QA/QC Review of Method 8260D Volatiles Data
for Pace Analytical Services, SDG Number: L2541710

15 Soil Samples and 1 Trip Blank
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 for VOA110 on 07-01-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 1,1,2-trichloroethane was below the method minimum, but not below 0.010 on 07-14-25 (V10250714B01). The RRF for 1,1,2-trichloroethane was below the method minimum, but not below 0.010 on 07-15-25 (V10250715A01). The %Ds for 15 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-14-25 (V10250714B01). The %Ds for 14 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-15-25 (V10250715A01). The %Ds for 6 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-15-25 (V23250715A01). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for 15 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-14-25 (V10250714B01). The %Ds for 14 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

15-25 (V10250715A01). The %Ds for 6 compounds (highlighted yellow on attached Form 7) and 1,4-dioxane were above the allowable maximum (20%) on 07-15-25 (V23250715A01). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank WG2090855-5BLANK contained a trace of bromomethane (0.66 ug/kg). Method blank WG2090856-5BLANK contained a trace of bromomethane (33 ug/kg). Positive results for bromomethane and styrene that are less than 5 times the field blank level should be reported as not detected (U) in associated samples.

Surrogate Recovery: One of four surrogate recoveries for samples 25SB-1 (9-11), 25SB-6 (0-2), and 25SB-6 (11-12) were above control limits. Positive results should be considered estimated, biased high (J+) in the samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for 5 compounds (highlighted yellow on attached Form 3) were above the allowable maximum; 1 or 2 percent recoveries (%Rs) for 5 compounds (highlighted yellow on attached Form 3) were above QC limits; and 1 or 2 %Rs for 20 compounds (highlighted yellow on attached Form 3) were below QC limits, but not below 10% for soil MS/MSD sample 25SB-5 (0-2). The "not detected" results for the 20 compounds with %Rs that are below QC limits should be considered estimated (UJ) in sample 25SB-5 (0-2).

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 1 of 2 percent recoveries (%Rs) for methyl cyclohexane was above QC limits for soil samples WG2090855-3/4 and WG2090856-3/4. Positive results for methyl cyclohexane should be considered estimated, biased high (J+) in associated soil samples.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for 2-hexanone were below QC limits, but not below 10% for soil samples WG2090945-3/4 and WG2090947-3/4. Positive results for 2-hexanone should be considered estimated, biased low (J-) and "not detected" results estimated (J) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

96-12-8	1,2-Dibromo-3-chloropropane	ND	150	50.	U
98-82-8	Isopropylbenzene	ND	50	5.4	U
87-61-6	1,2,3-Trichlorobenzene	ND	100	16.	U
120-82-1	1,2,4-Trichlorobenzene	ND	100	14.	U
79-20-9	Methyl Acetate	ND	200	48.	U
110-82-7	Cyclohexane	ND	500	27.	U
123-91-1	1,4-Dioxane	ND	4000	1800	U

Results Summary
Form 1
Volatile Organics by EPA 5035

Client	: Vektor Consultants, LLC	Lab Number	: L2541710
Project Name	: 601-607 UNION ST	Project Number	: 25030019
Lab ID	: WG2090856-5	Date Collected	: NA
Client ID	: WG2090856-5BLANK	Date Received	: NA
Sample Location	:	Date Analyzed	: 07/14/25 13:33
Sample Matrix	: SOIL	Dilution Factor	: 1
Analytical Method	: 1,8260D	Analyst	: AJK
Lab File ID	: V10250714B05	Instrument ID	: VOA110
Sample Amount	: 15.0 g	GC Column	: RTX-VMS
Level	: HIGH	%Solids	: NA
Extract Volume (MeOH)	: 15 ml	Injection Volume	: N/A

		ug/Kg			
CAS NO.	Parameter	Results	RL	MDL	Qualifier
76-13-1	Freon-113	ND	200	35.	U
108-87-2	Methyl cyclohexane	ND	200	30.	U

Data for Pace Analytical Services
SDG Number: L2541710

15 Soil Samples
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for MORK on 11-10-24. The average RRF for 2,6-dinitrotoluene was below the method minimums, but not below 0.010 for GCMS5 on 05-18-25. The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for MINDY on 05-24-25. The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for SV103 on 06-03-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-07-25 (WG2087548-3). The RRF for 2-chloronaphthalene was below the method minimum, but not below 0.010 on 07-08-25 (WG2088101-3). The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-10-25 (WG2089015-3). The RRF for 2-chloronaphthalene was below the method minimum, but not below 0.010 on 07-10-25 (WG2089069-3). The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-13-25 (WG2090054-3). The %Ds for 5 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-07-25 (WG2087548-3). The %Ds for 5 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-08-25 (WG2088101-3). The %Ds for 5 compounds (highlighted yellow on attached Form 7) were above the method maximum on

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

07-10-25 (WG2089015-3). The %Ds for 4 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-10-25 (WG2089069-3). The %Ds for 4 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-12-25 (WG2089838-3). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-13-25 (WG2090054-3). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 5 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-07-25 (WG2087548-3). The %Ds for 5 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-08-25 (WG2088101-3). The %Ds for benzaldehyde and caprolactam were above the allowable maximum (20%) on 07-08-25 (WG2088101-4). The %D for atrazine was above the allowable maximum (20%) on 07-08-25 (WG2088101-5). The %Ds for 5 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-10-25 (WG2089015-3). The %Ds for caprolactam and 1,2,4,5-tetrachlorobenzene were above the allowable maximum (20%) on 07-10-25 (WG2089015-4). The %Ds for 4 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-08-25 (WG2089069-3). The %D for 1,2,4,5-tetrachlorobenzene was above the allowable maximum (20%) on 07-10-24 (WG2089069-4). The %Ds for 4 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-12-25 (WG2089838-3). The %D for caprolactam was above the allowable maximum (20%) on 07-12-25 (WG2089838-4). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-13-25 (WG2090054-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: One of three base/neutral surrogate recoveries for samples 25SB-6 (0-2), 25SB-6 (7-9), and 25SB-6 (11-12) was above control limits. No action is taken on one surrogate recovery per fraction outside control limits, provided no recovery is less than 10%.

Two of three acid extractable surrogate recoveries for samples 25SB-2 (0-2), 25SB-2 (0-2)RE, and 25SB-4 (0-2)RE were below control limits and below 10%. Two of three acid extractable surrogate recoveries for sample 25SB-4 (0-2) were below control limits and one below 10%. Positive results for acid extractable compounds should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in these samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximum; 2 of 2 percent recoveries (%Rs) for 2,3,4,6-tetrachlorophenol were below QC limits, but not below 10%; and 2 of 2 %Rs for hexachlorocyclopentadiene, 2,4-dinitrophenol, 4,6-dinitro-o-cresol, and pentachlorophenol were below QC limits and below 10% for soil MS/MSD sample 25SB-5 (0-2). The "not detected" result for 2,3,4,6-tetrachlorophenol should be considered estimated (UJ), and the "not detected' results for hexachlorocyclopentadiene, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and pentachlorophenol rejected, unusable (R) in sample 25SB-5 (0-2).

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum and the percent recoveries (%Rs) were within QC limits for soil samples WG2089676-2/3 and WG2089813-2/3.

The RPDs for target compounds were below the allowable maximum, but 1 of 2 %Rs for hexachlorocyclopentadiene was below QC limits, but not below 10% for soil samples WG2087146-2/3. Positive results for hexachlorocyclopentadiene should be considered estimated, biased low (J-) and "not detected" results estimated (J) in associated soil samples.

Compound ID: Checked compound and surrogate results were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

The results for acenaphthene, fluoranthene, phenanthrene, and pyrene in sample 25SB-6 (11-12) were quantitated by extrapolating data above the highest calibration standard and marked 'E' by the laboratory. The sample was diluted by the laboratory and re-analyzed; therefore, the results that are flagged as 'E' in the undiluted sample should be considered estimated (J). The use of the diluted results for these compounds is recommended for the sample. It is recommended that the undiluted results be used for all other compounds.

QA/QC Review of 8081B Pesticide
Data for Pace Analytical Services
SDG Number: L2541710

15 Soil Samples
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target pesticides as not detected.

Surrogate Recovery: One of two surrogate recoveries for samples 25SB-1 (9-11), 25SB-2 (0-2), 25SB-3 (0-2), and 25SB-4 (7-9) was above QC limits on one column. One of two surrogate recoveries for sample 25SB-6 (0-2) was below QC limits, but not below 10%. No action is taken on one surrogate recovery outside QC limits on one column, provided the recovery is not less than 10%.

One of two surrogate recoveries for samples 25SB-1 (12-13), 25SB-2 (12-13), and 25SB-4 (12-13) were above QC limits on both columns. One of two surrogate recoveries for sample 25SB-3 (12-13) were above QC limits on both columns and 1 of 2 below QC limits but not below 10%. Two of two surrogate recoveries for sample 25SB-5 (11-12) were above QC limits on one or both columns. The positive results should be considered estimated, biased high (J+) in the samples.

Two of two surrogate recoveries for sample 25SB-6 (7-9) were outside QC limits on one or both columns and one below 10% on one column. Two of two surrogate recoveries for sample 25SB-6 (11-12) were outside QC limits and one below 10% on one column. The "not detected" results for these samples should be considered rejected, unusable (R).

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 percent recoveries for endrin were above QC limits for soil MS/MSD sample 25SB-5 (0-2). Sample 25SB-5 (0-2) reported endrin as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The relative percent differences for target pesticides were below the allowable maximum and the percent recoveries were within QC limits for soil samples WG2087151-2/3 and WG2089228-2/3.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Initial Calibration: The %RSDs were below the allowable maximum (20%) or the correlation coefficients were above the allowable minimum (0.995) for target pesticides on both columns, as required.

Continuing Calibration: The %D for 4,4'-DDD was above the allowable maximum (20%) for channel A on 07-08-25 (20250708b-03). The %Ds for endrin aldehyde and methoxychlor were above the allowable maximum (20%) for channel B on 07-09-25 (18250709a-16). Positive results for these pesticides should be considered estimated (J) in associated samples.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (20%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: The checked surrogate and detected pesticide results were within GC quantitation limits. The RPD for dual column quantitation of cis-chlordane in sample 25SB-1 (9-11) was above the allowable maximum (25%), but not above 70% and the higher result was reported. The RPD for dual column quantitation of 4,4'-DDD in sample 25SB-5 (0-2) was above the allowable maximum (25%), but not above 70% and the higher result was reported. Positive results for these pesticides should be considered estimated, biased high (J+) in the samples.

The RPD for dual column quantitation of 4,4-DDE in sample 25SB-4 (0-2) was above the allowable maximum (25%), but not above 70% and the lower result was reported. Positive results for 4,4'-DDE should be considered estimated, biased low (J-) in the sample.

The RPDs for dual column quantitation of trans-chlordane in samples 25SB-1 (9-11), 25SB-3 (0-2), and 25SB-4 (7-9) was above the allowable maximum (25%) and above 100%. Positive results for trans-chlordane should be considered rejected, unusable (R) in the samples.

Pesticide Identification Summary for Multi-Component Analytes: The analyses of soil samples reported target multi-component pesticides as not detected.

QA/QC Review of 8082A PCB Data
for Pace Analytical Services
SDG Number: L2541710

15 Soil Samples
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits for soil MS/MSD sample 25SB-5 (0-2).

Laboratory Control Sample: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximums and percent recoveries were within QC limits for soil samples WG2087148-2/3 and WG2087326-2/3.

Initial Calibration: The average %RSDs for target aroclors were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The average %Ds for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) for both columns, as required

PCB Identification Summary: The checked surrogate and detected aroclor results were within GC quantitation limits. The %RPDs for dual column quantitation of detected aroclors were below the allowable maximum (25%), as required.

Remediation
Water Supply

QA/QC Review of Method 1633 PFAS Data for
Pace Analytical Services SDG Number: L2541710

15 Soil Samples
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

Continuing Calibration: The percent recoveries for applicable PFASs were within QC limits (70-130%), as required.

Blanks: Method blank WG2089092-1BLANK contained traces of PFBA (0.034 ng/g), PFHxA (0.070 ng/g), PFOA (0.036 ng/g), and PFOS (0.033 ng/g). Positive results for these PFAS that are below the reporting limit (RL) should be reported as not detected (U) at the reporting limit in associated samples. Positive results for these PFAS that are above the RL and less than ten times the highest blank level should be considered estimated, biased high (J+) in associated samples.

Surrogate Recovery: Two of twenty-four surrogate recoveries for sample SB-1 (0-2) were below QC limits, but not below 10%. Positive and "not detected" results associated with the surrogate below QC limits should be considered estimated (J or UJ) in the sample.

Four of twenty-four surrogate recoveries for sample SB-6 (0-2) were above QC limits. Two of twenty-four surrogate recoveries for sample SB-4 (12-13) were above QC limits. One of twenty-four surrogate recoveries for samples SB-4 (0-2), SB-6 (0-2)D, 25SB-6 (7-9), and 25SB-6 (11-12) was above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for soil MS/MSD sample 25SB-5 (0-2).

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for soil samples WG2088045-2/3, WG2088547-2/3, WG2089092-2/3, and WG2089097-2/3.

Compound ID: Checked PFAS and surrogate results were within LC quantitation limits.

QA/QC Review of 8151A Herbicides Data
for Pace Analytical Services
SDG Number: L2541710

15 Soil Samples
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target herbicides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target herbicides were below the allowable maximum and the percent recoveries were within QC limits for soil MS/MSD sample 25SB-5 (0-2).

Laboratory Control Sample: The relative percent differences for target herbicides were below the allowable maximums and percent recoveries were within QC limits for soil samples WG2087325-2/3 and WG2088655-2/3.

Initial Calibration: The average %RSDs for target herbicides were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The %Ds for target herbicides were below the allowable maximum (15%) for both channels, as required.

Herbicide Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of the soil samples reported target herbicides as not detected.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2541710

15 Soil Samples
Collected July 2, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration and method blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: One of two percent recoveries (%Rs) for lead was above control limits (75-125%) for soil MS/MSD sample 25SB-5 (0-2). Positive results for lead should be considered estimated, biased high (J+) in associated soil samples.

Two of two %Rs for antimony and 1 of 2 %Rs for manganese were below control limits (75-125%), but not below 10% for soil MS/MSD sample 25SB-5 (0-2). Positive results for antimony and manganese should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (35%) for soil MS/MSD sample 25SB-5 (0-2), as required.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for soil samples WG2089636-2 and WG2089642-2.

Serial Dilution: The %Ds for applicable metals were below the allowable maximum (15%) for soil serial dilution sample 25SB-5 (0-2), as required.

Percent Solids: The % solids for soil samples were above 50%.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2542557

4 Soil Samples and 1 Trip Blank
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatiles, semi-volatiles, herbicides, PCBs, pesticides, PFAS, and TAL metals analyses for 4 soil samples and volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- Positive volatile result for styrene was qualified as "not detected" (U) for sample 25SB-7 (12-13) because the level reported in the sample was not significantly greater than (more than 5 times) the highest associated blank level.

