## **1.0 INTRODUCTION**

Brinkerhoff Environmental Services, Inc. (Brinkerhoff) was retained by YYY Brooklyn NY LLC c/o MADD Equities LLC to perform a Phase I Environmental Site Assessment (ESA) of the property located at 202-208 Tillary Street (aka 67-73 Prince Street), in the Borough of Brooklyn, Kings County, New York (hereinafter referred to as the site or subject property). (Refer to *Figure 1 - Site Location Map*.) The subject property is further defined by the City of New York as Block 2050, Lot 100. (Refer to *Figure 2 - Tax Map*.) The scope of this Phase I ESA is consistent with United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI), 40 Code of Federal Regulations (CFR) Part 312, and the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process Scope of Work.

### **1.1 PURPOSE**

The purpose of this assessment is to review the general environmental condition of the land and structure that comprise the subject property. Specifically, the report seeks to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and historical recognized environmental conditions (HRECs), as defined by ASTM E 1527-13, on and near the site and records of those areas that may adversely impact the subject property owner or operator under existing federal, state, and local environmental laws, and to recommend further actions necessary to confirm, quantify, or abate those conditions.

### **1.2 DETAILED SCOPE OF SERVICES**

Brinkerhoff undertook the following actions to accomplish this Phase I ESA:

- ✓ A physical inspection of the subject property on July 7, 2015, by Brinkerhoff to locate and identify: obvious signs of chemical spills; visual and documented evidence of chemical storage tanks; improper use, storage and disposal of hazardous materials; and, polychlorinated biphenyl (PCB)-containing electrical equipment.

- ✓ A review of federal and state standard environmental record sources using minimum search distances from the subject property, as defined by ASTM E 1527-13, to identify nearby sites with known environmental impairments or operations registered to handle hazardous substances and wastes.
- ✓ A review of reasonably ascertainable standard historical sources that might include aerial photographs, fire insurance maps, property tax files, recorded land title records, United States Geological Survey (USGS) 7.5 Minute Topographic Maps, local street directories, building department records, zoning/land use records, or other historical sources.

### **1.3 LIMITATIONS AND EXCEPTIONS**

This Phase I ESA reflects conditions that were visibly evident in those areas where access was available on the date of Brinkerhoff's site visit. The assessment offers both information about the site and operations performed on site; however, visual inspections were limited to those areas of the subject property that were accessible during the site visit. It is possible that hazardous materials might be found in inaccessible areas.

The site reconnaissance involved inspecting readily accessible areas and did not involve subsurface investigations, investigations under asphalt paving, concrete slabs, gravel-covered areas, storage areas, or other areas which could not be reasonably inspected without the use of specialty equipment such as heavy machinery or geophysical probing devices.

Brinkerhoff cannot be held responsible if site conditions change in the future and environmental conditions arise that could not reasonably have been identified during the site reconnaissance initially conducted.

Brinkerhoff submitted a Freedom of Information Act (FOIA) and Right-to-Know Law requests for information to appropriate federal, state and local government agencies. If responses and/or files were not provided at the time of report preparation, it is documented as a data gap in Section 6.0. As per ASTM E 1527-13-3.2.69, 3.2.72 and 8.1.4, Brinkerhoff reviewed only those files that were practically reviewable and reasonably ascertainable.

As per ASTM E 1527-13, the following "nonscope considerations" were not included in this evaluation: asbestos-containing materials (ACMs), biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to related of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint (LBP), lead in drinking water, mold, radon, regulatory compliance, and wetlands. Since ASTM E 1527-13 does not require that these inspections be conducted, said inspections were not performed as part of this Phase I ESA.

### **1.4 USER RELIANCE**

YYY Brooklyn NY LLC c/o MADD Equities LLC may rely upon this report, which has no other purpose and should not be relied upon by any other person or entity.

## 2.0 SITE DESCRIPTION

### 2.1 LOCATION AND LEGAL DESCRIPTION

Street Address: 202-208 Tillary Street (aka 67-73 Prince Street)  
Borough/State: Brooklyn, New York  
County: Kings  
Tax Block/Lot: Block 2050, Lot 100  
Shape of Lot: Irregular

### 2.2 CURRENT USE OF THE SITE

The subject property is located along Tillary Street and Prince Street and is developed with a five-story self-storage building with a basement. The building covers approximately 14,800 square feet of the subject lot and has approximately 89,000 square feet of interior space, including the interior loading dock area. The building is currently operated by American Self Storage as a public storage facility with more than 1,300 storage units. The eastern portion of the site is a parking lot, approximately 5,800 square feet, that is covered with asphalt and concrete with small areas of unpaved gravelly soil.

Photographs of the subject property were taken at the time of the site inspection and are provided in *Appendix I*.

### 2.3 UTILITIES

The subject property is serviced by regionally supplied electricity and natural gas from Consolidated Edison. Potable water and sanitary sewer services are provided by the City of New York. Information regarding water quality reports for the City's drinking water can be found at the following Web site: [http://www.nyc.gov/html/dep/html/drinking\\_water/wsstate.shtml](http://www.nyc.gov/html/dep/html/drinking_water/wsstate.shtml).

### 2.4 HEATING SOURCE

The subject property building is heated by natural gas. One natural gas-supplied hot water heater and one electric hot water heater were observed at the site.

### 2.5 CURRENT USES OF ADJACENT PROPERTIES

Current uses of adjacent properties are as follows:

**North:** Tillary Street and Route 278 are located immediately to the north of the subject site. To the north, beyond Tillary Street and Route 278, is an apartment complex.

**East:** An apartment complex is located to the east of the subject property.

**South:** An apartment complex is located to the south of the subject property.

**West:** A women's shelter is located immediately adjacent to the north of the subject property. Beyond the women's shelter and across Prince Street to the north is located a New York City 84<sup>th</sup> Precinct Police Department and a New York City Fire Department station.

## **2.6 PHYSICAL SETTING ANALYSIS**

### **2.6.1 SITE GEOLOGY/SOIL**

Kings County is underlain by geological formations known collectively as the Coastal Plain Province. These unconsolidated sediments range in age from Cretaceous to Miocene (135 to 5.3 million years old), dip toward the coast, and extend beneath the Atlantic Ocean to the edge of the Continental Shelf. The sediments consist of layers of sand, silt and clay deposited alternately in deltaic and marine environments as sea level fluctuated during Cretaceous and Tertiary time. These layers of sediment outcrop in irregular bands that trend northeast-southwest. Wide areas of the Coastal Plain are covered by a thin veneer of Late Tertiary and Quaternary sand and gravel deposited by rivers. The topography of the Coastal Plain is generally flat to very gently undulating.

According to the United States Department of Agriculture Natural Resources Conservation Service New York City Reconnaissance Survey, the majority of the subject property soils consist of Urban land-Greenbelt complex, with 0 to 3 percent slopes and low impervious surface (UGA1). The extreme western portion of the site along Prince Street consists of Urban land, till substratum, with three to eight percent slopes (UtB). An on-site investigation would be necessary to confirm the actual classes of soil present on the subject property.

### **2.6.2 SITE TOPOGRAPHY**

The subject property is located approximately 20 feet above mean sea level and appears generally flat. Rainfall is expected to run off impervious surfaces toward the City storm water drains along adjacent streets.

## **3.0 RECORDS REVIEW**

### **3.1 FEDERAL AND STATE DATABASE REVIEW**

An environmental database search of the subject property and the area within a one-mile radius of the subject property was conducted by Environmental Data Resources, Inc. (EDR). The EDR environmental database search generated information regarding the subject property and surrounding properties that are or have been regulated, tracked, or investigated under specific federal or state environmental programs. The Executive Summary of the EDR environmental database search report is provided in *Appendix II*; the complete report is on CD-ROM in Appendix II.

#### **3.1.1 SUBJECT PROPERTY**

According to the EDR environmental database search, the subject property was identified in three databases as follows.

##### **3.1.1.1 Emergency Response Notification System (ERNS)**

According to the EDR environmental database search, the subject property was identified in the ERNS database under the following listing:

No Name Provided  
202 Tillary Street  
Brooklyn, New York

According to the listing, the facility is listed as Site ID 90157555. The listing is related to a 150-gallon diesel oil spill that occurred on April 6, 1990. The report indicated that the oil spilled while a delivery truck was approaching the fuel dock and it struck a curb. The police and fire department were on site, and a cleanup was undertaken. The material spilled from the truck's fuel tank. No additional information was provided by EDR.

##### **3.1.1.2 Facility Index System/Facility Registry System (FINDS)**

According to the EDR environmental database search, the subject property was identified in the FINDS database under the following listing:

202 Tillary Street Building  
202 Tillary Street  
Brooklyn, New York

The site was identified in the database with EPA ID 110042331759.

##### **3.1.1.3 United States Air Emissions Data (US AIRS)**

According to the EDR environmental database search, the subject property was identified in the US AIRS database under the following listing:

202 Tillary Street Building  
202 Tillary Street  
Brooklyn, New York

The site was identified in the database with EPA Plant ID 110019815645. A Standard Industrial Classification (SIC) Code of 4225 (General Warehousing and Storage) was listed for the site. The site was identified as being in compliance with state procedural requirements.

### 3.1.2 ADJACENT PROPERTIES

The following adjacent properties and their corresponding database listings/details were identified in the EDR Report:

1. **MIM Import Corp., Lot 30, Tax Block 134, 78 Prince Street, Brooklyn, NY** – NY Underground Storage Tank (UST), NY HIST UST and NY E-Designation (Effective date 6/28/2004) – The E-Designation listing is associated with “Underground Gasoline Storage Tanks\* Testing Protocol” and “Window Wall Attenuation & Alternate Ventilation”. The UST listing is for Site ID 2-369918 (expiration 12/22/1991) for a 3,000-gallon closed #1, 2 or 4 fuel oil UST closed prior to 1991.
2. **84<sup>th</sup> Precinct, 301 Gold Street, Brooklyn, NY** - (Site ID 8248) – NY HIST UST, NY UST, NY LTANKS, NY SPILLS and NY AST – The databases identified one closed in place 3,000-gallon 1, 2 or 4 Fuel oil UST, four removed 550-gallon gasoline USTs, one removed 10,000-gallon #2 fuel oil UST, a closed in place 3,000-gallon #2 fuel oil UST, a removed 4,000-gallon gasoline UST, an in service 4,000-gallon gasoline UST, an in service 10,000-gallon #2 fuel oil UST, and an in service #2 fuel oil AST.

A two-gallon oil spill was identified at the site in 1993 that was cleaned. A closed date of 10/06/1993 was identified.

A gasoline discharge was also identified at the site in 1996 from a leaking UST. It is uncertain if this discharge case was closed. Soil contamination, VOC groundwater contamination, and an extensive monitoring well/remediation system network were referenced at the site. A few case numbers were identified that were to be merged and/or some individually closed. The cases were not documented to be formally closed as per the EDR Report.

3. **Vault #3213, Tillary Street/Prince Street, Brooklyn, NY** – NY SPILLS (Site ID 266657, Spill Number 0203269 and closed date 8/30/2002) – The report indicated that approximately one pint of unknown oil mixed with 1,000 gallons of water spilled within a Con Ed vault on 06/26/2002. The spill was contained, and sewers and waterways were not affected. A cleanup was completed.
4. **Manhole #60577, Prince and Tillary Streets, Brooklyn, NY** – NY SPILLS (Site ID 114797, Spill Number 9902724 and closed date 5/18/2000) – The report indicated that approximately two quarts of unknown oil mixed with 75 gallons of water spilled within a

manhole on 06/09/1999. The spill was contained, and sewers and waterways were not affected. A cleanup was completed, and the incident was listed as closed.

5. **Vault #4147, Tillary Street/Prince Street, Brooklyn, NY – NY SPILLS** (Site ID 314747, Spill Number 9906421 and closed date 11/9/1999) – The report indicated that approximately one quart of unknown oil mixed with 50 gallons of water spilled within a vault on 08/30/1999. The spill was contained, and sewers and waterways were not affected. A cleanup was completed, and the incident was listed as closed.
6. **Manhole #60577, Prince and Tillary Streets, Brooklyn, NY – NY SPILLS** (Site ID 117708, Spill Number 9810655 and closed date 10/30/2002) – The report indicated that approximately one-half gallon of unknown oil mixed with five gallons of water spilled within a Con Ed manhole on 11/23/1998. The spill was contained, and sewers and waterways were not affected. A cleanup was undertaken, and the incident was closed.
7. **Tillary Street and Prince Street, Brooklyn, NY – NY SPILLS** (Site ID 74406, Spill Number 9701275 and closed date 4/29/1997) – The report indicated that a traffic/truck accident occurred and 110 gallons of diesel fuel spilled on 04/29/1997. The spill was contained and cleaned by the Fire Department of New York Haz Mat Division. Corrective action was undertaken, and the incident was closed.
8. **Vault #3213, Tillary Street, East of Prince, Brooklyn, NY – NY SPILLS** (Site ID 195391, Spill Number 9810815 and closed date 10/23/2002) – The report indicated that a Con Edison equipment failure caused approximately 10 gallons of transformer oil to be spilled on 11/27/1998. A cleanup was undertaken, and the incident was closed.
9. **Tillary Street and Prince Street, Brooklyn, NY – NY SPILLS** (Site ID 310644, Spill Number 9000207 and closed date 04/06/1990) – The report indicated that a traffic/truck accident occurred and 150 gallons of diesel fuel spilled on 04/06/1990. The spill was contained and cleaned by the Fire Department of New York. Corrective action was undertaken, and the incident was closed.
10. **Ingersoll Houses NYCHA, 85 Navy Walk, Brooklyn, NY – NY SPILLS** (Site ID 105483, Spill Number 9513974 and closed date 3/13/2009) – The report indicated that 40 gallons of fuel oil spilled on 02/02/1996. A recovery system was installed after an oil delivery was made into incorrect piping. Monitoring wells were installed and sampled/tested. A No Further Action (NFA) letter was issued in 2009.
11. **Ingersoll Houses, 85 Navy Walk, Brooklyn, NY – NY UST** (Site ID 20917 and Tank ID 172782) – The report indicated that a 25,000-gallon #2 fuel oil UST is active at the site. The report also identified two 35,000-gallon closes #4 fuel oil USTs.
12. **Ingersoll Houses, 85 Navy Walk, Brooklyn, NY – NY AST** (Site ID 20917) – The report indicated that a 275-gallon waste oil/used oil AST was removed from the site.

Additional information was not provided for the above sites by EDR.

### 3.1.3 SURROUNDING PROPERTIES

According to the EDR environmental database search, surrounding properties were identified in the federal and state databases within a one-mile search radius of the subject property and are identified as follows:

- ✓ Within a zero to one-eighth mile radius of the subject property, the following database listings were identified:
  - One property was identified in the NY TANKS database.
  - Four properties were identified in the RCRA-LQG database.
  - Six properties were identified in the RCRA-CESQG database.
  - Two properties were identified in the NY LTANKS database.
  - Twelve properties were identified in the NY UST database.
  - Ten properties were identified in the NY AST database.
  - One property was identified in the NY BROWNFIELDS database.
  - Seven properties were identified in the NY HIST UST database.
  - Sixty-one properties were identified in the NY SPILLS database.
  - Twenty-four properties were identified in the RCRA-NonGen/NLR database.
  - Thirty-seven properties were identified in the NY MANIFEST database.
  - Twenty properties were identified in the NY E-Designation database.
  - Four properties were identified in the NJ MANIFEST database.
  - One property was identified in the EDR US HIST CLEANERS database.
  - Five properties were identified in the EDR US HIST AUTO STAT database.
  
- ✓ Within a one-eighth to one-quarter mile radius of the subject property, the following database listings were identified:
  - Two properties were identified in the RCRA-SQG database.
  - Five properties were identified in the RCRA-LQG database.
  - Five properties were identified in the RCRA-CESQG database.
  - One property was identified in the NY TANKS database.
  - Seven properties were identified in the NY LTANKS database.
  - Seventeen properties were identified in the NY UST database.
  - Twenty properties were identified in the NY AST database.
  - One property was identified in the NY CBS AST database.
  - One property was identified in the NY CBS database.
  - Four properties were identified in the NY HIST UST database.
  - Thirty-two properties were identified in the RCRA NonGen/NLR database.
  - One property was identified in the NY HSWDS database.
  - Sixty-two properties were identified in the NY MANIFEST database.
  - Three properties were identified in the NJ MANIFEST database.
  - Six properties were identified in the EDR US HIST AUTO STAT database.
  - Four properties were identified in the EDR US HIST CLEANERS database.

- ✓ Within a one-quarter to one-half mile radius of the subject property, the following database listings were identified:
  - Two properties were identified in the CERC NFRAP database.
  - Three properties were identified in the NY SHWS database.
  - One property was identified in the NY INST CONTROL database.
  - One property was identified in the NY ENG CONTROL database.
  - Forty-two properties were identified in the NY LTANKS database.
  - One property was identified in the NY VCP database.
  - One property was identified in the NY BROWNFIELDS database.
  - Three properties were identified in the NY HSWDS database.
  - One property was identified in the EDR MGP database.
  
- ✓ Within a one-half to one mile radius of the subject property, the following database listings were identified:
  - One property was identified in the NPL database.
  - Five properties were identified in the NY SHWS database.
  - One property was identified in the FUDS database.
  - One property was identified in the ROD database.
  - Three properties were identified in the EDR MGP database.

Additional information regarding each of the individual properties identified in the databases listed above is provided in *Appendix II*.

The EDR Orphan Summary Report includes listings for 15 properties that are included in certain federal or state environmental databases, but are reported by EDR to be unmapped due to insufficient address information. The listing of orphan sites within the database search was reviewed, cross-referencing available address information with facility names. The subject property address was not included in the Orphan Summary. Based upon available information, it appears that none of the listed orphan sites are located in close proximity to the subject property.

Numerous surrounding properties were identified as aforementioned; however, the regulatory listed sites are unlikely to impact the subject property for one or more of the following reasons:

- Based upon the distance of the listed property from the subject property, the listed property was judged to be too distant to likely impact the subject property;
- The listed property was topographically downgradient or sidegradient of the subject property;
- The listed property is separated from the subject property by a hydrologic barrier, such as a river; and/or,
- The property was listed as engaging in an activity that requires environmental registration but for which no violation was documented, such as a registered UST with no documented leak, or the property was issued a case closure letter.

### 3.1.4 VAPOR ENCROACHMENT SCREENING

Brinkerhoff utilized the information listed for the properties identified in the federal and state database search, topographic maps, aerial photographs, and the New York State Department of Environmental Conservation's (NYSDEC's) online Environmental Site Database Search to evaluate the migration potential of hazardous substances or petroleum products in subsurface vapor. These resources assisted in the evaluation of potential vapor migration on the subject property or to the subject property from surrounding properties that are or may be engaged in storage, handling, or usage of petroleum products and hazardous materials.

According to the EDR environmental database search, the subject property was identified in the ERNS database for a 150-gallon diesel oil spill that occurred on April 6, 1990. The report indicated that the oil spilled while a delivery truck was approaching the fuel dock and it struck a curb. The material spilled from the truck's fuel tank. The police and fire department were on site, and a cleanup was undertaken. Additional details confirming formal closure were not provided.

Numerous NY SPILLS listings were identified on streets surrounding the site associated with small spills within vaults and manholes. The EDR Report identified "closed dates" for the spills and indicated that they were addressed/corrective action was undertaken.

One property, identified as Ingersoll Houses at 85 Navy Walk, is located in the immediate vicinity of the subject property in the NY AST and NY UST databases. The Ingersoll Houses site was identified in a spill/discharge database in 1996; however, an NFA letter was issued for the discharge in 2009.

A property identified as MIM Import Corp. is located diagonally across Prince Street from the subject property. This site was identified in the NY UST, NY HIST UST and NY E-Designation (Effective date 6/28/2004) databases. The E-Designation listing is associated with "Underground Gasoline Storage Tanks\* Testing Protocol" and "Window Wall Attenuation & Alternate Ventilation". The UST listing is for a 3,000-gallon closed #1, 2 or 4 fuel oil UST closed prior to 1991.

Another adjacent site, identified as the 84<sup>th</sup> Precinct at 301 Gold Street, is located across Prince Street and is identified in the NY HIST UST, NY UST, NY LTANKS, NY SPILLS and NY AST databases. The databases identified one closed in place 3,000-gallon 1, 2 or 4 Fuel oil UST, four removed 550-gallon gasoline USTs, one removed 10,000-gallon #2 fuel oil UST, a closed in place 3,000-gallon #2 fuel oil UST, a removed 4,000-gallon gasoline UST, an in service 4,000-gallon gasoline UST, an in service 10,000-gallon #2 fuel oil UST, and an in service #2 fuel oil AST. A two-gallon oil spill was identified at the site in 1993 that was cleaned. A closed date of 10/06/1993 was identified. A gasoline discharge was also identified at the site in 1996 from a leaking UST. It is uncertain if this discharge case was closed. Soil contamination, VOC groundwater contamination, and an extensive monitoring well/remediation system network were referenced at the site. A few case numbers were identified that were to be merged and/or some individually closed. The cases were not documented to be formally closed as per the EDR Report. No information was uncovered which would suggest that the contaminant is migrating onto the subject property.

Based upon the data acquired during the investigation for vapor encroachment, Brinkerhoff finds that the subject property has the potential to be impacted by vapor migration from an historic on-site discharge or from nearby sites.

## **3.2 HISTORICAL USE DOCUMENTATION**

### **3.2.1 SANBORN® FIRE INSURANCE MAPS (SANBORNS)**

Brinkerhoff requested a historical map search from EDR. EDR provided historical Sanborns for the years 1887, 1904, 1915, 1938, 1950, 1969, 1979, 1980, 1981, 1982, 1986, 1987, 1988, 1989, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. (Refer to *Appendix III* for copies of the Sanborns.) The Sanborns are described as follows:

#### **1887**

**Subject Property:** The subject property is occupied by numerous stores, dwellings and stables. Municipal water lines are shown on adjacent streets.

#### **Surrounding Properties:**

**North:** Tillary Street, dwellings, stores and F.A. Van Iderstine Hides and Tallow Factory are located to the north of the subject property.  
**East:** Fleet Place, stores and dwellings are present to the east of the subject property.  
**South:** Dwellings are located to the south of the site.  
**West:** Stores, a wagon house/stable and dwellings are present to the west of the subject property.

#### **1904**

**Subject Property:** The subject property is occupied by numerous stores, dwellings and stables.

#### **Surrounding Properties:**

**North:** Tillary Street, dwellings, stores, F.A. Van Iderstine Hides and Tallow Factory and A. Levy Wool Factory are located to the north of the subject property.  
**East:** Fleet Place, stores and dwellings are present to the east of the subject property.  
**South:** Dwellings are located to the south of the site.  
**West:** Stores, a wagon house and dwellings are present to the west of the subject property.

#### **1915**

**Subject Property:** The subject property is occupied by numerous stores, dwellings and stables.

#### **Surrounding Properties:**

**North:** Tillary Street, F.A. Van Iderstine Hides and Tallow Factory and A. Levy Wool Factory are located to the north of the subject property.  
**East:** Fleet Place, stores and dwellings are present to the east of the subject property.  
**South:** Dwellings are located to the south of the site.  
**West:** Stores, a wagon house and dwellings are present to the west of the subject property.

### **1938**

**Subject Property:** The subject property is occupied by four dwellings along Prince Street.

#### **Surrounding Properties:**

- North:** Tillary Street and A. Levy Wool Factory are located to the north of the subject property.
- East:** Fleet Place, stores and dwellings are present to the east of the subject property.
- South:** Dwellings are located to the south of the site.
- West:** A manufacturing flat, a parking garage and dwellings are present to the west of the subject property.

### **1950**

**Subject Property:** The subject property is occupied by a manufacturing flat constructed in 1948. Two elevators are identified in the building. Additional details regarding the site cannot be interpreted based on the limited clarity of the map.

#### **Surrounding Properties:**

- North:** Tillary Street and vacant land are located to the north of the subject property.
- East:** An apartment complex (with numerous buildings) and surrounding open space are present to the east of the subject property.
- South:** An apartment complex (with numerous buildings) and surrounding open space are present to the south of the subject property.
- West:** A manufacturing flat, a used machinery repairs and sales facility, stores and dwellings are present to the west of the subject property.

### **1969**

**Subject Property:** The subject property is occupied by a manufacturing flat constructed in 1948. Two elevators are identified in the building. Additional details regarding the site cannot be interpreted based on the limited clarity of the map.

#### **Surrounding Properties:**

- North:** Tillary Street and extensive associated highway ramps are located to the north of the subject property.
- East:** An apartment complex (with numerous buildings) and surrounding open space are present to the east of the subject property.
- South:** An apartment complex (with numerous buildings) and surrounding open space are present to the south of the subject property.
- West:** A manufacturing flat is present to the west of the subject property.

### **1979**

**Subject Property:** The subject property is occupied by a manufacturing flat constructed in 1948. Two elevators are identified in the building. Additional details regarding the site cannot be interpreted based on the limited clarity of the map.

**Surrounding Properties:**

- North:** Tillary Street and extensive associated highway ramps are located to the north of the subject property.
- East:** An apartment complex (with numerous buildings) and surrounding open space are present to the east of the subject property.
- South:** An apartment complex (with numerous buildings) and surrounding open space are present to the south of the subject property.
- West:** A manufacturing flat and the NYC Fire Department Engine Company 207/NYC Police Department 84<sup>th</sup> Precinct are present to the west of the subject property.

**1980, 1981, 1982, 1986, 1987, 1988, 1989, 1991, 1992, 1993, 1995 and 1996**

The subject property and surrounding properties appear similar to the 1977 Sanborn.

**2001, 2002, 2003, 2004, 2005, 2006 and 2007**

The subject property is occupied by the same building as the prior maps; however, it is shown as being commercial use on the first floor and vacant on the upper floors. The surrounding properties appear similar to the prior maps.

**3.2.2 AERIAL PHOTOGRAPHS**

Brinkerhoff reviewed historical aerial photographs from EDR for the years 1951, 1954, 1961, 1966, 1971, 1974, 1980, 1984, 1991, 1994, 2006, 2009 and 2011. Copies of the aerial photographs are provided in *Appendix IV*. The aerial photographs were examined to determine prior usage, development and construction on the subject property. The subject property appears to be developed with the existing structure in the photographs and is located in a highly developed urban area. Due to the scale of the photographs, details are not discernible.

**3.2.3 CITY DIRECTORY ABSTRACT**

Brinkerhoff requested a City Directory Abstract search from EDR. The 202 Tillary Street address was identified in 1970, 1973, 1976, 1980, 1985, 1997, 2000, 2005, 2008 and 2013. The 206 and 208 Tillary Street addresses were identified in 1934. The 71 Prince Street address was identified in 1949, 1960 and 1965. The EDR-City Directory Abstract is provided in *Appendix V*.

### **3.3 SUMMARY OF HISTORICAL INFORMATION**

According to the historical data/map review, the subject property was developed with residences, stores and stables from at least the 1880s until 1948 when a manufacturing facility building was constructed. The Sanborn Maps did not identify operators or uses of the manufacturing building; however, city directory listings indicated various tenants/operators including Polytechnic Research & Development Co. Inc. Receiving Dep't., PRD Electronics Inc. Receiving Dep't., individual names, a potential garage identified as "Garage Atndt H", headwear/curtain/textile companies, a binding company, wholesalers/traders, a beverage company, a vegetable company, and a self-storage facility.

### **3.4 REGULATORY AGENCY REVIEW**

In addition to the review of state and federal government databases, as discussed in Section 3.1 above, Brinkerhoff accessed the USEPA MyPropertyInfo database online for reviews of files concerning environmental violations at the subject property or in the immediate area of the subject property. Brinkerhoff also provided communications to the NYSDEC via electronic mail and to the New York City Department of Environmental Protection (NYCDEP) via facsimile to request reviews of files concerning environmental violations at the subject property or in the immediate area of the subject property. (Refer to *Appendix VI* - Government Communications.) Brinkerhoff reviewed only those files that were practically reviewable and reasonably ascertainable.

#### ***USEPA***

According to the USEPA *MyPropertyInfo* database, the subject property address of 202 Tillary Street was listed in the searched databases as the "202 Tillary Street Building" with USEPA ID 110042331759 and SIC Code 4225. The site is listed in the FRS and AIRS databases. Violations were not identified for the site from 2012 to 2015, and historic violations were not identified.

#### ***NYSDEC***

The NYSDEC did not identify any files pertinent to the subject property.

#### ***NYCDEP***

The NYCDEP did not identify any files pertinent to the subject property.

### **3.5 CITY ENVIRONMENTAL QUALITY REVIEW DECLARATION ("E" DESIGNATION)**

The City Planning Commission approved amendments to the New York City Zoning Maps which may include environmental designations of certain tax lots that have physical or historical evidence of uses related to hazardous materials. The "E" designations shown on the zoning maps function as indicators of the environmental review that must be conducted when the lots are developed in accordance with the regulations of the rezoned district. The City Planning Commission's rezoning actions, including environmental designations, were made effective upon the City Council's approval of the Zoning Map Amendment.

Based upon a review of the NYCDEP's most recent "E" Designation database, reviewed July 1, 2015, the subject property was not identified in the database.

## 4.0 INTERVIEW AND USER-PROVIDED INFORMATION

### 4.1 INTERVIEW

Brinkerhoff was accompanied on the site inspection by Kim Brancaccio, a site representative for American Self Storage. According to Ms. Brancaccio, she was not aware of any environmental issues related to the property. A Site Questionnaire was not received.

#### 4.1.1 ENVIRONMENTAL CLEANUP LIENS

Ms. Brancaccio was not aware of environmental cleanup liens filed against the subject property under federal, tribal, state, or local law.

#### 4.1.2 ACTIVITY AND USE LIMITATIONS (AULs)

Ms. Brancaccio has no knowledge of AULs, such as engineering controls, land use restrictions, or institutional controls such as deed notices, in place at the site presently or historically.

#### 4.1.3 PREVIOUS USE OF THE PROPERTY

According to historical documents reviewed, the subject property has been developed and utilized for commercial use since at least 1887.

### 4.2 TITLE RECORDS AND ENVIRONMENTAL LIEN SEARCH

Title and deed information was not provided by the Client. Brinkerhoff accessed the New York City Department of Finance's Automated City Register Information System (ACRIS), available at <http://www.nyc.gov/html/dof/html/jump/acris.shtml>, to locate deed information for the subject property. (Refer to *Appendix VII*.) The table below summarizes the deed information provided for the subject property.

Grantor	Grantee	Deed Date
Ansol Holding Corp	NG, Chun Chuen	11/10/1982
NG, Chun Chuen	King Rlty Corp	08/27/1985
CNB Realty Corp	BNC Storage LLC	03/04/2002
BNC Storage, LLC	The Diamond Group, LLC	06/22/2007
The CNB Family Limited Partnership A/K/A CNB Fam	D Self Storage, LLC	10/11/2012

## **5.0 SITE RECONNAISSANCE**

### **5.1 METHODOLOGY AND LIMITING CONDITIONS**

The site reconnaissance involved inspecting reasonably accessible areas and did not involve subsurface investigations, investigations under debris piles, asphalt paving, concrete slabs, sidewalks, or other areas that could not be reasonably inspected without the use of specialty equipment such as heavy machinery or geophysical probing devices. Additionally, since the building is a self-storage facility containing more than 1,300 privately-rented storage units, access was not possible within the units with the exception of the units and rooms containing utility services such as electric, natural gas and fire suppression systems.

### **5.2 GENERAL SITE SETTING**

#### **5.2.1 MATERIAL STORAGE**

Materials stored within the accessible areas of the building included maintenance and cleaning supplies. Debris was not observed inside or outside the building.

#### **5.2.2 ABOVEGROUND STORAGE TANKS (ASTs) AND UNDERGROUND STORAGE TANKS (USTs)**

Evidence of ASTs or USTs was not observed on the subject property at the time of the site inspection.

#### **5.2.3 ODORS**

Brinkerhoff did not encounter noxious odors at the site during the inspection.

#### **5.2.4 DRUMS**

Brinkerhoff did not observe drums at the site.

#### **5.2.5 POLYCHLORINATED BIPHENYLS (PCBs)**

Brinkerhoff did not observe evidence of PCBs during the site inspection.

#### **5.2.6 WELLS**

Potable wells or groundwater monitoring wells were not observed at the site.

### **5.3 EXTERIOR OBSERVATIONS**

#### **5.3.1 PITS, PONDS OR LAGOONS**

There are no pits, ponds or lagoons at the subject property.

### **5.3.2 STAINED SOIL OR PAVEMENT**

Brinkerhoff did not observe stained soil or pavement on the property.

### **5.3.3 STRESSED VEGETATION**

Stressed vegetation was not observed on the subject property.

### **5.3.4 SOLID WASTE**

At the time of the site inspection, Brinkerhoff did not solid waste on the property. Any waste to be disposed of is stored in the two on-site two-cubic yard dumpsters or in the six trash cans.

### **5.3.5 WASTEWATER DISPOSAL**

The subject property is provided with sanitary sewer service by New York City.

### **5.3.6 URBAN HISTORIC FILL**

The potential exists that urban historic fill is present beneath the site. The presence of urban historic fill is typically and commonly found throughout the New York City Metropolitan area. Urban historic fill can be contaminated with several metals and semi-volatile organic compounds.

## **5.4 INTERIOR OBSERVATIONS**

### **5.4.1 HEATING/COOLING SYSTEMS**

The subject building is heated by natural gas supplied to individual ceiling mounted heating units located throughout the building. With the exception of electric window fans for ventilation, there is no cooling system for the building.

### **5.4.2 STAINS OR CORROSION**

Staining was not observed in the interior or exterior of the subject building.

### **5.4.3 FLOOR DRAINS AND SUMPS**

Brinkerhoff observed one sump located below the basement floor outside the room containing the fire suppression system at the north side (front) of the building. The sump was observed to discharge to the sanitary sewer system. Additionally, one sump was reported by the maintenance department to be located below the in-service elevator located at the northwestern corner of the building; access to that sump was not possible for inspection.

### **5.4.4 GREASE TRAPS**

Grease traps were not observed in the building.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

Brinkerhoff performed a Phase I ESA of the property located at 202-208 Tillary Street (aka 67-73 Prince Street), in the Borough of Brooklyn, Kings County, New York. The assessment was performed in conformance with the scope and limitations of AAI and the ASTM E 1527-13 Standard Practice for ESAs: Phase I ESA Process Scope of Work. The Phase I ESA revealed the following:

### **DATA GAPS**

- As of the date of report preparation, the NYSDEC and the NYCDEP had not yet responded to requests for site information.

### **RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)**

- According to the EDR environmental database search, the subject property was identified in the ERNS database at the 202 Tillary Street address. According to the report, the listing is related to a 150-gallon diesel oil spill that occurred on April 6, 1990. The report indicated that the oil spilled while a delivery truck was approaching the fuel dock and it struck a curb. The police and fire department were on site, and a cleanup was undertaken. The material spilled from the truck's fuel tank. No additional information was provided by EDR. Since cleanup was implemented and no open NYSDEC spill number exists, no further investigation is proposed.

Based on the findings of this report, a Phase II ESA is not recommended at this time.

### **CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CRECs)**

No CRECs were identified.

### **HISTORIC RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)**

No HRECs were identified.

### **OTHER ENVIRONMENTAL CONCERNS**

- **Urban Historic Fill** - It should be noted that the potential exists that urban historic fill is present on the property. Urban historic fill is common in highly urbanized areas and can contain contaminants such as heavy metals and semi-volatile organic compounds. If identified, appropriate transportation and disposal/recycling procedures should be followed.
- **Asbestos-Containing Materials (ACMs)/Lead-Based Paint (LBP)** - The structures on the subject property were constructed in the early 1900s when ACMs and/or LBP were commonly used. It is possible that ACMs and/or LBP may be present. ACM and LBP surveys should be conducted prior to the renovation or demolition of the structures.

## 7.0 QUALIFICATIONS AND SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Jennifer M. Taylor, Project Manager, and Duane Shinton conducted the site inspection and research for the completion of this Phase I ESA. Doug Harm, Vice President of Technical Operations, oversaw the completion of this Phase I ESA; his resume is provided in *Appendix VIII*.

To the best of Brinkerhoff's professional knowledge and belief, Brinkerhoff meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and also meets the specific qualifications based upon education, training, and experience to assess a property as to its nature, history, and setting. Brinkerhoff developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This report has been prepared using information available through government agencies and private contacts at the time of the investigation. Should Brinkerhoff receive additional information which may alter the characteristics enumerated within this report, Brinkerhoff reserves the right to revise this report or issue an addendum statement.

This report has been prepared and is respectfully submitted by

BRINKERHOFF ENVIRONMENTAL SERVICES, INC.

---

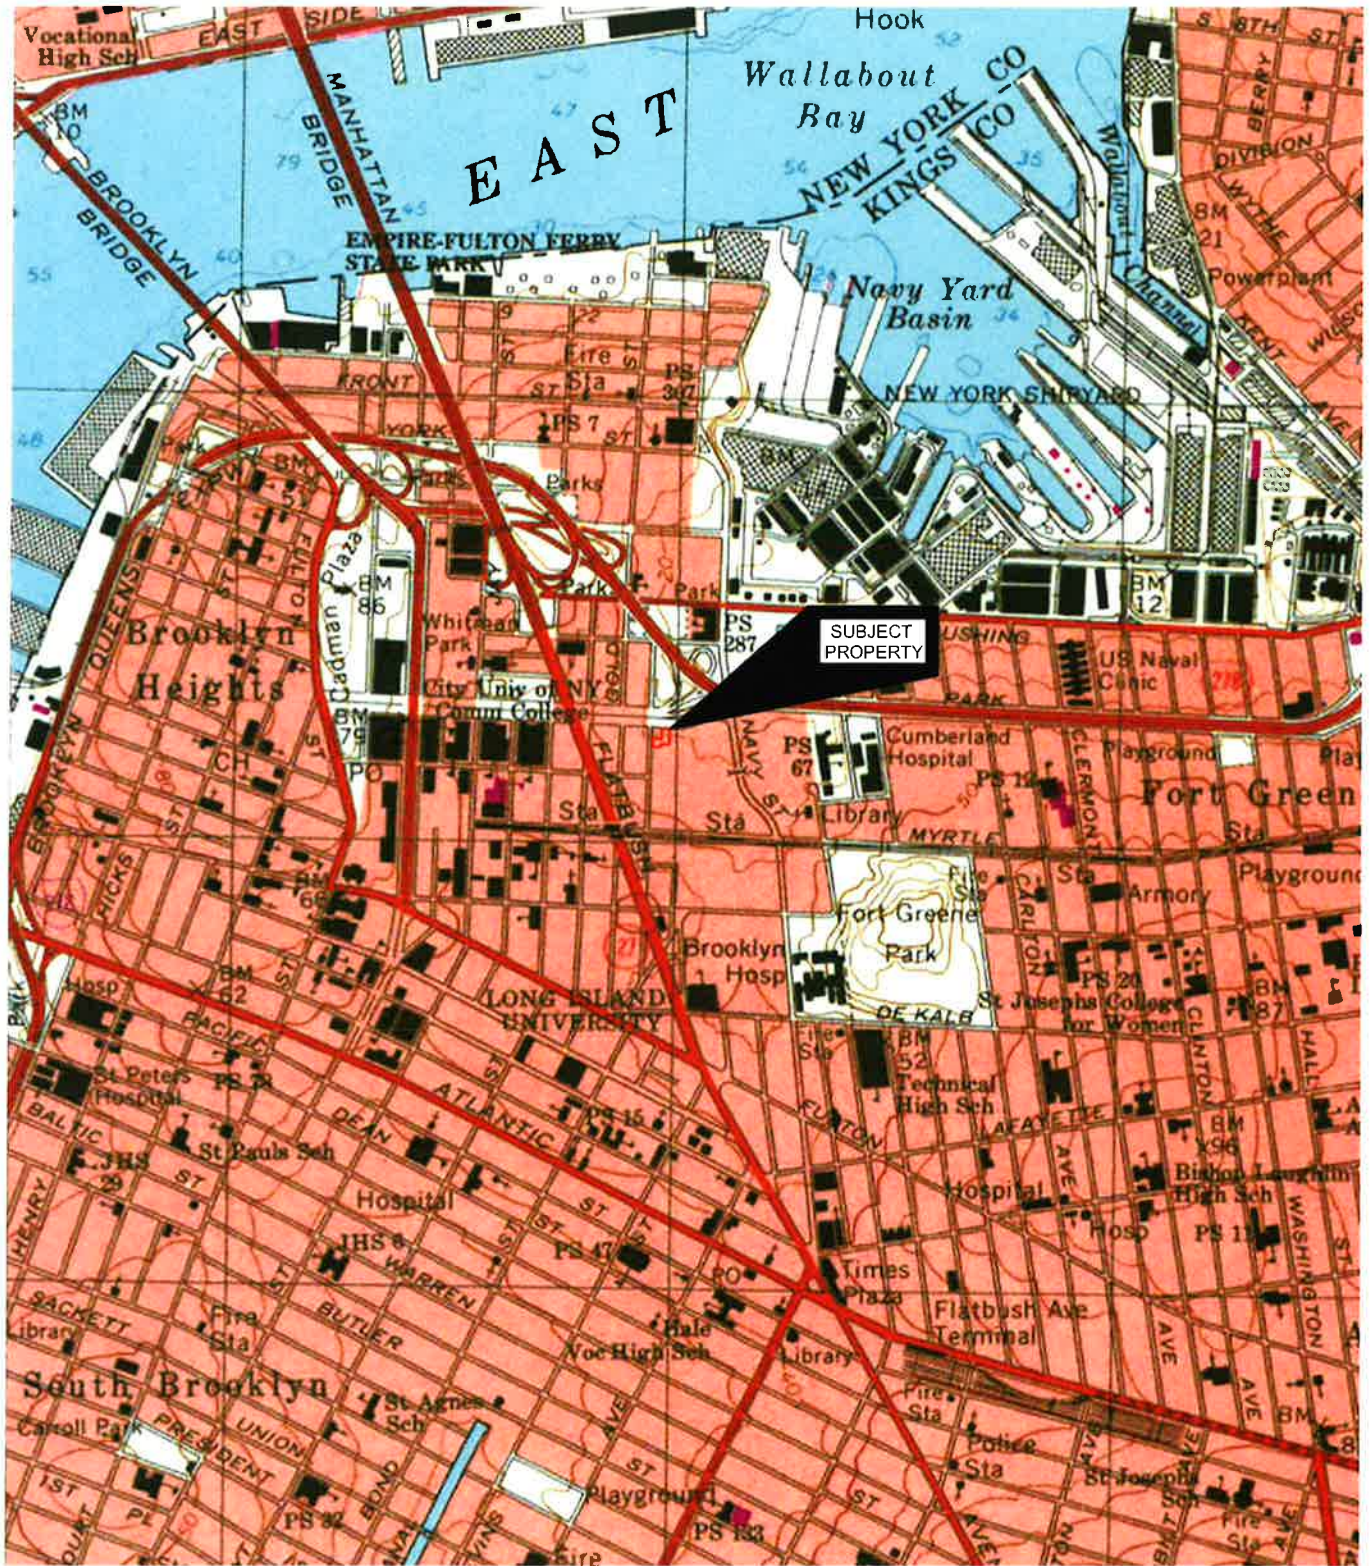

DOUG HARM, P.G.  
Vice President of Technical Services

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/26/2015 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

#### ***Federal CERCLIS NFRAP site List***

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 9 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 11 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/18/2015 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/18/2015 has revealed that there are 51 NY LTANKS sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

NY TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, and dated 03/30/2015 has revealed that there are 2 NY TANKS sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### ***State and tribal voluntary cleanup sites***

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 05/18/2015 has revealed that there is 1 NY VCP site within approximately 0.5 miles of the target property.

### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/18/2015 has revealed that there are 61 NY Spills sites within approximately 0.125 miles of the target property.

## EXECUTIVE SUMMARY

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 56 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 06/06/2014 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

NAVY BARRACKS BKLYN		E 1/2 - 1 (0.587 mi.)	336	946

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 11/25/2013 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

<i>GOWANUS CANAL</i>	<i>BUTLER ST (BETWEEN B</i>	<i>SSW 1/2 - 1 (0.953 mi.)</i>	<i>AT342</i>	<i>981</i>

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 4 NY HSWDS sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

NY E DESIGNATION: Lots designation with an 'E' on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 03/17/2015 has revealed that there are 20 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 11 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 5 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: 12/16/05: This spill transferred from J.Kolleeny to S.Kraszewski.03/26/06: This spill transferred to K.Tang - SK1/25/07 - Site transferred from K. Tang to J.Kann. 7/31/07 - J.Kann - WP submitted 6/15/07 and under review.5/22/08 - J.Kann - WP was approved on 8/29/08 in an email. Recieved NYCHA's request for closure on April 8, 2008 after completing the sampling of monitoring wells. Information under review.9/29/08 - J.Kann - second round of sampling was performed as requested by DEC. Results of the first round submitted on 5/22/08 were non-detect in all wells for VOCs and SVOCs. Second round of sampling confirmed the results of the first. Recovery system was installed in 1996 after a delivery into the wrong piping resulted in the spill. Based on information submitted to date, NFA letter sent.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**RECONSTRUCTION SITE (Continued)**

**S107657827**

Site Assessment for a residential tower building they discovered in the north-western portion of the property adjacent to the 84th Precinct some exceedances of VOCs in groundwater (2,000 ppb total VOCs) and soil (4,140 ppb total VOCs). The contaminated area is cross gradient from the 84th Precinct. They will remove contaminated soil from the site and take end point samples. They are putting a soil vapor barrier underneath a future residential tower building. Also, they found perc in two groundwater samples obtained from wells at 93 ppb and 17 ppb. When the excavation is complete a report will be submitted to DEC. AZ6-7-2006 A letter was issued by Darryl H. Cabbastalk (NYCDEP 718-595-4398). NYCDEP reviewed Phase II Investigation Report for this property. The comments recommendations are: 1. all known USTs and ASTs must be properly removed/closed. 2. In addition vapor barrier, an active venting should be provided in accordance with NYSDOH Vapor Intrusion Protocol A post construction protocol should be submitted to DEP. AZ 9-25-2006 Conversation with Stuart Knoop from Langan Engineering @212-479-5461. DEP issued a notice to proceed with remediation of the site. The remediation will consist of soil excavation to 25' depth. Its above gw table. The owner is petitioning DEP to waive the requirement for the sub slab depressurization system due to the fact that they are building underground garage which with an active ventilation system with a positive pressure. AZ11-5-2007 I contacted Stuart Knoop (Langan Engineering 212-479-5461 Assistant Project Geologist). The backup contact is Tarek Khori 212-479-5450 -Project Engineer. The client (167 Johnson Street LLC) is in the middle of the excavation of the site. The excavation is delayed due to the permitting issues. I request that end point samples in the spill area will be taken at the end of the excavation. They should submit to DEC prior to the sampling the area plans with depicted area of excavation, area of contamination, locations of the installed wells and advanced borings with respective total VOCs and SVOCs concentrations. Groundwater flow direction should be shown on the plans. Proposed end point sample locations should be depicted on the plans submitted to DEC. If water is discovered in the excavation, groundwater samples should be taken. Langan Engineering should submit to DEC periodic status reports. AZ8-12-2008 I contacted Stuart Knoop (Langan Engineering 212-479-5461 Assistant Project Geologist). The job is temporarily suspended due to the reconfiguration of the building design. They partially excavated the site. They have not completed the excavation. I reiterated my request for end point sampling. AZ2-25-2010 The project has been suspended indefinitely due financial issues. The site was partially excavated (approximately 50%). There is probably some dissolved groundwater contamination at the site (up to 1200 ppb of xylene, some small concentrations of perc -up to 93 ppb). No reports were generated by langan. Stuart Knoop will get back to me with more info. AZ2-16-2012 Left a message for Stuart Knoop. He called me back. The site is under a new ownership. The previous owner probably went out of business. No activity is going on the site. The City backfilled the site. New owner is preparing Remedial Engineering Report. The new owner is Argent Ventures (Jonathan Rabinow 212-692-5408). I requested that the owner forward existing environmental reports to DEC (hard copies and e-copies) ASAP. The case will be referred to Legal if no actions are taken. The documents must be submitted to DEC within one week. AZ9-19-2012 Stuart Knoop contacted DEC. Langan is overseeing redevelopment of the site. The owner is now excavating soil for a foundation construction. End point samples will be taken in

**RECONSTRUCTION SITE (Continued)**

**S107657827**

north-west corner at northern boundary of the site, where impacts were previously found. Groundwater samples must be taken. Soil vapor barrier will be constructed. They will probably excavate 15' below the grade. AZ9-20-12 E-mail from Stuart Knoop:"Alex, Just to recap our discussion regarding the Gold Street spill, excavation has resumed for construction of a high-rise foundation at the site. We will collect endpoint soil and groundwater samples from the north-central and northwestern portions of the excavation (i.e., those areas that exhibited regulatory exceedances during the Phase II investigation) following completion of the excavation to approximately 15 ft below sidewalk grade. Thanks and please call with any questions. Stuart Knoop, P.G.Senior Project Manager Direct: 212.479.5461 Mobile: 917.941.2831"AZ11-27-2012 Received a phone call from Stuart Knoop. The new contact for the site is Mimi Raygorodetsky 212-479-5441 Project Manager. They are doing a sub grade. They excavated to the target depth. They are about 14' below the sidewalk. Groundwater is about 23' below the sidewalk. The plan is to take end point samples. They never found a source. A probable source is 84th Precinct. They will collect a groundwater sample where a contaminated soil sample was collected. They can not excavate further. Contamination is the saturated zone. AZ11-29-2012 The following e-mail was received from Langan:"Dear Alex, This e-mail serves to memorialize your conversation today with Stuart Knoop regarding the scope of investigation that was agreed to for Spill No. 0514513 (209 Gold Street, Brooklyn, NY). On Wednesday, November 28, 2012, Langan will mobilize to the site with a geoprobe drill rig and will advance one soil boring (E-1) to the water table in the northwest corner of the site, where petroleum-impacted soil was discovered during the course of a subsurface investigation on the property in 2005. The source of the observed petroleum is suspected to be the adjoining Police Station where a spill is known to exist and active remediation is known to currently occur. Recovered soil from the boring will be field screen for evidence of contamination. One soil sample will be collected for laboratory analysis from the surface of the site (0-2' bgs), absent any interval that exhibits evidence of contamination. The boring will be overdrilled and a temporary monitoring well will be installed to allow for the collection of a groundwater sample. An effort will be made to purge three well volumes prior to sample collection. Both the soil and groundwater samples will be sent to an ELAP-certified lab for VOC CP-51 analysis via 8260 and SVOC analysis via 8270. Upon receipt of lab results, Langan will submit a short report to you documenting this investigation. If no evidence of a surficial release is determined by lab data, we will request spill closure. Thank you, Mimi Raygorodetsky Mimi S. Raygorodetsky Senior Project Manager Direct: 212.479.5441 Mobile: 917.952.9906 Langan Engineering & Environmental Services Phone: 212.479.5400 Fax: 212.479.5444 21 Penn Plaza 360 West 31st Street, 8th Floor New York, NY 10001-2727 11-28-2012 The following e-mail was sent to Langan:"Dear Ms. Raygorodetsky, Why only one boring/well is planned? I will need a map showing the proposed well and the contaminated soil location. Sincerely, Alexander Zhitomirsky 11-29-2012 The following e-mail was sent to Mimi Ragorodetsky"Dear Mini, I did not agree with this proposal. Stuart just informed me about the boring installation. I need to see the report with all maps and laboratory data. Have you taken the end point samples after the excavation was completed? These results must be included in the report. Thanks, Alexander Zhitomirsky 12-10-2012 On December 7, 2012, the following

