# PHASE I ENVIRONMENTAL SITE ASSESSMENT

**173 Myrtle Avenue  
Portion of Block 2050, Lot 1  
Borough of Brooklyn, Kings County, New York**

**February 18, 2019**

## 1.0 INTRODUCTION

Brinkerhoff Environmental Services, Inc. (Brinkerhoff) was retained by YYY Brooklyn, LLC to perform a Phase I Environmental Site Assessment (ESA) of a Portion of Block 2050, Lot 1 located at 173 Myrtle Avenue in the Borough of Brooklyn, New York County, New York (hereinafter referred to as the site or subject property). (Refer to **Figure 1** - Site Location Map.) The subject property is further defined by the City of New York as Portion of Block 2050, Lot 1. (Refer to **Figure 2** - Parcel Map.) The scope of this Phase I ESA is in general conformance with United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI), 40 Code of Federal Regulations (CFR) Part 312, and the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process Scope of Work.

### 1.1 PURPOSE

The purpose of this assessment is to review the general environmental condition of the land that comprises the subject property. Specifically, the report seeks to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and historical recognized environmental conditions (HRECs), as defined by ASTM E 1527-13, on and near the site and records of those areas that may adversely impact the subject property owner or operator under existing federal, state, and local environmental laws, and to recommend further actions necessary to confirm, quantify, or abate those conditions.

### 1.2 DETAILED SCOPE OF SERVICES

Brinkerhoff undertook the following actions to accomplish this Phase I ESA:

- ✓ A physical inspection of the subject property on January 31, 2019, to locate and identify: obvious signs of chemical spills; visual and documented evidence of chemical storage tanks; improper use, storage and disposal of hazardous materials; and, polychlorinated biphenyl (PCB)-containing electrical equipment.
- ✓ A review of federal and state standard environmental record sources using minimum search distances from the subject property, as defined by ASTM E 1527-13, to identify nearby sites with known environmental impairments or operations registered to handle hazardous substances and wastes.
- ✓ A review of reasonably ascertainable standard historical sources that might include aerial

photographs, fire insurance maps, property tax files, recorded land title records, United States Geological Survey (USGS) 7.5 Minute Topographic Maps, local street directories, building department records, zoning/land use records, or other historical sources.

### **1.3 LIMITATIONS AND EXCEPTIONS**

This Phase I ESA reflects conditions that were visibly evident in those areas where access was available on the date of Brinkerhoff's site visit. The assessment offers both information about the site and operations performed on site; however, visual inspections were limited to those areas of the subject property that were accessible during the site visit. It is possible that hazardous materials might be found in inaccessible areas.

The site reconnaissance involved inspecting readily accessible areas and did not involve subsurface investigations, investigations under asphalt paving, concrete slabs, gravel-covered areas, storage areas, or other areas which could not be reasonably inspected without the use of specialty equipment such as heavy machinery or geophysical probing devices.

At the time of site reconnaissance, parked vehicles, leaves and snow cover limited Brinkerhoff's ability to observe portions of the ground surface. Brinkerhoff was not granted access to a locked chain-link fence storage enclosure during the inspection.

Brinkerhoff cannot be held responsible if site conditions change in the future and environmental conditions arise that could not reasonably have been identified during the site reconnaissance initially conducted.

Brinkerhoff submitted a Freedom of Information Act (FOIA) and Right-to-Know Law requests for information to appropriate federal, state and local government agencies. If responses and/or files were not provided at the time of report preparation, it is documented as a data gap in Section 6.0. As per ASTM E 1527-13-3.2.69, 3.2.72 and 8.1.4, Brinkerhoff reviewed only those files that were practically reviewable and reasonably ascertainable.

As per ASTM E 1527-13, the following "nonscope considerations" were not included in this evaluation: asbestos-containing materials (ACMs), biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint (LBP), lead in drinking water, mold, radon, regulatory compliance, and wetlands. Since ASTM E 1527-13 does not require that these inspections be conducted, said inspections were not performed as part of this Phase I ESA.

### **1.4 USER RELIANCE**

YYY Brooklyn, LLC may rely upon this report, which has no other purpose and should not be relied upon by any other person or entity.

## 2.0 SITE DESCRIPTION

### 2.1 LOCATION AND LEGAL DESCRIPTION

Street Addresses: 173 Myrtle Avenue  
Municipality/State: Borough of Brooklyn, New York  
County: Kings  
Tax Block/Lot: Portion of Block 2050, Lot 1  
Lot Shape: Irregular

### 2.2 CURRENT USE OF THE SITE

The subject property is a narrow strip of land that is located adjacent east of the American Self Storage/202-208 Tillary Street property and south and west of the 173 Myrtle Avenue/NYC Public Housing Complex. The site is currently utilized as an automobile parking lot and driveway. The site is accessible via entrances from Tillary Street and Prince Street.

Photographs of the subject property were taken at the time of the site inspection and are provided in **Appendix I**.

### 2.3 UTILITIES

The subject property was not connected to utilities at the time of the site reconnaissance. The subject property is located in an area with regionally supplied electricity, natural gas service, potable water and sanitary sewer services from Consolidated Edison (a.k.a. Con Edison or Con Ed) and the New York City Department of Environmental Protection (NYCDEP).

### 2.4 HEATING SOURCE

Heating sources were not identified on the subject property.

### 2.5 CURRENT USES OF ADJOINING PROPERTIES

Current uses of adjoining properties are as follows:

- North:** Tillary Street, the Brooklyn Queens Expressway (BQE) are located to the north of the subject property.
- East:** New York City Housing Authority's Ingersoll Houses are located to the east of the subject property.
- South:** New York City Housing Authority's Ingersoll Houses are located to the south of the subject property.
- West:** American Self Storage at 202 Tillary Street, New York City Police Department - 84th Precinct at 301 Gold Avenue, Prince Street Parking at 85-99 Prince Street, and Prince Street are located to the west of the subject property.

## **2.6 PHYSICAL SETTING ANALYSIS**

### **2.6.1 SITE GEOLOGY/SOIL**

New York County is underlain by geological formations known collectively as the Piedmont Province. The rocks of the Piedmont Group are predominantly of Late Triassic and Early Jurassic age (230 to 190 million years old). They rest on a large elongated crustal block that dropped downward in the initial stages of the opening of the Atlantic Ocean. The sediments are composed of material caused by the erosion of adjacent uplands, which were deposited along rivers and in lakes within basins. These sediments became compacted to form conglomerate, sandstone, siltstone, and shale. They commonly have a reddish-brown color. The subject property is underlain by the Cambrian Manhattan Formation.

According to the Soil Survey for Kings County, the soils at the subject property are classified as Urban land-Greenbelt complex (UGAI) with zero (0) to three (3) percent slopes with a very low available water capacity. An on-site investigation would be necessary to determine classes of soil present on the subject property.

### **2.6.2 SITE TOPOGRAPHY**

The subject property is located approximately 24 feet above mean sea level and is relatively flat. Rainfall is expected to run off impervious surfaces to stormwater drains, which were observed along Tillary Street and Prince Street.

### **2.6.3 SITE HYDROLOGY**

Based upon site topography, groundwater is anticipated to flow northeast toward the East River, located approximately 0.63 miles northeast of the site. Detailed investigations involving the installation and gauging of on-site monitoring wells would be required to ascertain the groundwater flow direction on site.

## **3.0 RECORDS REVIEW**

### **3.1 FEDERAL AND STATE DATABASE REVIEW**

An environmental database search of the subject property and the area within a one-mile radius of the subject property was conducted by Environmental Data Resources, Inc. (EDR). The EDR environmental database search generated information regarding the subject property and surrounding properties that are or have been regulated, tracked, or investigated under specific federal or state environmental programs. The EDR environmental database search report is provided in **Appendix II**.

#### **3.1.1 SUBJECT PROPERTY**

The subject property was not identified in the databases searched.

#### **3.1.2 ADJOINING PROPERTIES**

##### **3.1.2.1 202 Tillary Street**

The west-adjointing property was identified in the Emergency Response Notification System (ERNS) database under the following listing:

200 Tillary Street  
Brooklyn, NY

The ERNS database identified the west-adjointing property under NRC Report No. 16091 when an unknown amount of diesel fuel spilled from a Schneider National truck that was pulling into a fuel dock and struck a curb. The incident occurred on April 6, 1990; the police and fire department were on scene for the cleanup.

##### **3.1.2.2 67 Prince Street**

The northwest-adjointing property was identified in the E-DESIGNATION database under the following listing:

67 Prince Street  
Lot 100, Tax Block 2050  
Brooklyn, NY

The E-Designation database identified the northwest-adjointing property under E-Designation No. E-437 and CEQR No. 17DCP176K, effective October 31, 2017 for Air Quality, Hazardous Materials, and Window Wall Attenuation & Alternate Ventilation.

### 3.1.2.3 78 Prince Street

The west-adjointing property was identified in the E-DESIGNATION and Underground Storage Tank (UST) databases under the following listings:

78 Prince Street  
Lot 30, Tax Block 134  
Brooklyn, NY

MIM Import Corporation  
78 Prince Street  
Brooklyn, NY

The E-Designation database identified the northwest-adjointing property under E-Designation No. E-124 and CEQR No. 03DME016K, effective June 28, 2004 for Underground Gasoline Storage Tanks Testing Protocol, and Window Wall Attenuation & Alternate Ventilation.

The UST database identified the northwest-adjointing property as registered under the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) program under Site No. 2-369918 with an unregulated/closed status for a 3,000-gallon No. 2 fuel oil UST closed prior to March of 1991.

### 3.1.2.4 85 Navy Walk

The east-adjointing property was identified in the UST, NY-SPILLS, AST and FINDS databases under the following listings:

Ingersoll Houses  
85 Navy Walk  
Brooklyn, NY 11205

NYC-HA Ingersoll House  
85 Navy Walk  
Brooklyn, NY 11201

Ingersoll Houses - NYCHA  
85 Navy Walk  
Brooklyn, NY

The UST database identified the east-adjointing property as registered under the NYSDEC PBS program under Facility ID No. 2-474509 with an active status for an in-service 25,000-gallon No. 2 fuel oil UST installed on October 1, 1993.

The NY-Spills database identified the east-adjointing property registered under Spill Incident No. 9513974 for an event that occurred on February 2, 1996 when 40-gallons of No. 2 fuel oil was spilled. The spill case was subsequently closed with the NYSDEC on March 13, 2009.

The AST database identified the east-adjointing property as registered under the NYSDEC PBS program under Facility ID No. 2-474509 for a 257-gallon waste oil/used oil Aboveground Storage Tank (AST) installed on October 1, 1994 and closed on December 22, 2009.

The FINDS database identified the east-adjointing property under Registry ID No. 110019833411.

### **3.1.2.5 120 Navy Walk**

The southeast-adjointing property was identified in the NY-MANIFEST, FINDS, RCRA NON-GEN/ LNR and ECHO databases under the following listing:

NYC-HA Ingersoll House  
120 Navy Walk  
Brooklyn, NY 11201

The NY-MANIFEST database identified the southeast-adjointing property as registered under EPA ID No. NYR000040600 for the transfer and off-site disposal of four (4) 55-gallon metal drums containing nicotine and salts on June 19, 1997.

The FINDS database identified the southeast-adjointing property under Registry ID No. 110004535021.

The RCRA NONGEN/NLR database identified the southeast-adjointing property listed under EPA ID No. NYR000040600 as a non-generator of hazardous waste as of January 1, 2007. The property was listed as a former conditionally exempt small quantity generator of acetic acid, 2,4-dichlorophenoxy, salts and esters. No violations were listed for the facility.

The ECHO database identified the southeast-adjointing property under Registry ID 110004535021.

### **3.1.2.6 5 Fleetwalk and Tillary Street**

The northeast-adjointing property was identified in the NY-Spills database under the following listing:

Ingersoll Houses - NYCHA  
5 Fleetwalk and Tillary Street  
Brooklyn, NY

The NY-Spills database identified the northeast-adjointing property registered under Spill Incident No. 9306043 for an event that occurred on August 16, 1993 for equipment failure when an unknown amount of petroleum was spilled. The spill case was subsequently closed with the NYSDEC on May 1, 1995.

## **3.1.3 SURROUNDING PROPERTIES**

According to the EDR environmental database search, surrounding properties were identified in the federal and state databases within a one-mile search radius of the subject property and are

identified as follows:

- ✓ Within a zero to one-eighth mile radius of the subject property, the following database listings were identified:
  - Nine (9) properties were identified in the RCRA-LQG database.
  - One (1) property was identified in the RCRA-SQG database.
  - Three (3) properties were identified in the RCRA-CESQG database.
  - One (1) property was identified in the ERNS database.
  - Nine (9) properties were identified in the NY LTANKS database.
  - One-hundred seventeen (117) properties were identified in the NY SPILLS database.
  - Forty-four (54) properties were identified in the RCRA NonGen/NLR database.
  - Four (4) properties were identified in the FINDS database.
  - Three (3) properties were identified in the ECHO database.
  - Thirty-eight (38) properties were identified in the NY E-DESIGNATION database.
  - Twenty-four (24) properties were identified in the NY UST database.
  - Seventeen (17) properties were identified in the NY AST database.
  - One (1) property was identified in the NY TANKS database.
  - Two (2) properties were identified in the NY VCP database.
  - Two (2) properties were identified in the NY BROWNFIELDS database.
  - Seventy-nine (79) properties were identified in the NY MANIFEST database.
  - Ten (10) properties were identified in the NJ MANIFEST database.
  - One (1) property was identified in the PA MANIFEST database.
  - Four (4) properties were identified in the EDR Hist Auto database.
  - Six (6) properties were identified in the EDR Hist Cleaner database.
  
- ✓ Within a one-eighth to one-quarter mile radius of the subject property, the following database listings were identified:
  - Eight (8) properties were identified in the RCRA-LQG database.
  - Four (4) properties were identified in the RCRA-SQG database.
  - Nine (9) properties were identified in the RCRA-CESQG database.
  - One (1) property was identified in the NY SHWS database.
  - One (1) property was identified in the NY SWF/LF database.
  - Six (6) properties were identified in the NY LTANKS database.
  - Seventeen (17) properties were identified in the NY UST database.
  - One (1) property was identified in the NY CBS database.
  - Twenty-four (24) properties were identified in the NY AST database.
  - One (1) property was identified in the NY CBS AST database.
  - One (1) property was identified in the NY TANKS database.
  - One (1) property was identified in the NY ENG CONTROLS database.
  - One (1) property was identified in the NY INST CONTROL database.
  - Four (4) properties were identified in the NY VCP database.
  - One (1) property was identified in the NY BROWNFIELDS database.

- Fifty-two (52) properties were identified in the RCRA NonGen/NLR database.
  - Four (4) properties were identified in the NY DRYCLEANERS database.
  - One (1) property was identified in the NY HSWDS database.
  - Ninety-two (92) properties were identified in the NY MANIFEST database.
  - Two (2) properties were identified in the RI MANIFEST database.
  - Eighteen (18) properties were identified in the NJ MANIFEST database.
  - Two (2) properties were identified in the PA MANIFEST database.
- ✓ Within a one-quarter to one-half mile radius of the subject property, the following database listings were identified:
- Four (4) properties were identified in the SEMS-ARCHIVE database.
  - Two (2) properties were identified in the NY SHWS database.
  - Fifty-six (56) properties were identified in the NY LTANKS database.
  - Five (5) properties were identified in the NY VCP database.
  - One (1) property was identified in the NY BROWNFIELDS database.
  - One (1) property was identified in the NY ERP database.
  - Two (2) properties were identified in the US BROWNFIELDS database.
  - One (1) property was identified in the FUDS database.
  - Three (3) properties were identified in the HSWDS database.
  - One (1) property was identified in the EDR MGP database.
- ✓ Within a one-half to one-mile radius of the subject property, the following database listings were identified:
- One (1) property was identified in the NPL database.
  - Six (6) properties were identified in the SHWS database.
  - One (1) property was identified in the ROD database.
  - Five (5) properties were identified in the ED MGP database.

Additional information regarding each of the individual properties identified in the databases listed above is provided in **Appendix II**.

### 3.1.4 ORPHAN SUMMARY

The EDR Orphan Summary Report lists twenty (20) properties that were included in certain federal or state environmental databases, but were reported by EDR to be unmapped due to insufficient address information. The listing of orphan sites within the database search was reviewed, cross-referencing available address information with facility names. Upon review, it was determined that the orphan sites do not appear to be associated with the subject or adjacent properties. (Refer to **Appendix II**.)

### 3.1.5 FINDINGS

The subject property was not identified in the databases searched.

The west-adjointing properties were identified in the ERNS, E-DESIGNATION and UST databases. The northwest-adjointing property was identified in the E-DESIGNATION database. The east-adjointing property was identified in the UST, NY-SPILLS, AST and FINDS databases. The southeast-adjointing property was identified in the NY-MANIFEST, FINDS, RCRA NON-GEN/LNR and ECHO databases, and the northeast-adjointing property was identified in the NY-Spills database.

Numerous surrounding properties were identified as aforementioned; however, the listed sites are unlikely to impact the subject property for one or more of the following reasons:

- The listed property was judged to be too distant to likely impact the subject property;
- The listed property was topographically downgradient or sidegradient of the subject property;
- The listed property is separated from the subject property by a hydrologic barrier, such as a river; and/or,
- The property was listed as engaging in an activity that requires environmental registration but for which no violation was documented, such as a registered UST.

## 3.2 HISTORICAL USE DOCUMENTATION

### 3.2.1 SANBORN® FIRE INSURANCE MAPS (SANBORNS)

Brinkerhoff requested a historical map search from EDR. EDR provided historical Sanborns for the years 1887, 1904, 1915, 1938, 1950, 1969, 1979, 1987, 1996 and 2007. (Refer to **Appendix III** for copies of the Sanborns.) The Sanborns are described as follows:

#### **1887 and 1904**

**Subject Property:** The eastern portion of the subject property appears undeveloped and is located within the boundaries of Fleet Place. The western portion of the subject property is developed with several multi-story residential dwellings.

The surrounding properties appear to be developed with several multi-story residential dwellings.

#### **1915**

**Subject Property:** The subject property appears similar to the 1904 Sanborn Map; however, a single structure identified as “storage” located at 73 Prince Street, has been demolished.

The north-adjointing properties across Tillary Street are developed with several multi-story commercial-use structures. The north-adjointing property located at 213 - 215 Tillary Street is identified as “Storage of Pipe Fittings”. The remaining surrounding properties are similar to the 1904 Sanborn Map.

### **1938**

**Subject Property:** The subject property appears similar to the 1915 Sanborn Map.

The north-adjointing property across Tillary Street, the west-adjointing properties adjacent to Fleet Place and 74 Prince Street appear undeveloped. The east and south-adjointing properties are similar to the 1915 Sanborn Map.

### **1950**

**Subject Property:** The subject property is undeveloped and appears in its present-day configuration.

The south and east-adjointing properties are developed with the present-day New York City Housing Authority's Ingersoll Houses. The west-adjointing property is developed with its present-day commercial structure. The north-adjointing property is similar to the 1938 Sanborn Map.

### **1969**

**Subject Property:** The subject property appears similar to the 1950 Sanborn Map.

The surrounding properties appear similar to the 1950 Sanborn Map; however, the north-adjointing property is developed with the present-day BQE. The west-adjointing property located at 72 - 76 Prince Street is undeveloped, and lot 76 is identified as "Parking".

### **1979, 1987, 1996 and 2007**

**Subject Property:** The subject property is similar to the 1969 Sanborn Map.

The surrounding properties appear similar to the 1969 Sanborn Map; however, the west-adjointing property across Prince Street has been developed with the present-day structures identified as "N.Y.C. Police Department" and "N.Y.C. Fire Department".

## **3.2.2 AERIAL PHOTOGRAPHS**

Brinkerhoff reviewed historical aerial photographs from EDR for the years 1924, 1951, 1961, 1974, 1984, 1994, 2009, and 2017. Copies of the aerial photographs are provided in **Appendix IV**. Due to poor quality of the photographs, specific details of the subject and adjoining properties were not discernable. However, the eastern portion of the subject property is developed as "Fleet Street" in 1924 and the western portion is developed with several multi-story structures; the present-day configuration appears from 1961 through 2017. The north-adjointing property appears developed by 1924, undeveloped by 1951, and in 1961 the present-day BQE is visible. The south and east-adjointing properties appear developed with several multi-story structures in 1924, and in 1950 appear with their present-day structures. The west-adjointing properties appear developed with several multi-story structures in 1924, and the present-day structures in 1951(Tillary Street) and 1974 (Prince Street).

### 3.2.3 CITY DIRECTORY ABSTRACT

Brinkerhoff requested a City Directory Abstract search for the subject property (173 Myrtle Avenue) from EDR. According to information provided in the EDR-City Directory Abstract, in 1934 the subject property was identified as 173 Myrtle Avenue and listed as Curtin, John J. Plumber. From 1945 through 1965 the subject property was identified as 173 Myrtle Avenue and listed as Flink Pharmacy, in 1973 as Family Day Care Career Project, in 1976 as Ingersoll Willoughby Housing Development, in 1985 as Colony South Brooklyn Houses, and from 1997 through 2000, listed as Ingersoll Tenants Association.

Surrounding properties were identified from 1928 through 2014 and were utilized for residential and commercial use. A copy of the EDR-City Directory Abstract is provided in **Appendix V**.

### 3.2.4 SUMMARY OF HISTORICAL INFORMATION

According to the historical data review, the eastern portion of the subject property was developed as “Fleet Place” from at least 1887 through 1938. The western portion of the subject property was developed with several multi-story residential dwellings from at least 1887 through 1938. From approximately 1950 through 2017, the subject property remained undeveloped and utilized for parking/storage.

The north-adjointing property was developed with several multi-story residential and commercial structures from at least 1887 through 1924. From 1938 through 1951, the property remained undeveloped until approximately 1961, when the BQE was developed.

The east and south-adjointing properties were developed with several multi-story residential dwellings from at least 1887 through 1938 and by 1950, the present-day structures were developed.

The west-adjointing properties appear developed with several multi-story structures in 1924, and the present-day structures in 1951(Tillary Street) and 1974 (Prince Street). The west-adjointing properties appear developed with their present-day structures by 1951 (Tillary Street) and 1974 (Prince Street).

## 3.3 REGULATORY AGENCY REVIEW

In addition to the review of state and federal government databases, as discussed in Section 3.1 above, Brinkerhoff accessed the USEPA Envirofacts database to obtain information regarding the subject property. Brinkerhoff also provided communications to the NYSDEC via electronic mail and to the NYCDEP via electronic mail to request reviews of files concerning environmental violations at the subject property or in the immediate area of the subject property. (Refer to **Appendix VI** - Government Communications.) Brinkerhoff reviewed only those files that were practically reviewable and reasonably ascertainable.

### 3.3.1 SUBJECT PROPERTY

#### ***USEPA***

Information regarding the subject property was not available in the USEPA Envirofacts database, accessed on January 24, 2019.

#### ***NYSDEC***

Brinkerhoff did not receive a response from NYSDEC during the preparation of this report.

#### ***NYCDEP***

Brinkerhoff received an NYCDEP response for the subject property on January 30, 2019. A diligent search of records responsive to our request were not located for the site.

### 3.3.2 ADJOINING PROPERTIES

#### ***202 Tillary Street***

Information regarding the west-adjointing property was not available in the USEPA Envirofacts database, accessed on February 11, 2019.

This property is identified in the ERNS database under NRC Report No. 16091 for an unknown amount of diesel fuel spilled from a Schneider National truck that was pulling into a fuel dock and struck a curb. The incident occurred on April 6, 1990; the police and fire department were on scene for the cleanup. Based on the lack of evidence of an on-going release incident or corrective action at this property, requests for additional information were not submitted to the NYCDEP or NYSDEC.

#### ***67 Prince Street***

Information regarding the northwest-adjointing property was not available in the USEPA Envirofacts database, accessed on February 11, 2019.

This property is identified in the E-Designation database under E-Designation No. E-437 and CEQR No. 17DCP176K, effective October 31, 2017 for Air Quality, Hazardous Materials, and Window Wall Attenuation & Alternate Ventilation.

Based on the lack of evidence of a release incident or corrective action at this property, requests for additional information were not submitted to the NYCDEP or NYSDEC.

#### ***78 Prince Street***

Information regarding the northwest-adjointing property was not available in the USEPA Envirofacts database, accessed on February 11, 2019.

This property is identified in the E-Designation database under E-Designation No. E-124 and CEQR No. 03DME016K, effective June 28, 2004 for Underground Gasoline Storage Tanks Testing Protocol, and Window Wall Attenuation & Alternate Ventilation. This property is identified in UST database for its inclusion in the NYSDEC PBS program under Facility ID No. 2-369918 for a 3,000-gallon No. 2 fuel oil UST which was closed prior to March of 1991.

Based on the lack of evidence of a release incident or corrective action at this property, requests for additional information were not submitted to the NYCDEP or NYSDEC.

85 Navy Walk

Information regarding the east-adjoining property was available in the USEPA Envirofacts database, accessed on February 11, 2019. NYC-HA Ingersoll House is registered under EPA ID No. 110019833411 for its inclusion in the NY Facility Information System (FIS) database under Environmental Interest No. 2-6101-00408.

This property is identified in the UST database for its inclusion in the NYSDEC PBS program under Facility ID No. 2-474509 for an in-service 25,000-gallon No. 2 fuel oil UST installed on October 1, 1993. This property is identified in the NY-Spills database registered under Spill Incident No. 9513974 for an event that occurred on February 2, 1996 when 40-gallons of No. 2 fuel oil was spilled. The spill case was subsequently closed with the NYSDEC on March 13, 2009. This property is identified in the AST database registered under the NYSDEC PBS program under Facility ID No. 2-474509 for a 257-gallon waste oil/used oil AST installed on October 1, 1994 and closed on December 22, 2009. This property is identified in the FINDS database under Registry ID 110019833411.

Based on the lack of evidence of a release incident or corrective action at this property, requests for additional information were not submitted to the NYCDEP or NYSDEC.

120 Navy Walk

Information regarding the southeast-adjoining property was available in the USEPA Envirofacts database, accessed on February 11, 2019. NYC-HA Ingersoll House is registered under EPA ID No. 110004535021 for its inclusion in the RCRA database under Environmental Interest No. NYR000040600.

This property is identified in the NY-MANIFEST database registered under EPA ID No. NYR000040600 for the transfer and off-site disposal of four (4) 55-gallon metal drums containing nicotine and salts on June 19, 1997. This property is identified in the FINDS database under Registry ID No. 110004535021. This property is identified in the RCRA NONGEN/NLR under EPA ID No. NYR000040600 as a non-generator of hazardous waste as of January 1, 2007. The property was listed as a former conditionally exempt small quantity generator of acetic acid, 2,4-dichlorophenoxy, salts and esters. No violations were listed for the facility. This property is identified in the ECHO database under Registry ID No. 110004535021.

Based on the lack of evidence of a release incident or corrective action at this property, requests for additional information were not submitted to the NYCDEP or NYSDEC.

5 Fleet Walk and Tillary Street

Information regarding the northeast-adjoining property was not available in the USEPA Envirofacts database, accessed on February 11, 2019.

This property is identified in the NY-Spills database under Spill Incident No. 9306043 for an  
Phase I Environmental Site Assessment  
173 Myrtle Avenue  
Portion of Block 2050, Lot 1  
Borough of Brooklyn, Kings County, New York

event that occurred on August 16, 1993 for equipment failure when an unknown amount of petroleum was spilled. The spill case was subsequently closed with the NYSDEC on May 1, 1995.

Based on the lack of evidence of a release incident or corrective action at this property, requests for additional information were not submitted to the NYCDEP or NYSDEC.

### **3.4 CITY ENVIRONMENTAL QUALITY REVIEW DECLARATION ("E" DESIGNATION)**

The City Planning Commission approved amendments to the New York City Zoning Maps which may include environmental designations of certain tax lots that have physical or historical evidence of uses related to hazardous materials. The "E" designations shown on the zoning maps function as indicators of the environmental review that must be conducted when the lots are developed in accordance with the regulations of the rezoned district.

The City Planning Commission's rezoning actions, including environmental designations, were made effective upon the City Council's approval of the Zoning Map Amendment.

Based upon a review of the NYCDEP's most recent "E" Designation database on January 18, 2019, the subject property is not assigned an E-Designation.

### **3.5 BUILDINGS INFORMATION SYSTEM (BIS)**

Brinkerhoff accessed the New York City Department of Building's (NYCDOB's) Building Information System (BIS) at <http://a810-bisweb.nyc.gov/bisweb/bsqpm01.jsp> on February 11, 2019. It was recorded that no active DOB violations were identified for the subject property.

### **3.6 VAPOR MIGRATION**

Brinkerhoff utilized the information listed for the properties identified in the federal and state database search, Sanborns, aerial photographs, and the NYSDEC's online Environmental Site Database Search to evaluate the migration potential of hazardous substances or petroleum products in subsurface vapor. These resources assisted in the evaluation of potential vapor migration on the subject property or to the subject property from surrounding properties that are or may be engaged in storage, handling, or usage of petroleum products and hazardous materials. Please note that an investigation per ASTM E2600-10 was not conducted as part of this Phase I ESA.

Based upon the available data acquired, the subject property appears unlikely to be impacted by vapor migration from on-site sources as no release of hazardous substances or petroleum products has been documented to date. However, the potential for vapor migration may exist from unknown or unclassified sources on site and/or upgradient or sidegradient of the subject property.

## 4.0 INTERVIEW AND USER-PROVIDED INFORMATION

### 4.1 INTERVIEW

Brinkerhoff was not accompanied by the subject property owner during the site inspection. The ASTM E1527-13 User Questionnaire was completed by Katherine Savarese, Project Manager with YYY Brooklyn, LLC (the owner of the subject property), and is provided as **Appendix VII**.

#### 4.1.1 ENVIRONMENTAL CLEANUP LIENS

Ms. Savarese was not aware of environmental cleanup liens filed against the subject property under federal, tribal, state, or local law.

#### 4.1.2 ACTIVITY AND USE LIMITATIONS (AULs)

Ms. Savarese was not aware of AULs, such as engineering controls, land use restrictions, or institutional controls such as deed notices, in place at the site presently or historically.

#### 4.1.3 PREVIOUS USE OF THE PROPERTY

According to Ms. Savarese, the subject property has been utilized for parking/storage for several years.

### 4.2 TITLE RECORDS AND ENVIRONMENTAL LIEN SEARCH

Title and deed information for the subject property was not provided by the Client. Brinkerhoff accessed the New York City Department of Finance (NYCDOF) Automated City Register Information System (ACRIS), available at <http://a836-acris.nyc.gov/CP/>, on January 18, 2019, to locate deed information for the subject property. The table below summarizes available information for the subject property.

Grantor	Grantee	Declaration Date
New York City Housing Authority	Department of Housing Urban Development	February 13, 2006

Available NYCDOF information is provided in **Appendix VIII**.

## **5.0 SITE RECONNAISSANCE**

### **5.1 METHODOLOGY AND LIMITING CONDITIONS**

The site reconnaissance involved inspecting reasonably accessible areas and did not involve subsurface investigations, investigations under debris piles, asphalt paving, concrete slabs, sidewalks, or other areas that could not be reasonably inspected without the use of specialty equipment such as heavy machinery or geophysical probing devices.

At the time of site reconnaissance, parked vehicles, leaves and snow cover limited Brinkerhoff's ability to observe portions of the ground surface. Brinkerhoff was not granted access to a locked chain-link fence storage enclosure during the inspection.

### **5.2 GENERAL SITE SETTING**

#### **5.2.1 MATERIAL STORAGE**

Brinkerhoff observed two (2) 2-cubic yard dumpsters filled with garbage bags and trash, a locked storage container with "Time Movers" printed on the front, three (3) garbage cans and two (2) metal recycling receptacles. Three (3) 55-gallon metal drums with an unknown content were observed along the southern property boundary of the site. These materials were stored in an orderly fashion, and evidence of staining was not observed in the vicinity of these materials at the time of the site reconnaissance.

#### **5.2.2 ABOVEGROUND STORAGE TANKS (ASTs) AND UNDERGROUND STORAGE TANKS (USTs)**

Brinkerhoff did not observe ASTs or surficial evidence of USTs (fill or vent pipes, etc.) on the subject property.

#### **5.2.3 ODORS**

Brinkerhoff did not detect noxious odors on the subject property at the time of the site reconnaissance.

#### **5.2.4 DRUMS**

Brinkerhoff observed three (3) 55-gallon metal drums along the southern boundary of the site. The drums were observed to be full with an unknown content. The drums appeared to be in good condition and evidence of staining was not observed in the vicinity of the drums.

#### **5.2.5 POLYCHLORINATED BIPHENYLS (PCBs)**

Brinkerhoff did not observe PCB-containing equipment on the subject property at the time of the site reconnaissance.

### **5.2.6 WELLS**

Brinkerhoff did not observe wells on the subject property at the time of the site reconnaissance.

## **5.3 EXTERIOR OBSERVATIONS**

### **5.3.1 PITS, PONDS OR LAGOONS**

Brinkerhoff did not observe pits, ponds or lagoons on the subject property at the time of the site reconnaissance.

### **5.3.2 STAINED SOIL OR PAVEMENT**

Brinkerhoff observed a *de-minimis* amount of stained asphalt and concrete paved surfaces at the time of the site reconnaissance. Uneven and patched pavement was observed in the area adjacent south of Tillary Street. Staining was not observed in soil covered areas.

### **5.3.3 STRESSED VEGETATION**

Brinkerhoff did not observe stressed vegetation on the subject property.

### **5.3.4 SOLID WASTE**

Brinkerhoff observed two (2) 2-cubic yard dumpsters and three (3) garbage cans filled with garbage bags and trash at the time of the site reconnaissance.

### **5.3.5 WASTEWATER DISPOSAL**

Wastewater discharge does not occur at the subject property.

### **5.3.6 STORMWATER DRAINS**

Two (2) stormwater drains were observed on the subject property at the time of the site reconnaissance. An access plate of unknown use and origin was observed on the subject property within the concrete pavement, adjacent south of Tillary Street.

## 6.0 CONCLUSIONS

Brinkerhoff performed a Phase I ESA of the subject property located at 173 Myrtle Avenue (Portion of Block 2050, Lot 1) Brooklyn, Kings County, New York. The assessment was performed in general conformance with the scope and limitations of AAI and the ASTM E 1527-13 Standard Practice for ESAs: Phase I ESA Process Scope of Work. The Phase I ESA revealed the following:

### **DATA GAPS**

The following data gaps were identified during the completion of this Phase I ESA:

- At the time of site reconnaissance, parked vehicles, leaves and snow cover limited Brinkerhoff's ability to observe portions of the ground surface.
- Brinkerhoff was not granted access to a locked chain-link fence storage enclosure during the inspection.
- At the time of report preparation, information regarding the subject property had not been received from the NYSDEC.
- During site reconnaissance, Brinkerhoff observed an access plate in the concrete paved area of the site with an unknown origin and use.
- During site reconnaissance, Brinkerhoff observed three (3) 55-gallon metal drums along the southern boundary of the site. The contents of the drums are unknown.

### **RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)**

Based upon the findings of this Phase I ESA, the following REC was identified:

1. According to historical data, the subject property appeared to be developed with several structures along Prince Street and Fleet Place prior to at least 1887. Although no structures are currently present, supporting documentation regarding the prior heating source of the former structures were not identified or provided to Brinkerhoff. Therefore, the potential exists for heating oil USTs to be present at the site associated with the former structures.

A Phase II Site Investigation is recommended to address the aforementioned REC.

### **CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CRECs)**

Based upon the findings of this Phase I ESA, CRECs were not identified.

**HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)**

Based upon the findings of this Phase I ESA, HRECs were not identified.

**OTHER ENVIRONMENTAL CONCERNS**

- ***Potential Urban Historic Fill*** -- The potential exists for urban historic fill to be present beneath the subject property. Urban historic fill is commonly found throughout the NYC Metropolitan Area and can contain contaminants such as heavy metals and semi-volatile organic compounds. If identified, appropriate transportation and disposal/recycling procedures should be followed.

## 7.0 QUALIFICATIONS AND SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Rachael Barr, Project Manager, conducted the site inspection and research to prepare this Phase I ESA. John Checchio, Senior Consultant, oversaw the completion of this Phase I ESA. Resumes for both environmental professionals are provided in **Appendix IX**.

To the best of Brinkerhoff's professional knowledge and belief, Brinkerhoff meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and also meets the specific qualifications based upon education, training, and experience to assess a property as to its nature, history, and setting. Brinkerhoff developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This report has been prepared using information available through government agencies and private contacts at the time of the investigation. Should Brinkerhoff receive additional information which may alter the characteristics enumerated within this report, Brinkerhoff reserves the right to revise this report or issue an addendum statement.

This report has been prepared and is respectfully submitted by

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/12/2018 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>GOWANUS CANAL</b> Cerclis ID:: 206222 EPA Id: NYN000206222	<b>BUTLER ST (BETWEEN B</b>	<b>SSW 1/2 - 1 (0.847 mi.)</b>	<b>BY598</b>	<b>1326</b>

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/13/2018 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

## EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 17 RCRA-LQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 12 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **Federal ERNS list**

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 09/24/2018 has revealed that there is 1 ERNS site within approximately 0.001 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 9 NY SHWS sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2018 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

### **State and tribal leaking storage tank lists**

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/12/2018 has revealed that there are 71 NY LTANKS sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 41 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is

## EXECUTIVE SUMMARY

1 NY CBS AST site within approximately 0.25 miles of the target property.

NY ERP: In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

A review of the NY ERP list, as provided by EDR, and dated 11/12/2018 has revealed that there is 1 NY ERP site within approximately 0.5 miles of the target property.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Local Brownfield lists**

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 12/17/2018 has revealed that there are 2 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

#### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/12/2018 has revealed that there are

## EXECUTIVE SUMMARY

117 NY Spills sites within approximately 0.125 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 106 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/15/2018 has revealed that there are 4 FINDS sites within approximately 0.001 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 4 NY HSWDS sites within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

2008 after completing the sampling of monitoring wells. Information under review. 9/29/08 - J.Kann - second round of sampling was performed as requested by DEC. Results of the first round submitted on 5/22/08 were non-detect in all wells for VOCs and SVOCs. Second round of sampling confirmed the results of the first. Recovery system was installed in 1996 after a delivery into the wrong piping resulted in the spill. Based on information submitted to date, NFA letter sent. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY Con Ed e2mis #134527 Notes: 11-28-00 1421hrs While on location for fiber optic work, found 1 qt unknown oil on dry concrete floor of manhole 1947. Regulator tank present and not leaking. Sump not affected. No pump. No sewer connection. 1 solid sample taken. 11-28-00 1501hrs Test results received. LSN 00-11212 769ppm PCB. 11-29-00 2212hrs Upon inspection of manhole, found a 4'X4' area of floor against north wall of the structure which had about a pint of sticky oil on cement and dirt. Above the affected floor area was a feeder cable which had a 4' long area of oil soaked asbestos arc proofing. #9 was called to remove arc proofing and look for leaks. Sump did not appear affected. However, after digging sump down found an open 6 sewer trap impacted with soil. Removed packed soil of sewer pipe, wiped out the inside with a diaper which showed no signs of oil and sealed the pipe with diapers and a duct plug. The sump had a cement floor, after digging soil out of sump, added 10gal of hydraulic cement to bring sump floor even with plugged sewer pipe. All solids were removed and structure was double washed. >50 tanker removed 120gal wash water and Transportation picked up two drums of solid waste. #9 supervisor and troubleman removed 6' arc proofing off 3 single inserts going to 3-c straight joint on feeder 6B50 and found two of the singles had nicks in the lead jacket down to the insulating paper. D faulted feeder. Control Center requested the feeder be taken off on emergency to make repairs. After D fault is resolved, Env Ops will return to soda blast and take wipe samples. 1-3-01 1800hrs 10 wipe samples taken. Double washed hole with bio-gen 760 and 715 sludge softener. Tar scraped off of floor, removed cap from sewer pipe and cemented same. 1-5-01 1225hrs Wipe sample results. Test point 1 <1ugs/100cm2 TP 2 <1ugs/100cm2 TP 3 2ugs/100cm2 TP 4 <1ugs/100cm2 TP 5 <1ugs/100cm2 TP 6 <1ugs/100cm2 TP 7 <1ugs/100cm2 TP 8 <1ug2/100cm2 TP 9 <1ugs/100cm2 TP 10 <1ugs/100cm2 1-5-01 1910hrs Flush reports chem lab sample of sump came back OK.

**MANHOLE #1947 (Continued)**

**S104880717**

Update 3/5/02: Per Env. Ops Planner and info in this report the sump was found to be cemented. There was a sewer drain in the sump which had some soil in it. The soil was removed and disposed of as over 50 ppm pcb. As this was not an earthen sump the soil under the sump was not tested."

Remarks: "ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION. SAMPLE TAKEN AND CLEANUP IS PENDING RESULTS. CON ED # 134527 . NO CALL BACK REQUESTED. AMOUNT REPORTED AS 1 QUART."