- The positive semi-volatile result for butyl benzyl phthalate was qualified as "estimated" (J) for sample 25SB-8 (1-3) because the %D for butyl benzyl phthalate was above the allowable maximum in the associated continuing calibration verification sample.

- The "not detected" pesticide results for target pesticides were qualified as "estimated" (UJ) for sample 25SB-7 (12-13) because 2 of 2 surrogate recoveries were below QC limits, but not below 10% on one column in the sample.

- The "not detected" pesticide results for target pesticides were qualified as "rejected, unusable" (R) for sample 25SB-8 (11-12) because 1 of 2 surrogate recoveries was below QC limits and below 10% on one column in the sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive metal results for arsenic, manganese, potassium, and sodium were qualified as estimated, biased high (J+) for all 4 soil samples because the percent recoveries for arsenic, manganese, potassium, and sodium were above the control limits in the associated soil batch spike sample.

All data are that are not qualified rejected (R) are considered usable with estimated (J+, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260D Volatiles Data
for Pace Analytical Services, SDG Number: L2542557

4 Soil Samples and 1 Trip Blank
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 on 07-17-25 (V31250717A01). The %Ds for dichlorodifluoromethane, vinyl chloride, bromomethane, and trichlorofluoromethane were above the method maximum on 07-17-25 (V31250717A01). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %Ds for dichlorodifluoromethane, vinyl chloride, bromomethane, and trichlorofluoromethane were above the allowable maximum (20%) on 07-17-25 (V31250717A01). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank WG2092279-5BLANK contained traces of bromomethane (1.1 ug/kg) and styrene (0.59 ug/kg). Positive results for bromomethane and styrene that are less than 5 times the field blank level should be reported as not detected (U) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples and trip blank.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for soil samples WG2092279-3/4.

Compound ID: Checked compounds and surrogates were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270E Semi-Volatiles
Data for Pace Analytical Services
SDG Number: L2542557

4 Soil Samples
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for MORK on 11-10-24. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-13-25 (WG2090054-3). The RRF for 2-chloronaphthalene was below the method minimums, but not below 0.010 on 07-14-25 (WG2090397-3). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-13-25 (WG2090054-3). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-14-25 (WG2090397-3). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-13-25 (WG2090054-3). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-14-25 (WG2090397-3). The %D for 1,2,4,5-tetrachlorobenzene was above the allowable maximum (20%) on 07-14-24 (WG2090397-4). Positive results for these compounds should be considered estimated (J) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil samples.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for soil samples WG2089348-2/3.

Compound ID: Checked compound and surrogate results were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

Compound #114: Indeno(1,2,3-cd)pyrene

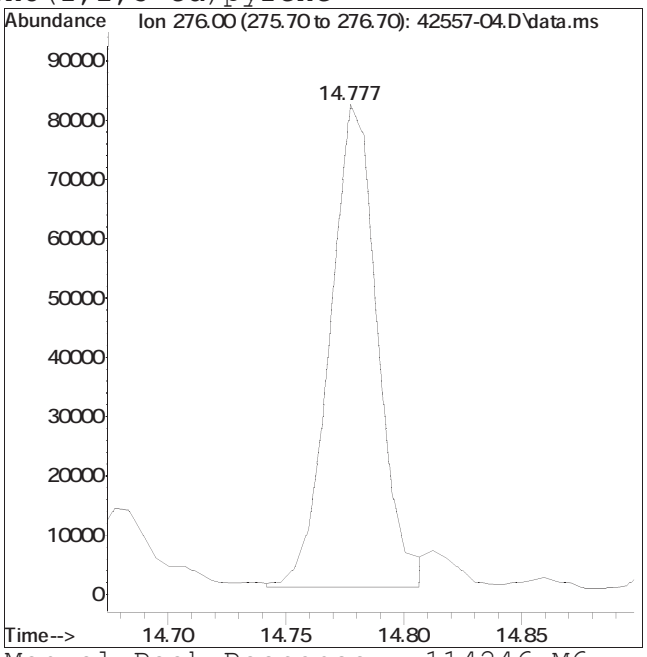
Original Peak Response = 119583



Manual Peak Response = 114246 M6

M6 = Misassignment of peak valley by automated integration (poor split of 2 peaks).

Manual Integration Report

Calculation of Volatile Organic Compounds

Aqueous Concentration Formula: Amt * DF * Uf * (1/Vo)

Where:
DF = Dilution Factor
Vo = Sample Volume Purged (mL)
Uf = ng Unit Correction Factor (mL)

Soil Concentration Formula: Amt * DF * (1/Wt)

Where:
DF = Dilution Factor
Wt = Weight of Sample (g)

QA/QC Review of 8081B Pesticide
Data for Pace Analytical Services
SDG Number: L2542557

4 Soil Samples
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported target pesticides as not detected.

Surrogate Recovery: One of two surrogate recoveries for sample 25SB-8 (1-3) was below QC limits, but not below 10% on one column. No action is taken on one surrogate recovery outside QC limits on one column, provided the recovery is not less than 10%.

Two of two surrogate recoveries for sample 25SB-7 (12-13) were below QC limits, but not below 10% on one column. The "not detected" results for sample 25SB-7 (12-13) should be considered estimated (UJ).

One of two surrogate recoveries for sample 25SB-8 (11-12) was below QC limits and below 10% on one column. The "not detected" results for sample 25SB-8 (11-12) should be considered rejected, unusable (R).

Laboratory Control Sample: The relative percent differences for target pesticides were below the allowable maximum and the percent recoveries were within QC limits for soil samples WG2089268-2/3.

Initial Calibration: The %RSDs were below the allowable maximum (20%) or the correlation coefficients were above the allowable minimum (0.995) for target pesticides on both columns, as required.

Continuing Calibration: The %Ds for target pesticides were below the allowable maximum (20%) for both channels, as required.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (20%) for 4,4'-DDT and endrin, as required.

www.alphageoscience.com

Pesticide Identification Summary for Single Component Analytes: The checked surrogate results were within GC quantitation limits. The analyses of soil samples reported target single component pesticides as not detected.

Pesticide Identification Summary for Multi-Component Analytes: The analyses of soil samples reported target multi-component pesticides as not detected.

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil samples.

Laboratory Control Sample: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximums and percent recoveries were within QC limits for soil samples WG2089324-2/3.

Initial Calibration: The average %RSDs for target aroclors were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The average %Ds for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) for both columns, as required

PCB Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of the soil samples reported target aroclors as not detected.

for Pace Analytical Services
SDG Number: L2542557

4 Soil Samples
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration and method blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: The percent recoveries for arsenic, manganese, potassium, and sodium were above control limits (75-125%) for soil batch spike sample L2543304-01. Positive results for arsenic, manganese, potassium, and sodium should be considered estimated, biased high (J+) in associated soil samples.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (35%) for soil batch duplicate sample WG2091296-4, as required.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for soil samples WG2091296-2 and WG2091306-2.

Serial Dilution: The %Ds for applicable metals were below the allowable maximum (15%) for soil batch serial dilution sample L2543304-01, as required.

Percent Solids: The % solids for soil samples were above 50%.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2542924

1 Soil Sample
Collected July 9, 2025

Prepared by: Donald Anné
September 17, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of PFAS analysis for 1 soil sample.

The overall performances of the analyses are acceptable. Alpha Analytical Labs did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some minor issues that are identified in the accompanying data validation review. The data were not qualified either rejected (R) or estimated; therefore, all data are considered usable. Detailed information on data quality is included in the data validation review.

QA/QC Review of Method 1633 PFAS Data for
Pace Analytical Services SDG Number: L2542924

1 Soil Sample
Collected July 9, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: Sample 25SB-5 (0-2) was analyzed within USEPA holding times.

Initial Calibration: The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

Continuing Calibration: The percent recoveries for applicable PFASs were within QC limits (70-130%), as required.

Blanks: The analysis of the method blank reported target PFAS as not detected.

Surrogate Recovery: One of twenty-four surrogate recoveries for sample 25SB-5 (0-2) was above QC limits. Positive results associated with this surrogate above QC limits should be considered estimated (J) in the sample.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for soil MS/MSD sample 25SB-5 (0-2).

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for soil samples WG2094399-2/3.

Compound ID: Checked surrogate results were within LC quantitation limits. The analysis of sample 25SB-5 (0-2) reported target PFAS as not detected.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2545792

4 Soil Samples
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of TCLP lead analyses for 4 soil samples.

The overall performances of the analyses are acceptable. Alpha Analytical Labs did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some minor issues that are identified in the accompanying data validation review. The data were not qualified either rejected (R) or estimated; therefore, all data are considered usable. Detailed information on data quality is included in the data validation review.

QA/QC Review of TCLP Lead Data for
Pace Analytical Services
SDG Number: L2545792

4 Soil Samples
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were prepared and analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for lead were within control limits (90-110%).

Blanks: The analyses of initial and continuing calibration and method blanks reported lead as not detected.

Spike Sample Recovery: The percent recovery for lead was within control limits (75-125%) for batch TCLP spike sample L2545590-01.

Laboratory Duplicates: The analysis of batch TCLP duplicate sample WG2095937-4.

Laboratory Control Sample: The percent recovery for lead was within control limits for TCLP sample WG2095937-2.

Data Usability Summary Report for
Pace Analytical Services, SDG: No: L2542672

6 Soil Vapor/Air Samples and 1 Field Duplicate
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contained the results of TO15 volatile analyses for 1 soil vapor sample.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation review. The following data were qualified:

- The volatile result for tertiary butyl alcohol (TBA) in sample 25 SV-4 was quantitated using data that were extrapolated beyond the highest calibration standard and flagged "E" by the laboratory. The result for TBA marked "E" in the undiluted sample was qualified as estimated (J).

- The positive volatile results for the following 10 compounds were qualified as estimated (J) for samples 25 SV-2 and 25 DUP-1 because the relative percent differences for these 10 compounds were above the allowable maximum for the soil vapor/air field duplicate pair 25 SV-2/25 DUP-1.

1,3-butadiene	acetone	isopropanol	tertiary butyl alcohol
carbon disulfide	2-butanone	benzene	cyclohexane
2-hexanone	tetrachloroethene		

All data are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

6 Soil Vapor/Air Samples and 1 Field Duplicate
Collected July 8, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within the EPA recommended holding times.

Cannister Pressure: The laboratory reported residual vacuums (negative pressure) in the samples, as required.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for 1,2,4-trichlorobenzenewas was above the allowable maximum (30%)on 07-21-25 (R243349). Positive results for 1,2,4-trichlorobenzene should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for soil vapor/air samples WG2093729-3 WG2093731-3.

The %R for 1,2,4-trichlorobenzenewas was above QC limits for soil vapor/air sample WG2093236-3. Positive results for 1,2,4-trichlorobenzene should be considered estimated, biased high (J+) in associated soil vapor/air samples.

www.alphageoscience.com

Laboratory Duplicates: The relative percent differences for applicable compounds were below the allowable maximum (25%) for soil vapor/air duplicate samples 25 SS-1 and 25 AI-1, as required.

Field Duplicates: The relative percent differences for 10 compounds were above the allowable maximum (25%) for soil vapor/air field duplicate pair 25 SV-2/25 DUP-1 (attached table). Positive results for these 10 compounds should be considered estimated (J) in samples 25 SV-2 and 25 DUP-1.

Compound ID: Checked compound results were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

The result for tertiary butyl alcohol (TBA) in sample 25 SV-4 was quantitated by extrapolating data above the highest calibration standard and marked 'E' by the laboratory. The sample was diluted by the laboratory and re-analyzed; therefore, the result that is flagged as 'E' in the undiluted sample should be considered estimated (J). The use of the diluted result for TBA is recommended for sample 25 SV-4. It is recommended that the undiluted results be used for all other compounds.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2543949

3 Ground Water Samples, 1 Field Blank,
and 1 Trip Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatile, semi-volatiles, SIM Semi-volatiles, 1,4-dioxane, herbicides, PCBs, pesticides, PFAS, and TAL metals analyses for 3 ground water samples and 1 field blank, and the results of volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for acetone were qualified as "estimated" (J) for the trip and field blanks because the relative percent difference for acetone was above the allowable maximum in the associated aqueous LCS/LCSD.

- The positive volatile result for methyl tert butyl ether (MTBE) was qualified as "estimated" (J) for MW-2 because the relative percent difference for MTBE was above the allowable maximum in the associated aqueous LCS/LCSD.

- The positive volatile results for acetone were qualified as "not detected" (U) for all 3 ground water samples because the level reported in the samples were not significantly greater than (more than 10 times) the highest associated blank level.

- The 'not detected" volatile results for 1,4-dioxane were qualified as "rejected, unusable" (R) for all 3 ground water samples, trip blank, and field blank because the RRF for 1,4-dioxane was below the allowable minimum in the associated continuing calibration verification sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The "not detected" semi-volatile results for 3,3'-dichlorobenzidine was qualified as "rejected, unusable" (R) for sample MW-1 because 2 of 2 percent recoveries for 3,3'-dichlorobenzidine were below QC limits and one below 30% in the aqueous MS/MSD sample.

- The positive SIM semi-volatile results for benzo(a)anthracene were qualified as "not detected" (U) for samples MW-1, MW-2, and 25FB-1 because the level reported in the sample analyses were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive SIM semi-volatile results for dibenzo(a,h)anthracene were qualified as "not detected" (U) for samples MW-1, MW-3, and 25FB-1 because the level reported in the sample analyses were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive SIM semi-volatile results for pentachlorophenol were qualified as "not detected" (U) for samples MW-1, MW-2, and MW-5 because the level reported in the sample analyses were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive SIM semi-volatile result for indeno(1,2,3-cd)pyrene was qualified as "estimated" (J) for sample MW-5 because the %D for indeno(1,2,3-cd)pyrene was above the allowable maximum in the associated continuing calibration verification samples.

- The positive PFAS result for PFBS was qualified as "estimated" (J) in sample MW-1 because percent recovery for the surrogate used to quantitate PFBS was above QC limits in the sample.

- The positive PFAS result for PFHxS was qualified as "estimated" (J) in sample MW-2 because percent recovery for the surrogate used to quantitate PFHxS was above QC limits in the sample.

- The positive PFAS result for 6:2FTS was qualified as "not detected" (U) at the reporting limit for sample 25FB-1 because the sample was associated with a method blank containing 6:2FTS and reported concentration for 6:2FTS was below the reporting limit.

- The positive metal results for potassium were qualified as estimated, biased high (J+) for all 3 ground water samples because 1 of 2 percent recoveries for potassium was above the control limits in the associated aqueous MS/MSD sample.

- The positive metal results for magnesium were qualified as estimated (J) for all 3 ground water samples because the %D for magnesium was above the allowable maximum in the associated aqueous serial dilution sample.

