REMEDIAL INVESTIGATION REPORT

Site Name: 601-607 Union Street Site

Site Address: 601-607 Union Street
Brooklyn, New York 11215

BCP Site Number: C224392

Report Date: February 2026

Submitted to:

New York State Department of Environmental Conservation
Division of Environmental Remediation
625 Broadway
Albany, New York 12233-7020

Prepared for:

601 Union Street Owner LLC
221 West 37th Street, 5th Floor
New York, New York 10018

UST	Underground Storage Tank
UUSCOs	Unrestricted Use Soil Cleanup Objectives
VOC	Volatile Organic Compound

CERTIFICATION

I, Hilmi U. Aydin, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Report as prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in accordance with the DER-approved work plans and any DER-approved modifications.

Hilmi U. Aydin
Principal Engineer

1.0 INTRODUCTION

This Remedial Investigation Report (RIR) was prepared on behalf of 601 Union Street Owner LLC (the "Applicant") for the 601–607 Union Street Site, located at 601–607 Union Street in Brooklyn, Kings County, New York (the "Site"). The Applicant is enrolled in the New York State Brownfield Cleanup Program (BCP) under Site No. C224392, pursuant to a Brownfield Cleanup Agreement (BCA) executed with the New York State Department of Environmental Conservation (NYSDEC) on January 26, 2024. The Applicant is classified as a Volunteer under the BCP.

The remedial investigation (RI) documented in this report was performed in accordance with the Remedial Investigation Work Plan (RIWP) dated February 21, 2025, prepared to meet the requirements of the BCP and approved by NYSDEC. The objectives of the RI were to:

- Characterize the nature and extent of contamination associated with historic operations at the Site;
- Identify potential contaminant source areas;
- Perform a qualitative exposure assessment for current and potential future occupants of the Site and the surrounding community; and
- Provide data necessary to support the evaluation of remedial alternatives.

This Remedial Investigation Report (RIR) provides the data and findings of the RI conducted at the Site between July 2, 2025, and July 16, 2025, and supplemental groundwater sampling conducted at the Site on February 12, 2026, and February 16, 2026. The RI was conducted in accordance with the NYSDEC Division of Environmental Remediation (DER) Program Policy: Technical Guidance for Site Investigation and Remediation (DER-10); and the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York, with revisions (October 2006).

2.0 SITE BACKGROUND

2.1 Site Location and Current Usage

The Site, addressed as 601–607 Union Street, is located on the east side of Third Avenue between Sackett Street to the north and Union Street to the south in the Borough of Brooklyn, Kings County, New York. The Site comprises two adjacent tax lots (Tax Block 440, Lots 1 and 12) with a combined area of approximately 37,553 square feet. The tax lots will be reconfigured into three new lots for the purposes of redevelopment.

A site location map is provided in Figure 1.

The western parcel: Lot 1 (21,055 square feet) is currently undeveloped and vacant. The most recent improvement consisted of a 1-story office/warehouse building with a partial cellar (approximately 500 square feet) situated in the northeastern portion of the lot. The above-grade portion of the building was demolished in December 2025. However, the concrete slab and the partial cellar remain in place. One 550-gallon and one 3,000-gallon aboveground storage tank (AST), containing #2 fuel oil, are located in the cellar. The slab-on-grade and cellar areas are predominantly covered with concrete, except for a small, exposed area resulting from historic tank removal or other intrusive work. The eastern parcel: Lot 12 (16,498 square feet) is used as an open parking and storage yard, fully covered with asphalt. The current layout of the Site includes:

- Lot 1: This lot contains no structures, except for the former building cellar and slab-on-grade. The partial cellar is located below the northeastern portion.
- Lot 12: This lot contains no structures and is entirely paved for vehicle parking and storage.

The Site is secured with fencing and gated entrances. The Site is currently vacant, with occasional parking. Prior to vacancy and recent demolition, Lot 1 was most recently used for warehouse and vehicle repair operations by a petroleum trucking and management company, and Lot 12 served as parking and storage.

A site plan is provided in Figure 3.

The surrounding neighborhood is characterized by a mix of residential, commercial, and industrial uses. Adjacent properties include mixed-use buildings, several residential buildings, office buildings, and warehouses, ranging from one to eight stories in height. The Site is located within an M1-4/R7A zoning district**,** which is part of the Special Mixed-Use District. This zoning permits light manufacturing, commercial, community facility, and residential uses, promoting a blend of uses consistent with the character of the surrounding area.

The surrounding land use is provided in Figure 2.

2.2 Description of Surrounding Property

North	Sackett Street, followed by a two-story warehouse (215 3rd Avenue), a one-story warehouse (597 Sackett Street), and a one-and two-story warehouse (615 Sackett Street)
South	Union Street, followed by a four-story mixed residential and commercial use building (251 3rd Avenue), four four-story walk-up buildings (570, 572, 578. and 580 Union Street), a one-story auto repair shop (576 Union Street),
West	Third Avenue, followed by a new nine-story mixed residential and commercial use building (585 Union Street)
East	One eight-story commercial hotel (628 Sackett Street and 625 Union Street)

The Site is bounded to the north by Sackett Street, followed by commercial and industrial warehouses; to the south by Union Street, followed by mixed residential, commercial, and industrial uses (i.e., auto repair shop); to the east by an eight-story commercial building; and to the west by Third Avenue, followed by a new nine-story mixed residential and commercial use building and additional commercial and mixed-use buildings.

The nearest ecological receptor is the Gowanus Canal, located approximately 250 feet west of the Site. Other sensitive receptors, as defined in DER-10, within a half mile of the Site include the following:

Educational Facilities:

- PS 372 The Children's School (512 Carroll Street, Brooklyn, NY 11215)
- Brooklyn Secondary School for Collaborative Studies (610 Henry Street, Brooklyn, NY 11231)
- PS 32 Samuel Mills Sprole School (317 Hoyt Street, Brooklyn, NY 11231)
- The Al Noor School (675 4th Avenue, Brooklyn, NY 11232)
- St. Agnes Academic School (433 Sackett Street, Brooklyn, NY 11231)

Childcare/Daycare Facilities:

- Beansprouts Nursery School (453 6th Avenue, Brooklyn, NY 11215)
- Rivendell School (277 3rd Avenue, Brooklyn, NY 11215)
- Good Shepherd Preschool (742 Carroll Street, Brooklyn, NY 11215)
- Park Slope North Child Development Center (255 4th Avenue, Brooklyn, NY 11215)

Parks and Recreational Areas:

- Thomas Greene Playground (Degraw Street & 3rd Avenue, Brooklyn, NY 11217)
- St. Mary's Playground (Smith Street & Nelson Street, Brooklyn, NY 11231)
- Carroll Park (Carroll Street & Court Street, Brooklyn, NY 11231)

2.3 Geology and Hydrogeology

The Site is located in the western portion of Brooklyn, New York, within the Paleozoic Hartland formation of bedrock at a depth of approximately 100 to 200 feet below grade surface. The ground surface elevation at the Site is approximately 18 feet above mean sea level (USGS 7.5-Minute Brooklyn, New York Quadrangle, 2013). The Site is situated in an area historically influenced by glacial activity, with surficial deposits consisting of fill material overlying native glacial and coastal plain sediments.

Based on the findings of the RI, a historic urban fill layer extending to a maximum of 15 feet below grade surface (bgs) was identified across most of the Site. The fill material predominantly consists of brick, concrete, and miscellaneous debris underlain by silty sand with varying amounts of fine- to coarse-grained gravel. The underlying soils generally consist of medium-dense silty sand with trace to some gravel and clay. Saturated conditions were observed at approximately 12 to 13 feet below grade underlain by medium-dense silty sand with some gravel from 15 feet to 21 feet, followed by intervals of lean clay, gravel, and organics.

According to a survey conducted by TS Land Surveying P.C., dated May 4, 2025, the surface elevation of the Site ranges from approximately 18.55 feet in the southwest portion to 20.09 feet in the central portion (in reference to North American Vertical Datum 1988).

Groundwater elevation beneath the Site ranged from approximately 6.13 feet (NAVD88) in MW-3 to 7.42 feet in MW-5 in 2025, and, based on recent gauging events, from approximately 4.55 feet in MW-3 to 6.78 feet in MW-5. Groundwater flow beneath the Site is generally towards the north-northwest. Regional groundwater flow is anticipated to be generally west-southwest towards the Gowanus Canal located approximately 900 feet west of the Site.

According to the United States Fish & Wildlife Service National Wetlands Inventory and the NYSDEC regulated wetlands map, there are no wetlands at or adjacent to the Site.

2.4 Redevelopment Plans

The proposed redevelopment includes the demolition of the current building at the Site, and construction of two 8-story mixed residential and commercial use buildings with full cellars. The north building will contain 40 apartments, approximately 5,000 gross square feet (GSF) of amenity use, and 4,500 GSF of retail space. The north building will include 13 mandatory inclusionary housing (affordable) apartments and 26 market-rate apartments. The south building will contain 87 apartments, with approximately 10,500 GSF of amenity use and 10,500 GSF of retail space. The south building will include 25 mandatory inclusionary housing (affordable) apartments and 61 market-rate apartments.

3.0 SITE HISTORY

3.1 Past Uses and Ownership

Based on the available records, including historic Sanborn fire insurance maps, city directory records, and other available documentation indicate that the Site has been developed and used for residential uses and commercial lumber yard between 1906 and 1926, parking and storage in 1940, industrial uses including machine shop, truck repair, and commercial offices between 1951 and at least 2003, a fuel company between 1994 and 2017, and truck parking and parking since 2003.

Both parcels of the Site were undeveloped as early as 1888. Lot 1 of the Site was developed with a lumber yard (Ross & Snyder), including one- and two-story lumber sheds located in the western portion between 1906 and 1926. The lumber yard operations continued between 1906 until at least 1950s. By 1951, Lot 1 was redeveloped as the current warehouse with a partial cellar, and utilized as offices, a machine shop, and a repair station for trucks and buses.

Lot 12 of the Site was developed with 4-story residential dwellings between 1906 and 1926. These structures were demolished, and a one-story warehouse was built at Lot 12 circa 1951. This structure was demolished sometime between 1965 and 1978, and remained vacant until 2003, when it was utilized as truck parking.

Potential releases from these former uses could have impacted the subsurface conditions beneath the Site.

According to the New York City Department of Finance's Automated City Register Information System (ACRIS), the ownership of the Site is vested in Union Street Owner LLC d/b/a 601 Union Street Owner, LLC (the Applicant) since December 24, 2024.

3.2 Previous Investigations

The following prior investigations were conducted at the Site:

Phase I Environmental Site Assessment at 601-607 Union Street, Brooklyn, New York by Athenica Environmental Services, July 2022

- Athenica Environmental Services, Inc. (Athenica) prepared this report on behalf of Aniska Realty I, LLC, in accordance with ASTM Standard E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment (ESA) Process.
- The following Recognized Environmental Conditions (RECs) were identified during the Phase I:
    - The presence of E-Designation for hazardous materials at the Site.
    - The historic industrial, manufacturing, auto repair, and fuel oil storage/handling uses of the Site.

- The historic and/or current industrial, automotive service, and gasoline station uses of the surrounding properties.
- Presence of open Spill #2009932 that was reported on March 9, 2021, approximately 50 feet west of the Site at 585 Union Street, where investigations identified contamination in soil and groundwater.
- Presence of an open Spill #9605719 that was reported on August 2, 1996, approximately 315 feet east of the Site at 204-222 4th Avenue, where investigations identified contamination in soil vapor and groundwater.
- The potential for vapor intrusion from Site operations, and off-Site properties with documented releases to soil vapor and groundwater.

It should be noted that the fish store and light manufacturing listed in the Phase I ESA Report is associated with another property and not the BCP site.

Phase II Investigation Report at 601-607 Union Street, Brooklyn, New York by Hydro Tech Environmental Engineering and Geology, DPC, September 2022

- Based on the review of available Phase I ESA Reports summarized above, Hydro Tech Environmental Engineering and Geology, DPC (Hydro Tech) recommended a Phase II Environmental Site Assessment to evaluate whether historic industrial operations had adversely impacted the subsurface conditions beneath the Site prior to redevelopment.
- A Phase II investigation consisting of a geophysical survey, installation and sampling of seventeen (17) soil borings, installation and sampling of eight (8) temporary groundwater monitoring wells, and the installation and sampling of two (2) soil vapor points, and six (6) sub-slab vapor points was conducted at the Site in September 2022.
- The subsurface materials were generally described as a layer of black silty sand with pebbles and crushed concrete or asphalt pieces from the surface down to 2-6 feet, underlain by brown and black silty sand with or without rocks and pebbles.
- The geophysical survey did not identify any anomalies or areas of concern indicative of underground storage tanks, except for the oil/water separator located in the existing building.
- Seventeen soil borings, SP-1 through SP-17, were installed to 12 feet bgs (i.e., groundwater table), and seventeen soil samples were collected to be analyzed at the New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory for the presence of Part 375 Target Compound List (TCL) volatile organic compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260, TCL semi-volatile organic compounds (SVOCs) by EPA Method 8270, Target Analyte List (TAL) Metals by EPA Method 6000/7000, Pesticides by EPA Method 8081, PCBs by EPA Method 8082. Four of the soil samples were analyzed for PFAS compounds using EPA Method 537, and 1,4-dioxane using EPA Method 8270SIM.

- No photoionization detector (PID) readings were detected in the soil samples, except for two soil borings: SP-10 at the 8-10 feet interval and SP-11 at the 10-12 feet interval, which were detected as 428.1 parts per million (ppm) and 465.1 ppm, respectively.
- Based on the field observations, the following soil samples were collected:

Sample ID	Sample Intervals
SP-1	8-10 feet bgs
SP-2	8-10 feet bgs
SP-3	10-12 feet bgs
SP-4	4-6 feet bgs
SP-5	6-8 feet bgs
SP-6	2-4 feet bgs
SP-7	0-2 feet bgs
SP-8	1-3 feet bgs
SP-9	1-3 feet bgs
SP-10	8-10 feet bgs
SP-11	10-12 feet bgs
SP-12	10-12 feet bgs
SP-13	10-12 feet bgs
SP-14	6-8 feet bgs
SP-15	6-8 feet bgs
SP-16	8-10 feet bgs
SP-17	4-6 feet bgs

  - VOCs in Soil:
    Acetone was detected in SP-15 (6'-8') at a concentration of 0.057 parts per million (ppm) exceeding its respective NYSDEC Part 375 Unrestricted Use Soil Cleanup Objective (UUSCO) but below NYSDEC Part 375 Restricted Residential Use Soil Cleanup Objective (RRSCO). Chlorinated VOCs (CVOCs) including 1,4-dichlorobenzene (3.4 ppm) in SP-11 (10'-12') and methylene chloride (max. 5.1 ppm) in SP-1 (8'-10'), SP-2 (8'-10') and SP-6 (2'-4') were detected at concentrations exceeding their respective UUSCOs but below RRSCOs. Petroleum-related VOCs 1,2,4-trimethylbenzene (3.7 ppm), n-butylbenzene (25 ppm), n-propylbenzene, (max. 29 ppm), sec-butylbenzene (22 ppm) and total xylene (1.1 ppm) in SP-10 (8'-10') and SP-11 (10'-12') were detected at concentrations exceeding their respective UUSCOs but below RRSCOs. No other VOCs were detected in any of the soil samples at concentrations exceeding UUSCOs.

  - SVOCs in Soil:
    SVOCs, including acenaphthene (23.8 ppm), benzo(a)anthracene (max. 40.5 ppm), benzo(a)pyrene (max. 54.8 ppm), benzo(b)fluoranthene (max. 21 ppm),

benzo(k)fluoranthene (max. 28.2 ppm), chrysene (max. 43 mg/kg), dibenzo(a,h)anthracene (max. 4.41 ppm), fluoranthene (107 ppm), indeno(1,2,3 cd)pyrene (max. 24.9 ppm) and pyrene (183 ppm) were detected in SP-1 (8'-10'), SP-2 (8'-10'), SP-4 (4'-6'), SP-6 (2'-4'), SP-9 (1'-3'), SP-12 (10'-12'), SP-14 (6'-8'), SP-15 (6'-8') and SP-16 (8'-10') at concentrations exceeding their respective UUSCOs. Except acenaphthene, all these SVOCs were also detected in most of the samples exceeding their respective RRSCOs.

- Pesticides in Soil:
  No pesticides were detected in any of the soil samples at concentrations exceeding UUSCOs.

- PCBs in Soil:
  No PCBs were detected in any of the soil samples at concentrations exceeding UUSCOs.

- Metals in Soil:
  Metals including arsenic (max. 106 ppm), barium (max. 4,910 ppm), copper (max. 181 ppm), lead (max. 2,400 ppm), nickel (max. 451 ppm), silver (max. 7.08 ppm), zinc (max. 2,980 ppm), mercury (max. 47.1 ppm) and chromium trivalent (max. 109 ppm) were detected individually or collectively in all samples at concentrations exceeding their respective UUSCOs. Of these, arsenic in SP-3 (10'-12'), SP-7 (0-2'), SP-9 (1'-3'), SP-11 (10'-12'), SP-12 (10'-12') and SP-13 (10'-12'), barium in SP-6 (2'-4'), SP-7 (0-2'), SP-9 (1'-3'), and SP-12 (10'-12'), lead in SP-11 (10'-12'), and nickel in SP-9 (1'-3') exceed their respective RRSCOs.

- Emerging Contaminants in Soil:
  1,4-dioxane was not detected above its UUSCO in the samples it was analyzed for.

  Perfluorooctanoic acid (PFOA) in SP-4 (4'-6') was identified at a concentration of 1.62 ppm exceeding its respective UUSCO.

- Petroleum related VOCs were identified most abundant in deeper soil between 8 to 12 feet from the vicinity of the oil/water separator in the mid-northern portion of the existing building, which might be indicative of impact of leakage from the associated subgrade equipment.
- Several SVOCs and metals were detected in shallow and deep soil at concentrations exceeding UUSCOs. Several SVOCs and metals including arsenic, barium, lead, zinc and mercury also exceeded their respective RRSCOs. Lead and mercury also exceeded

their respective PGWSCOs. Although the presence of the PAHs and the metals were attributed to the presence of urban fill material beneath the Site during the 2022 Phase II, the presence of elevated concentrations of metals could be attributed to historic Site operations.

- Groundwater was encountered at a range of approximately 12.3 feet to 13.75 feet below grade.
- During the initial investigation in 2022, eight temporary monitoring wells were installed, and eight groundwater samples were collected to be analyzed for the presence of TCL VOCs via USEPA Method 8260, TCL SVOCs via USEPA Method 8270, Target Analyte List (TAL) Metals by EPA Method 6000/7000, Pesticides by EPA Method 8081, PCBs by EPA Method 8082, PFAS compounds vie EPA Method 537, and 1,4-Dioxane by EPA Method 8270SIM. These groundwater samples were collected from temporary groundwater wells in 2022, and their results are considered non-representative of subsurface groundwater conditions at the Site and therefore, will not be included in the evaluation of the remedial data.

    - <u>VOCs in Groundwater:</u>
      One petroleum related-VOC, benzene was detected in MW-7 (6.21 ppb) at a concentration exceeding its GQS. No other VOCs were detected in any of the groundwater samples at concentrations exceeding their respective GQS.

    - <u>SVOCs in Groundwater:</u>
      SVOCs including benzo(a)anthracene (max. 0.36 ppb), benzo(a)pyrene (max. 0.19 ppb), benzo(b)fluoranthene (max. 0.16 ppb), benzo(k)fluoranthene (max. 0.17 ppb), chrysene (max. 0.37 ppb) and indeno(1,2,3-cd) pyrene (max. 0.1 ppb) were detected MW-2 through MW-4, MW-7 and MW-8 at concentrations exceeding their respective GQS. No other SVOCs were detected in any of the groundwater samples at concentrations exceeding their respective GQS.

    - <u>Pesticides in Groundwater:</u>
      No pesticides were detected at concentrations exceeding their respective GQS.

    - <u>PCBs in Groundwater:</u>
      No PCBs were detected in any samples.

    - <u>Metals in Groundwater:</u>
      Total metals barium (max. 20,200 ppb), chromium (max. 1,480 ppb), copper (max. 8,790 ppb), lead (max. 52,700 ppb), magnesium (max. 232,000 ppb), manganese (max. 20,200 ppb), nickel (max. 1,550 ppb), Sodium (max. 735,000 ppb), zinc (max. 58,400 ppb), antimony (max. 32.7 ppb), arsenic (max. 4,090

ppb), beryllium (max. 20.2 ppb), cadmium (max. 220 ppb) and selenium (max. 2,040 ppb) were detected at concentrations exceeding their respective GQS.

Dissolved metals barium (max. 3,170 ppb), chromium (max. 339 ppb), copper (213 ppb), lead (max. 9,230 ppb), magnesium (max. 146,000 ppb), manganese (max. 12,100 ppb), nickel (max. 1,990 ppb), sodium (max. 938,000 ppb), zinc (max. 11,700 ppb), antimony (max. 11.3 ppb), and beryllium (max. 136 ppb) exceeded their respective GQS in part of or all groundwater samples.

- Emerging Contaminants in Groundwater:
  1,4-Dioxane was detected in MW-6 at a concentration of 1.54 ppb, which exceeds its NYSDEC Guidance Value.

  Several PFAs were detected in all groundwater samples including 1H,1H,2H,2HPerfluorooctanesulfonic acid (6:2 FTS), Perfluorobutanesulfonic acid (PFBS), Perfluoroheptanoic acid (PFHpA), Perfluorohexanoic acid (PFHxA), Perfluoro-nbutanoic acid (PFBA), Perfluorooctanesulfonic acid (PFOS), Perfluorooctanoic acid (PFOA) and Perfluoropentanoic acid (PFPeA). The concentrations of PFOS (max. 0.042 ppb) in both MW-5 and MW-7 and PFOA (max. 0.070 ppb) in all groundwater samples with the exception of MW-8 were detected at concentrations exceeding their respective NYSDEC Guidance Values. No notable levels of chlorinated VOCs were observed in the soil. Petroleum-related VOCs and CVOCs were detected in groundwater marginally exceeding their respective regulatory standards but none of the exceedances should be indicative of spills or significant impact from historic use of the Site for auto repair.

- The presence of SVOCs and dissolved metals in the groundwater beneath the Site was attributed to regional groundwater quality or urban fill during the 2022 Phase II.
- During the 2022 Phase II ESA, two soil vapor points were installed to 10 feet, and six sub-slab vapor points were installed 3 inches below the existing building slab, and two soil vapor samples, and six sub-slab vapor samples were collected to be analyzed for VOCs via EPA Method TO-15.
  - Results showed total VOC concentrations range from 109.7 ug/m^3 in SSB-4 to 2,141.7 ug/m^3 in SSB-6. Chlorinated VOCs including 1,1-dichloroethane (3.9 ug/m^3), chloroethane (0.44 ug/m^3), chloroform (max. 4.2 ug/m^3), chloromethane (max. 2.3 ug/m^3), cis-1,2-dichloroethylene (max. 7.2 ug/m^3), dichlorodifluoromethane (max. 2.1 ug/m^3), methylene chloride (max. 5.2 ug/m^3), tetrachloroethylene (PCE) (max. 550 ug/m^3), trans-1,2-dichloroethylene (2.2 ug/m^3), trichloroethylene (TCE) (max. 240 ug/m^3) and trichlorofluoromethane (freon 11) (max. 1.2 ug/m^3) were detected individually or collectively in all vapor samples.

- Petroleum related VOCs including BTEX compounds (benzene, toluene, ethyl benzene and xylenes) and their derivatives were commonly detected in all vapor samples. The total concentration of BTEX compounds range from 13 ug/m^3 in SV-1 to 152.1 ug/m^3 in SSB-3.
- Chlorinated solvents such as PCE and TCE were identified in soil vapor and sub slab vapor at concentrations requiring mitigation as per the NYSDOH Decision Matrix. Since these VOCs were not identified in soil at elevated concentrations, Hydro Tech determined that the presence of CVOCs in soil vapor is likely attributed to an off-Site source.

The soil data of the 2022 Phase II ESA was validated. Therefore, the soil results of the 2022 Phase II are incorporated into this RI. Tables 3B through 8B and Table 18B provide the results of the 2022 Phase II ESA. Figure 5 includes the exceedances in soil. Figure 8 shows the detections in soil vapor. Since the groundwater samples were collected via temporary monitoring wells and were not available for resampling at the time of the RI, the groundwater results from 2022 are not considered usable.

Copies of the previous reports are provided as Appendix A. All prior reports have been previously submitted to NYSDEC and NYSDOH and can be found in the document repositories, which includes this RIR, as well as the following repository link: https://extapps.dec.ny.gov/data/DecDocs/C224392/.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The RI included the following scope of work from July 1, 2025 through July 16, 2025:

1. Geophysical survey to locate unidentified underground storage tanks (USTs) and identify utilities in the vicinity of the boring locations,
2. Installation of fourteen (14) soil borings to 15 feet bgs across the Site and collection of thirty-two (32) soil samples and additional quality assurance /quality control (QA/QC) samples,
3. Installation of six (6) soil borings to 20-30 feet bgs across the Site and collection of fifty-two (52) soil samples for delineation purposes,
4. Installation of eight (8) monitoring wells and collection of eight (8) groundwater samples from the newly installed onsite wells, the collection of two (2) groundwater samples from existing monitoring wells in the adjacent sidewalks, and additional QA/QC samples, and
5. Installation of five (5) soil vapor points and collection of five (5) soil vapor samples including one duplicate soil vapor sample, installation of one sub-slab vapor point and collection of one (1) sub-slab soil gas sample, and collection of one co-located indoor air sample.

A Supplemental Groundwater Sampling Event included the following scope of work on February 12, 2026 and February 16, 2026:

1. Gauging of all accessible monitoring wells at different times of the day, and
2. Collection of confirmation samples from three monitoring wells for metals analysis.

A summary of the construction details for soil borings, groundwater monitoring wells, soil vapor points are provided in Table 1. The locations of all soil borings, groundwater monitoring wells and soil vapor points from the RI are shown on Figure 3.

4.1 Geophysical Investigation

Prior to intrusive sampling, a geophysical survey was conducted by Coastal Environmental Solutions (Coastal) Medford, New York on July 1, 2025. The purpose of the geophysical surveys was to identify anomalies indicative of potential USTs, locate buried utilities, and clear boring locations prior to intrusive drilling. Coastal utilized a ImpulseRadar PinPointR UWB GPR which utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame; a vLoc3-Pro Receiver which is a hand-operated antenna capable of detecting electromagnetic (EM) fields emitted from a source; and a TW-6 Pipe and Cable Locator which

is a handheld magnetometer which utilizes a transmitter-receiver pair attached to opposite ends of a handle. A copy of the geophysical report is provided in Appendix B.

4.2 Soil Investigation

4.2.1 Soil Boring Installation

Coastal Environmental Solutions, Inc. (Coastal) of Medford, New York was retained to install a total of 14 soil borings across the Site between July 1, 2025, and July 16, 2025. Soil borings (25SB-1 through 25SB-14) were installed to 15 feet below grade utilizing direct push Geoprobe® 6011DT or Geoprobe® 420M drill rigs.

Figure 3 shows the location of soil borings installed during the RI. Soil boring logs are provided in Appendix C. Figures 9 and 10 show the geologic cross-sections of soil borings installed during the RI.

4.2.1.1 Supplemental Boring Installation

During the same mobilization as RI in July 2025, a waste characterization sampling event was conducted to pre-determine soil disposal facilities for the future remedial excavation. Based on the elevated concentrations of metals, including hazardous concentrations of lead, identified during the waste characterization sampling, a supplemental delineation sampling event was conducted in August 2025. At which time, soil borings were advanced to depths between 20 and 30 feet below grade surface to determine the clean soil elevation at the Site for remedial alternatives analysis.

Select soil borings, 25SB-4X, 25SB-5X, 25SB-6X, 25SB-9X, and 25SB-10X were installed to 30 feet below grade and 25SB-11X was installed to 20 feet below grade utilizing direct push Geoprobe® 6011DT for vertical delineation at their original locations (25SB-4, 25SB-6, 25SB-6, 25SB-9, 25SB-10, and 25SB-11). Samples were collected at 1-foot or 2-foot intervals at these locations.

Figure 3 shows the location of soil borings installed during the RI. Soil boring logs are provided in Appendix C.

4.2.2 Soil Sampling

Soil samples were collected continuously into 5-foot-long acetate sleeves. Continuous soil samples were collected from each boring and field screened for presence of VOCs with a photoionization detector (PID) and were inspected for visual and olfactory evidence of contamination. Generally, elevated PID readings were not identified during this RI. However, the highest PID reading was 50 parts per million (ppm) in 25SB-1 at a depth of 9 feet bgs. An extra soil sample was collected from this depth.

Two or three samples were collected from each soil boring. A total of 32 soil samples and two matrix spike/matrix spike duplicate (MS/MSD) samples were collected for chemical analysis during the RI. At the RI boring locations, one soil sample was collected from the

surface fill layer at 0 to 2 feet bgs and one sample was collected from immediately above the groundwater table. Additionally, a third, intermediate depth sample was collected from 25SB-4 and 25SB-14. Based on field observations, a third sample was also collected from 25SB-1 and 25SB-6.

All soil samples were collected using a dedicated, disposable sampling scoop to prevent cross-contamination. VOC samples were collected via a dedicated one-time use 5g Terra-core sampler tool provided by the laboratory for each sample. Soil samples were immediately containerized in pre-cleaned, laboratory-supplied glassware, stored in a chilled cooler (4 °C), and submitted to Pace Analytical Services, Inc. (Pace) of Westborough, MA, under proper chain of custody procedures.

Approximate corresponding datum depths are as follows:

Sample ID	Sample Intervals
25SB-1	0-2 feet bgs, 9-11 feet bgs, 12-13 feet bgs
25SB-2	0-2 feet bgs, 12-13 feet bgs
25SB-3	0-2 feet bgs, 12-13 feet bgs
25SB-4	0-2 feet bgs, 7-9 feet bgs, 12-13 feet bgs
25SB-5	0-2 feet bgs, 11-12 feet bgs
25SB-6	0-2 feet bgs, 7-9 feet bgs, 11-12 feet bgs
25SB-7	0-2 feet bgs, 12-13 feet bgs
25SB-8	1-3 feet bgs, 11-12 feet bgs
25SB-9	0-2 feet bgs, 11-12 feet bgs
25SB-10	0-2 feet bgs, 11-12 feet bgs
25SB-11	0-2 feet bgs, 11-12 feet bgs
25SB-12	0-2 feet bgs, 11-12 feet bgs
25SB-13	0-2 feet bgs, 11-12 feet bgs
25SB-14	0-2 feet bgs, 7-9 feet bgs, 11-12 feet bgs
MS/MSD Samples	25SB-5 from 0-2 feet bgs

Soil samples were analyzed at NYSDOH ELAP-certified laboratory for the presence of Part 375 Target Compound List (TCL) volatile organic compounds (VOCs) by EPA Method 8260, TCL semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides by EPA Method 8081, polychlorinated biphenyls (PCBs) by EPA Method 8082, Target Analyte List (TAL) metals including mercury by EPA Methods 6010 and 7471, 1,4-dioxane by EPA Method 8270SIM, and 40 per- and polyfluoroalkyl substances (PFAS) compounds via EPA Method 1633. Based on the results, the soil samples with total lead concentrations over 100 ppm were also analyzed for TCLP lead, and the soil samples with total mercury concentrations over 3 ppm were also analyzed for TCLP mercury.

4.2.2.1 Supplemental Soil Sampling

Soil samples were collected continuously into 5-foot-long acetate sleeves. Continuous soil samples were collected from each boring and field screened for presence of VOCs with a

photoionization detector (PID) and were inspected for visual and olfactory evidence of contamination. No elevated PID readings were not identified during this sampling.

Samples were collected at 1-foot or 2-foot intervals between 0 (surface grade) and 30 feet in 25SB-4X, 25SB-5X, 25SB-6X, 25SB-9X, 25SB-10X, and between 0 (surface grade) and 20 feet in 25SB-11X due to a lack of recovery. A total of 55 soil samples were collected for chemical analysis during the RI. Of these, 45 soil samples were activated for total and TCLP lead, and total and TCLP mercury. Furthermore, of the 45 soil samples, three soil samples were activated for SVOCs based on the results.

Approximate corresponding datum depths are as follows:

Sample ID	Boring Depth (feet)	Original RI Sampling Depths (feet)	Delineation Sampling Intervals (feet)
25SB-4X	30	0-2', 7'-9', 12'-13'	6'-7', 7'-8', 9'-10', 13'-15', 15'-17', 17'-19', 19'-21', 21'-23', 23'-25', 25'-27', 27'-29', 29'-30'
25SB-5X	30	0-2', 11'-12'	12'-14', 14'-16', 16'-18', 18'-20', 22'-24', 24'-26', 26'-28', 28'-30'
25SB-6X	30	0-2', 7'-9', 11'-12'	6'-7', 9'-10', 12'-14', 14'-16', 16'-18', 18'-20', 22'-24', 24'-26', 26'-28', 28'-30'
25SB-9X	30	0-2', 11'-12'	2'-4', 4'-6', 6'-8', 8'-10', 10'-12', 12'-14', 16'-18', 18'-20', 24'-26', 26'-28', 28'-30'
25SB-10X	30	0-2', 11'-12'	7'-8', 12'-14', 14'-16', 16'-18', 18'-20', 20'-22', 24'-26', 26'-28', 28'-30'
25SB-11X	20	0-2', 11'-12'	7'-8', 12'-14', 14'-16', 16'-18', 18'-20'

Note: Activated samples are underlined.