**RECONSTRUCTION SITE (Continued)**

**S107657827**

documentation was received from Langan:"Phase I Environmental site assessment by MEC(dated June 14, 2004), Phase II Environmental Site Investigation Report by Langan prepared for GDY Properties and dated March 17, 2006,Remedial Action Plan and Construction Health and Safety Plan by Langan prepared for NYCDEP and dated March 2006,Interim Remedial Engineering Report by Langan prepared forGold 613 LLC and dated February 21, 2012 and Remedial Action Work Stipulation list submitted to the New York City Office of Environmental Remediation by Lanhgan and dated November 20, 2012. The following e-mail was sent to Mimi Raygorodetsky, Kevin Lalezarian; Brevdo, Vadim; Carrus, Daniel; Knoop, StuartR: "Dear Ms. Raygorodetsky, I am currently reviewing information related to the above spill number. It should be noted that according to the Department's records, on numerous occasions, beginning in 2007, the Department requested the submittal of an end-point sampling work plan. This plan should include but not be limited to: area plans with a depicted area of excavation, an area of contamination, locations of the installed wells and borings with the corresponding total VOCs and SVOCs concentrations. The Department also requested information regarding groundwater flow direction and the proposed end-point sample locations. However, these requests have not been satisfied. No reports were submitted to the Department until December 7, 2012. A sampling plan was submitted to the Department only on December 7, 2012. This plan included one end-point sample which was collected on November 28, 2012, and two end point samples that will be collected - a total of three end-point samples. I consider this number of end-point samples insufficient. A total of fifteen end-point samples should be collected. These samples should be collected at the depth of two feet below the excavation termination depth. Soil PID screening should be performed prior to the sampling. Also, six groundwater samples should be collected at the site. Groundwater wells/sampling points should be developed prior to the groundwater sampling. When placing the end-point samples and wells/groundwater sampling points, special attention should be given to the area where contamination was previously discovered. Soil and groundwater samples should be analyzed for the full list of VOCs and SVOCs. A plan with the proposed end-point sampling points and groundwater sampling locations should be submitted to the DEC for approval prior to the start of the field work. The predominant groundwater flow direction should be shown on the plan. Sincerely, Alex ZhitomirskyAlexander Zhitomirsky | Engineering Geologist 212-11-2012 No reports or remedial action work plan were submitted to DEC prior to December 7, 2012. This is a construction site. An excavation was performed at the site for construction purposes. According to Interim Remedial Engineering Report dated February 21, 2012, the site occupies 15,545 square feet in Downtown Brooklyn and is identified as Block 134, Lots 1,5, 30,38 and 41. The property address is 309- Gold Street and 171-175 Johnson Street A visual inspection and physical walkover of the property indicated that there are signs of underground storage tanks (USTs) located on the property. A gasoline fill line and vent pipe was noted at the 175 Johnson Street building indicating the possible existence of an underground storage tank (UST).An approximately 1,100-gallon UST filled with water was encountered under the Prince Street sidewalk during excavation and lagging installation along the eastern Site boundary on July 17, 2007.According to Langan, evidence of petroleum impacts was not observed in the soil surrounding UST. Removal of UST was postponed

based on its location underneath a public right-of-way and outside of the construction excavation footprint. The UST remained in-place as of the suspension of excavation activities. There was an auto repair auto shop at 311 Gold Street (Phase I Environmental Assessment 6-14-2004). The site was also occupied a five-story factory building at 171 to 175 Johnson Street and two garage buildings at 311 and 313 Gold Street. The excavation was performed by Recine. Historic fill was excavated from Grids 1 through 10 to depths ranging from 8' to 12' bgs between June 19 and August 13, 2007. Earthwork was suspended indefinitely and Lagan demobilised from the Site on August 13, 2007. Portions of the site were excavated to depths ranging from 8' to 12' bgs. 1,100-gallon UST remained in-place underneath the Prince Street sidewalk. The site was backfilled by September 25, 2009. The source of backfill was not disclosed in the complaint disposition. (Interim Remedial Engineering Report February 21, 2012 by Langan). The buildings were demolished in January and February 2006 (Interim Remedial Engineering Report 2-21-2012). The plan redevelopment included construction of a 35-story mixed-use residential condominium and commercial building. The building was to include 208 apartments with underground parking and retail space at the ground floor level. 12-20-2012 The following e-mail was sent to Stuart Knoop, V. Brevdo: "Dear Stuart, I have reviewed the work plan submitted on December 20, 2012, for the end point sampling. The plan is approved. I agree to eliminate sampling points E15 and E17. A full report including the results of the end point sampling should be submitted to DEC. You stated that an improperly closed tank on Prince Street will be excavated. Upon the excavation of this tank six end point samples should be taken from the excavation pit. These samples should be analyzed for the full list of VOCs and SVOCs. The tank should be properly closed and registered. Sincerely, Alexander Zhitomirsky | Engineering Geologist 2"

Remarks: found contaminated soil (minor) could be an off site spill, : any questions please call

DEC Memo: 8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concurred with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ3/20/2006 Stuart Knoop (Langan Engineering) 212-479-5461 reported that during their site investigation at the adjacent property 167 Johnson Street they found dissolved phase in groundwater on the north-western part of the property on Gold Street. BTEX and naphtalene were encountered at concentrations 2009 ppb total VOCs and 680 ppb total SVOCs . New spill was opened # 0514513. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent growndwater analytical results showed total VOC concentrations up to 4,462 ppb in MW-6. The current sampling results showed increase in VOC levels in wells MW-17, 84MW-2 and 84MW-6 in the portion of 84 Precinct. AZ12/01/2006 Reviewed a Monitoring Report for April - June 2006. Flow meter is brokentherefore the the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ 5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase floe extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and

S104951147

PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk:MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8,840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. All these tasks should be performed without delay. Roux recommended inspection of the water flow meter, removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05 could be discontinued. AZ7-23-2007 An e-mail was sent to DDC/Roux/Greyhawk: "I have reviewed a Monitoring Report for the above site for the period of October 2006 - March 2007 and dated May 24, 2007. Total VOC concentrations ranged at the site from non-detect to 6,458 ppb in 84MW-02. Total VOC concentrations significantly increased in downgradient monitoring well MW-20 (from 601 ppb to 1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC concurs with the following addition: extraction well EW-12 should also remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated 5-11-2007." AZ3-25-2008 An e-mail was sent to Greyhawk/DDC/ROUX/V. Brevdo: "I have reviewed a Monitoring Report for the above site for the period of April - September 2007 dated December 21, 2007. Total VOC concentrations ranged at the site from non-detect to 5,712 ppb in 84MW-03. Total VOC concentrations significantly increased in monitoring wells 84MW-6 and MW-07/EW06. The MPE system is offline. Roux proposed restart of the MPE system. MPE system restart should be performed without delay. Bioremediation program proposed by Roux should be implemented without delay." AZ8-11-2008 An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: "I have reviewed report for the above spill submitted on June 2, 2008. This spill was issued on March 29, 2001 when concentrations of semi-volatile organic compounds (SVOCs) around a 10,000-gallon tank containing #2 fuel and 3,000-gallon tank containing diesel were found to exceed allowable regulatory guidelines. The tanks are closed in place. Spill #9512589 at this site is currently being remediated by Greyhawk/Roux Associates for gasoline contamination. The spill #0013663 will be incorporated into investigation/remediation of spill#9512589. However, soil and groundwater testing should be performed around the #2 fuel tank and the diesel tank prior to the closure of spill #9512589. An electronic copy of the report dated June 2, 2008, should be submitted to DEC." The spill #0013663 was consolidated with spill #9512589. AZ

Remarks: A site assessment was performed on 10,000 gal UST on Mar 13, 2001. The analytical results show there is soil contamination.

under remediation by LiRo. It being the same site, the above-mentioned two spills have been closed today keeping this initial one open. - IMDAD (12/10/04).LiRo is operating a multi-phase extraction system at this site and the adjacent Engine Co. 207 site, which have been combined for purposes of remediation. This spill transferred from Kolleeny to A. Zhitomirsky on 4/13/05. - JK6-2-2005 Reviewed a Monitoring Report for the above referenced site. The report presened remedial system performance and groundwater monitoring data. The data show that wells adjacent to Gold Street showed increasing contaminant concentrations. In the report LiRo proposed to discontinue groundwater sampling at wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-12 and MW-13. The Department concured with this proposal. However, the Department recommended that LiRo should take steps to address the increases in dissolved-phase VOC levels in the wells adjacent to Gold Street. AZ8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concured with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ3/20/2006 Stuart Knoop (Langan Engineering) 212-479-5461 reported that during their site investigation at the adjacent property 167 Johnson Street they found dissolved phase in groundwater on the north-western part of the property on Gold Street. BTEX and naphtalene were encountered at concentrations 2009 ppb total VOCs and 680 ppb total SVOCs . New spill was opened # 0514513. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent growndwater analytical results showed total VOC concentrations up to 4,462 ppb in MW-6. The current sampling results showed increase in VOC levels in wells MW-17, 84MW-2 and 84MW-6 in the portion of 84 Precinct. AZ5-24-2006 Stuart Knoop 212-479-5461 (GDY Properties - real estate developers). During Phase 2 Environmental Site Assessment they discovered in the north-western portion of the property adjacent to the 84th Precinct some excedances of VOCs in groundwater (2,000 ppb total VOCs) and soil (4,140 ppb total VOCs). The contaminated area is cross gradient from the 84th Precinct. They will remove contaminated soil from the site and take end point samples. They are putting a soil vapor barrier underneath a future residential tower building. Also, they found perc in two groundwater samples obtained from wells at 93 ppb and 17 ppb. When the excavation is complete a report will be submitted to DEC. AZ 9/25/2006 Stuart Knoop from Langan Engineering @212-479-5461 inquired about the site. AZ12/01/2006 Reviewed a Monitoring Report for April - June 2006 by Roux. Flow meter is brokenththerefore the the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ 5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on

**84 PRECINCT NYPD -DDC (Continued)**

**S104951147**

the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase floe extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk:MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round.Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. All these tasks should be performed without delay.Roux recommended inspection of the water flow meter, removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05 could be discontinued. AZ8-11-2008 An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: "8-11-2008 An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: "I have reviewed report for the above spill submitted on June 2, 2008. This spill was issued on March 29, 2001 when concentrations of semi-volatile organic compounds (SVOCs) around a 10,000-gallon tank containing #2 fuel and 3,000-gallon tank containing diesel were found to exceed allowable regulatory guidelines. The tanks are closed in place. Spill #9512589 at this site is currently being remediated by Greyhawk/Roux Associates for gasoline contamination. The spill #0013663 will be incorporated into investigation/remediation of spill#9512589. However, soil and groundwater testing should be performed around the #2 fuel tank and the diesel tank prior to the closure of spill #9512589. An electronic copy of the report dated June 2, 2008, should be submitted to DEC." The spill #0013663 was consolidated with spill #9512589." The spill #0013663 was consolidated with spill #9512589. AZ12-20-2010 An e-mail was sent to DDC/V. Brevdo, S. Frank (LiRo):"Dear Steve,I have reviewed a quarterly monitoring report and site turn-over status. The report proposed advancement of five borings and installation of one well. These proposals are approved. Also, the report stated that a number of diesel/gasoline tanks were closed in place. These tanks could be a continued source of contamination. Excavation of these tanks should be considered as one of the remedial options, if feasible.The Responsible Party and Contractors are responsible for the safe execution of the Work Plan."Elevated levels of soil and dissolved groundwater contamination exist at this site. The City's consultant conducted a site reconnaissance, well inspection, and a round of water gauging in June 2010. Residual soil and groundwater contamination remain at the site. Moderate to high level VOC remain in the groundwater. The MPE remediation system has been offline since 2007 due to failure of the discharge pump and phase separator transfer pump. Two bio-injections were performed at the site in 2008-2009. The DEC has made several requests in correspondence

S104951147

requesting to repair the system. Consultants proposed conducting an additional site investigation to determine current soil conditions. DEC approved proposed advancement of five borings and installation of one well. Also, DEC recommended in December 2010 excavation of a number of diesel/gasoline tanks were closed in place, if feasible., since these tanks could be a continued source of contamination. AZ3-25-2011 Reviewed tank closure report dated 12/13/2010 4,000 gal gasoline tank was removed. 2 samples were taken from the bottom and 2 samples were taken from suction line and dispenser location excavation. No VOC exceedances were recorded. SVOCs were present in soil samples dispensers and pipeline. The SVOCs that were detected were below CP-51 numbers. No side samples were taken due to a steel sheet piles. AZ10-12-2011 Received and reviewed proposals for in-situ chemical oxidation (ISCO) pilot test. I called S. Frank and expressed concerns regarding heat generation effects on communications and existing tanks. The following e-mail was received in response:"Dear Alex,I received your voice mail expressing concern about heat generation and potential impact to USTs and utilities at the 84th Precinct site. Because the depth to water is about 20 feet, the tops of the injection well screens will be set at 18 feet which is far below the depth of the UST bottoms (which are founded on a concrete slab at a depth of about 12 feet) and infrastructure at the site. Therefore we are comfortable that no damage will result and no warranties will be voided through application of peroxide at the site. Please call if you require further information."An e-mail was sent to S. Frank/F. Ashkan/ V. Brevdo:"Dear Steve,I have reviewed in-Situ Chemical Oxidation (ISCO) Pilot Test Work Plan. I have expressed concern about the heat generation impact to USTs and utilities. You are stating that LiRo is comfortable that no damage will result.Based on this statement, the proposed pilot test is approved. EPA should be notified of the injection.The Responsible Party and its contractors are solely responsible for the safe execution of all work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work." AZ1-9-2012 An email was sent to LiRo/F. Ashkan/V. Brevdo:Dear Steve,I have reviewed a quarterly monitoring report for the period of April through August 2011 and dated October 31, 2011. The report stated that LiRo will conduct an In-Situ Chemical Oxidation pilot test which was approved by DEC on October 12, 2011.LiRo proposed removing several monitoring wells from the monitoring program. Monitoring wells MW-03 and MW-13 could be removed from the monitoring program."AZ6-20-2012 Reviewed QMR September through November 2011 dated February 23, 2012. Elevated levels of VOC and SVOC in soil in the parking area of the precinct. VOCs in groundwater ranging from 128 ppb to 9,317 ppb. ORC socks are installed. AZ10-9-2012 Reviewed QMR September 2011 through Feb 2012 2011 dated May 31, 2012. Wells MW-09, EW-09/MW-14,EW-05 and EW-07 will be re-developed and one-time sampled. Based on the results of the site visit to evaluate removal of remaining closed-in-place USTs, GPR/Radio Frequency/Electromagnetic survey to confirm the presence of

S104951147

of the USTs will be conducted. The survey will also include the driveway are south of 84th precinct to try to determine location of piping from the emergency generator to the 10,000 gallon #2 fuel oil UST. DEC approved ISCO (hydrogen peroxide) test on October 12, 2011. This test is yet to be done. AZ4-19-2013 Six injection wells were installed in May 2012. In April 2012 total VOC concentrations were up to 16,030 ppb in PD-BW-06. ISCO pilot test will be completed. Four injections are planned. GPR survey to locate USTs will be conducted. AZ7-5-2013 Reviewed QMR report dated January 15, 2013. The WP recommended 4 injection events. A total of three events were completed. A total of 2,880-gallon of iron catalyst and 9,900-gallons of 8% hydrogen peroxide have been injected into the six injection wells between May 2012 and August 2012. Dissolved phase VOC impacts remain in the vicinity of wells MW-A, FW-05 and MW-07/EW-06. Offsite well MW-15 showed an order of magnitude increase compared to the April 2012 sampling. Nuisance odors were reported in the basement area adjacent to the injection area. As a result, the fourth ISCO injection event has been temporarily halted. LiRo will evaluate ways to address odor issues. AZ5-15-2014 Reviewed report dated 10/28/2013. Increased VOC concentrations in January 2013 and August 2013 indicate rebounding levels. Off site wells MW-15 and MW-17 reported increase in VOC concentrations in August 2013. Due to nuisance odors in the basement area the fourth ISCO injection will be delayed. Potential off gassing issues will be addressed. AZ9-2-2014 Reviewed report dated 1/09/2014. Routine groundwater sampling was completed in November 2013. Dissolved phase VOC impacts remain in the vicinity of wells MW-A, EW-05, MW-07/EW-06. The fourth application event will be completed and potential; off-gassing issues will be addressed. AZ12-22-2014 Reviewed a monitoring report December 2013 - April 2014 dated June 19, 2014. Groundwater sampling was completed in February 2014 and April 2014. Dissolved phase VOC impacts at 84th Pct remain along the driveway/alleyway, reported decrease in total VOC concentrations in all but one location. Due to ongoing construction at the adjacent building the fourth ISCO injection will be delayed. AZ4-22-2015 Reviewed a monitoring report August 2014 - October 2014 dated February 17, 2015. LiRo proposes to advance 5 soil borings along the 84th Precinct Alleyway to assess the current soil situation. One additional soil boring is recommended along the sewer line (along Gold Street) to assess the current soil situation. Based on the results of the proposed investigation, LiRo proposes to abandon the current ISCO injection wells and install new wells. The following e-mail was sent to S. Frank/V. brevdo: "Dear Steve, I have reviewed a monitoring report for the period of August 2014 to October 2014, dated February 17, 2015. LiRo proposes to advance five soil borings along the 84th Precinct alleyway to assess the current soil situation. One additional soil boring is recommended along the sewer line (along Gold Street) to assess the current soil situation. Based on the results of the proposed investigation, LiRo proposes to abandon the current ISCO injection wells and install new wells. I concur with this proposal. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site. Alex Zhitomirsky"

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ZHITOMIRSKY" This site has been combined with the adjacent 84th Precinct for purposes of remediation. LiRo is currently operating a multi-phase extraction system with branches at both facilities to address soil and groundwater remediation. (See also Spill #9512589 at 84th Precinct.) - JK 1/19/04.6-2-2005 Reviewed a Monitoring Report for the above referenced site. The report presented remedial system performance and groundwater monitoring data. The data show that wells adjacent to Gold Street showed increasing contaminant concentrations. In the report LiRo proposed to discontinue groundwater sampling at wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-12 and MW-13. The Department concurred with this proposal. However, the Department recommended that

LiRo should take steps to address the increases in dissolved-phase VOC levels in the wells adjacent to Gold Street. AZ8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concurred with this proposal. AZ2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent groundwater analytical results showed total VOC concentrations up to 11.070 ppb in MW-7. The current sampling results showed increase in VOC levels at extraction wells EW-6/MW-7 in the portion of EC 207. AZ12/01/2006 Reviewed a Monitoring Report for April - June 2006. Flow meter is broken, therefore the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morrissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 DEC inquired about the remedial progress at this site. The system must be rebalanced. Greyhawk will issue a change order. AZ5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk:MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. All these tasks should be performed without delay. Roux recommended inspection of the water flow meter, removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05 could be discontinued. AZ7-23-2007 Reviewed a Monitoring Report for October 2006 - March 2007 and dated May 24, 2007. Total VOC concentrations ranged from non-detect to 6,458 ppb in 84MW-03. Total

VOC concentrations significantly increased in downgradient well MW-20 (from 601 ppb to 1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC concurs with the following addition: extraction well EW-12 should also remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated 5-11-2007. An e-mail was sent to DDC/Roux/Greyhawk: "I have reviewed a Monitoring Report for the above site for the period of October 2006 - March 2007 and dated May 24, 2007. Total VOC concentrations ranged at the site from non-detect to 6,458 ppb in 84MW-02. Total VOC concentrations significantly increased in downgradient monitoring well MW-20 (from 601 ppb to 1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC concurs with the following addition: extraction well EW-12 should also remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated 5-11-2007." AZ3-25-2008 An e-mail was sent to Greyhawk/DDC/ROux/V.Brevdo: "I have reviewed a Monitoring Report for the above site for the period of April - September 2007 dated December 21, 2007. Total VOC concentrations ranged at the site from non-detect to 5,712 ppb in 84MW-03. Total VOC concentrations significantly increased in monitoring wells 84MW-6 and MW-07/EW06 . The MPE system is offline. Roux proposed restart of the MPE system. MPE system restart should be performed without delay. Bioremediation program proposed by Roux should be implemented without delay."AZ 1-16-2009 An e-mail was sent to Roux/DDC/Greyhawk/V. Brevdo: "I have reviewed Quarterly Monitoring Report for the above site for the period of October 2007 - September 2008 dated November 5, 2008. Total VOC concentrations ranged at the site from 228 ppb to 3,972 ppb in 84MW-06. Total VOC concentrations have been on the rise during the last reporting period.DEC approved enhanced bioremediation plan on July 23, 2007. The injection was performed in October 2008. The MPE system is offline. In March 2008 DEC requested restart of the MPE system. But the system has not been started. Following evaluation of the bioremediation program, the MPE system should be resumed if needed."AZ10-8-09 An e-mail was sent to Roux/Fatemeh Ashkan: "I have reviewed Quarterly Monitoring Report for the above site for the period of October 2008 - January 2009 dated April 23, 2009. ORC injections were performed in 2003. In December 2008 sampling event two wells MW-10 and MW-19 were inaccessible. MW-01 and 84-MW-01 have been paved over and are no longer accessible. The injection work started on August 6, 2008, but could not continue due to extremely low-flow conditions at the site. Wells have difficulty taking the required NutriMax solutions. PermeOx Injection Plus and NutriMax injections were completed in October 2008 due to the low-flow conditions. MPE system is still off-line. Total VOC concentrations after injections ranged from 126 ppb to 3,557 ppb in 84MW-03. The highest levels of groundwater contamination remains in the southern portion of the site. Roux proposed a round of confirmatory soil borings. This proposal is approved. MPE system should be repaired, modified and restarted." Also, I contacted Brian Morrissey. Wells MW-04, MW-05 and MW-06, MW-12, MW-13,and MW-15 had no access on

December 17, 2008 sampling event. I requested that if wells MW--01 and 84-MW-01 had been previously contaminated than they should be re-installed. If the wells which were not accessed in December 2008 event were not accessible in October 2009 they should be re-sampled. AZ12-20-2010 An e-mail was sent to DDC/V. Brevdo, S. Frank (LiRo): "Dear Steve, I have reviewed a quarterly monitoring report and site turn-over status. The report proposed advancement of five borings and installation of one well. These proposals are approved. Also, the report stated that a number of diesel/gasoline tanks were closed in place. These tanks could be a continued source of contamination. Excavation of these tanks should be considered as one of the remedial options, if feasible. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan." AZ5-4-2011 Reviewed a QMR dated Jan-20-2011. LiRo proposed implementation of the additional site investigation that was previously approved by DEC and quarterly sampling. AZ1-9-12 Reviewed a QMR 10/31/11. ISCO will be implemented at the site. It was approved by DEC in October 2011. AZ6-18-2012 LiRo will investigate the feasibility of removal of the four USTs located within the station house apparatus floor in the Engine Company. Soil is heavily contaminated northwest of tanks 004, 005, 007 and 008. AZ7-5-2013 LiRo identified a concrete patch in the western most bay area, approximately 19' by 4'. This area is assumed to be centered over the four closed in-place 550-gallon USTs. The bay area has approximately 10 feet of overhead clearance and the tanks can be assessed through the bay door to the north. LiRo recommended completion of geophysical survey to determine location of the tanks and other utilities. LiRo also recommended feasibility study to determine if tank removal will address contamination at the site. I contacted S. Frank over the phone. He confirmed that LiRo will perform a geophysical survey and the tanks removal feasibility study. AZ12-9-2013 Six injection wells were installed along the driveway area, south of the 84th Precinct in May 2012. Soil contamination is present at and below the groundwater level at depths ranging 21'-28'. Increased VOC levels indicate rebounding levels. Monitoring well PD-BW-06 has exhibited 19,970 ppb in groundwater. Nuisance odors were reported, therefore, the fourth injection event will be completed and potential off-gassing issues will be addressed in the third quarter 2013. AZ12-22-2014 Reviewed a monitoring report December 2013 - April 2014 dated June 19, 2014. Groundwater sampling was completed in February 2014 and April 2014. Dissolved phase VOC impacts at EC 207 facility remain in the vicinity of wells MW-A, EW-05 and MW-07/ew-06 (up to 3,022 ppb). AZ4-2-2015 Reviewed a monitoring report May 2014 - July 2014 dated September 5, 2014. Soil data collected indicates that soil contamination is present at and below the groundwater table, in the saturated zone along the driveway area of 84 Precinct. The fourth ISCO injection event was completed in July 2014. Groundwater sampling was completed in May 2014. Dissolved phase VOC impacts were recorded in 14 wells. The total VOC concentrations above AWQSGV's ranged from 41 ppb to 13,948 ppb. AZ

Remarks:

LABORATORY RESULTS TAKEN DURING A SUB-SURFACE INVESTIGATION INDICATE SOIL CONTAMINATION.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

Sangesland left a voice message for Kate Brunner at AKRS asking for further information.No Callback.Left another message giving Ryan Piper's contact info.KAte will e-mail report when complete.4/10/08-DEC Piper - I recieved and reviewed closure report. As per report, a limited area of soil was found to be contaminated under a hydraulic lift. The soil was excavated and disposed of. Enpoints revealed no VOC;s though some PAH's were detected slightly above Tagm. Closed. See e-docs if warranted.

Remarks: unknown amount spilled; unsure but could be hydrolic oil; it was discovered on a construction site during removal of a hydrolic lift; soil will be taken by point samples

DEC Memo:

01/31/06-Hiralkumar Patel. Spoke with Mr. Godick at AKRF. AKRF is doing site assessment for potential buyer. General Borings was working on site for AKRF and during boring the hydrolic line leaked and spilled. the spill was contained on asphalt pavement and its all cleaned up. no sewer/drain affected. AKRF has cleaned all spill and dumped in drums ready for disposal. they are preparing report, and will send me as done with pictures. the buyer is going to use this site as a parking lot at least for one year. Mr. Godick will call me back with the information about current and future owner.PBS: 2-350648From Property SharkOwner of the property:Manhattan Bridge Three Cent Line LLC101 Eighth Ave Apt 8Brooklyn, NY 11215Attn.: Robert M. PotterPH: (718) 638-1337FAX: (718) 398-5415Email: brokenvalley@aol.comTalked with Robert at Manhattan Bridge, and as per him the tank they have on site is abandoned in 1995 and the lines are filled with cement and tank was cleaned up in 95.02/01/06-Hiralkumar Patel. REceived call from Mr. Godick (646-388-9534)Mark GodickFAX: 914-949-7559 White Plains Office 212-726-0942 New York City Office02/02/06-Hiralkumar Patel. CSL has sent out to Robert. Faxed to Robert and Mark.02/24/06-Hiralkumar Patel. Mark Godick is out of office till Tuesday Feb. 28th 2006. Call after that.03/03/06-Hiralkumar Patel. Spoke with Mark and he told me that they are waiting for lab results. once he has that he will send me final report.03/28/06-Hiralkumar Patel. Left message for Mr. Godick.04/04/06-Hiralkumar Patel. Left message for Mr. Godick (Desk NO. 914-922-2356)04/06/06-Hiralkumar Patel. Received call from Mr. Godick. he will send me report without disposal manifest, as they haven't disposed those drums from site. he will send me that in couple of weeks.04/21/06-Hiralkumar Patel. Spoke with Mr. Godick. he got disposal manifest and will send final report by next

week.05/08/06-Hiralkumar Patel. Received letter report from Mr. Godick. abstract of report:- spill was reported after a break of a hydraulic line from a drill rig owned and operated by General Borings, INC.- spill caused approx. 10 gal of hydraulic oil to leak onto the asphalt paved parking lot on the property.- AKRF, INC. had subcontracted General Borings to drill soil borings and install monitoring wells to conduct subsurface investigation, and the property is owned by Manhattan Bridge Three Cent Line LLC.- absorbent clay and oil absorbent pads were used to contain the spill.- the rupture occurred entirely beneath the drill rig on the surface pavement and was contained, such that the oil did not enter the open borehole (SB-3/MW-3) that was being drilled at the time.- on Feb. 14 2006 a Geoprobe drill rig was utilized to collect one soil sample (SB-12) immediately below the asphalt surface at the location where the spill had occurred.- no visual or olfactory evidence of petroleum contamination was observed in the soil sample.- no VOCs found in SB-3 or SB-12- seven PAHs were detected at level above TGAM limit. however, these concentrations were typical of the nature of the historic fill, which was observed to contain ash, brick and concrete. these concentrations and types of PAHs were also similar or lower to those found in soil sample SB-3/MW-3 taken below the surface from the borehole being drilled in this location before spill occurred. reviewed lab results of soil boring SB-3 & SB-12. both shows very high concentrations of SVOCs.

