# FACT SHEET

## Brownfield Cleanup Program

2864 Atlantic Avenue  
Redevelopment  
2864 Atlantic Avenue  
Brooklyn, NY 11207

**December 2023**

**SITE No. C224349**  
**NYSDEC REGION 2**

## Cleanup Action Completed at Brownfield Site

Action has been completed to address the contamination related to the 2864 Atlantic Avenue Redevelopment site ("site") located at 2864 Atlantic Avenue, Brooklyn, New York, under New York State's Brownfield Cleanup Program (BCP). Please see the map for the site location.

Cleanup activities were performed by 2864 Atlantic Realty LLC ("applicant") with oversight provided by the New York State Department of Environmental Conservation (NYSDEC). The applicant has submitted a draft Final Engineering Report (FER) for NYSDEC review which states that cleanup requirements have been or will be achieved to fully protect public health and the environment for the proposed site use.

- Access project documents online through the DECinfo Locator:  
<https://www.dec.ny.gov/data/DecDocs/C224349/>.
- The documents also are available at the location(s) identified at left under "Where to Find Information."

**Highlights of the Site Cleanup:** The following activities have been or will shortly be completed to achieve the remedial action objectives:

- Removal and decommissioning of five Underground Storage Tanks;
- Excavation and off-site disposal of approximately 70 cubic yards of hazardous fill material and approximately 6,300 cubic yards of contaminated fill material exceeding the Unrestricted Use Soil Cleanup Objectives, the site-specific cleanup criteria.
- Importation of clean material to backfill the excavation.
- Collection and analysis of endpoint soil samples to confirm that standards were achieved.
- In-Situ (in-place) Chemical Oxidation treatment of residual volatile organic compounds in groundwater via injections of Sodium Persulfate.
- Installation of monitoring wells for post-injection groundwater monitoring;
- If the remedial goals for groundwater are achieved within five years of the date of the BCP Certificate of Completion, the site will have achieved a Track 1 cleanup. If these goals are not achieved within five years, the Certificate shall be modified to a Track 2 Residential Use cleanup.

# BROWNFIELD CLEANUP PROGRAM

- Performance of a soil vapor intrusion evaluation of the new building basement. The evaluation will include a provision for implementing actions recommended to address exposure related to soil vapor intrusion;
- Implementation of a Site Management Plan (SMP) for long-term management of residual contamination as required by the Environmental Easement, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting;
- Recording of an Environmental Easement to prevent future exposure to any contamination remaining at the site and to ensure implementation of the SMP.

**Next Steps:** When NYSDEC approves the FER, it will be made available to the public (see "Where to Find Information"). NYSDEC then will issue a Certificate of Completion (COC) that will be announced in a fact sheet. The applicant would be able to redevelop the site after receiving a COC. In addition, the applicant will be eligible for tax credits to offset a portion of the costs of performing cleanup activities and for redevelopment of the site.

**Site Description:** The site is located at 2864 Atlantic Avenue in the East New York neighborhood of Kings County, New York and is identified as Block 3965, Lot 11 on the New York City Tax Map. The site is approximately 18,100 square feet (0.415 acres) and is bound to the north by Atlantic Avenue followed by multiple mixed use low-rise residential buildings, to the east by Jerome Street followed by low-rise residential buildings, to the south by low-rise residential buildings, and to the west by Barbey Street followed by a vacant 3-story industrial use buildings. The site was partially developed in the late 1800s with two stores and one residential building. By the early 1950s, the site was partially redeveloped with a garage and two gasoline tanks. By 1965, the entire site was occupied by a gas station that was developed with an overhead canopy and a one-story office building. The site remained unchanged since the mid-1960s and actively operated as a gas station until February 2022 when all on-site structures were demolished.

The site is currently being developed for mixed-use (residential and commercial) purposes.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the site ID, C224349) at:

<https://www.dec.ny.gov/cfm/xtapps/dereexternal/index.cfm?pageid=3>

**Brownfield Cleanup Program:** New York's Brownfield Cleanup Program (BCP) encourages the voluntary cleanup of contaminated properties known as "brownfields" so that they can be reused and redeveloped. These uses may include recreation, housing, business or other uses. A brownfield site is any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria or guidance adopted by NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations.

For more information about the BCP, visit:
