Certifications

I, Scott A. Underhill, am currently a registered professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the Site Management Plan protocols, and I certify that the documentation of site management activities is accurately presented in the Periodic Review Report for the period ending April 2, 2026, for the 1885 Atlantic Avenue Redevelopment located in Brooklyn, New York, BCP Site No. C224347 (the "Site").

For each institutional or engineering control identified for the Site, I certify that all of the following statements are true:

a) The inspection of the Site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under my direction;
b) The institutional control and/or engineering control employed at this Site is unchanged from the date the control was put in place, or last approved by the New York State Department of Environmental Conservation (Department);
c) Nothing has occurred that would impair the ability of the control to protect the public health and environment;
d) Nothing has occurred that would constitute a violation or failure to comply with any Site Management Plan for this control;
e) Access to the Site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;
f) If a financial assurance mechanism is required under the oversight document for the Site, the mechanism remains valid and sufficient for the intended purpose under the document;
g) Use of the Site is compliant with the Environmental Easement;
h) The engineering control systems are performing as designed and are effective;
i) To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the Site remedial program and generally accepted engineering practices; and
j) The information presented in this report is accurate and complete

Executive Summary

On behalf of 1885 Atlantic Realty LLC (the Volunteer), H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) submits this first Periodic Review Report (PRR) for Brownfield Cleanup Program (BCP) Site No. C224347, for the property located at 1885 Atlantic Avenue in Brooklyn, New York (herein referred to as the "Site") for the period of December 2, 2024, through April 2, 2026. The Site location map is provided as **Figure 1**. This PRR is prepared in accordance with New York State Environmental Conservation Law and New York State guidance entitled *DER-10 / Technical Guidance for Site Investigation and Remediation*, dated May 3, 2010 (New York State Department of Environmental Conservation [NYSDEC], 2010). The PRR Form for this period is provided in **Appendix A**.

On February 16, 2022, the Site was accepted into the NYSDEC BCP, and a Brownfield Cleanup Agreement (BCA) was executed.

From March 2022 to January 2023, Haley & Aldrich of New York conducted Remedial Investigation (RI) and Supplemental RI activities in soil, groundwater, and soil vapor. Analytical results revealed the presence of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals in soil samples; VOCs, SVOCs, total and dissolved metals, and per- and polyfluoroalkyl substances (PFAS) in groundwater; and VOCs, specifically, benzene, toluene, ethylbenzene, and xylenes (BTEX), 2,2,4-trimethylpentane, cyclohexane, heptane, and n-hexane (Site Contaminants of Concern [COCs]) in soil vapor samples at the Site.

From May to August 2022, an Interim Remedial Measure (IRM) was implemented at the Site that included the removal of kiosks, canopies, storage sheds, product dispensers and pump islands, and six underground storage tanks (USTs).

From September 2023 to August 2024, the Remedial Action was implemented at the Site and included in-situ chemical oxidation (ISCO), soil excavation, and installation of a soil vapor extraction (SVE) system and sub-slab depressurization system (SSDS). The Remedial Action achieved Restricted-Residential Soil Cleanup Objectives (RRSCOs) in soil and a Track 2 remedy.

In December 2024, the NYSDEC issued a Certificate of Completion for the Site and approved the Site Management Plan (SMP) for operations and maintenance of the engineering controls, which included the SVE system and SSDS and long-term monitoring activities associated with remaining on-site groundwater and soil vapor contamination.

In accordance with the NYSDEC-approved SMP, Haley & Aldrich of New York conducted monthly monitoring of the SVE system starting in February 2025, quarterly groundwater monitoring since March 2024, and biannual monitoring of the SSDS starting in April 2025. Continued operation and monitoring of the SVE system, SSDS, and groundwater conditions, along with the SVI Evaluation dated March 2025, have demonstrated conformance to the Remedial Action Objectives.

Based on pre-treatment vapor observed over the last 16 months, Haley & Aldrich of New York recommends continuing to operate the SVE system and SSDS without carbon treatment for one more year prior to petitioning NYSDEC to conduct a shutdown test during the 2026/2027 heating season. Haley & Aldrich of New York also recommends discontinuing groundwater sampling and decommissioning MW-6, MW-7, and MW-8.

1. Introduction

The 1885 Atlantic Avenue Redevelopment site (hereinafter referred to as the "Site") is located at 1885 Atlantic Avenue in Brooklyn, Kings County, New York, and is identified as Block 1714, Lot 30 on the New York City Tax Map. The Site is currently in the New York State Brownfield Cleanup Program (BCP), Site No. C224347, which is administered by the New York State Department of Environmental Conservation (NYSDEC). The Site is approximately 0.249 acres (approximately 10,800 square feet [sq ft]) and is bound to the north by a vacant vegetated lot; to the east by Ralph Avenue followed by mixed-use commercial and residential buildings; to the south by Atlantic Avenue and the Long Island Railroad Tracks followed by commercial buildings including an auto repair facility; and to the west by a commercial building occupied by a McDonalds fast food restaurant. A Project Locus is provided as **Figure 1**. A figure showing the boundaries of the Site is provided as **Figure 2**.

The Site consists of a nine-story mixed-use commercial/residential, mixed-income building with one full cellar level. The building encompasses the entire lot footprint and extends 12 to 14 feet (ft) below ground surface (bgs). The cellar level is utilized as a parking garage, compactor room, electrical room, mechanical rooms, and bicycle storage. The first floor is occupied by a parking garage, bicycle parking, a residential lobby and lounge, a laundry room, a package room, and a residential unit. The second floor is occupied by residential units and an outdoor courtyard. The third through ninth floors are occupied by residential units. The development use is consistent with existing zoning for the property. The depth to groundwater is approximately 60 ft bgs.

Previous Site investigation activities documented the presence of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, and per- and polyfluoroalkyl substances (PFAS) in soil samples; VOCs, SVOCs, total and dissolved metals, and PFAS in groundwater; and VOCs, specifically, benzene, toluene, ethylbenzene, and xylenes (BTEX), in soil vapor samples at the Site.

From May to August 2022, an Interim Remedial Measure (IRM) was implemented at the Site that included the removal of kiosks, canopies, storage sheds, product dispensers and pump islands, and six underground storage tanks (USTs). The UST field was excavated to an approximate depth of 12 ft below sidewalk grade. Non-hazardous contaminated soils associated with the UST excavation area were disposed of off Site.

From September 2023 to August 2024, the Remedial Action was implemented at the Site and included a round of in-situ chemical oxidation (ISCO) injections (September 26 to 29, 2023), excavation of contaminated soil, installation of a soil vapor extraction (SVE) system, and installation of a sub-slab depressurization system (SSDS). Remedial excavation to remove non-hazardous contaminated soil ranged between 4 and 20 ft bgs. Deeper excavations occurred in localized endpoint grid areas and the former UST area, where over-excavation was required to achieve Restricted Residential Use Soil Cleanup Objectives (RRSCOs). Due to the presence of deep soil and soil vapor contamination, an SVE system was installed beneath the northeastern portion of the building to treat source material ranging from 20 to 60 ft bgs, and an SSDS was installed beneath the building foundation and consisted of horizontal perforated piping within a permeable stone layer under a Stego® Wrap 20-mil vapor barrier and concrete slab to mitigate potential soil vapor intrusion (SVI) issues.

In December 2024, the NYSDEC issued a Certificate of Completion for the Site and approved the Site Management Plan (SMP) dated September 2024 for operations and maintenance of the engineering

controls (ECs), which included the SVE system and SSDS and long-term monitoring activities associated with the remaining on-site groundwater and soil vapor contamination.

Since approval of the SMP in December 2024, H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) conducted quarterly groundwater sampling events at the Site. The analytical results of the groundwater samples were compared to the NYSDEC Ambient Water Quality Standards (AWQS). Groundwater analytical results indicated that since the Remedial Action, Site-related contaminants have been below their AWQS in groundwater. Tetrachloroethene (PCE), a contaminant not associated with on-site contamination, has been consistently detected in the upgradient well (MW-6) and side gradient well (MW-7) above its AWQS since March 2024. PCE was only detected above its AWQS in the downgradient well (MW-8) once, in March 2024. PCE concentrations detected in on-site groundwater are likely from an upgradient, off-site source.

In accordance with the NYSDEC-approved SMP, Haley & Aldrich of New York conducted monthly monitoring of the SVE system starting in February 2025 and biannual monitoring of the SSDS starting in April 2025.

In March 2025, Haley & Aldrich of New York conducted an SVI Evaluation during the 2024-2025 heating season. Analytical results revealed elevated concentrations of cyclohexane, 2,2,4-trimethylpentane, and hexane in the sub-slab and indoor air. However, the lowest level of the building is currently used as a parking garage and was in use during the SVI Evaluation. Additionally, the building has ECs, including an active SSDS and cover system consisting of a 20-mil vapor barrier and concrete slab. SVI is not a concern at this time.

2. Site Background

2.1 SITE HISTORY

A review of Sanborn Fire Insurance Maps shows the Site as vacant until 1908, when it was partially developed with a two-story woodworking shop in the western portion of the Site. By 1932, the woodworking shop was replaced with an auto repair shop, and a garage was developed on the southern half of the Site. A gasoline tank is indicated on the 1932 Sanborn Fire Insurance Map in the southern portion of the Site along Atlantic Avenue. By the early 1950s, the former garage operated as a metal product manufacturing facility, and the former auto repair shop was occupied by a plumber. By the early 1960s, the formerly identified structures were razed, and the Site was identified as a gasoline filling station and an auto wrecking facility, with the Site partially developed with a one-story building. The formerly identified gasoline tank was not depicted on Sanborn Fire Insurance Maps after 1951. By 1978, the formerly identified structures were razed, and the auto wrecking facility was no longer present. The entire Site was identified as a gasoline service station with a one-story commercial building in the northwest corner of the Site. City Directories indicate that "Safeway Ralph" operated the gasoline station in the early to mid-1970s, followed by "Merit Gasoline Stations." The Site most recently operated as a Speedway gasoline service station and had been vacant since January 2022.

1885 Atlantic Realty LLC acquired ownership of the Site in March 2022. Demolition activities of the former gasoline filling station superstructures were completed in May 2022. From June through August 2022, an IRM was performed at the Site in accordance with a NYSDEC-approved Interim Remedial Measure Work Plan (IRMWP) dated February 2022. The IRM included demolition of retail petroleum operation-related superstructures; removal of six USTs; excavation, transportation, and off-site disposal of soil materials; collection of two documentation soil samples; backfilling the excavation area with imported clean quarry stone; and updating the NYSDEC Petroleum Bulk Storage (PBS) Registry to reflect the status of the tanks as closed-removed. The summary of the IRM, including the total volume of soil disposed and stone imported to the Site, is provided in the NYSDEC-approved January 2023 Construction Completion Report (CCR). Following the CCR, the Site was remediated in accordance with the remedy selected by the NYSDEC in the Remedial Action Work Plan (RAWP) dated August 1, 2023, and the Decision Document dated September 14, 2023, described further in Section 3.

2.2 GEOLOGY AND HYDROGEOLOGY

2.2.1 Geology

Based on field observations from the Remedial Investigation (RI) and Supplemental Remedial Investigation (SRI), the Site was underlain by a layer of urban historical fill generally consisting of light to dark brown, fine to medium sand with varying amounts of silt, clay, and gravel with brick, concrete, slag/ash, glass, ceramic, and asphalt fragments. Fill remains on Site between 14 and 15 ft bgs, except in areas represented by endpoint samples EP-7, EP-12, and EP-13 in Haley & Aldrich of New York's *Final Engineering Report* (September 2024). Brown to orange fine to medium sand with varying amounts of silt, gravel, and intermittent clay lenses underly the fill layer and extends to at least 60 ft bgs

2.2.2 Hydrogeology

Based on Site-specific groundwater measurements, groundwater beneath the Site ranges from approximately 60 to 64 ft bgs. Groundwater flow beneath the Site is generally from northeast to southwest.

2.2.3 Nature and Extent of Contamination Prior to Remediation

The contamination, present in shallow and deep soil/fill, deep groundwater, and soil vapor across the Site, was related to the Site's historical operations. The results of Haley & Aldrich of New York's RI were compared to NYSDEC Part 375 RRSCOs, Unrestricted Use Soil Cleanup Objectives (UUSCOs), and/or the Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) for soil; the NYSDEC Class GA AWQS and Ambient Water Quality Guidance Values for groundwater; and the New York State Department of Health (NYSDOH) Air Guidance Values (AGVs) for soil vapor.

The primary Contaminants of Concern (COCs) included VOCs (specifically BTEX), SVOCs (specifically polycyclic aromatic hydrocarbons [PAHs]), and heavy metals detected in soil; VOCs (specifically BTEX), SVOCs (specifically PAHs), heavy metals, and PFAS detected in groundwater; and petroleum-based VOCs detected in soil vapor.

3. Site Remediation

3.1 SITE REMEDIATION

The Site was remediated in accordance with the remedy selected by the NYSDEC in the RAWP dated August 1, 2023, the Decision Document dated September 14, 2023, and all applicable federal, state, and local rules and regulations. The Site was remediated as a Track 2 remedy (Alternative II) that consisted of ISCO injections, the removal of on-site soil that exceeded RRSCOs, and installation of an SVE system in the northeastern portion of the Site and an SSDS beneath the entire building footprint. Prior to the implementation of the remedy, the demolition of the existing building was completed in May 2022. Remedial activities occurred at the Site between September 26, 2023, and August 7, 2024. A Track 2 cleanup was achieved.