19,000----50,000 Spoke to Mark. he took about 20 samples for subsurface investigation. asked him to send lab results of all 20 samples with boring logs and site plan with sampling locations.05/15/06-Hiralkumar Patel. Left message for Mr. Godick.05/19/06-Hiralkumar Patel. Received lab results from Mr. Godick. all 11 samples shows high SVOCs in 0-5 ft depth and this is due to backfilled material. Spoke to Mr. Godick. as per him, this is E designated site and DEP is handling this. he has been hired by potential buyer and once property get sold out, buyer is planning to build high rise residential complex. and to put foundation, they are planning to dig out whole area to 25 ft depth, which covers all contamination. asked Mr. Godick to send letter stating they are dealing with DEP as this is E designated site and to include E site ID number. Discussed with DEC Vought. as per vought, as this is E designated site and there is no VOCs, once we receive such letter, we could close the case.05/30/06-Hiralkumar Patel. spoke to Mark (914-922-2356). he will send the letter.06/05/06-Hiralkumar Patel. Left message for Mark.06/09/06-Hiralkumar Patel. REceived letter from Mr. Mark. site has E-designation. E-Designation # E-124. they have

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 3/3/06 - Raphael Ketani. I arrived on site 2:15PM. Many Con Ed and DEP personnel on site already. Hose on east side of street running water at high volume down the street to the intersection of Navy St. and Park Ave. Many tank trailer trucks and 2 vacuum trucks on site. Problem is below the elevated BQE and doesn't affect traffic. Initial release is 2,000 gals with 150 gals. recovered. Jerry Mattarazzo is the Incident Commander for Con Ed. Spoke to Mr. Natale, Information

Officer of Con Ed, at command post ((917) 417-7372). He said that 345,000 volt feeder was compromised by water main that crosses it. Feeder runs parallel and under the eastbound (northbound) side of BQE. Oil does not contain PCBs. Water main crosses the line perpendicularly. Water main sprang a leak which picked up the sand around the feeder pipe and sand blasted the feeder pipe until it cut the pipe and released oil. At beginning of incident yesterday 3/2/06, all that was seen was water breaking through cracks in pavement under the BQE. Con Ed dug up the intersection of the feeder and the main. Yellow oil was seen floating and filling up the pit. Pressure was reduced in the feeder to about 5 gal./min., but the water pressure was maintained. Con Ed kept pumping oil to keep the water out and DEP kept pumping water to keep the oil out. Mike Pillig of Con Ed, Safety Officer (and acting as Environmental Officer for Con Ed), told me that, initially, Con Ed thought that 2,000 gal. had been released, but because pumping never ceased in order to protect the feeder, much more is suspected of having been released as a mix with water from the water main. There are cracks in the pavement where the east side of Park Avenue is within 15' of the intersection of the feeder and water main. Started pumping out excavation at 2:45PM. Empty hole with about an 8" hole on underside of one feeder pipe. Oil is still coming out of pipe. Vacuuming is continuing and liquids are going into portable 10,000 gal. roll off holding tank. However, tanker trucks are standing by. I pointed out the cracks in the pavement to Mike Pillig and he said that once things are under control, Con Ed will do soil borings to determine extent of soil contamination and oil migration. I asked David Russo, DEP Environmental Health and Safety Officer, whether the water treatment plant has been notified of the mix of water and oil heading to the plant. He said they had been notified and it's up to them what they will do about it. The Ingersol Houses apartment buildings are about 50 feet away from the site of the excavation. It's not clear whether any oil headed to or entered the basements of the buildings as the great majority of the water from the water main escaped up and out through cracks in the pavement under the BQE. 3/3/06 4:00 PM - LEAK LOCATED ON PARK AVE BET NAVY AND POSTLAND. MET AT SITE WITH PILLIG AND NATALE. LEAK HAS BEEN EXCAVATED AND TEMPORARY CLAMP IN PLACE. SPOKE WITH RUSSO (NYCDEP) WHO IS SATISFIED WITH PROGRESS THUS FAR. WILL RETURN TO SITE ON MONDAY 3/6 TO DISCUSS POST-EX SAMPLING WITH PILLIG. (JHO)4/10/06 e-mail from Mike Pillig: "Jane, I wanted to update you on our cleanup activities on the subject feeder leak. As you will be able to see from the results, we have one area of the excavation where the wall samples are still high, that being the East wall (north corner). The reason you do not see more samples taken on the north wall is because we uncovered another feeder to inspect for damage and backfilled with sand so as to protect the feeder. While there was no visible contamination we did not take samples. If I were to take samples of the north wall, I would merely be sampling the clean sand that was put back in to protect the feeder." Lab results show high TPH results (23,200 ppm and 26,100 ppm) in northeast corner of excavation. (JHO)4/19/06 - spoke with Pillig - told him to excavate north east corner area. He indicated that they were already planning to excavate additional soil and re-sample that area. Also, they will be conducting additional excavation to the north of the second feeder and collecting samples. He will send revised sketch showing excavation limits. (JHO)5/4/06 - met on site with Mike Pillig. Additional excavation conducted to north and east approx. 5 feet, new samples collected - all results

Remarks: below 500 ppm TPH. OK to backfill. Also, he extended excavation to west approx. 5 feet and to a depth of 2 feet due to visual observation of oil beneath asphalt during initial spill response. 11 samples collected, as well as 2 shallow soil borings immediately north of feeders 701/702 (which are located north of the original excavation). Results expected next week. When these excavations are backfilled, he will open excavation northeast to DEP valve basin, which was impacted during initial release. Total leak amount now calculated at approx. 5700 gallons. (JHO)6/28/06: Mike Pillig e-mailed all lab results and site sketch showing sampling locations - see eDocs. All results below cleanup guidance values. Close out. (JHO) Not reported

poss spill into east river btwn rainy substation and farragut sub station in Brooklyn. Feeder runs under water btwn sub stations. Equipment failure in feeder. Leaking 10 gallons per hour. 163167

Tank Info:

Tank Number: 1  
Tank Id: 50476  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None  
B00 - Tank External Protection - None  
C01 - Pipe Location - Aboveground  
H00 - Tank Leak Detection - None  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
G00 - Tank Secondary Containment - None  
I00 - Overfill - None

Tank Location: 1  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - In Place  
Pipe Model: Not reported  
Install Date: Not reported  
Capacity Gallons: 12000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: 05/29/1997  
Register: True

Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: 21  
Date Test: 10/27/2004  
Next Test Date: Not reported  
Pipe Model: F  
Modified By: NRLOMBAR  
Last Modified: 01/08/2013

Equipment Records:

A00 - Tank Internal Protection - None  
D10 - Pipe Type - Copper  
I05 - Overfill - Vent Whistle  
J02 - Dispenser - Suction Dispenser  
L09 - Piping Leak Detection - Exempt Suction Piping  
C03 - Pipe Location - Aboveground/Underground Combination  
E00 - Piping Secondary Containment - None  
G04 - Tank Secondary Containment - Double-Walled (Underground)  
F00 - Pipe External Protection - None  
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring  
K01 - Spill Prevention - Catch Basin  
B04 - Tank External Protection - Fiberglass

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Registry ID: 110059791596

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Region: 2  
DER Facility ID: 164331  
DEC Memo: 10/4/04 Met with GSC and ExxonMobil on site. Station was under construction due to the retrofitting of steel product delivery lines with fiberglass. Discussed the location of the two downgradient monitoring points to evaluate the effectiveness of the ORC. Downgradient monitoring wells will be installed on the same side of Flatbush Ave as the station. Waiting for GSC include in the RAP the location of the downgradient monitoring wells. 2/7/05 Approved Remedial Action Plan dated 9/28/04. January 2010 - Haggerty: assumed management of spill April 2010 - PM approved request to install ORC socks, but required additional delineation 1/14/10. Additional off-site wells installed, report due by the end of May 2010 May 2010 - SIR report due May 31  
Remarks: NYCFD ON SITE, ISSUED VIOLATION FOR NO TIGHTNESS TEST, GASOLINE RAN ALONG GOLD STREET, SAND WAS APPLIED, ENGINE 207 RESPONDED.

DER Facility ID: 346218  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL". This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. DEC Sigona sent tank test failure notice to ExxonMobil on April 22, 2003. See ExxonMobil files under Mobil files for additional information. This site cleanup (Spill No. 9004727) is consolidated under Spill No. 0300775.08/17/04 Sidewalk opening permit mailed to Melissa Winsor ExxonMobil for the installation of wells along the west side of Gold St Between Johnson and Myrtle and the east side of Flatbush between Johnson and Myrtle. Rommel. May 2010 - PM approved request to install ORC socks, but required additional delineation 1/14/10. Additional off-site wells installed in April, report due by the end of May 2010. July 2010 - Subsurface Investigation Report approved. March 2011 - reviewed SSUR and provided comments. ORC socks have been in place for a year. Instructed EM to remove them to see if the dissolved conc rebound. July 2011 - Additional groundwater monitoring required based on current gw data. November 2011 - required additional monitoring to measure rebound effect. December 2011 - SSUR under review. January 2012 - asked for one last gw sampling event. If consistent with last year of quarterly reports, Spill will be closed.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"e2mis no. 151-111:13-NOV-2003 1110HRS L WILLIAMS # 11235 FOD REPORTS FOUND 1 PINT UNKNOWN OIL ON 50 GALLONS WATER IN M-1958. FOUND WHILE LOOKING FOR DEAD CABLE. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED. TOOK SAMPLE ON A 4 TO 6 HOUR PRIORITY. 11/13/03=1537HRS LAB RESULT RETURNED 155PPM.11/14/03 Environmental operations crew was assigned to clean the structure. After the initial liquids were removed I went tocheck for any potential leaks and found (3) cable ends capped but pointing towards the floor, and an uncapped copper tubing connected to a joint regulator. I requested a #9 crew they capped the tubing and removed the cable ends from the floor and tied them up; all debris were removed and the structure was doublewashed several times with 715, and 760 biogen until it was free of all oils. No sump was found.

Remarks: coming off 24 hr program - 1 pt unk oil on 50 gal of water in manhole - samples taken and clean up pending resultscon ed #151111removed off 24 hr progarm due to manhole being behind a locked gatethey will try for access in morning

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"Con Ed e2mis #134527 Notes:11-28-00 1421hrsWhile on location for fiber optic work, found 1 qt unknown oil on dry concrete floor of manhole 1947. Regulator tank present and not leaking. Sump not affected. No pump. No sewer connection. 1 solid sample taken.11-28-00 1501hrsTest results received. LSN 00-11212 769ppm PCB.11-29-00 2212hrsUpon inspection of manhole, found a 4'X4' area of floor against north wall of the structure which had about a pint of sticky oil on cement and dirt. Above the affected floor area was a feeder cable which had a 4' long area of oil soaked asbestos arc proofing. #9 was called to remove arc proofing and look for leaks. Sump did not appear affected. However, after digging sump down found an open 6" sewer trap impacted with soil. Removed packed soil of sewer pipe, wiped out the inside with a diaper which showed no signs of oil and sealed the pipe with diapers and a duct plug. The sump had a cement floor, after digging soil out of sump, added 10gal of hydraulic cement to bring sump floor even with plugged sewer pipe. All solids were removed and structure was double washed. >50 tanker removed 120gal wash water and Transportation picked up two drums of solid waste.#9 supervisor and troubleman removed 6' arc proofing off 3 single inserts going to 3-c straight joint on feeder 6B50 and found two of the singles had nicks in the lead jacket down to the insulating paper. D faulted feeder. Control Center requested the feeder be taken off on emergency to make repairs. After D fault is resolved, Env Ops will return to soda blast and take wipe samples.1-3-01 1800hrs 10 wipe samples taken. Double washed hole with bio-gen 760 and 715 sludge softener. Tar scraped off of floor, removed cap from sewer pipe and cemented same.1-5-01 1225hrsWipe sample results.Test point 1 <1ugs/100cm2TP 2 <1ugs/100cm2TP 3 2ugs/100cm2TP 4 <1ugs/100cm2TP 5 <1ugs/100cm2TP 6 <1ugs/100cm2TP 7 <1ugs/100cm2TP 8 <1ug2/100cm2TP 9 <1ugs/100cm2TP 10 <1ugs/100cm21-5-01 1910hrsFlush reports chem lab sample of sump came back OK.Update 3/5/02: Per Env. Ops Planner and info in this report the sump was found to be cemented. There was a sewer drain in the sump which had some soil in it. The soil was removed and disposed of as over 50 ppm pcb. As this was not an earthen sump the soil under the sump was not tested.

Remarks: ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION. SAMPLE TAKEN ANDCLEANUP IS PENDING RESULTS.CON ED # 134527 . NO CALL BACK REQUESTED. AMOUNT REPORTED AS 1 QUART.

 DEC Memo:

Sangesland spoke with Mark Robbins: Property was a manufacturing facility which is now going to be used for residential. Any city property classification moving from Manufacturing to Residential requires an "E Designation" report to the DEP which reviews the "toxic risks" associated with the site. Mark believes the problems at this site are not major and will be solved with excavation. No schedule yet on when excavation work will be done. If the excavation work does NOT solve the environmental issues at the site, then the case will be transferred to Koon Tang's group. 05/17/06 - Vought - Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 5/24/06 - Raphael Ketani. I have reviewed the Sept. 15, 2005 Remedial Action Plan produced by Hydro Tech Environmental, with the exception that they should drum the purge water that is generated prior to well sampling and not send it back down the wells. I talked to Mark Robbins, Vice President, (631) 462-5866 regarding the report and progress on the project. He said that another RAP has been written and sent to the client for approval. He said he will send this one to DEP also. I told him to send me the plan so that we're all "on the same page." He said that the new RAP simply requires digging out

**COMMERCIAL FACILITY (Continued)**

**S107409518**

everything and putting in a vapor barrier. Mr. Robbins said that he will contact Sharissa Singh, project manager, at the Brooklyn office (718) 636-0800 and have her send me the new RAP, and the contact information for the NYC DEP. Ms. Singh FAXed me a letter that DEP sent to Hydro Tech. We also discussed possibly digging down to the water table and vacuuming out the water to eliminate the contamination issue. We also discussed the position of the vapor barrier and the passive venting system. She said she will send me a copy of the latest RAP and to direct all correspondences to her. 6/29/06 - Raphael Ketani. I reviewed the 6/1/06 Remedial Action Plan and Construction Health and Safety Plan submitted by Hydro Tech Environmental Corp. I found the report to be acceptable with the comments: bottom soil sampling should be once every 900 square feet (not 900 linear feet); samples should be sent to an ELAP certified lab for 8260B and 8270C analysis; a summary table should be provided in the analytical report; groundwater that is encountered should be sampled; all groundwater that has a sheen should be vacuumed; all tanks encountered should be cleaned, removed, registered, and manifests provided as to who they are sent to. I will send a letter to Ms. Singh and to Julie Stein of DEP approving the report. 7/28/06 - Raphael Ketani. I talked to Ms. Singh. I asked her why I haven't heard of any work taking place. She said that DEP hasn't gotten back to her approving the DEC comments and giving the "go-ahead" to do the work. I asked her to try and get in contact with the DEP case manager and get the work started. She said she will. 8/8/06 - Raphael Ketani. I received the plans for the vapor barrier and passive venting system from Hydro Tech Environmental dated 8/7/06. 8/17/06 - Raphael Ketani. I tried to contact Ms. Singh, but could only leave a message. 9/7/06 - Raphael Ketani. I tried calling Ms. Singh, but she was no longer with the company. I tried to contact Mark Robbins (631) 462-5866. I talked to him and let him know what DEC's comments were regarding the RAP. He said that Ms. Yash Saha (718) 636-0800 is the new project manager in the Brooklyn office and that he is working with her to get her up to speed. Mr. Robbins said that, otherwise, he is still waiting for approval from DEP. 11/13/06 - Raphael Ketani. I spoke with Mr. Robbins and asked him why I have heard nothing regarding progress on the project. He said that the DEP approved the RAP and the DEC comments, but the site has multiple "E" designations. So there is a requirement for noise abating windows for the building that meet a certain specification. The architect involved has to submit the window specification to DEP before they will give the go-ahead. So Mr. Robbins and the DEP are waiting on the architect to make his submissions. 3/21/07 - Raphael Ketani. I received a call from Ms. Saha. She said she was waiting for an approval letter from DEC regarding the RAP and the DEC's comments. I told her that Mr. Robbins had received approval of these items from DEP back in November 2006. She said she wasn't aware of this. I told her to coordinate things with Mr. Robbins. I also asked her whether the window design from the architect was approved by DEP. She said she had an approval letter from January 2007. I asked her whether I could get a copy of this letter. She said she would send it. Lastly, I told her the project has been stagnating and to get it moving again. She said she would. 3/22/07 - Raphael Ketani. Mr. Robbins called to clarify that the work on the site is moving forward. He said that the client is selling the property and that Hydro Tech has a notice to proceed from DEP. Some soil has already been removed. We discussed the case and agreed that the first step will be to have new groundwater wells installed

**COMMERCIAL FACILITY (Continued)**

**S107409518**

and to take new water samples. This is being done as the last round of water samples were taken several years ago, according to Mr. Robbins. Then, if the groundwater is significantly contaminated, vacuum pumping will take place and resampling will be performed. I told him that once the building is gone, then the contaminated soil must be removed quickly. Otherwise, the rain may wash the contaminants into the water table. He agreed and said that they will move quickly to start digging once the building is down. I also asked for a quick site map showing any gas stations and apartment buildings in the area. Mr. Robbins said that he will send this with the well plan. 3/26/07 - Raphael Ketani. I received the following e-mail today from Mr. Robbins: Julie & Raphael: Attached please find the end point sample results from our recent soil excavation activity at the above property. We removed and disposed of soil from 2 locations prior to formal commencement of site construction/development. Future work associated with the property will be performed as specified in our Remedial Action Plan/Construction Health & Safety Plan - in general future excavation associated with the construction of foundations, the placement of the vapor barrier and the capping of all portions of the property outside the building footprint with concrete or asphalt. Please review the attached results and approve the course of action as outlined above. Thank you in advance for your attention to this matter. Mark 3/28/07 - Raphael Ketani. I reviewed the soil analytical results (Table 1) that were sent by e-mail by Mr. Robbins. The table didn't list the full suite of VOC analytes that should be tested for. There were many SVOC hits for each sample with exceedences of the TAGM standard for primarily the combustion by-product species (the benzo series). I spoke to Ms. Saha about the table and she said that Mr. Robbins is the project manager now. I called Mr. Robbins and asked him why he was the project manager. He said that there were so many people involved now, that he has to act as the manager for the project. I asked him why there was an incomplete list of VOCs for the table. He said that the table reflects everything that was a hit above the MDLs. I asked him why there were so many and so high hits for SVOCs. He said he didn't know why. I asked him for a description of the history of landfilling at the site before the buildings were constructed, the boring logs, and the soil descriptions. He said all of these documents will definitely be in the closure report. 3/30/07 - Raphael Ketani. I received the following e-mail today from Mr. Robbins: Field Activities at Gold Street: 1/10/2007 - Waste characterization sample was collected for Soil safe parameters. Soil safe called back saying the sample had Lead contamination and would not be accepted at their facility. Clean Earth of NJ was then contacted. We filed an application with the EPA for an ID No on 2/14/2007 for hazardous soil waste. Refer diagram for AOC-2 and AOC-3 locations. \*Soil excavation began on 3/3/2007 at AOC-2. Soil was temporarily stockpiled. \*Excavation at AOC-3 was done on 3/4/2007. Concrete too thick to break. Jackhammers were used to break the concrete and continue excavation at AOC-3. Soil temporarily stockpiled on Site. \*Excavation and loading of trucks: 3/5/2007, a total of 6 trucks loaded (3 from each Lot). \*Loading of trucks continued: 3/7/2007, 1 truck from the soil that was stockpiled at AOC 3 \*Collected a total of 10 end point samples EP-1 through EP-10 from the Site (5 from each AOC) \*Excavation continued along western sidewall of AOC-2 on 3/7/2007. \*Loading of trucks: 3/7/2007, 3 trucks from AOC 2. \*End point sample EP-11 was collected from AOC 2 at the end of excavation activities. \*All end point samples were analyzed for EPA 8260, EPA

8270 and TCLP Lead. \*Excavation pit at AOC-2 is 30 feet by 18 feet. Depth: 12 to 14 feet. \*Excavation pit at AOC-3 is 42 feet by 12 feet. Depth: 12 feet. \*The total weight of the contaminated soil from the excavation area was 258.92 tons. \*Attached is the End point sampling plan, End point sample characterization details, the Laboratory results and Pictures. Yash Saha Project Manager Hydro Tech Environmental, Corp 6/13/07 - Raphael Ketani. Eva of Hydro Tech called for Ms. Saha, as she was on vacation. She asked what DEC needed to close the case. I told her that DEC needed the boring logs and site history description. I told her that I had spoken to Mr. Robbins, and he told me that he will enclose these documents in the Closure Report. I added that I was told the report would be received soon and that without it, I can't tell why there are such high SVOC detections. 6/26/07 - Raphael Ketani. Ms. Saha called regarding the work plan dated April 2007. I told her I hadn't received the plan. She said she will send it. I also asked her for the boring log descriptions and a complete site history. Otherwise, I told her, I can't close the spill case. She said she understood. 6/27/07 - Raphael Ketani. Today I received the April 17, 2007 Groundwater Investigation Work Plan from Hydro Tech. I reviewed the plan and had questions regarding why there were only 2 wells planned. I left a message for Ms. Saha to call me back. 7/9/07 - Raphael Ketani. I spoke to Ms. Saha about the wells. She said she was just relaying information to me and to talk to Mr. Robbins about them. I spoke to Mr. Robbins and he said these wells are just for monitoring the groundwater before that area is excavated. He said that this was part of the plan for dealing with the groundwater contamination hotspot. This is the only hot spot and so wells are planned only for the northwest corner of the property. However, two more wells may also be installed later. I asked him again for the detailed soil descriptions in order to see whether something in the soil was generating the high SVOCs. He said he will send them. 7/10/07 - Raphael Ketani. Ms. Saha e-mailed me the summary report for the field activities that have taken place at the site so far. The report included pictures of the excavation work, figures depicting AOC-2 and AOC-3 and their respective soil sampling locations and soil analytical results tables. This is the same report that I had received on 3/30/07, except I now have the pictures to go along with it. 7/26/07 - Raphael Ketani. I sent out the letter regarding the groundwater well installation plan. 9/17/07 - Raphael Ketani. On 9/13/07, Yash Saha of Hydro Tech sent me an e-mail that the two wells that were requested by DEC were being installed today, instead of a few weeks ago. The delay was due to the need to get DOT permits. 10/18/07 - Raphael Ketani. I tried to contact Ms. Saha (718) 636-0800, but could only leave a message. I contacted Mark Robbins (631) 462-5866 and asked him to make sure Ms. Saha calls me back. He said he will. 10/19/07 - Raphael Ketani. Ms. Saha called me back and left a message. She said that the report with the groundwater analytical results from the two new wells was on Mr. Robbins' desk. She said that DEC should receive it next week. 11/5/07 - Raphael Ketani. I received the 10/19/07 Groundwater Investigation Report from Hydro Tech Environmental Corp. I began my review of the report. Though there were a couple of exceedences of VOCs from the water sample from MW-1, they were low (11 and 20 ppb). MW-2 had no exceedences. 11/6/07 - Raphael Ketani. I spoke to Yash Saha regarding the report and the site. She said that excavation has not taken place, yet. She said that the project involves just lot 13. I told her that DEC doesn't consider the two

analyte hits to be significant and will close its spill case. However, I told her that DEC never received the analytical report for the soil samples from borings SP-1 to SP-8, nor the results from the groundwater sample from GP-2. She said she will e-mail me the report. I also told her that DEC was missing the investigation results for the test pits, and AOC-2 and AOC-3. She said she will send this document, also. I received the May 2, 2005 Subsurface Investigation Report and the 9/4/07 test pit and AOC investigation report. I am closing the spill case based upon the 8/7/06 Vapor Barrier Specifications, the EP series soil analytical results from the 4/6/07 Memo to Julie Stein, the 9/4/07 test pit and Area of Concern soil excavation report, and the groundwater analytical results from the 10/19/07 Groundwater Investigation Report. I sent a letter stating this basis for closing the case to Ms. Saha and Ms. Stein.

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 56131  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
H99 - Tank Leak Detection - Other  
J00 - Dispenser - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
G03 - Tank Secondary Containment - Vault (w/o access)  
I02 - Overfill - High Level Alarm  
K01 - Spill Prevention - Catch Basin  
E02 - Piping Secondary Containment - Vault (with Access)  
F99 - Pipe External Protection - Other  
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring  
C01 - Pipe Location - Aboveground  
F01 - Pipe External Protection - Painted/Asphalt Coating

Tank Location: 1  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 12/01/1997  
Capacity Gallons: 5000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

Site Description: This BCP site is +/- .76 acres, and is located at 166-180 Myrtle Avenue, City of New York, Borough of Brooklyn, Kings County. Historic uses of the property have been commercial in nature. Surrounding uses include residential apartment buildings, commercial office buildings, day care centers and retail stores. The site is occupied by a one-story brick building with a cellar. It is bounded by Myrtle Avenue to the north, a construction area to the east, Fair Street to the south, and Prince Street to the west. The BCP application was denied by letter dated 4/28/09.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"Con ed e2mis notes:Hole midway up from body of TM128 on feeder 1B62 leaking approx 12 gallons of oil onto 2 feet of dirt in structure. It appears to be contained at this time. Records show 270ppm. 1 sample taken.Chris Hass of dep haz mat profile job for him and he was satisfied. When transformer is denergized we will remove remaining transformer oil and clean dirt out of transformer as best as possible. We will make inspections of floor for sewer connections etc..and break the roof of transformer MH to remove it. We will attempt to meet teh 48 hour clock. Following removal we will finish clean up. epa#NYP004042487.Transf was drained. Tanker removed 590 gallons of oil was removed. Transf holds 607 gallons oil. Transf leaked 17 gallons oil. He found clogged drain. He opened drain and found no oil. He cemented drain perm. Lab results returned 206 ppm. Cleanup is completed, they double washed structure and removed 18 barrels of debris , removed E.S.Tag. Over 50 ppm cleanup paperwork retained with env. ops. Incident is closed.