DEC Memo: "Prior to Sept. 2004 data translation this spill Lead\_DEC Field was RODRIGUEZ e2mis no. 151-111: 13-NOV-2003 1110HRS L WILLIAMS # 11235 FOD REPORTS FOUND 1 PINT UNKNOWN OIL ON 50 GALLONS WATER IN M-1958. FOUND WHILE LOOKING FOR DEAD CABLE. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED. TOOK SAMPLE ON A 4 TO 6 HOUR PRIORITY. 11/13/03=1537HRS LAB RESULT RETURNED 155PPM. 11/14/03 Environmental operations crew was assigned to clean the structure. After the initial liquids were removed I went to check for any potential leaks and found (3) cable ends capped but pointing towards the floor, and an uncapped copper tubing connected to a joint regulator. I requested a #9 crew they capped the tubing and removed the cable ends from the floor and tied them up; all debris were removed and the structure was double washed several times with 715, and 760 biogen until it was free of all oils. No sump was found."

Remarks: "coming off 24 hr program - 1 pt unk oil on 50 gal of water in manhole - samples taken and clean up pending results con ed #151111 removed off 24 hr progarm due to manhole being behind a locked gate they will try for access in morning"

and Labarbera cleaned structure and removed (6) drums of debris and double washed the STOP Tag was left in place pending post cleanup for wipe sampling. On 3 Nov 04, an Underground Crew removed asbestos and oil soaked arc proofing from MH 1936. After the arc proofing was removed a possible default was discovered by the Underground Crew and #9 was called to the location to investigate the feeder. UPDATE: 2200 Hrs = 11/03/04 = Env Ops Supv C. Fernandez reports that a # 9 supervisor came out and inspected the structure for a possible D-Fault and found none. Two drums were picked up by an Astoria truck. Tag remains in place pending soda blast. Wednesday, December 08, 2004 3:49 PM Environmental Crew set up for work at MH 1936 and the manhole had lots of oily debris in the structure. Because of the amount of oil in the structure the Crew checked again for a possible leaking feeder and found a possible joint that may have been leaking. #9 was called to the structure and found that the joint was not leaking. An Underground Crew removed more arc proofing but was called off of the job before all of the arc proofing was removed. 50 gal. of oil was taken from the structure by Astoria Tanker and 3 barrels of solid debris by barrel-pickup. Wednesday, January 05, 2005 5:57 PM Zones were set up by Mech's R. Vega, and R. Esponda of Environmental Operations for the Underground to remove oil soaked Asbestos Arc Proofing. Two bags with 20' of Arc proofing was removed by Splicer M. Santiago; Astoria tanker removed 100 gallons of liquid after we washed excess oil from contamination. The Stop tag was left in place. The Underground will be returning 1/6/05 to Arc Proof the feeders and we will follow up with Soda Blasting after they are done. Update 1/6/05 22:00hrs. O.S. B.Bamonte reports on location with Rodriguez, Carson, and Jones. Structure was double washed with 10 gallons of bio-gen 760, and 10 gallons of safety clean detergent. Sump was found sealed. An >500 Astoria tanker removed 150 gallons of wash liquids out of structure. Two (2) drums were generated consisting of PCB solids, PPE, zone material, and lead. Drums were picked up by Astoria transportation. After washing structure, Env. Ops. crews soda blasted structure. Upon completing soda blasting, an Astoria chemist was called to location to take PCB wipes. A total of 9 wipes were taken. Env. stop tag remains in place pending results from wipes. WIPE RESULTS RECEIVED 1/7/05 - 1536. 05-00165. WIPES # 5 (<1.0 ug), 6 (4 ug), 7 (9 ug) & 9 (4 ug) PASSED. WIPES # 1 (28 ug), 2 (12 ug), 3 (27 ug), 4 (14 ug) & 8 (38 ug) FAILED. FOLLOW UP SODA BLAST REQUIRED. UPDATE 11-JAN-2005 0957HRS FLUSH OPERATIONS SUPV E. WILLIAMS REPORTS, TANKER REMOVED 150 GALS OF LIQUID. CREW GENERATED 1 DRUM OF PPE & ZONE MATERIAL. STRUCTURE WASHED WITH 5 GALS OF SAFE WASH, AND SODA BLASTED BY CREW MEMBERS A. GLODOWSKI & RYAN. DRUM WILL BE TRANSPORTED TO THE YARD UNDER THE ONE TRIP RULE, CLEANUP PENDING RESULTS OF WIPE SAMPLES TAKEN TODAY. WIPE RESULTS RECEIVED 1/12/05 - 2141. 05-00276. ALL 5 WIPES PASSED. STRUCTURE IS NOW CLEAN. TAG TO BE REMOVED. UPDATE: 1/13/05 - 0430 A. GLODOWSKI - ENV. OPS., REPORTS TAG # 43917 REMOVED. INCIDENT IS CLOSED."

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL DEC INSPECTOR NOTES Ron James - Voice Mail on 11-12-99 @ 11:10am Crews have been on location but cannot enter manhole until D-fault is located and feeder is shut off. 12:05pm Ron James called back - having difficulty locating D-fault due to number of cables in hole. Still looking no sewer connection. 3:35pm Message from Ron Cosentino - D-fault made safe. Leak on feeder repaired. Seco nd sample colleted, cleanup started as>500ppm. Sewer connection found-sewer trap opened - dry. 12-16-99 Left voice message for Ron Cosentino requesting updated E2MIS report. 12-20-99 Updated E2MIS faxed from Steve Zalloughi. Asbestos abatement done - initial PCB cleanup conducted. Awaiting second cleaning and post cleaning, wipe samples. 12-21-99 V.M. update from Steve Zalloughi Manhole cleaned today. E2MIS will be updated and faxed to me. CON ED E2MIS NOTES 1 oz. of Dielectric fluid on 2 gals. of water on floor of MH 1957. Appears contained to structure, no sewers or waterways affected. Source of oil appears to be 3 conductor cable ends. Joint regulator also in structure. Sample to be taken from source of leak. Also found

leaking feeders in MH will turn into #9 to D-falut MH. EPA# Issued NYP004046363 Update Re:sampleed 3c cables (D-IB94) attached to joint. Found old Gliptol patch leaking. He took off old patch and epoxy patched it and stopped the leak. He also cut into tubing from tank and found it bone dry. Also found open sump which was a regular sewer and it appears to be dry at this time with no escape. 11-13-99 0530hrs. Manhole was double washed, 3 barrels of solid debris was removed, hole requires asbestos abatement. 40' of oil soaked ARC proofing after abatement has been removed wipe sample will have to be taken. 11-16-99 1350 hrs. Consentino requested control feeder rep. that dead feeder cables 1B94 be removed when possible. The oil from this cable was tested and results returned 403 ppm MH is currently waiting for an asbestos abatement and post wipe samplings.ACP-7 is being submitted. New EPA# issued NYP004047692 12-17-99 Underground crew did asbestos abatement and removed 80' liner feet of arc proof tape that was pcb saturated. Dielectric Fluid 1oz. HRS. -- ERT A. MEYROWITZ ISSUED EPA ID # NYP 004 124 913 9/21/04  
1900HRS Update for MH 1952 located at S/S Myrtle Ave 230' W/O Navy  
St. (Inc # 154899): On 21 Sep 04 Ed Rasa and Edgar Cortes did a  
preliminary survey for asbestos and found two feeders with a total of  
20' of asbestos in the Manhole. An Abatement will not be required.  
The cleanup will continue once the oil soaked arc proofing is  
removed. One barrel of PPE and setup material was taken back to 3rd  
Ave yard via one trip rule. 11-03-04 10:30 NEW EPA NO. NYP 004 126  
124. -----Original Message----- From: Bamonte, Benjamin Sent:  
Wednesday, November 17, 2004 2:56 PM To: Hearn, Dennis J. Subject:  
Inc.#154899 Update 11/17/04 14:00hrs. O.S. B. Bamonte reports on  
location with Esponda, Vega & LaBarbera. Upon inspecting structure,  
Env. Ops. crews found company leaking equipment. # 9 was called to  
location to verify. # 9 found 3 D faults in structure. One D fault  
was found on dead feeder 4B21, the other D fault was found on dead  
feeder 4B36 and the other was on a dead unknown feeder. There were  
two oil reservoir tanks in structure that were connected to the  
feeders and both were empty. D fault tag 0013 was hung in structure.  
Clean up is incomplete at this time. Env. stop tag remains in place  
until D faults are repaired. UPDATE 4/4/05 08:10 HRS NEW EPA ID# NYP  
004 130 209 UPDATE: 4/4/05 - 2130 E. WILLIAMS - O.S. - ENV. OPS.,  
REPORTS D- FAULTS REPAIRED THE CLEANUP IS COMPLETED BY DOUBLE WASHING  
STRUCTURE WITH 10 GALS OF BIO GEN 760. ASTORIA TANKER REMOVED 200  
GALS OF LIQUIDS. 1 BARREL OF SOLID WASTE WAS GENERATED AND WILL BE  
PICKED UP FOR DISPOSAL BY ASTORIA TRANSP. NO SUMPS OR DRAINS IN  
STRUCTURE. TAG # 43916 REMOVED."

Remarks: "coming off the 24 hour clock, samples were taken, can't clean up due  
tp crew availability: coned # 154899 no to 5 questions: "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Update By: MOBARRIE  
 Site Description:

This BCP site is +/- .76 acres, and is located at 166-180 Myrtle Avenue, City of New York, Borough of Brooklyn, Kings County. Historic uses of the property have been commercial in nature. Surrounding uses include residential apartment buildings, commercial office buildings, day care centers and retail stores. The site is occupied by a one-story brick building with a cellar. It is bounded by Myrtle Avenue to the north, a construction area to the east, Fair Street to the south, and Prince Street to the west. The BCP application was denied by letter dated 4/28/09.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- . Waste name: GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-, D-
  
- . Waste code: U210
- . Waste name: ETHENE, TETRACHLORO-
  
- . Waste code: U279
- . Waste name: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE
  
- . Waste code: U411
- . Waste name: PHENOL, 2-(1-METHYLETHOXY)-, METHYLCARBAMATE (OR) PROPOXUR

Date form received by agency: 03/05/2012

Site name: CVS PHARMACY #13019

Classification: Conditionally Exempt Small Quantity Generator

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: P001
- . Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
  
- . Waste code: P042
- . Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-
  
- . Waste code: P075
- . Waste name: NICOTINE, & SALTS
  
- . Waste code: P081
- . Waste name: NITROGLYCERINE (R)

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Record Updated Date:      06/29/2012  
 Update By:                  KALEWAND  
 Site Description:

Site Location: The subject property is located at 160-180 Myrtle Avenue and is identified in New York City Tax Maps as Block 2061, Lot 1. The subject property consists of a total land area of approximately 1.8 acres. The site is bounded by Myrtle Avenue to the north, a commercial/residential building to the east, commercial and residential buildings to the south and a parking garage to the west. The site is presently vacant land, which is utilized as on-grade parking. Two combined-sewer DEP easements (50-feet wide) traverse the site north to south. Site Features: An active NYCT subway tunnel, IRT lines N, Q, B and D, is located approximately 350 feet to the west of the site beneath Flatbush Avenue. Current Zoning: The site is zoned as an R7-1 residential district with a C2-2 commercial overlay. Both residential and commercial uses are allowed under this type of zoning. The New York City Department of Environmental Protection has assigned an E-124 designation to the Subject Site concerning noise and hazardous materials. Historical Use: Sanborn Maps indicate that the property was developed with commercial and residential properties as early as 1887. Former one-story retail buildings with single level basements were demolished in early-to-mid 2007. Site Geology/Hydrogeology: The site is currently paved; subsurface soil at the site consists primarily of urban fill to a depth of approximately 16 feet, with native soils beneath that depth. Native soils are expected to be somewhat stratified, containing beds of fine soils (silts and clays) with low rates of hydraulic conductivity and beds of coarse soils (sand and gravels) with high rates of hydraulic conductivity at greater depths. The surface elevation of the site is approximately 35 feet above mean sea level. The topography of the site is generally flat. Regional topography is generally flat, with a slight elevation drop to the west and to the north. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map for the City of New York (Panel 203 of 457, effective date September 5, 2007; FEMA Map # 3604970203F), the Site is located in a Flood Zone X - an area outside the 0.2 annual chance floodplain. The East River is located approximately 1 mile northwest of the Subject Site. The limited studies concluded that the general direction of surface and groundwater flow is northwesterly and hence any contaminants released from the Site have a limited potential to migrate towards the East River. Depth to groundwater at the Site is approximately 30 feet below ground surface (bgs). The BCP application was denied by letter dated June 29, 2012.

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL Con ed e2mis notes: Found approx. 1 qt unknown oil on approx 50 gallons water in VS4147. Oil was discovered after transformer was removed and flush began to clean structure transformer is wrapped up and on truck when it was removed. It was not leaking crew will pressure test unit and check to see if below min sample was taken from structure but if transformer does not hold pressure or shows below min sample will need to be taken from transf. historical record for this transformer is 305 ppm - flush truck will need to be quarantined until sample results are returned. Pressure tested trf. and ok unit does not show below min. Flush crew to stand by- waiting for directions from foreman, may possibly do cleanup as 50-499 until lab results are received. Lab results returned <1ppm lab seq#99-09038, bankhead reports cleanup comp tag removed. Incident is closed.a "

DEC Memo:

"Mr. Knoop says that this contamination is from an adjacent property being managed by Alex Zhitomirsky. The spill assigned to Alex Zhitomirsky by Steve Sangesland and Koon Tang on 3/21/2006. This location might be affected by 84th Precinct spill which is being remediated by NYCDDC. AZ 5-24-2006 Stuart Knop 212-479-5461 (GDY Properties - real estate developers). During Phase 2 Environmental Site Assessment for a residential tower building they discovered in the north-western portion of the property adjacent to the 84th Precinct some exceedances of VOCs in groundwater (2,000 ppb total VOCs) and soil (4,140 ppb total VOCs). The contaminated area is cross gradient from the 84th Precinct. They will remove contaminated soil from the site and take end point samples. They are putting a soil vapor barrier underneath a future residential tower building. Also, they found perc in two groundwater samples obtained from wells at 93 ppb and 17 ppb. When the excavation is complete a report will be submitted to DEC. AZ 6-7-2006 A letter was issued by Darryl H. Cabbastalk (NYCDEP 718-595-4398). NYCDEP reviewed Phase II Investigation Report for this property. The comments recommendations are: 1. all known USTs and ASTs must be properly removed/closed. 2. In addition vapor barrier, an active venting should be provided in accordance with NYSDOH Vapor Intrusion Protocol A post construction protocol should be submitted to DEP. AZ 9-25-2006 Conversation with Stuart Knoop from Langan Engineering @212-479-5461. DEP issued a notice to proceed with remediation of the site. The remediation will consist of soil excavation to 25' depth. Its above gw table. The owner is petitioning DEP to waive the requirement for the sub slab depressurization system due to the fact that they are building underground garage which with an active ventilation system with a positive pressure. AZ 11-5-2007 I contacted Stuart Knoop (Langan Engineering 212-479-5461 Assistant Project Geologist). The backup contact is Tarek Khori 212-479-5450 -Project Engineer. The client (167 Johnson Street LLC) is in the middle of the excavation of the site. The excavation is delayed due to the permitting issues. I request that end point samples in the spill area will be taken at the end of the excavation. They should submit to DEC prior to the sampling the area plans with depicted area of excavation, area of contamination, locations of the installed wells and advanced borings with respective total VOCs and SVOCs concentrations. Groundwater flow direction should be shown on the plans. Proposed end point sample locations should be depicted on the plans submitted to DEC. If water is discovered in the excavation, groundwater samples should be taken. Longan Engineering should submit to DEC periodic status reports. AZ 8-12-2008 I contacted Stuart Knoop (Langan Engineering 212-479-5461 Assistant Project Geologist). The job is temporarily suspended due to the reconfiguration of the building design. They partially excavated the site. They have not completed the excavation. I reiterated my request for end point sampling. AZ 2-25-2010 The project has been suspended indefinitely due financial issues. The site was partially excavated (approximately 50%). There is probably some dissolved groundwater contamination at the site (up to 1200 ppb of xylene, some small concentrations of perc -up to 93 ppb). No reports were generated by langan. Stuart Knoop will get back to me with more info. AZ 2-16-2012 Left a message for Stuart Knoop. He called me back. The site is under a new ownership. The previous owner probably went out of business. No activity is going on the site. The City backfilled the site. New owner is preparing Remedial Engineering Report. The new owner is Argent Ventures (Jonathan Rabinow 212-692-5408). I requested

**RECONSTRUCTION SITE (Continued)**

**S107657827**

that the owner forward existing environmental reports to DEC (hard copies and e-copies) ASAP. The case will be referred to Legal if no actions are taken. The documents must be submitted to DEC within one week. AZ 9-19-2012 Stuart Knoop contacted DEC. Langan is overseeing redevelopment of the site. The owner is now excavating soil for a foundation construction. End point samples will be taken in north-west corner at northern boundary of the site, where impacts were previously found. Groundwater samples must be taken. Soil vapor barrier will be constructed. They will probably excavate 15' below the grade. AZ 9-20-12 E-mail from Stuart Knoop: Alex, Just to recap our discussion regarding the Gold Street spill, excavation has resumed for construction of a high-rise foundation at the site. We will collect endpoint soil and groundwater samples from the north-central and northwestern portions of the excavation (i.e., those areas that exhibited regulatory exceedances during the Phase II investigation) following completion of the excavation to approximately 15 ft below sidewalk grade. Thanks and please call with any questions. Stuart Knoop, P.G. Senior Project Manager Direct: 212.479.5461 Mobile: 917.941.2831 AZ 11-27-2012 Received a phone call from Stuart Knoop. The new contact for the site is Mimi Raygorodetsky 212-479-5441 Project Manager. They are doing a sub grade. They excavated to the target depth. The are about 14' below the sidewalk. Groundwater is about 23' below the sidewalk. The plan is to take end point samples. They never found a source. A probable source is 84th Precinct. They will collect a groundwater sample where a contaminated soil sample was collected. They can not excavate further. Contamination is the saturated zone. AZ 11-29-2012 The following e-mail was received from Langan: Dear Alex, This e-mail serves to memorialize your conversation today with Stuart Knoop regarding the scope of investigation that was agreed to for Spill No. 0514513 (209 Gold Street, Brooklyn, NY). On Wednesday, November 28, 2012, Langan will mobilize to the site with a geoprobe drill rig and will advance one soil boring (E-1) to the water table in the northwest corner of the site, where petroleum-impacted soil was discovered during the course of a subsurface investigation on the property in 2005. The source of the observed petroleum is suspected to be the adjoining Police Station where a spill is known to exist and active remediation is known to currently occur. Recovered soil from the boring will be field screen for evidence of contamination. One soil sample will be collected for laboratory analysis from the surface of the site (0-2 bgs), absent any interval that exhibits evidence of contamination. The boring will be overdrilled and a temporary monitoring well will be installed to allow for the collection of a groundwater sample. An effort will be made to purge three well volumes prior to sample collection. Both the soil and groundwater samples will be sent to an ELAP-certified lab for VOC CP-51 analysis via 8260 and SVOC analysis via 8270. Upon receipt of lab results, Langan will submit a short report to you documenting this investigation. If no evidence of a surficial release is determined by lab data, we will request spill closure. Thank you, Mimi Raygorodetsky Mimi S. Raygorodetsky Senior Project Manager Direct: 212.479.5441 Mobile: 917.952.9906 Langan Engineering & Environmental Services Phone: 212.479.5400 Fax: 212.479.5444 21 Penn Plaza 360 West 31st Street, 8th Floor New York, NY 10001-2727 11-28-2012 The following e-mail was sent to Langan: Dear Ms. Raygorodetsky, Why only one boring/well is planned? I will need a map showing the proposed well and the contaminated soil location. Sincerely, Alexander Zhitomirsky 11-29-2012 The following

e-mail was sent to Mimi Ragorodetsky Dear Mini, I did not agree with this proposal. Stuart just informed me about the boring installation. I need to see the report with all maps and laboratory data. Have you taken the end point samples after the excavation was completed? These results must be included in the report. Thanks, Alexander Zhitomirsky 12-10-2012 On December 7, 2012, the following documentation was received from Langan: Phase I Environmental site assessment by MEC(dated June 14, 2004), Phase II Environmental Site Investigation Report by Langan prepared for GDY Properties and dated March 17, 2006, Remedial Action Plan and Construction Health and Safety Plan by Langan prepared for NYCDEP and dated March 2006, Interim Remedial Engineering Report by Langan prepared for Gold 613 LLC and dated February 21, 2012 and Remedial Action Work Stipulation list submitted to the New York City Office of Environmental Remediation by Langan and dated November 20, 2012. The following e-mail was sent to Mimi Raygorodetsky, Kevin Lalezarian; Brevdo, Vadim; Carrus, Daniel; Knoop, Stuart: Dear Ms. Raygorodetsky, I am currently reviewing information related to the above spill number. It should be noted that according to the Department's records, on numerous occasions, beginning in 2007, the Department requested the submittal of an end-point sampling work plan. This plan should include but not be limited to: area plans with a depicted area of excavation, an area of contamination, locations of the installed wells and borings with the corresponding total VOCs and SVOCs concentrations. The Department also requested information regarding groundwater flow direction and the proposed end-point sample locations. However, these requests have not been satisfied. No reports were submitted to the Department until December 7, 2012. A sampling plan was submitted to the Department only on December 7, 2012. This plan included one end-point sample which was collected on November 28, 2012, and two end point samples that will be collected - a total of three end-point samples. I consider this number of end-point samples insufficient. A total of fifteen end-point samples should be collected. These samples should be collected at the depth of two feet below the excavation termination depth. Soil PID screening should be performed prior to the sampling. Also, six groundwater samples should be collected at the site. Groundwater wells/sampling points should be developed prior to the groundwater sampling. When placing the end-point samples and wells/groundwater sampling points, special attention should be given to the area where contamination was previously discovered. Soil and groundwater samples should be analyzed for the full list of VOCs and SVOCs. A plan with the proposed end-point sampling points and groundwater sampling locations should be submitted to the DEC for approval prior to the start of the field work. The predominant groundwater flow direction should be shown on the plan. Sincerely, Alex Zhitomirsky Alexander Zhitomirsky - Engineering Geologist 2 12-11-2012 No reports or remedial action work plan were submitted to DEC prior to December 7, 2012. This is a construction site. An excavation was performed at the site for construction purposes. According to Interim Remedial Engineering Report dated February 21, 2012, the site occupies 15,545 square feet in Downtown Brooklyn and is identified as Block 134, Lots 1,5, 30,38 and 41. The property address is 309- Gold Street and 171-175 Johnson Street A visual inspection and physical walkover of the property indicated that there are signs of underground storage tanks (USTs) located on the property. A gasoline fill line and vent pipe was noted at the 175 Johnson Street building indicating the possible existence of an

RECONSTRUCTION SITE (Continued)

S107657827

underground storage tank (UST). An approximately 1,100-gallon UST filled with water was encountered under the Prince Street sidewalk during excavation and lagging installation along the eastern Site boundary on July 17, 2007. According to Langan, evidence of petroleum impacts was not observed in the soil surrounding UST. Removal of UST was postponed based on its location underneath a public right-of-way and outside of the construction excavation footprint. The UST remained in-place as of the suspension of excavation activities. There was an auto repair auto shop at 311 Gold Street (Phase I Environmental Assessment 6-14-2004). The site was also occupied a five-story factory building at 171 to 175 Johnson Street and two garage buildings at 311 and 313 Gold Street. The excavation was performed by Recine. Historic fill was excavated from Grids 1 through 10 to depths ranging from 8' to 12' bgs between June 19 and August 13, 2007. Earthwork was suspended indefinitely and Langan demobilised from the Site on August 13, 2007. Portions of the site were excavated to depths ranging from 8' to 12' bgs. 1,100-gallon UST remained in-place underneath the Prince Street sidewalk. The site was backfilled by September 25, 2009. The source of backfill was not disclosed in the complaint disposition. (Interim Remedial Engineering Report February 21, 2012 by Langan). The buildings were demolished in January and February 2006 (Interim Remedial Engineering Report 2-21-2012). The plan redevelopment included construction of a 35-story mixed-use residential condominium and commercial building. The building was to include 208 apartments with underground parking and retail space at the ground floor level. 12-20-2012 The following e-mail was sent to Stuart Knoop, V. Brevdo: Dear Stuart, I have reviewed the work plan submitted on December 20, 2012, for the end point sampling. The plan is approved. I agree to eliminate sampling points E15 and E17. A full report including the results of the end point sampling should be submitted to DEC. You stated that an improperly closed tank on Prince Street will be excavated. Upon the excavation of this tank six end point samples should be taken from the excavation pit. These samples should be analyzed for the full list of VOCs and SVOCs. The tank should be properly closed and registered. Sincerely, Alexander Zhitomirsky - Engineering Geologist 2 "

Remarks: "found contaminated soil (minor) could be an off site spill, : any questions please call"

DEP personnel on site already. Hose on east side of street running water at high volume down the street to the intersection of Navy St. and Park Ave. Many tank trailer trucks and 2 vacuum trucks on site. Problem is below the elevated BQE and doesn't affect traffic. Initial release is 2,000 gals with 150 gals. recovered. Jerry Mattarazzo is the Incident Commander for Con Ed. Spoke to Mr. Natale, Information Officer of Con Ed, at command post ((917) 417-7372). He said that 345,000 volt feeder was compromised by water main that crosses it. Feeder runs parallel and under the eastbound (northbound) side of BQE. Oil does not contain PCBs. Water main crosses the line perpendicularly. Water main sprang a leak which picked up the sand around the feeder pipe and sand blasted the feeder pipe until it cut the pipe and released oil. At beginning of incident yesterday 3/2/06, all that was seen was water breaking through cracks in pavement under the BQE. Con Ed dug up the intersection of the feeder and the main. Yellow oil was seen floating and filling up the pit. Pressure was reduced in the feeder to about 5 gal./min., but the water pressure was maintained. Con Ed kept pumping oil to keep the water out and DEP kept pumping water to keep the oil out. Mike Pillig of Con Ed, Safety Officer (and acting as Environmental Officer for Con Ed), told me that, initially, Con Ed thought that 2,000 gal. had been released, but because pumping never ceased in order to protect the feeder, much more is suspected of having been released as a mix with water from the water main. There are cracks in the pavement where the east side of Park Avenue is within 15' of the intersection of the feeder and water main. Started pumping out excavation at 2:45PM. Empty hole with about an 8 hole on underside of one feeder pipe. Oil is still coming out of pipe. Vacuuming is continuing and liquids are going into portable 10,000 gal. roll off holding tank. However, tanker trucks are standing by. I pointed out the cracks in the pavement to Mike Pillig and he said that once things are under control, Con Ed will do soil borings to determine extent of soil contamination and oil migration. I asked David Russo, DEP Environmental Health and Safety Officer, whether the water treatment plant has been notified of the mix of water and oil heading to the plant. He said they had been notified and it's up to them what they will do about it. The Ingersol Houses apartment buildings are about 50 feet away from the site of the excavation. It's not clear whether any oil headed to or entered the basements of the buildings as the great majority of the water from the water main escaped up and out through cracks in the pavement under the BQE. 3/3/06 4:00 PM - LEAK LOCATED ON PARK AVE BET NAVY AND POSTLAND. MET AT SITE WITH PILLIG AND NATALE. LEAK HAS BEEN EXCAVATED AND TEMPORARY CLAMP IN PLACE. SPOKE WITH RUSSO (NYCDEP) WHO IS SATISFIED WITH PROGRESS THUS FAR. WILL RETURN TO SITE ON MONDAY 3/6 TO DISCUSS POST-EX SAMPLING WITH PILLIG. (JHO) 4/10/06 e-mail from Mike Pillig: Jane, I wanted to update you on our cleanup activities on the subject feeder leak. As you will be able to see from the results, we have one area of the excavation where the wall samples are still high, that being the East wall (north corner). The reason you do not see more samples taken on the north wall is because we uncovered another feeder to inspect for damage and backfilled with sand so as to protect the feeder. While there was no visible contamination we did not take samples. If I were to take samples of the north wall, I would merely be sampling the clean sand that was put back in to protect the feeder. Lab results show high TPH results (23,200 ppm and 26,100 ppm) in northeast corner of excavation. (JHO) 4/19/06 - spoke with Pillig - told him to excavate north east corner

**FEEDER 63 (Continued)**

**S107657331**

area. He indicated that they were already planning to excavate additional soil and re-sample that area. Also, they will be conducting additional excavation to the north of the second feeder and collecting samples. He will send revised sketch showing excavation limits. (JHO) 5/4/06 - met on site with Mike Pillig. Additional excavation conducted to north and east approx. 5 feet, new samples collected - all results below 500 ppm TPH. OK to backfill. Also, he extended excavation to west approx. 5 feet and to a depth of 2 feet due to visual observation of oil beneath asphalt during initial spill response. 11 samples collected, as well as 2 shallow soil borings immediately north of feeders 701/702 (which are located north of the original excavation). Results expected next week. When these excavations are backfilled, he will open excavation northeast to DEP valve basin, which was impacted during initial release. Total leak amount now calculated at approx. 5700 gallons. (JHO) 6/28/06: Mike Pillig e-mailed all lab results and site sketch showing sampling locations - see eDocs. All results below cleanup guidance values. Close out. (JHO) "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ZHITOMIRSKY This site has been combined with the adjacent 84th Precinct for purposes of remediation. LiRo is currently operating a multi-phase extraction system with branches at both facilities to address soil and groundwater remediation. (See also Spill #9512589 at 84th Precinct.) - JK 1/19/04. 6-2-2005 Reviewed a Monitoring Report for the above referenced site. The report presented remedial system performance and groundwater monitoring data. The data show that wells adjacent to Gold Street showed increasing contaminant concentrations. In the report LiRo proposed to discontinue groundwater sampling at wells MW-1, MW-2, MW-3, MW-4, MW-5, MW-12 and MW-13. The Department concurred with this proposal. However, the Department recommended that LiRo should take steps to address the increases in dissolved-phase VOC levels in the wells adjacent to Gold Street. AZ 8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concurred with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent groundwater analytical results showed total VOC concentrations up to 11.070 ppb in MW-7. The current sampling results showed increase in VOC levels at extraction wells EW-6/MW-7 in the portion of EC 207. AZ 12/01/2006 Reviewed a Monitoring Report for April -

June 2006. Flow meter is broken, therefore the system's efficiency in removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from gw the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ 12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 DEC inquired about the remedial progress at this site. The system must be rebalanced. Greyhawk will issue a change order. AZ 5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk: MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. All these tasks should be performed without delay. Roux recommended inspection of the water flow meter, removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05 could be discontinued. AZ 7-23-2007 Reviewed a Monitoring Report for October 2006 - March 2007 and dated May 24, 2007. Total VOC concentrations ranged from non-detect to 6,458 ppb in 84MW-03. Total VOC concentrations significantly increased in downgradient well MW-20 (from 601 ppb to 1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC concurs with the following addition: extraction well EW-12 should also remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated 5-11-2007. An e-mail was sent to DDC/Roux/Greyhawk: I have reviewed a Monitoring Report for the above site for the period of October 2006 - March 2007 and dated May 24, 2007. Total VOC concentrations ranged at the site from non-detect to 6,458 ppb in 84MW-02. Total VOC concentrations significantly increased in downgradient monitoring well MW-20 (from 601 ppb to 1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC

concur with the following addition: extraction well EW-12 should also remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated 5-11-2007. AZ 3-25-2008 An e-mail was sent to Greyhawk/DDC/ROux/V. Brevdo: I have reviewed a Monitoring Report for the above site for the period of April - September 2007 dated December 21, 2007. Total VOC concentrations ranged at the site from non-detect to 5,712 ppb in 84MW-03. Total VOC concentrations significantly increased in monitoring wells 84MW-6 and MW-07/EW06. The MPE system is offline. Roux proposed restart of the MPE system. MPE system restart should be performed without delay. Bioremediation program proposed by Roux should be implemented without delay. AZ 1-16-2009 An e-mail was sent to Roux/DDC/Greyhawk/V. Brevdo: I have reviewed Quarterly Monitoring Report for the above site for the period of October 2007 - September 2008 dated November 5, 2008. Total VOC concentrations ranged at the site from 228 ppb to 3,972 ppb in 84MW-06. Total VOC concentrations have been on the rise during the last reporting period. DEC approved enhanced bioremediation plan on July 23, 2007. The injection was performed in October 2008. The MPE system is offline. In March 2008 DEC requested restart of the MPE system. But the system has not been started. Following evaluation of the bioremediation program, the MPE system should be resumed if needed. AZ 10-8-09 An e-mail was sent to Roux/Fatemeh Ashkan: I have reviewed Quarterly Monitoring Report for the above site for the period of October 2008 - January 2009 dated April 23, 2009. ORC injections were performed in 2003. In December 2008 sampling event two wells MW-10 and MW-19 were inaccessible. MW-01 and 84-MW-01 have been paved over and are no longer accessible. The injection work started on August 6, 2008, but could not continue due to extremely low-flow conditions at the site. Wells have difficulty taking the required NutriMax solutions. PermeOx Injection Plus and NutriMax injections were completed in October 2008 due to the low-flow conditions. MPE system is still off-line. Total VOC concentrations after injections ranged from 126 ppb to 3,557 ppb in 84MW-03. The highest levels of groundwater contamination remains in the southern portion of the site. Roux proposed a round of confirmatory soil borings. This proposal is approved. MPE system should be repaired, modified and restarted. Also, I contacted Brian Morrissey. Wells MW-04, MW-05 and MW-06, MW-12, MW-13, and MW-15 had no access on December 17, 2008 sampling event. I requested that if wells MW--01 and 84-MW-01 had been previously contaminated than they should be re-installed. If the wells which were not accessed in December 2008 event were not accessible in October 2009 they should be re-sampled. AZ 12-20-2010 An e-mail was sent to DDC/V. Brevdo, S. Frank (LiRo): Dear Steve, I have reviewed a quarterly monitoring report and site turn-over status. The report proposed advancement of five borings and installation of one well. These proposals are approved. Also, the report stated that a number of diesel/gasoline tanks were closed in place. These tanks could be a continued source of contamination. Excavation of these tanks should be considered as one of the remedial options, if feasible. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ 5-4-2011 Reviewed a QMR dated Jan-20-2011. LiRo proposed implementation of the additional site investigation that was previously approved by DEC and quarterly

sampling. AZ 1-9-12 Reviewed a QMR 10/31/11. ISCO will be implemented at the site. It was approved by DEC in October 2011. AZ 6-18-2012 LiRo will investigate the feasibility of removal of the four USTs located within the station house apparatus floor in the Engine Company. Soil is heavily contaminated northwest of tanks 004, 005, 007 and 008. AZ 7-5-2013 LiRo identified a concrete patch in the western most bay area, approximately 19' by 4'. This area is assumed to be centered over the four closed in-place 550-gallon USTs. The bay area has approximately 10 feet of overhead clearance and the tanks can be assessed through the bay door to the north. LiRo recommended completion of geophysical survey to determine location of the tanks and other utilities. LiRo also recommended feasibility study to determine if tank removal will address contamination at the site. I contacted S. Frank over the phone. He confirmed that LiRo will perform a geophysical survey and the tanks removal feasibility study. AZ 12-9-2013 Six injection wells were installed along the driveway area, south of the 84th Precinct in May 2012. Soil contamination is present at and below the groundwater level at depths ranging 21'-28'. Increased VOC levels indicate rebounding levels. Monitoring well PD-BW-06 has exhibited 19,970 ppb in groundwater. Nuisance odors were reported, therefore, the fourth injection event will be completed and potential off-gassing issues will be addressed in the third quarter 2013. AZ 12-22-2014 Reviewed a monitoring report December 2013 - April 2014 dated June 19, 2014. Groundwater sampling was completed in February 2014 and April 2014. Dissolved phase VOC impacts at EC 207 facility remain in the vicinity of wells MW-A, EW-05 and MW-07/ew-06 (up to 3,022 ppb). AZ 4-2-2015 Reviewed a monitoring report May 2014 - July 2014 dated September 5, 2014. Soil data collected indicates that soil contamination is present at and below the groundwater table, in the saturated zone along the driveway area of 84 Precinct. The fourth ISCO injection event was completed in July 2014. Groundwater sampling was completed in May 2014. Dissolved phase VOC impacts were recorded in 14 wells. The total VOC concentrations above AWQSGV's ranged from 41 ppb to 13,948 ppb. AZ 1-11-2016 Reviewed a monitoring report November 2014 - February 2015 dated May 26, 2015. Soil data collected indicates that soil contamination is present at and below the groundwater table, in the saturated zone along the driveway area of 84 Precinct. The fourth ISCO injection event was completed in July 2014. Groundwater sampling was completed in January 2015. Dissolved phase VOC impacts were recorded in 11 wells. The total VOC concentrations above AWQSGV's ranged from 6 ppb to 10,996 ppb. Six wells on the Engine 207 portion of the site were inaccessible since they were covered with construction trailers. AZ 2-12-2016 Reviewed a QMR report dated December 7, 2015. The report recommended implementation of a modified ISCO injection plan. A total four ISCO injection events have been completed so far. According to LiRo, it appears that the injection well radius of influence was reduced and the well locations were no longer effective. LiRo performed a soil investigation in the alleyway. Six borings were advanced to 30'-40'. Petroleum impacted soil was identified from 25' to 30' bgs. Also, petroleum impacted soil was identified outside the injection area, within the sidewalk, along Gold Street. The total VOC concentrations in six soil samples ranged from 48,420 ppb to 806,400 ppb (26'-27'). Some of 2015 sampling data does not have a similar sampling interval as the historical data. This is because in the June 2015 data, there were generally no indicators (i.e., elevated PID readings, odors,

**U003241861**

staining, etc) of petroleum impacts within the corresponding depth intervals, therefore no samples were collected. Multiple wells were not sampled due to site construction trailers locking access. The total VOC concentrations in 10 samples ranged from 31 ppb to 15,295 ppb. Five wells reported increases in VOC concentrations. All three wells within ISCO injection area reported increases in total VOC concentrations compared to the May 2015 sampling event and two wells reported decreases. Two USTs remain close in place, one at each site: EC 207 and 84th Precinct. I left a message for S. Frank. AZ 1-31-2017 Reviewed a QMR report dated August 8, 2016. VOC concentrations ranged from 3,630 ppb in the wells associated with Engine Company 207. LiRo will continue EFR and use of ORC socks. LiRo will conduct GPR survey in the alleyway (84th Pct.) to determine possible location of the piping for the closed-in-place UST. Additionally, LiRo evaluate excavating test pits to determine if piping source areas are present. I have contacted S. Frank over the phone and approved the test pits. I have also requested more aggressive treatment of this spill, including excavation if feasible. AZ 7-17-2017 Reviewed a QMR report dated January 27, 2017. Based on the Geophysical Investigation results performed in August 2016, there is no evidence of remaining piping or tanks in the 84th Precinct alleyway. However, due to persistent elevated contaminant levels in that area, LiRo will conduct a several test pits in the alleyway to better determine if piping/lines are present. AZ 3-5-2018 Reviewed a QMR report dated September 28, 2017. Petroleum impacts remain mainly within the apparatus floor and Monitoring wells MW-A, ew-05, mw--10/mw-10R, EW-09/MW-11. EFR will be continued. AZ"

Remarks:

"LABORATORY RESULTS TAKEN DURING A SUB-SURFACE INVESTIGATION INDICATE SOIL CONTAMINATION."