All data are that are not qualified rejected (R) are considered usable with estimated (J+, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260D Volatiles Data
for Pace Analytical Services, SDG Number: L2543949

3 Ground Water Samples, 1 Field Blank,
and 1 Trip Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 for VOA105 on 06-28-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 1,1,2-trichloroethane was below the method minimum, but not below 0.010 on 07-24-25 (V05250724A05). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-24-25 (V05250724A05). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRF for 1,4-dioxane was below the allowable minimum (0.001) on 07-24-25 (V05250724A05). Positive results for 1,4-dioxane should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %Ds for 7 compounds (highlighted yellow on attached Form 7) and 1,4-dioxane were above the allowable maximum (20%) on 07-24-25 (V05250724A05). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected. The trip blank contained a trace of acetone (2.3 ug/L). Field blank 25FB-1 contained a trace of acetone (3.8 ug/L). Positive results for acetone that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples, field blank, and trip blank.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for acetone was above the allowable maximum and 1 or 2 percent recoveries for 8 compounds (highlighted yellow on attached Form 3) were above QC limits for aqueous MS/MSD sample MW-1. The positive result for acetone should be considered estimated, biased high (J+) in sample MW-1.

Laboratory Control Sample: The relative percent differences for methyl tert butyl ether, acetone, and methyl acetate were above the allowable maximum for aqueous samples WG2095025-3/4. Positive results for these compounds should be considered estimated (J) in associated aqueous samples.

Two of two %Rs for chloroethane and carbon disulfide were above QC limits for aqueous samples WG2095025-3/4. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked compound results were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270E Semi-Volatiles
Data for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for SV107 on 06-19-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-18-25 (WG2092337-3). The %Ds for 10 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-18-25 (WG2092337-3). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 10 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-18-25 (WG2092337-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 3,3'-dichlorobenzidine was above the allowable maximum; 2 of 2 percent recoveries (%Rs) for 2,4-dinitrophenol were above QC limits; and 2 of 2 %Rs for 3,3'-dichlorobenzidine were below QC limits and one below 30% for aqueous MS/MSD sample MW-1. The "not detected" result for 3,3'-dichlorobenzidine should be considered rejected, unusable (R) in sample MW-1.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for p-chloro-m-cresol and 4-nitrophenol, and 1 of 2 %Rs for di-n-octylphthalate were above QC limits for aqueous samples WG2091134-2/3. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked surrogate results were within GC/MS quantitation limits. The analyses of the ground water samples reported target compounds as not detected.

Data for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within the USEPS SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for pentachlorophenol and indeno(1,2,3-cd)pyrene were above the allowable maximum (20%) on 07-16-25 (WG2091332-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank WG2091137-1BLANK contained traces of benzo(a)anthracene (0.04 ug/L), dibenzo(a,h)anthracene (0.06 ug/L), pentachlorophenol (0.18 ug/L), and hexachlorobenzene (0.02 ug/L). Positive results for these compounds that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2091137-2/3.

Compound ID: Checked compound and surrogate results were within GC/MS quantitation limits.

QA/QC Review of Method 8270D SIM 1,4-Dioxane
Data for Pace Analytical Services, SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Initial Calibration: The average RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %D was below the allowable maximum (20%), as required.

Blanks: The analyses of the method and field blanks reported 1,4-dioxane and not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2091265-2/3.

Compound ID: Checked surrogate results were within quantitation limits.

QA/QC Review of 8081B Pesticide
Data for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The percent recoveries for target pesticides were within QC limits, but relative percent difference for endrin ketone was above the allowable maximum for aqueous MS/MSD sample MW-1. Sample MW-1 reported endrin ketone as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The relative percent differences for target pesticides were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2090943-2/3.

Initial Calibration: The %RSDs were below the allowable maximum (20%) or the correlation coefficients were above the allowable minimum (0.995) for target pesticides on both columns, as required.

Continuing Calibration: The %D for methoxychlor was above the allowable maximum (20%) for the B channel on 07-16-25 (11250716a-37). Positive results for methoxychlor should be considered estimated (J) in associated samples.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (20%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: The checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported single component pesticides as not detected.

Pesticide Identification Summary for Multi-Component Analytes: The analyses of soil samples reported target multi-component pesticides as not detected.

QA/QC Review of 8082A PCB Data
for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximums and percent recoveries were within QC limits for aqueous samples WG2091158-2/3.

Initial Calibration: The average %RSDs for target aroclors were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The average %Ds for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) for both columns, as required

PCB Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of ground water samples reported target compounds as not detected.

QA/QC Review of Method 1633 PFAS Data for
Pace Analytical Services SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

Continuing Calibration: The percent recoveries for applicable PFASs were within QC limits (70-130%), as required.

Blanks: Method blank WG2092151-1BLANK contained a trace of 6:2FTS (1.86 ng/L). Positive results for 6:2FTS that are below the reporting limit (RL) should be reported as not detected (U) at the reporting limit in associated samples. Positive results for 6:2FTS that are above the RL and less than ten times the highest blank level should be considered estimated, biased high (J+) in associated samples.

Surrogate Recovery: Three of eighteen surrogate recoveries for sample MW-1 were above QC limits. One of eighteen surrogate recoveries for samples MW-2 and MW-5 was above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for aqueous sample WG2092151-3.

Compound ID: Checked PFAS and surrogate results were within LC quantitation limits.

QA/QC Review of 8151A Herbicides Data
for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target herbicides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target herbicides were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The relative percent differences for target herbicides were below the allowable maximums and percent recoveries were within QC limits for aqueous samples WG2092062-2/3.

Initial Calibration: The average %RSDs for target herbicides were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The %D for 2,4-D was above the allowable maximum (15%) for channel A on 07-19-25 (15250719a-01). The %D for 2,4,5-T was above the allowable maximum (15%) for channel B on 07-19-25 (15250719a-01). Positive results for these herbicides should be considered estimated (J) in associated samples.

Herbicide Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported target herbicides as not detected.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 17, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration, method, and field blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: One of two percent recoveries for potassium was above control limits (75-125%) for aqueous MS/MSD sample MW-1. Positive results for potassium should be considered estimated, biased high (J+) in associated aqueous samples.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (20%) for aqueous MS/MSD sample MW-1, as required.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for aqueous samples WG2093714-2 and WG2093718-2.

Serial Dilution: The %D for the magnesium was above the allowable maximum (10%) for aqueous serial dilution sample MW-1. Positive results for magnesium that are above the RL should be considered estimated (J) in associated aqueous samples.

Re: Data Validation Report
601-607 Union St
July 2025 Ground Water and Soil Vapor Sampling Events

Dear Ms. Karayel,

The Data Usability Summary Reports are attached to this letter for the 601-607 Union Street site, July 2025 ground water and soil vapor sampling events. The data for Pace Analytical Services SDG numbers L2542672, L2543949, L2544316, and L2544658 are mostly acceptable, with issues that are identified in the DUSR and QA/QC review summaries. There are data that are rejected, unusable (R) in data packs L2543949, L2544316, and L2544658. The DUSRs and QA/QC reviews outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Donald Anné

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Polyfluorinated Alkyl Substances (PFAS) Acronyms

PFBA	Perfluorobutanoic acid
PFPeA	Perfluoropentanoic acid
PFHxA	Perfluorohexanoic acid
PFHpA	Perfluoroheptanoic acid
PFOA	Perfluorooctanoic acid
PFNA	Perfluorononanoic acid
PFDA	Perfluorodecanoic acid
PFUnA	Perfluoroundecanoic acid
PFDoA	Perfluorododecanoic acid
PFTriA or PFTrDA	Perfluorotridecanoic acid
PFTeA or PFTA	Perfluorotetradecanoic acid
PFBS	Perfluorobutanesulfonic acid
PFPeS	Perfluoropentanesulfonic acid
PFHxS	Perfluorohexanesulfonic acid
PFHpS	Perfluoroheptanesulfonic acid
PFOS	Perfluorooctanesulfonic acid
PFNS	Perfluorononanesulfonic acid
PFDS	Perfluorodecanesulfonic acid
FOSA	Perfluorooctane Sulfonamide
NMeFOSAA	N-methyl perfluorooctane sulfonamidoacetic acid
NEtFOSAA	N-ethyl perfluorooctane sulfonamidoacetic acid
4:2 FTS or 4:2	1H, 1H, 2H, 2H-perfluorohexanesulfonic acid
6:2 FTS or 6:2	1H, 1H, 2H, 2H-perfluorooctanesulfonic acid or 6:2 Fluorotelomersulfonate
8:2 FTS or 8:2	1H, 1H, 2H, 2H-perfluorodecanesulfonic acid or 8:2 Fluorotelomersulfonate

Data Usability Summary Report for
Pace Analytical Services, SDG: No: L2542672

6 Soil Vapor/Air Samples and 1 Field Duplicate
Collected July 8, 2025

Prepared by: Donald Anné
September 26, 2025

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contained the results of TO15 volatile analyses for 6 soil vapor samples and 1 field duplicate.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical method.

The data are mostly acceptable with some issues that are identified in the accompanying data validation review. The following data were qualified:

- The volatile result for tertiary butyl alcohol (TBA) in sample 25 SV-4 was quantitated using data that were extrapolated beyond the highest calibration standard and flagged "E" by the laboratory. The result for TBA marked "E" in the undiluted sample was qualified as estimated (J).

- The positive volatile results for the following 10 compounds were qualified as estimated (J) for samples 25 SV-2 and 25 DUP-1 because the relative percent differences for these 10 compounds were above the allowable maximum for the soil vapor/air field duplicate pair 25 SV-2/25 DUP-1.

1,3-butadiene	acetone	isopropanol	tertiary butyl alcohol
carbon disulfide	2-butanone	benzene	cyclohexane
2-hexanone	tetrachloroethene		

All data are considered usable, with estimated (J) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation review.

6 Soil Vapor/Air Samples and 1 Field Duplicate
Collected July 8, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within the EPA recommended holding times.

Cannister Pressure: The laboratory reported residual vacuums (negative pressure) in the samples, as required.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for 1,2,4-trichlorobenzenewas was above the allowable maximum (30%)on 07-21-25 (R243349). Positive results for 1,2,4-trichlorobenzene should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for soil vapor/air samples WG2093729-3 and WG2093731-3.

The %R for 1,2,4-trichlorobenzenewas was above QC limits for soil vapor/air sample WG2093236-3. Positive results for 1,2,4-trichlorobenzene should be considered estimated, biased high (J+) in associated soil vapor/air samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Laboratory Duplicates: The relative percent differences for applicable compounds were below the allowable maximum (25%) for soil vapor/air duplicate samples 25 SS-1 and 25 AI-1, as required.

Field Duplicates: The relative percent differences for 10 compounds were above the allowable maximum (25%) for soil vapor/air field duplicate pair 25 SV-2/25 DUP-1 (attached table). Positive results for these 10 compounds should be considered estimated (J) in samples 25 SV-2 and 25 DUP-1.

Compound ID: Checked compound results were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

The result for tertiary butyl alcohol (TBA) in sample 25 SV-4 was quantitated by extrapolating data above the highest calibration standard and marked 'E' by the laboratory. The sample was diluted by the laboratory and re-analyzed; therefore, the result that is flagged as 'E' in the undiluted sample should be considered estimated (J). The use of the diluted result for TBA is recommended for sample 25 SV-4. It is recommended that the undiluted results be used for all other compounds.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2543949

3 Ground Water Samples, 1 Field Blank,
and 1 Trip Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatile, semi-volatiles, SIM Semi-volatiles, 1,4-dioxane, herbicides, PCBs, pesticides, PFAS, and TAL metals analyses for 3 ground water samples and 1 field blank, and the results of volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile results for acetone were qualified as "estimated" (J) for the trip and field blanks because the relative percent difference for acetone was above the allowable maximum in the associated aqueous LCS/LCSD.

- The positive volatile result for methyl tert butyl ether (MTBE) was qualified as "estimated" (J) for MW-2 because the relative percent difference for MTBE was above the allowable maximum in the associated aqueous LCS/LCSD.

- The positive volatile results for acetone were qualified as "not detected" (U) for all 3 ground water samples because the level reported in the samples were not significantly greater than (more than 10 times) the highest associated blank level.

- The 'not detected" volatile results for 1,4-dioxane were qualified as "rejected, unusable" (R) for all 3 ground water samples, trip blank, and field blank because the RRF for 1,4-dioxane was below the allowable minimum in the associated continuing calibration verification sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The "not detected" semi-volatile results for 3,3'-dichlorobenzidine was qualified as "rejected, unusable" (R) for sample MW-1 because 2 of 2 percent recoveries for 3,3'-dichlorobenzidine were below QC limits and one below 30% in the aqueous MS/MSD sample.

- The positive SIM semi-volatile results for benzo(a)anthracene were qualified as "not detected" (U) for samples MW-1, MW-2, and 25FB-1 because the level reported in the sample analyses were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive SIM semi-volatile results for dibenzo(a,h)anthracene were qualified as "not detected" (U) for samples MW-1, MW-5, and 25FB-1 because the level reported in the sample analyses were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive SIM semi-volatile results for pentachlorophenol were qualified as "not detected" (U) for samples MW-1, MW-2, and MW-5 because the level reported in the sample analyses were not significantly greater than (more than 5 times) the highest associated blank level.

- The positive SIM semi-volatile result for indeno(1,2,3-cd)pyrene was qualified as "estimated" (J) for sample MW-5 because the %D for indeno(1,2,3-cd)pyrene was above the allowable maximum in the associated continuing calibration verification samples.

- The positive PFAS result for PFBS was qualified as "estimated" (J) in sample MW-1 because percent recovery for the surrogate used to quantitate PFBS was above QC limits in the sample.

- The positive PFAS result for PFHxS was qualified as "estimated" (J) in sample MW-2 because percent recovery for the surrogate used to quantitate PFHxS was above QC limits in the sample.

- The positive PFAS result for 6:2FTS was qualified as "not detected" (U) at the reporting limit for sample 25FB-1 because the sample was associated with a method blank containing 6:2FTS and reported concentration for 6:2FTS was below the reporting limit.

- The positive metal results for potassium were qualified as estimated, biased high (J+) for all 3 ground water samples because 1 of 2 percent recoveries for potassium was above the control limits in the associated aqueous MS/MSD sample.

- The positive metal results for magnesium were qualified as estimated (J) for all 3 ground water samples because the %D for magnesium was above the allowable maximum in the associated aqueous serial dilution sample.

All data are that are not qualified rejected (R) are considered usable with estimated (J+, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260D Volatiles Data
for Pace Analytical Services, SDG Number: L2543949

3 Ground Water Samples, 1 Field Blank,
and 1 Trip Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 for VOA105 on 06-28-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 1,1,2-trichloroethane was below the method minimum, but not below 0.010 on 07-24-25 (V05250724A05). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-24-25 (V05250724A05). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRF for 1,4-dioxane was below the allowable minimum (0.001) on 07-24-25 (V05250724A05). Positive results for 1,4-dioxane should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %Ds for 7 compounds (highlighted yellow on attached Form 7) and 1,4-dioxane were above the allowable maximum (20%) on 07-24-25 (V05250724A05). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected. The trip blank contained a trace of acetone (2.3 ug/L). Field blank 25FB-1 contained a trace of acetone (3.8 ug/L). Positive results for acetone that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples, field blank, and trip blank.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for acetone was above the allowable maximum and 1 or 2 percent recoveries for 8 compounds (highlighted yellow on attached Form 3) were above QC limits for aqueous MS/MSD sample MW-1. The positive result for acetone should be considered estimated, biased high (J+) in sample MW-1.