The factors considered during the selection of the remedy are those listed in Title 6 of the New York Codes, Rules and Regulations (NYCRR) Part 375-1.8. The following were the components of the selected remedy:

1. Development and implementation of a Construction Health and Safety Plan (CHASP) and Community Air Monitoring Plan (CAMP) for the protection of on-site workers, the community, residents, and the environment during remediation and construction activities.
2. Design and construction of a support of excavation (SOE) system to facilitate excavation of soil exceeding RRSCOs to a depth of at least 14 ft bgs Site-wide.
3. Implementation of soil erosion, pollution, and sediment control measures in compliance with applicable laws and regulations.
4. Removal of the existing asphalt cover and miscellaneous debris on the Site.
5. Decommissioning of on-site monitoring wells in accordance with NYSDEC Commissioner Policy 43 (CP-43).
6. Excavation, stockpiling, off-site transport, and disposal of about 1,400 cubic yards (cu yd) of historic fill and solid waste that exceeds RRSCOs as defined by 6 NYCRR Part 375-6.8, and to facilitate the installation of an SSDS.
7. Removal of four USTs and/or associated appurtenances (e.g., fill lines, vent lines, and electrical conduits) as well as decommissioning and off-site disposal during redevelopment in accordance with Division of Environmental Remediation (DER)-10, 6 NYCRR Part 613.9, NYSDEC CP-51, and other applicable NYSDEC UST closure requirements.
8. Screening for indications of contamination (by visual means, odor, and monitoring photoionization detectors [PIDs]) of excavated material during intrusive Site work.
9. Implementation of a preliminary waste characterization to facilitate off-site disposal of excavated soil/fill.
10. Appropriate off-site disposal of material removed from the Site in accordance with federal, state, and local rules and regulations for handling, transport, and disposal.
11. Installation, operation, and monitoring of an SVE system to remediate concentrations of petroleum-related VOCs above the PGWSCOs in the vadose zone in the northeastern portion of the Site. The SVE system was installed to remediate petroleum-impacted soils in the northeastern

portion of the Site deeper than 15 ft bgs, down to the groundwater table, located at approximately 60 ft bgs.

12. Implementation of ISCO by temporary injection points utilizing alkaline-activated persulfate (AP-pH) to reduce elevated concentrations of VOCs, including petroleum-related VOCs and chlorinated VOCs in groundwater.
13. Backfilling of excavated areas, as necessary for development, with certified-clean fill/soil (i.e., meeting the Allowable Constituent Levels for Imported Fill or Soil as per unrestricted use defined in DER-10 Appendix 5), recycled concrete aggregate (RCA), or virgin, native crushed stone.
14. Collection and analysis of confirmation soil samples at the proposed remediation depth in accordance with DER-10 to confirm a Track 2 remedy was achieved. All confirmation soil samples were analyzed for the Part 375 list of VOCs, SVOCs, pesticides, polychlorinated biphenyls (PCBs), metals, PFAS, and 1,4-dioxane.
15. Installation, operation, and monitoring of an active SSDS to mitigate potential exposures related to SVI.
16. Installation of new permanent groundwater monitoring wells MW-6 through MW-8 for post-remedy groundwater monitoring within the vicinity of RI monitoring wells MW-3, MW-4, and MW-5, respectively.
17. Quarterly collection and analysis of groundwater samples for VOCs in accordance with DER-10 for a minimum of one year following remedial excavation activities to document groundwater quality beneath the Site.
18. Completion of an SVI Evaluation in accordance with DER-10 and NYSDOH Final Guidance on Soil Vapor Intrusion following remedial activities and prior to occupancy.
19. Establish an SMP for institutional controls (ICs) and ECs that includes an Institutional and Engineering Control Plan, Monitoring Plan, and Operations and Maintenance Plan.

3.2 SUMMARY OF CONTAMINATION REMAINING AT THE SITE

3.2.1 Soil

Soil was characterized during investigations prior to entering the BCP and during the RI conducted as part of the BCP. During the RI, soil beneath the Site was found to have concentrations of VOCs, SVOCs, and metals above the RRSCOs; therefore, soil excavation and disposal were included as a component of the Decision Document. Excavation was completed at the Site to reduce petroleum-based VOC and PAH concentrations in soil down to 14 ft bgs. However, deeper VOC contamination above the PGWSCOs is present beneath the building down to 60 ft bgs and is currently being treated by an SVE system.

3.2.2 Groundwater

Groundwater quality was characterized during investigations prior to entering the BCP and during the RI conducted as part of the BCP. During the RI, groundwater beneath the Site was found to have concentrations of petroleum-related VOCs, petroleum-related SVOCs, and metals above the AWQS; therefore, groundwater treatment was included as a component of the Decision Document. A groundwater treatment program was completed at the Site to reduce petroleum-based VOC and PAH concentrations in groundwater. Quarterly groundwater monitoring is conducted and compared to groundwater data from the RI to confirm the efficacy of the groundwater treatment. RI data was collected

from five wells (MW-1 through MW-5) that were abandoned during the remediation; three new monitoring wells (MW-6 through MW-8) were installed post-remediation (i.e., excavation and chemical injections) and are sampled on a quarterly basis to monitor remediation efforts. Petroleum-related VOCs in the groundwater are below the AWQS; PCE detected in the groundwater above the AWQS during the post-remedial groundwater sampling is upgradient from and at higher concentrations than the concentrations detected during the RI, indicating that the PCE concentrations detected within groundwater at the Site are from an off-site source.

Groundwater use at the Site is also subject to the ICs documented within the Environmental Easement (EE) and is restricted for use as a source of potable or process water without necessary water quality treatment as determined by NYSDOH.

3.2.3 Soil Vapor

Sub-slab soil vapor and indoor air quality were characterized during previous investigations. Soil vapor and indoor air analytical results from the RI and SRI identified VOCs as a COC for the Site. Remedial activities at the Site were conducted in accordance with the RAWP. Soil at the Site was removed, at a minimum, to a depth of 14 ft bgs. However, previous investigations have demonstrated elevated VOCs in soil and soil vapor between 45 and 60 ft bgs. An SVE system was installed to mitigate the deeper soil vapor contaminants associated with deeper soil contamination. The Site is also subject to the ICs documented within the EE.

In March 2025, Haley & Aldrich of New York collected sub-slab soil vapor samples and co-located indoor air samples from the building interior within the parking garage space to evaluate the potential for SVI in the new on-site building (*Post-Remediation Quarterly Progress Report – March 2025*, prepared by Haley & Aldrich of New York, dated August 2025). The samples were collected during normal operating conditions of the 2024/2025 heating season without the interference from construction activities; however, the cellar was and is utilized as an active parking garage. The SVI Evaluation results are discussed in Section 6.7 below and are included in the March 2025 quarterly progress report provided in **Appendix B**.

4. Site Management Requirements of ICs and ECs

4.1 IC/EC REQUIREMENTS AND COMPLIANCE

A series of ICs/ECs is required by the Certificate of Completion to: (1) implement, maintain, and monitor EC systems; (2) prevent future exposure to remaining contamination; and (3) limit the use and development of the Site to restricted residential, commercial, and industrial uses only. Adherence to these ICs/ECs on the Site is required by the EE and was implemented under the SMP. ICs/ECs identified in the EE will not be discontinued without an amendment to or extinguishment of the EE and SMP with NYSDEC approval. These ICs/ECs are discussed below.

4.1.1 Institutional Controls

The EE includes a description of the key components of the ICs/ECs at the Site and is designed to protect public health and the environment by restricting the use of the property and requiring management of Site IC/ECs under the NYSDEC-approved SMP. The SMP details Site-specific implementation procedures required by the EE (**Appendix C**). ICs defined in the NYSDEC-approved SMP include the following:

- The property may be used for restricted residential, commercial, and industrial use;
- All ECs must be operated and maintained as specified in the SMP;
- All ECs must be inspected at a frequency and in a manner defined in the SMP;
- The use of groundwater underlying the property is prohibited without the necessary water quality treatment as determined by the NYSDOH or the New York City Department of Health and Mental Hygiene (NYCDOHMH) to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from NYSDEC;
- Groundwater and other environmental or public health monitoring must be performed as defined in the SMP;
- Data and information pertinent to Site management must be reported at the frequency and in a manner as defined in the SMP;
- All future activities that will disturb remaining contaminated material must be conducted in accordance with the SMP;
- Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;
- Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy shall be performed as defined in the SMP;
- Access to the Site must be provided to agents, employees, or other representatives of the state of New York with reasonable prior notice to the property owner to assure compliance with the restrictions identified by the EE;
- The potential for SVI must be evaluated for any buildings developed in the area within the IC boundaries, and any potential impacts that are identified must be monitored or mitigated;
- Vegetable gardens and farming on the Site are prohibited; and

- An evaluation shall be performed to determine the need for further investigation and remediation should large-scale redevelopment occur, if any of the existing structures are demolished, or if the subsurface is otherwise made accessible.

During the Site inspection conducted on December 10, 2025, no deficiencies were observed. All ICs will remain in place to prevent exposure to contaminated soil vapor at the Site.

4.1.2 Engineering Controls

4.1.2.1 Sub-Slab Depressurization System

An active SSDS was installed to mitigate the potential for SVI by providing a pathway for soil vapor to vent to the atmosphere. The major components of the active SSDS include:

- One continuous perforated 4-inch polyvinyl chloride (PVC) horizontal pipe network with 13 termini, embedded within a permeable layer (3/4-inch stone) under the foundation slab;
- A cover system consisting of a continuous Stego® 20-mil vapor barrier and a variable thickness concrete slab;
- Six sub-slab vapor monitoring points (MPs) throughout the building slab; and
- A blower located in the basement equipped with an exhaust stack consisting of 4-inch-diameter cast iron riser pipe extending through the roof and terminating with a rain cap, at least 12 inches above the highest roof surface and at least 10 ft away from any adjacent building or at least 3 ft above any heating, ventilation, and air conditioning (HVAC) intakes. The blower is also used as part of the SVE system discussed below. The SSDS as-built is provided in **Figure 3,** and the piping and instrumentation diagram is provided in **Figure 4**.

No deficiencies were observed during the reporting period.

4.1.2.2 Soil Vapor Extraction System

A SVE system was installed in the northeastern portion of the Site to treat VOC contamination exceeding UUSCOs in the vadose zone soils between 20 ft and the groundwater table, located approximately 60 ft bgs. The soil vapor extracted by the SVE system undergoes treatment with granular activated carbon (GAC) before being discharged to the atmosphere through an exhaust stack consisting of 4-inch-diameter cast iron riser pipe extending through the roof and terminating with a rain cap, at least 12 inches above the highest roof surface and at least 10 ft away from any adjacent building or at least 3 ft above any HVAC intakes.

The SVE system is comprised of a total of nine SVE locations, with each SVE location containing two co-located SVE wells, for a total of 18 SVE wells. Among the 18 SVE wells, five SVE wells are screened from 20 to 30 ft bgs, four from 30 to 40 ft bgs, five from 40 to 50 ft bgs, and four from 50 to 60 ft bgs. Each SVE well is constructed with 1.5-inch-diameter, schedule 40 PVC pipes with a 10-ft screen. The SVE wells are installed under the concrete slab with a horizontal section that penetrates the concrete slab near the blower. The 1.5-inch-diameter wells have a dedicated sample port and valve prior to manifolding into a 4-inch header pipe. The header pipe is connected to the air-water separator, SVE/SSDS blower, GAC drums, and discharge stack. The piping and instrumentation diagram is provided in **Figure 4,** and the SVE system as-built is provided in **Figure 5**.

MPs are used to measure the SVE system influence. There are two MP locations, each with four co-located MPs, for a total of eight MPs, installed within the treatment area. The MPs consist of 12-inch stainless-steel screens, connected to the surface with Teflon™ tubing. These 12-inch-long MPs have been installed at the midpoint of each treatment interval (i.e., 25, 35, 45, and 55 ft bgs).

No deficiencies were observed during the reporting period.

5. Site Management Monitoring Requirements

5.1 COMPONENTS OF THE MONITORING PLAN

Monitoring requirements under the SMP include:

- Monthly SVE system monitoring;
- Quarterly SVE system vapor sampling;
- Quarterly groundwater sampling;
- Biannual SSDS monitoring;
- Annual Site inspection; and
- Annual SVI Evaluation sampling.

5.2 SUMMARY OF MONITORING

Monitoring was performed per the SMP dated September 24, 2024, during the reporting period, as described below.

5.2.1 SVE System Monitoring

In accordance with the SMP, routine inspections of the SVE system and monitoring of system readings were conducted on a monthly basis. SVE system components that were monitored include, but are not limited to, those listed in **In-Text Table 1** below.

In-Text Table 1: SVE System Monitoring Requirements and Schedule

Remedial System Component	Monitoring Parameter	Operating Range	Monitoring Schedule
SVE System	SVE-1S/D through SVE-9S/D	5 to 10 cfm each	Monthly
	SVE/SSDS Blower	120 to 160 cfm	Monthly
	GAC Drum 1 and 2	Not to exceed 10 psi	Monthly
	MP 1 and 2	Greater than 0.1 IWC	Monthly

Notes:
cfm = cubic feet per minute
IWC = inches of water column
psi = pounds per square inch

The following SVE system inspections were completed during the reporting period:

- February 20, 2025
- March 11, 2025
- April 7, 2025
- June 12, 2025
- July 10, 2025

- August 14, 2025
- September 26, 2025
- October 15, 2025
- November 3, 2025
- December 8, 2025
- January 28, 2026
- February 26, 2026
- March 18, 2026

Results are discussed in Section 6.2.

SVE inspection results and field forms were included in quarterly progress reports submitted to NYSDEC and are included in **Appendix B**.

5.2.2 SVE System Vapor Sampling

In accordance with the SMP, samples were collected from the SVE system on at least a quarterly basis and are listed in **In-Text Table 2** below.

In-Text Table 2: SVE System Sampling Requirements and Schedule

Sampling Location	Analytical Parameters	Schedule
	VOCs (USEPA Method TO-15)	
SVE/SSDS Combined Influent	X	Quarterly
SVE/SSDS Effluent (after treatment with two GAC vessels connected in series and before discharging)	X	Quarterly

Note:
USEPA = U.S. Environmental Protection Agency

The following SVE system sampling events were conducted during the reporting period:

- February 20, 2025
- June 12, 2025
- July 10, 2025
- August 14, 2025
- September 26, 2025
- October 15, 2025
- December 8, 2025
- February 26, 2026

Results are discussed in Section 6.3.

SVE system analytical results for each sampling event are provided in **Table I**. Analytical laboratory reports are provided as **Appendix D**. Data Usability Summary Reports (DUSRs) and Electronic Data Deliverable (EDD) confirmations are provided as **Appendix E**. Monitoring point locations associated with the SVE system are provided on **Figure 5**.

5.2.3 Groundwater Sampling

In accordance with the SMP, groundwater samples were collected from the three on-site groundwater monitoring wells on a quarterly basis. **In-Text Table 3** provides sampling locations required, analytical parameters, and schedule.

In-Text Table 3: Post-Remediation Groundwater Sampling Requirements and Schedule

Sampling Location	Analytical Parameters	Schedule
	VOCs (USEPA Method 8260B)	
MW-6, MW-7, and MW-8	X	Quarterly

Five quarterly rounds of groundwater sampling were completed during the reporting period:

- March 12, 2025
- May 1, 2025
- August 15, 2025
- December 11, 2025
- January 28, 2026

Results are discussed in Section 6.4.