Remarks: hole in main body of transformer caused spill - clean up will bedone as 50/499 ppm - history shows 270 ppm for pcbcon d #127600

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEMO"12/23/2002, MILLER REASSIGNED SPILL REPORT TO TOMASELLO. THIS WAS A PIN JOB MANAGED BY TOMASELLO.5/10/04 - AUSTIN - TRANSFERRED FROM TOMASELLO TO DEMEO - END8/23/05 - Raphael Ketani. Case transferred to Jeff Vought.7/31/09- Complete file review by Intern lbeh.File being reviewed is SP# 9100147, PIN# 91015 on 4/3/91 at Flatbush Ave& Tillary St. Caller's remarks were "200-300 gallons of petroleum product in an excavation site, explosion occurred". A video cassette of the spill scene shot by DEC Tomasello shows the sidewalk of Tech and Duffield intersection cordoned off from a busy road with large quantities of rubble from the demolition that caused the spill. A large pit at the excavation site was filled with gasoline and groundwater and floating on the surface were pads put in to soak up free product and foam applied by the Fire Department to prevent flare-ups. The site appears to be the current location of a Metrotech Center building.Closed SP##9709176- Chase Metrotech Center, spill date- 11/06/97 from an overfilled storage tank. SP# closed 11/06/97 as it was contained in sewers in front of the building.PBS records for Metrotech Center brought up 15 Metrotech Center, Brooklyn, PBS # 2-609673 with owner listed as:Forest City Myrtle Associates15 Metrotech Centerc/o 1Brooklyn, NY 11201Attn: Andrew Hardy-15 Metrotech Center (718.797.6300)4/3/91- DEC Tomasello states that he got a call to go to Tillary and Flatbush where there was gasoline in an open hole with fire and an explosion. Fire department on scene. An old Merrit service station tank was being demolished and tank pit contained water with gas on the water. Fire department said contractor hit tank and filled pit with water, explosion occurred and contractor left. Neither contractor nor owner's rep on scene but building owned by Metrotech, who are rebuilding the whole block. There was no contact for them. Steve Miller on site trying to contact Metrotech and contractor was supposedly Blandford. Fire department would not permit a hole with gas on top overnight so Sullivan was called and he said to call Winton to clean up. Winton on scene with Joe Sceppa, vacuum truck and 2 workers to begin work. A lot of wood chips were noticed in water clogging the hose. Another truck with pads was called for and Winton continued work. 4/4/91- Cont.: Tomasello and Winton on scene. Bags of debris were left overnight and would be sent to yard and put in drums. A man told Tomasello that "he would put him in touch with the powers that be, Herman Weingood" of PDC. Tomasello and Charles Olmster of LBG, rep for Merrit on site, went to Weingood's office, which put them in touch with Mike Weiner,

**11 METROTECH CENTER (Continued)**

**S102140921**

the supervisor for Housing Preservation and Development, NYC (his Super- Mr. Juliano 212.240.7548). Weiner said he would give it over to Tom Hallock. He said he talked to the contractor, Blandford Construction (48 Coffey St., Brooklyn, 11231 P. 718.541.4030) and Mr. Kenny Lickman was on his way to site. Blandford said contractor filled hole with water but he had no knowledge of any problem on the site. At site, Tomasello showed Lickman from Blandford the problem and videotaped it as well. Lickman said his guy was digging in hole, smelled gas and stopped the job. Said he told the operator to leave and made arrangements for the gas to be pumped out in 2 or 3 days. There was no fire on site and they did not know they had to notify the Fire Department or State. Fire was noticed by unknown persons in building across the street and a Transit Officer came to site and said he had an eye-witness from across the street, Roy McGinn 718.330.3320, who said he saw contractor fill pit with water, bulldozer hit tank and sprung a leak, a flash of explosion, then contractor left and pulled bulldozer down the street behind a mobile home and left scene and that Fire Department came to scene because he called them and they saw contractor leave. Sullivan called Merrit and it was felt that Merrit was not to blame as tanks were temporarily out of service and were to be taken care of by the City. The City condemned the property and gave the fair market value for it. Weinstein and Lickman were shown the other site on the corner with a large pile of contaminated sand and a drum of gas tank bottoms. They were told these had to be removed immediately in the proper manner. Blandford said they would take over job and were told to dewater only water to sewer, not gas on top, and address the tanks.6/17/91- Letter from DEC to Kenneth Lickman of Blandford Construction Corp. re; gasoline spill on construction site stating that Winston Contracting Corp. performed work on a construction site at the intersection of Flatbush Ave and Tillary St and enclosed was the invoice for the work done. DEC determined that demolition actions at the site were the direct cause of the spill thus Blandford should pay the contractor directly and forward documentation of payment to DEC.7/15/91- DEC Tomasello: 1.40pm- He received a call from Mr. Lickman of Blandford who said he could not afford to pay bill as it would put him out of business. He thinks the gas was in the hole on the groundwater and that the broken water main pushed the gas to the surface therefore; it must be Merrit's fault.2pm- Mr. Baymer, Merrit boss was called and secretary said he would call back.2.10pm- Mr. Weiner of HPD was called about Merrit and secretary was told to have him return call.2.45pm- Tanks were purged by Merrit and most tanks filled with concrete thus it was hard pulling them out. Tanks were still on site and any investigation done would be known by NYC Department of Economic Development Corporation.4.15pm- Tanks were in concrete vault and 3 wells were on site down to 25ft with no groundwater. City purchased as is and were given inventory. 6 tanks present, 3 filled with concrete. 7/25/91- Letter from Kenneth Lickman of Blandford to DEC Tomasello in response to invoice letter, stating that before commencement of tank removal, they called Merrit Gasoline and were informed that tanks were closed out and filled with sand and concrete slurry, which they physically inspected and found to be so. In the process of demolishing, a water line was ruptured causing the site to flood thus work was stopped and plumber cut off the water main. The following day, he received a call from NYC Demolition Office informing that a Spill team was at the site. He went to site and observed a slight film on water but no gasoline coming from tanks. He

suspected that the film may have come from previous spill onto the soil prior to their work on the site. He stated that he was not responsible for charges incurred and that monies expended by Spill response crew exceeds contract amount paid to him by City for demolition.3/14/00- ISR to Albany.8/3/09- As per Bechard at OAG, no records on file.08/18/09-Vought-Spoke to DEC Farrar and as "Att. Gen. Close Date" box is filled out in UIS, no Final ISR needed.09/14/09-Vought-Looked up PBS for MetroTech center (as per video, site was on corner of Flatbush and Tillary which is now occupied by MetroTech center) and contact is Alan Lee (First New York Management Company 718-403-8960 fax 718-403-8614) as per PBS #2-603952 for 9 MetroTech Center. Vought called Lee to arrange site visit. Vought left message for Lee to return call and faxed him copy of notes. Vought received callback from Lee and returned call and spoke to Lee. Lee working for management company at MetroTech for past twenty years and recalls issues of disposing of contaminated soil during construction of the building (suggesting that once again over excavation of soil achieved remedial goals as groundwater shallow (~3'bg) in video. Vought arranged site visit for 9/16 at 2pm.09/16/09-Vought-Site visit by Vought and Vought met with:Alan LeeBuilding ManagerFirst New York Partners11 MetroTech CenterBrooklyn, NY 11201 Ph: (718)403-9860alee@fcr.comGarage with ventilation occupies entire basement floor of building and as such possible soil vapor and indoor air effects (if remediation was never performed) not a concern. Building was also installed with a moisture barrier as per Lee and as such product infiltration not a concern as well. Lowest room in building was inspected by Vought which was the tankroom and sump pit was dry. Note also that large height of building and deep foundation suggests that excavation was performed far below the water table throughout the entire block as such removing all remaining soil sources. Corner closed to historical spill location as per video also had not signs of petroleum such as staining or odors. Vought reviewed spill with DEC Austin and spill closed by Vought.

Remarks: 200-300 GAL OF PETROLEUM PRODUCT IN AN EXCAVATION PIT,EXPLOSION OCCURRED.

FOUND TO BE LEAKING.UPDATE 1-JUN-2004 22:05 HRS.ENVIR. OPER. MECH-A  
F.SCOTT EMP# 392 REPORTS:DBL. WASHED STRUCTURE WITH BIO-GEN 760, SUMP  
FOUND SEALED IN STRUCTURE. ENVIR. TAG# 39236 REMOVED. CLEANUP  
COMPLETE.

Remarks: .5 pint of dielectric fluid spilled. Originally on 24 hr program  
however do to extended time of testing, results would not be back  
within the time frame.

Material:

Site ID: 111400  
Operable Unit ID: 884367

DEC Memo: 01/17/06: This spill transferred from J.Kolleeny to S.Kraszewski. Recovery system installed after tank pull. Only one recovery well, not known if any site assessment was done or any post-exc samples analyzed. - SK9/22/06: Spill transferred from Kraszewski to Kann.8/30/07: WP submitted 8/27/07 and following email sent to NYCHA on 8/29 "The Department has reviewed the work plans listed below and finds them acceptable provided a schedule of work is submitted to the Department (i.e. for field work and report submittal, as discussed in previous meetings). This can be done through a one page addendum submitted as an attachment to each report. The reports reviewed are as follows:Site Specific Field Investigation Supplemental Work Plan, East River Houses, March 2007Site Specific Field Investigation Work Plan, Ingersoll Houses, June 2007Site Specific Field Investigation Work Plan, Marlboro Houses, June 2007Site Specific Field Investigation Work Plan, Isaacs Houses, June 2007"

Remarks: DISCOVERED SOIL IN TANK PULL WOULD LIKE CALL BACK.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 1/3/2005 File Update by Sun:-The Department has reviewed the Soil and Groundwater Analytical Results, which were reported in Divestment Assessment Phase II Report, prepared by EnviroTrac dated 10/27/04 for Sunoco for the subject site. The report indicates that the Groundwater samples secured from MW-3 had BTEX and MTBE concentrations in excess of NYS Water Quality standards. Based on the sampling data taken on October 18, 2004, MW-3 had MTBE concentration of 130, 000 ug/l and total BTEX concentration of 3,483 ug/l, including benzene concentration of 2,300 ug/l. The high MTBE and BTEX concentrations indicated that the groundwater had been contaminated and thus, is required to be remediated and monitored. -On 11/8/04, Sun sent a letter to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 11/30/04 for signing the Stipulation Agreement. -In Sun's letter to Russell Hammond dated 11/8/04, the Department also requires the following:1. Re-test the underground storage tanks (USTs) and piping system for tightness: The analytical result of Phase II Assessment Report in Reference 1 showed that the MTBE in monitoring well MW-3 had extreme concentration of 130,000 ug/l, which needs to be investigated to determine if the source of the contamination is from new spill. Per DEC Regulation for Petroleum Bulk Storage, 6 NYCRR part 613.7, the owner or operator is required to inspect and to test the tanks, piping system or equipment for tightness and structural soundness when a leak of petroleum is

suspected.2. Delineation of Soil and Groundwater Contamination: A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination both on-site and off-site must be performed. The investigation at a minimum must include installation of borings/wells: down-gradient of MW-3 (see MW-4), side-gradient of MW-3 (see MW-5), southeast of MW-3 and west of tank field (see MW-6), and up-gradient of MW-3 (see MA-7) . 3. Surrounding Property Sketch: A surrounding property sketch including property layout and usage must be submitted to the Department. North arrow and scale must also be included on the Site Plan.4. Locations of Remote Fills and Dispenser Island: The locations of former remote fills and dispenser islands must be included on the site plan. Also note as per DER-10 Section 3.7.1 "Pump islands and associated piping greater than 25 feet from the tank field should be considered separate areas of concern and should require a separate groundwater sample location". North arrow and scale must also be included on the Site Plan.

-10/17/2005, S. Andersen assigned as new project manager.-10/17/2005: Reviewed Quarterly monitoring report by Envirotrac dated 10/12/2005, and groundwater investigation report by Hydro Tech, and sent letter to firms, owner, and buyer to confirm review of these reports. Now awaiting results of continued monitoring as well as a RAP.11/3/05: new address :North Development Group, LLC217 Havemeyer Street, 5th FloorBrooklyn, NY 11211718-599-8600718-599-861311/29/05: Spoke with Hydrotech on the phone. Hydrotech is the consultant for the current owner, who is taking charge of the site remediation. The site has an E designation with the DEP, meaning it has been rezoned residential. Hydrotech will complete and submit an investigation summary report to DEC and DEP. 12/9/05: December 8 meeting between Sunoco, EnviroTrac and NYSDEC. Sunoco said that they and EnviroTrac are still in charge of site remediation (not Hydrotech). An RAP is currently in progress. The site will be utilized as a parking lot by the new owners.1/26/06: Review of phase 1/2 performed by hydrotech shows soil and gw contamination.4/10/06: Received monitoring report. Concentrations high in MW-3 and MW-4. BTEX 5,052 ppb in MW4, and 1,194 ppb in MW3. An additional MW west of the plume is required by June 10, 2006.4/12/06: Received email from Erin Goelz of EnviroTrac. Additional delineation is not possible due to the subway. Sent RAP required letter, due back 6/12/06.6/21/06: Sent Erin Goelz and email to followup on the status of overdue RAP.7/5/06: Received an email from Erin Goelz of EnviroTrac stating the following: The Remedial Action Plan (RAP) for this site is in progress and will be submitted to the NYSDEC on or before July 14, 2006.7/11/06: RAP reviewed and rejected. MNA proposed. Revised RAP required by 9/29/06 with more aggressive remedial strategy. Groundwater samples collected on 5/24/06 show max BTEX 5,475 in MW4 and 83 ppb MTBE in MW3.8/11/06: Received phone call from new owner and consultant (Dave Yudelson of Sive Paget). They will be taking over site remediation. They are thinking of excavating the site. The site will redeveloped with a rec center and pool. A sub-slab depressurization system and vapor barrier will be used in the construction. The site has an E designation. Chemical oxidation will also be used. A meeting is scheduled for 8/22/06 at 11:30am.8/18/06: Meeting on 8/17/06 with Sunoco, ET, and NYSDEC. Sunoco will discuss remedial plans with the new owner prior to resubmitting an RAP.8/22/06: Meeting with David Yudelson (Sive, Paget & Riesel), new owners law firm, and Charles Sosik (P.W. Grosser), new owners consulting firm, regarding remediation. Chemical

oxidation will be used. A RAP will be submitted.9/26/06: Received phone call from Erin Goelz of EnviroTrac, representing Sunoco. Construction has begun at the site, Sunoco cannot access the monitoring wells, and a RAP has not been received by the new owners. Sunoco requested a one month extension to submit a RAP until this issue has been resolved. New owner is James Muller (North Development).Called Charles Sosik and David Yudelson and both were unavailable. Spoke to David Yudelson, an RAP will be submitted in a day or two. Demolition is being conducted at the site, but construction has not begun. The Department informed him that a violation will be issued if construction begins prior to the Departments approval of a RAP.9/27/06: DEP Project Managers:Callista Nazaire : cnazaire@dep.nyc.govAmy Ma: AMa3@dep.nyc.govThe DEP has not received development plans or a remedial workplan.9/28/06: Site visit. Demolition at the site is complete. The monitoring wells could not be located. They are either destroyed, or inaccessible under construction equipment.10/12/06: Received and reviewed RAP from PW Grosser. Excavation, chemical oxidation (sodium persulfate), vapor barrier, and active sub slab venting system proposed. RAP conditionally approved, with extension of chemox treatment area by 10 feet north, groundwater sampling for pH, DO, redox potential, conductivity, and persulfate, a baseline groundwater sampling event, and Department approval required for gw samples collected two weeks after chemox injection, prior to initiation of constuction activities on the southern portion of the property, and monthly subslab depressurization system air effluent sampling. A stipulation agreement was mailed.12/18/06: Emailed Charles Sosik and David Yudelson to followup on status of stipulation agreement and RAP implementation. Received email from David Yudelson:"I have the signed stip and will send it over. We are having some delays with DEP so we should talk about it."Received email from Charles Sosik indicating he is no longer working on this project. New project manager: Kris Almskog at PWGC (631)589-6353, KrisA@pwgrosser.com.1/2/07: Left voice message for David Yudelson.1/22/07: Spoke to David Yudelson. DEP has delayed approval due to review of soundproof glass specifications. Will send signed stipulation agreement.1/24/07: Spoke to Amy Ma of DEP (718-595-6658). She will cc me on DEP's RAP approval.1/26/07: Stipulation agreement signed by North Development Group. Effective date 1/23/07. Sent email to Gary Heath of DEP (garyh@dep.nyc.gov), as per David Yudelson's request, confirming the DEC conditionally approved the RAP, received a signed stipulation agreement, and has no further requirements that need to be met prior to initiation of RAP implementation.3/1/07: Emailed David Yudelson and Kris Almskog to followup on DEP approval and RAP implementation. Received email from Dave Yudelson, DEP approval for Hazmat expected soon.4/2/07: Emailed David Yudelson to followup on DEP approval and RAP implementation. Received email from David Yudelson:"We expect the MTA excavation permit to be issued in a week or so and excavation to start April 16".4/16/07: Spoke to Kris Almskog at PWGC (631)589-6353, date not set yet for excavation. He will call the developer and get back to me.5/1/07: Emailed Kris Almskog to followup on exavation.5/4/07: Received email from David Yudelson. The excavation is delayed for an MTA permit.6/12/07: Emailed David Yudelson to followup on RAP implementation.7/30/07: Emailed David Yudelson to followup on the status of RAP implementation.8/2/07: Spoke to David Yudelson. They are still having trouble getting an excavation permit from MTA because there is a subway directly adjacent to the site.8/3/07:

Received email from David Yudelson: "We are still waiting for approvals to start excavation from the MTA and NYC DOB. We are eager to start remediation and development and are pushing as hard as we can but realistically it will be about a month." 8/21/07: Received letter from Charles Sosik with additional information regarding soil disposal. 9/13/07: Emailed David Yudelson to followup on workplan implementation and permit acquisition. 9/14/07: Received email from David Yudelson. Permits not received yet. 10/23/07: Emailed David Yudelson to followup on workplan implementation and permit acquisition. 10/31/07: Reassigned from Sarah Carlson to Chanda. 11/5/07: Chanda received an email from Joe Sun (NYSDEC) regarding the new project consultant's (Environmental Business Consultant) email. The consultant's email is: "This is to inform you that EBC has taken over as the environmental consultant on this project. We are intimately familiar with the project and the remedial action plan as I was the Senior PM on this project with PW Grosser and had met with you and Joe Sun on the development of the remedial plan. With respect to current status: The project has been delayed by permits and approvals from the MTA due to the proximity to the subway. These issues have largely been resolved and we expect to begin excavation shortly. We completed test pits for additional waste characterization of the top four feet of material and are assisting in identifying a disposal facility and securing approvals. We met last week with the excavation contractor to go over details and scheduling. I will notify you when we have a date to begin excavation. Right now that is still dependant on final arrangements and approvals with MTA. Please direct all future inquiries and correspondence to EBC and / or North Development Group. Thank you." 11/6/07: The file is updated by Chanda. Chanda received an email from Charles B. Sosik (consultant): "This is to inform you that EBC has taken over as the environmental consultant on this project. We are intimately familiar with the project and the remedial action plan as I was the Senior PM on this project with PW Grosser and had met with you and Joe Sun on the development of the remedial plan. With respect to current status: The project has been delayed by permits and approvals from the MTA due to the proximity to the subway. These issues have largely been resolved and we expect to begin excavation shortly. We completed test pits for additional waste characterization of the top four feet of material and are assisting in identifying a disposal facility and securing approvals. We met last week with the excavation contractor to go over details and scheduling. I will notify you when we have a date to begin excavation. Right now that is still dependant on final arrangements and approvals with MTA." On 11/6/07, Chanda sent an email to Charles Sosik (EBC): " This is to inform you I am the project manager for the above referenced site. On 10/5/06, the New York State Department of Environmental Conservation (the Department) received the RAP from PW Grosser. Excavation, chemical oxidation (sodium persulfate), vapor barriers, and active sub slab venting system proposed. On 10/12/06, the Department conditionally approved the RAP, with extension of chemical oxidation treatment area by 10 feet north, groundwater sampling for pH, dissolve oxygen, oxidation/reduction potential, conductivity, and persulfate, a baseline groundwater sampling event, and the Department approval required for groundwater samples collected two weeks after chemical oxidant injection, prior to initiation of construction activities on the southern portion of the property, and monthly sub-slab depressurization system air effluent sampling." 11/13/07: Chanda received a letter from P.W. Grosser

Consulting (PWG) dated 11/9/07. This letter stated that PWG is no long representing the developer/owner of the 75-85 Flatbush Ave., Brooklyn, NY property. 12/21/07: Chanda received an email from Charles Sosik (EBC): " We are making final arrangements with the excavation contractor and their disposal company and plan to begin excavation and removal of soil at the site in early January. We have an on-site meeting with the contractor on January 2nd and will update you at that time on scheduling."2/14/08: Chanda received an email from Charles Sosik, Environmental Business Consultants regarding the soil excavation and installation of chemical oxidant injection points at the site. (see eDocs)2/20/08: Chanda received the following email from Charles Sosik, Environmental Business Consultants: " Injection well installation was completed on Friday. We designated 3 locations as monitoring wells and are collecting samples from them today. We are also running tests on the soil and groundwater to determine buffering capacity of the soil and groundwater at the site to assist in adjusting the chemical oxidant mixture. I will let you know when the injections are scheduled. A 550 gallon UST was discovered Monday. The tank was encased in concrete and partially filled with water. Both tanks appeared to have been used for gasoline. Both tanks were in good condition with only minor surface rust. We photographed the tanks and collected endpoint samples beneath the concrete base. The tanks were cut-opened, cleaned and scrapped yesterday by ABC Tank. The tanks will be closed with the FD and NYSPBS group. Documentation will be provided in the site closure report." 5/5/08: Chanda called Charles Sosik, EBC (Ph.631-504-6000) to get updated information regarding this site. He stated that an email will be sent to DEC with updated status as soon as possible. (Chanda)10/15/08: Chanda called Charles Sosik, EBC (Ph.631-504-6000) to get the UST closure report for this site. He stated that the Site closure report will be sent to DEC end of Novemer 2008. 1/19/11: Breen. Mike Taormina called. He is the new consultant. He will FOIL the 2006 Remedial Action Plan to get on board. He is at 201-332-1844, X107. See e-docs for his address. His cell is 973-479-3095. 1/24/11: Breen. I spoke to Mike this morning. He says his client is anxious to get moving. Client asked him to do a phase 2. Mike has option to complete already approve RAP, or with fresh eyes and the long passage of time making the RAP somewhat stale to propose a better way. He will explore his options. 2/2/11. Breen. Mike called to say putting up a building has been cancelled. Thus subslab vapor extraction is no longer needed. He will submit a new RAP to reflect this. He says his copy of the Hydrotech RAP of Jan 06 contains only portions of the drawings. He wants to know if we have the complete drawings. Office = 201-332-1844. Cell = 973-479-3095. 2/22/11: Breen. Mike Taormina called to ask for tables of soil analytical results. Tables were printed B size, but only half was scanned. I checked e-docs and found that was indeed the case. I called the original consultant, HydroTech and spoke to Mostafa. He said he should never have sent in that RAP in 1-5-2006 because his client, Isaac Hagar, had not paid him. He said Hagar owes him \$30K. He said he spent \$15K in legal fees to sue Hagar and WON. However, he can't collect because this corporation of Hagar's is broke. Hagar has defaulted on STIP. He has not done anything in three years. He may have abandoned an open excavation. 2/24/11. Breen. I told Mike that I was not successful in obtaining copies of the missing pages. I told him that HydroTech was not paid. He said he is not working for Hagar, but rather for the Bank that holds the mortgage. Mike has nothing to do with Hagar; he may be gone. The Bank may just want to do the

**U001839271**

cleanup and sell the land. The Bank is not interested in going ahead with the development. 2/28/11. Breen. I sent Isaac Hagar a letter to notify him of his delinquency under his Stip. I called the bank that holds the mortgage, was put into voice mail; I asked them to return my call so I could send copy of the letter to a person. No call back yet. 3/1/11. Breen. I found a paper copy of the HydroTech Site Investigation report of 1-5-06 in the basement storage room. It had the pages Mike was looking for. I sent Mike the seven missing pages, all B-sized, by e-mail. I also put these pages in e-docs. 3/2/11. Breen. I learned further details from the e-mail Mike sent me to acknowledge receipt of the B-sized pages. He says he is not working for the bank that holds the mortgage, rather for a bank that represents a prospective buyer. I will get more details tomorrow when I can question to him directly. 3/2/11. Breen. I got the green card back from Isaac Hagar with his signature. This confirms delivery and receipt. 6/10/2011 Got a call from Mike Taormina. His client wants to move forward with the project. I explained to Mike that if he wants modifications to the work plan - send me what modifications are needed and I will review. Ultimately, for spill to be closed concentrations must be acceptable, no free product, no exposure threat, no plume migrations, etc. Mike understood and said he will get me something thought e-mail later today. VB12/1/2011 - Carlson: Received phone call from Michael Dougherty (212-885-5578), attorney from USBank. He wants to know case status. Site will not be redeveloped. They will be selling land only. 12/6/11 - Carlson: Received email from Mike Taormina of AEI Consultants. His contact at US Bank is: Karen Boyer Vice President Special Assets Group U.S. Bank National Association 461 Fifth Avenue New York, New York 10017 Phone: (646) 935-4558 Cell: (646) 275-6081 Fax: (646) 935-4550 E-mail: karen.boyer@usbank.com Left voice message for Karen Boyer. 1/4/12 - Carlson: Left message for Karen Boyer. Will US Bank be remediating site? 1/12/12 - Carlson: I spoke to Karen Boyer. USBank received foreclosure proceedings but they do not formally own property. They will try to sell the property as is. USBank will not be remediating the site at this time. She will forward documents by email. 2/16/2012 - Carlson: Spoke to Charles Sosik- site was partially excavated - he doesn't have manifests (former owner has manifests). He is working with buyer (do they formally own the property?). Sosik will send workplan for site investigation and info on buyer/new owner. 2/22/2012 - Carlson: Received email from Charles Sosik with info on new owner. The new owner is or will be: Flatbush Holding LLC 16 E. 34th Street New York, NY Aaron Kline (917) 604-1139 2/27/2012 - Carlson: Reviewed workplan dated 2/24/2012. The workplan submitted by email. In email Charles Sosik stated he wanted to implement work plan on 2/28/2012. The new property owner is going to continue with redevelopment of the site. Sent email requesting a revised work plan. Soil samples must be collected from all mw locations proposed (six monitoring wells proposed). Sampling for VOCs and SVOCs is required. Revised work plan due in 30 days. 2/29/2012 - Carlson: Reviewed revised work plan. Sent email approving revised work plan and requiring stip by 3/29/2012. Four wells were installed yesterday. Two remaining well locations are blocked by cars, wells will be installed today if cars can be removed. 4/18/2012 - Carlson: Reviewed Sampling Report and Remedial Action Plan both dated April 2012. Seven soil borings/monitoring wells installed. High soil and gw impact in MW6. Low level gw MTBE present in MW4 and MW5. Low level SVOCs in groundwater present in MW-1,3,4,5,6,7 - may be historic fill. MW-6 also had naphthalenes

SUNOCO #0007-1548 (Continued)