Laboratory Control Sample: The relative percent differences for methyl tert butyl ether, acetone, and methyl acetate were above the allowable maximum for aqueous samples WG2095025-3/4. Positive results for these compounds should be considered estimated (J) in associated aqueous samples.

Two of two %Rs for chloroethane and carbon disulfide were above QC limits for aqueous samples WG2095025-3/4. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked compound results were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270E Semi-Volatiles
Data for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for SV107 on 06-19-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-18-25 (WG2092337-3). The %Ds for 10 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-18-25 (WG2092337-3). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 10 compounds (highlighted yellow on attached Form 7) were above the allowable maximum (20%) on 07-18-25 (WG2092337-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 3,3'-dichlorobenzidine was above the allowable maximum; 2 of 2 percent recoveries (%Rs) for 2,4-dinitrophenol were above QC limits; and 2 of 2 %Rs for 3,3'-dichlorobenzidine were below QC limits and one below 30% for aqueous MS/MSD sample MW-1. The "not detected" result for 3,3'-dichlorobenzidine should be considered rejected, unusable (R) in sample MW-1.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for p-chloro-m-cresol and 4-nitrophenol, and 1 of 2 %Rs for di-n-octylphthalate were above QC limits for aqueous samples WG2091134-2/3. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked surrogate results were within GC/MS quantitation limits. The analyses of the ground water samples reported target compounds as not detected.

Data for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within the USEPS SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for pentachlorophenol and indeno(1,2,3-cd)pyrene were above the allowable maximum (20%) on 07-16-25 (WG2091332-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank WG2091137-1BLANK contained traces of benzo(a)anthracene (0.04 ug/L), dibenzo(a,h)anthracene (0.06 ug/L), pentachlorophenol (0.18 ug/L), and hexachlorobenzene (0.02 ug/L). Positive results for these compounds that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

QA/QC Review of Method 8270D SIM 1,4-Dioxane
Data for Pace Analytical Services, SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Initial Calibration: The average RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %D was below the allowable maximum (20%), as required.

Blanks: The analyses of the method and field blanks reported 1,4-dioxane and not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2091265-2/3.

Compound ID: Checked surrogate results were within quantitation limits.

QA/QC Review of 8081B Pesticide
Data for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The percent recoveries for target pesticides were within QC limits, but relative percent difference for endrin ketone was above the allowable maximum for aqueous MS/MSD sample MW-1. Sample MW-1 reported endrin ketone as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The relative percent differences for target pesticides were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2090943-2/3.

Initial Calibration: The %RSDs were below the allowable maximum (20%) or the correlation coefficients were above the allowable minimum (0.995) for target pesticides on both columns, as required.

Continuing Calibration: The %D for methoxychlor was above the allowable maximum (20%) for the B channel on 07-16-25 (11250716a-37). Positive results for methoxychlor should be considered estimated (J) in associated samples.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (20%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: The checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported single component pesticides as not detected.

Pesticide Identification Summary for Multi-Component Analytes: The analyses of soil samples reported target multi-component pesticides as not detected.

QA/QC Review of 8082A PCB Data
for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximums and percent recoveries were within QC limits for aqueous samples WG2091158-2/3.

Initial Calibration: The average %RSDs for target aroclors were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The average %Ds for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) for both columns, as required

PCB Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of ground water samples reported target compounds as not detected.

QA/QC Review of Method 1633 PFAS Data for
Pace Analytical Services SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

Continuing Calibration: The percent recoveries for applicable PFASs were within QC limits (70-130%), as required.

Blanks: Method blank WG2092151-1BLANK contained a trace of 6:2FTS (1.86 ng/L). Positive results for 6:2FTS that are below the reporting limit (RL) should be reported as not detected (U) at the reporting limit in associated samples. Positive results for 6:2FTS that are above the RL and less than ten times the highest blank level should be considered estimated, biased high (J+) in associated samples.

Surrogate Recovery: Three of eighteen surrogate recoveries for sample MW-1 were above QC limits. One of eighteen surrogate recoveries for samples MW-2 and MW-5 was above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for aqueous sample WG2092151-3.

Compound ID: Checked PFAS and surrogate results were within LC quantitation limits.

QA/QC Review of 8151A Herbicides Data
for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method and field blanks reported target herbicides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target herbicides were below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-1.

Laboratory Control Sample: The relative percent differences for target herbicides were below the allowable maximums and percent recoveries were within QC limits for aqueous samples WG2092062-2/3.

Initial Calibration: The average %RSDs for target herbicides were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The %D for 2,4-D was above the allowable maximum (15%) for channel A on 07-19-25 (15250719a-01). The %D for 2,4,5-T was above the allowable maximum (15%) for channel B on 07-19-25 (15250719a-01). Positive results for these herbicides should be considered estimated (J) in associated samples.

Herbicide Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported target herbicides as not detected.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2543949

3 Ground Water Samples and 1 Field Blank
Collected July 14, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration, method, and field blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: One of two percent recoveries for potassium was above control limits (75-125%) for aqueous MS/MSD sample MW-1. Positive results for potassium should be considered estimated, biased high (J+) in associated aqueous samples.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (20%) for aqueous MS/MSD sample MW-1, as required.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for aqueous samples WG2093714-2 and WG2093718-2.

Serial Dilution: The %D for the magnesium was above the allowable maximum (10%) for aqueous serial dilution sample MW-1. Positive results for magnesium that are above the RL should be considered estimated (J) in associated aqueous samples.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatile, semi-volatiles, SIM Semi-volatiles, 1,4-dioxane, PFAS, herbicides, PCBs, pesticides, and TAL metals analyses for 3 ground water samples.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The "not detected" volatile result for 4-methyl-2-pentanone was qualified as "estimated" (UJ) for sample MW-6 because 1 of 2 percent recoveries for 4-methyl-2-pentanone was below QC limits, but below 30% in the associated aqueous LCS/LCSD.

- The "not detected" volatile result for 1,4-dioxane was qualified as "rejected, unusable" (R) for sample MW-6 because the RRF for 1,4-dioxane was below the allowable minimum in the associated continuing calibration verification sample.

- The "not detected" volatile results for 1,2,3-trichlorobenzene and 1,2,4-trichlorobenzene were qualified as "estimated" (UJ) for samples MW-7 and MW-3 because 1 or 2 percent recoveries for 1,2,3-trichlorobenzene and 1,2,4-trichlorobenzene were below QC limits, but below 30% in the associated aqueous LCS/LCSD.

- The positive semi-volatile result for di-n-butylphthalate was qualified as "estimated" (J) for sample MW-6 because %D for di-n-butylphthalate was above the allowable maximum in the associated continuing calibration verification sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive SIM semi-volatile result for benzo(a)anthracene was qualified as "not detected" (U) for sample MW-7 because the level reported in the sample was not significantly greater than (more than 5 times) the highest associated blank level.

- The positive PFAS results for 6:2FTS were qualified as "not detected" (U) at the reporting limits for samples MW-6 and MW-3 because the samples were associated with an method blank containing 6:2FTS and reported concentrations for 6:2FTS were below the reporting limits.

- The positive PFAS result for 6:2FTS was qualified as "estimated, biased high" (J+) for sample MW-7 because the result for 6:2FTS was above the reporting limits but not greater than 10 times the associated blank level.

- The positive metal results for calcium were qualified as estimated, biased high (J+) for all 3 ground water samples because the percent recovery for calcium were above control limits in the associated interference check sample.

All data are that are not qualified rejected (R) are considered usable with estimated (J+, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

for Pace Analytical Services, SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 14 compounds (highlighted yellow on attached Form 6) were below the method minimums, but not below 0.010 for VOA122 on 06-03-25. The average RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimums, but not below 0.010 for GONZO on 06-20-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for bromodichloromethane and 1,1,2-trichloroethane were below the method minimum, but not below 0.010 on 07-26-25 (VG250726A03). The RRFs for 15 compounds (highlighted yellow on attached Form 7) were below the method minimum, but not below 0.010 on 07-28-25 (V22250728A01). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-26-25 (VG250726A03). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-28-25 (V22250728A01). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRF for 1,4-dioxane was below the allowable minimum (0.001) on 07-28-25 (V22250728A01). Positive results for 1,4-dioxane should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Ds for 7 compounds (highlighted yellow on attached Form 7) and 1,4-dioxane were above the allowable maximum (20%) on 07-26-25 (VG250726A03). The %Ds for 7 compounds (highlighted yellow on attached Form 7) and 1,4-dioxane were above the allowable maximum (20%) on 07-28-25 (V22250728A01). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and trip blanks reported target compounds as not detected.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The relative percent difference (RPD) for bromomethane was above the allowable maximum for aqueous samples WG2095890-3/4. Positive results for bromomethane should be considered estimated (J) in associated aqueous samples.

One of two percent recoveries (%Rs) for 4-methyl-2-pentanone was below QC limits, but not below 30% for aqueous samples WG2095890-3/4. Two of two %Rs for 1,2,3-trichlorobenzene and 1 of 2 %Rs for 1,2,4-trichlorobenzene were below QC limits, but not below 30% for aqueous samples WG2095922-3/4. Positive results for these compounds should be considered estimated, biased low (J-) and “not detected” results estimated (UJ) in associated aqueous samples.

The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for chloroethane were above QC limits for aqueous samples WG2095922-3/4. Positive results for chloroethane should be considered estimated, biased high (J+) in associated aqueous samples.

Compound ID: Checked compound results were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for SV106 on 07-17-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-21-25 (WG2093240-3). The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-24-25 (WG2094394-3). The %Ds for pentachlorophenol and di-n-butylphthalate were above the method maximum on 07-21-25 (WG2093240-3). The %D for di-n-butylphthalate was above the method maximum on 07-24-25 (WG2094394-3). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for pentachlorophenol and di-n-butylphthalate were above the allowable maximum (20%) on 07-21-25 (WG2093240-3). The %D for atrazine was above the allowable maximum (20%) on 07-21-25 (WG2093240-5). The %Ds for 2,3,4,6-tetrachlorophenol and di-n-butylphthalate were above the allowable maximum (20%) on 07-24-25 (WG2094394-3). The %D for atrazine was above the allowable maximum (20%) on 07-24-25 (WG2094394-5). Positive results for these compounds should be considered estimated (J) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for p-chloro-m-cresol and 4-nitrophenol and 1 of 2 %Rs for di-n-octylphthalate were above QC limits for aqueous samples WG2091134-2/3. Positive results for carbazole should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked surrogate results were within GC/MS quantitation limits. The analyses of the ground water samples reported target compounds as not detected.

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within the USEPS SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for hexachlorobenzene was above the allowable maximum (20%) on 07-20-25 (WG2092769-3). Positive results for hexachlorobenzene should be considered estimated (J) in associated samples.

Blanks: Method blank WG2091137-1BLANK contained traces of benzo(a)anthracene (0.04 ug/L), dibenzo(a,h)anthracene (0.06 ug/L), pentachlorophenol (0.18 ug/L), and hexachlorobenzene (0.02 ug/L). Positive results for these compounds that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2091137-2/3.

Compound ID: Checked compound and surrogate results were within GC/MS quantitation limits.

QA/QC Review of Method 8270D SIM 1,4-Dioxane
Data for Pace Analytical Services, SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Initial Calibration: The average RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analysis of the method blank reported 1,4-dioxane and not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Laboratory Control Sample: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2092263-2/3.

Compound ID: Checked surrogate and 1,4-dioxane results were within quantitation limits.

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples.

Laboratory Control Sample: The relative percent differences for target pesticides were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2091685-2/3.

Initial Calibration: The %RSDs were below the allowable maximum (20%) or the correlation coefficients were above the allowable minimum (0.995) for target pesticides on both columns, as required.

Continuing Calibration: The %Ds for target pesticides were below the allowable maximum (20%) for both channels, as required.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (20%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: The checked surrogate results were within GC quantitation limits. The analyses of ground water samples reported target single component pesticides as not detected.

Pesticide Identification Summary for Multi-Component Analytes: The analyses of ground water samples reported target multi-component pesticides as not detected.

Water Supply

QA/QC Review of Method 1633 PFAS Data for
Pace Analytical Services SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

Continuing Calibration: The percent recoveries for applicable PFASs were within QC limits (70-130%), as required.

Blanks: Method blank WG2092151-1BLANK contained a trace of 6:2FTS (1.86 ng/L). Positive results for 6:2FTS that are below the reporting limit (RL) should be reported as not detected (U) at the reporting limit in associated samples. Positive results for 6:2FTS that are above the RL and less than ten times the highest blank level should be considered estimated, biased high (J+) in associated samples.

Surrogate Recovery: Three of eighteen surrogate recoveries for sample MW-7 were above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the sample.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries were within QC limits for aqueous batch MS/MSD sample WG2092151-3/4.

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for aqueous sample WG2092151-2.

Compound ID: Checked PFAS results were within LC quantitation limits.

QA/QC Review of 8151A Herbicides Data
for Pace Analytical Services
SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported target herbicides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples.

Laboratory Control Sample: The relative percent differences for target herbicides were below the allowable maximums and percent recoveries were within QC limits for aqueous samples WG2092062-2/3.

Initial Calibration: The average %RSDs for target herbicides were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The %D for 2,4-D was above the allowable maximum (15%) for channel A on 07-19-25 (15250719a-01). The %D for 2,4,5-T was above the allowable maximum (15%) for channel B on 07-19-25 (15250719a-01). Positive results for these herbicides should be considered estimated (J) in associated samples.

Herbicide Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of the ground water samples reported target herbicides as not detected.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2544316

3 Ground Water Samples
Collected July 15, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration, method, and field blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for calcium and potassium were above control limits (80-120%) for sample R1996478-5. Positive results for calcium and potassium should be considered estimated, biased high (J+) in associated samples.

Spike Sample Recovery: The percent recoveries for applicable metals were within control limits (75-125%) for aqueous batch spike samples L2500778-167 and L2544117-01.

Laboratory Duplicates: The analyses of aqueous batch duplicate samples WG2094683-4 and WG2094689-4 were acceptable.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for aqueous samples WG2094683-2 and WG2094689-2.

Serial Dilution: This data was not provided.

Data Usability Summary Report for
Pace Analytical Services, SDG Number: L2544658

4 Ground Water Samples and 1 Trip Blank
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

The data package contained the documentation as required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appeared legible and complete. The data pack contained the results of volatile, semi-volatiles, SIM Semi-volatiles, PCBs, pesticides, and TAL metals analyses for 4 ground water samples; the results of herbicides, 1,4-dioxane, and PFAS analyses for 3 ground water samples; and the results of volatile analyses for 1 trip blank.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile result for carbon disulfide was qualified as "estimated" (J) for sample MW-4 because the %D for carbon disulfide was above the allowable maximum in the associated continuing calibration verification sample

- The "not detected" volatile results for 4-methyl-2-pentanone were qualified as "estimated" (UJ) for all 4 ground water samples and trip blank because 1 of 2 percent recoveries for 4-methyl-2-pentanone was below QC limits, but below 30% in the associated aqueous LCS/LCSD.