Groundwater purge logs are provided in **Appendix F**. Groundwater analytical results for each sampling event are provided in **Table II** and **Figure 6**. Analytical laboratory reports are provided as **Appendix G**. DUSRs and EDD confirmations are provided as **Appendix E**. Groundwater results were included in quarterly progress reports submitted to NYSDEC and are included in **Appendix B**.

5.2.4 SSDS Monitoring

In accordance with the SMP, routine inspections of the SSDS and monitoring of system vacuum were conducted at least on a biannual basis at sub-slab monitoring points MP-1 through MP-6. **In-Text Table 4** provides sampling locations required, operating range, and schedule.

In-Text Table 4: SSDS Monitoring Requirements and Schedule

Remedial System Component	Monitoring Parameter	Operating Range	Monitoring Schedule
Active SSDS	Vacuum Monitoring Points	Greater than 0.004 IWC	Biannually
	SVE/SSDS Blower	120 to 160 cfm	Biannually

The following SSDS inspections were completed during the reporting period:

- April 7, 2025
- November 10, 2025
- January 28, 2026

Results are discussed in Section 6.5.

SSDS inspection results were included in quarterly progress reports submitted to NYSDEC and are included in **Appendix B**. Vacuum readings are provided in **Table III**. Monitoring point locations associated with the SSDS are provided on **Figure 3**.

5.2.5 Annual Site Inspection

In accordance with the SMP, Site-wide inspections were performed at a minimum of once per year on December 10, 2025. The periodic inspection was conducted when the ground surface was visible (i.e., no snow cover). The Site-wide inspection was performed by Omar Colon, a qualified person who directly reports to a Professional Engineer (P.E.) who is licensed and registered in New York State. A Site inspection form was completed, as provided in Appendix E of the SMP, which included sufficient information to assess the following:

- Compliance with all ICs, including Site usage;
- Conditions and continued effectiveness of ECs;
- General Site conditions at the time of the inspection;
- Site management activities being conducted, including, where appropriate, confirmation sampling and a health and safety inspection; and
- Whether Site records are up to date.

Results are discussed in Section 6.6.

5.2.6 Soil Vapor Intrusion Evaluation

In accordance with the SMP, an SVI Evaluation was conducted during the 2024/2025 heating season on March 13, 2025. **In-Text Table 5** provides sampling locations required, analytical parameters, and schedule.

In-Text Table 5: Post-Remediation SVI Evaluation Sampling Requirements and Schedule

Sampling Location	Analytical Parameters	Schedule
	VOCs (USEPA Method TO-15)	
MP-1 through MP-6, located in the garage	X	One sampling event, during heating season, upon completion of the Building Envelope
Six co-located Indoor Air Samples and one Ambient Air Sample	X	One sampling event, during heating season, upon completion of the Building Envelope

Results are discussed in Section 6.7.

6. Evaluate Remedy Performance, Effectiveness, and Protectiveness

The SMP describes the measures for evaluating the performance and effectiveness of the ICs/ECs. The Site management monitoring inspections completed during this reporting period are summarized in the following sections.

6.1 SVE SYSTEM COMMISSIONING

On July 18, 2024, Haley & Aldrich of New York conducted SVE system startup activities, which included operating the SVE/SSDS blower, verifying the integrity of piping connections, and balancing the SVE wells, SSDS network, and dilution air to treat soil contamination and depressurize the building slab. On July 19, 2024, Haley & Aldrich of New York returned to the Site to verify system operations. PID readings of the air stream after the carbon drums indicated that the carbon drums were spent. The system was shut down to prevent the discharge of untreated, VOC-impacted soil vapor.

On August 8, 2024, the SVE system was restarted with the SSDS network and select SVE wells open to depressurize the building slab and continue treating soil contamination while reducing the VOC mass loading to the activated carbon drums. Additionally, the effluent piping was rerouted to the bulkhead instead of the second-floor courtyard to mitigate the potential for nuisance odors to impact nearby receptors.

6.2 SVE SYSTEM MONITORING

Following the issuance of the Certificate of Completion on December 2, 2024, monthly monitoring of the SVE system started in February 2025 and was conducted in accordance with the NYSDEC-approved SMP dated September 2024.

Monthly monitoring activities included conducting inspections of the system, piping, piping connections, monitoring points, blower operation, and the high-water alarm for the air/water separator. Monitoring also included (i) collecting vacuum/pressure differential field measurements at the SVE MPs, (ii) air flow and PID readings from each SVE well and the combined influent/effluent air stream before and after the SSDS connection, (iii) hours of blower operation, and (iv) temperature and vacuum/pressure differential field measurements associated with the blower.

The SVE system was designed to treat four depth intervals: 20 to 30 ft bgs, 30 to 40 ft bgs, 40 to 50 ft bgs, and 50 to 60 ft bgs. To mitigate the potential to overload the carbon drums as observed during system commissioning, the SVE wells were opened in a tiered approach; the SVE system operated to treat one treatment interval at a time, starting with the shallowest interval until the interval showed low PID readings (i.e., typically PID readings under 50 parts per million [ppm]). Analytical samples were collected before and after opening different SVE wells to evaluate VOC concentrations before and after system modification. **In-Text Table 6** shows which SVE wells were operating during each analytical sample.

In-Text Table 6 – Summary of SVE Well Modifications			
Date	**Total Influent VOCs (µg/m³)**	**SVE Wells Open**	**Treatment Interval (ft bgs)**
2/20/2025	12,888	SVE-1S, 3S, 5S, 7S, 9S	20 to 30
6/12/2025	2,088	SVE-1S, 3S, 5S, 7S, 9S	20 to 30
7/10/2025	2,109	SVE-1S, 3S, 5S, 7S, 9S	20 to 30
7/10/2025	5,186	SVE-2S, 4S, 6S, 8S	30 to 40
8/14/2025	6,599	SVE-2S, 4S, 6S, 8S	30 to 40
9/26/2025	16,237	SVE-2S, 4S, 6S, 8S	30 to 40
9/26/2025	13,541	SVE-1S/D, 2S/D, 3S/D, 4S/D, 5S/D, 6S/D, 7S/D, 8S/D, 9S/D	20 to 60
10/15/2025	24,966	SVE-1S/D, 2S/D, 3S/D, 4S/D, 5S/D, 6S/D, 7S/D, 8S/D, 9S/D	20 to 60
10/15/2025	40,169	SVE-1S/D, 2S/D, 3S/D, 5S, 6S/D, 7D, 8S/D, 9S	20 to 60
12/8/2025	19,227	SVE-1S/D, 2S/D, 3S/D, 5S, 6S/D, 7D, 8S/D, 9S	20 to 60
1/28/2026	N/A	SVE-1S/D, 2S/D, 5S, 7D, 8S/D	20 to 60
2/26/2026	22,438	SVE-1S/D, 2S/D, 5S, 7D, 8S/D	20 to 60

Notes:
µg/m³= micrograms per cubic meter
N/A = no analytical sample collected

From February to September 2025, SVE wells were operated in a tiered approach. In September 2025, all SVE wells were open due to the low VOC concentrations observed in the shallow treatment intervals. In October 2025, to target SVE wells with high VOC concentrations, wells where PID readings were less than 50 ppm were closed. In January 2026, due to condensation accumulation, five SVE wells (i.e., SVE-3S/D, 6S/D, and 9S) were closed. SVE well flow rates, analytical data, and PID readings confirmed that the SVE system effectively removed VOC contamination from the subsurface.

SVE well flow rate and PID readings varied during the reporting period. In general, SVE well flow rates achieved the desired 5 to 10 cfm flow rate, and SVE monitoring points achieved at least 0.1 IWC vacuum, except for MP-2_25, MP-2_35, and MP-2_55, which never showed vacuum influence during SVE operation; these monitoring points are suspected to be damaged. Field observations are provided in the field forms submitted with each quarterly progress report, provided in **Appendix B**.

Since its startup in August 2024, the SVE system has removed approximately 99 pounds of Site COCs and approximately 147 pounds of total VOCs based on analytical data, or an average of approximately 0.25 pounds per day of total VOCs. Monthly mass removal data and calculations are provided in **Appendix H.** Mass removal using influent analytical data for Site COCs removed and total VOCs removed is provided as **Figure 7**.

6.3 SVE SYSTEM VAPOR SAMPLING

Soil vapor samples were collected from the SVE/SSDS combined influent and SVE/SSDS combined effluent after GAC treatment to evaluate remaining VOC concentrations in the subsurface and to understand when carbon drum swaps were needed to maintain GAC treatment. As outlined in the SMP, soil vapor samples were collected at least on a quarterly basis and were analyzed for VOCs via USEPA Method TO-15.

COCs in soil vapor were established in the NYSDEC-approved Remedial Investigation Report (RIR) and included benzene, ethylbenzene, toluene, xylenes, 2,2,4-trimethlpentane, cyclohexane, and heptane (Site COCs). Petroleum-related VOC influent concentrations show a fluctuating trend since February 2025 as a result of regular system optimization and confirm that the SVE system is effectively removing VOCs from the subsurface. Haley & Aldrich of New York recommends continuing to operate the SVE system. Influent Total BTEX concentrations are shown on **Figure 8**.

Influent sample analytical results were also evaluated to determine if carbon treatment of the SVE system emissions is required. High toxicity air contaminants (HTACs) and non-HTACs were compared to the allowable emission rates presented in 6 NYCRR Subpart 212-2.2 Table 2, current through February 15, 2022. The SVE system emission rates were below their respective allowable emission rates. As per 6 NYCRR Subpart 212-2, the SVE system emissions do not require treatment. Haley & Aldrich of New York recommends discontinuing carbon treatment of the SVE system emissions. An emission rate evaluation is provided in **Table IV**.

6.4 QUARTERLY GROUNDWATER SAMPLING AND RESULTS

In December 2023, three monitoring wells were installed by Haley & Aldrich of New York to monitor groundwater upgradient of the Site (MW-6), cross-gradient of the Site (MW-7), and downgradient of the Site (MW-8). As outlined in the SMP, Haley & Aldrich of New York conducted quarterly groundwater sampling, and the samples were analyzed for VOCs as directed by the NYSDEC.

Groundwater samples were collected using low-flow sampling techniques from the permanent monitoring wells. Prior to sampling each monitoring well, the water level was measured using an electronic water level meter, and the well was purged utilizing a low-flow submersible stainless-steel or a peristaltic pump with dedicated Teflon™ or Teflon™-lined polyethylene tubing connected to a transparent flow cell. Groundwater was purged using low pumping rates (between 100 and 500 milliliters per minute [mL/min]) to limit drawdown of the water level. Wells were purged until turbidity, pH, temperature, dissolved oxygen (DO), and specific conductivity stabilized. Field measurements were taken from the flow cell and recorded in the field logbook during and after purging and before sampling. Purging was performed with the pump intake placed about 5 ft above the bottom of the well screen to ensure that stagnant water in the well was removed, while not stirring up sediment that may have accumulated on the bottom of the well. After purging the wells, the samples were analyzed for VOCs.

In general, groundwater flows from northeast to southwest. A groundwater contour is provided as **Figure 9**.

6.4.1 Baseline Groundwater Conditions

After the completion of the Remedial Action but prior to the reporting period, groundwater samples were collected from MW-6 through MW-8 in March 2024, July 2024, and September 2024. The analytical results were compared to the AWQS and revealed one VOC (PCE), which is not related to on-site contamination, above its AWQS. In March 2024, PCE concentrations ranged from 8.2 micrograms per liter (µg/L) to 57 µg/L. In July 2024, concentrations ranged from 1.8 µg/L to 77 µg/L. In September 2024, concentrations ranged from 1.4 µg/L to 84 µg/L. During each sampling event, the highest PCE concentration was detected in the upgradient well (MW-6) and the lowest concentration in the downgradient well (MW-8).

6.4.2 March 2025

On March 12, 2025, the first quarterly groundwater sampling event was completed. The analytical results were compared to the AWQS and revealed one VOC (PCE) not related to on-site contamination in groundwater above the AWQS, which ranged from 1.7 to 59 µg/L.

During the March 2025 groundwater sampling event, DO concentrations ranged from 0 to 5.62 milligrams per liter (mg/L), and oxidation-reduction potential (ORP) measurements ranged from -33 to 162 millivolts (mV).

6.4.3 May 2025

On May 1, 2025, the second quarterly groundwater sampling event was completed. The analytical results were compared to the AWQS and revealed one VOC (PCE) not related to on-site contamination in groundwater above the AWQS, which ranged from 1.8 to 44 µg/L.

During the May 2025 groundwater sampling event, DO concentrations ranged from 2.85 to 4.62 mg/L, and ORP measurements ranged from 159 to 201 mV.

6.4.4 August 2025

On August 15, 2025, the third quarterly groundwater sampling event was completed. The analytical results were compared to the AWQS and revealed one VOC (PCE) not related to on-site contamination in groundwater above the AWQS, which ranged from 3.1 to 99 µg/L.

During the August 2025 groundwater sampling event, DO concentrations ranged from 2.77 to 4.86 mg/L, and ORP measurements ranged from 21 to 58 mV.

6.4.5 December 2025

On December 11, 2025, the fourth quarterly groundwater sampling event was completed. The analytical results were compared to the AWQS and revealed one VOC (PCE) not related to on-site contamination in groundwater above the AWQS, which ranged from 2.2 to 95 µg/L.

During the December 2025 groundwater sampling event, DO concentrations ranged from 2.10 to 3.70 mg/L, and ORP measurements ranged from 20 to 61 mV.

6.4.6 January 2026

On January 28, 2026, the fifth quarterly groundwater sampling event was completed. The analytical results were compared to the AWQS and revealed one VOC (PCE) not related to on-site contamination in groundwater above the AWQS, which ranged from 3.8 to 95 µg/L.

During the January 2026 groundwater sampling event, DO concentrations ranged from 0 to 1.76 mg/L, and ORP measurements ranged from 119 to 178 mV.

6.4.7 Conclusions

Analytical results and field readings indicate that since the Remedial Action, Site-related contaminants have been below their AWQS in groundwater. PCE, a contaminant not associated with on-site contamination, has been detected in the upgradient well (MW-6) and side gradient well (MW-7) above its AWQS continuously since March 2024. PCE was only detected above its AWQS in the downgradient well (MW-8) in March 2024. Additionally, PCE was not observed in soil or groundwater during the RI, except in MW-4 (similar location as MW-7) at a concentration of 18 µg/L. Haley & Aldrich of New York recommends discontinuing groundwater monitoring and decommissioning MW-6, MW-7, and MW-8.

6.5 BIANNUAL SSDS MONITORING RESULTS

On August 8, 2024, the SSDS pipe network was connected to the blower associated with the SVE system. Following the issuance of the Certificate of Completion on December 2, 2024, biannual monitoring of the SSDS began in April 2025 and was conducted in accordance with the NYSDEC-approved SMP dated September 2024. Vacuum readings collected during the reporting period indicated the SSDS was working as designed and was depressurizing the building slab. Monitoring data collected during the reporting period is provided in **Table III**.

On April 7, 2025, vacuum readings from the sub-slab MPs ranged from 0.0 to 0.0725 IWC. Vacuum readings were not obtained at MP-3 and MP-4 due to excessive moisture in the MPs. Vacuum readings were not recollected in April 2025; however, vacuum readings at MP-1, MP-2, MP-5, and MP-6 indicated that the SSDS was depressurizing the building slab.

On November 10, 2025, vacuum readings from the sub-slab MPs ranged from 0.005 IWC to 0.361 IWC and indicated the SSDS was depressurizing the building slab at all MPs.

On January 28, 2026, vacuum readings from the sub-slab MPs ranged from 0.006 IWC to 0.055 IWC and indicated the SSDS was depressurizing the building slab at all MPs.

6.6 SITE-WIDE INSPECTION

On December 10, 2025, a Site-wide inspection was conducted to evaluate the protectiveness of the remedy and document Site conditions. The Site is currently developed with a nine-story building with a full cellar level and finished rooftop level above the ninth floor. The cellar level is utilized as a parking garage, compactor room, electrical room, mechanical rooms, and bicycle storage. The first floor is occupied by a parking garage, bicycle parking, a residential lobby and lounge, a laundry room, a package room, and a residential unit. The second floor is occupied by residential units and an outdoor courtyard. The third through ninth floors are occupied by residential units.

Six soil vapor MPs and above-grade SSDS piping were observed on the cellar level and on the roof, respectively, and were observed to be intact during the time of the inspection.

A surficial crack in the northern portion of the garage was identified during the December 10, 2025, inspection. The crack did not extend through the entire slab and did not impact the vapor barrier. Haley & Aldrich of New York recommends repairing the crack during the next reporting period. No other holes, cracks, or other physical deficiencies associated with the building slab were identified during the Site-wide inspection.

A Site-wide inspection form and photo log are attached as **Appendix I**.

6.7 SOIL VAPOR INTRUSION EVALUATION

On March 13, 2025, Haley & Aldrich of New York personnel collected soil vapor samples from six sub-slab MPs installed below the existing concrete slab, along with six co-located indoor air samples. Additionally, one ambient air sample was collected from the outdoor parking lot behind the Site. Sample locations are shown in **Figure 3**. The samples were collected during normal operation of the building's HVAC system.

Prior to sample collection, Haley & Aldrich of New York conducted a building survey to note materials in the building that may contain VOCs and impact the indoor air samples. The chemical inventory did not reveal the storage of any chemicals in the garage space. It is noted that during this time, the garage was active and in use by visitors to the building, contractors, potential tenants, and Ownership. An SVI Evaluation was included in the Q1 2025 Quarterly Progress Report and is included in **Appendix B**.

6.7.1 March 2025 Sampling

Sub-slab soil vapor, indoor air, and ambient air samples were collected over a 24-hour period in certified, laboratory-supplied, 2.7-liter Summa canisters using 24-hour flow regulators. Prior to sampling, air was purged from the sub-slab MPs by attaching a tube to the MP, attaching the surface end of the tube to an air valve, and then to a vacuum pump. The sub-slab soil vapor samples were first screened for organic vapors using a PID. The indoor air canisters were placed at breathing height (3 to 5 ft above the floor). The flow rate for sampling did not exceed 0.2 liters per minute (L/min).

Samples were submitted to Eurofins, an NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory, and analyzed for VOCs via USEPA Method TO-15.

6.7.2 March 2025 Analytical Results

The analytical results of the sub-slab soil vapor, indoor air, and ambient air samples were compared to NYSDOH Soil Vapor/Indoor Air Decision Matrices A through F. A summary of the VOC results is listed below:

- 1,1-Dichloroethene (DCE):
  - 1,1-DCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.
- Carbon tetrachloride:
  - In indoor air samples, carbon tetrachloride was detected in all six locations at concentrations ranging from 0.21 µg/m^3 in sample IA-06 to 0.42 µg/m^3 in sample IA-01.
  - In the sub-slab soil vapor samples, carbon tetrachloride was detected in all six locations at concentrations ranging from 0.32 µg/m^3 in sample MP-2 to 0.41 µg/m^3 in sample MP-5.
  - In the ambient air sample, carbon tetrachloride was detected at a concentration of 0.38 µg/m^3 in sample AA-01.
- Cis-1,2-DCE:
  - Cis-1,2-DCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.

- Trichloroethene (TCE):
  - TCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.
- 1,1,1-TCE:
  - 1,1,1-TCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.
- PCE:
  - In indoor air samples, PCE was detected in all six locations at concentrations ranging from 0.18 µg/m^3 in samples IA-01, IA-04, IA-05, and IA-06 to 0.22 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, PCE was detected in five of the six locations at concentrations ranging from 0.15 µg/m^3 in sample MP-3 to 0.61 µg/m^3 in sample MP-4.
  - PCE was detected in the ambient air sample at a concentration of 0.17 µg/m^3.
- Methylene chloride:
  - In indoor air samples, methylene chloride was detected in five of the six locations at concentrations ranging from 0.65 µg/m^3 in samples IA-01 and IA-03 to 1.7 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, methylene chloride was detected in five of the six locations at concentrations ranging from 0.67 µg/m^3 in sample MP-5 to 1 µg/m^3 in sample MP-2.
  - Methylene chloride was detected in the ambient air sample at a concentration of 0.88 µg/m^3.
- Vinyl chloride:
  - Vinyl chloride was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.
- Benzene:
  - In indoor air samples, benzene was detected in all six locations at concentrations ranging from 1.1 µg/m^3 in samples IA-01, IA-02, IA-04, and IA-05 to 1.3 µg/m^3 in sample IA-06.
  - In sub-slab soil vapor samples, benzene was detected in all six locations at concentrations ranging from 0.5 µg/m^3 in sample MP-3 to 13 µg/m^3 in sample MP-1.
  - Benzene was detected in the ambient air sample at a concentration of 0.59 µg/m^3.
- Ethylbenzene:
  - In indoor air samples, ethylbenzene was detected in two of the six locations at concentrations ranging from 0.3 µg/m^3 in sample IA-05 to 0.32 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, ethylbenzene was detected in all six locations at concentrations ranging from 0.39 µg/m^3 in sample MP-6 to 13 µg/m^3 in sample MP-1.
  - Ethylbenzene was not detected above laboratory reporting limits in the ambient air sample.
- Naphthalene:
  - In sub-slab soil vapor samples, naphthalene was detected in one of the six locations at a concentration of 5.1 µg/m^3 in sample MP-1.
  - Naphthalene was not detected above laboratory reporting limits in any of the indoor air samples or in the ambient air sample.

- Cyclohexane:
  - In indoor air samples, cyclohexane was detected in all six locations at concentrations ranging from 1.5 µg/m^3 in sample IA-05 to 2.5 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, cyclohexane was detected in all six locations at concentrations ranging from 0.61 µg/m^3 in sample MP-5 to 72 µg/m^3 in sample MP-2.
  - Cyclohexane was not detected above the laboratory reporting limit in the ambient air sample.
- 2,2,4-Trimethylpentane:
  - In indoor air samples, 2,2,4-Trimethylpentane was detected in all six locations at concentrations ranging from 2.5 µg/m^3 in sample IA-05 to 4.9 µg/m^3 in sample IA-06.
  - In sub-slab soil vapor samples, 2,2,4-Trimethylpentane was detected in all six locations at concentrations ranging from 0.96 µg/m^3 in sample MP-5 to 350 µg/m^3 in sample MP-2.
  - 2,2,4-Trimethylpentane was detected in the ambient air sample at a concentration of 0.44 µg/m^3.
- 1,2,4-Trimethylbenzene:
  - In indoor air samples, 1,2,4-Trimethylbenzene was detected in two of the six locations at concentrations ranging from 0.47 µg/m^3 in sample IA-06 to 0.57 µg/m^3 in sample IA-05.
  - In sub-slab soil vapor samples, 1,2,4-Trimethylbenzene was detected in all six locations at concentrations ranging from 0.61 µg/m^3 in sample MP-3 to 8.9 µg/m^3 in sample MP-1.
  - 1,2,4-Trimethylbenzene was not detected above laboratory limits in the ambient air sample.
- 1,3,5-Trimethylbenzene:
  - In sub-slab soil vapor samples, 1,3,5-Trimethylbenzene was detected in three of the six locations at concentrations ranging from 0.3 µg/m^3 in sample MP-5 to 2.7 µg/m^3 in sample MP-1.
  - 1,2,4-Trimethylbenzene was not detected above laboratory limits in any of the indoor air samples or in the ambient air sample.
- o-Xylene:
  - In indoor air samples, o-Xylene was detected in four of the six locations at concentrations ranging from 0.28 µg/m^3 in sample IA-04 to 0.38 µg/m^3 in sample IA-05.
  - In sub-slab soil vapor samples, o-Xylene was detected in all six locations at concentrations ranging from 0.57 µg/m^3 in sample MP-2 to 12 µg/m^3 in sample MP-4.
  - o-Xylene was not detected above laboratory reporting limits in the ambient air sample.
- m,p-Xylenes:
  - In indoor air samples, m,p-Xylenes were detected in five of the six locations at concentrations ranging from 0.74 µg/m^3 in sample IA-04 to 1.1 µg/m^3 in sample IA-06.
  - In sub-slab soil vapor samples, m,p-Xylenes were detected in all six locations at concentrations ranging from 1.3 µg/m^3 in sample MP-2 to 34 µg/m^3 in sample MP-4.
  - m,p-Xylenes were detected in the ambient air sample at a concentration of 0.49 µg/m^3.

- n-Heptane
  - In indoor air samples, n-Heptane was detected in all six locations at concentrations ranging from 0.66 µg/m^3 in sample IA-01 to 1.3 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, n-Heptane was detected in all six locations at concentrations ranging from 0.66 µg/m^3 in sample MP-5 to 35 µg/m^3 in sample MP-2.
  - n-Heptane was detected in the ambient air sample at a concentration of 0.49 µg/m^3.
- Hexane:
  - In indoor air samples, hexane was detected in all six locations at concentrations ranging from 17 µg/m^3 in samples IA-02 and IA-05 to 21 µg/m^3 in sample IA-06.
  - In indoor air samples, hexane was detected in all six locations at concentrations ranging from 4.1 µg/m^3 in sample MP-5 to 480 µg/m^3 in sample MP-2.
  - Hexane was detected in the ambient air sample at a concentration of 0.58 µg/m^3.
- Toluene:
  - In indoor air samples, toluene was detected in all six locations at concentrations ranging from 1 µg/m^3 in sample IA-01 to 8.9 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, toluene was detected in all six locations at concentrations ranging from 1.9 µg/m^3 in sample MP-6 to 3.3 µg/m^3 in sample MP-1.
  - Toluene was detected in the ambient air sample at a concentration of 0.97 µg/m^3.

A summary of the sub-slab, indoor, and outdoor ambient air analytical results is provided in **Table V**. The analytical laboratory package is provided in **Appendix J**. The DUSR and EDD submission confirmation are provided in **Appendix E**.

6.7.3 Conclusion

Site-related COCs identified during the RI included petroleum-related VOCs. Based on the results of the SVI sampling and comparison to the NYSDOH Soil Vapor/Indoor Air Decision Matrices, all results indicate that "No Further Action" is required, with the exception of (i) the IA-2/MP-2 co-located samples, which require "Monitor" based on the concentrations of cyclohexane (Matrix D), 2,2,4-trimethylpentane (Matrix D), and hexane (Matrix E), and (ii) the IA-06/MP-6 co-located samples, which require "Identify source(s) or Resample or Mitigate" based on the indoor air concentration of hexane (Matrix E). The lowest level of the building is currently used as a parking garage, which was in use during the SVI Evaluation. Hexane concentrations ranged from 17 to 21 µg/m^3 in indoor air throughout the garage space and ranged from 4.1 to 480 µg/m^3 in the soil vapor; the source of hexane is most likely vehicle exhaust from the garage space and not soil vapor.

The building has ECs, including an active SSDS and cover system consisting of a 20-mil vapor barrier and concrete slab, and the lowest level is currently only used as a parking garage (no residential occupancy) with enhanced ventilation based on the New York City Mechanical Code from November 2022. In consideration of the existing ECs, current use of the lowest floor as a garage, and that the indoor air concentrations identified during the SVI Evaluation are consistent with exhaust from vehicles, Haley & Aldrich of New York recommends that the SVI Evaluation be considered complete and that another SVI Evaluation be performed during heating season, only after the SVE system and SSDS have been turned off as part of shutdown testing.

7. Conclusions and Recommendations

All ICs/ECs and monitoring compliance requirements were met during the reporting period. The ICs and ECs are effectively protecting the public health and environment.

Monthly and quarterly monitoring of the SVE system indicated the system is working as designed. In general, SVE well flow rates achieved at least 5 to 10 cfm, and SVE monitoring points achieved at least 0.1 IWC. Additionally, BTEX VOC influent concentrations show a decreasing trend since February 2025 and confirm the SVE system is effectively removing VOCs from the subsurface. The SVE system removed a total of approximately 99 pounds of Site COCs and approximately 147 pounds of total VOCs based on analytical data. Influent sample analytical results were also evaluated to determine if carbon treatment of the SVE system emissions is required. The SVE system emission rates were below their respective allowable emission rates. As per 6 NYCRR Subpart 212-2, the SVE system emissions do not require treatment. Haley & Aldrich of New York recommends continuing to operate the SVE system without carbon treatment of the emissions.

Groundwater analytical results from March 2024 to January 2026 revealed that the Site-related contaminants have been below their AWQS in groundwater. PCE, a contaminant not associated with on-site contamination, has been detected in the upgradient well (MW-6) and side gradient well (MW-7) above its AWQS since March 2024. PCE was only detected above its AWQS in the downgradient well (MW-8) in March 2024. Additionally, PCE was not observed in soil or groundwater during the RI, except in MW-4 (similar location as MW-7) at a concentration of 1[illegible] µg/L. PCE concentrations detected in on-site groundwater are most likely from an off-site, upgradient source. With Site-related contaminants below their AWQS in groundwater from March 2024 through January 2026, Haley & Aldrich of New York recommends discontinuing groundwater monitoring and decommissioning MW-6, MW-7, and MW-8.