DEC Memo: "8-28-2005 Reviewed a Monitoring Report for June 2005. The report presented remedial system performance and groundwater monitoring data. Groundwater contaminant levels appear to be falling along the west side of Gold Street. In the report LiRo proposed to install ORC socks at wells MW-15, MW-17, 84MW-2 and 84MW-6. The Department concurred with this proposal. AZ 2/9/2006 Reviewed a Monitoring Report received in November 2005. The system was down for 26 days in September due to clogged lines. Franklin has been directed to make necessary repairs to increase induced vacuum in the 84th Pct. driveway area. AZ 3/20/2006 Stuart Knoop (Langan Engineering) 212-479-5461 reported that during their site investigation at the adjacent property 167 Johnson Street they found dissolved phase in groundwater on the north-western part of the property on Gold Street. BTEX and naphtalene were encountered at concentrations 2009 ppb total VOCs and 680 ppb total SVOCs . New spill was opened # 0514513. AZ 5/15/2006 Reviewed a Monitoring Report for October - December 2005. Recent growndwater analytical results showed total VOC concentrations up to 4,462 ppb in MW-6. The current sampling results showed increase in VOC levels in wells MW-17, 84MW-2 and 84MW-6 in the portion of 84 Precinct. AZ 12/01/2006 Reviewed a Monitoring Report for April - June 2006. Flow meter is brokentherefore the the system's efficiency in

**84 PRECINCT NYPD -DDC (Continued)**

**S104951147**

removing VOCs in gw is unknown. The MPE system needs rebalancing to ensure maximum vacuum and fluid extraction rates in EW-6, EW-8, EW-12, PD-BW-6, and PD-BW-2. In a telephone conversation with Brian Morissey I concurred with removing 84-MW-5 from the sampling program because VOCs and SVOCs were not detected for two consecutive monitoring events. The total VOC concentrations in MW-20 sharply increased. MW-2 has 10,450 ppb total VOCs. AZ 5-11-2007 Reviewed a Monitoring Report for July - September 2006 dated January 5, 2007. MPE system had an uptime of 9%. because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11,EW-12,PD-BW-02 and PD-BW-05. The MPE system needs adjustment. Roux recommended inspection of the water flow meter, removal of several monitoring wells from the sampling program, removal of SVOCs from the sample schedule, inclusion of several bioremediation parameters in the sampling program. E-mail was sent to DDC/Roux/Greyhawk: MPE system at this site had an uptime of 9% because of failure of liquid transfer pump P-101. System has restrictive fluid flow and vacuum on the extraction wells. VOC concentrations ranging from 2,360 ppb to 8, 840 ppb in four of the 18 monitoring wells. Wells MW-15 and MW-20 show large increase in total VOC concentrations from the previous sampling round. Roux listed as upcoming tasks repair of the liquid pump, re-starting the MPE system and making adjustments to increase flow extraction and vacuum at extraction wells EW-11, EW-12, PD-BW-02 and PD-BW-05. The MPE system needs adjustment. All these tasks should be performed without delay. Roux recommended inspection of the water flow meter, removal of SVOCs from the sampling schedule and inclusion of several bioremediation parameters in the sampling program. All these recommendations are approved. Sampling of wells MW-06 and 84MW-05 could be discontinued. AZ 7-23-2007 An e-mail was sent to DDC/Roux/Greyhawk: I have reviewed a Monitoring Report for the above site for the period of October 2006 - March 2007 and dated May 24, 2007. Total VOC concentrations ranged at the site from non-detect to 6,458 ppb in 84MW-02. Total VOC concentrations significantly increased in downgradient monitoring well MW-20 (from 601 ppb to 1777 ppb). The MPE system had an uptime of only 13%. Roux proposed that only seven extraction wells should remain online. DEC concurs with the following addition: extraction well EW-12 should also remain online. Bioremediation program proposed by Roux should be implemented without delay. Roux proposed removing six monitoring wells from the groundwater sampling program. DEC concurs. Roux proposed removing SVOCs from the sampling program. DEC previously concurred to this proposal in an e-mail dated 5-11-2007. AZ 3-25-2008 An e-mail was sent to Greyhawk/DDC/ROux/V. Brevdo: I have reviewed a Monitoring Report for the above site for the period of April - September 2007 dated December 21, 2007. Total VOC concentrations ranged at the site from non-detect to 5,712 ppb in 84MW-03. Total VOC concentrations significantly increased in monitoring wells 84MW-6 and MW-07/EW06 . The MPE system is offline. Roux proposed restart of the MPE system. MPE system restart should be performed without delay. Bioremediation program proposed by Roux should be implemented without delay. AZ 8-11-2008 An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo: I have

reviewed report for the above spill submitted on June 2, 2008. This spill was issued on March 29, 2001 when concentrations of semi-volatile organic compounds (SVOCs) around a 10,000-gallon tank containing #2 fuel and 3,000-gallon tank containing diesel were found to exceed allowable regulatory guidelines. The tanks are closed in place. Spill #9512589 at this site is currently being remediated by Greyhawk/Roux Associates for gasoline contamination. The spill #0013663 will be incorporated into investigation/remediation of spill#9512589. However, soil and groundwater testing should be performed around the #2 fuel tank and the diesel tank prior to the closure of spill #9512589. An electronic copy of the report dated June 2, 2008, should be submitted to DEC. The spill #0013663 was consolidated with spill #9512589. AZ "

Remarks: "A site assessment was performed on 10,000 gal UST on Mar 13, 2001. The analytical results show there is soil contamination."

dissolved groundwater contamination exist at this site. The City's consultant conducted a site reconnaissance, well inspection, and a round of water gauging in June 2010. Residual soil and groundwater contamination remain at the site. Moderate to high level VOC remain in the groundwater. The MPE remediation system has been offline since 2007 due to failure of the discharge pump and phase separator transfer pump. Two bio-injections were performed at the site in 2008-2009. The DEC has made several requests in correspondence requesting to repair the system. Consultants proposed conducting an additional site investigation to determine current soil conditions. DEC approved proposed advancement of five borings and installation of one well. Also, DEC recommended in December 2010 excavation of a number of diesel/gasoline tanks were closed in place, if feasible., since these tanks could be a continued source of contamination. AZ 3-25-2011 Reviewed tank closure report dated 12/13/2010 4,000 gal gasoline tank was removed. 2 samples were taken from the bottom and 2 samples were taken from suction line and dispenser location excavation. No VOC exceedances were recorded. SVOCs were present in soil samples dispensers and pipeline. The SVOCs that were detected were below CP-51 numbers. No side samples were taken due to a steel sheet piles. AZ 10-12-2011 Received and reviewed proposals for in-situ chemical oxidation (ISCO) pilot test. I called S. Frank and expressed concerns regarding heat generation effects on communications and existing tanks. The following e-mail was received in response: Dear Alex, I received your voice mail expressing concern about heat generation and potential impact to USTs and utilities at the 84th Precinct site. Because the depth to water is about 20 feet, the tops of the injection well screens will be set at 18 feet which is far below the depth of the UST bottoms (which are founded on a concrete slab at a depth of about 12 feet) and infrastructure at the site. Therefore we are comfortable that no damage will result and no warranties will be voided through application of peroxide at the site. Please call if you require further information. An e-mail was sent to S. Frank/F. Ashkan/ V. Brevdo: Dear Steve, I have reviewed in-Situ Chemical Oxidation (ISCO) Pilot Test Work Plan. I have expressed concern about the heat generation impact to USTs and utilities. You are stating that LiRo is comfortable that no damage will result. Based on this statement, the proposed pilot test is approved. EPA should be notified of the injection. The Responsible Party and its contractors are solely responsible for the safe execution of all work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. AZ 1-9-2012 An email was sent to LiRo/F. Ashkan/V. Brevdo:Dear Steve, I have reviewed a quarterly monitoring report for the period of April through August 2011 and dated October 31, 2011. The report stated that LiRo will conduct an In-Situ Chemical Oxidation pilot test which was approved by DEC on October 12, 2011. LiRo proposed removing several monitoring wells from the monitoring program. Monitoring wells MW-03 and MW-13 could be removed from the monitoring program. AZ 6-20-2012 Reviewed QMR

**S104951147**

September through November 2011 dated February 23, 2012. Elevated levels of VOC and SVOC in soil in the parking area of the precinct. VOCs in groundwater ranging from 128 ppb to 9,317 ppb. ORC socks are installed. AZ 10-9-2012 Reviewed QMR September 2011 through Feb 2012 2011 dated May 31, 2012. Wells MW-09, EW-09/MW-14,EW-05 and EW-07 will be re-developed and one-time sampled. Based on the results of the site visit to evaluate removal of remaining closed-in-place USTs, GPR/Radio Frequency/Electromagnetic survey to confirm the presence of the USTs will be conducted. The survey will also include the driveway are south of 84th precinct to try to determine location of piping from the emergency generator to the 10,000 gallon #2 fuel oil UST. DEC approved ISCO (hydrogen peroxide) test on October 12, 2011. This test is yet to be done. AZ 4-19-2013 Six injection wells were installed in May 2012. In April 2012 total VOC concentrations were up to 16,030 ppb in PD-BW-06. ISCO pilot rest will be completed. Four injections are planned. GPR survey to locate USTs will be conducted. AZ 7-5-2013 Reviewed QMR report dated January 15, 2013. The WP recommended 4 injection events. A total of three events were completed. A total of 2,880-gallon of iron catalyst and 9,900-gallons of 8% hydrogen peroxide have been injected into the six injection wells between May 2012 and August 2012. Dissolved phase VOC impacts remain in the vicinity of wells MW-A, FW-05 and MW-07/EW-06. Offsite well MW-15 showed an order of magnitude increase compared to the April 2012 sampling. Nuisance odors were reported in the basement area adjacent top the injection area. As a result, the fourth ISCO injection event has been temporarily halted. LiRo will evaluate ways to address odor issues. AZ 5-15-2014 Reviewed report dated 10/28/2013. Increased VOC concentrations in January 2013 and August 2013 indicate rebounding levels. Off site wells MW-15 and MW-17 reported increase in VOC concentrations in August 2013. Due to nuisance odors in the basement area the fourth ISCO injection will be delayed. Potential off gassing issues will be addressed. AZ 9-2-2014 Reviewed report dated 1/09/2014. Routine groundwater sampling was completed in November 2013. Dissolved phase VOC impacts remain in the vicinity of wells MW-A, EW-05, MW-07/EW-06. The fourth application event event will be completed and potential; off-gassing issues will be addressed. AZ 12-22-2014 Reviewed a monitoring report December 2013 - April 2014 dated June 19, 2014. Groundwater sampling was completed in February 2014 and April 2014. Dissolved phase VOC impacts at 84th Pct remain along the driveway/alleyway, reported decrease in total VOC concentrations in all but one location. Due to ongoing construction at the adjacent building the fourth ISCO injection will be delayed. AZ 4-22-2015 Reviewed a monitoring report August 2014 - October 2014 dated February 17, 2015. LiRo proposes to advance 5 soil borings along the 84th Precinct Alleyway to assess the current soil situation. One additional soil boring is recommended along the sewer line (along Gold Street) to assess the current soil situation. Based on the results of the proposed investigation, LiRo proposes to abandon the current ISCO injection wells and install new wells. The following e-amil was ssent to S. Frank/V. brevdo: Dear Steve, I have reviewed a monitoring report for the period of August 2014 to October 2014, dated February 17, 2015. LiRo proposes to advance five soil borings along the 84th Precinct alleyway to assess the current soil situation. One additional soil boring is recommended along the sewer line (along Gold Street) to assess the current soil situation. Based on the results of the proposed investigation, LiRo proposes to abandon the current ISCO injection wells and install new

wells. I concur with this proposals. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site. Alex Zhitomirsky 1-11-2016 Reviewed a monitoring report November 2014 - February 2015 dated May 26, 2015. Soil data collected indicates that soil contamination is present at and below the groundwater table, in the saturated zone along the driveway area of 84 Precinct. The fourth ISCO injection event was completed in July 2014. Groundwater sampling was completed in January 2015. Dissolved phase VOC impacts were recorded in 11 wells. The total VOC concentrations above AWQSGV's ranged from 6 ppb to 10,996 ppb. AZ 2-12-2016 Reviewed a Work Plan dated December 7, 2015. The Work Plan proposed a modified ISCO injections. Four rounds of ISCO injections were completed at the site, however, significant groundwater contamination remains at the site. Left a message for S. Frank. AZ 2-23-2016 Discussed the site over the phone with S. Frank. The following e-mail was received from S. Frank: Dear Alex, During our phone conversation today, you stated that you would like LiRo to re-examine any alternatives to additional injections at the 84th Precinct Site. You mentioned that you would like us to remove any closed in place tanks or do a source removal type of soil excavation. As I mentioned, the soil contamination is relatively deep and due to the proximity of the station house in the most contaminated portion of the site, excavation may not be feasible. We will revisit the excavation approach, however, and consider if any tank removal work is feasible. We will provide a letter detailing the evaluation and any potential changes that we could make to our previously submitted injection plan. Sincerely, Steve AZ 1-30-2017 Reviewed a report for the period of Sept. 2015 through February 2016. The report stated 13 reported VOC above AWQSGV. Nine of the 13 wells with exceedances are associated with the 84th Precinct side. The total VOC concentrations ranged from 263 ppb to 16,899 ppb. Four wells on the side of EC 207 concentrations ranged from 32 ppb to 12,850 ppb. LiRo will conduct GPR survey in the alley (84th Pct.0 to determine possible locations of the closed in place UST piping. Additionally, LiRo will evaluate excavating test pits or completing borings based on the GPR results in the alleyway to determine if piping source areas are present. AZ 1-31-2017 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, Based on the latest monitoring report dated August 4, 2016, significant VOC impacts were noted in the groundwater at the site. The total VOC concentrations ranged from 23 ppb to 12,227 ppb. As per LiRo proposal, test pits should be excavated, if feasible. If contaminated soil is encountered, it should be removed. End point samples should be taken. The test pits should be performed without delay. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long

Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov 5-4-2017 Reviewed a report for the period of June 2016 through August 2016. GPR survey was performed in the alley (84th Pct.) to determine possible locations of the closed in place UST piping. Anomaly was detected in the general area of the closed-in-place USTs. Monthly EFR is conducted. Several test pits will be advanced to determine possible sources of contamination. The total VOC concentrations ranged from ND to 20,939 ppb. AZ 11-13-2017 Reviewed a report for the period of Dec. 2016 through Feb. 2017. Monthly EFR is conducted. Several test pits will be advanced to determine possible sources of contamination. Due to the relatively high VOC concentrations reported in EW-05 in January 2017, LiRo will collect samples from wells previously removed from the sampling program. The total VOC concentrations ranged from ND to 19,378 ppb. AZ 1-25-2018 Reviewed a report for the period of March 2017 through May 2017. Monthly EFR is conducted. The reported VOC concentrations in EW-05 returned to historical values. LiRo submitted to NYCDDC a Site and Health Safety Plan for approval. Once the Plan is approved, the planned test pits will completed. AZ 3-2-2018 Reviewed a report for the period of June 2017 through August 2017. Monthly EFR is conducted. The reported VOC concentrations in EW-05 returned to historical values. The Health and Safety Plan was approved by NYCDDC. The planned test pits are scheduled for completion. ORC socks will be changed. Monitoring well EW-05 reported VOC concentrations of 7,209 ppb in July 2017. Also, monitoring well EW-03/MW-11, previously removed from sampling program, reported 1,195 ppb of total VOCs in July 2017. AZ 8-29-2018 Reviewed a report for the period of Sept. 2017 through Nov. 2017. Monthly EFR is conducted. The reported VOC concentrations in EW-05 returned to historical values. ORC socks will be changed. Monitoring well EW-05 reported VOC concentrations of 1,609 ppb in October 2017. The test pits were advanced in October 2017. No former fueling piping was identified in any of the test pits. AZ "

General Borings to drill soil borings and install monitoring wells to conduct subsurface investigation, and the property is owned by Manhattan Bridge Three Cent Line LLC. - absorbent clay and oil absorbent pads were used to contain the spill. - the rupture occurred entirely beneath the drill rig on the surface pavement and was contained, such that the oil did not enter the open borehole (SB-3/MW-3) that was being drilled at the time. - on Feb. 14 2006 a Geoprobe drill rig was utilized to collect one soil sample (SB-12) immediately below the asphalt surface at the location where the spill had occurred. - no visual or olfactory evidence of petroleum contamination was observed in the soil sample. - no VOCs found in SB-3 or SB-12 - seven PAHs were detected at level above TGAM limit. however, these concentrations were typical of the nature of the historic fill, which was observed to contain ash, brick and concrete. these concentrations and types of PAHs were also similar or lower to those found in soil sample SB-3/MW-3 taken below the surface from the borehole being drilled in this location before spill occurred. reviewed lab results of soil boring SB-3 & SB-12. both shows very high concentrations of SVOCs.

DEC Memo:

"Sangesland left a voice message for Kate Brunner at AKRS asking for further information. No Callback. Left another message giving Ryan Piper's contact info. KAte will e-mail report when complete. 4/10/08-DEC Piper - I recieved and reviewed closure report. As per report, a limited area of soil was found to be contamianted under a hydraulic lift. The soil was excavated and disposed of. Enpoints revealed no VOC;s though some PAH's were detected slightly above Tagm. Closed. See e-docs if warranted."

Remarks: "unknown amount spilled; unsure but could be hydrolic oil; it was discovered on a construction site during removal of a hydrolic lift; soil will be taken by point samples"

EPA ID Number

**TEAM OBSOLETE (Continued)**

**1000790339**

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: F001  
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110004496439

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D000  
. Waste name: Not Defined

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: F001  
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

Department (i.e. for field work and report submittal, as discussed in previous meetings). This can be done through a one page addendum submitted as an attachement to each report. The reports reviewed are as follows: Site Specific Field Investigation Supplemental Work Plan, East River Houses, March 2007 Site Specific Field Investigation Work Plan, Ingersoll Houses, June 2007 Site Specific Field Investigation Work Plan, Marlboro Houses, June 2007 Site Specific Field Investigation Work Plan, Isaacs Houses, June 2007 2/25/16: J.Kann - spoke with Yelena Tkach from NYCHA. She indicated that boiler replacement work will be performed in the area of the potentially contaminated soils. I informed her that the Department is okay with that work being done as long as proper measures are taken in the event that contaminated soils are encountered and that soils are disposed of properly. NYCHA does not need to investigate the area first. Department must be notified when excavation work is scheduled. 06/05/17: J.Kann - GSIP for investigation at this site was approved in 2016. As per NYCHA at May 31, 2017 meeting, contractor has been selected for this work and will start work in summer 2017. Spill reassigned to Andre Obligado. 9/28/18 - Obligado - I reviewed the Phase II report. 11 soil borings were advanced in the vicinity of the USTs and fill lines. Only one soil boring had any evidence of petroleum impact (SB4). Analytical results show only one petroleum compound in one soil sample slightly above SCOs (1100 ppb chrysine over the standard of 1000 ppb). This spill does not appear to be a threat to human health or the environment. This spill is closed. "

Remarks: "DISCOVERED SOIL IN TANK PULL WOULD LIKE CALL BACK."

. Waste code: D000  
. Waste name: Not Defined

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D008

**FINDS:**

Registry ID: 110004472482

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Classification: Non-Generator  
Description: Handler: Non-Generators do not presently generate hazardous waste

**Handler Activities Summary:**

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

**Historical Generators:**

Date form received by agency: 09/12/2010  
Site name: CON EDISON MANHOLE 12901  
Classification: Conditionally Exempt Small Quantity Generator

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

DEC Memo: "03/30/09-Hiralkumar Patel. left message for Tom at protest.  
04/14/09-Hiralkumar Patel. received fax from John from Protest.  
12,000 gal diesel UST was failed a test in dry portion. will do  
isolation test on 04/15/09. 04/17/09-Hiralkumar Patel. spoke with  
John. they tested tank and one line (possibly supply line) together  
and found leak in fiberglass piece between two flanges on pipe. this  
leak found in sump area on top of the tank. no product observed in  
tank sump. NY plumbing is replacing entire sump and joint then  
Protest will do system test again. John mentioned that NY plumbing  
did pressure test on remaining lines (fill, vent and return) and  
found tight. asked John to provide contact at NY plumbing.  
05/15/09-Hiralkumar Patel. 12:40 PM:- received report from John. tank  
system was tested on 03/28/09 and was failed with a dry leak at the  
inner wall. tank only was tested on 04/15/09 and failed with a gross  
dry leak. NY Plumbing technician removed the sump over the tank,  
replaced the gasket between the manhole cover and the tank and then  
installed a new sump. Protest retested tank only on 05/01/09 and it  
passed. tank system was retested on 05/02/09 and passed. no  
contamination found. case closed."

Remarks: "1546 The caller advised the system test failed no spill at this  
time. The company has to advise DEC for potential spill."

Contact Name: MOLLY RAMHARRACK  
DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was KRIMGOLD 1/6/03 TJD Location is a co-op apartment building. Molly Ramharrack (Apt 2L) is an owner/tenant, her complaint is that the building management has recently installed a new AST at the building (10/03) and her apartment is now impacted during and immediately following each fuel delivery. There is no report of spillage. According to Molly the building recently closed in place a 20K UST, and installed the new AST 14K on the first floor (no basement) directly beneath her apartment. Since that time she has been affected by the petroleum vapors. Additional information provided by Molly: her daughter a cancer patient is adversely affected by the vapors and has sought medical treatment as a result. The building management has been unresponsive to her concerns. Demeo suggested to Molly to contact both FDNY and NYC DOB and request inspections to determine if the tank was installed in accordance with applicable NYC Building and fire code. An inspection should be conducted by DEC to determine if tank is properly vented. 1/07/04. J.Krimgold visit the site and inspected closed and newly installed tanks. An old tank (#1) was properly closed and building management provide all necessary documentation to support this fact. New tank (#2) was inspected by J.Krimgold and no PBS violations were found. The probable source of the petrol. odor in the complaint apartment is a tank vent line located about 3 feet below nearest window. However, NYC Building Code permits installation of the tank vent exhaust as close as 2 feet from the nearest building opening (window, door, etc.). 01/08/04. J.Krimgold spoke to Ms. Molly Ramharrack and explain the findings of his site visit. Suggested to resolve the problem with building management by relocating the vent exhaust further from her window. NFA."

Remarks: "THE INFORMATION IN THE REPORT IS FROM AN NRC REPORT THAT THE CALLER WAS REFERING TO. THERE ARE FUMES COMING FROM AN UNDERGROUND STORAGE TANK. THE TANKS HAVE NOT BEEN TESTED BUT RESIDENTS IN THE APARTMENT BUILDING ARE COMPLAINING OF THE ODOR AND STATING THAT PEOPLE ARE GETTING SICK FROM THE SMELL. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Name: MARK ROBINS  
Spiller Company: COMMERCIAL FACILITY  
Spiller Address: 235-263 GOLD STREET  
Spiller Company: 001  
Contact Name: MARK ROBINS  
DEC Memo: "Sangesland spoke with Mark Robbins: Property was a manufacturing facility which is now going to be used for residential. Any city property classification moving from Manufacturing to Residential requires an E Designation report to the DEP which reviews the toxic risks associated with the site. Mark believes the problems at this site are not major and will be solved with excavation. No schedule yet on when excavation work will be done. If the excavation work does NOT solve the environmental issues at the site, then the case will be transferred to Koon Tang's group. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 5/24/06 - Raphael Ketani. I have reviewed the Sept. 15, 2005 Remedial Action Plan produced by Hydro Tech Environmental, with the exception that they should drum the purge water that is generated prior to well sampling and not send it back down the wells. I talked to Mark Robbins, Vice President, (631) 462-5866 regarding the report and progress on the project. He said that another RAP has been written and sent to the client for approval. He said he will send this one to DEP also. I told him to send me the plan so that we're all on the same page. He said that the new RAP simply requires digging out everything and putting in a vapor barrier. Mr. Robbins said that he will contact Sharissa Singh, project manager, at the Brooklyn office (718) 636-0800 and have her send me the new RAP, and the contact information for the NYC DEP. Ms. Singh FAXed me a letter that DEP sent to Hydro Tech. We also discussed possibly digging down to the water table and vacuuming out the water to eliminate the contamination issue. We also discussed the position of the vapor barrier and the passive venting system. She said she will send me a copy of the latest RAP and to direct all correspondences to her. 6/29/06 - Raphael Ketani. I reviewed the 6/1/06 Remedial Action Plan and Construction Health and Safety Plan submitted by Hydro Tech Environmental Corp. I found the report to be acceptable with the comments: bottom soil sampling should be once every 900 square feet (not 900 linear feet); samples should be sent to an ELAP certified lab for 8260B and 8270C analysis; a summary table should be provided in the analytical report; groundwater that is encountered should be

**COMMERCIAL FACILITY (Continued)**

**S107409518**

sampled; all groundwater that has a sheen should be vacuumed; all tanks encountered should be cleaned, removed, registered, and manifests provided as to who they are sent to. I will send a letter to Ms. Singh and to Julie Stein of DEP approving the report. 7/28/06 - Raphael Ketani. I talked to Ms. Singh. I asked her why I haven't heard of any work taking place. She said that DEP hasn't gotten back to her approving the DEC comments and giving the go-ahead to do the work. I asked her to try and get in contact with the DEP case manager and get the work started. She said she will. 8/8/06 - Raphael Ketani. I received the plans for the vapor barrier and passive venting system from Hydro Tech Environmental dated 8/7/06. 8/17/06 - Raphael Ketani. I tried to contact Ms. Singh, but could only leave a message. 9/7/06 - Raphael Ketani. I tried calling Ms. Singh, but she was no longer with the company. I tried to contact Mark Robbins (631) 462-5866. I talked to him and let him know what DEC's comments were regarding the RAP. He said that Ms. Yash Saha (718) 636-0800 is the new project manager in the Brooklyn office and that he is working with her to get her up to speed. Mr. Robbins said that, otherwise, he is still waiting for approval from DEP. 11/13/06 - Raphael Ketani. I spoke with Mr. Robbins and asked him why I have heard nothing regarding progress on the project. He said that the DEP approved the RAP and the DEC comments, but the site has multiple E designations. So there is a requirement for noise abating windows for the building that meet a certain specification. The architect involved has to submit the window specification to DEP before they will give the go-ahead. So Mr. Robbins and the DEP are waiting on the architect to make his submissions. 3/21/07 - Raphael Ketani. I received a call from Ms. Saha. She said she was waiting for an approval letter from DEC regarding the RAP and the DEC's comments. I told her that Mr. Robbins had received approval of these items from DEP back in November 2006. She said she wasn't aware of this. I told her to coordinate things with Mr. Robbins. I also asked her whether the window design from the architect was approved by DEP. She said she had an approval letter from January 2007. I asked her whether I could get a copy of this letter. She said she would send it. Lastly, I told her the project has been stagnating and to get it moving again. She said she would. 3/22/07 - Raphael Ketani. Mr. Robbins called to clarify that the work on the site is moving forward. He said that the client is selling the property and that Hydro Tech has a notice to proceed from DEP. Some soil has already been removed. We discussed the case and agreed that the first step will be to have new groundwater wells installed and to take new water samples. This is being done as the last round of water samples were taken several years ago, according to Mr. Robbins. Then, if the groundwater is significantly contaminated, vacuum pumping will take place and resampling will be performed. I told him that once the building is gone, then the contaminated soil must be removed quickly. Otherwise, the rain may wash the contaminants into the water table. He agreed and said that they will move quickly to start digging once the building is down. I also asked for a quick site map showing any gas stations and apartment buildings in the area. Mr. Robbins said that he will send this with the well plan. 3/26/07 - Raphael Ketani. I received the following e-mail today from Mr. Robbins: Julie & Raphael: Attached please find the end point sample results from our recent soil excavation activity at the above property. We removed and disposed of soil from 2 locations prior to formal commencement of site construction/development. Future work associated with the property will be performed as specified in our

**COMMERCIAL FACILITY (Continued)**

**S107409518**

Remedial Action Plan/Construction Health & Safety Plan - in general future excavation associated with the construction of foundations, the placement of the vapor barrier and the capping of all portions of the property outside the building footprint with concrete or asphalt. Please review the attached results and approve the course of action as outlined above. Thank you in advance for your attention to this matter. Mark 3/28/07 - Raphael Ketani. I reviewed the soil analytical results (Table 1) that were sent by e-mail by Mr. Robbins. The table didn't list the full suite of VOC analytes that should be tested for. There were many SVOC hits for each sample with exceedences of the TAGM standard for primarily the combustion by-product species (the benzo series). I spoke to Ms. Saha about the table and she said that Mr. Robbins is the project manager now. I called Mr. Robbins and asked him why he was the project manager. He said that there were so many people involved now, that he has to act as the manager for the project. I asked him why there was an incomplete list of VOCs for the table. He said that the table reflects everything that was a hit above the MDLs. I asked him why there were so many and so high hits for SVOCs. He said he didn't know why. I asked him for a description of the history of landfilling at the site before the buildings were constructed, the boring logs, and the soil descriptions. He said all of these documents will definitely be in the closure report. 3/30/07 - Raphael Ketani. I received the following e-mail today from Mr. Robbins: Field Activities at Gold Street: 1/10/2007- Waste characterization sample was collected for Soil safe parameters. Soil safe called back saying the sample had Lead contamination and would not be accepted at their facility. Clean Earth of NJ was then contacted. We filed an application with the EPA for an ID No on 2/14/2007 for hazardous soil waste. Refer diagram for AOC-2 and AOC-3 locations. \*Soil excavation began on 3/3/2007 at AOC-2. Soil was temporarily stockpiled. \*Excavation at AOC-3 was done on 3/4/2007. Concrete too thick to break. Jackhammers were used to break the concrete and continue excavation at AOC-3. Soil temporarily stockpiled on Site. \*Excavation and loading of trucks: 3/5/2007, a total of 6 trucks loaded ( 3 from each Lot). \*Loading of trucks continued: 3/7/2007, 1 truck from the soil that was stockpiled at AOC 3 \*Collected a total of 10 end point samples EP-1 through EP-10 from the Site ( 5 from each AOC) \*Excavation continued along western sidewall of AOC-2 on 3/7/2007. \*Loading of trucks: 3/7/2007, 3 trucks from AOC 2. \*End point sample EP-11 was collected from AOC 2 at the end of excavation activities. \*All end point samples were analyzed for EPA 8260, EPA 8270 and TCLP Lead. \*Excavation pit at AOC-2 is 30 feet by 18 feet. Depth: 12 to 14 feet. \*Excavation pit at AOC-3 is 42 feet by 12 feet. Depth: 12 feet. \*The total weight of the contaminated soil from the excavation area was 258.92 tons. \*Attached is the End point sampling plan, End point sample characterization details, the Laboratory results and Pictures. Yash Saha Project Manager HydroTech Environmental, Corp 6/13/07 - Raphael Ketani. Eva of Hydro Tech called for Ms. Saha, as she was on vacation. She asked what DEC needed to close the case. I told her that DEC needed the boring logs and site history description. I told her that I had spoken to Mr. Robbins, and he told me that he will enclose these documents in the Closure Report. I added that I was told the report would be received soon and that without it, I can't tell why there are such high SVOC detections. 6/26/07 - Raphael Ketani. Ms. Saha called regarding the work plan dated April 2007. I told her I hadn't received the plan. She said she will send it. I also asked her for

the boring log descriptions and a complete site history. Otherwise, I told her, I can't close the spill case. She said she understood. 6/27/07 - Raphael Ketani. Today I received the April 17, 2007 Groundwater Investigation Work Plan from Hydro Tech. I reviewed the plan and had questions regarding why there were only 2 wells planned. I left a message for Ms. Saha to call me back. 7/9/07 - Raphael Ketani. I spoke to Ms. Saha about the wells. She said she was just relaying information to me and to talk to Mr. Robbins about them. I spoke to Mr. Robbins and he said these wells are just for monitoring the groundwater before that area is excavated. He said that this was part of the plan for dealing with the groundwater contamination hotspot. This is the only hot spot and so wells are planned only for the northwest corner of the property. However, two more wells may also be installed later. I asked him again for the detailed soil descriptions in order to see whether something in the soil was generating the high SVOCs. He said he will send them. 7/10/07 - Raphael Ketani. Ms. Saha e-mailed me the summary report for the field activities that have taken place at the site so far. The report included pictures of the excavation work, figures depicting AOC-2 and AOC-3 and their respective soil sampling locations and soil analytical results tables. This is the same report that I had received on 3/30/07, except I now have the pictures to go along with it. 7/26/07 - Raphael Ketani. I sent out the letter regarding the groundwater well installation plan. 9/17/07 - Raphael Ketani. On 9/13/07, Yash Saha of Hydro Tech sent me an e-mail that the two wells that were requested by DEC were being installed today, instead of a few weeks ago. The delay was due to the need to get DOT permits. 10/18/07 - Raphael Ketani. I tried to contact Ms. Saha (718) 636-0800, but could only leave a message. I contacted Mark Robbins (631) 462-5866 and asked him to make sure Ms. Saha calls me back. He said he will. 10/19/07 - Raphael Ketani. Ms. Saha called me back and left a message. She said that the report with the groundwater analytical results from the two new wells was on Mr. Robbins' desk. She said that DEC should receive it next week. 11/5/07 - Raphael Ketani. I received the 10/19/07 Groundwater Investigation Report from Hydro Tech Environmental Corp. I began my review of the report. Though there were a couple of exceedences of VOCs from the water sample from MW-1, they were low (11 and 20 ppb). MW-2 had no exceedences. 11/6/07 - Raphael Ketani. I spoke to Yash Saha regarding the report and the site. She said that excavation has not taken place, yet. She said that the project involves just lot 13. I told her that DEC doesn't consider the two analyte hits to be significant and will close its spill case. However, I told her that DEC never received the analytical report for the soil samples from borings SP-1 to SP-8, nor the results from the groundwater sample from GP-2. She said she will e-mail me the report. I also told her that DEC was missing the investigation results for the test pits, and AOC-2 and AOC-3. She said she will send this document, also. I received the May 2, 2005 Subsurface Investigation Report and the 9/4/07 test pit and AOC investigation report. I am closing the spill case based upon the 8/7/06 Vapor Barrier Specifications, the EP series soil analytical results from the 4/6/07 Memo to Julie Stein, the 9/4/07 test pit and Area of Concern soil excavation report, and the groundwater analytical results from the 10/19/07 Groundwater Investigation Report. I sent a letter stating this basis for closing the case to Ms. Saha and Ms. Stein."

Remarks:

"FOUND HIGH LEVELS OF CONTAMINATION IN SOIL AND GROUNDWATER:"

**FINDS:**

Registry ID: 110001572619

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

APARTMENT BUILDING - TTF (Continued)

S106124004

Nostrand Ave - 4th Flr Brooklyn, NY 11229 Attn: Martin Marks 7.16.04  
tiple sent letter requesting documentation.//  
2/15/06: CBN Called Martin Marks (718) 332-0777 and left a message  
but haven't received anything back. 9/22/06 called A-1 Crown Leak re:  
tank failure. left info. they will get back to me. bf 8/17/12 Spill  
re-assigned to T. Demeo as per RSE. bf 1/3/13 AFrischeisen intern  
Revious TTF letter mailed Dec 13, 2012 was returned as undeliverable.  
Resent TTF letter to revised address and upped to eDocs. 8/1/14 TJD  
File review - TTF (wet/dry leak) reported by A1- Crown Leak Detection  
associated with (2) 10K UST's manifolded. A review of PBS documents  
reveal the registration expired on 7/14/02. Multiple calls to  
contacts listed on PBS registration were made - all contact  
information is out of date. DeMeo was able to obtain information for  
the current management company FS Residential Management and the  
current management agent Ms. Miriam Stolin (718.875.9225).  
Teleconference with Ms. Stolin reveal that property is a co-op  
comprised of (5)building for a total of 292 units. Ms. Stolin states  
she has managed the property since 2009 and was unaware of any open  
spill file associated with this site - she further states that in  
April 2014 the complex converted to natural gas from dual fuel and  
will no longer be using oil - they will be abandoning the UST in  
place. DeMeo requested of all documentation available concerning the  
tank system at this property. 8/12/14 TJD File review - duplicate PBS  
numbers found for this facility 2-279617 & 2-608923. Property has had  
multiple management agents since reported tank test failure -  
historical records are unavailable. Facility was able to produce  
records (work orders and invoices) for work associated with the  
(2)10K UST's registered at this facility. The contractor Petroleum  
Tank Cleaners isolated the tanks and performed tank only tests with  
passing results in February 2004, a failed cross-over line was  
identified and replaced in May 2004, followed by passing system test  
in June 2004. There is no mention of any contamination discovered  
during the replacement of the failed cross-over line by PTC. Another  
passing system test was performed in January 2012. As per information  
obtained during discussions with the current property manager the  
facility has switched to a natural gas in April 2014 and will no  
longer be using the (2)10K UST's which they plan to close in place  
ASAP. Based upon the documentation available - no further action is  
required at this time. Spill is administratively closed. Due to the  
multiple PBS numbers associated with this property Spills (DeMeo).  
referred the PBS discrepancies to PBS unit (Zielinski) for any  
necessary follow-up. All available documentation has been uploaded to  
DECDOCS."

Remarks: "gross failure, above ground tank. recommend tank cleaning and retest"

CLEANUP PENDING TEST RESULT. 2/26/05 0011HRS LAB RESULT RETURNED 110 PPM LSN-05-01685-001 UPDATE: 2/27/05 - 0013 Environmental operations crew E. Trinidad, D. Williams, and D. Rodriguez were assigned to clean the above structure; a >50 PPM. Due to the amount of oil in the structure the feeder Representative sent Supervisor P. Gallo of the Underground to check for any D-Fault. He inspected the cables, and measured the oil in the tank connected to the tank. All was ok and the oil was deemed to have come from an unknown source. Two drums of debris, and 250 gallons of liquids were removed from the structure. The Manhole was double washed with 10 gallons of 760, and five Gallons of Safe Wash; the structure was cleaned 100% and environmental Stop Tag # 30205 was removed at 2130hrs."

Remarks: "4 gallons of unknown oil on 30 gallons of water - Cleanup is pending a tanker. Lab results = 110 ppm Ref. 157381 "

G10 - Tank Secondary Containment - Impervious Underlayment  
K00 - Spill Prevention - None  
E00 - Piping Secondary Containment - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
C02 - Pipe Location - Underground/On-ground  
F06 - Pipe External Protection - Wrapped  
J02 - Dispenser - Suction Dispenser  
I04 - Overfill - Product Level Gauge (A/G)  
B00 - Tank External Protection - None  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 01/01/1995  
Capacity Gallons: 300

Date form received by agency: 02/24/2006

Site name: LONG ISLAND UNIVERSITY

Classification: Small Quantity Generator

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
  
- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
  
- . Waste code: D004
- . Waste name: ARSENIC

FOLEY e2mis no. 144-456: 8/8/02 09:10 HRS B/Q EQUIP. GROUP, REPORTS AT 09:00 HRS. FOUND OIL-SOAKED DIRT ON FLOOR OF VS-50 & APPROX.0 GAL. OIL MISSING FROM TRANSFORMER. CANNOT SEE LEAK DUE TO DIRT COVERING BOTTOM OF TRANSF. UNABLE TO PRESSURE TEST SINCE TRANSF. OIL LEVEL BELOW MIN. SPILL APPEARS TO BE CONTAINED. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED. NO PRIVATE PROPERTY AFFECTED. NO FIRE OR SMOKE. NO INJURIES. ENV. STOP TAG #085 PLACED. LOSCHIAVO CONTACTED SHIFT MGR. M. CARUSO TO REQUEST FEEDER 1B64 OFF ON EMERG. CAT. 1. OIL SAMPLE WILL BE TAKEN FROM THE TRANSFORMER ONCE UNIT IS OFF SYSTEM. EQUIP. GROUP TO REMAIN ON LOCATION PENDING ARRIVAL OF ENV. OPS. CLEANUP WILL BE STARTED AS 50-499 PPM. TRANSFORMER INFO FROM ECC WAREHOUSE: MFR. G.E., SERIAL # H308981, MFR DATE 1972, HISTORICAL PCB RESULTS 10 PPM AS OF 8/30/99, LAB SEQ # 602260. PRINT FOR VS-50 SHOWS NO SEWER CONNECTION, HOWEVER THE ADJACENT BUS COMPARTMENT (MH-62481) HAS A SUMP, PUMP, & SEWER CONNECTION. UPDATE 8/8/02 12:55 HRS. -- CIG T. MARCINEK INQUIRED ABOUT STATUS OF ADJACENT MANHOLE / BUS COMPARTMENT. AS PER UPDATE FROM A. HOWELL, O.S. BROOKLYN ENV. OPS, BUS COMPARTMENT WAS CHECKED AND NO OIL FOUND. UPDATE: 08-AUG-2002 20HRS LAB RESULTS RETURNED LSN# 02-07433-001 5PPM. Update - 8/9/02 1045hrs A. Loschavio, networks, reported drained unit, and removed unit from structure. Tanker removed 210 gallons oil from unit, mfr tag reads unit holds 255 gallons. Loss of 45 gallons - upgrade of 5 gallons from original report of 40 gallons. UPDATE @ 1305 HRS 8/9 J.LIPORI REPORTS STRUCTURE DOUBLE WASHED WITH SLICKS, TANKER DRAINED TRANSFORMER, SUMP FOUND CLEAN & DRY, CEMENTED SUMP & REMOVED ENVIROMENTAL TAG. CLEANUP COMPLETE."