- The "not detected" volatile results for 1,4-dioxane were qualified as "rejected, unusable" (R) for all 4 ground water samples and trip blank because the RRF for 1,4-dioxane was below the allowable minimum in the associated continuing calibration verification sample.

- The positive semi-volatile result for carbazole was qualified as "estimated, biased low" (J-) for sample MW-4 because 1 of 2 percent recoveries for carbazole was below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The "not detected" semi-volatile results for 3,3'-dichlorobenzidine were qualified as "estimated" (UJ) for all 4 ground water samples because 1 of 2 percent recoveries for 3,3'-dichlorobenzidine was below QC limits, but below 30% in the associated aqueous LCS/LCSD.

- The "not detected" semi-volatile results for carbazole were qualified as "estimated" (UJ) for samples MW-8, B8DW, and B10D because 1 of 2 percent recoveries for carbazole was below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The positive SIM semi-volatile result for hexachlorobenzene was qualified as "estimated" (J) for sample MW-4 because the %D for hexachlorobenzene was above the allowable maximum in the associated continuing calibration verification samples.

- The positive pesticide result for 4,4'-DDT was qualified as "estimated, biased low" (J-) for sample B10D because the RPD for dual column quantitation of 4,4'-DDT was above the allowable maximum, but was not above 70% and the lower result was reported.

- The positive pesticide result for 4,4'-DDT was qualified as "estimated, presumptive evidence" (JN) for sample B8DW because the %RPD for dual column quantitation of 4,4'-DDT was above the allowable maximum and above 70%, but not above 100%.

- The positive metal results for magnesium were qualified as estimated, biased low (J-) for all 4 ground water samples because 2 of 2 percent recoveries for magnesium were below control limits, but not below 30% in the associated aqueous batch MS/MSD sample.

All data are that are not qualified rejected (R) are considered usable with estimated (J-, J, JN, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260D Volatiles Data
for Pace Analytical Services, SDG Number: L2544658

4 Ground Water Samples and 1 Trip Blank
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 14 compounds (highlighted yellow on attached Form 6) were below the method minimums, but not below 0.010 for VOA122 on 06-03-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 15 compounds (highlighted yellow on attached Form 7) were below the method minimum, but not below 0.010 on 07-28-25 (V22250728A01). The %Ds for 7 compounds (highlighted yellow on attached Form 7) were above the method maximum on 07-28-25 (V22250728A01). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRF for 1,4-dioxane was below the allowable minimum (0.001) on 07-28-25 (V22250728A01). Positive results for 1,4-dioxane should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %Ds for 7 compounds (highlighted yellow on attached Form 7) and 1,4-dioxane were above the allowable maximum (20%) on 07-28-25 (V22250728A01). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method and trip blanks reported target compounds as not detected.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples and trip blank.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The relative percent difference for bromomethane was above the allowable maximum for aqueous samples WG2095890-3/4. Positive results for bromomethane should be considered estimated (J) in associated aqueous samples.

One of two percent recoveries for 4-methyl-2-pentanone was below QC limits, but not below 30% for aqueous samples WG2095890-3/4. Positive results for 4-methyl-2-pentanone should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked compound results were within GC/MS quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

SDG Number: L2544658

4 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 for SV107 on 06-19-25. No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no average RRF is less than 0.010.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 2-chloronaphthalene and 2,6-dinitrotoluene were below the method minimums, but not below 0.010 on 07-19-25 (WG2092572-3). The %Ds for 2,4-dinitrophenol, fluorene, 4,6-dinitro-o-cresol, and butyl benzyl phthalate were above the method maximum on 07-19-25 (WG2092572-3). No action is taken on fewer than 20% of the compounds with method criteria outside control limits per calibration, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 2,4-dinitrophenol, fluorene, 4,6-dinitro-o-cresol, and butyl benzyl phthalate were above the allowable maximum (20%) on 07-19-25 (WG2092572-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analysis of the method blank reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Laboratory Control Sample: The relative percent difference for 4-nitrophenol was above the allowable maximum for aqueous samples WG2092274-2/3. Positive results for bromomethane should be considered estimated (J) in associated aqueous samples.

One of two percent recoveries for carbazole and 3,3'-dichlorobenzidine were below QC limits, but not below 30% for aqueous samples WG2092274-2/3. Positive results for carbazole and 3,3'-dichlorobenzidine should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked surrogate results were within GC/MS quantitation limits. The analyses of the ground water samples reported target compounds as not detected.

4 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within the USEPS SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %D for hexachlorobenzene was above the allowable maximum (20%) on 07-20-25 (WG2092769-3). The %D for pentachlorophenol was above the allowable maximum (20%) on 07-30-25 (WG2096877-3). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank WG2092160-1BLANK contained a trace of benzo(a)anthracene (0.03 ug/L). Positive results for benzo(a)anthracene that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Laboratory Control Sample: The relative percent differences for target compounds were below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2092160-2/3.

Compound ID: Checked compound and surrogate results were within GC/MS quantitation limits.

QA/QC Review of Method 8270D SIM 1,4-Dioxane
Data for Pace Analytical Services, SDG Number: L2544658

4 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Initial Calibration: The average RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %D was below the allowable maximum (20%), as required.

Blanks: The analysis of the method blank reported 1,4-dioxane and not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the ground water samples.

Laboratory Control Sample: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous samples WG2093014-2/3.

Compound ID: Checked surrogate and 1,4-dioxane results were within quantitation limits.

QA/QC Review of 8081B Pesticide Data for Pace Analytical Services
SDG Number: L2544658

4 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples.

Laboratory Control Sample: The percent recoveries for target pesticides were within QC limits, but relative percent differences for heptachlor, aldrin, 4,4'-DDE, and 4,4'-DDT were above the allowable maximum for aqueous samples WG2092235-2/3. Positive results for these pesticides should be considered estimated (J) in associated aqueous samples.

Initial Calibration: The %RSDs were below the allowable maximum (20%) or the correlation coefficients were above the allowable minimum (0.995) for target pesticides on both columns, as required.

Continuing Calibration: The %Ds for endrin aldehyde were above the allowable maximum (20%) for both channels on 07-22-25 (10250722a-27). Positive results for endrin aldehyde should be considered estimated (J) in associated samples.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (20%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: The checked surrogate and detected pesticide results were within GC quantitation limits. The RPD for dual column quantitation of 4,4'-DDT in sample B10D was above the allowable maximum (25%), but not above 70% and the lower result was reported. The positive result for 4,4'-DDT should be considered estimated, biased low (J-) in sample B10D.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The RPD for dual column quantitation of 4,4'-DDT in sample B8DW was above the allowable maximum (25%) and above 70%, but not above 100%. The positive result for 4,4'-DDT should be considered estimated, presumptive evidence (JN) in sample B8DW.

Pesticide Identification Summary for Multi-Component Analytes: The analyses of ground water samples reported target multi-component pesticides as not detected.

QA/QC Review of 8082A PCB Data
for Pace Analytical Services
SDG Number: L2544658

4 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the ground water samples.

Laboratory Control Sample: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximums and percent recoveries were within QC limits for aqueous samples WG2092485-2/3.

Initial Calibration: The average %RSDs for target aroclors were below the allowable maximum (20%) on both columns, as required.

Continuing Calibration: The average %Ds for aroclor 1016 and aroclor 1260 were below the allowable maximum (20%) for both columns, as required

PCB Identification Summary: The checked surrogate results were within GC quantitation limits. The analyses of ground water samples reported target compounds as not detected.

QA/QC Review of Method 1633 PFAS Data for
Pace Analytical Services SDG Number: L2544658

3 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The %RSDs for applicable PFASs were below the method maximum (20%) or the R or R squared were above the method minimums, as required.

Continuing Calibration: The percent recoveries for applicable PFASs were within QC limits (70-130%), as required.

Blanks: The analysis of the method blank reported target PFAS as not detected.

Surrogate Recovery: Two of twenty-four surrogate recoveries for samples MW-8 and B8DW were above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the samples.

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for aqueous samples WG2093048-2/3.

Compound ID: Checked PFAS results were within LC quantitation limits.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2544658

4 Ground Water Samples
Collected July 16, 2025

Prepared by: Donald Anné
September 26, 2025

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration, method, and field blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: Two of two percent recoveries for magnesium were below control limits (75-125%), but not below 30% for aqueous batch MS/MSD sample L2543650-11. Positive results for magnesium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Laboratory Duplicates: The relative percent differences for applicable metals were below the allowable maximum (20%) for aqueous batch MS/MSD sample L2543650-11 and duplicate sample MW-4, as required.

Laboratory Control Sample: The percent recoveries for target metals were within control limits for aqueous samples WG2093368-2 and WG2093369-2.

Serial Dilution: This data was not provided.

February 20, 2026

Ms. Alexandra Keenan
Project Manager
vEKtor consultants
555 8th Avenue, Suite 2302
New York, NY 10018

Re: Data Validation Report
601 Union-2022 Phase 2 RI
September 2022 Soil and Ground Water Sampling Events

Dear Ms. Keenan,

The Data Usability Summary Reports are attached to this letter for the 601 Union site, September 2022 soil and ground water sampling events. The data for York Analytical Laboratories, Inc., SDG numbers 22I0332 and 22I0453 are mostly acceptable, with issues that are identified in the DUSRs and QA/QC review summaries. There are data that are rejected, unusable (R) in both data packs. The DUSRs and QA/QC reviews outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Donald Anné

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Polyfluorinated Alkyl Substances (PFAS) Acronyms

PFBA	Perfluorobutanoic acid
PFPeA	Perfluoropentanoic acid
PFHxA	Perfluorohexanoic acid
PFHpA	Perfluoroheptanoic acid
PFOA	Perfluorooctanoic acid
PFNA	Perfluorononanoic acid
PFDA	Perfluorodecanoic acid
PFUnA	Perfluoroundecanoic acid
PFDoA	Perfluorododecanoic acid
PFTriA or PFTrDA	Perfluorotridecanoic acid
PFTeA or PFTA	Perfluorotetradecanoic acid
PFBS	Perfluorobutanesulfonic acid
PFPeS	Perfluoropentanesulfonic acid
PFHxS	Perfluorohexanesulfonic acid
PFHpS	Perfluoroheptanesulfonic acid
PFOS	Perfluorooctanesulfonic acid
PFNS	Perfluorononanesulfonic acid
PFDS	Perfluorodecanesulfonic acid
FOSA	Perfluorooctane Sulfonamide
NMeFOSAA	N-methyl perfluorooctane sulfonamidoacetic acid
NEtFOSAA	N-ethyl perfluorooctane sulfonamidoacetic acid
4:2 FTS or 4:2	1H, 1H, 2H, 2H-perfluorohexanesulfonic acid
6:2 FTS or 6:2	1H, 1H, 2H, 2H-perfluorooctanesulfonic acid or 6:2 Fluorotelomersulfonate
8:2 FTS or 8:2	1H, 1H, 2H, 2H-perfluorodecanesulfonic acid or 8:2 Fluorotelomersulfonate

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 11 soil samples analyzed for volatiles, semi-volatiles, 1,4-dioxane by SIM, PFAS, pesticides, PCBs, TAL metals, and hexavalent chromium.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical methods except for ICP metals analyses.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile result for methylene chloride was qualified as "not detected" (U) for sample SP-1 (8-10) because the level reported in the sample was not significantly greater than (more than 10 times) the highest associated blank level.

- The "not detected" volatile results for tetrachloroethylene were qualified as "estimated" (UJ) for all 11 soil samples because 2 of 2 percent recoveries for tetrachloroethylene were below QC limits, but not below 10% in the associated soil LCS/LCSDs.

- The positive volatile results for 9 compounds were qualified as "estimated, biased high" (J+) for sample SP-10 (8-10) because 1 of 3 surrogate recoveries was above control limits for the sample.

- The positive semi-volatile result for indeno(1,2,3-cd)pyrene was qualified as "estimated" (J) for sample SP-11 (10-12) because the %D for indeno(1,2,3-cd)pyrene was above the allowable maximum in the associated continuing calibration.

- The positive semi-volatile results for 18 compounds were qualified as "estimated, biased high" (J+) for sample SP-4 (4-6) because 2 of 3 base/neutral surrogate recoveries were above control limits for the sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive semi-volatile results for 19 compounds were qualified as “estimated, biased high” (J+) for sample SP-10 (8-10) because 1 of 3 base/neutral surrogate recoveries was above control limits for the initial and re-analyses of the sample.

- The positive semi-volatile result for 2-methylnaphthalene was qualified as “estimated, biased high” (J+) for sample SP-11 (10-12) because 1 of 3 surrogate recoveries was above control limits for the re-analysis of the sample.

- The “not detected” PFAS results for N-EtFOSAA and 8:2 FTS were qualified as “estimated” (UJ) for sample SP-11 (10-12) because percent recoveries for the surrogates used to quantitate N-EtFOSAA and 8:2 FTS were below QC limits, but not below 10% in the sample.

- The “not detected” PFAS results for N-MeFOSAA was qualified as “rejected, unusable” (R) for sample SP-10 (8-10) because percent recovery for the surrogate used to quantitate N-MeFOSAA was below QC limits and below 10% in the sample.

- The “not detected” PFAS results for PFOS was qualified as “rejected, unusable” (R) for sample SP-11 (10-12) because percent recovery for the surrogate used to quantitate PFOS was below QC limits and below 10% in the sample.

- The positive metal results for nickel were qualified as estimated, biased low (J-) for all 11 soil samples because the percent recovery for nickel was below control limits, but not below 10% in the associated soil spike sample.

- The positive metal results for antimony were qualified as estimated, biased low (J-) for samples SP-1 (8-10), SP-2 (8-10), SP-4 (4-6), SP-9 (1-3), SP-10 (8-10), and SP-11 (10-12) because the percent recovery for antimony was below control limits, but not below 10% in the associated soil spike sample.

- The “not detected” metal results for antimony were qualified as estimated (UJ) for samples SP-3 (10-12), SP-5 (6-8), SP-6 (2-4), SP-7 (0-2), and SP-8 (1-3) because the percent recovery for antimony was below control limits, but not below 10% in the associated soil spike sample.

- The positive metal results for sodium were qualified as estimated, biased low (J-) for samples SP-2 (8-10), SP-5 (6-8), SP-8 (1-3), SP-9 (1-3), and SP-11 (10-12) because the percent recovery for sodium was below control limits, but not below 10% in the associated soil spike sample.

- The "not detected" metal results for sodium were qualified as estimated (UJ) for samples SP-1 (8-10), SP-3 (10-12), SP-4 (4-6), SP-6 (2-4), SP-7 (0-2), and SP-10 (8-10) because the percent recovery for sodium was below control limits, but not below 10% in the associated soil spike sample.

