydraulic properties of the landfill's refuse. He collected groundwater and leachate measurements in recovery wells and in adjacent observation wells under pumping and non-pumping conditions.

DEPARTMENT OF HOUSING AND BUILDINGS

BOROUGH OF BROOKLYN, CITY OF NEW YORK

No.

164058

Date

JAN 16 1959

CERTIFICATE OF OCCUPANCY

(Standard form adopted by the Board of Standards and Appeals and issued pursuant to Section 646 of the New York Charter, and Sections C.26-181.0 to C.26-187.0 inclusive Administrative Code 2.1.3.1. to 2.1.3.7. Building Code.)

This certificate supersedes C. O. No.

To the owner or owners of the building or premises:

THIS CERTIFIES that the ~~new~~ ~~existing~~ building—premises located at

685 Flushing Avenue, North Side, 75'0" East of Harrison Avenue
Block **2272** Lot **55**

, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and

CERTIFIES FURTHER that, any provisions of Section 646F of the New York Charter have been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent.

~~Alt. No.~~ Alt. No.—**1200/1955**

Construction classification—**Frame**

Occupancy classification—**store and two (2) families** Height **5** stories, **-** feet.

Date of completion—**constr. 1/12/59** , Located in **Unrestricted** Use District.

plumb. 1/6/59
Area **A** Height Zone at time of issuance of permit

This certificate is issued subject to the limitations hereinafter specified and to the following resolutions of the Board of Standards and Appeals: (Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS Lbs. per Sq. Ft.	PERSONS ACCOMMODATED			USE
		MALE	FEMALE	TOTAL

third	40	-	-	-	one (1) family
TOTAL - store and two (2) families					
Not a Multiple Dwelling					

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL
BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators, nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Housing and Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

Dear Sir or Madam:

Our firm has been retained to prepare an Environmental Assessment for the above-referenced properties.

We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g. asbestos, lead paint), etc. for the facility.

We agree with the department's decision to omit any health or personal identification in records provided.

If you require additional information to respond to this request or if there are costs associated with same, please do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

Environmental Business Consultants

Certified Sanborn® Map Report

10/10/19

Site Name:

Brooklyn Triangle Site A
665 Flushing Avenue
Brooklyn, NY 11206
EDR Inquiry # 5823513.3

Client Name:

Env. Business Consultants
1808 Middle Country Road
Ridge, NY 11961
Contact: Keith W Butler

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Env. Business Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 550B-4E1E-9DF9

PO # NA

Project SNA1901

Maps Provided:

2007	1995	1982	1935
2006	1993	1981	1918
2005	1992	1980	1904
2004	1991	1979	1887
2003	1989	1977	
2002	1987	1965	
2001	1986	1950	
1996	1984	1947	

Sanborn® Library search results

Certification #: 550B-4E1E-9DF9

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America
- ☒ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Env. Business Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 23 RCRA-LQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/13/2019 has revealed that there are 6 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 21 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/12/2019 has revealed that there are 30 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 71 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

SCHOLES ST. STATION	SCHOLES ST 7 BOGART	NE 1/2 - 1 (0.880 mi.)	440	1249

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
P & C SERVICE STATIO	655 FLUSHING AVE	WSW 0 - 1/8 (0.030 mi.)	A44	96
MEL-BERN NUMBER FOUR	645 FLUSHING AVE	WSW 0 - 1/8 (0.044 mi.)	E59	132

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 5/25/04 Amoco station adjacent to excavation. Keyspan will manifest and remove soil they pulled but will not go to clean endpoints. (notes from Sangesland) 5/25/04 Bart Polizotti(Keyspan) confirmed address of Amoco station as 655 Flushing Ave at Tompkins Ave, not Thompson. See Amoco spill #0104597. (KMF) 5/26/04 Site visit with J. Sun. Keyspan contractor, Hallen, trenching along Flushing Avenue and around Harrison St. No odors detected from trench while on-site. No water in excavation. Contractor from Hallen stated contamination was spotty. Will be hiring Miller Environmental to remove and dispose of contaminated soil. While on site, attempted to locate the monitoring wells put in by Delta to address spill #0104597. MW-5 and MW-7 were possibly under plates. Contractor stated that they did not remove any wells. Two Pfizer buildings, one located across Flushing Ave and one across Bartlett St. The one on Bartlett has a Charter School and playground area south of school. Remediation work to be done under spill #0104597."

Remarks: "gas construction crew installing 300 feet of gas line noticed odor of gasoline in the soil they excavated."

DEC Memo: "3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/4/03 Reassigned from Vought to Foley. See spill #8401982. See PIN file 4393. HISTORY: Leaks were detected and repaired at the threaded bushings of the piping run in 1984. MWs and an extraction well were installed in 1985. LNAPL was detected in 10 of 11 on-site wells ranging in thickness from trace to approx 1'. A product recovery system(scavenger pumps) was installed and activated. Approx 3000gal of LNAPL was removed. In 1990, the 12X550gal tanks were removed and new 4000gal double-walled tanks, islands and dispensers were installed. Subsequent to the rebuild, four new MWs were installed. Approx 0.06' LNAPL was observed in one well. Tyree had monitored these wells from 1990 to 1995. In July 1995, Tyree also installed three temporary wells in the sidewalk across Bartlett St. No BTEX or MTBE above GW standards was detected in these. In Oct 1997, Baltec installed MW-5 which contained VOCs above standards. The site transitioned to Delta in April 1999. In May 1999, an EFR event was conducted on MW-3. Approx 700gal of impacted GW was treated(approx 9lbs VOCs removed). The results of the EFR event indicated that the residual contamination was no longer significantly volatile and therefore indicative of an older release. In July 2001, LNAPL was observed in tank mat well TW-1 during routine monitoring events at a thickness of 0.41' and was determined to be fresh. Spill #0114597 was reported. The LNAPL may have been related to a leaking impact valve at dispenser 5/6 which was discovered 6/11/01 and repaired 6/12/01. LNAPL was last detected in TW-1 in 1/02. An EFR program was initiated in 7/01. Between 7/01 and 2/02, nine EFR events were conducted on tank mat well TW-1. Approx 1gal of LANPL, 4116gal water and a total mass of 255lbs of VOCs were recovered and treated. Between 3/6/02 and 4/24/02, six MWs were installed and VOCs in excess of soil cleanup objectives were detected in all samples. Between 9/22/03 and 10/27/03, spill containment was installed around the submersible pumps, deep spill containment boxes were installed under the dispensers, 50' of steel piping was replaced with double walled fiberglass, anad leak detection was installed at each spill containment box and tied to the Veeder Root. 12/8/03 Received Line Closure and Dispenser Upgrade Report (Delta, 12/4/03). Depth to groundwater approx 6-7'bgs. VOCs were not detected above TAGM cleanup objectives in any of the soil samples collected. Soil samples were collected from beneath the three dispensers(2.5-3.5'bgs). Three post-ex soil samples were collected along the product piping(3-3.5'bgs). Four samples were collected during the sump upgrade(2.5-3'bgs). 3/19/04 Received 2Q, 3Q, and 4Q 2002 reports. Dissolved BTEX and MTBE at high concentrations. 0.01ft LNAPL detected in MW-3 10/8/02, 0.13ft in MW-3 on 7/17/02 and 4/15/02. 5/4/04 Overdue for tightness test since 5/1/02. Spartan Petroleum Corp. was previous owner. 5/25/04 Keyspan was installing 300ft of natural gas line and noticed a gasoline odor in the soil they excavated. Reported

spill #0402082. See notes. 5/26/04 Stip mailed out and due back 6/28/04. Two Pfizer buildings, one located across Flushing Ave and one across Bartlett St. The one on Bartlett has a Charter School and playground area south of school(crossgradient of station). Delta was on-site to collect endpoints from Keyspan excavation. One of four (composite) endpoints returned with VOCs in excess of soil cleanup objectives. 5/28/04 1Q03, 2Q03, 3Q03, 4Q03 and 1Q04 monitoring reports submitted. 1Q04 BTEX from ND(MW-7,12,A) to 35,740ppb(MW-F). MTBE from ND(MW-6,7,12) to 39,300ppb(MW-9). 6/29/04 Stip executed by T. Kunkel. 7/6/04 Passing tank test results submitted. Investigation Report due 8/28/04. 8/17/04 2Q04 monitoring report received. BTEX from ND(MW-6,7,12,A) to 62870ppb(MW-F). MTBE from ND(MW-6,7,12) to 18500ppb(MW-9). 8/31/04 Received Investigation Summary Report. Delineation complete. RAP due 10/27/04. 11/18/04 A. Lapine update- On November 11, 12, and 15th, Delta collected ground water samples for geochemical analysis in support of a potential Biostimulation Remedial Action Plan. The suite of analytes are extensive, so the laboratory analysis usually takes a few weeks. Awaiting a status from the lab and plan on a requesting a rushed turnaround. Will expedite the preparation of the report. 1/14/05 Received RAP for biological stimulation. MW-1, MW-5, MW-11 and MW-13 are proposed to be used to inject nitrate/sulfate solutions into the subsurface. A workplan describing the specific application of nitrate and sulfate solutions with regard to quantity, concentration and expected rate of injection, as well as a future monitoring program to determine a level of effectiveness will be submitted upon approval of the RAP. An exposure assessment was conducted identifying chemicals of concern(COC), identifying potential receptors and exposure pathways, determining complete exposure pathways, estimating COC concentrations at points of exposure(POE) for each complete pathway, estimating potential baseline exposure at POEs and estimating site-specific target levels(SSTLs). The assessment concluded concentrations of BTEX and MTBE are protective of potential receptors. Delta conducted geochemical sampling from 11/11/04 to 11/23/04. Samples from MW-6 and MW-7 were from upgradient to assess conditions outside of the impacted zone. Samples from MW-4, MW-5 and MW-11 were within the impact zone. The evidence suggests: Dissolved oxygen levels are depressed in the source zone and recover in downgradient wells. ORP readings support depletion of electron acceptors in the source zone, as compared to upgradient background. Nitrate concentrations are depleted in the source zone, as compared to upgradient and downgradient(nitrate-reducing activity). Concentrations of dissolved manganese increases in the source zone(manganese-reducing activity). Concentrations of ferrous iron increases in the source zone(iron-reducing activity). Concentrations of sulfate are depleted in the source zone(sulfate-reducing activity). Highly elevated concentrations of dissolved methane in the impacted zone indicate methanogenic biological activity. Introduction of exogenous nitrate and sulfate solutions (by injection into existing wells), will provide for additional electron acceptors to increase the rate of biodegradation. 3/22/05 Approved RAP which is to be implemented by 7/21/05. Delta to submit workplan outlining specific application of nitrate and sulfate solutions with regard to quantity, conc, and rate of injection in addition to OMMP. 4/27/05 Portfolio meeting- Injection workplan to be submitted 6/05, O&M 7/05, RAP implementation by 9/05. 7/15/05 4Q04- DTW 5 to 7'bgs, northeast. No LNAPL present. BTEX from ND(MW-6,7,14,15,16) to 51170ppb(MW-13). MTBE from

ND(MW-6,7,13,14,16) to 3170ppb(MW-9). 11/8/05: Reviewed quarterly report dated October 27, 2005. Twelve of 16 wells were sampled on January 27, 2005. No free product. Max BTEX is 8,950 ppb (MW12), max MTBE 702ppb (MW12). Contamination in all on-site wells. Increased BTEX concentration in MWs-2,12,& 17. 11/25/05 2Q05 - Fifteen wells sampled on 4/29/05. Max BTEX 66,750 (MW13), max MTBE 1,210 (MW10). Fluctuating contaminant trends. 3Q05 - DTW 6.10-7.66' bgs. BTEX from ND(MW-6,7,14,15) to 58980ppb(MW-13). MTBE from ND(MW-6,7,14) to 1000ppb(MW-10). 3/3/06 All 16 wells sampled 10/20/05. MW-8 was paved over. DTW 5.36-7.79' bgs. No LNAPL present. BTEX from ND(MW-6,7,14,15) to 23770ppb(MW-13). MTBE from ND(MW-6,7,14) to 816ppb(MW-9). Off-site wells are non-detect. Evaluating biostimulation as remedial strategy. 3/16/06 Meeting held with BP and Delta. K. Endriss of BP was questioning biostimulation as a strategy. There will be an internal review prior to submitting RAP and OM&M Plan. 6/8/2006 - Feng - project reassigned to RJJFeng. (RJJF) 9/22/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 8/17/2006, by Delta. Groundwater sampling and gauging on 1/30/2006. 14 of the 16 monitoring wells were sampled. MW-6 was not sampled due to an obstruction. MW-16 was not sampled due to an insufficient volume of water in the well. Groundwater flows to east at the depth of 5.37' to 7.67' bg. MW-1, 128.6 ppb BTEX, 7.5 ppb MTBE. MW-2, 8,513 ppb BTEX (381 ppb B, 2,670 ppb T, 382 ppb E, 5,080 ppb X), 63.6 ppb MTBE. MW-3, 4,239 ppb BTEX (3,790 ppb B, 102 ppb T, 48 ppb E, 299 ppb X), 591 ppb MTBE. MW-4, 232 ppb BTEX, 13.6 ppb MTBE. MW-5, 2,801 ppb BTEX, 57.2 ppb MTBE. MW-7, ND. MW-9, 974.8 ppb BTEX, 2,270 ppb MTBE. MW-10, 263.6 ppb BTEX, 163 ppb MTBE. MW-11, 8,220 ppb BTEX (1,920 ppb B, 1,300 ppb T, 1,330 ppb E, 3,670 ppb X), 788 ppb MTBE. MW-12, 4,933 ppb BTEX (1,780 ppb B, 480 ppb T, 573 ppb E, 2,100 ppb X), 39.2 ppb MTBE. MW-13, 15,550 ppb BTEX (4,200 ppb B, 5,040 ppb T, 1,190 ppb E, 5,120 ppb X), 67.8 ppb MTBE. MW-14, ND. MW-15, ND. MW-17, 974.2 ppb BTEX, 43.1 ppb MTBE. (RJJF) 9/28/2006 - Feng - Portfolio meeting with BP and Delta. RAP plan changed. Delta began engineering design/construction of the automatic bio-stimulation system. Sulfate injection plan and O&M plan will be submitted. Sulfate concentration will be monitored downgradient which should not exceed the groundwater standard. (RJJF) 12/6/2006 - Feng - Quarterly Monitoring Report, 2Q2006, 11/27/2006, by Delta. Groundwater sampled and gauged 5/5/2006. 14 of 16 monitoring wells were sampled. MW-6 was not sampled due to an obstruction. MW-16 was not sampled due to insufficient volume of water in the well. DTW 4.9' to 7.24'. Flows northeast. No LNAPL. BTEX range ND to 45,980 ppb (MW-13). MTBE range ND to 2,660 ppb (MW-9). (RJJF) 6/12/2007 - Feng - Quarterly Monitoring Report, 3Q2006, 1/29/2007. Groundwater sampled 7/24/2006. 14/16 monitoring wells were sampled. DTW 5.52' to 7.21' bg. No LNAPL. Flows to northeast. MW-1, 88.3 ppb BTEX, 7.9 ppb MTBE. MW-2, 6,765 ppb BTEX, 30 ppb MTBE. MW-3, 4,027 ppb BTEX, 198 ppb MTBE. MW-4, 104 ppb BTEX, 8.5 ppb MTBE. MW-5, 980 ppb BTEX, 29.3 ppb MTBE. MW-6, not accessible. MW-7, ND. MW-9, 589 ppb BTEX, 434 ppb MTBE. MW-10, 159 ppb BTEX, 124 ppb MTBE. MW-11, 3,506 ppb BTEX, 163 ppb MTBE. MW-12, 4,550 ppb BTEX, 50.4 ppb MTBE. MW-13, 23,940 ppb BTEX, 34.2 ppb MTBE. MW-14 and MW-15, ND. MW-16, not enough water. MW-17, 807 ppb BTEX, 44.2 ppb MTBE. (RJJF) 7/24/2007 - Feng - 4Q2006, 4/30/2007. Groundwater sampled 10/30/2006. 12/15 monitoring wells were sampled. DTW 5.79' to 7.21' bg. Flows to northeast. LNAPL in MW-13 (0.05'). MW-1, 132 ppb BTEX, 4.8 ppb MTBE. MW-2, 28,400 ppb BTEX, 27 ppb MTBE. MW-3, 3,627 ppb BTEX, 253 ppb MTBE. MW-4, 203 ppb BTEX, 5.1 ppb MTBE. MW-5, 707 ppb BTEX, 7.7 ppb MTBE. MW-6, not

accessible. MW-7, 209 ppb BTEX, 14.3 ppb MTBE. MW-9, 358 ppb BTEX, 139 ppb MTBE. MW-11, 264 ppb BTEX, 112 ppb MTBE. MW-12, 5,312 ppb BTEX, 496 ppb MTBE. MW-13, 762 ppb BTEX, 53.8 ppb MTBE. MW-14, MW-15, ND. MW-16 and MW-17, not accessible. 1Q2007, 5/7/2007. Groundwater sampled 1/5/2007. 15/16 monitoring wells were sampled. DTW 5.71' to 8.98' bg. Flows to northeast. No LNAPL. MW-1, 161 ppb BTEX, 4.4 ppb MTBE. MW-2, 29,260 ppb BTEX, 19.8 ppb MTBE. MW-3, 149 ppb BTEX, 639 ppb MTBE. MW-4, 277.5 ppb BTEX, 6.1 ppb MTBE. MW-5, 2,013 ppb BTEX, 20.1 ppb MTBE. MW-6, not accessible. MW-7, Nd. MW-9, 837 ppb BTEX, 285 ppb MTBE. MW-10, 2.51 ppb BTEX, 108 ppb MTBE. MW-11, 4,532 ppb BTEX, 330 ppb MTBE. MW-12, 24,563 ppb BTEX, 1,200 ppb MTBE. MW-13, 2,935 ppb BTEX, 23.8 ppb MTBE. MW-14, MW-15 and MW-16, ND. MW-17, 1,428 ppb BTEX, 24 ppb MTBE. (RJF) 12/12/2007 - Feng - 2Q2007, 8/30/2007. Active Service Station. The monitoring well network was gauged and sampled on 4/4/2007. 15/16 monitoring wells were gauged. DTW 5.31' to 6.81' bg. Flows to northeast. No LNAPL. 14/16 monitoring wells were sampled. BTEX range ND to 12,400 ppb (MW-11). MTBE range ND to 671 ppb (MW-9). (RJF) 1/8/2008 - Feng - 3Q2007, 11/5/2007. Active Service Station. The monitoring well network was gauged and sampled on 7/13/2007. 12/16 monitoring wells were gauged. DTW 5.64' to 7.91' bg. Flows to northeast. No LNAPL. 12 monitoring wells were sampled. BTEX range ND to 40,760 ppb (MW-13). MTBE range ND to 2,040 ppb (MW-3). (RJF) 2/13/2008 - Feng - 4Q2007, 11/19/2007. Active service station. the monitoring well network was gauged and sampled on 10/3/2007. 14/16 monitoring wells were gauged. DTW 6.51' to 7.87' bg. Flows to northeast. No LNAPL. 13 monitoring wells were sampled. BTEX range ND to 8,190 ppb (MW-11). MTBE range ND to 249 ppb (MW-3). (RJF) 3/20/2008 - Feng - Email to K. Endriss (BP) for the status of biostimulation/sulfate solution injection. (RJF) 6/16/2008 - Feng - 1Q2008, 2/15/2008. Active service station. The monitoring well network was gauged and sampled on January 21, 2008. 12 monitoring wells. DTW 5.72' to 7.39' bg. Flows to northeast. No LNAPL. BTEX range ND to 29,200 ppb (MW-13). MTBE range N Dto 470 ppb (MW-3). (RJF) 8/26/2008 - Reviewed the Work Plan Addendum Bio-Stimulation Remediation Pilot Study, dated July 29, 2008, by Delta. The work proposed in this work plan was originally proposed in the approved RAP dated 1/13/2005. A pilot study will be performed to address DEC's concern regarding the application of elevated sulfate concentrations. 784 lbs of magnesium sulfate will be mixed with 1,000 gallons of tap water (75,000 mg/L) will be added into MW-1 by gravity. DTW of all monitoring wells will gauged immediately after the application. Gauging and sampling of the wells will be performed the day after the application and then on weekly basis for 12 weeks. (RJF) 9/12/2008 - Comments on the Work Plan Addendum Bio-Stimulation Remediation Pilot Study were provided to Delta. 11/10/2008 - 2Q2008, 8/7/2008, by Delta. Active Service station. the monitoring well network was gauged and sampled on 4/25/2008. 14 wells were gauged. No LNAPL. DTW 6.01' to 7.60' bg. Flows to northeast. MW-6 and MW-7 were not found and not gauged. 13 wells were sampled. MW-16 didn't have sufficient volume for sampling. BTEX range ND to 29,100 ug/L (MW-13). MTBE range ND to 1,000 ug/L (MW-9). 10/28/2008 - 3Q2008, 9/29/2008, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on 7/14/2008. 14 wells were gauged. No LNAPL. DTW 5.90' to 7.72' bg. Flows to northeast. 13 wells were sampled. MW-6 and MW-7 couldn't be located. MW-16 has insufficient sample volume. Max benzene 4,500 ug/L (MW-13). Max BTEX 26,200 ug/L (MW-13). Max MTBE 650 ug/L (MW-9). (RJF) 3/4/2009 - 4Q2008, 1/5/2009, by EnviroTrac.

Active BP Service Station. The monitoring well network was gauged and sampled on 10/2/008. 14 wells were gauged. NO LNAPL. DTW 5.75' to 8.25' bg. Flows to northeast. 13 wells were sampled. 3 wells were not sampled, MW-6 and MW-7 were paved over and MW-16 was dry. Max benzene 2,500 ug/L (MW-13). Max BTEX 13,970 ug/L (MW-13). Max MTBE 410 ug/L (MW-9). (RJF) 5/21/2009 - Reviewed Drilling Work Plan, dated 3/31/2009, by Delta. Delta is installing 2 monitoring wells at the site. Proposed MW-18 will be in downgradient instead replacing the two wells across street. Work plan is approved. SHARA due within 90 days, August 21, 2009. (RJF) 1/8/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated 10/16/2009, by Delta. Between June 18 and June 19, 2009, EnviroTrac, on behalf of Atlantic Richfield, advanced two soil borings (MW-18 and MW-19) to 12 feet and 15 feet respectively, using Geoprobe 6620 hollow stem auger and direct push, macro-core sampling unit. 2 soil samples were collected. MW-19 (6-6.5'), NO PID, VOCs ND. MW-19 (14.5-15'), NO PID, VOCs ND. On July 13, 2009, all the wells were gauged and sampled. DTW 5.89' (MW-13) to 7.46' (MW-16). BTEX range ND to 3,450 ug/L (MW-13). MTBE range ND to 470 ug/L (MW-9). MW-18, VOCs ND. MW-19, 0.61 ug/L benzene, 0.61 ug/L total VOCs. The sulfate injection pilot is scheduled for October 21, 22, 2009, and will have a 12-week monitoring plan. (RJF) 6/9/2010 - 4Q2009, 1/17/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 10/6/2009. 16 wells were gauged. NO LNAPL. DTW 6.22 - 7.58' bg. Flows to northeast. 15 wells were sampled. MW-16 with insufficient water, not sampled. Max benzene 2,600 ug/L (MW-11). Max BTEX 4,280 ug/L (MW-11). Max MTBE 280 ug/L (MW-3). 1Q2010, 4/9/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 1/15/2010. 16 monitoring wells were gauged. NO LNAPL. DTW 6.19 - 7.92' bg. Flows to northeast. 15 wells were sampled. MW-16 with insufficient water, not sampled. Max benzene 3,900 ug/L (MW-3). Max BTEX 5,160 ug/L (MW-11). Max MTBE 810 ug/L (MW-3). 2Q2010, 5/19/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 4/9/2010. 16 wells were gauged. NO LNAPL. DTW 5.59 - 7.33' bg. Flows to northeast. 15 wells were sampled. MW-16 not enough water, not sampled. Max benzene 3,900 ug/L (MW-13). Max BTEX 21,780 ug/L (MW-13). Max MTBE 530 ug/L (MW-3). 6/21/2010 - Enhanced Bioremediation Pilot Summary and Full Scale Application Work Plan, dated 4/1/2010, by Delta. On 10/20/2009, pre-application groundwater monitoring including gauging for DTW, well depth, sampling for BTEX, MTBE, sulfate and sulfide. On 10/21, 22/2009, a 1,000 gallon of 28,000 mg/L sulfate solution was added to MW-1. Post-application groundwater monitoring for sulfate and sulfide was conducted, 10/23, 11/4, 11/12, 11/20, 11/24, 12/4, 12/11, 12/16, 12/22, 12/29/2009, 1/15/2010 and 2/19/2010. Some orders of magnitude of sulfate was detected in MW-2, MW-4, MW-12 and MW-13. The concentration of sulfate up to 27,000 mg/L was dissipated in MW-1 within 120 days. Delta proposes to apply full scale, adding 500 gallon MgSO₄ at 28,000 mg/L into MW-1, MW-3, MW-5 and MW-13 for 12 events in 36 months, namely quarterly application. Gauging and monthly sampling will be conducted. Reviewed the quarterly report. comments to Delta. MW-2, MW-4, MW-12 and MW-13 seem not show effectiveness on remediating the dissolved as the BTEX/MTBE concentration is still remaining the similar level after the pilot application. And question if sulfate addition is still an appropriate remedy. 6/28/2010 - approve the full scale application work plan, dated 4/1/2010. The work plan implementation and results shall be included in the quarterlys, and a report summarize the remedy shall

MW-17, 638 BTEX, less than 2.5 MTBE. 3/29/2013 - 4Q2012, 12/27/2012, by Antea Group. The groundwater was sampled on 10/26/2012. The next sampling will be in 1/2013. MW-2, 5,750 BTEX, 6.1 MTBE. MW-3, 435 BTEX, 150 MTBE. MW-4, 105 BTEX, 12 MTBE. MW-5, 663 BTEX, less than 0.5 MTBE. MW-9, 1,008 BTEX, 240 MTBE. MW-10, 1,598 BTEX, 87 MTBE. MW-11, 31.2 BTEX, 2.1 MTBE. MW-12, 516 BTEX, less than 2.5 MTBE. MW-13, 13,960 BTEX, less than 5.0 MTBE. MW-15, 3.0 BTEX, 10 MTBE. 9/30/2013 - 1Q2013, 3/29/2013, by Antea Group. The groundwater sample was collected on 1/23/2013. MW-2, 3,780 BTEX. MW-3, 348 BTEX, 190 MTBE. MW-4, 121 BTEX, 14 MTBE. MW-5, 1,790 BTEX. MW-9, 1,115 BTEX, 200 MTBE. MW-10, 30 BTEX, 45 MTBE. MW-11, 104 BTEX, 11 MTBE. MW-12, 1,691 BTEX. MW-13, 5,970 BTEX. 2Q2013, 6/28/2013, by Antea Group. The groundwater was sampled on 4/10/2013. MW-2, 4,420 BTEX. MW-3, 768 BTEX, 150 MTBE. MW-4, 94.7 BTEX, 10 MTBE. MW-5, 2,140 BTEX. MW-9, 1,107 BTEX, 1,100 MTBE. MW-10, 9.6 BTEX, 37 MTBE. MW-11, 497 BTEX, 16 MTBE. MW-12, 1,960 BTEX, 5.2 MTBE. MW-13, 3,360 BTEX. Bioremediation Workplan Updates, 5/28/2013, by Antea Group. The workplan updates was submitted to BP. Antea Group proposed to ease the application of sulfate solution. The sampling data show the sulfate concentration has increased and should promote the bioremediation. And the trend of BTEX and MTBE have also shown decreasing during the same timeframe as the supplemental sulfate

solution were introduced which is an indication of bioremediation occurring. 12/5/13-Vought- Meeting with RSE, DEC John, DEC Hussein, DEC Ketani and Vought sent email: Dear Mr. Onufrak, The New York State Department of Environmental Conservation (the Department) is sending this email to confirm the conversation between yourself, myself and Randy Austin today. BP Amoco will be calling out a contractor to vacuum out well BMW-11 adjacent to the Former Pfizer property at 630 Flushing Avenue and across from the BP Amoco located at 655 Flushing Avenue. The VEFR event on well BMW-11 will occur no later than COB, tomorrow Friday, December 6, 2013. The Department made notification of this discovery to you as a representative of BP Amoco to ensure that if it is determined that the product originated from the BP Amoco site, that BP Amoco has the opportunity to remedy the problem before the Department mobilizes a contractor using the New York State Spill Fund. The contact for the Pfizer property is Mr. Mathew Basso and he can be reached at 908-901-7096. Please contact Randy Austin at 718-482-4929 or June Feng at x4988 if you have any questions as I will be on vacation starting tomorrow. We look forward to your response confirming the above as well as meeting with you and Antea Group to discuss the data for both sites after it has been reviewed by all parties. Vought received reply from Nick that Nick, Thanks again for your cooperation on this one. Please submit the FOIL Request for the Pfizer site through June so that she may expedite it and we can all discuss. Vought sent reply that Nick, Thanks again for your cooperation on this one. Please submit the FOIL Request for the Pfizer site through June so that she may expedite it and we can all discuss. 12/6/13-Vought-Received copy of email from Antea (Meyer) that Hello, Antea Group, on behalf of BP, dispatched a vac truck this morning to evacuate the well in question. They are leaving the site now. This morning, there was approximately one gallon of NAPL present in the well. We proceeded to extract a sample, which will be sent for forensics analysis. Over the course of 6-hour event, approximately 637 gallons of water were removed from the well. There was no measurable NAPL thickness observed in the ~2,000 capacity tank on the truck. There was no NAPL present in the well upon departure. We ll be in contact with June regarding an updated FOIA request. Thank you. Chris . DEC Austin sent email that Thanks, Chris, for your report. We appreciate the actions taken by BP Amoco in this matter, and we will now address the origin of that petroleum product in well BMW-11. The DEC project managers handling these two adjoining site remediation projects will review the data available for both locations, and we will then develop a course action from there. Antea (Meyer) sent email to DEC Feng that Hello June, Attached is a copy of the FOIA request we've been submitting monthly. Other than an updated spill report (attached) we haven't received any deliverables....while we assumed that meant there was no new information, these recent events might suggest otherwise. Can you provide any new information? Thank you. Chris 12/18/13-Vought-Vought sent email inquiry to Meyer as to when forensic results of samples will be received. Voutht also sent email to Meyer that Chris, I am going to field this one while June is out on sick. I noted a large amount of documents in our files and want to be sure that you have them all. I am needing a bit more clarification on what documents you have already or the date of the original FOIA request (so that I can send you the new info, if any). Feel free to call me on my cell at 917-577-1728 as well. Vought also sent email to all parties that I thought to send an email so that I may keep everyone informed (including both BP and their consultant,

AMOCO (Continued)

S105141059

Antea Group copied above). June has been out on extended sick leave from the office and will hopefully be returning on 12/23. As she is the BP portfolio manager, she will have to review both the BP Amoco file at 655 Flushing Avenue as well as the Pfizer file at 630 Flushing Avenue for concurrence with Raphael's and Pfizer's findings. BP and Antea based on recent activities have submitted a FOIL request to June to obtain and review the files as well so that we may open up an constructive conversation based on real data and they may respond cooperatively, if need be. I will see to completion of this FOIL Request today and respond back to Antea so that they may begin review. As soon as June completes her review (and initial discussion of her findings with Randy and I) we will then discuss internally to the Region (eg with you, Raphael and Hassan) before possibly approaching BP with investigatory requirements on the Pfizer property. If Raphael thinks it appropriate, he is free to forward this email to Roux as well so that they may be informed. Thanks everyone for their patience. Vought called and spoke to Meyer after Meyer resent list of documents he already had. Meyer also noted that there was multiple feet of product in well which was calculated to a approximately one gallon volume recovered. Meyer also noted that since 2004 BP was adding a marker to their product and as such the product sample was not sent for fingerprinting but for identification of the Marker. Meyer acknowledged that even if Marker was not present that product could be from a spill prior to 2004 (Spill was reported in 2001). 12/20/13-Vought-Prepared CD with FOIL file updates for Meyer and left with DEC Silva under FOIL #R2-13-3589. Vought cc'd all parties on email with same info as well. DEC Requires:
1)Fingerprinting results of product. 2/6/2014 - reviewed Investigation Work Plan, dated 2/4/2014, by Antea Group. Proposed to install 4 monitoring wells, i.e. one monitoring well in the west sidewalk of Harrison Ave, one monitoring well in the north sidewalk of Flushing Ave, one monitoring well in the south sidewalk of Bartlett Street, and one monitoring well in the south sidewalk of Flushing Ave. The work plan also proposed to start monthly gauging BMW-11 to determine if NAPL is present. The work plan is approved. Letter to BP and copied Antea, Roux, and Pfizer. 11/19/2014 - 4Q2014, 11/17/2014, by Antea Group. Groundwater was sampled 10/9/2014. MW-11, 1,165 BTEX. MW-10, 747 BTEX. MW-12, 1,670 BTEX. B-103, 23 MTBE. MW-13, 4,900 BTEX. B-104, 399 BTEX. B-102, 1,196 BTEX, 110 MTBE. MW-5, 720 BTEX, 16 MTBE. MW-17, 375 BTEX. MW-16, 535 BTEX, 400 MTBE. MW-3, 1,553 BTEX. MW-2, 0.03 feet LNAPL. In the email from Chris Meyer of Antea Group In sending this to you, I thought it worth following up on our August request to abandon the well that Pfizer installed, as well as our additional deep aquifer delineation wells. That report explained how the LNAPL observed in BMW-11 is not an indication of a larger issue and that the overall sustained recoverability of that material is negligible. 4/1/2015 - Reviewed Subsurface Investigation Report, dated 8/14/2014. BP installed four (4) deep monitoring wells around their station site and started monitoring. BP submitted the investigation report and requested to abandon the four deep wells (MW-101/B-101 to MW-104/B-104) they installed and the deep wells (BMW-11) that Pfizer installed based on their investigation and mainly modeling. Utilizing the models, BP/Antea Group ESTIMATED the Oil Specific Volume (OSV) in the four deep wells, i.e. B-101 (0.0003), B-102 (0.019), B-103 (0.04) and B-104 (0.004) and extends or infer that results through the entire smear zone which conclude that there is no recoverable LNAPL on a

AMOCO (Continued)