All soil samples were collected using a dedicated, disposable sampling scoop to prevent cross-contamination. Soil samples were immediately containerized in pre-cleaned, laboratory-supplied glassware, stored in a chilled cooler (4 °C), and submitted to Pace Analytical Services, Inc. (Pace) of Westborough, MA, under proper chain of custody procedures.

4.3 Grossly Contaminated Media Investigation

Coastal Environmental Solutions, Inc. (Coastal) of Medford, New York was retained to install two deep soil borings: GCM-1 and GCM-2 at the Site using a Sonic Drill Rig SRS ML 120 DUO on June 12, 2025 and July 14, 2025 to investigate the Site for the presence of Grossly Contaminated Material (GCM) as required by the NYSDEC. GCM is defined by NYSDEC in 6NYCRR Part 375-1.2(u) as "soil, sediment, surface water or groundwater which contains sources or substantial quantities of mobile contamination in the form of NAPL, as defined in

subdivision 375-1.2 (ac), that is identifiable either visually, through strong odor, by elevated contaminant vapor levels or is otherwise readily detectable without laboratory analysis".

GCM-1 and GCM-2 were advanced to a minimum depth of 90 feet below ground surface (bgs). An interval of no recovery was observed in GCM-2 from 30 to 40 feet bgs. No samples were collected from these borings as no evidence of GCM impacts was observed.

The soil lithology generally consisted of historic fill in a dark brown to gray silty sand matrix from grade surface to varying intermediate depths (down to 15 feet) followed by a peat layer with roots and organics from 25 to 27.5 feet bgs, followed by a saturated loose gray clay to approximately 60 feet which transitioned to brown fine to medium silty sand at 60 feet bgs and graded into a brown fine to medium sand from 75 feet bgs to the terminal depth of the boring at 90 feet bgs. Bedrock was not encountered in either boring.

4.4 Groundwater Investigation

4.4.1 Monitoring Well Installation

Eight (8) permanent groundwater monitoring wells designated as 25MW-1 through 25MW-8 were installed across the Site between July 2 and July 8, 2025. Six (6) of these monitoring wells were installed via a direct push Geoprobe® 6011DT drill rig to approximate maximum depths of 20 feet bgs. The remaining two monitoring wells (25MW-4 and 25MW-5) were installed with a limited-access direct-push Geoprobe® 420M drill rig to approximately 17.5 and 16.5 feet bgs, respectively. The monitoring wells were constructed of polyvinyl chloride (PVC) and had a 10-foot well screen set at various terminal depths. The groundwater monitoring wells, along with two existing off-site monitoring wells in the adjacent sidewalks, were sampled on July 14, 15, and 16, 2025.

The following in-text table shows the construction of the monitoring wells installed during this RI.

Installed Monitoring Well Construction Information

Monitoring Well ID	TOC** Elevation (NAVD88)	Depth to Water*	Groundwater Elevation (NAVD88)	Bottom of Screen *	Top of Screen *	Total Screen Depth *
25MW-1	18.97	12.60	6.37	19.20	9.20	10
25MW-2	19.12	12.48	6.64	18.80	8.80	10
25MW-3	19.35	13.22	6.13	19.20	9.20	10
25MW-4	21.69	15.28	6.41	17.46	7.46	10
25MW-5	20.14	12.72	7.42	16.50	6.50	10
25MW-6	19.37	13.15	6.22	19.02	9.02	10
25MW-7	19.10	12.52	6.58	19.25	9.25	10
25MW-8	19.52	12.63	6.89	19.21	9.21	10

* All measurements above are in feet from grade level.

**TOC: Top of Casing

*** The measurements on the table are from August 2025.

Figure 3 shows the location of groundwater monitoring wells installed during the RI. Monitoring well construction logs are provided in Appendix D.

All monitoring wells were developed following installation, using a submersible pump, until the water was clear and the turbidity was less than 50 Nephelometric Turbidity Units (NTUs). Monitoring wells were gauged and surveyed by Montrose Surveying Co. LLP. Groundwater elevations ranged from el. 6.13 feet North American Vertical Datum 1988 (NAVD88) in MW-3 to el. 7.42 feet (NAVD88) in MW-5 in August 2025. During the February 2026 gauging events, it ranged from el. 4.55 feet (NAVD88) in MW-3 to el. 6.78 feet (NAVD88) in MW-5 as described below.

4.4.2 Groundwater Sampling

One groundwater sample was collected from each of the eight on-Site and two off-Site monitoring wells (a total of ten), utilizing USEPA low-flow groundwater sampling techniques one week after well development. The groundwater monitoring wells were purged approximately three well volumes prior to sampling, utilizing a peristaltic pump. Groundwater field parameters, including pH, specific conductivity, dissolved oxygen, oxidation-reduction potential, temperature, and turbidity, were measured during purging, except for monitoring wells MW-4, MW-8, B8DW, and B10D. A slow recharge condition was identified in these wells; therefore, three well volumes were purged from MW-8, B8DW, and B10D via a dedicated bailer prior to sampling. The tubing was changed between each monitoring well to prevent cross-contamination, and the low-flow sampling equipment was cleaned with Alconox and distilled water. Samples were collected with a peristaltic pump with dedicated high-density polyethylene tubing. Groundwater samples were placed into laboratory-supplied glassware and stored in a chilled cooler (4^{o}C), and submitted to Pace of Westborough, MA, under proper chain of custody procedures.

Groundwater samples collected at groundwater interface were submitted to Pace, an ELAP certified laboratory, for analysis for TCL VOCs by EPA Method 8260, TCL SVOCs by EPA Method 8270, pesticides by EPA Method 8081, herbicides via EPA Method 8151, PCBs by EPA Method 8082, and TAL metals including mercury (total and dissolved) via EPA Method 6010 and 7471, 40 per- and polyfluoroalkyl substances (PFAS) compounds via EPA Method 1633, and 1,4-dioxane via 8270SIM.

4.4.2.1 Supplemental Groundwater Sampling

At the request of the NYSDEC, a confirmatory groundwater sampling was conducted for metals analysis at three groundwater monitoring well locations. On February 12, 2026, groundwater monitoring wells 25MW-4 and 25MW-5 were sampled for total and dissolved metals, and on February 16, 2026, 25MW-7 was sampled for total and dissolved metals including mercury (total and dissolved) via EPA Method 6010 and 7471.

4.4.3 Groundwater Gauging

On February 12 and 16, 2026, additional gauging of groundwater monitoring wells was conducted. On-Site groundwater monitoring wells 25MW-3, 25MW-4, 25MW-5, and off-Site groundwater monitoring wells B10D and B8DW were gauged on February 12, 2026, with an interface probe at 12:00 and again at 16:00. Due to snow cover across the entire Site, not all groundwater wells could be located. Vektor returned on February 16, 2026, and gauged all on-Site and off-Site wells with an interface probe at 08:30 and again at 13:50, except for 25MW-2, 25MW-6, and 25MW-8, which appeared to be clogged or damaged due to recent demolition activities.

All groundwater monitoring wells were surveyed to a common datum on July 16, 2025. A groundwater contour map showing groundwater flow direction is provided in Figure 4. Groundwater sampling logs are provided in Appendix E.

4.5 Soil Vapor Investigation

4.5.1 Soil Vapor Point Installation

Four soil vapor probes (25SV-1, 25SV-2, 25SV-3, and 25SV-4) were installed via Geoprobe® 6011DT and Geoprobe® 420M direct push-probe drill rigs at approximately 10 feet bgs. One duplicate soil vapor sample (25DUP-1) was collected at soil vapor probe location 25SV-2. A sub-slab soil gas sample point was also installed within the interior of the building on the Site.

The construction of the vapor points followed the design of the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" dated October 2006 with updates. For the installation of the soil vapor points were connected to ¼-inch outer diameter inert polyethylene, Teflon-lined, tubing which extended above ground surface to allow for purging and sampling. Prior to testing, the integrity of the seal was tested by placing a plastic shroud over the vapor points to isolate them from ambient air. Then, a helium tracer gas was applied into the shroud and was screened utilizing a helium detector for presence of helium. No helium was detected in any of the vapor points; therefore, the sampling points were confirmed to be sealed properly prior to sampling.

4.5.2 Soil Vapor Sampling

After purging approximately three volumes of air from each vapor point at a flow rate less than 200 milliliters per minute, representative samples were collected for laboratory analysis utilizing 6-liter SUMMA canisters fitted with 8-hour flow controllers during the sampling events on July 8, 2025. One indoor air sample was collected at breathing height over an 8-hour sampling period concurrently with the soil vapor samples. Additionally, one sub-slab soil gas sample was collected concurrently with the soil vapor and indoor air samples. Flow controllers were set to not to exceed 0.2 liters per minute, as established by the NYSDOH Guidance document. Upon completion of the vapor sampling, all canisters were labeled properly with the sample ID numbers, and vacuum pressure readings in the canisters

before and after the sample collection. The vapor samples were submitted to Pace of Westborough, MA, under proper chain of custody procedures. Soil vapor samples were analyzed for VOCs via USEPA Method TO-15.

Soil vapor, sub-slab vapor, and indoor air sampling locations are shown in Figure 3. Soil vapor sampling logs are included in Table 2A.

4.6 Quality Assurance / Quality Control Sampling

During the RI, field blanks, trip blanks, and matrix spike/matrix spike duplicate (MS/MSD) samples were collected and submitted for laboratory analysis. QA/QC samples include the following quality control samples:

Soil QA/QC Samples

- Three trip blanks: Trip Blank (7/1/2025), Trip Blank (7/2/2025), and Trip Blank (7/8/2025)
- Two MS/MSD samples: 25SB-5(0-2) MS & 25SB-5(0-2) MSD

Groundwater QA/QC Samples

- Three field blank samples: 5FB-1 (7/14/2025), FB-2.12.26 and FB-2.16.26
- Two trip blank samples: Trip Blank (7/14/2025) and Trip Blank (7/16/2025)
- One Duplicate Sample: 25MW-5 DUP

Soil Vapor QA/QC Samples

- One field duplicate soil vapor sample: 25DUP-1 (25SV-2)

Field duplicates were collected to assess the accuracy of the analytical methods relative to the sample matrix. The duplicates were collected from the same sample media as the primary sample by splitting the volume of homogenized sample collected in the field into two sample containers. The duplicate soil vapor sample was collected at a rate of one per 20 samples and submitted to the laboratory. MS/MSD samples were collected at the rate of one per 20 samples and submitted to the laboratory.

Trip blank samples were collected to assess the potential for contamination of the sample containers and samples during the trip from the laboratory to the field, and back to the laboratory for analysis. Trip blanks contain approximately 40 milliliters of acidic water (doped with hydrochloric acid) that is sealed by the laboratory when the empty sample containers are shipped to the field and unsealed and analyzed by the laboratory when the sample shipment is received from the field. Trip blanks accompanied samples each time they were transported to the laboratory and were analyzed for VOCs.

Field blank samples were collected to determine the effectiveness of the decontamination procedures for the groundwater sampling equipment train and the cleanliness of unused

nitrile gloves and acetate liners used to collect soil samples. Field blank samples consisted of deionized, distilled water provided by the laboratory that has passed through the sampling.

4.7 Reporting

Daily reports were provided to NYSDEC, including a summary of Site activities, investigation progress updates, and photographs of fieldwork. Copies of the submitted daily reports are included in Appendix F.

4.8 Community Air Monitoring Program

Air monitoring was conducted to characterize any personnel exposures and fugitive emissions generated from the performance of the investigation activities. Air monitoring was performed in accordance with the Community Air Monitoring Program (CAMP)/Health and Safety Plan (HASP) prepared for this investigation.

Calibrated air monitoring instruments were used to monitor for potential releases of volatile organic vapors and soil particulates from the Site. Upwind and downwind air monitoring stations were established relative to each drilling location. A portable data logging Photo Ionization Detector and particulate meter were utilized during all invasive activities. The air monitoring instruments were calibrated on a daily basis prior to the start of field work. No elevated PID or dust readings were identified during the RI. Copies of the air monitoring field forms are included in the daily reports in Appendix F.

4.9 Data Validation

Laboratory reports included ASP Category B deliverables for use in the preparation of a data usability report (DUSR). All analyses were reported using NYSDEC ASP Category B deliverables. Laboratory data for all media (soil, groundwater, soil vapor) during the RI were validated by Alpha Geoscience, a third-party validator. The soil results from the 2022 Phase II were also validated by Alpha Geoscience. The DUSRs are applicable to all samples collected during the RI. Refer to Section 5.7 for further details.

4.10 Investigation Derived Waste

Investigation-derived wastes (IDW) generated during the RI were containerized as necessary. Aqueous waste from monitoring well development, purging, and decontamination water was placed into DOT-approved 55-gallon steel drums with sealed tops. The IDW in the drums was sampled in February 2026, and will be transported off-Site by a licensed waste hauler and disposed of at a permitted facility

5.0 REMEDIAL INVESTIGATION RESULTS

All media, including soil, groundwater, and soil vapor, have been sampled and evaluated in this RIR. Discrete (grab) samples have been used for delineating the nature and extent of contamination and to determine the impact of contaminants on public health and the environment.

Soil results are compared to the 6 NYCRR Part 375 Unrestricted Use SCOs and Restricted Residential Use SCOs.

Groundwater results are compared to the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) AWQS and Guidance Values published in "Sampling, Analysis and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs".

Soil vapor, sub-slab vapor, and air results were reviewed in conjunction with groundwater and soil data.

5.1 Fish and Wildlife Remedial Impact Analysis

The Site provides no wildlife habitat or food value. There are no natural waterways, wetlands, resources, or critical habitats of endangered species present on or adjacent to the Site. The Site was evaluated in accordance with the Fish and Wildlife Resources Impact Analysis (FWRIA) Decision Key provided in DER-10, Appendix 3C, to determine if an FWRIA was required. It was determined that an FWRIA was not required.

5.2 Geological and Hydrogeological Conditions

5.2.1 Stratigraphy

Based on the findings of the RI, a historic urban fill layer extending to a maximum of 15 feet below grade surface (bgs) was identified across most of the Site. The fill material predominantly consists of brick, concrete, and miscellaneous debris underlain by silty sand with varying amounts of fine- to coarse-grained gravel. The underlying soils generally consist of medium-dense silty sand with trace to some gravel and clay. Saturated conditions were observed at approximately 12 to 13 feet below grade underlain by medium-dense silty sand with some gravel from 15 feet to 21 feet, followed by intervals of lean clay, gravel and organics. Bedrock was not encountered during the RI.

5.2.2 Hydrogeology

Groundwater head measurements were collected utilizing a Solinst® 122 Oil/Water Interface probe. The interface probe can measure depths to water to 0.01 inch. No free product was observed within any of the monitoring wells. Ground surface elevation is relatively level at the Site, ranging from approximately 18.55 feet (NAVD88) in the southwest portion to 20.09 feet (NAVD88) in the central portion. Average depth to groundwater was observed as 6.58 feet (NAVD88) during the RI in 2025. A second and third gauging events were conducted in February 2026 at the Site. Average depth of groundwater was observed

at el. 6.04 feet (NAVD88) in February 2026. Based on the findings of the RI synoptic groundwater gauging events in February 2026, groundwater beneath the Site generally flows from southwest to north-northwest.

Although the regional groundwater flow direction is generally expected to be toward the southwest in the direction of the Gowanus Canal, the groundwater elevations measured at the Site shows a localized deviation. This condition is likely attributable to anthropogenic influences, including construction dewatering systems and ongoing remediation efforts in the surrounding area, which may be locally altering the hydraulic gradient.

A table of water level data for all monitoring wells is included in Table 1B. A map of groundwater level elevations with groundwater contours is shown in Figure 4.

5.3 Geophysical Investigation Findings

No anomalies or areas of concern indicative of potential USTs during the geophysical survey.

The geophysical survey report is provided in Appendix B.

5.4 Soil Results

Figure 3 provides the soil boring locations. Figures 5 and 6 provide a summary of soil exceedances. The data on soil sample collection for chemical analyses, including dates of collection and sample depths, are reported in Tables 3A through 8A, and Tables 9, and 10. Laboratory analytical deliverables for soil samples are provided in Appendix G, H, and I.

5.4.1 Soil Chemistry (RI)

Soil results were compared to the NYSDEC Part 375 Unrestricted Use SCOs (UUSCOs) and Restricted Residential Use SCOs (RRSCOs). Compounds detected in groundwater above the AWQS were compared to the Protection of Groundwater SCOs (PGWSCOs). Emerging contaminant results were compared to the guidance values as established in the NYSDEC Guidance Document for Part 375 Remedial Programs.

No visual or olfactory evidence of petroleum or chemical impacts were observed during the RI.

Volatile Organic Compounds

No VOCs were detected above Unrestricted Use SCOs with the exception of acetone (max. of 0.27 ppm), which was detected above its UUSCO of 0.05 ppm in eight soil samples, and 2-butanone (0.28 ppm), which was detected above its UUSCO of 0.12 ppm in one soil sample 25SB-6 (11'-12'). Acetone, which is a common laboratory artifact, was detected in several samples at low concentrations.

Semi-Volatile Organic Compounds

Eleven SVOCs, 2-methylphenol, 3-methylphenol/4-methylphenol, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene,

dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, naphthalene, and phenol were detected at concentrations exceeding their respective UUSCOs. Of these, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, ad indeno(1,2,3-cd)pyrene also exceeded their respective RRSCOs. Furthermore, four SVOCs, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and chrysene also exceeded their respective PGWSCOs in twenty of the soil samples. The table below provides concentration ranges of these exceedances.

SVOCs	Minimum Detected Concentration > SCOs		Maximum Detected Concentration> SCOs		UUSCO (ppm)	RRSCO (ppm)	PGWSCO (ppm)
2-Methylphenol	0.48	25SB-7 (12'-13')	0.48	25SB-7 (12'-13')	0.33	100	N/A
3-Methylphenol/ 4-Methylphenol	0.62	25SB-4 (12'-13')	2.5	25SB-9 (0-2')	0.33	100	N/A
Acenaphthene	34	25SB-12 (11'-12')	34	25SB-12 (11'-12')	20	100	N/A
Benzo(a)anthracene	**1**	25SB-5 (0-2')	**20**	25SB-7 (12'-13')	1	1	**1**
Benzo(a)pyrene	**1**	25SB-5 (0-2'), 25SB-7 (0-2')	**20**	25SB-11 (0-2')	1	**1**	22
Benzo(b)fluoranthene	**1.1**	25SB-3 (0-2'), 25SB-4 (7'-9')	**22**	25SB-7 (12'-13')	1	**1**	**1.7**
Benzo(k)fluoranthene	0.88	25SB-3 (12'-13')	**5.6**	25SB-4 (0-2')	0.8	**3.9**	1.7
Chrysene	**1.1**	25SB-4 (7'-9), 25SB-5 (0-2'), 25SB-7 (0-2')	**20**	25SB-7 (12'-13')	1	**3.9**	**1**
Dibenzo(a,h) anthracene	**0.39**	25SB-6 (7'-9')	**2.4**	25SB-7 (12'-13')	0.33	**0.33**	N/A
Indeno(1,2,3-cd)pyrene	**0.59**	25SB-12 (0-2')	**12**	25SB-11 (0-2')	0.5	**0.5**	N/A
Naphthalene	31	25SB-10 (11'-12')	44	25SB-12 (11'-12')	12	100	N/A
Phenol	0.53	25SB-7 (12'-13')	0.53	25SB-7 (12'-13')	0.33	100	N/A

- All concentrations are reported in parts per million (ppm).
- N/A: Not applicable since the compound was not detected in groundwater above AWQS.
- Underscored concentrations are above UUSCOs.
- **Bold concentrations are above RRSCOs.**
- **Underscored and bold concentrations are above PGWSCOs**

Pesticides

One pesticide, 4,4'-DDT (0.00384 ppm), was detected at a concentration slightly exceeding its respective UUSCO (0.0033 ppm) but below its RRSCO in one soil sample 25SB-5 (0-2'). No other pesticides were detected in the soil samples above laboratory reporting limits.

Herbicides

No herbicides were detected in the soil samples above laboratory reporting limits.

Polychlorinated Biphenyls

PCBs were not detected in any of the soil samples.

Metals

One or more of up to nine metals, including arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium, and zinc, were detected at concentrations exceeding their respective UUSCOs in all soil samples. Of these, arsenic, barium, lead, and mercury also exceeded their respective RRSCOs in 27 soil samples. The table below provides concentration ranges of these exceedances.

Contaminant	Minimum Detected Concentration > SCOs		Maximum Detected Concentration > RRSCOs		UUSCO (ppm)	RRSCO (ppm)
Arsenic	14.1	25SB-12 (0-2')	**35.2**	25SB-13 (0-2')	13	**16**
Barium	**418**	25SB-7 (12'-13')	**1270**	25SB-14 (0-2')	350	**400**
Cadmium	3.62	25SB-10 (0-2')	3.62	25SB-10 (0-2')	2.5	4.3
Copper	57.4	25SB-13 (0-2')	181	25SB-6 (11'-12')	50	270
Lead	97.2	25SB-9 (11'-12')	**10000**	25SB-4 (12'-13')	63	**400**
Mercury	0.324	25SB-1 (0-2')	**9.05**	25SB-1 (12'-13')	0.18	**0.81**
Nickel	35.2	25SB-9 (11'-12')	40.3	25SB-10 (0-2')	30	310
Selenium	5.97	25SB-9 (0-2')	17.3	25SB-7 (12'-13')	3.9	180
Zinc	109	25SB-8 (1'-3')	898	25SB-10 (0-2')	109	10000

- All concentrations are reported in parts per million (ppm).
- Underscored concentrations are above UUSCOs.
- **Bold concentrations are above RRSCOs.**

Emerging Contaminants

1,4-dioxane were not detected in any of the soil samples above laboratory reporting limits or SCOs.
PFAS compounds were not detected in any of the soil samples above UUSCOs.

5.4.1.1 Soil Delineation Chemistry

Due to the high lead and mercury concentrations identified in soil samples, a supplemental delineation sampling event was conducted. Borings were installed in the central north, northwest, southwest, northern, central and southern portions of the Site to horizontally and vertically delineate these heavy metals. Before the delineation event, the soil samples with

total lead concentrations over 100 ppm were activated for TCLP lead, and the soil samples with total mercury concentrations over 3 ppm were activated for TCLP mercury.

Based on the results, no hazardous concentrations of mercury were identified in any of the soil samples. However, hazardous concentrations of lead were identified in five soil borings. The table below provides concentration ranges of these exceedances.

Metals	Minimum Detected Concentration > SCOs		Maximum Detected Concentration> SCOs		UUSCO (ppm)	RRSCO (ppm)	EPA TCLP Level (mg/L)
Total Lead	76.8	25SB-11X (18'-20')	**10000**	25SB-4 (12'-13')	63	**400**	N/A
TCLP Lead	**5.47**	25SB-6 (7'-9')	**99.1**	25SB-11 (11'-12')	N/A	N/A	**5**
Total Mercury	0.576	25SB-9 (0-2')	**9.05**	25SB-1 (12'-13')	0.18	**0.81**	N/A
TCLP Mercury	-	-	-	-	N/A	N/A	0.2

Once the metals delineation was completed at approximately 28 feet bgs, the three borings that showed SVOCs exceedances during the initial RI were activated for SVOCs to complete the vertical delineation. No SVOCs were detected above UUSCOs in 25SB-4X (29'-30'), 25SB-6X (26'-28'), or 25SB-10X (28'-30').

Summary of Soil Analytical Results

- Thirty-two (32) soil samples, and a set of MS/MSD samples were analyzed for full-suite TCL analysis during the RI, forty-five (45) soil samples were analyzed for TCLP lead and/or TCLP mercury, and three soil samples were analyzed for TCL SVOCs.
- Two VOCs, acetone and 2-butanone, were detected above UUSCOs. Acetone is a common laboratory artifact and was detected in several samples at low concentrations. 2-Butanone was detected slightly above its UUSCO in one soil sample 25SB-6 (11-12) located in the northern portion of the Site. No VOCs were detected above RRSCOs.
- Eleven SVOCs were detected above UUSCOs. Of these, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene also exceeded their respective RRSCOs, and four SVOCs, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and chrysene also exceeded their respective PGWSCOs in twenty soil samples between grade and 13 feet across the Site.
- One pesticide, 4,4'-DDT, was detected slightly exceeding its respective UUSCO but below its RRSCO in one shallow soil sample, 25SB-5 (0-2') located in the southwestern portion of the Site.

- No PCBs, PFAS, or1,4-dioxane were detected above regulatory standards in soil samples.
- One or more of up to nine metals, including arsenic, barium, cadmium, copper, lead, mercury, nickel, selenium, and zinc, were detected at concentrations exceeding their respective UUSCOs in all soil samples. Of these, arsenic, barium, lead, and mercury also exceeded their respective RRSCOs in 27 soil samples across the Site.
- Hazardous concentrations of lead were identified in 13 soil samples extending to 12 feet across the Site.
- Soil results showed no exceedances of UUSCOs at approximately 28 feet below grade surface.

5.5 Groundwater Results

Figure 3 provides the monitoring well locations installed and/or sampled during the RI. Figure 7 provides a summary of groundwater exceedances identified during the RI. A summary table of data for chemical analyses performed on groundwater samples are included in Tables 11 through 16. Laboratory analytical deliverables for groundwater samples evaluated in the RIR are provided in Appendix J.

Groundwater results are compared to the NYSDEC Division of Water TOGS 1.1.1 Ambient AWQS and the Guidance Values published in "Sampling, Analysis and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs".

Volatile Organic Compounds

One VOC, benzene, was detected above its respective AWQS in the groundwater samples at the Site as follows:

On-Site Groundwater VOC Analytical Results			
Contaminant (VOC)	**Monitoring Well ID**	**Concentration (ppb)**	**AWQS (ppb)**
Benzene	25MW-8	1.7	1

Three chlorinated VOCs (CVOCs), cis-1,2-dichloroethene, tetrachloroethene (PCE), and trichloroethene (TCE), were detected above its respective AWQS in the off-Site groundwater samples as follows:

Off-Site Groundwater VOC Analytical Results			
Contaminant (VOC)	**Monitoring Well ID**	**Concentration (ppb)**	**AWQS (ppb)**
cis-1,2-Dichloroethene	B10D	29	5
Tetrachloroethene	B8DW	6.2	5
	B10D	22	
Trichloroethene	B10D	10	5

Semi-Volatile Organic Compounds

Five SVOCs, were detected in groundwater samples across the Site above their respective AWQS. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene and chrysene were detected above AWQS in 25MW-4 located in the western portion of the Site. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene were detected above AWQS in 25MW-5 located in the southwestern portion of the Site, and benzo(a)anthracene was detected above AWQS in 25MW-7 and 25MW-8 located in the eastern and southern portions of the Site, respectively. No SVOCs were identified above AWQS in the off-Site monitoring wells. The findings were as follows:

Contaminant (SVOC)	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
Benzo(a)anthracene	25MW-4	0.9	0.002
	25MW-5	0.23	
	25MW-7	0.03	
	25MW-8	0.55	
Benzo(a)pyrene	25MW-4	0.93	0.002
	25MW-5	0.25	
Benzo(b)fluoranthene	25MW-4	1.2	0.002
	25MW-5	0.32	
Benzo(k)fluoranthene	25MW-4	0.32	0.002
Chrysene	25MW-4	0.92	0.002
	25MW-5	0.19	

Herbicides

No herbicides were detected in the groundwater samples above laboratory reporting limits.

Pesticides

No pesticides were detected in the groundwater samples above laboratory reporting limits.

Polychlorinated Biphenyls

No PCBs were detected in the groundwater samples above laboratory reporting limits.

Total Metals

A total of twelve total metals, including barium, copper, iron, magnesium, manganese, nickel, selenium, and sodium, and four heavy metals, arsenic, chromium, mercury, and lead, were identified at concentrations exceeding their respective AWQS in the on-Site groundwater samples as follows:

Total Metals	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
Arsenic, total	25MW-5	48.64	25
Barium, total	25MW-5	1073	1000
Chromium, total	25MW-5	64.72	50
Copper, total	25MW-5	384.9	200
Iron, total	25MW-1	35,100	300
	25MW-2	55,300	
	25MW-3	21,400	
	25MW-4	25,200	
	25MW-5	59,800	
	25MW-6	32,100	
	25MW-7	3,730	
	25MW-8	16,200	
Lead, total	25MW-3	26.84	25
	25MW-4	579.9	
	25MW-5	2707	
	25MW-8	312.6	
Magnesium, total	25MW-1	49,000	35,000
	25MW-4	46,400	
	25MW-5	37,000	
	25MW-6	40,100	
Manganese, total	25MW-1	920.5	300
	25MW-2	2,667	
	25MW-3	1,253	
	25MW-4	1,488	
	25MW-5	3,698	
	25MW-6	1,148	
	25MW-7	379.5	
	25MW-8	678.1	
Mercury, total	25MW-4	3	0.7
	25MW-5	9.92	
	25MW-8	1.1	
Nickel, total	25MW-5	104	100
Selenium, total	25MW-5	19.8	10
Sodium, total	25MW-1	188,000	20,000
	25MW-2	543,000	
	25MW-3	117,000	
	25MW-4	540,000	
	25MW-5	392,000	
	25MW-6	324,000	
	25MW-7	22,200	
	25MW-8	369,000	

Only four naturally occurring total metals, iron, magnesium, manganese, and sodium were identified at concentrations exceeding their respective AWQS in the off-Site groundwater samples as follows:

Total Metals	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
Iron, total	B8DW	5,160	300
	B10D	3,050	

Total Metals	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
Magnesium, total	B8DW	62,800	35,000
	B10D	69,100	
Manganese, total	B8DW	1,175	300
Sodium, total	B8DW	198,000	20,000
	B10D	234,000	

Dissolved Metals

A total of four dissolved metals, all of which are naturally occurring, including iron, magnesium, manganese, and sodium, were detected at concentrations exceeding their respective AWQS in both on-Site and off-Site groundwater samples as follows:

Dissolved Metals	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
Iron, dissolved	25MW-1	2,120	300
	25MW-2	1,560	
	25MW-3	1,960	
	25MW-5	501	
	25MW-6	1,330	
	25MW-7	921	
	B8DW	1,500	
	B10D	805	
Magnesium, dissolved	25MW-1	56,600	35000
	B8DW	60,500	
	B10D	68,900	
Manganese, dissolved	25MW-1	768.4	300
	25MW-2	1,798	
	25MW-3	1016	
	25MW-5	1643	
	25MW-6	932.1	
	25MW-7	311.5	
	25MW-8	462.5	
	B8DW	822.9	
Sodium, dissolved	25MW-1	203000	20000
	25MW-2	536000	
	25MW-3	188000	
	25MW-5	341000	
	25MW-6	190000	
	25MW-8	369000	
	B8DW	185000	
	B10D	229000	

Supplemental Metals

A total of thirteen total metals, including barium, cadmium, copper, iron, magnesium, manganese, sodium, thallium, zinc, and four heavy metals, arsenic, chromium, mercury, and lead, were identified at concentrations exceeding their respective AWQS in the on-Site groundwater samples as follows:

Total Metals

Total Metals	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
Arsenic, Total	25MW-4	51.41	25
Barium, Total	25MW-4	2,797	1,000
Cadmium, Total	25MW-4	6.95	5
Chromium, Total	25MW-4	79.03	50
Copper, Total	25MW-4	271	200
Iron, Total	25MW-4	80,600	300
	25MW-5	8,040	
	25MW-7	15,800	
	25MW-5 DUP	7,660	
Lead, Total	25MW-4	2,046	25
	25MW-5	27.26	
Magnesium, Total	25MW-4	42,700	35,000
Manganese, Total	25MW-4	2,626	300
	25MW-5	1,773	
	25MW-7	650.3	
	25MW-5 DUP	1,756	
Mercury, Total	25MW-4	9.62	0.7
Sodium, Total	25MW-4	354,000	20,000
	25MW-5	450,000	
	25MW-7	72,300	
	25MW-5 DUP	433,000	
Thallium, Total	25MW-4	0.67	0.5
Zinc, Total	25MW-4	3,312	2,000

Dissolved Metals

A total of three dissolved metals, all of which are naturally occurring, including iron, manganese, and sodium, were detected at concentrations exceeding their respective AWQS in the same samples during confirmatory sampling event as follows:

Dissolved Metals	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)

Iron, dissolved	25MW-5	1,720	300
	25MW-7	1,650	
	25MW-5 DUP	7,230	
Manganese, dissolved	24MW-4	1,257	300
	25MW-5	1,524	
	25MW-7	648.7	
	25MW-5 DUP	1,504	
Sodium, dissolved	25MW-4	365,000	20,000
	25MW-5	426,000	
	25MW-7	75,600	
	25MW-5 DUP	408,000	

Emerging Contaminants

Two PFAS compounds, perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA), and 1,4-dioxane were detected above the Part 375 Remedial Program Guidance Values (GV) for Water as follows:

Emerging Contaminants	Monitoring Well ID	Concentration (ppb)	AWQS (ppb)
1,4-Dioxane	25MW-2	0.381	0.35
	25MW-8	0.37	
PFOS	25MW-5	0.0292	0.0027
	25MW-7	0.00474	
	25MW-8	0.00967	
	B8DW	0.0036	
PFOA	25MW-1	0.032	0.0067
	25MW-2	0.107	
	25MW-3	0.0364	
	25MW-5	0.0236	
	25MW-6	0.0484	
	25MW-7	0.0114	
	25MW-8	0.0361	
	B8DW	0.0386	
	B10D	0.0573	

Summary of Groundwater Analytical Results

- One petroleum-related VOC, benzene, was detected in one on-Site groundwater sample slightly above its AWQS. However, three CVOCs specifically cis-1,2-dichloroethene, tetrachloroethene (PCE) and trichloroethene (TCE) were detected above their respective AWQS in the off-Site groundwater samples collected from the

two monitoring wells located on the adjacent sidewalks. Therefore, the presence of CVOCs in groundwater is likely due to an off-Site source.