Remarks:

"went hey opened it up to do an inspection they found oil soaked dirt on the floor - there is 40 gallons missing from the transformer that is in that vault - dirt is covering the bottom of the transformer - clean up will be started @ 50-499 ppm pcb - vs has no sump pump & no connection to the sewers - ref #144456"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY 8/5/02 Foley met with Transmission Operations Joe Farina and contractor Jacques Whitford (Bart Pressly, Eleanor Capasso). Con Ed will take post-ex samples for TPH via modified method 8100 for dielectric fluid and TCLP benzene by sampling grid that we discussed in the field. Clean Venture to remove another 1' of contaminated soil across entire excavation and then make determination if more needs to be removed. Will take samples when visually clean. 8/5/02 1515hrs Phone conversation with John Tranchina (S&TO): Tranchina indicated clamp was installed at approx 1:45am Sunday(8/4). Foley told Tranchina that DEC staff Demeo was on-site at this time and leak was not yet exposed. Tranchina explained that he placed a phone call when

he anticipated where the leak was located based upon amount of oil seepage. He indicated that they still had to excavate another 5' feet to expose the leak and subsequently make a temporary repair. 8/5/02 1535hrs Requested updated report from ERT David Duke. 9/9/02 Phone conversation with J. Tranchina. Will powerwash after removing residual oil between asphalt and concrete. 9/10/02 Received phonecall from J. Tranchina. Installing 2 monitoring wells tomorrow, one at each end of excavation. Continuous sampling will begin below clean backfill (10ft). 9/12/02 Installed monitoring wells. Con Ed will send results of continuous samples when received.(KMF) 1/22/03 Received letter on soil collection activities and monitoring well installation from John Tranchina. Prepared by Jacques Whitford. After review I requested additional information regarding groundwater gauging. Report from Jacques Whitford and e2mis report did not match up.(KMF) 1/31/03 Received fax from J. Tranchina. He received info from Jacques Whitford regarding gauging of monitoring wells, MW-1 and MW-2. Product was measured (0.01') in MW-1 on October 16, 2002 but no sheen or odor was observed. On October 24, 2002, they rechecked MW-1 and product remained. They placed soakease in the MW-1. On November 7th, no product was found on soakease when they removed it from MW-1. They replaced it with new soakease. On November 26, no product was observed and soakease was removed.(KMF) 7/14/03 Monitoring well gauging activities report submitted 5/15/03 by Jacques Whitford Co., dated 4/24/03. Monitoring wells were gauged on twelve separate events between September 2002 and April 2003. No product has been observed. (KMF) 8/13/04: Gauging data for May - July 2003 indicate no product or sheen observed in wells. (JHO) 2/5/04: Updated monitoring well gauging activities report submitted by Jacques Whitford. No product/sheen observed in wells 8/03 through 1/04. 8/24/04: Gauging data Feb '04 to June '04 shows no product/sheen in wells. Review of all data to date indicates that product finding in well MW-1 on 10/16/02 and 10/24/02 were observed using oil/water interface probe. However, when probe was removed from well on both occasions, no oil or sheen was observed on the probe tip. Also, no product was observed on the absorbent placed in the well on those dates, so the product measurement may have been a probe malfunction. Based on the soil analytical results obtained during installation of the wells, the majority of the contaminated soil was removed during the initial excavation to 10 feet below grade. While a small amount of contaminated soil remains (apparently between 10-12 feet below grade at the MW-1 location), the absence of observed groundwater contamination (neither separate-phase or dissolved-phase) indicates there is no further environmental concern - this incident can be closed. (JHO) ~~~~~ Con Ed e2mis #144354: C.VILLALDA #84206 OF SUB STATION OPS REPORTS THAT AT 1514 HRS 8/3 A DISCREPENCY OF 500 GALLONS OF DIELECTRIC FLUID WAS NOTICED ON FDR-38B05. @ 1700HRS A SPILL OF APPROX 15 GALLONS OF DIELECTRIC FLUID WAS FOUND ON THE STREET AT ASHLAND PL & WILLOUGHBY AVE. SANATATION DEPT SANDED STREET TO CONTAIN SPILL. AS PER C.VILLALDA A SAMPLE OF OIL IS NOT NEEDED. CLEANUP BY TRANSMISSION OPS IN PROGRESS. At 15:45 8/3/02 SSO declared loss of 500 gallons from pumphouse for 38B05 following a feeder fault. No PFT in feeder. CGO crews requested to check all manholes. TO crew sent out to ride entire run looking for signs of activity in street. Con Ed tanker notified to mobilize and stand by at Farragut. Safeway notified to have crew on standby. At 17:00 TO crew found oil coming up through street on Ashland PI approx 260' n/o Dekalb Ave. Approx area is 10' long x 10' wide 20' off of

west curb. TO crews placed booms and pads along curb to contain fluid. Also TO crew made area safe to keep vehicle traffic from driving through the fluid. TO crew checked all subsurface (sewers, vaults, and manholes) and did not find any signs of dielectric fluid. Con Ed tanker notified to respond to leak site. Safeway notified to respond. Clean Harbors notified to respond. Allstate notified to respond. CGO crew notified to stop checking manholes and respond to leak location to M Scope feeder run and depths. Sanitation department requested (through CIG) to deliver dump truck of sand. Chem lab requested to take samples for PCB and benzene. Sanitation dept delivered 2 small piles of sand in area. Sand was used to berm area and keep fluid from entering catch basin. Con Ed tanker began picking up fluid from street at 16:30. At 19:45 Safeway began to excavate asphalt at location of leak. Clean Harbors and Allstate on location at approx 20:00 to clean up spill. Clamps and asbestos removal equipment on location 20:25. UPDATE 03-AUG-2002 22:00 HRS: C.VILLALDA #84206 OF SUB STATION OPS REPORTS: THAT IT IS NOW BELIEVED THAT THERE IS A DISCREPANCY OF 1600 GALLONS OF DIELECTRIC FLUID ON FDR-38B05. UPDATE 04-AUG-2002 02:20 HRS. SUB-STATION OPERATIONS SHIFT MANAGER T.HANSON EMP# 81189 REPORTS: U.T.O HAVE PLACED A TEMP CLAMP ON LEAKING FEEDER EFFECTIVELY STOPPING LEAK. PERMANENT REPAIRS TO FOLLOW. The temp clamp was installed at 01:45 8/4/02. Chem lab reported 02-07253 <1.0 ppm PCB. Excavation continues to provide room for repairs and x-rays in morning. Paretsky inspected excavation at 0700 hrs. Observed about a 20-foot section of presumed transite duct that had been dislodged (apparently telephone ducts). This duct was about 2 to 3 feet east of feeder pipe. This 20-foot section consisted of 2 ten-foot sections that are connected with collars. One piece about 10 feet long had been dislodged intact (e.g., pulled out of the connecting collars). Another 10-foot section had been pulled out of its connecting collars, but was broken in two places. Since transite is non-friable, and the break at the two locations appears clean, there does not appear to have been a release of either non-friable or friable asbestos. The broken sections were wrapped with plastic by a NYCDEP/DOL certified asbestos worker (John Tranchina, Transmission Operations) and placed alongside the intact section in the excavation. Central Field Services reports that 1000gal of dielectric fluid was removed from street and excavation during work to install clamp by Con Ed vac truck. The fluid was returned back to Astoria for disposal. 8/6/02 J. Farina, construction supervisor of TO: The NYSDEC (Kerry Foley) was onsite yesterday afternoon. DEC requested some additional excavation, which is proceeding. A soil sampling plan was also laid out. Total oil loss calculated by SSO is 5300 gal. Of that total 850gal was contained during flushing operations. Therefore a total of 4450gal entered the environment. September 10, 2002, J. Tranchina fop, 79186 The splice joint location and two freeze pit locations have been restored and preparations are being made to install two monitoring well in locations specified by the NYSDEC. Work on the wells is scheduled for 9/11/02 at 16:30 hrs. November 07, 2002, J. Tranchina fop, 79186 As of 11/07/02 MW-1 has 0.01 foot of product in it. A soakease that was in place has been turned and remain in the well. There was no product found in MW-2. Update: Feb 4, 2004 Monitoring well results and closure letter was prepared by Jacques Whitford. Recommendations: Based on the absence of visual evidence of contamination observed during monitoring well gauging and the absence of detectable concentrations of analyzed constituents in groundwater samples collected from the wells, Jacques Whitford

Used oil transfer facility: No  
Used oil transporter: No

Historical Generators:

Date form received by agency: 01/01/2006  
Site name: SHELL SERVICE STATION  
Classification: Not a generator, verified

Date form received by agency: 04/14/1995  
Site name: SHELL SERVICE STATION  
Classification: Unverified

. Waste code: NONE  
. Waste name: None

Date form received by agency: 03/19/1991  
Site name: SHELL SERVICE STATION  
Classification: Large Quantity Generator

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

ADAMO # 28458 NETWORK REPORTS WHILE GETTING READY TO REPLACE A DEF TRANSF ON TROUBLE (OA) FDR. 1B64 HE FOUND IN VS6059 W/S GOLD ST 29' N/O WILLOUGHBY ST THERE IS APPROX 225 GALLONS (HE USED DIP TEST) OF OIL MISSING FROM THE TRANSF. THE TRANSF HOLDS APPROX 265 GALLONS OIL. OIL IS MIXED INTO DIRT. HISTORICAL RECORD OF TRANSF IS 5 PPM AND WAS LAST TESTED 2-17-97. ENGINEERING RECORD SHOWS A SOIL DRAIN DATED 10-22-74. THERE IS/ WAS NO FIRE OR SMOKE AT THIS LOCATION. NO INJURIES DUE TO THIS SPILL. NO PRIVATE PROPERTY AFFECTED. WEATHER DID NOT CAUSE OR CONTRIBUTE TO THIS SPILL. THERE WAS NO SUBSTANTIAL CRACKS ON WALLS OF STRUCTURE. HE DOES NOT SEE A SUMP OR SEWER CONNECTION AT THIS TIME. LIQUID SEEMS CONTAINED , NO SEWERS OR WATERWAYS AFFECTED. HE TOOK A LIQUID SAMPLE FROM SOURCE (TRANSF) AND REQUESTED EMERG PRIORITY FOR PCB SAMPLE RESULTS. WILL START CLEANUP AS 50-499 PPM. ORDERED OVER 50

Classification: Not a generator, verified

Date form received by agency: 09/09/2001  
Site name: PRATT INSTITUTE  
Classification: Small Quantity Generator

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to

replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Historical Generators:

Date form received by agency: 05/01/2006  
Site name: F B E PRINCE ST  
Classification: Small Quantity Generator

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Date form received by agency: 04/30/2006

**FINDS:**

Registry ID: 110004541666

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
  
- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018  
. Waste name: BENZENE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "1/3/2005 File Update by Sun: -The Department has reviewed the Soil and Groundwater Analytical Results, which were reported in Divestment Assessment Phase II Report, prepared by EnviroTrac dated 10/27/04 for Sunoco for the subject site. The report indicates that the Groundwater samples secured from MW-3 had BTEX and MTBE concentrations in excess of NYS Water Quality standards. Based on the

SUNOCO #0007-1548 (Continued)

U001839271

sampling data taken on October 18, 2004, MW-3 had MTBE concentration of 130,000 ug/l and total BTEX concentration of 3,483 ug/l, including benzene concentration of 2,300 ug/l. The high MTBE and BTEX concentrations indicated that the groundwater had been contaminated and thus, is required to be remediated and monitored. -On 11/8/04, Sun sent a letter to Russell Hammond of Sunoco requiring complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of 11/30/04 for signing the Stipulation Agreement. -In Sun's letter to Russell Hammond dated 11/8/04, the Department also requires the following: 1. Re-test the underground storage tanks (USTs) and piping system for tightness: The analytical result of Phase II Assessment Report in Reference 1 showed that the MTBE in monitoring well MW-3 had extreme concentration of 130,000 ug/l, which needs to be investigated to determine if the source of the contamination is from new spill. Per DEC Regulation for Petroleum Bulk Storage, 6 NYCRR part 613.7, the owner or operator is required to inspect and to test the tanks, piping system or equipment for tightness and structural soundness when a leak of petroleum is suspected. 2. Delineation of Soil and Groundwater Contamination: A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination both on-site and off-site must be performed. The investigation at a minimum must include installation of borings/wells: down-gradient of MW-3 (see MW-4), side-gradient of MW-3 (see MW-5), southeast of MW-3 and west of tank field (see MW-6), and up-gradient of MW-3 (see MA-7) . 3. Surrounding Property Sketch: A surrounding property sketch including property layout and usage must be submitted to the Department. North arrow and scale must also be included on the Site Plan. 4. Locations of Remote Fills and Dispenser Island: The locations of former remote fills and dispenser islands must be included on the site plan. Also note as per DER-10 Section 3.7.1 Pump islands and associated piping greater than 25 feet from the tank field should be considered separate areas of concern and should require a separate groundwater sample location . North arrow and scale must also be included on the Site Plan. -10/17/2005, S. Andersen assigned as new project manager. -10/17/2005: Reviewed Quarterly monitoring report by Envirotrac dated 10/12/2005, and groundwater investigation report by Hydro Tech, and sent letter to firms, owner, and buyer to confirm review of these reports. Now awaiting results of continued monitoring as well as a RAP. 11/3/05: new address : North Development Group, LLC 217 Havemeyer Street, 5th Floor Brooklyn, NY 11211 718-599-8600 718-599-8613 11/29/05: Spoke with Hydrotech on the phone. Hydrotech is the consultant for the current owner, who is taking charge of the site remediation. The site has an E designation with the DEP, meaning it has been rezoned residential. Hydrotech will complete and submit an investigation summary report to DEC and DEP. 12/9/05: December 8 meeting between Sunoco, EnviroTrac and NYSDEC. Sunoco said that they and EnviroTrac are still in charge of site remediation (not Hydrotech). An RAP is currently in progress. The site will be utilized as a parking lot by the new owners. 1/26/06: Review of phase 1/2 performed by hydrotech shows soil and gw contamination. 4/10/06: Received monitoring report. Concentrations high in MW-3 and MW-4. BTEX 5,052 ppb in MW4, and 1,194 ppb in MW3. An additional MW west of the plume is required by June 10, 2006. 4/12/06: Received email from Erin Goelz of EnviroTrac. Additional delineation is not possible due to the subway. Sent RAP

required letter, due back 6/12/06. 6/21/06: Sent Erin Goelz and email to followup on the status of overdue RAP. 7/5/06: Received an email from Erin Goelz of EnviroTrac stating the following: The Remedial Action Plan (RAP) for this site is in progress and will be submitted to the NYSDEC on or before July 14, 2006. 7/11/06: RAP reviewed and rejected. MNA proposed. Revised RAP required by 9/29/06 with more aggressive remedial strategy. Groundwater samples collected on 5/24/06 show max BTEX 5,475 in MW4 and 83 ppb MTBE in MW3. 8/11/06: Received phone call from new owner and consultant (Dave Yudelson of Sive Paget). They will be taking over site remediation. They are thinking of excavating the site. The site will be redeveloped with a rec center and pool. A sub-slab depressurization system and vapor barrier will be used in the construction. The site has an E designation. Chemical oxidation will also be used. A meeting is scheduled for 8/22/06 at 11:30am. 8/18/06: Meeting on 8/17/06 with Sunoco, ET, and NYSDEC. Sunoco will discuss remedial plans with the new owner prior to resubmitting an RAP. 8/22/06: Meeting with David Yudelson (Sive, Paget & Riesel), new owners law firm, and Charles Sosik (P.W. Grosser), new owners consulting firm, regarding remediation. Chemical oxidation will be used. A RAP will be submitted. 9/26/06: Received phone call from Erin Goelz of EnviroTrac, representing Sunoco. Construction has begun at the site, Sunoco cannot access the monitoring wells, and a RAP has not been received by the new owners. Sunoco requested a one month extension to submit a RAP until this issue has been resolved. New owner is James Muller (North Development). Called Charles Sosik and David Yudelson and both were unavailable. Spoke to David Yudelson, an RAP will be submitted in a day or two. Demolition is being conducted at the site, but construction has not begun. The Department informed him that a violation will be issued if construction begins prior to the Departments approval of a RAP. 9/27/06: DEP Project Managers: Callista Nazaire : cnazaire@dep.nyc.gov Amy Ma: AMa3@dep.nyc.gov The DEP has not received development plans or a remedial workplan. 9/28/06: Site visit. Demolition at the site is complete. The monitoring wells could not be located. They are either destroyed, or inaccessible under construction equipment. 10/12/06: Received and reviewed RAP from PW Grosser. Excavation, chemical oxidation (sodium persulfate), vapor barrier, and active sub slab venting system proposed. RAP conditionally approved, with extension of chemox treatment area by 10 feet north, groundwater sampling for pH, DO, redox potential, conductivity, and persulfate, a baseline groundwater sampling event, and Department approval required for gw samples collected two weeks after chemox injection, prior to initiation of construction activities on the southern portion of the property, and monthly subslab depressurization system air effluent sampling. A stipulation agreement was mailed. 12/18/06: Emailed Charles Sosik and David Yudelson to followup on status of stipulation agreement and RAP implementation. Received email from David Yudelson: I have the signed stip and will send it over. We are having some delays with DEP so we should talk about it. Received email from Charles Sosik indicating he is no longer working on this project. New project manager: Kris Almskog at PWGC (631)589-6353, KrisA@pwgrosser.com. 1/2/07: Left voice message for David Yudelson. 1/22/07: Spoke to David Yudelson. DEP has delayed approval due to review of soundproof glass specifications. Will send signed stipulation agreement. 1/24/07: Spoke to Amy Ma of DEP (718-595-6658). She will cc me on DEP's RAP approval. 1/26/07: Stipulation agreement signed by North Development

Group. Effective date 1/23/07. Sent email to Gary Heath of DEP (garyh@dep.nyc.gov), as per David Yudelson's request, confirming the DEC conditionally approved the RAP, received a signed stipulation agreement, and has no further requirements that need to be met prior to initiation of RAP implementation. 3/1/07: Emailed David Yudelson and Kris Almskog to followup on DEP approval and RAP implementation. Received email from Dave Yudelson, DEP approval for Hazmat expected soon. 4/2/07: Emailed David Yudelson to followup on DEP approval and RAP implementation. Received email from David Yudelson: We expect the MTA excavation permit to be issued in a week or so and excavation to start April 16. 4/16/07: Spoke to Kris Almskog at PWGC (631)589-6353, date not set yet for excavation. He will call the developer and get back to me. 5/1/07: Emailed Kris Almskog to followup on excavation. 5/4/07: Received email from David Yudelson. The excavation is delayed for an MTA permit. 6/12/07: Emailed David Yudelson to followup on RAP implementation. 7/30/07: Emailed David Yudelson to followup on the status of RAP implementation. 8/2/07: Spoke to David Yudelson. They are still having trouble getting an excavation permit from MTA because there is a subway directly adjacent to the site. 8/3/07: Received email from David Yudelson: We are still waiting for approvals to start excavation from the MTA and NYC DOB. We are eager to start remediation and development and are pushing as hard as we can but realistically it will be about a month. 8/21/07: Received letter from Charles Sosik with additional information regarding soil disposal. 9/13/07: Emailed David Yudelson to followup on workplan implementation and permit acquisition. 9/14/07: Received email from David Yudelson. Permits not received yet. 10/23/07: Emailed David Yudelson to followup on workplan implementation and permit acquisition. 10/31/07: Reassigned from Sarah Carlson to Chanda. 11/5/07: Chanda received an email from Joe Sun (NYSDEC) regarding the new project consultant's (Environmental Business Consultant) email. The consultant's email is: This is to inform you that EBC has taken over as the environmental consultant on this project. We are intimately familiar with the project and the remedial action plan as I was the Senior PM on this project with PW Grosser and had met with you and Joe Sunn on the development of the remedial plan. With respect to current status: The project has been delayed by permits and approvals from the MTA due to the proximity to the subway. These issues have largely been resolved and we expect to begin excavation shortly. We completed test pits for additional waste characterization of the top four feet of material and are assisting in identifying a disposal facility and securing approvals. We met last week with the excavation contractor to go over details and scheduling. I will notify you when we have a date to begin excavation. Right now that is still dependant on final arrangements and approvals with MTA. Please direct all future inquiries and correspondence to EBC and / or North Development Group. Thank you. 11/6/07: The file is updated by Chanda. Chanda received an email from Charles B. Sosik (consultant): This is to inform you that EBC has taken over as the environmental consultant on this project. We are intimately familiar with the project and the remedial action plan as I was the Senior PM on this project with PW Grosser and had met with you and Joe Sunn on the development of the remedial plan. With respect to current status: The project has been delayed by permits and approvals from the MTA due to the proximity to the subway. of the top four feet of material and are assisting in identifying a disposal facility and securing approvals. We met last week with the excavation contractor to go over details and scheduling. I will notify you when we have a date to begin excavation. Right now that is still dependant on final arrangements and approvals with MTA. On 11/6/07, Chanda sent an email to Charles Sosik (EBC): This is to inform you I am the project manager for the above referenced site. On 10/5/06, the New York State Department of Environmental Conservation (the Department) received the RAP from PW Grosser. Excavation, chemical oxidation (sodium persulfate), vapor barriers, and active sub slab venting system proposed. On 10/12/06, the Department conditionally approved the RAP, with extension of chemical oxidation treatment area by 10 feet north, groundwater sampling for pH, dissolve oxygen, oxidation/reduction potential, conductivity, and persulfate, a baseline groundwater sampling event, and the Department approval required for groundwater samples collected two weeks after chemical oxidant injection, prior to initiation of construction activities on the southern portion of the property, and monthly sub-slab depressurization system air effluent sampling.

11/13/07:Chanda received a letter from P.W. Grosser Consulting (PWG) dated 11/9/07. This letter stated that PWG is no long representing the developer/owner of the 75-85 Flatbush Ave., Brooklyn, NY property. 12/21/07: Chanda received an email from Charles Sosik (EBC): We are making final arrangements with the excavation contractor and their disposal company and plan to begin excavation and removal of soil at the site in early January. We have an on-site meeting with the contractor on January 2nd and will update you at that time on scheduling. 2/14/08: Chanda received an email from Charles Sosik, Environmental Business Consultants regarding the soil excavation and installation of chemical oxidant injection points at the site. (see eDocs) 2/20/08: Chanda received the following email from Charles Sosik, Environmental Business Consultants: Injection well installation was completed on Friday. We designated 3 locations as monitoring wells and are collecting samples from them today. We are also running tests on the soil and groundwater to determine buffering capacity of the soil and groundwater at the site to assist in adjusting the chemical oxidant mixture. I will let you know when the injections are scheduled. A 550 gallon UST was discovered Monday. The tank was encased in concrete and partially filled with water. Both tanks appeared to have been used for gasoline. Both tanks were in good condition with only minor surface rust. We photographed the tanks and collected endpoint samples beneath the concrete base. The tanks were cut-opened, cleaned and scrapped yesterday by ABC Tank. The tanks will be closed with the FD and NYSPBS group. Documentation will be provided in the site closure report. 5/5/08: Chanda called Charles Sosik, EBC (Ph.631-504-6000) to get updated information regarding this site. He stated that an email will be sent to DEC with updated status as soon as possible. (Chanda) 10/15/08: Chanda called Charles Sosik, EBC (Ph.631-504-6000) to get the UST closure report for this site. He stated that the Site closure report will be sent to DEC end of Novenmer 2008. 1/19/11: Breen. Mike Taormina called. He is the new consultant. He will FOIL the 2006 Remedial Action Plan to get on board. He is at 201-332-1844, X107. See e-docs for his address. His cell is 973-479-3095. 1/24/11: Breen. I spoke to Mike this morning. He says his client is anxious to get moving. Client asked him to do a phase 2. Mike has option to complete already approve RAP, or with fresh eyes and the long passage of time making the RAP

somewhat stale to propose a better way. He will explore his options. 2/2/11. Breen. Mike called to say putting up a building has been cancelled. Thus subslab vapor extraction is no longer needed. He will submit a new RAP to reflect this. He says his copy of the Hydrotech RAP of Jan 06 contains only portions of the drawings. He wants to know if we have the complete drawings. Office = 201-332-1844. Cell = 973-479-3095. 2/22/11: Breen. Mike Taormina called to ask for tables of soil analytical results. Tables were printed B size, but only half was scanned. I checked e-docs and found that was indeed the case. I called the original consultant, HydroTech and spoke to Mostafa. He said he should never have sent in that RAP in 1-5-2006 because his client, Isaac Hagar, had not paid him. He said Hagar owes him \$30K. He said he spent \$15K in legal fees to sue Hagar and WON. However, he can't collect because this corporation of Hagar's is broke. Hagar has defaulted on STIP. He has not done anything in three years. He may have abandoned an open excavation. 2/24/11. Breen. I told Mike that I was not successful in obtaining copies of the missing pages. I told him that HydroTech was not paid. He said he is not working for Hagar, but rather for the Bank that holds the mortgage. Mike has nothing to do with Hagar; he may be gone. The Bank may just want to do the cleanup and sell the land. The Bank is not interested in going ahead with the development. 2/28/11. Breen. I sent Isaac Hagar a letter to notify him of his delinquency under his Stip. I called the bank that holds the mortgage, was put into voice mail; I asked them to return my call so I could send copy of the letter to a person. No call back yet. 3/1/11. Breen. I found a paper copy of the HydroTech Site Investigation report of 1-5-06 in the basement storage room. It had the pages Mike was looking for. I sent Mike the seven missing pages, all B-sized, by e-mail. I also put these pages in e-docs. 3/2/11. Breen. I learned further details from the e-mail Mike sent me to acknowledge receipt of the B-sized pages. He says he is not working for the bank that holds the mortgage, rather for a bank that represents a prospective buyer. I will get more details tomorrow when I can question to him directly. 3/2/11. Breen. I got the green card back from Isaac Hagar with his signature. This confirms delivery and receipt. 6/10/2011 Got a call from Mike Taormina. His client wants to move forward with the project. I explained to Mike that if he wants modifications to the work plan - send me what modifications are needed and I will review. Ultimately, for spill to be closed concentrations must be acceptable, no free product, no exposure threat, no plume migrations, etc. Mike understood and said he will get me something thought e-mail later today. VB 12/1/2011 - Carlson: Received phone call from Michael Dougherty (212-885-5578), attorney from USBank. He wants to know case status. Site will not be redeveloped. They will be selling land only. 12/6/11 - Carlson: Received email from Mike Taormina of AEI Consultants. His contact at US Bank is: Karen Boyer Vice President Special Assets Group U.S. Bank National Association 461 Fifth Avenue New York, New York 10017 Phone: (646) 935-4558 Cell: (646) 275-6081 Fax: (646) 935-4550 E-mail: karen.boyer@usbank.com Left voice message for Karen Boyer. 1/4/12 - Carlson: Left message for Karen Boyer. Will US Bank be remediating site? 1/12/12 - Carlson: I spoke to Karen Boyer. USBank received foreclosure proceedings but they do not formally own property. They will try to sell the property as is. USBank will not be remediating the site at this time. She will forward documents by email. 2/16/2012 - Carlson: Spoke to Charles Sosik- site was partially excavated - he doesn't have manifests (former owner has manifests). He is working

with buyer (do they formally own the property?). Sosik will send workplan for site investigation and info on buyer/new owner. 2/22/2012 - Carlson: Received email from Charles Sosik with info on new owner. The new owner is or will be: Flatbush Holding LLC 16 E. 34th Street New York, NY Aaron Kline (917) 604-1139 2/27/2012 - Carlson: Reviewed workplan dated 2/24/2012. The workplan submitted by email. In email Charles Sosik stated he wanted to implement work plan on 2/28/2012. The new property owner is going to continue with redevelopment of the site. Sent email requesting a revised work plan. Soil samples must be collected from all MW locations proposed (six monitoring wells proposed). Sampling for VOCs and SVOCs is required. Revised work plan due in 30 days. 2/29/2012 - Carlson: Reviewed revised work plan. Sent email approving revised work plan and requiring stip by 3/29/2012. Four wells were installed yesterday. Two remaining well locations are blocked by cars, wells will be installed today if cars can be removed. 4/18/2012 - Carlson: Reviewed Sampling Report and Remedial Action Plan both dated April 2012. Seven soil borings/monitoring wells installed. High soil and gw impact in MW6. Low level gw MTBE present in MW4 and MW5. Low level SVOCs in groundwater present in MW-1,3,4,5,6,7 - may be historic fill. MW-6 also had naphthalenes present in gw that were a result of the spill (not related to historic fill). RAP proposed chemical injection of sodium persulfate into six injection points. Groundwater sampling proposed two weeks following injection to evaluate effectiveness, need for further injection. Look up info on sodium persulfate. What are redevelopment plans? several rounds of injection will likely be necessary as well as confirmatory soil sampling. If rapid redevelopment is planned, full excavation would be the fastest/best approach; 5/9/12 - Carlson: Received email from Charles Sosik - they will excavate the entire property to 26 ft, he wants to submit a revised RAP; Replied to email - will they still be using chemox to treat groundwater?, revised RAP must include post remedial (post chemox) soil sampling to confirm remediation has been completed. Revised RAP due in 30 days. 6/4/12 - Carlson: Received revised RAP submitted on 5/18/12 (but dated April 2012). Emailed Charles Sosik the following comments/questions: The text of the RAP was updated, but the figures were not. The report states the impacted soil in the vicinity of MW6 will be excavated to the water table, but the figures show the excavated area to include MW1, MW2, and MW3 only. Please update the figures. Additionally, section 3.2 states the injection well screen will extend 2 ft above the water table, but section 3.1 states the area will be excavated to the water table. Please explain this discrepancy. 6/5/12 - Carlson: Received email from Charles Sosik. Spoke to Charles Sosik. Entire site will be excavated to 20 ft. Hotspot excavation in vicinity of MW6 will extend to water table. Hotspot excavation samples will be collected. Injection wells will be installed for chemical oxidation to address groundwater contamination around MW6. Future development will include a vapor barrier. SSDS will NOT be included because basement level is a ventilated parking garage. Revised RAP to be submitted. 6/8/12 - Carlson: Reviewed revised Remedial Action Plan dated June 2012. The RAP proposes excavation of impacted soil to the water table. Chemical oxidation is proposed to treat impacted groundwater and saturated soil. Impacted soil in the vicinity of MW6 will be excavated to the groundwater table. The excavation will be expanded horizontally to remove all impacted vadose zone soils. Sidewall endpoint samples will be collected at the base of the excavation to confirm impacted vadose

U001839271

zone soils have been removed. Following collected of endpoint samples, the excavation will be backfilled to the desired depth for future development plans. Six injection points are proposed in the vicinity of MW6. Injection of chelated iron activated sodium persulfate is proposed. Performance groundwater samples will be collected following the initial injection event. The need for subsequent injections will be evaluated based on the results of performance groundwater samples. Confirmatory soil samples will be collected following completion of the chemical injections to confirm complete remediation of saturated soils. Future construction at this site will include a 20 mil HDPE geomembrane liner. The plan notes a sub-slab depressurization system is not necessary because future development plans at this site include a two-level basement parking garage that will be ventilated. Quarterly groundwater monitoring, sampling, and reporting will be initiated. A Remedial Action Completion Report will be submitted summarizing the remedial work performed. Issued approval letter. Departmental approval of Remedial Completion Report is required prior to site redevelopment. 7/2/2012 - Carlson: Received email from Charles Sosik. Building will be a hotel. The sub-cellar will be used by hotel maintenance and laundry facilities. The cellar will be a kitchen, gym and meeting room. Sent email requiring submission of a revised RAP in 15 days that includes a SSDS. 9/18/12 - Carlson: Reviewed revised RAWP dated 9/9/12. spoke to Charles Sosik - requested revised SSDS site plan to differentiate between pipes types, and a sub-slab monitoring point to sample vacuum/air pressure. Revised RAWP to be submitted. 9/28/12 - Carlson: Approved revised RAP dated September 2012. SSDS included in redevelopment plans. Post-remedial soil gas samples will be collected in order to evaluate the need for installation of the proposed SSDS. The SSDS design includes a sub-slab monitoring point that will be tested in order to confirm effectiveness of the SSDS. A Remedial Action Completion Report will be submitted summarizing the remedial work performed. 12/1/12 - Carlson: Received revised RAP dated 11/28/12 proposed SVE to treat unsaturate zone soil impact and chemox to treat saturated soil and gw contamination. Workplan states that remediation will be performed in conjunction with foundation construction. 12/5/12 - Carlson: Spoke to Mr. Charles Sosik. Building footings and framing will be installed, these will not interfere with remediation. 12/14/12 - Carlson: Revised RAP text proposes installation of 6 injection wells, while figure indicated 7 injection wells will be installed. Emailed Charles Sosik about inaccuracy. 1/4/13 - Carlson: DEC Hassan, Carlson, Ketani, and O'Connel met with Mr. Sosik to discuss the revised RAP. Additional excavation not possible due to subway. He said AS would interfere with construction. Chemox is the easiest remedial method for groundwater treatment for them. 1/7/2013 - Carlson: Issued letter requiring a revised RAP that includes 1) a secondary, backup, groundwater remediation method, 2) performance monitoring samples must effectively monitor the aquifer for rebounding groundwater concentrations, 3) an additional soil boring must be performed in the vicinity of boring B6 in order to vertical delineate the extent of contamination. Issued a new stip to 85 flatbush LLC. Received email from Mr. Sosik, plan will be revised the include statement that the chemox injection plan will be modified if need be, and a contingency AS system will be installed. plan will be resubmitted Received signed stip via email. Original must be submitted. 1/11/13 - Carlson: Received original signed stip. Agreement was signed as flatbush

extension LLC, but respondent was listed at 85 flatbush LLC. Flatbush extension LLC appears to be correct based on ACRIS property records. DEC issued a second stipulation with respondent listed as Flatbush Extension LLC. Revised Agreement must be signed and resubmitted. Received revised RAP dated January 2013. Reviewed revised RAP. Required modifications were made as per 1/7/13 letter. 1/16/2013 - Carlson: Received signed Stipulation Agreement, forwarded to Legal Division. Issued approval letter for January 2013 revised RAWP. 2/6/13 - Carlson: Received executed Stip from Legal, signed by DEC 1/25/13. Forwarded to Charles Sosik (csosik@ebcincny.com). 07/15/13 - Spill Case is transferred from Sarah Carlson (Section C) to June Feng (Section of Spill Prevention and Response) as per DER Region 2 decision. 06/27/2014: This spill case was transferred to A. Doronova. - AD 08/05/2014: Sent the following e-mail to Sunoco contact - Russell Hammond (e-mail: rhammond@sunocoinc.com) and copied to Anthony Fiorentine (afiorentine@cg-env.com): Dear Mr. Hammond: My name is Ainura Doronova. I am a NYSDEC project manager for the following spill cases, which were recently transferred to me: 1. Spill No. 1011266, 550 Humbolt Street, Brooklyn; 2. Spill No. 0913725, 1626 Steelwell Avenue, Brooklyn; 3. Spill No. 0809869, 42-02 21st Street, Queens; 4. Spill No. 0708451, 972 Remsen Avenue, Brooklyn; 5. Spill No. 0502868, 1781 Bay Ridge Parkway, Brooklyn; 6. Spill No. 0407558, 5 Flatbush Avenue, Brooklyn; 7. Spill No. 0304033, 805 65th Street, Brooklyn; 8. Spill No. 9909665, 175-33, Horace Harding Expressway, Queens; 9. Spill No. 9900619, 1650 Forest Avenue, Staten Island; 10. Spill No. 9808686, 188-06 Hillside Avenue, Queens; 11. Spill No. 9711173, 2310 Tillotson Avenue, Bronx; 12. Spill No. 9609282, 1781 Arthur Kill Rd., Staten Island; 13. Spill No. 9501327, 2701 Knapp Street, Brooklyn; 14. Spill No. 8905358, 32-32 Queens Boulevard, New York; 15. Spill No. 8904831, 38-15 Queens Boulevard, Queens; 16. Spill No. 8904151, 161-15 46th Avenue, New York; 17. Spill No. 8808987, 135-45 Cross Bay Boulevard, Queens; 18. Spill No. 8706272. 2052 Victory Boulevard, Staten Island. From now on, please submit all your future documentation (letters, reports, work plans, RAPs) related to these spill cases to my attention. Please note, that you should submit one hard copy of the document (report/work plan) and e-copy on a CD by regular mail. Please, do not submit large size documents via e-mail, since we have limited storage capacity, so it should be used only for correspondence. Feel free to contact me if you have any questions. Thank you. Sincerely, Ainura Doronova Environmental Engineer 1 Division of Environmental Remediation NYS Department of Environmental Conservation Region 2 (718) 482-6453 AD 05/05/2015: Called and left a message to Charlie Sosik of EBC. AD 08/27/2015: Received the following e-mail from Kevin Brusee of EBC: Ainura, I will be forwarding you a copy of the Remedial Action Report for NYSDEC Spill No. 0407558 via the DEC FTS link. The Remedial Action Report was prepared for NYC OER, but discusses all of the information regarding the spill. The RAR describes site excavation for the new building, describes installation of monitoring wells, collection of groundwater samples, injections of chemical oxidant and groundwater sampling after the injections to confirm effectiveness of the injections. All tanks on site have been properly removed, the majority of the Site was excavated to a depth immediately above the groundwater table, and the concentrations of gasoline related VOCs in groundwater have decreased significantly following chemical oxidant injections. Therefore, EBC is recommending closure of the spill number. Please feel free to call me with any questions or concerns.

Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Later in the day received the second e-mail from Kevin stating: Ainura, The Report is attached. All of the appendices will be sent to you via the FTS link. Thanks, Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 09/08/2015: Reviewed the report. It states that the site was re-developed. The initial redevelopment plan proposed in 2005 consisted of a new 21-story mixed use building with a cellar, sub-cellar and mezzanine. However, the redevelopment plans changed in 2012 to a 12 story hotel/apartment building with two sub-cellar levels and a small cellar level. The underground storage tanks (USTs), dispensers and related piping associated with the former Sunoco service station were removed from the Site in 2005. A Remedial Action Work Plan was approved by DEC on October 12, 2006. The approved Remedial Action Work Plan included the excavation and removal of all petroleum affected soils and historic fill materials at the Site and the injection of chemical oxidants to treat residual petroleum contamination in soil and groundwater. The petroleum contamination was limited to the southern third of the property where the USTs and dispensers were formerly located. Excavation and off-Site disposal was started in early 2008, but was discontinued during the recession. The majority of former Lot 45 (former Sunoco service station) had been excavated to a depth of approximately 20 feet below surface grade. The west wall (toward Flatbush Avenue) of the excavation was backfilled to form a steep slope while the southern and eastern property lines were shored with wooden planking. The northern end of the property gradually slopes up toward former Lot 13. Following the recession, ownership was transferred and the redevelopment plan changed. The following remedial action were performed at the site: -From April 18, 2013, to June 17, 2013, a total 11,259.85 tons of fill/soil was excavated and loaded into 10-wheel dump trucks for transport to Soil Safe - Logan facility. An additional 7,247.23 tons of clean soil was removed from July 3, 2013, to August 8, 2013, from across the Site to get to the final excavation depth for the building's cellar/sub-cellar. The final depth of the excavation reached depth 30' bgl. -One 550-gallon underground storage tank was removed off-site in compliance with applicable local, State and Federal laws and regulations; -Installed Preprufe 300R as manufactured by Grace as a vapor barrier/waterproofing membrane system beneath the entirety of the building slab, and installed Bituthene 4000 as manufactured by Grace as a vapor barrier/waterproofing membrane system behind all foundation walls to grade; -Installed seven injection wells and performed three rounds of chemical oxidant injections to reduce soil/groundwater contamination; -Collected groundwater samples from monitoring wells to determine the effectiveness of the chemical injections. There is no figure of the site plan with locations of three monitoring well and injection points. Called and left a message to Mr. Brussee. AD 09/17/2015: Left a message to Mr. Brussee. AD 09/23/2015: Received the requested figure. Will review. AD 09/24/2015: Reviewed the submitted figure. The historically most contaminated well MW-6 located along the Flatbush Avenue. In-situ chemical oxidation was performed in the vicinity of this well via 7 injection points. Discussed with J. Kolleeny the closure request. Given the performed remedial excavation, in-situ chemical oxidation

Tank Info:

Tank Number: 001  
Tank Id: 242732  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I02 - Overfill - High Level Alarm  
L09 - Piping Leak Detection - Exempt Suction Piping  
E00 - Piping Secondary Containment - None  
H00 - Tank Leak Detection - None  
K00 - Spill Prevention - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
A00 - Tank Internal Protection - None  
F00 - Pipe External Protection - None  
I04 - Overfill - Product Level Gauge (A/G)  
C01 - Pipe Location - Aboveground  
J02 - Dispenser - Suction Dispenser  
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 433076  
DEC Memo: "8/04/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. As per NYC building records 404 Albee Square has alternate addresses of 404-404 Albee Square and 404-404 Gold Street. According to PBS#2-611063, there was a 5,000 gallon #6 fuel oil AST which has been closed-removed as of 1/23/2013, no other spill record was found. As stated in tank testing report the dry portion of tank failed isolation test as well as the wet portion of tank. Contact as per tank test failure results - Derrick 917-559-4337 DEC Possibly Requires: 1. Test results and possible investigation for piping (fill vent supply/return) 2. Investigation of possible spill related to tank testing results and failure of AST. 3. Clarification of fuel oil type of former AST #2 or #6. 8/05/2015: Rashad Email sent to Chris Quintana: After reviewing the failed tank test report for spill# 1214526 at 404 Albee Square, I would like to request the following

TANK TEST FAIL TTF (Continued)

S112810196

information: Test results for supply/return and fill/vent piping. Fuel type that was stored in tank. According to spill report it was #2 fuel oil and according to PBS registration it was #6 fuel oil. Property owner s name and phone number for our requirement letter, if any and records.Thank you and feel free to call me at 718-482-6752 or email me to discuss. As per Vought if no response to email received a formal letter will be sent to the owner requiring the same information. Response by Chris: Hello in response to the request for information about this property I can offer the following. I performed a tank test as a sub-contractor of S&J Fuel Oil Co. in Brooklyn which resulted in a failure. As a result of that test, I called in the failure and had no further interaction with S&J Fuel on this matter or anyone else. I assumed the were going to fix the problem and have me re-test but they never called me back in. If I can offer anything else please let me know. You can reach me on my cell at any time 347-397-8298. If I recall correctly this was a 2 oil system at the time of the test. 8/06/2015: Rashad Replied to Chris' email: Thank you for your help would you happen to have a contact (name, number & email) at S&J Fuel that would be able to help me with this case? 8/20/2015: Rashad Emailed Chris & SJ Fuel: I spoke with Jeff and we would like to know which parts failed the wet leak and which parts failed the dry leak referred to in the tank test report. If we know this information it may save the property owner (NYC HPD) a costly investigation. Note I have copied S&J Fuel above in case they have any additional information. Andrew from SJ Fuel called and reported the tank was removed and that there was no contamination. He will be emailing the documents he has. Chris emailed: The test performed on this tank was a full system test indicating two types of leaks. On the Mic a dry(hiss) was heard and a slight bubble. This tank was wrapped in concrete and no definitive cause of leak could be determined under my scope of testing. The failure was called in and no further work was performed by my company. SJ fuel emailed back with document, it was uploaded to D2 and indicated gas free certificate, and certificate of affidavit which insicates tank and all line removal (vent/fill/supply/return). Called Derek 917-559-4337 from spill report and PBS registration he indicated all piping was above ground and no contamination was found. Case can be prepared for closure as per Vought 8/21/2015: Rashad Uploaded closure report to D2. Email sent to Chris, Support@sjfuelco.com, and mpianelli@sjfuelco.com: We reviewed the data and attached is a standardized letter closing spill case#1214526 for 404 Albee Square, Brooklyn NY. The original letter was mailed to the current owner NYC HPD. "

Remarks: "Tank test failure"

. Waste code: D000  
. Waste name: Not Defined

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 32595  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
G99 - Tank Secondary Containment - Other  
B04 - Tank External Protection - Fiberglass  
H00 - Tank Leak Detection - None  
I00 - Overfill - None  
C01 - Pipe Location - Aboveground  
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Fiberglass Coated Steel  
Tank Status: Closed - In Place  
Pipe Model: Not reported  
Install Date: 01/01/1940  
Capacity Gallons: 20000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: 11/01/1997  
Register: True  
Modified By: TRANSLAT  
Last Modified: 04/14/2017  
Material Name: #2 fuel oil (on-site consumption)

Tank Number: 002  
Tank Id: 32596

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 55517  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring  
E12 - Piping Secondary Containment - Double-Walled (AG only)  
G03 - Tank Secondary Containment - Vault (w/o access)  
J00 - Dispenser - None  
C01 - Pipe Location - Aboveground  
F99 - Pipe External Protection - Other  
H99 - Tank Leak Detection - Other  
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: In Service  
Pipe Model: Not reported  
Install Date: 03/01/1990  
Capacity Gallons: 20000  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: Not reported  
Register: True

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F003  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005  
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

**FINDS:**

Registry ID: 110004514632

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 001  
Tank Id: 2617  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

G00 - Tank Secondary Containment - None  
J02 - Dispenser - Suction Dispenser  
A00 - Tank Internal Protection - None  
B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
F00 - Pipe External Protection - None  
H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
I04 - Overfill - Product Level Gauge (A/G)  
D00 - Pipe Type - No Piping

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: Not reported  
Capacity Gallons: 1500  
Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: 01/01/2013  
Register: True

Date Entered In Computer: 2012-07-12  
Spill Record Last Update: 2014-11-14  
Spiller Name: Not reported  
Spiller Company: PROPERTY OWNER  
Spiller Address: Not reported  
Spiller Company: 999  
Contact Name: CHARLES POWERS  
DEC Memo: "07/19/12- Zhune spoke to Charles Power from Aldi Development 516-032-3228. he said they were doing support excavation. They found a 550- gallons gasoline tank. Tank was removed and soil contaminated excavated. About 40 yards of soil contaminated was excavated. Endpoint collected. 10/26/12- Called Aldi Development spoke to Gim Vanhorn said the closure report is going to be send in two weeks. 11/13/14-Wala Canation from CNC Management Corp. emailed the Remedial Action report including the Phase I and the Phase II. Phase I.-Complety by FLS and Biene dated 1/2007 (with Phase I update dated April 2008) REC identified st the subject site by Biene, included a parking garage with ten gasoline USTs. a filling station with eight gasoline USTs, former painting operations, and other past sites occupanciesn mauy have utilized hazardous and/or petroleum products as part of their operations. A CEQR E designation was also identified, being placed on the site by the Department of City Planning as part of the Downtown Brooklyn Developmen for potential hazardous materials and noise impacts based upon its historicial use. The Phase I update dated April 2008 did not identified any other REC than that stated within the previous Phase I. Phase II.- On 1/11/11 and 2/17/11, CNS advanced a total of nine (9) borings (ACRS-SB01 through ACRS-SB09).On 10/31/11 through 11/8/11, CNS advanced an additional thirty-one borings ACRS-SB10 throught ACRS-SB-40)Subsurface borings were advanced to a depth of 30 feet bg or refusal, which is two feet below the planned excavation depthof 28 ft bgs or the anticipated foundation grade level of 44' bgs. A total of (61) composite soil samples were obtained from ACRS- SB-10 through ACRS-SB40. The analytical result indicate no exceeding of the NYSDEC CP-51/soil cleanup guidance within the collected soil samoles. Only sample ACRS-SB)5-S5B collected from 8'-16' bgs indicate low-level of SVOC contituents consisting of Benzo(a)anthracene 3.8 ppm, Benzo (a)pyrene 3.2 ppm, Benzo (b)fluoranthene 3.9 ppm and Indeno(1,2,3,-cd)pyrene)which was detected slightly above the standards. On 8/3/11, CNS collected samples from the three remaining monitoring wells at the City Development site, installed by FLS between 11/2007 to 01/2008. Monitoring well MW-1(FLS'MW5) is located western portion of hte site, were groundwater was encountered at 43'4 bgs. Monitoring well MW-2(FLS'MW-3) and MW-3(FLS'MW-2A) are located within the portion tax lot 101, where groundwater is encountered at 45' 4 bgs and 42' 0 bgs. The groundwater analytical result did not identified any VOC or Metal contaminants above the the NYSDEC TOGS Standards within any of the three groundwater samples. However SVOCs contituents were identified. Both Benzo(a)anthracene and Benzo(b)fluoranthene were detected slightly above the NYSDEC TOGS within monitoring well MW-1 0.05 ppb and monitoring well MW-2 0.05 ppb. Benzo (a)pyrene 0.06 ppb and Benzo(b)fluoranthene 0.06 ppb were detected above the standards in monitoting wellll MW-3. On 11/13/11, CNS installed a total of four(4)soil gas at the site labeled SG-01 through SG-04 Analytical results of all four soil-gas samples did not identify any volatile chemicals exceeding the air guideline values.

**S112147654**

Remedial Action Plan.- The proposed remedial action will consist of:  
1.- Perform a Community Air Monitoring Program . 2.- Utilize site -specific Restricted-Residential Soil Cleanup Objectives (SCOs) for contaminants of concern. Excavation and removal of soil to the depths of 44' bgs including soil/fill exceeding SCOs, where applicable.  
3.- Collection and analysis of end-point samples. 4.- Removal of underground storage tanks 5.- Construction and maintenance of an Engineering composite cover consisting of building slab. 6.- Installation of vapor barrier system. 7.- demarcation of residual soil/fill. 8.- transportation and off-site disposal of all soil/fill material. 9.- Screening of excavated soil/fill. 10.-Site mobilization involving site security setup, equipment mobilization, utility mark out and marking & staking excavation areas. 11.-Implementation of storm-water pollution prevention measures. 12.-Performance of all activities required for the remedial action 13.-Submission of a remedial Closure Report (RCR). 11/14/14-Wala Canario from CNS Environmental Corp. emailed the Tank Closure Report dated 10/5/12. The report stated that Tank Area # 1, discovered on 7/12/12 is located within the east /southeast portion of the site (Grid SB-23) where a 550 gallon gasoline UST was identified during redevelopment activities. The UST, which was filled with an inert material was cut, cleaned and removed from the site. Prior to the tank removal off-site, the area demonstrated olfactory evidence of a potential release within the soil was identified beneath the UST. Soil was excavated from the UST area. ACO # 1, discovered 7/26/12 is located within the central portion of the site (Grid # 27) where elevated PID readings and a gasoline odor were identified during excavation activities. Upon completion of the excavation activities CNS subsequently collected a total of (5) soil endpoint grab samples from each excavation area. Endpoint soil samples collected from Area # 1 are: T1-Ep-NS-S1A (north sidewall),T1-Ep-ES-S2A (east sidewall), T1-Ep-SS-S3A (south sidewall),T1-Ep-WS-S4A (West sidewall),T1-Ep-BE-S5A (bottom of the excavation). Endpoint soil samples collected from AOC #1 are: ACC1-EP-NS-S1A (North sidewall), ACC1-EP-ES-S2A (east sidewall), ACC1-EP-SS-S3A (south sidewall), ACC1-EP-WS-S4A (West sidewall), ACC1-EP-BE-S5A (bottom of the excavation). The soil analytical results of the endpoint samples from both excavation Tank #1 and AOC #1 did not identify any VOC or SVOC contaminants exceeding the standards. spill closed."  
Remarks: "DURING EXCAVATION, A 550 GALLON GASOLIN TANK WAS UNEARTHED."

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D007

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 3/23/2001 AN ANNONYMOUS CALLER INDICATED THAT THERE HAD BEEN A SPILL IN THE BASEMENT OF #1 UNIVERSITY PLAZA SEVERAL DAYS AGO . ECO MATT DORRETT IS AT THE SITE TODAY TO INTERVIEW PEOPLE INVOLVED. INITITAL REPORTS ARE THAT THERE HAD BEEN A BREAK IN A FUEL LINE IN THE BASEMENT AND SOME QUANTITY OF #2 FUEL SPILLED INTO A PIT AREA AND FLOOR DRAIN. THIS DRAIN FED INTO A SUMP WHICH WAS THEN PUMPED OUT INTO A CITY SEWER. THE FACILITIES PERSON ON SITE SAID PETROLEUM TANK CLEANERS WAS CALLED IN TO CLEAN THE SITE. SANGESLAND SPOKE WITH GABE AT PETROLEUM TANK CLEANERS. GABE SAID PTC WAS CALLED ON 3/22 TO CLEAN UP THE PIT AREA. THEY WERE TOLD THAT THE SPILL OCCURRED FROM A BROKEN PIPE AND A PLUMBER (JEB) FROM GENERAL PLUMBING HAD FIXED THE LINE. PTC SAID THEY WOULD ONLY WORK ON THE CLEANUP IF A SPILL NUMBER HAD BEEN CALLED IN. GABE WENT TO THE SITE AND SAID THE PIT AREA NEEDED CLEANING AND PTC WOULD COME BACK ON MONDAY 3/26 TO FINISH THAT WORK. IT IS UNCLEAR WHETHER THE SPILL IS TOTALLY CLEANED AT THIS POINT.  
6/8/05 - Project transferrd to TLGibbons in Central Office, Albany  
9/14/05 - Spoke to Cathy O'Sullivan, Long Island University, (718) 488-3459. Sent me an invoice from the plumbing contractor who cleaned the spill, General Plumping Corporation. Some of the wok appeared to be subcontracted to Petroleum Tank Cleaners. Broken pipes were repaired and the spill was cleaned up by 3/28/01. Work overseen by ECO Matt Dorrett. Close spill."  
Remarks: "annon caller advised of broken pipe and spill to ground, and floor drain."

Date form received by agency: 08/20/1997

Site name: CUMBERLAND DIAGNOSTIC & TREATMENT CTR

Classification: Large Quantity Generator

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D007

. Waste name: CHROMIUM

. Waste code: F002

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Tank Info:**

Tank Number: 001  
Tank Id: 2985  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

**Equipment Records:**

F06 - Pipe External Protection - Wrapped  
J02 - Dispenser - Suction Dispenser  
A00 - Tank Internal Protection - None  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
B00 - Tank External Protection - None  
C00 - Pipe Location - No Piping  
G03 - Tank Secondary Containment - Vault (w/o access)  
H00 - Tank Leak Detection - None  
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 0001  
Tank Id: 63665  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser  
E00 - Piping Secondary Containment - None  
F00 - Pipe External Protection - None  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
K00 - Spill Prevention - None  
C01 - Pipe Location - Aboveground  
I04 - Overfill - Product Level Gauge (A/G)  
G02 - Tank Secondary Containment - Vault (w/access)  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: 04/01/2002  
Capacity Gallons: 5000  
Tightness Test Method: -  
Date Test: Not reported  
Next Test Date: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Tank Info:

Tank Number: 001  
Tank Id: 34486  
Material Code: 0002  
Common Name of Substance: #4 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F01 - Pipe External Protection - Painted/Asphalt Coating  
K00 - Spill Prevention - None  
C03 - Pipe Location - Aboveground/Underground Combination  
J02 - Dispenser - Suction Dispenser  
I04 - Overfill - Product Level Gauge (A/G)  
E00 - Piping Secondary Containment - None  
G02 - Tank Secondary Containment - Vault (w/access)  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
L00 - Piping Leak Detection - None

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: 01/01/1957  
Capacity Gallons: 10000  
Tightness Test Method: -  
Date Test: Not reported  
Next Test Date: Not reported  
Date Tank Closed: 02/23/2017  
Register: True

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial). Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium-to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.  
 Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant

concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Description: Location: The 388 Bridge Street site consists of two lots situated between Willoughby and Fulton Streets. Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial). Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium-to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan

Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Lot 118 occupies 141 to 145 Lawrence St. and Lot 37 occupies 384 to 388 Bridge St. Current Zoning and Uses: The site is located in a mixed use commercial / residential area of Brooklyn. Historically, the site has been used for both residential and commercial purposes and will continue to be used for similar purposes once redeveloped. The site is zoned RM (mixed residential and commercial). Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium-to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil,

groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

Site Features: On-site structures were demolished and the entire footprint of the site was excavated to a depth of up to 25 feet below surface grade (bsg) in preparation for redevelopment. Historic Use: One of the former commercial operations on the site was a dry cleaner in the northeast corner of the site. Site investigations indicate that improper handling and disposal of the dry cleaning solvent, tetrachloroethene (PCE), resulted in soil, groundwater and soil vapor impacts from PCE and its breakdown products. Site Geology and Hydrogeology: The site has been excavated to a depth of up to 25 feet bsg. Below the excavation, brown, medium-to coarse-grained sand intermixed with some gravel is present to a depth of 42 feet bsg. Below that, the glacial till stratum extends to 100 feet bsg and is underlain by highly consolidated Gardiner s clay. The groundwater table is approximately 43 to 45 feet bsg. Due to regional topography and the nearby presence of the East River, the local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not

represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

local groundwater flow was assumed to be to the south/southwest toward New York Harbor. However, groundwater at the site has been determined to be flowing to the northeast. This localized groundwater flow direction may be influenced by the subway tunnels located north and southwest of the site and pumping operations at a Metropolitan Transportation Authority (MTA) de-watering station located within 1.5 miles northeast of the site. Certificate of Completion issued on 12/19/2013.

Env Problem: Nature and Extent of Contamination: Prior to the site entering the Brownfield Cleanup Program (BCP), the entire site was excavated to a depth of up to 25 feet below grade (street level) for site redevelopment. Soil sampling conducted during the BCP remedial investigation found no PCE contamination remaining in on-site soil. The data indicate that the on-site source was removed during the initial excavation. Contamination was limited to groundwater and soil vapor. With the source removed, groundwater contaminant concentrations have declined. Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were the dry cleaning solvent tetrachloroethene (PCE) and its breakdown products trichloroethene (TCE) and dichloroethene (DCE). Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a site management plan. Site-related contaminants were observed in indoor air in an adjacent building. A sub-slab depressurization system (SSDS) was installed and is operating in that building. A soil vapor extraction system (SVE) has been installed and is operating in the new on-site building. Once soil vapor concentrations meet acceptable levels, the SVE system will be converted into an SSDS. Certificate of Completion issued on 12/19/2013.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. A combination of mitigation measures have been installed at an adjacent property to prevent vapors beneath the slab from entering the building. Environmental sampling has identified soil vapor contamination that is not related to the site. A separate investigation to determine the source or sources of the contamination is on-going.

529-6526 (C) Fax (212) 631-8066 email: eric@emteque.com  
08/20/08-Hiralkumar Patel. spoke with Eric. asked him to submit all previous reports (Phase I, Phase II, Construction Health & Safety Plan and RAP). Eric mentioned that they found another area of contamination. visited site. met Jake Hawkes (cell: 917-769-2618) from Emteque at the site. they found two more areas with contamination. will collect endpoint samples. Jake mentioned that there was a drycleaner at the site. 08/21/08-Hiralkumar Patel. received emails from Eric with few documents, but all confusing. sent email to Eric to submit complete reports. also asked to submit property owner's information. Jim Farley 384 Bridge Street Associates, LLC \*\*property owner\*\* c/o Stahl Real Estate Co. 277 Park Avenue, 47th floor New York, NY 10017 Ph. (212) 826-7060 Fax (212) 223-4609 email: jfarley@stahlre.com 08/28/08-Hiralkumar Patel. received Phase I, Phase II reports and copy of DEP correspondence from Eric. subject site includes properties along Bridge Street (384-394 Bridge Street) and also along Lawrence Street (141-145 Lawrence street) abstract of Phase I report: - in the early 1900s the site was primarily residential and retail - in 1938 the site is listed as taxi garage <----- - from 1950 to the present site has been used as retail, DRY CLEANING and training facility <----- according to Phase I, previous owner Victoria Aviles, who has knowledge of the facility since 1985, indicated that she has no knowledge of gasoline tanks in the ground. (means nobody has information about dispenser island or remote fill port). discussed with DEC Jacob regarding tank registration. he mentioned as there was no gasoline tank use since 1985, no registration required. <----- abstract of Phase II: - advanced ten borings to a maximum depth of 10 ft bg - site elevation is approx. 37 ft above mean sea level - topography in surrounding area is gently sloping to the west towards East river <----- - one soil sample collected at 2 ft bg and second composite sample from 0-10 ft bg from each borings <---- - found high Naphthalene in samples from 384 Bridge Street site - high SVOC contamination found in all samples from parcels along Bridge street (384-388-390 Bride street) - found PCE (Tetrachloroethene) in all samples from site along Bridge street (dry cleaner was located at 384 Bridge Street and highest PCE found 480 ppb in soil sample from 384 Bridge Street parcel) <----- - mercury contamination found in almost all samples <----- according to DEP correspondence dated 04/16/07, after reviewing RAP and construction health and safety plan, DEP rejected it and asked for following additional work: - endpoint samples at the end of excavation - an active SSDS and vapor barrier according to letter from DEP, dated 03/18/08, they approved to excavate and for foundation work based on submitted revised RAP/CHASP, but no approval for building construction has issued yet. spoke with Eric. he mentioned that owner is planning to excavate to depth of approx. 30 ft bg. Eric doesn't know depth of groundwater, but owner has done geotechnical investigation and they have groundwater depth detail in it. asked Eric to submit RAP and geotechnical investigation report. also asked Eric to contact site owner to hold any construction activities until further soil and groundwater investigation is done (which is required as found PCE in soil at 10 ft depth and site had dry cleaner since 1950s). spoke with Mr. Schreiber at DEP regarding project manager. he will call back with project manager's information. received call from Mr. Winter from DEP, who is project manager for the subject site. Maurice Winter \*\*project manager at DEP\*\* NYC DEP Ph. (718) 595-4514 email:

mwinter@dep.nyc.gov DEP tracking #: 07DEPTECH258K <-----  
08/29/08-Hiralkumar Patel. received geotechnical report from Huy Pham  
from Cauldwell Wingate. abstract: - proposed building will be 54  
stories hith with two levels of basement extending about 26 ft below  
sidewalk grade <----- - subway lines runs under Fulton Street  
and Willoughby street, less than 200 ft from site - eight borings  
were installed: two on sidewalk and six inside building at different  
location - sidewalk borings were installed to depth of 102 ft and  
borings inside previous building were installed to depth of 60 ft bg  
- piezometers were installed at borings B-1P and B-8P installed on  
sidewalk - groundwater found at depth of 43 ft bg Huy Pham \*\*geotech  
consultant\*\* Cauldwell Wingate Co. LLC Bridge Street Construction  
Field Office 131 Lawrence St Brooklyn, NY 11201 Ph. (718) 852-7909  
(Ext. 104) (917) 841-8827 (C) Fax (718) 858-0315 email:  
hpham@cingate.com received RAP (previously approved by DEP) from  
Eric. abstract: - endpoint samples shall be restricted to 384, 388  
Bridge street location <----- - in the event that elevated levels  
of VOCs continue to exist and can't be removed, a SSDS will be  
installed <----- - vapor barrier will be installed - if dewatering  
occurs, will collect groundwater samples for required permits RAP not  
acceptable for following reasons: - proposing to collect endpoint  
samples in area of 384 & 388 Bridge street only and not throughout  
the site - proposing to install SSDS if only any contamination left,  
but the department requires SSDS installed as site had gas tanks and  
dry cleaner 09/03/08-Hiralkumar Patel. spoke with Eric. Eric asked  
about number of monitoring wells at the site. asked Eric to collect  
endpoint soil samples throughout the site (regardless of previous  
sampling results) to characterize soil beneath new foundation and  
based on endpoint sample analyticals, monitoring well locations will  
be decided. also asked to install SSDS and vapor barrier, throughout  
site, regardless of endpoint sample analyticals. discussed with DEC  
Jane. Jane mentioned that regardless of endpoint soil sample results,  
the department requires sampling of groundwater and also soil-vapor  
delineation in area close to school site at 374 Bridge street.  
09/04/08-Hiralkumar Patel. discussed with DEC Austin regarding  
sampling requirements. Austin mentioned that the Department only  
requires endpoint soil samples, groundwater samples from three wells  
at previous dry cleaner site with site specific groundwater flow  
direction and installation of SSDS. Austin mentioned that soil vapor  
samples only be required if finds contamination in soil or  
groundwater and at that point case will be transferred to remediation  
section C . sent letter to Mr. Farley requiring endpoint soil samples  
throughout the site, groundwater samples via three wells/piezometers  
and site specific groundwater flow direction. also asked to install  
vapor barrier and SSDS after review and approval of investigation  
report. letter emailed to Mr. Farley, Eric and Mr. Winter (at DEP).  
09/09/08-Hiralkumar Patel. received email from Eric with endpoint  
sample analyticals. Eric mentioned that wells has been installed and  
will be sampled this week. Eric asked to proceed with installation of  
mud slab. asked Eric to wait until gets groundwater sample  
analyticals. (analyticals stored on e-docs). 09/10/08-Hiralkumar  
Patel. received call from Ivy from PW Grosser. Ivy mentioned that  
they installed wells at the site. now as they are waiting for a week  
prior to sampling these wells, property owner wants to install Rat  
Slab which comprises of concrete, stone and other material and which  
will be maximum of 2 to 3 inches thick. owner wants to install such  
slab to save time. explained to Ivy that if any contamination found

**1000188813**

in groundwater, then the department requires complete groundwater delineation with more wells on-site as well as off-site. and installation of on-site wells will requires holes in newly installed slab. Ivy mentioned that owner is ready to take such chance. asked Ivy to call owner to call me to discuss regarding such work. 09/11/08-Hiralkumar Patel. received email from Eric. he asked whether SSDS required even no contamination found in groundwater. Eric mentioned that new structure will be structural slab on grade and not a spread footing system and any disturbance to existing soils and the installation of an SSDS system has potential structural implications, since a significant load will be sitting on the piping system. also received site map with endpoint sampling locations and well locations. spoke with Eric and Mr. Farley regarding rat slab and SSDS installation. mentioned to them that the department requires installation of SSDS based on site history (dry cleaner and repair shop). told them that if any contamination found in groundwater then SSDS is must. regarding rat slab, Mr. Farley agreed to drill through new slab if finds contamination in groundwater samples lateron. 09/22/08-Hiralkumar Patel. received call from Eric. they found perc in groundwater. they also performed vapor intrusion study. they have SSDS design ready. asked Eric to hold all construction activities and to submit investigation report with system design. left message for Mr. Farley to hold construction activities until get approval from the department. received email from Eric with SSDS drawings. drawings were not signed off by lincensed engineer. sent email to Eric requiring drawings signed by licensed engineer. 09/23/08-Hiralkumar Patel. received SSDS design from Eric in mail (not signed by licensed engineer). 09/24/08-Hiralkumar Patel. received groundwater sample analyticals (only) from Eric. found high PERC contamination in all three groundwater samples. -----Tetrachloroethene MW-1-----386 MW-2-----565 MW-3-----1,070 09/25/08-Hiralkumar Patel. visited site yesterday evening. tried to contact school supervisor, but left for the day. doorman asked to contact Ms. Gallagagr. Sister Joan Gallagagr Principal St. Joseph High School 80-86 Willoughby St / 374-382 Bridge St Ph. (718) 624-3618 email: jgallagher@sjsbridge.org left message for Ms. Gallagagr. after discussing with DEC Austin and DEC Amar, sent permit revoke request letter to NYC DOB, NYC DOH, NYC DEP and NYC Dept. of City Planning. letter emailed to Mike Hughes at NYS DOH, Mr. Nieves at NYC DOH (RNIEVES1@health.nyc.gov), Mr. Winter at NYC DEP, DEC Krimgold, Mr. Farley and Eric. received email from Mike Hughes from NYS DOH. he mentioned that as site has only PERC contamination and doesn't have petroleum contamination, site will be monitored by Bureau of Environmental Exposure Investigation (BEEI). he asked to send correnspondence to Joe Crua, Section Chief. Joseph P. Crua Chief, Metro Section Bureau of Environmental Exposure Investigation New York State Department of Health Ph. (518) 402-7880 email: jpc04@health.state.ny.us after discussing the DEC Austin, sent chlorinated solvent notification letter to Mr. Farley and informed him that remediation section will provide further direction in this matter. letter emailed to Mr. Farley, Eric, DEC Jacob, Mr. Winter at DEP and Mr. Crua at DOH (BEEI section). received email from Mr. Crua from BEEI, NYS DOH. he has assigned case to Bridget Callaghan in his office. received email from Ms. Callaghan from NYS DOH requesting submission of all available documents. Bridget K. Callaghan Public Health Specialist II NYS DOH PH. (518) 402-7850 email: bkc01@health.state.ny.us 09/26/08-Hiralkumar Patel. received message

from Sister Joan from St. Joseph High school. spoke with Sister Joan at high school. she mentioned that they have cafeteria and utility rooms (maintenance office, boiler room etc) in basement.  
09/29/08-Hiralkumar Patel. sent CD, with all available documents, to Ms. Callaghan to NYS DOH (DHL tracking #: 77482194543). received message from Mr. Russo, owner's attorney. left message for Mr. Russo. Steven Russo \*\*owner's attorney\*\* Sive, Paget & Riesel, P.C. 460 Park Avenue New York, New York 10022 Ph. (646) 378-7273 -- direct (212) 421-2150 -- main Fax (212) 421-1891 email: srusso@sprlaw.com  
09/30/08-Hiralkumar Patel. received email from Mr. Russo with copy of letter to NYC DOB. he mentioned that owner has voluntarily ceased all construction activities. discussed with DEC Amar, Vought, Joe O'Connell and Jannifer Kann. after reviewing available documents and information, Amar asked Ms. Kann for conference call with DEC Bob Cozzy. sent documents, which are not on e-docs (because waiting for complete report), to DEC Kann. 10/03/08-Hiralkumar Patel. spoke with Eric at Emteque. they are no longer working at the site. owner has hired Fleming Lee Shue. Eric mentioned that he has gave soil-gas data, groundwater analyticals and draft report to Fleming Lee Shue for review. left message for Mr. Ahmed at Fleming lee shue. Mohamed Ahmed Fleming Lee Shue Ph. (212) 675-3225 (O) (917) 612-6018 (C) Fax (212) 675-3224 email: mohamed@flemingleeshue.com spoke with Mr. Ahmed regarding groundwater and soil-gas investigation report. Mr. Ahmed mentioned that he only has lab data and nothing else. he mentioned that Eric supposed to send complete report. asked Mr. Ahmed to submit soil-gas data received soil-gas analyticals. he mentioned that methodology for soil-gal sampling and QA/QC is not available to him. found chlorinated compounds in soil-gas results. 10/03/08-Hiralkumar Patel. case transferred to DEC Jennifer Kann. 10/06/08- J.Kann - Discussed the site with B. Cozzy, and agreed it qualifies for a non-petroleum stip. Spoke with Mohamed Ahmed of FlemingLeeShue on 10/6, who requested a meeting to discuss requirements for the site. Agreed to meet on Thursday october 9 at 10AM. Mohamed said an investigative work plan will be submitted to the Department on october 7. 10/7/08 - J.kann - Consultant (Mohamed Ahmed of FLS 212.675.3225) requested the meeting be moved to the 14. Due to scheduling conflicts, it could not be rescheduled until October 16. A work plan should be submitted by October 10. Mohamed discussed doing grid sampling on site around the location of the former dry cleaner, as well as installing off-site wells. He was informed that the plan should also include soil gas sampling in the sidewalk adjacent to the private high school. 10/16/08: - J.Kann - J. Krimgold and J.Kann met with the consultant (M. Ahmed and A. Fleming) to discuss the work plan which was submitted on October 10. Informed them of changes the Department wants- a sampling grid which covers the entire lot of the former dry cleaning facility, as well as an off-site well in front of the active dry cleaners. They were informed that they should enter a stipulation agreement, and were told that John Urda would be the DEC legal contact. FLS will revise the work plan and resubmit it.  
10/24/08: J.Kann - revised work plan submitted on October 23. Work Plan approved via email provided two comments were addressed - an additional soil vapor sample collected and one shallow boring extended to groundwater. CAP provided to J. Urda. 10/27/08 - J.Kann - spoke with Mohamed of FLS. He agreed to address the two comments (the deeper soil gas may need to be performed inside the property line where the soils have been excavated). Also spoke with John Urda, who said he will contact Steve Russo and forward a non-petroleum stip to

him. 10/30/08: J.Kann - visited site. Field work commenced. 11/14/08: J.Kann - J.Urda sent stip to RPs attorney on 11/10. Attorney verbally said they will enter into stipulation agreement. 12/24/08 - J.Kann Stipulation agreement executed (edocs). RP sent preliminary results of soil gas and groundwater findings and requested a meeting. 12/31/08- J.Kann - Meeting scheduled for January 6, 2009 at 10AM. Letter received from NYCDOB stating they have no authority to enforce such state and federal requirements . This letter was a response to the DEC's September 25, 2008 letter requesting building permits be revoked. (edocs) 1/2/2009 - J.Kann - letter sent to NYCDOB, NYCDEP, City Planning and NYCDOH rescinding DEC's request to have permits revoked, because the RP has entered into a stipulation agreement. (edocs) 1/6/09 - J.Kann - meeting held with the RP, James Farley, his consultants, Arnold Fleming and Mohamed Ahmed of FLS, and Michael Bogin of Sive Paget and Reisel. DEC present, J Krimgold, J Urda and J.Kann. Teleconferenced NYSDOH Bridget Calaghan and DEC's Jim Harrington. RP's consultant to submit a brief work plan by Monday January 12. Indoor air and subslab sampling to be proposed in the adjacent HS. Additional gw levels will also need to be taken to confirm gw flow direction. 1/13/09 - J.Kann - received Indoor Air Quality Work Plan on January 12. 5 sub-slab and concurrent indoor air samples will be collected on janaury 19. One outdoor air will also be collected. DOH (Bridget Calaghan) reviewed the work plan and had no comments. Approval letter was sent to consultant today. 1/29/09 - J.Kann - preliminary results of IAQ received on 1/27 indicated elevated levels of PCE in indoor air and sub-slab. A conference call was held today with the consultant and DOH to determine how to proceed. It was decided that the principal must be informed immediately. The RP said that he will try and contact her to arrange a conference call. 1/30/09 - J.kann - Contacted RP's consultant, mohamed ahmed of FLS and asked if call with Principal was scheduled. Mohammed said that they tried to contact her on 1/29, but were not able to reach her. They will try again today. I will follow up at the end of the day. 2/2/09 - J.Kann - Conference call with St Joseph's Principal, Sr. Joan Gallagher,DOH (B. Calaghan and Joe Crua), DEC (T. Morenzi, J. Krimgold, J. Urda and J.Kann), FLS (Art Fleming, M. Ahmed), SPR (M. Bogan) and Stahl (J. Farley) occurred at 11 AM this morning. Sr. Joan was informed of the levels found in the school. Highest indoor air concentration of PCE was 355 ug/m3. DOH guidance uses 100 ug/m3 to mitigate and 1000 ug/m3 requiring immediate response. DOH explained this to sister joan. Sister Joan was explained the steps that were to follow and that included sealing of any cracks in the basement floor or walls, sealing the door to the boiler room and possible replacement of the fan in the boiler room, and the installation and operation of two temporary scrubber units. These are temporary actions, and long term measure will be looked into. DOH said that Sister Joan will need to notify the students and their parents and that DOH would help her with the preparation of that letter and they would supply a Fact Sheet on vapor intrusion. Initial work (sealing, scrubbers) will start week of February 6. 2/9/09 - J.Kann - Visited site on 2/6. Air scrubbers were to be delivered by COB Friday. FLS was intending on running them over the weekend (will need to verify today if they were received on time to be started). FLS will finalize a report including the investigative work performed on the Bridge Street site and the IAQ work performed at St. Joseph's and will submit it by mid-February. Cracks were sealed in the basement of St. Joseph's and the boiler room door was

better sealed. A walk through was performed on 2/6 and additional cracks were noticed and will be sealed. In addition, some sheetrock work will be done in one basement storage room (no ceiling tiles between this area and 1st floor auditorium). Indoor air will be performed again after the scrubber is run for approximately a week. 2/10/09 - J.Kann - Spoke with FLS - scrubbers were only received on 2/9. They were installed in the basement of St. Joseph's on 2/9 and are currently running. FLS will be submitting a report by February 13 which includes the work performed at 384 Bridge in fall of 2008 and the sampling performed at St. Joseph's in January 2009. Bridget Calaghan of DOH has been in contact with Sr. Joan, principal, and has provided her with sample letter and fact sheets to use for parent/student notification. DOH spoke with the principal on 2/6 at which time the principal did not commit to a date for notification. Air sampling will be performed the week of February 16 to confirm effectiveness of scrubbers. 02/25/09 - J. Kann - The principal, Sr. Joan, mailed notifications to the student s parents on February 13. The letter, prepared by the principal, did not list DOH or DEC as contacts, and therefore no inquiries have been made to us. A second round of indoor air sampling was performed in the basement and first floor of the school on February 19. The sampling results are expected the first week of March. The St. Joseph's Indoor Air Sampling Report was submitted to DEC and DOH on February 13. Groundwater flow direction at the Bridge Street site has not been established. FLS is collected another round of groundwater measurements on 2/26. The investigative report for Bridge Street will be submitted after these measurements are completed and incorporated into the report. 03/05/09- J.Kann - receive results of second round of indoor air sampling. No significant change noted in the basement air levels. First floor levels are fine with the exception of a sample collected near the elevators. FLS, the consultant, will be collecting a sample in the pit on Saturday March 7 to determine if the elevator pit is a source. 03/10/09 - J.Kann - DOH reviewed data and requested a meeting with FLS. I spoke to FLS and provided the following information to DOH via email: 1. The installation of the air scrubbers consisted of just plugging them in . He can not say for sure why they aren't working because FLS's initial calculations said the concentrations would be reduced within 24 hours. The scrubbers were running 10 days before the follow up sampling was performed. 2. FLS is working with a Mechanical Engineer to attempt to fix the existing HVAC system at the school so that fresh air can be directed into the basement. By the end of this week they hope to have a report indicating what repairs/modifications will need to be done. 3. Results from the sample collected in the elevator pit is expected by the end of the week. If this is confirmed as a source, FLS will provide a coating around the elevator pit. 03/12/09: J.Kann - DOH requested a teleconference. Arranged teleconference for 2:30 Friday March 13. FLS said the attorney and RP would be on the call. DEC Legal, Urda, was notified. 03/13/09: J.kann - Teleconference participants included DOH, FLS, DEC, RP and his counsel) Teleconference basically discussed the items sent to DOH in the march 10 email. DOH requested any draft information provided by the Mechanical Engineer be sent to them. This will likely be early next week. FLS has a structural engineer exploring the options for a final solution, a SSDS system. This process is taking longer than expected because no original drawings for the building exist. Results of the sample collected in the elevator pit are expected early next week. A vapor barrier will be

**BRIDGE CLEANERS (Continued)**

**1000188813**

installed in the elevator pit if the results confirm it as a source.  
03/19/09: J.Kann - REceived an email from Mohammed of FLS summarizing their proposal of planned actions for the school. Information from the email is below: 1. Immediate action (within two weeks) a. The existing air scrubbers will continue operating b. Vent existing indoor air and replace with fresh air. A total of twelve air exchanges @ 2,000 CFM are planned. c. Re-activate existing basement outside air heating and ventilation unit to replace air being exhausted by basement kitchen hood system. d. Refurbish existing H-V unit including a new fan belt, lubricate bearings if applicable, new air filters, vacuum inside of unit, and resume unit s operation. e. Install remote kitchen hood fan starter buttons in kitchen area. 2. Long Term Action (operational within 4 months) a. Design dehumidification system which will manage basement humidity levels and avert possibility of mold propagation. b. Upgrade existing H-V unit motor drive to variable speed, and set for two levels of operation, one without kitchen hood exhaust operational, and the second with kitchen exhaust in operation. Interconnect kitchen exhaust fan starter with H-V drive unit for coordinated operation. c. Design and installation of sub-slab venting system. 3/20/09: J.Kann -An email was sent to the consultant indicating the following: DEC and DOH have no objections to your approach to minimize indoor air concentrations in the basement. It is important to note that any modifications to the HV system are short term solutions only and that installation and design of a SSDS must also remain a priority. 3/31/09: J.Kann - A letter was submitted on remedy selection for the Bridge Street site. The letter was forwarded to DOH and Albany (Mike MacCabe). An application was received for the BCP on March 3 and a determination has not yet been made as far as eligibility. 4/22/09: J.Kann - During a discussion with regional HWE, I was informed that the standard proceedure for spill sites, that have applications in with the BCP, is to handle them as spill sites until a BCP agreement is signed. Since a determination for BCP eligibility has not been made to date, with the concurrence of Jacob Krimgold, the review of remedy selection for the site will move forward. I spoke with DOH today and they agree with the consultants proposal. The consultant proposes to do soil vapor extraction on the site and want to start a pilot test as soon as possible. Once written DOH concurrence is received by DEC an email will be prepared and sent to the consultant. 05/04/09: Internal discussions at DEC about the use of SVE to treat groundwater indicate that it may not be effective. The consultant was contacted and more information was requested to be provided on their proposal, specifically if any case studies are available. The HV system in the adjacent school was repaired and operational effective April 21. The consultant was asked if an additional round of indoor air sampling was planned. 05/08/09: J.Kann - FLS provided the following email on 05/07 : The indoor air sampling inside the school will be scheduled for the weekend of May 16, 2009. As we spoke this morning, the case study of using SVE to remediate groundwater contamination was for a NYSDEC spill site. The spill closure letter is attached. Please let me know if you have any question. (reference is made to spill 9605688) 6/23/09: J.Kann - SSDS design information for St. Joseph's and the results of an additional round of indoor air samples were submitted on 6/2/09. No significant change was noted in the indoor air samples collected. DOH comments on the SSDS were forwarded to the consultant on 6/9/09. Received an email from Mike McCabe of Albany on 6/22/09. He visited the site last week and

**1000188813**

noticed that an elevator pit was installed. I informed him that earlier this year the consultant had requested permission to construct the elevator pit only, and they were verbally told it was okay as long as proper vapor mitigation measures were installed. The area of the elevator pit, as far as I was told, was not in the former dry cleaner portion of the site. Based on the investigative work performed, soils remaining at the site do not contain VOCs above the RSCOs. 6/24/09: J.Kann - spoke with M. Ahmed of FLS. The RP is trying to coordinate the installation of the SSDS during the summer months while school is not in session with Sr. Joan of St. Joseph's School. They are hoping to speak with her and set a schedule sometime this week. The site, 384 Bridge Street, is being backfilled due to pressure from DOB. The RP is waiting on a determination regarding eligibility into the brownfields program before moving forward with on-site work and remediation. Spoke with J. Urda of legal who indicated that the RPs attorney will be dealing directly with Albany to resolve any issue regarding BCP eligibility. 8/13/09: J.Kann - a supplemental remedial investigation work plan was submitted on July 9. An email accepting the plan was sent to FLS on July 16. The site was accepted into the BCP on August 12. Site to be transferred to Mike MacCabe. 08/18/09: J.Kann. BCP Agreement signed for this site by Dale Desnoyers on August 13, 2009. On-site and off-site contamination is covered under the BCA. As per Amar Nagi, spill closed. See cross referenced remediation site number C224134 for additional information. \*\*e designated site.\*\* <-----"

**FINDS:**

Registry ID: 110002361532

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BNYDC site on the south. Site Features: The 13-Acre parcel site includes a barge basin, the Building 419 transformer substation, two former drum storage areas, and a railroad siding area. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychlorinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River.