Biannual monitoring of the SSDS indicates the sub-slab is depressurized and the system is working as designed. Additionally, SVI Evaluation analytical results indicate that "No Further Action" is required regarding SVI, with the exception of hexane. Elevated concentrations within the indoor air sample IA-06 are most likely vehicle exhaust from the garage space and not soil vapor. Soil vapor is not a concern at this time.

In consideration of the existing ECs, Haley & Aldrich of New York recommends that the SSDS and SVE system continue to operate for an additional year. If the quarterly vapor samples associated with the SVE system indicate low, asymptotic influent VOC concentrations, Haley & Aldrich of New York will petition NYSDEC to shut down the SSDS and SVE system and perform an SVI evaluation at least 30 days after the shutdown. If the confirmation SVI Evaluation indicates "No Further Action," Haley & Aldrich of New York will petition NYSDEC to shut down the SVE system, deactivate the SSDS, and remove the EC/ICs from the Site.

ABBREVIATIONS AND NOTES:

µg/m3: micrograms per cubic meter

-: Not Analyzed
J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
- For test methods used, see the laboratory data sheets.

ABBREVIATIONS AND NOTES:

µg/m3: micrograms per cubic meter

-: Not Analyzed
J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
- For test methods used, see the laboratory data sheets.

Notes:

ug/m^3 - micrograms per cubic meter
cfm - cubic feet per minute
lb - pound
VOC - volatile organic compound
HTAC - High Toxicity Air Contaminant

1. Only contaminants with detectable concentrations are shown
2. Allowable Emission Rates are from the New York Codes, Rules and Regulations Part 212-2.1 Table 2 dated February 15, 2022
3. If Allowable Emission Rates are exceeded, then treatment of the emission is required.

Conversion to lb/year: Concentration (ug/m^3) x flow ft^3/min x m^3/(3.28 ft)^3 x 1 g/1,000,000 ug x lb/454 g x 60 min/hr x 24 hr/day x 365 days/year = lb/year
Conversion to lb/hr: Concentration (ug/m^3) x flow ft^3/min x m^3/(3.28 ft)^3 x 1 g/1,000,000 ug x lb/454 g x 60 min/hr = lb/hr

ABBREVIATIONS AND NOTES:

µg/m ^{3} : micrograms per cubic meter

J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
*- **Bold** text indicates detected concentration is in the Low range.*
- Blue highlighted text indicates detected concentration is in the Medium range.
- Orange highlighted text indicates a detected concentration is in the High range.

Description of Institutional Controls

Parcel	Owner	Institutional Control
1714-30	1885 Atlantic Realty LLC	Soil Management Plan Landuse Restriction Ground Water Use Restriction Monitoring Plan Site Management Plan O&M Plan IC/EC Plan

The property may be used for restricted residential, commercial or industrial use.

All ECs must be operated, maintained inspected as specified in this SMP.

The use of groundwater underlying the property is prohibited. Groundwater and other environmental or public health monitoring must be performed.

Data and information pertinent to Site management must be reported.

All future activities that will disturb remaining contaminated material must be conducted in accordance with this SMP.

Monitoring to assess the performance and effectiveness of the remedy.

Operations, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy shall be performed.

Access to the Site must be provided to agents, employees, or other representatives of the State of New York.

Vegetable gardens and farming on the Site are prohibited

The potential for vapor intrusion must be evaluated for any buildings developed and any potential impacts that are identified must be monitored or mitigated.

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

   a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;

   b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES	NO
X	☐

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

   (a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

   (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

   (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

   (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

   (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES	NO
X	☐

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

Attention: Sadique Ahmed

Subject: Post-Remediation Quarterly Progress Report – March 2025
1885 Atlantic Avenue Redevelopment Site
Brooklyn, New York
Brownfield Site #C224347

Dear Mr. Ahmed:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is pleased to submit this report, which documents groundwater monitoring, soil vapor extraction (SVE) system monitoring, and Soil Vapor Intrusion (SVI) Evaluation activities at the 1885 Atlantic Avenue Redevelopment Site ("Site") for the first quarter (Q1) of 2025. 1885 Atlantic Realty LLC (the Volunteer) has remediated a 0.250-acre property known as the 1885 Atlantic Avenue Redevelopment Site, designated under Brownfield Cleanup Program (BCP) Site No. C224347. See Figure 1 for a Site plan.

Purpose

This report summarizes quarterly groundwater monitoring, monthly and quarterly SVE system monitoring, and an SVI Evaluation, which are requirements of the New York State Department of Environmental Conservation (NYSDEC) approved Site Management Plan (SMP) dated September 2024.

An Environmental Easement (EE) package was submitted to NYSDEC and the Kings County Clerk on March 7, 2024. The EE requires compliance with the approved SMP and the Institutional Controls (ICs) placed on the Site. The SMP indicates that upon the completion of the post-remedial sampling and evaluation of the results, a determination will be made if the ICs can be lifted or become permanent. The SMP further indicates that samples will be collected until the EE is terminated in accordance with New York State Environmental Conservation Law (ECL) Article 71, Title 36.

Scope

During monthly monitoring events, SVE system reading collection and a visual inspection were conducted by a qualified person under the supervision of the Remedial Engineer (RE). During quarterly monitoring

events, vapor samples were collected from the SVE system, and groundwater samples were collected from the groundwater monitoring wells to assess the performance of the remedy.

During Q1 2025, an SVI Evaluation was conducted during the heating season under normal operating conditions without interference from construction activities, including interior work (e.g., painting and epoxy coating). Samples were collected from the six sub-slab monitoring points with co-located indoor air samples, along with a corresponding ambient air sample, upon completion of the building envelope.

Monitoring Network

Three monitoring wells were used for post-remediation groundwater monitoring, including one upgradient well (MW-6), one cross-gradient well (MW-7), and one downgradient well (MW-8). Six sub-slab monitoring points were used for sub-slab vapor sampling along with six co-located indoor air samples. The monitoring wells and sub-slab monitoring points/ indoor air sample locations are shown on Figures 2 and 3, respectively.

Groundwater Monitoring

Groundwater monitoring has occurred at the Site since the completion of remediation in December 2023. Groundwater remediation included the injection of alkaline-activated persulfate (AP-pH) into the groundwater through six injection wells to reduce elevated petroleum-based volatile organic compound (VOC) and polycyclic aromatic hydrocarbon (PAH) concentrations in the groundwater. A single injection event occurred from September 26, 2023, to September 29, 2023, during which AP-pH was injected into the groundwater via injection points at a depth interval of 60 to 80 feet (ft) below ground surface (bgs). A total of 16,210 pounds of sodium persulfate, 2,017 gallons of 25 percent sodium hydroxide solution, and 8,864 gallons of potable water were mixed to create a 15 percent activated persulfate solution (AP-pH mixed with municipal water).

The March 2025 groundwater sampling round was performed on March 12, 2025, using low-flow procedures. Samples were collected and analyzed for Target Compound List (TCL) VOCs by U.S. Environmental Protection Agency (USEPA) Method 8260B. Well purging, sampling, sample containment, chain of custody and sample shipping procedures, and laboratory analyses were completed in accordance with the SMP. Chemical analyses were performed by Eurofins Environmental Testing LLC (Eurofins), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Groundwater Results Summary

Results exceeding the groundwater values listed in the Division of Water Technical and Operational Guidance Series 1.1.1, Ambient Water Quality Standards (AWQS), are summarized as follows:

MW-6 (upgradient): One VOC (tetrachloroethene [PCE]) was detected above its AWQS at a concentration of 59 micrograms per liter (µg/L).

MW-7 (cross-gradient): One VOC (PCE) was detected above the AWQS at a concentration of 45 µg/L.

MW-8 (downgradient): No VOCs were detected above the AWQS.

Results for the March 2025 sampling round are provided in Table I and Figure 2. The analytical laboratory report is provided as Appendix A. An electronic data deliverable (EDD) will be submitted as part of the 2026 Periodic Review Report (PRR) due in May 2026, 16 months following issuance of the certificate of completion issued on December 2, 2024.

SVE System Monitoring

Monthly SVE system maintenance and monitoring were conducted in February and March 2025 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting flow, photoionization detector (PID), pressure/vacuum, and temperature readings associated with the SVE wells, SVE/sub-slab depressurization system (SSDS) blower, granular activated carbon drums, and SVE monitoring points. Field forms for each maintenance and monitoring event are included in Appendix B.

Quarterly vapor sampling of the SVE system was conducted in February 2025 and included an SVE/SSDS combined influent sample and an SVE/SSDS effluent sample analyzed for VOCs by USEPA Method TO-15. Chemical analyses were performed by Pace Analytical (Pace), an NYSDOH ELAP-certified laboratory. Analytical results will be included in the 2026 PRR.

March 2025 SVI Evaluation

On March 13, 2025, an SVI Evaluation was conducted in accordance with the NYSDEC-approved SMP, and samples were collected and analyzed for VOCs by USEPA Method TO-15 for soil vapor and indoor/ambient air. Chemical analyses were performed by Eurofins, an NYSDOH ELAP-certified laboratory. As part of the SVI Evaluation, a chemical inventory was conducted. The chemical inventory did not reveal the storage of any chemicals in the garage space. It is noted that during this time, the garage was active and in use by visitors to the building, contractors, potential tenants, and Ownership.

Prior to sampling, vacuum readings were collected, and air was purged from the sub-slab monitoring points by attaching a tube to the monitoring point and attaching the surface end of the tube to an air valve, and then to a vacuum pump. The sub-slab soil vapor samples were first screened for organic vapors using a PID. The indoor air canisters were placed at breathing height (3 to 5 ft above the floor). Vacuum readings at the sub-slab monitoring points before purging are provided in Table II.

March 2025 SVI Evaluation Results

The analytical results of the sub-slab soil vapor and indoor air samples were compared to NYSDOH Soil Vapor/Indoor Air Decision Matrices A through F. A summary of the VOC results is listed below:

- 1,1-Dichloroethene (DCE):
  - 1,1-DCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.

- Carbon tetrachloride:
  - In indoor air samples, carbon tetrachloride was detected in all six locations at concentrations ranging from 0.21 micrograms per cubic meter (µg/m^3) in sample IA-06 to 0.42 µg/m^3 in sample IA-01.
  - In the sub-slab soil vapor samples, carbon tetrachloride was detected in all six locations at concentrations ranging from 0.32 µg/m^3 in sample MP-2 to 0.41 µg/m^3 in sample MP-5.
  - In the ambient air sample, carbon tetrachloride was detected at a concentration of 0.38 µg/m^3 in sample AA-01.

- Cis-1,2-DCE:
  - Cis-1,2-DCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.

- Trichloroethene (TCE):
  - TCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.

- 1,1,1-TCE:
  - 1,1,1-TCE was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.

- PCE:
  - In indoor air samples, PCE was detected in all six locations at concentrations ranging from 0.18 µg/m^3 in samples IA-01, IA-04, IA-05, and IA-06 to 0.22 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, PCE was detected in five of the six locations at concentrations ranging from 0.15 µg/m^3 in sample MP-3 to 0.61 µg/m^3 in sample MP-4.
  - PCE was detected in the ambient air sample at a concentration of 0.17 µg/m^3.

- Methylene chloride:
  - In indoor air samples, methylene chloride was detected in five of the six locations at concentrations ranging from 0.65 µg/m^3 in samples IA-01 and IA-03 to 1.7 µg/m^3 in sample IA-02.

  - In sub-slab soil vapor samples, methylene chloride was detected in five of the six locations at concentrations ranging from 0.67 µg/m^3 in sample MP-5 to 1 µg/m^3 in sample MP-2.
  - Methylene chloride was detected in the ambient air sample at a concentration of 0.88 µg/m^3.

- Vinyl chloride:
  - Vinyl chloride was not detected above laboratory reporting limits in any of the sub-slab soil vapor samples, indoor air samples, or in the ambient air sample.

- Benzene:
  - In indoor air samples, benzene was detected in all six locations at concentrations ranging from 1.1 µg/m^3 in samples IA-01, IA-02, IA-04, and IA-05 to 1.3 µg/m^3 in sample IA-06.
  - In sub-slab soil vapor samples, benzene was detected in all six locations at concentrations ranging from 0.5 µg/m^3 in sample MP-3 to 13 µg/m^3 in sample MP-1.
  - Benzene was detected in the ambient air sample at a concentration of 0.59 µg/m^3.
- Ethylbenzene:
  - In indoor air samples, ethylbenzene was detected in two of the six locations at concentrations ranging from 0.3 µg/m^3 in sample IA-05 to 0.32 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, ethylbenzene was detected in all six locations at concentrations ranging from 0.39 µg/m^3 in sample MP-6 to 13 µg/m^3 in sample MP-1.
  - Ethylbenzene was not detected above laboratory reporting limits in the ambient air sample.

- Naphthalene:
  - In sub-slab soil vapor samples, naphthalene was detected in one of the six locations at a concentration of 5.1 µg/m^3 in sample MP-1.
  - Naphthalene was not detected above laboratory reporting limits in any of the indoor air samples or in the ambient air sample.

- Cyclohexane:
  - In indoor air samples, cyclohexane was detected in all six locations at concentrations ranging from 1.5 µg/m^3 in sample IA-05 to 2.5 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, cyclohexane was detected in all six locations at concentrations ranging from 0.61 µg/m^3 in sample MP-5 to 72 µg/m^3 in sample MP-2.
  - Cyclohexane was not detected above the laboratory reporting limit in the ambient air sample.

- 2,2,4-Trimethylpentane:
  - In indoor air samples, 2,2,4-Trimethylpentane was detected in all six locations at concentrations ranging from 2.5 µg/m^3 in sample IA-05 to 4.9 µg/m^3 in sample IA-06.

  - In sub-slab soil vapor samples, 2,2,4-Trimethylpentane was detected in all six locations at concentrations ranging from 0.96 µg/m^3 in sample MP-5 to 350 µg/m^3 in sample MP-2.
  - 2,2,4-Trimethylpentane was detected in the ambient air sample at a concentration of 0.44 µg/m^3.