- Five SVOCs were detected in groundwater samples across the Site above their respective AWQS. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, benzo(k)flouranthene and chrysene were detected above AWQS in 25MW-4. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)flouranthene, and chrysene were detected above AWQS in 25MW-5, and benzo(a)anthracene was detected above AWQS in 25MW-7 and 25MW-8. Due to the lack of SVOCs in off-Site monitoring wells, and presence of SVOCs in soil across the Site, the presence of SVOCs in groundwater could be attributed to the Site soils.
- No herbicides, pesticides, or PCBs were detected in the groundwater samples above laboratory reporting limits.
- Four dissolved metals were detected in the July 2025 sampling event, all of which are naturally occurring metals including iron, magnesium, manganese, and sodium were detected at concentrations exceeding their respective AWQS. Three dissolved metals were detected in the February 2026 confirmation groundwater sampling event, all of which are also naturally occurring metals including iron, manganese, and sodium. It should be noted that naturally occurring metal contaminants in groundwater are not Site-specific contaminants of concern and will not be addressed by a remedy.
- A total of twelve total metals, including barium, copper, iron, magnesium, manganese, nickel, selenium, and sodium, and four heavy metals, arsenic, chromium, mercury, and lead, were identified at concentrations exceeding their respective AWQS in the on-Site groundwater samples in the July 2025 sampling event. None of the heavy metals were identified in the off-Site groundwater samples. Only four naturally occurring total metals, iron, magnesium, manganese, and sodium were identified at concentrations exceeding their respective AWQS in the off-Site groundwater samples. A total of thirteen total metals, including barium, cadmium, copper, iron, magnesium, manganese, sodium, thallium and zinc, and four heavy metals, arsenic, chromium, mercury and lead, were identified at concentrations exceeding their respective AWQS in the on-Site groundwater samples. Due to the absence of dissolved heavy metals in on-Site groundwater samples, the Site soils were not deemed as the source.
- Two PFAS compounds, PFOS and PFOA, were detected above the regulatory limits, PFOS in four samples and PFOA in nine groundwater samples. PFAS samples were not detected in any of the soil samples above laboratory reporting limits.

5.6 Soil Vapor Results

5.6.1 Soil Vapor Results

Figure 3 provides the soil vapor and ambient air sampling locations. Figure 8 provides a summary of findings with detected concentrations. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 17A. Laboratory data deliverables for all samples evaluated in the RIR are provided in Appendix K.

Soil Vapor

Total concentrations of petroleum-related benzene, toluene, ethylbenzene, and xylenes (BTEX) ranged from 18.65 µg/m^3 in 25SV-4 to 154.8 µg/m^3 in 25SV-3 beneath the Site and were detected at a total concentration of 33.54 µg/m^3 in the indoor air sample (25AI-1). Results further showed concentrations of tetrachloroethene (PCE) in two soil vapor samples, one sub-slab soil vapor sample, and one indoor air sample. The highest concentration of PCE detected was 46.8 µg/m^3 in SV-2, located in the southeastern portion of the Site. When the one sub-slab vapor sample and co-located indoor air sample results are evaluated against the NYSDOH Decision Matrices, no further action is required. A summary table of the detected NYSDOH Decision Matrix compounds is provided below:

Matrix	Compound	Minimum Detection (ug/m^3)	Maximum Detection (ug/m^3)
B	Tetrachloroethene	7.8 (25SV-4)	46.8 (25SV-2)
	1,1,1-Trichloroethane	1.26 (25SV-4)	31.1 (25SV-1)
D	Benzene	2.44 (25SS-1)	56.2 (25SV-3)
	Ethylbenzene	1.91 (25SV-4)	21.6 (25SV-3)
	Napthalene	3.68 (25SV-2)	4.21 (25SS-1)
	Cyclohexane	1.41 (25SS-1)	164 (25SV-1)
	Isooctane (2,2,4-trimethylpentane)	4.1 (25DUP-1)	4,500 (25SV-1)
	1,2,4-trimethylbenzene	2.89 (25SV-4)	14.8 (25SV-2)
	1,3,5-trimethylbenzene	1.3 (25SV-4)	4.44 (25SV-2)
	o-Xylene	5.21 (25SV-4)	13.9 (25SV-3)
E	m,p-xylenes	9.21 (25SV-4)	50.8 (25SV-1)
	heptane	3.11 (25SV-4)	23.4 (25SV-1)
	hexane	1.39 (25SV-4)	161 (25SV-1)
F	Toluene	1.68 (25SV-4)	37 (25SV-3)

Summary of Soil Vapor Analytical Results

Results showed low concentrations of petroleum-related VOCs, with the single exception of 2,2,4-Trimethylpentane, which was detected at 4,500 µg/m^3 in soil vapor sample 25SV-1. BTEX was identified between 18.50 µg/m^3 in 25SV-4 to 154.8 µg/m^3 in 25SV-3. The highest concentrations of CVOCs detected were of PCE at 25SV-2 (46.80 µg/m^3) and 14.2 µg/m^3 in

25SV-DUP-1 (collected from the 25SV-2 location), and TCE at 25AI-1 (0.193 µg/m^3), which is located in the western portion of the Site.

When the results of the one sub-slab vapor sample and the co-located indoor air sample are evaluated against the NYSDOH Decision Matrices, no further action is required.

Soil vapor sample 25SV-1, located on the northwestern portion of the property, showed an elevated detection of isooctane (2,2,4-trimethylpentane) at 4,500 µg/m^3 as well as other elevated petroleum compound detections. Soil vapor sample 25SV-3, located on the northeastern portion of the property, showed low to moderate detections of petroleum and BTEX compounds. Soil vapor samples 25SV-2 and 25SV-4, located on the southwestern and southeastern portions of the Site, appear to have relatively lower detections of petroleum and BTEX compounds. In general, petroleum compound detections appear to be more elevated in the northern portion of the Site along Sackett Street. However, it should be noted that these VOCs were not detected in soil or groundwater samples, except for benzene in one groundwater sample.

The highest detection of PCE was identified in soil vapor sample 25SV-2 located in the southwestern portion of the property at 46.8 µg/m^3. On the southeastern portion of the Site, in soil vapor sample 25SV-4, PCE was detected at 7.8 µg/m^3, and on the northern portions of the Site, in soil vapor samples 25SV-1 and 25SV-3, PCE was not detected. Although CVOCs were not in soil samples above UUSCOs, they were detected in the off-site groundwater samples.

5.7 Data Usability Summary

New York Analytical Services Protocols (ASP) Category B laboratory reports for the soil groundwater and soil vapor for the RI were provided by York Analytical Laboratories and sent to be validated by Alpha Geoscience, a third-party data validator. The data was reported electronically to the NYSDEC via the Environmental Quality Information Systems (EQuIS). The data was deemed mostly usable. All the data that were not qualified rejected (R) are usable. Below is a summary of the rejected data:

<u>RI Soil:</u>

- The positive PCB result for aroclor 1268 (and total PCBs) was “rejected” for sample 25SB-10 (0-2) because aroclor 1268 was reported “detected” on column 1 and “not detected” on column 2; therefore, the presence of aroclor 1268 was not confirmed.
- The “not detected” semi-volatile results for 14 acid extractable compounds were “rejected” for sample 25SB-4 (0-2) because two of three acid extractable surrogate recoveries were below control limits and one below 10% in the samples.
- The “not detected” semi-volatile results for 15 acid extractable compounds were “rejected” for samples 25SB-2 (0-2), 25SB-2 (0-2) because two of three acid extractable surrogate recoveries were below control limits and below 10% in the samples.

- The "not detected" semi-volatile results for hexachlorocyclopentadiene, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and pentachlorophenol were "rejected" for sample 25SB-5 (0-2) because two of two percent recoveries for these compounds were below QC limits, but not below 10% in the soil MS/MSD sample.
- The positive pesticide results for trans-chlordane were qualified as "rejected" for sample 25SB-1 (9-11), 25SB-3 (0-2), and 25SB-4 (7-9) because the %RPDs for dual column quantitation of trans-chlordane were above the allowable maximum and above 100% in the samples.
- The "not detected" pesticide results for target pesticides were qualified as "rejected" for sample 25SB-6 (7-9) because two of two surrogate recoveries were outside QC limits on one or both columns and one below 10% on one column in the sample.
- The "not detected" pesticide results for target pesticides were qualified as "rejected" for sample 25SB-6 (11-12) because two of two surrogate recoveries were outside QC limits and one below 10% on one column in the sample.
- The "not detected" pesticide results for target pesticides were qualified as "rejected" for sample 25SB-8 (11-12) because one of two surrogate recoveries was below QC limits and below 10% on one column in the sample.

Phase II Soil:

In general, the analytical results of the 2022 RI soil sampling were classified as usable. With the exception of the rejected PFAS non-detect results for N-MeFOSAA (SP-10) and PFOS (SP-11), all data are considered usable for site characterization and comparison to applicable regulatory criteria. Results qualified as J, J+, J-, or UJ indicate estimated values with associated uncertainty but remain suitable for evaluating site conditions and supporting remedial alternatives analysis.

Groundwater

With the exception of the rejected results for 1,4-dioxane (all samples, trip blank, and field blank) and selenium (25MW-5 and 25MW-5-DUP), all groundwater data are considered usable for site characterization and comparison to applicable regulatory criteria. Results qualified as J, J-, or UJ indicate estimated values with associated uncertainty but remain suitable for evaluating site conditions and supporting remedial alternatives analysis.

It should be noted that the analytical data for 1,4-dioxane in groundwater samples was rejected for the VOC analysis (8260D). The appropriate analysis for 1,4-Dioxane is 8270E-SIM for SVOCs and the data for this analysis was deemed usable in the DUSR.

Soil Vapor

The overall performances of the analyses were acceptable.

The DUSRs for 2025 RI samples are provided in Appendix L. The DUSR for 2022 soil samples is provided in Appendix M, and the DUSR for 2026 confirmatory groundwater samples is provided in Appendix N.

6.0 CONCEPTUAL SITE MODEL

Investigation results were compared to the following applicable standards and guidance values, and three areas of concern were identified:

- NYSDEC Part 375 Unrestricted Use SCOs, Restricted Residential Use SCOs, and Protection of Groundwater SCOs
- NYSDEC TOGS 1.1.1 AWQS and NYSDEC Guidance Values
- NYSDOH Decision Matrices for Sub-Slab Vapor/Indoor Air

6.1 Site Contaminants

The following contaminants of concern were identified at the Site:

- SVOCs (PAHs) Impacts in Soil and Groundwater
- Hazardous Lead and Metals Impacts in Soil
- CVOCs in Soil Vapor

6.1.1 SVOCs (PAHs) Impacts in Soil and Groundwater

Contaminants associated with urban fill from unknown sources were identified across the Site. Varying amounts of historic fill were identified from the surface down to 15 feet below grade. The fill material predominantly consists of brown and dark brown fine to medium sand with varying amounts of gravel, concrete, asphalt, glass, and silt.

Analytical results from soil samples collected from shallow (0-2') and intermediate (7-9', 11-12' and 12-13') depth intervals across the Site, identified exceedances of SVOCs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, and naphthalene] above UUSCOs, RRSCOs, and Protection of Groundwater SCOs.

Additionally, SVOCs exceedances in groundwater samples were identified in 25MW-4, 25MW-5, 25MW-7, and 25MW-8 across the Site, indicating that urban fill is likely the source of contamination at the Site.

6.1.2 Hazardous Lead and Metals Impacts in Soil

Total lead concentrations ranged from 97.2 ppm to 10,000 ppm throughout the Site at varying depths with exceedances of both UUSCOs (63 ppm) and RRSCOs (400 ppm). Toxicity Characteristic Leaching Procedure (TCLP) results for lead ranged from non-detect to 99.1 mg/L, with multiple samples exceeding its respective EPA Hazardous Waste Limit (5 mg/L). Based on the vertical and horizontal distribution, lead is considered a primary contaminant of concern in Site soils. Furthermore, other metals, including arsenic, barium, lead, and mercury also exceeded their respective RRSCOs in 27 soil samples across the Site. This distribution suggests that the lead impacts are not localized to a single source area but are consistent with urban fill and historical industrial activities.

Metals concentrations appear to achieve UUSCOs around 28 feet below grade surface, and the hazardous lead appears to be limited to the top 14 feet.

6.1.3 CVOCs in Soil Vapor

Soil vapor and sub-slab vapor results showed low to moderate concentrations of CVOCs detected across the Site. When the one sub-slab vapor sample and co-located indoor air sample results are evaluated against the NYSDOH Decision Matrices, no further action is required. The highest detection of PCE was identified in soil vapor sample 25SV-2 located in the southwestern portion of the property at 46.8 µg/m^3. On the southeastern portion of the Site, in soil vapor sample 25SV-4, PCE was detected at 7.8 µg/m^3.

Three CVOCs, PCE, TCE, and cis-1,2-dichloroethene were detected at concentrations ranging from 6.2 µg/L to 29.0 µg/L, exceeding their respective AWQS of 5 ug/L in two off-site groundwater monitoring wells. PCE exceedances were observed in two off-site groundwater monitoring wells. B8DW (6.2 ug/L) and B10D (22 ug/L), located in the sidewalk adjacent to the southwest and south of the Site, respectively. TCE exceedance was detected above its AWQS in off-site monitoring well B10D (10 ug/L). No CVOCs were identified in the on-site groundwater samples or soil samples at concentrations exceeding regulatory standards. Based on these findings, the CVOCs present in soil vapor are likely attributable to off-site sources rather than on-site impacts.

7.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT

The objective of the qualitative exposure assessment is to identify potential receptors and pathways for human exposure to the contaminants of concern (COC) that are present at, or migrating from, the Site. Human health exposure risk was evaluated in accordance with Appendix 3B NYSDOH Qualitative Human Health Exposure Assessment and Section 3.3(c)4 of the NYSDEC DER-10. The five elements of an exposure pathway are the (1) source of contamination; (2) environmental media and transport mechanisms; (3) point of exposure; (4) route of exposure; (5) receptor population based on past, present or future events. The potentially exposed receptors and how any unacceptable exposures may be eliminated are determined from an assessment of the primary use of the area, actual and potential use of ground and surface waters that are impacted or threatened, and how any potential routes of exposure may be eliminated.

7.1 Contaminant Sources

Based on the results of the RI, on-site contaminants to be evaluated for human health exposure risk include contaminants of concern at the Site, including SVOCs and metals in soil; SVOCs in groundwater; and CVOCs in soil vapor.

The SVOCs and metals detections throughout the Site are generally consistent with historic fill material observed throughout NYC. The SVOCs exceedances in both soil and groundwater samples indicate that non-native urban fill source material is present at the Site.

Groundwater results showed CVOCs in off-site groundwater samples, indicating that the presence of CVOCs in groundwater and soil vapor is likely attributed to an off-site source since the same compounds were not detected above regulatory standards at the Site.

Four dissolved metals, all of which are naturally occurring metals, including iron, magnesium, manganese, and sodium, were detected at concentrations exceeding their respective AWQS. A total of twelve (12) total metals, including barium, copper, iron, magnesium, manganese, nickel, selenium, and sodium, and three heavy metals, arsenic, chromium, mercury, and lead, were identified at concentrations exceeding their respective AWQS in the on-site groundwater samples. Due to the absence of dissolved heavy metals in on-site groundwater samples, the Site soils were not deemed as the source.

7.2 Current Conditions

The Site is located in a densely developed part of Brooklyn, New York. The Site is currently vacant. Approximately half of the Site is covered with an existing building with concrete slab, and the other half is covered with paved parking lot. Therefore, human exposure to contaminated soil through dermal absorption, inhalation, and ingestion is limited and unlikely under the current conditions.

As groundwater in this area of New York City is not used as a potable water source, a complete exposure pathway to groundwater under current Site conditions is unlikely.

An incomplete exposure pathway to soil vapor is concluded based on the current site use and occupancy. Specifically, the Site is currently vacant and unoccupied. As such, there are no receptors currently present, and no indoor air exposure is occurring since the building was recently demolished.

7.3 Exposure Route

An exposure route is the mechanism by which a receptor comes into contact with a chemical. Three potential primary routes exist by which chemicals can enter the body:

- Ingestion of water, fill, and/or soil;
- Inhalation of vapors and/or particulates; and
- Dermal contact with water, fill, soil, and/or building materials.

7.4 Potential Sensitive Receptors

On-Site Receptors: The Site is currently vacant and capped with the former building's concrete slab and an asphalt-paved parking lot. The Site is secured with locked roll-up metal doors and typical doorways and the entrance to the parking lot is controlled by a locked gate and fence. On-site receptors are limited to workers, trespassers, Site representatives, and visitors granted access to the property. Under proposed future conditions, potential on-Site receptors include workers, residents, and visitors.

Off-Site Receptors: Potential off-Site receptors within a 500-foot radius of the Site include adult and child residents; commercial and construction workers; pedestrians; students at local schools, and trespassers based on the following land uses within 500 feet of the Site:

1. Commercial Businesses – existing and future
2. Residential Buildings – existing and future
3. Building Construction/ Renovation – existing and future
4. Pedestrians, Trespassers, Cyclists – existing and future
5. Schools – existing and future

Community Air Monitoring Program (CAMP) will be implemented at the Site during intrusive activities to monitor air quality the public.

7.5 Potential Exposure Pathways

On-Site: The former building at the Site has been demolished, and the Site is currently vacant. The Site is currently capped with the former building's concrete slab and an asphalt-paved parking lot. Human exposure to contaminated soil through dermal absorption, inhalation, and ingestion is unlikely due to the current Site cover.

As groundwater in this area of New York City is not used as a potable water source, a complete exposure pathway to groundwater under current Site conditions is unlikely.

Since the Site is currently vacant and unoccupied, no receptors are present, and as such, a potential exposure pathway for soil vapor is unlikely. No indoor air exposure exists since the building was recently demolished. Once construction activities begin, a potential exposure pathway may exist for construction workers and inspectors to come into direct contact with soil. Any future Site remediation activities would be conducted under a HASP, which would control and limit human exposure to on-Site contaminants.

Off-Site: There is an existing potential exposure pathway from soil gas emanating from on-Site VOCs entering neighboring properties as a result of any floor or wall openings/cracks, although these CVOCs were attributed to off-Site source(s). Although it is unlikely, the indoor air quality at the adjoining properties may be susceptible to contamination from subsurface vapor intrusion attributable to CVOCs in the area. The potential receptors from such a migration pathway into the building would be to: off-Site construction and commercial workers, adult and child residents, and visitors. The primary route of exposure would be inhalation.

During the redevelopment (excavation activities), the potential exists for off-Site vapor intrusion risk to off-Site receptors. In the absence of a CAMP and HASP, during ground intrusive activities, off-Site receptors could be exposed to particulates and vapors. The implementation of a CAMP and HASP during intrusive work will monitor and limit off-Site receptor's exposure to particulates and vapors.

As groundwater in this area of New York City is not used as a potable water source, a complete exposure pathway to groundwater under the redeveloped conditions is unlikely.

Once the redevelopment is complete, it is unlikely that a new foundation with the addition of a vapor barrier would allow for vapor migration into the building. Based on the findings, the evaluation during the remedy will include a provision for implementing actions recommended to address exposures related to soil vapor intrusion.

7.6 Exposure Assessment Conclusions and Recommendations

Based upon this analysis, exposure to contaminants in soil and groundwater is not expected under current conditions, as the Site is capped with concrete slabs and asphalt pavement, and groundwater in this area of New York City is not used as a potable water source. The soil intrusion pathway is currently incomplete on-site because there is no building or occupant present. There is an existing potential exposure pathway from soil gas emanating from VOCs entering neighboring properties as a result of any possible floor or wall openings/cracks. Although it is unlikely, the indoor air quality at the adjoining properties may be susceptible to contamination from subsurface vapor intrusion attributable to CVOCs in the area. Once remediation/construction activities start, any potential exposure pathway will be monitored and controlled by implementation of a CAMP and HASP.

During redevelopment (including excavation or other ground-intrusive activities), there is a temporary potential for the generation of dust and volatilized compounds that could result

in inhalation exposure to both on-Site workers and off-Site receptors. This potential exposure mechanism would be related to short-term constriction-phase emissions rather than vapor intrusion into enclosed structures. In the absence of a CAMP and HASP, during ground intrusive activities, off-Site receptors could be exposed to particulates and vapors. Monitoring and control measures have been and will continue to be used during any investigation and any future planned remediation to prevent completion of this pathway. Under future conditions, the Site will be remediated, and engineering and institutional controls will be implemented, as necessary, to prevent completion of this pathway.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the RI, the following conclusions were made:

- An urban fill layer consisting of brick, concrete, and miscellaneous debris appears to be extending to 15 feet below grade surface (bgs) across most of the Site.
- The topography of the Site is relatively level, ranging from approximately 18.55 feet (NAVD88) in the southwest portion to 20.09 feet (NAVD88) in the central portion. Average depth to groundwater was observed as 6.58 (NAVD88) during the RI.
- Geophysical survey did not identify any areas of concern indicative of anomalies consistent with USTs.
- Contaminants of concern in soil were identified as SVOCs, including polycyclic aromatic hydrocarbons (PAHs), and metals, including hazardous lead, and non-hazardous arsenic and mercury. Since the same SVOCs were identified in groundwater samples, the results were evaluated by comparison to the Protection of Groundwater SCOs.
- Contaminants of concern in groundwater were identified as SVOCs, consisting of PAHs.
- One petroleum-related VOC, benzene (1.7 ppb), was detected slightly above its respective AWQS (1 ppb) in one of the Site groundwater samples (25MW-8). This could be an anomaly and should be confirmed via resampling.
- Although CVOCs, cis-1,2-dichloroethene, tetrachloroethene (PCE), and trichloroethene (TCE), were identified in off-site groundwater samples, they were not detected in the on-site groundwater samples. Therefore, their presence is likely an off-site source.
- Four dissolved metals, all of which are naturally occurring metals, including iron, magnesium, manganese, and sodium, were detected at concentrations exceeding their respective AWQS. A total of fifteen (15) total metals, including barium, cadmium, copper, iron, magnesium, manganese, nickel, selenium, sodium, thallium, zinc, and four heavy metals, arsenic, chromium, mercury, and lead, were identified at concentrations exceeding their respective AWQS in the on-site groundwater samples. Due to the absence of dissolved heavy metals in on-site groundwater samples, the Site soils were not deemed as the source.
- Concentrations of petroleum-related VOCs in soil vapor samples ranged from low to moderate across the Site, except for, isooctane (2,2,4-Trimethylpentane), which was detected at 4,500 µg/m^3 in soil vapor sample 25SV-1 located in the northwestern portion of the property. The highest concentrations of CVOCs detected in soil vapor were of PCE in soil vapor sample 25SV-2 at 46.80 µg/m^3, and in 25DUP-1 (Parent

Sample: 25SV-2) at 14.2 µg/m^3. Additionally, TCE was detected in indoor air sample 25AI-1 at 0.193 µg/m^3 but was not detected in any soil vapor sample or the sub-slab soil vapor sample. CVOCs were not detected in soil samples, however, they were detected in off-Site groundwater samples. Therefore, the presence of CVOCs in soil vapor is likely due to off-Site source(s).

Based on the results of the RI, remedial action will be necessary. Applicable strategies and technologies may include, but are not limited to, excavation to remove urban fill in accordance with all applicable laws and regulations, and installation of engineering controls.

USER KEY FOR DATA SUMMARY TABLES

Qualifier Key for Data Summary Tables

D: Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

U: Not detected at the reported detection limit for the sample.

R: Unreliable result; data is rejected or unusable. Analyte may or may not bepresent in the sample. Supporting data or information is necessary to confirm the result.

NJ: Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

J: Analyte is present. Reported value may be associated with a higher levelof uncertainty than is normally expected with the analytical method.

J-: Analyte is present. Reported value may be biased low and associated witha higher level of uncertainty than is normally expected with the analytical method.

J+: Analyte is present. Reported value may be biased high andassociated witha higher level of uncertainty than is normally expected with the analytical method.

UJ: Not detected, quantitation limit may be inaccurate or imprecise.

E: Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Bold values are detected concentrations

Bold and highligted values are concentrations above Part 375 Unrestricted Use Soil Cleanup Objectives

Bold and highligted values are concentrations above Part 375 Restricted Residential Use Soil Cleanup Objectives

Bold and highligted values are concentrations above Part 375 Protection of Groundwater Soil Cleanup Objectives

Bold and highligted values are concentrations above USEPA Hazardous Waste Limits

Senior Project Manager/Senior Reviewer

Certification:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Kenneth P. Wenz, Jr., PG, LEP –Senior Project Manager /QEP

EXECUTIVE SUMMARY

On behalf of Aniska Realty I, LLC, Athenica Environmental Services, Inc. (Athenica) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 601 Union Street, herein referred to as "the Site". The location of the Site is shown on Figure 1 in Appendix A. This assessment was conducted in substantial compliance with the American Society for Testing and Materials (ASTM) Practice Designation E1527-13: Standard Practice for ESAs: Phase I ESA Process.

The purpose of this ESA is to identify, to the extent feasible, any recognized environmental conditions (RECs), historic RECs (HRECs), controlled RECs (CRECs), or *de minimis* conditions in connection with the Site. According to the current ASTM Standard, a REC is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A HREC is a past release of any hazardous substance or petroleum product that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A CREC is a REC that has been addressed to the satisfaction of the applicable regulatory authority or meeting risk-based criteria established by regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. A *de minimus* condition is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. *De minimis* conditions are not recognized environmental conditions. The Phase I ESA was performed at the request of Aniska Realty I, LLC as part of their typical environmental due diligence prior to acquisition of the property.

The Site consists of two parcels comprising 37,553 total square-feet fronting Union Street to the south, Third Avenue to the west, and Sackett Street to the north. The western parcel (Lot 1) is 21,055 square feet and is completely occupied by a 1-story industrial building. The eastern parcel (Lot 12) is 16,498 square feet in area, is undeveloped, and is currently utilized as a parking lot and storage yard. The Site building maintains a warehouse and offices for a petroleum trucking and management company. Lot 12 is currently being utilized as a parking lot and storage yard. Most of the building is slab-on grade, with a partial cellar (approximately 500 square feet in area) in the northeastern portion of the building. This portion of the building also maintains a mezzanine area, which is occupied by offices. The building is concrete block and brick construction, with concrete floors, brick and concrete block interior walls, concrete partial cellar, metal frame interior; and wood-frame roof. The office portion of the Site maintains tiled floors, plaster interior walls, and drop-tiled and plaster ceilings.

The office area of the building is heated and cooled by a ducted natural gas-fired HVAC system with equipment on the roof. Portions of the building are also heated by a ducted No. 2 fuel oil-fired HVAC system with boiler and ASTs in the cellar. The office area is also cooled by individual electric wall-mounted air conditioners. The warehouse portion of the building is heated by overhead natural gas-fired unit heaters and a natural gas-fired ducted system; this portion of the building is not cooled. Solid waste generated by the building is removed regularly from the Site by private waste removal contractors for off-Site disposal. Wastewater and sewage from the building is discharged to the municipal sewer system for treatment at an off-Site wastewater treatment facility serving the community.

The current use of the Site is industrial. The building is occupied by a petroleum storage and trucking company, which receives and transports fuel oil, diesel, and gasoline. The building stores multiple trucks inside, and maintains a parking lot with several petroleum transport vehicles. The western portion of the building maintains office space.

The north-adjacent properties maintain 1-, 2-, and 3-story industrial buildings. The east-adjacent property maintains an 8-story hotel. The west-adjacent property maintains a vacant lot, currently under redevelopment (most recently developed with a 1-story industrial building). The south-adjacent properties maintain a 2-story residential building, two 4-story residential buildings, a 1-story office building and warehouse, and a 4-story residential building.

This assessment has revealed evidence of the following RECs in connection with the Site:

- The E-Designation for the Site represents a REC since it pertains to potential hazardous materials;
- The historic and current industrial, manufacturing, auto repair, and fuel oil storage/handling uses of the Site;
- The historic and/or current industrial, automotive service, and gasoline station uses of the surrounding properties;
- Open Spill Number 2009932 was reported on March 9, 2021, approximately 50 feet west of the Site at 585 Union Street. Investigations identified contamination in soil and groundwater;
- Open Spill Number 9605719 was reported on August 2, 1996, approximately 315 feet east of the Site at 204-222 4th Avenue. Investigations identified contamination in soil vapor and groundwater; and
- The potential for vapor intrusion from Site operations, and off-Site properties with documented releases to soil vapor and groundwater.

Based on the findings of the Phase I ESA, Athenica recommends the following:

- A Phase II Investigation should be conducted to evaluate subsurface conditions as a result of the identified RECS. The Phase II should include, at minimum, the collection of soil and soil vapor samples beneath the Site;
- Any unregistered petroleum bulk storage tanks should be properly registered with the NYSDEC; and
- If redevelopment of the Site is planned, all “E” Designation requirements must be addressed to the satisfaction of OER.

1.0 INTRODUCTION

On behalf of Aniska Realty I, LLC, Athenica Environmental Services, Inc. (Athenica) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 601 Union Street, herein referred to as "the Site". The location of the Site is shown on Figure 1 in Appendix A. This assessment was conducted in substantial compliance with the American Society for Testing and Materials (ASTM) Practice Designation E1527-13: Standard Practice for ESAs: Phase I ESA Process.

1.1 Purpose

The purpose of this ESA is to identify, to the extent feasible, any recognized environmental conditions (RECs), historic RECs (HRECs), controlled RECs (CRECs), or *de minimis* conditions in connection with the Site. According to the current ASTM Standard, a REC is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A HREC is a past release of any hazardous substance or petroleum product that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. A CREC is a REC that has been addressed to the satisfaction of the applicable regulatory authority or meeting risk-based criteria established by regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. A *de minimus* condition is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. *De minimis* conditions are not recognized environmental conditions.

1.2 Scope-of-Services

This Phase I ESA was conducted utilizing a standard of good residential and customary practice that was consistent with the ASTM Standard Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are included in appropriate sections of this report. In accordance with the above-referenced agreement, Athenica performed walk-through observations of the Site, noted the use of adjacent properties, and conducted a search of readily available historical and regulatory records. More specifically, the scope of services included the following:

- Site and Adjacent Property Observations
  Visual observations of the Site, structures, and surrounding properties were made to identify potential sources or indications of chemical and/or petroleum impacts such as underground storage tanks (USTs), aboveground storage tanks (ASTs), potential sources of polychlorinated biphenyls (PCBs), chemicals and hazardous materials, and areas with surface stains or distressed vegetation. In addition, the immediately adjacent properties were observed, without being entered, for possible sources of impacts or environmental impairment that could migrate to the site via surface water runoff, groundwater transport, or other pathways. Photographs documenting Site and adjacent property observations are included in Appendix B.
- Federal, State, Tribal and Local Regulatory Review
  A Federal, State, Tribal and Local regulatory database review was completed and supplied to Athenica by Environmental Data Resources, Inc. (EDR). A complete listing of all of the databases included in the review is available in Section 4.0 of this report. A copy of the full EDR database report in included in Appendix C.

- Historical Review
  Reviews of available historical Sanborn Fire Insurance maps, City Directories, historical aerial photographs, and historical topographic maps for the Site and adjacent properties were conducted to evaluate previous land use. Copies of the available historical Sanborn Fire Insurance maps, City Directories, historical aerial photographs, and historical topographic maps are included in Appendix D, E, and F, respectively.

- Geological Information
  Published geological and groundwater information for the Site was obtained from the United States Geological Survey (USGS) Hydrogeologic Investigations Atlas: Hydrogeologic Framework of Long Island, New York (1989).

- Interviews
  Interviews were conducted with persons familiar with the Site regarding possible past or present use of potentially hazardous materials at the Site, and other issues of potential interest relative to potential environmental conditions.

- Local Building and Tax Information Records Review
  Local building and tax information records were obtained from New York City via NYC online databases and reviewed to identify potential environmental issues of concern. Copies of the local records obtained from local agencies are included in Appendix G.

- Regulatory Agency File and Records Review
  A regulatory agency file or records review was conducted for the Site or adjacent properties unless not warranted by the findings of the database search report or the opinion of the environmental professional.

- Freedom of Information Act (FOIA) Requests
  For the Regulatory Agency File and Records Review, Freedom of Information Act (FOIA) requests were submitted to federal, state, and local regulatory agencies to obtain records of environmental issues of concern. Copies of FOIA letter requests by Athenica and responses from regulatory agencies are included in Appendix H.

- Vapor Encroachment Screening
  Vapor encroachment screening was performed to evaluate the potential for migration of vapors onto the Site. The vapor encroachment screening was conducted in accordance with the ASTM Standards E2600-15 "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions". A copy of the vapor encroachment screening report is included in Appendix I.

Please note that the scope of work for this Phase I ESA does NOT include collection of samples or materials for testing, including testing of soils, groundwater, vapor, lead-based paint, lead in drinking water, asbestos-containing materials (ACMs), etc.

1.3 Assumptions, Limitations and Exceptions

Athenica has prepared this Phase I ESA using reasonable efforts in each phase of its work to identify RECs associated with hazardous substances or petroleum products at the Site. The scope-of-work for this Phase I ESA was consistent with the ASTM Practice E 1527-13. Findings within this report are based on information collected from observations made on the day of the Site investigation and from reasonably ascertainable information obtained from governing public agencies and referenced sources.

Athenica's professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This statement is in lieu of other statements either expressed or implied. Athenica is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site observations, field exploration, and laboratory test data presented in this report.