- The "not detected" metal results for selenium were qualified as estimated (UJ) for all 11 soil samples because the percent recovery for selenium was below control limits, but not below 10% in the associated soil spike sample.

- The positive metal result for beryllium was qualified as estimated, biased low (J-) for sample SP-9 (1-3) because the percent recovery for beryllium was below control limits, but not below 10% in the associated soil spike sample.

- The "not detected" metal results for beryllium were qualified as estimated (UJ) for all soil samples except SP-9 (1-3) because the percent recovery for antimony was below control limits, but not below 10% in the associated soil spike sample.

- The positive metal results for barium and copper were qualified as estimated, biased high (J+) for all 11 soil samples because the percent recoveries for barium and copper were above QC limits in the associated soil LCSs.

- The positive metal results for arsenic, lead, magnesium, potassium, and zinc were qualified as estimated, biased high (J+) for the following samples because the percent recoveries for arsenic, lead, magnesium, potassium, and zinc were above QC limits in the associated soil LCS.

SP-3 (10-12)	SP-4 (4-6)	SP-5 (6-8)	SP-6 (2-4)
SP-7 (0-2)	SP-8 (1-3)	SP-9 (1-3)	SP-10 (8-10)
SP-11 (10-12)			

- The positive metal results for chromium were qualified as estimated, biased high (J+) for samples SP-1 (8-10) and SP-2 (8-10) because the percent recovery for chromium was above QC limits in the associated soil LCS.

- The positive metal results for zinc were qualified as estimated (J) for samples SP-1 (8-10) and SP-2 (8-10) because the %D for zinc was above the allowable maximum in the associated soil serial dilution sample and the results were above the MRLs.

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260C Volatiles Data for
York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 1,2-dibromo-3-chloropropane, 2-butanone, and bromoform were below the method minimums, but not below 0.010 for VOA No.5 on 08-26-22. No action is taken when fewer than 20% of the compounds per calibration do not meet average RRF criteria, provided the average RRFs are not below 0.010.

The average RRFs for target compounds were above the allowable minimum (0.001 for 1,4-dioxane, 0.010 for all other compounds), as required.

The %RSDs for bromoform and dibromochloromethane were above the allowable maximum (30%) for VOA No.5 on 08-26-22. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRFs for 1,2-dibromo-3-chloropropane, 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 on 09-13-22 (V5426698.D). The RRFs for 1,2-dibromo-3-chloropropane, 2-butanone, and bromoform were below the method minimums, but not below 0.010 on 09-14-22 (V5426724.D). The RRFs for 1,2-dibromo-3-chloropropane, 2-butanone, 2-hexanone, and bromoform were below the method minimums, but not below 0.010 on 09-15-22 (V5426749.D). The %Ds for 5 compounds (marked with a red X on attached FORM VII) were above the method maximum on 09-13-22 (V5426698.D). The %Ds for carbon disulfide, chloromethane, dichlorodifluoromethane, and vinyl chloride were above the method maximum on 09-14-22 (V5426724.D). The %Ds for chloromethane and dichlorodifluoromethane were above the method maximum on 09-15-22 (V5426749.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Ds for 7 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 09-13-22 (V5426698.D). The %Ds for 1,4-dioxane, acrolein, carbon disulfide, chloromethane, dichlorodifluoromethane, and vinyl chloride were above the allowable maximum (20%) on 09-14-22 (V5426724.D). The %Ds for acrolein, chloromethane, and dichlorodifluoromethane were above the allowable maximum (20%) on 09-15-22 (V5426749.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BI20559-BLK2 contained a trace of methylene chloride (540 ug/kg). Positive results for methylene chloride that are less than 10 times the highest blank level should be reported as not detected (U) in associated samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: One of three surrogate recoveries for sample SP-11 (10-12) was above control limits. Positive results for volatiles should be considered estimated, biased high (J+) in sample SP-11 (10-12).

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for methylene chloride were above QC limits for soil samples BI20559-BS1/BSD1. The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for chloromethane, dichlorodifluoromethane, and vinyl chloride were above QC limits for soil samples BI20630-BS1/BSD1. The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for dichlorodifluoromethane were above QC limits for soil samples BI20730-BS1/BSD1. Positive results for these compounds should be considered estimated, biased high (J+) in associated soil samples.

Two of two %Rs for tetrachloroethylene were below QC limits, but not below 10% for soil samples BI20559-BS1/BSD1, BI20630-BS1/BSD1, and BI20730-BS1/BSD1. Positive results for tetrachloroethylene should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D Semi-Volatiles Data
for York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.010), as required.

The %RSDs for 2,4-dinitrotoluene and 2,6-dinitrotoluene were above the allowable maximum (30%) for BNA#1 on 09-09-22. Positive results for these compounds should be considered estimated (J) in associated samples.

Continuing Calibration: The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 09-21-22 (BNA1016999.D). The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 09-21-22 (BNA1017011.D). The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 09-22-22 (BNA1017032.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, and 2-chloronaphthalene were above the method maximum on 09-21-22 (BNA1016999.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, bis(2-chloroisopropyl)ether, hexachlorocyclopentadiene, and indeno(1,2,3-cd)pyrene were above the method maximum on 09-21-22 (BNA1017011.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, bis(2-chloroisopropyl)ether, and hexachlorobenzene were above the method maximum on 09-22-22 (BNA1017032.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, and 2-chloronaphthalene were above the allowable maximum (20%) on 09-21-22 (BNA1016999.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, aniline, bis(2-chloroisopropyl)ether, hexachlorocyclopentadiene, indeno(1,2,3-cd)pyrene, and n-nitrosodimethylamine were above the allowable maximum (20%) on 09-21-22 (BNA1017011.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, bis(2-chloroisopropyl)ether, and hexachlorobenzene were above the allowable maximum (20%) on 09-22-22 (BNA1017032.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: Two of two base/neutral surrogate recoveries for sample SP-4 (4-6) were above control limits. One of two base/neutral surrogate recoveries for samples SP-10 (8-10), SP-10 (8-10)RE2, and SP-11 (10-12)RE was above control limits. Positive results for base/neutral compounds should be considered estimated, biased high (J+) for these samples.

Laboratory Control Sample: The percent recoveries for target compounds were within QC limits for soil samples BI20994-BS1 and BI21000-BS1.

Compound ID: Checked compound and surrogate results were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D SIM 1,4-Dioxane Data
for York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRF for 1,4-dioxane was above the allowable minimum (0.010) and the %RSD was below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analysis of the method blank reported 1,4-dioxane as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recoveries were within QC limits for the soil samples and field blank.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for soil MS/MSD sample SP-8 (1-3).

Laboratory Control Sample: The percent recovery for 1,4-dioxane was within QC limits for soil sample BI20995-BS1.

Compound ID: Checked surrogate results were within quantitation limits. The analyses of the soil samples reported 1,4-dioxane as not detected.

York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil samples.

Laboratory Control Sample: The percent recoveries for target pesticides were within QC limits for soil samples BI20996-BS1 and aqueous sample BI20999-BS1.

Initial Calibration: The %RSDs for target pesticides were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The %Ds for target pesticides were below the allowable maximum (20%) for both columns, as required.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (15%) for 4,4'-DDT and endrin, as required.

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The analyses of the soil samples reported target single component pesticides as not detected.

Pesticide Identification Summary for Multicomponent Analytes: The analyses of the soil samples reported target multi-component pesticides as not detected.

QA/QC Review of Method 8082A PCB Data for
York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target aroclors as not detected.

Surrogate Recovery: One of two surrogate recoveries for sample SP-9 (1-3) was below QC limits, but not below 10% on one column. No action is taken on one surrogate recovery outside QC limits, provided the recovery is not less than 10%.

Laboratory Control Sample: The percent recoveries for aroclor 1016 and aroclor 1260 were within QC limits on both columns for soil samples BI20996-BS2 and BI20999-BS2.

Initial Calibration: The %RSDs for target aroclors were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (20%), as required.

PCB Identification Summary: Checked surrogate results were within GC quantitation limits. The %Diff for dual column quantitation of aroclor 1260 in sample SP-10 (8-10) was below the allowable maximum (25%), as required.

QA/QC Review of Method 537 Modified PFAS Data for
York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The Quad COD for target PFAS were above the allowable minimum (0.995), as required.

Continuing Calibration: The %D for PFTrDA was above the allowable maximum (30%) on 09-14-22 (QQQ304172.d). Positive results for PFTrDA should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target PFAS as not detected.

Internal Standard Area Summary: The internal standard retention times were within control limits.

Surrogate Recovery: Three of eighteen surrogate recoveries for samples SP-3 (10-12) and SP-6 (2-4) were above QC limits. Two of eighteen surrogate recoveries for sample SP-1 (8-10) were above QC limits. One of eighteen surrogate recoveries for sample SP-7 (0-2) was above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the sample.

Two of eighteen surrogate recoveries for sample SP-11 (10-12) were below QC limits, but not below 10%. One of eighteen surrogate recoveries for sample SP-10 (8-10) was below QC limits, but not below 10%. Positive and "not detected" results associated with the surrogate below QC limits should be considered estimated (J or UJ) in the samples.

One of eighteen surrogate recoveries for sample SP-10 (8-10) and SP-11 (10-12) was below QC limits and below 10%. Positive results associated with the surrogate below QC limits should be considered estimated (J) and "not detected" results rejected, unusable (R) in the samples.

Laboratory Control Sample: The percent recoveries for target PFAS were within QC limits for soil sample BI20417-BS1.

Compound ID: Checked PFAS and surrogate results were within LC quantitation limits.

QA/QC Review of TAL Metals Data for
York Analytical Laboratories, Inc., SDG: 22I0332

11 Soil Samples
Collected September 7, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recovery for antimony was below control limits (90-110%), but not below 50% for Y2I1919-CCV7. Positive results for antimony should be considered as estimated, biased low (J-) and "not detected" results estimated (UJ) in associated samples.

CRDL Standard: The percent recoveries for lead and thallium were above laboratory QC limits for the CRDL sample Y2I2014-CRL2. Positive results for lead and thallium that are below 4 times the MRL should be considered estimated, biased high (J+) in associated aqueous samples.

Blanks: The analyses of the method blanks reported target metals as not detected.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%) for the interference check samples.

Spike Sample Recovery: The percent recoveries for antimony, beryllium, nickel, selenium, and sodium were below control limits (75-125%), but not below 10% for soil spike sample SP-2 (8-10). Positive results for these 5 metals should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicate: The relative percent differences for applicable metals were below the allowable maximum (35%) for soil duplicate sample SP-2 (8-10), as required.

Laboratory Control Sample: The percent recoveries (%Rs) for barium, chromium, and copper were above QC limits for soil sample BI20593-SRM1. The %Rs for arsenic, barium, copper, lead, magnesium, potassium, and zinc were above QC limits for soil sample BI20594-SRM1. Positive results for these metals should be considered estimated, biased high (J+) in associated soil samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Serial Dilution: The %D for zinc was above the allowable maximum (15%) for soil serial dilution sample SP-2 (8-10). Positive results for zinc that are above the RLs should be considered estimated (J) in associated soil samples.

Detection Limits: The LODs were at or below POQs, as required.

Percent Solids: The percent solids for soil samples were above 50%.

Data Usability Summary Report for
York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 6 soil and 3 ground water samples analyzed for volatiles, semi-volatiles, pesticides, PCBs, TAL metals, and hexavalent chromium, and the results of 3 soil and 3 ground water samples analyzed for 1,4-dioxane by SIM and PFAS.

The overall performances of the analyses are acceptable. York Analytical Laboratories, Inc. did fulfill the requirements of the analytical methods except for ICP metals analyses.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive volatile result for methylene chloride was qualified as "not detected" (U) for sample MW-3 because the level reported in the sample was not significantly greater than (more than 10 times) the highest associated blank level.

- The positive volatile results for acetone were qualified as "estimated" (J) for all 3 ground water samples because the %RSD for acetone was above the allowable maximum in the associated initial calibration.

- The "not detected" volatile results for cyclohexane were qualified as "estimated" (UJ) for all 3 ground water samples because 2 of 2 percent recoveries for cyclohexane were below QC limits, but not below 30% in the associated aqueous LCS/LCSDs.

- The "not detected" volatile results for bromomethane were qualified as "rejected, unusable" (R) for all 3 ground water samples because 2 of 2 percent recoveries for bromomethane were below QC limits and below 30% in the associated aqueous LCS/LCSDs.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The "not detected" volatile result for 1,2,3-trichlorobenzene was qualified as "estimated" (UJ) for sample MW-3 because 1 of 2 percent recoveries for 1,2,3-trichlorobenzene was below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The "not detected" volatile results for 1,4-dioxane were qualified as "rejected, unusable" (R) for all 3 ground water samples because average RRF and RRFs for 1,4-dioxane were below the allowable minimum in the associated initial and continuing calibrations.

- The positive SIM semi-volatile results for 5 compounds were qualified as "estimated" (J) for sample MW-1 because the %Ds for these 5 compounds were above the allowable maximum in the associated continuing calibration.

- The positive SIM semi-volatile results for 10 compounds were qualified as "estimated" (J) for sample MW-2 because the %Ds for these 10 compounds were above the allowable maximum in the associated continuing calibration.

- The positive SIM semi-volatile results for 9 compounds were qualified as "estimated" (J) for sample MW-3 because the %Ds for these 9 compounds were above the allowable maximum in the associated continuing calibration.

- The "not detected" SIM semi-volatile results for n-nitrosodimethylamine were qualified as "rejected, unusable" (R) for all 3 ground water samples because the percent recovery for n-nitrosodimethylamine was below QC limits and below 30% in the associated aqueous LCS.

- The positive SIM semi-volatile result for bis(2-ethylhexyl)phthalate was qualified as "not detected" (U) for sample MW-3 because the level reported in the sample was not significantly greater than (more than 10 times) the highest associated blank level.

- The "not detected" semi-volatile results for 3,3-dichlorobenzidine were qualified as "estimated" (UJ) for all 3 ground water samples because 2 of 2 percent recoveries for 3,3-dichlorobenzidine were below QC limits, but not below 30% in the associated aqueous LCS/LCSD.

- The positive semi-volatile results for anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(g,h,i)perylene, and chrysene were qualified as "estimated, biased low" (J-) for sample SP-15 (6-8) because 1 of 3 base/neutral surrogate recoveries was below control limits for the second re-analysis of the sample.

- The positive PFAS result for PFBA was qualified as "estimated" (J) for sample SP-12 (10-12) because percent recovery for the surrogate used to quantitate PFBA was above QC limits in the sample.

- The positive total metal results for iron were qualified as estimated, biased high (J+) for all 3 ground water samples because the percent recoveries for iron were above control limits, but not above 150% in the associated continuing calibration verification samples.

- The positive total metal result for zinc was qualified as estimated, biased high (J+) for sample MW-1 because the percent recovery for zinc was above control limits, but not above 150% in the associated continuing calibration verification sample.

- The dissolved metal result for antimony was qualified as estimated, biased high (J+) for sample MW-1 because the percent recovery for antimony was above control limits, but not above 150% in the associated continuing calibration verification sample.

- The positive total metal results for sodium were qualified as estimated, biased high (J+) for all 3 ground water samples because the percent recovery for sodium was above control limits in the associated aqueous total LCS.

- The positive dissolved metal results for sodium were qualified as estimated, biased low (J-) for all 3 ground water samples because the percent recovery for sodium was below control limits and below 30% in the associated aqueous dissolved LCS.

- The positive total metal results for cadmium were qualified as estimated, biased low (J-) for all 3 ground water samples because the percent recovery for cadmium was below control limits, but not below 50% in the associated continuing calibration verification sample.

- The positive metal results for copper and zinc were qualified as estimated, biased high (J+) for all 6 soil samples because the percent recoveries for copper and zinc were above control limits in the associated soil spike sample.

- The positive metal results for arsenic, calcium, magnesium, and manganese were qualified as estimated (J) for all 6 soil samples because the relative percent differences for these 4 metals were above the allowable maximum in the associated soil duplicate sample.

- The positive metal results for sodium were qualified as estimated, biased low (J-) for samples SP-14 (6-8), SP-12 (10-12), SP-17 (4-6), SP-15 (6-8), and SP-16 (8-10) because the percent recovery for sodium was below control limits, but not below 10% in the associated soil spike sample.

- The "not detected" metal result for sodium was qualified as estimated (UJ) for samples SP-13 (10-12) because the percent recovery for sodium was below control limits, but not below 10% in the associated soil spike sample.

- The positive metal results for antimony were qualified as estimated, biased low (J-) for samples SP-13 (10-12), SP-14 (6-8), and SP-17 (4-6) because the percent recovery for antimony was below control limits, but not below 10% in the associated soil spike sample.

- The "not detected" metal results for antimony were qualified as estimated (UJ) for samples SP-12 (10-12), SP-15 (6-8), and SP-16 (8-10) because the percent recovery for antimony was below control limits, but not below 10% in the associated soil spike sample.

- The positive metal results for nickel were qualified as estimated (J) for samples SP-13 (10-12), SP-14 (6-8), SP-17 (4-6), SP-15 (6-8), and SP-16 (8-10) because the %D for nickel was above the allowable maximum in the associated soil serial dilution sample and the results were above the MRLs.

- The metal results for lead were qualified as estimated, biased high (J+) for samples SP-13 (10-12) and SP-14 (6-8) because the percent recovery for lead was above control limits, but not above 150% in the associated continuing calibration verification sample.

- The metal results for cobalt and nickel were qualified as estimated, biased high (J+) for sample SP-12 (10-12) because the percent recoveries for cobalt and nickel were above control limits, but not above 150% in the associated continuing calibration verification sample.

- The metal results for potassium were qualified as estimated, biased high (J+) for samples SP-12 (10-12), SP-17 (4-6), SP-15 (6-8), and SP-16 (8-10) because the percent recoveries for potassium were above control limits, but not above 150% in the associated continuing calibration verification samples.

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, J+, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of Method 8260C Volatiles Data for
York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The BFB tuning criteria were within control limits.

Initial Calibration: The average RRFs for 2-butanone and 2-hexanone were below the method minimums, but not below 0.010 for QVOA9 on 09-01-22. No action is taken when fewer than 20% of the compounds per calibration do not meet average RRF criteria, provided the average RRFs are not below 0.010.

The average RRF for 1,4-dioxane was below the allowable minimum (0.001) for QVOA9 on 09-01-22. Positive results for 1,4-dioxane should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %RSD for acetone was above the allowable maximum (30%) for QVOA9 on 09-01-22. Positive results for acetone should be considered estimated (J) in associated samples.

Continuing Calibration: The RRF for 2-butanone was below the method minimum, but not below 0.010 on 09-13-22 (QV428348.D). The RRFs for 2-butanone, 2-hexanone, 4-methyl-2-pentanone, acetone, bromoform, and bromomethane were below the method minimums, but not below 0.010 on 09-14-22 (QV922927.D). The RRFs for 2-butanone, 2-hexanone, acetone, bromoform, and bromomethane were below the method minimums, but not below 0.010 on 09-15-22 (QV922980.D). The %Ds for 1,1,2-trichloro-1,2,2-trifluoroethane, 1,2-dichloroethane, carbon tetrachloride, MTBE, and tetrachloroethylene were above the method maximum on 09-13-22 (QV428348.D). The %Ds for 9 compounds (marked with a red X on attached FORM VII) were above the method maximum on 09-14-22 (QV922927.D). The %Ds for 6 compounds (marked with a red X on attached FORM VII) were above the method maximum on 09-15-22 (QV922980.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The RRFs for 1,4-dioxane were below the allowable minimum (0.001) on 09-14-22 (QV922927.D) and 09-15-22 (QV922980.D). Positive results for 1,4-dioxane should be considered estimated (J) and "not detected" results rejected, unusable (R) in associated samples.

The %Ds for 1,1,2-trichloro-1,2,2-trifluoroethane, 1,2-dichloroethane, carbon tetrachloride, dibromomethane, MTBE, n-butylbenzene, and tetrachloroethylene were above the allowable maximum (20%) on 09-13-22 (QV428348.D). The %Ds for 14 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 09-14-22 (QV922927.D). The %Ds for 11 compounds (highlighted yellow on attached FORM VII) were above the allowable maximum (20%) on 09-15-22 (QV922980.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BI20807-BLK1 contained a trace of methylene chloride (1.05 ug/L). Positive results for methylene chloride that are less than 10 times the highest blank level should be reported as not detected (U) in associated aqueous samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits.

Surrogate Recovery: The surrogate recoveries were within control limits for the soil and ground water samples.

Laboratory Control Sample: The relative percent differences (RPDs) for target compounds were below the allowable maximum, but 2 of 2 percent recoveries (%Rs) for TBA were above QC limits for soil samples BH21859-BS1/BSD1. Positive results for TBA should be considered estimated, biased high (J+) in associated soil samples.

Two of two %Rs for dichlorodifluoromethane and trichlorofluoromethane were above QC limits for aqueous samples BI20708-BS1/BSD1. Two of two %Rs for trichlorofluoromethane were above QC limits for aqueous samples BI20807-BS1/BSD1. Positive results for these compounds should be considered estimated, biased high (J+) in associated aqueous samples.

Two of two %Rs for cyclohexane were below QC limits, but not below 30% for aqueous samples BI20708-BS1/BSD1. Two of two %Rs for cyclohexane and 1 of 2 %Rs for 1,2,3-tribenzene were below QC limits, but not below 30% for aqueous samples BI20807-BS1/BSD1. Positive results for these compounds should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

The RPD for bromomethane was above the allowable maximum and 2 of 2 %Rs for bromomethane were below QC limits and below 30% for aqueous samples BI20708-BS1/BSD1. The RPDs for target compounds were below the allowable maximum, but 2 of 2 %Rs for bromomethane were below QC limits and below 30% for aqueous samples BI20807-BS1/BSD1. Positive results for bromomethane should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated soil samples.

Compound ID: Checked compounds and surrogates were within GC quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D Semi-Volatiles Data
for York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for applicable compounds were above the method minimums, as required.

The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 09-22-22 (E20010365.D). The RRF for hexachlorobenzene was below the method minimum, but not below 0.010 on 09-23-22 (E20010391.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, bis(2-chloroisopropyl)ether, and n-nitroso-di-n-propylamine were above the method maximum on 09-14-22 (SV3011135.D). The %Ds for 2,4-dinitrotoluene and 2,6-dinitrotoluene were above the method maximum on 09-22-22 (E20010365.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, and hexachlorocyclopentadiene were above the method maximum on 09-23-22 (E20010391.D). No action is taken when fewer than 20% of the compounds per calibration do not meet either method %D or RRF criteria, provided no RRF is less than 0.010.

The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, bis(2-chloroisopropyl)ether, and n-nitroso-di-n-propylamine were above the allowable maximum (20%) on 09-14-22 (SV3011135.D). The %Ds for 2,4-dinitrotoluene and 2,6-dinitrotoluene were above the allowable maximum (20%) on 09-22-22 (E20010365.D). The %Ds for 2,4-dinitrotoluene, 2,6-dinitrotoluene, and hexachlorocyclopentadiene were above the allowable maximum (20%) on 09-23-22 (E20010391.D). Positive results for these compounds should be considered estimated (J) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Blanks: The analyses of the method blanks reported target compounds as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The base/neutral surrogate recoveries were within control limits for the ground water samples.

One of two base/neutral surrogate recoveries for sample SP-15 (6-8)RE2 was below control limits and below 10%. Positive results for base/neutral compounds should be considered estimated, biased low (J-) for sample SP-15 (6-8)RE2.

Laboratory Control Sample: The percent recoveries (%Rs) for target compounds were within QC limits for soil samples BI21059-BS1 and BI21145-BS1.

The relative percent differences for target compounds were below the allowable maximum, but 2 of 2 %Rs for 3,3-dichlorobenzidine were below QC limits, but not below 30% for aqueous samples BI20625-BS1/BSD1. Positive results for 3,3-dichlorobenzidine should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Compound ID: Checked compound and surrogate results were within quantitation limits. The mass spectra for detected compounds contained the primary and secondary ions, as outlined in the method.

QA/QC Review of Method 8270D SIM Semi-Volatiles Data
for York Analytical Laboratories, Inc., SDG: 22I0453

3 Ground water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: The samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for target compounds were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for target compounds were above the allowable minimum (0.010), as required.

The %Ds for 15 compounds (highlighted yellow attached FORM VII) were above the allowable maximum (20%) on 09-14-22 (SV532573.D). Positive results for these compounds should be considered estimated (J) in associated samples.

Blanks: Method blank BI20625-BLK2 contained a trace of bis(2-ethylhexyl)phthalate (0.630 ug/L). Positive results for bis(2-ethylhexyl)phthalate that are less than 10 times the highest blank level should be reported as not detected (U) in associated aqueous samples.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Laboratory Control Sample: The percent recovery (%R) for hexachloroethane was above QC limits for aqueous sample BI20625-BS2. Positive results for hexachloroethane should be considered estimated, biased high (J+) in the associated aqueous samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

The %R for n-nitrosodimethylamine was below QC limits and below 30% for aqueous sample BI20625-BS2. Positive results for n-nitrosodimethylamine should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in in the associated aqueous samples.

Compound ID: The analysis of the field blank reported target compounds as not detected.

QA/QC Review of Method 8270D SIM 1,4-Dioxane Data
for York Analytical Laboratories, Inc., SDG: 22I0453

3 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

GC/MS Tuning and Mass Calibration: The DFTPP tuning criteria were within control limits.

Initial Calibration: The average RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %RSDs were below the allowable maximum (30%), as required.

Continuing Calibration: The RRFs for 1,4-dioxane were above the allowable minimum (0.010) and the %Ds were below the allowable maximum (20%), as required.

Blanks: The analyses of the method blanks reported 1,4-dioxane as not detected.

Internal Standard Area Summary: The internal standard areas and retention times were within control limits for reported soil samples.

Surrogate Recovery: The surrogate recoveries were within QC limits for the soil and ground water samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent difference for 1,4-dioxane was below the allowable maximum and the percent recoveries were within QC limits for aqueous MS/MSD sample MW-2.

Laboratory Control Sample: The percent recoveries for 1,4-dioxane were within QC limits for soil sample BI21236-BS1 and aqueous sample BI20766-BS1.

Compound ID: Checked surrogate results were within quantitation limits. The analyses of the soil and ground water samples reported 1,4-dioxane as not detected.

QA/QC Review of Method 8081B Pesticide Data for
York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target pesticides as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil and ground water samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for target pesticides were below the allowable maximum; 1 of 2 percent recoveries (%Rs) for methoxychlor on the primary column; and 2 of 2 %Rs for methoxychlor and 1 of 2 %Rs for 4,4'-DDT on the secondary column were above QC limits for soil MS/MSD sample SP-14 (6-8). Sample SP-14 (6-8) reported these pesticides as "not detected"; therefore, no action is taken.

Laboratory Control Sample: The percent recoveries (%Rs) for target pesticides were within QC limits for soil sample BI21067-BS1.

The %Rs for target pesticides were within QC limits, but the relative percent difference for methoxychlor was above the allowable maximum on the secondary column for aqueous samples BI20471-BS1/BSD1. Positive results for methoxychlor should be considered estimated (J) in associated aqueous samples.

Initial Calibration: The %RSDs for target pesticides were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The %Ds for target pesticides were below the allowable maximum (20%) for both columns, as required.

DDT/Endrin Breakdown Check: The percent breakdowns were below the allowable maximum (15%) for 4,4'-DDT and endrin, as required.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

Pesticide Identification Summary for Single Component Analytes: Checked surrogates were within GC quantitation limits. The %Diff for dual column quantitation of 4,4'-DDD in sample MW-1 was below the allowable maximum (25%), as required.

Pesticide Identification Summary for Multicomponent Analytes: The analyses of the soil and ground water samples reported target multi-component pesticides as not detected.

QA/QC Review of Method 8082A PCB Data for
York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were extracted and analyzed within USEPA SW-846 holding times.

Blanks: The analyses of the method blanks reported target aroclors as not detected.

Surrogate Recovery: The surrogate recoveries were within QC limits on both columns for the soil and ground water samples.

Matrix Spike/Matrix Spike Duplicate: The relative percent differences for aroclor 1016 and aroclor 1260 were below the allowable maximum and the percent recoveries were within QC limits for soil MS/MSD sample SP-14 (6-8).

Laboratory Control Sample: The percent recoveries for aroclor 1016 and aroclor 1260 were within QC limits on both columns for soil sample BI21067-BS2 and aqueous sample BI20471-BS2.

Initial Calibration: The %RSDs for target aroclors were below the allowable maximum (20%) or the Quad CODs were above the allowable minimum (0.99) for both columns, as required.

Continuing Calibration: The average %Ds for target aroclors were below the allowable maximum (20%), as required.

PCB Identification Summary: Checked surrogate results were within GC quantitation limits. The analyses of the soil and ground water samples reported target aroclors as not detected.

QA/QC Review of Method 537 Modified PFAS Data for
York Analytical Laboratories, Inc., SDG: 22I0453

3 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: The samples were analyzed within USEPA holding times.

Initial Calibration: The Quad COD for target PFAS were above the allowable minimum (0.995), as required.

Continuing Calibration: The %D for 8:2 FTS was above the allowable maximum (30%) on 09-15-22 (QQQ304251.d). The %D for PFTrDA was above the allowable maximum (30%) on 09-17-22 (QQQ304347.d). Positive results for these PFAS should be considered estimated (J) in associated samples.

Blanks: The analyses of the method blanks reported target PFAS as not detected.

Internal Standard Area Summary: The internal standard retention times were within control limits.