- 1,2,4-Trimethylbenzene:
  - In indoor air samples, 1,2,4-Trimethylbenzene was detected in two of the six locations at concentrations ranging from 0.47 µg/m^3 in sample IA-06 to 0.57 µg/m^3 in sample IA-05.
  - In sub-slab soil vapor samples, 1,2,4-Trimethylbenzene was detected in all six locations at concentrations ranging from 0.61 µg/m^3 in sample MP-3 to 8.9 µg/m^3 in sample MP-1.
  - 1,2,4-Trimethylbenzene was not detected above laboratory limits in the ambient air sample.

- 1,3,5-Trimethylbenzene:
  - In sub-slab soil vapor samples, 1,3,5-Trimethylbenzene was detected in three of the six locations at concentrations ranging from 0.3 µg/m^3 in sample MP-5 to 2.7 µg/m^3 in sample MP-1.
  - 1,2,4-Trimethylbenzene was not detected above laboratory limits in any of the indoor air samples or in the ambient air sample.

- o-Xylene:
  - In indoor air samples, o-Xylene was detected in four of the six locations at concentrations ranging from 0.28 µg/m^3 in sample IA-04 to 0.38 µg/m^3 in sample IA-05.
  - In sub-slab soil vapor samples, o-xylene was detected in all six locations at concentrations ranging from 0.57 µg/m^3 in sample MP-2 to 12 µg/m^3 in sample MP-4.
  - o-Xylene was not detected above laboratory reporting limits in the ambient air sample.

- m,p-Xylenes:
  - In indoor air samples, m,p-Xylenes were detected in five of the six locations at concentrations ranging from 0.74 µg/m^3 in sample IA-04 to 1.1 µg/m^3 in sample IA-06.
  - In sub-slab soil vapor samples, m,p-Xylenes were detected in all six locations at concentrations ranging from 1.3 µg/m^3 in sample MP-2 to 34 µg/m^3 in sample MP-4.
  - m,p-Xylenes were detected in the ambient air sample at a concentration of 0.49 µg/m^3.

- n-Heptane
  - In indoor air samples, n-Heptane was detected in all six locations at concentrations ranging from 0.66 µg/m^3 in sample IA-01 to 1.3 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, n-Heptane was detected in all six locations at concentrations ranging from 0.66 µg/m^3 in sample MP-5 to 35 µg/m^3 in sample MP-2.
  - n-Heptane was detected in the ambient air sample at a concentration of 0.49 µg/m^3.

- Hexane:
  - In indoor air samples, hexane was detected in all six locations at concentrations ranging from 17 µg/m^3 in samples IA-02 and IA-05 to 21 µg/m^3 in sample IA-06.
  - In indoor air samples, hexane was detected in all six locations at concentrations ranging from 4.1 µg/m^3 in sample MP-5 to 480 µg/m^3 in sample MP-2.
  - Hexane was detected in the ambient air sample at a concentration of 0.58 µg/m^3.

- Toluene:
  - In indoor air samples, toluene was detected in all six locations at concentrations ranging from 1 µg/m^3 in sample IA-01 to 8.9 µg/m^3 in sample IA-02.
  - In sub-slab soil vapor samples, toluene was detected in all six locations at concentrations ranging from 1.9 µg/m^3 in sample MP-6 to 3.3 µg/m^3 in sample MP-1.
  - Toluene was detected in the ambient air sample at a concentration of 0.97 µg/m^3.

Results for the March 2025 SVI Evaluation are provided in Table III. The analytical laboratory report is provided as Appendix C. An EDD will be submitted as part of the 2026 PRR.

Conclusions

GROUNDWATER

As documented in the NYSDEC-approved Final Engineering Report (FER) dated September 2024, PCE is not considered a Site contaminant as it was not observed during the remedial investigation or used in historical Site operations. Elevated PCE concentrations in the upgradient well (MW-6) and cross-gradient well (MW-7) are attributed to an off-site source. Haley & Aldrich of New York recommends continued quarterly sampling of the three monitoring wells.

SVE SYSTEM

Monthly PID readings and quarterly SVE system vapor samples indicate the system is effectively removing VOC contamination from the subsurface. Haley & Aldrich of New York recommends continued operation and monitoring of the SVE system per the SMP.

SVI EVALUATION

Site-related contaminants of concern identified during the remedial investigation included petroleum-related VOCs. Based on the results of the SVI sampling and comparison to the NYSDOH Soil Vapor/Indoor Air decision matrices, all results indicate that “No Further Action” is required with the exception of the IA-2/MP-2 co-located samples, which require “Monitor” based on the concentrations of cyclohexane (Matrix D), 2,2,4-Tirmethylpentane (Matrix D), and hexane (Matrix E), and the IA-06 sample, which requires “Mitigate” based on the indoor air concentration of hexane (Matrix E). The lowest level of the building is currently used as a parking garage, which was in use during the SVI Evaluation.

The building has Engineering Controls (ECs), including an active SSDS and cover system consisting of a 20-mil vapor barrier and concrete slab, and the lowest level is currently used as a parking garage only (no residential occupancy) with enhanced ventilation based on the New York City Mechanical Code from November 2022. In consideration of the existing ECs, current use of the lowest floor as a garage, and that the indoor air concentrations identified during the SVI Evaluation are consistent with exhaust from vehicles, Haley & Aldrich of New York recommends that the SVI Evaluation be considered complete.

Future Monitoring

Future monitoring events in the second quarter of 2025 will include monthly visits for SVE system monitoring and quarterly visits for groundwater and SVE system sampling.

Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Client: Haley & Aldrich, Inc.
Job ID: 460-322068-1
Project/Site: 1885 Atlantic Avenue, Brooklyn

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	Duplicate RPD exceeds control limits
*	MS or MSD is outside acceptance limits.
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 460-322068-1 Eurofins Edison

Job Narrative
460-322068-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/12/2025 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.9°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 460-1026344 was outside the method criteria for the following analytes: Dichlorodifluoromethane and Ethylene Dibromide. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: 1885 Atlantic Avenue, Brooklyn

Job ID: 460-322068-1

Client Sample ID: MW-08_03122025 — Lab Sample ID: 460-322068-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Tetrachloroethene	1.7		0.40	0.28	ug/L	1		8260D	Total/NA

Client Sample ID: MW-07_03122025 — Lab Sample ID: 460-322068-2

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Client: Haley & Aldrich, Inc.
Project/Site: 1885 Atlantic Avenue

Job ID: 200-77312-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
200-77312-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/14/2025 10:35 AM. Unless otherwise noted below, the samples arrived in good condition.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): MP-1_20250312. The container label listed asset ID 2911, while COC listed 2511. Sample was logged in per container ID.

Client revised sample IDs via email on 3/19/2025 as follows:

Lab ID	Original Sample ID	New Sample ID
200-77312-7	MP-1IA_20250312	IA-01_20250312
200-77312-8	MP-2IA_20250312	IA-02_20250312
200-77312-9	MP-3IA_20250312	IA-03_20250312
200-77312-10	MP-4IA_20250312	IA-04_20250312
200-77312-11	MP-5IA_20250312	IA-05_20250312
200-77312-12	MP-6IA_20250312	IA-06_20250312

Special Instructions on COC requested that laboratory log in samples using sampling Start Dates and Times. Client clarified on 3/25/2025 to use End Dates/Times, as per normal lab procedures for integrated air samples.

Air - GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Haley & Aldrich, Inc.
Project/Site: 1885 Atlantic Avenue

Job ID: 200-77312-1

Laboratory: Eurofins Burlington

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New Jersey	NELAP	VT972	06-30-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	4-Isopropyltoluene
TO-15		Air	Chlorodifluoromethane
TO-15		Air	n-Butane
TO-15		Air	n-Butylbenzene
TO-15		Air	n-Propylbenzene
TO-15		Air	sec-Butylbenzene
TO-15		Air	tert-Butylbenzene

New York	NELAP	10391	03-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	4-Ethyltoluene
TO-15		Air	4-Isopropyltoluene
TO-15		Air	Chlorodifluoromethane
TO-15		Air	Methyl Butyl Ketone (2-Hexanone)
TO-15		Air	n-Butane
TO-15		Air	n-Butylbenzene
TO-15		Air	n-Propylbenzene
TO-15		Air	sec-Butylbenzene
TO-15		Air	tert-Butylbenzene
TO-15		Air	Tetrahydrofuran

200-77312-A-13	34000461	-6.7	N	5010	N/A	N	34000461	

[1] Criteria: Return Pressure should be between -1 and -12 ("Hg) with the exception of grab samples.
Grab samples, or if using 100 or 200mL/minute flow controllers, must be returned at no lower than -12"Hg, but have no other specific criteria.

[2] If return pressure is not within criteria, initiate Non-conformance Memo

[3] Subtact the retrun pressure from the final field pressure reading recorded on the FTDS.

[4] The difference should be less than ± 2.3 ("Hg), if it is not, initiate Non-conformance Memo.

[5] Record the ID of the FC used for sampling if information is provided, otherwise leave blank.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of $100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of $100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is $1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.

Hi Lee Ann,

Thank you for sending this over to us. We need to change the following Lab Sample IDs from MP-#IA_20250312 to just IA-##_YYYYMMDD with the number 01 matching up with MP-01 (So instead of MP-1IA_20250312 to IA-01_20250312 and so on). The following lab IDs that should reflect this change are below.

200-77312-7 (MP-1IA_20250312)
200-77312-8 (MP-2IA_20250312)
200-77312-9 (MP-3IA_20250312)
200-77312-10 (MP-4IA_20250312)
200-77312-11 (MP-5IA_20250312)
200-77312-12 (MP-6IA_20250312)

Let me know if you have any questions

Best,
Nick

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	N/A	Thermal preservation not required.
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

[1] Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

[3] Difference = Final Pressure - Initial Pressure . Acceptance Criteria: (1) The difference must be less than or equal to + 0.25psi. (2) Pressure readings must be at least 24 hours apart.

If time frame was not met, the PM must authorize shipment of canister **PM Authorization** **Date:**

[1] Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

[3] Difference = Final Pressure - Initial Pressure . Acceptance Criteria: (1) The difference must be less than or equal to + 0.25psi. (2) Pressure readings must be at least 24 hours apart.

If time frame was not met, the PM must authorize shipment of canister **PM Authorization** **Date:**

Subject: 1885 Atlantic Avenue Redevelopment Site
Post-Remediation Quarterly Progress Report – June 2025
Brooklyn, New York
Brownfield Site #C224347

Dear Mr. Ahmed:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is pleased to submit this report, which documents groundwater monitoring, soil vapor extraction (SVE) system monitoring, and sub-slab depressurization system (SSDS) monitoring activities at the 1885 Atlantic Avenue Redevelopment Site ("Site") for Q2 2025. 1885 Atlantic Realty LLC (the Volunteer) has remediated a 0.250-acre property known as the 1885 Atlantic Avenue Redevelopment Site, designated under Brownfield Cleanup Program (BCP) Site No. C224347. See **Figure 1** for a Site plan.

Purpose

This report summarizes quarterly groundwater monitoring, monthly and quarterly SVE system monitoring, and biannual SSDS monitoring, which are requirements of the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP) dated September 2024.

An Environmental Easement (EE) package was submitted to NYSDEC and the Kings County Clerk on March 7, 2024. The EE requires compliance with the approved SMP and the Institutional Controls (ICs) placed on the Site. The SMP indicates that upon the completion of the post-remedial sampling and evaluation of the results, a determination will be made if the ICs can be lifted or become permanent. The SMP further indicates that samples will be collected until the EE is terminated in accordance with New York State Environmental Conservation Law (ECL) Article 71, Title 36.

Scope

During monthly monitoring events, SVE system reading collection and a visual inspection were conducted by a qualified person under the supervision of the Remedial Engineer (RE). During quarterly monitoring events, vapor samples were collected from the SVE system, and groundwater samples were collected

from the groundwater monitoring wells to assess the performance of the remedy. During biannual monitoring events, SSDS reading collection and a visual inspection were conducted by a qualified person under the supervision of the RE.

Monitoring Network

Three monitoring wells were used for post-remediation groundwater monitoring, including one upgradient well (MW-6), one cross-gradient well (MW-7), and one downgradient well (MW-8). The monitoring wells are shown on **Figure 2**.

Groundwater Monitoring

Groundwater monitoring has occurred at the Site since the completion of remediation in December 2023. Groundwater remediation included the injection of alkaline-activated persulfate (AP-pH) into the groundwater through six injection wells to reduce elevated petroleum-based volatile organic compound (VOC) and polycyclic aromatic hydrocarbon (PAH) concentrations in the groundwater. A single injection event occurred from September 26, 2023, to September 29, 2023, during which AP-pH was injected into the groundwater via injection points at a depth interval of 60 to 80 feet (ft) below ground surface (bgs). A total of 16,210 pounds of sodium persulfate, 2,017 gallons of 25 percent sodium hydroxide solution, and 8,864 gallons of potable water were mixed to create a 15 percent activated persulfate solution (AP-pH mixed with municipal water).

The Q2 2025 groundwater sampling round was performed on May 1, 2025, using low-flow procedures. Samples were collected and analyzed for Target Compound List (TCL) VOCs by U.S. Environmental Protection Agency (USEPA) Method 8260B. Well purging, sampling, sample containment, chain of custody and sample shipping procedures, and laboratory analyses were completed in accordance with the SMP. Chemical analyses were performed by Eurofins Environmental Testing LLC (Eurofins), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Groundwater Results Summary

Results exceeding the groundwater values listed in the Division of Water Technical and Operational Guidance Series 1.1.1, Ambient Water Quality Standards (AWQS), are summarized as follows:

MW-6 (upgradient): One VOC (tetrachloroethene [PCE]) was detected above its AWQS at a concentration of 42 micrograms per liter (µg/L).

MW-7 (cross-gradient): One VOC (PCE) was detected above the AWQS at a concentration of 44 µg/L.

MW-8 (downgradient): No VOCs were detected above the AWQS.

Results for the May 2025 sampling round are provided in **Table I** and **Figure 2**. The analytical laboratory report is provided as **Appendix A**. An electronic data deliverable (EDD) will be submitted as part of the

2026 Periodic Review Report (PRR) due in May 2026, 16 months following issuance of the certificate of completion issued on December 2, 2024.

SVE System Monitoring

Monthly SVE system maintenance and monitoring were conducted in April, May, and June 2025 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting flow, photoionization detector (PID), pressure/vacuum, and temperature readings associated with the SVE wells, SVE/SSDS blower, granular-activated carbon drums, and SVE monitoring points. Field forms for each maintenance and monitoring event are included in **Appendix B**.