This report is intended for the sole use of the Client. It should be noted that environmental evaluations are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and Site evaluations. For these types of evaluations, it is often necessary to use information prepared by others, and Athenica cannot be responsible for the accuracy of such information. Additionally, the passage of time may result in a change in the environmental characteristics at this Site and surrounding properties. This report does not warrant against future operations or conditions, nor does it warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

As per the United States Environmental Protection Agency (USEPA) final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquires) that "persons conducting all appropriate inquiries may use the procedures included in the ASTM E 1527-13 standard to comply with today's final rule." Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared in conformance with the ASTM E 1527-13 standard, persons attempting to utilize this ESA while seeking one of the Comprehensive Environmental Response, Compensation, and Liability Act's (CERCLA's) Limited Liability Protections (LLPs) must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that are beyond the scope of this practice (ASTM E 1527-13) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to Athenica before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

Subsurface conditions were not field investigated, as this was outside the scope of this study, and may differ from the conditions implied by the surficial observations. This study is not intended to assess or otherwise determine if soil impacts, waste emplacement, or groundwater impacts exist. These data are accessible only by subsurface material and groundwater sampling through the completion of soil borings and the installation of monitoring wells. The scope of work, in accordance with our agreement, did not include these activities.

It must be noted that no evaluation, no matter how thorough, can absolutely rule out the existence of hazardous materials at a given Site. This assessment has been based on prior Site history and observable conditions. Existing hazardous materials and hazardous substances can escape detection using these methods. Therefore, if a higher level of confidence is required than can be defined by the Phase I scope of work, additional evaluation would, of course, be required.

Our conclusions regarding the potential environmental impact of nearby, off-site facilities on the Site are based on readily available information from the environmental databases listed and the presumed groundwater flow direction based on surface topography and localized knowledge. A detailed file review of each facility was beyond the scope of work. Actual groundwater conditions, including direction of flow, can only be determined through the installation of monitoring wells.

Athenica does not warrant the correctness, completeness, relevancy, merchantability, or fitness of any information related to records review provided in this report. Such information is not the product of an independent review conducted by Athenica, but is only publicly available environmental information maintained by federal, state, and local government agencies.

Deviations from ASTM Standard Practice E 1527-13 are described in Section 10.

1.4 Special Terms and Conditions (User Reliance)

This report may be relied upon by the undersigned or by any purchaser or assignee. In addition, the report may be relied upon by any rating agency involved in rating securities secured by, or representing an interest in, the Property Note. This report may be used in connection with materials offering for sale the Property Note, or an interest in the Property Note, and in presentations to any rating agency. With respect to the foregoing, the report speaks only as of the origination date of the report unless specifically updated through a supplemental report.

Athenica makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Athenica's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of no more than our contract price.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site is located at 601 Union Street in the Borough of Brooklyn, New York. It is defined on the New York City Department of Finance Tax Map as Block 434 and Lots 1 and 12.

2.2 Site and Vicinity General Characteristics

The Site is located within a primarily mixed use, residential, commercial and industrial area of Brooklyn, New York. The Site is zoned as M1-2/R7-A, denoting it as a manufacturing zone typically generating light industrial uses and often serving as a buffer zone between commercial or residential and heavier manufacturing zones, as well as a moderate density apartment house district with a maximum building height of 75 feet. The neighborhood is historically industrial, with some residential areas. However, the surrounding area is subject to a November 23, 2021 zoning action (The Gowanus Plan), which allows more residential uses. As a result, the character of the neighborhood is likely to change to encourage more residential development. More recent redevelopment of properties throughout the neighborhood have trended towards mid- to high-rise residential and mixed-use commercial and residential buildings.

2.3 Current Use of the Property

The Site consists of two parcels comprising a total of 37,553 square-feet, fronting Union Street to the south, Third Avenue to the west, and Sackett Street to the north. The western parcel (Lot 1) is 21,055 square feet in area and is completely occupied by a 1-story industrial building. The eastern parcel (Lot 12) is 16,498 square feet in area, is undeveloped, and is currently utilized as a parking lot and storage yard. The Site building maintains a warehouse area and offices for a petroleum trucking and management company, including on-Site truck repair and maintenance. Most of the building is slab-on grade, with a small partial cellar (approximately 500 square feet in area) located in the northeastern portion of the building. This portion of the building also maintains a mezzanine area, which is occupied by offices. The office area of the building is heated and cooled by a ducted natural gas-fired HVAC system with equipment on the roof. Portions of the building are also heated by a ducted No. 2 fuel oil-fired HVAC system with boiler and ASTs in the cellar. The office area is also cooled by individual electric wall-mounted air conditioners. The warehouse portion of the building is heated by overhead natural gas-fired unit heaters and a natural gas-fired ducted system; this portion of the building is not cooled.

2.4 Description of Site Improvements

According to historic Sanborn Fire Insurance Maps, the current building at the Site was constructed circa 1951. Sanborn maps depict a 2-story lumber shed and several 4-story residential buildings from as early as 1906 to as recently as 1926; and a 1-story building depicted in 1965.

2.5 Current Use of Adjoining Properties

Direction	Address	Description
North	215 3rd Avenue 597 Sackett Street 601 Sackett Street	2-story industrial building 1-story industrial building 3-story industrial building

South	251 3rd Avenue	2-story residential building
	570 Union Street	4-story residential building
	572 Union Street	4-story residential building
	576 Union Street	1-story office/warehouse building
	578 Union Street	4-story residential building
	580 Union Street	1-story warehouse building
East	625-628 Union Street	8-story commercial building (hotel)
West	585 Union Street	Vacant property, recently demolished 1-story industrial building

2.6 Physical Setting Source

2.6.1. Topography

According to the United States Geological Survey (USGS) Topographic Quadrangle for Brooklyn, New York, the elevation of the Site is approximately 18 feet above mean sea level (amsl). The Site slopes gently downward to the west, towards the Gowanus Canal.

2.6.2. Soils

According to the U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS), which is included in the EDR GeoCheck Report, the soils in the area of the Site are classified as Urban Land.

2.6.3. Geology

According to the USGS Hydrogeologic Investigations Atlas: Hydrogeologic Framework of Long Island, New York (1989), the borough of Brooklyn is generally underlain by the following geological deposits: Upper Glacier formation, Gardiner's Clay, Magothy formation, Raritan Confining Unit, Lloyd formation, and bedrock. The Upper Glacial formation is present throughout Brooklyn; however, as further explained, the Gardiner's Clay and Raritan Confining Unit are not present throughout Brooklyn and therefore may not be present beneath the Site.

The Upper Glacial formation typically consists of poorly-permeable glacial outwash deposits and till composed of clay, sand, gravel and boulders. The Upper Glacier Aquifer also is comprised of moderately to highly permeable outwash deposits consisting of fine to very coarse quartzose sand and gravels, as well as glaciolacustrine, marine, and reworked deposits. The glaciolacustrine and marine clay deposits exhibit mostly poor permeability but, locally, have thin moderately permeable layers of sand and gravel.

The Gardiner's Clay, if present, underlies the Upper Glacial formation and consists of poorly permeable grayish-green and brown clay and silt, with a few layers of sand, and includes marine shells and glauconite. The formation pinches out in the southernmost portions of the borough.

The Magothy formation is located in part directly below each of the above units and is comprised of fine to medium sand that is clayey in part, interbedded with lenses of and layers of coarse sand and sandy and solid clay.

The Raritan Confining Unit underlies the Gardiner's Clay, if present, and consists of poorly permeable silty clays with few lenses of sand. Lignite and pyrite are commonly found in the Raritan Confining Unit.

The Lloyd formation underlies the Raritan Confining Unit and consists of a poorly to moderately permeable, fine to coarse-grained sand. There are also some lenses of silty clay found in the Lloyd Aquifer. In Brooklyn, the formation thins and pinches out in the northernmost portions of the borough.

Bedrock in Brooklyn generally consists of crystalline metamorphic rocks, muscovite-biotite schist or gneiss, and/or igneous rocks, such as granite.

2.6.4. Hydrology

The movement and direction of groundwater flow is influenced by many factors including, but not limited to, the aquifer's hydraulic characteristics, surface and bedrock topography, the presence of surface water bodies and the influence of pumping wells. Preliminary estimates of groundwater flow direction usually consider surface topography and the presence of nearby surface water bodies. Based on topography and localized knowledge, the inferred groundwater flow direction for the Site is to the west towards the Gowanus Canal, located approximately 900 feet to the west of the Site.

Local groundwater depth and flow direction can be influenced by additional factors (e.g., underground structures, seasonal fluctuations, soil and bedrock geology, and production wells), which are beyond the scope of this investigation. Groundwater is anticipated to be present at a depth of approximately 10 to 12 feet below ground surface (bgs).

2.6.5. Flood Zones and Wetlands

A regulatory agency database obtained from EDR was reviewed and included available Flood Insurance Rate Maps (FIRMS) obtained from the Federal Emergency Management Agency (FEMA). The Site lies outside the 100-year and 500-year flood zones. The National and State wetland inventories do not indicate any wetlands on the Site.

3.0 USER PROVIDED INFORMATION

As defined in ASTM E 1527-13 Standard, the User is the person or entity seeking to use this report. During the course of the Phase I ESA, the User Questionnaire provides specific information pertaining to the Subject Property.

The User Questionnaire was not completed at the time of this report. A copy of the User Questionnaire sent to the purchaser is provided in Appendix J.

The following section summarizes information provided by the User with regard to the Site.

3.1 Title Records

The User did not provide Athenica with Title Records for the Site.

Athenica accessed the New York City Department of Finance (NYCDOF) Office of the City Register for present and past recorded deeds. According to the NYCDOF, present and/or past owners of the Site include the following:

- Lot 1
  - 601 Union Street Realty Cp: 1989 – Present
  - Pasquale Vetrano: 1986 – 1989
  - Plaza Motor Plan Co: 1977 – 1986
  - Pomvet Realty Corp: 1972 – 1977
  - White Motor Corp: Unspecified – 1972
- Lot 12
  - 607 Union Street Realty Cp: 1990 – Present
  - Pasquale Vetrano: 1985 – 1990
  - Distinctive Devices Inc: 1975 – 1985
  - LMC Data Inc: 1972 – 1975
  - ESCO Packers Supply Co Inc: 1970 – 1972
  - Vincy Realty Corp:1966 – 1970
  - Anthony Cestari: 1966 – 1966
  - Marie Cestari: Unspecified – 1966

3.2 Environmental Liens or Activity and Use Limitations

Environmental liens and activity and use limitations (AULs) are indications of a past or present release of a hazardous substance of petroleum products. AULs are an explicit recognition by a federal, tribal, state, or local regulatory agency that residual levels of hazardous substances or petroleum products may be present on a property, and that unrestricted use of the property might not be acceptable.

As of the date of this report, an Environmental Lien and AUL Search Report for the Site has not been provided to Athenica.

3.3 Specialized Knowledge

The User indicated that it was aware that the Site has been assigned an “E” Designation for potential hazardous waste, which indicates that certain environmental requirements must be completed as part of redevelopment.

3.4 Valuation Reduction for Environmental Issues

The User indicated that it was not aware of information regarding valuation reduction for environmental issues.

3.5 Owner, Property Manager, and Occupant Information

The current owners of the Site parcels are 601 Union Street Realty Corp. (Lot 1) and 607 Union Street Realty Associates (Lot 12). Currently, the Site is occupied by a petroleum trucking and management company.

3.6 Reason for Performing Phase I

The Phase I ESA was performed at the request of Aniska Realty I, LLC as part of their typical environmental due diligence prior to acquisition of the property.

4.0 RECORDS REVIEW

A review of databases and files from federal, state and local environmental regulatory agencies was conducted to identify use, generation, storage, treatment or disposal of hazardous materials and chemicals, or release incidents of such materials, that may impact the site. EDR provided the federal and state environmental database information to Athenica.

Federal, state, tribal and local database records were reviewed for the Site and those properties surrounding the Site. Information on the improper storage, handling, and/or disposal of hazardous substances, wastes, or petroleum products, on or adjacent to the Site, is provided within these records. Following is a summary of the listings identified within applicable search radius. The potential for the facilities identified by the database review to cause an adverse impact on the environmental condition of the Site within the aforementioned search distances was evaluated solely on the distance and presumed topographic orientation (with respect to groundwater flow) of each facility relative to the Site (i.e., upgradient, downgradient, cross-gradient). Furthermore, each facility's presumed topographic elevation orientation was determined solely by a review of available USGS quadrangle topographic maps. No attempt was made to verify the actual groundwater flow direction or to access regulatory agency files regarding the identified facilities, as this was beyond the scope of work for this project.

There are no orphan sites (sites with inadequate information to be mapped) listed on the regulatory database report. The following subsections provide a summary of the listings identified within applicable ASTM search radii or adjusted minimum search distances.

4.1 Federal Environmental Records

This section presents the findings of the database search report for the Federal environmental records.

National Priorities List (NPL), Proposed NPL, NPL Liens and Delisted NPL

The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. Sites on the Proposed NPL have been proposed for listing through the issuance of a proposed rule in the Federal Register. The United States Environmental Protection Agency (USEPA) then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing. Sites that have established criteria that USEPA uses to delete sites from the NPL are listed on the Delisted NPL.

The Site is not listed on the NPL, Proposed NPL, NPL Liens, or Delisted NPL database. There is one listing within a 1-mile radius of the Site listed on the NPL database. This listing refers to the Gowanus Canal, which is not located in the immediate vicinity of the Site and is downgradient with respect to the presumed groundwater flow direction at the Site, and is therefore not considered to be a REC for the Site.

Superfund Enterprise Management System (SEMS) and SEMS ARCHIVE Lists

SEMS tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of USEPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the USEPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons. This list also contains sites which are either proposed to or on the NPL and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

The Site is not listed on the SEMS or SEMS-ARCHIVE database. There is one property within a ½-mile radius on the SEMS database, and there are two properties within a ½-mile radius of the Site listed on the SEMS-ARCHIVE

database. All three of these properties are downgradient or cross-gradient of the Site, and none are located in the immediate vicinity of the Site. Due to their relative locations, these listings are not considered to be RECs for the Site.

RCRA Corrective Action Report (CORRACTS), Treatment, Storage and/or Disposal Facilities (TSDF), Large Quantity Generator (LQGs), and Small Quantity Generators (SQG)

The 1976 Resource Recovery and Conservation Act (RCRA) program identifies and tracks hazardous wastes from the point of generation to the point of disposal. The RCRA database tracks those facilities that treat, store, and/or dispose of hazardous materials as defined by RCRA TSDF. The RCRA CORRACTS database identifies TSDF that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The RCRA Generators database tracks large (LQG) and small quantity generators (SQG) of hazardous waste. LQGs generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. SQGs generate between 100 kg and 1,000 kg of hazardous waste per month.

Neither the Site nor any properties within a ½-mile radius of the Site are listed on the RCRA TSDF database. The Site is not listed on the RCRA CORRACTS database. There is one property within a 1-mile radius of the Site listed on the RCRA CORRACTS database. This property is not located in the immediate vicinity of the Site and is downgradient with respect to the presumed groundwater flow direction at the Site. Due to its relative location, this listing is not considered to be a REC for the Site.

The Site is not listed on the RCRA LQG or RCRA SQG database. There are six properties within a ⅛-mile radius of the Site listed on the RCRA LQG or RCRA SQG databases. All of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site, and five of these six properties are not located within the immediate vicinity of the Site. Due to their relative locations, these five properties are not considered to be RECs for the Site. The remaining property is discussed below.

- The "Con Edison – Excavation Oil-O-Static" facility located in the street near 232 3rd Avenue, approximately 50 feet to the west of, and downgradient with respect to the presumed groundwater flow direction at, the Site, is identified on the RCRA LQG database as a large quantity generator of petroleum, resulting from an excavation. This generator listing is likely associated with NYSDEC Spill Number 0012321, reported on February 16, 2001, and closed on June 23, 2003. There are no violations associated with the RCRA listing. Due to its regulatory status, this RCRA listing is not considered to be a REC for the Site. However, due to the documented release of petroleum at this property is considered to be a potential Vapor Encroachment Condition (pVEC) for the Site, as discussed further in Section 4.6. Additionally, this property is listed on the RCRA NONGEN / NLR, RCRA-LQG, FINDS, ECHO and the NY MANIFEST databases and is further discussed below.

RCRA Very Small Quantity Generators (RCRA-VSQG)

RCRA-VSQG, formerly known as Conditionally-Exempt Small Quantity Generator (RCRA-CESQG), is USEPA's comprehensive information system, providing access to data supporting RCRA and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the RCRA-VSQG. The listed facilities generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

The Site is not listed on the RCRA-VSQG database. There are three properties within a ⅛-mile radius of the Site listed on the RCRA-VSQG database. One of these properties is located downgradient of the Site and is not located

in the immediate vicinity of the Site, and therefore is not considered to be a REC for the Site. The remaining two listings on the RCRA-VSQG database are located upgradient of the Site, and are discussed below:

- The Speedway gasoline station located at 204-222 4th Avenue, approximately 350 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is identified on the RCRA VSQG database as a very small quantity generator of ignitable waste and benzene. There are no violations associated with the RCRA-VSQG listing, and due to its regulatory status, this listing is not considered to be a REC for the Site. This property is also listed on the NY SPILLS database for Spill Number 9713442, opened on March 4, 1998 and closed on August 4, 2017; and Spill Number 1608842, opened on December 17, 2016 and closed on March 3, 2017. Due to historic gasoline storage and the documented release of petroleum at this property, this listing is considered to be a pVEC for the Site, as discussed further in Section 4.6. Additionally, this property is also listed under the LTANKS, NY SPILLS, EDR Historical Auto Stations, UST, US AIRS, FINDS, ECHO, NY MANIFEST, and the NY BROWNFIELDS databases and is further discussed below.
- The BP gasoline station located at 164 4th Avenue, approximately 600 feet to the northeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is identified on the RCRA-VSQG database as a very small quantity generator of ignitable waste, pesticide residue, and benzene. There are no violations associated with the RCRA-VSQG listing, and due to its regulatory status, this listing is not considered to be a REC for the Site. This property is also listed on the NY SPILLS database for Spill Number 9713442, opened on March 4, 1998 and closed on August 4, 2017. Additionally, this property is also listed under the FINDS, NY MANIFEST, EDR Historical Auto Stations, UST, and the NY SPILLS databases and is further discussed below.

United States Institutional / Engineering Control Registries (US INST / ENG CONTROLS)

US INST CONTROLS is a listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on Site. Deed restrictions are generally required as part of the institutional controls. US ENG CONTROLS are a listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

The Site is not listed on the US Institutional Controls database or the US Engineering Controls database. There is one property within a ½-mile radius of the Site listed on the US Institutional Controls database and the US Engineering Controls database. This property refers to the Gowanus Canal, which is not located in the immediate vicinity of the Site and is downgradient with respect to the presumed groundwater flow direction at the Site. Due to its relative location, this listing is not considered to be a REC for the Site.

Emergency Response Notification System (ERNS)

The ERNS database records and stores information on reported releases of oil and hazardous substances.

The Site is not listed on the ERNS database.

4.2 State and Tribal Environmental Records

This Section presents the database search report findings for State and Tribal environmental records.

State Hazardous Waste Sites (SHWS)

SHWS are referred to as the State Superfund Program and are sites in the cleanup program from inactive hazardous waste sites, including hazardous substance sites.

The Site is not listed on the SHWS database. There are four properties within a 1-mile radius of the Site listed on the SHWS database. None of these properties are located in the immediate vicinity of the Site and all are downgradient with respect to the presumed groundwater flow direction at the Site. Due to their relative locations, these listings are not considered to be RECs for the Site.

Vapor Intrusion Legacy Site (Vapor Reopened)

The Vapor Intrusion Legacy Site database identifies previously investigated and/or remediated sites that have been reopened by the NYSDEC due to concerns for vapor intrusion. "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Neither the Site nor any properties within a 1-mile radius of the Site are listed on the Vapor Reopened database.

Solid Waste Facility (SWF) / State Landfill (SL)

SWF/SL type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

The Site is not listed on the SWF/SL database. There are 14 properties within a ½-mile radius of the Site listed on the SWF/SL database. Thirteen of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining property is upgradient of the Site and is further discussed below:

- The "Rinaldi Recycling Co. Inc." facility is located approximately 450 feet to the northeast of, and upgradient with respect to presumed groundwater flow direction at, the Site. This property is listed as an inactive facility and does not appear on any regulatory database indicating open spills or violations. Due to its regulatory status, this SWF/SL facility is not considered to be a REC for the Site. Additionally, this property is also listed under the NY SPILLS database.

Leaking Storage Tank Incident Reports (LTANKS)

These records contain an inventory of reported leaking storage tank incidents reported from April 1, 1986 through the most recent update. They can be either leaking underground storage tanks or leaking above-ground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

The Site is not listed on the LTANKS database. There are eight properties within a ⅛-mile radius of the Site listed on the LTANKS database. Five of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining three listings (associated with two properties) are upgradient of the Site and are further discussed below:

- A tank test failure was reported at "AJR Woodworking", located at 599 Degraw Street, approximately 330 feet to the northeast of the Site, and is listed on the LTANKS database as Spill No. 0500453, dated April 11, 2005. The NYSDEC entry for the spill indicates that a 550-gallon No. 2 fuel oil tank failed a tightness test due to disconnected pipe fittings on the top of the tank. The tank was cleaned and was abandoned in place by filling with concrete. NYSDEC issued a letter indicating no further action was required, and the spill case was closed by the NYSDEC on April 28, 2005.
- The property at 204-222 4th Avenue, located approximately 350 feet to the east of the Site, is listed on the LTANKS database for two spill cases, which are further discussed below:
    - Spill Number 9113310 was reported on March 31, 1994. According to the NYSDEC entry for the spill, an unleaded gasoline product line failed a tightness test. No further information is provided, and the spill case was closed by NYSDEC on August 3, 1994.
    - Spill Number 9515732 was reported on March 7, 1996. According to the NYSDEC entry for the spill, a piping line failed a tightness test. No further information is provided, and the spill case was closed by NYSDEC on June 11, 1997.

Due to regulatory status, these three upgradient LTANKS listings are not considered to be RECs for the Site. However, due to historic gasoline storage and the documented release of petroleum at this property, this property represents a pVEC for the Site, as discussed further in Section 4.6.

Underground Storage Tank (UST)

The UST database contains registered USTs. USTs are regulated under Subtitle I of RCRA. The data are derived from the NYSDEC Petroleum Bulk Storage (PBS) database.

The Site is not listed on the UST database. However, the Site is listed as a PBS facility with ID #2-601627. The specifics of the registration (number and contents of tanks) were redacted in the database report and on the NYSDEC PBS database, and are therefore not publicly available. Evidence of a suspect current or former UST (apparent vent pipe consistent with a UST located on the northern portion of the building's roof as well as a suspicious steel plate located in the northern portion of the building) was observed during Athenica's Site reconnaissance.

There are ten additional properties within a ⅛-mile radius of the Site listed on the UST database. Six of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining four properties are all located upgradient of the Site, and are further discussed below:

- The "617 Sackett Street Realty Corp" facility at 617 Sackett Street, located approximately 115 feet to the northeast of the Site, is listed on the UST database as an active facility under PBS Facility ID #2-069299. This listing is for one 1,080-gallon UST, which is used to store No. 2 fuel oil, installed on an unspecified date. There are no spills or violations associated with this property, and therefore this UST database listing is not considered to be a REC for the Site.
- The "A. Shamosh Realty LLC" facility at 620-628 Degraw Street, located approximately 175 feet to the northeast of the Site, is listed on the UST database as a closed facility under PBS Facility ID #2-611758. This listing includes one former 1,080-gallon gasoline UST, installed on an unspecified date and removed on January 5, 2012; and four 550-gallon gasoline USTs, installed on unspecified dates and all closed-in-place or removed by January 5, 2012. Due to its regulatory status, this UST database listing is not considered to be a REC for the Site. However, the historic storage of gasoline at this property is considered to be a pVEC for the Site, as discussed further in Section 4.6. This property is further listed on the NY SPILLS database for one closed spill case unrelated to the USTs at the property. Additionally, this property is also listed under the AST and the NY SPILLS databases and is further discussed below.

- The "Speedway" gasoline station at 204-222 4th Avenue, located approximately 350 feet east of the Site, is listed on the UST database as a closed facility under PBS Facility ID #2-297666. This listing is for nine 4,000-gallon USTs (eight storing gasoline and one storing diesel fuel), installed between the dates of July 1, 1979 and August 1, 1996 and removed between the dates of August 1, 1996 and October 4, 2019; three 2,000-gallon USTs (two storing gasoline and one storing No. 2 fuel oil), installed between the dates of July 1, 1979 and November 1, 1988 and removed between the dates of August 1, 1996 and October 4, 2019; and 37 550-gallon USTs (two storing an unspecified material and 35 storing gasoline) installed between the dates of January 1, 1965 and June 1, 1992 and closed in place or removed (two USTs were removed post-closure and the remaining 35 USTs were closed in-place) between the dates of December 1, 1979 and October 4, 2019.This property is further listed on the NY SPILLS database for two closed spill cases discussed in the NY SPILLS section. Since all tanks have been removed or closed-in-place, these UST listings are not considered to be RECs for the Site. However, due to documented groundwater and soil vapor contamination from releases associated with these USTs, this property represents a pVEC for the Site, as further discussed in Section 4.6.
- The "BP Service Station" at 164 4th Avenue, located approximately 500 feet to the northeast of the Site, is listed on the UST database as an active facility under PBS Facility ID #2-337722. This listing includes one 12,000-gallon gasoline UST, installed on September 1, 1997; two 10,000-gallon gasoline USTs installed September 1, 1997; four 4,000-gallon gasoline USTs, installed on December 1, 1981 and removed on September 1, 1997; one 550-gallon UST (contents not reported), installed on December 1, 1970 and removed on December 1, 1992; and one 550-gallon UST (contents not reported), installed on April 19, 1997 and closed-in-place on March 27, 1998. This property is further listed on the NY SPILLS database for one closed spill case, which is not pertaining to the USTs at the property. Due to its regulatory status this UST database listing is not considered to be a REC for the Site. However, this property represents a pVEC for the Site, further discussed in Section 4.6.

Major Oil Storage Facility Underground Storage Tanks (MOSF UST)

The MOSF UST database contains registered facilities that have petroleum storage capacities in excess of 400,000 gallons. The data are derived from the NYSDEC.

Neither the Site nor any properties within a ½-mile radius of the Site are listed on the MOSF UST database.

Above-ground Storage Tanks (ASTs)

The AST database contains registered ASTs. The data are derived from the NYSDEC PBS database.

The Site is not listed on the AST database. The Site is registered with NYSDEC for petroleum bulk storage, under PBS ID #2-601627. The specifics of the registration (number and contents of tanks) were redacted in the database report and on the NYSDEC PBS database, and are therefore not publicly available. Multiple ASTs were observed during Athenica's Site reconnaissance. Athenica observed three ASTs in the partial cellar. Two of these tanks were manifolded 500-gallon ASTs containing No. 2 fuel oil. A third tank in the cellar, labeled as a 3,000-gallon No. 2 fuel oil tank, is reportedly used to store diesel fuel. Remote fill and vent pipes were observed along the northern exterior wall of the Site building, and a dispenser nozzle was observed within the garage portion of the Site building. Athenica also observed four additional 275-gallon ASTs located throughout the Site building. Three of these were located in the northern portion of the warehouse area, and were not connected to any piping. Nearby signage indicated that these tanks are used for the storage of waste oil. The fourth 275-gallon AST was located in the central portion of the Site building, and was labeled as containing Mobil Delvac (a lubricant oil). All observed ASTs appeared to be intact, though minor staining was observed at the locations of several tanks. The FDNY FOIL response included records of only the three observed ASTs in the cellar.

There are eight properties within a ⅛-mile radius of the Site listed on the AST database. Six of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are

not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining two properties are upgradient of the Site and are further described below.

- The "Holyland Auto Repair" facility at 637 Union Street, located approximately 150 feet to the east of the Site, is listed on the AST database as an active facility under PBS ID #2-605796. This listing is for one 275-gallon waste oil AST, installed on March 1, 2003. This property is not listed on any database for spills or violations. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "A. Shamosh Realty LLC" facility at 620-628 Degraw Street, located approximately 175 feet to the northeast of the Site, is listed on the AST database as a closed facility under PBS ID #2-611758. This listing is for two 275-gallon No. 2 fuel oil ASTs. Both of these ASTs were installed on an unspecified date and removed on January 5, 2012. Due to its regulatory status, this listing is not considered to be a REC for the Site.

Major Oil Storage Facility Above-ground Storage Tanks (MOSF AST)

The MOSF AST database contains registered facilities that have petroleum storage capacities in excess of 400,000 gallons.

Neither the Site nor any properties within a ½-mile radius of the Site are listed on the MOSF AST database.

Chemical Bulk Storage (CBS) Database

The CBS database contains facilities that store hazardous substances listed in 6NYCRR Part 597 in ASTs with capacities of 185 gallons or greater or USTs of any size. The data are derived from the NYSDEC.

The Site is not listed on the CBS database. There is one property within a ¼-mile radius of the Site listed on the CBS database. This property is not located in the immediate vicinity of the Site and is downgradient with respect to the presumed groundwater flow direction at the Site. Due to its relative location, this listing is not considered to be a REC for the Site.

State Institutional/Engineering Control Registries (INST/ENG CONTROLS)

The INST/ENG CONTROLS is a database of properties that have institutional or engineering controls in place. The data are derived from the NYSDEC.

The Site is not listed on the Institutional Controls database or the Engineering Controls database. There are five properties within a ½-mile radius of the Site listed on the Institutional Controls database or the Engineering Controls database. None of these properties are located in the immediate vicinity of the Site and all are downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site. Due to their relative locations, these listings are not considered to be RECs for the Site.

Voluntary Cleanup Program (VCP)

The VCP database lists properties that were investigated and/or remediated under the State's Voluntary Cleanup Program (VCP). The VCP was a voluntary remedial program established to address the environmental, legal, and financial barriers that hinder the redevelopment and reuse of contaminated properties. The VCP was developed to enhance private sector cleanup of contaminated properties by allowing parties to remediate properties using private rather than public funds and to reduce the need for development of undeveloped parcels (greenfields).

The Site is not listed on the VCP database. There are 13 properties within a ½-mile radius of the Site listed on the VCP database. None of these properties are located in the immediate vicinity of the Site and all are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site. Due to their relative locations, these listings are not considered to be RECs for the Site.

Environmental Restoration Program (ERP) Listing and Brownfield (BROWNFIELDS) Site List

The ERP and BROWNFIELD databases list properties in New York State's ERP and Brownfield programs. Under the Environmental Restoration Program, New York State provides grants to municipalities to reimburse up to 90 percent of the eligible on-site costs and 100 percent of the off-site costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential, or public uses. A brownfield is any real estate property where redevelopment or re-use may be complicated by the present or potential presence of hazardous waste, petroleum, pollutants, or contamination. The data for this database are derived from the NYSDEC.

The Site is not listed on the ERP or BROWNFIELDS database. There are 24 properties within a ½-mile radius of the Site listed on the BROWNFIELDS database. Twenty-two of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The two remaining properties are further discussed below.

- The "Matthews International Casket Division" facility, located 585 Union Street, approximately 50 feet to the west of the Site, is listed on the BROWNFIELDS database under Site Code 619763, HW Code C224329. Since remediation has not been completed, this listing represents a REC for the Site. There is currently one open spill associated with this listing, further discussed in the NY SPILLS section. Additionally, this property is also listed under the NY SPILLS and the RCRA-NONGEN / NLR databases and is further discussed below. Additionally, since investigation identified groundwater impacts, this property also represents a pVEC, further discussed in Section 4.6.
- The "Speedway" gasoline station at 204-222 4th Avenue, approximately 350 feet to the east of the Site, is listed on the BROWNFIELDS database under Site Code 587854, HW Code C2244295. According to the Brownfield listing, investigations identified VOC, semi-volatile organic compound (SVOC), and metal contamination in soil and groundwater, and VOC contamination in soil vapor. There is currently one open spill associated with this property, further discussed in the NY SPILLS section. Although the groundwater flow direction was reported to be north to northwest, the regional groundwater flow direction is towards the west. As a result, this BROWNFIELDS database listing is considered to be a REC for the Site. Additionally, this property represents a pVEC for the Site, further discussed in Section 4.6.

4.3 Additional Environmental Records and Other Ascertainable/EDR Proprietary Records

This section presents the findings of the database search report for additional environmental records and other ascertainable/EDR proprietary records.

Local Brownfield Lists (US BROWNFIELDS)

This database is a listing of brownfields properties addressed by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without USEPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, USEPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under USEPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the USEPA. USEPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use USEPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Neither the Site nor any properties within a ½-mile radius of the Site are listed on the US BROWNFIELDS database.

Local Lists of Landfill/Solid Waste Disposal Sites: Open Dump Inventory (ODI), Registered Waste Tire Storage & Facility List (SWTIRE), and Solid Waste Registered Recycling Facility List (SWRCY)

This database is a listing of properties listed on the following: Open Dump Inventory (ODI), Solid Waste Tire Storage & Facility List (SWTIRE), and Solid Waste Registered Recycling Facility List (SWRCY).

The Site is not listed on the ODI, SWTIRE or SWRCY database. There are three properties within a ½-mile radius of the Site listed on the SWRCY database. Two of these properties are located cross-gradient with respect to the presumed groundwater flow direction at the Site. The remaining upgradient property is not located in the immediate vicinity of the Site. In addition, none of these properties is listed on any available database for open releases or violations. Due to their relative locations and regulatory status, none of these facilities are considered to be RECs for the Site.

Local Lists of Hazardous Waste Contaminated Sites: US Clandestine Drug Labs and Delisted Registry Sites

This database is a listing of properties identified on the Clandestine Drug Labs (CDL) and/or the Delisted Registry Sites (DEL SHWS) listings. The CDL listing contains addresses of some locations where law enforcement agencies reported chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. The DEL SHWS listing is a database listing of sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites.

The Site is not listed on the CDL database. There is one property located within a ½-mile radius of the Site, listed on the DEL SHWS database. This property is not located in the immediate vicinity of the Site and is downgradient of the Site, and is therefore not considered to be a REC for the Site.

Local Land Records (LIENS 2 and LUCIS)

This database includes properties on the CERCLA Lien Information and/or Land Use Control Information System (LUCIS) listings. A federal CERCLA lien can exist by operation of law at any site or property at which USEPA has spent Superfund monies. LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

The Site is not listed on the LIENS 2 database, and neither the Site nor any properties within a ½-mile radius of the Site are listed on the LUCIS database.

Hazardous Materials Incident Reporting System (HMIRS)

HMIRS contains hazardous material spill incidents reported to the Department of Transportation (DOT).

The Site is not listed on the HMIRS database.

New York State Spills (NY Spills)

The NY Spills database is a listing of spills reported to the NYSDEC, as required by Article 12 of the Navigation Law, 6 NYCRR Section 613.8, or 6 NYCRR Section 595.2. This database includes spills active as of April 1, 1986 as well as spills occurring since that date.

The Site is not listed on the NY SPILLS database. There are 31 properties within a ⅛-mile radius of the Site listed on the NY SPILLS database. Fifteen of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site, and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining 16 properties (representing 23 spill cases) within a ⅛-mile radius of the Site listed on the NY SPILLS database are further discussed below:

- Spill Number 2009932 was reported at the intersection of Union Street and 3rd Avenue, located approximately 40 feet to the south of, and downgradient with respect to the presumed groundwater flow direction at, the Site, on July 10, 2000. According to the NYSDEC entry for the spill, one quart of cable oil was released due to a defective cable joint. Cleanup was completed and the component was replaced. The spill case was closed by the NYSDEC on October 17, 2001. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site. Additionally, this location is also listed under the RCRA NONGEN / NLR, FINDS, and the ECHO databases and is further discussed below
- Spill Number 0004302 was reported at 585 Union Street, located approximately 50 feet to the west of, and downgradient with respect to the presumed groundwater flow direction at, the Site, on March 9, 2021. According to the NYSDEC entry for the spill, contaminated soil and groundwater was discovered during Phase II investigation for potential redevelopment. The spill is currently open, and remediation is being managed under the New York State Brownfield Cleanup Program, HW Code C224329. This spill listing represents a REC for the Site. Additionally, since investigation identified groundwater impacts, this property also represents a pVEC, further discussed in section 4.6.
- The property at 615 Sackett Street, located approximately 50 feet to the north of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is listed on the NY SPILLS database with three individual spill cases (Spill Number 2005102 is a duplicate spill report for Spill Number 2005071); these spill cases are further described below:
    - Spill Number 2005071 and duplicate spill case number 2005102 were reported on September 2, 2020. According to the NYSDEC entry for the spill, an unknown quantity of waste denoted as "sludge" was anonymously reported as illegal dumping after contractors were observed removing small buckets of fuel oil and a strong smell was identified emanating from a container in front of the property. NYSDEC visited the property on September 4, 2020, and the container was found to be mostly empty, with no evidence of fuel oil, piping related to a fuel tank system, or petroleum odors. The spill cases were closed by the NYSDEC on October 14, 2020, and November 3, 2020 respectively, after waste sampling showed no elevated VOC concentrations. Due to their closed status, these NY SPILLS database listings are not considered to be a REC for the Site.
    - Spill Number 1809848 was reported on December 21, 2018. According to the NYSDEC entry for the spill, ten gallons of an unknown petroleum were detected in soil at a depth of 14 feet, leading to discovery of a 550-gallon UST. The UST was removed intact but showed evidence of degradation and minor holes. The spill case was closed by the NYSDEC on November 12, 2019. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
- The property at 225 3rd Avenue, located approximately 50 feet north of, and cross-gradient with respect to the presumed groundwater flow direction at, the Site, is listed on the NY SPILLS database with two spill cases; these spill cases are further described below:
    - Spill Number 0204259 was reported on July 24, 2002. According to the NYSDEC entry for the spill, 25 gallons of diesel fuel were released into a parking lot area from a broken hose on a transport truck. Following multiple attempts at remediation, the spill case was closed by the NYSDEC on March 30, 2009. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
    - Spill Number 0612588 was reported on February 20, 2007. According to the NYSDEC entry for the spill, 100 gallons of diesel fuel were released into a drain at the adjacent property, due to equipment failure. Following successful cleanup, the spill case was closed by the NYSDEC on March 30, 2009. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
- The property at 568A Union Street, located approximately 62 feet to the south of, and downgradient with respect to the presumed groundwater flow direction at, the Site, is listed on the NY SPILLS database with two spill cases; these spill cases are further described below:

  - Spill Number 0911340 was reported on January 21, 2010. According to the NYSDEC entry for the spill, an unspecified quantity of an unknown petroleum was identified. No further information was provided. The spill case was closed by the NYSDEC on January 25, 2010. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
  - Spill Number 9803217 was reported on June 12, 1998. According to the NYSDEC entry for the spill, an unspecified quantity of No. 2 fuel oil was identified. The spill case was closed by the NYSDEC on August 28, 2014, following investigation and redevelopment of the property under Spill Number 0911340. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.

- Spill Number 0211682 was reported at 612 Degraw Street, located approximately 150 feet to the north of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on February 25, 2003. According to the NYSDEC entry for the spill, two gallons of No. 2 fuel oil were released onto concrete. This spill was cleaned and the spill case was closed by the NYSDEC on the same day. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.

- Spill Number 0801906 was reported at 620-628 Degraw Street, located approximately 170 feet to the northeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on May 19, 2008. According to the NYSDEC entry for the spill, contaminated soil was identified below a UST detected during a Phase II investigation. Two 275-gallon ASTs and one 1,080-gallon UST were removed, and contaminated soil was excavated from below the UST. The spill case was closed on July 3, 2013. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site. Additionally, this property is also listed under the AST and UST databases

- Spill Number 1205449 was reported at 651 Union Street, located approximately 250 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on August 29, 2012. According to the NYSDEC entry for the spill, an unknown quantity of unspecified petroleum was identified in groundwater monitoring wells. No further information was provided and the spill case was closed by the NYSDEC on March 26, 2013. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.

- Spill Number 1411530 was reported at 635 Sackett Street, located approximately 275 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on March 10, 2015. According to the NYSDEC entry for the spill, 18 gallons of No. 2 fuel oil were identified on 100 gallons of water in a Con Edison service box. The spill was reportedly contained and cleaned, and the spill case was closed by the NYSDEC on April 24, 2015. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site. Additionally, this property is also listed under the RCRA NONGEN / NLR, FINDS, ECHO, and the NY MANIFEST databases and is further discussed below.

- Spill Number 0411328 was reported at 654 Sackett Street, located approximately 315 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on January 19, 2005. According to the NYSDEC entry for the spill, one gallon of unknown oil was identified in a soil boring during Phase II testing. It was documented that no sewers or waterways were affected. The spill case was closed by the NYSDEC on July 21, 2007. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.

- The property at 204-222 4th Avenue, located approximately 315 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is listed on the NY SPILLS database for two entries, representing four spill cases; these spill cases are further described below:

  - Spill Number 0602980 was reported on June 17, 2006. According to the NYSDEC entry for the spill, an unknown quantity of gasoline was released from a leaking spill bucket. Contaminated soil was removed, and this spill case was consolidated with Spill Number 9605719 (discussed below). This spill case was closed by the NYSDEC on September 12, 2006. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.

  - Spill Number 0210654 was reported on January 23, 2003. According to the NYSDEC entry for the spill, seven gallons of diesel were released due a tank overfill. No further information was provided and this spill case was closed by the NYSDEC on November 3, 2003. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
  - Spill Number 9605719 was reported on August 2, 1996. According to the NYSDEC entry for the spill, an unknown quantity of diesel fuel and associated contaminated soil were identified during the removal of underground tanks. Further investigation identified impacts to soil vapor and groundwater. The spill is currently open, and remediation is being managed under the New York State Brownfield Cleanup Program, HW Code C2244295. Due to its open status with the NYSDEC, and documented impacts to soil vapor and groundwater this NY SPILLS database listing is considered to be a REC for the Site.
  - Spill Number 1608842 was reported on December 17, 2016. According to the NYSDEC entry for the spill, an unknown quantity of unknown hazardous material was identified due to an overflow of the storm drainage system at the property. Remediation was conducted, and this spill case was closed by the NYSDEC on March 3, 2017. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
  - Due to documented releases to soil vapor and groundwater from the above listed spills, this property represents a pVEC, further discussed in Section 4.6.

- Spill Number 1605774 was reported at 639 Degraw Street, located approximately 470 feet to the northeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on September 8, 2016. According to the NYSDEC entry for the spill, SVOCs were identified in soil and groundwater samples during a subsurface investigation. The spill case was closed by the NYSDEC on September 8, 2016 based on the available information. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
- Spill Number 0104798 was reported at the Union Street Station, located at the intersection of Union Street and 4th Avenue, approximately 475 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on August 3, 2001. According to the NYSDEC entry for the spill, an unknown petroleum product was discovered around old remote fill pipes located above a utility closet in the subway (for which petroleum impacts were being addressed under previous Spill Number 0201876, discussed below). Following remediation, the spill case was closed on February 5, 2004. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site. Additionally, this location is also listed under the RCRA NONGEN / NLR, and the NY MANIFEST databases and is further discussed below.
- Spill Number 1108073 was reported at 196 4th Avenue, located approximately 480 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on September 23, 2011. According to the NYSDEC entry for the spill, automotive fluid mixed with water used to fight a fire was released into a sewer. The spill case was closed by the NYSDEC on December 1, 2011. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
- Spill Number 9713442 was reported at 164 4th Avenue, located approximately 500 feet to the northeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on March 4, 1998. According to the NYSDEC entry for the spill, an unknown quantity of methyl-tert-butyl ether (MTBE) was detected in groundwater during Phase II testing. Following groundwater remediation, the spill case was closed by the NYSDEC on August 4, 2017. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site. This property also appears on the UST, RCRA-VSQG, FINDS, and Historic Auto Stations databases. Due to documented impacts to groundwater, this property represents a pVEC, further discussed in Section 4.6.
- Spill Number 0201876 was reported at the Union Street Subway, located at the intersection of Union Street and 4th Avenue, approximately 520 feet to the east of, and upgradient with respect to the presumed

groundwater flow direction at, the Site, on May 21, 2002. According to the NYSDEC entry for the spill, a complaint was made that there was oil leaking from a utility closet on the subway platform. No further information is provided and the spill case was closed on May 22, 2002. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site. Additionally, this location is also listed under the RCRA NONGEN / NLR, FINDS, ECHO, and the NY MANIFEST databases and is further discussed below.

- Spill Number 9911109 was reported at the intersection of Sackett Street and 4th Avenue, located approximately 535 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on December 20, 1999. According to the NYSDEC entry for the spill, one gallon of dielectric fluid was released to the floor of Con Edison vault #5491, due to equipment failure. No further information is provided, and the spill case was closed by the NYSDEC on March 28, 2002. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.
- Spill Number 0512890 was reported at 207 4th Avenue, located approximately 560 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, on February 7, 2006. According to the NYSDEC entry for the spill, five gallons of kerosene were spilled due to human error. This spill was cleaned up on the same day and the spill case was closed on March 28, 2002. Due to its closed status, this NY SPILLS database listing is not considered to be a REC for the Site.

RCRA Non Generators (RCRA-NonGen / NLR)

RCRA-NonGen is USEPA's comprehensive information system, providing access to data supporting RCRA and HSWA. The database includes selective information on sites which generated, transported, stored, treated, and/or disposed of hazardous waste as defined by RCRA. Non-Generators do not presently generate hazardous waste.

The Site is listed on the RCRA-NonGen database under EPA ID #NYR000187302. The listing, attributed to "A 2 Z Environmental LLC" lists the site as a historic generator of unspecified wastes. This property is also listed on the FINDS and ECHO databases, with no violations listed. The "A 2 Z Environmental LLC" facility does not appear on any database for spills or violations. Since petroleum operations are currently active at the Site in the form of fuel usage, this listing is considered to be a REC for the Site.

There are 23 additional facilities within a ⅛-mile radius of the Site listed on the RCRA-NonGen/NLR database. Fourteen of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining nine facilities are further described below:

- The "Con Edison" facility, located at the intersection of Sackett Street and 3rd Avenue, approximately 35 feet to the west of, and downgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of unspecified waste. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "Con Edison" facility, located at the intersection of Union Street and 3rd Avenue, approximately 40 feet to the west of, and downgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of unspecified waste. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "Matthews International Casket Division" facility, located 585 Union Street, approximately 50 feet to the west of, and downgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen /NLR database as a historic generator of unspecified waste. There is currently one open spill associated with this listing, further discussed in the NY SPILLS section. However, since

hazardous waste operations have ended, and the property is being remediated and redeveloped with NYSDEC oversight, this RCRA-NonGen listing is not considered to be a REC for the Site. However, since remediation has not been completed, and investigation identified groundwater impacts, this property represents a pVEC, further discussed in Section 4.6.

- The "Con Edison" facility, located at 251 3rd Avenue, approximately 60 feet to the south of, and downgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of unspecified waste. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site. Additionally, this property is also listed under the NY MANIFEST database and is further discussed below.
- The "Con Edison Service Box", located at 578 Union Street, approximately 60 feet to the south of, and cross-gradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of unspecified waste. There are no spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "Con Edison Service Box", located at 604 Union Street, approximately 275 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of unspecified waste. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "Semple Rieger Co." facility, located at 635 Sackett Street, approximately 280 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of ignitable waste. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "Union Station" facility, located at the intersection of Union Street and 4th Avenue, approximately 480 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of lead. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.
- The "Con Edison Manhole", located at the intersection of Union Street and 4th Avenue, approximately 530 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the RCRA-NonGen/NLR database as a historic generator of unspecified waste. There are no open spills or violations associated with this listing. Due to its regulatory status, this listing is not considered to be a REC for the Site.

Toxic Release Inventory System (TRIS)

This database is a listing of facilities which release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. Information for the TRIS database is provided and maintained by the USEPA.

The Site is not listed on the TRIS database.

Toxic Substances Control Act (TSCA)

This database is a listing of manufacturers and importers of chemical substances on the TSCA chemical substances inventory lists and includes data on production volumes of these substances by plant location.

The Site is not listed on the TSCA database.

PCB Activity Database System (PADS)

This database identifies generators, transporters, commercial stores and/or brokers of PCBs who are required to notify the USEPA of such activities.

The Site is not listed on the PADS database.

Facility Index System/Facility Registry System (FINDS)

The FINDS database contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: Permit Compliance System (PCS), Aerometric Information Retrieval System (AIRS), Enforcement Docket (DOCKET) used to manage and track information on civil judicial enforcement cases for environmental statutes, Federal Underground Injection Control (FURS), Criminal Docket (C-DOCKET) used to track criminal enforcement actions for environmental statutes, Federal Facilities Information System (FFIS), State Environmental Laws and Statutes (STATE), and PCB Activity Data System (PADS).

The Site is listed on the FINDS database under Registry ID #110044830261, related to its status as a RCRA generator of hazardous waste. According to its ECHO listing, there have been no reported violations for at least 12 quarters. The FINDS listing does not necessarily represent a REC. However, the Site's historic use as a hazardous waste generator represents a REC for the Site.

RCRA Administrative Action Tracking System (RAATS)

The RAATS database contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the USEPA. For administrative actions after September 30, 1995, data entry in the RAATS database was discontinued due to decrease in agency resources.

The Site is not listed on the RAATS database.

Hazardous Substance Waste Disposal Site (HSWDS) Inventory

The HSWDS database is a listing of known or suspected hazardous substance waste disposal sites and includes sites that were delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that the USEPA had prepared a Preliminary Assessment (PA) or Site Investigation (SI) report.

The Site is not listed on the HSWDS database. There is one property within a ½-mile radius of the Site listed on the HSWDS database. This property is not located in the immediate vicinity of the Site and is cross-gradient with respect to the presumed groundwater flow direction at the Site. Due to its relative location, this listing is not considered to be a REC for the Site.

Facility and Manifest Data (MANIFEST)

This database is a listing of facilities that generate a manifest. A manifest is a document that lists and tracks hazardous waste from the generator through transporters to a Treatment, Storage, Disposal (TSD) facility. The information for this database is provided by the NYSDEC.

The Site is not listed on the NY MANIFEST database. There are 32 properties within a ⅛-mile radius of the Site listed on the NY MANIFEST database. Nineteen of these properties are located downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining six downgradient or cross-gradient properties are located in the immediate vicinity of the Site, but do not appear on any regulatory database for open spills or violations, and therefore are not considered to be RECs for the Site. The remaining seven listings are upgradient of the Site, and six of these are not located in the immediate vicinity of the Site and do not appear on

any regulatory database for open spills or violations. Due to their regulatory status, these six upgradient listings are not considered to be RECs for the Site. The remaining upgradient property is further described below:

- The "Speedway" gasoline station, located at 204-222 4th Avenue, approximately 315 feet to the east of the Site, is listed on the NY MANIFEST database. No further information is provided. Manifest listings do not necessarily represent RECs. However, this property is a historic auto service facility/gas station, and is listed on the NY SPILLS database for one open spill. This property is being redeveloped under NYSDEC oversight, and is enrolled in the NYS Brownfield Cleanup Program.

New York Drycleaners (NY Drycleaners)

The NY Drycleaners is a listing of registered drycleaners. The data are derived from the NYSDEC.

The Site is not listed on the HSWDS database. There is one property within a ½-mile radius of the Site listed on the HSWDS database. This property is not located in the immediate vicinity of the Site and is downgradient with respect to the presumed groundwater flow direction at the Site. Due to its relative location, this listing is not considered to be a REC for the Site.

State Pollutant Discharge Elimination System (SPDES)

New York State has a program approved by the USEPA for the control of waste water and storm water discharges in accordance with the Clean Water Act and is referred to as the State Pollutant Discharge Elimination System (SPDES). This program broader in scope than required by the USEPA in that SPDES controls point source discharges to groundwater as well as surface waters. This database is listing of SPDES properties.

The Site is not listed on the SPDES database.

E Designation

The "E" Designation database is a listing of properties in New York City that have an "E" zoning designation. An "E" designation is a zoning map designation notifying the potential for hazardous material contamination, noise, or air quality impacts for a particular tax lot. The information for this database is derived from the New York City Department of City Planning.

According to the EDR report, neither the Site nor any properties within a ⅛-mile radius of the Site are listed on the "E" Designation database. However, according to information from the New York City OASIS map, both Site parcels have been assigned "E" Designations, listed under E-601(The Gowanus Plan), effective November 23, 2021. The Site maintains "E" Designations for potential hazardous materials, noise, and air, all of which would have to be addressed to the satisfaction of the New York City Mayor's Office of Environmental Remediation (OER) upon redevelopment of the Site., The "E" Designation for potential hazardous materials is considered to be a REC (the "E" Designations for air and noise would be addressed through design components of any new building planned for the Site).

There are no properties within a ⅛-mile radius of the Site listed on the "E" Designation database. However, similar to the Site, there are multiple properties in the vicinity of the Site listed under E-601 for "E" Designations. For each of these properties, "E" Designation requirements must be addressed for any future redevelopments. These "E" Designations do not necessarily represent RECs for the Site.

Restrictive Declaration (RES DECL)

The RES DECL database lists properties with a restrictive declaration. A restrictive declaration is a covenant running with the land that binds the present and future owners of the property. As a condition of special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places

specialized conditions on the future use and development of the property. Certain restrictive declarations are indicated by the letter "D" on zone maps. The data for this database are derived from the New York City Department of Planning.

Neither the Site nor any properties within a ⅛-mile radius of the Site are listed on the RES DECL database.

Manufactured Gas Plants

The Manufactured Gas Plants database includes records of coal gas plants compiled by EDR's researchers. Manufactured gas plants were used in the United States from the 1800s to the 1950s to produce a gas that was distributed and used as a fuel. The plants typically utilized coal to produce gas and generated a significant amount of waste. Many of the waste byproducts from manufactured gas plants included coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds that are potentially hazardous to human health and the environment. The waste byproducts from manufactured gas plants were often disposed of at the facility and acted as a source of soil and groundwater contamination for the surrounding area.

The Site is not listed on EDR's Manufactured Gas Plant database. There is one Manufactured Gas Plant site within a 1-mile radius of the Site. The “Fulton Works” facility located at the intersection of Degraw Street and Nevins Street is approximately 400 feet to the west from the Site. This property is located along the Gowanus Canal and any releases from this property would be unlikely to affect the Site. Due to its relative location, this Manufactured Gas Plant site is not considered to be a REC for the Site.

EDR Historical Auto Stations and Cleaners (US Hist Auto Stat and US Hist Cleaners)

The EDR Historical Auto Stations and Historical Cleaners databases are listings of potential gasoline filling stations, auto repair stations, dry cleaners, laundries, and laundromats based on the findings of EDR researchers.

The Site is not listed on the EDR Historical Auto Stations database. There are six properties within a ⅛-mile radius of the Site listed on the EDR Historical Auto Stations database. Two of these properties are downgradient or cross-gradient with respect to the presumed groundwater flow direction at the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining four listings are further described below:

- "Speedway" gasoline station, located at 204-222 3rd Avenue, approximately 315 feet to the east of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is listed twice on the EDR Historical Auto Stations database. These listings include “Hess Corporation”, listed at the property as a historic auto station between 2001 and 2014 and “Merit Oil Corporation” is listed at the property as a historic auto station between 1994 and 2000. This property is listed on the NY SPILLS database for one open spill case. Due to the spill’s regulatory status, and the relative location of the property, these EDR Historical Auto Stations listings are considered to be RECs for the Site. Additionally, this property represents a pVEC for the Site, further discussed in section 4.6.
- The property located at 621 Degraw Street, approximately 410 feet to the northeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is listed on the EDR Historical Auto Stations database from 2011 to 2014. There are currently no open spills or violations associated with this property and therefor this listing is not considered to be a REC for the Site.
- The property located at 164 4th Avenue, approximately 500 feet to the northeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, and is listed on the EDR Historical Auto Stations database from 1973 to 1997. This property is identified on the RCRA-VSQG database as a very small quantity generator of ignitable waste, pesticide residue, and benzene. This property is also listed on the NY SPILLS database for Spill Number 9713442, opened on March 4, 1998 and closed on August 4, 2017. This property is also listed on the FINDS, NY MANIFEST, EDR and UST database. Due to its

regulatory status, this listing is not considered to be a REC. However, this property represents a pVEC, further discussed in Section 4.6.

The Site is not listed on the EDR Historical Cleaners database. There are three properties within a ⅛-mile radius of the Site listed on the EDR Historical Cleaners database. Two of these properties are located downgradient of the Site and are not located in the immediate vicinity of the Site, and therefore are not considered to be RECs for the Site. The remaining upgradient listing is further described below:

- The "BMT Stop Dry Cleaners Inc." facility located at 230 4th Avenue, approximately 400 feet to the southeast of, and upgradient with respect to the presumed groundwater flow direction at, the Site, is listed on the EDR Historical Cleaners database from the years of 1997 to 2014. There are no documented releases or violations associated with this property. Due to its regulatory status, this listing is not considered to be a REC for the Site. However, the historical use of this property as a dry-cleaning facility represents a pVEC for the Site, further discussed in Section 4.6

4.4 Historical Use Information

The Site history was researched by a review of information from the following sources:

- Sanborn Fire Insurance Maps
- City directories
- Historical aerial photographs
- Other historical sources

4.4.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were provided by EDR for the years 1886, 1888, 1904, 1906, 1915, 1922, 1926, 1928, 1938, 1950-1951, 1965, 1969, 1977-1982, 1985-1988, 1991-1996, and 2001-2007. The following table describes characteristics of the Site and adjoining properties and identifies notable environmental concerns in the vicinity of the Site for each individual year of Sanborn Fire Insurance map coverage. Copies of the Sanborn Fire Insurance Maps are included in Appendix D.

Year	Site Comments	Surrounding Area Comments
1886	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. The west-adjacent property is depicted as a timber yard.
1888	The Site maintains two vacant undeveloped lots.	The north-adjacent properties maintain vacant undeveloped land. The east-adjacent property maintains undeveloped vacant land. The south-adjacent properties maintain vacant undeveloped land. The west-adjacent property is not depicted on this Sanborn map.
1904	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map.

		There are no changes to the west-adjacent property since the 1886 Sanborn map.
1906	The western portion of the Site is depicted as a lumber yard. This portion is developed with a 1- to 2-story lumber shed building along the western edge of the property and a 1-story office building in the southwest corner. The southeast portion of the Site is developed with four 4-story residential buildings, the easternmost of which maintains a 2-story shed in the rear.	The north-adjacent properties maintain a lumber yard, and a junkyard, and a woodworking facility. The east-adjacent property maintains three 4-story residential buildings and a 2-story shed. The south-adjacent properties maintain a 4-story commercial building, and five 4-story residential buildings. The west-adjacent property is not depicted on this Sanborn map.
1915	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. There are no changes to the west-adjacent property since the 1904 Sanborn map.
1922	The Site is not depicted on this Sanborn map.	The surrounding properties are not depicted on this Sanborn map. A subway station is depicted further to the southwest of the Site.
1926	The Site is improved with a 1-story building depicted as “Planing”. The residential buildings are now depicted as flats	The north-adjacent properties are improved by several 1-story industrial buildings, including a laundry, printing ink manufacturing, painting, auto wrecking, a garage building, and a wheelwright. A gasoline tank is depicted at the north-adjacent garage property. The east-adjacent residential buildings are depicted as flats. A not-adjacent property approximately 50 feet to the east of the Site is depicted as a garage, with a gasoline tank shown. The south-adjacent commercial building is improved with a 2-story commercial building. The west-adjacent property is not depicted on this Sanborn map.
1928	The Site is not depicted on this Sanborn map.	The surrounding properties are not depicted on this Sanborn map.
1938	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. The west-adjacent property is redeveloped with a garage building, and a storehouse for a telegraph department. The eastern portion maintains an auto repair facility.
1950	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. The west-adjacent auto repair facility is no longer depicted. This area is shown as a carpentry shop.
1951	The western portion of the Site is depicted as an auto-repair facility. The Site has been improved with additional offices on the western and southern portions of the property and a 1-story building depicted as “Service Station for Trucks and Busses”.	The north-adjacent properties are improved by several 1-story industrial buildings, including auto repair, waste paper storage, metal slitting, and a filling station in the southwest corner of the property depicting two gasoline tanks.

	The eastern portion of the Site is improved with a 1-story office building in the northeast corner of the property and is now depicted as a "Railway Express Agency".	The east-adjacent properties are improved by a 1-story industrial building depicted as a "Paper Box Warehouse". Three of the 1-story residential flats have been demolished for additional space on the Site for the Railway Express Agency. There are no changes to the south-adjacent properties since the 1926 Sanborn map. The west-adjacent property is not depicted on this Sanborn map.
1965	The eastern portion of the Site is no longer depicted as a Railway Express Agency and the office building in the northeast corner of the Site is now listed as vacant and open.	The north-adjacent property is redeveloped with a warehouse; the gasoline tank in this section of the property is no longer depicted. The east-adjacent property is redeveloped with a woodworking facility. The gasoline tank is no longer depicted. The south-adjacent property has been redeveloped with a 1-story office building in the third (formerly vacant) flat. The first two flats and the 2-story commercial building are now depicted as residential buildings. The west-adjacent property is not depicted on this Sanborn map.
1969	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. There are no changes to the west-adjacent property since the 1950 Sanborn map.
1977	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. There are no changes to the west-adjacent property since the previous Sanborn map.
1978	The 1-story office building in the northeast corner of the Site is no longer depicted.	The filling station and auto repair facility in the north-adjacent property have been demolished. The woodworking facility in the east-adjoining property is now depicted as an electrical contracting facility. There are no changes to the south-adjacent property since the 1965 Sanborn map. The west-adjacent property is not depicted on this Sanborn map.
1979	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-adjacent property since the previous Sanborn map. The electrical contracting facility in the east-adjoining property is now depicted as an auto parts facility. There are no changes to the south-adjacent property since the previous Sanborn map. There are no changes to the west-adjacent property since the 1977 Sanborn map.

1980	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
1981	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. There are no changes to the west-adjacent property since the previous Sanborn map.
1982	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
1985	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, or south-adjacent properties since the previous Sanborn map. The west-adjacent property is not depicted on this Sanborn map.
1986	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. There are no changes to the west-adjacent property since the previous Sanborn map.
1987	There are no changes to the Site since the 1985 Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
1988	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
1991	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
1992	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
1993	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, south-, or west-adjacent properties since the previous Sanborn map. The auto parts commercial building in the east-adjoining property is now depicted as a woodworks commercial building.
1995	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.

1996	The Site is not depicted on this Sanborn map.	The north-, east-, and south-adjacent properties are not depicted on this Sanborn map. There are no changes to the west-adjacent property since the previous Sanborn map.
2001	There are no changes to the Site since the previous Sanborn map.	The north-adjacent properties are redeveloped with a 2-story commercial building. It is noted that this construction occurred in 1999. There are no changes to the east-, south-, or west-adjacent properties since the previous Sanborn map.
2002	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
2003	The eastern portion of the Site is now depicted as truck parking.	There are no changes to the north-, south-, or west-adjacent properties since the previous Sanborn map. The east-adjacent property is now depicted as parking.
2004	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
2005	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.
2006	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, south-, or west-adjacent properties since the previous Sanborn map. The east-adjacent property is redeveloped with an 8-story hotel building.
2007	There are no changes to the Site since the previous Sanborn map.	There are no changes to the north-, east-, south-, or west-adjacent properties since the previous Sanborn map.

As indicated in the previous table, the western Site parcel (Lot 1) was developed with the current structure since at least 1951, and the eastern Site parcel (Lot 12) has been an open lot since at least 1966. The adjacent properties appear to have consisted of several commercial, industrial, and residential buildings. The historic industrial uses of the Site and surrounding properties represent RECs for the Site.

4.4.2 City Directory

EDR's City Directory Abstract is a screening report designed to assist the environmental professional in evaluating potential liability on a target property resulting from past activities. The Site is listed in EDR's historical city directory in 1928, 1934, 1940, 1960, 1965, 1970, 1973, 1980, 1985, 1994, 1997, 1999-2000, 2004-2005, 2009, 2014, and 2017. The occupants of the Site addresses include commercial oil, which is considered to be a REC.

Similarly, the occupants of the addresses for adjoining properties consist mainly of private residences and various commercial and industrial buildings, including an 8-story hotel, a funeral home, auto repair, and waste paper storage facility. The industrial uses of the surrounding properties represents a REC for the Site. A copy of the City Directory Abstract is included in Appendix E.

4.4.3 Other Historical Information

Historical Aerial Photographs

Available historical aerial photographs provided from EDR were reviewed for this Environmental Site Assessment. Copies of historical aerial photographs are included in Appendix F of this report. A summary of the historical aerial photography is provided below.

Year	Site Comments	Surrounding Area Comments
1924	The Site appears to maintain low- to mid-rise structures.	The north-adjacent property appears to maintain low- to mid-rise structures. The east-adjacent property appears to maintain low- to mid-rise structures. The south-adjacent property appears to maintain mid-rise structures. The west-adjacent property appears to maintain low-rise structures.
1940	The Site configuration is not discernable on this aerial photograph.	The surrounding properties cannot be discerned on this aerial photograph.
1943	The Site appears to be redeveloped with several low-rise structures.	The north-adjacent property appears to maintain low- to mid-rise structures. The east-adjacent property appears to maintain low- to mid-rise structures. The south-adjacent property appears to maintain mid-rise structures. The west-adjacent property appears to maintain mid- rise structures.
1951-1966	There are no changes to the Site since the previous aerial photograph.	There are no changes to the surrounding properties since the previous aerial photograph.
1971	The eastern portion of the Site appears to be razed, and now maintains a parking lot.	There are no changes to the surrounding properties since the previous aerial photograph.
1974-1994	There are no changes to the Site since the previous aerial photograph.	There are no changes to the surrounding properties since the previous aerial photograph.
2006	There are no changes to the Site since the previous aerial photograph.	The east-adjacent property appears to be redeveloped with a high-rise building.
2009-2017	There are no changes to the Site since the previous aerial photograph.	There are no changes to the surrounding properties since the previous aerial photograph.

As indicated in the previous table, the western Site parcel (Lot 1) was developed with the current structure since at least 1943, and the eastern Site parcel (Lot 12) has been vacant since at least 1971. Lot 12 previously maintained a

smaller low-rise structure. Several additional low-rise structures were visible from at least 1943 to as recently as 1971. The adjacent properties appear to have consisted of several low- to mid-rise structures and a high-rise structure. No RECs can be discerned from these aerial photographs.

Historical Topographic Maps

Historical topographic maps of moderately to densely populated urban areas provide little or no useful information regarding the historical use of properties located within these areas. Rather, comprehensive historical use information for the Site and surrounding area was obtained and reviewed by Athenica as part of this Phase I ESA. These information sources include, at the minimum, Sanborn Fire Insurance maps, city directories and historical aerial photographs.

Other Historical Sources

According to the New York City Department of Finance's Automated City Register Information System (ACRIS), there are records of deeds for the property, dated January 4, 1972; March 11, 1977; July 10, 1985; April 8, 1986; August 19, 1986; August 30, 1989; and March 19, 1990.

The New York City Department of Buildings on-line information includes several certificates of occupancy stating the following:

Block 434, Lot 1 and Lot 12:

- October 18, 1940:
  - Parking and storage
- September 12, 1946
  - Cellar: Ordinary Use
  - First Floor: One Family
  - Second Floor: One Family
- December 23, 1946
  - Cellar: Ordinary Use
  - First Floor: Fish Store and Light Manufacturing
  - Second Floor: Two Fans
- October 23, 1947
  - First Floor: Office, Loading Platform, and Boiler Room
- May 14, 1997
  - First Floor: Open Parking for 42 Cars

4.5 Prior Reports and Agency Review Results

4.5.1 Prior Reports Review

No prior environmental report was provided for review.