U001839271

present in gw that were a result of the spill (not related to historic fill). RAP proposed chemical injection of sodium persulfate into six injection points. Groundwater sampling proposed two weeks following injection to evaluate effectiveness, need for further injection. look up info on sodium persulfate. What are redevelopment plans? several rounds of injection will likely be necessary as well as confirmatory soil sampling. if rapid redevelopment is planned, full excavation would be the fastest/best approach; 5/9/12 - Carlson: Received email from Charles Sosik - they will excavate the entire property to 26 ft, he wants to submit a revised RAP; Replied to email - will they still be using chemox to treat groundwater?, revised RAP must include post remedial (post chemox) soil sampling to confirm remediation has been completed. Revised RAP due in 30 days.6/4/12 - Carlson: Received revised RAP submitted on 5/18/12 (but dated April 2012). Emailed Charles Sosik the following comments/questions: "The text of the RAP was updated, but the figures were not. The report states the impacted soil in the vicinity of MW6 will be excavated to the water table, but the figures shows the excavated area to include MW1, MW2, and MW3 only. Please update the figures. Additionally, section 3.2 states the injection well screen will extend 2 ft above the water table, but section 3.1 states the area will excavated to the water table. Please explain this discrepancy. "6/5/12 - Carlson: Received email from Charles Sosik. Spoke to Charles Sosik. Entire site will be excavated to 20 ft. Hotspot excavation in vicinity of MW6 will extend to water table. Hotspot excavation samples will be collected. Injection wells will be installed for chemical oxidation to address groundwater contamination around MW6. Future development will include a vapor barrier. SSDS will NOT be included because basement level is a ventilated parking garage. Revised RAP to be submitted.6/8/12 - Carlson: Reviewed revised Remedial Action Plan dated June 2012. The RAP proposes excavation of impacted soil to the water table. Chemical oxidation is proposed to treat impacted groundwater and saturated soil. Impacted soil in the vicinity of MW6 will be excavated to the groundwater table. The excavation will be expanded horizontally to remove all impacted vadose zone soils. Sidewall endpoint samples will be collected at the base of the excavation to confirm impacted vadose zone soils have been removed. Following collected of endpoint samples, the excavation will be backfilled to the desired depth for future development plans. Six injection points are proposed in the vicinity of MW6. Injection of chelated iron activated sodium persulfate is proposed. Performance groundwater samples will be collected following the initial injection event. The need for subsequent injections will be evaluated based on the results of performance groundwater samples. Confirmatory soil samples will be collected following completion of the chemical injections to confirm complete remediation of saturated soils. Future construction at this site will include a 20 mil HDPE geomembrane liner. The plan notes a sub-slab depressurization system is not necessary because future development plans at this site include a two-level basement parking garage that will be ventilated. Quarterly groundwater monitoring, sampling, and reporting will be initiated. A Remedial Action Completion Report will be submitted summarizing the remedial work performed. Issued approval letter. Departmental approval of Remedial Completion Report is required prior to site redevelopment.7/2/2012 - Carlson: Received email from Charles Sosik. Building will be a hotel. The sub-cellar will be used by hotel maintenance and laundry facilities. The cellar will be a kitchen, gym

U001839271

and meeting room. Sent email requiring submission of a revised RAP in 15 days that includes a SSDS.9/18/12 - Carlson: Reviewed revised RAWP dated 9/9/12. spoke to charles sosik - requested revised SSDS site plan to differentiate between pipes types, and a sub-slab monitoring point to sample vacuum/air pressure. Revised RAWP to be submitted.9/28/12 - Carlson: Approved revised RAP dated September 2012. SSDS included in redevelopment plans. Post-remedial soil gas samples will be collected in order to evaluate the need for installation of the proposed SSDS. The SSDS design includes a sub-slab monitoring point that will be tested in order to confirm effectiveness of the SSDS. A Remedial Action Completion Report will be submitted summarizing the remedial work performed. 12/1/12 - Carlson: Received revised RAP dated 11/28/12 proposed SVE to treat unsaturate zone soil impact and chemox to treat saturated soil and gw contamination. Workplan states that remediation will be performed in conjunction with foundation construction.12/5/12 - Carlson: Spoke to Mr. Charles Sosik. Building footings and framing will be installed, these will not interfere with remediation. 12/14/12 - Carlson: Revised RAP text proposes installation of 6 injection wells, while figure indicated 7 injection wells will be installed. Emailed Charles Sosik about inaccuracy. 1/4/13 - Carlson: DEC Hassan, Carlson, Ketani, and O'Connel met with Mr. Sosik to discuss the revised RAP. Additional excavation not possible due to subway. He said AS would interfere with construction. Chemox is the easiest remedial method for groundwater treatment for them. 1/7/2013 - Carlson: Issued letter requiring a revised RAP that includes 1) a secondary, backup, groundwater remediation method, 2) performance monitoring samples must effectively monitor the aquifer for rebounding groundwater concentrations, 3) an additional soil boring must be performed in the vicinity of boring B6 in order to vertical delineate the extent of contamination. Issued a new stip to 85 flatbush LLC. Received email from Mr. Sosik, plan will be revised the include statement that the chemox injection plan will be modified if need be, and a contingency AS system will be installed. plan will be resubmittedReceived signed stip via email. Original must be submitted.1/11/13 - Carlson: Received original signed stip. Agreement was signed as flatbush extension LLC, but respondent was listed at 85 flatbush LLC. Flatbush extension LLC appears to be correct based on ACRIS property records. DEC issued a second stipulation with respondent listed as Flatbush Extension LLC. Revised Agreement must be signed and resubmitted. Received revised RAP dated January 2013. Reviewed revised RAP. Required modifications were made as per 1/7/13 letter.1/16/2013 - Carlson: Received signed Stipulation Agreement, forwarded to Legal Division. Issued approval letter for January 2013 revised RAWP.2/6/13 - Carlson: Received executed Stip from Legal, signed by DEC 1/25/13. Forwarded to Charles Sosik (csosik@ebcincny.com).07/15/13 - Spill Case is transferred from Sarah Carlson (Section C) to June Feng (Section of Spill Prevention and Response) as per DER Region 2 decision.06/27/2014: This spill case was transferred to A. Doronova. - AD08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afoientine@cg-env.com):"Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn;2. Spill No. 0913725, 1626 Steelwell Avenue, Brooklyn;3. Spill No. 0809869, 42-02 21st Street, Queens;4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn;5. Spill No.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110055642915

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

**HAZARDOUS WASTE BIENNIAL REPORTER**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Sangesland spoke to Kathy O'Sullivan at LI Univ. She says there was some type of leak from a pipe in the building. Sangesland spoke to Petroleum Tank Cleaners - They were on the site working on cleanup. 4/29/2005 PTC says 200 gal of water was pumped out with a sheen of oil on the top. Spill was confined to a pit in the boiler room. All work was complete. SS

Remarks: THINK MAYBE A PIPE LEAKED UNDERGROUND;

DEC Memo: Cleanup is complete - Environmental Company will steam clean and epoxy paint "soon"Triumverate Environmental - "Dan" 718-274-3339 "Alishia" Overfilled the tank. Oil came out of the manhole and was contained within the vault.5/12/2009 Sangesland reviewed a closure report prepared by Triumvirate Environmental.Report estimates that 80 to 100 gal of oil had spilled in the vault area. It was Triumverate's opinion that the tank had been overfilled based on the taining pattern on the sides of the tank. On Feb 10th Triumvirate returned to the site to pressure wash the tank vault floor/walls. After cleaning, staining was still evident, but was not treated further. See eDocs for Triumverate's report.  
Remarks: CALLER STATES THAT THERE MAY HAVE BEEN AN OVERFILL OF PRODUCT TO A TANK. PRODUCT IS CONTAINED TO THE VAULT. CLEAN UP IS PENDING. UNK AMOUNT.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

reported by A1- Crown Leak Detection associated with (2) 10K UST's manifolded. A review of PBS documents reveal the registration expired on 7/14/02. Multiple calls to contacts listed on PBS registration were made - all contact information is out of date. DeMeo was able to obtain information for the current management company FS Residential Management and the current management agent Ms. Miriam Stolin (718.875.9225). Teleconference with Ms. Stolin reveal that property is a co-op comprised of (5)building for a total of 292 units. Ms. Stolin states she has managed the property since 2009 and was unaware of any open spill file associated with this site - she further states that in April 2014 the complex converted to natural gas from dual fuel and will no longer be using oil - they will be abandoning the UST in place. DeMeo requested of all documentation available concerning the tank system at this property.8/12/14 TJDFile review - duplicate PBS numbers found for this facility 2-279617 & 2-608923. Property has had multiple management agents since reported tank failure - historical records are unavailable. Facility was able to produce records (work orders and invoices) for work associated with the (2)10K UST's registered at this facility. The contractor Petroleum Tank Cleaners isolated the tanks and performed tank only tests with passing results in February 2004, a failed cross-over line was identified and replaced in May 2004, followed by passing system test in June 2004. There is no mention of any contamination discovered during the replacement of the failed cross-over line by PTC. Another passing system test was performed in January 2012. As per information obtained during discussions with the current property manager the facility has switched to a natural gas in April 2014 and will no longer be using the (2)10K UST's which they plan to close in place ASAP. Based upon the documentation available - no further action is required at this time. Spill is administratively closed. Due to the multiple PBS numbers associated withthis property Spills (DeMeo). referred the PBS discrepancies to PBS unit (Zielinski) for any necessary follow-up. All available documentation has been uploaded to DECDOCS.

Remarks: gross failure, above ground tank. recommend tank cleaning and retest

**FINDS:**

Registry ID: 110004364839

**Environmental Interest/Information System**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

**AIR SYNTHETIC MINOR**

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"8/10/2001 - Tony Kloss from Impact Environmental (office # 516-453-2790 cell phone 516-250-3187)Impact has been hired to remove two #4 oil tanks from sidewalk vaults on Jay St in front of PolyTech University. Impact did some geoprobes and found contamination consistant with #4 oil. They also opened up the vaults and found 6" of floating product.The plan is to excavate the site and remove the tanks (probably in September 2001) At that time they will try to over excavate and remove as much as possible. If end point samples remain high, they will need to propose a remediation.8/20/2001 - Sangesland spoke with Tony Kloss. Samples came back, some were high. Mr.Kloss is putting together a map with results and will mail it to the DEC. He also reconfirmed that the tanks will be pulled in September. 5/9/2002 - Sangesland received a Tank Closure Report from Impact Environmental dated 3/11/2002. The report details the removal of two - 7,500 gal heating oil UST. All contaminated soil around the tanks was removed (447.13 tons).Post-excavation soil samples were all below TAGM - Soil Clean Up Objectives for VOC's and SVOC'sA new 7,500 gal double walled tank was installed in the space in Feb 2002. A new Vedeer Root monitoring system was installed and the tank was pressure tested on Feb 6, 2002.All work was complete at this site and the spill case is closed.  
Remarks: caller reporting a spill at the jacob's building at aboveclosing 2 tanks and believe spill is from that one tank 001 and tank 002 nys

DER Facility ID: 294900  
DEC Memo: 10/21/05 - Raphael Ketani. I called up Jim Melnick of ProTest ((631) 321-4670) and asked him what happened as a result of the failed tank test. Mr. Melnick said that the tank was retested 1 week later and passed after Key Span did their own repairs. I spoke to Mike Calderon of Key Span at (718) 222-3479. He said that the vent line had been moved as a result of construction at the site (Marriot Hotel was having work done). He said that the construction crew had made a new vent pipe and had put a rubber cap on it. So this cap didn't hold the pressure during the tank test. However, once the cap was discovered, the pipe was retested and held the pressure, and the cap was replaced with a metal one. I contacted Mr. Calderon's supervisor, Ed Urban ((718) 389-4204, ext 17), regarding the tank test and he confirmed what Mr. Calderon had said. He added that the construction crew had hit the vent pipe and moved it and then trucks ran over the concrete cover and cracked the concrete. Mr. Urban added that water had leaked through the concrete and set off an alarm. So Key Span went to check out what happened and that's when they discovered the broken concrete and that the vent pipe had been moved. Mr. Urban added that the tank is registered with the PBS unit. The tank is registered with the Brooklyn Renaissance and the case # is 2-610012.12/21/05 - Raphael Ketani. I tried calling up Mr. Urban, but the number had been disconnected with no forwarding number. I spoke to Mr. Melnick and he said he would FAX me a copy of the successful tank test.Mr. Melnick FAXed me a copy of the successful second tank test. As the rubber cap replacement and the repair of the moved vent line had been the only problems and had been corrected resulting in a successful tank test, I am closing the case.

**Site Description:**

Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial). Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiners clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional

topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Remediation at the site is complete. Prior to remediation the following is a discussion of the site conditions: Nature and Extent of Contamination: Contamination associated with the site is the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination is now limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have been declining over the course of the BCP project. However, as discussed below, contamination in soil vapor immediately adjacent to the site remains elevated. PCE concentrations are generally decreasing in on-site and off-site groundwater. PCE in a down gradient off-site monitoring well decreased from 988 ppb in November 2008 to 117 ppb in July 2010. The highest on-site PCE contamination detected was 585 ppb in MW-1 in November 2008. However, the PCE concentration in MW-1 in July 2011 was 30.2 ppb. One on-site well (MW-5) has shown an increasing trend of PCE concentration up to maximum of 20.2 ppb in July 2011. Significant soil vapor impacts remain present on-site and off-site. The highest on-site PCE concentration in soil vapor was 213,000 micrograms/cubic meter. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system was installed in that adjacent building. An soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013. Not reported

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products.Site Geology and Hydrogeology:The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiners clay.The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site.Certificate of Completion issued on 12/19/2013.  
Env Problem: Remediation at the site is complete. Prior to remediation the following is a discussion of the site conditions:Nature and Extent of Contamination:Contamination associated with the site is the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination is now limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have been declining over the course of the BCP project. However, as discussed below, contamination in soil vapor immediately adjacent to the site remains elevated. PCE concentrations are generally decreasing in on-site and off-site groundwater. PCE in

a down gradient off-site monitoring well decreased from 988 ppb in November 2008 to 117 ppb in July 2010. The highest on-site PCE contamination detected was 585 ppb in MW-1 in November 2008. However, the PCE concentration in MW-1 in July 2011 was 30.2 ppb. One on-site well (MW-5) has shown an increasing trend of PCE concentration up to maximum of 20.2 ppb in July 2011. Significant soil vapor impacts remain present on-site and off-site. The highest on-site PCE concentration in soil vapor was 213,000 micrograms/cubic meter. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system was installed in that adjacent building. An soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013. Not reported

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial). Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to

site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination is now limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have been declining over the course of the BCP project. However, as discussed below, contamination in soil vapor immediately adjacent to the site remains elevated. PCE concentrations are generally decreasing in on-site and off-site groundwater. PCE in a down gradient off-site monitoring well decreased from 988 ppb in November 2008 to 117 ppb in July 2010. The highest on-site PCE contamination detected was 585 ppb in MW-1 in November 2008. However, the PCE concentration in MW-1 in July 2011 was 30.2 ppb. One on-site well (MW-5) has shown an increasing trend of PCE concentration up to maximum of 20.2 ppb in July 2011. Significant soil vapor impacts remain present on-site and off-site. The highest on-site PCE concentration in soil vapor was 213,000 micrograms/cubic meter. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system was installed in that adjacent building. An soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013. Not reported

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Program: BCP  
Site Code: 410416  
Acres: .460  
HW Code: C224134  
SWIS: 2401  
Town: New York City  
Update By: JAMORAS  
Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial). Site Features: On-site structures were

**388 BRIDGE STREET (Continued)**

**S116041493**

demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium- to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiners clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem:

Remediation at the site is complete. Prior to remediation the following is a discussion of the site conditions: Nature and Extent of Contamination: Contamination associated with the site is the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination is now limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have been declining over the course of the BCP project. However, as discussed below, contamination in soil vapor immediately adjacent to the site remains elevated. PCE concentrations are generally decreasing in on-site and off-site groundwater. PCE in a down gradient off-site monitoring well decreased from 988 ppb in November 2008 to 117 ppb in July 2010. The highest on-site PCE contamination detected was 585 ppb in MW-1 in November 2008. However, the PCE concentration in MW-1 in July 2011 was 30.2 ppb. One on-site well (MW-5) has shown an increasing trend of PCE concentration up to maximum of 20.2 ppb in July 2011. Significant soil vapor impacts remain present on-site and off-site. The highest on-site PCE concentration in soil vapor was 213,000 micrograms/cubic meter. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system was installed in that adjacent building. An soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013. Not reported

Health Problem:

Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil

Record Upd: 10/22/2014  
Updated By: JEBROWN

Site Description: Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is operated by the NYC Department of Sanitation. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes a barge basin, the Building 419 transformer substation, two former drum storage areas, and a railroad siding area. The 224019A site deals with only 9.5 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychlorinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.

MAP FINDINGS

**BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued)**

**S105586296**

Env Problem: Nature and Extent of Contamination: Soils are contaminated with lead and polycyclic aromatic hydrocarbons (PAHs) throughout the site, though more so at the railroad siding and drum storage areas, where concentrations of lead have been observed to sometimes exceed the Toxicity Characteristic Leaching Procedure (TCLP) limit for characteristically hazardous waste. The lead and PAHs are believed to be due primarily to historic fill having been placed throughout the area in order to render the land usable. Polychlorinated biphenyls (PCBs) have been detected in site soils, primarily near the Building 419 transformer substation, but also at the railroad siding area. The level of PCBs detected outside of the Building 419 area are relatively low, with only a few exceedances of the 1 part per million (PPM) commercial cleanup level. PCBs nearer Building 419 have been found well in excess of the 1 PPM commercial cleanup level in near surface soils, and above the 10 PPM level often used for cleanups in deeper soil. The highest concentration detected in soil within this area was 210 PPM. In general, observed concentrations of contaminants in groundwater at the site do not indicate a significant source of groundwater contamination due to waste management at the site. However, there are minor excesses of groundwater standards found sporadically on the parcel, presumably due to historic operations at the site, as well as the presence of historic fill. No source area of contamination relative to these minor groundwater impacts was found during the investigation. Special Resources Impacted/Threatened: The site is largely paved and is not considered an area of significant habitat. Contaminant concentrations found in barge basin sediments are generally consistent with those found throughout the region, and no clear contribution of sediment contamination from the site was determined. Significant Threat: The site was determined to be a significant threat due to the presence and release of hazardous substances.

Health Problem: Exposure to site-related contaminants in surface soil has been minimized by an interim remedial measure (IRM) to remove hot spot soil contamination. Since some contaminated soils remain at the site below concrete or backfill, people will not come in to contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Since there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due soil vapor intrusion for any future on-site development. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO"10/30/03. TTF letter has been send to:ANDYHELEN KELLER SCHOOL57 WILLOWBY AVEBROOKLYN, NY 11201 Y12/08/2005 The NYC School spill coordinator, Jim Merlo, indicates that this spill report is for a tank registered to the landlord of the facility and not part of the School district. Joe White called the contact for the spill, Phil Fazen. Mr. Fazen indicates that he tested the tank and was not ablike to make the repair and has no record of a subsequent tank test passing. He recommended calling Petroleum Tank Testers who may have been involved in fixing / replacing / abandoning the tank.12/08/2005: Joe White called Dianna at Petroleum Tank Testers and she onidicated that her records show failure with no passes. Tank was cleaned and some lines plugged but tank still did not pass. She indicated that the work was being performed for Exterme Heating Company and that I should follow up with them.12/08/2005: Joe White called Jason at Extreme Heating Company. Hedid not recall the work but suggested that I call him back next week and he would be in the office where his records are kept. I will follow up next week with him.12/12/2005: Joe White called Jason at Extreme Heating and left a message. Awaiting a return phonecall.1/6/2006: Called Jason at Extreme Heating. No return message was received.1/13/2006: I was unable to get any furtherinformation regarding this spill. Given the age of the spill and the reported volume of the spill being 0 gallons and the fact that there are no PBS registered tanks at this location I have to assume that he tanks have either been removed or taken out of service. I am closing out this spill. ----- joe white

Remarks: yesterday. They are waiting for a proposal from Pro Test. bf12/4/07 received fax from Ted Dros of Pro Test. He believ3es the failure is a dry leak since there is "no indication of missing oil or leaks." Pro test will be scheduling further exploratory work to ascertain the cause of failure. Tank is in subbasement under concrete which makes it a difficult project. bf3/25/08 Received fax from Petroleum Tank Cleaners. Lines were tight and tank was not tight. Tank was examined and no holes or rust areas were noted. Three samples taken through tank bottom approximately 1 foot below the tank's bottom. Samples taken(EPA 8260 and 8270). Tank abandoned with foam. NFA. bf PBS No: 2-359769DRY & WET LEAK COMBO

DEC Memo:

Obligado- I called Mark Salamac. He said he believes that the tank was empty at the time of the test. He said the tank failed probably due to the configuration of the fill port, which he said causes automatic failure. he has not been retained to do any more work at the site.Obligado - I called the DCAS Chief Engineer Joseph Wagner. He said he will have someone call me back with the particulars of the site.From PBS this is a 40,000 gallon #2 heating oil UST. I called back PTC to get mroe information. I spoke with Mr. Lara to confirm whether there was product in the tank. He said the tank had 32,000 gallons in it when it was tested. The leak was determined to be an "above liquid leak". He thinks it is possibly a vent issue. He said this is a "union site" and they stick the tank daily to confirm the product levels. He doesn't suspect there was a release from the tank. Per Austin, spill will be assigned to Vadim Brevdo.10-28-2014 - V. BrevdoReceived a call from Darius Vasquez of Department of Citywide Administrative Services (212-386-0509), who requested extension to comply with the requirements of tank taseting and fixing the tank. Mr. Vasquea advised the Department that there was no actual release of product and that this is dry spill. I requested an e-mail with the extension request, provided an e-mail address to write to me. VB. Mr. Vasques said he will send an e-mail. VB.11-06-2014 - V. BrevdoDepartment approved 45-day extension request from DCAS to investigate, make repairs to the tank and submit report to the Department for review. VB01-21-2015 - V. Brevdoe-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services:Mr. Brevdo, Please see the attached pdf with the NYC DCAS purchase order to make repairs and retest Brooklyn Supreme Court (360 Adams Street, PBS # 2-217050) tank. I will inform your office once the contractor is schedule to be onsite to make repairs and retest tank. If any further information is needed please do not hesitate to contact me. Sincerely, Dario A. Vazquez, FMA,RPA | Executive Director of Facility Operations, Asset Management P: (212) 386-0509 | F: (212) 313-3384 | Dvazquez@dcas.nyc.gov01-21-2015 - V. Brevdoe-mail response to NYC Dept. of Citywide Adminstrative Services:Mr. Vazquez:Thank you for the update. Yes, please inform me once the contractor is schedule to be onsite to make repairs and retest tank. V. BrevdoVB02-20-2015 - V.

DEC Memo: 02/28/05 - Sawyer - On the 11/11/04, I responded to the address above to find a overfill spill that had impacted a stairwell as well as the entrance way to the building. The spill impacted 3 flights and the maintenance workers were trying to handle the problem. I suggested the realty company get a professional cleanup company. I will follow up to see if this suggestion was taken.03/08/05 - Sawyer - Received information on the spill clean up from Richard Chirra with management company. No further action required on this spill.

 DEC Memo: 2/15/13-Vought-Duty desk officer. Vought called Bob Urban (ProTest Ph:631-321-4670 Fax:631-539-0822) for more information. Tank was a 10,000-gallon #2 fuel oil UST and had a dry leak and had always been empty as it was a "backup tank" and was relined eight years ago. Tank passed test five years ago but had not had oil for at least eight years. Proposal to isolate and retest will be submitted to Brooklyn Friends School. Vought inspected PBS #2-252174 and noted site has two 10,000-gallon #2 fuel oil USTs. Spill addressed to DEC Demeo as TTF at PBS site. Owner of site as per PBS and addressee for TTF is:Brooklyn Friends School375 Pearl StreetBrooklyn, NY 11201Attn: Michel RimpelPh:(718)852-1029Vought called and spoke to site contact Michel Rimpel (Ph:718-852-1029) and told him that Vought to send TTF letter and also provided contact info for DEC Demeo in case of further questions. Vought prepared TTF letter for signature by DEC Demeo with above address. DEC Demeo signed TTF letter and Vought added to e-docs and sent to address above.4/30/14 TJDFile review. Out of service (empty) tank failed tightness test with a dry leak. Contractor (ProTest) responded to location to perform a tightness test on an out of service UST (10K). This tank is reported to have been empty and not in use since previous testing 5 years earlier.

Initial failure was reported on 2/15/13 - reported as a dry leak. ProTest returned to the property on multiple occasions - uncovering top of UST to access manway and piping connections. Manhole was regasket and supply/return lines were isolated still resulting in a dry leak failure. On 3/17/14 ProTest isolated the remote fill and vent piping associated with the tank - replaced the vent pipe and still had a failure on system test. On 3/19/14 the remote fill pipe was disconnected at elbow and the underground section of piping was tested and passed. With the remote fill plugged at elbow, the system then passed a tightness test - the remote fill remains plugged and tank remains empty and out of service. As per ProTest "There was no evidence of visible contamination within the excavation". Tank will remain out of service and tank owner plans to abandon in place. Based upon the information provided, no further action is required. All documentation has been uploaded to DECDOCS. Spill closed.

Remarks: 10000 gallon tank failed test and tank has not been used and has been empty for past eight years

DEC Memo: 5/13/2015 - Feng - Duty Desk. Talked to Camille of Hydro Mechanical (718-898-8588, HydroMechInc@hotmail.com). They are the plumbers for the building. It is a 1,080-gallon #2 oil tank and she believe that the only tank at the site. I advised her that if it is a "wet" leak, they need to empty the tank immediately and will conduct investigation to see if there is any actual spill.The building

manager:Dan TamburelliAllied Construction and Design Corp.570-352-2559dt@alliedorganization.comLeft a message to Dan Tamburelli for a call back. Talked to Chris Steele of Petroleum Tank Cleaners (646-772-7295). It is a 1,080-gallon #2 oil UST in the basement floor. It is a commercial cloth store. The tank still contain 40 inches of oil inside the tank. There is no registration. It is dry leak. He believes that one of the top pipe maybe leaking. Will go back to the site for a isolation retest pending on the owner's approval. Entered the data into the spreadsheet in K: drive. Spill is assigned to T. DeMeo.

Flushing Avenue to the south, Kent Avenue to the east and Navy Street to the west. The Navy Yard itself is an industrial/commercial area, while the property surrounding the Navy yard is mixed commercial and residential use. Site Features: The main site features include large dry docks used for ship repair, several older buildings, roadways and a newly-constructed movie studio. Current Zoning and Land Use: The site is currently used as an industrial park and is zoned as M3-1, which allows for heavy manufacturing. Other uses include warehousing, office work and the making of films. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used as a ship building and repair facility from the 1800's to the mid-1900's. These activities included metal fabrication, painting and sand blasting, as well as various support activities including the maintenance of the electrical system. These functions resulted in the release of metals, petroleum products and PCBs. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) was created for the site-wide investigation in an effort to find discreet source areas throughout the BNY facility. OU2 was created in order to expedite the investigation at a portion of the site prior to building a new movie studio. OU 3 was created in order to expedite the investigation at a portion of the site that was to have a second studio built upon it. For administrative reasons, OU 3 was subsequently terminated, and the remedy was incorporated under the OU 1 remedy. All studies are now complete. Site Geology and Hydrogeology: Site soil is comprised of many feet of historic fill (e.g., soil mixed with coal ash and building rubble) that was placed in low-lying, marshy areas over a hundred years ago. Groundwater occurs at a depth of approximately four feet below ground surface, and it flows west/northwest towards the East River.