Quarterly vapor sampling of the SVE system was conducted in June 2025 and included an SVE/SSDS combined influent sample and an SVE/SSDS effluent sample analyzed for VOCs by USEPA Method TO-15. Chemical analyses were performed by Pace Analytical (Pace), an NYSDOH ELAP-certified laboratory. Analytical results will be included in the 2026 PRR.

SSDS Monitoring

Biannual SSDS maintenance and monitoring were conducted in April, May, and June 2025 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting vacuum readings associated with the sub-slab monitoring points. Field readings are included in **Table II**.

Conclusions

GROUNDWATER

As documented in the NYSDEC-approved Final Engineering Report (FER) dated September 2024, PCE is not considered a Site contaminant as it was not observed during the remedial investigation or used in historical Site operations. Elevated PCE concentrations in the upgradient well (MW-6) and cross-gradient well (MW-7) are attributed to an off-site source. Haley & Aldrich of New York recommends continued quarterly sampling of the three monitoring wells.

SVE SYSTEM

Monthly PID readings and quarterly SVE system vapor samples indicate the system is effectively removing VOC contamination from the subsurface. Haley & Aldrich of New York recommends continued operation and monitoring of the SVE system per the SMP.

SSDS

Biannual monitoring readings indicate some of the sub-slab monitoring points may be clogged with condensation (i.e., MP-3 and MP-4). However, monitoring points further away from the SVE/SSDS blower indicate sufficient vacuum to depressurize the slab (i.e., MP-2, MP-5, and MP-6) and confirm the SSDS is operating effectively. The SVE system is concurrently treating shallow contamination (i.e., 10 to 20 ft below the slab), which also mitigates potential soil vapor intrusion. Additionally, the cellar level is currently used as a garage space and does not have any occupied space. The SSDS will continue to operate and will not be discontinued until written approval is granted by NYSDEC.

Future Monitoring

Future monitoring events in the third quarter of 2025 will include monthly visits for SVE system monitoring, biannual readings for the SSDS, and quarterly visits for groundwater and SVE system sampling.

Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

Matthew Forshay, P.E.
Assistant Project Manager

Matthew Levy

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Job Narrative
460-325502-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/2/2025 6:50 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.7°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 460-1036114 was outside the method criteria for the following analytes: Vinyl chloride (biased high), 1,2-Dichloroethane, Bromoform and Bromomethane (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
*	Duplicate RPD exceeds control limits
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

QC Association Summary

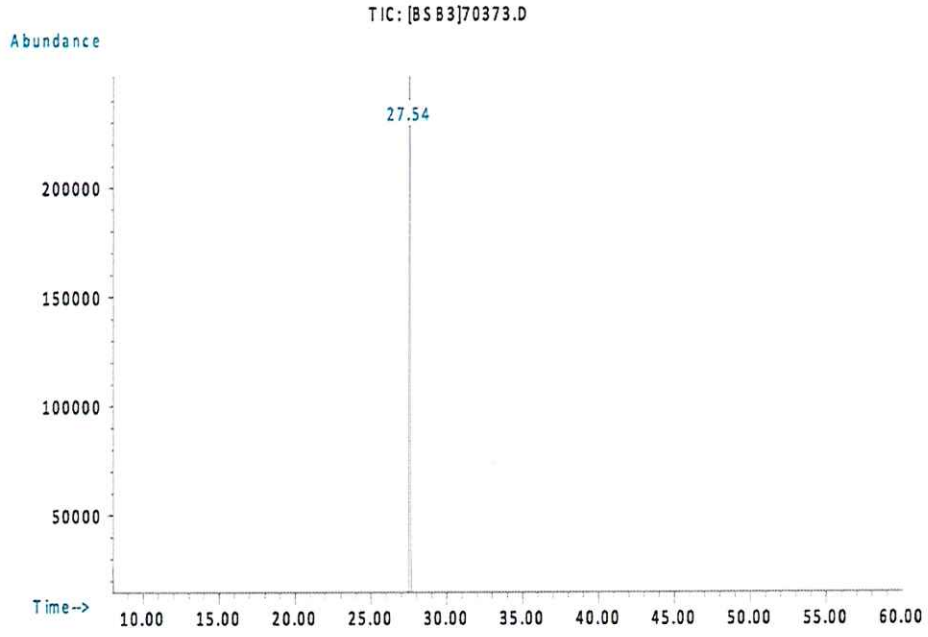
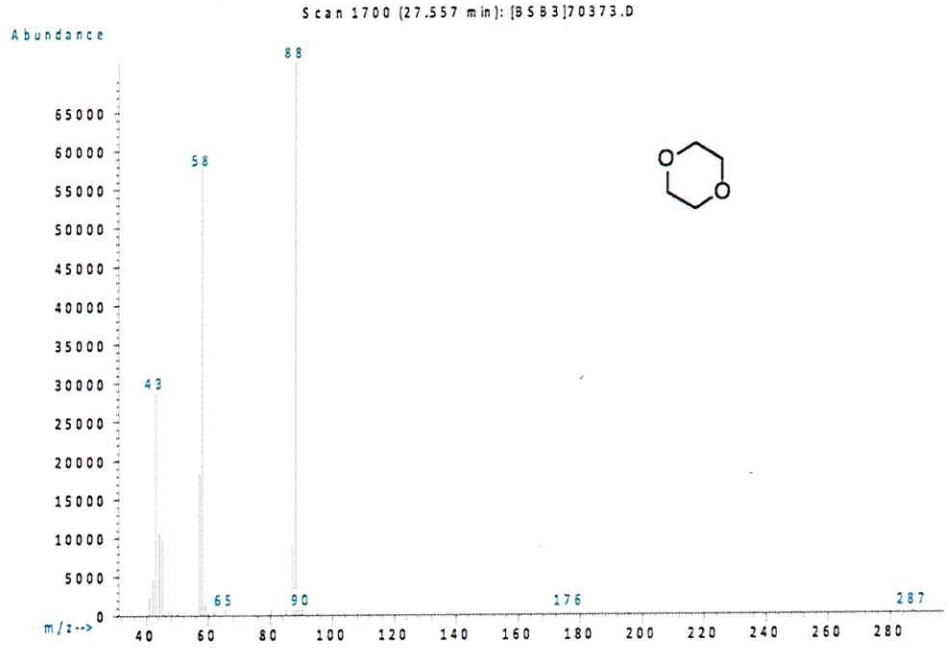
Method GC6MSD-1: Column: Vocol (60m X 0.25mm ID X 1.5µm film thickness). Temp. 1 = 35°C (10min.), Temp. 2 = 200°C (8.75 min.), Rate = 4°C/min., Injector Temp.= 200°C, Detector Temp. = 220°C. Analysis performed by Candice Warren.





- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certifed (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

- **The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.**
- **Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).**
- **Standards are certifed (+/-) 0.5% of the stated value, unless otherwise stated.**
- **All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.**
- **Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).**

Tech Tips:
Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods . Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

- The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
- Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
- Standards are certified (+/-) 0.5% of the stated value, unless otherwise stated.
- All Standards, after opening ampule, should be stored with caps tight and under appropriate laboratory conditions.
- Uncertainty Reference: Taylor, B.N. and Kuyat, C.E., "Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Result," NIST Technical Note 1297, U.S. Government Printing Office, Washington, DC, (1994).

Attention: Sadique Ahmed

Subject: 1885 Atlantic Avenue Redevelopment Site
Post-Remediation Quarterly Progress Report – September 2025
Brooklyn, New York
Brownfield Site #C224347

Dear Mr. Ahmed:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is pleased to submit this report, which documents groundwater monitoring, soil vapor extraction (SVE) system monitoring, and sub-slab depressurization system (SSDS) monitoring activities at the 1885 Atlantic Avenue Redevelopment Site ("Site") for Q3 2025. 1885 Atlantic Realty LLC (the Volunteer) has remediated a 0.250-acre property known as 1885 Atlantic Avenue Redevelopment Site, designated under Brownfield Cleanup Program (BCP) Site No. C224347. See **Figure 1** for a Site plan.

Purpose

This report summarizes quarterly groundwater monitoring and monthly and quarterly SVE system monitoring, which are requirements of the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP) dated September 2024.

An Environmental Easement (EE) package was submitted to NYSDEC and the Kings County Clerk on March 7, 2024. The EE requires compliance with the approved SMP and the Institutional Controls (ICs) placed on the Site. The SMP indicates that upon the completion of the post-remedial sampling and evaluation of the results, a determination will be made if the ICs can be lifted or become permanent. The SMP further indicates that samples will be collected until the EE is terminated in accordance with New York State Environmental Conservation Law (ECL) Article 71, Title 36.

Scope

During monthly monitoring events, SVE system reading collection and a visual inspection were conducted by a qualified person under the supervision of the Remedial Engineer (RE). During quarterly monitoring

events, vapor samples were collected from the SVE system, and groundwater samples were collected from the groundwater monitoring wells to assess the performance of the remedy.

Monitoring Network

Three monitoring wells were used for post-remediation groundwater monitoring, including one upgradient well (MW-6), one cross-gradient well (MW-7), and one downgradient well (MW-8). The monitoring wells are shown on **Figure 2**.

Groundwater Monitoring

Groundwater monitoring has occurred at the Site since the completion of remediation in December 2023. Groundwater remediation included the injection of alkaline-activated persulfate (AP-pH) into the groundwater through six injection wells to reduce elevated petroleum-based volatile organic compound (VOC) and polycyclic aromatic hydrocarbon (PAH) concentrations in the groundwater. A single injection event occurred from September 26, 2023, to September 29, 2023, during which AP-pH was injected into the groundwater via injection points at a depth interval of 60 to 80 feet (ft) below ground surface (bgs). A total of 16,210 pounds of sodium persulfate, 2,017 gallons of 25 percent sodium hydroxide solution, and 8,864 gallons of potable water were mixed to create a 15 percent activated persulfate solution (AP-pH mixed with municipal water).

The Q3 2025 groundwater sampling round was performed on August 15, 2025, using low-flow procedures. Samples were collected and analyzed for Target Compound List (TCL) VOCs by U.S. Environmental Protection Agency (USEPA) Method 8260B. Well purging, sampling, sample containment, chain of custody and sample shipping procedures, and laboratory analyses were completed in accordance with the SMP. Chemical analyses were performed by Eurofins Environmental Testing LLC (Eurofins), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Groundwater Results Summary

Results exceeding the groundwater values listed in the Division of Water Technical and Operational Guidance Series 1.1.1, Ambient Water Quality Standards (AWQS), are summarized as follows:

MW-6 (upgradient): One VOC (tetrachloroethene [PCE]) was detected above its AWQS at a concentration of 67 micrograms per liter (µg/L).

MW-7 (cross-gradient): One VOC (PCE) was detected above the AWQS at a concentration of 99 µg/L.

MW-8 (downgradient): No VOCs were detected above the AWQS.

Results for the August 2025 sampling round are provided in **Table I** and **Figure 2**. The analytical laboratory report is provided as **Appendix A**. An electronic data deliverable (EDD) will be submitted as part of the 2026 Periodic Review Report (PRR) due in May 2026, 16 months following issuance of the certificate of completion issued on December 2, 2024.

SVE System Monitoring

Monthly SVE system maintenance and monitoring were conducted in July, August, and September 2025 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting flow, photoionization detector (PID), pressure/vacuum, and temperature readings associated with the SVE wells, SVE/SSDS blower, granular-activated carbon drums, and SVE monitoring points. Field forms for each maintenance and monitoring event are included in **Appendix B**.

Conclusions

GROUNDWATER

As documented in the NYSDEC-approved Final Engineering Report (FER) dated September 2024, PCE is not considered a Site contaminant as it was not observed during the remedial investigation or used in historical Site operations. Elevated PCE concentrations in the upgradient well (MW-6) and cross-gradient well (MW-7) are attributed to an off-site source. Haley & Aldrich of New York recommends continued quarterly sampling of the three monitoring wells.

SVE SYSTEM

Monthly PID readings and quarterly SVE system vapor samples indicate the system is effectively removing VOC contamination from the subsurface. Haley & Aldrich of New York recommends continued operation and monitoring of the SVE system per the SMP.

Future Monitoring

Future monitoring events in the fourth quarter of 2025 will include monthly visits for SVE system monitoring, biannual readings for the SSDS, and quarterly visits for groundwater and SVE system sampling.

Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

Matthew Forshay, P.E.
Assistant Project Manager

Matthew Levy
Senior Project Manager

Vinyl chloride	2	ND (1)	ND (1)	ND (1)	ND (1)
Xylene (Total)	5	ND (2)	ND (2)	ND (2)	ND (2)

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

NA: Not Applicable

ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.

- Water analytical results are compared to the New York TOGS 111 Ambient Water Quality Standards.

- Bold indicates an exceedance of AWQS criteria.

August 2025 Laboratory Report

eurofins | Environment Testing

ANALYTICAL REPORT

PREPARED FOR

Attn: Matthew Levy
Haley & Aldrich, Inc.
213 West 35th Street, 7th Floor
New York, New York 10001

Generated 8/22/2025 11:06:58 AM

JOB DESCRIPTION

1885 Atlantic Avenue, Brooklyn

JOB NUMBER

460-332933-1

Eurofins Edison
777 New Durham Road
Edison NJ 08817

See page two for job notes and contact information.

my EOL

Eurofins Edison

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Authorization

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
*	Duplicate RPD exceeds control limits
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 460-332933-1 Eurofins Edison

Job Narrative
460-332933-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 8/15/2025 7:10 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 460-1056703 was outside the method criteria for Bromoform (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 460-1056801 was outside the method criteria for the following analytes: Vinyl chloride, Chloromethane and Dichlorodifluoromethane (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: 1885 Atlantic Avenue, Brooklyn

Job ID: 460-332933-1

Client Sample ID: MW-6_20250815 — Lab Sample ID: 460-332933-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Chloroform	0.78	J	1.0	0.33	ug/L	1		8260D	Total/NA

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Attention: Sadique Ahmed

Subject: 1885 Atlantic Avenue Redevelopment Site
Post-Remediation Quarterly Progress Report – December 2025
Brooklyn, New York
Brownfield Site #C224347

Dear Mr. Ahmed:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is pleased to submit this report, which documents groundwater monitoring, soil vapor extraction (SVE) system monitoring, and sub-slab depressurization system (SSDS) monitoring activities at the 1885 Atlantic Avenue Redevelopment Site ("Site") for Q4 2025. 1885 Atlantic Realty LLC (the Volunteer) has remediated a 0.250-acre property known as the 1885 Atlantic Avenue Redevelopment Site, designated under Brownfield Cleanup Program (BCP) Site No. C224347. See **Figure 1** for a Site plan.