4.5.2 Agency Review Results

Freedom of Information Act (FOIA) requests were submitted to the New York State Department of Environmental Conservation (NYSDEC), New York City Department of Health (NYCDOH), the New York City Fire Department (FDNY), and the New York City Department of Environmental Protection (NYCDEP) to perform a file review of

petroleum storage tanks and spills for the Site. The response from NYSDEC indicated that the Site was registered for petroleum bulk storage. However, the details of the registration were redacted, and not publicly available. Since several RECs have been identified through other means, the lack of any regulatory agency file review is unlikely to affect the outcome of this report. If responsive records are identified which alter the findings or conclusions of this report, Athenica will provide a written update. Athenica also received a response from the FDNY, who indicated that they were aware of two 275-gallon No. 2 fuel oil ASTs, and one 3,000-gallon AST. These tanks were observed in the partial cellar of the Site building. Copies of the FOIA requests and the NYSDEC and FDNY responses, can be found in Appendix H.

4.6 Vapor Encroachment Evaluation

The ASTM standard requires evaluating the movement of hazardous substances or petroleum products in any form, including vapor in the subsurface. Vapor migration was evaluated in accordance with the ASTM Standard E2600-15, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions". Evaluation of vapor migration utilizing the aforementioned ASTM Standard indicated that vapor migration represents a REC.

Multiple potential Vapor Encroachment Conditions (pVECs) were identified, including the following:

- The historic industrial use of the Site, including fuel oil storage, fuel truck storage and maintenance, and various other petroleum-related operations;
- The historic industrial and auto service/gasoline station uses of surrounding properties, including several facilities with documented releases to soil vapor and groundwater;

Due to these historic uses of the Site and the surrounding properties, and the documented petroleum and VOC impacts to groundwater and soil vapor from off-Site spills, these pVECs are considered to be a REC for the Site. The evaluation of vapor migration is documented in Appendix I.

5.0 SITE RECONNAISSANCE

Athenica's representative, Mr. Evan Greenberg conducted the Site reconnaissance on June 7, 2022. The Site reconnaissance consisted of observing conditions throughout accessible areas of the Site building and around the perimeter of the Site. Photographs documenting conditions of the Site and surrounding area are included in Appendix B.

5.1 Interior & Exterior Description

The Site consists of two parcels comprising a total of 37,553 square-feet, fronting Union Street to the south, Third Avenue to the west, and Sackett Street to the north. The western parcel (Lot 1) is 21,055 square feet in area and is completely occupied by a 1-story industrial building. The eastern parcel (Lot 12) is 16,498 square feet in area, is undeveloped, and is currently utilized as a parking lot and storage yard. The Site building maintains a warehouse area and offices for a petroleum trucking and management company. Most of the building is slab-on grade, with a small partial cellar (approximately 500 square feet in area) located in the northeastern portion of the building. This portion of the building also maintains a mezzanine area, which is occupied by offices. The building is concrete block and brick construction, with concrete floors, brick and concrete block interior walls, concrete partial cellar, metal frame interior; and wood-frame roof. The office portion of the Site maintains tiled floors, plaster interior walls, and drop-tiled and plaster ceilings. The office area of the building is heated and cooled by a ducted natural gas-fired HVAC system with equipment on the roof. Portions of the building are also heated by a ducted No. 2 fuel oil-fired HVAC system with boiler and ASTs in the cellar. The office area is also cooled by individual electric wall-mounted air conditioners. The warehouse portion of the building is heated by overhead natural gas-fired unit heaters and a natural gas-fired ducted system; this portion of the building is not cooled. Solid waste generated by the building is removed regularly from the Site by private waste removal contractors for off-Site disposal. Wastewater and sewage from the building is discharged to the municipal sewer system for treatment at an off-Site wastewater treatment facility serving the community.

The current use of the Site is industrial. The building is occupied by a petroleum trucking and management company, which receives and transports petroleum (including lubricants, fuel oil and diesel fuel), as well as provides storage for waste oil, lubricants, and miscellaneous chemicals associated with the tenant business. Several trucks are stored and maintained inside the building, and others are stored on Lot 12. The western portion of the building maintains office space.

The north-adjacent properties maintain 1-, 2-, and 3-story industrial buildings. The east-adjacent property maintains an 8-story hotel. The west-adjacent property maintains a vacant lot, currently under redevelopment (most recently developed with a 1-story industrial building). The south-adjacent properties maintain a 2-story residential building, two 4-story residential buildings, a 1-story office building and warehouse, and a 4-story residential building.

5.2 Methodology and Limiting Conditions

The Site reconnaissance consisted of visual and/or physical observations of the Site and improvements; adjoining sites as viewed from the Site; and, the surrounding area based on visual observations made during the trip to and from the Site. Unimproved portions of the Site (if any) were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors (if any) were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise. Access to the roof of the building was not provided.

5.3 Hazardous Substance Use/Storage

Athenica observed evidence of hazardous substance use and storage at the Site. Several oil drums and ASTs were stored in both the building on Lot 1, and throughout the parking lot on Lot 12. A dispenser nozzle was observed near the entrance of the building and is presumably used to fill trucks with gasoline. Additionally, a suspicious steel plate was observed inside the building and is suspected to have an unregistered UST buried beneath. Additionally, multiple 55-gallon drums, some labeled “acetone” and “antifreeze” were observed in the parking lot.

5.4 Underground and Aboveground Storage Tanks

Athenica observed evidence of seven ASTs at the Site, three of which are located in the partial cellar. Two of these tanks are manifolded 500-gallon No. 2 fuel oil ASTs, and the third is, labeled as a 3,000-gallon No. 2 fuel oil tank, but is reportedly used to store diesel fuel.

Athenica also observed four additional 275-gallon ASTs throughout the first floor of the Site building. Three of these were located in the northern portion of the warehouse, and were not connected to any piping. Signage in the area indicated these tanks are for the storage of waste oil. The fourth 275-gallon AST is located in the central portion of the Site, and is labeled Mobil Delvac (a lubricant oil). All seven tanks appeared to be intact, though minor staining was observed at the locations of four of the tanks. Additionally, Athenica observed remote fill and vent pipes along the northern exterior wall of the Site building, a dispenser nozzle within the garage portion of the Site building, and a vent pipe consistent with a UST on the northern portion of the building roof. Athenica did not observe a UST, but it is suspected that one may be present. The Site is registered with NYSDEC for petroleum bulk storage, under PBS ID #2-601627. However, the EDR report, NYSDEC tank database listing, and NYSDEC FOIL response were redacted to block out the specifics of the listing for the registration (number and contents of tanks), and this information is therefore not publicly available.

5.5 Other Petroleum Products

Athenica observed a significant quantity of petroleum-based chemicals at the time of the Site inspection such as several ASTs, several dozen 55-gallon drums (many unlabeled), and a fuel dispenser associated with a diesel AST. Additionally, several drums labeled as storing waste oil were observed on Site. The eastern portion of the Site (Lot 12) is also used for the storage of multiple fuel oil delivery trucks. The ASTs and oil drums appeared to be in fair to good condition, however minor to moderate staining around the several storage tanks and drums was observed. Oil was observed in several open containers located throughout the building.

5.6 Polychlorinated Biphenyls (PCBs)

PCBs are toxic coolants or lubricating oils used in some electrical transformers, light ballasts, electrical panels or other similar equipment. Athenica observed that potential PCB-containing fluorescent light ballasts were utilized throughout the warehouse of the building. In addition, there were multiple electrical panels located within the warehouse and office portions of the building. Additionally, the current Site occupant stores various waste oils, some of which may contain PCBs.

5.7 Waste Generation, Storage and Disposal

Refuse generated at the Site is currently stored in the warehouse and is disposed as needed by a private waste removal contractor.

5.8 Septic Systems

Athenica did not observe evidence of any on-Site septic system at the Site.

5.9 Storm Water Management/Surface Areas

Athenica did not observe any evidence of surface water, surface impoundments or retention ponds at the Site.

5.10 Wells

Athenica did not observe evidence of production wells or monitoring wells at the Site or in the vicinity of the Site.

6.0 INTERVIEWS

6.1 Interview Summary

During the course of the Phase I ESA, despite reasonable attempts to conduct such interviews, no past owners and/or occupants were interviewed by Athenica as none were readily available. Athenica does not believe that any such past owners and/or occupants would have provided additional pertinent information regarding the potential for contamination at the Subject Property that was not already obtained from other sources over the course of this investigation.

In addition to the FOIA request submitted to the NYCDEP, Athenica interviewed NYCDEP personnel regarding the potential historic use of fuel oil at the Site and any potentially available boiler records contained in the NYCDEP Clean Air Tracking System (CATS). NYCDEP personnel identified boiler records for the Site under the CATS, including historic records for No. 2 fuel oil-fired boilers used at the Site.

Athenica also attempted to contact the FDNY; however, no response was provided within the timeframe of this investigation. Local officials within New York City are typically not available for interview during a reasonable timeframe and would not add value to the results of the Phase I as they do not typically have knowledge of individual sites.

7.0 ADDITIONAL SERVICES

7.1 Wetlands

No evaluation of wetlands was performed since such an evaluation is considered to be outside the scope of a Phase I ESA according to the ASTM standard (i.e., non-scope consideration).

7.2 Suspect Asbestos-Containing Material (ACM)

No evaluation of asbestos-containing building materials (ACMs) was performed since such an evaluation is considered to be outside the scope of a Phase I ESA according to the ASTM standard (i.e., non-scope consideration).

7.3 Radon

No evaluation of radon was performed since such an evaluation is considered to be outside the scope of a Phase I ESA according to the ASTM standard (i.e., non-scope consideration).

7.4 Lead Based Paint

No evaluation of lead-based paint was performed since such an evaluation is considered to be outside the scope of a Phase I ESA according to the ASTM standard (i.e., non-scope consideration).

7.5 Mold Observation

No evaluation of mold was performed since such an evaluation is outside the scope of a Phase I ESA according to the ASTM standard (i.e., non-scope consideration).

8.0 FINDINGS AND OBSERVATIONS

The following summarizes known or suspected environmental conditions in connection with the Site based on information collected during the ESA. For each condition, Athenica provides an opinion of the impact on the Site based on an evaluation of the results of record reviews, site reconnaissance and interviews as discussed in this report. Athenica also provides a conclusion and rationale regarding whether or not an environmental condition is a recognized environmental condition.

This assessment has revealed evidence of the following RECs in connection with the Site:

- The E-Designation for the Site represents a REC since it pertains to potential hazardous materials;
- The historic and current industrial, manufacturing, auto repair, and fuel oil storage/handling uses of the Site;
- The historic and/or current industrial, automotive service, and gasoline station uses of the surrounding properties;
- Open Spill Number 2009932 was reported on March 9, 2021, approximately 50 feet west of the Site at 585 Union Street. Investigations identified contamination in soil and groundwater;
- Open Spill Number 9605719 was reported on August 2, 1996, approximately 315 feet east of the Site at 204-222 4th Avenue. Investigations identified contamination in soil vapor and groundwater; and
- The potential for vapor intrusion from Site operations, and off-Site properties with documented releases to soil vapor and groundwater.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Athenica Environmental Services has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of 601 Union Street in the Borough of Brooklyn, New York (Block 434 and Lots 1 and 12). Any exceptions to, or deletions from, this practice are described in Section 10 of this report. This assessment has revealed evidence of the following RECs in connection with the Site.

- The E-Designation for the Site represents a REC since it pertains to potential hazardous materials;
- The historic and current industrial, manufacturing, auto repair, and fuel oil storage/handling uses of the Site;
- The historic and/or current industrial, automotive service, and gasoline station uses of the surrounding properties;
- Open Spill Number 2009932 was reported on March 9, 2021, approximately 50 feet west of the Site at 585 Union Street. Investigations identified contamination in soil and groundwater;
- Open Spill Number 9605719 was reported on August 2, 1996, approximately 315 feet east of the Site at 204-222 4th Avenue. Investigations identified contamination in soil vapor and groundwater; and
- The potential for vapor intrusion from Site operations, and off-Site properties with documented releases to soil vapor and groundwater.

Based on the findings of the Phase I ESA, Athenica recommends the following:

- A Phase II Investigation should be conducted to evaluate subsurface conditions as a result of the identified RECS. The Phase II should include, at minimum, the collection of soil and soil vapor samples beneath the Site;
- Any unregistered petroleum bulk storage tanks should be properly registered with the NYSDEC; and
- If redevelopment of the Site is planned, all “E” Designation requirements must be addressed to the satisfaction of OER.

10.0 DEVIATIONS AND DATA GAPS

In accordance with ASTM E1527-13 3.2.21, a Data Gap is defined as a lack of or inability to obtain information as required under the Standard during the Phase I process, despite a good faith effort by the Environmental Professional to gather this information. A Data Gap by itself is not inherently significant, but is only significant if other information and/or professional experience raises reasonable concerns. As per Section 12.7 of ASTM E1527-13, the Phase I ESA report must contain information pertaining to Data Gap(s) and evaluate their relative significance with respect to the Environmental Professional's ability to identify RECs.

The following Data Gaps were encountered and their relative significance is discussed as follows:

- Petroleum Bulk Storage Registration

  The Site is registered with NYSDEC for petroleum bulk storage, under PBS ID #2-601627. However, the EDR report, NYSDEC tank database listing, and NYSDEC FOIL response were redacted to block out the specifics of the listing for the registration (number and contents of tanks). Since petroleum storage on-Site (as observed during Site reconnaissance) is already considered to be a REC, regardless of tank registration status, this data gap is unlikely to alter the conclusions provided in this report due to the findings of other resource(s) obtained and is of low significance.

- Historical Site Source Interval

  A review of standard historical sources was not available to the time of first development or to a minimum of five-year intervals, as such sources are: (1) not reasonably ascertainable, or (2) past experience indicates that the sources are not likely to be sufficiently useful, accurate, or complete in terms of satisfying the objectives of this Phase I ESA. This Data Gap is unlikely to alter the conclusions provided in this report due to the findings of other resource(s) obtained and is of low significance.

- Environmental Lien and Activity and Use Limitations (AULs) Record Review

  As per current ASTM standards, a search for the existence of environmental liens and AULs that are filed or recorded against a property being assessed must be conducted. In accordance with Section 6.2 of ASTM E1527-13, this practice does not impose on the Environmental Professional and, unless specifically added by a change in the scope of work, solely is the responsibility of the User. Any environmental liens and AULs known by a User must be reported to the Environmental Professional conducting a Phase I ESA. As of the date of this report, a search of environmental liens or AULs has not been provided to Athenica. This Data Gap is of low significance and is unlikely to alter the conclusions of this report due to the findings of other resource(s) obtained.

- Municipal Records Review

  As required by the current ASTM standards, FOIA requests were filed with applicable regulatory agencies to identify any available responsive records pertaining to the Site, its adjoining properties, or any pertinent surrounding properties that are identified in one or more of the standard environmental record sources. As of the date of this report, responsive records have not been returned from one or more of the regulatory agencies contacted. This Data Gap is of unknown significance, as it is unknown if potential responsive records identified will provide pertinent information with respect to REC(s), HREC(s), CREC(s), or de minimis condition(s) at the Site. If responsive information is provided by the regulatory agencies that changes the findings or conclusions of this report, Athenica will provide a written update.

The EDR FieldCheck®System enables EDR's customers to make certain online modifications to the maps and text contained in EDR Radius Map Reports. As a result, the maps and text contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. The EDR FieldCheck System accesses user-modified records from previously submitted reports. Any user-modified record from a previous report that is plotted outside the search radius of this report may not be included in this report.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). ATHENICA ENV. SERVICES INC. used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by ATHENICA ENV. SERVICES INC.. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

601 UNION STREET
BROOKLYN, NY 11217

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NPL list,
as provided by EDR, has revealed that there is 1 NPL site
within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the SEMS list,
as provided by EDR, has revealed that there is 1 SEMS site
within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the SEMS-ARCHIVE list, as provided by EDR, has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the CORRACTS list, as provided by EDR, has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the RCRA-LQG list, as provided by EDR, has revealed that there are 18 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NY SHWS list, as provided by EDR, has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NY LTANKS list, as provided by EDR, has revealed that there are 42 NY LTANKS sites within approximately 0.5 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NY MOSF UST list, as provided by EDR, has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NY CBS AST list,
as provided by EDR, has revealed that there is 1 NY CBS AST site
within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the RCRA NonGen / NLR list, as provided by EDR, has revealed that there are 69 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NY HSWDS list, as provided by EDR, has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the NY MANIFEST list, as provided by EDR, has revealed that there are 107 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

USPS GOWANUS SITE. F	2ND AVENUE AND 12TH	SW 1/2 - 1 (0.760 mi.)	401	1348

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

An online review and analysis by ATHENICA ENV. SERVICES INC. of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"12/21/18-Hiralkumar Patel. alternate address: 607-615 Sackett Ave no PBS or other spill reports found. 2:26 PM:- spoke with Ruijie Xu at Hydro Tech. they conducted Phase I and Phase II investigation at the site. the site has one-story vacant warehouse. during Phase II

VACANT PROPERTY- PHASE II (Continued) **S123659582**

investigation, they installed three soil borings near an unknown size UST and two soil-vapor probes. moist soil was noted at 14 ft bg during investigation, but groundwater monitoring well was not installed and groundwater samples were not collected as these were not part of scope of work. highest PID reading of 1,272 ppm was recorded in moist soil, but soil sample was not collected due to moisture. instead of that, soil sample from 2 ft above was collected where 300 ppm was recorded on PID. some product was found in the tank. asked Ruijie to submit property owner's contact info, copy of Phase I report, site map with sampling locations and sample result report. 12/24/18-Hiralkumar Patel. received email from Ruijie (at 3:54 PM on 12/21/18) including property owner's contact info, lab reports, site map, boring logs and link to Phase I report. 601 Sackett Property Owner LLC. **property owner** c/o Liberty One Group 175 Blake Ave Brooklyn, NY 11212 Attn.: Jojo Rabinowitz PH. (212) 220-2569 (917) 864-4446 Fax (347) 533-8538 email: jojo@liberty1group.com summary of Phase I dated 04/21/17: - lot consists of one (1) 2-story brick building with no basement and is approx. 10,000 sq. ft. in area - site used as warehouse with an office located on the second floor - subject property is currently vacant - elevation of the subject property is approx. 21 ft above mean sea level - depth to groundwater at the site is approx. 10 ft - regional groundwater flow direction in the vicinity of the site is toward the west in the direction to the Gowanus Canal - subject property was developed prior to 1906 - there is a gasoline tank with unknown quantity in the southern portion of the site until 1951 ------ - a fuel oil petrometer and a series of fuel oil copper lines running to the roof at the southern portion of the former warehouse/storage building. there is a fill port identified associated with these pipes inside the building - no visual evidence of current/former AST was identified 12/27/18-Hiralkumar Patel. 1:53 PM:- sent email to Ruijie and asked her to submit complete Phase II report for review. email copied to Mark Robbins at HydroTech. 01/30/19-Hiralkumar Patel. 2:21 PM:- received email from Ruijie including Phase II report. summary: - site is developed with a 1-story building and mezzanine office is located along the western boundary (it looks like 2nd floor mentioned in Phase I is referring to mezzanine level) - during GPR survey, an anomaly indicative of an UST of approx. 4 ft by 8 ft dimensions was detected in the central portion of the building - bottom of suspected UST is assumed to be at approx. 5 ft bg - approx. 8 inches of liquid product (light yellow, clear) was found in the tank - elevation of the site is approx. 21 ft above mean sea level - depth to groundwater is approx. 16-18 ft bg - as per USGS maps, regional groundwater flow direction in the vicinity of the site is toward the west in the direction to the Gowanus Canal - installed three soil borings (SP-1 through SP-3) in the vicinity of the UST - boring SP-1 was installed to a depth of 12 ft bg where refusal encountered; noted light to strong petroleum odors below 6 ft bg with maximum of 35.8 ppm on PID at 8 ft bg - boring SP-2 was installed to a depth of 16 ft bg; light to strong petroleum odors were noted below 10 ft depth with max. of 163.2 ppm on PID at 12 ft bg - boring SP-3 was installed to a depth of 20 ft bg; light to strong petroleum odors were noted below 8 ft depth with max. of 1,272 ppm on PID at 16-18 ft bg - general soil type consists of a shallow layer of fill material consist of asphalt, bricks and wood from 0 to 14 ft underlain by fine grained sand with pebbles - one soil sample was collected from each boring at highest PID reading except boring

VACANT PROPERTY- PHASE II (Continued) **S123659582**

SP-3 - as the soil from 16-18 ft bg in SP-3 was observed to be wet, the soil sample was collected from 14-16 ft interval where 368.2 ppm was recorded on PID - minute contamination noted in SP-1 and SP-2 - some VOCs noted in SP-3 soil analyticals (in ppb): ----------SP-3 14-16 ft Toluene----------1,200 Ethylbenzene----------2,600 Xylene----------4,200 1,2,4-Trimethylbenzene------880 1,3,5-Trimethylbenzene----7,600 Naphthalene----------5,600 - two soil-vapor probes (SV-1 and SV-2) were installed in the northern portion of the building to 6 ft bg - two soil-vapor samples, one indoor air sample and one outdoor air sample were collected - since children will occupy the first floor, the indoor ambient air samples were obtained at an average child breathing zone height of 3 ft above surface ---------- - no chemical storage area were noted at the subject site soil-vapor analyticals (in ug/m3): ----------SV-1--------SV-2 Benzene----------29----------8 Toluene----------200---------130 Ethylbenzene----------2,500----------16 Xylene----------5,900---------149 - spill # 0801906 was listed as potential vapor encroachment condition to the subject property in previous Phase I - during investigation of spill # 0801906, total xylene were detected at 2 ppm in soil from western portion of the adjacent property at 620 DeGraw St, which is located to the northeast and upgradient of the subject property 01/31/19-Hiralkumar Patel. 10:05 AM:- spoke with Mr. Rabinowitz regarding children occupying first floor of future building. he mentioned that an another floor will be added above the existing one-story warehouse and site will be redeveloped into a hotel (and not into any child care center). Mr. Rabinowitz has planned to remove the UST system and will install a vapor barrier above the existing slab. 2:10 PM:- sent letter to Mr. Rabinowitz requiring delineation/remediation of contamination. letter emailed to Mr. Rabinowitz, Ruijie and DEC Sekhon. case assigned to DEC Sekhon. 4/5 - Sekhon The proposed use of the renovated building is as a rehabilitative center and offices 4/8 - Sekhon DEC reviewed, UST Closure Work Plan (Work Plan) for the above site, submitted by Impact Environmental. The scope of work to be performed under this Work Plan includes the decommissioning and removal of one (1) underground storage tank (UST) estimated to be 1,000-gallons and the associated product line and vent line piping; installation of excavation support shoring if necessary; excavation and disposal of petroleum-impacted soil to the extent practicable; exploration of potential options of should additional remediation of contamination be required, post-excavation confirmation sample collection; Site restoration; and reporting. Work plan discussed with DEC Kumar and approved. 4/11 - Sekhon Work plan approved letter send to Stephanie at spollert@impactenvironmental.com DECDOCs 5/16/19 - Sekhon Impact was onsite on Tuesday May 14th to oversee the removal of the UST. The UST was observed to have a 550-gallon capacity, and 145 gallon of an oil water mix was removed. The condition of the tank was intact, but with signs of degradation, and minor pitting/holes were noted. Minor soil staining and odors were observed, as well as some elevated PID readings. The area was over excavated as much as possible, however, the area was restricted due to an electric utility conduit located in very close proximity. Soil removed was stockpiled on site, and will be disposed off properly pending review of the waste characterization

VACANT PROPERTY- PHASE II (Continued) **S123659582**

soil sample analytical results. UST fill and vent lines were also removed, and two (2) soil samples from beneath this area were also collected in addition to the four (4) sidewall and two (2) bottom samples. 7/23 - Sekhon Impact environmental submitted end point samples results on 6/28/19 and on 7/8/19. Results discussed with DEC Kumar and contractor approved to backfill the excavation and to submit summary report. DECDOCs. 8/29- Sekhon Closure report submitted as requested. DECDOCs. 11/12/19 - Sekhon spill closed. "

Contact Name: ROSE GUIDO
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 07/24/02. Phone/Petro Oil/J.Krimgold. Spill due to a broken hose on truck. Oil spilled onto the parking lot area. Some oil went to the drywells (not into the sewer catch basins). Surface and wells were cleaned up by Milro. However, Milro observed that more oily substance was coming into the well from subsurface and install absorbent pads. J. Krimgold contacted Williams Trucking (Sally Williams @ 718-923-9600) and informed about findings. Ms. Williams refused to accept responsibility and suggested that this should be discussed with Keith Williams. J. Krimgold requested that Mr. Williams call back DEC to discuss this matter. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 10/30/06 Reassigned from Tang to Sun. (JS/MS) 11/28/06 Sun sent letter to Dolly Williams (property owner) at 225 3rd Ave, on 11/27/06 requiring that the following be submitted to the NYSDEC by 12/27/06: To rectify this problem, a letter report asserting a cause of the release and summarizing the cleanup activities, observations, post-excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office by December 27th, 2006, referencing the spill case number (see above) and the site address. (JS/MS) 03/19/07: Mrs. Williams is going to contact Milro who performed the environmental investigation at her property to see if they have the additional documentation regarding clean-up that she says has been performed. (JS/MS) 6/6/07: Called Petro Oil at 718.628.3349. They stated that they have no documentation regarding this property. 8/6/07: Called Williams Trucking again 718.923.9600. Dolly will be in the office this afternoon and will return call. (JS/MS) 9/5/07: MS contacted Dolly Williams to check on status. She has faxed a receipt from Petroleum Tank Cleaners who cleaned spill to show DEC that clean up has been performed. She has paid half of the bill and need time to pay the remainder. Her request for an extension has been granted. (JS/MS) 12/4/07: As per RK: 11/29/07 - Raphael Ketani. I spoke to the operator/assistant at PTC. She said that Ms. Williams still owes thousands of dollars and so PTC can’t release the paperwork. I called up Ms. Williams at (718) 923-9600 and told her the spill case is still open and will not be closed until we get the necessary paperwork stating that the release has been cleaned up. She said that she hasn’t been working and had to borrow some money. She said that

A. WILLIAMS CONSTRUCTION (Continued) **S108466119**

she had given PTC $1,000 more since October. I told her that PTC still isn't releasing anything. She said she will talk to them to try and get some paperwork sent to DEC. 4/15/08: Called and left message with receptionist for Dolly Williams. (JS/MM) 4/16/08: No call, sending 2nd letter requesting clean up summary, or refer to Legal Affairs (JS/MM) 4/28/08: Sent subsurface investigation letter due June 13, 2008 or goes to Legal (JS/MM) 6/20/80: Phone calls have not been returned (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/27/08: Dolly Williams has not submitted any documentation from Milro regarding the cleanup. Bill for what materials was used is in files. A Williams Trucking is supposedly in financial trouble. Refer to OGC. (JK/MM) 12/15/08: Paper file contains two faxes from Dolly Williams: The first one sent on 8/14/08 to MM contains a fax Ms. Williams received from Milro containing 2 waste manifest tickets dated 7/24/02. One is for petroleum impacted soil, speedydry, and sediment and the other is for petroleum contaminated water. The second fax was a letter to MM on 8/25/08. The letter is from Ms. Williams and says, As per my conversation with you today we are hereby requesting additional time to submit the report on the above referenced spill. Because this is an old case for Milro they need additional time to research it. The manifest was forwarded to you last week and as per your ackknowledgement you did receive them by fax. No report has been submitted to date. (JK/KG) 12/16/08: Spoke with Dolly Williams to check on status of report. She said she would have to call Milro and PTC again and check to see if they had a report. She said last she spoke to them they needed some time to look through archives. I told her the report needs to include results of soil samples. If none were collected at the time of clean-up then she will have to have install a soil boring and collect samples. (JK/KG) 01/15/09: Tried to call D. Williams - no answer. (JK/KG) 01/20/09: Rec'd voice message from D. Williams on 01/16/09. She has been in contact with Milro and Petroleum Tank Cleaners and is still trying to get the reports from them. She will be on vacation and will call back on 1/22/09 to discuss the status of the reports. (JK/KG) 01/26/09: Spoke with Dolly and told her again that the report needs to have results of GW and soil samples. If Milro doesn't have the report she will need to perform a subsurface investigation. (JK/KG) 02/27/09: Left message for Dolly Williams. (JK/KG) 03/03/09: Rec'd voice message from Dolly on 2/27/09, she will call back with more information. (JK/KG) 03/11/09: Spoke to D. Williams, she has some reports/documents that she will send. (JK/KG) 03/12/09: D. Williams called me from Petroleum Tank Cleaners. Bob Lamirata of Petroleum Tank Cleaners requested copies of letters sent to D. Williams be faxed to him in order to see what DEC required to address this spill (fax 718-624-1856). Letters dated 11/27/06, 4/16/08, and 7/8/08 were faxed. Bob will call back on 3/16 or 3/17 with more information. (JK/KG) 03/18/09: Rec'd call from D. Williams, B. Lamirata is still working on case. (JK/KG) 03/24/09: Rec'd call from Mark of Petroleum Tank Cleaners. He will fax me a report today. He said he went to the site to evaluate the conditions. He stated that the concrete is 14 inches thick in the area the discharge ocurred. Soil samples were not collected. Report rec'd via fax; under review. (JK/KG) 03/30/09: Based on the amount spilled and time that has past since this spill occurred, it does not appear that soil and groundwater would still be affected/contaminated. Therfore, this spill case is being closed. (JK/KG)"

Remarks: "spill is in a sewer on property - contacting milro for clean up "

DEC Memo:	"2/20/07 - Raphael Ketani. I visited the site today. I met Dolly Williams ((718) 399-3508, the owner, and asked to see the spill. Her daughter took me to the truck yard next door. I saw snow that was covered with a light yellow green liquid. A little bit of the liquid was draining into a drain. I smelled oil, also. I went back upstairs and told Ms. Williams that she needed to get the spill cleaned up immediately as it was going down a drain. She said that she had been in contact with PTC, but they haven't done the cleanup. I called PTC and Big Anthony (Anthony Lara) said that they hadn't received a

A. WILLIAMS CONSTRUCTION (Continued) **S108466119**

signed contract to do the cleanup. I explained this to Ms. Williams and she FAXed a signed contract to PTC. Mr. Lara said that they would be over today in the afternoon. 2/21/07 - Raphael Ketani. I spoke to Ray Lara of PTC (718) 624-4842 and he said that they took away 6 drums of contaminated snow. He said they cleaned an area of 20 feet by 25 feet and put down absorbent. 7/13/07 - Raphael Ketani. I tried to contact Mr. Lara, but could only get his assistant. She said that DEC hasn't received any paperwork because they haven't been paid for the work they did. I told his assistant that DEC will wait for the paperwork. 10/4/07 - Raphael Ketani. I tried to contact Mr. Lara, but he was out. So I spoke to the assistant. She said that A. Williams Construction still owes $3,000, but they did pay part of the bill in June. She said they have a reputation for being slow payers. I told her DEC will wait. 11/29/07 - Raphael Ketani. I spoke to the operator/assistant at PTC. She said that Ms. Williams still owes thousands of dollars and so PTC can't release the paperwork. I called up Ms. Williams at (718) 923-9600 and told her the spill case is still open and will not be closed until we get the necessary paperwork stating that the release has been cleaned up. She said that she hasn't been working and had to borrow some money. She said that she had given PTC $1,000 more since October. I told her that PTC still isn't releasing anything. She said she will talk to them to try and get some paperwork sent to DEC. 12/7/07 - Raphael Ketani. Ms. Williams called to say that she just got back to work after being sick. 12/10/07 - Raphael Ketani. Ms. Williams called to say that she can't pay PTC the remainder of the money she owes (about $2500) because she doesn't have it. She asked that I contact Bob Lamirata of PTC to find out if he is willing to release the original paperwork for the cleanup so that the case can be closed. I contacted Mr. Lamirata and he said he would prefer to get all of the money before releasing the paperwork. I told him that would be fine. 12/11/07 - Raphael Ketani. I contacted Ms. Williams and told her that DEC will wait until PTC is completely paid and they send us the original paperwork. She said she should be able to pay off the bill by January 2008. I told her we will wait. 1/9/08 - Raphael Ketani. I spoke to Mr. Lamirata (718) 624-4842. He said that Ms. Williams still owes PTC a lot of money. I told him I will not close the case. 2/12/08 - Raphael Ketani. I spoke to Mr. Lamirata. He said that Ms. Williams still owes $1500. He said he doesn't understand why she doesn't have the money to pay PTC the balance as her company is just 2 blocks away and he sees her construction equipment leave the site everyday to do work. I told Mr. Lamirata that I will have to close the case because this was not a significant spill, it happened a long time ago, and it's sitting open in our database. Based upon the fact that the spill was successfully cleaned up, the lack of human contact with the discharge, and the long amount of time that has passed since the spill took place, I am closing the case. "

DEC Memo: "9/2/2020 - Feng - Desk Duty in office. Spoke to the caller, who did not provide his name. He owns a business in the area. He said that the 601 and 615 Sackett Street are two buildinga next to each other and doing construction work. The basement entrance is next to the 617 Sackett Street. The caller sees the contractors are removing small buckets of fuel oil as he can smell it and furnaces and dumping those into the green dumpster for construction debris with words Juma 3387 on it outside the building. He does not know what s look like inside the building. It is smelly in the area. He requests an inspection by our enforcement unit. Anonymous caller 732-2339587 Email to DEC Lieutenant Doreen Lum Doreen, We received an illegal dumping

CONSTRUCTION SITE (Continued) **S126996809**

complaint. I spoke to the person who report it. He provided the phone number 732-233-9587, but not his name. He owns a business in this area. He said that the 601 and 615 Sackett Street are two building next to each other and doing construction work. The basement entrance is next to the 617 Sackett Street. The caller sees the contractors are removing small buckets of fuel oil as he can smell it and furnaces and dumping those into the green dumpster for construction debris with words Juma 3387 on it outside the building. He does not know what s look like inside the building. It is smelly in the area. He requests an inspection by our enforcement unit. See below email spill report for more details. I am referring this case to you as it is more of illegal dumping at this time. Please take a look to see if any further action shall be taken by your end. As per R. Austin, Rick Lin will be responding this evening. As per Lt. D. Lum's email, ECO Lovgren will follow up on this complaint. 9/3/20 - Obligado - Mr. Lieberman (next door office tenant (732)-233-6587) called the Duty Desk phone to update on this complaint. He said the construction workers have dumped oil into a roll off container and a truck was arriving today to remove the roll off. He stated that he told the truck driver that there was contamination in the roll off and the truck driver did not take the roll off and drove away. 9/4/20 - Sekhon ON 9/3 (PM) - Site visited. Met Victor Lee (DEP), Mr. Liberman (7322339587-next door tenant), Shaya Shapiro (3475850968 - shaya@liberty1group.com). Mr. Liberman that complaining that dumpster (Guma carting) in front of 615 Sackett st contains oil saturated soil mixed with other debris. Oil/sewer like smell observed from the dumpster contents, but with 1-2 ppm & no hit on PID on different corners of dumpster. Driver from Guma carting was there to pick that container, was asked to provide his information, and told that, this container (may be)has contaminated soil in it, and I asked him to provide his information, he refused and told me to talk to Aron. Spoke with Aron klein(Guma - 6465338277- gumaconstruction@gmail.com),and told that this containerhas potentially contaminated debris inside it. and NYSDEC needs disposal manifest and soil sample results checked for petroleum contamination. ECO Lovgren, DEC Austin, DEC Lin (email)- were updated about this situation. 9/4/20-Lin-Visited site on 9/2. The container was mostly empty. Looked into the container and observed debris and soil on the bottom. The container was mostly empty. Did not observe any signs of fuel oil or piping related to a fuel tank system. No odor petroleum odor was noted. 10/14/20-Lin-Recieved waste sampling results and no elevated VOC compounds were found. Waste was taken to Clean Earth of NJ for disposable. Received Manifests. Case closed. "

DEC Memo: "3/3/2021- DEC Piper spoke with consultant. Site had several investigations done in recent years and found low level soil and groundwater contamination. Owner is looking to enter the VCP program and has already hada pre-application meeting with DEC. Application has not been submitted though will be shortly. Site will have to adhere to spills requirements if not accepted. Report to be sent to DEC Piper and DEC Kim for review. 12/21/2021- email sent to and received by consultant. site entered VCP program c224329, manage Nathan Freeman in Albany. Spill transferred to Nathan for follo and closure."
Remarks: "soil and ground water affect by historic spill. Phase two investigation was reason for the dig, this is for potential redevelopment of the site, clean-up pending."