S105141059

sustainable basis. The potential LNAPL migration velocity remain low even in maximum LNAPL saturation, i.e. 1.81×10^{-3} feet/year in B-103, but still below the suggested remediation metric. A baildown test was done on BMW-11 when thickness of LNAPL was 5.04 feet on 6/2/2014 and found extremely low LNAPL recharge rate as their gauging data shows. The LNAPL came back to 1.41 feet in 9/22/2014 gauging event and now 3 feet as of 2/2015. The LNAPL transmissivity was estimated to be 0.009 feet²/day which below the range of LNAPL transmissivity (0.1 to 0.8 feet²/day) suggested as the lower limit for LNAPL removal using hydraulic or pneumatic recovery system and that a sustainable LNAPL yield from BMW-11 is unrealistic. In the Technical Memorandum (App. F), the technician provided that a passive skimmer pump might recover 1.5 gallons (9.5% of the LNAPL within the capture zone) over 3 years of operation, and a skimmer pump with groundwater pumpage might recover 73 gallons (50% of LNAPL within the capture zone) over 3 years of operation. But in the Future Plan part, they stated LNAPL in BMW-11 is not migrating or recoverable due to limiting characteristics supported by the transmissivity and LDRM recovery simulations. And they requested to abandon these wells. 4/13/2015 - email to Central Office Bill Ottaway for technical support and advice on the abandonment of BMW-11. Attached with the email the summary of spill history. 7/23/2015 - email to Chris Meyer of Antea Group We have discussed this site with the Bureau of Technical Support (BTS) in Central Office regarding BP's request to abandon monitoring well BMW-11 which was installed by Pfizer as part of their own spill investigation. BMW-11 showed the presence of LNAPL up to 7 feet and it is still 3 feet at this time. As discussed, despite the estimated/calculated transmissivity, we cannot ignore the fact that the LNAPL continues come into the monitoring well. Once the LNAPL is in the well, it is considered feasible to be recovered. We also discussed that the transmissivity could be used as tool, but should not represent the ultimate rationale and worthiness in determining the implementability of the remedy. Low transmissivity makes conventional mechanical recovery (pumps, vacuum) less efficient or practical but does not mean that there are no other recovery options. We recommend that BP try passive recovery methods, such as bailing, absorbent socks, or well skimmers on regular basis. According to the boring log of BMW-11, the well screen is approximately 7 feet below water table which also raises the question of how the LNAPL is entering the well. There is a need to understand where the LNAPL is flowing relative to the lithology. We also discussed with BTS how further delineation might eventually be required in the Pfizer parking lot and the sidewalk to delineate the extent of the LNAPL. For the large spill on-site at the BP Station, further remediation shall be required. Soil vapor extraction or soil vapor venting were suggested by BTS for an on-site remedy. BTS also noted these methods will encourage air movement in the soil which may recover the residual contamination and may also bring on-site product into the wells so that it may become feasible to be recovered. If you would like to discuss, please let us know as always. 9/30/2015 - 2Q2015, 6/22/2015. Groundwater was sampled on 4/21/2015. MW-2, 11,020 BTEX. MW-3, 2,279 BTEX, 100 MTBE. MW-4, 366 BTEX. MW-5, 1,353 BTEX, 51 MTBE. MW-9, 436 BTEX, 200 MTBE. MW-10, 227 BTEX. MW-11, 4,390 BTEX. MW-12, 3,730 BTEX. MW-13, 8,630 BTEX. MW-17, 2,330 BTEX, 160 MTBE. 3Q2015, 9/30/2015. Groundwater was sampled on 7/22/2015. Beginning 8/17/2015, BP has initiated monthly gauging of well BMW-11 and monthly LNAPL recovery in BMW-11 via low-flow pumping and hand

MW-17, 656 BTEX, 32 MTBE. 3Q2016, 9/2/2016. Monitoring on 7/12/2016. MW-3, 1,403 BTEX, 75 MTBE. MW-4, 232 BTEX. MW-5, 764 BTEX, 36 MTBE. MW-9, 149 BTEX, 49 MTBE. MW-10, 238 BTEX, 6 MTBE. MW-11, 2,459 BTEX. MW-12, 1,257 BTEX. MW-13, 9,010 BTEX. MW-17, 805 BTEX, 33 MTBE. BMW-11, No Product. 12/22/2016 - 4Q2016, 12/22/2016. Monitoring on 10/24/2016. MW-2, not sampled, sock present. MW-3, 1,024 BTEX, 40 MTBE. MW-4, 163 BTEX. MW-5, 617 BTEX, 33 MTBE. MW-9, 98.6 BTEX, 51 MTBE. MW-10, 229 BTEX. MW-11, 1,897 BTEX. MW-12, 505 BTEX. MW-13, 3,490 BTEX. MW-17, 264 BTEX, 21 MTBE. BMW-11, LNAPL 0.42', recovered 0.5 gallon. 5/4/2017 - Feng - 1Q2017, 3/31/2017. Monitoring on 1/5/2017. BMW-11, no product, total recovered 4.30 gallons to date. MW-2, not sampled, sock in well. MW-3, 1,928 BTEX, 54 MTBE. MW-4, 190 BTEX. MW-5, 821 BTEX, 20 MTBE. MW-9, 274 BTEX, 96 MTBE. MW-10, 79.8 BTEX. MW-11, 2,660 BTEX. MW-12, 487 BTEX. MW-13, 3,670 BTEX. MW-17, 464 BTEX, 21 MTBE. 5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey Vought. 8/3/17-Vought-Received email from Antea(Meyer) dated 6/9/17 that Jeff, I've attached our proposed remedial action plan for the above-referenced site. We'll need agency approval in order to obtain the permits required to drill in the sidewalk. If you have any questions or would like to discuss, please let me know. Have a great weekend. Vought added attached RAWP to D2 and reviewed: Remedial Action Work Plan - In Situ Activated Carbon Product Application (Antea)-6/9/17. RAWP contains review of site history and contaminant distribution, review of historical remedial activities, evaluation of MNA and ISCO injection, and a proposal for carbon injection. The subject site is located in an urban area characterized by commercial properties and mixed residential/retail development. Adjacent to and northwest of the subject site, across Bartlett Street, are commercial/residential office buildings. The former Children Charter School, now vacant, is located to the west of the subject site. Adjacent to and northeast of the subject site, across Harrison Avenue, are a vacant lot and multi-story residential

EDR ID Number
EPA ID Number

AMOCO (Continued)

S105141059

buildings with first floor retail. Adjacent to the south of the subject site, across Flushing Avenue, are additional vacant commercial buildings. Sensitive receptor survey performed and The closest hydraulically down gradient basement property is a mixed-use, residential/retail building located approximately 60 ft northeast of the subject site, across Harrison Avenue . Groundwater is 5-8'bg and flows in an east-northeasterly direction as well as in a westerly direction . Of note, a silt/clay lens extends under the subject and surrounding properties, ranging in depth from approximately 5 to 20 feet bgs, and appears continuous throughout the subject site and surrounding areas. Total of twenty three monitoring wells installed at site. Site history includes: product recovery system from 1985 to 1990 with removal of approximately 3000-gallons of LNAPL, site raise and rebuild in 1990 with removal of old tanks and replacement with new tanks; manual baling from 1990-1995; delineation across Bartlett street with no recorded impact; LNAPL was last detected in TW-1 in January 2002. In accordance with the off-site investigation completed in May 2014, Antea Group has conducted deep aquifer assessment and sampling, including monthly gauging of the off-site Pfizer well, BMW-11. The investigation results previously summarized in the Investigation Summary Report, dated August 14, 2014, indicated an absence of a LNAPL pathway between BMW-11 and the gas station across Flushing Avenue. LNAPL has been observed in BMW- 11 consistently since gauging was initiated in February 2014. The persistence of LNAPL in BMW-11 indicates the LNAPL is associated with a historical spill unrelated to the subject property. Therefore, Antea Group has submitted requests in Ground Water Monitoring Reports submitted to the NYSDEC for the subject site dated November 17, 2014, March 31, 2015 and June 22, 2015 to discontinue monthly gauging of BMW-11 and abandon the deep aquifer wells. The contamination found in BMW-11 is not related to contamination found at the BP property, as reported in the Investigation Summary Report. All historical groundwater analytical data is presented in Table 1. Since April 2015, monitoring wells MWB-101, MWB-102, MWB-103, and MWB-104 have been eliminated from the monitoring well network. Additional details of this investigation were previously reported in the Investigation Summary Report, dated August 14, 2014. In April 1985, a product recovery system, consisting of a groundwater depression pump and product scavenger (skimmer) pump in a single recovery well, a 550-gallon oil water separator, and a 550-gallon UST for recovered product, was installed and activated. To enhance the remediation system five ejector pumps were installed at various times in monitoring wells MW-1, MW-2, MW-3, MW-6, MW-8, and MW-9 to increase product recovery from the site. The product recovery system operated until the summer of 1990, at which time the site was razed and rebuilt. Approximately 3,000 gallons of LNAPL were removed by the recovery system. A total of seven full-scale biostimulation events were completed between May 2011 and December 2012. The events consisted of 2,000 gallon injections of 28,000 mg/L sodium sulfate solution into four injection wells, followed by consistent monitoring events post application. Each event included 28,000 mg/L of sulfate solution [2,000 gallons of a sulfate solution, 500 gallons per well per application] gravity fed into monitoring wells MW-1, MW-3, MW-5, and MW-13. On December 6, 2013, an emergency VEFR event was conducted in response to a NYSDEC request for LNAPL removal from third party monitoring well BMW-11, located in the southern sidewalk along Flushing Avenue adjacent to the Former Pfizer building located at 630 Flushing Avenue, across

Map ID

EPA ID Number

AMOCO (Continued)

S105141059

from the subject site. Initial gauging of monitoring well BMW-11 identified 6.53 ft of product. Post event gauging identified no product remained in the well following the VEFR event. A total of 637 gallons of liquid was recovered during this event, including approximately 1.06 gallons of product. The product accumulating in BMW-11 has periodically been removed from the well by utilizing a peristaltic pump, drummed on-site and disposed of at a treatment facility off-site. The NAPL present in well BMW-11 is currently being addressed via a petroleum-absorbent sock in the well which is inspected on a monthly basis, periodically removed from the well once fully saturated, and replaced. The saturated socks are drummed on-site and disposed of at a treatment facility off-site. The Investigation Summary Report, dated August 14, 2014, summarized an absence of a LNAPL pathway between BMW-11 and the gas station across Flushing Avenue. Therefore, the persistence of LNAPL in BMW-11 is associated with a historical spill unrelated to the subject property. Based on this information, the focus of this Remedial Action Work Plan is limited to on-site soil and ground water impacts only. LNAPL measurements have been monitored in on-site monitoring well MW-2 since July 2014 and reported to the NYSDEC as part of the ongoing quarterly groundwater monitoring program for the subject site. During this time frame, LNAPL thicknesses have ranged between zero and 0.03 ft. The LNAPL is removed from MW-2 by a petroleum absorbent sock which is installed in the well, inspected on a monthly basis, periodically removed from the well once fully saturated, and replaced. The saturated socks are drummed on-site and disposed of at a treatment facility offsite. Contains proposal for 8,250 pounds of activated carbon product and 5,250 gallons of water will be mixed on-site 8/3/17-Vought-Sent email to Meyer/Onufrak that Gentlemen, I must admit I was bit overzealous in my consideration of closure of the above site as I did not recall the product in BMW11 which was noted in the text of the RAWP as I went straight to the tables in the back of the Plan. I am thinking we should discuss the site at our quarterly next week and that the carbon application is not needed at the site, however, the free product in BMW-11 is certainly a continued concern. I recall an email from our DEC Central Office Bureau of Technical Services in July of 2015 that noted As discussed, despite the estimated/calculated transmissivity, we cannot ignore the fact that the LNAPL continues come into the monitoring well. Once the LNAPL is in the well, it is considered feasible to be recovered. We also discussed that the transmissivity could be used as tool, but should not represent the ultimate rationale and worthiness in determining the implementability of the remedy. Low transmissivity makes conventional mechanical recovery (pumps, vacuum) less efficient or practical but does not mean that there are no other recovery options. We recommend that BP try passive recovery methods, such as bailing, absorbent socks, or well skimmers on regular basis. We should focus on whether passive recovery methods are feasible at this point and a key piece of information that is needed is the current product thickness at BMW-11. It would be great to have this information before our discussion on Tuesday. Sorry for jumping to conclusions gentlemen and on to 1128 East Gunhill Road . 8/4/17-Vought-Sent email to Meyer/Onufrak that Gentlemen, After further review I would hold on going out to MW-11 before our meeting as sock removal and product measurement, after allowing time for equilibrium to be reached, is also necessary on MW-2. We can discuss further next Tuesday. Chris, I did not realize you were on vacation

and thanks for taking my call yesterday on your time off. Enjoy!
8/8/17-Vought-BP Quaterly Review Meeting - Vought/Meyer/Onufrak.
Antea will remove socks from MW-2 and BMW-11 and allow time for
stabilization followed by well monitoring and submission of results.
Product trends on BMW-11 show decreasing product thicknesses and were
most recently 0.3 feet thick. DEC Requires: 1)Removal of absorbent
socks from MW2 and BMW-11, allowance for time to stabilize and then
product monitoring and submission of results to DEC. 2)cc to Antea
(Meyer) 12/12/17 - Austin - Assigned from Vought to Feng - end
2/20/2018 - Feng - Skype meeting among BP Nick Onufrak, Antea Group
Chris Meyer and Glen Shrank, DEC Andre Obligado and June Feng. Antea
has removed the absorbent sock in BMW-11 and still found LNAPL of 0.5
feet after 30 days. DEC agreed no remediation needed for onsite, but
they need to remove the LNAPL in BMW-11 (at least or less than 0.1
feet) before spill could be closed. 4/24/2018 - Feng - 4Q2017,
2/26/2018. Monitoring on 12/5/2017. MW-2, 2,186 BTEX. MW-3, 1,154
BTEX, 21.8 MTBE. MW-4, 93.3 BTEX. 682.2 BTEX, 22 MTBE. MW-9, 1,684

S105141059

he will likely use ORC socks. 8/20/97 While on site to investigate optimal locations for additional MWs, Baltec located 4 existing tank mat wells. The wells were designated TW-1, TW-2, TW-3 and TW-4. 8/25/97 At this sampling event, it was determined that all tank mat wells required redevelopment. They contain approx 2' silt, which is likely clogging the screened interval creating lower hydraulic conductivity across screen. This may explain BTEX depression around TW-1 and TW-2. In order to further delineate the soil/GW quality across site and to obtain more accurate understanding of GW flow pathways, Baltec intends to install one additional onsite MW in the NE corner of the site. Baltec will also redevelop TW-1 through TW-4 during the 4th quarter. 10/20/97 Voicemail from K. Butler. Old MWs were damaged. Would like to install additional wells. 10/21/97 Installed one additional well on NE corner(Harrison St & Flushing Ave.). Noticed three more wells offsite (2 on sidewalk across street on Bartlett St and 1 across street on Flushing Ave.) Wells are fine, tied in and surveyed. GW flow direction is NE. 02/27/2003-AUSTIN As per directive to close out spills with no recent history,close out. 3/14/03 REASSIGNED FROM TOMASELLO TO VOUGHT. 12/3/03 Reassigned from Vought to Foley. See spill #0104597. "

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Spiller Phone: (718) 780-8686
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 244426
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 1/2/2004 Reassigned from Rommel to Sun. (Also refer to Spill # 93-03325 for this site) 07/08/04 This spill is closed. To be investigated and remediated under Spill #93-03325. 01/12/06-The spill is reopened since this spill was caused by gasoline, while Spill #93-03325 was caused by #6 fuel oil. 1/12/2006 - Feng - Called Pfizer Inc and spoke with Manuel Lopez (718-780-0947). He remembers that they have been sent the some report to DEC. He would contact his engineer and find the information DEC need and get back to DEC. (RJF) 1/12/2006 - Feng - Faxed the two spill report to Samantha Plourde (718-780-8380) and request to send 1) tank closure report, 2) any other site investigation/site assessment, to DEC. (RJF) 1/27/2006 - Feng - Reviewed the Tank Closure Report of 12/10/1999, sent on 1/20/2006 by Pfizer. These 6 USTs were discovered during pre-construction activities in the northwestern corner. The site was a former Texaco gasoline station some time in the 1940's. 6 USTs in the northwestern corner of the site were confirmed by the insurance maps. Pfizer registered and removed the USTs performed from 5/17/1999 to 9/30/1999. 6 soil boringw were done prior the removal activities. Analyticals show SB-6 (10'-12' bg) with high contamination, 840 ppb Toluene, 10,000 ppb Ethylbenzene, 51,800 ppb Xylene, 20,000 ppb 1,3,5-Trimethylbenzene, and 40,000 ppb 1,2,4-Trimethylbenzene. To further delineate the SB-6, SB-6A to SB-6E (12'-14')were drilled and sampled, lab result indicated low VOCs. And removed all the soil above the clay layer (12' bg plus 0.5'-1.0' of the clay). The tankks found no carcks or holes. After tank removal, precipitation occurred for several days and the rain water run into the excavation, water

removed and tested, found 6,047 ppb BTEX. All the piping associated with the USTs were removed. Soil removal extended to where the pre-UST removal soil samples contained concentration of VOCs below DEC STARS. Total of 286.18 tons of soil were removed. The report attached with lab analyticals sheet for soil sample, but not indicated the location of sample taken and not mentioned in the narrative text. Backfilled with clean sand and permanent asphalt pavement was placed on top. Requested spill closure. (RJF) 1/27/2006 - Feng - Send letter to Pfizer request of 1) groundwater sample in the vicinity of the former SB-6 boring location, 2) clarification of the soil sample presented in the lab report attached in App C. Result due 4/3/2006. Faxed to Scott Glash (Roux). (RJF) 02/09/06: This spill transferred from R.Feng to S.Kraszewski. 03/06/06: Received letter from Pfizer, dated March 2, 2006. Pfizer is requesting that the Department suspend the April 3rd deadline for the subsurface investigation. Pfizer believes that the Department is not familiar with all documentation related to this spill. Pfizer will collect and review all historic documentation and correspondence related to the closure and removal of the gasoline USTs. This information will be submitted to the DEC by March 15, 2006. Pfizer believes that based on the contents of this letter that an additional investigation will not be necessary. - SK 03/24/06: Received detailed summary of closure activities from Pfizer. Currently under review. - SK 03/27/06: Reviewed all documents for the UST closure. This additional information was sent in response to the DEC's request for a complete subsurface delineation both on-site and off-site. Pfizer believes that with the information supplied in this closure summary that there is no need for further investigation and NFA should be issued. Pfizer has also included documentation and explanations in response to R.Feng's letter issued January 2006 and previous DEC requests: No post-exc samples taken: Pfizer contests that retrieving samples would cause stockpiling of contaminated soil and leave the excavation open, which is a hazard. Instead, they conducted soil borings to eliminate the hazards associated with an open excavation. Furthermore, Pfizer feels that the soil borings properly delineated the horizontal extent of the contamination since they were conducted until no VOCs were detected by PID. Rainwater from the excavation was sampled and found to contain high levels of BTEX: It was a waste characterization sample, a composite from several sources. Pfizer states this water sample was mixture of rainwater from the USTs, the excavation and waste water used to clean each UST. A soil samples with highly elevated VOC concentrations was detected but it was not mentioned in the report summary nor is it given a location on the site plan: This sample was also a composite sample, collected from each UST. Sand material was discovered within the USTs and this sample was used to characterize the tank solids for proper disposal. It did not come from the excavation. R.Feng requests GW samples: Pfizer attached results from two GW samples taken from the former tank area in June 2004. The samples were taken from 8 to 10 fbg using low-flow purging techniques. Acetone was detected in both samples, a common laboratory contaminant. Naphthalene and Xylenes were detected but below GW standards. Boring logs, PID logs, information of perched GW and explanations of work methods are also included in response to a February 2000 letter from DEC to provide information for these shortcomings in the UST closure report from 1999. - SK 03/27/03: Called Manuel Lopez to ask about the report. He said it would be best to contact Omar at Roux & Associates. I called and left Omar

Remarks: (631-232-2600) a voicemail to call me back. - SK 03/28/06: Rob Kovacs for Roux and Associates called in place of Omar. I asked Rob about the clay layer and he said based on historic production wells used by Pfizer and Roux & Associates' experience with the surrounding area they have mapped out the extent of the clay layer. Rob is emailing me a map with the known extent of the clay layer. - SK 03/31/06: Received PDF of the geologic cross section for that area and an overhead map. After careful consultation and consideration with supervisor J.Kolleeny, we feel that based on all of the available information at hand, this spill poses no threat to GW, the environment or the public. NFA letter sent out. Closed out. - SK " "TOOK 65 BORING AND RECEIVED TEST RESULTS BACK THIS MORNING SHOW CONTAMINATED SOIL"

VCP:

Name: PFIZER INC. (CITRIC BLOCK)
Address: 630 FLUSHING AVE.
City,State,Zip: BROOKLYN, NY
Program Type: VCP
Site Code: 56802
HW Code: V00067
Site Class: C
SWIS: 2401
Region: 2
Town: New York City
Acres: 1.75
Date Record Added: 11/30/2000
Date Record Updated: 03/23/2007
Updated By: dcwalsh

Site Description: The Citric Block Site is located in the Williamsburg section of Brooklyn, New York. Gerry Street, Harrison Avenue, and Union Avenue border the Citric Block Site to the north, east, and west, respectively, while Flushing Avenue border the Citric Block Site to the south. The Citric Block Site is situated within a high-density, mixed urban residential commercial industrial zone, approximately one mile east-southeast of the East River. Pfizer decommissioned the Citric Block Site for future redevelopment and/or beneficial use. As part of the decommissioning process, all Citric Block Site buildings were demolished, with demolition activities being completed in August 1995. Presently, the reinforced-concrete slab foundation is the only aboveground remnant of the former buildings. The concrete slab is continuous throughout most of the Citric Block Site, and varies in thickness between approximately 0.5 and 1.5 feet. The remaining portion of the Citric Block Site is covered with asphalt pavement approximately two inches thick with a four-inch aggregate subgrade. The entire Citric Block Site is surrounded by a 10-ft high chain-link fence, and is under continuous security surveillance. The Citric Block Site was developed for chemical manufacturing between 1854 and 1888 and it operated continuously until 1985, and was demolished in 1995. Redevelopment is likely to include paved areas for outdoor activities in the center of the Citric Block Site and a small park in

the western portion. The remainder of the Citric Block Site would be Capped by either the existing concrete slab or by new pavement. The cap will prevent any direct exposure of future users of the property with fill material. Institutional controls involving Deed restrictions have been implemented. The property can be used for industrial/ commercial usage. Site Management Plan requires proper management of all future subgrade construction activities and proper notification to the Department.

Env Problem: The site has been cleaned up. Post remedial groundwater monitoring was satisfactory.

DEC Memo: "02/02/11- Zhune spoke to Russel Downey 908-413-0811. Site is a Pfizer Factory. Property is going to be sold. During investigation found groundwater contamination. Requested report. Mr. Russel will send the report. 04/04/12-Roux Associates sent the Petroleum Investigation Report dated June 24, 2011. Property solution performed Phase I and Phase II subsurface investigation activities at site E and F on behalf of Acumen Capital Partner, LLC (Acumen)(buyer). Phase II.- Included the completion of 24 soil borings, with the collection of 24 soil borings samples and 7 groundwater samples were collected from temporary well. Of the 24 borings completed 12 were located on Site E and 12 were located on Site F. Four (4) of the seven groundwater samples were collected on Site E, and the remaining three collected on Site F. Only The property solution's borings designated SB-19, SB-20/GW-20, SB-21, SB-22/GW-22, SB-23, SB-24 and SB-25 were completed within the former Main Plant near the former Fitness Center. The analytical results indicated that soil and groundwater collected from boring SB-22/GW-22 (located within the Former Fitness Center) contained elevated concentrations of VOCs. The soil samples collected from the four (4) borings located near SB-22 as well as borings located at the west end of the former Main Plant (SB-19 and SB-20) did not have any exceedances. The groundwater sample collected from boring SB-20/GW-20) at 15 to 16 ft bls. detected VOCs below the applicable limit. In response to the identification of groundwater impacts in phase II beneath the Main Plant, Roux Associates on behalf of Pfizer conducted focused investigation activities in April, May and June 2011. The focused investigation included the installation of four(4) deep wells BMW-10, BMW-11, BMW-12, BMW-13 and a total of three (3) soil borings TPNE, TPSE, TPSW. Groundwater samples were collected from wells BMW-10 through BMW-13 and soil borings TPNE, TPSE, TPSW. The analytical results indicated the following VOCs (

BTEX, 1,3,5 trimethybenzene, Isopropylbenzene, naphthalene, n-propylbenzene, and p-isopropyltoluene) were detected above the acceptable limits in the groundwater sample collected from BMW-11. LNAPL was found in well BMW-11 at a thickness of 2.76 feet. A sample of LNAPL was collected for gas chromatography product characterization analysis. The LNAPL was identified as leaded gasoline. The groundwater sample collected from boring TPNE indicated the following VOCs(BTEX, 1,3,5 trimethybenzene,Isopropylbenzene, MTBE, naphthalene and n-propylbenzene) detected above the acceptable limits. BP evaluated Groundwater flow directions in shallow perched water. BP reported groundwater flow to be in the northeast direction at the BP service station. Pfizer's assessment evaluated Groundwater flow directions in deep water. Pfizer reported that Groundwater flow in the deep zone was to the southwest. 04/11/12- Roux Associated Inc. sent the Supplemental Petroleum Investigation Report dated July 22,2011 05/07/12-This spill has been transferred to Hassan Hussein of the Hazardous Material Unit. 1/24/2013 - Raphael Ketani. The spill case for this Commercial Property at 630 Flushing Avenue, Brooklyn, 11206 was transferred to me. The spill was called in on 2/1/11 due to the discovery of oil contaminated soil samples. The block and lot are 1720 and 1. The deed date is 2/11/11. The property was sold by Pfizer, Inc., 235 East 42nd Street, NY, 10017 to Acumen Capital Partners (ACP) BK I, LLC, 37-18 Northern Blvd., Ste. 300, LIC, 11101. PBS is #2-017329. There were 31 tanks. Twenty five (25) were closed, 1 was converted to non-regulatory use and 5 are active. The tank sizes ranged from 62 gals. to 30,000 gal. The products contained were #6 oil, #2 oil, diesel, gasoline and other. Presently, there are 6 active tanks. They range in size from 62 gals. to 20,000 gals. The two 20,000 gal. tanks contain #6 oil and others (300 gal., 275 gal. and 62 gal.) contain diesel fuel. A 275 gal. tank contains #2 heating oil is also active. 3/18/13 - Raphael Ketani. Matthew (Mat) Carroll, P.E., of Tenen Environmental, LLC (646) 606-2332, ext 103 [121 West 27th Street, Suite 1004, New York, NY 10001, mcarroll@tenen-env.com] called today regarding the site. He is the new consultant for ACP. I tried to contact him, but could only leave a message. Mr. Carroll called me back. He said that Pfizer is still involved in the remediation of the property, even though ACP bought the site. They are the responsible party. Mr. Carroll will send me the two ROUX reports for my review. However, Pfizer is contending that there is a gas station upgradient which is the source of the contamination. Mr. Carroll sent me the following contact information: Please address all correspondence related for Spill #1011062 to: Robert Kovacs, Sr. Environmental Scientist Roux Associates, Inc. 209 Shafter Street Islandia, New York 11749 rkovacs@rouxinc.com Please also cc Pfizer, the site owner and myself. Office addresses and email addresses are as follows: Matthew R. Basso, MS, CHMM Manager, ERT Pfizer 100 Route 206N (M/S 414) Peapack, NJ 07977 Matt.Basso@pfizer.com Jeffrey Rosenblum ACP BK 1 LLC The Standard Motor Products Building 37-18 Northern Boulevard, Suite 300 Long Island City, NY 11101 jrosenblum@acumenny.com 3/28/13 - Raphael Ketani. I reviewed the 6/24/11 Petroleum Investigation Report which was produced by Roux Associates, Inc. for Pfizer. Groundwater impacts were found under the main plant on the north side where the former Fitness Center used to be. Roux did investigations during April, May and June of 2011. Borings and wells were installed. The data indicates that the source is the BP Service Station (formerly AMOCO; active spill #0104597) to the north at 655 Flushing Avenue. The BP investigation was limited to

U003074670

the shallow soil and groundwater above the silty clay (which averages 10 feet bgs). Pfizer investigated the groundwater in the deeper zone. Roux states in the report that their evidence for BP being the source is the following: 1) BP is 70 feet away from the main building (site E) and has a long history of impacts to the the soil and the groundwater 2) petroleum contamination was found beneath the Pfizer main plant as part of utility work which took place by the utility company (they don't state who this is, but it was probably Con Ed) - the utility company filed reports regarding the contamination 3) the deeper groundwater zone is hydraulically downgradient from BP 4) almost 3 feet of NAPL was found on the south side of Flushing Avenue and the fingerprint of the oil indicated that it was leaded gasoline 5) Roux identified extremely elevated VOC concentrations in the deeper groundwater zone - there were 38,700 ppb of total BTEX in the groundwater 8 feet south of BP in the deeper zone 6) Pfizer had 2 small USTs under the north part of the main building (former Fitness Center) - the soil results did not indicate any impacts from the USTs - the USTs were in 12 inches of concrete in an intact vault and were decommissioned in 1988 7) information from Pfizer and BP for routine groundwater sampling provides data from the south side of Flushing Avenue supporting that the Pfizr USTs did not leak 8) MTBE is present in the deeper groundwater samples from the Pfizer site, but the timing does not support that the impacts are related to the Pfizer operations - Pfizer decommissioned the USTs in 1988 before the widespread use of MTBE in 1992 - MTBE bearing gasoline was stored at BP for years and BP had many releases of gas - in 2001 there was a gasoline release with MTBE where the MTBE concentrations were up to 385,000 ppb in the groundwater The main plant consists of buildings 55, 16, 16A, warehouse A and warehouse AA. The majority of the main plant (site E) is buildings 16 and 16A - 8 story buildings. Operations at the plant ceased during November 2008. On 2/11/11, the ownership changed to Acumen Capital Partners (ACP) BK I LLC. Site F is the parking lot to the south. Property Solutions performed the Phase II during October 2010 and January 2011 for sites E and F. They did 24 borings. Seven (7) gorundwater samples were taken from temporary wells. Twelve (12) borings were performed at site E and 12 borings were performed at site F. Four (4) groundwater samples were taken at site E and 3 groundwater samples were taken at site F. A small portion of the sampling was done near the former Fitness Center in warehouse A and pertains to this investigation. The borings and wells were SB-19, SB-20/GW20, SB-21, SB-22/GW-22, SB-23 to SB-25. Groundwater from G-22 was taken on 1/6/11 and had elevated VOCs of gasoline. The sample was collected at 16.5 to 20 feet bgs, below the perched water table at 10 feet bgs. Anthropogenic fill is present from 5 to 12 feet bgs. Silty clay is present throughout the area and is 15 feet thick. The Upper Glacial Aquifer underlies the silty clay at 20 to 30 feet bgs. Thin perched lenses of groundwater are present throughout the area. A perched water table is present at 5 to 8 feet below the site. The perched water table follows the surficial topography of the clay. The clay is 6 feet below the southwest part of the BP site and 11 feet below the northeast part of the site. The BP wells are in the perched horizon. BP reported that the groundwater flowed to the northeast. Permanent wells BMW-10 to BMW-13 indicate that the deeper groundwater flows to the southwest. The deeper groundwater is likely affected by pumping by NYCT for its subway tunnels. Their pumping wells are to the west of the main building. The pumping also likely affects the vertical gradient. Gauging took

U003074670

place at BMW-10 to BMW-13 on May 3 to June 8 during 2011. LNAPL was found to be 2.76 feet thick at BMW-11 on 6/8/11. Property Solutions did borings SB-19 to SB-25 near the Fitness Center. Only SB-22 at 7.5 to 8 feet bgs had soil VOCs that were above the unrestricted CP-51 standards. There were 5 VOCs above the standards. Naphthalene at 16,000 ppb, n-butylbenzene at 14,000 ppb, n-propylbenzene at 7000 ppb, ethylbenzene at 2300 ppb. The soil samples from the rest of the borings had results that were below the unrestricted standards. On 1/26/11, Property Solutions collected groundwater samples from GW-20 and GW-22. Low levels of BTEX were detected at 15 to 16 feet bgs. The sample from GW-22 beneath the Fitness Center had many VOC hits that were above the unrestricted standards. Permanent well BMW-11 had many VOC hits that were above the unrestricted standards. From 6/6/11 to 6/8/11, Roux took groundwater samples from 3 borings. All had samples with exceedences. Groundwater samples from boring TPNE (in the sidewalk at the south edge of the BP station) were taken at 13 to 15 feet bgs, 15 to 17 feet bgs, and at 17 to 19 feet bgs. There were many VOC exceedences amongst the samples. The highest BTEX result was from the sample from 13 to 15 feet bgs. The groundwater samples that were taken at 15 to 17 feet bgs and at 17 to 19 feet bgs from boring TPSW directly downgradient (southwest) of the station had low VOC hits. I finished my review of the 6/24/11 Petroleum Investigation Report. I looked at Plate 1 - Generalized Hydrogeological Cross Section - of the report. All of the wells - temporary and permanent - were partially screened at the top in the silty clay. This is not proper practice. There is no explanation in the report why this was done. Any groundwater samples that would be taken from these wells would entrain some of the clay sediment due to disturbance of the clay as a result of the collection process. So, the geochemistry of the groundwater is not representative of just the Upper Glacial Aquifer. Analytes which had adhered to the clay flakes were incorporated in each groundwater sample. Additionally, water samples which are taken from soil borings typically do not have as high concentrations of analytes as would samples from permanent wells. Also, from the boring logs in the report, it is not entirely clear that the perched aquifer and the glacial aquifer are truly separated at a distance. If the NYCT is pumping groundwater, then their actions could cause some groundwater to seep down from above.

Comments by Ketani: ----- The soil results from SB-22 for the sample from 7.5 to 8 feet bgs in the former diesel and gasoline USTs area(the former Fitness Center) had naphthalene and n-butylbenzene hits above 10,000 ppb. The ethylbenzene hit was 2,300 ppb and the n-propylbenzene hit was 7,000 ppb. Though the soil results for the samples from SB-21 and SB-23 to SB-25 which surround SB-22 did not have exceedences or were non-detect. The groundwater results from temporary well GW-22 in the former diesel and gasoline USTs area had high VOC exceedences in the sample from 16.5 to 20 feet bgs. However, the groundwater results from temporary well TPSW about 65 feet to the east and permanent well BMW-10 about 35 feet to the east have a small number of very low hits and no exceedences. These soil and groundwater results suggest that one of the UST systems probably leaked. More borings and permanent wells need to be installed in this area. Additionally, the BP Service Station that is referred to in the report has an active spill number, #0104597. According to a report in the e-docs, groundwater flow in the perched water table is due northeast, away from the Pfizer site. Also, MTBE was introduced to gasoline nationally during 1979. So, it

U003074670

is not impossible that there used to be MTBE bearing gasoline in the gas UST below the former fitness center location before the tank was removed during 1988. 3/29/13 - Raphael Ketani. Next, I reviewed the Roux Supplement to Petroleum Investigation Report dated 7/22/11. Of significance was that staff from Roux stated in this Supplement report that the former DEC case manager should obtain all of the UST and piping information for the BP Service Station from the respective DEC file. They also stated that the Phase I and the Phase II were not done for Pfizer. So, Pfizer can't vouch for the reliability of the reports. Also, they stated, Acumen Capital Partners may consider the reports to be confidential and may not feel comfortable releasing them to the DEC. However, Roux did provide some information regarding the USTs under the Pfizer site and neighboring facilities in this Supplement report. The staff from Roux stated that tank closure reports weren't required to be submitted when the tanks were decommissioned during 1988. They state that soil samples were collected from TPNE, TPSW, TPSE, BMW-10 to BMW-13, but the samples were not submitted to the laboratory for analysis. The information contained in the report consisted of documents related to the UST decommissioning which took place throughout the site and Sanborn maps. The 550 gal. diesel UST (#211) and the 550 gal. gasoline UST (#212) under the Fitness Center were pressure tested during 1984 and held the pressure (9/27/84 and 10/24/84 Tone Gasoline Tank and Pump Inc. letters). In a 12/28/88 tank decommissioning letter, it is stated that tanks #211 and #212 in the former Wha garage were cut up from 12/13/88 to 12/16/88. In the process of cutting them up, it was noticed that the gasoline UST had leaked into the vault. The gasoline was collected and the vault was ventilated in order to remove the vapors. It was noticed that the floor of the vault was pitted due to leaked gasoline. However, it was reported in the letter that the tank removal crew did not notice signs of chipping of the floor or any loose concrete. _____ Comments by Ketani:

----- From the information in the 7/22/11 report, it is apparent that there was at least a gasoline spill. How the gasoline UST could have passed its integrity test in 1984 and be found to have leaked anyway is not clear. There are no details regarding how the testing was performed. So the test may not have been valid compared to later integrity testing methods. Additionally, the pitted floor suggests that the leaking had been going on for some time. Also, there still is no information regarding the locations of the associated piping for the USTs and the locations of the pump islands. Clearly, more investigation needs to be done. A draft letter was submitted to Hassan Hussein, EE III and head of Unit C, requesting that a work plan be submitted for conducting an investigation around and under the vault, next to any remaining piping and in the vicinity of the pump islands. Soil and groundwater sampling was requested. The letter was approved by Mr. Hussein and was sent out. A due date of April 30 was set for submission of the work plan. 4/15/13 - Raphael Ketani. Mr. Kovacs (631) 232-2600 tried to call me today regarding the March 29, 2013 letter and left a voice message. I tried to contact him, but could only leave a voice message. 4/16/13 - Raphael Ketani. Mr. Kovacs and I discussed the site and the soil and groundwater results for SB-22 and GW-22, respectively. I pointed out that the soil contamination results from the surrounding borings at the same level did not have exceedences. Also, the groundwater results for GW-22 were higher than a sidegradient well that was sampled at the same depth. I added that there was a letter in the

Map ID

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

ACUMEN PARTNERS LLC (Continued)

U003074670

Roux 7/22/11 report which stated that a gasoline leak had been discovered. Mr. Kovacs argued that all of the contamination was from the BP site across the street. I reiterated that the soil and groundwater results and the letter suggested a local source of contamination. I asked him for soil and groundwater contamination delineation. Mr. Kovacs stated that the tank vault was in the former loading dock area, which had been filled in with 4 feet of concrete. However, they had cored thick concrete before. So they could do borings in this area. Mr. Kovacs added that Pfizer was not objecting to doing more investigative work in this area, but that they wanted to make sure everyone was on the same page and that the DEC was considering the groundwater flow from the northeast from the BP site. I repeated my previous statement that the DEC had determined that there is a local source of contamination under the former Pfizer site and that delineation is being required. Mr. Kovacs stated that he will talk to the people at Pfizer. With that, the conversation ended.

4/17/13 - Raphael Ketani. Mr. Kovacs sent me an e-mail requesting an extension of the deadline for submitting the work plan. He asked for a deadline of June 3, 2013. I granted his request. 6/4/13 - Raphael Ketani. I reviewed the Work Plan for Additional Petroleum Investigation Activities dated 5/29/13 and submitted by Roux Associates on behalf of Pfizer, Inc. The work plan contained the same information and arguments as I had read in the previous 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. Roux Associates added that the timing of the use of the gasoline and diesel USTs below the former fitness center and the soil data generated by Property Solutions does not support that the impacts associated with spill #1011062 are related to the Pfizer operations. Pfizer removed the USTs in 1988 before the widespread use of high concentrations of MTBE beginning in 1992. There was no MTBE in the soil samples below the Pfizer site where the USTs used to be. High concentrations of MTBE were found in the groundwater beneath the former fitness center. Property Solutions collected 7 soil samples from 5 borings in the vicinity of the USTs and found only slight soil contamination in one sample. In the work plan, Roux proposes conducting three tasks. Task 1 would be to do one round of groundwater gauging and sampling at wells BMW-10 to 13. Roux would request that the DEC gain access for them to the wells on the BP site. They will have the samples tested only via method 8260. Task 2 would involve submitting a report of their findings. Roux will make recommendations for either additional investigations, or to close the spill case, or to link the spill case to the BP site. Task 3 involved having a meeting with the DEC to discuss their findings and additional data. I drafted a response letter for the review of Mr. Hussein. In the letter, I explained that the information and statements that were in the 5/29/13 work plan were the same as were included in the 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. So, the Department was again requesting that a soil and groundwater investigation take place as previously requested in our 3/29/13 letter. I added that we will send a letter to Acumen requesting their cooperation for allowing the wells to be installed. However, it would be up to Pfizer to obtain permission from BP for gaining access to their wells. I set a deadline of 7/12/13 for submission of a new work plan. 6/5/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/6/13 - Raphael Ketani. In response to the 6/5/13 letter, Matthew Basso of Pfizer called me. He tried to explain to me

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

ACUMEN PARTNERS LLC (Continued)

U003074670

that Pfizer wasn't responsible for the contamination under the vault. He used the same information as had been presented in the 6/24/11 report and the 7/22/11 report. I explained to him that his discussion wasn't going to change the Department's request for a soil and groundwater investigation. I added the lower groundwater hits of the deep well to the northeast, the finding of free product in the vault, the discovery of soil contamination in the unsaturated zone below the vault and the presence of high contamination in the groundwater just under the vault. Mr. Basso explained that he had witnessed the consultants for the BP station across the street doing remedial work. He said that they were injecting treatment solutions. Mr. Basso added that the gas station has lost a lot of product and it is going under the former Pfizer site. I told Mr. Basso that the Department was aware of the problems at the BP station and that they were being addressed. I did admit to him that some of the contamination may be going under part of the former Pfizer site, but that the contamination in the former vault area was a different matter that was solely the responsibility of Pfizer. Mr. Basso stated that the groundwater was flowing from the BP site to the former Pfizer building. I told him that this was not true for the perched water table. He also stated that he didn't believe the new owners of the property, Acumen, would allow Pfizer to drill through the floor of the former fitness center. I told him that I will write a letter requesting Acumen's cooperation regarding the investigation. At the end of the conversation, Mr. Basso requested a meeting with the DEC. I told him to talk to everyone at his end and get them to agree on a date for next week. He said that he will do this. Later, Mr. Kovacs (631) 232-2600 sent me an e-mail stating that Pfizer, Acumen and Roux would be able to meet with staff from the DEC on Monday, June 10th, at 2:00PM. I confirmed that this was an acceptable meeting time. A draft letter was submitted to Mr. Hussein which requested the cooperation of Acumen in allowing Roux Associates to conduct an investigation in the vicinity of the vault. Mr. Hussein approved the letter and it was sent out. 6/10/13 - Raphael Ketani. The meeting took place as scheduled. In attendance were Matthew Basso from Pfizer, Robert Kovacs and Charlie McGuckin from Roux Associates, and Hassan Hussein and myself. The former Pfizer site and the BP gas station to the north were discussed. Mr. Kovacs and Mr. McGuckin presented the same information as I had read from previous reports. They showed one new map which showed that, at one time, the Wallabout Creek had flowed near the vicinity of the former vault and in adjacent areas. So the area contained stream sediments. Mr. Kovacs and Mr. McGuckin stated that the gas contamination in the former vault area was from the BP site due to deep groundwater flow towards the southwest in the regional aquifer. They commented that the NYCT was pumping from a well to the southwest for the G train line. So, this well had moved groundwater flow to the southwest. I stated that groundwater flow was to the northeast in the perched water table and to the southwest in the regional aquifer. I stated that the gas contamination in the vicinity of the vault was from a former gas UST that had been observed to have leaked. I also stated that there was gas contamination in the shallow unsaturated soil in the vicinity of the vault. So the contamination in the immediate vicinity had come from the UST, not the BP site. They countered that the gasoline below the vault contained MTBE and this chemical was not in the Pfizer gas UST when it was removed in 1988. They also stated that the groundwater analytes had the signature of BP gas. I told the Roux

Site

Database(s)

EDR ID Number
EPA ID Number

ACUMEN PARTNERS LLC (Continued)

U003074670

consultants that the wells were never screened properly. Some were screened in the clay. So it is not clear what the true groundwater chemical makeup is. I requested a work plan for conducting 4 soil borings around the former vault location, installing a properly screened well in the shallow zone and another in the deeper regional aquifer, and to take a Shelby tube sample and do permeability testing for the confining layer between the two bodies of groundwater. Mr. McGuckin objected to the request for more investigating. He said that Pfizer had done enough to determine subsurface conditions and that there was no point in doing more work. He again stated that all of the contamination was due to the spilling at the BP station. He added that there was a well 75 feet to the east of the Pfizer vault with 3 feet of product in it. Mr. Basso stated that this gasoline could be fingerprinted to prove that it belonged to BP. I added that more soil and groundwater data must be obtained in order to determine the subsurface conditions and in order to determine where the contamination had originated from. Otherwise, BP will not accept responsibility with so little information. Mr. Basso said that he will approach his management with the DEC demand and our argument why more work needed to be done. Following this meeting, Mr. Hussein and I had a meeting with June Feng, the DEC project manager for the BP station at 655 Flushing Avenue, Brooklyn (spill case #0104597). Specifically, we asked her whether the BP investigation had done off site delineation of the spill and whether there presently were leaking USTs and product on the groundwater. Ms. Feng said that, presently, there were no leaking USTs and no product on the groundwater. She said that wells were only installed on the BP property. I told her about the 3 feet of product that had been found in the Roux Associates well BMW-11, which was about 100 feet east of the vault in question and downgradient from the BP station (as regards the deeper aquifer flow). Ms. Feng asked whether the gasoline had ever been fingerprinted. I told her No. She said that she could not understand how gasoline could make its way down from the perched water table to the regional aquifer. I told her I was not sure either how this had happened, but the Roux Associates consultants were stating that this happened. She then asked whether the gasoline could have followed a utility conduit. I told her that this was possible, but I wasn't sure it would stay in the aquifer as gasoline floats on water. Ms. Feng and I thought about how the gasoline could have ended up below a perched water table, but we did not find an answer.

6/11/13 - Raphael Ketani. Ms. Feng sent me a c-c for an e-mail she had sent to Nicholas Onufrak of BP. She warned him that Pfizer and their consultants were telling the DEC that the gasoline contamination was from the 655 Flushing Avenue site. Later, Mr. Onufrak responded back that he had received the e-mail. 6/12/13 - Raphael Ketani. Mr. Basso sent me an e-mail in which he stated that Pfizer was working on a work plan and intended to submit it by July 12, 2013. 7/22/13 - Raphael Ketani. I reviewed the 7/18/13 Workplan for Additional Focused Subsurface Investigation. The work plan was written in response to the DEC 3/29/13 letter in which additional investigative work was requested around the vault. ROUX also made the same arguments that the source of the contamination under the former Pfizer plant is from the BP service station across the street. They also recapped the results of the previous investigations from 2011. They state that NAPL was found on 6/8/11 at BMW-11 and was identified as leaded gasoline. Also, they state in the report that, given the geologic and hydrogeologic conditions in the subsurface and the

U003074670

presence of NAPL in the deep groundwater zone downgradient of the BP station and the presence of MTBE in the groundwater, it is strongly suggested that the impacts at SB-22/GW-22 are not the result of former Pfizer operations, but the result of the long history of releases from the BP station. ROUX will do a focused field investigation involving a Phase I and, if necessary, a Phase II. After the work is done, a summary report will be prepared and a meeting with DEC staff will be requested to discuss the results and determine what should happen next. The Phase II will be performed only if contaminated soil is found below the former UST locations. Five shallow soil borings will be performed around the vault and dispenser area to the top of the silty clay. Soil and groundwater samples will be analyzed via methods 8260 and 8270. The perched water table samples will be collected from 3 temporary wells. Only temporary wells can be installed due to the height restrictions inside of the Fitness Center (it will only accommodate small equipment). Undisturbed soil samples will be collected from the silty clay and the sandy layer below it for permeability testing. If there are no discernable soil impacts in the shallow soil, then they will bore down below the silty clay layer and sample the soil just above the deep groundwater. The existing deep wells BMW-10 to BMW-13 will be gauged and sampled. If the Phase II is necessary, then two additional wells will be installed at two more locations within the Fitness Center footprint and the groundwater will be sampled beneath the silty clay. The Phase II would also involve the collection of additional perched water samples. I looked at the proposed soil boring and well locations depicted in Figure 7 of the report. The locations seemed reasonable. I drafted a letter for the review of Mr. Hussein in which I stated that the Department had approved the 7/18/13 work plan. 7/24/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today. 10/15/13 - Raphael Ketani. As there has been no word regarding activity at the site, I sent an e-mail to the three individuals involved in the spill case from Pfizer and Roux (Mr. Basso at (908) 901-7096/bassom@pfizer.com; Mr. Kovacs at (631) 232-2600/rkovacs@rouxinc.com; Mr. McGuckin at (631) 232-2600/cmckguckin@rouxinc.com). The e-mail mentioned that the 7/18/13 work plan had been approved and reports were due to the Department on September 19 (phase I) and on October 8 (phase II). I requested updated information regarding the investigation around the vault. In response to my e-mail, Mr. Basso sent me the message: The Pfizer /Roux project team met today to review the Phase I /Phase II data, that includes comprehensive soil sampling data, perched groundwater zone data, deep groundwater gauge data as obtained as part of the approved Workplan. Today we also reviewed schedule, where Pfizer had earmarked a touchbase meeting for its internal team in early October, and wrap-up to document the Phase I/Phase II results and conclusions this week. My apologize for this delay, and we met today in order to prepare an update for NYSDEC on this project. Please note: we had significant technical difficulty to get the smallest made geoprobe rig into the interior study location of the Acumen Capital Partners building to successfully achieve the intrusive sampling, and needed to arrange for the right equipment, which slowed our progress. I will ask that Roux Associates follow-up on my e-mail to better communicate the schedule for submitting to DEC the WorkPlan Report. Via this email I am keeping the site owner (Acumen) informed of our progress. Best regards, Matt Basso, MS, CHMM Later, Mr. Kovacs sent me an e-mail stating that the Phase I was

ACUMEN PARTNERS LLC (Continued)

U003074670

completed, but with great difficulty. They had to find a drilling machine that was small enough to fit into the health club and they had to hire a specialized drilling company to drill through 7 feet of concrete. However, they did the soil borings, took soil and perched groundwater samples and gauged the deep groundwater wells. They hope to get permission from BP to gauge their on site wells, also. The report will be submitted on November 15, 2013. 11/20/13 - Raphael Ketani. I reviewed the ROUX Associates Additional Focused Subsurface Investigation report dated 11/13/13. During 9/9/13 and 9/10/13, ROUX Associates drilled 5 soil borings - RSB-1 to RSB-5. RSB-1 was adjacent to the location of SB-22/GW-22 and RSB-5 was very close by. The other borings were installed radially around the former UST locations (1 550 gal. diesel UST-west and 1 550 gal. gas UST-east) and the former dispenser location. According to the report, the UST had been removed during 1988 and the vault was filled with concrete. (It should be noted that the introduction of MTBE in gasoline took place nationally in the U.S. during 1979 and was banned by New York State beginning on January 1, 2004.) Before the borings took place, the 7 feet of concrete was cored on 8/26/13 and 8/27/13. The bottom 6 inches of concrete at RSB-1 was collected for permeability testing. The soil was bored just into the confining silt and clay layer. The boring terminated at the groundwater at 16 to 19 feet below grade. The soil and groundwater samples were tested via methods 8260 and 8270. Two (2) soil cores were collected for permeability testing and grain size analysis from boring RSB-4A (1 foot from RSB-4). The collection device was pushed using the Geoprobe hammer. One sample consisted of shallow fill at 2 to 4 feet bgs and the other sample consisted of silt and clay at 8 to 10 feet bgs. The 2 to 4 foot sample from RSB-4A was 71.5% sand and 28.1% fines (due to the high sand content, the permeability test couldn't be performed). The 8 to 10 foot sample was 47.5% sand and 52.2% silt and clay. This sample tested at a permeability of 2.7×10^{-4} cm/sec. However, there were microfractures in the sample. The true permeability was estimated as probably being 10-5 cm/sec. Based on previous soil investigations at the Citric Block near the former Main Building, on the north side of Flushing Avenue, Shelby Tube samples had been collected by ROUX at 8 feet bgs during 1996. These soil samples had permeabilities of 2.87×10^{-7} to 1.8×10^{-6} cm/sec. Though, as regards the permeability of the concrete core, it had not been tested at the time of the writing of this report. This data will be submitted later. The soil sample that had been collected years ago from SB-22 at a depth of 7.5' to 8' had 5 VOC hits from 1900 ppb to 16,000 ppb, but no MTBE. RSB-1 (to the east and next to SB-22) = 7' sample 15 VOC hits from 100 ppb to 1200 ppb with 390 ppb MTBE; 11' sample almost entirely non-detect with 2300 ppb MTBE; 13' sample almost entirely non-detect with 3700 ppb MTBE RSB-2 (next to former east side of gas UST) = almost entirely non-detect RSB-3 (downgradient of the USTs) = 9' sample with 13 VOC hits from 3000 ppb to 62,000 ppb but no MTBE; 14' sample almost entirely non-detect RSB-4 (far west of SB-22) = 6.5' sample 11 VOC hits from 57 ppb to 8200 ppb but no MTBE; 8' sample 13 VOC hits from 89 ppb to 8500 ppb but no MTBE RSB-5 (very near and to the northwest of SB-22) = 7' and 9.5' samples almost entirely non-detect Except for 24,000 ppb of naphthalene in the 8.5' to 10.5' sample from RSB-3, there were no SVOC hits for any of the RSB samples. Groundwater was found at 0.5' to 2.5' below the former location of the USTs (perched groundwater) and at 10' to 13.5' below the former USTs location (deep groundwater). Deep wells BMW-10 to BMW-13 were gauged on 9/10/13.

However, BP would not let ROUX have access to their wells on the gas station property. Attempts were made to collect groundwater from the perched water table at RSB-1, RSB-2 and RSB-4. ROUX was successful in collecting perched groundwater only from RSB-2. GW-22 (screened deep 16'-22') = 13 VOCs from 5.9 ppb to 3900 ppb, 10 VOCs 100 ppb or above, 3 VOCs 1000 ppb or above, 3900 ppb MTBE BMW-11 (deep water) = 6.83' product on 9/10/13, other series wells without product; 9 VOCs with 6 hits from 240 ppb to 6100 ppb, no MTBE BMW-12 and BMW-13 almost entirely non-detect (deep) TPNE highest VOC concentrations in this series in 2011 with 7 VOC hits to 17,600 ppb and MTBE 200 ppb TPSE at all levels (13'-15', 15'-17', 17'-19') had the same VOC hits at about the same concentrations, except the sample from the 13'-15' interval had generally slightly higher concentrations TPSW was almost entirely non-detect RSB-2 (perched at 7'-9') had 6 VOC hits from 16 ppb to 120 ppb, but no MTBE SVOCs were almost entirely non-detect for RSB-2, except for 54 ppb of naphthalene As part of my review, I reviewed reports for the BP site (spill #0104597). I looked at the groundwater flow maps and analytical results in the 3rd Quarter 2004 Quarterly Monitoring Report dated 7/25/05 and the groundwater flow map in the 2nd Quarter 2013 Quarterly Monitoring Report dated 6/28/13. I determined that groundwater flow in the perched horizon is to the northeast while groundwater flow in the regional aquifer is to the southwest. 11/25/13 - Raphael Ketani. I sent a quick e-mail to Mr. Kovacs requesting that Pfizer and ROUX immediately begin product recovery events in order to contain any plumes emanating from BMW-11. 11/26/13 - Raphael Ketani. I drafted a review letter for editing by Mr. Hussein. I stated in the letter that the Department had approved the report. However, the data in the report and the case file indicated that additional work needed to take place. I determined that groundwater was flowing from upgradient to under the former Pfizer site through the deep groundwater horizon. However, there was evidence of contamination from onsite, also. The Department was requiring delineation of the soil contamination downgradient from the former vault and downgradient from BMW-11. Pfizer was also asked to immediately begin product collection at BMW-11 and to submit monthly gauging and product collection reports. A deadline of January 10, 2013 was set for the submission of a delineation work plan. Mr. Hussein approved the letter. 11/27/13 - Raphael Ketani. The AFSI report review letter was sent to Mr. Basso at (908) 901-7096/bassom@pfizer.com, Mr. Kovacs at (631) 232-2600/rkovacs@rouxinc.com and Mr. Rosenblum. After having sent the letter, I met with June Feng, the case manager of the BP Station site to the north. I explained that the data indicated that the source of the product at BMW-11 was the BP site. I showed her some pages from various reports describing the subsurface conditions below the Pfizer site and ROUX Associates' findings. I asked her to contact Nicholas Onufrak, the BP representative, regarding this matter and to try and have BP take over the product collection at BMW-11. 12/2/13 - Raphael Ketani. I met with Jeff Vought, Ms. Feng's supervisor, regarding the former Pfizer site and the BP site. I explained the data and showed him the Additional Focused Subsurface Investigation report (AFSI). I also explained that the perched groundwater was flowing northeast, away from the former Pfizer site, while the deeper groundwater was flowing toward the site. He noted what I had told him, but wasn't convinced that the source of the contamination under the Pfizer site was from the BP station. At the end of the day, Mr. Kovacs sent a response e-mail regarding the DEC 11/27/13 AFSI review and response

U003074670

letter. In short, Mr. Kovacs wrote that the responsibility for the contamination lied with the BP station and that Pfizer was not going to do further delineation nor collect the 7 feet of product from BMW-11 which was next to the school. He wrote that I should contact BP and have them do the VEFring. 12/3/13 - Raphael Ketani. In response to Mr. Kovacs 12/2/13 e-mail, I sent him a response e-mail (with C-Cs to Mr. Basso, Mr. Rosenblum and Mr. Hussein) stating that Pfizer and ROUX had to evacuate BMW-11 immediately as this well had 7 feet of gasoline and it was right next to the school indicated in Figure 2 of the AFSI. ROUX's claim that the gasoline had originated from the BP station hadn't been proven and the product was under the former Pfizer site. So it was Pfizer's responsibility. I added that if Pfizer and ROUX fail to send me an e-mail by December 6 (friday) stating that VEFring is taking place, then the DEC will open up a PIN case, have its contractor do the work and continue to VEFR the well as required by DEC. I also wrote that our contractor will do the delineation work, bill the DEC, and the DEC will pass the costs along to the Attorney General who will sue Pfizer. A series of response e-mails followed from Mr. Basso. In summation, he said that Pfizer staff were in consultation regarding the presence of gasoline in BMW-11. It was also explained that the building next to BMW-11 was not a school. I asked Mr. Basso to get someone into the building to do indoor air surveying for vapors with a PID meter. Later, I sent Mr. Basso an e-mail stating that I wanted to make a site visit tomorrow to see for myself what the conditions are who is using the former Pfizer building. Mr. Basso agreed to the site visit. 12/4/13 - Raphael Ketani. A site meeting and inspection took place at 2:00PM as planned. In attendance were Mr. Kovacs (631) 232-2600, Mr. Basso (908) 901-7096, Mr. Rosenblum, Mr. Hussein and myself. At the beginning of the lobby entrance, I saw a wall on the left side with many placards indicating the various businesses that were using the former Pfizer main building. Most of the business appeared to be food processing and management companies (i.e. ice cream manufacturing, manufacturing of meals for homebound people, etc.). However, Mr. Rosenblum pointed out that there were some high tech business and his office. He also stated that the businesses were on the upper floors and that the first floor, where we were, was vacant. Next, we went to the former fitness center. Throughout the first floor, I sensed various odors, but all were light and none were noxious. There was one odor from food cooking. The PID meter did not detect any vapors anywhere at the first floor. Mr. Kovacs had the same brand and model of PID meter and his didn't detect any vapors, either. We went to the former fitness center. I continued to take pictures. There were no PID detections. Mr. Kovacs and Mr. Basso explained to everyone that the vault was below the floor and how the soil boring operation went. We saw many places where a piece of floor tile had been removed in order to do a boring and we saw the filled boring holes. Mr. Kovacs showed me where SB-22 had been and where RSB-3 was. He explained that the floor was only 1 or 2 feet thick at the location of RSB-3. Whereas, they had to go through 7 feet of concrete at the location of SB-22. Next, we walked to the first floor level of warehouse A (the eastern part of the main building). Mr. Basso showed us where BMW-11 was. We could also see the BP station across the street. Mr. Hussein, Mr. Basso, Mr. Kovacs and myself discussed the product in BMW-11 and that the data in the ROUX reports showed deep groundwater flow from the BP station and to the Pfizer site. Mr. Basso and Mr. Kovacs stated that there had been many spills at the BP station over the

ACUMEN PARTNERS LLC (Continued)

U003074670

course of many decades. The problem of how the gasoline could get from the perched aquifer to the deeper aquifer was discussed. Mr. Hussein mentioned that there were only wells in the perched horizon at BP. Mr. Kovacs mentioned that BP had installed a lot of tanks and that they had stacked the tanks on top of each other. He stated that he thought BP had stacked the tanks so deep that they penetrated through the confining silty clay layer. Mr. Hussein agreed that the data seemed to suggest the contamination was from the BP station. He stated that delineating the contamination could be done in two ways. First, BP could be asked to do the work. If they were to refuse, then the State would have its own contractor do the work and install deep wells at the BP station in order to determine the deep groundwater flow direction. Mr. Basso stated Pfizer was deferring to BP to do the delineation work. He added that if BP were to do the delineation and groundwater monitoring, then he would gladly give them access to the Pfizer wells. Mr. Hussein asked Mr. Basso for an Executive Summary describing the current environmental conditions and the information that Pfizer and ROUX have found so far. We left this part of the building and entered the middle (building 16) warehouse area. Again, no vapors were detected. There was nothing much to see here. So, we went down to the partial basement. Once inside the partial basement, there was a moderate odor of #2 oil. My meter registered about 1.7 ppm of total VOC vapors. Mr. Kovacs' meter detected the same concentration of vapors. A man was in the basement and he told us that he had just finished cleaning a machine (he didn't say what type of machine it was). I asked him whether any oil had been spilled. He said very little oil had been released. However, he mentioned that he had used a spray cleaner to remove the oil from the surfaces of the machine. We went further into the basement. It was well lit, 78 degrees Fahrenheit and the floor was clean. There was no active ventilation taking place, even though there was a means for the indoor air to be circulated and removed. So the oil vapors were everywhere. Mr. Kovacs stated that we were standing 10 feet below grade. So, we were below the water table, but the walls were dry. Mr. Kovacs pointed out the sump and the sump pumps. The pumps weren't running. I put the nose of the PID meter into a hole through the steel plate covering the sump, but the vapors that were being detected seemed to remain the same. The vapors were actually higher about a few feet above the steel plate. There was nothing else to see. So we left the basement and exited onto Flushing Avenue. I took some pictures outside and the meeting ended. 12/5/13 - Raphael Ketani. Jeff Vought, a supervisor in the Spills Unit, was told about the Pfizer site visit and my findings. I had previously talked to him about the data for this site. He contacted Randall Austin, the Regional Spills Engineer, and they contacted Nicholas Onufrak, Project Manager, at the Atlantic Richfield Company (the owners of the BP station). Mr. Onufrak agreed to send a vacuum truck over to suck out the well during the morning of 12/6/13. He also agreed to do at least one more vacuum event. Mr. Onufrak will look at the data for the Pfizer site and decide whether BP is responsible for the gasoline. Mr. Onufrak's contact information is: Atlantic Richfield Company, 1 West Pennsylvania Avenue, Ste. 440, Towson, MD, 21204. Later, Mr. Basso sent me the Executive Summary. I reviewed the document. The majority of the content consisted of Mr. Basso writing that BP was the source of the contamination below the former Pfizer site. He did state that there were soil impacts below the former fitness center. However, he claimed that they were minor and that the

ACUMEN PARTNERS LLC (Continued)

U003074670

results should be compared to the Commercial Soil Standards. At the end of the document, Mr. Basso requested closure of the spill case. 12/6/13 - Raphael Ketani. Mr. Onufrak sent staff at the DEC Spills Unit and myself an e-mail today. He wrote that the evacuation of the well took place. One gallon of NAPL was recovered. A sample was collected for forensic analysis. The vac truck operator collected 637 gals. of total liquids. There was no measureable NAPL in the truck. June Feng, the project manager for the BP spill case, will be contacted by BP. 12/18/13 - Raphael Ketani. I e-mailed Mr. Kovacs regarding BMW-11. I stated that BP had evacuated only 1 gallon of product, but ROUX had measured 7 feet of product in the well several months ago. Mr. Kovacs responded that the well is two inches in diameter and that Antea Group, BP's consultant, had also measured 7 feet of product when they gauged the well before evacuating it on December 6, 2013. 1/14/14 - Raphael Ketani. A planned followup site visit took place in the partial basement of the main former Pfizer building. In attendance were Mr. Rosenbloom and Gavin Cato of ROUX. I walked around the basement with my PID meter. The basement air was at 76 degrees Fahrenheit. There were no oil odors. I put the nose of the meter above my head, at the sump and at the opening to several floor drains. The PID meter didn't detect any volatile chemicals. After this, I left the site. Later, I met with Mr. Hussein to discuss my site visit, the soil and groundwater analytical results and the other data regarding the site. Based upon our discussion and the information regarding the case, Mr. Hussein approved the closure of the spill case. Based upon the information in the spill case, I have determined that there is no threat to the public or the environment from the residual contamination below the site. Therefore, I am closing the spill case effective 1/14/14. As the building is currently being used for commercial purposes and will be used in this fashion for the foreseeable future, I am making this closure in consideration of a comparison of the soil data to the New York State commercial standards. 1/16/14 - Raphael Ketani. A spill closure letter was sent to Mr. Basso. In the letter, I wrote that the Department was requesting that Pfizer leave their wells open so that British Petroleum can use them for groundwater gauging, sampling and product recovery as part of their investigation and remedial efforts." DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 4/2/2001 Sangesland and NYCDEP Wai Man Wan made a site visit to the Pfizer facility to look for a reported Acetone leak. After initial inspection, DEC - ECO Shawn Dussault arrived to make a similar inspection of the roof top equipment. According to Pfizer Engineer Mr. Daniel Shiel the following is a description of the process and then the system problem: Process: Acetone is used in the process of coating pills. After the material leaves the pills bath area, the vapor acetone is collected and piped to a chiller/condensor on the plant roof. This Edwards Unit chiller/condensor has 3 stages which drops the vapor temperature in 3 steps to 85°F below zero. At that point the acetone is in liquid form and is recovered via pipe and collected. This material is then tanked and removed from the site. (Pfizer states that a company purchases this recondensed acetone from them). Problem: Somewhere in the second stage of this unit is a leak. The Pfizer representative stated that there is probably a crack in the line someplace, but the exact location has not been found. Pfizer states that they first became aware of the problem in early March 2001 and took the system out of service for approx. 10 days to perform routine maintenance to the unit and to try to find the problem. The specific problem was not found and not fixed. The equipment was put back into operation. At the site visit, it was clear that acetone was leaking to the atmosphere. Pfizer says that they have done a mass balance which shows that they are still

retreaving approx. 91% of the total process acetone, above their legal limit (limit is someplace in the low 80's %). Pfizer also had LEL meters on the equipment to show that they have remained below approx 50% of the LEL explosive limits. However, there is no alarm on this meter. The meter is read several times per day by plant personnel. Pfizer rep also said the units are actually 2 separate parallel process lines running at the same time. He believes that the leak is only in one side of the system. The system can operate with only one side of the process system in operation, only at a lower volume and therefore a lower pill production rate. In order to repair the system, the unit would need to be lifted off the roof of the building, lowered to the street level, opened and re-welded. Pfizer said they had an equipment rep on site later today to quote them on the cost and time needed to build a replacement unit. ECO Dussault issued 2 tickets. 6NYCRR Part 595.3.a.2.ii and .iii with a May 17, 2001 court appearance date. Since this is a release to the atmosphere it may include the NYSDEC Air Unit. Since it is a material AFTER production (of the pills) it may be considered by NYSDEC RCRA Dept. 4/3/2001 Officer Dussault spoke with Dan Shiel (Pfizer) later on the afternoon of 4/2. Mr. Shiel said that Pfizer met with the manufacturer of the Edwards unit and he said it would take about 6 to 8 weeks to build and install a new unit. Until that time, Mr. Shiel said they may try to find a way to run just the first and third stage of the system and bypass the second unit. This will still allow some condensation of the process acetone and may allow the production line to operate (perhaps at a reduced rate) "

Remarks: "caller states that the compnay has had a leak since june on the roof of the building from the edwards unit. the do not want to fix this due to the down time and the cost. dennis pappas engineer of charge"

SUN 7/6/04 - AUSTIN - TRANSFERRED FROM GARDINEER TO SUN - RELATED TO
SPILL #990181 - END 07/08/04-Sun- Also refer to Spill # 99-01811 for
the same site. 02/09/06: This spill transferred from R.Feng to
S.Kraszewski. 03/06/06: Recieved letter from Pfizer, dated March 2,
2006. The letter states that the Department's verbal request for
documentation of UST closure from 1993 is unnecessary since
significant remedial work has taken place to address this spill since
1993 and also an NFA letter has been issued. The NFA supposedly
declares that the VCA (Voluntary Cleanup Agreement) performed by
Pfizer has been completed. SK spoke with Manuel Lopez, Director of
Environmental Health and Safety for Pfizer. I requested a copy of the
NFA letter be faxed for confirmation. - SK 03/07/06: Reviewed NFA
letter faxed by Pfizer. Will discuss with J.Kolleeny and K.Tang. - SK
04/05/06: Apparently, when this site became involved with the
Voluntary Clean-Up Agreement (VCP) the spill number should have been
closed. This spill closed out. - SK "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "11/22/11 Driver could not hear whistle, approx 5 to 10 gallons out of vent to soil. One drum full of pcs was collected. Homeowner not happy, wants more removed along with his well sampled. Steve Kalka has been hired to take water sample and access soil...mm See edocs for email response of 2/6/12. DT 7/9/13- Site meeting. Tom Chi, Steve Kalka, Deborah Thompson, Mike Taylor, and Energi Insurance on site. Discussed spill cleanup history and noted spill area. Area of initial cleanup/soil removal was limited to area under deck only; no cleanup performed outside of under deck area adjacent to tank. Recent test pit was done just downgradient of cleanup area towards pool that demonstrated impact. Shallow exposed bedrock is visible. Mr. Taylor explained that spill occurred due to plastic cap in a bung opening on top of a/g 550 tank instead of a metal cap. Tank was overfilled causing oil to come out of plastic cap on bung opening. Inspected whole house treatment system. Only one carbon tank followed by sediment filter and a UV light. Required that system be upgraded to be in compliance with DOH specs. Site potable well is reported to be some 400 feet deep and is some 40 feet from spill location. Required that well be checked for presence of free phase product. Discussed additional work requirements to delineate impacts and remediate. DT Consulting to submit work plan to Ins. Co. and then to DEC for subsurface investigation. DT 8/21/13- DT Consulting reports that subsurface investigation was performed and report to be sent to DEC in next 7-10 days. DT Subsurface Inv. conducted; no significant soil or gw impacts found. POET to remain in place and monitored quarterly. 6/9/14- Received 4 quarterly POET system sample results. Raw water has been non-detect. No Further Remeidal Action necessary at this time. DT"

Remarks: "No Whisle Clean up done"

City,State,Zip: BROOKLYN, NY 11206 Site Code: 58206 HW Code: V00350 Control Code: 36 Control Type: ENG Date Record Added: 07/09/2018 Date Rec Updated: 07/09/2018 Updated By: MXYAU Site Description: Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that	NY ENG CONTROLS NY INST CONTROL NY VCP	S106906497 N/A

PFIZER SITES B AND D (Continued)

S106906497

Env Problem:

specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the

PFIZER SITES B AND D (Continued)

S106906497

groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded

Site

Database(s)

EDR ID Number
EPA ID Number

PFIZER SITES B AND D (Continued)

S106906497

their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Name: PFIZER SITES B AND D
Address: 59-71 GERRY ST. AND 73-87 GERRY ST.
City,State,Zip: BROOKLYN, NY 11206
Site Code: 58206
HW Code: V00350
Control Code: 13
Control Type: ENG
Date Record Added: 07/09/2018
Date Rec Updated: 07/09/2018
Updated By: MXYAU
Site Description: Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved.

OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Env Problem:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management

Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected

at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 58206
HW Code: V00350
Control Code: 12
Control Type: ENG
Date Record Added: 07/09/2018
Date Rec Updated: 07/09/2018
Updated By: MXYAU
Site Description:

Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka

Env Problem:

177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the

site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited

Health Problem: regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment. Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Name: PFIZER SITES B AND D
Address: 59-71 GERRY ST. AND 73-87 GERRY ST.
City,State,Zip: BROOKLYN, NY 11206
Site Code: 58206
HW Code: V00350
Control Code: 15
Control Type: ENG
Date Record Added: 07/09/2018
Date Rec Updated: 07/09/2018
Updated By: MXYAU
Site Description:

Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that

Env Problem:

specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the

PFIZER SITES B AND D (Continued)

S106906497

groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded

PFIZER SITES B AND D (Continued)

S106906497

their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Env Problem:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial

S106906497

actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most

S106906497

recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Site Code: 58206
Site Description: Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate,

eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m³); TCE was detected at 4,700 g/m³; and cis-DCE at 1,500 g/m³. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were

PFIZER SITES B AND D (Continued)

S106906497

seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been

S106906497

determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Dt rec updated: 07/09/2018
Updated By: MXYAU
Site Code: 58206

Site Description: Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside

PFIZER SITES B AND D (Continued)

S106906497

from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer's ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Env Problem:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

PFIZER SITES B AND D (Continued)

S106906497

detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCO, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m³); TCE was detected at 4,700 g/m³; and cis-DCE at 1,500 g/m³. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m³ at the vacant, unpaved lot to the east of the site; 38 g/m³ in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m³ in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m³ and TCE was detected at 19 g/m³. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow

PFIZER SITES B AND D (Continued)

S106906497

soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3. A sub-slab depressurization system and vapor barrier were installed in new buildings as part of the remediation and redevelopment.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

PFIZER SITES B AND D (Continued)

S106906497

Site Description: Location: The site is comprised of several properties in the southeast Williamsburg neighborhood of Brooklyn, located at the following addresses: 191 Harrison Avenue and 60-66 Gerry Street (Block 2269, Lot 1) defined as OU-1; 59-71 Gerry Street (aka 177 Harrison Avenue) (Block 2266, part of Lot 1 and Lot 52) defined as Operable Unit 2 (OU-2); and 73-87 Gerry Street (Block 2266, Lots 45-50) defined as OU-3. It should be noted that any references herein to Pfizer Site B and Pfizer Site D are names historically designated by Pfizer Inc. for their properties and do not refer to Department-designated sites or operable units. Site Features: The total size of the site is 1.47 acres. The OU-1 property at 191 Harrison Avenue and 60-66 Gerry Street is currently vacant and paved. OU-1 is surrounded on three sides by a condemned and vacant apartment building which is not part of the site. The OU-2 property at 59-71 Gerry Street is currently occupied by a high school for girls (Bais Ruchel High School) and a paved area adjacent to the school building. The ou-3 property at 73-87 Gerry Street is occupied by 3 newly-constructed family houses and paved areas. Current Zoning and Land Use: The site is located in a commercial district overlay within a residential zoning district. Some portions of the property are currently vacant and paved; however, a part of OU-2 is occupied by a high school for girls and 3 newly-constructed family houses occupy a portion of OU-3. Past Use of the Site: Pfizer leased what is now OU-2 (59-71 Gerry Street) from the previous owner from 1954 to 2004; aside from occasional use as a parking lot, it was vacant from the 1950s until remediation and redevelopment began in 2011. OU-3 (73-87 Gerry St.) was purchased by Pfizer in 1964 and was used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizer s ownership, it was used as a garage and truck rental facility. OU-1 (60-66 Gerry Street) was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. It is also believed that a tetrachloroethylene (PCE) reclamation facility operated at 66 Gerry Street circa 1955, prior to Pfizer ownership, based on a building permit document from that time. Soil removal activities were performed on OU-3 in 2002 (prior to the site entering the VCP), and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of petroleum VOC-impacted soil and 18,449 gallons of groundwater (including perched groundwater). The excavation was then backfilled with clean material. Operable Units: The site consists of three Operable Units due to separate ownership and timing of development schedules for different parcels. An operable unit represents a portion of a remedial program for a site, which for technical or administrative reasons, can be addressed separately to investigate, eliminate or mitigate a release, threat of release, or exposure pathway resulting from the site contamination. The property at 191 Harrison Avenue and 60-66 Gerry Street, located on the southeast corner of Gerry Street and Harrison Avenue, (known as Pfizer Site D) is Operable Unit 1 (OU-1). The property at 59-71 Gerry Street (aka 177 Harrison Ave.) or the western portion of Pfizer Site B is OU-2. The property located at 73-87 Gerry Street, which is the eastern portion of Pfizer Site B, is OU-3. Site Geology and Hydrogeology: The site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15

Env Problem:

feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. Groundwater flow direction is generally to the north, with some radial flow to the northwest.

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds (VOCs), specifically tetrachloroethene (PCE) and its degradation products, in soil and groundwater on OU1, metals and semi-volatile organic compounds (SVOCs) in soil across the entire site. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan. Prior to Completion of Remediation Contamination is described separately for each of the Operable Units (OUs). For a description of the OUs, please refer to the Site Description. Nature and Extent of Contamination - OU-1: The primary contaminants of concern in all media on OU-1 were chlorinated VOCs. Soil - Chlorinated VOCs were detected in soil at elevated levels in a discrete area beneath the eastern portion of OU-1, primarily 8 to 15 feet below grade (fbg). PCE was detected in 4 soil borings at a maximum concentration of 280 parts per million (ppm), compared to the Protection of Groundwater Soil Cleanup Objective (PGWSCO) of 1.3 ppm. Trichloroethene (TCE) was detected in 3 soil borings at a maximum concentration of 4.2 ppm, compared to the PGWSCO of 0.47 ppm. Cis-1,2-dichloroethene (DCE) was detected in 5 borings at a maximum concentration of 120 ppm, compared to the PGWSCO of 0.25 ppm. Vinyl chloride was detected in 4 borings at a maximum of 1.2 ppm, compared to the PGWSCO of 0.02 ppm. Some metals and SVOCs were detected in soil above the Restricted-Residential use SCOs, but were not considered contaminants of concern. Groundwater - The same chlorinated VOCs that were present in soil were also present at elevated concentrations in the groundwater beneath OU-1, in similar locations as the contaminated soil. The highest concentrations were present in the 9-19 fbg depth range, with contaminants detected at lesser concentrations in deeper intervals. During recent groundwater monitoring in April 2018, PCE and TCE were non-detect; cis-DCE as high as 1,700 parts per billion (ppb); and vinyl chloride as high as 7,800 ppb. The applicable groundwater standard for these contaminants is 5 ppb for PCE, TCE, and cis-DCE and 2 ppb for vinyl chloride. Soil vapor - Chlorinated VOCs were present in soil vapor at elevated concentrations throughout OU-1. Near the source of contamination beneath the paved courtyard, PCE was detected in soil vapor at 37,000 micrograms per cubic meter (g/m3); TCE was detected at 4,700 g/m3; and cis-DCE at 1,500 g/m3. These contaminants were also present in soil vapor samples closer to the site boundaries, but at much lesser concentrations which were seen to decrease with increasing distance from the contaminated soil and groundwater. In off-site samples, PCE was detected as high as 430 g/m3 at the vacant, unpaved lot to the east of the site; 38 g/m3 in the sidewalk to the south of the site (the northeastern sidewalk of Bartlett Street); and 76 g/m3 in the sidewalk to the southwest of the site (beneath the northeastern sidewalk of Harrison Avenue). No significant impacts were observed outside of the high school across Harrison Ave. ? Nature and Extent of Contamination - OU-2: The primary contaminants of concern on OU-2 were SVOCs and metals related to urban fill in the soil, and chlorinated VOCs in the groundwater and soil vapor which have been determined to originate from OU-1. Soil - Prior to remediation, soil on OU-2 contained metals and SVOCs

PFIZER SITES B AND D (Continued)

S106906497

indicative of urban fill to depths of approximately 10 feet below grade. Metals that exceeded applicable soil cleanup objectives (SCOs) included lead as high as 6,730 ppm; mercury as high as 16.1 ppm; arsenic as high as 20.5 ppm; chromium as high as 33.6 ppm; and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm; chrysene as high as 270 ppm; benzo(a)pyrene as high as 220 ppm; indeno(1,2,3-cd)pyrene as high as 110 ppm; and dibenz(a,h)anthracene as high as 58 ppm. As part of the remediation of this OU, soil was excavated from contaminated hot-spots. Groundwater - During the most recent groundwater sampling event in March 2018, limited VOCs were detected in groundwater on the sidewalk adjacent to Lot 52. Cis-1,2-DCE was detected at 210 ppb and vinyl chloride was detected at 75 ppb; these chlorinated solvents can be attributed to contamination at OU-1. Soil vapor - Chlorinated solvents have been detected in soil vapor. Prior to remediation, PCE was detected in soil vapor at 659 g/m3 and TCE was detected at 19 g/m3. A sub-slab depressurization system and vapor barrier were installed in the high school building as part of the remediation and redevelopment. Nature and Extent of Contamination - OU-3: The primary contaminants of concern on OU-3 were chlorinated VOCs in groundwater and soil vapor, and SVOCs and metals related to historic fill in the soil. Soil - VOCs in soil at OU-3 were addressed under previous remedial actions. Soil removal activities were performed in 2002, prior to entry in the Department's VCP. Some SVOCs and metals are still present in shallow soil (0 to 2 fbg) on OU-3, in areas that were not previously excavated. Metals included lead as high as 2,020 ppm; mercury as high as 61.4 ppm; arsenic as high as 307 ppm; barium as high as 1,250 ppm; and chromium as high as 75.7 ppm. SVOCs included benzo(a)anthracene as high as 75 ppm; chrysene as high as 87 ppm; benzo(a)pyrene as high as 59 ppm; indeno(1,2,3-cd)pyrene as high as 43 ppm; and dibenz(a,h)anthracene as high as 25 ppm. These contaminants exceeded their respective soil cleanup objectives for Restricted Residential use. Site-related soil contamination did not extend off-site based on the available data. Groundwater - In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the soil and tank excavations. The system was operated from October 2006 to February 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective at treating petroleum-related VOCs in groundwater. The primary contaminants of concern that remained in groundwater following operation of the AS/SVE system were chlorinated VOCs, which were present in the northeast corner of the site. During the most recent groundwater monitoring in March 2018, PCE was detected at 16 ppb; TCE at 26 ppb; cis-DCE at 840 ppb; and vinyl chloride at 26 ppb. It has been determined that these contaminants in groundwater at OU-3 are originating at OU-1. There is no off-site migration of contaminated groundwater that originates from OU-3 specifically. Contaminated groundwater emanating from OU-1 migrates toward OU-3 and further downgradient of OU-3. Soil vapor Recent soil vapor data is limited regarding overall site coverage. Two soil vapor sampling points in the northwestern portion of OU-3 were monitored quarterly from August 2010 through February 2012. During the last sampling event from these locations, PCE was detected at 19 g/m3 with other VOCs at lower concentrations. Directly across the street from and upgradient of the site (beneath the southwestern sidewalk of Gerry Street, just outside the boundary of OU-1), PCE was detected in soil vapor at 76,000 g/m3.

Name: SITE B PFIZER
Address: 59-71 GERRY STREET AND 73-87 GERRY STREET
City,State,Zip: BROOKLYN, NY 11206
Program: BCP
Site Code: 333571
Acres: 0.8
HW Code: C224101
SWIS: 2401
Town: New York City
Record Added Date: 11/10/2004
Record Updated Date: 02/15/2007
Update By: KXCarpenter
Site Description: Site B is located in the eastern portion of the Pfizer facility and is bordered on the north by a poultry market and vacant land, a three-story apartment building, and an auto body garage and yard; on the south by Gerry St.; on the east by a portion of the auto body garage and yard, and a storage lot; and on the west by Harrison Ave.. Building demolishing in 1996 has left a reinforced concrete slab across half of the eastern portion of site B. The western portion of site B is covered with gravel and is being used as a parking lot. The site is being investigated and remediated under VP Agreement ? see site no. V00350.

Env Problem: Based upon preliminary investigations, Pfizer completed on-site and off-site delineation of petroleum related impacts in the fill material and conducted an Interim Remedial Measure (IRM) in December 2002. IRM included removal the removal of 4,735 tons of petroleum related impacted soils and more than 18,000 gallons of groundwater (including perched groundwater). In addition, nine UST's and other subsurface structures were removed and properly disposed off-Site. Investigations indicate a plume of groundwater contamination that extends north to the property border. Soil gas investigation is on-going.

Health Problem: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Sangesland called Earth Tech Environmental back to ask about this spill Contact said a 20 gal drum of unknown oil was found on the property during soil borings (part of a phase 2 on the site). Sangesland informed Earth Tech that the property owner was responsible for removing the drum from the site, NOT the DEC. Sangesland told Earth Tech to remove the drum, over excavate any contaminated soil, take 1 end point sample, forward a report to DEC with writeup, test results and waste manifest. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 08/27/2009 - Copy of Phase 2 report was submitted by Earth Tech. In 2005, during excavation of Test Pit #29 on the site, a drum was discovered at approx 7 ft depth. Drum contained unknown black oil which was leaking. Spill was called in to DEC. Visually contaminated soils were excavated from a depth of 10 ft below grade (approx 35 tons) of soil was removed. Soil sample #TP29-10 was tested and came back No VOCs, or SVOCs therefore no additional excavation work was necessary at this site."

Remarks: "1-25 GALLON DRUM IN A TEST PIT: DEC CALL TO SEE IF IT CAN BE PICKED UP:"

Tank Info:

Tank Number: 002
Tank Id: 22629
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 01/01/1956
Capacity Gallons: 1080
Tightness Test Method: NN
Date Test: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: dcwalsh
Site Description: The "Organics/Suciac Block" site is located in the central portion of the Pfizer Inc. facility in the Williamsburg section of Brooklyn, NY. Gerry Street, Harrison Avenue, Union Avenue and Wallabout Street border this block. The site was first developed for chemical manufacturing between 1854-1888. Operations continued there until 1989 and all buildings were demolished by March of 1995. The Organic/Suciac block is situated within a high-density, mixed urban/commercial/ industrial zone. Pfizer decommissioned the Organic/Suciac block with the intent to utilize it for future redevelopment and/or beneficial use. As part of the decommissioning process, all buildings were demolished. The present concrete slab is continuous throughout the Block and varies in thickness from 0.5 and 1.5 feet. In 1997, waste from the site was excavated and disposed off site, which included 18.12 tons of mercury and lead hazardous soils. Also, a total of 1,930 tons of benzene hazardous soils were excavated and disposed off-site. In 1999/2000, the excavated soil (approximately 420.3 tons) was classified as a petroleum contaminated

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "02/12/13-Hiralkumar Patel. 1:17 PM:- spoke with Kevin. he mentioned that the subject site is e designated and they are working with NYC OER for remediation. during previous investigations, they collected groundwater samples from three on-site wells and found chlorinated solvents. they prepared RAP and got approved by OER. recently, during excavation, they found 1,000 gal UST. today, they found another 550 gal tank. currently, the excavation is about 7 ft bg. its 50 ft by 100 ft site and it will be developed as 4 story condo with celler with new foundation at 8 ft bg. Kevin mentioned that groundwater was found around 8.5 ft bg during previous investigations. passive SSDS

and vapor barrier designs have been approved by NYC OER. Hannah Moore NYC OER Ph. (212) 442-6372 78-80 Throop LLC. **property owner** c/o Rabsky Group 505 Flushing Ave, # 1D Brooklyn, NY 11205 Attn.: Ph. (718) 237-2261 alternate address: none no PBS or other spills found. as per ACRIS record, 78-80 Throop LLC. owns properties 78 Throop Ave and 80 Throop Ave and as per NYC DOB record, both properties are being developed. also, as per NYC DOB record, site 78 Throop Ave has little e designation for hazmat/noise/air. ----- 1:51 PM:- left message at Rabsky Group. 02/15/13-Hiralkumar Patel. 9:33 AM:- received email from Kevin including Remedial Investigation Report. report forwarded to DEC Sharif for review. after discussing with DEC Sharif, case assigned to him. 01/15/14-Hiralkumar Patel. DEC Nick Lombardo came to discuss PBS application form he received for registration of a 100 gal tank. informed him that contractor found one 1,000 gal and one 550 gal tank at the site. he will talk to contractor to discuss this. case reassigned to DEC Patel. 10:24 AM:- spoke with Kevin. inquired him about remediation work. he mentioned that three lots (78/80/82 Throop Ave) being redeveloped with three separate buildings. all three lots were excavated to about 8-9 ft bg, little into groundwater, for entire footprint. EBC collected endpoint samples. foundation for all three buidings have been poured. asked Kevin to submit report for review. 11:07 AM:- received email from Kevin including report. he mentioned that some soil and liquid manifests are missing which will be submitted soon, once available. reviewed available documents. 1) Remedial Investigation Report dated Oct. 2012: - site located at 78-80 Throop Ave; block 2266; lots # 32 and 33 - proposed future use of the site will consist of two identical 4-story apartment buildings - both buildings will have a full cellar beneath the footprint of each building - concrete slab of the cellar will be approx. 6 ft 4 inches below sidewalk level - excavation for each new building and rear cellar-level court yard will likely extend to a depth of approx. 8 ft bg - prior to 1887, the property was developed with a bakery, livery and wagon house. the operation was closed by 1904. sometime between 1904 and 1905 the site was redeveloped with a 5-story mixed use commerical/residential building. the first floor was divided into two commercial spaces and the upper floors were residential. the 5-story mixed use building remained until the entire lot was demolished in 1980. the site has remained undeveloped since, but the land was used for lumber storage until 2003. since 2003, the site has remained vacant - elevation of the property is approx. 14 ft - depth to bedrock is greater than 100 ft - installed four (4) borings (SB-1 through SB-4) to a depth of 10 ft bg - subsurface soil at the site consisted of historic fill, which was primarily comprised of brick, concrete, wood and other debris in a borwn silty-sand mix - layer of historic fill extended to a depth of 7 ft bg - native soil consisting of a brown sand is present below the historic fill layer - no PID readings were obtained from any of the soil borings with the exception of slightly elevated readings noted for soil recovered from approx. 8 to 10 ft bg from SB1 (50 ppm) and SB3 (100 ppm) - soil at 8-10 ft bg exhibited a petroleum odor, and was stained slightly grey - collected two soil samples from each boring: one from 0-2 ft bg and another from 8-10 ft bg - collected one duplicate soil sample from boring SB-4 from 0-2 ft bg - found some VOC contamination in deeper soil from 8-10 ft bg - found some SVOC contamination in shallow soil from 0-2 ft bg - installed three (3) 1-inch diameter temporary monitoring wells (in borings SB-1, SB-2 and SB-3) - wells were installed to a depth of 15 ft bg, with 10 ft

UNDERGROUND (Continued)

S112809841

of screen - collected 3 groundwater samples and 1 duplicate groundwater sample - no free product was observed within the three monitoring wells - depth to groundwater is approx. 10 ft bg
----- groundwater flow direction based on prior investigations performed on adjacent properties is from south to north ----- three groundwater samples and one duplicate groundwater sample (from boring SB-1) were collected for analysis - found only chlorinated compounds in groundwater samples - installed three (3) soil vapor probes (VP-1 through VP-3) to a depth of 6 ft bg and collected 3 samples - found petroleum and chlorinated compounds in soil-vapor samples 2) Remedial Action Work Plan dated Oct. 2012: - excavation of soil/fill to a depth of approx. 8 ft bg for development purposes and excavation of the area with VOC contamination to an anticipated depth of approx. 10 ft bg - collection and analysis of endpoint samples - installation of vapor barrier below the concrete slab and behind the foundation walls of the two proposed buildings - installation and operation of a passive SSDS below the vapor barrier 3) tank removal report dated 09/17/13: - two (2) 1,000 gal USTs removed: one from near the front of 80 Throop Ave (lot 33) and another from near the front of 82 Throop Ave (lot 34) - both lots were excavated to a depth of approx. 7 ft bg (depth of groundwater table) for redevelopment purposes, but additional excavation was performed below the groundwater interface to remove 2 ft smear zone of petroleum impacted soil from across the front of 60 ft of site - pool of water accumulated within the excavation - total of approx. 784 gal of groundwater and a thin film of oil that accumulated on the groundwater surface was removed - endpoint samples were collected from entire site - no contamination noted in endpoint samples based on available information, case closed. ** e designation***
Remarks: "found while removal of tank - clean up pending"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Actual:
12 ft.

BROWNFIELDS:
Name: FORMER PFIZER SITE C
Address: 334 WALLABOUT STREET
City,State,Zip: BROOKLYN, NY 11206
Program: BCP
Site Code: 579698
Acres: 2.55
HW Code: C224288
SWIS: 2401
Town: New York City
Record Added Date: 11/20/2018
Record Updated Date: 12/28/2018
Update By: BRHUMPHR
Site Description: Location The site to be remediated and redeveloped is located in the Brooklyn Triangle section of Kings County and is comprised of four tax parcels totaling 110,040 square feet (2.55 acres). The site is located in the City of New York and Borough of Brooklyn. The irregular shaped site occupies a full block with approximately 485 ft. of frontage along Wallabout Street, 200 feet of frontage on Harrison Avenue, 225 feet of frontage on Union Avenue and 600 feet of frontage on Gerry Street. Site Features There are no structures presently on the site. Current Zoning and Land Use The lot is currently used for the storage of scaffolding and related construction equipment. The property is surrounded by an 8 ft high chain-link fence with one gate on Wallabout Street. The western portion of the site is zoned R8A while the central portion is zoned R7D and the eastern portion is zoned R7A. The lot is currently used for the storage of scaffolding and related construction equipment. Surrounding land use includes residential apartment buildings to the west, former Pfizer Site A to the north, commercial (warehouses), residential buildings and a private school (Bais Ruchel High School) to the east and the and a charter school (Beginning with Children) to the south. The closest school (Bais Ruchel High School) is located 60 feet to the east. Beginning with Children Charter School is located 70 feet to the south and PS 318 is located 375 feet to the north.

FORMER PFIZER SITE C (Continued)

S121343849

Past Use of the Site The historic use of the site includes residential homes, Pfizer chemical works and varnish manufacturing in 1887-1918, a lumber yard and the Pfizer chemical works in 1935. By 1947 the Pfizer chemical works occupied the entire property and continued you to do so through the 1995 when the buildings were demolished. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 4 to 13 feet below the surface followed a thick silt and clay layer. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 18 feet above the National Geodetic Vertical Datum (NGVD). The area topography is generally flat with little relief and no significant elevation changes. Groundwater occurs beneath the site at a depth of approximately 8-13 feet below grade under perched water table conditions. Based on previous studies performed at the site, groundwater flow is generally west to southwest. No portion of the site is located within a designated flood zone area.

Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Name: FORMER PFIZER SITE A
Address: 243-271 WALLABOUT STREET
City,State,Zip: BROOKLYN, NY 11206
Program: BCP
Site Code: 576972
Acres: 1.64
HW Code: C224284
SWIS: 2401
Town: New York City
Record Added Date: 09/10/2018
Record Updated Date: 10/19/2018
Update By: LSZINOMA
Site Description:

Location The Site to be remediated and redeveloped is located in the Brooklyn Triangle section of Kings County and is comprised of four tax parcels totaling 71,305 square feet (1.63 acres). The Site is located in the City of New York and Borough of Brooklyn. The irregular shaped Site occupies a full block with has approximately 450 ft of frontage along Wallabout Street, 200 feet of frontage on Harrison Avenue, 260 feet of frontage on Union Avenue and 275 feet of frontage on Walton Street. Site Features The Site is currently owned by Harrison Realty LLC. There are no structures presently on the Site. All of the lots are currently used for the storage of trucks and construction equipment. The property is surrounded by an 8 ft high chain-link fence with two gates each on Wallabout Street and Harrison Street, and one gate on Walton Street. Current Zoning and Land Use The western portion of the Site is zoned R8A while the central portion is zoned R7D and the eastern portion is zoned R7A. Surrounding land use includes residential apartment buildings to the west, residential apartment buildings and a public school (IS 318) to the north, commercial (warehouses), residential buildings and a private school (Bais Ruchel High School) to the east and the former Pfizer Site C and a charter school (Beginning with Children) to the

Env Problem: south. The closest school (Bais Ruchel High School) is located 120 feet to the east. PS 318 is located 150 feet to the north and the Charter School is located 325 feet to the south. Past Use of the Site The historic use of the Site includes taxi-fleet maintenance garages, a lumberyard and as a storage facility for Pfizer Inc. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 7 to 10 feet below the surface followed by silty-clay and fine sand. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The area topography is generally flat with little relief and no significant elevation changes. Groundwater occurs beneath the Site at a depth of approximately 6-10 feet below grade under perched water table conditions. Based on previous studies performed at the Site, groundwater flow is generally to the east. No portion of the Site is located within a designated flood zone area.

Health Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

FINDS:

Registry ID: 110067707930

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

- . Waste code: B004
- . Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

- . Waste code: B007
- . Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Address: SAME
Spiller Company: 001
Contact Name: MR. ALALIEWIE
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Sangesland gave written notice directly to Mr. Alaliewie (owner of site) to do the following work within 30 days of 7/28/99:
1)Surface removal down to pavement or top 2 feet of soil in contaminated work area. (owner says site is paved under gravel) 2)A subsurface investigation via geoprobes of the yard area
3)Installation of asphalt or other solid surface in work area
4)Prepare a report outlining proposed method of site remediation. A list of contractors was provided to the owner. It was explained to him that he can hire one of these, or someone of his own choice.
9/26/2000 Mr. Jules Kimel (718-996-3260) called requesting closure of this spill number because he wants to sell the lot to build an Edwards supermarket/mall. Mr. Kimel said he was the owner along with Mr. Cici and that Mr. Sam Alaliewie was just a tenent on the site. Mr. Kimel was told that a site investigation & cleanup would be required before the spill number would be closed out. Jules Kimel 27 85 West 5th St #7A Brooklyn 11224 Frank Cici 69-26 53rd Rd maspeth 11378 9/26/2000 Mr. Sammy Alaliewie called back to say the site was cleaned last year and NYC did 8 soil borings when they were planning on buying the site to build housing. Sangesland told Sammy to track down a copy of the environmental report related to the 8 soil borings and submit it to the DEC. If the report shows the subsurface is clean then the DEC will consider closing the site out. 9/28/2000 Real Estate Broker - John Fischer 718-677-5700 was told of the situation

S104193417

and what needs to be done. 4/3/2006 Sangesland sent a Notice of Violation letter to: Willboro Properties Ltd. c/o Klein & Solomon, 275 Madison Ave - 11th Flr, NYC 10016 Letter gives a June 15, 2006 deadline to provide DEC with results of soil boring work on the site to prove the site has been cleaned up adequately. 4/6/2006 Sangesland received a voice message from someone named Mr. Schwimer at 718-522-5512. He did not identify how he was related to the site nor did he say what he was looking for. Sangesland returned the call and left a voice message at a machine which once again did NOT identify who they were. 4/13/2006 Sangesland called Mr. John Fischer (Real Estate Broker) he said that he was NOT involved in the final transaction. He knows nothing about the current owners or what they may or may not have done on the site. 4/25/2006 Dave Glass (212-221-8303) has been hired by the property owner to remediate the site. 6/21/2006 Sangesland received a Proposed Work Plan prepared by David Glass at TRC environmental (212-221-7822). The report was inadequate to what was requested in the April 3, 2006 letter. When Sangesland asked Mr. Glass if he was the legal representative of the owner for this site, Mr. Glass specifically said he was NOT. When Sangesland asked for the name and contact information for the owner of the property, Mr. Glass said that he did not know. 6/22/2006 Sangesland spoke with Mr. Ed Klein at Klein & Solomon (law firm listed on NYC Tax records as legal address for Willboro Properties LLC). Mr. Klein said he heard of Willboro Properties, but didn't know the details. He said he would look into it and get back to the DEC with the proper contacts for the property owner. 6/22/2006 Mr. Glass from TRC called Sangesland again asking why DEC needed to know who the property owner was. Sangesland said that the DEC can/will only deal with the property owner or his designated representative. Sangesland stated that the report submitted by Mr. Glass was inadequate and that the DEC would like to prepare a Stipulation Agreement to be reviewed and signed by the property owner. This agreement will lay out the specific work required along with establishing a schedule for when the work will be done. Mr. Glass stated that the owners do not want to be identified, they do not want a stipulation agreement and they do not want a schedule of when the work must be done on the site. 7/11/2006 Sangesland and John Urda (DEC Legal Dept) spoke with Mr. Solomon at Klein & Solomon again asking for property owner name/contacts. Mr. Solomon said he would look into it. 7/12/2006 Mr. Solomon called Sangesland to say that his firm no longer represents the owner and he has no additional information on the property. Sangesland responded that the April 3, 2006 letter to Klein & Solomon apparently made it through to the owner. So obviously someone at their law firm knows how to get in touch with the owner. 7/13/2006 Sangesland submitted a Case Initiation Form to John Urda (DEC Legal) for this site. DEC spills would like to find the name/contact of the property owner and to get them to sign a Stipulation Agreement or an Order on Consent. 3/20/2007 Soil and groundwater sampling work was done in Dec 2006 by Hydrotech Environmental Corp. (631-462-5866). The initial report was found to have some problems with the well depth and screening of the wells, so another round of samples were requested. This second round of groundwater samples were taken on Feb 12, 2007. The results show a problem with high levels of cis-1,2-Dichloroethene = 2,060 ug/L in the area of MW-1 in the North edge of the property associated with the former tank farm of the former gas station. This compound is normally associated with a breakdown of PERC which is normally

associated with dry cleaners or sometimes used as a parts washer in automotive service stations. Sangesland reviewed the report (see e-docs) and sent the following response via e-mail to Mr. Saha at Hydrotech Environmental:

***** e-mail to Mr. Saha dated 3/20/07: Yash Saha, The NYSDEC has reviewed your Technical Submittal dated March 7, 2007 for the subject site, and we have the following questions/requirements for the site. The primary area of concern is around MW-1. 1) Please provide a detailed scaled layout of this portion of the property, showing the locations of the: a) Former tank field (current drawings show this location different from the old Sanborn maps, where are the site photos taken during excavation?) b) remote fill pipes c) pump islands d) location of MW-1 in relation to the old station structures. 2) A hit of cis-1,2-Dichloroethene = 2,060 ug/L will need to be further delineated and remediated in some fashion. Where is the source? (is it from offsite from the East side of Harrison Ave?, from the prior gas station on this corner?) This material is normally believed to be a breakdown of PERC from either a dry cleaner or a parts washer from a service station. If it was from the former gas station, is there a former drywell hot spot on the property that was used as a drain? How long ago was the station closed? Where is the groundwater flow moving the contamination? What are the receptors? If Hydrotech will be arguing that there is no offsite impact, then a groundwater sample from offsite will be required (DEC may request to be present for this sample) 3) There is a serious concern that there are high levels of VOC's in the groundwater at a depth of 6 ft below grade in an area where a new building is being built. The DEC will need information on the type of building going up on the site (residential or industrial). Also, will the building have a basement? In addition, depending upon the degree of remediation involved, some form of mechanical barrier will probably need to be installed under the slab floor of the new building to prevent vapor intrusion into the new structure. 4) Has this building site been processed through the NYC E-designation program? If so, what is the case number? If not, then the site is assumed to be remaining as industrial in nature? Please get back to me with answers to these questions. Thank you, Steven Sangesland Environmental Engineer 1 NYSDEC - Spills Remediation Group

***** 12/26/07-Hiralkumar Patel. received call from Ms. Saha (718-636-0800). she wants meeting with DEC project manager. 12/4/2008 - Sangesland received a quarterly sampling status report for a single MW on the south corner of the site (corner Walton & Union St). These samples from June & Oct 2008 appear clean or minor. 1/14/2009 - Sangesland spoke to Yasha at HydroTech Environmental. Requested copy of building drawings (HydroTech says building is now complete) showing a vapor barrier under the basement slab. Also copies of all environmental reports from the last few years and a meeting here at DEC to review site status. 5/6/2010 - Sangesland spoke again with Yasha at HydroTech. She submitted a Vapor Barrier System Design Specification for a building THAT HAS NOT YET BEEN BUILT???? Sangesland told her that the spill case will be closed out after Sangesland visits the site and actually sees the vapor barrier installed in the foundation. Only comment on the HydroTech report (Feb 26, 2010) is to change from 30 mil barrier to 40 mil barrier. Notification was sent to HydroTech. 5/24/2011 - Sangesland sent a letter to the owner stating that no additional water samples will be

needed from MW#1. Also, once the 40Mil vapor barrier has been laid down, the NYSDEC will close out the spill case. 7/5/2011 - Sangesland received a copy of a Vapor Barrier Specification/Drawings (signed by a PE) and dated June 3, 2011 (see eDocs). The document is acceptable to NYSDEC. Sangesland requested to witness the barrier installation and Field Testing/Vacuum Test as per the specification (Section 1.13.C.1.a) After the installation is complete and a PE has signed off that the installation was completed as per the specification , then the spill cases will be closed out. 8/21/2013 - Sangesland still has NOT received the vapor barrier installation is complete statement from a PE. as per 7/5/2011 request above. In addition on 8/2/2013 sangesland sent the following e-mail requesting a summary of all work done on the site INCLUDING the Perc TCE issues:

***** To: Ezgi Karayel Ezgi, Back in March 2007 I responded to a Feb 2007 submittal from Hydrotech with a specific question. Please take a look at that request and incorporate an answer into your summary report: From March 2007 e-mail to Yash: 2) A hit of cis-1,2-Dichloroethene = 2,060 ug/L will need to be further delineated and remediated in some fashion. Where is the source? (is it from offsite from the East side of Harrison Ave?, from the prior gas station on this corner?) This material is normally believed to be a breakdown of PERC from either a dry cleaner or a parts washer from a service station. If it was from the former gas station, is there a former drywell hot spot on the property that was used as a drain? (Steve believes this is true) How long ago was the station closed? Where is the groundwater flow moving the contamination? What are the receptors? If Hydrotech will be arguing that there is no offsite impact, then a groundwater sample from offsite will be required (DEC may request to be present for this sample) Please update your report and resubmit. Thanks, Steve Sangesland

11/5/2013 - as per J. Vought, spill is assigned to J. Feng. 2/14/2014 - email case review comments to HydroTech. Spill closure is denied. More information and clarification are required. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 2/2/18 - Spill transferred to Central Office spills. 02/04/19 - Spill closed not meeting standards. Central office staff made a site visit on 03/01/18 and discovered the parcel has been developed with a new building. The building has been outfitted with a vapor barrier (per NYC building code) and an SSDS to address any residual CIS 1,2 DCE vapors. - RJW"

Remarks:

"SITE IS A JUNK YARD WITH WIDESPREAD OIL CONTAMINATION AROUND THE YARD. CARS ARE LEFT DRAINING DIRECTLY INTO THE SOIL AND CAR ENGINES ARE LEFT TO DRAIN/LEAK ON THE GROUND. INVESTIGATION IS A RESULT OF A DEC-ENCON/NYPD SWEEP. OTHER LEGAL ACTIONS HAVE BEEN TAKEN BY NYPD AND ENCON."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1984
Capacity Gallons: 4000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MFLEONAR
Last Modified: 01/11/2018
Material Name: #2 fuel oil (on-site consumption)

They performed borings to groundwater. There was a sheen on the wt. He thinks remediation will be required. He will submit TP report and results of borings when lab analysis is available. 2/16/99 Tom Seguljic called. Mailing report. Groundwater and soil contamination. Wanted to know if we require STIP/CAP etc. I said yes. TRANSFERRED FROM Y.KRIMGOLD. 10/07/05 DDC removed the site from LiRo's list because the tanks in question were owned by NYC Health and Hospital Corporation which was responsible for the site investigation and remediation. AZ 1/13/2006 Trying to obtain info on contacts from HHC Corporation. AZ 1/18/2006 Site should be investigated and remediated. I called J. Aliberti and requested information on HHC. I was given the following information: Ruth Kalbitzer - telephone number(212) 788-3312. I called this number and left a message. AZ 1/19/2006 Received a message from Wayne McNulty (Legal Affairs HHC) 212-788-3300. Left a message for him. Contacted Wayne McNulty (Legal Affairs HHC). He informed me that Mark Walter (attorney ph. 212-788-3300) is handling this case. He will be back on Monday and will contact me regarding this case. I contacted Tom Seguljic (HRP)518-899-3011. His company handled this project before. The site was handled by Jacob Krimgold. J. Krimgold approved a remedial plan. Consultants installed wells and encountered free phase - 0.08'(MW-10)-0.9'(MW-9). Also dissolved plume in a range of 15,000 ppb. DEC requested to design a remedial system and IRM. It has not been done. AZ 1/24/2006 I left a message for Mark Walter (HHC Legal). 1/25/2006 I contacted Mark Walter (Legal Affairs HHC) at 212-788-3303. He will contact the facility and get back to me in a day or two. I updated him on the site history. AZ 1/27/2006 I contacted Mark Walter (Legal Affairs HHC). He told me that Patrick Sullivan (ph. 718-963-8006 - Deputy Executive Director for Support Services) will be in charge for the site clean up. HRP will be there consultants. Consultants will assess the situation and submit a work plan and time time table next week. AZ 1/31/2006 I contacted Jeff Sotek (HRP-518-899-3011). We discussed Remedial Action Work Plan for the site. Initially there were 9 wells. I recommended to inspect, map, develop and sample all wells prior to conducting any work. They will proceed with the field work during this week. AZ 2/21/2006 Contacted Jeff Sotek (HRP-518-899-3011 Ext. 206). GW results are in. Report will be ready by the end of this week. I left a message for Jeffry. AZ 2/22/2006 Jeff Sotek (HRP). HRP completed the field work. Free phase was found in 2 wells - MW-2 and MW-5. About 2' of product was found in MW-5. MW-9, 10 have sheen. A report will be issued on Monday. Remedial Action Work Plan is to follow. I requested to send a vac truck to the facility to pump out the free phase immediately. AZ 2/28/2006 Reviewed groundwater sampling results and report by HRP Associates. The report indicates that dissolved contamination phase is present at concentrations up to around 20,000 ppb. The report has deficiencies: no measurment of free phase thickness was performed, plume map and total VOC contcentrations were not submitted. I contacted Jeff Sotek and conveyed my comments. I requested to start vac truck operations immeadiately. He replied that vac truck operations will start this week. Remedial Action Work Plan will be submitted to DEC. AZ 3/2/2006 Contacted Jeff Sotek. He informed me that the vac truck operations will start on Friday March 3, 2006. I instructed him to arange future vac truck visits based on the recharge. AZ 3/16/2006 Received and reviewed a report from Warren & Penzer (Chet Bijoor 212-922-0077). They will take over this project. On March 3, 2006, they pumped product from MW-2, MW-5, VE-1,OB-1,

NYC-HH - WOODHULL HOSPITAL (Continued)

S106534422

OB-2and OB-3. 78 gallons of fluid and 29 gallons of free product was pumped. They are preparing a report for DEC (RAWP). AZ 6/13/2006 Contacted Warren & Penzer (Chet Bijoor 212-922-0077). Three pump outs were performed 14-20 gal of free product removed. Product levels are dropping. They are revising design plans. AZ 7/6/2006 Received update from Warren & Penzer (Chet Bijoor 212-922-0077). Pump out was performed last week - 75 gal of free product and water mixture was removed. AZ 8/15/2006 Reviewed Interim Progress report from Warren & Penzer. Pump out was performed on July 28, 2006 - 43 gallons of free product and water mixture was removed. AZ 11/21/2006 Reviewed Interim Progress report from Warren & Penzer received on November 16, 2006. Pump out was performed on October 20, 2006 - 106 gallons of free product and water mixture were removed. Eight gallons of product was pumped out. AZ 7-10-2007 Reviewed Remedial Action/Design Work Plan Report by Warren & Penzer submitted on May 25, 2007. The report is lacking important information: no IRM summary was included, no tables with free product thickness data were included, no free product isopleth map was included, no summary of soil sampling results included. The report proposed, as a remedial measure, a combination of SVE system for soil remediation and a vacuum truck for free phase as a secondary means. Total BTEX in groundwater ranged from less than 0.5 ppb to 13,600 ppb in MW-10. I left a message for Chet Bijoor (Warren & Penzer 212-922-0077). AZ 7-11-2007 I called Chet Bijoor and asked him about the deficiencies of the report. He said that he will call me back. AZ 7-12-2007 Joan Caiazzo (Facility Operation Area Senior Associate Director 718-963-8789). I requested to expedite the site remediation and submittal of the modified report. AZ 7-12-2007 I called Chet Bijoor (Warren & Penzer). I told him that the report contains a number of deficiencies. These deficiencies should be corrected. Chet told me that no pump outs were performed since November. Although, monitoring was performed. DEC has not received any monitoring reports since November 2006. AZ 7-16-2007 A letter to the consultant and the hospital was discussed with V.Brevdo and sent out: NYSDEC has not received any Monitoring Reports since November 2006. Therefore, the current status of the free product plume is unknown. In addition, the report is lacking IRM summary, free phase product thickness data, free phase product isopleth map or a similar plan with free phase product thickness information. On page 2 of the report was stated that the free phase product recovery and level measurements are provided in Appendix B. However, this Appendix appears to be missing. The remedial plan proposed an SVE system to treat soil contamination but no summary of soil sampling results was included in the report. The dissolved phase groundwater contamination was detected at the site but no remedy for the dissolved phase was proposed. Permanent remedial system could be used at the site to treat free phase and dissolved phase groundwater contamination. Please note, that the Department will be able to make a decision regarding remedial system selection only when all missing information is submitted to DEC. The remedial plan should include a monitoring plan and an implementation schedule. A schematic plan of the remedial system should be included in the proposal. Major parameters of the remedial system such as computations of drawdown, pumping rates and radius of influence; the capture zone, system monitoring parameters and frequency, and reporting frequency should specified in the report. The submittal of the remedial plan was significantly delayed. A revised remediation plan should be submitted to DEC within two weeks of the receipt of this letter. AZ 8-3-2007 I requested that

Chet Bijoor submit hard copies with all info which was requested by DEC. Wells will be monitored next week. Consultant will submit the monitoring report with the results of well monitoring. Neither IRM nor gw monitoring was performed since November 2006. AZ 8-7-2007 I contacted Chet Bijoor and requested that the following items should be submitted to DEC: 1. Free phase isopleth map or a block diagram map; 2. Dissolved phase map with historical data for total VOCs and SVOCs information. It also may be presented as block diagrams; 3. Free phase table; 4. Soil contamination plume map. Chet Bijoor responded that this info will be submitted to DEC within ten days. AZ 8-23-2007 An e-mail was sent to Chet Bijoor: I need hard copies of all figures. Results of the latest monitoring should be included in this report. Your analysis of the submitted data, old and new, together with the remediation action plan should be submitted to DEC. AZ 8-31-2007 I contacted Chet Bijoor via telephone and requested that the report with updated figures and tables should be submitted to DEC within next ten days. AZ 3-20-2008 Contacted Joan Caiazzo. She informed that she was reassigned and the person in charge is Lisa Scott-McKenze Senior Associate Executive Director 718-963-8007 and Kein Anderson (Deputy). Left a message for Lisa Scott-McKenze. AZ 3-20-2008 An e-mail was sent to Warren and Panzer and Kein Anderson (Woodhull Hospital): Dear Chet, I have reviewed Groundwater Monitoring Report for the above site submitted to DEC on February 7, 2008. The report lacks some important information and has to be modified. The report's deficiencies are discussed below: The report does not contain free product thickness monitoring data collected in August 2007. The report states that Warren and Panzer visited the site on August 7, 8 and 9, 2007, and performed groundwater investigation. However, free product data for MW-2 and MW-5 obtained as a result of this investigation were not reflected in Fig. 5 (Historical Free Product Reference). Historical free product data should be tabulated. DEC has previously requested in writing that a table with historical free product levels should be compiled and submitted to DEC. The report is proposing installation of an internal combustion engine that will extract the product vapors and remove product. Unfortunately, Warren and Panzer did include any description or details regarding the proposed system. In August 2007, DEC sent a letter to Warren and Panzer. This letter requested that a schematic plan of the remedial system should be included in the remedial system proposal, as well as major parameters of the proposed system. The report dated February 5, 2008, does not contain this information. Detailed description of the proposed remedial system (internal combustion engine) which will address free product plume, its schematic plan and case studies should be submitted to the Department. The remedial plan should include a monitoring plan and an implementation schedule. System monitoring parameters, monitoring frequency, and reporting frequency should specified in the report. A modified groundwater monitoring report containing detailed remedial system proposals should be submitted to DEC. Please note, that the Department will be able to make a decision regarding remedial system selection only when all missing information is submitted to DEC. AZ 5-30-2008 I contacted Brian Shaw @212-922-0077 regarding the modified Groundwater Monitoring Report dated April 11, 2008. The report had a number of deficiencies: 1. Figures 2 and 5 are not legible 2. The latest product thickness data is not reflected in Historical Free Product map (Figure 5) 3. Groundwater contour map was not included in the report. Groundwater flow direction is not shown on the plans.

NYC-HH - WOODHULL HOSPITAL (Continued)

S106534422

Historical groundwater plume data map with groundwater flow direction should be submitted to DEC. Figure 2 and 5 should be revised the so the mapped information is legible and submitted to DEC. Some groundwater plume delineation might be necessary. Revised info will be submitted to DEC. New proposals for a remedial strategy will be submitted to DEC. AZ 6-23-2008 Contacted Brian (Warren and Penzer). Reminded him that the revised remedial strategy should be submitted to DEC. He suggested a meeting to discuss this site. I concurred but suggested that the RP representative attends the meeting. Brian will get everybody availability and will call me back. AZ 6-25-2008 I left a message for Joan Caiazza (Facility Operation Area Senior Associate Director 718-963-8789). AZ 6-26-2009 Received a phone call from Joan Caiazza. She is no longer in charge of this project. The person in charge is Kein Andersen Facility Operation Manager 718-963-6869. I left a message for Kein Andersen. AZ 6-26-2008 Contacted Associate Executive Director 718-963-6869. We discussed the project. I listed DEC concerns It was agreed to set up a meeting on the week of July 14, 2008. AZ 7-18-2008 An e-mail was sent to Warren and Penzer and Woodhull Hospital: On July 17, 2008, Representatives of Woodhull Hospital and Warren & Panzer attended a meeting with NYSDEC. The goal of the meeting was to discuss the status of remediation at the above site. Since last sampling at the site was done in August 2007, another round of well gauging and groundwater sampling should be performed. Groundwater wells will be sampled for VOC contaminants. A monitoring report including the free product table and map, dissolved phase groundwater data summary and figures with historic data should be submitted to the NYSDEC within six (6) weeks. The data shall include total VOCs. If the groundwater monitoring determines that there is appreciable amount of free product present in any of the wells, a product pump out should be performed to remove the free product. The product pump out report should also include data on the amount of product removed as well the amount of GROUNDWATER with dissolved removed. Quarterly groundwater monitoring should be implemented thereafter. Monitoring reports will be submitted to the NYSDEC within four (4) weeks of the sampling event. Warren and Penzer should conduct soil sampling at the site. A plan with proposed soil borings should be submitted to DEC. Soil borings should be advanced throughout the site including locations in the vicinity of former soil borings WH-13 and WH-14. Wells, if installed, should be developed, purged sampled. Soil Sampling report should be submitted within eight weeks for NYSDEC review. Upon collection of the field data, a revised remedial strategy report based on the findings should be prepared by Warren and Penzer and submitted to the NYSDEC within 8 weeks for review. AZ 11-3-2008 An e-mail was sent to Bryan Shaw (Warren and Penzer), Woodhull Hospital and V.B.: I have reviewed a Monitoring Report for the above site submitted on September 8, 2008. The report contains several deficiencies. In the previous correspondence with Warren and Penzer and at the meeting on July 17, 2008, DEC requested that a monitoring report must include a free product table and map. However, the submitted report does not contain a table with free product measurements. Also, according to the report, Figure 5 provides data collected from the monitoring events. However, submitted Figure 5 does not contain the latest free product data. Current free product data and free product tables should be included in a revised report and the revised report submitted to DEC within ten days. At the July 17, 2008, meeting Warren and Penzer stated that a soil sampling will be conducted. The soil sampling plan

is overdue and should be submitted within ten days. The total VOC concentrations in MW-3, MW-9 and MW-10 require immediate attention. Warren and Penzer should submit to DEC a remedial strategy addressing dissolved phase groundwater plume. These remedial proposals should be submitted within ten days. Recovery wells installation is approved. Recovery wells should address free phase petroleum and the dissolved phase product. Warren and Penzer should submit design proposals for remediation of the dissolved phase groundwater contamination within ten days. Submitted groundwater and soil tables should contain NYSDEC Guidance Values. Laboratory data (STARS list of VOC and SVOC compounds) should be compared to NYSDEC Guidance Values and exceedances should be indicated by bold print. Corrected groundwater tables should be included in the revised report and submitted to NYSDEC. Interim Remedial Activities (IRM) should be performed. Free phase product should be evacuated using peristaltic pump. Amount of the evacuated product should be recorded and included in monthly progress reports. Brief site progress reports describing field and laboratory activities should be submitted to DEC on a monthly basis. First monthly progress report is due by November 18, 2008. AZ 11-4-2008 I contacted Bryan Shaw. I requested that a recovery well is installed near MW-10 to remediate the dissolved phase plume. Soil borings were advanced. Bryan stated that soil contamination is concentrated around the former piping which has not been removed. I suggested considering hot spot soil excavation. AZ 11-20-2008 Received a modified report from W&P. W&P performed a product extraction event on 11/10/08. They are currently waiting for the report from the vendor to determine the product collected from groundwater. Once they receive the report they will expedite a long term remediation strategy in a formal RA report. W&P plans on performing another extraction early next month. AZ 12-24-2008 Received a modified report from W&P. They performed an enhanced fluid recovery on November 10, 2008. Approximately 2 gallons of vapor phase product was removed from MW-2 and RW-2. Approximately 958 gallons of impacted groundwater was removed from MW-2 and approximately 270 gallons from RW-2. Each well was vented for approximately 4 hours each. Another EFR is scheduled for January 12, 2009 in which they will check the influence on MW-9 and 10. An e-mail was sent to Bryan Shaw: A hard copy of the report to be submitted to DEC for a review. Please indicate how vapor phase was measured. Also, free product portion of the impacted groundwater should be measured. DEC previously informed W&P about this requirement. Soil sampling results in Table 1 should be compared to the DEC Guidelines Values and exceedances indicated in bold print. Separate maps for dissolved groundwater results and plume, and free phase plume map similar to what was presented in Fig. 2 (soil sampling results/plume) should be included in the report. Monthly progress reports should be submitted to DEC. AZ 8-24-09 Received Remedial Action Work Plan (RAWP) dated July 8, 2009. The plan stated that Enhanced Fluid Recovery (EFR) was performed at the site as IRM. The report proposed a combination of two techniques for the site remediation: EFR and Chemical Oxidation (Regenox in-situ treatment). I contacted Bryan Shaw of WP and informed him that the report is missing essential information. The report is missing tables containing free phase product measurements in all monitored wells, free phase plume maps, tables with dissolved VOC concentrations, dissolved plume maps, tables containing soil contaminant concentrations and soil contamination plume maps. Results of the quarterly monitoring events should be included in RAWP. Free

phase and dissolved data were previously requested by DEC on numerous occasions. RAWP can not be reviewed without this essential information. RAWP should be revised and resubmitted together with the e-version to DEC. The following e-mail was sent to Warren and Penzer, Woodhull Hospital; and V. Brevdo: Brian, I received Remedial Action Work Plan (RAWP) dated July 8, 2009. The plan stated that Enhanced Fluid Recovery (EFR) was performed at the site as IRM. The report proposed a combination of two techniques for the site remediation: EFR and Chemical Oxidation (Regenox in-situ treatment). The report is missing essential information: tables containing free phase product measurements in all monitoring wells, free phase plume maps, tables with dissolved VOC concentrations, dissolved plume maps, tables containing soil contaminant concentrations and soil contamination plume maps. Results of the quarterly monitoring should be included in RAWP. Free phase and dissolved data were previously requested by DEC on several occasions. RAWP can not be reviewed without this essential information. RAWP should be revised and resubmitted together with the e-version on a cd to DEC. Also, no quarterly monitoring reports were received from Warren and Penzer since December 2008. Quarterly Monitoring Reports should be submitted on time. AZ 6-8-2011 Received an e-mail from S. Frank LiRo stating that NYC Health and Hospitals Corp. contracted LiRo to help them with this spill. LiRo sampled at the site this spring and will submit a monitoring report on behalf of Health and Hospitals. They are repairing a bunch of the site monitoring wells as many of the roadboxes were in bad shape. Their intent is to come up with a remedial action plan. I forwarded to LiRo Remedial Action Work Plan (RAWP) dated July 8, 2009 by Warren and Penzer. AZ 10-19-2011 A letter and groundwater monitoring report dated 6-21-2011 and issued by LiRo stated that product was detected in two of the on-site monitoring wells, including MW-05 (up to 0.01 ft) and MW-02 (up to 0.43 ft). Data from nearby wells indicate that the free product is limited to a small area. Persistent groundwater contamination is evident in the area of the former USTs. A number of the site well casings were in poor condition. NYCHHC and LiRo have implemented a well repair program to secure and stabilize the wells. LiRo will prepare a revised Remedial Action Report and based on our discussion, the revised report will include the following: A summary table showing historical free product thickness levels and a free product extents map; Data summary tables and contaminant plume maps for soil and groundwater; Better documentation of existing contaminant levels and the basis for the remedial recommendations; and, A storage tank inventory to confirm that all USTs have been accounted for at the site. AZ 11-16-2011 LiRo submitted groundwater monitoring report for the above site dated July 26, 2011. The report stated that no free phase was encountered on June 28 and 29, 2011. VOCs were detected in 13 of the 16 wells sampled. 3 wells had general increase in BTEX concentrations. Concentrations ranged from ND to 69,200 ppb MTBE was detected above TOGS values in 10 samples and ranged from 0.5 to 10,000 ppb. LiRo will prepare a revised Remedial Action Plan and submit to DEC. AZ 1-19-2012 The following email was sent to S. Frank/F.Ashkan/V. brevdo: Dear Steve, I have reviewed Groundwater Monitoring Report dated October 18, 2012, for the above site. The report stated that trace of product was detected in well MW-02. Elevated PID readings were detected upon opening four wells (up to 1,841 ppb). Total VOCs were detected up to 12,600 ppb in 12 of the 15 wells sampled. MTBE was detected (up to 2,700 ppb) in seven of the 15 samples collected. The report proposed that a Revised Remedial

S106534422

Action Plan will be prepared following four quarters of groundwater monitoring on-site. This proposal is unacceptable. This site has been monitored for a prolonged period of time and enough monitoring data has been collected. A remedial system has to be designed to address the existing contamination. A Remedial Action Work Plan should be submitted to DEC within 30 days of this email. Also, this site should be discussed at the upcoming DEC/DDC meeting. AZ This email was forwarded to Kein Anderson (Kein.Anderson@woodhullhc.nychhc.org) who is a Woodhull Hospital Rep. AZ 6-25-2012 Reviewed Revised Remedial Action Report for this site dated March 21, 2012. The report stated that historically free product was detected in six site monitoring wells. Currently MW-2 contained 0.48 ft. of free product. Concentrations of total VOCs ranged from 2.69 ppb to above 27,650 ppb in well MW-05. The free product and contaminated soils are the likely source of the dissolved phase contamination. The remedial action report discussed five remedial technologies including technologies that may be implemented at the site: groundwater and free product extraction and treatment, excavation with off-site treatment and/or disposal and in-situ chemical oxidation injection (ISCO). Three different options were proposed for excavation: 222 cubic yard excavation, 1,000 cubic yard excavation and 3,500 cubic yard excavation. In order to select the best remedial option, I contacted S. Frank of LiRo and asked to submit three additional plume maps which would show different options for excavations including excavation areas. The excavation plans should be superimposed on free phase, groundwater and soil contaminant maps. LiRo will submit these maps for review. 6-27-2012 LiRo submitted requested maps for review. I asked LiRo if it is possible to add area around borings SB-13 and SB-15 with very high VOC concentrations to the excavation area. AZ 8-15-2012 Reviewed Groundwater Monitoring Report dated March 2012. Product was detected in MW-02. Elevated PID readings were detected upon opening wells in MW-2, MW-05, MWB-VE1, MWOB3D in a range of 123-1,458 ppb. VOC were detected in 14 of 15 wells sampled and ranged from 2.69 ppb to 27,650 ppb in MW-05. Four wells have had general overall increase in BTEX concentrations. MTBE ranged from 2.3 ppb to 4,400 ppb. AZ 10-10-2012 Reviewed Groundwater Monitoring Report dated May 18, 2012. product was detected in two wells. PID reading were recorded upon opening wells up to 1,296 ppb. Total VOCs in gw were up to 9,701 ppb in MWOB3D. AZ 10-22-12 An e-mail received from S. Frank: Alex, LiRo and NYCHHC discussed adding spot excavations that you requested at SB-13 and SB-15 at the Woodhull Hospital Site. The planned Alternative 4 excavation area could be expanded to include location SB-13 which had relatively high soil contaminant levels (total BTEX in soil on the order of 300 ppm). Location SB-15 is physically separated from the Alternative 4 excavation area and contaminant levels were much lower (Total BTEX in soil on the order of 35 ppm) at the SB-15 location. We do not believe the residual contamination at SB-15 significantly contributes to the groundwater contamination at the site and do not feel that the additional cost of excavation at SB-15 is warranted. Please send a letter if our revised Remedial Action Plan is acceptable and we will move forward with the Site remediation. Thanks Steve Frank LiRo Engineers, Inc. I contacted S. Frank and discussed the proposed excavation. Exceedances in xylene are more than two orders of magnitude in the area of SB-15. This area should be addressed. Excavation or SVE system could be possible remedial options for this area. S. Frank will discuss site remediation with Woodhull hospital and send me a revised proposal. AZ

5-20-2016 I have contacted S. Frank and asked about the status of this site. He will get back to me with the update. AZ 5-23-2016 In response to DEC's request for additional excavation in the areas of historical boring locations SB-13 and SB-15, LiRo proposed an amended excavation plan. The plan consists of excavation in three discrete areas of contaminated soil. The dimensions and depth are based on historical soil data which indicate contaminated soil to a depth of 10 feet in the main and SB-13 excavation areas and to a depth of 5 feet in the SB-15 excavation area. Because the added excavation areas (at SB-13 and SB-15) are very close to a retaining wall foundation, extreme caution will be exercised to protect the integrity of the foundation. The western extent of the excavations may be limited as necessary for protecting the foundation. If dewatering is required, water from the excavations will be removed using a vacuum truck. Once the excavations are complete, five soil samples will be collected from each area (four side walls and bottom of each excavation). These end point samples will be submitted for NYSDEC CP-51 Table 2 VOCs using method 8260. After completion of the sampling, Kloxur CR - a self-activated persulfate oxidation system which couples chemical oxidation with aerobic and anaerobic bioremediation processes will be applied in the excavation to oxidize and bioremediate residual petroleum contamination. I left a message for S. Frank. Discussed the site with S. Frank. LiRo will resubmit the report with the following modifications: two bottom soil samples will be collected. Also, if groundwater is encountered in the excavation, a groundwater sample should be collected. AZ 6-3-2016 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed the Amended Revised Remedial Action Plan for Woodhull Medical and Mental Health Center issued to NYSDEC on May 27, 2016. The Work Plan calls for the excavation of three discrete areas of contaminated soil. I concur with this plan. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 4-10-2018 Left a message for Scott Yanuck at 631-673-0612 (Laurel Environmental). He called me back. They are preparing a remedial proposal for Woodhull Hospital. AZ 3-26-2019 Reviewed Groundwater Monitoring Report by Laurel Env. (LEA) dated October 29, 2018, and received on November 29, 2018. Laurel performed groundwater monitoring and sampling at the site in October 2018. Samples were collected from ten of the fifteen pre-existing wells. The five wells not sampled either contained free product, were destroyed or couldn't be located. Product was detected in the monitoring well MW-2 at the thickness of 0.75'. Total VOCs concentrations in groundwater were up to 15,782 ppb in MW-5. AZ 3-26-2019 I have discussed the site with Scott Yanuck at 631-673-0612 (Laurel Environmental). He proposed a soil delineation and a

DEC Memo: "07/11/12- zhune spoke to Carol Castana(718-714-6898 from Empire Environmental. She said they found petroleum contamination while doing sidewalk flag where an old fill box was closed in 2010. Alfred Cigarra- Hospital contact. Facility Mnagement. 718-963-5874 07/11/12- Carol From Empire Environmental sent the foolowing email: As a follow-up to our conversation today, Empire Environmental Services was on site today at 760 Broadway, Brooklyn to replace 1 x sidewalk flag (5 x 5) at Woodhull Medical Center. Upon breaking up the concrete flag it was noted that there was petroleum contamination

Map ID
Direction
Distance
Elevation

NYC-HH - WOODHULL HOSPITAL (Continued)

S106534422

present under the sidewalk. The sidewalk flag that was being replaced is the location of a closed fillbox. The contamination present is not fresh product. In 2010 Empire Environmental closed the existing fillbox and installed a new fillbox in a different location. When the fillbox was closed we did not remove the concrete sidewalk flag, but repaired the concrete flag. At that time we obtained a Dept of Transportation (DOT) permit to perform the work on the sidewalk. In June 2012 the DOT issued a violation to Empire for repairing the sidewalk flag instead of replacing it, which is the reason why we were on site today. We will be placing a vapor barrier between the contaminated soil and the new concrete. This is a very busy pedestrian area and the sidewalk can not remain opened while the Medical Center determines its next course of action. 8/14/12-Alfred Cegarra sent the following email. Plan of Correction Woodhull Hospital will be working with it s consultants in order to determine the best course of action in order to meet the new oil burning regulations (Local Law 43). One of the proposed plans would require removing the existing no. 6 oil tanks that are buried under the sidewalk in favor of new oil tanks. This is the same location that Empire Environmental Services removed the residual oil from prior to repairing the sidewalk. The excavation of the old tanks (and related piping) will allow us to better examine the area in question and if needed, allow us to remove any remaining traces that may have been missed by Empire Environmental Services. Upon completion we will forward to your office the required documentation in order to satisfactory close out the report. 9/20/13-Zhune visited the site met Lisa R. Scott-Mckenzie (Senior associate Executive Diretor)and Alfred Cegarra (Facility Operations -Safety Director). Lisa said the project to upgrade the tank will star in March 2014. 8/23/13-Alfred Segarra sent the following email: Note that the New York Power Authority will be conducting soil testing near the fill port on September 25, 2013 in order to determine if any action is warranted. We will advise you of the test results as soon as they are available. 2/9/16-Russ sent the following email to Leszek. I guess there are two questions/issues: 1.Being that the tank had a hole in it, is there any concern that the tank leaked (should a spill have been called in, should there be any investigation to determine the absence/presence of a spill around the tank)? 2.Has Woodhull done everything that is necessary to address the old spill? If unknown, does this impact the decision to allow this variance (does additional work need to be completed and/or a tank removed in order to address the contamination at the site)? 2/10/16-Russ sent the following email to Lezek The TTT and structural assessment are not in DecDocs. I can get you a copy if you would like to take a look at them. The record is not clear on whether the TTT was done prior to or after the repair of the hole in the tank. The hole is located in the upper area of the tank and as such may not have leaked product if the volume of product in the tank was always below the hole. It is not clear to me whether a spill should have been called in and/or investigated. I will be interested in the feedback from Veronica and Jeff on the spill situation. 2/16/16-Russ sent the following email to Joanna Veronica Zhune is requesting the information concerning the 2012 spill. While we are getting closer to approval, we are not giving the approval yet so it would not be wise to order the steel material for this project yet. 2/17/15-Zhune spoke to Joanna from Wendel Joanna said that I have to speak to Buss Brauksiek in regards to spill #120358. She also said the hospital is responsible to clean the spill. This spill is not

NYC-HH - WOODHULL HOSPITAL (Continued)

S106534422

including in the project that she is working. 2/23/16-Zhune spoke to Alfred Cigarra. Alfred said he is not involve in this spill anymore the I have to speak to Ricardo Corrales. 2/23/16-Vought-Sent email response to inquiry via DEC Zielinski via DEC Brauksieck that Russ, Our apologies on Veronica s lack of response to your below email. Unfortunately with a case load of 150 plus projects she is proverbially buried like most in the Region 2 Spills Unit. Veronica and I looked into your query below as to if the reported spill is in close proximity to the site and if Woodhull is completing all the work that is deemed to be necessary. We also noted your concerns in the DEC Remarks of the reported tanks in the sidewalk as well as the sidewalk also having soil contamination. Unfortunately, Woodhull has not submitted any site plan to date so as of yet we cannot answer whether the tanks will need to be removed as part of the soil remediation. Veronica noted she was in communication with Joanna last week and she inquired about the status of the spill and Joanna noted the spill was not part of the project and the project is on hold and the cleanup of the sidewalk spill is the responsibility of the hospital. Joanne noted to Veronica that additional questions regarding the spill should be directed to you. Veronica noted she has also called her contact for the spill, Alfred Cegarra, and left numerous messages since her last note entry in August 2013 but he has not returned her calls. We would like to draft and send out a letter to the responsible party, or parties, requiring delineation of the spill, collection of endpoint samples, and submission of a scaled site plan with all UST and piping locations. As per the PBS Registration, the owner of the tanks is WoodHall Medical & Mental . With your approval, and so that we may be consistent in our efforts, we would like to send out this letter to WoodHall Medical & Mental. We will be sure to copy you on the letter as well. Apologies again for the delay and as always if it is easier to discuss you can call me on my cell phone at 917-577-1728, Thanks. 2/23/16-Russ sent the following email to Jeff. Thanks for your response. I understand the work load situation down there. I agree with sending Woodhull a letter. I have seen the site plan (Leszek also has a copy) but it is not clear exactly where the spill was observed and whether it impacts the area around the tanks. The original letter from Woodhull concerning this tank lining project came in from Ricardo Corrales, Senior Associate Director, Capital Construction & Life Safety Management. His phone number is 718.963-6891. If the other contacts at Woodhull are unresponsive then I suggest contacting Ricardo. 2/25/16-Russ sent the following email to Joanna. I have had email conversation with Veronica and her boss Jeff. The result is the attached email that was sent on Tuesday on which you were copied. I am looking for Woodhull to respond to the email and have a clearer understanding that moving ahead with the spill cleanup and moving ahead on the tank project are not in conflict. At this point, the spill file that you reviewed indicates that the complete cleanup can be accomplished when the tanks are removed. You have indicated that this statement is incorrect but I need confirmation from the facility/Veronica/Jeff that this spill cleanup can occur without disturbing the tanks. 2/25/16-Joanna sent the following email to Russ. Thank you for attaching the email& Never received it, but I do know that yesterday morning, I was told that Veronica had spoken to Ricardo Corrales from the hospital and that the hospital was hiring the services from Empire to follow NYSDEC protocol for clean-up. I have included Ricardo Corrales and Alfred Segarra in this email so

they can confirm with you via email and document that this oil spill is nowhere near our construction site. 2/26/16-Joanna sent the following email to Russ Has Ricardo Corrales or Alfred Segarra contacted you in regards to the location of the oil spill? 2/26/16-Ricardo sent the following email to Russ. Please be advised that the oil spill occurred at an abandoned fill port that is nowhere near the construction site in question. We are awaiting a proposal from Empire to remediate the spill which they had left in a contained state several years ago. 2/26/26-Jeff sent the following email to Russ. To date Spills has not received any site plan with tank locations or any delineation data to know how big the spill is and as such we cannot confirm Riccardo s statement below that the oil spill occurred at an abandoned fill port that is nowhere near the construction site in question . We would would be able to answer the question if we had the delineated spill on the same site plan as the tanks in question. 2/26/16-Russ sent the following email to Jeff I appreciate the information. It would be helpful if you would reply to Ricardo s email so that they understand that DEC needs a site plan that includes tank location and the delineation data to demonstrate the accuracy of the statement that the spill is nowhere near the construction site in question. 2/26/16-Zhune sent the following email to Ricardo. We discussed the below with Russ and the additional information we need is a scaled site plan that includes both the tank and piping locations and the completely delineated spill (with sample locations and analyses). We look forward to the information and will review it as quick as possible so as to not affect the schedule for the tank project 2/26/16-Joanna sent the following email to Ricardo. When will this be issued to the NYSDEC? 2/26/16-Carol Castania from Empire Environmental sent the following email We will be furnishing the proposal to Woodhull Hospital for remediation of the spill at Woodhull Hospital. Michael Giustiniani would like to speak with you to clarify where exactly the samples need to be taken. Can you please call him at (718) 714-6898 to discuss. 2/26/16-Jeff and I spoke with Michael Giustiniani from Empire(copied above) and he will be submitting a site plan with a brief site description in including information on the tank upgrades and proposal for further action on the spill (vz) 3/29/16-Carol from Empire sent the following email We have received the Purchase Order from Woodhull Hospital to proceed with the remediation of Spill #1203508. As per your request, attached please find the following documentation: .Letter from Empire Environmental Services with a brief description of the facility approved work to be performed. . Site Plan indicating the location of the contaminated soil to be remediated, location of previously closed fill box, location of underground storage tanks and location of potential receptors. Please note information regarding the tank upgrades was previously submitted to NYSDEC as requested by Russ Brauksieck. Empire Environmental is submitting the necessary documentation to obtain a DOT permit as required for the removal of the sidewalk flags at the location of the soil contamination. Once the permit has been issued we will commence work at the site. 3/29/16-Zhune sent the folloing email to Carla The Region 2 Spills Unit reviewed your below email and site plan with the information in regards to Spill #1203508. The Department has no objections with the tank upgrade as proposed. Please ensure all tank upgrades are done with the approval of the DEC PBS Program copied above. We look forward to receiving the report with the endpoint sample analyses and a scaled site plan. 4/15/16- Jennifer Perez from Empire Environmental

sent the following email We received the analytical report for the end point samples collected for the removal of spill # 1203508. We are working on completing the Spill Closure Report; the only item needed is the drum disposal manifest. We are coordinating the pickup of the 30 x 55 gallon drums with Lincoln Hospital. Attached is the sample table and the analytical report. All samples are under the NYS DEC soil cleanup levels. We would like to back fill this hole asap due to the high populated area. At this time I m requesting your approval to backfill on Monday, April 18th . Please advise if you require a site visit and if we have the okay to backfill the excavated area. In addition please advise if you require any additional information. We will remit the Spill Closure Report as soon as the 30 drums are picked up tentatively scheduled for next Friday. 4/15/16- Zhune reviewed the endpoint analytical results. The results are be below the NYSDEC CP-51 soil cleanup guidance, therefore the spill is closed. "