Purpose

This report summarizes quarterly groundwater monitoring and monthly and quarterly SVE system monitoring, and biannual SSDS monitoring, which are requirements of the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP) dated September 2024.

An Environmental Easement (EE) package was submitted to NYSDEC and the Kings County Clerk on March 7, 2024. The EE requires compliance with the approved SMP and the Institutional Controls (ICs) placed on the Site. The SMP indicates that upon the completion of the post-remedial sampling and evaluation of the results, a determination will be made if the ICs can be lifted or become permanent. The SMP further indicates that samples will be collected until the EE is terminated in accordance with New York State Environmental Conservation Law (ECL) Article 71, Title 36.

Scope

During monthly monitoring events, SVE system reading collection and a visual inspection were conducted by a qualified person under the supervision of the Remedial Engineer (RE). During quarterly monitoring events, vapor samples were collected from the SVE system, and groundwater samples were collected from the groundwater monitoring wells to assess the performance of the remedy. During biannual

monitoring events, SSDS reading collection and a visual inspection were conducted by a qualified person under the supervision of the RE.

Monitoring Network

Three monitoring wells were used for post-remediation groundwater monitoring, including one upgradient well (MW-6), one cross-gradient well (MW-7), and one downgradient well (MW-8). The monitoring wells are shown on **Figure 2**.

Groundwater Monitoring

Groundwater monitoring has occurred at the Site since the completion of remediation in December 2023. Groundwater remediation included the injection of alkaline-activated persulfate (AP-pH) into the groundwater through six injection wells to reduce elevated petroleum-based volatile organic compound (VOC) and polycyclic aromatic hydrocarbon (PAH) concentrations in the groundwater. A single injection event occurred from September 26, 2023, to September 29, 2023, during which AP-pH was injected into the groundwater via injection points at a depth interval of 60 to 80 feet (ft) below ground surface (bgs). A total of 16,210 pounds of sodium persulfate, 2,017 gallons of 25 percent sodium hydroxide solution, and 8,864 gallons of potable water were mixed to create a 15 percent activated persulfate solution (AP-pH mixed with municipal water).

The Q4 2025 groundwater sampling round was performed on December 11, 2025, using low-flow procedures. Samples were collected and analyzed for Target Compound List (TCL) VOCs by U.S. Environmental Protection Agency (USEPA) Method 8260B. Well purging, sampling, sample containment, chain of custody and sample shipping procedures, and laboratory analyses were completed in accordance with the SMP. Chemical analyses were performed by Eurofins Environmental Testing LLC (Eurofins), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Groundwater Results Summary

Results exceeding the groundwater values listed in the Division of Water Technical and Operational Guidance Series 1.1.1, Ambient Water Quality Standards (AWQS), are summarized as follows:

MW-6 (upgradient): One VOC (tetrachloroethene [PCE]) was detected above its AWQS at a concentration of 76 micrograms per liter (µg/L).

MW-7 (cross-gradient): One VOC (PCE) was detected above the AWQS at a concentration of 95 µg/L.

MW-8 (downgradient): No VOCs were detected above the AWQS.

Results for the December 2025 sampling round are provided in **Table I** and **Figure 2**. The analytical laboratory report is provided as **Appendix A**. An electronic data deliverable (EDD) will be submitted as

part of the 2026 Periodic Review Report (PRR) due in May 2026, 16 months following issuance of the certificate of completion issued on December 2, 2024.

SVE System Monitoring

Monthly SVE system maintenance and monitoring were conducted in October, November, and December 2025 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting flow, photoionization detector (PID), pressure/vacuum, and temperature readings associated with the SVE wells, SVE/SSDS blower, granular-activated carbon drums, and SVE monitoring points. Field forms for each maintenance and monitoring event are included in **Appendix B**.

Quarterly vapor sampling of the SVE system was conducted in October and December 2025 and included an SVE/SSDS combined influent sample and an SVE/SSDS effluent sample analyzed for VOCs by USEPA Method TO-15. Chemical analyses were performed by Pace Analytical (Pace), an NYSDOH ELAP-certified laboratory. Analytical results will be included in the 2026 PRR.

SSDS Monitoring

Biannual SSDS maintenance and monitoring were conducted in November 2025 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting vacuum readings associated with the sub-slab monitoring points. Field readings are included in **Table II**.

Conclusions

GROUNDWATER

As documented in the NYSDEC-approved Final Engineering Report (FER) dated September 2024, PCE is not considered a Site contaminant as it was not observed during the remedial investigation or used in historical Site operations. Elevated PCE concentrations in the upgradient well (MW-6) and cross-gradient well (MW-7) are attributed to an off-site source. Haley & Aldrich of New York recommends continued quarterly sampling of the three monitoring wells.

SVE SYSTEM

Monthly PID readings and quarterly SVE system vapor samples indicate the system is effectively removing VOC contamination from the subsurface. Haley & Aldrich of New York recommends continued operation and monitoring of the SVE system per the SMP.

SSDS

Biannual monitoring readings indicate the SSDS is operating effectively. The SVE system is concurrently treating shallow contamination (i.e., 10 to 20 ft below the slab), which also mitigates potential soil vapor

intrusion. Additionally, the cellar level is currently used as a garage space and does not have any occupied space. The SSDS will continue to operate and will not be discontinued until written approval is granted by NYSDEC.

Future Monitoring

Future monitoring events in the first quarter of 2026 will include monthly visits for SVE system monitoring, biannual readings for the SSDS, and quarterly visits for groundwater and SVE system sampling.

Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

Trichlorofluoromethane (CFC-11)	5	ND (1)	ND (1)	ND (1)	ND (1)
Trifluorotrichloroethane (Freon 113)	5	ND (1)	ND (1)	ND (1)	ND (1)
Vinyl chloride	2	ND (1)	ND (1)	ND (1)	ND (1)
Xylene (Total)	5	ND (2)	ND (2)	ND (2)	ND (2)

ABBREVIATIONS AND NOTES:

µg/L: micrograms per liter

-: Not Analyzed

J: Value is estimated.

NA: Not Applicable

ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.

- Water analytical results are compared to the New York TOGS 111 Ambient Water Quality Standards.

- Bold indicates an exceedance of AWQS criteria.

Eurofins Edison

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	MS or MSD is outside acceptance limits.
*	Duplicate RPD exceeds control limits
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-341362-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 12/11/2025 7:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C.

Receipt Exceptions
Per laboratory policy, the Trip Blank date/time was added to reflect the date/time of the latest sampling event.

TB-1 Blank (460-341362-6)

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 460-1080639 was outside the method criteria for Dichlorodifluoromethane (biased low). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Attention: Paige Shovelton

Subject: Post-Remediation Quarterly Progress Report – Q1 2026
1885 Atlantic Avenue Redevelopment Site
Brooklyn, New York
Brownfield Site #C224347

Dear Ms. Shovelton:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is pleased to submit this Post-Remediation Quarterly Progress Report, which documents groundwater monitoring, soil vapor extraction (SVE) system monitoring, and sub-slab depressurization system (SSDS) monitoring activities at the 1885 Atlantic Avenue Redevelopment Site ("Site") for Q1 2026. 1885 Atlantic Realty LLC (the Volunteer) has remediated a 0.250-acre property known as the 1885 Atlantic Avenue Redevelopment Site, designated under Brownfield Cleanup Program (BCP) Site No. C224347. See **Figure 1** for a Site plan.

Purpose

This report summarizes quarterly groundwater monitoring and monthly and quarterly SVE system monitoring, and biannual SSDS monitoring, which are requirements of the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP) dated September 2024.

An Environmental Easement (EE) package was submitted to NYSDEC and the Kings County Clerk on March 7, 2024. The EE requires compliance with the approved SMP and the Institutional Controls (ICs) placed on the Site. The SMP indicates that upon the completion of the post-remedial sampling and evaluation of the results, a determination will be made if the ICs can be lifted or become permanent. The SMP further indicates that samples will be collected until the EE is terminated in accordance with New York State Environmental Conservation Law (ECL) Article 71, Title 36.

Scope

During monthly monitoring events, SVE system reading collection and a visual inspection were conducted by a qualified person under the supervision of the Remedial Engineer (RE). During quarterly

monitoring events, vapor samples were collected from the SVE system, and groundwater samples were collected from the groundwater monitoring wells to assess the performance of the remedy. During biannual monitoring events, SSDS reading collection and a visual inspection were conducted by a qualified person under the supervision of the RE.

Monitoring Network

Three monitoring wells were used for post-remediation groundwater monitoring, including one upgradient well (MW-6), one cross-gradient well (MW-7), and one downgradient well (MW-8). The monitoring wells are shown on **Figure 2**.

Groundwater Monitoring

Groundwater monitoring has occurred at the Site since the completion of remediation in December 2023. Groundwater remediation included the injection of alkaline-activated persulfate (AP-pH) into the groundwater through six injection wells to reduce elevated petroleum-based volatile organic compound (VOC) and polycyclic aromatic hydrocarbon (PAH) concentrations in the groundwater. A single injection event occurred from September 26, 2023, to September 29, 2023, during which AP-pH was injected into the groundwater via injection points at a depth interval of 60 to 80 feet (ft) below ground surface (bgs). A total of 16,210 pounds of sodium persulfate, 2,017 gallons of 25 percent sodium hydroxide solution, and 8,864 gallons of potable water were mixed to create a 15 percent activated persulfate solution (AP-pH mixed with municipal water).

The Q1 2026 groundwater sampling round was performed on January 28, 2026, using low-flow procedures. Samples were collected and analyzed for Target Compound List (TCL) VOCs by U.S. Environmental Protection Agency (USEPA) Method 8260B. Well purging, sampling, sample containment, chain of custody and sample shipping procedures, and laboratory analyses were completed in accordance with the SMP. Chemical analyses were performed by Eurofins Environmental Testing LLC (Eurofins), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory.

Groundwater Results Summary

Results exceeding the groundwater values listed in the Division of Water Technical and Operational Guidance Series 1.1.1, Ambient Water Quality Standards (AWQS), are summarized as follows:

MW-6 (upgradient): One VOC (tetrachloroethene [PCE]) was detected above its AWQS at a concentration of 95 micrograms per liter (µg/L).

MW-7 (cross-gradient): One VOC (PCE) was detected above the AWQS at a concentration of 91 µg/L.

MW-8 (downgradient): No VOCs were detected above the AWQS.

Results for the January 2026 sampling round are provided in **Table I** and **Figure 2**. The analytical laboratory report is provided as **Appendix A**. An electronic data deliverable (EDD) will be submitted as part of the 2026 Periodic Review Report (PRR) due in May 2026, 16 months following issuance of the certificate of completion issued on December 2, 2024.

SVE System Monitoring

Monthly SVE system maintenance and monitoring were conducted in January, February, and March 2026 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting flow, photoionization detector (PID), pressure/vacuum, and temperature readings associated with the SVE wells, SVE/SSDS blower, granular-activated carbon drums, and SVE monitoring points. Field forms for each maintenance and monitoring event are included in **Appendix B**.

Quarterly vapor sampling of the SVE system was conducted in February 2026 and included an SVE/SSDS combined influent sample and an SVE/SSDS effluent sample analyzed for VOCs by USEPA Method TO-15. Chemical analyses were performed by Pace Analytical (Pace), an NYSDOH ELAP-certified laboratory. Analytical results will be included in the 2026 PRR.

SSDS Monitoring

Biannual SSDS maintenance and monitoring were conducted in January 2026 in accordance with the NYSDEC-approved SMP. Maintenance and monitoring activities included a visual inspection of system components and collecting vacuum readings associated with the sub-slab monitoring points. Field readings are included in **Table II**.

Conclusions

GROUNDWATER

As documented in the NYSDEC-approved Final Engineering Report (FER) dated September 2024, PCE is not considered a Site contaminant as it was not observed during the remedial investigation or used in historical Site operations. Elevated PCE concentrations in the upgradient well (MW-6) and cross-gradient well (MW-7) are attributed to an off-Site source. Haley & Aldrich of New York recommends discontinuing quarterly sampling of the three monitoring wells. A detailed discussion of the quarterly groundwater results will be included in the 2026 PRR.

SVE SYSTEM

Monthly PID readings and quarterly SVE system vapor samples indicate the system is effectively removing VOC contamination from the subsurface. Haley & Aldrich of New York recommends continued operation and monitoring of the SVE system per the SMP.

SSDS

Biannual monitoring readings indicate the SSDS is operating effectively. The SVE system is concurrently treating shallow contamination (i.e., 10 to 20 ft below the slab), which also mitigates potential soil vapor intrusion. Additionally, the cellar level is currently used as a garage space and does not have any occupied space. The SSDS will continue to operate and will not be discontinued until written approval is granted by NYSDEC.

Future Monitoring

Future monitoring events in the second quarter of 2026 will include monthly visits for SVE system monitoring, biannual readings for the SSDS, and quarterly visits for SVE system sampling. A quarterly visit for groundwater sampling will also be conducted unless written approval from NYSDEC to discontinue groundwater sampling is received.

Please do not hesitate to call if you have any questions or comments.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP

Matthew Forshay, P.E.
Assistant Project Manager

James M. Bellew
Principal

ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.

- Water analytical results are compared to the New York TOGS 111 Ambient Water Quality Standards.

- Grey shading indicates an exceedance of AWQS criteria.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Authorization

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
*	MS or MSD is outside acceptance limits.
J	Indicates an estimated value.
U	Analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
460-344099-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 1/30/2026 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.6°C.

Receipt Exceptions
The container label for the following sample(s) did not match the information listed on the Chain-of-Custody (COC): The FB vials have two different times recorded, neither of which match the COC. The vials have sample times of 1135 & 1140. Logged per COC.

GC/MS VOA
Method 8260D: Target analytes were detected in the TB. There was no written field label on the container: TB-01_20260128 (460-344099-6)

Method 8260D: The continuing calibration verification (CCV) analyzed in batch 460-1088584 was outside the method criteria for the following analytes: 2-Hexanone (biased low), Dichlorodifluoromethane, 1,1,2-Trichloro-1,2,2-trifluoroethane and Trichlorofluoromethane (biased high). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 460-1088584 recovered outside control limits for the following analytes: 2-Hexanone (biased low) and Dichlorodifluoromethane (biased high). These analytes were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Haley & Aldrich Inc
Project/Site: 1885 Atlantic Avenue, Brooklyn

Job ID: 460-344099-1