Update By:	DJEATON

Site Description: "Location: The site is located at 563 Sackett Street in the Gowanus neighborhood of Brooklyn, Kings County, and is identified as Block 426 lot 44. The site is approximately 0.229 acres in size. Site Features: The site is developed with a large open shed, which is divided into two portions. A two-story structure consisting of stacked metal shipping containers is present at the northeast side of the site and is used for storage and office space by the site occupants. The remainder of the site consists of an unpaved yard that is used for general storage by the occupants. The majority of the eastern portion of the yard is covered with metal plates and the remainder of the yard consists primarily of exposed soil and gravel cover. Current Zoning and Land Use: The current zoning of the property is for commercial use. The eastern portion of the shed is occupied by Partner For You, a general commercial products (e.g., plastic bottles and aluminum cans) recycling facility, and the western portion of the shed is occupied by Brooklyn Truck & Equipment Repair, a vehicle and equipment repair operation. Historical Use: The site and surrounding area have been developed for residential, commercial and industrial uses since at least 1886. Historical site uses included Nolan Bro s Contractors (1904), a wagon builder (1915), a bottle storage facility (1938-1950), parking (1969 to 2007). Geology and Hydrogeology: The site lies at an average elevation of about 15 feet. The site is generally covered with paved roads, walkways and buildings. The built environment is generally underlain by fill material used for construction and development since the 1800's. The subsurface strata at the site consists of historic fill material characterized by loose silty sand with varying amounts of brick and concrete fragments, rubber, metal wire and coal fragments extending to depths ranging from about 10 to 20 feet below grade surface. The historic fill material was underlain by alluvial deposits consisting of poorly sorted sands with gravel and marsh deposits, referred to as meadow mat, which consists of interbedded sands, clays and silts. Depth of groundwater was measured at 13.84 feet below grade surface in a monitoring well located in the center of 560 DeGraw Street and at 6.85 feet below grade surface in the southwestern corner of 560 DeGraw Street. The depth to groundwater was measured at 9 feet bgs within the former gasholder footprint. Groundwater elevation measurements recorded from monitoring wells across the former MGP site indicate that the shallow groundwater, on the east side of the Canal, generally flows westward toward the

563 SACKETT STREET (Continued) **S118141136**

	Gowanus Canal at high and low tide levels. "
Env Problem:	"Nature and Extent of Contamination: The primary contaminants of concern at the site are Semi-Volatile Organic Compounds (SVOCs) and Metals. SVOCs include Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene and Chrysene. Metals include Arsenic, Barium, Cadmium, Copper, Lead and Mercury. The Volatile Organic Compound (VOC) Benzene was detected in one groundwater well. Soil: Contamination including SVOC and Metals were observed throughout the historic fill layer that exists at the site. The fill layer is generally present from grade to depths of approximately twenty feet below grade. The SVOCs Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene and Chrysene were detected at maximum concentrations of 22.7; 14.7; 16.1 and 14.5 parts per million (ppm), respectively. Their respective unrestricted use soil cleanup objectives are 1, 1, 0.8 and 1 ppm. The Metals Arsenic, Barium, Cadmium, Copper, Lead and Mercury were detected at maximum concentrations of 36.4; 679; 34.3; 1,240; 1,840; and 1.57 ppm respectively. Their respective unrestricted use soil cleanup objectives are 13; 350; 2.5; 50; 63 and 0.18 ppm. Groundwater: Limited groundwater contamination was observed. Benzene was detected in one on-site well at a concentration of 2.6 parts per billion (ppb). The ambient groundwater standard for Benzene is 1 ppb. The SVOC benzo(b)fluoranthene was detected in one well at 0.6 ppb, exceeding its ambient groundwater standard of 0.002 ppb. In addition, the Metals Manganese and Selenium were detected in groundwater at maximum concentrations of 1,000 and 13 ppb respectively. Their respective groundwater quality standards are 300 and 10 ppb. Soil and Sub-Slab Soil Vapor: Various petroleum related VOCs were detected in the soil vapor samples collected at the site. Tetrachloroethene was detected in a soil vapor sample at a concentration of 240 micrograms per cubic meter (ug/m^3). There is no standard for soil vapor concentrations. Special Resources Impacted or Threatened: None"

Spiller Company: 999
Contact Name: BRENDAN MORAN
DEC Memo: "Sangesland spoke to Brendan Moran at Laurel Envir. A phase 2 done on a site. Sanborne says a tank once was in this location. No tank was found, but they did find contamination. Property Owner: Jack Amir 718-240-2622 fax:718-240-2662 CSL sent to: Dynamite Decorators Attn: Jack Imir 1100 Linwood Ave Brooklyn, NY 11208
06/18/08-Vought-Received call from and spoke to Chaya Sofer (718-314-7750) who works for Jack Amir who was requesting report review. 06/27/08-Vought-Reviewed Limited Phase II Subsurface Investigation report dated 5/23/08 and received on 5/29/08 form Laurel Environmental Associates (Brendan Moran Ph:631-673-0612 Fax:631-427-5323). Laurel retained by First National Bank of Long Island. Site formerly used as contractors yard from 1888 top 1926, as a garage with two (550-gallon)gasoline USTs, part of site was former ink factory. Site currently used for storage of clothing products. Report also includes Phase ESA from Laurel Environmental dated 8/9/07 that states A steel inaccessible cover which may represent a fill port was noted in the western tenant space . Additionally a cut to grade concrete filled vent pipe and small area of patched concrete which may represent an inactive fill vent pipe and a fomrer dispenser, respectively, were also observed in close proximity to the Sanborn depicted UST. A fill port labeled GASOLINE was observed in the exterior sidewalk near the central tenant space overhead door . Two stick/fill ports were noted within the western tenant space storage area. Initial sampling plan included collection of three soil samples and one groundwater sample around SB-7 to be analyzed via 8260. Later investigation included eleven geoprobe locations. Groundwater at depth of 13' below grade and expected groundwater flow to the southwest. WESTERN TENANT SPACE- Investigation of two fill ports showed they were both connected to one single UST containing 3' of gasoline with bottom of tank at 5.5'bg. The capacity of the tank likely ranges between 550 gallons and 1,500 gallons . Six geoprobes performed around tanks. Field screening of samples collected from each boring location did not show evidence of petroleum or other contamination . A confirmatory sample was collected from ten(10) to fifteen(15) feet below grade. The sample was delivered to the laboratory via courier and placed on Hold pending further instruction from the client. Analysis of the sample was later approved by the client though the sample was no longer viable . Report recommends removal or abandonment in place of UST. Five soil borings performed around UST showed no field indications of soil contamination. CENTRAL TENANT SPACE-Gasoline fill port in sidewalk was investigated and was decomissioned with concrete. Magnetic anomoly found in direction of fill piping. Soil sampling in the area of the anomaly was not conducted as a required NYCDOT sidewalk opening permit was not included in the scope of work . Geoprobe boring SB-7 was performed in area of magnetic anomaly and soil borings performed to depth of 15'bg. Soil analytical no longer viable due to retention time in lab. Three additional Geoprobe borings performed later around SB7 and soil samples were collected showing: 22,200ppb 1,2,4-trimethylbenzene(SB7A 3-5'bg), 7230ppb 1,3,5-trimethylbenzene(SB7A 3-5'bg), 1740ppb

COMMERCIAL PROPERTY (Continued) **S109062979**

xylene(SB7A 3-5'bg). Groundwater sample was collected in area if SB7C and groundwater sample showed 2ppb MTBE(SB7C). Report recommends reinvestigation of sidewalk fill port by rover camera and/or sonde tracing to determine if connection to a UST exists. If necessary, obtain NYCDOT sidewalk opening permits to excavate piping and conduct sampling in the area of the nearby anamoly . EASTERN TENANT SPACE-Soil boring performed in area of historical UST and field screening showed no evidence of contamination. Report recommends no further investigation. DEC approves recommendations in Phase II pending inclusion of requirements: 1)future use of property? 2)Central tenant space-delineation of groundwater contamination at sample at SB7A, 3)Central Tenant Space -site assessment where anomaly was found as per 40CFR280. Vought sent letter with above requirements to prepared for address on Phase II: First National Bank of Long Island 10 Glen Head Road Glen Head, New York 11545 Vought called Brendan Moran (Laurel 631-673-0612) for future property use and to explain requirements and inquire as to future use of property. Vought spoke to Moran who was unsure of future use and would return call to DEC. Vought sent out letter to above address with cc to Moran. Address of Developer: Ms. Chaya Sofer A. Shamosh Realty 620 Degraw Street Brooklyn, NY 11217 Ph: 718-240-2622 Fax: 718-240-2662 07/21/08-Vought-Received call from and spoke to Chaya. She received 6/30 letter and she provided letter to Laurel Environmental. Vought approved tank removal adjacent to SB7A in lieu of investigation and discussed above requirements. 08/07/08-Vought-Received call from and spoke to Rocky Weneskus (PW Grosser -631-589-6353) who is working for Chaya Sofer. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 10/1/10 - Raphael Ketani. The spill took place on 4/30/08 and involved the discovery of contaminated soil during an investigation. According to ACRIS, the property (block and lot 427/21) was sold in 12/1998 to Shamosh Realty, LLC, 620-628 Degraw Street, Brooklyn. By 2005, A. Shamosh Realty, LLC changed its address to 1454 East 14 Street, Brooklyn, NY, 11230. The E-docs and the paper file have the original CSL, the Laurel Environmental Associates Phase II, and Mr. Vought's Phase II review letter. There are no other spill cases for the property and no PBS registration. There are 3 tenants on the site. From the database notes, it appears that the part of the property occupied by the west tenant had a gasoline UST with product in it. The part of the property occupied by the central tenant needs the delineation of soil and groundwater contamination. There may be a UST. The area occupied by the eastern tenant does not have any environmental issues. I tried to contact Rocky Wenskus of PW Grosser (631) 589-6353, but I could only leave a message. Mr. Wenskus called me back. He said that PW Grosser did not win the bid for the work. So they had no involvement with the project. I sent a standard followup letter to Shamosh Realty and the First National Bank of Long Island requesting the remediation report. 12/3/10 - Raphael Ketani. As there has been no response to the followup letter, I sent a STIP package to Chaya Sofer, A. Shamosh Realty, LLC, 1454 E. 14th Street, Brooklyn, NY 11230. A deadline was set at January 7, 2011 for the return of the signed STIP. 1/12/11 - Raphael Ketani. I tried to reach Ms. Sofer (718) 240-2622/cell (718-314-7750), but my call was picked up by an answering machine with a message stating that I had reached Dynamite Decorators. I left messages at both of Ms. Sofer's phone numbers and stated that the spill case will be forwarded to our legal division for action. I tried to contact Brendan Moran at (631) 673-0612

COMMERCIAL PROPERTY (Continued) **S109062979**

(Laurel Environmental Associates), but I could only leave a message. I checked the PBS database, but there was no registration case. 1/14/11 - Raphael Ketani. I spoke Mr. Moran (631) 673-0612/bmoran@laurelenv.com. He said that Laurel Environmental has had no contact with A. Shamosh Realty since they performed the work in 2008. He said that this was a bank deal. He had no other contact information, but he said that they were hard to reach. I tried once more to reach A. Shamosh Realty. I called up the (718) 240-2622 number and again reached Dynamite Decorators. This time, I asked for the property owner. I was passed to Suzanne who told me that the owner is Jack Imir at (212) 532-5005. She said that I can also reach him at the (718) 240-2622 number. She said that he has several businesses. However, right now, he is out of town. He will be back teusday. Next, I successfully contacted Ms. Sofer. She said that she used to be Mr. Imir's secretary. She said that she hasn't worked for him for several years. She gave me the same (212) number for contacting Mr. Imir. 1/19/11 - Raphael Ketani. I tried to contact Mr. Imir, but I reached his assistant (212) 532-5005 who didn't give his name. The assistant told me that Mr. Imir was out of town. I asked the assistant to contact him today and find out whether he was willing to sign the STIP. I added that if Mr. Imir doesn't sign the STIP, then the case will be forwarded to our Office of General Counsel for legal action. He said that he understood and would call Mr. Imir. The assistant told me that the company I was contacting was: ESTEX House Fashion, 284 5th Avenue, NY, NY. Mr. Imir never called the Department in order to discuss conducting a followup investigation or signing the Stipulation Agreement. Therefore, I submitted a Case Initiation Form to Randall Austin, Chief of the Spills Unit, for his signature. 1/20/11 - Raphael Ketani. Mr. Imir called me today. He said that his assistant had told him that the DEC was calling. So he wanted to know what the DEC was concerned about. I told him about the contaminated soil and groundwater that was found by Laurel Environmental. I added that the DEC had sent him a CSL, a followup letter, and a Stipulation Agreement for his signature. Mr. Imir said that he never received any of these documents. I asked him where he gets his mail. He said that I should mail letters to: A. Shamosh Realty, LLC, c/o Jack Imir, 1527 Ocean Parkway, Brklyn, 11230. He added that his FAX number is: (212) 532-1414. I asked Mr. Imir about his ownership of the property. He said that he bought the property sometime in 1999 or 2000. He said that he had applied for more money for his business in 2008 and that's when Laurel did an investigation on behalf of Sovereign Bank. However, he later decided against taking the money. Mr. Imir added that Laurel never told him that more work needed to be done. He said that he was hesitant to ask for more environmental investigating because he thought that Laurel was looking to make more money. I sent him a new STIP with a 30 day deadline and a green return card, as per John Urda of Legal. I also sent the STIP by FAX. 1/25/11 - Raphael Ketani. Vinny Lovari's wife called to say that Mr. Imir had hired Island Tank (631) 662-9445 to do a soil and groundwater investigation and to take away the old fuel tank. I told Vinny's wife that soil borings were needed to determine, in general, whether there is soil contamination throughout the soil underneath the building. I asked her whether Vinny can install wells, also. She said that he can. Later, I received the green return card with Mr. Imir's signature. 1/26/11 - Raphael Ketani. Paul Stewart of Advanced Cleanup Technologies (516) 933-0655, ext 12 called and left a message. He wanted to get information regarding the site so that he

COMMERCIAL PROPERTY (Continued) **S109062979**

can write a proposal and send it to Mr. Imir. I tried to return his call, but could only leave a message. 2/3/11 - Raphael Ketani. Vinny of Island Tank (631) 662-9445 called yesterday. He said that Island Tank was approved by Mr. Imir to do the work. Geoprobing will be done on 2/3/11 and they will hunt for the tank and the piping. Later, Chris of ABC Tank called. He wanted to know what will be needed to investigate the site. I told him that 15 borings would suffice for an initial investigation of the site, along with investigating the anomaly in the eastern section, the fill port in the central section and the tank and fill ports in the western section. He said that he will talk to Mr. Imir about the proposal and see whether he will get the job. 2/8/11 - Raphael Ketani. Vicki of Island Tank (Environmental) sent me 12 pictures of the fuel management system. I put them in the E-docs. 2/10/11 - Raphael Ketani. Chris from ABC Tank (718)272-2800 called. He said that he had spoken to Mr. Imir and that he was putting together a price for doing the investigative work. He said that he needed two more days to calculate the price and put together the contract. I told him that would be fine. Chris said that he expected to start the work next wednesday, 2/16/11. A little while later, Tom Gallinger (tgallinger@optonline.net) called. He said that he was working with Chris of ABC on the project. He wanted to know more about the site and what type of work was required. I read him the case notes describing what had been done in each section of the site. He requested the last investigation report that had been done for the site. I sent him the Laurel Phase II. 2/14/11 - Raphael Ketani. Mr. Imir called me today. He said he had sent the signed STIP via UPS. I told him that there were mistakes with the address and that UPS couldn't deliver the package. I added that they will send the STIP in the package back to him and to then put the STIP in a regular envelope and send it to the DEC. I told him that we will not penalize him for this problem. He said that he will resend the STIP once he gets it by regular mail. Mr. Imir added that he is also waiting for a proposal from each of the three companies he contacted. He said that he called these companies many times, but they are slow in getting back to him. I told him that the DEC is glad that he is moving forward with the project and to send me the proposal once he gets it. He said that he will keep me updated. 2/15/11 - Raphael Ketani. Alex Avracen of Cosmos Environmental Services Inc. called to find out what the DEC believes is needed to investigate the site. I told him what the site history was. He said that he had reviewed the Laurel Environmental Phase I and Phase II. He said that he will make a proposal to Mr. Imir. 2/17/11 - Raphael Ketani. I tried to contact Mr. Imir (212) 532-5005, ext 13/(718) 240-2622 regarding the submission of the STIP, but I could only leave messages. Mr. Imir called me back. He said that he still hasn't received the UPS package with the STIP with the original signature. He will find out where it is and give me a call back. Later, Mr. Imir left a message that he had the package and was putting it in the regular mail today, as I requested. 2/23/11 - Raphael Ketani. Today I received the signed STIP package. I forwarded it up to our legal staff. 3/1/11 - Raphael Ketani. I received an e-mail from Lou Oliva, Regional Attorney, with a pdf file of the A. Shamosh Realty executed STIP. I sent a copy of the STIP to Mr. Imir. Later, Mr. Avracen (516) 374-7890 called me. He said that Mr. Imir had hired him. He will submit a proposal to the DEC on March 9. 3/25/11 - Raphael Ketani. I called up Mr. Avracen (516) 374-7890 and told him that the deadline for submitting the work plan had expired. Mr. Avracen said that he didn't realize that the

COMMERCIAL PROPERTY (Continued) **S109062979**

expiration date was today. He asked that I give him until monday to submit the work plan. He said that it will contain all of the elements that we had discussed. I told Mr. Avracen that this would be alright, but no later. Otherwise, I will have to take action. He asked for May 2 as the deadline for submitting the investigation report. I asked him whether this was enough time to do the work, get the sample results and submit the report. Mr. Avracen said that it was. Later, I tried to contact Mr. Imir (212) 532-5005, ext 13/(718) 240-2622. However, I could only leave a message that the deadline for submitting the work plan had passed. 3/28/11 - Raphael Ketani. Mr. Avracen sent me a work plan by e-mail. I reviewed it and disapproved it. I disapproved it for the following reasons: 1) there were no borings in the back areas of each section; 2) the boring next to the fill port was for 4 feet, rather than digging until the most contaminated sample is found; 3) he was going to take composite samples where no contamination was found - this is not the proper sampling method; 4) a ground penetrating radar survey needed to be done for each section and any anomalies needed to be investigated and borings done if a UST is discovered Later, Mr. Imir called. He just found my message from 3/25/11 on his answering machine. He said that he will do whatever the DEC feels is necessary. He asked whether Mr. Avracen had sent the work plan. I told him that he had and I had disapproved it because it needed changes. I added that Mr. Avracen had been informed by e-mail about the changes. I also told Mr. Imir to talk to Mr. Avracen about the changes. Mr. Imir asked whether legal action was going to be taken by the DEC. I told him that we wont if we get the revised work plan very soon. 3/31/11 - Raphael Ketani. Mr. Avracen sent me the revised 3/25/11 work plan. It incorporated the above listed 4 items. I approved the work plan and e-mailed Mr. Avracen (516) 374-7890 to proceed as soon as possible. 5/3/11 - Raphael Ketani. I called up Mr. Avracen (516) 374-7890 and asked him where the investigation report was. He said that he had just received the signed contract and a check via overnight mail from Mr. Imir. He said that the envelope was mailed yesterday. Mr. Avracen said that the mark outs will be done this week and the work will start next week. I told Mr. Avracen to keep me informed regarding progress on the project. He said that he will. 6/7/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding progress at the site, but I could only leave a message. 6/10/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding progress at the site, but I could only leave a message. Mr. Avracen called me back. He said that he had done all of the drilling, and soil and groundwater sampling. He received the analytical results for the samples and they are low in concentration, except for one place under the sidewalk. He believes that there were gasoline overfills. There are two tanks. One has gasoline and one has fuel oil. Mr. Avracen will send the full report soon. 8/3/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding progress at the site, but I could only leave a message. Mr. Avracen called me back. He said that Mr. Imir finally made the last payment for the work that was performed. So, the DEC will receive the investigation report sometime during this week or next week. 9/15/11 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding his sending the investigation report, but I could only leave a message. 9/16/11 - Raphael Ketani. I spoke to Mr. Avracen. He said that he had sent the report some time ago. I told him that we never received it. I added that sometimes the lab analytical report

COMMERCIAL PROPERTY (Continued) **S109062979**

is too large to send with the rest of the investigation report. Mr. Avracen said that he will send the two items separately this morning. 9/19/11 - Raphael Ketani. Today I received the COSMOS Environmental Services 8/1/11 Investigation Report. I began my review. 9/22/11 - Raphael Ketani. I finished reviewing the COSMOS 8/1/11 report. Western section (hardware store): 3 soil borings performed in the vicinity of the gas UST, 1 boring performed in the rear of the store, 1 well installed; sample from B-10 near the gas UST had elevated target compound hits, B-9 sample had 2 SVOCs above TAGM standards Central section (fish market): 3 soil borings performed in the vicinity of the gas UST, 1 boring performed in the rear of the store, 1 boring at the remote fill in the sidewalk, inspected two 275 gal. ASTs with basement soil analysis; sample B-8 along the gas tank fill line had elevated VOC concentrations, but no contamination below the 1.5' to 2.5' sampling zone, B-7 had elevated concentrations of target compounds Eastern section (bar/club): 3 soil borings performed in the vicinity of the gas UST, 1 boring performed in the rear, 1 well installed in the northeast corner; samples from B-3 and B-4 had elevated concentrations A GPR survey was performed in the rear of the building, but no anomalies were found that would suggest the presence of a UST. Groundwater is at about 13 feet below grade and didn't have product on it, nor a sheen or elevated hits. The cellar floor is made of concrete with some patches. There were no odors, nor stains on the concrete. In the report, Mr. Avracen recommended doing the following: 1) abandon the 3,000 gal. UST in the courtyard of the western section and do 2 borings below the UST 2) the gas UST in front of the west section should be abandoned and soil samples should be collected below the tank 3) the gas UST in the central section and the surrounding soil should be removed and end point samples taken 4) contaminated soil should be excavated along the fill line and end point samples taken 5) perform a test pit at the fill port in front of the east section to see if there is a UST and if there is, then remove the tank and any contaminated soil and do end points Additionally, from the soil data that was presented in the report, I determined that soil excavation should take place at the locations of B-3 and B-7. The soil should also be removed from the location of boring 7A from the Laurel Environmental Associates Phase II report. I drafted a letter to Mr. Imir and Mr. Avracen approving the COSMOS 8/1/11 report and the recommendations contained therein. I added my own recommendations listed above. The draft letter was sent to Mr. Austin for his approval with a deadline of October 21, 2011 for the work to start. 9/23/11 - Raphael Ketani. The letter was approved by Mr. Austin and was sent out today. 10/12/11 - Raphael Ketani. Vinny Lovari (631) 662-9445 of Island Tank called and left a message yesterday. I returned his call today and left a message. Later, Mr. Lovari called. He said that Mr. Imir was hiring him to deal with the USTs, the fill line and to check and see whether the fill port in front of the east section is connected to a tank. I told him that if there is contaminated soil below a tank, then the tank will have to be removed unless its removal would jeopardize the building's foundation. Mr. Lovari said that he understood. Mr. Imir called. He wanted to clarify what the DEC wanted done. I told him that the work that should take place was indicated in the DEC 9/23/11 letter. Mr. Imir said that he had the letter and he sent a copy to Mr. Lovari along with the COSMOS report. He added that he gave Mr. Lovari the tank work as this is his specialty. I told him that would be fine. 10/18/11 - Raphael Ketani. Mr. Imir called and requested an extension

COMMERCIAL PROPERTY (Continued) **S109062979**

of the deadline for starting the UST abandonment and removal and additional work. He said that many holidays were coming up and that he needed to be out of the country for a short while, too. Mr. Imir added that he still hasn't decided whether COSMOS or Island Tank will do the work. I changed the deadline and gave him until 11/18/11 to start this phase of the work. 11/16/11 - Raphael Ketani. Danny Singh of Don Carlo Environmental (718) 857-3100 called. He said that Mr. Imir was going to sign a contract with Don Carlo for doing the work that was recommended in DEC's 9/23/11 letter. I told him that would be fine. 12/1/11 - Raphael Ketani. Today I reviewed the Don Carlo 11/16/11 Remedial Action Plan. The only comments I had were that the VOCs should be analyzed by method 8260, the CP-51 lists of VOCs and SVOCs should be used and that Don Carlo should see whether there is a UST below the sidewalk. I sent an e-mail approving the RAP with my comments. 12/13/11 - Raphael Ketani. Mr. Singh called today. Don Carlo has removed the two 275 gal. ASTs and the one 1,000 gal. gasoline UST. They did a GPR survey for any tanks or piping near the seafood store, but didn't find anything. The 1,000 gal. UST was in the area of the hardware store. They had removed the contaminated soil from the sides of the excavation, but then they dug down 11 feet to remove the rest of the contaminated soil. Mr. Singh said that the soil still smelled of gasoline, but that they were afraid to go deeper for fear of endangering the foundation. I told him that they should have been digging at a 45 degree angle away from the foundation and that the DEC never asks anyone to dig to the point of endangering a foundation, utilities or appurtenances. Mr. Singh said that his crew will take soil samples from the side of the hole, from under the vault and from the bottom and then backfill the hole. He said that two wells will be installed for soil treatment injections. I asked him whether there was a downgradient well in the area. He said that there is a well about 7 feet upstream. He added that on 12/20 and 12/21, they will have access to the lounge and will do a GPR survey to determine whether the 3,000 gal. UST is still there. 1/4/12 - Raphael Ketani. Mr. Imir (212) 532-5005 ext 13/(718) 240-2622 left me a message and I tried to contact him. However, I could only leave a message with his secretary. Mr. Imir called me back. He said that Mr. Avracen wanted to do soil treatment injections at the location of B-7 from his 8/1/11 COSMOS report. He said that the DEC had approved the work, but that he wasn't sure it was necessary as soil had been dug out down to 11 feet already. I told Mr. Imir that contamination had been left because it was not a good idea to dig out more soil next to the foundation. I looked at the data in the 8/1/11 report and told Mr. Imir that I would have to talk again to Mr. Avracen to see whether he had other soil data for this location. I added that if Mr. Avracen did take another soil sample after the excavation was completed, then this information may be helpful in determining whether soil treatment is necessary. I said that maybe it really wasn't. However, I couldn't promise him anything. Mr. Imir said that he understood and that he will have Mr. Avracen call me tomorrow. Lastly, I asked who is doing the tank removal and abandonment work. He said that it was Don Carlo. 1/6/12 - Raphael Ketani. I spoke to Mr. Singh (718) 857-3100 regarding the possible soil treatment of the area around B-7. He said that Mr. Imir and him have been having disussions about this and have been going back and forth on the issue. I told Mr. Singh that the DEC had taken another look at the contamination levels at B-7 and had decided that soil treatment was not necessary. I told him that this decision was

COMMERCIAL PROPERTY (Continued) **S109062979**

based on the facts that the contamination is in a very localized area, the soil had been dug out down to 11.5 feet by COSMOS, no more digging could take place because the location is next to the foundation, and because the analytical results were not high for a commercial site. Mr. Singh said that he understood. I told him that Don Carlo should continue to do the rest of the work that they plan to do and send the DEC a remediation report. We will look at the report and decide whether to close the spill case. With that, the conversation ended. I spoke to Mr. Imir (212) 532-5005 ext 13/(718) 240-2622 regarding the DEC's decision not to require soil treatment for the area of B-7. However, I told him that the rest of the remediation and tank removal work had to continue. Mr. Imir said that he understood and the conversation ended. 2/17/12 - Raphael Ketani. I received the January 2012 Don Carlo Tank Closure Report and began my review. 2/29/12 - Raphael Ketani. I finished my review of the Tank Closure Report. The descriptions of the locations of various parts of the site and the tanks are 180 degrees different from the descriptions in the Laurel Environmental and Cosmos Environmental reports. It appears that the north arrow in the Don Carlo site figure is pointed in exactly the opposite and wrong direction. A check of the Hagstrom Map seems to indicate that the Don Carlo figure is wrong. Nevertheless, I continued to work with the figure and compare it to the descriptions in the report. The ASTs and the 1,080 gal. UST in the hardware store (east section) were removed. Figure 1 shows that lots of contaminated soil was also removed. The excavation area may encompass the location of boring B-3 of the Cosmos investigation (see the September 23, 2011 DEC letter). A composited soil sample was taken at 3 feet bgs at the suspected pump island location and composited samples were taken from the sidewalls of the 1,080 gal. UST grave at 5 feet bgs. Two excavations were dug in the northwest corner of the seafood depot store (central section). Contaminated soil was removed in the vicinity of borings SB-7 and SB-7A of the Laurel Environmental investigation (see the September 23, 2011 DEC letter) and boring B-7 of the Cosmos investigation. The larger test pit was dug to 12 feet bgs and the smaller one was dug to 4 feet bgs. Samples were taken at 9 feet and 12 feet in the large pit and at 4 feet in the small pit. Three 550 gal. USTs under the lounge (western section) were cleaned out and abandoned in place. Two soil samples were collected from this area. One was a composite of the soil samples from the ends of each tank at 4 feet bgs (tank #004 under the lounge hallway; tanks #005 and #006 under the southeast quarter of the lounge itself. The other was from between tanks #005 and #006 at 6 feet bgs. A soil was sample was taken from the remote fill box location at 2 feet bgs and the last soil sample was taken from the vicinity of the oil water separator at 8 feet bgs. The oil water separator, itself, was cleaned of sludge and filled with cement. The soil end point results were, in general, almost entirely non-detect with only a small number of very low VOC and SVOC hits. However, there were high SVOC exceedences for benzo series analytes and their combustion products. These results are interpreted to represent historical fill as the naphthalene results for the same samples were either non-detect or very low. Soil disposal manifests, tank removal and closure in place affidavits, forms indicating that the liquids from the tanks were disposed of, a copy of analytical report and a copy of a PBS registration application were enclosed in the report. The report was deficient as not enough soil samples were taken around the tanks under the lounge (#004 to #006). Overall, too many samples