Spiller Company: 999
Contact Name: ENGINEERING/HOUSE KEEPING
DEC Memo: "2/9/10 - Raphael Ketani. I received an anonymous call from what sounded like a man. The voice sounded artificially altered. However, the person sounded like a man. He said that he wasn't sure who to speak to regarding a mercury spill in Woodhull Hospital. I asked him who he was. He simply said that he was from the nursing administration. He said that he is concerned for the patients. I asked him how he knew there was a mercury spill. He said that he heard about it from someone at the hospital. I asked him where the spill took place. He said that it was in the boiler room. I asked him what broke that released the mercury. He said that he didn't know. I asked him how he knew it was a mercury spill. He said that he was told it was metal filings, but he doesn't believe them. He said that the staff are covering up the spill. I asked him how large the spill is. He said that he thought it was a small spill, but that it was mercury. He asked for an inspector to come to site and look at the situation. I told him that the DEC doesn't respond to small mercury spills. I told him that usually the Fire Department responds to mercury spills and they would have more information about this if there actually was a spill and they responded. I added that if he is so concerned about the spill, he can call the New York Fire Department. They will come to investigate a mercury spill of any size. He said that he will get back to me. After this, he hung up the phone. 2/10/10 - Raphael Ketani. This mercury spill was called in today. As it is anonymous, and as it is a report from someone who heard about the spill from someone else, and as the caller couldn't give me detailed information yesterday, and as it is allegedly a small spill, I am closing the spill case."
Remarks: "spill of mercury in a patient care hospital - believed to be in boiler room - stated beads all over floor - unsure of any cleanup being done -"

Tank Info:

Tank Number: 006
Tank Id: 219626
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

H02 - Tank Leak Detection - Interstitial - Manual Monitoring
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
E00 - Piping Secondary Containment - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
K00 - Spill Prevention - None
L09 - Piping Leak Detection - Exempt Suction Piping
F06 - Pipe External Protection - Wrapped
J02 - Dispenser - Suction Dispenser
D11 - Pipe Type - Flexible Piping

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 06/24/2005
Capacity Gallons: 4000
Tightness Test Method: -

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID: 296385
DEC Memo: "7/26/2005 Sangesland spoke to Christopher DeCarlo (cell #201-694-4943) with Flemming Lee Shue Environmental Consulting. Approx. 20 years ago this site was a gasoline station. There is no DEC - PBS or Spill history for the site. Chris DeCarlo works for the new owner of a property which is now under construction. Apparently the former owner dug out the tanks and left a pit. Now that the new owner has started construction, approx 8 ft below the bottom of the pit they found floating gasoline product. They are in the process of removing product and contaminated soil. Since the consultant knew the DEC procedure and had already started, no contaminated soil letter was sent. 7/26/2005 Sangesland - a second Spill Report came in on this site (#0505029). A vapor complaint from a neighbor with the smell of gasoline (95 degree temp today). Sangesland left a voice mail with Chris DeCarlo at Flemming Shue asking him to confirm that the stock piled material is covered and as much Vapor Abatement as possible has been done. 9/19/05-Reassigned to A. Obligado. (Sun) 9/19/05- Obligado- Reviewed fax from Christopher De Carlo of Fleming Lee Shue consultants dated 9/8/05 requesting case manager be assigned to site. Called De Carlo to give him contact info. DeCarlo stated that they completed excavation of soil and taken clean soil endpoint samples. GW sample from bottom of excavation is 18 ppm MTBE and 3.9 ppm benzene. Asks if they can request closure of spill number. Tell him the NYSDEC needs to see the UST closure report before a judgement can be made. DeCarlo says report is in progress and NYSDEC should receive it shortly. 9/19/05 - Obligado - Follow up phone conversation with De Carlo. Ask him to send DEC foundation and vapor barrier details. Inquire about site status - site construction on hold pending permit for excavation. Ask him not to begin construction until the department reviews designs and UST excavation results. 10/28/05 - Obligado - Received phone call from De Carlo, says he had sent DEC Remedial Action Report and was waiting for DEC response. Told him that haven't seen report yet, and to email pdf of report. 10/31/05 - Obligado - review Remedial Action Report. 5 gasoline USTs removed previously, no records of soil disposal or analyticals. Upon beginning of FLShue's involvement of the site, the USTs had already been removed and an excavation 3 to 4 ft deep was on site. Continued

excavation to 9-10 ft bgs. Excavated laterally until no contaminated soil encountered. 354 tons of soil removed from site. Soil results show no VOC exceedences in endpoint samples, only PAH exceedences in one soil sample, SB-2. Ground water sample collected from bottom of excavation show 3.9 ppb benzene and 18 ppb MTBE. Building construction will include 20 mL high polypropylene vapor barrier. Request NFA based on low concentrations and vapor barrier. Call Chris and leave message. Sent email approving building construction. Need to discuss closure. 11/3/05 - Obligado - Call Chris De Carlo (212) 675-3225, left message "

100 UNION AVENUE REDEVELOPMENT SITE (Continued)

S117676130

Site Description:	Location: The site is located in an urban area at 100 Union Avenue, Brooklyn (aka 100 to 118 Union Avenue and 180 Middleton Street). The site is located on the east side of Union Avenue between Middleton and Lorimer Streets and is bordered by Middleton Street to the north; Union Avenue to the west; a vacant lot, a 2-story residential building and a NYC Transit substation building to the south; and a 6-story residential building to the east. Site Features: The site is 10,566 square feet (0.24 acres) in area and currently consists of a vacant lot with no developments. The site is covered with bare soil and is surrounded by a plywood fence along the two bounding streets and four adjacent properties. Current Zoning and Land Use: The site is zoned R6A (residential district) with C2-4 commercial overlay and is currently vacant. Past Use of the Site: The site was historically occupied by a church and residential dwellings prior to 1887. The site then became vacant through 1950. A 1-story building located in the northern portion of the site was used for auto sales between 1965 through 2014 and the southern portion was used as a junk yard from 1992 through 2014. Site Geology and Hydrology: The site is generally level and is at an elevation of approximately 16 feet above sea level. The geology of Kings County consists of unconsolidated glacial deposits. Groundwater beneath the site was encountered at depths ranging between 10.39 to 12.94 feet. Regional groundwater flow direction in the vicinity of the site is toward the southwest.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Env Problem:

is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St. was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel. Nature and Extent of Contamination: Prior to Remediation Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm). Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source. Post-Remediation: Remediation at the site is complete. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered entirely by a building. People are not drinking the contaminated groundwater because the area is served by a public water

supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to minimize the potential for vapor intrusion in buildings at the site and sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Env Problem:

is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St. was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel. Nature and Extent of Contamination: Prior to Remediation Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm). Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source. Post-Remediation: Remediation at the site is complete. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered entirely by a building. People are not drinking the contaminated groundwater because the area is served by a public water

supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to minimize the potential for vapor intrusion in buildings at the site and sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Site Code: 479327

Site Description: Location: The site is located in an urban area in East Williamsburg, Brooklyn and occupies Tax Block 2245 Lot 8. Site Features: The site is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St.

FORMER CHARLES PFIZER & CO SITE (Continued)

S112139064

Env Problem: was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel.

Env Problem: Nature and Extent of Contamination: Prior to Remediation Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm).

Env Problem: Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source. Post-Remediation: Remediation at the site is complete. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered entirely by a building. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to minimize the potential for vapor intrusion in buildings at the site and sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Site Code: 479327

Site Description: Location: The site is located in an urban area in East Williamsburg, Brooklyn and occupies Tax Block 2245 Lot 8. Site Features: The site is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St. was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown

to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel.

Env Problem: Nature and Extent of Contamination: Prior to Remediation Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm). Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source. Post-Remediation: Remediation at the site is complete. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered entirely by a building. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to minimize the potential for vapor intrusion in buildings at the site and sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm). Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source. Post-Remediation: Remediation at the site is complete. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered entirely by a building. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures are in place to minimize the potential for vapor intrusion in buildings at the site and sampling indicates that soil vapor intrusion is not a concern for off-site buildings.

Site Code: 479327

Site Description: Location: The site is located in an urban area in East Williamsburg, Brooklyn and occupies Tax Block 2245 Lot 8. Site Features: The site is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St. was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel.

Env Problem: Nature and Extent of Contamination: Prior to Remediation Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the

Date Rec Updated: 12/31/2018
Updated By: JGJONES
Site Description: Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is about 2.1 acres in size and is currently vacant. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site is paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type "en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in

Env Problem:

their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest.

Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor

and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Site Description: Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is about 2.1 acres in size and is currently vacant. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site is paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type "A" en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum

Env Problem:

contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest.

Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Site Description: Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is about 2.1 acres in size and is currently vacant. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site is paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type "A" zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from

Env Problem:

leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest.

Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was

detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Site Description: Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is about 2.1 acres in size and is currently vacant. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site is paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type "A" en-zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum contamination was also detected in the on-site soil, likely from

Env Problem:

leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest.

Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was

detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of which were not detected in the soil and groundwater. However, PCE was

detected in the on-site soil and groundwater. PCE and TCE were detected in sub-slab and soil vapor samples at maximum concentrations of 453 micrograms per cubic meter and 25.8 micrograms per cubic meter, respectively. One soil vapor sample had detections of benzene, toluene, ethylbenzene and xylene (BTEX) totaling 1,466 micrograms per cubic meter.

Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site.

BROWNFIELDS:

Name: FORMER CASCADE LAUNDRY
Address: 553 MARCY AVENUE
City,State,Zip: BROOKLYN, NY 11206
Program: BCP
Site Code: 495614
Acres: 2.158
HW Code: C224194
SWIS: 2401
Town: New York City
Record Added Date: 06/03/2014
Record Updated Date: 01/02/2019
Update By: AMSERVIS
Site Description:

Site Location: The site is located in an urban area at 553 Marcy Avenue in Brooklyn, Kings County. It is identified on New York City tax maps as Block 1747, Lot 1. The site is bordered by Stockton Street on the north, Marcy Avenue on the west and Myrtle Avenue on the south. Site Features: The site is about 2.1 acres in size and is currently vacant. The site previously included several attached industrial buildings which were demolished for redevelopment in 2015 and 2016. The remainder of the site is paved parking. Current Zoning and Land Use: Part of the site is zoned as residential with commercial retail businesses on the ground floor (R7D residential with a C2-4 commercial overlay), while the remainder of the site has residential zoning (R6A). The site is currently vacant and the on-site buildings have been demolished. The surrounding area includes multi-family residential buildings, schools, churches and retail stores. The site is located in a Type "A" zone. Past Use of the Site: Commercial and residential development at the site began prior to 1887. Cascade Laundry, a commercial laundry, began operating on part of the site prior to 1918 and expanded onto the other parts of the site over the succeeding decades before closing in 2010. Other past uses of the site include various retail stores, an oil paint factory, a carpet cleaning facility, a bakery, an upholstery factory, a furniture manufacturer, and a chemical factory. At some point in their history, Cascade Laundry used tetrachloroethene (PCE) in their operations, as evidenced by PCE-contaminated soil. Petroleum

Env Problem:

contamination was also detected in the on-site soil, likely from leaking underground storage tanks. The top 4-8 feet of soil beneath the site is historic fill, which contains semi-volatile organic compounds (SVOCs), metals and pesticides. Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of about 4 to 8 feet below grade. Silty sand and gravel is present immediately below this layer. The elevation of the property is about 30 feet above mean sea level and the land within the immediate area slopes gradually from southeast to northwest. Groundwater at the site is present at a depth of about 25 feet below grade. The groundwater flow direction is northwest.

Nature and Extent of Contamination: Remediation at the site is complete. Based on investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Review of on-site data indicates that the on-site contamination does not impact off-site properties or receptors. Soils - Soil contamination was addressed in the Remedial Action by dewatering, excavation and chemical oxidation. Post remediation, remaining soils to a depth of 15 ft. bgs meet UUSCOs for all parameters due to the depth of excavation across the site. All remaining soils at depth meet UUSCOs for all COCs, except for a single detection of Chrysene at 30 ft. bgs beneath Lot 2. Soils pre remediation - The VOCs in the soil included petroleum compounds and chlorinated solvents. During the Remedial Investigation, petroleum compounds exceeding unrestricted use soil cleanup objectives include 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, ethylbenzene, xylene, methylene chloride and naphthalene. For example, 1,2,4-trimethylbenzene, was detected at 38 parts-per-million (ppm), exceeding the unrestricted use soil cleanup objective of 3.6 ppm. Tetrachloroethene (PCE), a chlorinated solvent, was found in the soil at 48 ppm, exceeding the unrestricted use soil cleanup objective of 1.3 ppm. SVOCs, metals and pesticides were detected in the subsurface soils. Nearly all of these contaminants were detected near the surface in the historic fill layer, and likely arrived at the site with the deposition of the historic fill material. However, chrysene, an SVOC, was detected beneath the historic fill at 3.1 ppm, exceeding the unrestricted soil cleanup objective of 1 ppm. Lead was detected in the soil at a maximum level of 3,770 ppm, which may classify the soil as hazardous waste. Groundwater - Post Remediation, groundwater beneath the site meets or will meet SCGs for all site-sourced contaminants. The petroleum compounds still being detected in groundwater approximate the ambient water quality standards. Pre Remediation groundwater - The VOCs in the groundwater also consist of petroleum compounds and chlorinated solvents. A viscous petroleum product -- likely fuel oil -- was found in one monitoring well, indicated a layer of free petroleum product floating on the groundwater. PCE was detected in several wells at levels exceeding its New York State groundwater standard; however, the highest PCE concentrations were detected upgradient of any known on-site source area and at the upgradient edge of the site. Several pesticides were detected at concentrations above groundwater standards. Soil Vapor and Sub-Slab Vapor - Post remediation sub-slab samples taken in newly constructed on-site buildings detected PCE at a concentrations as high as 441 micrograms per cubic meter. Pre Remediation Soil Vapor and Sub-Slab Vapor - Several VOCs, including PCE, were detected in soil vapor and sub-slab vapor samples collected on-site, most of

DEC Memo: "01/30/06: This spill transferred from J.Kolleeny to S.Kraszewski. This site was previously served by two 23K USTs installed in 1960. They were replaced by two 20K USTs in 2004. They all stored #2 fuel oil. A Phase II report performed in 1993 reveals oil-stained soil in the vicinity of the USTs, the leaks origin is suspected to be the fuel lines since oil seepage has been seen coming through the boiler room wall. Two MWs were installed but neither found any free product or a sheen. Test results show no PAHs, AHs or TPH. However, some GW contamination might exist between the tanks and the boiler room wall, where the leak is most likely to be. Report suggests quarterly monitoring and one additional MW. Monitoring and bailing records on file indicate no free product in any of the MWs. No GW samples taken from any of the wells prior to the Phase II. Seems that only the soil has been impacted and isn't migrating into the GW. - SK 03/22/06: This spill transferred to K.Tang - SK 11/19/07: This spill remains open, but consolidated with 0402157. J.Kann 5/20/09: J.Kann - Investigation work plan received. 5/1/12: J.Kann - work plan approved in an email dated 9/21/09. SIR rcvd 4/2012. Report reviewed. Some product appears to be seeping into the basement based on a photo in the report. Information on the tank closure was requested from NYCHA and submitted on 4/26/2012. SIR includes closure request. File under review. 1/4/12: J.Kann - Work Plan approved in an email dated 9/21/2009. GPR work is scheduled to start on 1/5/12. 4/12/12: J.Kann - SIR received in March 27, 2012 5/1/12: J.Kann - reviewed SIR, additional information regarding tank closure requested from NYCHA in an email. Info submitted by NYCHA to DEC on 4/26/12 and is under review. 5/9/12: J.kann - Tank closure report from 2004 received on 4/26/12 shows no VOCs detected in endpoints and minor PAHs in one location of endpoints. In 2004, the excavation was performed to 18 feet (groundwater varies from 8-12 ft bgs on site). The site Investigation Summary report dated March 2012 (installation of 5 borings and 2 new wells, and sampling of an existing well) shows no groundwater impacts and soils below CP-51 with the exception of minor exceedences of PAHs at 10-12 feet in one location. A photo in the report shows some oil seepage in the basement at a depth of approx. 12 ft bgs. A site visit was made on May 3. Staining on the boiler room wall with weathered No. 6 oil was observed at a depth 12-14 feet bgs. Given the number 6 oil tanks were removed in 2004, together with

contaminated soils; and the 2012 investigation shows no contamination in borings and wells, it is likely a layer of saturated soils remain immediately adjacent to the foundation wall (the tank excavation required shoring which was place approx. 2-3 feet from the foundation wall (based on site photos and a drawing in the tank closure report. The site was discussed at the May 7 closure meeting. Closure was rejected because of the seepage/staining. An email will be sent to NYCHA indicating this. 5/10/12: J.Kann - email sent to NYCHA and edoced. 5/29/12: J.kann - rcvd a response from NYCHA. 6/13/12: J.kann - sent a response back to NYCHA. The oil seepage issue remains and NYCHA must determine whether there is a feasible way to address it. 8/30/12: J.Kann - received a revised ISR on August 21 and edoced it. 5/30/13: J.Kann - NYCHA sealed the seepage area in the basement and provided a photo. Spoke with Jeff Vought and he confirmed that the spill should be closed and that the revised spill closure letter should be sent. 6/26/13: J.Kann - Spill closure letter sent."

Remarks: "DISCOVERED OIL COMING THROUGH BASEMENT WALL."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Andy- 631-589-6353. Building will be redeveloped. They will repair and retest and send documentation. 3/27/13 AFrischeisen intern TTF letter sent. 5-6-14 Dupigny - Notes from Sangesland what repair work was done to the tank/ Lines? No work was done will Demo the building 10/30/14-Vought-Received call from Chris Lickman (Ph:718-797-9555) who left Vought numerous messages regarding the above spill. Vought left message for Lickman with Demeo's phone number and email address. 1/20/15 TJD File review. 8K concrete wrapped AST failed tightness test. Tester (ATS) determined the cause of the failure was the fill pipe - failure point was interior (tank room) where the pipe penetrated the concrete wrap. Tank was entirely above ground with no petroleum discharge noted during inspection by tester and author of Phase 2 report (PW Grosser). Tank has subsequently been removed and structure was converted to natural gas heat. Based upon the documentation received there was no petroleum discharge from reported tank test failure. All received documentation has been uploaded to DECDOCS. No further action is required. Spill closed."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Mulqueen to Vought as per Rommel. 3/24/06 Diaz - Next steps required - review file, track down contacts. Spill transferred back to Region 2 3/10/08 - Austin - Spill assigned to Ahmed for followup - end 10/27/11 - Austin - Transferring this case from Ahmed to Ketani - end 9/23/13 - Raphael Ketani. I spoke to Heidi Unwin (518) 786-4347, Environmental Specialist II, Environmental Compliance Branch regarding the spill. She said that she had been looking through some old records and discovered that the spill had not been closed out. I told her that the DEC had only two letters stating that the investigation and remediation was going to take place. Ms. Unwin stated that she will send the DEC copies of all of the remediation, sampling and disposal information that she has on file. 10/8/13 - Raphael Ketani. Ms. Unwin sent 4 documents regarding the tank removal and soil excavation. These documents were: the Solution Mechanical Corp. 7/11/96 pre-excavation soil endpoint analytical report; the Solution

Mechanical Corp. 7/18/96 post-excavation soil endpoint analytical report; the Solution Mechanical Corp. 7/26/96 tank removal and remediation report; and the NYS Division of Military and Naval Affairs 10/2/13 Spill Closure Letter. The pre-excavation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. The results were either non-detect or well below the CP-51 unrestricted standards. The post-excavation soil endpoint samples were analyzed for VOCs and SVOCs. Samples were taken from all four sidewalls and two samples from the bottom. Samples were also taken from the soil stockpile and around the stockpile. The results were almost entirely non-detect for the endpoints and non-detect to well below standards for the soil stockpile samples. The tank removal and remediation report had a map showing where the tanks and the pump islands had been. Both 2,000 gal. USTs had contained gasoline, even though one was labeled as containing diesel. The cause of the spill was the sweating of product from the joints of the fill pipes and the suction lines. The excavation of the soil had started on 6/24/96. The contaminated soil was shipped to a landfill in Albany, NY. Tanks were cleaned and shipped to a scrap metal facility. Manifests were included for the soil and the tanks. The Spill Closure Letter stated that about 63.4 tons of soil had been excavated. 10/10/13 - Raphael Ketani. The spill case was presented to Hassan Hussein, supervisor Unit C, Region 2, Remediation for closure. Mr. Hussein accepted the closure of the spill case. Based upon the information in the case record, the site has been successfully remediated and there are no threats to the public of the environment. Therefore, I am closing the spill case effective today."

Remarks: "upon digging out tanks it was discovered that soil was contaminated from gasoline and possibly diesel fuel-area has been cleaned up"

03/23/06: This spill transferred to K.Tang - SK 12/11/07: J.Kann.
This spill transferred to J.Kann. Consolidated with 9611167 (closed)
and 9614725 (closed). Spill 9611167 indicates 07/28/06: NYCHA update
summary states that two 35K USTs installed in 1982 and stored #4 and
#6 oil were closed-removed in 2001. A 2K Diesel tank installed in
1982 was closed-removed in 2001. In 1999, a 20K UST was installed. In
1996, a 4K AST was installed. Both were disconnected in 2001. In
2001, two 25 USTs that store #2 oil and one 2K diesel tank were
installed and are currently in service. No recovery system and no MWs
on site. NYCHA recommends that DEC review the available site
assessment. 3/10/11: J.Kann - Investigative work plan submitted on
3/3/11. 5/29/12: J.kann - priority p0 assigned to the site 3/31/15:
J.Kann - email sent to NYCHA on March 11 asking if they have any
information regarding the tank closure (endpoints). NYCHA did not
find additional information, therefore the IWP was approved today.
10/5/15: J.Kann - received notice that field work will be occurring
today and tomorrow at Marcy Houses. 1/20/16: J.Kann - SIR for the
site was received on 12/7/16. 7 borings were advanced and 4
monitoring wells installed. No stained soils or odors noted in
borings. 7 soils samples and 4 groundwater samples were collected for
VOC and SVOC analysis. No VOCs or SVOCs were detected. Spill closed.
1/20/16 - J.kann - DecDoced site file correspondences from
1996-present under this spill number."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY Initial site investigation soil data found soil contamination, however, additional soil sampling by URS failed to duplicate those results and only contaminant in groundwater was MTBE, which seemed likely to be coming from upgradient 90th Precinct. In March 2005, J. Kolleeny approved NFA for the soil at site (and monitoring of groundwater combined with 90th Pct. monitoring), but cautioned that if there were indications that on-site soil contamination was impacting groundwater, additional investigation and/or remediation could be required. In November 2004 URS Groundwater Monitoring report for 90th Precinct and Engine Co. 216, MTBE levels in Eng. Co. 216 wells seem persistent and possibly unrelated to 90th Precinct plume. JK spoke with Jane Staten of URS and agreed that if next round of GW sampling still showed high MTBE levels, situation at Eng. Co. 216 would be re-evaluated. Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006.MW-3 - 150 PPB mtbe in groundwater.Recommendations: maintainn DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ 04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60 ppb(July 2006). Benzene and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX). AZ 10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ 7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ 2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ 11-6-09 An e-mail was sent to Brian Morrissey/Fatemeh Ashkan/ V. Brevdo: I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination (i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed

considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report. AZ 4-25-2011 Reviewed LiRo status report. This spill is associated with four closed in place 550 gallon gasoline USTs. Two soil borings will be installed near these USTs. AZ 11-28-2011 A report dated 9-8-2011 stated that drilling for the borings approved by DEC was scheduled for August 2011. AZ 6-12-2012 Reviewed a status report dated 3-29-2012. ORC socks were placed in contaminated wells. AZ 4-12-2012 Reviewed a status report dated 8-31-2012. Semi-annual sampling is being performed at 12 wells. Downgradient well MW-2 exhibited continued rise in contaminant levels. Left a message for S. Frank. He called back and we discussed the site. He will into it. Maybe LiRo will install a well downgradient of 216-MW-2 AZ 9-3-2013 Reviewed s pill closure report for this spill. This spill is associated with the four closed in-place 550-gallon gasoline USTs located on the Engine Company 216 property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with TVOC concentrations less than 100 ppb was recorded uring last two sampling events. The subway and tunnel prevent offsite migration. AZ 9-4-2013 The following e-mail sent to S. Frank/V. Brevdo/F. Ashkan: Dear Steve, I have reviewed Request for Spill Closure dated May 23, 2013. This spill is associated with the four closed in-place 550-gallon gasoline USTs located on the Engine Company 216 property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with Total Volatile Organic Contaminant concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. URS requested that DEC close spill number 9807905. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9807905. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely.

DER Facility ID: 328078
DEC Memo: "3/27/07 bf: Spoke with Matt of Associated Environmental (631)234-4273. Epoxy patch from previous repair at top of tank was problem. Tank is AST. They plan on having the tank cleaned out, inspected, remove epoxy, and weld a steel patch to tank. Then tank will be tightness tested. They plan on starting work next week. One problem is getting a tanker to be dedicated to the building while the repairs are made. Petroleum Tank Cleaners will be doing repairs and testing in conjunction with Associated. Sent ttf letter to: David Rochlitz 544 Park Avenue Brooklyn, NY 11205 7/13/07 On 7/12/07, received call from Antionette Ollivierre of American Environmental Associates and Solutions (718)209-0653. She requested a call back. Called her back today. I faxed her a copy of the ttf letter dated 3/27/07. fax:(718)622-5807. bf 9/20/07 Received call from Aron Weinstein tesla Environmental 732-904-4618. Called him back at 2:45 PM. He will send email letting me know where project stands. Tank is encased in concrete and there may be structural concerns regarding the building. A Phase II was done on the property and eight borings were done. I told him I need to see those. I asked him why the tank failed and he could not answer except that the Horner EZ 3 should not be allowed. He was on a cell phone and was hard to hear. bf 11/13/07 On 11/8/07, received call from Donna of ABC Tank. Ph.(718)272-2800 Fax.(718)272-3147. She requested any paperwork regarding the spill. I sent her the ttf letter and the spill report. Called her back, but she is not in until Thursday. bf 3/4/08 Site inspected on 2/29/08. NOV issued. Received call to day from John of Gianco (contractor doing tank test/repair). I faxed ttf letter to him. Fax: (631)952-5975. bf 4/2/08 Signed order hand-delivered with check for \$1100 panalty. bf 4/30/08 Received faxed letter on 4/9/08 from John Sinatra of Gianco, dated 4/8/08, to Robert Hoffman. Tank passed pressure test over the weekend holding 7 pounds of air. No contamination was found on, near, or surrounding the tank. It is his belief that the tank can be out online as a backup. 6/19/08 Called Robert Hoffman requesting tank test report. He faxed letter to close spill, not report. Sent tt return letter to him since document is not a tank test report. bf 7/1/08 Received passing test report on 6/30/08. NFA. bf"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY The spill is referred to spill # 8809462. The site is currently under remediation by LiRo Engineers. - II (03/02/05). 4/28/05- Reviewed the monthly monitoring report-Jan/05. A multi-phase extraction system is in place and is performing well. Both vapor and water effluent are under compliance. A trace (.01 ft)of free product persists at one well only as revealed from monthly monitoring data. Quarterly groundwater sampling results show persistently decreasing trend and are close to under compliance. Soil sampling is done semiannually. Routine site monitoring to continue. 3 monthly electronic files have been installed in the eDoc Folder.- II 6/6/05- Reviewed Feb/05 & Mar/05 monthly monitoring reports. The MPE system monitoring data shows that it is working effectively. Neither of the scheduled Quarterly GW sampling nor Semi-annual soil sampling were done during the monitoring period as they were not due in this period. All monitoring wells have become free from Free Product. Routine monitoring to continue as scheduled.- II 7/22/05- Reviewed the Monthly Monitoring Report prepared by LiRo Engineers dated May 27, 2005. The report presents MPE system performance monitoring data

S104621574

for the month of April, 2004. The system monitoring data indicate that vacuum measurements were not taken at two monitoring wells and six (50%) extraction wells. This lack of readings prevents DEC from properly evaluating the system's effectiveness. Sent the above comment to DDC and LiRo via email. Installed the monthly monitoring reports for Feb., Mar. & Apr./05 in the eDoc Folder. - II 8/23/05- Reviewed the May/05 monitoring report. The report presents MPE system operating data and GW sampling results for the month of May/05. Apprx. 0.3 lbs VOC was collected and the MPE system is functioning effectively. Monthly GW sampling could not be done on wells EW-6 & MW-8 due to deposits lining the inside of the drop tube and well EW-1 & MW-13 for being under water. Over all, the GW contamination has reduced substantially and four of the wells sampled in May/05 still exceed NYSDEC quality criteria for one or more compounds. Routine monitoring will continue. - II. 9/19/05- Reviewed the June & July/05 monthly monitoring reports. MPE system is operating effectively. Approx. 2.8 lb VOC was collected during July month which is very high compared to the June month. LiRo did not explain the reason. Quarterly GW sampling was not due during the monitoring period. Routine system monitoring will continue. - II. 10/25/05- Reviewed the August/05 monitoring report. The MPE system collected about 0.5 lb VOC during the month and the last month's spike (2.8 lb) is said to be an anomaly. Overall GW contamination at most wells has been significantly reduced. Low level Product has appeared in two wells and they have been sampled for fingerprint analysis. Of the four wells sampled, two wells were non-detect for STARS list compounds. Other two wells showed a very slight increase in TVOC contamination. However, routine monitoring will continue. - II 11/18/05- Reviewed the Sept. & Oct/05 monthly monitoring reports. Product appearance in wells LW-1 & MW-1 have been found to be mineral spirit and hydraulic oil respectively by fingerprint analysis. In Sept. & Oct/05 the MPE system collected 4.2 lbs and 2.4 lbs of VOCs respectively. LiRo states this increase in influent VOC levels during the period due to system cleaning and drop tube adjustments which the contractor Franklin conducted during this period. GW sampling was not due during this two months of monitoring period. LiRo recommends to continue operation of the MPE system with improved induced vacuum. LiRo also recommends installation of passive skimmers in two wells having product. LiRo's recommendation for passive skimmers installation and plan for next round of annual soil sampling four borings) are approved with an additional boring to be located in the vicinity of GPR-13. Filed the monthly reports in the eDoc folder. - II 01/31/06: This spill transferred from Imdad to Q.Abidi. Reviewed November/05 monthly monitoring report. Quarterly groundwater sampling was not performed during this monitoring period. On Dec.6, 2005 Liro pumped out wells LW-1 and MW-1 with a vacuum truck, removing 1,412 gallons of contaminated fluids, of which an estimated 14 gallons was free product. Liro recommends to continue the system operation. No response letter necessary. - QA 02/07/06: Reviewed December/05 Monthly monitoring report. Quarterly groundwater sampling was not performed during the monitoring period. LiRo recommends that the vacuum truck should return to the site to treat wells LW-1 and MW-1. Site is being transferred to Greyhawk. Data show decrease in induced vacuum levels, possibly indicating a line blockage. Liro suggest New CM should evaluate the site and determine whether system should be cleaned, or shut down and only use a vacuum truck on LW-1 and MW-1. Filed the monthly report in the eDoc folder. - QA 08/18/06: Transferred to

