Scope of Work:

- RIWP implementation: IEEG acknowledged the NYSDEC's comments regarding the RIWP on 11/2/22, and on 11/3/22 the NYSDEC acknowledged satisfaction of the requirements, and that the RI work could be implemented.

Site Activities:

- IEEG Tailgate Health and Safety meeting with drilling subcontractor; and
- PG augered down within the deep cluster well in the GW-8 location, as the day before 15' of material collapsed within the well. The well was augered to 93'. PG began to set the well. The deep cluster well will be identified as GW-8-93'. A 5' screen was placed from the 87-92' interval and a 1' sump with a cap was installed from 92-93'.

Samples Collected:

- No Samples collected

Community Air Monitoring Program (CAMP)

Prestart Conditions – PID = __0.0__ ppm, Dust = __0.121__ mg/m³ @ 07:31

High Conditions – PID = __0.0__ ppm, Dust = _0.121 mg/m³ @ 07:31

*The initial elevated reading is due to a calibration spike. No particulate exceedances were noted throughout the day on-Site.

Problem Encountered:

- When setting the deep cluster well, GW-8-93', installing the sand pack created an upwelling of water from within the well, sand was used to create a damn in order to contain the liquid. Liquid was then collected in buckets and placed within labeled 55-gallon steel drums.
- PG environmental deconned augers which generated runoff, as soon as water was noted exiting the Site, measures were immediately taken to spot the flow of water. A sand damn was made, sand was also

dispersed along the concrete where runoff was present and swept in order to gather the sand and drum on-Site. Drillers have been instructed to decon equipment in a containerized manner going forward so that the water can be moved into drums and no IDW leaves the Site.

Planned Future Activities:

- A *Supplemental Remedial Investigation Work Plan* is in the process of being prepared which will delineate the migration of off-Site MGP waste identified on-Site. IEEG will be implementing this work following the NYSDE's approval of the plan. When delineation work commences, the cluster wells installed at GW-2 and GW-8 will be sampled if required.