Env Problem:

Nature and Extent of Contamination: The majority of the Brooklyn Navy Yard is underlain by historic fill, and soil and groundwater quality at the site is reflective of this. Much of the low to moderate-level metal and Semi-Volatile Organic Compound (SVOC) contamination identified during the study is attributable to coal ash, cinders, asphalt and other fill materials in the upper soil layer (0 ft-20ft below ground surface), with concentrations of contaminants typically elevated above state Unrestricted, Residential, and Restricted Residential Use Cleanup Objectives, but generally near the states Restricted Commercial Use Cleanup Objectives (see 6 NYCRR Part 375-6). The metals and SVOC compounds detected in site soil/fill appear to be bound through physical and chemical processes, limiting the potential for ground water impacts, as well as curtailing pathways to environmental receptors (i.e., groundwater and down gradient surface waters). Groundwater contamination with metals and SVOCs is present at levels that are generally reflective of the historic fill present at the facility, with only one well showing SVOC levels appreciably above standards, and that well (MW-04) is thought to be impacted by contamination emanating from the nearby former manufactured gas plant at the adjacent K-Nassau Works MGP site (Site ID No. 224019B). That site is being addressed under a separate investigation, and the impacts to groundwater will be assessed under the remedy for that site. Metals in excess of groundwater standards

appears to be largely an artifact of the sampling technique (i.e., soil particles became entrained in the water sample), as opposed to a wide-spread plume of dissolved contamination. Soil vapors were assessed at the facility and while certain contaminants were detected, the levels were not considered to be indicative of a potential threat to indoor air. Twenty-seven electrical sub-stations are located within the Navy Yard, and twenty-four (24) of those were found to be contaminated with polychlorinated biphenyls (PCBs). The levels of contamination vary, but in no case were PCBs found at a level which the NYSDEC considers a source area of contamination, and the contamination was often limited to the concrete foundation the transformers rest upon. Special Resources Impacted/Threatened: Sediments contained several metals and SVOCs above screening criteria, however, the aquatic ecological evaluation shows the benthic and finfish communities to be of moderate diversity and population size, consistent with other similar settings in the New York City area. The investigation concluded that the ecological resources at the Brooklyn Navy Yard (Wallabout Basin) have not been significantly impacted by site contamination.

Health Problem: People in the area around Brooklyn Navy Yard are not exposed to site contaminants in their drinking water since the area is served with public water. Any contamination that may remain in soil at the site following excavation and off-site disposal will be inaccessible since it will be under pavement, structures or one foot of clean soil over a demarcation layer. Data collected during investigations indicate that it is unlikely that people in the area of the site would be breathing any site-related contaminants.

DEC Memo: 11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski.02/02/06: This spill transferred from S.Kraszewski to Q.Abidi.04/04/06: This spill transferred from Q. Abidi to Koon Tang.12/30/09: Spill transferred to J.kann and consolidated with 9912596.3/10/11: J.Kann - Investigative work plan submitted on 3/3/11.12/30/14: J.Kann - Work Plan approved, Site included in multi site stipulation executed on 10/14/14. SIR due 4/14/15/12/15: J.Kann - field work is ongoing. Modifications were made to the work plan based on field conditions. One viable well has been installed. Depth to gw is approximately 41 feet. Drew Pardus called and explained that there is no visual or PID impacts around the tank. He sent an email requesting that and requesting that just one more attempt be made at SB-4. The following email was sent to drew Pardus DPardus@PardusEnv.com 646-577-8280 "Based on the diagram I have the following recommendation-Another soil boring should be advanced in the northeastern area of the tanks (in the vicinity of SB-2). Even if it is in the "garbage" area that we had discussed which is a few feet to the east. I do not feel that that area has been investigated at all based on the relocation of borings and the termination of SB-3 at 11-15 feet. Otherwise, I am fine with your recommendation. However, keep in mind if laboratory results come back with elevated levels of contaminants, additional work will be necessary."3/12/15: J.kann - Received report on 3/2/15. Reviewed report. Concurred with the recommendations of no further action given no contamination was detected as a part of the 2015 investigation (6 borings advanced, 6 soil samples analyzed, 2 wells installed and sampled). Spill closure email sent to NYCHA today.  
Remarks: DURING TANK REMOVAL OF A 25,000 GALLON TANK, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCK PILED AND SAMPLED.

Remarks: cement before he arrived at the property. Property owner is Mr. Barry (718-326-7265)Mr. Barry said the tanks were not pulled, but rather filled in place. Apparently the property is being sold and Mr. Barry would like this old spill closed out.PBS Application will need to be updated to identify that the status of the tanks is not "Removed", but rather "Abandoned in place" 4/11/2002 Sangesland left a message with Joseph Martinez of Galli Engineering (734 Walt Whitman Rd. Suite 402A Melville, NY 11747)According to Mr. Barry, soil borings were drilled and tested.Review needs to confirm that soil samples were taken in appropriate locations and that samples were tested to EPA Method 8270 and 8021. Since this was a "Tank Farm" of several 550 gal UST's at least 1 ground water sample will also need to be run for VOC and SVOC's.4/12/2002 Sangesland spoke with Mr.Martinez of Galli Engineering.Apparently a Phase I and Phase II report has been completed including soil borings. After a discussion of what was in the report, it was concluded that a well would be required and groundwater tested. Mr. Martinez will complete this work and incorporate the results into his report and resubmit.Sangesland also forwarded to Mr. Martinez a copy of "Spill Closure Report Outline".4/13/2002 Sangesland forwarded (fax) a request to identify the location/status of the waste oil 550 UST. Requested a soil boring tested to 8021, 8270 and RCRA Metals.4/26/2002 Sangesland received a "Sampling Investigation Work Plan" from Galli Engineering which outlines 2 soil borings and 1 water sample - All as discussed above. Sangesland forwarded an OK back to Galli Engineering to go ahead with this work. 7/8/2002 Sangesland was on site for an additional round of soil borings and groundwater sampling. Specific boring and water sampling locations were selected on site with Galli. All samples appear clear. Galli will submit samples to the lab and will prepare a closure report.8/15/2002 Sangesland reviewed a "Spill Closure Report" dated August 9, 2002. This report presents additional soil boring data from July 8 field work, results from 2 well samples (65' depth) and a section on the MTBE issue at the site. All of the soil results for the site are ND for VOC and SVOC. The groundwater samples were trace or ND for VOC and SVOC. MTBE was detected in both groundwater samples: (GW-7 = 1,106 ug/L) and (GW-8 = 2,543 ug/L).In the MTBE section of the report, Galli presented data to support their belief that the MTBE found was due to several documented MTBE releases within 1/2 mile upgradient of this site. Based on this analysis and the lack of any detection of MTBE, VOC or SVOC's in any of the soil samples above 65ft depth, the DEC is satisfied that this site is not causing any negative impact to the environment.Spill Closed (8) 550 GAL TANKS FAILED AN AIR PRESSURE TEST WITH AN UNDETERMINED LEAK RATE, UNKNOWN ACTION.

Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as having had disposal from 1960-'79. An on-site inspection was carried out by DEC, Region 2 on April 29, 1980. The entire manufacturing building is four stories high and there was a freight unloading area adjacent to the buildings and parking lot. Facility is bounded by Prospect Street and York Street. There appears to be no disposal ever practiced here.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL"2/23/99Spoke to Morris KreppelAfter repair the manhole manifold, they retested the tank and it passed. He will submit paperwork for my review. 3/1/99Spoke to Morris Kreppel. After installing a new gasket, the tank passed the retest. Phil Lodico, enforcement attny in Albany, got involved after 3 notices that the tank was overdue for testing. Apparently the city operates the tank so Kreppel forwarded the notices to the city who then ignored them. Currently being fined \$11K, \$10K of which will be waived if they comply within 60 days. Told Kreppel that he needs to submit an exposure affidavit complete with whether or not contamination was encountered during the work. 3/19/99Spill closed as per 3/4/99 letter from ABC Tank signed by Mark Salamack indicating that a gasket, nuts and bolts were replaced on the manhole and the system passed the HEZ3 retest and that no contamination was discovered during repairs.  
Remarks: TANK TEST PERFORMED ON BEHALF OF COMMERCIAL COOLING SERVICE, HELEN, (718) 492-2100. COMMERCIAL COOLING TO BE GIVEN A QUOTE FOR ISOLATING AND RETESTING THE TANK ONLY.

Left message for Gulum. Contact owner if no return call.7/21/05: Al Gulum found a file with several reports. He will make copies and send them to me.7/14/05: Spoke with Al Gulum. He will check his records.9/7/06 - Austin - Assigned from Albany to Region 2 staff for review and closure - end10/20/06 - Raphael Ketani. The spill case was opened due to the discovery of a buried 275 gal. tank and associated contaminated. The soil was excavated and the lead hot spot was also removed. Reports and correspondences regarding the excavation work are in the file. The present owners of the property are: 1 Carlton Associates Inc. The site location is block 02031 and lot 0016.I found a letter in the file dated 11/5/97 and written by Anthony Sigona, the previous Spills case worker for the project. The letter states at the end that the spill case will be closed.Based upon the reports and other documentation in the file, and the 11/5/97 letter, I am closing he spill case and setting the closure date as 11/5/97.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"Con Ed e2mis Notes:7/29/00 Found an undiaperable film of transformer oil on approx 50gal water in manhole. Transformer was pressure tested, did not hold, found sweat on valve. Historical PCB count is 13ppm. Vault has floor drain connected to sump. Sump connects to sewer but pump was not running and no oil was found in discharge line. Transformer installed in 1991. Sample returned <1ppm PCB. Cleanup completed by double washing with slix. Liquids removed by tanker, solids by vactor.UPDATE 4-25-02 1530 HRS J.CAMPANILE OS NETWORK REPORTS ON 8-18-00 NETWORK CREW FOUND OIL VALVE TO BE GOOD, NOT LEAKING. THEY PRESSURE TESTED TRANSF AND IT PRESSURED GOOD. INSPEC TRANSF AND FOUND NO DEFECTS. 4/26/02, 2:01 PM e-mail from Ron James, B/Q EH&S:Jane: Attached is the incident report for the other requested vault. The transformer was deemed not to be in need of replacement. After the pressure test on the date of the spill and the sweat that was noticed, the operator (finder of the spill) processed the transformer for a further inspection.That inspection was done on 8/18/00. No leak was found after another pressure testing and closer inspection. A routine inspection on 3/14/01 also found no leak or signs of any oil spill. Ron

Remarks: sheen on 50 gals of water contained in manhole. clean up pending. con ed 132-602

DEC Memo: 1/3/14-Vought-Vought spoke with primary off hours responder DEC Piper who noted that he spoke with Riteway (Anthony Lara) and Lara noted that he will be sending crew for cleanup. Spill assigned to DEC Piper for followup. DEC received duplicate spill report for this site (Spill 1309611) and administratively closed that spill (called in by Rob Hill of Riteway) and referred it to this open spill. Vought called Riteway (Rob Hill Ph:718-855-7272) and told him that DEC Piper was Project Manager for this spill.

Remarks: #4 Oil leak from a vent pipe at building. Oil ran down sidewalk and curb about 50'. Dont believe to have affected any storm drains or other resources.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD"04/13/06- Case was transferred from Jake Krimgold to Koon Tang.07/03/2007: This spill case was transferred to A. Doronova. AD8/2007: Called few times to 26 court Associates and left messages. No response yet. AD11/21/2007: Called Joe Schachter (718)802-9272 - contact person for this site on PBS registration form. AD11/30/2007: Received a call from Mr. Schachter. He said that there is no any spill registered in their records for 26 Court street. Faxed him FOIL version of the spill report. In the DEC report it says that Petroleum Tank Cleaners of Brooklyn was contacted after the release, and that PTC will perform the cleanup. Called PTC to confirm if they have any record of this spill in their files. After searching their data no such record was found. Will contact Castle Oil - notifier. AD12/07/2007: Spoke with Mr. Robert Hill of Castle Oil. He said that such spill was reported for 235 Lincoln Place, Brooklyn NY, not for 26 Court Street, Brooklyn, as it was documented in our file. He also cleared that management office for 235 Lincoln Place located at 26 Court Street. AD01/14/2008: Called and left a message for J. Shachter. AD01/16/2008: Received a phone call from Mr. Shachter. He said that he is not with Advanced Management (AM) company, which office is also located at 26 Court Street. He gave me phone number for AM (phone: 718-852-5310, contact Linda Feldman).Called her few times and left messages. No any response was received. AD03/26/2008: Left a message to L. Feldman.She returned my call later. Ms. Feldman will submit information regarding spill cleanup till April 7, 2008. AD04/30/2008: Called and left a message to Ms. Feldman regarding spill cleanup information. AD05/06/2008: Called to AM, Ms. Feldman is on vacation. Left a message to her assistant. She called back. Requested to submit all reports regarding this spill till May 16, 2008. AD05/15/2008: Spoke with Linda Feldman. They have only copy of a check they paid to Petroleum Tank Cleaners (PTC) for the spill cleanup, as a proof. Asked her to contact PTC and request a confirmation letter from them. Also asked if they have any documentation regarding line replacement or repair. Ms. Feldman will

submit all this documentation. AD05/16/2008: Received an email from L. Feldman saying: " Dear Ms. Doronona: As per your request, enclosed please find a copy of the paid invoice from Petroleum Tank Cleaners for DEC Spill #04-00897 for the premises located at 235 Lincoln Place. Very Truly Yours, Linda Artman Feldman Property Manager" DL it to eDocs. AD12/16/2008: Received a letter from Mark Salamack of Petroleum Tank Cleaners, Ltd. (PTC). It states that on April 27, 2004 PTC responded to a call made by Advance Management Services. An oil delivery was made to one of their buildings, located on 235 Lincoln Place, Brooklyn. During the course of the delivery, a fill line separated inside the building and a considerable amount of #2 fuel oil was released onto the floor of the boiler and tank room, which covered in solid concrete and has several coats of paint on it. The debris from the boiler room was collected into DCT drums for disposal. The floor was then pressure washed and the resulting water collected in a vacuum truck for disposal. The boiler room floor has been found to be adequately coated and free of cracks, which prevented the oil from seeping through. No soil samples were collected. Disposal manifests and liquid disposal receipt were attached to the letter. PTC request spill closure. The letter also states that the fill line replacement was performed by other contractor. No any supporting documentation on line repairman was not submitted yet. The site map is missing. AD01/12/2009: Received a phone call from M. Salamack of PTC. He asked about the case closure. Told him that the RP should submit all documentation related to the spill and the cleanup, and also site plan with tank and piping location. Mr. Salamack said that he will contact AM. Later received a phone call from Jannet Avorodo of AM. Explained her what type of documentation should be submitted. AD03/09/2009: Received a letter from PTC with attached pictures of the boiler room, and a letter from GEE CEE Mechanical Service, Inc. as a proof of the fill line replacement for the # 2 fuel oil AST. The requested site map was not submitted. AD04/2009: Called and left a message to Salamack regarding missing site plan. AD02/2010: called and left a message to Mr. Salamack. AD

Remarks:

Either a broken fill line leading to storage tank or abandoned fill line leading to basement is the cause of the spill of 1200 gallons of #2 fuel oil. Spill is in the basement of building. Petroleum Tank Cleaners (PTC) of Brooklyn contacted. Will send vacuum truck and spill crew.

DEC Memo:

3/26/07 bf: called David Marcus of 111 Livingston LLC. Dry leak at both tanks. failure due to testing error. Pro Test to return for retest on 4/2/07. TTF letter faxed to Mr. Marcus (718)797-2429. Also mailed to:David Marcus111 Livingston LLC111 Livingston St.Brooklyn, NY 112014/12/07 Received fax from John Leddy of Pro Test. Tanks were retested on 4/2/07 and probe was properly sealed. Waiting for tank test results. Letter states they have been mailed. Received message from david marcus at 4:14 PM. He said tanks were retested and passed and wanted to know if any more information was needed from him. bf4/13/07 Returned call to Mr. Marcus. I told him I received fax from Mr. Leddy. Tank test results are still needed to close spill. Received tank test results this afternoon. NFA. bf  
Remarks: Both tanks failed with dry leaks.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"12/26/2001 - Tank test failure. DEC required the owner to file a new PBS form (signed by the owner) stating that the tank would be removed. Kevin O'Connor from Action Remediation (516-781-3000 ext 2421) stated that the tank would be pulled on Thursday Dec 27th,

while the school is closed for Christmas vacation. Sangesland requested Action Remediation to take endpoint samples from the excavation and to take several color photos of the tank and excavation area. A proper "Tank Closure" report must be submitted to the DEC. 1/11/2002 - Sangesland received a "Draft" version of the report. Apparently only a single "composite" sidewall sample was taken along with a bottom endpoint sample. Sangesland called Kevin O'Connor to discuss the format and content of the "Tank Closure" report and requested several additional items. This Tank Closure report should include: 1) Discussion of what the tank problem was, what was done to solve/clean it, how the close out went. 2) Discuss the end point sampling - What was found, did it exceed limits (compare results to TAGM). 3) If anything exceeds limits, state how it will be remediated, or justify why this level of contamination is acceptable to be left on site. 4) Photos of the excavation. 2/1/02 - Sangesland received another package of information from Kevin O'Connor at Action Remediation. This package included the same information submitted earlier, plus photos. MISSING FROM THIS REPORT WAS: 1) THE SPILL NUMBER 2) THE NARRATIVE OF WHAT HAS BEEN DONE ON THE SITE AND WHY 3) THE CONSULTANTS REVIEW AND INTERPRETATION OF THE LAB RESULTS 2/7/2002 Protest sent a letter dated 1/30/2002 (Mailed 2/4/2002) Which included the information listed above (1/2/02 notes). Minor contamination continues to exist, but structural problems limit the ability to excavate any further. (Use of biologicals was not suggested by Protest). Spill Status - "No Further Action"

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO"sent TTF ltrTried, but could not make contact with property owner. Refer back to Region 2. S. Scharf10/30/06 bf: sent ttf letter to:Rick ManeroBPC Management Corp.80 Livingston St.Brooklyn, NY 1120111/13/06 on November 3, 2006, DEC received a response to the ttf letter. Response was a collection of records pertaining to the tank. The registration certificate and invoices from Petroleum Tanks describing the closure and installation of a 1500 gallon AST were included. The AST is not registered. The UST failed the tightness test due to a faulty vent line. I called Petroleum Tanks and spoke with Mark Salamack. He checked his records and recalled that the vent line prevented the tank from passing the tightness test and that no contamination was observed during isolation and the in-place closure of the tank. He also confirmed the installation of the AST. This case was referred to DLA and a consent order will be sent out for an unregistered tank. bf4/27/09 According to M. Salamack, the cause of tank failure was the vent line and no contamination was found during repairs, no further action is required at this time. bf

Acreage: Not reported  
Description: The Navy Barracks are located in the County of Kings, Borough of Brooklyn, City of New York, State of New York. The site is bounded on the North by Flushing Avenue, on the South by Park Avenue, on the East by Vanderbilt Avenue and on the West by Clermont Avenue. The site was improved by a six story concrete building utilized as a military prison and three story brick building used as barrack and for administrative purposes. The NYC Department of Corrections is used as the Brooklyn Correctional Facility. The former military prison building and associated utilities are beneficially used by the present owner the New York City Department of Corrections. The former Navy barrack and administrative building is abandoned and owned by GSA. There are number of underground storage tanks, which were never used by the present owner.  
History: As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

**Site Description:**      Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates at the site. The site is covered by buildings, some asphalt parking areas and walkways. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The nearest residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site groundwater is tidally influenced.

**Env Problem:**          Environmental conditions at the site will be determined during the Site Characterization.

**Health Problem:**      The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

DER Facility ID: 124588  
DEC Memo: Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIPPLE"9/24/03 There was a Ferric Chloride spill called in to the DEC Hotline by DEP James Daley at 8:37 AM on September 24,2003. Reportedly, the spill was caused by a tank failure. DEC Spill responder Michelle Tipple and Joseph Kudirka from the Water unit responded to this spill.Upon investigation, an 8000 gallon tank of Ferric Chloride had an internal failure and released some of it's contents to a secondary containment tank, this secondary tank released some of the Ferric Chloride into the containment area surrounding the secondary tank. The containment area surrounding the secondary tank had been modified with the installation of a wooden structure secured with steel bolts around the top of the containment. When the chemical hit the bolts they were dissolved, allowing a small amount,10-15 gal of Ferric Chloride beyond the containment areas.Soda Ash was applied to the Ferric Chloride as required by DEP protocol. Mats were placed on the drain inlets in the vicinity to reduce the possibility of the chemical reaching the water.Eagle Brook Pump and repair were in route to remove all product from the tanks and containment area, assess and repair the system. DEP Plant Superintendent Joseph Massaro will keep DEC updated.9/25/03 Tipple followed up with James Daly- DEP safety. Eagle Brook worked until 4:30 this AM removing product and thoroughly cleaning the tanks and impacted area, all product removed from the site was carried by the eagle brook company's properly tagged tank trucks. Upon inspection of the cleaned system it was determined that the discharge line on the bottom of the tank was compromised causing the release. The system repairs are scheduled to begin later today.

Remarks: ruptured tank caused material to leak - atmt to stop leak now -haz mat enroute - 10 to 15 gal on the ground -- over 1000 gal inthe tank -- potential for a large spill

DEC Memo: All site motor fuel tanks will be removed in december 07. Lou will be in touch. 1/30/08- DEC Piper spoke with Site chief Rob rickey. There will be a meeting tomorrow and he will send meeting minutes.3/25/08- Piper- I recieved and reiewed disposal manifests and sampling results. Samples were for characterization. Based on excavation work and sampling, this spill is closed. See e-docs if warranted.

Remarks: NYS Power Authority was digging to put in some conduit and discovered contaminated soil. Caller tested all the tanks in the area and they are fine. Unknown where the material came from. The contract is under the state so the clean up will be determined by them.

**Site Description:**

Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): IndustrialHistoric Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the

groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None

Health Problem: Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

Site Description:    Site DescriptionThe Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by hard urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway. Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres. The canal also serves as a storm water drain for the surrounding area. Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers. Stagnant water conditions have plagued the canal since its initial construction. To combat this, a flushing tunnel at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal. Currently the flushing tunnel has been de-activated to facilitate its upgrade and an oxygenation system has been installed at the upper end of the canal. The first of three new tunnel pumps was brought back on line in Jan 2014, and the remaining two are slated for start up in April. Site History Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope). In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area, the result was a large area of reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyns available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete. Long term decline of the local manufacturing economy has led to a marked decrease in commercial use of the Canal, with only a handful of petroleum distributors and

concrete batch plants as regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

Env Problem: Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified. Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation, remedy selection and implementation. The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process. The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and redevelopment as a mixed commercial/residential project. The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010. Numerous oil storage and handling facilities, asphalt plants, manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

Health Problem: People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes: The NYSDOH recommends that women of childbearing age and children under

the age of 15 not eat any fish from the Canal. Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass. People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

Alias Name: GOWANUS CANAL  
Alias Address: BUTLER ST(BETWEEN BOND ST AND NEVINS ST)  
BROOKLYN, NY 11231  
Alias Comments: Not reported  
Site Description: The Gowanus Canal runs through a highly developed area in Brooklyn, New York, and is impacted by contaminated sediments, principally due to activities of former Manufactured Gas Plants (MGPs). Surface sediments contain PCBs at levels up to 350 ppm, and coal tar residue up to 23% by weight of sample.

**FINDS:**

Registry ID: 110033604197

**Environmental Interest/Information System**

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**Actual:**  
**9 ft.**

**Site Description:** LOCATION:The Site is located at 198 Douglass Street in Brooklyn, between Bond Street and the Gowanus Canal. **SITE FEATURES:**The property is 0.18 acres and features a one-story warehouse building which is currently used for the storage of art and antique goods and furniture. **CURRENT USE/ZONING:**The property is currently used for the storage of antique goods. It is zoned for manufacturing use. **HISTORICAL USES:**The Site has historically been used for a variety of industrial purposes. Prior to its current use, the Site was owned and operated by Paramount Plumbing (approx. 1995 to 1998) and O.Z. Electrical Manufacturing Company Inc. (approx. 1960 to 1995). O.Z. also formerly owned and operated on the adjacent property (196 Douglass) as well as three buildings to the west, across Bond Street (262 Bond Street). Earlier owners/operators include P.H. Hughes Lime, Brick and Lath Yard (approx. 1887 to 1900); a gravel/crushed stone yard (approx. 1900 to 1930); and the Knickerbockers Ice Company, which included a machine shop (1930?s). **SITE GEOLOGY AND HYDROGEOLOGY:**Fill material consisting of sand, silt, gravel, and construction/demolition debris has been encountered to approximately 10 feet below ground surface (fbgs). Beneath the fill material (10 to 36 fbgs) is a sequence of inter-bedded silt, clay, sand, and peat layers atop fine to coarse-grained sand to a depth of approximately 48 fbgs. Groundwater has been encountered at depths ranging from 1.5 fbgs to 9 fbgs, during various investigations. USEPA Superfund investigations in the area of the Gowanus Canal have found that shallow groundwater flows toward the canal at both low and high tide. Intermediate groundwater generally flows upward toward the canal. Based on water chemistry measurements in surface water and

groundwater (collected during Superfund investigations of the Gowanus Canal), it was concluded that infiltration from the canal controls water quality in shallow wells adjacent to the canal, with decreasing influence with distance from the canal. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: A Site Investigation performed in April/May 2012 confirmed that tetrachloroethene (PCE) previously detected in groundwater was limited and not indicative of a release of hazardous waste. GROUNDWATER: In 2006, PCE was detected in groundwater at a concentration of 1,600 parts per billion (ppb) and benzene at 14 ppb, from one grab groundwater sample collected from one boring. In the 2012 Site Investigation, groundwater was sampled from four groundwater monitoring wells. Groundwater samples were analyzed for volatile organic compounds (VOCs). Several VOCs were detected; however, the only contaminants detected at concentrations that exceed standards were isopropylbenzene (detected at 5.1 ppb compared to the standard of 5.0 ppb) and methyl tertiary butyl ether (MTBE) (detected at 10.7 ppb compared to the standard of 10 ppb). The standards cited for groundwater are the NYS Ambient Water Quality Standards and Guidance Values for Water Class GA from NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1. SOIL: The 2012 Site Investigation included soil sampling from 7 soil borings and analysis for VOCs. The only contaminant detected above standards was isopropylbenzene, detected at 3.91 parts per million (ppm) compared to the CP-51 Supplemental Soil Cleanup Objective for protection of groundwater of 2.3 ppm. A few VOCs were detected on site in the 2006 soil boring, but at very low concentrations. SOIL VAPOR: In soil vapor, trichloroethene (TCE) was detected in two samples at a maximum concentration of 200 micrograms per cubic meter (ug/m3); however TCE was not detected above reporting limits in concurrent indoor air samples. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