Env Problem:

Nature and Extent of Contamination: Soils are contaminated with lead and polycyclic aromatic hydrocarbons (PAHs) throughout the site, though more so at the railroad siding and drum storage areas, where concentrations of lead have been observed to sometimes exceed the Toxicity Characteristic Leaching Procedure (TCLP) limit for characteristically hazardous waste. The lead and PAHs are believed to be due primarily to historic fill having been placed throughout the area in order to render the land usable. Polychlorinated biphenyls (PCBs) have been detected in site soils, primarily near the Building 419 transformer substation, but also at the railroad siding area. The level of PCBs detected outside of the Building 419 area are relatively low, with only a few exceedances of the 1 part per million (PPM) commercial cleanup level. PCBs nearer Building 419 have been found well in excess of the 1 PPM commercial cleanup level in near surface soils, and above the 10 PPM level often used for cleanups in deeper soil. The highest concentration detected in soil within this area was 210 PPM. In general, observed concentrations of contaminants in groundwater at the site do not indicate a significant source of groundwater contamination due to waste management at the site. However, there are minor excesses of groundwater standards found sporadically on the parcel, presumably due to historic operations at the site, as well as the presence of historic fill. No source area of contamination relative to these minor groundwater impacts was found during the investigation. Special Resources Impacted/Threatened: The site is largely paved and is not considered an area of significant habitat. Contaminant concentrations found in barge basin sediments are generally consistent with those found throughout the region, and no clear contribution of sediment contamination from the site was determined. Significant Threat: The site was determined to be a significant threat due to the presence and release of hazardous substances.

**BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued)**

**S105586296**

Health Problem: Exposure to site-related contaminants in surface soil has been minimized by an interim remedial measure (IRM) to remove hot spot soil contamination. Since some contaminated soils remain at the site below concrete or backfill, people will not come in to contact with contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Since there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due soil vapor intrusion for any future on-site development. An evaluation of the potential for soil vapor intrusion to occur will be completed should the current use of the site change.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: Yes  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002  
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003  
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 8/10/2001 - Tony Kloss from Impact Environmetal (office # 516-453-2790 cell phone 516-250-3187) Impact has been hired to remove two #4 oil tanks from sidewalk vaults on Jay St in front of PolyTech University. Impact did some geoprobes and found contamination consistant with #4 oil. They also opened up the vaults and found 6 of floating product. The plan is to excavate the site and remove the tanks (probably in September 2001) At that time they will try to over excavate and remove as much as possible. If end point samples remain high, they will need to propose a remediation. 8/20/2001 - Sangesland spoke with Tony Kloss. Samples came back, some were high. Mr.Kloss is putting together a map with results and will mail it to the DEC. He also reconfirmed that the tanks will be pulled in September. 5/9/2002 - Sangesland received a Tank Closure Report from Impact Environmental dated 3/11/2002. The report details the removal of two - 7,500 gal heating oil UST. All contaminated soil around the tanks was removed (447.13 tons). Post-excavation soil samples were all below TAGM - Soil Clean Up Objectives for VOC's and SVOC's A new 7,500 gal double walled tank was installed in the space in Feb 2002. A new Vedeer Root monitoring system was installed and the tank was pressure tested on Feb 6, 2002. All work was complete at this site and the spill case is closed."

Remarks: "caller reportng a spill at the jacob's building at above closing 2 tanks and believe spill is from that one tank 001 and tank 002 nys pbs#2-158232 no clean up and spill is subsurface "

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**FINDS:**

Registry ID: 110004506482

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001  
Tank Id: 234285  
Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

K01 - Spill Prevention - Catch Basin  
I02 - Overfill - High Level Alarm  
E04 - Piping Secondary Containment - Double walled UG  
A00 - Tank Internal Protection - None  
B01 - Tank External Protection - Painted/Asphalt Coating  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
F05 - Pipe External Protection - Jacketed  
C03 - Pipe Location - Aboveground/Underground Combination  
F04 - Pipe External Protection - Fiberglass  
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring  
J02 - Dispenser - Suction Dispenser  
G02 - Tank Secondary Containment - Vault (w/access)  
I05 - Overfill - Vent Whistle  
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)  
Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: 02/04/1991  
Capacity Gallons: 10000  
Tightness Test Method: -

DEC Memo: "12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 01/26/06. Feroze. PBS of that spill is 2-600807. Owner of that property Mr. Dennis C. Bartling 718-250-8090. TTF is sent to: Mr. Dennis C. Bartling Brooklyn Hospital Center 121 Dekalb Ave Brooklyn, New York 11201. 02/27/06 Feroze , Mr.Dennis C. Bartling is called and a message is left for him. 03/02/06 Feroze, I received a letter from Mr.Laurie Jodice. He informed that Tyree Company 631-249-3150 performed a third party tank test on 02/24/06 and the tank was found tight. They also mentioned that petrometer gage fitting was loose which they have tightened. Test result is available at Crompco. Ms. Lanrie Judis 631-249-3150 fax me the tank test result. The tank and the system passed the test. The spill is closed."  
Remarks: "TEST METHOD WAS EZ3 LOCATOR PLUS."

 DEC Memo: "8/22/16-Zhune spoke to Paul Scorzelli. Paul said Thank is a 3000-gallons UST. They tested the tank and failed the test with a wet leak. Tank will be repair or remove. 8/22/16-A TTF letter was sent to : Oswaldo Brito 121 DeKalb Ave Brooklyn NY 11217 Spill Assigned to DEC Demeo (secondary off-hours). 12/19/18 TJD File review. Closure report submitted by Environmental Engineering Solutions - deficiencies noted in the report including reference to cathodic protection and incomplete information regarding the passing tightness test (tank only - listed in report). 1/25/18 TJD File review. Corrected closure report received - errors corrected. The following notes were added to revised report: This is in response to your questions regarding the procedure that was done on the tank at 121 DeKalb St Brooklyn Hospital. Basic procedure for tank testing was performed, 1- Tank stuck for product and water. 2- Removed vent caps (2) and capped using fernco rubber caps 3- Removed atg probe so we could install 4 testing set up 4- Calculated product level for appropriate vacuum (EZY 3 Locator Plus) 5- Pulled vacuum stages. During the pull down we stopped to test to listen for any leaks in the tank system and found the 2 stick line remote fill cap was loose tightened it-and continued the pull down. At the completion of pull down and tank vacuum decay I heard another sound coming from the vessel, after further

DER Facility ID: 215297  
DEC Memo: "repair rested pending. 03-18-2015 - V. Brevdo This TTF Spill Case is transferred to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Ms. Ainura Doronova as Project Manager. - VB 03/18/2015: This spill case was transferred to A. Doronova. - AD 04/30/2015: Sent TTF Letter by a certified mail (# 7010 0290 0000 9758 3339) to Mr. Dennis Bartling of Brooklyn Hospital center. Cont. phone is (718)250-8090. Response is due May 30, 2015. AD 06/03/2015: Did not receive any response. AD 08/2015: Called and left a message. AD 03/2016: Called and left a message. AD 10/2016: Looked in PBS database. According to it, the authorized representative is Paul Wong. AD 02/24/2017: Issued and sent Tank Test Failure certified letter # 7008 1830 0004 6282 9332 to Mr. Wong. Response is due 03/24/2017. AD 03/23/2017: Received a response from Environmental Engineering Solutions (EES). Will review. AD 05/03/2017: Reviewed the submitted documents. According to them, this spill case was due to tank test failure. On April 14, 2016, a cathodic protection test was performed on the tank #4. The report indicates that the tank passed the tightness test and had corrosion protection. Initial cause of the tightness test failure is unknown. AD 06/19/2017: Received another report from EES which has some additional data for corrosion testing of the tank. AD 06/22/2017: called and spoke with EES representative. Asked to submit an initial tank test failure report to learn the cause. AD 07/03/2017: Received an e-mail from the consultant with attached documents: Good Afternoon Ms. Doronova, This is in regards to the violation (spill case number 1307639) for tank #4 (4000 gallon) at Brooklyn Hospital. As you requested we have attached the copy of the tightness test report from 2013. The other document is the service reports and invoice for the repairs that was made on the tank in 2015. The hospital said that the parts that were replaced was what had caused the failed test in 2013. Please let us know any other document is needed to dismiss this violation. Thank you, Best regards, Jacob Varghese Environmental Engineer Environmental Engineering Solutions, P.C. 1106 Main Street Peekskill, New York 10566 Tel: (914) 788-4165 Fax: (914) 788-7121 jacob@eespc.com www.eespc.com Will review. AD 07/18/2017: Reviewed the submitted documents. One is job ticket from Petroleum tank Cleaners LTD, which states that on October 24, 2013 5 tank systems test was performed at the site. One tank's system was not good - according to a note in the job ticket. Actual tank tightness test report was not submitted, so it is not clear what part of the tank failed the test: the tank itself, its wet portion or dry portion or the piping. So the cause of the failure is unknown. The second document is an invoice from may 29, 2015 for work performed at the site by PTC. It included payment for following actions: - Exposure of suction and return lines; - Removal and replacement of suction and return lines; - Removal and installation of 2X2 vent alarm and vent line with 2 mushroom cap; - Performing certified tank test; - Backfilling to grade; - Compiling data and supplying DEC Spill Closure Report. Also it included 5 jobs tickets for the work performed. According to them the tank in question passed the

**BROOKLYN HOSPITAL - TTF (Continued)**

**S118953537**

re-testing after all repairs were done. No actual tank tightness test report was submitted. AD 07/20/2017: Received an e-mail from Mr. Varghese: Good Morning Ms. Doronova, Can you please update the status of this violation dismissal process? I really appreciate your response. Thank you, Best regards, Jacob Varghese Called and spoke with Mr. Varghese. Requested to submit the actual tank tightness test report from 2013 where the cause of the failure will be indicated, or if it is not possible to locate, to submit a letter report explaining and summarizing the info on tank failure cause, and was it an actual spill into the environmental or not. AD 09/28/2017: Received an e-mail from Michael J. DiGirolamo of Environmental Engineering Solutions saying: Good afternoon Ms. Doronova, On behalf of The Brooklyn Hospital please review the attached letter and its supplementary test reports for your kind consideration with regard to their open spill number 1307639. Your expeditious review and closure of the case is greatly appreciated. Should you have any questions or concerns regarding this matter, please feel free to contact us. Thank you, Michael J. DiGirolamo Environmental Engineer Environmental Engineering Solutions, P.C. 1106 Main Street Peekskill, New York 10566 Tel: (914) 788-4165 Extension # 113 Fax: (914) 788-7121 mike@eespc.com Will review. AD 10/18/2017: Reviewed the submitted documents. The letter states that the violation was reported for a tank tightness test failure where petroleum product was presumed to have escaped the tank system and therefore classifying it as a spill. DEC assigned a spill number 1307639. The tank in question was determined to be Tank #04, a 4,000 gallon underground storage tank containing #2 fuel oil. Brooklyn Hospital Center had contracted Petroleum Tank Cleaners, Ltd who had reviewed the cause of spill and prepared a Spill Closure Report. Unfortunately, Petroleum Tank Cleaners are no longer in business and RP were unable to obtain a copy of the TTF report from 2013. However, in response to this violation RP asserts that at no time did any product actually escape from the tank. This was confirmed in a following tightness test conducted by Accurate Environmental Inspections (Certification # 56-0991) on 04/2016. It is suspected that a leak response might have been triggered during the 10/24/2013 testing due to a loose pipe fitting(s) but never caused any physical spill. The loose fittings were tightened and retested (04/2016). The reports that RP had supplied show that tank # 04 both passed the tightness test as well as is adequately protected from corrosion by means of a cathodic protection system. Therefore, RP confirms that there was no actual spill that occurred from this tank and requests that DEC close the spill case. AD 10/26/2017: Called and spoke with Mr. Varghese regarding the site. AD 12/15/2017: Received a phone call from Mr. Varghese. Discussed with him if the soil contamination was noted during the line replacement. He confirmed its absence. Will discuss closure recommendation with J. Kolleeny. AD 12/19/2017: Discussed the site with J. Kolleeny. The consultant confirmed that there was no actual spill of the product to the environment and TTF was due to the loose piping, which was tightened, and UST in question was retested and passed the tightness test. Based on the consultant's statement and tank tightness re-test results, the Department decided to approve spill case closure request. Case closed. AD "

DEC Memo: "5/13/2015 - Feng - Duty Desk. Talked to Camille of Hydro Mechanical (718-898-8588, HydroMechInc@hotmail.com). They are the plumbers for the building. It is a 1,080-gallon #2 oil tank and she believe that the only tank at the site. I advised her that if it is a wet leak, they need to empty the tank immediately and will conduct investigation to see if there is any actual spill. The building manager: Dan Tamburelli Allied Construction and Design Corp. 570-352-2559 dt@alliedorganization.com Left a message to Dan Tamburelli for a call back. Talked to Chris Steele of Petroleum Tank Cleaners (646-772-7295). It is a 1,080-gallon #2 oil UST in the basement floor. It is a commercial cloth store. The tank still contain 40 inches of oil inside the tank. There is no registration. It is dry leak. He believes that one of the top pipe maybe leaking. Will go back to the site for a isolation retest pending on the owner's approval. Entered the data into the spreadsheet in K: drive. Spill is assigned to T. DeMeo. 1/7/16 TJD File review. Don Carlo Environmental Services has submitted closure documentation - 1080 gallon UST was uncovered and tank only tightness test was performed

on 6/22/15 with passing results. The initial spill report by PTC indicated a dry leak. During the tank investigation, Don Carlo Environmental reported the suction and return lines were not installed with proper fittings which created an air leak. No lab data was provided with the request for closure. DeMeo contacted Romeo Santos at Don Carlo Environmental for further explanation - he stated there was no spill, the six drums of waste generated was mostly concrete debris. The tank was abandoned in place (affidavit in report) and the suction and return lines evacuated and capped. When asked about end point sampling, Romeo states the entire tank top was exposed and was all concrete - no soils exposed for sample collection. Based upon the information provided in the closure report and the phone interview of the environmental consultant, no further action is required. All documentation has been uploaded to DECDOCS. Spill closed."

DEC Memo: "10/21/05 - Raphael Ketani. I called up Jim Melnick of ProTest ((631) 321-4670) and asked him what happened as a result of the failed tank test. Mr. Melnick said that the tank was retested 1 week later and passed after Key Span did their own repairs. I spoke to Mike Calderon of Key Span at (718) 222-3479. He said that the vent line had been moved as a result of construction at the site (Marriot Hotel was having work done). He said that the construction crew had made a new vent pipe and had put a rubber cap on it. So this cap didn't hold the pressure during the tank test. However, once the cap was discovered, the pipe was retested and held the pressure, and the cap was replaced with a metal one. I contacted Mr. Calderon's supervisor, Ed Urban ((718) 389-4204, ext 17), regarding the tank test and he confirmed what Mr. Calderon had said. He added that the construction crew had hit the vent pipe and moved it and then trucks ran over the concrete cover and cracked the concrete. Mr. Urban added that water had leaked through the concrete and set off an alarm. So Key Span went to check out what happened and that's when they discovered the broken concrete and that the vent pipe had been moved. Mr. Urban added that the tank is registered with the PBS unit. The tank is registered with the Brooklyn Renaissance and the case # is 2-610012. 12/21/05 - Raphael Ketani. I tried calling up Mr. Urban, but the number had been disconnected with no forwarding number. I spoke to Mr. Melnick and he said he would FAX me a copy of the successful tank test. Mr. Melnick FAXed me a copy of the successful second tank test. As the rubber cap replacement and the repair of the moved vent line had been the only problems and had been corrected resulting in a successful tank test, I am closing the case."

10,000-gallon #2 fuel oil USTs. Spill addressed to DEC Demeo as TTF at PBS site. Owner of site as per PBS and addressee for TTF is: Brooklyn Friends School 375 Pearl Street Brooklyn, NY 11201 Attn: Michel Rimpel Ph:(718)852-1029 Vought called and spoke to site contact Michel Rimpel (Ph:718-852-1029) and told him that Vought to send TTF letter and also provided contact info for DEC Demeo in case of further questions. Vought prepared TTF letter for signature by DEC Demeo with above address. DEC Demeo signed TTF letter and Vought added to e-docs and sent to address above. 4/30/14 TJD File review. Out of service (empty) tank failed tightness test with a dry leak. Contractor (ProTest) responded to location to perform a tightness test on an out of service UST (10K). This tank is reported to have been empty and not in use since previous testing 5 years earlier. Initial failure was reported on 2/15/13 - reported as a dry leak. ProTest returned to the property on multiple occasions - uncovering top of UST to access manway and piping connections. Manhole was regasket and supply/return lines were isolated still resulting in a dry leak failure. On 3/17/14 Protest isolated the remote fill and vent piping associated with the tank - replaced the vent pipe and still had a failure on system test. On 3/19/14 the remote fill pipe was disconnected at elbow and the underground section of piping was tested and passed. With the remote fill plugged at elbow, the system then passed a tightness test - the remote fill remains plugged and tank remains empty and out of service. As per ProTest There was no evidence of visible contamination within the excavation . Tank will remain out of service and tank owner plans to abandon in place. Based upon the information provided, no further action is required. All documentation has been uploaded to DECDOCS. Spill closed. "

Remarks: "10000 gallon tank failed test and tank has not been used and has been empty for past eight years"

Updated By: JXGRECO  
Site Description: Location: The Brooklyn Navy Yard Voluntary Cleanup Program site consists of 146.79 acres of the 353-acre Brooklyn Navy Yard Industrial Park. The site is generally bounded by the East River on the north, Flushing Avenue to the south, Kent Avenue to the east and Navy Street to the west. The Navy Yard itself is an industrial/commercial area, while the property surrounding the Navy yard is mixed commercial and residential use. Site Features: The main site features include piers surrounding large dry docks used for ship repair, many industrial and commercial use buildings, roadways and a movie studio and associated sound stages. Current Zoning and Land Use: The site is currently used as an industrial park and is zoned as M3-1, which allows for heavy manufacturing. Other uses include

warehousing, office work and the making of films. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used as a ship building and repair facility from the 1800's to the mid-1900's. These activities included metal fabrication, painting and sand blasting, as well as various support activities including the maintenance of the electrical system. These functions resulted in the release of metals, petroleum products and PCBs. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Operable unit 1 (OU1) was created for the site-wide investigation in an effort to find discreet source areas throughout the BNY facility. OU2 was created in order to expedite the investigation at a portion of the site prior to building a new movie studio. OU 3 was created in order to expedite the investigation at a portion of the site that was to have a second studio built upon it. For administrative reasons, OU 3 was subsequently terminated, and the remedy was incorporated under the OU 1 remedy. All studies are now complete and the final remedy is in-place. Site Geology and Hydrogeology: Site soil is comprised of many feet of historic fill (e.g., soil mixed with coal ash and building rubble) that was placed in low-lying, marshy areas over a hundred years ago. Groundwater occurs at a depth of approximately four feet below ground surface, and it flows west/northwest towards the East River.

Env Problem:

Post-Remediation: All remedies have been implemented. The site remedy requires that the site be covered with materials suitable for commercial use. The site is controlled via an Environmental Easement and is now managed under a Site Management Plan. Prior to Remediation: The primary contaminants of concern at the facility were metal, semi-volatile organic compounds and PCBs, as detailed below. Nature and Extent of Contamination: The majority of the Brooklyn Navy Yard is underlain by historic fill, and soil and groundwater quality at the site is reflective of this. Much of the low to moderate-level metal and Semi-Volatile Organic Compound (SVOC) contamination identified in soil during site investigations is attributable to coal ash, cinders, asphalt and other fill materials in the upper soil layer (0 ft-20ft below ground surface), with concentrations of contaminants typically elevated above state Unrestricted, Residential, and Restricted Residential Use Cleanup Objectives, but generally near the state's Restricted Commercial Use Cleanup Objectives (see 6 NYCRR Part 375-6). The metals and SVOC compounds detected in site soil/fill appear to be bound through physical and chemical processes, limiting the potential for ground water impacts, as well as curtailing pathways to environmental receptors (i.e., groundwater and down gradient surface waters). Groundwater contamination with metals and SVOCs is present at levels that are generally reflective of the historic fill present at the facility, with only one well showing SVOC levels appreciably above standards, and that well (MW-04) is thought to be impacted by contamination emanating from the nearby former manufactured gas plant at the adjacent K-Nassau Works MGP site (Site ID No. 224019B). That site is being addressed under a separate investigation, and the impacts to groundwater will be assessed under the remedy for that site. Metals in excess of groundwater standards appears to be largely an artifact of the sampling technique (i.e., soil particles became entrained in

the water sample), as opposed to a wide-spread plume of dissolved contamination. Soil vapors were assessed at the facility and while certain contaminants were detected, the levels were not considered to be indicative of a potential threat to indoor air. Twenty-three electrical sub-stations located within the Brooklyn Navy Yard study area were found to be contaminated with polychlorinated biphenyls (PCBs). Twenty of those areas have been either remedied or are being actively managed under the Site Management Plan and are slated for remedy when taken out of service. Three areas (Building 297, Building 274 and Building 77) originally within the VCP study were excluded from the final VCP remedy and are being considered for further action under consent order with the NYSDEC. Special Resources Impacted/Threatened: Sediments contained several metals and SVOCs above screening criteria, however, the aquatic ecological evaluation shows the benthic and finfish communities to be of moderate diversity and population size, consistent with other similar settings in the New York City area. The investigation concluded that the ecological resources at the Brooklyn Navy Yard (Wallabout Basin) have not been significantly impacted by site contamination.

Health Problem: People in the area around Brooklyn Navy Yard are not exposed to site contaminants in their drinking water since the area is served with public water. Any contamination that may remain in soil at the site following excavation and off-site disposal will be inaccessible since it will be under pavement, structures or one foot of clean soil over a demarcation layer. Data collected during investigations indicate that it is unlikely that people in the area of the site would be breathing any site-related contaminants.

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 4/2/2002 Mark Califano from Galli Engineering called to find out status of spill closure. 631-271-9292 Reassigned from Sullivan to Sangesland. Site is a former gas station which failed a tank test in 1990. 4/11/2002 Sangesland ran a PBS for this site. File says 9 tanks had been removed in May 1994 and one waste oil tank remains. Sangesland called the facility operator (Pedro Mendez

718-628-7285) who said the tanks were not pulled, but filled with cement before he arrived at the property. Property owner is Mr. Barry (718-326-7265) Mr. Barry said the tanks were not pulled, but rather filled in place. Apparently the property is being sold and Mr. Barry would like this old spill closed out. PBS Application will need to be updated to identify that the status of the tanks is not Removed, but rather Abandoned in place 4/11/2002 Sangesland left a message with Joseph Martinez of Galli Engineering (734 Walt Whitman Rd. Suite 402A Melville, NY 11747) According to Mr. Barry, soil borings were drilled and tested. Review needs to confirm that soil samples were taken in appropriate locations and that samples were tested to EPA Method 8270 and 8021. Since this was a Tank Farm of several 550 gal UST's at least 1 ground water sample will also need to be run for VOC and SVOC's. 4/12/2002 Sangesland spoke with Mr. Martinez of Galli Engineering. Apparently a Phase I and Phase II report has been completed including soil borings. After a discussion of what was in the report, it was concluded that a well would be required and groundwater tested. Mr. Martinez will complete this work and incorporate the results into his report and resubmit. Sangesland also forwarded to Mr. Martinez a copy of Spill Closure Report Outline . 4/13/2002 Sangesland forwarded (fax) a request to identify the location/status of the waste oil 550 UST. Requested a soil boring tested to 8021, 8270 and RCRA Metals. 4/26/2002 Sangesland received a Sampling Investigation Work Plan from Galli Engineering which outlines 2 soil borings and 1 water sample - All as discussed above. Sangesland forwarded an OK back to Galli Engineering to go ahead with this work. 7/8/2002 Sangesland was on site for an additional round of soil borings and groundwater sampling. Specific boring and water sampling locations were selected on site with Galli. All samples appear clear. Galli will submit samples to the lab and will prepare a closure report. 8/15/2002 Sangesland reviewed a Spill Closure Report dated August 9, 2002. This report presents additional soil boring data from July 8 field work, results from 2 well samples (65' depth) and a section on the MTBE issue at the site. All of the soil results for the site are ND for VOC and SVOC. The groundwater samples were trace or ND for VOC and SVOC. MTBE was detected in both groundwater samples: (GW-7 = 1,106 ug/L) and (GW-8 = 2,543 ug/L). In the MTBE section of the report, Galli presented data to support their belief that the MTBE found was due to several documented MTBE releases within 1/2 mile upgradient of this site. Based on this analysis and the lack of any detection of MTBE, VOC or SVOC's in any of the soil samples above 65ft depth, the DEC is satisfied that this site is not causing any negative impact to the environment. Spill Closed "

Remarks: "(8) 550 GAL TANKS FAILED AN AIR PRESSURE TEST WITH AN UNDETERMINED LEAK RATE, UNKNOWN ACTION."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL 2/23/99 Spoke to Morris Kreppel After repair the manhole manifold, they retested the tank and it passed. He will submit paperwork for my review. 3/1/99 Spoke to Morris Kreppel. After installing a new gasket, the tank passed the retest. Phil Lodico, enforcement attny in Albany, got involved after 3 notices that the tank was overdue for testing. Apparently the city operates the tank so Kreppel forwarded the notices to the city who then ignored them. Currently being fined \$11K, \$10K of which will be waived if they comply within 60 days. Told Kreppel that he needs to submit an exposure affidavit complete with whether or not contamination was encountered during the work. 3/19/99 Spill closed as per 3/4/99 letter from ABC Tank signed by Mark Salamack indicating that a gasket, nuts and bolts were replaced on the manhole and the system passed the HEZ3 retest and that no contamination was discovered during repairs. "

Remarks: "TANK TEST PERFORMED ON BEHALF OF COMMERCIAL COOLING SERVICE, HELEN, (718) 492-2100. COMMERCIAL COOLING TO BE GIVEN A QUOTE FOR ISOLATING AND RETESTING THE TANK ONLY."

DEC Memo: "Obligado- I called Mark Salamac. He said he believes that the tank was empty at the time of the test. He said the tank failed probably due to the configuration of the fill port, which he said causes automatic failure. he has not been retained to do any more work at the site. Obligado - I called the DCAS Chief Engineer Joseph Wagner. He said he will have someone call me back with the particulars of the site. From PBS this is a 40,000 gallon #2 heating oil UST. I called back PTC to get mroe information. I spoke with Mr. Lara to confirm whether there was product in the tank. He said the tank had 32,000 gallons in it when it was tested. The leak was determined to be an above liquid leak . He thinks it is possibly a vent issue. He said this is a union site and they stick the tank daily to confirm the product levels. He doesn't suspect there was a release from the tank. Per Austin, spill will be assigned to Vadim Brevdo. 10-28-2014 - V. Brevdo Received a call from Darius Vasquez of Department of Citywide Administrative Services (212-386-0509), who requested extension to comply with the requirements of tank taseting and fixing the tank. Mr. Vasquea advised the Department that there was no actual release of product and that this is dry spill. I requested an e-mail with the extension request, provided an e-mail address to write to me. VB. Mr. Vasques said he will send an e-mail. VB. 11-06-2014 - V. Brevdo Department approved 45-day extension request from DCAS to investigate, make repairs to the tank and submit report to the Department for review. VB 01-21-2015 - V. Brevdo e-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services: Mr. Brevdo, Please see the attached pdf with the NYC DCAS purchase order to make repairs and retest Brooklyn Supreme Court (360 Adams Street, PBS # 2-217050) tank. I will inform your office once the contractor is schedule to be onsite to make repairs and retest tank. If any further information is needed please do not hesitate to contact me. Sincerely, Dario A. Vazquez, FMA,RPA - Executive Director of Facility Operations, Asset Management P: (212) 386-0509 - F: (212) 313-3384 - Dvazquez@dcas.nyc.gov 01-21-2015 - V. Brevdo e-mail response to NYC Dept. of Citywide Adminstrative Services: Mr. Vazquez: Thank you for the update. Yes, please inform me once the contractor is schedule to be onsite to make repairs and retest tank. V. Brevdo VB 02-20-2015 - V. Brevdo e-mail from Dario Vazquez of NYC Dept. of Citywide Administrative Services: Mr. Brevdo, Please see the above invoice and work tickets from Petroleum Tank Cleaners LTD indicating that the repairs and tightness testing was successful for Brooklyn Supreme Court. (Spill Case # 1406924) Once I receive the official statement from the contractor I will forward it to your office to close out this issue. If any further information is needed please do not hesitate to contact me. Sincerely Dario A. Vazquez, FMA,RPA - Executive Director of Facility Operations, Asset Management P: (212) 386-0509 - F: (212) 313-3384 - Dvazquez@dcas.nyc.gov "

Transformer was pressure tested, did not hold, found sweat on valve. Historical PCB count is 13ppm. Vault has floor drain connected to sump. Sump connects to sewer but pump was not running and no oil was found in discharge line. Transformer installed in 1991. Sample returned <1ppm PCB. Cleanup completed by double washing with slix. Liquids removed by tanker, solids by vactor. UPDATE 4-25-02 1530 HRS J.CAMPANILE OS NETWORK REPORTS ON 8-18-00 NETWORK CREW FOUND OIL VALVE TO BE GOOD, NOT LEAKING. THEY PRESSURE TESTED TRANSF AND IT PRESSURED GOOD. INSPEC TRANSF AND FOUND NO DEFECTS. 4/26/02, 2:01 PM e-mail from Ron James, B/Q EH&S: Jane: Attached is the incident report for the other requested vault. The transformer was deemed not to be in need of replacement. After the pressure test on the date of the spill and the sweat that was noticed, the operator (finder of the spill) processed the transformer for a further inspection. That inspection was done on 8/18/00. No leak was found after another pressure testing and closer inspection. A routine inspection on 3/14/01 also found no leak or signs of any oil spill. Ron"

Remarks: "sheen on 50 gals of water contained in manhole. clean up pending. con ed 132-602"

DEC Memo:

"4/13/2017 - Feng - Duty Desk. Spoke to Felix Cancel and he said all the information is available in the EMIS report that sent out. Received EMIS 256002 report. on 4/13/2017, 2nd floor air conditioning compressor unit 2A2, 30 Flatbush Facility. 65 lbs of R22 leaked from the 2nd floor air conditioning compressor after a service technician discovered the unit was empty of all Freon. There does not seem to be a catastrophic failure of the unit. Repair are pending. Assigned to Con Ed Unassigned. 8/14/17 - Austin - Con Ed repaired a leaking pipe on 4/14/17 - See document files for further information - Not a spill - Closed - end"

Remarks: "repairs pending"

Remarks: Associates Inc. The site location is block 02031 and lot 0016. I found a letter in the file dated 11/5/97 and written by Anthony Sigona, the previous Spills case worker for the project. The letter states at the end that the spill case will be closed. Based upon the reports and other documentation in the file, and the 11/5/97 letter, I am closing the spill case and setting the closure date as 11/5/97. "FAILURE OF UNDERGROUND TANK CAUSED SPILL"

 Update By: BXANDERS  
 Site Description: Location: The site is located at 29 Flatbush Avenue in the borough of Brooklyn, City of New York, Kings County, New York and is identified on the local Tax Maps as block 2106, Lot 19(formerly lots 19 and 40). Site Features: The site is about 0.412 acres in size and is bordered by Fulton Street to the north, Rockwell Place to the east, and Flatbush Avenue to the west. Adjacent properties principally consist of commercial, retail and office uses. Current Zone/Use: The site is owned by 29 Flatbush Associates, LLC and it is currently vacant. It is zoned for commercial and office buildings (C6-4). The proposed future use of the site will be mixed commercial and residential. Historic Use: The site was most recently developed as an asphalt-paved, hydraulic-lift parking lot, which operated from 1960 until 2004. At the time of the application, there were no on-site structures with the exception of a prefabricated parking lot attendant s booth situated atop a concrete slab. The hydraulic aboveground car lifts are no longer present at the Site, and it is not known when operation of the lifts ceased. The Site was previously occupied by the Orpheum Theater (circa 1900), and prior to the theater the Site contained numerous residential dwellings, some including retail space, along Fulton Avenue, Flatbush Avenue and

Rockwell Place. Past adjacent and surrounding properties consisted of residential, institutional and retail development. Site Geology and Hydrogeology: Soil at the site consists of a layer of urban fill extending from the surface to depths ranging from 12 to 24 feet below grade underlain by an unstratified glacial till. Groundwater is approximately 27 to 30 feet below grade surface and flows toward the southwest. June 7, 2013 - DEC signed the Certificate of Completion for this site.

Env Problem: Nature and Extent of Contamination: Piror to Remediation: Based on the investigations conducted to date, known contaminants including chlorinated solvents, semi-volatile organic compounds (SVOCs), metals, and pesticides are present in the subsurface. These contaminants are impacting soil and groundwater. Soil - No volatile organic compounds (VOCs) were detected in soil exceeding their respective SCGs. Soil sample results indicated that SVOCs, mainly carcinogenic polycyclic aromatic hydrocarbons (cPAHs), metals (primarily lead), and pesticides (primarily 4,4 -DDT) at concentration exceeding Part 375 Unrestricted use SCOs. The reported total concentration of SVOCs detected in soil ranges from 1.4 ppm to 116 ppm, the total lead concentration reported ranges from 39 ppm to 2780 ppm, and the concentration of 4,4 -DDT reported ranges from 0.0045 ppm to 0.0355 ppm. Groundwater - VOCs detected in groundwater include tetrachloroethylene (PCE) at concentrations ranging from 16 to 18 ppb which is only marginally above the standard. Coupled with the absence of VOCs in soil, the PCE is likely attributable to an upgradient source, and not derived from on-site contamination. Soil Vapor - VOCs detected in the eight soil vapor samples collected at the site include PCE. PCE was detected in one sample at a concentration of 73.24 ug/m3. The presence of VOCs in soil vapor is attributed to an unknown off-site source due to the lack of VOCs in on-site soil. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were Lead and SVOCs in soil. Significant Threat: NYSDEC in consultation with NYSDOH determined that the site does not pose a significant threat to the environment or public health based on the data available.

Health Problem: All contaminated soil has been removed from the site thereby eliminating potential human contact. Contaminated groundwater at the site is not used for drinking or other purposes as the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. New on-site buildings have been constructed with ventilated underground parking garages and vapor barriers minimizing the potential for vapor intrusion.

DEC Memo: "11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski.  
02/02/06: This spill transferred from S.Kraszewski to Q.Abidi.  
04/04/06: This spill transferred from Q. Abidi to Koon Tang.  
12/30/09: Spill transferred to J.kann and consolidated with 9912596.  
3/10/11: J.Kann - Investigative work plan submitted on 3/3/11.  
12/30/14: J.Kann - Work Plan approved, Site included in multi site stipulation executed on 10/14/14. SIR due 4/14/15 1/22/15: J.Kann - field work is ongoing. Modifications were made to the work plan based on field conditions. One viable well has been installed. Depth to gw is approximately 41 feet. Drew Pardus called and explained that there is no visual or PID impacts around the tank. He sent an email requesting that and requesting that just one more attempt be made at SB-4. The following email was sent to drew Pardus DPardus@PardusEnv.com 646-577-8280 Based on the diagram I have the following recommendation- Another soil boring should be advanced in the northeastern area of the tanks (in the vicinity of SB-2). Even if it is in the garbage area that we had discussed which is a few feet to the east. I do not feel that that area has been investigated at all based on the relocation of borings and the termination of SB-3 at 11-15 feet. Otherwise, I am fine with your recommendation. However, keep in mind if laboratory results come back with elevated levels of contaminants, additional work will be necessary. 3/12/15: J.kann - Received report on 3/2/15. Reviewed report. Concurred with the recommendations of no further action given no contamination was detected as a part of the 2015 investigation (6 borings advanced, 6 soil samples analyzed, 2 wells installed and sampled). Spill closure email sent to NYCHA today."  
Remarks: "DURING TANK REMOVAL OF A 25,000 GALLON TANK, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCK PILED AND SAMPLED."

DEC Region: 2  
DER Facility ID: 87190  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SANGESLAND 12/26/2001 - Tank test failure. DEC required the owner to file a new PBS form (signed by the owner) stating that the tank would be removed. Kevin O'Connor from Action Remediation (516-781-3000 ext 2421) stated that the tank would be pulled on Thursday Dec 27th, while the school is closed for Christmas vacation. Sangesland requested Action Remediation to take endpoint samples from the excavation and to take several color photos of the tank and excavation area. A proper Tank Closure report must be submitted to the DEC. 1/11/2002 - Sangesland received a Draft version of the report. Apparently only a single composite sidewall sample was taken along with a bottom endpoint sample. Sangesland called Kevin O'Connor to discuss the format and content of the Tank Closure report and requested several additional items. This Tank Closure report should include: 1) Discussion of what the tank problem was, what was done to solve/clean it, how the close out went. 2) Discuss the end point sampling - What was found, did it exceed limits (compare results to TAGM). 3) If anything exceeds limits, state how it will be remediated, or justify why this level of contamination is acceptable to be left on site. 4) Photos of the excavation. 2/1/02 - Sangesland received another package of information from Kevin O'Connor at Action Remediation. This package included the same information submitted earlier, plus photos. MISSING FROM THIS REPORT WAS: 1) THE SPILL NUMBER 2) THE NARRATIVE OF WHAT HAS BEEN DONE ON THE SITE AND WHY 3) THE CONSULTANTS REVIEW AND INTERPRETATION OF THE LAB RESULTS 2/7/2002 Protest sent a letter dated 1/30/2002 (Mailed 2/4/2002) Which included the information listed above (1/2/02 notes). Minor contamination continues to exist, but structural problems limit the ability to excavate any further. (Use of biologicals was not suggested by Protest). Spill Status - No Further Action "

subcommittee report as having had disposal from 1960-'79. An on-site inspection was carried out by DEC, Region 2 on April 29, 1980. The entire manufacturing building is four stories high and there was a freight unloading area adjacent to the buildings and parking lot. Facility is bounded by Prospect Street and York Street. There appears to be no disposal ever practiced here.

Spiller Extention: Not reported  
DEC Region: 2  
DER Facility ID: 284444  
DEC Memo: "3/26/07 bf: called David Marcus of 111 Livingston LLC. Dry leak at both tanks. failure due to testing error. Pro Test to return for retest on 4/2/07. TTF letter faxed to Mr. Marcus (718)797-2429. Also mailed to: David Marcus 111 Livingston LLC 111 Livingston St. Brooklyn, NY 11201 4/12/07 Received fax from John Leddy of Pro Test. Tanks were retested on 4/2/07 and probe was properly sealed. Waiting for tank test results. Letter states they have been mailed. Received message from david marcus at 4:14 PM. He said tanks were retested and passed and wanted to know if any more information was needed from him. bf 4/13/07 Returned call to Mr. Marcus. I told him I received fax from Mr. Leddy. Tank test results are still needed to close spill. Received tank test results this afternoon. NFA. bf "

Remarks: "Both tanks failed with dry leaks."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 233501  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was SUN 3/11/03 - SAMUEL- File available in active unassigned spill files. 1/14/2004 Reassigned from O'Dowd to Sun. Also refer to Spill # 8911007 for this site. 01/22/04 Sun sent a letter to Rendel Forbes, the Respondent requiring the following: 1) A subsurface investigation to adequately characterize site hydrogeology and to completely delineate the full extent of petroleum contamination both on-site and off-site must be performed. The investigation at a minimum must include installation of borings/well: south of MW-DG in the vicinity of sidewalk of Fulton Street about mid-point between MW-UPG and MW-D, 2) Re-sample the two previously installed wells, and 3) A surrounding property sketch. 06/4/04 Letter from Andrew Rudko of AKRF to Joe Sun of DEC with an attachment of subsurface investigation report: The investigation revealed that elevated levels of VOCs were detected in the soil sample collected from the groundwater interface, sample MW-DG (35'-37'). Low levels of SVOCs were detected below the NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives. NO VOCs or SVOCs were detected in the sample from MW-UG. Elevated level of VOCs were detected in MW-DG above the NYSDEC groundwater quality standards. NO SVOCs were detected in MW-DG. Based on the test results, MW-DG had BTEX concentration of 14,710 ug/l, including 130 ug/l of Benzene concentration, 2300 ug/l of Ethylbenzene concentration, 680 ug/l of Toluene concentration, 3700 ug/l of o-Xylene concentration and 7900 ug/l of m&p-Xylene concentration. The above concentrations are in excess of NYSDEC Water Quality standards. 06/25/04-File Update by Sun: On 06/22/04 Sun sent a letter and Stipulation Agreement to Rendel Forbes, the property owner requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The Department set a deadline of July 13, 2004 for signing the Stipulation Agreement by the Respondent. 07/21/04-File Update by Sun: On 07/21/04 Sun sent a letter to Rendle Forbes (Property Owner) and Andrew Rudko (Consultant with AKRF) informing them that the Department has reviewed and approved the remediation method proposed by AKRF, dated June 4, 2004. The Department approves the use of the Oxygen Release Compound (ORC) bioremediation technology for the remediation of the contaminated groundwater in the area of the former gasoline tanks. 12/19/05-File Update by Sun: AKRF submitted a letter report dated 10/17/05. The report indicated that Oxygen REleasing Compound (ORC) was injected into the spill area in August/September 2004. The two wells on the site were sampled on 9/25/05 following low-flow sampling procedures. No gasoline-related compounds were detected in the upgradient well (MWUPG). Concentrations of gasoline-related compounds in the downgradient well (MWDG) have declined since the baseline sampling was performed in April 2004. Analytical results of MWDG well showed

the following concentrations: ND (benzene), 1400 ug/l (ethylbenzene), 38 ug/l toluene). 130 ug/l (o-xylene), 1000 ug/l (m, p-xylene), 120 ug/l (naphthalene), ND (MTBE), 400 ug/l (n-propylbenzene), 940 ug/l (sec-butylbenzene), 110 ug/l (1,3,5-triethylbenzene), 1100 ug/l (1,2,4-triethylbenzene), 350 ug/l (n-butylbenzene). (Sun)  
12/28/05-Sun: Sun received a letter report dated 12/27/05 from AKRF. The report is based on the samples taken on 12/4/2005. (sun)  
02/21/06-Sun: On 02/17/06, Sun received a report from AKRF for assessment of potential impacts of the residual groundwater contamination on the 620 Fulton Street on the adjacent subway tunnels. Review of this report is pending. (Sun) 04/21/06-Sun: A NFA letter was issued based on assessment of potential impacts of the residual groundwater contamination, performed by AKRF in their letters dated 02/17/06 and 03/15/06. The NFA was based on the following: 1)The gasoline tanks and all associated gasoline-impacted soil down to a depth of 22 feet below grade were removed in 1994; 2)Groundwater contamination in the source area under the former tank location has now been significantly reduced. Overall concentrations have been reduced by about 90 percent; 3) Groundwater is at a depth of 37 feet below grade within a dense glacial till with low permeability. There is a subway line directly to the west of the site which further restricts any groundwater movement off-site. 4) The residual concentrations are much too low to have any impact on the adjacent subways; and 5) For total m.o. and p-xylene, the DEC Div. of Air Resource Short-term Guidance Concentration (SGC) is 4300 ug/m<sup>3</sup>, which is over ten times the estimated maximum concentration (340 ug/m<sup>3</sup>) in the tunnel. (Sun) "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was KRIMGOLD 01/26/04 Transferred from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 11/05/2005 Left messages for Dean Peterson at new location at Community Living (718-855-4035). Did not receive a callback. Bishop 09/13/06 This case was transferred from Albany to Region 2. Zhune called Mr. Petersen several times. He never call back. A TTF letter was sent to: Mr. Dean Petersen 40 Rector Street New York, NY 10006 08/14/08-Zhune visited the site spoke to Tiffany Adams Office/Building Manager (718) 855-4035 ext. 1303. Tiffany called Cris Heighter the Director of the Institute of Community Living celll 347- 219-8991, office 718- 272-6046. He said by the time that the tank failed the test in 2001 he was not the Director of the Community Living. The 3000 gallons # 2 fuel tank was recently tested by ACR Mechanical and passed the test. He will be back from vacation on september and will search for papers work. A TTF letter was sent to: The Institute of Community Living 2384 Atlantic Ave. Brooklyn NY 11233 Att: Chris Heighter 09/19/08 Chris Heighter sent the result for the last Tightness test. The 3000 gallons #2 fuel tank was tested on 05/07/08. The result indicates that the tank passed the test Therefore DEC is asking for information that happened in 2001. 09/30/08- Zhune called Chris and gave him the

phone # of Crown Leak Detection which was the company that tested the tank on 07/30/2001. 11/26/08-Chris sent the 02/21/03 tank test results that was done by Protest. 11/26/08-Zhune spoke to Bob from Protest. As per Bob the tank system was tested in December, 2002 and failed the test with a Ullage (dry) leak. They replaced the remote fill and the vent line. On 02/21/03 the system was retested and passed the test. He also said that he did not see any note about contamination at this site. Worker who did this job are no longer with Protest Spill closed. "

Remarks: "caller found the tank that may be connected to an abandoned tank and he believes that is why the tank test failed"

DEC Memo: "08/9/13- John Bonanno called and said the remote fill line is corroded and need to be replace. 9/7/13- As per Arlene Gianchetta (Owner's wife). They are refinancing the building and the bank recommended to the owner to hire ARRCO to test the oil tank. 9/7/13-Arlene sent an email with invoice of the company (Harris Plumbing \$ Heating) that fixed the fill line dated 8/15/13. The invoice stated the following: Cut out and discard the defective 2 oil line into the existing oil tank. Installed a new 2 oil fill line from the tank up to the cellar door stairway instead of up the first street level. 9/7/13-Arlene sent an email with result of the tightness test performed after the line was fixed and dated 8/19/13. The system was tested by Petroleum Tank Cleaner. The result indicated the system passed the test. 9/10/13-Zhune visited the site. Based on

failed test was a 2500 gallon fuel oil UST located behind the above address with the vent riser and remote fill located on the front of the building. Tank alone passed tightness test. It was determined that the only problems were remote fill line, vent line and petrometer gauge line . These three lines ran a distance of approximately 5 feet from the tank to the building. The earth around the above three lines and the building was excavated. No contamination was found there or on-site. Three lines were replaced. The problem with the vent and remote fill lines was the use of improper couplings in the internal lines, where electrical type coupling were used instead of plumbing couplings. These couplings do not have the exact same thread as the piping an can be tightened very tight but still do not provide a tight seal . After repairs system tightness test passed. Vought checked PBS database and registration was received. Spill closed by Vought."

3/14/14, Bill sent email reply: Jon, I do have some info for you on this site. It is for sale and potential buyer had their envt'l consultant perform a 1-day Phase II drilling & sampling investigation on Jan. 21, 2014. Which I am sure is why NYCOER contacted you, because they must have submitted a permit for some type of site development plan. We were on-site to document this Phase II investigation. They performed 9 borings, collected soil for field screening (nothing of any concern was found), submitted certain samples for lab analysis, collected soil gas samples from some boring locations for lab analysis, and attempted to install some wells but were unable to set any new wells with their rig since geology was very dense and gravelly to 16'. They did find 2 old wells that they said they were going to come back and sample at some point and depth to water was around 57' - 59'. No sheen, odor or free product was on GW in these wells. This week, CFI requested if data can be provided to them that we can forward to you and/or use for closure. I will let you know if we hear back, hopefully soon. - J. Kolleeny 04/07/14: Spoke with Shaminder Chawla and Hannah Moore of NYCOER, who informed me that gas station will be dismantled and site redeveloped. We discussed spill closure requirements, they said they would forward to me a 2003 closure rpt for waste oil UST (subject of this spill rpt), and a Feb. 2014 Remedial Investigation Rpt (prepared for potential buyer). They also stated that a RAWP would be prepared to document station decommissioning, removal of all USTs, piping, dispensers, etc. Later, received email from Hannah: Jon nice speaking with you earlier. I'm attaching Waste Oil UST Closure Rpt, and RIR we received with most recent data. I'm also attaching a figure that shows sampling locations, tanks, and proposed sampling locations. Also, just to recap our conversation, under their proposed development plan, entire Site will be excavated to 11-12 ft bg. All remaining tanks will be removed, and a vapor barrier will be installed. Thanks, and let us know if you need anything else from them at this time. I sent reply: Nice speaking with you as well, and thanks for documents. I think Shaminder mentioned on phone that a Remedial Action Work Plan would be prepared to detail decommissioning of gas station; is that still true? Hannah sent reply: Yes we will get a RAWP before they proceed with redeveloping Site. After reviewing figure, I sent email to Hannah and Shaminder: I looked quickly at figure, and have a couple of comments: 1) If any USTs have remote fill ports in sidewalk, as opposed to direct fills, remote fills should be investigated, with borings and possibly wells (if borings show significant impacts). 2) I'm assuming that currently active gasoline USTs are double-walled FRP tanks. However, if there were formerly a number of single-walled steel 550-gal gasoline tanks in a different location on site, their location should be investigated with borings or wells, if this was not done during recent Phase II investigation. Also, any 550-gal gasoline USTs would likely have had remote fill ports in sidewalk that should be investigated. Thanks again. - JK 04/09/14: Reviewed UST Closure Rpt dated 8/8/2003 by ATC Associates (in eDocs). Rpt documents removal of one 550-gal waste oil UST from site in June 2003. Soils above/below UST yielded slight PID hits; about 15 tons of soil were removed. Four sidewall soil samples and one bottom soil sample were collected; sample results showed no VOCs above TAGM 4046 RCOs, but some SVOCs were detected above stds, as were metals arsenic, barium and lead. ATC concluded that metals and SVOCs detected are indicative of historical fill materials, and that no contam associated with former waste oil UST system remains. Also

reviewed Feb. 2014 Remedial Investig Rpt by Env'tl Business Consultants (EBC), in eDocs. In Jan. 2014, 9 soil borings were advanced with 18 soil samples collected, GW was sampled from 3 existing wells, and 6 soil vapor probes were installed and 6 soil vapor samples collected. Soil samples showed low detections of some gasoline-related VOCs, but below unrestricted use SCOs. Some SVOCs and metals lead and mercury were detected above restricted residential use SCOs; these were attributed to historical fill materials. GW samples showed no petroleum-related VOCs, but low levels of chlorinated VOCs were detected in two samples, including PCE (up to 8 ug/L), chloroform (up to 7 ug/L), and TCE (up to 1.5 ug/L). Soil vapor samples showed low levels of BTEX and chlorinated compounds. Rpt states that site is currently an active Getty [Gulf?] svc station but there are plans to redevelop site with 5-story mixed-use bldg with full cellar; entire site will be excavated to depth of 12 ft below grade. Rpt states that depth to GW at site is 57 ft, and that GW flow direction is assumed to be to NW. Site plan figure by EBC shows 3 existing wells are in south part of site, up-gradient of UST field; fig. shows 2 proposed well locations, to NE and SW of UST field. - J. Kolleeny 05/01/14: On 4/29/14, received email from Bill Simmons of ECS: Jon, Attached is RIR performed by EBC that ECS was on-site to observe in Jan. 2014. This rpt provides those data results, current proposed development plan for Site, as well as copies of historical env'tl documents submitted to NYSDEC. Please review and let me know if this data is adequate for open Spill# closure(s). We will also keep you updated on any changes in Site development if applicable. Thanks. On 4/30/14, I sent email reply: Bill, I've already received & reviewed Feb. 2014 RIR rpt by EBC. NYCOER also sent me a site plan showing two add'tl proposed wells (closer to tank field than three existing wells), and they said that a RAP for station decommissioning will be submitted, so I'd like to wait until two new wells are installed and station is decommissioned before closing spill, just in case anything more significant comes to light. On 5/1/14, Bill sent email asking that I call him to discuss. When I did, he indicated that RP Cumberland Farms was unaware of any plan to install two add'tl wells, or to have RAP prepared and submitted prior to decommissioning gas station; in fact, they plan to remove all tanks/piping/dispensers in about two weeks. I said I would talk to NYCOER and suggest that their applicant (potential buyer/developer) coordinate better with owner/RP. - JK 05/07/14: I received BC of email from Hannah Moore of NYCOER with cc's to Chawla Shaminder and Amanda Duchesne of OER: New York City Office of Env'tl Remediation is providing attached Fact Sheet pursuant to New York City Voluntary Cleanup Program (VCP). SYG Realities has applied to enroll in City VCP. 140 Vanderbilt Ave site is located in Fort Greene section of Brooklyn, New York and consists of a 14,770-square ft lot currently developed with a Gulf service station. Proposed future use of property will be a new 5-story mixed-use building with a full cellar across entire property. Public comment period on 140 Vanderbilt Avenue site runs through June 5, 2014. Direct link to Document Repository is: <http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml>. I uploaded two Fact Sheets (one translated into several languages) into DecDocs. - J. Kolleeny 05/08/14: Spoke with Hannah Moore of NYCOER, asked that she have developer's consultant EBC coordinate better with owner/RP Cumberland Farms and their consultant ECS regarding install'n of add'tl mon wells and preparation of RAP for station

decommissioning. She indicated she was aware that removal of USTs etc. will happen in near future; I said I would most likely require UST closure rpt from RP, and based on data in that rpt I will either close spill or require those 2 addt'l wells. She said developer's consultant will be preparing RAP detailing excavation of entire property to 11 ft, install'n of vapor barrier, etc. I suggested that if UST closure does not reveal significant impacts, then it may be developer's responsibility to install any addt'l wells required by NYCOER, but that if site excavation during redevelopment turns up impacts related to old 550-gal USTs known to have been on-site, Cumberland Farms would be responsible for any addt'l investigation/cleanup; she agreed to discuss this with developer and their consultant. Then I spoke with Bill Simmons of ECS, who said they'd been contacted by developer's consultant EBC and had already discussed these same issues. He said they will probably do some test pits during station decommissioning to investigate for old 550s. Bill also said that a pre-construction meeting will happen in a couple of weeks and he will let me know when UST removal is scheduled. - J. Kolleeny 05/22/14: After receiving notice from ECS that UST removal is underway, I visited site. Site is surrounded by 8-ft tall plywood fence. Personnel on site included Charles Jones of ECS, Sonny Chen of EBC (developer's consultant), and workers with Island Pump & Tank, UST removal contractor. Site has five 4,000-gal gasoline USTs, made of double-walled steel coated with fiberglass. At time of visit, two tanks had been removed and were staged on pavement. Tanks appeared to be in good condition, with no obvious holes or cracks. Work activities had ended when I arrived, except for cleaning up & putting away equipment, so I could not evaluate whether excessive dust was being generated during work. However, there were no noticeable petroleum odors coming from tank pit or at site in general. There was a small stockpile of segregated soil which had slight to mild petroleum odor (if held up to your nose). According to Jones of ECS, this soil probably was impacted when they cut pipes and some residual product drained out. Three remaining tanks will be removed tomorrow, and then contractor will begin removing bottom concrete slab. End-point sampling is anticipated to occur early next week. Fuel dispensers had already been dismantled, but secondary containment units under dispensers were still there and will be removed, and samples will be collected at those locations. ECS also plans to dig two or three test pits to look for potential impacts from earlier generation of 550-gal USTs that were formerly on site. (PBS form indicates there were 12 or 13 550s installed in 1963 which appear to have been removed or closed in place in 1989; form is unclear about their final status. Nine borings were advanced at various locations during a Phase II performed earlier this year and found no signs of any 550s or significantly contaminated soil.) Overall, site appeared to be in good condition, removed tanks looked good, no obvious petroleum odors on site (no odors were evident from outside fence). - JK 05/29/14: Received update email from Bill Simmons of ECS: Jon, We discovered some impacted soil around remote fills from 3 -7 that field screened between 40-400 ppm - it appears to cleanup around 8 but we will find out more later when we get back to this area and complete excavation and we will collect post-ex as usual. - J. Kolleeny 06/04/14: I sent email to Bill Simmons of ECS: Bill, Can you give me an update on UST removal work at this site? Was bottom concrete slab successfully removed? Has end-point sampling been performed? Any more impacted soil encountered? Please let me know.

**EXXON S/S (Continued)**

**S104619744**

Bill sent reply: Jon, Yes entire bottom slab was removed did not find any impacted soil under slab. Still have not worked in remote fill impacted area yet since they have removed all product and vent lines and now are concentrating on removing 3 concrete canopy footings which are very large. I'll let you know when they get to remote fill excavation. - J. Kolleeny 6/12/14: On 6/10/14, received email from Bill Simmons of ECS: Jon, Here is remote fill excavation status: Attached is a remote fill excavation photo. At 13 we have a PID TOV of 700 ppm. Sand does not look that contaminated (no staining or saturation etc.) however and appears older. They cannot excavate any deeper or further to east towards sidewalk as they are 12 away from it now and they have to adhere to 1:1 sloping ratio. Also attached is a photo of material excavated to 12 this glacial till and rock material makes it impossible to drive sheet shoring along east wall near sidewalk to allow for further vertical excavation at this time. We know developer plans to dig at least 12 deep across site in future, and we expect that if they plan to excavate to sidewalk limits, they would have to shore walls using other methods. Tomorrow June 11, contractor will continue impacted soil excavation laterally and vertically to limits in all directions feasible, and ECS will collect samples for field screening analysis and submit post-ex samples for lab analysis. We propose that any necessary add'l impacted soil excavation, based on post-ex data evaluation, can occur in conjunction with site development. Previously discussed test pits will be performed in next few days. Please let us know your comments. On 6/12/14, I sent email reply: Bill, Thanks for site update. Is remote fill port area in northeast part of site? I'm thinking that, based on PID reading at 13 ft (a depth which will not be exceeded during site redevelopment), I may ask for a well to be installed in former fill port area to evaluate potential GW impacts. I know there are already several wells on site (I think 3), but when I was at site it became clear that they are on uphill portion of site, and that site slopes fairly significantly toward north. Since it's pretty clear that there was a release or releases from either tanks, piping or fill ports (or maybe just overfills at fill ports), I feel I would be remiss in my job if I didn't ask that GW be investigated on down-gradient edge of site, where tanks and fill ports were located. Please let me know what you think. - J. Kolleeny 10/21/14: Reviewed UST Closure and Subsurface Investigation Summary Rpt by ECS, dated 8/28/14 (in DecDocs). Rpt summarizes removal of all USTs, dispensers, piping, fill ports, hydraulic lifts, etc. during decommissioning of gas station in May/June 2014, and presents results of end-point soil samples. Rpt also summarizes install'n of 4th monitoring well at site in response to my request for a well in area of former remote fill port, and presents results of soil & GW samples from well. Total of 34 end-point samples were collected. Relatively minor impacts with low to moderate PID readings were encountered in pea gravel in UST excavation (PID up to 198 ppm), which was removed. Samples from excavation sidewalls and from beneath bottom concrete pad showed no significant impacts. Main impacts at site were identified in area of former remote fill port in NE area of site (east of UST field), with PID readings of 1,300 ppm at 13 ft below grade, at which point they couldn't dig further due to sloping requirements of excavation. Two bottom samples from center of remote fill excavation area showed VOCs above soil cleanup objectives: Sample 19 had 4,300 ug/kg toluene, 3,230 ug/kg ethylbenzene, 37,100 ug/kg total xylenes, 27,100 ug/kg 1,2,4-trimethylbenzene and 9,250 ug/kg 1,3,5-trimethylbenzene; Sample

24 showed only an exceedance for xylenes, with 701 ug/kg. Soil beneath dispensers, canopy footings, and piping runs did not show significant residual impacts. Soil beneath hydraulic lifts showed some SVOCs and metals attributable to historical fill materials at site. In addition, three test pits were dug at my request to look for any older USTs at site; no USTs or soil impacts were found in test pits. A total of 220.63 tons of impacted soil were removed from site and transported to Clean Earth of Carteret, NJ for recycling. In July 2014, ECS returned to site and installed well MW-4 in former remote fill port area; soil samples from 13-15 and 15-18 ft bgs showed impacts (PID readings, xylene exceedances). Water table was encountered at ~53 ft bgs; GW sample showed no VOCs above lab detection limits. Rpt notes that site will be developed with 5-story bldg with full basement, and that entire property will be excavated to ~12 ft bgs; rpt states that CFI and new owner will develop plan to remove residual soil impacts left behind in remote fill port area from 13 to 18 ft bgs, if feasible. Once soil excavation for site development is complete, ECS will prepare status rpt summarizing any add'l excavation of impacted soil, with recommendations for further remedial actions if warranted or petitioning for spill closure. - J. Kolleeny"

S106000067

57 WILLOWBY AVE BROOKLYN, NY 11201 Y 12/08/2005 The NYC School spill coordinator, Jim Merlo, indicates that this spill report is for a tank registered to the landlord of the facility and not part of the School district. Joe White called the contact for the spill, Phil Fazen. Mr. Fazen indicates that he tested the tank and was not able to make the repair and has no record of a subsequent tank test passing. He recommended calling Petroleum Tank Testers who may have been involved in fixing / replacing / abandoning the tank.  
12/08/2005: Joe White called Dianna at Petroleum Tank Testers and she indicated that her records show failure with no passes. Tank was cleaned and some lines plugged but tank still did not pass. She indicated that the work was being performed for Extreme Heating Company and that I should follow up with them. 12/08/2005: Joe White called Jason at Extreme Heating Company. He did not recall the work but suggested that I call him back next week and he would be in the office where his records are kept. I will follow up next week with him. 12/12/2005: Joe White called Jason at Extreme Heating and left a message. Awaiting a return phonecall. 1/6/2006: Called Jason at Extreme Heating. No return message was received. 1/13/2006: I was unable to get any further information regarding this spill. Given the age of the spill and the reported volume of the spill being 0 gallons and the fact that there are no PBS registered tanks at this location I have to assume that the tanks have either been removed or taken out of service. I am closing out this spill. ----- joe white"  
Remarks: "TANK FAILED THE TEST "

 Description: The Navy Barracks are located in the County of Kings, Borough of Brooklyn, City of New York, State of New York. The site is bounded on the North by Flushing Avenue, on the South by Park Avenue, on the East by Vanderbilt Avenue and on the West by Clermont Avenue. The site was improved by a six story concrete building utilized as a military prison and three story brick building used as barrack and for administrative purposes. The NYC Department of Corrections is used as the Brooklyn Correctional Facility. The former military prison building and associated utilities are beneficially used by the present

owner the New York City Department of Corrections. The former Navy barrack and administrative building is abandoned and owned by GSA. There are number of underground storage tanks, which were never used by the present owner.

Current Program: Not reported

History: As per Declaration of Taking dated 29 January 1941, the Department of the Navy obtained 2.638 acres fee. On 15 April 1975, the Department of the Navy conveyed 2.638 acres fee to GSA. As per quitclaim deed dated 4 June 1979, GSA conveyed 0.294 acre fee to the Department of Health and Hospitals Corporation (HHC) of the City of New York. Said deed did not contain any recapture or restoration clauses but did contain a restrictive clause (to be used public health purposes for a period of thirty years -from the date of conveyance). As per quitclaim deed dated 22 February 1985, GSA conveyed 2.344 acres fee to the City of New York. Said deed did not contain any recapture, restoration or restrictive clauses. On 8 September 1986, the 0.294 acre fee reverted back to GSA because of a breach of contract by HHC. GSA is still the owner of record of the 0.2 94 acre fee.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was TIPPLE 9/24/03 There was a Ferric Chloride spill called in to the DEC Hotline by DEP James Daley at 8:37 AM on September 24,2003. Reportedly, the spill was caused by a tank failure. DEC Spill responder Michelle Tipple and Joseph Kudirka from the Water unit responded to this spill. Upon investigation, an 8000 gallon tank of Ferric Chloride had an internal failure and released some of it's contents to a secondary containment tank, this secondary tank released some of the Ferric Chloride into the containment area surrounding the secondary tank. The containment area surrounding the secondary tank had been modified with the installation of a wooden structure secured with steel bolts around the top of the containment. When the chemical hit the bolts they were dissolved, allowing a small amount,10-15 gal of Ferric Chloride beyond the containment areas. Soda Ash was applied to the Ferric Chloride as required by DEP protocol. Mats were placed on the drain inlets in the vicinity to reduce the possibility of the chemical reaching the water. Eagle Brook Pump and repair were in route to remove all product from the tanks and containment area, assess and repair the system. DEP Plant Superintendent Joseph Massaro will keep DEC updated. 9/25/03 Tipple followed up with James Daly- DEP safety. Eagle Brook worked until

Remarks: 4:30 this AM removing product and thoroughly cleaning the tanks and impacted area, all product removed from the site was carried by the eagle brook company's properly tagged tank trucks. Upon inspection of the cleaned system it was determined that the discharge line on the bottom of the tank was compromised causing the release. The system repairs are scheduled to begin later today. "  
"ruptured tank caused material to leak - attempt to stop leak now - haz mat enroute - 10 to 15 gal on the ground -- over 1000 gal in the tank -- potential for a large spill"

**Site Description:** Location: The Brooklyn Gas Light Works Manufactured Gas Plant (MGP) is located at 1 Hudson Avenue in Brooklyn, New York in Kings County. Site Features: An active generating station (Hudson Ave.), owned by Consolidated Edison, currently operates at the site. The site is covered by buildings, some asphalt parking areas and walkways. Current Zoning and Land Use: The site is currently an active generating station and is zoned for light manufacturing and commercial uses. The nearest residential area is 0.3 miles to the south. Past Use of the Site: The MGP plant operated from 1849 until approximately 1900. The property was sold to Brooklyn Edison Company between 1922 and 1928. The MGP buildings and associated above-ground structures were subsequently removed and the generating station was built. Consolidated Edison purchased the property and generating station in approximately 1950. Site Geology and Hydrogeology: The general geology in the area is artificial fill and alluvial deposits ranging between 15-20 feet thick. The next layer consists of glacial deposits (clay, sand, gravel and boulders); then a layer of Gardiner's Clay; coarse sand and gravel; a clay and silty clay layer; a sand layer interbedded with gravel clay and silt; and finally a bedrock consisting of gneiss, schist and pegmatite. Overall groundwater ranges between 5 and 22 feet below ground surface (bgs), and generally flows to the north towards the East River. The site groundwater is tidally influenced.

**Env Problem:** Environmental conditions at the site will be determined during the Site Characterization.

**Health Problem:** The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from

**Site Description:** Location: Naval Station - Brooklyn is located in a flat industrial area within the New York Naval Shipyard in the Williamsburg section of Brooklyn, north of Flushing Avenue, between Clinton Avenue and Williamsburg Place. Site Features: The East River is 1500 feet west of the site. There are two working electrical substations at the site which have three transformers employing dielectric fluid which formerly contained PCBs. Each of the substations is contained within an area surrounded by concrete walls. They are located in the northern portion of the property, adjacent to the property line. Current Zoning/Use(s): Industrial Historic Use(s): A 1987 Phase I investigation showed that the PCB content of the dielectric fluid in the transformers ranged from 250 to 590 parts per million (ppm). Transformer spills stained slabs and soil located beneath the transformers, with soil contamination ranging from 0.5 to 870 ppm. The PCB containing transformers were subsequently retro-filled. Remedial work began in the summer of 1994 and concluded in 1995 and included power-washing the transformers and stained slabs and removing hazardous levels of PCB contaminated soils. The areas were then backfilled with crushed stone and secured. Three monitoring wells were installed to determine whether PCBs had contaminated the groundwater beneath the site at Building 7. Three rounds of groundwater samples collected in September 1996, December 1996, and March 1997, showed no detectable concentrations of PCBs. It was

determined that further monitoring at this site was not warranted. In July 2012 NYSDEC placed an Environmental Notice on the Transformer Area which requires written approval from NYSDEC prior to any disturbance or excavation of the soil, proper management and/or disposal of any contaminated materials exposed or removed, and prior approval by NYSDEC for any change in use. The Transformer Area has been delisted from the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete, to extent that the Navy was able to work around the active transformers. The primary contaminants of concern at the site, PCB's, were addressed by the removal action completed in 1995. Due to the location in a walled transformer yard beneath the crushed stone site cover, and the limited amounts remaining in the soil, residual PCB contamination in the soils will not impact the East River. Three rounds of groundwater samples were non-detect for PCBs. Special Resources Impacted/ Threatened: None

Health Problem: Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. In addition, the site is fenced, which restricts public access.

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Site Description:

Site Description The Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by hard urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway. Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres. The canal also serves as a storm water drain for the surrounding area. Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers. Stagnant water conditions have plagued the canal since its initial construction. To combat this, a flushing tunnel at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal. Currently

the flushing tunnel has been de-activated to facilitate its upgrade and an oxygenation system has been installed at the upper end of the canal. The first of three new tunnel pumps was brought back on line in Jan 2014, and the remaining two are slated for start up in April. Site History Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope). In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area, the result was a large area of reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyn's available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete. Long term decline of the local manufacturing economy has led to a marked decrease in commercial use of the Canal, with only a handful of petroleum distributors and concrete batch plants as regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

Env Problem:

Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified. Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation, remedy selection and implementation. The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process. The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and

redevelopment as a mixed commercial/residential project. The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010. Numerous oil storage and handling facilities, asphalt plants, manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

Health Problem: People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes: The NYSDOH recommends that women of childbearing age and children under the age of 15 not eat any fish from the Canal. Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass. People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

 Site Description:

LOCATION: The Site is located at 198 Douglass Street in Brooklyn, between Bond Street and the Gowanus Canal. SITE FEATURES: The property is 0.18 acres and features a one-story warehouse building which is currently used for the storage of art and antique goods and furniture. CURRENT USE/ZONING: The property is currently used for the storage of antique goods. It is zoned for manufacturing use. HISTORICAL USES: The Site has historically been used for a variety of industrial purposes. Prior to its current use, the Site was owned and operated by Paramount Plumbing (approx. 1995 to 1998) and O.Z. Electrical Manufacturing Company Inc. (approx. 1960 to 1995). O.Z. also formerly owned and operated on the adjacent property (196 Douglass) as well as three buildings to the west, across Bond Street (262 Bond Street). Earlier owners/operators include P.H. Hughes Lime, Brick and Lath Yard (approx. 1887 to 1900); a gravel/crushed stone yard (approx. 1900 to 1930); and the Knickerbockers Ice Company, which included a machine shop (1930?s). SITE GEOLOGY AND HYDROGEOLOGY: Fill material consisting of sand, silt, gravel, and

construction/demolition debris has been encountered to approximately 10 feet below ground surface (fbgs). Beneath the fill material (10 to 36 fbgs) is a sequence of inter-bedded silt, clay, sand, and peat layers atop fine to coarse-grained sand to a depth of approximately 48 fbgs. Groundwater has been encountered at depths ranging from 1.5 fbgs to 9 fbgs, during various investigations. USEPA Superfund investigations in the area of the Gowanus Canal have found that shallow groundwater flows toward the canal at both low and high tide. Intermediate groundwater generally flows upward toward the canal. Based on water chemistry measurements in surface water and groundwater (collected during Superfund investigations of the Gowanus Canal), it was concluded that infiltration from the canal controls water quality in shallow wells adjacent to the canal, with decreasing influence with distance from the canal. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: A Site Investigation performed in April/May 2012 confirmed that tetrachloroethene (PCE) previously detected in groundwater was limited and not indicative of a release of hazardous waste. GROUNDWATER: In 2006, PCE was detected in groundwater at a concentration of 1,600 parts per billion (ppb) and benzene at 14 ppb, from one grab groundwater sample collected from one boring. In the 2012 Site Investigation, groundwater was sampled from four groundwater monitoring wells. Groundwater samples were analyzed for volatile organic compounds (VOCs). Several VOCs were detected; however, the only contaminants detected at concentrations that exceed standards were isopropylbenzene (detected at 5.1 ppb compared to the standard of 5.0 ppb) and methyl tertiary butyl ether (MTBE) (detected at 10.7 ppb compared to the standard of 10 ppb). The standards cited for groundwater are the NYS Ambient Water Quality Standards and Guidance Values for Water Class GA from NYSDEC Technical & Operational Guidance Series (TOGS) 1.1.1. SOIL: The 2012 Site Investigation included soil sampling from 7 soil borings and analysis for VOCs. The only contaminant detected above standards was isopropylbenzene, detected at 3.91 parts per million (ppm) compared to the CP-51 Supplemental Soil Cleanup Objective for protection of groundwater of 2.3 ppm. A few VOCs were detected on site in the 2006 soil boring, but at very low concentrations. SOIL VAPOR: In soil vapor, trichloroethene (TCE) was detected in two samples at a maximum concentration of 200 micrograms per cubic meter (ug/m3); however TCE was not detected above reporting limits in concurrent indoor air samples. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

analytical and send to DEC. 9/8/06- DEC Piper reviewed subsurface investigation report. AS per report, investigation was due to the presence of petroleum vapors inside work area. 1 boring was completed. Groundwater was encountered at 9 feet bgs. A water sample was collected at 34 feet which contained elevated levels of benzene, PCE and a variety of SVOCs were above standards. A soil sample was collected at 36 feet bgs which indicated trace levels of chlorinated solvents. Indoor air samples revealed elevated levels of petroleum and chlorinated solvents were detected above standards. Due to the soil and gw samples not being collected at the gw interface, the concentrations observed where collected, and indoor air quality, additional investigation is warranted. Case referred to remediation. 9/20/06- DEC Piper . Spill transferred to remediation as per Austin on 9/8/06. 11/13/06 - reviewed site assessment report, found PERC in GW. Need to contact consultant to get more delineation of the GW contamination. - KST 4/11/08 - This spill has been transferred to D. Kaplan. Since previous reports were missing the representative of the site was contacted and the subsurface investigation report was obtained from the environmental consultant. 5/7/08 - Met the environmental consultant (Djamel Lekmine, AMEC), architect Jeff Flannigan who was acting as representative of the owner (was in charge of construction at the time the spill was reported), and attorney for the owner at the site. The entire lot is covered with a building with slab on grade finished floor. The building serves as a storage facility for fine art. It was explained that additional investigation was necessary. 5/19/08 - Environmental consultant sent a proposed work plan for additional investigation which was very incomplete (see edocs). 5/27/08 - A letter was sent to the environmental consultant describing additional requirements for a subsurface investigation. 8/26/08 - Attorney for the owner has been trying to work out a site access agreement with the owner of the adjacent property (196 Douglass St). Representative for the owner of 196 indicated that they are unwilling to grant site access. 9/26/08 - After negotiations with the owner of 196 Douglass for site access proved unsuccessful, DEC attorney (John Urda) sent a letter to the owner citing statutory authority for site access for investigation work. See edocs. 5/11/09- The work was performed February 10th and 11th. The report has not yet been received. 6/18/10-Vought-Received inquiry from DEC Austin as to whether Site should be transferred to Vought as P-Site . Vought discussed with DEC O'Connell and spill reassigned from Kaplan to Vought and entered into P-Site Tracking Spreadsheet. 2/8/11-Vought-Spill transferred from DEC Vought to DEC Kaplan for further action. 6/10/11 - Transferred to hazardous waste program as potential hazardous waste site (P site 224152) "

Remarks:

"THERE WAS SOIL SAMPLE TESTING AND GROUND WATER TESTING. THERE WAS DIFFERENT MATERIAL THAT WAS FOUND AT THE SITE. THERE ARE TRACES OF VOLATILE ORGANIC COMPOUND, TETRACHLOROETHENE, ETHYLBENZENE, XYLENE WAS FOUND IN SOIL SAMPLE. THE WATER SAMPLE HAD BENZENE, TETRACHLOROETHENE. THEY WERE DIGGING AT THIS SITE."

Updated By: MOBARRIE

Site Description: The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment.

Env Problem: The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroleum compounds in sediments/ sludge contained in a large concrete structure (known as "the ash pit"); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined.

Date Record Added: 06/23/2010  
Date Record Updated: 08/07/2017  
Updated By: GWCROSS

Site Description: Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site is a currently vacant with no above grade structures. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use, but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site s proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs in soil, VOCs in groundwater and PCBs in the ash pit sediments. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan

Health Problem: The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of

buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

DEC Memo: "12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 3/14/08: NYSDEC received Ash Pit Remedial Investigation (RI) summary report dated March 3, 2008 from Con Ed. See eDocs for details. (MA, 4/04/08) 4/3/08: Spoke with Con Ed Remediation project manager, David Rubin regarding suitable time-frame for submission of feasibility study work plan (FSWP) and RAWP related to Ash Pit site. The Department has approved 90 days period as requested by Con Ed for submission of FSWP and RAWP. 4/14/08: NYSDEC sent comments letter to Con Ed in response to Ash Pit Remedial Investigation Summary Report dated March 3, 2008. Comments letter is in eDocs. (MA). 4/17/08: NYSDEC is in receipt of response letter from ConEd. The letter requests for modification of time-frame requested in comments letter of April 4, 2008 for submission of RAWP and Feasibility Study report. See eDocs for details. (MA) 4/18/08: NYSDEC sent approval letter to ConEd, the letter modified submission of FS and RAWP schedule. Document in eDocs. (MA) 11/25/09. This site was transferred to Hazardous Waste Program and should be tracked under HW224137. Spill case closed. JK.