S104621574

S.Kraszewski. According to URS Bi-monthly update report Rouc performed GW sampling and gauging on April 5, 2006. VOCs detected range from 6 ppb to 532 ppb. SVOCs were below detection. Monthly gauging on May 5, 2006 revealed 0.22 ft of product in LW-02 and 0.01 ft in LW-01. On June 15, 2006 no free product in LW-02 and 0.01 ft of product in LW-01. An absorbent sock was placed in LW-01. - SK 08/31/06: Reviewed Quarterly O&M and Monitoring Report for April-June 2006 submitted on July 7, 2006 by Greyhawk/Roux. On April 5, 2006 Roux gauged and monitoring wells EW-1, EW-4, EW-6, EW-9, LW-1 and LW-2. Gauging occurred on May 5 and June 15 as well. GW flow direct was determined to be southernly. No free product in April, but 0.01 ft for LW-1 and 0.22 ft for LW-2 in May. In June, LW-1 had 0.01 ft. All six MWs revealed VOCs ranging from 6 ppb to 532 ppb with several TAGM exceedances. No SVOCs detected in GW. Greyhawk plans on continuing quarterly GW sampling but recommends reducing the gauging and free product removal frequency from monthly to quarterly visits. Low PID readings for influent and effluent air. However, influent air TVOCs reveal 3250 ug/m³ in April and 877 ug/m³ in June. Since the system is still effectively removing volatiles Greyhawk recommends continued operation and maintenance of the MPE system. They will attempt to increase the vacuum in EW-3 and EW-12. SK called Andris Ledins at Greyhawk (718-943-1100.) Left a message to call back. - SK 10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM 5/31/07 Reviewed Quarterly Monitoring Report for July through September 2006 submitted by Roux and dated Nov. 10, 2006. Free phase product was detected in wells LW-02 (0.01 foot) and product sheen detected in EW-06 on July 20, 2006. During the previous quarterly monitoring period (April through June 2006), free product was detected in well LW-01 (0.01 ft) and LW-02 (0.22 ft). Groundwater samples were collected from wells on the quarterly schedule (more wells are sampled on an annual schedule at this site) and the highest level of TVOCs was 693ug/L in LW-01. The MPE system continues to run however restricted vacuum readings have been observed in multiple monitoring wells and ventilation wells. 6/11/07 Reviewed Quarterly Monitoring Report for October Through December 2006 submitted by Roux and dated March 15, 2007. Free-phase product was detected in wells LW-02 (0.10 ft) and EW-06/MW-08 (0.15 ft) and product sheen was observed in LW-01 during the October gauging event. Wells EW-06/MW-08 was not gauged in December because of a DOS truck was obstructing and LW-01 and LW-02 had petroleum absorbent socks which were removed. Groundwater samples were collected from wells on the quarterly schedule and the highest level of TVOCs was 261ug/L in LW-01. The MPE system has had an uptime of approximately 80 percent during this monitoring period. However, the system has been hampered by the decreased inlet header vacuum, which resulted in the system's inability to extract groundwater and expose the smear zone. Attached in the appendices were an Enhanced Bioremediation Work Plan and Additional Site Investigation Work Plan. The Enhanced Bioremediation Work Plan proposed injecting a bacteria/enzyme mixture at wells LW-01, LW-02 and MW-16. These wells would be monitored to evaluate the effectiveness of the injection. I requested that EW-07/MW-09 be included in the monitoring program and approved the work plan. The Additional Site Investigation Work Plan proposed the advancement of seven soil borings in locations as shown in Figure 8. I requested that the new borings be advanced as close as possible to the original soil samples collected at the beginning of the site investigation and approved the work plan. Additional recommendations to the O&M

S104621574

Procedures are as follows: 1) Convert MPE system to SVE system 2) Reduce frequency of the quarterly groundwater monitoring program to semi-annual 3) Reduce frequency of gauging from monthly to quarterly 4) Remove SVOCs from the groundwater sampling program 5) Remove wells EW-05, MW-12 and MW-15 from the groundwater sampling program. Recommendations 1, 3, 4, and 5 were approved. Since a new remedy is being implemented at the site groundwater monitoring should continue on a quarterly basis for several more round. The reduction of monitoring frequency from quarterly semi-annual will be reevaluated at a later date. A letter was sent today with these approvals and can be found in edocs. - JAM 3/3/08 Reviewed Quarterly O&M and Monitoring Report for period January through June 2007 submitted by Roux and dated September 18, 2007. MPE system operated at the site and as currently configured the MPE system is not operating efficiently to remediate residual soil and groundwater. Groundwater samples were collected from select wells in January and April 2007 for VOCs and SVOCs. No SVOCs were detected in any wells and TVOCs were observed ranging from ND to 84ug/L. Roux states the MPE system has effectively reduced levels of free product and residual soil and groundwater contamination. During the next monitoring event Roux will conduct quarterly monitoring, implement the approved bioremediation WP and convert the MPE system to an SVE system. - JAM 6/10/08 Spoke to Brian Morrissey at Roux. He said the DOS is terminating their lease and moving from the site. They will maintain liability for the spill. Several tanks on the site will be closed. The In-situ Bioremediation work plan should be implimented soon. The MPE system will also be converted to an SVE system. I have received emails from Envirotrac notifying the DEC that the MPE system has been shut down due to a faulty solenoid valve. The valve will be replaced and the extimated down time is 1 week. - JAM 6/23/08 Spill number 0001698 was closed and consolidated with this spill number. Hoist oil was observed in several wells which has been evacuated or removed by petroleum absorbent sock. I added Hoist Oil to the material list on this spill case. I called Brian Morrissey and let him know that spill number 0001698 was closed and consolidated with this spill. - JAM 7/28/08 Reviewed Quarterly Monitoring Report for period July 2007 through May 2008 submitted by Roux and dated June 24, 2008. The MPE system operated at the site with an uptime of 81 percent. As configured the MPE system is not operating effectively and needs optimization. Free product was detected in 4 of the on-site monitoring wells with a max thickness of 0.38feet in well EW-09/MW-03. Product identified as hydraulic oil or heavy lubricating oil. VOCs were detected in several wells with the max detection during the reporting period of 512ug/L in LW-01 in July 2007. Roux advanced six soil borings as per the approved work plan to a depth ranging between 24 to 31 feet. VOCs were detected in 4 of the six borings with a max of 249400ppb in RXSB-02 from interval 19-21fbs. Roux recommends the following: 1. Continue quarterly groundwater monitoring program. 2. Continue using petroleum absorbent socks in wells LW-01 and LW-02. 3. Conduct a soil investigation (as proposed in Appendix E) near the three UST areas in the south-southwester part of the site. 4. Optimize the MPE system performance. I sent an email today approving these recommendations. A work plan should be submitted in a separate letter for approval that describes the optimization of the current MPE system in more detail. The letter should include a process and instrumentation diagram and a site diagram showing the additional extraction points. The report and email are uploaded to eDocs. - JAM 9/12/08 Received an email from Tom

BROOKLYN NORTH 03/03A DOS -DDC (Continued)

S104621574

Hug at Envirotrac. The MPE system was shut down because the discharge line has become clogged and the system is shutting down on a high water alarm. As soon as the blockage is cleared the system will be restarted. Estimated downtime is 1 week. - JAM 5/12/10 Received an email from Stephen Frank at LiRo and Fatemah Ashkan at the NYCDDC. LiRo proposed a conceptual remedy, which includes excavation and removal of USTs on-site as well as injecting chemical oxidants to treat smear zone and groundwater contamination. I sent a reply email stating that, The proposed approach is acceptable; however, a remedial action work plan (RAWP) must be submitted to the DEC for approval. The RAWP should include a detailed description of the proposed excavation/tank removal work with figures showing the proposed excavation limits and an end-point soil sampling plan. The RAWP should also include a chemical oxidant injection plan with a detailed description of the chemical oxidant to be used, how the chemical oxidant will be applied and a monitoring plan to evaluate the effectiveness of the remedy. I also notified them that the EPA Underground Injection Control Program needs to be notified and an application must be submitted to perform the chemical oxidant injections. - JAM 6/25/10 Reviewed the Proposed Site Pre-Design Investigation Work Plan for the above referenced site submitted by LiRo Engineers, Inc. (LiRo) dated June 16, 2010. The work plan was prepared for the tanks located on the adjacent property at 314 Rutledge Street and proposes advancing nine soil borings and installing two groundwater monitoring wells. The purpose is to locate the three previously abandoned tanks and delineate soil and groundwater contamination, and to determine the limits of the planned soil excavation and design a chemical oxidation injection program, which constitute the remedial strategy approved by the NYSDEC via email on May 12, 2010. The work plan is uploaded to eDocs. I issued a letter today approving this work plan. A summary report including appropriate diagrams, soil boring logs, well construction logs, and tables summarizing soil and groundwater analytical data should be submitted to the NYSDEC for review. A detailed remedial action plan based on the findings of this investigation should also be included for review and approval. Letter uploaded to eDocs. - JAM 11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ 2-14-2011 Reviewed revised additional soil and geophysical investigation summary report and remedial action work plan dated 10/13/2010 and received from J. Kolleeny on Dec. 20, 2010. The plan proposed an in-situ chemical oxidation system to treat smear zone and phreatic zone at 314 Rutledge St. Also, the plan proposed excavation of the remaining USTs and excavation of the remaining residual soil contamination and injections of a metal solution, hydrogen peroxide, and a biological treatment at 306 Rutledge Street. An e-e-mail was sent to S. Frank, V.Brevdo and F. Ashkan: I have reviewed a Revised Soil and Geophysical Summary Report and Remedial Action Work Plan dated October 13, 2010. The Work Plan is approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ 8-18-2011 The following e-mail was received from S. Frank (LiRo) on 8/18/2011: At the Quarterly meeting we discussed Brooklyn 3/3A. As you know, NYCDOS moved out of the leased site several years ago. There is currently litigation over rent payments and site impacts that have been ongoing between the property owners and NYC. To complicate matters, the former DOS site includes two separate properties (306 Rutledge and 314 Rutledge) that are owned by two different parties. Both parties

S104621574

are separately in litigation with the City. The City is committed to remediating both properties, but in the past, all site contamination was being addressed under a common spill number associated with fuel oil releases on the 306 Rutledge property. We have acquired Sanborn Fire Insurance maps that show that the 314 site had historically been used for dry cleaning and the historical mapping shows solvent tanks in the portion of the site where the contamination was identified as mineral spirits (see attached Sanborn Map). A mineral spirits derivative was historically used for dry cleaning. The City has inquired if it would be possible to open a separate spill number for the mineral spirits release at the 314 Rutledge Street property. At the meeting, Vadim indicated that NYSDEC would review the site information and advise DDC with regard to opening a new spill for mineral spirits at 314 Rutledge Street. I was wondering if you have had an opportunity to discuss this issue with him. AZ 8/22/2011 The following e-mail was sent by S. Frank (LiRo) to Vadim Brevdo and AZ on 8/22/2011: Dear Mr. Brevdo, I am writing to follow-up on our quarterly meeting conversation regarding the former use of 314 Rutledge Street for Dry Cleaning and the identification of a mineral spirits release. Mr. Alex Zhitomirsky called me to inquire whether chlorinated dry cleaning hydrocarbon compounds (i.e., tetrachloroethene and/or its breakdown products) were present. LiRo tested for full Target Compound List (TCL) volatile organic compounds during our February 2011 groundwater sampling of wells in the area of concern (314 Rutledge and 306 Rutledge at the common wall with 314 Rutledge) and the results are summarized in the attached table. Based on the February 2011 sampling, there is no evidence that chlorinated compounds are present in groundwater and all samples showed a chemical identification of mineral spirits. Thank you for your attention to this matter and do not hesitate to contact me if your office needs additional information. AZ 10/26/2011 An e-mail with the information regarding the Owner of 314 Rutledge, LLC. Contact info: c/o Abraham Glanzer, 718 855-9100. Mailing address: Edith Kahan and/or Abraham Glanzer, 170 Hewes St, Brooklyn, NY 11211. AZ 10/31/2011 Discussed this site w/V. Brevdo. Contacted S. Frank of LiRo and requested a technical memo which will summarize all information related to a mineral spirits spill. 12-13-2011 Received an email from S. Frank: Dear Alex, I wanted to update you on the status of remedial work at Brooklyn 3/3A. We are installing injection wells for the ISCO work at both properties (314 Rutledge and 306 Rutledge) as well as removing tanks that were formerly closed in place in the building interior at 306 Rutledge. In conjunction with the tank removal work, we are over-excavating contaminated soil to the extent possible. We are hoping to finish the well installation and tank removal work this week. We expect the ISCO injection work will begin within a couple of weeks after the well installations are completed. AZ 2-13-2012 Reviewed and discussed with V. Brevdo a report by LiRo Former DSNY Brooklyn 03/3a Garage Request for spill number for mineral spirits released at 314 Rutledge. The report states that contamination at 314 Rutledge is a different spill and plume from 306 Rutledge. A spill at 306 Rutledge is allegedly caused by mineral spirits. According to the report, this site was a dry cleaning operation between 1947 and 1965. The Sanborn maps indicate the presence of solvent tanks located along eastern wall of 314 Rutledge which is adjacent to the 306 Rutledge Street property. Petroleum based mineral spirits (Stoddard solvent was historically used in dry cleaning operations. Soil and groundwater investigation

S104621574

completed by EBC (contractor working for 314 Rutledge owner) at 314 Rutledge in 2008 indicated petroleum related VOC in soil and groundwater. EBC recommended the DEC Hotline be notified, however, it was not done. Free phase product fingerprint analysis for the sample from MW-18 (located at 314 Rutledge) identified the product as mineral spirits. Routine groundwater sampling completed in February 2011 from 314 Rutledge wells MW-17 and MW-18 indicated petroleum identification as mineral spirits. DSNY records indicate that petroleum fuel storage and fueling operations were never conducted by DSNY at the 314 Rutledge parcel. However, PBS records indicate that there are three 1,500 gal tanks closed and registered by DSNY in 2000. Product stored indicated as gasoline. This discrepancy must be resolved. S. Frank indicated that these tanks were filled with concrete and will be excavated by LiRo. I requested to attempt fingerprinting any remaining product or sludge in the tanks in question. Also, the tanks design should be described. The Sanitation is leasing this site from 1993. LiRo should submit tank inspection results. LiRo should submit any information supporting statement that DSNY did not use 314 Rutledge for fueling or storage. LiRo should include fingerprint analysis of the alleged mineral spirits. The site was discussed with J. Urda. It was decided that V. Brevdo will contact A. Samani and request a conference call with a City lawyer AZ 10-3-2012 LiRo issued a report in August 2011, stating that Empire Environmental conducted the tank removal and remedial soil excavation work at 306 Rutledge from December 2011 to January 2012. The report was uploaded to e-docs. AZ 10-4-2012 According to LiRo's report dated January 8, 2012, tanks 009, 010 and 011 are 1,500-gallon gasoline USTs which were closed in place at 314 Rutledge in 2000. These tanks were registered as gasoline tqanks. However, according to DSNY records, petroleum fuel was not stored and petroleum fuel operations were not conducted at the 314 Rutledge parcel. The results of geophysical investigation did not indicate the presence of USTs beneath the site. In October 2010, free phase product was observed in 314 Rutledge St. well MW-18. Fingerprint analysis identified the product as mineral spirits. Soil and groundwater contamination are present at 314 Rutledge. However, in the report dated August 8, 2012, LiRo stated that they located and removed previously closed in place mineral spirits tanks at 314 Rutledge Street parcel. A report for the 314 Rutledge Street tank removal will be submitted to DEC under separate cover. Discussed the site with V. Brevdo. AZ 1-2-2013 Reviewed LiRo's report dated August 8, 2012. According to the report, Spill#9200212 was opened in in 1992 due to the release of gasoline and hoist oil in the southern portion of the 306 Rutledge parcel of the site. Underground storage tanks (USTs) and aboveground storage tanks (ASTs) used by DSNY for storing gasoline and hoist oil include three 550-gallon USTs (Tanks 012, 013, and 0140, one hoist oil UST and one hoist oil AST). Multi-phase extraction system was made operational in 2002 and shut down in 2008 because of operational issues. The proposed remedial plan included soil/UST excavation to address spill#92002112 in the 306 Rutledge portion of the site. In addition, the plan proposed chemical oxidation to treat mineral spirits contamination supposedly coming from the historic dry cleaning operation at 314 Rutledge. 1-11-2013 A CSL was sent to C/O GLanzer 170 Hewes Street, Brooklyn, NY 11211. Copies were sent to J. Urda/V. Brevdo. AZ 12-5-2013 Reviewed a semi-annual monitoring report through March 2013. According to the report, mineral spirit related impacts from the 314 Rutledge St. parcel, are present in in wells

S104621574

near the common wall with 314 Rutledge and two wells located along Rutledge St. These include wells LW-01, MW-16, IP-22, IP-23, IP-29, MW-22 and MW-23. Total VOC concentrations above the standards ranged from 42 ppb to 3,870 ppb. Contamination fingerprint identification completed previously at IP-22 and MW-22 identified mineral spirits. Residual motor fuel impacts, mainly Benzene and MTBE are present at 306 Rutledge wells, RXMW-01, MW-03/EW-09, MW-01 and RXMW-07, located along Heyward Street. Total VOC concentrations above the standards ranged from 7 ppb to 150 ppb. A trace level (less than 0.03') of residual oil has been detected intermittently at wells RXMW-01 and MW-03/EW-09 located along Heyward Street. The oil was historically identified as a mixture of lube oil and kerosene. AZ 09-16-2014 Reviewed a semi-annual monitoring report for the period of April 2013 through October 2013, dated January 16, 2014. In October 2013 free-phase product was observed in wells EW-09/MW-03, RXMW-01 and MW-22. No groundwater samples were collected from the Site's interior wells since LiRo was unable to gain access from the current site owner to the interior of the 306 Rutledge Street parcel. Residual motor fuel VOC (MTBE) impacts are present in 306 Rutledge street parcel. Residual motor fuel, VOC (MTBE) impacts are present in 306 Rutledge street parcel well RXMW-07, located along Howard Street (29 ppb). Free phase product was noted in wells EW-09/MW-2 and RXMW-01 along Howard Street. Petroleum absorbent socks were placed in wells RW-09/MW-03, RXMW-01 and MW-22 during the October 2013 sampling event. All three wells were gauged again in November 2013 and December 2013 and attempted to collect product samples for TPH petroleum identification. The only well exhibiting free phase product was MW-22. A TPH sample was collected and identified as mineral spirits. AZ 1-22-2015 Reviewed a semi-annual monitoring report for the period of November 2013 through May 2014, dated June 30, 2014. Free phase product was measured in wells FW-09/MW-03, RXMW-01, MW-01 and MW-22 (exterior 314 Rutledge parcel well) in April 2014, and petroleum absorbent socks were re-installed. TPH samples were collected from EW-09/MW-03, RXMW-09, RXMW-01 and MW-01. The product was generally identified as #2 fuel oil/motor oil mixture or motor oil. The product in MW-01 could not be identified due to low volume of product. On May 13, 2014, LiRO completed EFR on Heyward Street wells (RXMW-01, MW-01, EW-09/MW-03. during the EFR event the only well with measurable free-phase product was RXMW-01. AZ 7-31-2015 Reviewed semi-annual monitoring report for the period of June 2014 to December 2014 and dated 1/29/2015. Free phase product identified as mineral spirits was measured in well MW-22 (314 Rutledge Street parcel well). The product thickness ranged from 0.43' to 0.89' thick. Free phase product was measured in well RXMW-01 on Aug. 20, 2014 at 0.13' thick. LiRo performed EFR on September 3, 2014. Absorbent socks were changed on a regular basis during this monitoring period. During the August 2014 gauging event, LiRo noticed that wells RXMW-01 and MW-22 had been tampered with. The petroleum absorbent socks in both wells had been raised and were no longer situated at the groundwater table. LiRo returned to the Site on September 4, 2014 and installed locked j-plugs in the exterior wells. The wells were also tagged. AZ 12-1-2015 Reviewed semi-annual monitoring report for the period of January 2015 to June 2015 and dated 9/01/2015. Free phase product identified as mineral spirits was measured in January 2015 and June 2015. The product was measured in wells MW-16, MW-22, IP-18 and IP-22 during the January 2015 sampling and in wells MW-22, IP-22 and RXMW-01 during the June 2015 sampling. Product thickness ranged from

S104621574

0.03' to 1.42'. Free -phase product was consistently measured in well MW-22(314 Rutledge Street parcel well). Interior well LW-01 was discovered as being damaged in January 2015. LiRo will utilize nearby well IP-18 as a substitute for sampling and gauging. I left a message for S. Frank requesting continuation of semi-annual monitoring of groundwater monitoring wells at 306 Rutledge Street parcel. AZ 12-15-2015 Reviewed additional groundwater data submitted by LiRo on 12/15. Discussed the site with S. Frank It was decided that LiRo will fingerprint free product from IP-18 and reinstall three monitoring wells MW-2, MW-10 and MW-12 located on Heyward street and near RXMW-01 that contains free product (motor oil). AZ 12-22-2015 On December 22, 2015, a meeting was held among the Department (K. Mintzer, V. Brevdo, Alex Zhitomirsky), owners of the 306 Rutledge Street site and their environmental consultant (Mohamed Ahmed, Tenen Env.) and legal counsel. The current status of the spill cases on both 306 and 314 Rutledge Street properties, path forward towards spill case closure and potential site development were discussed during the meeting. The DER has completed preparation of the case referral form to OGC to enforce cleanup of the 314 Rutledge Street parcel and is preparing Stipulation Agreement and Corrective Action Plan for the owners of the 314 Rutledge Street parcel. AZ 12-23-2016 Reviewed a semi-annual monitoring report dated April 14, 2016. On 12/21/2015 Sheen was encountered at monitoring well RXMW-01. The free-phase product in this well is motor fuel. Petroleum absorbent socks have been used to remove low levels of product. Wells associate with 306 Rutledge Street (spill#9200212) reported low levels total dissolved VOCs: less than 130 ppb. AZ 10-26-2017 Reviewed a semi-annual monitoring report dated April 4, 2017. Measurable FREE-PHASE product was encountered at monitoring well RXMW-01 and MW-01. EFR was performed on two wells on November 2016. Petroleum absorbent socks have been used to remove low levels of product. Wells associated with 306 Rutledge Street (spill#9200212) reported low levels total dissolved VOCs: less than 95 ppb. Only four out of 15 wells of the interior at 306 Rutledge were accessible. AZ 2-22-2018 Reviewed a semi-annual monitoring report dated August 25, 2017. During this monitoring period measurable free-phase product was reported twice in well MW-01 (0.24'and 0.19') EFR was performed on April 10, 2017. Petroleum absorbent socks were changed. Historically, free phase product has been measured in 306 Rutledge Street parcel interior well IP-22, however, the well was covered with debris during this monitoring period. AZ 9-18-2018 Reviewed a semi-annual monitoring report dated March 1, 2018. During this monitoring period free-phase product was not measured in any Heyward Street wells (September and October 2017). However, petroleum absorbent socks were maintained in these wells. LiRo was unable to gain access to the interior wells of 306 Rutledge, therefore, there is no groundwater data for these wells. Numerous interior wells were covered with debris, garbage, storage pallets, etc., and could not be gauged. Well IP-22, which historically contained mineral spirits free-phase product, was covered with debris and could not be gauged. Mineral spirits contamination migrated onto 306 Rutledge Street interior wells in the northeast corner along the common wall with 314 Rutledge Street. AZ 9-27-2018 On September 27, 2018, DEC met with 306 Rutledge representatives. Regional Attorney Patrick Foster (DEC), Vadim Brevdo (DEC), Chris Gorman and Michael Bogin (the owner's counsel), and Mohamed Ahmed (the owner s consultant, Tenen Environmental) were present. The status of the site was discussed. DEC expressed concerns

S104621574

regarding access for the City's consultant, LiRo, to the interior of the site. Mr. Gorman 516-328-2300) promised to assist with this issue; his contact information will be provided to LiRo. The off-site mineral spirits contamination from 314 Rutledge into 306 Rutledge was discussed. The 306 Rutledge owners requested that the 314 Rutledge owners expedite the cleanup of the mineral spirits spill. DEC agreed to contact the 314 Rutledge owners to request that they expedite the cleanup. Mr. Bogin stated that if the City is willing to excavate the remaining petroleum contamination at 306 Rutledge, the 306 Rutledge owners will demolish the existing on-site structures. This proposal will be discussed with the DDC consultant LiRo. AZ 1-29-2019 On January 29, 2019, a meeting was held between the representatives of 306 Rutledge Street property owners, NYCDDC, NYC Law Department, DSNY and NYSDEC (represented by Alex Z, Vadim B. and Regional Attorney) to discuss further course of action for the project. During this meeting 306 Rutledge Street site owner's counsel reiterated their readiness to demolish the building on the property to expedite remediation if the City commits to excavation of the contaminated area to complete remediation. City Law Department expressed concern about the cost of remedial excavation as opposed to product recovery via absorbent socks. The Department stated that its priority is to have the remedial work completed and spill closed. The NYC Law Department stated that they will hold additional internal discussions on whether City can commit to remedial excavation and get back to 306 Rutledge Street property owner and the Department. 5-29-2019 Reviewed a semi-annual monitoring report dated October 27, 2018. During this monitoring period free-phase product was not measured in any Heyward Street wells (associated with 306 Rutledge Street). However, petroleum absorbent socks were maintained in these wells. A sheen was noticed in RXMW-01 following purging. Petroleum absorbent socks were replaced in wells RXMW-01 and MW-01 on March 1, 2018. Free-phase product was measured in well MW-22 associated with 314 Rutledge Street during this monitoring period. Access to 314 Rutledge wasn't provided during March 2018 sampling event. However, the owner did provide access during the October 2018 sampling event. AZ ""

urbanized area of Brooklyn, New York and is identified as Block 3071, Lot 40 on the Kings County Tax Map. The site is located on the city block bound by Johnson Avenue to the north, Humboldt Street to the east, Boerum Street to the south, and Graham Avenue to the west. The site is bound to the north and east by 170 Johnson Avenue (multi-family residential building with vegetative cover); to the south by Boerum Street followed by 160 Boerum Street (multi-family residential building and parking lot); and to the west by 132-138 Graham Avenue (four multifamily residential buildings). Site Features: The about 11,180-square-foot (0.25 acres) site is situated on the south-central part of the tax block and is occupied by an open-air asphalt parking lot surrounded by landscaped areas to the north and south. The site grade slopes from north (elevation 28.5) to south (elevation 25.8), toward Boerum Street. The topography of the region is characterized by small peaks and valleys, which causes varying changes in the direction and degree of slopes in localized areas. The surrounding area slopes downward gradually to the south-southeast. Current Zoning and Land Use: According to the New York City Planning Commission Zoning Map 13b, the site is located within a residential district (R6). According to the New York City Planning Commission, R6 zoning districts are widely mapped in built-up, medium-density areas in Brooklyn, Queens and the Bronx. The character of R6 districts can range from neighborhoods with a diverse mix of building types and heights. The surrounding properties are zoned for residential (R6) uses with commercial overlays (C1/C2) along major thoroughfares. A copy of the zoning map is included in Attachment B. Land use within a half-mile radius includes residential, commercial, industrial, open space and institutional developments. The nearest ecological receptor is the English Kills (tributary to Newtown Creek), located about 0.64 miles northeast of the site. Past Use of the Site: A review of available Sanborn Fire Insurance Maps, historic aerial photographs, and City Directory records indicate the site was developed as early as 1887 with four multi-story buildings used as stores (labeled as tailor shop, synagogue, candy packaging, and warehouse), parking, and residential dwellings until about 1965. The previous mixed commercial/residential buildings were demolished around 1974, and the site was used as an open-air parking lot as early as 1981. Test pits excavated on-site revealed buried solid waste, including glass, organic fibers, fabric, plastic, automobile tires, coal, ceramics, metal, brick and concrete as deep as 7.5 feet bgs, suggesting that undocumented dumping occurred at some point after the buildings were demolished in 1974. Site Geology and Hydrogeology: Based on findings of the previous limited investigation performed in October 2018 the site is underlain by solid waste within a sand and gravel matrix. Solid waste includes random distributions of brick, glass, organic fibers, fabric, plastic, automobile tires, coal, ceramics, metal and concrete from surface grade to about 7.5 feet below grade surface (bgs). Bedrock was not encountered during previous investigations conducted at the site, and is anticipated to be located over 80 feet bgs based on Langan's experience with other projects in this area of Brooklyn. According to the USGS Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and parts of Bergen and Hudson Counties, New Jersey, dated 1994, the site is underlain by the Hartland Formation. The Hartland Formation is comprised of 1) quartz-biotite-muscovite schist, 2) gray, fine-grained quartz-muscovite-biotite schist, 3) is white to

Env Problem: pinkish-white, gneissic granite, 4) is a dark greenish-black amphibolite, and 5) gray, unevenly foliated gneissic schist. Based on a review of USGS topographic maps, groundwater is inferred to flow east-southeast toward the English Kills (tributary to the Newtown Creek). According to the NYSDEC SHWS database for Top Hat Cleaners, located 200 feet north of the site (152 Graham Avenue), groundwater was encountered between 17.5 to 22.5 feet bgs. During the October 2018 due diligence sampling performed by Langan, groundwater was not encountered; however, groundwater was identified between about 7 to 10 feet at a property located 400 feet southeast of the site during a subsurface investigation performed by Langan.

Health Problem: Nature and Extent of Contamination: This site has been impacted from contamination in the soil medium. No groundwater or soil vapor sample has not been collected. Samples from soil medium was analyzed for volatile organic compounds (VOCs), Semi volatiles (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigation conducted to date, the primary contaminants of concern include: SVOCs, barium, cadmium, lead, mercury, pesticides and PCBs in soil. Metals including barium (maximum concentration of 624 mg/kg), which exceeds the Soil Cleanup Objective (SCO) for unrestricted use 350 [mg/kg], cadmium (maximum concentration of 5.98 mg/kg), which exceeds the SCO for unrestricted use 2.5 [mg/kg], mercury (maximum concentration of 0.945 mg/kg), exceeds the SCO for unrestricted use 0.18 [mg/kg], lead (maximum concentration of 900 mg/kg), exceeds the SCO for unrestricted use 63 [mg/kg]. Several SVOCs including benzo(a)anthracene (maximum concentration of 21 mg/kg), benzo(a)pyrene (maximum concentration of 20 mg/kg), benzo(b)fluoranthene (maximum concentration of 26 mg/kg), benzo(k)fluoranthene (maximum concentration of 8.9 mg/kg), chrysene (maximum concentration of 20 mg/kg), dibenzo(a,h)anthracene (maximum concentration of 2.9 mg/kg), and indeno(1,2,3-cd)pyrene (maximum concentration of 12 mg/kg) were detected in soil samples collected from Test Pit 1 exceeding UU and/or Restricted Use Restricted-Residential (RRU) SCOs. Concentrations of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were detected in Test Pit 1 at concentrations exceeding both Commercial and Industrial Use SCOs from about 4 to 7.5 feet bgs. Total PCBs in two samples collected from shallow fill (Test Pit 1) exceeded UU SCOs (maximum concentration of 0.159 mg/kg). Several pesticides including 4,4 -DDD (maximum concentration of 0.151 mg/kg), 4,4 -DDE (maximum concentration of 0.128 mg/kg), 4,4 -DDT (maximum concentration of 0.541 mg/kg), and dieldrin (maximum concentration of 0.0544 mg/kg) exceeded the UU SCOs in all soil samples collected from the two test pits.

Site Description: Location: The 0.1 acre site is located on the west side of Walworth Street in Brooklyn between Flushing Avenue and Park Avenue. The site is bounded to the south and west by single story commercial buildings, to the north by Flushing Avenue and to the east by Walworth Street. Site No. 224239: Former Techtronics Ecological Corp. is located immediately south of the property. Site Features: Currently, the site consists of a one-story building used as a storage facility and food store. Current Zoning/Use(s): The site is located in an M1-2 (light manufacturing) zoning district. The surrounding area consists of a mix of light manufacturing, commercial and residential uses. Historical Use(s): The southern portion of the site was utilized in the past by a paint and lacquer manufacturing company (Techtronics Ecological Corporation) from 1962 to 1990. The former Techtronics operation encompassed the property to the south (8 Walworth Street, Block 1716 Lot 33) as well as the southern portion of this site (Block 1716 Lot 30). During the period from 1981 to 1990, the site was a large quantity generator of hazardous waste under EPA ID no. NYD000824334. Wastes formerly generated at the site include ignitable waste, corrosive waste, spent halogenated solvents (i.e. tetrachloroethene), spent non-halogenated solvents (i.e. xylene) and lead. Myer Auto Center operated at the site as a vehicle repair shop from approximately 2005 - 2015. Waste oil was stored on-site under NYSDOC Petroleum Bulk Storage (PBS) ID 2-605797. Site Geology and Hydrogeology: Fill material was identified to a depth of five to seven feet below grade, and native soil thereafter. Groundwater was found at approximately 10 feet below grade. Regional groundwater flow direction in the vicinity of the site is to the west towards the East River.

Env Problem: The environmental assessment will be updated when information becomes available.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Update By: SXDEWES
Site Description:

Location The site (a.k.a. Former Techtronics B, Site No. 224259). is in the Bedford Stuyvesant section of Brooklyn in the City of New York and is comprised of a single tax parcel totaling 4,450 square feet (0.102 acre). The site is rectangular in shape with 50 feet of frontage on Flushing Avenue and 89.25 feet of frontage on Walworth Street. The north side of the property is bordered by Flushing Avenue, and the east side is bordered by Walworth Street. The west and south property lines are bordered by two NYSBCP sites; the 11 Spencer site to the east and the 8 Walworth site to the south. Site Features The site is currently vacant with no structures present. An 8-foot-high construction fence borders the property on the north and west sites to prevent unauthorized access. The property was most recently used as an auto repair shop. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities,

such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The site is currently vacant with no structures present and is not being used. Surrounding land use includes commercial and mixed-use (retail / residential) properties along the north side of Flushing Avenue, commercial / office use to the west, commercial (warehouses) properties to the south and to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the site including Bnei Shimon Yisroel of Sopron approximately 150 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the property was developed sometime prior to 1887 with two 2-story residences in the southern portion of the Lot with the northern portion vacant. A 1-story building was constructed on the northern portion which is shown as broom manufacturers supply till 1950. A new 1 story building is present in the southern portion of the site in 1965 and identified as paint mixing . The northern building is shown as storage or warehouse. Both buildings remain unchanged till 2016 when the north building was demolished. The south building was demolished in 2018. The property was known to be most recently used by an auto repair shop and a fish market. A site characterization of the site was completed under the project name Former Techtronics B (Site No. 224259). After the site characterization the site entered the brownfield program as 480 Flushing. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 1 foot below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater was reported to be present under confined or semi-confined conditions at approximately 14 ft below grade. Groundwater flow was estimated to be northwest. The site is not located within a designated flood zone area.