Surrogate Recovery: Three of eighteen surrogate recoveries for sample SP-12 (10-12) were above QC limits. Two of eighteen surrogate recoveries for sample MW-1 were above QC limits. Positive results associated with the surrogate above QC limits should be considered estimated (J) in the sample.

Laboratory Control Sample: The relative percent differences for target PFAS were below the allowable maximum and the percent recoveries (%Rs) were within QC limits for aqueous samples BI20511-BS1/BSD1. The %Rs for target PFAS were within QC limits for soil sample BI20595-BS1.

Compound ID: Checked PFAS and surrogate results were within LC quantitation limits.

QA/QC Review of TAL Metals Data for
York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were analyzed within the USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries (%Rs) for iron and zinc were above control limits (90-110%), but not above 150% for Y2I1522-CCVC. The %R for iron was above control limits (90-110%), but not above 150% for Y2I1629-CCVB. The %Rs for antimony and cadmium were above control limits (90-110%), but not above 150% for Y2I1902-CCV5. The %Rs for lead and thallium were above control limits (90-110%), but not above 150% for Y2I2013-CCVA. The %Rs for cobalt, nickel, potassium, selenium, and zinc were above control limits (90-110%), but not above 150% for Y2I2116-CCV4. The %Rs for potassium and zinc were above control limits (90-110%), but not above 150% for Y2I2116-CCV5. Positive results for these metals should be considered as estimated, biased high (J+) in associated samples.

The %R for cadmium was below control limits (90-110%), but not below 50% for Y2I2307-CCV5. The %R for antimony was below control limits (90-110%), but not below 50% for Y2I2116-CCV5. Positive results for these metals should be considered as estimated, biased low (J-) and "not detected" results estimated (UJ) in associated samples.

CRDL Standard: The percent recoveries for chromium and sodium were below laboratory QC limits, but not below 30% for the CRDL sample Y2I1430-CRL1/2. Positive results for these metals that are below 4 times the MRL should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous samples.

Blanks: Total method blank BI20586-BLK1 contained calcium (0.125 mg/L) above the RL. Dissolved method blank BI20783-BLK1 contained calcium (0.159 mg/L) and potassium (0.0671 mg/L) above the RLs. Method blank BI20845-BLK1 contained calcium (28.2 mg/kg) above the RL. Method blank BI20853-BLK1 contained calcium (14.8 mg/kg) and potassium (5.78 mg/kg) above the RLs. Positive results for these metals that are less than 5 times the highest blank level should be reported as not detected (U) in associated samples.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%) for the interference check samples.

Spike Sample Recovery: The percent recoveries (%Rs) for copper thallium, and zinc were above control limits (75-125%) for soil spike sample SP-14 (6-8). Positive results for copper, thallium, and zinc should be considered estimated, biased high (J+) in associated soil samples.

The %Rs for antimony and sodium were below control limits (75-125%), but not below 10% for soil spike sample SP-14 (6-8). Positive results for antimony and sodium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated soil samples.

Laboratory Duplicate: The relative percent differences for arsenic, calcium, magnesium, and manganese were above the allowable maximum (35%) for soil duplicate sample SP-14 (6-8). Positive results for arsenic, calcium, magnesium, and manganese should be considered estimated (J) in associated soil samples.

Laboratory Control Sample: The percent recovery (%R) for sodium was above control limits (80-120%) for total aqueous sample BI20586-BS1. The %R for iron was above control limits (80-120%) for dissolved aqueous sample BI20783-BS1. Positive results for these metals should be considered estimated, biased high (J+) in associated aqueous samples.

The %R for sodium was below control limits (80-120%) and below 30% for dissolved aqueous sample BI20783-BS1. Positive results for these metals should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous samples.

The %R for thallium was above QC limits for soil sample BI20845-SRM1. Positive results for thallium should be considered estimated, biased high (J+) in associated soil samples.

Serial Dilution: The %Ds for nickel and zinc were above the allowable maximum (15%) for soil serial dilution sample SP-14 (6-8). Positive results for nickel and zinc that are above the RLs should be considered estimated (J) in associated soil samples.

Detection Limits: The LODs were at or below POQs, as required.

Percent Solids: The percent solids for soil samples were above 50%.

Dissolved vs Total: The dissolved metal results were less than the total result plus 10%, as required.

QA/QC Review of Method 7196A Hexavalent Chromium (Cr6+)
Data for York Analytical Laboratories, Inc., SDG: 22I0453

6 Soil and 3 Ground Water Samples
Collected September 8, 2022

Prepared by: Donald Anné
February 20, 2026

Holding Times: Samples were analyzed within USEPA SW-846 holding times.

Blanks: The analysis of the method blank reported Cr6+ as not detected.

Spike Sample Recovery: This data was not provided.

Laboratory Duplicate: This data was not provided.

Laboratory Control Sample: The percent recoveries for Cr6+ were within QC limits for soil sample BI21267-SRM1 and aqueous sample BI20439-BS1.

Re: Data Validation Report
601 Union
February 2026 Ground Water Sampling Events

Dear Ms. Keenan,

The Data Usability Summary Reports are attached to this letter for the 601 Union site, September 2022 soil and ground water sampling events. The data for Pace Analytical Services, SDG numbers L2607998 and L2608427 are mostly acceptable, with issues that are identified in the DUSRs and QA/QC review summaries. There are data that are rejected, unusable (R) in data pack L2607998. The DUSR and QA/QC review outlines the reasons for rejecting the data. The data are rejected based solely on the validation guidance criteria. The rejected data may be determined to be acceptable to the user based on additional information that is not contained in the data validation criteria.

A list of data validation acronyms and qualifiers is attached to assist you in interpreting the data validation reviews. If you have any questions concerning the work performed, please contact me at (518) 348-6995. Thank you for providing us an opportunity with vEKtor consultants.

Sincerely,
Alpha Geoscience

Donald Anné
Senior Chemist

Alpha Geoscience: Acronyms and Definitions

Data Validation Acronyms

AA	Atomic absorption, flame technique
BHC	Hexachlorocyclohexane
BFB	Bromofluorobenzene
CCB	Continuing calibration blank
CCC	Calibration check compound
CCV	Continuing calibration verification
CN	Cyanide
CRDL	Contract required detection limit
CRQL	Contract required quantitation limit
CVAA	Atomic adsorption, cold vapor technique
DCAA	2,4-Dichlophenylacetic acid
DCB	Decachlorobiphenyl
DFTPP	Decafluorotriphenyl phosphine
ECD	Electron capture detector
FAA	Atomic absorption, furnace technique
FID	Flame ionization detector
FNP	1-Fluoronaphthalene
GC	Gas chromatography
GC/MS	Gas chromatography/mass spectrometry
GPC	Gel permeation chromatography
ICB	Initial calibration blank
ICP	Inductively coupled plasma-atomic emission spectrometer
ICV	Initial calibration verification
IDL	Instrument detection limit
IS	Internal standard
LCS	Laboratory control sample
LCS/LCSD	Laboratory control sample/laboratory control sample duplicate
MSA	Method of standard additions
MS/MSD	Matrix spike/matrix spike duplicate
PID	Photo ionization detector
PCB	Polychlorinated biphenyl
PCDD	Polychlorinated dibenzodioxins
PCDF	Polychlorinated dibenzofurans
QA	Quality assurance
QC	Quality control
RF	Response factor
RPD	Relative percent difference
RRF	Relative response factor
RRF(number)	Relative response factor at concentration of the number following
RT	Retention time
RRT	Relative retention time
SDG	Sample delivery group
SPCC	System performance check compound
TCX	Tetrachloro-m-xylene
%D	Percent difference
%R	Percent recovery
%RSD	Percent relative standard deviation

Data Validation Qualifiers Used in the QA/QC Reviews for USEPA Region II

U	=	Not detected. The associated number indicates the approximate sample concentration necessary to be detected significantly greater than the level of the highest associated blank.
R	=	Unreliable result; data is rejected or unusable. Analyte may or may not be present in the sample. Supporting data or information is necessary to confirm the result.
N	=	Tentative identification. Analyte is considered present. Special methods may be needed to confirm its presence or absence during future sampling efforts.
J	=	Analyte is present. Reported value may be associated with a higher level of uncertainty than is normally expected with the analytical method.
J-	=	Analyte is present. Reported value may be biased low and associated with a higher level of uncertainty than is normally expected with the analytical method.
J+	=	Analyte is present. Reported value may be biased high andassociated with a higher level of uncertainty than is normally expected with the analytical method.
UJ	=	Not detected, quantitation limit may be inaccurate or imprecise.

Note: These qualifiers are used for data validation purposes. The data validation qualifiers may differ from the qualifiers that the laboratory assigns to the data. Refer to the laboratory analytical report for the definitions of the laboratory qualifiers.

Data Usability Summary Report for
Pace Analytical Services
SDG Number: L2607998

2 Ground Water Samples and 1 Field Duplicate
Collected February 12, 2026

Prepared by: Donald Anné
February 24, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 2 ground water samples and 1 field duplicate analyzed for total and dissolved TAL metals.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive total metal results for barium and lead were qualified as estimated, biased low (J-) for samples 25MW-4, 25MW-5, and 25MW-5-DUP because the percent recoveries for barium and lead were below control limits, but not below 30% in the associated aqueous total spike sample.

- The positive total metal results for antimony and selenium were qualified as estimated, biased low (J-) for sample 25MW-4 because the percent recoveries for antimony and selenium were below control limits, but not below 30% in the associated aqueous total spike sample.

- The “not detected” total metal result for antimony were qualified as estimated (UJ) for samples 25MW-5 and 25MW-5-DUP because the percent recovery for antimony was below control limits, but not below 30% in the associated aqueous total spike sample.

- The “not detected” total metal result for selenium were qualified as rejected, unusable (R) for samples 25MW-5 and 25MW-5-DUP because the percent recovery for selenium was below control limits and below 30% in the associated aqueous total spike sample.

679 Plank Road ● Clifton Park, New York 12065 ● (518) 348-6995 ● Fax (518) 348-6966
www.alphageoscience.com

- The positive total metal result for silver was qualified as estimated (J) for sample 25MW-4 because the %D for silver was above the allowable maximum in the associated soil serial dilution sample and the results were above the MRLs.

- The positive total metal results for aluminum, cobalt, copper, and zinc were qualified as estimated (J) for total samples 25MW-5 and 25MW-5-DUP because the relative percent differences for these 4 metals were above the allowable maximum for the aqueous total field duplicate pair 25MW-5/25MW-5-DUP.

All data that are not qualified rejected (R) are considered usable with estimated (J-, J, or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2607998

2 Ground Water Samples and 1 Field Duplicate
Collected February 12, 2026

Prepared by: Donald Anné
February 24, 2026

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration, and method blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: The percent recoveries (%Rs) for applicable metals were within control limits (75-125%) for aqueous dissolved spike sample 25MW-4.

The %Rs for antimony, barium, and lead were below control limits (75-125%), but not below 30% for aqueous total spike sample 25MW-4. Positive results for antimony, barium, and lead should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous total samples.

The %R for selenium was below control limits (75-125%) and below 30% for aqueous total spike sample 25MW-4. Positive results for selenium should be considered estimated, biased low (J-) and "not detected" results rejected, unusable (R) in associated aqueous total samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous dissolved duplicate sample 25MW-4, as required.

The RPD for silver was above the allowable maximum (20%) for aqueous total duplicate sample 25MW-4. Positive results for silver should be considered estimated (J) in associated aqueous total samples.

www.alphageoscience.com

Field Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous dissolved field duplicate pair 25MW-5/25MW-5-DUP (attached table), as required.

The RPDs for aluminum, cobalt, copper, lead, and zinc were above the allowable maximum (20%) for aqueous total field duplicate pair 25MW-5/25MW-5-DUP (attached table). Positive results for these 5 metals should be estimated in samples 25MW-5 and 25MW-5-DUP.

Laboratory Control Sample: The percent recoveries for target metals were within control limits (80-120%) for aqueous total samples WG2175410-2 and WG2175414-2 and aqueous dissolved samples WG2175718-2 and WG2175720-2.

Serial Dilution: The %Ds for barium and lead were not above the allowable maximum (10%) for aqueous total serial dilution sample 25MW-4, as required.

Dissolved vs Total: The dissolved metal results were less than the total result plus 10%, as required.

Data Usability Summary Report for
Pace Analytical Services
SDG Number: L2608427

1 Ground Water Sample and 1 Field Blank
Collected February 16, 2026

Prepared by: Donald Anné
February 24, 2026

The data package contains the documentation required by NYSDEC ASP. The proper chain of custody procedures were followed by the samplers. All information appears legible and complete. The data pack contains the results of 1 ground water sample and 1 field blank analyzed for total and dissolved TAL metals.

The overall performances of the analyses are acceptable. Pace Analytical Services did fulfill the requirements of the analytical methods.

The data are mostly acceptable with some issues that are identified in the accompanying data validation reviews. The following data were qualified:

- The positive dissolved metal results for magnesium and potassium were qualified as estimated, biased low (J-) for sample 25MW-7 because the percent recoveries for magnesium and potassium were below control limits, but not below 30% in the associated aqueous batch dissolved spike sample.

- The "not detected" dissolved metals result for magnesium and potassium were qualified as estimated (UJ) for sample FB-2.16.26 because the percent recoveries for magnesium and potassium were below control limits, but not below 30% in the associated aqueous dissolved spike sample.

All data are considered usable with estimated (J- or UJ) data associated with a higher level of quantitative uncertainty. Detailed information on data quality is included in the data validation reviews.

QA/QC Review of TAL Metals Data
for Pace Analytical Services
SDG Number: L2608427

1 Ground Water Sample and 1 Field Blank
Collected February 16, 2026

Prepared by: Donald Anné
February 24, 2026

Holding Times: The samples were analyzed within USEPA SW-846 holding times.

Initial and Continuing Calibration Verification: The percent recoveries for target metals were within control limits (90-110% for all metals except Hg, 80-120% for Hg).

Blanks: The analyses of initial and continuing calibration, method, and field blanks reported target metals as either not detected or below the reporting limits, as required.

ICP Interference Check Sample: The percent recoveries for applicable metals were within control limits (80-120%).

Spike Sample Recovery: The percent recoveries (%Rs) for applicable metals were within control limits (75-125%) for aqueous total spike sample 24MW-7.

The %Rs for magnesium and potassium were below control limits (75-125%), but not below 30% for aqueous dissolved batch spike sample L2608422-01. Positive results for magnesium and potassium should be considered estimated, biased low (J-) and "not detected" results estimated (UJ) in associated aqueous dissolved samples.

Laboratory Duplicates: The relative percent differences (RPDs) for applicable metals were below the allowable maximum (20%) for aqueous total duplicate sample 25MW-7 and dissolved batch duplicate sample WG2176375-4, as required.

Laboratory Control Sample: The percent recoveries for target metals were within control limits (80-120%) for aqueous total samples WG2176372-2 and WG2176373-2 and aqueous dissolved samples WG2176375-2 and WG2176378-2.

Dissolved vs Total: The dissolved metal results were less than the total result plus 10%, as required.