Remarks: 5/23/13 - note that the prior comment needs clarification; the investigation finding that was reported to the Department via this spill is being addressed through the Voluntary Cleanup Program (VCP) as site V00732. The prior comment also notes that the spill case was closed, but it was not. It is closed today as an administrative closure as referred to V00732. Refer to VCP site V00732 for further information. (JOC)

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/12/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: N/A
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 12/28/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/15/2019
	Data Release Frequency: Quarterly

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/12/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: N/A
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 12/28/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/15/2019
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Next Scheduled EDR Contact: 04/15/2019  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/12/2018

Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/13/2018	Source: EPA
Date Data Arrived at EDR: 12/28/2018	Telephone: 800-424-9346

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (212) 637-3660
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 04/08/2019

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (212) 637-3660
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (212) 637-3660
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 04/08/2019
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (212) 637-3660
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 12/03/2018

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 10/17/2018	Source: Department of the Navy
Date Data Arrived at EDR: 10/25/2018	Telephone: 843-820-7326
Date Made Active in Reports: 12/07/2018	Last EDR Contact: 10/15/2018
Number of Days to Update: 43	Next Scheduled EDR Contact: 02/25/2019
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 11/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 03/11/2019
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency

## ***State and tribal institutional control / engineering control registries***

### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Date of Government Version: 11/18/2010	Source: NYC Department of City Planning
Date Data Arrived at EDR: 06/30/2014	Telephone: 212-720-3401
Date Made Active in Reports: 07/21/2014	Last EDR Contact: 12/21/2018
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/01/2019
	Data Release Frequency: Varies

### ENV RES DECL: Environmental Restrictive Declarations

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

Data Release Frequency: Varies

## VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 11/12/2018

## ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Data Release Frequency: Varies

### HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 03/01/2018

	Data Release Frequency: Quarterly

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 11/05/2018
Number of Days to Update: 88	Next Scheduled EDR Contact: 02/18/2019
	Data Release Frequency: Quarterly

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

Number of Days to Update: 14	Next Scheduled EDR Contact: 03/18/2019
	Data Release Frequency: Annually

## RMP: Risk Management Plans

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 10/26/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/06/2018	Telephone: 202-564-8600
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 01/22/2019

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

	Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 06/23/2017	Source: Department of Energy
Date Data Arrived at EDR: 10/11/2017	Telephone: 505-845-0011

Number of Days to Update: 36	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR RECOVERED GOVERNMENT ARCHIVES

### ***Exclusive Recovered Govt. Archives***

#### RGA HWS: Recovered Government Archive State Hazardous Waste Facilities List

The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/12/2018  
Date Data Arrived at EDR: 11/14/2018  
Date Made Active in Reports: 12/04/2018  
Number of Days to Update: 20

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

West Map:	6048959 JERSEY CITY, NJ
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
3604970203F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
3604970184F	FEMA FIRM Flood data
3604970204F	FEMA FIRM Flood data
3604970211F	FEMA FIRM Flood data
3604970063B	FEMA Q3 Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile ENE
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is present at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### ROCK STRATIGRAPHIC UNIT

Era: Mesozoic  
System: Cretaceous  
Series: Upper Cretaceous  
Code: uK (decoded above as Era, System & Series)

#### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

## OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## WELL SEARCH DISTANCE INFORMATION

<u>DATABASE</u>	<u>SEARCH DISTANCE (miles)</u>

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## FEDERAL USGS WELL INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
J53	USGS40000828451	1/2 - 1 Mile SSE
54	USGS40000829092	1/2 - 1 Mile NW
55	USGS40000828501	1/2 - 1 Mile SW
56	USGS40000829117	1/2 - 1 Mile NE
57	USGS40000828443	1/2 - 1 Mile SSE

## FEDERAL FRDS PUBLIC WATER SUPPLY SYSTEM INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
No PWS System Found		

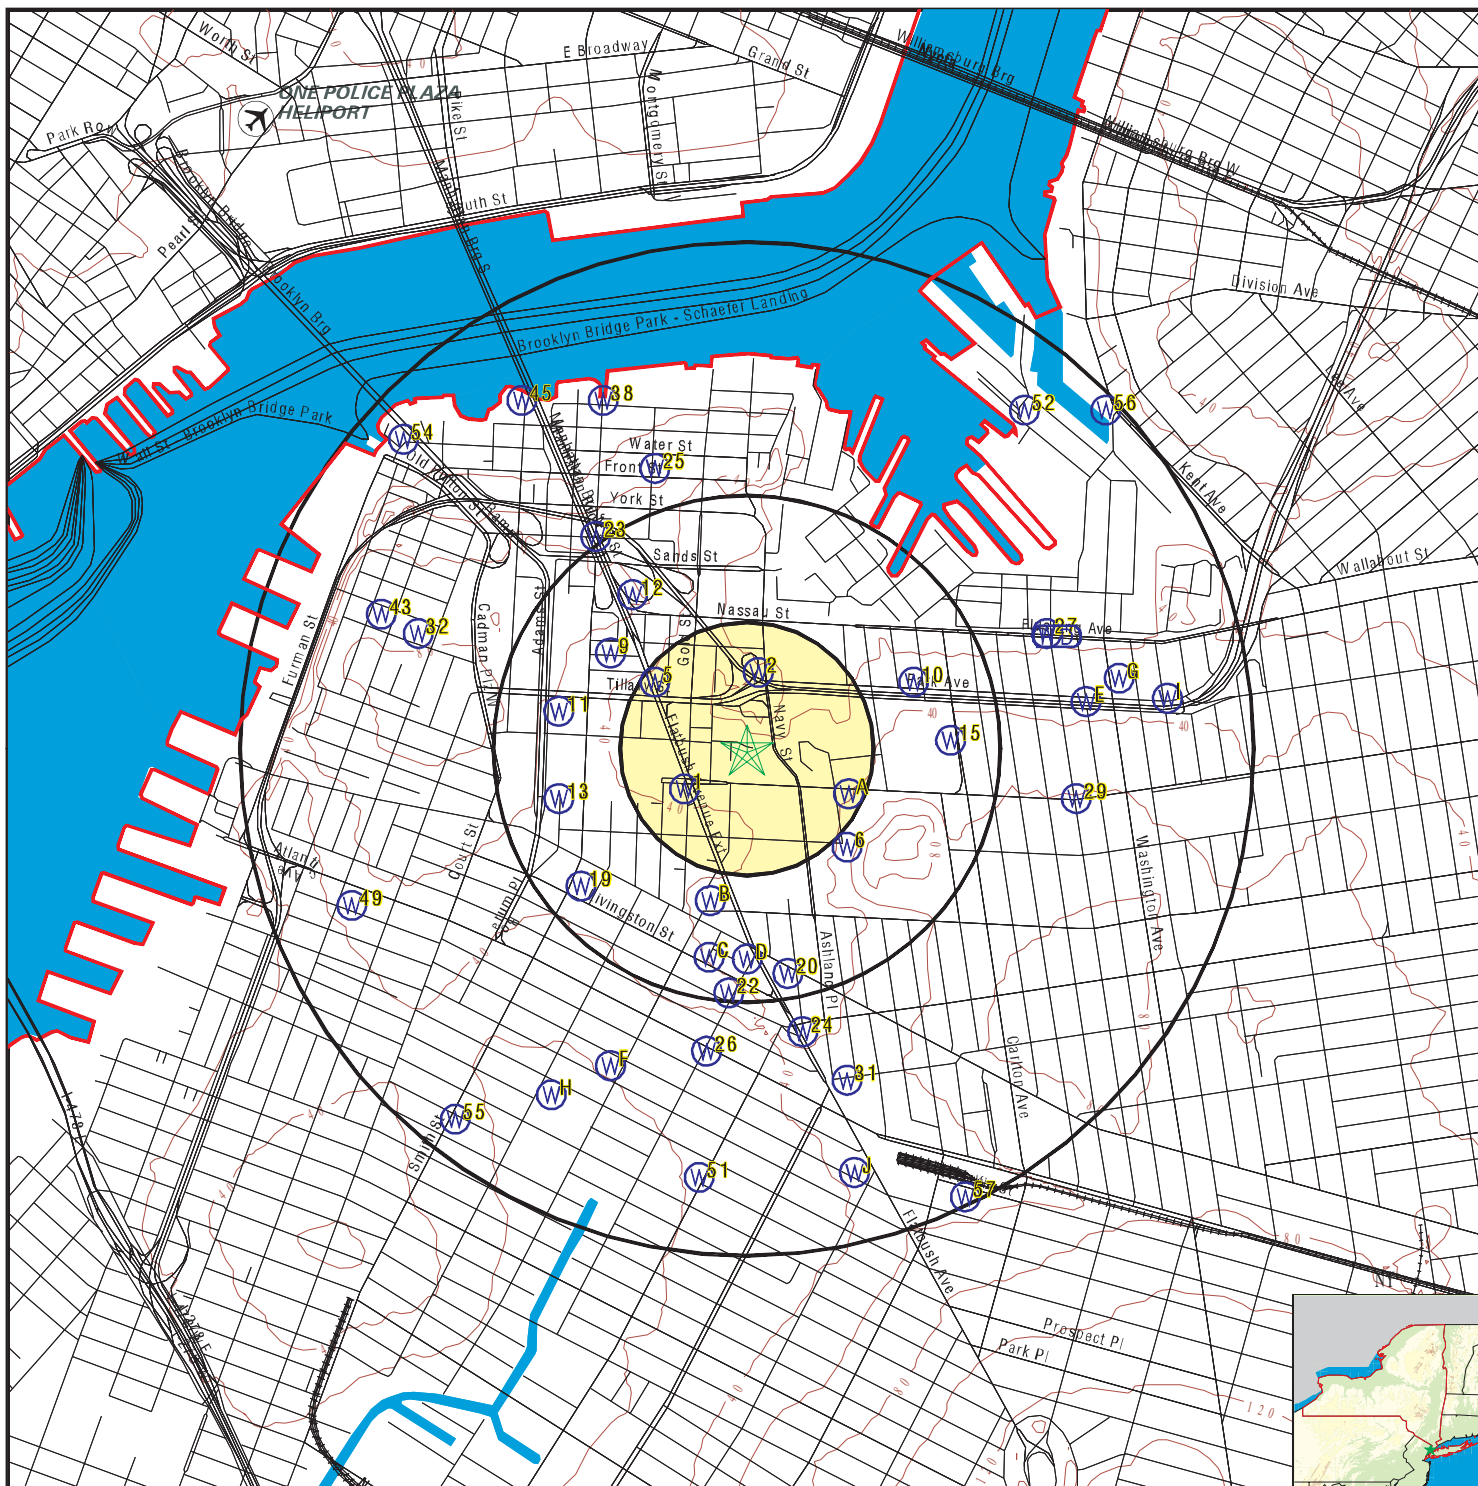

Note: PWS System location is not always the same as well location.

## STATE DATABASE WELL INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
No Wells Found		

# PHYSICAL SETTING SOURCE MAP - 05543299.2r

- County Boundary
- Major Roads
- Contour Lines
- Airports
- Earthquake epicenter, Richter 5 or greater
- Water Wells
- Public Water Supply Wells
- Cluster of Multiple Icons

- Groundwater Flow Direction
- Indeterminate Groundwater Flow at Location
- Groundwater Flow Varies at Location
- Closest Hydrogeological Data
- Oil, gas or related wells

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Source: Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

### **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

**Subject:** FOIL Request :: W047318-012419  
**Date:** Thursday, January 24, 2019 3:38:41 PM

---

Dear Rachael:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 1/24/2019 and given the reference number FOIL #W047318-012419 for tracking purposes. You may expect the Department's response to your request no later than **2/22/2019**.

**Record Requested: Re: Freedom of Information Request – Environmental Search Site: 173 Myrtle Avenue Block 2050, Lot 1 Brooklyn, New York 11201 Brinkerhoff Project No. 19-0040 To Whom It May Concern: Brinkerhoff Environmental Services, Inc. is conducting an environmental site assessment of the above-referenced site. This letter is a request to review files relative to environmental issues that your office may have regarding the above-referenced property. Kindly advise us of your findings in writing. We are looking for site inspection reports, violations for the handling, storage or disposal of hazardous substances, hazardous material releases or spills, underground storage tank information, land use restrictions, and other information regarding potential areas of environmental concern. Thank you for your time and attention to this matter and please do not hesitate to contact me at 732-223-2225 or [rbarr@brinkev.com](mailto:rbarr@brinkev.com) if you have questions or would like additional information. Sincerely, BRINKERHOFF ENVIRONMENTAL SERVICES, INC.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

the 1990s, the number of people in the world who are living in poverty has increased from 1.2 billion to 1.6 billion (World Bank 2000).

There are a number of reasons for this increase. First, the population of the world has increased from 5 billion in 1987 to 6 billion in 2000. Second, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000. Third, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000. Fourth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000. Fifth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

There are a number of reasons for this increase. First, the population of the world has increased from 5 billion in 1987 to 6 billion in 2000.

Second, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Third, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Fourth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Fifth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Sixth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Seventh, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Eighth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Ninth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Tenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Eleventh, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Twelfth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Thirteenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Fourteenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Fifteenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Sixteenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Seventeenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Eighteenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Nineteenth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Twentieth, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Twenty-first, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Twenty-second, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

Twenty-third, the number of people in the world who are living in poverty has increased from 1.2 billion in 1987 to 1.6 billion in 2000.

the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries (1).

There is a growing awareness of the need to improve the quality of life of people with schizophrenia. This has led to a focus on the development of psychosocial interventions, which aim to help people with schizophrenia to live more independently and to participate more fully in society (2).

One of the key areas of focus in psychosocial interventions is the development of social skills. People with schizophrenia often have difficulties with social skills, which can lead to social isolation and a reduced quality of life (3).

There are a number of different approaches to the development of social skills in people with schizophrenia. These include cognitive-behavioural therapy (CBT), social skills training (SST), and supported employment (SE) (4).

CBT is a form of therapy that helps people to identify and change negative thought patterns and behaviours. SST is a form of training that helps people to learn and practice social skills. SE is a form of intervention that helps people to find and maintain meaningful work (5).

Each of these approaches has its own strengths and weaknesses. CBT is often used to help people with schizophrenia to manage their symptoms and to improve their social skills. SST is often used to help people to learn and practice social skills. SE is often used to help people to find and maintain meaningful work (6).

There is a need to evaluate the effectiveness of these different approaches to the development of social skills in people with schizophrenia. This is the aim of the present study (7).

The present study was a randomised controlled trial that compared the effectiveness of CBT, SST, and SE in the development of social skills in people with schizophrenia (8).

The results of the study showed that CBT was more effective than SST and SE in the development of social skills in people with schizophrenia (9).

The findings of the present study have important implications for the development of psychosocial interventions for people with schizophrenia. They suggest that CBT should be used as the first-line approach to the development of social skills in people with schizophrenia (10).

There are a number of reasons why CBT might be more effective than SST and SE in the development of social skills in people with schizophrenia. One reason is that CBT helps people to identify and change negative thought patterns and behaviours, which can lead to improved social skills (11).

Another reason is that CBT is often used to help people to manage their symptoms and to improve their social skills. This can lead to improved social skills and a reduced quality of life (12).

There are a number of limitations to the present study. One limitation is that the study was a short-term study and it is not clear whether the improvements in social skills were maintained in the long term (13).

Another limitation is that the study did not measure the quality of life of people with schizophrenia. It is important to measure the quality of life of people with schizophrenia in order to evaluate the effectiveness of psychosocial interventions (14).

There are a number of implications for future research. Future research should evaluate the effectiveness of CBT, SST, and SE in the development of social skills in people with schizophrenia in the long term (15).

Future research should also evaluate the quality of life of people with schizophrenia in order to evaluate the effectiveness of psychosocial interventions (16).

In conclusion, the present study found that CBT was more effective than SST and SE in the development of social skills in people with schizophrenia (17).

The findings of the present study have important implications for the development of psychosocial interventions for people with schizophrenia (18).

There are a number of reasons why CBT might be more effective than SST and SE in the development of social skills in people with schizophrenia (19).

There are a number of limitations to the present study (20).

There are a number of implications for future research (21).

In conclusion, the present study found that CBT was more effective than SST and SE in the development of social skills in people with schizophrenia (22).

The findings of the present study have important implications for the development of psychosocial interventions for people with schizophrenia (23).

There are a number of reasons why CBT might be more effective than SST and SE in the development of social skills in people with schizophrenia (24).

There are a number of limitations to the present study (25).

There are a number of implications for future research (26).

In conclusion, the present study found that CBT was more effective than SST and SE in the development of social skills in people with schizophrenia (27).

The findings of the present study have important implications for the development of psychosocial interventions for people with schizophrenia (28).

the 1990s, the number of people with a diagnosis of schizophrenia has increased in many countries (1).

There is a growing awareness of the need to improve the quality of life of people with schizophrenia, and the need to address the social and psychological consequences of the illness (2). The World Health Organization (WHO) has developed a number of instruments to assess the quality of life of people with schizophrenia (3).

The WHO Quality of Life (QoL) instrument is a self-rated measure of the individual's perception of their own health and well-being (4).

The WHO QoL instrument is a self-rated measure of the individual's perception of their own health and well-being (4).

the 1990s, the number of people with a mental health problem has increased in the UK (Mental Health Act 1983, 1994).

There is a growing awareness of the need to improve the lives of people with mental health problems. The Department of Health (1999) has set out a strategy for mental health care in the UK. The strategy is based on the following principles:

- People with mental health problems should be treated as individuals, with their own needs and wishes.
- People with mental health problems should be given the opportunity to participate in decisions about their care and treatment.
- People with mental health problems should be given the opportunity to live in their own homes and communities.

The strategy also sets out a number of objectives for the mental health care system, including:

- To reduce the number of people with mental health problems who are admitted to hospital.
- To improve the quality of care and treatment for people with mental health problems.
- To improve the support and services available to people with mental health problems.

The strategy is a key document for the mental health care system in the UK. It sets out a clear vision for the future of mental health care and provides a framework for the development of policies and services.

The strategy is based on the following principles:

- People with mental health problems should be treated as individuals, with their own needs and wishes.
- People with mental health problems should be given the opportunity to participate in decisions about their care and treatment.
- People with mental health problems should be given the opportunity to live in their own homes and communities.

The strategy also sets out a number of objectives for the mental health care system, including:

- To reduce the number of people with mental health problems who are admitted to hospital.
- To improve the quality of care and treatment for people with mental health problems.
- To improve the support and services available to people with mental health problems.

## **APPENDIX VII**

---

**ASTM E1527-13: USER QUESTIONNAIRE**

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “Brownfields Amendments”), the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The User should provide the following information to the Environmental Professional. Failure to conduct these inquiries could result in a determination that “all appropriate inquiries” is not complete.

- 1) Environmental liens that are filed or recorded against the property [40 CFR 312.25]

Did a search of recorded land title records (or judicial records where appropriate, See Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state, or local law?

\_\_\_\_\_ Yes                       X  No

*NOTE 1 – In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.*

- 2) Activity and Use Limitations (AULs) that are in place on the property or that have been filed or recorded against the property [40 CFR 312.26(a)(1)(v) and (vi)]

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state, or local law?

\_\_\_\_\_ Yes                       X  No

- 3) Specialized knowledge or experience of the person seeking to qualify for the LLP [40 CFR 312.28]

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

\_\_\_\_\_ Yes                       X  No

- 4) Relationship of the purchase price to the fair market value of the property if it were not contaminated [40 CFR 312.29]

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

Yes                       No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes                       No

- 5) Commonly known or reasonably ascertainable information about the property [40 CFR 312.30]

Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify potential conditions indicative of releases or threatened releases? For example:

- a) Do you know the past uses of the property?

Yes                       No

- b) Do you know the specific chemicals that are present or once were present at the property?

Yes                       No

- c) Do you know of spills or other chemical releases that have taken place at the property?

Yes                       No

- d) Do you know of any environmental cleanups that have taken place at the property?

Yes                       No

- 6) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation [40 CFR 312.31]

Based on you knowledge and experience related to the subject property are there any obvious indicators that point to the presence or likely presence of releases at the property?

Yes                       No

What is the reason this Phase I ESA is being performed?

Purchase of air rights

## Declaration of Trust

**WHEREAS**, the **NEW YORK CITY HOUSING AUTHORITY** (herein called the “**PHA**”), a public body corporate and politic, duly created and organized pursuant to and in accordance with the provisions of the laws or ordinances of the State of New York, having its principal place of business at 250 Broadway, Borough of Manhattan, City of New York, and the United States of America by the Department of Housing and Urban Development (herein called “**HUD**”), having an area office at 26 Federal Plaza, Borough of Manhattan, City of New York, pursuant to the United States Housing Act of 1937, as amended (42 U.S.C. §1401, *et seq.*) (hereinafter the “**Act**”), and the Department of Housing and Urban Development Act (5 U.S.C. §624, *et seq.*) entered into a certain consolidated Annual Contributions Contract (which contract, as amended, is herein called the “**Annual Contributions Contract**”), providing for a loan and for annual contributions to be made by HUD to assist the PHA in developing and in maintaining and operating its public housing units in accordance with all public housing requirements; and

**WHEREAS**, as of the date of this Declaration of Trust, the Annual Contributions Contract covers certain individual lower income housing projects more fully described on **Schedule A**, attached (herein individually referred to as a “**Project**” and collectively referred to as the “**Projects**”); and which lower income housing projects is known as **Raymond V. Ingersoll Houses** (herein referred to as the “**Project**”), **Project No. NY005213B**; and

**WHEREAS**, each Project, the acquisition of and/or construction and/or improvements on the site or sites thereof, will have been financed with grant assistance by HUD.

**NOW, THEREFORE**, to assure HUD of the performance by the PHA of the covenants contained in the Annual Contributions Contract, the PHA does hereby acknowledge and declare that it is possessed of and holds in trust for the benefit of HUD, for the purposes hereinafter stated, the real property as more fully described in Schedule A, annexed hereto and made a part hereof, and all buildings and fixtures erected or to be erected thereon or appurtenant thereto.

The PHA hereby declares and acknowledges that during the existence of the trust hereby created, HUD has been granted and is possessed of an interest in the above described Project property, **TO WIT: SEE SCHEDULE A**

The right to require the PHA to remain seized of the title to said property and to refrain from transferring, conveying, assigning, leasing, mortgaging, pledging, or otherwise encumbering or permitting or suffering any transfer, conveyance, assignment, lease, mortgage, pledge or other encumbrance of said property or any part thereof, appurtenances thereto, or any rent, revenues, income, or receipts therefrom or in connection therewith, or any of the benefits or contributions granted to it by or pursuant to the Annual Contributions Contract, or any interest in any of the same except that the PHA may: (1) to the extent and in the manner provided in the Annual Contributions Contract: (a) lease dwellings and other spaces and facilities in any Project; or (b) convey or otherwise dispose of any real or personal property which is determined to be excess to the needs of the Project(s); or (c) convey or dedicate land for use as streets, alleys, or other public right-of-way, and grant easements for the establishment, operation, and maintenance of public utilities; or (d) enter into and perform contracts for the sale of dwelling units to members of tenant families, as authorized by the Act; or (2) with the approval of HUD, release any Project from the trust hereby created; provided, that nothing herein contained shall be construed as prohibiting the conveyance of title to or the delivery of possession of the Project to HUD pursuant to the Annual Contributions Contract.

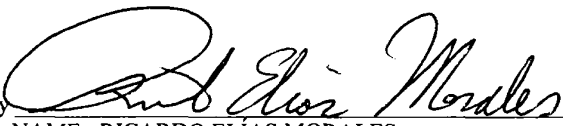

The endorsement by a duly authorized officer of HUD upon (1) any conveyance or transfer made by the PHA of any real or personal property which is determined to be excess to the needs of the Project; (2) any instrument of conveyance or dedication of property, or any interest therein, for use as streets, alleys, or other public

right-of-way, or for the establishment, operation and maintenance of public utilities; (3) any instrument transferring or conveying a dwelling unit, or an interest therein, to a member of a tenant family; or (4) any instrument of release made by the PHA of any Project shall be effective to release such property from the trust hereby created.

Upon expiration of the period during which the PHA is obligated to operate the Project(s) in accordance with the Annual Contributions Contract, the trust hereby created shall terminate and no longer be effective.

**In Witness Whereof**, the PHA by its officers thereunto duly authorized has caused these presents to be signed in its name and its corporate seal to be hereunto affixed and attested this 13<sup>th</sup> day of February, 2006.

NEW YORK CITY HOUSING AUTHORITY

By   
NAME: RICARDO ELÍAS MORALES  
TITLE: General Counsel

Date 2/13/06

## SCHEDULE "A"

All that certain tract of land, together with the building and improvements erected thereon and the appurtenances thereunto belonging, situated in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows:

### Parcel A

Beginning at the intersection of the northerly line of Myrtle avenue with the easterly line of Prince street and running thence northerly along the easterly line of Prince street, north 0 degrees, 41 minutes 00 seconds west 558.100 feet; thence east parallel with Myrtle avenue, 85.082 feet; thence northerly parallel with Prince street north 0 degrees 41 minutes 00 seconds west 34.272 feet; thence easterly parallel with Tillary street north 89 degrees 57 minutes 47 seconds east 85.081 feet, to the westerly line of Fleet place; thence northerly along the westerly line of Fleet place, north 0 degrees 41 minutes 00 seconds west 150.443 feet to the southerly line of Tillary street; thence through Tillary street, on a curve to the north having a radius of 320.00 feet, a distance of 220.395 feet; thence on a curve to the south having a radius of 90.00 feet, a distance of 189.196 feet; thence southerly, parallel with the westerly line of Navy street, south 9 degrees 03 minutes 08.5 seconds east 360.676 feet; thence southerly, through Johnson and Navy streets, on a curve to the east having a radius of 320.00 feet, a distance of 180.138 feet to the easterly line of Navy street; thence northerly along the easterly line of Navy street, north 9 degrees 03 minutes 08.5 seconds west 113.520 feet to the southerly line of Johnson street; thence easterly along

the southerly line of Johnson street, east 38.253 feet; thence northerly across Johnson street, on a curve to the east having a radius of 240.00 feet, a distance of 58.864 feet to the northerly line of Johnson street; thence westerly along the northerly line of Johnson street, 31.009 feet to the easterly line of Navy street; thence northerly along the easterly line of Navy street, north 9 degrees 03 minutes 08.5 seconds west 370.180 feet to the southerly line of Tillary street; thence easterly along the southerly line of Tillary street, north 89 degrees 57 minutes 47 seconds east 31.005 feet; thence northerly, parallel with Navy street, north 9 degrees 03 minutes 08.5 seconds west 90.625 feet to the northerly line of Tillary street; thence westerly along the northerly line of Tillary street, south 89 degrees 57 minutes 47 seconds west 84.417 feet to the easterly line of Navy street; thence northerly along the easterly line of Navy street, north 9 degrees 03 minutes 08.5 seconds west 203.673 feet to the southerly line of Park avenue; thence easterly along the southerly line of Park avenue, east 197.373 feet to the westerly line of Ashland place; thence southerly along the westerly line of Ashland place, south 9 degrees 03 minutes 08.5 seconds east 81.009 feet; thence easterly parallel with Park avenue, east 50.631 feet to the easterly line of Ashland place; thence northerly along the easterly line of Ashland place, north 9 degrees 03 minutes 08.5 seconds west 81.009 feet to the southerly line of Park avenue; thence easterly along the southerly line of Park avenue, 252.140 feet to the westerly line of St. Edwards street; thence southerly along the westerly line of St. Edwards street, south 11 degrees 29 minutes 32.5 seconds east 84.377 feet; thence easterly parallel with Park avenue, 40.818 feet; thence southerly through St. Edwards street and parallel with the easterly line of St. Edwards street, south 11 degrees 29 minutes 32.5 seconds east 467.479 feet; thence westerly at right angles to the last line, south 78 degrees 30 minutes 27.5 seconds west 80.00 feet; thence still westerly and on a curve to the south having a radius of 50.00 feet, a distance of 42.204 feet to the westerly line of Leo place; thence southerly along the westerly line of Leo place, south 14 degrees 16 minutes 17 seconds west 27.352 feet; thence through Leo place on a curve to the East having a radius of 50.00 feet, a distance of 66.594 feet to the corner formed by the intersection of the easterly line of Leo place and the westerly line of St. Edwards street; thence southerly along the easterly line of Leo place, south 14 degrees 16 minutes 17.0 seconds west 261.921 feet; thence easterly parallel with Myrtle avenue, 116.177 feet to the westerly line of St. Edwards street; thence southerly along the westerly

line of St. Edwards street, south 11 degrees 29 minutes 32.5 seconds east 102.046 feet to the corner formed by the intersection of the westerly line of St. Edwards street and the northerly line of Myrtle avenue; thence westerly along the northerly line of Myrtle avenue, 295.877 feet to the easterly line of Ashland place; thence northerly through Ashland place on a curve to the west having a radius of 240.00 feet, a distance of 152.062 feet; thence northwesterly still through Ashland place, north 45 degrees 21 minutes 16.2 seconds west 5.770 feet to the westerly line of Ashland place; thence southerly along the westerly line of Ashland place, south 9 degrees 03 minutes 06.5 seconds east 138.776 feet to the corner formed by the intersection of the westerly line of Ashland place and the northerly line of Myrtle avenue; thence westerly along the northerly line of Myrtle avenue, 665.505 feet to the easterly line of Prince street and the point of beginning.

Subject to the encroachments of the three story brick and stone church known as St. Edward's Church and the fence around the same upon the above described Parcel A, which encroachments are more particularly shown on a survey made by Young & Cronquist, Civil Engineers and Surveyors, of 10 Fiske place, Mt. Vernon, New York, dated September 27, 1940, and on file in the office of the New York City Housing Authority.

#### Parcel B

Beginning at the intersection of the northerly line of Myrtle avenue with the easterly line of St. Edwards street and running thence northerly along the easterly line of St. Edwards street, north 11 degrees 29 minutes 32.5 seconds west 238.359 feet to the corner formed by the intersection of the easterly line of St. Edwards street and the southerly line of Auburn place; thence easterly along the southerly line of Auburn place, north 81 degrees 14 minutes 52.5 seconds east 470.538 feet to the corner formed by the intersection of the southerly line of Auburn place and the westerly line of North Portland avenue; thence southerly along the westerly line of North Portland avenue, south 11 degrees 29 minutes 32.5 seconds east 311.420 feet to the corner formed by the intersection of the westerly line of North Portland avenue and the northerly line of Myrtle avenue; thence westerly along the northerly line of Myrtle avenue, 479.616 feet to the point or place of beginning.

Parcel C

Beginning at the intersection of the northerly line of Myrtle avenue with the easterly line of North Portland avenue and running thence northerly along the easterly line of North Portland avenue, north 11 degrees 29 minutes 32.5 seconds west 1,014.551 feet to the corner formed by the intersection of the easterly line of North Portland avenue and the southerly line of Park avenue; thence running easterly along the southerly line of Park avenue, a distance of 204.092 feet to the corner formed by the intersection of the southerly side of Park avenue and the westerly side of North Oxford street; running thence southerly along the westerly line of North Oxford street, a distance of 81.637 feet; running thence easterly parallel with the southerly line of Park avenue, a distance of 71.432 feet to the easterly line of North Oxford street; running thence northerly along the easterly line of North Oxford street, a distance of 81.637 feet to the corner formed by the intersection of the easterly line of North Oxford street and the southerly line of Park avenue; running thence easterly along the southerly line of Park avenue, a distance of 204.092 feet to the corner formed by the intersection of the southerly line of Park avenue and the westerly line of Cumberland street; running thence southerly along the westerly line of Cumberland street, a distance of 81.637 feet; running thence easterly and parallel with the southerly line of Park avenue, a distance of 71.432 feet to the easterly line of Cumberland street; running thence northerly along the easterly line of Cumberland street, a distance of 81.637 feet to the corner formed by the intersection of the easterly line of Cumberland street and the southerly line of Park avenue; running thence easterly along the southerly line of Park avenue, a distance of 204.092 feet to the corner formed by the intersection of the southerly line of Park avenue and the westerly line of Carlton avenue; thence southerly along the westerly line of Carlton avenue, south 11 degrees 29 minutes 32.5 seconds east 1,014.551 feet to the corner formed by the intersection of the westerly line of Carlton avenue and the northerly line of Myrtle avenue; thence along the northerly line of Myrtle avenue, west 755.140 feet to the point or place of beginning.

Parcel D

Beginning at the corner formed by the intersection of the southerly line of Park avenue with the easterly line of North Elliott place; running thence easterly along the southerly line of Park avenue, 204.092 feet to the corner formed by the intersection of the southerly line of Park avenue and the westerly line of North Portland

avenue; thence southerly along the westerly line of North Portland avenue, south 11 degrees 29 minutes 32.5 seconds east 159.208 feet; thence westerly at right angles to North Portland avenue, south 78 degrees 30 minutes 27.5 seconds west 100.00 feet; thence northerly parallel with North Portland avenue, north 11 degrees 29 minutes 32.5 seconds west 2.208 feet; thence westerly at right angles to North Elliott place, south 78 degrees 30 minutes 27.5 seconds west 170.00 feet to the westerly line of North Elliott place; thence northerly along the westerly line of North Elliott place, north 11 degrees 29 minutes 32.5 seconds west 130.858 feet; thence easterly and parallel with the southerly line of Park avenue 71.432 feet to the easterly line of North Elliott place; thence northerly and along the easterly line of North Elliott place, north 11 degrees 29 minutes 32.5 seconds west, a distance of 41.637 feet to the point or place of beginning.

Subject to encroachments, if any, upon the above described parcel of any buildings, improvements or party walls, standing partly upon the above described parcel and partly upon the adjoining premises.

#### Parcel E

Beginning at the intersection of the northerly line of Park avenue with the westerly line of St. Edwards street and running thence northerly along the westerly line of St. Edwards street, north 2 degrees 34 minutes 10 seconds, west 571.422 feet to a point in a line 70 feet southerly from and parallel with the northerly line of Flushing avenue as now laid out; thence running easterly along said line 70 feet south from and parallel with the northerly line of Flushing avenue as now laid out, south 89 degrees 47 minutes 5 seconds, east 210.071 feet to the westerly line of North Elliott place; thence southerly along the westerly line of North Elliott place, south 7 degrees 02 minutes 00 seconds, east 574.380 feet to the corner formed by the intersection of the westerly side of North Elliott place and the northerly line of Park avenue; thence westerly along the northerly line of Park avenue, west 254.783 feet to the point or place of beginning.

All bearings are according to an assumed meridian, which meridian is 2 degrees 52 minutes 35 seconds plus or minus east of the true meridian.

#### AND ALSO

All those certain tracts of land, being portions of the beds of certain streets and certain additional private property, situated in

the Borough of Brooklyn, County of Kings,  
City and State of New York, bounded and  
described as follows:

Parcel 1

Navy Street

Beginning at a point in the easterly line of Navy street distant 264.616 feet northerly from the corner formed by the intersection of the easterly line of Navy street with the northerly line of Myrtle Avenue and running thence northerly, through Navy and Johnson streets, on a curve to the east having a radius of 120.00 feet a distance of 180.136 feet; thence northerly parallel with the westerly line of Navy street, a distance of 360.676 feet to a tangent point; thence through Tillary street on a curve to the west, having a radius of 90.00 feet, a distance of 189.196 feet; thence through Tillary street on a curve to the south having a radius of 97.30 feet, a distance of 204.548 feet; thence southerly, parallel with the westerly line of Navy street, a distance of 354.363 feet to a tangent point; thence southerly, through Johnson and Navy streets, on a curve to the east having a radius of 109.00 feet, a distance of 155.643 feet to the easterly line of Navy street; thence southerly along the easterly line of Navy street, a distance of 21.627 feet to the point or place of beginning.

Parcel 2

Johnson Street

Beginning at a point in the southerly line of Johnson street distant 38.253 feet easterly from the corner formed by the intersection of the southerly line of Johnson street with the easterly line of Navy street and running thence northerly across Johnson street, on a curve to the east having a radius of 240.00 feet, a distance of 58.864 feet to the northerly line of Johnson street; thence westerly along the northerly line of Johnson street, a distance of 11.139 feet; thence southerly, through Johnson street and parallel with the easterly line of Navy street a distance of 1.753 feet to a tangent point; thence southerly still through Johnson street on a curve to the east, having a radius of 251.00 feet, a distance of 56.848 feet to the southerly line of Johnson street; thence easterly along the southerly line of Johnson street, a distance of 11.917 feet to the point or place of beginning.

Parcel 3

Tillary Street

Beginning at a point in the southerly line of Tillary street distant 31.005 feet easterly from the corner formed by the intersection of the southerly line of Tillary street with the easterly line of Navy street and running thence northerly, through Tillary street and parallel with the easterly line of Navy street, a distance of 50.625 feet to the northerly line of Tillary street; thence westerly along the northerly line of Tillary street, a distance of 11.138 feet; thence southerly, through Tillary street and parallel with the easterly line of Navy street, a distance of 50.625 feet to the southerly line of Tillary street; thence easterly along the southerly line of Tillary street, a distance of 11.138 feet to the point or place of beginning.

Parcel 4

Ashland Place

Beginning at the corner formed by the intersection of the easterly line of Ashland place with the northerly line of Myrtle avenue and running thence northerly through Ashland place on a curve to the west having a radius of 240.00 feet a distance of 152.06 feet to a tangent point; thence north 45 degrees 21 minutes 16.2 seconds west, a distance of 5.770 feet to the westerly line of Ashland place; thence southerly along the westerly line of Ashland place, a distance of 18.910 feet; thence southeasterly through Ashland place on a curve to the west having a radius of 229.00 feet a distance of 133.868 feet to the northerly line of Myrtle avenue; thence easterly along the northerly line of Myrtle avenue, a distance of 11.145 feet to the point or place of beginning.

Parcel 5

St. Edwards street and Leo place

Beginning at a point on a line parallel with and 18.00 feet westerly from the westerly side of St. Edwards street, which said point of beginning is distant northerly 80.00 feet from the intersection formed by the said line and the easterly side of Leo place; running thence southerly along said line a distance of 29.375 feet to a point on a curve shown on an acquisition map entitled "New York City Housing Authority - Acquisition Map - Showing Certain Lands and Premises to be Acquired in Fee by the New York City Housing

Authority as a site for a State-Aided Low Rent Housing Project, known as Fort Greene Houses, in the Borough of Brooklyn, City of New York, New York State, Division of Housing, Project No. N.Y.S.-1", dated October 31, 1940, and filed in the office of the New York City Housing Authority on the 31st day of October, 1940; running thence westerly on a curve to the North having a radius of 50.00 feet as shown on said acquisition map, a distance of 44.004 feet to the westerly line of Leo place; running thence northerly and along the westerly line of Leo place a distance of 27.352 feet; running thence northerly on a curve to the east, as shown on said acquisition map, said curve having a radius of 50.00 feet, a distance of 42.204 feet, to a point of tangency with a line as shown on said acquisition map; running thence easterly along said line as shown on said acquisition map a distance of 16.380 feet; running thence southerly on a curve to the west having a radius of 80.00 feet, a distance of 79.217 feet, to the point or place of beginning.

Parcel 6

Additional Private Property

Beginning at the corner formed by the intersection of the easterly line of Leo place and the westerly line of St. Edwards street; running thence southerly and along the westerly line of St. Edwards street a distance of 84.156 feet to a point of tangency with a curve; running thence northerly along this curve to the west, having a radius of 70.00 feet, a distance of 51.343 feet to the easterly side of Leo place; running thence northerly along the easterly side of Leo place a distance of 41.412 feet to the point or place of beginning.

All bearings are according to an assumed meridian, which meridian is 2 degrees, 52 minutes, 35 seconds plus or minus east of the true meridian.

ACKNOWLEDGMENT

STATE OF NEW YORK     )  
  ) SS:  
COUNTY OF NEW YORK    )

On the 24 day of July in the year 2006, before me, the undersigned, personally appeared RICARDO ELÍAS MORALES, personally known to me or proved to me on the basis of satisfactory evidence to be the individual whose name is subscribed to the within instrument, and acknowledged to me that he executed the same in his capacity, and that by his signature on the instrument, the individual, or the person upon behalf of which the individual acted, executed the instrument.

## **APPENDIX IX**

---

**JOHN CHECCHIO**  
**Senior Consultant**

**QUALIFICATIONS AND EXPERIENCE**

Mr. Checchio is a Civil Engineer and Environmental Scientist with over 25 years of experience managing Civil and environmental engineering projects, which include Phase I/II investigations, groundwater investigations and remediation, environmental assessments, feasibility studies, preparation of bid specifications, and underground storage tank management for industrial and residential projects.

**Soil and Groundwater Investigation and Remediation**

Mr. Checchio directs groundwater monitoring and hydrogeologic evaluations. Areas of specialization include the collection and evaluation of geologic/hydrogeologic data for the purpose of evaluating ground water contaminant transport computer models and in evaluating the effectiveness of remedial applications.

**Phase I/II Environmental Site Assessments**

Mr. Checchio directs Phase I and II Environmental Site Assessments, Site Investigations and Remedial Investigations for commercial/industrial property owners, banks and public sector clients. He also manages Phase II Environmental Investigations at impacted sites in cooperation with state and federal agencies.

**Underground Storage Tank Management**

Mr. Checchio manages all aspects of UST closures and environmental impacts resulting from leaking USTs. His experience includes evaluation of subsurface geology and hydrogeology, contaminant identification, plume extent and migration. He has supervised residential and commercial UST closures and cleanups in New Jersey, Maryland, California, Ohio, and Hawaii, and has generated regulatory reports, including closure reports and Site Investigation Reports (SIRs).

**Remedial Investigations**

Mr. Checchio manages RIs to address and remediate environmental impact by petroleum products, gasoline, heating oils, industrial solvents, priority pollutant metals and industrial by-products in soil and groundwater. His expertise includes the delineation of groundwater contaminants at sites with multiple sources, evaluation of natural attenuation in remediation of groundwater and soil, and the development of cost-effective solutions to vertical and lateral delineation problems. Mr. Checchio supervises the preparation of Remedial Investigation Reports (RIRs), Remedial Action Workplans (RAWs) and Remedial Action Reports (RARs).

**Industrial Site Recovery Act (ISRA) [formerly Environmental Cleanup Responsibility Act (ECRA) Investigations]**

Mr. Checchio manages compliance projects for environmental investigations and remediation, to ensure that industrial establishments have been remediated to an acceptable condition at the time of a property transfer. Mr. Checchio is well-versed in The New Jersey Technical Requirements for Site Remediation (N.J.A.C. 7:26 E), which form the basis for the investigation and cleanup of properties that fall under Standard Industrial Codes (SICs) applicable to ISRA.

**JOHN CHECCHIO**

**Page 2**

**EDUCATION**

M.S., Environmental Science, New Jersey Institute of Technology, 1991

B.S., Civil Engineering, New Jersey Institute of Technology, 1981

A.A.S., Civil/Environmental Engineering – Union County Technical Institute, 1978

**REGISTRATIONS AND PROFESSIONAL CERTIFICATIONS**

American Society of Civil Engineers

Hazardous Materials Control Research Institute

Water Pollution Control Federation

NJDEP Subsurface Investigator Certification

**RACHAEL BARR**  
**PROJECT MANAGER/ENVIRONMENTAL SCIENTIST**

**QUALIFICATIONS AND EXPERIENCE**

Ms. Barr's expertise involves Brownfield redevelopment projects, and commercial and industrial property transfers. Responsibilities include Phase I Environmental Site Assessments, Preliminary Assessments, Site Investigations, Remedial Investigations, and Remedial Action Work Plans and their implementation. She oversees residential and commercial underground storage tank removals and closures, soil and groundwater sampling, monitoring well installation, soil boring programs, and report preparation. Responsibilities also include oversight of subcontractors at sites and project team staff, scope design and cost preparation for investigations, and coordination and interaction with Clients and members of various regulatory programs. She manages projects under the jurisdiction of the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP), New York City Department of Environmental Protection (NYCDEP), and the New York City Office of Environmental Remediation (NYCOER) Voluntary Cleanup Program (VCP) and E-Designation Program.

**PHASE I ENVIRONMENTAL SITE ASSESSMENTS/PRELIMINARY ASSESSMENTS**

Ms. Barr has conducted many Phase I ESAs and PAs in support of decision making and obtaining financing for future development. Her experience includes: performing site reconnaissance; review of historic aerial photographs; Sanborn fire insurance maps; title search review; permit and license review; and searches of county, state and federal records. Her work encompasses reviewing historic site information regarding hazardous substances and assessed properties for Recognized Environmental Concerns (RECs) or Areas of Concern (AOCs) for the subject properties.

**PHASE II FOLLOW-UP/SITE INVESTIGATION**

Phase II/SI work follows Phase I/PA activities with a focus on individual recognized RECs/AOCs. Ms. Barr assisted in the successful execution of several Memoranda of Agreement and assisted Clients in meeting regulatory and due diligence project goals. Responsibilities included: design and implementation of soil and groundwater sampling of agricultural land, drainage ditches, historic fill, subsurface anomalies, and building pads; surface water sampling; asbestos inspections; and geophysical and subsurface analysis. Projects included open space, residential, commercial, and industrial properties.

**REMEDIAL INVESTIGATIONS**

Ms. Barr oversees the development of remedial scopes ranging from simple to complex and oversees the execution of RIs. She directs sampling events, coordinates with outside vendors, and keeps open communication with her Clients and interested parties to successfully navigate the remedial process. Ms. Barr works closely with the staff Licensed Site Remediation Professional (LSRP) of Record in attaining necessary remedial goals in anticipation of Response Action Outcomes (RAOs). She keeps abreast of technical changes and regulatory revisions, ensuring an effective management of projects.

**EDUCATION**

Bachelor of Arts, Environmental Science, Richard Stockton College of New Jersey, 2005

**REGISTRATION AND PROFESSIONAL CERTIFICATIONS**

OSHA 40-Hour Training + Annual 8-Hour Refresher Training  
Subsurface Evaluation and Closure - NJDEP License No. 491088  
Certificate in 8-hour Supervisor Training  
Certificate in 10-Hour Construction