Env Problem:

Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a site characterization. Soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are chlorinated solvents, Tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichloroethene (1,2-DCE), in addition to a suite of SVOCs present in soil. Surface Soil PCE [maximum concentration 16 parts per million (ppm), standard 1.3 unrestricted use soil cleanup objective (UUSCO)], Benzo(a)anthracene (5.5 ppm max, standard 1 UUSCO), Benzo(a)pyrene (4.7 ppm, standard 1 UUSCO), Benzo(b)fluoranthene (8.5 ppm, standard 1 UUSCO), Indo(1,2,3-cd)pyrene (4.5 ppm, standard 0.5 UUSCO). Subsurface Soil PCE [maximum concentration 99 parts per million (ppm), standard 1.3 unrestricted use soil cleanup objective (UUSCO)], Benzo(a)anthracene

(260 ppm max, standard 1 UUSCO), Benzo(a)pyrene (230 ppm, standard 1 UUSCO), Benzo(b)fluoranthene (280 ppm, standard 1 UUSCO), Benzo(k)Fluoranthene (100 ppm, standard 0.8 UUSCO), Phenanthrene (800 ppm, standard 1 UUSCO), Dibenzo(a,h)anthracene (37 ppm, standard 0.33 UUSCO), Indo(1,2,3-cd)pyrene (140 ppm, standard 0.5 UUSCO). Brick and coal fragments were observed in shallow soil at some of the soil borings collected, suggesting the presence of urban fill. Groundwater - PCE [maximum concentration 2,400 parts per billion (ppb), standard 5 ppb], TCE (350 ppb max, 5 ppb standard), and 1,2-dichlorethene (340 ppb max, 5 ppb standard). Elevated metal concentrations were detected in groundwater throughout the site. Iron (8840 ppb max, standard 300 ppb), Manganese (6621 ppb max, standard 300 ppb), and Sodium (66100 ppb max, standard 2000 ppb). Soil Vapor The site is currently undeveloped. Three soil vapor samples were collected on-site with elevated concentrations of chlorinated VOCs. Max concentrations of PCE are 40.6 micrograms per cubic meter (ug/m3), TCE 1470 ug/m3 and vinyl chloride 7.77 ug/m3.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description: Location: The site is located on the west side of Walworth Street in Brooklyn between Flushing Avenue and Park Avenue. The site is bounded to the north, south and west by single story commercial buildings, and to the east by Walworth Street. Site Features: Currently, the site has one-story used as a synagogue and a shipping facility. Current Zoning/Use(s): The site is located in an M1-2 (light manufacturing) zoning district. The surrounding area consists of a mix of light manufacturing, commercial and residential uses. Historical Use(s): The site was utilized in the past by a paint and lacquer manufacturing company (Techtronics Ecological Corporation) from 1962 to the 1990s. During the period from 1981 to 1993 the site was a large quantity generator of hazardous waste under EPA ID no. NYD000824334. Wastes formerly generated at the site include ignitable waste, corrosive waste, spent halogenated solvents (i.e. tetrachloroethene), spent non-halogenated solvents (i.e. xylene) and lead. Site Geology and Hydrogeology: Fill material was identified to a depth of five to seven feet below grade, and native soil thereafter. Groundwater was found at 10 feet below grade. Regional groundwater flow direction in the vicinity of the site is to the west towards the East River.

Env Problem: Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil and groundwater samples during investigation in December 2007. Soil

Chlorinated solvents were detected in one soil sample collected from above the water table at concentrations exceeding unrestricted use soil cleanup objectives: PCE (4.3 parts per million, or ppm) and TCE (0.87 ppm). Groundwater Chlorinated solvents were detected in all four groundwater samples collected at the site: PCE ranges from 17 to 30,845 parts per billion, or ppb; TCE ranges from 31 to 48,675 ppb; and cis-1,2-DCE ranges from 7 to 164,000 ppb. Non-chlorinated VOCs were detected in one groundwater sample (MW-2): toluene (75,488 ppb), ethylbenzene (4,393 ppb) and xylene (17,405 ppb). Significant Threat: A significant threat determination will be made following completion of a site characterization.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description:

06/21/2017
05/09/2018
SXDEWES

Location The Site is located in the Bedford Stuyvesant section of Kings County and is comprised of a single tax parcel totaling 3,910 square feet (0.089 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 78 feet of frontage along Walworth Street. The north, south and west sides of the property are bordered by warehouses and commercial / industrial buildings. Site Features The Site is improved with a 3,910 sf, 1- story masonry building constructed in 1982 (estimate). The building is divided into two sections each with its own access to the outside; the north section which was recently used as warehouse space and the south section which was used by an orthodox congregation for a prayer room. Current Zoning and Land Use Compliance with Current Zoning The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The proposed project, which includes an office building, is compatible with the surrounding land use and will be in compliance with the current zoning. Compliance with Land Use Plans On May 9, 2001, the City Council approved the Flushing - Bedford rezoning action (CEQR No. 00DCP015K) covering 15 blocks in the Flushing Avenue and Bedford Avenue area of Community Districts 1 and 3 in the Bedford Stuyvesant neighborhood of Brooklyn. According to the Notice of Completion of The Final Environmental Impact Statement issued on March 16, 2001 by the NYC Planning Commission: "The Flushing Bedford area, although zoned for manufacturing uses, contains a mix of residential uses, vacant land, open uses, auto-related uses, and commercial and industrial buildings. The rezoning area has experienced a significant decline in industrial activity over the last four decades resulting in an increase in auto related uses, junk yards and vacant land. Study findings indicate that over the last two decades, there has been a substantial growth in the residential population in the surrounding areas, resulting in a housing shortfall and increasing demand for new dwelling 'units. Since the mid 1980's there has been a marked increase in residential development, especially in the area north of Flushing Avenue." "Although the existing manufacturing zoning does not permit as-of-right residential development, in recent years there has been new residential development in the area north of Flushing Avenue pursuant to zoning variances granted by the Board of Standards, and Appeals (BSA). In 1996 and 1998, two rezoning applications were approved changing the designation of a three block area immediately north of the rezoning area from manufacturing to residential. The presence of vacant and underutilized land, coupled with the increasing demand for housing in the adjacent communities, presents an opportunity for new residential development in this part of Brooklyn." The objectives of the rezoning were to: -provide opportunities for new residential development on vacant and under- utilized parcels; -bring existing non-conforming residential uses into conformance, and would

1000244308

allow for their enlargement; -allow for the continued presence and expansion of commercial and manufacturing uses; -permit the introduction of new commercial and manufacturing uses; and, -allow the residential re-use of underutilized and vacant land. In general, the action would provide the land use controls necessary for appropriate residential development and the continued presence of viable manufacturing uses. The proposed project will be in full compliance with the current land use plans as identified in the Flushing Bedford Rezoning Action (CEQR No. 00DCP015K) adopted by the City on May 9, 2001. Past Use of the Site The historic use of the Site includes a storefront building, garage and residence from sometime prior to 1887 to sometime before to sometime before 1965 when a two-story residence remained on the south side of the Site and a single-story warehouse used for chemical drum storage was present on the north side of the Site. By 1977, the two-story residence was no longer present and the single story chemical drum storage warehouse remained on the north side of the Site. By 1982 the Site was redeveloped with a single-story paint mixing warehouse. The Site and adjacent properties have remained generally unchanged through the current day. Site Geography and Geology The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. According to geologic maps of the area created by the United States Geologic Survey (USGS), the bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and / or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Subsurface soils at the Site consist of historic fill materials to a depth of approximately 4 to 6 feet below grade. Silty sand and gravel is present immediately below this layer. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. No portion of the Site is located within a designated flood zone area. The nearest moderate risk flood zone is located 800 feet to the northwest and the nearest high risk flood zone is located 950 feet to the northwest.

Site Description: Location: The Site is located at 152 Graham Avenue in the Borough of Brooklyn, Kings County, NY. The site is located in the East Williamsburg section of Brooklyn, New York. The property is bordered by Graham Avenue on the west, by a three-story mixed commercial/residential building to the north, by a four-story mixed commercial/residential building with a one-story annex and a three-story mixed commercial/residential building to the south, and by a four-story residential building to the east. The three-story building located to the southeast of the site also has a dry cleaner on the first floor. Site Features: The 2,500 square foot (0.057 acre) site parcel is occupied by a three-story building built in 1920. The site parcel also contains an open yard area behind (east of) the structure. The first floor is occupied by a dry cleaner and the upper two floors are occupied by residential apartments. Current Zoning and Land Use: The current site use is a dry cleaner (Top Hat Cleaners) on the first floor with residential apartments on the second and third floors. Past Use of the Site: According to the historical records, a dry cleaner has occupied the 152 Graham Ave location since approximately 1960. A Phase I study at the adjacent property (154 Graham Avenue) identified current and prior occupants of the ground floor retail space (pastry shop, shoe retailer and moving company, among others) which were not likely to be a source for chlorinated VOC impacts beneath the site. The report identifies the dry cleaner at 152 Graham Avenue (Top Hat Cleaners) as the most likely source of the contaminants identified in soil vapor. Site Geology and Hydrogeology: The site elevation is approximately 27 feet above mean sea level. Soil lithology consists of two main types of soils. The first soil type was "fill" material that consisted of fine to medium sand to silt with fine to coarse gravel and traces of brick and other miscellaneous debris. The second type was "natural

material" composed of fine to coarse sand to silt with fine to coarse gravel and little clay. Groundwater was encountered between 17.5 feet and 22.5 feet below ground surface. Groundwater flow was determined to be in the north to northwest direction.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs). Based upon investigations conducted to date, the primary contaminant of concern is tetrachloroethene (PCE). Soil - Sampling of soil beneath and behind the site structure was limited due to inability to access the area with a drill rig. Sample results from other media indicate that a source area of higher contaminant concentrations may be present beneath the site structure. Two detections of PCE were observed in soil borings advanced during the Site Characterization. PCE was detected at MW-02 (0.0036 ppm 17 19) and MW-04 (0.0017 ppm 5 6). Both detections are below the NYCRR Part 375 Soil Clean-up Objective of 1.3 ppm for PCE meeting both Unrestricted Use and Protection of Groundwater objectives. Groundwater - PCE was found in groundwater at two of the three boring locations advanced into the water table. Concentrations in contravention of the Class GA Groundwater standard of five (5) ppb were observed at 56 ppb and 10 ppb. Each of these exceedances were located in the public sidewalk immediately off the site parcel. Soil Vapor & Indoor Air A Vapor Intrusion Investigation was performed at the adjacent building to the north (154 Graham Avenue) as part of a real estate transaction. As part of that investigation two sub-slab vapor samples, one basement indoor air sample, and one ambient air sample were collected. At sub-slab location SG2, 43,399 ug/m3 of PCE was detected in soil vapor. (Note that the concentration reported is from a sample that was diluted 600 times. The concentration of PCE in the undiluted sample was 10,171 ug/m3, which exceeded the calibration range of the equipment.) Trichloroethylene (TCE) was detected at 1074 ug/m3 in the diluted sample and at 1504 ug/m3 in the undiluted sub-slab vapor sample. Cis-1,2-dichloroethylene (cis-1,2-DCE) was detected at 2180 ug/m3 in the diluted sample and at 1110 ug/m3 in the undiluted sub-slab vapor sample. Indoor air sampling results identified 44.1 ug/m3 of PCE and 0.43 ug/m3 of TCE in the basement air sample. Special Resources Impacted or Threatened: No special resources were identified on or surrounding the site.

Health Problem: People may contact contaminated soil or groundwater if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Additional investigation of the potential for soil vapor intrusion to occur off-site is needed.

03/23/06: This spill transferred to K.Tang - SK 12/30/09: J.Kann -
site reassigned to J.kann and consolidated with 9904132 5/25/12:
J.kann - assigned priority P0 to site as part of monthly report
exercise, little information is readily available. 12/16/15: J.Kann -
Site Assessment Report (submittal cover page dated March 13, 2000)
was reviewed. 8 endpoint soil samples were collected as a part of the
tank removal process back in 1999. No VOCs exceeded Table 3 of CP-51.
7 of the 8 soil samples were below Table 3 CP-51 guidance for SVOCs.
At one location, NW-3, some minor SVOCs were detected above CP-51,
however they were minimal and isolated to one location. An excavation
was performed on site as a part of tank removal and a total of 656
tons of contaminated soil were removed from the site. In addition 3
borings were advanced around the tank that was closed in place. Each
of the three samples collected for analysis in these three borings
(at a depth of 20 ft) were below CP-51 Table 3 for SVOCs and VOCs.
Spill therefore closed. Report DECdoced."

02/02/06: This spill transferred from S.Kraszewski to Q.Abidi.
04/04/04: This spill transferred from Q. Abidi to Koon Tang 12/30/09:
J.Kann - site reassigned to J.Kann and consolidated with 9505222
12/16/15: J.Kann - Site Assessment Report (submittal cover page dated
March 13, 2000) was reviewed. 8 endpoint soil samples were collected
as a part of the tank removal process back in 1999. No VOCs exceeded
Table 3 of CP-51. 7 of the 8 soil samples were below Table 3 CP-51
guidance for SVOCs. At one location, NW-3, some minor SVOCs were
detected above CP-51, however they were minimal and isolated to one
location. The excavation was done to the extent feasible and a total
of 656 tons of contaminated soil were removed from the site. In
addition 3 borings were advanced around the tank that was closed in
place. Each of the three samples collected for analysis in these
three borings (at a depth of 20 ft) were below CP-51 for SVOCs and
VOCs. Spill therefore closed. Report DECdoced."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY URS investigated site, operated dual-phase extraction system to address free product, soil and groundwater contamination. System operation was terminated in 2002 due to diminishing results. To address remaining groundwater contamination they applied ORC. Groundwater monitoring still ongoing. - JK 4/4/05 Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 10/31/2005 Reviewed report dated September 2005. MTBE is at 230 ppb. AZ 8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006.MW-3 - 150 PPB mtbe in groundwater.Recommendations: maintainn DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ 04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60 ppb(July 2006). Benzine and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX): I have reviewed Monitoring Report for October- December 2006 dated March 15, 2007. The report recommended reducing monitoring and reporting frequency to semi-annual. ORC socks should be placed in wells where VOC concentrations exceed NYSDEC Guidance Values. AZ 10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ 7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 56 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ 2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ 11-6-09 An e-mail was sent to Brian Morrissey/Fatemeh Ashkan/ V. Brevdo: I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination

(i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report. AZ 3-29-2011 Reviewed 4,000 gal gasoline tank closure report.3 bottom samples were collected at depth 13 to 16 bgs. Sidewalls samples could not be collected due to the steel sheeting that was previously installed during the original tank installation. Groundwater sample was collected from approximately 13 ft bgs. No visual evidence of contamination was detected. PID readings 0.6 - 2.1 ppm. The tank was in good condition. 456.4 tons of soil was transported for offsite disposal. No VOCs or SVOCs were detected in the soil samples. Groundwater sample contained VOCs detected above NYSDEC TOGs total VOCs 438 ppb. AZ 4-27-2011 An e-mail was sent to LiRo/DDC/V. Brevdo: I have reviewed the Site Turnover Status Report and Semi-Annual Monitoring Report dated January 24, 2011. I concur with the LiRo's recommendations to install two wells near a former 4,000 gal gasoline UST. Since the groundwater contamination was discovered when this UST was removed, two additional wells are required near this tank (a total of four wells). Well MW-01 could be removed from the monitoring schedule, as per LiRo's recommendation. Additional soil borings are approved. There is a number of USTs, including gasoline tanks, closed in place at this site. I recommend that these tanks be removed, if feasible. AZ 11-27-2011 Reviewed report dated Aug. 29, 2011. The report stated that the latest groundwater results show VOCs were detected above AWQSGVs in four wells. LiRo will ORC socks and continue semi-annual monitoring. AZ 6-11-2012 Additional soil borings SB-01 through SB-04 will be installed. New monitoring wells LMW-01 through LMW-04 will installed in the second quarter of 2012. AZ 4-15-2013 ORC socks are installed in MW-02 and MW-08. AZ 9-24-2013 The following e-mail was sent to S. Frank/V. Brevdo/F. Ashkan: Dear Steve, I have reviewed Request for Spill Closure dated May 23, 2013. This spill is associated with the four closed in-place USTs located on the 90th Precinct property. No remediation of soils required based on recent (May 2012) and historical soil analytical data. ORC slurry application was performed in March 2004. Stable dissolved phase groundwater plume with Total Volatile Organic Contaminant concentrations less than 100 ppb was recorded during last two sampling events. The subway and tunnel prevent offsite migration. LiRo requested that DEC close spill number 9512590. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9512590. All wells associated with this project should be closed according to the Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If

subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky"

Town: New York City
Record Added Date: 12/17/2014
Record Updated Date: 04/19/2019
Update By: SXDEWES
Site Description: Location: The 0.315 acre site is located in the Williamsburg section of Brooklyn. It is bordered to the north by Flushing Avenue and a five story commercial building, to the west by Spencer Street and a one story manufacturing building, to the south by a one story manufacturing building and to the east by Site No. 224239, Former Techtronics Ecological Corp.; and Site No. 224259, Former Techtronics Site B. Site Features: The site consists of a vacant T shaped one story former manufacturing building with no basement. The building has frontage on Spencer Street and Flushing Avenue. Current Zoning/Use(s): The site is currently zoned as M1-2. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. There are residential buildings located to the northwest of the property. Past Use of the Site: The site was a former sheet metal manufacturing building. Delta Metal Products Co. operated at the site from the 1940s to the 1990s. Toluene and 1,1,1 trichloroethane was stored under Chemical Bulk Storage ID# 2-000024 and heating oil under Petroleum Bulk Storage ID# 2-356913. Site Geology and Hydrogeology: The site elevation is estimated at roughly 20 feet above mean sea level. Groundwater was found at 13 feet below grade during subsurface investigation. Groundwater flow is to the east.
Env Problem: Nature and Extent of Contamination: Soil A Focused Subsurface Site Investigation was conducted in July 2014 and a Supplemental Focused Subsurface Investigation was conducted in September 2014. PCE was detected at 32 parts per million (ppm) in one of the soil samples collected from a boring that was installed near the concrete

degreasing pit within the building. This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) and the Protection of Groundwater SCO. No petroleum-related volatile organic compounds (VOCs) were detected in soil at concentrations exceeding the UUSCOs. Additional soil samples were collected in 2015, 2016 and 2017. Highest concentration of PCE was detected in MWC2 (2/22/17) at 900 ppm at 11/12 feet below grade surface. Groundwater Several compounds were detected well above standards in groundwater during the Focused Subsurface Site Investigation. PCE was detected at a maximum of 47,000 parts per billion (ppb), TCE at a maximum of 250 ppb, DCE at a maximum of 260 ppb, and 1,1,1-TCA at a maximum of 3,100 ppb. During a supplemental investigation, toluene was detected at a maximum of 66,000 ppb. Supplemental groundwater samples were collected in 2017. CVOCs were the primary contaminants of concern. PCE was detected at a maximum concentration of 120,000 ppb, TCE at a maximum concentration of 38,000 ppb, DCE at a maximum concentration of 4,200 ppb, and 1,1,1-TCA at a maximum concentration of 86,000 ppb. Soil Vapor Soil vapors containing PCE and TCE have been found beneath the building slab at levels as high as 1.6 million micrograms per meter cubed (ug/m3) and 82,000 ug/m3, respectively. These same compounds have been detected within the building itself, with PCE observed as high as 80 ug/m3 and TCE observed as high as 30.8 ug/m3. These detections are at levels that would indicate mitigation is necessary.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Frank mentioned that these reports were made for Merritt Environmental, who subcontracted them. abstract of focused subsurface site investigation report: - site consists multiple lots on two block: 1. Block# 1716 / Lot# 24 (and 25, as per tax lot) (1-9 Spencer St, 466-468 Flushing Ave) - approx. 2,500 sq. ft. vacant located at the southeast corner of the intersection between Flushing Ave and Spencer St 2. Block# 1716 / Lot# 20 (15 Spencer St) and 21 (11 Spencer St, 476-478 Flushing Ave) - one large 20,000 sq. ft. vacant one-story former manufacturing building with no basement used in large part for sheet metal manufacturing ----- 3. Block# 1716 / Lot# 15 (25 Spencer St) and 16 (23 Spencer St, 28-32 Walworth St) - one approx. 4,000 sq. ft. single-story manufacturing/warehouse building that is currently contains a seafood distributor 4. Block# 1716 / Lot# 14 (27 Spencer St) - approx. 7,000 sq. ft exterior stockyard used by the seafood distributor 5. Block# 1715 / Lot# 29 (12 Spencer St, 735 Bedford Ave) - vacant three-story commercial building with a full basement - site elevation is estimated at roughly 20 ft above mean sea level - Phase I conducted by Merritt Engineering - Phase I indicated historical underground benzene storage tank, evidence of a former aboveground storage tank containing TCE and at least two historical gasoline USTs at 476 Flushing Ave (former sheet metal manufacturing facility) ----- GPR survey found one subsurface anomaly resembling a UST at the Flushing Ave side of the former sheet metal manufacturing building, and possible UST fill pipe in vacant lot (lot #: 24/25) - one 07/21/14, total of 16 borings (B1 through B16) were

installed on lots associated with this project - borings B15 and B16 were installed in the basement of building at 12 Spencer St (lot #: 29), to a maximum depth of 3 ft below basement floor where refusal encountered - during field activities, it was observed that all equipment and other items associated with former operations within the sheet metal manufacturing building had been removed - a large concrete-lined pit is located within this building and its former use was unknown. however, a former employee of the manufacturing operations said that the pit was a former dipping tank for cleaning metal with solvents - former worker also recalled possible dumping of water solvent at the southeast corner of the open stockyard at south end of the site ----- groundwater was encountered at approx. 13 ft bg - a distinct solvent odor was detected in soil and groundwater samples collected from boring B10, which was located nearest to the concrete pit in the sheet manufacturing building - due to field evidence of possible contamination, two soil samples were collected from boring B10 - groundwater samples were collected from borings B1, B6, B7, B8, B9, B10 and B14 - found chlorinated solvent contamination in soil and groundwater samples soil analyticals:

boring B19 was installed near previous boring B10 and only deeper groundwater sample was collected from B19 as shallow sample was collected from B10 earlier - toluene release may have originated from a small flammable materials storage room at the west side of the 11 Spencer St building. this area was formerly used for spray painting metal products other spill #: 9311586 was reported on 12/28/1993 at 25 Spencer Street (lot #: 25) due to dumping issue. case closed.
----- PBS #: 2-356913 is recorded for 21-23 Spencer Street (lot #: 16). as per PBS record, building 23 had one (1) 1,000 gal #2 oil UST and two (2) 275 gal #2 oil ASTs. the UST was removed in Oct. 1993 and the ASTs were converted to non-regulated use. ----- 2:01 PM:- spoke with Victoria at Merritt Engineering and asked for copy of

Site Description: At this time, no other site-specific information is available. The project was generated based on information collected on the public sidewalk of Spencer Street between Flushing Avenue and Park Avenue. More information will be provided as it becomes available.
Env Problem: To date, only one groundwater sample has been collected as part of the environmental investigation. A site characterization will be conducted in 2017. Groundwater: The site is contaminated with chlorinated volatile organic compounds (VOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and

1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). Soil, groundwater and soil vapor samples will be collected as part of the site characterization.

Health Problem: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Site Description: Location: The Skillman Street Holder Station is located in an urban area, at 7 Skillman Street, Brooklyn, NY. Site Features: The 7

K - SKILLMAN ST. STATION (Continued)

S109321184

Skillman Street parcel is completely covered by a two-story building. This building is used as a banquet/catering hall. Current Zoning/Use: The property is currently in active use as a banquet hall, and is zoned for mixed use, which includes residential, commercial, and light industrial uses. The surrounding parcels are currently used for a combination of commercial and residential purposes. The nearest residential building is approximately 150 feet to the southwest. Past Use of the Site: Two manufactured gas storage holders were constructed at the site between 1887 and 1904. These holders were operated solely as gas distribution holders, and no gas production facilities were present. At some point prior to 1935, gas storage operations ceased and the holders were demolished. The site remained under the ownership of the Brooklyn Union Gas Company until sometime prior to 1947. Upon being sold the property was used for automobile parking and storage. By 1950, the site was used as an automobile repair facility which remained until at least 1993. In 2003, the existing building was developed into a catering hall, which is presently in operation. Site Geology and Hydrogeology: The site is underlain by fill material, alluvial sands, glacial outwash and bedrock at depth. Groundwater is typically found at approximately 7 to 16 feet below ground surface (bgs), and flows generally to the west-northwest.

Env Problem:

Based upon investigations conducted to date, the primary contaminants of concern are the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and metals. Soil- The subsurface soil exceedances for on-site VOCs (BTEX) were slightly above unrestricted soil cleanup objectives (USCOs), though no samples exceed the restricted residential SCOs. However sampling of soil beneath the site was limited due to the inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. Adjacent to the site, in a sample collected beneath Skillman Street at a depth of approximately 27 feet where evidence of coal tar was observed, the concentration of toluene was 160 ppm, ethylbenzene was 220 ppm, and xylenes were 840 ppm in subsurface soil. Styrene was also detected at this location at a concentration of 400 ppm. There were no detections of chlorinated solvents or total cyanide in soil above unrestricted SCOs either on or off-site. The PAH exceedances above unrestricted SCOs consisted of benzo(b)fluoranthene, benz(a)anthracene, benzo(a)pyrene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene. Adjacent to the site the concentration of naphthalene was 1000 ppm (at 27 feet below ground surface). The only inorganics to exceed unrestricted SCOs were lead and mercury, although neither exceeded the restricted residential SCOs in soil. Groundwater - Samples collected from monitoring wells located both on-site (temporary sampling points) and off-site exceeded groundwater quality standards (GWQS) for benzene, toluene, ethylbenzene, xylenes (BTEX) compounds, naphthalene, chlorinated VOCs, cyanide, and metals. On-site, benzene ranged from 13 to 5,600 ppb (GWQS of 1 ppb), toluene at 20,000 ppb (GWQS of 5 ppb), ethylbenzene at 12,000 ppb (GWQS of 5 ppb), xylenes at 9,400 ppb (GWQS of 5 ppb), isopropyl benzene at 420 ppb (GWQS of 5 ppb), styrene at 82 ppb (GWQS of 5 ppb), cis-1,2-dichloroethene at 9.2 ppb (GWQS of 5 ppb), naphthalene at 5,600 ppb (GWQS of 10 ppb), total cyanide at 240 ppb (GWQS of 200 ppb), chromium at 380 ppb (GWQS of 50 ppb), and lead at 280 ppb (GWQS of 25 ppb). Elevated BTEX and naphthalene also indicate the possible

K - SKILLMAN ST. STATION (Continued)

S109321184

presence of MGP-related contaminants in the subsurface beneath the building. Off-site, detections of benzene range from 100 ppb to 410 ppb; toluene from 79 ppb to 1,100 ppb; ethylbenzene from 32 ppb to 930 ppb; xylenes from 100 ppb to 3,900 ppb; tetrachloroethene (PCE) from 5.6 to 9,400 ppb; trichloroethene (TCE) from 140 to 1,900 ppb; vinyl chloride from 200 to 380 ppb; cis-1,2-dichloroethene from 600 ppb to 8,000 ppb; isopropyl benzene from 64 ppb to 420 ppb; styrene from 82 ppb to 1,800 ppb; and naphthalene from 62 ppb to 5,600 ppb. There were also eight inorganic compounds that exceeded the groundwater standards in both on-site and off-site wells. These compounds were copper, iron, magnesium, manganese, nickel, selenium, sodium, and thallium, all of which are not associated with the former MGP operations. Soil Vapor - Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included benzene at 35 ug/m3; toluene at 96 ug/m3; ethylbenzene at 12 ug/m3; xylenes at 40 ug/m3; 1,2,4-trimethylbenzene at 12 ug/m3; and nonane at 8.4 ug/m3. The non-MGP constituents included PCE at 12,000 ug/m3, TCE at 1,200 ug/m3, and cis-1,2-dichloroethene at 1,500 ug/m3. Indoor Air - The contaminants present in soil vapor at elevated levels were detected at much lower concentrations in indoor air. The highest concentration of the BTEX compounds was toluene at 6.3 ug/m3. PCE was detected at a concentration of 0.66 ug/m3; TCE at 0.21 ug/m3; and ethanol at 450 ug/m3. The ethanol concentrations in indoor air were approximately an order of magnitude larger than the soil vapor concentrations, indicating the source to be within the building. No indoor air guidance values were exceeded for any compound. The owners of the affected property have been notified where mitigation or monitoring of impacts to indoor air is required. An Interim Site Management Plan (ISMP) is in place that governs soil disturbance and the required groundwater monitoring.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move in to the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Mitigation has been recommended to address the potential for people to inhale contaminants in indoor air of the onsite building due to soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings which are occupied.

Site Description: Site being handled under BCP - C224036 Location: The Former Jayer Plating site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0

to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills.

Env Problem: This site is now in the BCP as 2 Ingraham Street site (C224036). Project was reclassified to N.

Site Description: 2 Ingraham Street, site represents the Block 3084, Lot 1, in the Williamsburg Area of Brooklyn, NY 11206. The site is a 0.5 acre warehouse. The property is bordered by Ingraham Street to the north, by Marrisson Place to the south, by Bogart Street to the west and by Morgan Avenue to the east. The current use of the site is commercial. Before 1998, the building was used for cloth manufacturing and one of its section was used as a plating factory (Former Jayer Plating Co.). In spring 1998, the warehouse was vacant. The neighbourhood was mixed industrial, residential, and commercial. In the western section of the warehouse, where the plating factory has operated a deep corroded dry drain was noticed. In this area the concrete floor was also broken and corroded, perhaps due to waste bath residues of the metal plating processes on the floor. The VCP investigation was not compleated and the Volunteer Cleanup Agreement negotiations have been closed . See project C224036

Site Description: Location: The 2 Ingraham Street site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. The primary contaminants of concern at the site include metals, SVOCs, and VOCs. Environmental investigation in the area revealed concentrations of metals, SVOCs, and VOCs exceeding Standards, Criteria, and Guidance values (SCGs) in the soil and/or groundwater. Soil: Based upon investigations to date, sub-surface

soils are contaminated with metals, SVOCS, and VOCs. Results from soils sampling reported metals (chromium, lead, mercury, and nickel), SVOCS (polyaromatic hydrocarbons or PAHs), and VOCs(tetrachloroethene or PCE). The PAHs contamination in soils is likely related to the presence of historic fill. Maximum detections vs. applicable unrestricted use or protection of groundwater soil cleanup objectives (UUSCO/PGWSCO) are as follows: chromium at 8,400 ppm vs. 19 ppm, lead at 607 ppm vs. 63 ppm, mercury at 1,790 ppm vs. 0.73 ppm, nickel at 3,720 ppm vs. 130 ppm, several PAHs including benzo(a)pyrene at 16 ppm vs. 1 ppm, and PCE at 1.9 ppm vs. 0.47 ppm. Mercury and nickel (up to 18.2 ppm, and 433 ppm, respectively) were detected off-site at soil boring SSB7N. Lead (up to 106 ppm) was detected off-site at soil boring SB8. Groundwater: Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: chromium at 110,000 parts per billion (ppb) vs. 50 ppb, lead at 461 ppb vs. 25 ppb, and nickel at 90,900 ppb vs. 100 ppb. PCE (up to 17 ppb) and mercury (up to 3.3 ppb) were detected in off-site downgradient groundwater at MW-7. Chromium, lead, and nickel (up to 10,800 ppb, 802 ppb, and 8,690 ppb, respectively) were detected off-site in down-gradient groundwater at MW-8. Trichloroethene up to 140 ppb was detected off-site in groundwater at MW-6. Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor. The maximum concentrations of PCE and 1,1,1-Trichloroethane in sub-slab soil vapor were detected in the northwestern/northeastern portion of the site at the respective concentrations of 827 micrograms per cubic meter (ug/m3) and 1,220 ug/m3. In addition, soil vapor intrusion (SVI) levels for methylene chloride (e.g., 42 ug/m3 [below the slab] and 20.5 ug/m3 [indoor air]) require additional assessment, investigation or mitigation in accordance with NYSDOH SVI matrices. Therefore, additional sampling is needed to determine whether actions are needed to address soil vapor intrusion on- and off-site. Significant Threat: Recent public events held at the site and past unapproved activities are likely to increase the risk of direct contact with the contamination visually observed on the surface of the slab and/or slab areas with broken concrete in which the upper soils likely contain hazardous waste levels of contamination. Contravention of SCOs for metals pose a significant threat to human health due to accessibility. Also, metals contamination in soil at the source area exceeds respective industrial and/or protection of groundwater SCOs. This has resulted in contamination of shallow groundwater at levels several orders of magnitude above standards, creating a significant threat to the environment.

Health Problem:

Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People may come into contact with contaminants in soils if they dig below the surface or contact exposed soil. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants

due to soil vapor intrusion in the event the site is re-occupied and for any future buildings developed on the site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site.

Site Description:

This project (2 Ingraham Street Off-Site, C224036A) was created to investigate for potential off-site impacts from the 2 Ingraham Street BCP Site (C224036). Location: This site is the off-site component to the 2 Ingraham Street Site located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The BCP site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The BCP site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the BCP site is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the BCP site was used as an orphanage. In 1948, the BCP site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the BCP site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The BCP site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is

Env Problem: approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. Nature and Extent of Contamination: The primary contaminants of concern off-site include metals, and volatile organic compounds (VOCs). Previous environmental investigation in the area revealed concentrations of metals and VOCs exceeding Standards, Criteria, and Guidance values in the soil and/or groundwater. Based upon investigations to date, shallow soils (up to 5 feet below ground surface) are contaminated with metals. Data results from soils sampling reported metals (lead, mercury and nickel). Maximum detections vs. applicable unrestricted use or protection of groundwater cleanup objectives are as follows: lead at 106 parts per million (ppm) vs. 63 ppm, mercury at 18.2 ppm vs. 0.73 ppm, and nickel at 433 ppm vs. 130 ppm. Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: tetrachloroethene at 17 parts per billion (ppb) vs. 5 ppb, trichloroethene at 140 ppb vs. 5 ppb, chromium at 10,800 ppb vs. 50 ppb, and nickel at 8,690 ppb vs. 100 ppb.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

UTM Y (Meters):	4505822.5
Elevation:	14 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles West
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is present at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York

Survey Area Data: Version 9, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 23, 2014—Aug 15, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
UGA	Urban land-Greenbelt complex, 0 to 3 percent slopes	2.7	44.2%
UGAI	Urban land-Greenbelt complex, 0 to 3 percent slopes, low impervious surface	0.3	4.7%
UtA	Urban land, till substratum, 0 to 3 percent slopes	3.1	51.1%
Totals for Area of Interest		6.0	100.0%

SPECIAL FLOOD HAZARD AREAS		Without Base Flood Elevation (BFE) Zone A, V, A99
		With BFE or Depth Zone AE, AO, AH, VE, AR
		Regulatory Floodway
OTHER AREAS OF FLOOD HAZARD		0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile Zone X
		Future Conditions 1% Annual Chance Flood Hazard Zone X
		Area with Reduced Flood Risk due to Levee. See Notes. Zone X
		Area with Flood Risk due to Levee Zone D
OTHER AREAS		NO SCREEN Area of Minimal Flood Hazard Zone X
		Effective LOMRs
		Area of Undetermined Flood Hazard Zone D
GENERAL STRUCTURES		Channel, Culvert, or Storm Sewer
		Levee, Dike, or Floodwall
OTHER FEATURES		20.2 Cross Sections with 1% Annual Chance Water Surface Elevation
		17.5 Cross Sections with 1% Annual Chance Water Surface Elevation
		Coastal Transect
		Base Flood Elevation Line (BFE)
		Limit of Study
		Jurisdiction Boundary
		Coastal Transect Baseline
MAP PANELS		Digital Data Available
		No Digital Data Available
		Unmapped

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **11/19/2019 at 2:48:27 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.
