OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:
Langan performed soil vapor extraction (SVE) pilot testing, which is outlined in the New York State Department of Environmental Conservation (NYSDEC)-approved Design Investigation Work Plan for Off-Site Soil Vapor Extraction System, dated 8 March 2024.

Site Activities

- AARCO installed temporary soil vapor extraction well SVE-02 in the 3rd Street sidewalk.
- AARCO installed eight temporary vacuum monitoring points (VMP-08 through VMP-15) near SVE-02. The temporary vacuum monitoring points were installed about 20 inches beneath the existing sidewalk and were sealed with a one-way stop valve.
- Langan and AARCO performed SVE pilot tests using a test vacuum blower at SVE-02. Differential pressure was measured at monitoring points VMP-08 through VMP-15 at varying flow rates to inform subsurface conditions for the future SVE system design.
- After completion of SVE pilot testing, AARCO restored the SVE well and vacuum monitoring points using Portland cement.

Sampling

- None

Community Air Monitoring Plan (CAMP) Activities

- Langan conducted real-time air monitoring for volatile organic compounds (VOC) and particulate matter smaller than 10 microns in diameter (PM10) at upwind and downwind perimeters of the work area during ground-intrusive activities. The 15-minute time-weighted average (TWA) action levels for VOCs and PM10 were not exceeded during the monitoring period.
    - The PM10 data was mistakenly deleted, so it is not included in the report.

Anticipated Activities

- Langan and AARCO will continue SVE pilot tests on Friday, 24 May 2024.