DEC Memo: DEC Piper contacted Caller Jeff Flannigan. He will copy report and analytical and send to DEC.9/8/06- DEC Piper reviewed subsurface investigation report. AS per report, investigation was due to the presence of petroleum vapors inside work area. 1 boring was completed. Groundwater was encountered at 9 feet bgs. A water sample was collected at 34 feet which contained elevated levels of benzene, PCE and a variety of SVOCs were above standards. A soil sample was

collected at 36 feet bgs which indicated trace levels of chlorinated solvents. Indoor air samples revealed elevated levels of petroleum and chlorinated solvents were detected above standards. Due to the soil and gw samples not being collected at the gw interface, the concentrations observed where collected, and indoor air quality, additional investigation is warranted. Case referred to remediation.9/20/06- DEC Piper . Spill transferred to remediation as per Austin on 9/8/06.11/13/06 - reviewed site assessment report, found PERC in GW. Need to contact consultant to get more delineation of the GW contamination. - KST4/11/08 - This spill has been transferred to D. Kaplan. Since previous reports were missing the representative of the site was contacted and the subsurface investigation report was obtained from the environmental consultant. 5/7/08 - Met the environmental consultant (Djamel Lekmine, AMEC), architect Jeff Flannigan who was acting as representative of the owner (was in charge of construction at the time the spill was reported), and attorney for the owner at the site. The entire lot is covered with a building with slab on grade finished floor. The building serves as a storage facility for fine art. It was explained that additional investigation was necessary. 5/19/08 - Environmental consultant sent a proposed work plan for additional investigation which was very incomplete (see edocs). 5/27/08 - A letter was sent to the environmental consultant describing additional requirements for a subsurface investigation.8/26/08 - Attorney for the owner has been trying to work out a site access agreement with the owner of the adjacent property (196 Douglass St). Representative for the owner of 196 indicated that they are unwilling to grant site access.9/26/08 - After negotiations with the owner of 196 Douglass for site access proved unsuccessful, DEC attorney (John Urda) sent a letter to the owner citing statutory authority for site access for investigation work. See edocs.5/11/09- The work was performed February 10th and 11th. The report has not yet been received.6/18/10-Vought-Received inquiry from DEC Austin as to whether Site should be transferred to Vought as P-Site . Vought discussed with DEC O'Connell and spill reassigned from Kaplan to Vought and entered into P-Site Tracking Spreadsheet.2/8/11-Vought-Spill transferred from DEC Vought to DEC Kaplan for further action.6/10/11 - Transferred to hazardous waste program as potential hazardous waste site (P site 224152)

Remarks:

THERE WAS SOIL SAMPLE TESTING AND GROUND WATER TESTING. THERE WAS DIFFERENT MATERIAL THAT WAS FOUND AT THE SITE. THERE ARE TRACES OF VOLATILE ORGANIC COMPOUND, TETRACHLOROETHENE,ETHYLBENZENE, XYLENE WAS FOUND IN SOIL SAMPLE. THE WATER SAMPLE HAD BENZENE, TETRACHLOROETHENE. THEY WERE DIGGING AT THIS SITE.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 04/08/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 04/08/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 04/08/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/07/2015
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 04/08/2015
Number of Days to Update: 64	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Varies

## ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/07/2015

## ***Federal RCRA non-CORRACTS TSD facilities list***

### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/10/2015

## ***Federal RCRA generators list***

### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015  
Date Data Arrived at EDR: 03/31/2015  
Date Made Active in Reports: 06/11/2015  
Number of Days to Update: 72

Last EDR Contact: 03/31/2015  
Next Scheduled EDR Contact: 07/13/2015  
Data Release Frequency: Quarterly

### **RCRA-SQG: RCRA - Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/10/2015  
Date Data Arrived at EDR: 03/31/2015  
Date Made Active in Reports: 06/11/2015

Data Release Frequency: Quarterly

### **RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015  
Date Data Arrived at EDR: 03/31/2015

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal institutional controls / engineering controls registries***

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/16/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/17/2015	Telephone: 703-603-0695
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 06/01/2015
Number of Days to Update: 77	Next Scheduled EDR Contact: 09/14/2015
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/16/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/17/2015	Telephone: 703-603-0695
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 06/01/2015
Number of Days to Update: 77	Next Scheduled EDR Contact: 09/14/2015
	Data Release Frequency: Varies

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2015	Source: Department of the Navy
Date Data Arrived at EDR: 05/29/2015	Telephone: 843-820-7326
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 05/18/2015
Number of Days to Update: 13	Next Scheduled EDR Contact: 08/31/2015
	Data Release Frequency: Varies

## ***Federal ERNS list***

### ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 03/30/2015	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 03/31/2015	Telephone: 202-267-2180
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 03/31/2015
Number of Days to Update: 63	Next Scheduled EDR Contact: 07/13/2015
	Data Release Frequency: Annually

## ***State- and tribal - equivalent CERCLIS***

### SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/18/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/20/2015	Telephone: 518-402-9622
Date Made Active in Reports: 06/19/2015	Last EDR Contact: 05/20/2015
Number of Days to Update: 30	Next Scheduled EDR Contact: 08/31/2015
	Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 11/01/2014	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/19/2014	Telephone: 518-402-9814
Date Made Active in Reports: 01/12/2015	Last EDR Contact: 05/22/2015
Number of Days to Update: 54	Next Scheduled EDR Contact: 08/31/2015
	Data Release Frequency: Varies

## **State and tribal landfill and/or solid waste disposal site lists**

### SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 04/08/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/10/2015	Telephone: 518-457-2051
Date Made Active in Reports: 04/30/2015	Last EDR Contact: 04/06/2015
Number of Days to Update: 20	Next Scheduled EDR Contact: 07/20/2015
	Data Release Frequency: Semi-Annually

## **State and tribal leaking storage tank lists**

### LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 05/18/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/21/2015	Telephone: 518-402-9549
Date Made Active in Reports: 06/19/2015	Last EDR Contact: 05/21/2015
Number of Days to Update: 29	Next Scheduled EDR Contact: 08/31/2015
	Data Release Frequency: Varies

### HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/08/2005	Telephone: 518-402-9549
Date Made Active in Reports: 07/14/2005	Last EDR Contact: 07/07/2005
Number of Days to Update: 6	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

### INDIAN LUST R10: Leaking Underground Storage Tanks on Indian Land LUSTs on Indian land in Alaska, Idaho, Oregon and Washington.

Date of Government Version: 02/03/2015	Source: EPA Region 10
Date Data Arrived at EDR: 02/12/2015	Telephone: 206-553-2857
Date Made Active in Reports: 03/13/2015	Last EDR Contact: 04/27/2015
Number of Days to Update: 29	Next Scheduled EDR Contact: 08/10/2015
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## INDIAN LUST R8: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming.

Date of Government Version: 04/30/2015	Source: EPA Region 8
Date Data Arrived at EDR: 05/05/2015	Telephone: 303-312-6271
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 04/27/2015
Number of Days to Update: 48	Next Scheduled EDR Contact: 08/10/2015
	Data Release Frequency: Quarterly

## INDIAN LUST R7: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Iowa, Kansas, and Nebraska

Date of Government Version: 03/30/2015	Source: EPA Region 7
Date Data Arrived at EDR: 04/28/2015	Telephone: 913-551-7003
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 04/27/2015
Number of Days to Update: 55	Next Scheduled EDR Contact: 08/10/2015
	Data Release Frequency: Varies

## INDIAN LUST R6: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in New Mexico and Oklahoma.

Date of Government Version: 03/17/2015	Source: EPA Region 6
Date Data Arrived at EDR: 05/01/2015	Telephone: 214-665-6597
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 01/26/2015
Number of Days to Update: 52	Next Scheduled EDR Contact: 05/11/2015
	Data Release Frequency: Varies

## INDIAN LUST R4: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Florida, Mississippi and North Carolina.

Date of Government Version: 09/30/2014	Source: EPA Region 4
Date Data Arrived at EDR: 03/03/2015	Telephone: 404-562-8677
Date Made Active in Reports: 03/13/2015	Last EDR Contact: 04/27/2015
Number of Days to Update: 10	Next Scheduled EDR Contact: 08/10/2015
	Data Release Frequency: Semi-Annually

## INDIAN LUST R1: Leaking Underground Storage Tanks on Indian Land

A listing of leaking underground storage tank locations on Indian Land.

Date of Government Version: 02/03/2015	Source: EPA Region 1
Date Data Arrived at EDR: 04/30/2015	Telephone: 617-918-1313

## VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

## **State and tribal Brownfields sites**

### ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Date of Government Version: 05/18/2015

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005	Source: USGS
Date Data Arrived at EDR: 11/10/2006	Telephone: 888-275-8747
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 04/14/2015
Number of Days to Update: 62	Next Scheduled EDR Contact: 07/27/2015
	Data Release Frequency: Semi-Annually

### FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 06/06/2014	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 09/10/2014	Telephone: 202-528-4285
Date Made Active in Reports: 09/18/2014	Last EDR Contact: 06/12/2015
Number of Days to Update: 8	Next Scheduled EDR Contact: 09/21/2015
	Data Release Frequency: Varies

### CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Data Release Frequency: Annually

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Number of Days to Update: 25	Next Scheduled EDR Contact: 09/07/2015
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009	Source: EPA
Date Data Arrived at EDR: 12/10/2010	Telephone: 202-564-4203
Date Made Active in Reports: 02/25/2011	Last EDR Contact: 04/10/2015
Number of Days to Update: 77	Next Scheduled EDR Contact: 08/10/2015

## FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 01/18/2015	Source: EPA
Date Data Arrived at EDR: 02/27/2015	Telephone: (212) 637-3000
Date Made Active in Reports: 03/25/2015	Last EDR Contact: 06/10/2015
Number of Days to Update: 26	Next Scheduled EDR Contact: 09/21/2015
	Data Release Frequency: Quarterly

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

## SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Last EDR Contact: 05/01/2015  
Next Scheduled EDR Contact: 08/10/2015  
Data Release Frequency: Varies

## Financial Assurance 2: Financial Assurance Information Listing

A listing of financial assurance information for hazardous waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/01/2014  
Date Data Arrived at EDR: 01/06/2015

Data Release Frequency: Annually

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/16/2014

Data Release Frequency: N/A

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013  
Date Data Arrived at EDR: 08/19/2013  
Date Made Active in Reports: 10/03/2013  
Number of Days to Update: 45

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers for Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

## Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

## State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

UTM X (Meters):	586019.6
UTM Y (Meters):	4505242.5
Elevation:	20 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

West Map:	40074-F1 JERSEY CITY, NJ NY
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

Target Property County

## **NATIONAL WETLAND INVENTORY**

NWI Quad at Target Property  
BROOKLYN

NWI Electronic  
Data Coverage  
YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Location Relative to TP: 1/2 - 1 Mile ENE  
Site Name: Naval Station Ny  
Site EPA ID Number: NY5170022250  
Groundwater Flow Direction: NOT AVAILABLE.  
Measured Depth to Water: 14 feet in a well located 1 mile southeast of the site.  
Hydraulic Connection: Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s).  
Sole Source Aquifer: Bedrock is present at an estimated depth of 100 feet.  
Data Quality: A sole source aquifer is present at or near the site  
Information is inferred in the CERCLIS investigation report(s)

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **ROCK STRATIGRAPHIC UNIT**

Era: Paleozoic  
System: Ordovician  
Series: Ordovician  
Code: Oe (decoded above as Era, System & Series)

### **GEOLOGIC AGE IDENTIFICATION**

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

**OTHER SOIL TYPES IN AREA**

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

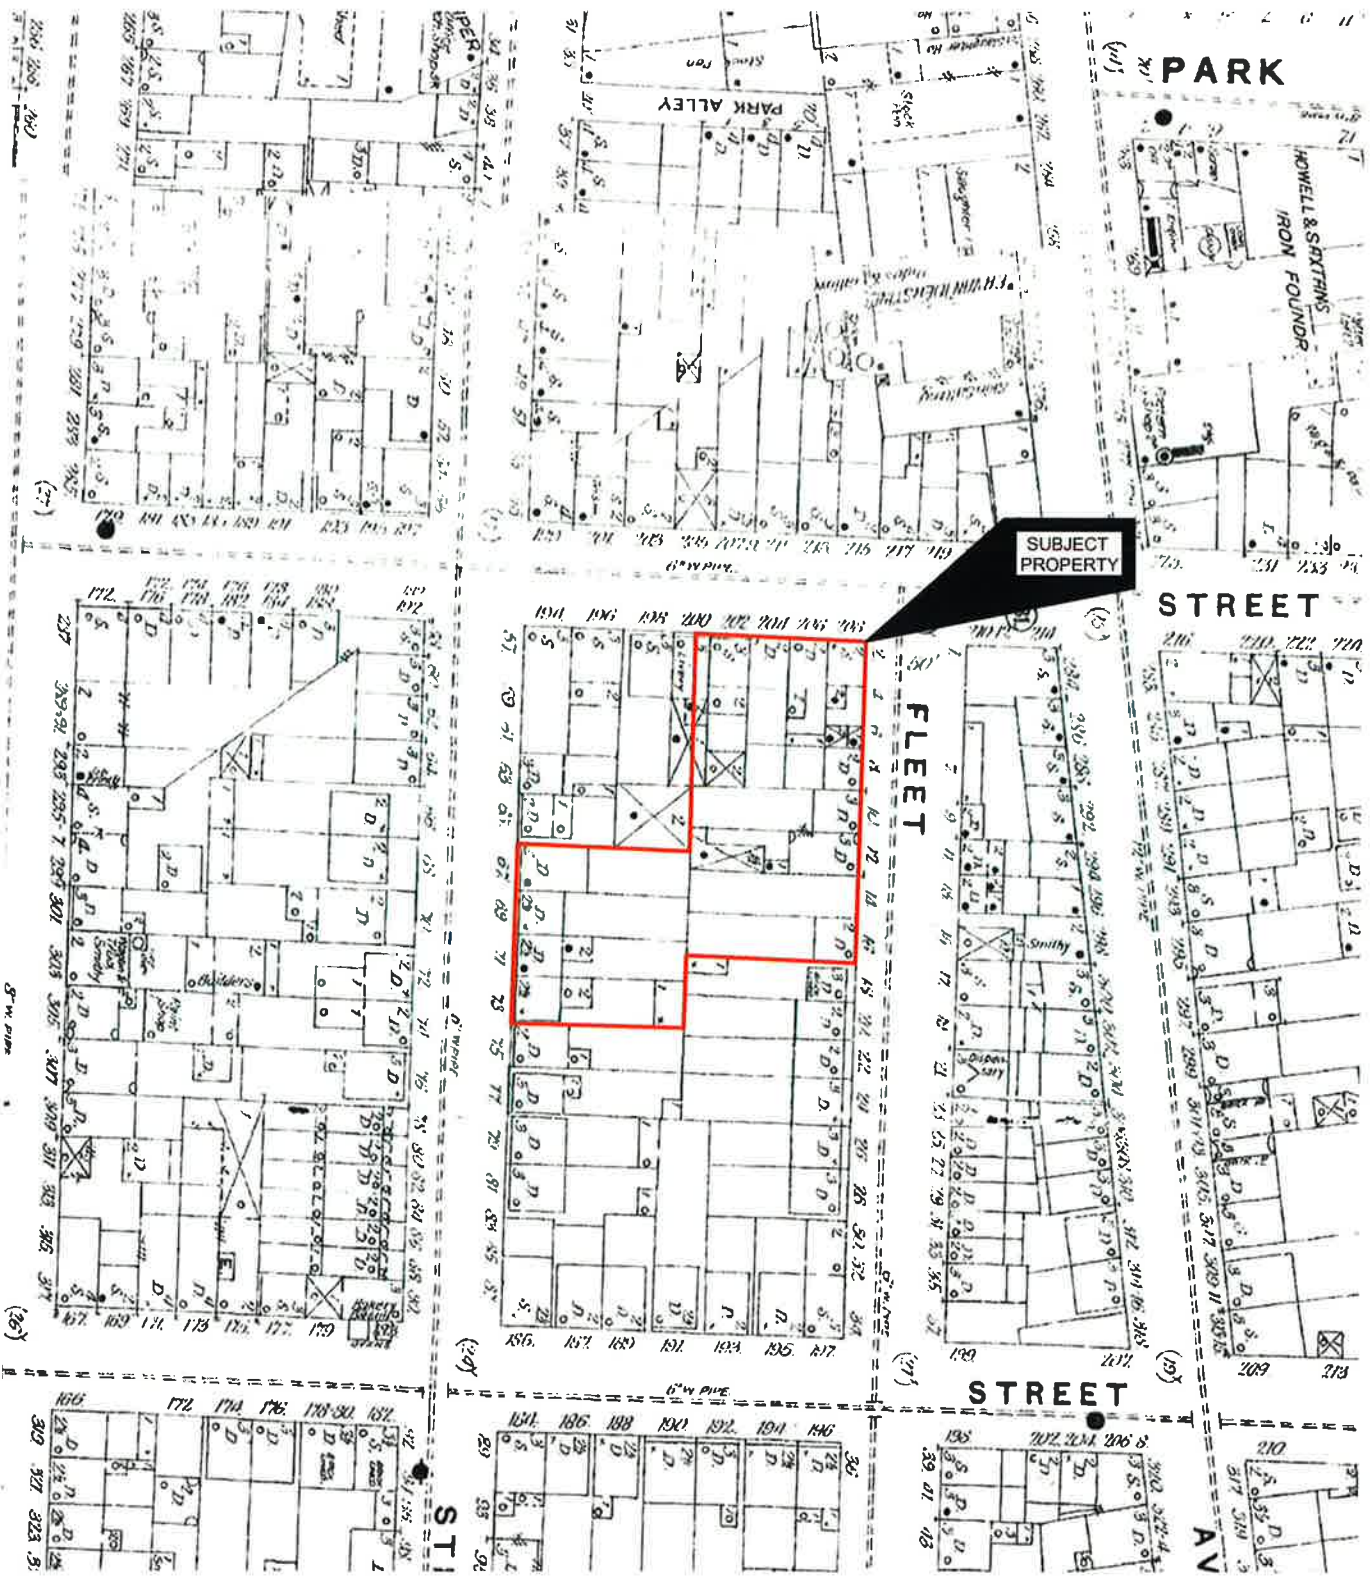

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

**Re: Freedom of Information Request – Environmental Search**  
**Site: 202-208 Tillary Street**  
**Block 2050, Lot 100**  
**Brooklyn, Kings County, NY**  
**Brinkerhoff Project No. 15BR103**

Dear Mr. Abdelsadek:

Brinkerhoff Environmental Services, Inc. is conducting an environmental site assessment of the above-referenced site. This letter is a request to review files relative to environmental issues that your office may have regarding the above-referenced property. Kindly advise us of your findings in writing.

We are looking for site inspection reports, violations for the handling, storage or disposal of hazardous substances, hazardous material releases or spills, underground storage tank information, land use restrictions, and other information regarding potential areas of environmental concern.

Thank you for your time and attention to this matter and please do not hesitate to contact me at 732-223-2225 if you have questions or would like additional information.

Sincerely,

BRINKERHOFF ENVIRONMENTAL SERVICES, INC.

**TO THE DEPARTMENT OF ENVIRONMENTAL CONSERVATION:**  
 I hereby apply to inspect the following records under the provisions of the Freedom of Information Law:

Address of Facility or Site (if applicable)  
202-208 Tillary Street  
Block 2050, Lot 100  
Brooklyn, New York

Spill No. (if applicable) \_\_\_\_\_ Facility ID No. (if applicable) \_\_\_\_\_

PBS No. (if applicable) \_\_\_\_\_

Other: Environmental records such as site inspection records, violations  
for the handling, storage, or disposal of hazardous wastes, UST  
records and/or land use restrictions.

After inspection, should I desire copies of all or part of the records inspected, I will identify the records to be copied and hereby offer to promptly pay the established fees. (Cost of reproduction or 25¢ per page as applicable). Contact me if cost will exceed \$ \_\_\_\_\_.

Name (Print or type) Sean Harrigan Telephone No. 732-223-2225 Fax No. 732-223-3666  
 Company (if applicable) Buhrkerhoff Environmental E-Mail Address sharrigan@bhkenv.com  
 Mailing Address 1805 Atlantic Ave, Manassas, VA 20108

Signature [Signature] Date 7/2/2015

**TO APPLICANT:**

**RECORDS PROVIDED**  
 The reproduction costs for the records provided \$ \_\_\_\_\_  
 Records have been (partially, fully) provided  
 (If not provided, date when records are expected to be fully provided: \_\_\_\_\_)

**RECORDS NOT AVAILABLE**  
 Records cannot be located after a diligent search  The Department is not the custodian for records indicated

**RECORDS DENIED**  
**I hereby advise that access to the records, or part of the records, has been denied for the reason(s) checked below:**

Specifically exempt by another statute  Unwarranted invasion of privacy  
 Would impair present or imminent contract awards or collective bargaining negotiations  Trade secrets  
 Compiled for law enforcement purposes  Could endanger life or safety of any other person  
 Inter-agency or intra-agency materials that are not:

- statistical or factual tabulations or data
- instructions to staff that affect the public
- final agency policy or determinations; or
- external audits, including but not limited to audits performed by the comptroller and the Federal government

Other exemptions (as applicable)

Records Custodian signature \_\_\_\_\_ Date: \_\_\_\_\_

## INSTRUCTIONS

**TO APPLICANT:** (The completion of this form is voluntary; however, it will facilitate access to records you seek.)

1. Please identify the specific records you wish to inspect under the "applicant" portion of this form, sign and date in the appropriate place, and give or mail to the Records Access Officer, NYS Department of Environmental Conservation, 625 Broadway, Albany, New York 12233-1500. In the alternative, you may send your request electronically to [access.records@dec.ny.gov](mailto:access.records@dec.ny.gov)
2. If after inspection you should desire copies, identify to the Records Custodian the specific records to be copied. Make check or money order payable to the "New York State Department of Environmental Conservation" for copies reproduced by the Department.
3. If you are denied access to records or portions of records, you may submit a written appeal to the FOIL Appeals Officer, Department of Environmental Conservation, 625 Broadway, Albany, New York 12233-1500. Such appeal has to be made within 30 days after the denial. Please attach a copy of this form showing the "Records Denied" portion when filing your appeal. The FOIL Appeals Officer will evaluate the appeal and respond in writing to you within ten (10) business days after receipt of the appeal.

### TO DEC RECORDS CUSTODIAN:

1. Conduct search for records:
  - 1a. If records requested for inspection are not in the custody of the Department, advise the applicant if possible as to the identity and location of the proper custodial agency.
  - 1b. If records are found, determine accessibility (in accordance with Public Officers Law Section 87.2)
2. After determination of accessibility:
  - 2a. If accessible, make available to applicant for inspection.
  - 2b. If not accessible, complete "Records Denied" portion of this form, make and retain one copy of completed form, and give original to applicant fully explaining reason for denial.
3. If applicant desires copies, collect total cost from applicant, and make copies (or arrange with applicant to have copies made with outside vendor and applicant pays vendor). Originals must be returned to Department Records Custodian(s).
4. If you are not able to respond to a request within five (5) business days, acknowledge receipt of the request in writing by the fifth business day and estimate when your final response will be made. If a request can not be fulfilled within (20) business days from the date of the acknowledgment letter, you must advise the requester of a date certain for completion of the request.

### SPECIAL NOTE

See [www.dec.ny.gov/public/373.html](http://www.dec.ny.gov/public/373.html) for answers to the most commonly asked questions about DEC and the New York State Freedom of Information Law.

To Whom It May Concern:

Brinkerhoff Environmental Services, Inc. is conducting an environmental site assessment of the above-referenced site. This letter is a request to review files relative to environmental issues that your office may have regarding the above-referenced property. Kindly advise us of your findings in writing.

We are looking for site inspection reports, violations for the handling, storage or disposal of hazardous substances, hazardous material releases or spills, underground storage tank information, land use restrictions, and other information regarding potential areas of environmental concern.

Thank you for your time and attention to this matter and please do not hesitate to contact me at 732-223-2225 if you have questions or would like additional information.

Sincerely,

BRINKERHOFF ENVIRONMENTAL SERVICES, INC.

**DOUGLAS L. HARM, P.G.**  
**Vice President, Technical Services**  
**Principal Hydrogeologist**

## **QUALIFICATIONS AND EXPERIENCE**

Mr. Harm's primary area of expertise is directing geologic and hydrogeologic investigations and the management of technical personnel, including Geologists, Hydrogeologists, Biologists, Geotechnicians, and Environmental Scientists. He has more than 25 years of extensive experience as a Geologist/Hydrogeologist and has managed a diverse range of projects involving complex geologic, hydrogeologic, and environmental issues.

### **Underground Storage Tank Management**

Mr. Harm has directed environmental projects at more than 100 retail gasoline stations for major oil companies, including subsurface evaluation during UST removal, groundwater investigations, design of soil and groundwater remediation systems, oversight during installation of remedial systems, and supervised operation and maintenance of the systems.

Mr. Harm has conducted more than 1,000 site assessments following UST closures for various residential and commercial accounts, including Fortune 500 companies. He has directed numerous projects for municipalities, including the development of bid specifications and the management of the bidding process, and implemented projects involving the removal and/or replacement/upgrade of USTs.

### **Phase I and II Environmental Site Assessments**

Mr. Harm supervises Phase I and II ESAs, SIs, and RIs for commercial/industrial property owners, banks, and public sector clients. He also manages Phase II Environmental Site Assessments at hazardous waste landfills in cooperation with state and federal agencies.

### **Landfill Management and Closure**

Mr. Harm has directed investigations at numerous hazardous waste landfills, CERCLA, and Superfund sites. He coordinates environmental affairs associated with obtaining closure approval and commercial development on former landfills. Projects involved field sampling, site characterization, installation of groundwater monitoring wells, application for discharge to groundwater permits and coordinating liner placement, dynamic compaction plans, and methane monitoring.

### **Asbestos Inspections**

Mr. Harm conducts asbestos inspections in accordance with the Environmental Protection Agency/Asbestos Hazard Emergency Response Act (EPA/AHERA) regulations. Inspections include identifying suspected asbestos containing materials and field sampling according to EPA/AHERA protocol. He is responsible for interpretation of laboratory analytical data and generation of report of findings.

### **Soil and Groundwater Remediation**

Mr. Harm has extensive experience in evaluating geologic/hydrogeologic data for the purposes of evaluating groundwater contaminant transport computer models and evaluating effectiveness of remedial applications. He designs soil and groundwater remediation projects ranging from pump-and-treat systems to passive systems. Mr. Harm's other responsibilities include state and federal permit acquisition and implementation, supervision of operations and system maintenance, and reporting to local, state and federal agencies.

Mr. Harm is an expert in the evaluation, development, and installation of active soil and groundwater remediation systems. He is licensed to run remediation systems requiring an N-2 Industrial Wastewater Treatment System Operator.

### **Subsurface Exploration**

From 1979 to 1986, Mr. Harm worked as an Exploration Geologist in the oil and gas industry. He developed oil and gas field prospects, interpreting a wide variety of geologic and geophysical data. The prospects were then presented to various investor groups for participation in the exploration programs.

Responsibilities included design, coordination, and oversight of well drilling programs. Duties involved interpretation of field data to evaluate economic productivity of the oil and gas wells. Well depths ranged from 800 – 6500 feet deep.

### **Expert Testimony**

Mr. Harm provides expert witness testimony at legal depositions for cases involving soil and groundwater issues. He also provides expert witness testimony in Courts of Law and was sanctioned by the Superior Court of Burlington County as being an expert in the field of environmental issues associated with leaking tanks and geologic and hydrogeologic evaluation.

### **EDUCATION**

B.S., Geology, West Virginia University, 1979

Waynesburg College, Rocky Mountain Summer Field Camp, 1976

### **REGISTRATIONS AND PROFESSIONAL CERTIFICATIONS**

NJDEP Licensed Site Remediation Professional (LSRP) No. 574862

Registered Professional Geologist, Pennsylvania, No. PG000238G

Registered Professional Geologist, Delaware, No. 54-0001217

Licensed Subsurface Evaluator and UST Closure, No. 10556

40-Hour OSHA Certification, 29 CFR 1910.120

Licensed N-2 Industrial Wastewater Treatment System Operator, No. 0016442