COMMERCIAL PROPERTY (Continued) **S109062979**

were composited. This gave an unclear picture regarding what soil conditions are under the site. It is also not clear whether all of the contaminated soil was removed from around the 1,080 gal. tank and the location of B-3. Additionally, Figure 1 is not to scale and this makes understanding where the borings were installed unclear. For this same reason, it is also not clear whether enough borings were installed in any of the sections of the site. Figure 1 also does not show the locations of the borings and wells that were previously installed, nor the location of the 3,000 gal. UST that was depicted in Figure 1 of the Cosmos Environmental report. Also, I could not find a current listing for the site in the PBS database. 3/1/12 - Raphael Ketani. I sent a letter to Mr. Imir and to Mr. Singh (718) 857-3100 disapproving the Tank Closure Report and explaining the deficiencies. Also, Mr. Imir was informed that the lack of a PBS registration for the site was a violation of 6NYCRR Part 612 and subject to penalties and fines. A deadline was set as March 30 for the submission of a work plan to perform more soil borings in the vicinities of tanks #004 to #006, and in the vicinity of the 1,080 gal. tank and B-3 excavation. 3/15/12 - Raphael Ketani. Mr. Imir (212) 532-5005 ext 13/(718) 240-2622 called me today regarding the results of the Don Carlo investigation and my letter dated 3/1/12. He explained that Don Carlo had lead him to believe that the remediation had been completed and no more work needed to be done. However, my 3/1/12 letter indicated that more work needed to be done. I told him that there was only one boring done in the area of tanks #005 and #006. So this was insufficient. He said that he was out of money and couldn't afford to have more work done. I told Mr. Imir that the DEC still didn't have a good idea of the subsurface soil conditions as the samples were composited. Mr. Imir asked whether the DEC could reduce the amount of requested work (soil borings). I looked at the Laurel Environmental plan and the results for borings SB-4 to SB-6 and told him that no borings would be required around tank #004. However, I said, three borings would be needed between the excavation pit for the former 1080 gal. tank and the location of COSMOS Environmental's boring B-3. In the end, Mr. Imir agreed to have 7 more borings done. He will contact Don Carlo and have them do the work. Lastly, the new PBS registration for the tanks at the site is #2-611758. 3/30/12 - Raphael Ketani. Mr. Imir's assistant called. She said that she was having trouble lining up a contractor to do the work reguested by DEC and that Mr. Imir was out of the country and wouldn't be back for about a month. She wanted an extension of the deadline to submit the work plan. I gave her until May 18 to submit the plan. A little while later, Mr. Avracen (516) 374-7890 of COSMOS Environmental called. He asked for clarification regarding what the DEC wanted in the way of investigative work. I told him about the need for the 7 borings. He said that he will get on this right away. 6/11/12 - Raphael Ketani. I spoke to Mr. Avracen (516) 374-7890 regarding the work plan. He said that he couldn't start the work because he needed to review the Don Carlo Tank Closure Report first to see whether they pumped out the sludge from the twin tanks under the club area. He said that, from what he knew, Don Carlo had just sucked out what liquid they could through the 2 inch direct fill ports and then filled the tanks with sand. So the walls of the tanks may still be covered with sludge and the bottom, too. He said that it wouldn't pay to do borings around the tanks if they have to be opened up and removed. I told him to go ahead and review the report thoroughly and then submit a work plan. He said that he will. He will

COMMERCIAL PROPERTY (Continued) **S109062979**

call me sometime during the week of June 18 to discuss a plan of action. 10/22/12 - Raphael Ketani. Mr. Avracen (516) 374-7890 called. He did more soil borings in the floor of the lounge and sent off the samples. Some borings were clean, but others had strong odors. He will get the results in two weeks. 4/15/13 - Raphael Ketani. As I hadn't received any reports or communication from Mr. Avracen in some time, I left him a voice message. I also sent him an e-mail stating that if the Department does not receive the reports by April 26, 2013, then we will take legal action as the deadlines in the Stipulation have not been met. I contacted Jack Imir (212) 532-5005 ext 13/(718) 240-2622 and asked him why the DEC hadn't received any reports or contact from Mr. Avracen. Mr. Imir said that he had paid him. He read to me an e-mail from 10/22/12 wherein Mr. Avracen had acknowledged receiving the payment he was due. Mr. Imir told me that he will e-mail Mr. Avracen demanding that the reports be sent. 4/17/13 - Raphael Ketani. Mr. Avracen called me back. He said that he did the soil borings in the lounge area, in the sidewalk in front of the lounge and in the vicinity of the 1,080 gal. tank and the location of B-3 in the east section of the property. All of the results came up clean, except the one for the outside boring next to the fill pipe for the twin USTs under the lounge. Mr. Avracen added that he didn't know whether the USTs under the lounge had been abandoned properly, but he will have to find this out. I asked Mr. Avracen when I would receive the investigation report. He said that he will send it this week, even though Mr. Imir owes him a little money. 5/13/13 - Raphael Ketani. I tried to contact Mr. Avracen (516) 374-7890 regarding the submission of the latest investigation report, but could only leave a message. I tried to contact Jack Imir (212) 532-5005 ext 13/(718) 240-2622 regarding the latest investigative work that was performed and the report for this work, but I could only leave a message. Mr. Imir called me back. He said that he had paid Mr. Avracen everything that he was owed. He added that Mr. Avracen told him on 5/10/13 that the report would be sent. I told Mr. Imir that, according to Mr. Avracen, the only issue was some contaminated soil outside at the fill port to the twin tanks. I added that I will set a new deadline of May 24, 2013 for receipt of the report. I again reviewed the January 2012 Don Carlo Tank Closure Report. Within the report, Don Carlo indicated that they had cleaned out the 3 USTs below the lounge and had abandoned them in place. They had also removed the 1,080 gal. UST and two nearby 275 gal. ASTs in the basement. Contaminated soil was found next to the fill pipe and box under the sidewalk that had served the twin 275 gal. USTs under the lounge area. The soil was removed down to 2 feet. 5/14/13 - Raphael Ketani. Mr. Avracen sent me an e-mail stating that he will send the report tomorrow. 6/6/13 - Raphael Ketani. Mr. Avracen sent the report yesterday and I began my review today of the 11/22/12 Remedial Investigation Report. As per my 3/15/12 conversation with Mr. Imir, 7 more borings were performed by Cosmos. According to the report, the work started on 10/12/12. Three (3) borings were done in the east section of the property in the vicinity of Cosmos boring B-3 and the former location of the gas UST. Four (4) borings were done in the west section of the property in the area of the twin gas USTs. All borings were performed to 12.5' to 13' bgs. The soil samples for the east section did not have VOC exceedences of the CP-51 unrestricted residential standards, but there were SVOC exceedences. Initially, 3 attempts were made close to the wall of the building in the west section, but a concrete obstruction was hit at 18' to 24

COMMERCIAL PROPERTY (Continued) **S109062979**

below the floor. PID hits in the three holes were from 250 ppm to 325 ppm. The head space and interface soil samples of the other borings in the west section did not have elevated VOC concentrations. However, there were SVOC exceedences. The VOC results were almost entirely non-detect for all of the samples, except B-14.2. This sample had one exceedence for total xylenes of 2,000 ppb. All of the soil samples had many SVOC hits and exceedences for the benzo series of analytes and their combustion products. However, B-11.2 had a 33,000 ppb exceedence for naphthalene and much higher benzo series exceedences than the other samples. 6/7/13 - Raphael Ketani. I called up Mr. Avracen (516) 374-7890 regarding the confusing highlighting for boring sample B-11.2. He said that naphthalene and the benzo series should have been highlighted, not the RDL numbers. Having answered my questions, I approved the report. 7/3/13 - Raphael Ketani. The information in the spill case was presented to staff at the DEC. Based upon their review, it was determined that the residual contamination was not a threat to people or the environment. Therefore, the spill case was approved for closure effective today."

Remarks: "FOUND DURING SOIL BORINGS, BELIEVES IT TO BE HISTORIC"

BROWNFIELDS:

Name:	585 UNION STREET
Address:	577-599 UNION STREET (AKA 586 SACKETT STREET)
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	619763
Acres:	0.770
HW Code:	C224329
SWIS:	2401
Town:	New York City
Record Added Date:	06/03/2021
Record Updated Date:	08/10/2021
Update By:	HMDUDEK
Site Description:	"Location: The site is situated in an urban area surrounded by commercial and residential properties. The site was initially comprised of two (2) parcels (Block 433 and Lots 28 and 46), however, it should be noted that Lot 28 and Lot 46 have been merged as of March 29, 2021 and the site is now identified only as Lot 28. The subject property has a total footprint of approximately 33,550 square feet (SF). Site Features: The main site features are two (2) single-story warehouse buildings. Current Zoning and Land Use: The site is currently zoned for manufacturing (M1-2) and is located within the Gowanus Canal Corridor as well as the Red Hook-Gowanus Brownfield Opportunity Areas. The surrounding parcels are used for a combination of residential, commercial and light industrial/manufacturing purposes. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that as early as 1889, lot 28 was used as a timber yard and lot 46 contained a single building used as a paint shop. The 1938 map depicts water distilling on lot 46, and lot 28 was improved with the current warehouse structure which was utilized by the NY Fire Department as an automobile repair garage and by the Telegraph Department for storage. By 1950, lot 28 was used by the NY Fire Department Telegraph Bureau, and by 1982, the South Brooklyn Casket Company occupied the entire site. Site Geology and Hydrogeology: The ground surface within the site is generally flat and the elevation of the property is approximately +15 (NAVD-88) feet. During previous investigation activities, groundwater was encountered at depths ranging from 11 to 15 feet below ground surface (bgs). Based on United States Geological Survey (USGS) mapping, groundwater is inferred to flow to the west toward the Gowanus Canal, which is located approximately 800 feet west of the Site. The site is not located in the 100-year or 500-year flood zone, however, Federal Emergency Management Agency (FEMA) flood maps show that the site is located adjacent to the 500-year flood zone associated with the Gowanus Canal to the west. Based on observations made during soil boring activities, subsurface soil at the site consisted of urban fill, which was primarily comprised of slag, brick, and gravel in a brown medium-grained sand matrix. Urban fill was encountered at a depth interval from grade to 15 feet bgs throughout the majority of the site. Neither native material, nor bedrock was encountered during this investigation."
Env Problem:	"Information submitted with the BCP application regarding the environmental condition at the site are currently under review and

DEC Memo: "need to send TTF letter no PBS for this address. 4/28/05. J.Krimgold reviewed a letter report submitted by Mercury Tank & Pump dated April 25, 2005. According to the report a 550 gal #2 oil tank failed the test due to disconnected pipe fittings on the top of the tank. The tank was empty at the time of test. Tank top was excavated,tank was cleaned up and filled with concrete slurry. Before this a hole was drilled through the bottom of the tank to obtain a soil sample. All analytes were found below TAGMs objectives. NFA letter. "
Remarks: "Doing a tank test on an old heating tank that no one knew was there. No contamination found or evidence of a leak. Ullage failure... unsure of any removal of tank."

DEC Memo:	"10/09/12-Hydroteck sent the site assessment report dated June 29/2012. Reviewed the report a total of four soil probes were installed during the investigation. SP-6 were installed on northeast portion of the property, SP-7 were install on the southeast portion of the property, SP-8 were installed on the central portion of the property, SP-9 were installed on the west central portion of the property. The soil analitycal results indicated that no VOCs were detected at a concetration exeeding the CP-51 Table 3 Soil Cleanup Levels. The following SVOCs were detected at concentrations exceeding the CP-51 Table 3 Soil Cleanup Levels: Benzo(a) anthracene,was detected in samples SP-6 at(4-6')(53000 ug/kg), (8-10')(6650 ug/kg), SP-7 (0-2')(74600 ug/kg), (10-12') (3710 ug/kg) and Sp-9 (12-14') (8620 ug/kg), Benzo (a) pyrene in samples SP-6(4-6') (43400ug/kg), (8-10') (6020ug/kg), Sp-7 (0-2') (622000)ug/kg, (10-12') (3620ug/kg) and SP-9 (12-14') (8110 ug/kg). Benzo(b)Fluoranthene in samples SP-6 (4-6') (34600 ug/kg), (8-10')(4610 ug/kg), Sp-8 (0-2')(43600 ug/kg), (10-12')(3030 ug/kg)and SP-9 (12-14') (7440 ug/kg). Benzo(b) Fluoranthene in samples SP-6 4-6')(40100 ug/kg), (8-10')(6230 ug/kg), SP-7 (0-2')(55000 ug/kg) (10-12')(2750 ug/kg) and Sp-9 (12-14')(6920

PRIVATE DWELLING (Continued) **S112226289**

ug/kg). Chrysene in samples Sp-6 (4-6')(48500 ug/kg)(8-10')(6230 ug/kg),SP-7 (0-2')(69300 ug/kg)(10-12')(3200 ug/kg)and Sp-9(12-14')(9380 ug/kg). Dibenzo(a)anthracene in samples Sp-6 (4-6')(5070ug/kg), (8-10')(241 ug/kg), Sp-7 (0-2')(10000ug/kg)(10-12')(552 ug/kg)) and SP-9 (12-14')(1110 ug/kg). Fluotranthene in samples Sp-6 (4-6')(115000 ug/kg), (8-10')(1860 ug/kg)and Sp-7 (0-2')(179000 ug/kg) (10-12')(6090 ug/kg) Indeno(1,2,3,c-d)Sp-6 (4-6') (18500 ug/kg), Sp-7 (0-2')(29300 ug/kg)) (10-12') (1120 ug/kg) and Sp-9 (12-14')(2540 ug/kg). Four(4) Monitoring Wells were installed. The groundwater flow beneath the site is toward West. Groundwater depth is at 11 feet. The groundwater analytical results indicated VOC 1,2,4 Trimethylbenzene 9.4 ug/L, 1,3,5 Trimethylbenzene 9.1 ug/l, Benzene 4.1 ug/L, Ethylbenzene 5 ug/L, Isopropylbenzene 7.8 ug/L n-propylbenzene 13 ug/L, Naphthalene 12 ug/L exceeding the Groundwater standard in MW-2. The following SVOCs 2,4,5 trichlorophenol, 2,4,6 Trichlorophenol, 2 Chlorophenol, 2- Nitrophenol, 4-Chloro-3-Methylphenol, 4 Nitrophenol, Benzo (a) Anthracene, Benzo(a) Pyrene, Benzo(b)Fluoranthene, Benzo (K)Fluoranthene, Bis (2-Choroethyl) ether, Chrysene, Hexachlorobenzene, and Phenol are present in MW-1, MW-2, MW-3 and MW-4 at concentrations exceeding the Groundwater Quality Standard. Bis(2-ethylhexyl)phathalate was detec at a concentration of 421 ug/L exceeding the Groundwater Quality Standard in water sample from MW-2. Methylphenol was detect at a concentration of 1.18 ug/L exceeding the Groundwater Quality Standard in the water sample from MW-4. 03/29/13- Received the Limited Phase II dated February 7, 2013 and submitted by Hydro Tech Environmental. The limited Phase II performed the collection of duplicate samples (Sp-1 to Sp-9) to verified the concetrations of SVOCs. The 4 soil probe were reinstalled and sampling. "

Remarks: "GW CONTAMINATION, VLC."

Tank Info:

Tank Number: 001
Tank Id: 65196
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

L09 - Piping Leak Detection - Exempt Suction Piping
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 2000
Tightness Test Method: NN

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Record Added Date: 04/29/2019
Record Updated Date: 06/07/2021
Update By: JHOCONNE
Site Description: "Location The site is located in an urban area in the Gowanus neighborhood of Brooklyn. The Site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was improved with a 360 square foot at grade storage building, a cashier s kiosk, and a canopy covering the pump islands. The site is no longer being used as a filling station and the kiosk has been removed. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site Based on information gathered as part of the February 2019 Phase I ESA, the site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station since then. Site Geology and Hydrogeology The stratigraphy of the site, from the surface down,

204 4TH AVENUE (Continued) **S125298840**

consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. Historic urban fill material is underlain by silty light brown sand, underlain by a layer of grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 14 feet below grade and generally flows towards the north/northwest. "

Env Problem: "Nature and extent of contamination Based upon investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Soil - VOCs including 1,2,4-Trimethylbenzene was found in soil at concentrations of 2 parts per million (ppm) compared to restricted residential soil cleanup objective (RRSCO) of 52 ppm and the protection of groundwater SCO (PGSCO) of 3.9 ppm. Xylenes was found at concentrations of 3,600 ppm (RRSCO is 100 ppm, PGSCO is 1.6 ppm). SVOCs including benzo(a)anthracene was found at concentrations of 120 ppm (RRSCO is 1 ppm). Benzo(b)fluoranthene was found at concentrations of 110 ppm (RRSCO is 1 ppm). Metals including lead was found at concentrations of 3,170 ppm (RRSCO is 400 ppm), arsenic was found at 542 ppm (RRSCO is 16 ppm). Groundwater - VOCs including benzene was found in groundwater at concentrations of 9.6 parts per billion (ppb) compared to Ambient Water Quality Standards (AWQS) of 1 ppb. 1,2,4,5-Tetramethylbenzene was found at concentrations of 61 ppb (AWQS is 5 ppb). SVOCs including acenaphthene was found at concentrations of 64 ppb (AWQS is 20 ppb). Metals including arsenic was found at concentrations of 33.61 ppb (AWQS is 25 ppb). Soil Vapor - VOCs including 2,2,4-Trimethylpentane was found throughout the site but at highest concentration at the north-east portion of the site at concentrations of 509,000 micrograms per cubic meter (ug/m3). "

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/23/2004-Sun-File Review by Sun: Site Status Update Report, Aprip 2003 through August 2003, by Geological Services Corp (GSC), dated 10/16/2003: Six (6) monitorin wells were gauged and sampled on July 17, 2003. A soil vaplr extraction well (SVE-1) was installed on July 30, 2003 and pilot test on SVE-1 was conducted on August 8, 2003. No LPH was detected. The groundwater depth ranged from 11.74 feet to 15.68 feet, and groundwater flow was in northwest direction. MW-2 has the maximum BTEX concentration of 11,400 ug/l and maimum MTBE concentration of 1,800 ug/l. Work performed during this period included repair and patch leak from wall in oil closet located in the subway, installation of three additional wells. A remedial action plan will be submitted by GSC based on the results of the pilot test. Per Hess' letter to DEC dated 10/28/2003, Hess is working with the New York City Transit Authority (NYCTA) to address an apparent hydrocarbon sheen in conjunction with groundwater seepage within a subsurface subway station utility closet. (Sun) 01/22/2004- Site visit by Joe Sun and Mark Tibbe on 1/22/2004. Inspection with Mike Matri of Hess and William Schaefer of GSC showed that some slight infiltration of groundwater continues where the urethane grout waterproofing did not adhere to the concrete. GSC has recommended a second waterproofing event utilizing a hydraulic concrete product. The product is now waiting for NYCTA's approval. (Sun) SEE Also Spill Nos. 0104798/0201876. 05/05/04-File Update by Sun: On 05/05/04 Sun sent a letter to Hess requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary report followed by a Remedial Action Plan. The Department set a deadline of May 28, 2004 for signing the Stipulation Agreement. (Sun) 06/06/05 File Update by Sun: On 06/06/05, Sun sent a letter to Hess' Project Manager, Mike Matri, informing him that the Department approves Hess proposed plan to take the opportunity of station renovation commencing in June, 2005 to install below ground environmental remediation infrastructure for future remediation of petroleum impacted soil and groundwater. Specifically, the Department approves the following planned installations at the station: 1.Installation of three additional SVE wells (PMW-8 through PMW-10). 2.Modification of existing 2-inch well FW-7 to include a 1-inch injection line which will be piped to the proposed remediation system location, The piping will potentially be used in the future for injection purposes (e.g., Biosolve, chemical oxidation and/or bioremediation). 3.Monitoring wells SVE-1, MW-2, and the three proposed SVE wells (PMW-8 through PMW-10) will have environmental piping installed from the wells to the proposed system location area.

HESS STATION 32530 (Continued) **S104276740**

The Department requires a formal Remedial Action Plan (RAP) in conjunction with the station redevelopment activities be submitted by Hess during the third quarter of 2005. (Sun) 10/19/2005: Project reassigned from Sun to Andersen 10/19/2005: Reviewed hydrogeologic groundwater report dated 8/29/2005. Report indicated liquid phase hydrocarbons and BTEX concentrations of up to 19,520 ppb. Report indicated that informal proposed remedial action plan discussed in abovementioned 6/6/05 entry is delayed and possibly canceled. The report states Amerada Hess Corporation will either request an extension to submit the currently proposed Remedial Action Plan or to submit a revised Remedial Action Plan . The next triannual sampling event is scheduled for November 2005. Additionally, a Stip was sent out on 5/5/04, which was never signed due to Hess waiting for a Consent Order. 10/25/05: Mailed a failure to sign Stip letter. Stip signature due on 11/15/2005. 1/26/06: 1/25/06 meeting between Quantum, NYSDEC, and GSC/Kleinfelder. The site in under redevelopment. An RAP will be prepared. Delineation will be investigated on the other side of 4th avenue. 3/1/06: Signed stipulation agreement, effective date 2/23/06. Investigation plan due 4/24/06. 4/24/06: Reviewed the site status update report/investigation plan dated 4/21/06. Report indicates that additional delineation on the east side of 4th avenue is not feasible due to utilites. Max BTEX 28,587 ppb (SVE1) and max MTBE 1,710 ppb (MW2). Depth to water 10-15 ft. RAP due 6/22/06. 5/25/06: Pilot testing on 5/25/06 6/29/2006: Meeting with Hess, NYSDEC, Quantum, EnviroTrac and GSC on 6/28/2006. RAP in progress. Endpoint sampling will be submitted for spill bucket replacement excavation. 7/28/06: RAP submission deadline extended to 9/21/06. 8/9/06: Conference call with Hess, Quantum, and GSC/Kleinfelder. The ROI duri testing was only 10 ft. A Hivac pilot test will be performed on 8/10/06 to try to increase the ROI. If it fails an extension will be required to perform additional testing prior to RAP submittal. 8/11/06: Received phone call from Gail Helfrick. A HVAC test was performed which did not result in a significant increase in the RIO. An RAP will be submitted on 9/21/06 as planned, but will require additional sampling to improve the ROI. 8/15/06: See spill 06-02980. The RAP should include remediation for the soil contamination from spill 06-02980. 9/12/06: Received RAP. SVE proposed. Pilot testing was conducted on May 25, 2006 and August 10, 2006. Two existing wells (MW-3 and SVE-1), and six proposed wells (SVE-2 - SVE-7) wil be used as extraction points to be connected to a SVE remediation system. The ROI varies from 10 to 50 feet throughout the site. Soil samples will be collected during installation of the new SVE wells, as well as from a soil boring proposed adjacent to MW-6. During system startup operation and maintenance visits will be conducted daily for three days, followed by weekly for the first monthy, followed by monthly. Based on start-up testing, a determination will be made as to whether emission treatment is necessary. Contamination from spill 06-02980 addressed, spill 06-02980 closed and consolidated with 9605719. Numerous sensitive receptors: subway, utilities, basements, schools, Gowanus Canal. AS not proposed due to the proximity of the subway, which runs parrallel and adjacent to the site. RAP conditionally approved, with additional groundwater treatment required. 9/21/06: Received phone call from Gail Helfrick (Quantum) and Al Tonn (GSC-K) requesting that the RAP be approved without additional gw treatment. Confirmed that additional gw treatment is required for MW-2, SVE-1, and FW-8. 10/3/06: Received email from gail helfrick: This email is

HESS STATION 32530 (Continued) **S104276740**

to confirm our conversation on Tuesday, September 26, 2006 regarding the Remedial Action Plan (RAP) for Hess Station # 32530 in Brooklyn, New York. In the RAP, Hess proposed the installation and operation of a Soil Vapor Extraction system at the site. The NYSDEC approved the proposal for SVE, and also requested groundwater remediation. Based on our conversations, it was agreed that Hess would install underground piping for groundwater treatment during the installation of the SVE system. It was further agreed that Hess would operate the SVE system for 1 full year, and during that year, Hess would 1) evaluate the performance of the SVE system on a monthly basis, 2) continue to monitor roundwater quality (March, July and November), and 3) submit progress reports to the NYSDEC (May, September and January). If after that 1 year period, the data demonstrates that groundwater remediation is necessary, alternative remedial technologies will evaluated and discussed with the NYSDEC. 10/4/06: Received update report dated 9/27/06. Groundwater samples collected on 7/27/06. BTEX 38,200 ppb (SVE1), mtbe 208 ppb (SVE1). SVE implementation required. 12/11/06: Sent email to Hess to followup on implementation schedule. 12/18/06: Received email from Hess: We still hope to be able to obtain the MTA permits needed to complete the subsurface intrusive work by January 10, 2007. Once these permits are obtained, we will provide the NYSDEC a schedule for system installation. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. SVE implementation in progress. 3/26/07: Reviewed update report. Wells sampled on 12/26/06. Max BTEX 30,720 ppb (SVE1). Max MTBE 1,000 ppb (MW2). SVE implementation in progress. 5/31/07: Reviewed site status report. Wells sampled on 3/16/07. Max BTEX 25,280 ppb (SVE1). Max MTBE 410 ppb (MW2). SVE installation in progress. 9/20/07: Reviewed site status report. Wells sampled in July 2007. LNAPL in MW 2 (0.03 ft).Max BTEX 30,370 ppb (SVE1). SVE startup planned for November 2007. Sent letter requiring RAP addendum for groundwater treatment (pipes for water removal are planned on being installed as a back-up plan). And increased sampling frequency to quarterly sampling. 5/14/08 - Carlson: Meeting on May 7th 2008 - Hess/Envirotrac will submit a RAP addendum. Reviewed First Quarterly 2008 Update Report. Wells sampled on 2/5/08. Max BTEX concentration 24,220 ppb (SVE1), max MTBE concentration 71 ppb (SVE1). MW-2 was dry. 8/7/08 - Carlson: Reviewed July 2008 Update Report. Wells sampled on 5/22/08. Maximum BTEX concentration 43,693 ppb (SVE1). Maximum MTBE concentration 554 ppb (MW2). RAP Addendum will be submitted under a separate cover. Emailed Hess/Envirotrac requiring submission of RAP Addendum by 9/8/08. Received email from Ed Russo stating that 9/8/08 deadline can probably be met. 9/8/08 - Carlson: The Department approved an extension until 10/1/08 to submit an RAP Addendum. 10/22/08 - Carlson: Meeting with Hess/Envirotrac. RAP Addendum will be submitted by 12/15/08. 11/20/08 - Carlson: Reviewed October 2008 Update Report. Wells sampled on 8/14/08. Maximum BTEX concentration 41,837 ppb (SVE1). RAP Addendum not received. Sent failure to comply letter. Start legal proceedings if RAP Addendum not submitted by 12/5/08. 12/23/08 - Carlson: Received Remedial Action Plan Addendum. Two SVE system, two wells strippers, and monthly dual phase extraction events proposed. Revised RAP Addendum required with following modifications: 1) removal of two wells from SVE system, 2) relocation of two of the proposed monitoring wells, 3) startup report must be submitted, 4) inclusion of more detailed information about the well strippers. 2/19/09 - Carlson: Received email from Ed Russo in response to 12/23/08 letter. Monthly O&M visits requiring monthly

HESS STATION 32530 (Continued) **S104276740**

WS water effluent testing, monthly SVE air discharge testing by PID, and quarterly SVE air discharge testing by laboratory. Revised letter addendum required. 3/11/09 - Carlson: Reviewed update report dated January 2009. Wells gauged and sampled on 11/5/08. LNAPL at depth of 0.02 ft in MW2. Maximum BTEX concentration 12,672 ppb (SVE1). 3/18/09 - Carlson: Meeting with Hess/Envirotrac. Revised addendum due in April 2009. 5/7/09 - Carlson: Reviewed April 2009 Update Report. Revised addendum letter overdue. Emailed John Schenkewitz about overdue letter/report. 5/11/09 - Carlson: Received revised RAP Addendum letter. Issued approval letter. 5/28/09 - Carlson: Well installation scheduled for 6/22/09. 8/7/09 - Carlson: Reviewed update report. Monthly EFR IRM ongoing. What is status of RAP implementation? 8/19/09 - Carlson: Meeting with Hess. RAP addendum will be submitted to include air sparge on the eastern portion on the site. 10/21/09 - Carlson: Reviewed RAP addendum. Issued approval letter. SVE/AS will be installed, except in sidewalk (because of subway). SVE in sidewalk with HVAC events to treat impacted groundwater. 11/17/09 - Carlson: Reviewed update report. Monthly HVAC events from sidewalk wells ongoing. SVE/AS system installation in progress. 1/27/2010 - Carlson: Meeting with Hess. 2/5/2010 - Carlson: Reviewed update report. EFR conducted in September and October. SVE/AS installation not begun yet. 5/20/2010 - Carlson: Meeting with Hess. They are working with MTA because the property is adjacent to the subway. 5/27/2010 - Carlson: Reviewed April 2010 Update Report. Six AS wells and one MW installed. HVAC was not conducted this quarter. 7/22/2010 - Carlson: Reviewed wastewater UST closure report. Tank abandoned in place with concrete slurry. Endpoint samples collected from the east wall (clean) and north wall (trace VOCs/sVOCs detected). West wall/south wall were not accessible for sample collection. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. EFR events ongoing. System construction pending NYCTA permits. 5/9/11 - Obligado - This spill transferred to Obligado as per Brevdo. I reviewed the 4Q10 update report. Free product (0.03 ft) was found in MW2. MAx BTEX 17674 ug/L in SVE1. They are still waiting for MTA permits. 8/30/11 - Obligado - I reviewed the 2Q11 update report. They are still waiting on NYCTA permits. Max BTEX is 9800 ug/L. No product detected this quarter. 11/14/11 - Carlson: Reviewed October 2011 update report. System construction pending NYCTA permits. Monthly EFR ongoing. 3/13/2012 - The site has SVE/AS system operation pending on the NYCTA's permission. Spoke to the consultant who works for the property owner next door in the Union Street. Groundwater contamination was identified during their Phase 2 investigation. Advised to call in for a spill number and prove to DEC it is from Hess site as they believe. 8/23/2012 - 1Q2012, 4/30/2012, by EnviroTrac. The groundwater was sampled on 2/13/2012. DTW 9.98 to 15.70 feet. Flows to north. No LNAPL. The remediation system construction is pending permit approval by NYCTA. CW-9, 560.1 BTEX, 182 MTBE. MW-7, 7.52J BTEX, 22.8 MTBE. MW-2, 5,529 BTEX, 162 MTBE. FW-7, 24.5 BTEX, MTBE ND. SVE-1, 6,369 BTEX, 6.7J MTBE. FW-8, 270.2 BTEX, 1.3J MTBE. FW-9, 570.6 BTEX, 2.5 MTBE. 10/12/2012 - 2Q2012, 7/31/2012, by EnviroTrac. The groundwater was sampled on May 14, 2012. DTW 10.87 to 16.05. Flows to north. CW-9, 43 BTEX, 106 MTBE. MW-7, 0.44J BTEX, 19.7 MTBE. MW-2, 1,626.9 BTEX, 100 MTBE. FW-7, 67.4 BTEX, 0.24J MTBE. FW-9, 961.6 BTEX, 1.6J MTBE. FW-8, 224.9 BTEX, 1.8 MTBE. SVE-1, 3,746.3 BTEX, 8.0J MTBE. EFR on on MW-2 and SVE-1 on 3/14, 4/9, and 5/2/2012. 1/24/2013 - 3Q2012, 11/5/2012, by EnviroTrac. The groundwater was sampled on 8/31/2012. DTW 10.49 to

HESS STATION 32530 (Continued) **S104276740**

14.72 feet. Flows to north. NO LNAPL. CW-8, 26J BTEX, 0.77J MTBE. CW-9, 297.9 BTEX, 73 MTBE. MW-7, 95.3 BTEX, 4.4 MTBE. MW-2, 8,656 BTEX, 101 MTBE. FW-7, 291.2 BTEX, 0.25J MTBE. SVE-1, 6,205 BTEX, 2.7J MTBE. FW-9, 1,894.3 BTEX, 1.1J MTBE. FW-8, 587.6 BTEX, 1.4 MTBE. EFR on MW-2 and SVE-1 on 6/7, 7/16, and 8/22/2012. The next sampling will be in 11/2012. 9/24/2013 - 4Q2012, 1/31/2013, by EnviroTrac. The groundwater was sampled on 11/16/2012. On 9/24 and 11/13/2012, conducted EFR on MW-2 and SVE-1. DTW 7.80 to 15.49 feet. Flows to north. CW-9, 223.4 BTEX, 94.1 MTBE. MW-7, 38.04J BTEX, 18 MTBE. MW-2, 6,630.7 BTEX, 136 MTBE. FW-7, 179.7 BTEX, MTBE ND. SVE-1, 1,933 BTEX, 2.7 MTBE. MW-2, 10,042 BTEX, 76.2 MTBE. FW-7, 230.9 BTEX. SVE-1, 984 BTEX. FW-8, 257.9 BTEX. FW-9, 356 BTEX. 11/17/2014 - 3Q2014, 11/7/2014. 6/12, 7/10 and 8/5/2014, EFR on MW-2 and SVE-1. 8/25/2014, sampled groundwater. DTW 10.52 to 15.81 feet. Flows to north. CW-9, 144.4 BTEX, 91.1 MTBE. MW-2, 6,517 BTEX, 83.5 MTBE. FW-7, 329.9 BTEX. SVE-1, 2,527 BTEX. FW-9, 856 BTEX. 4/9/2015 - 4Q2014, 1/26/2015. 9/15, 10/15 and 11/10/2014, EFR on MW-2 and SVE-1. 11/15/2014, gauged 15 monitoring wells and sampled 14 monitoring wells. DTW 11.54 to 15.81 feet. Flows to north. MW-2, 5,112.3 BTEX, 68.1 MTBE. FW-7, 332.1 BTEX. SVE-1, 500.9 BTEX. FW-9, 612.9 BTEX. 1Q2015, 4/9/2015. 12/8/2014, 1/9/2015 and 2/6/2015, EFR on MW-2 and SVE-1, STREs on MW-2/AS-2 and SVE-6/AS-1. 2/12/2015, gauged and sampled 11 monitoring wells. DTW 6.47 to 15.45 feet. Flows to north. CW-9, 121.1 BTEX, 82.9 MTBE. MW-2, 4,347 BTEX, 63.5 MTBE. FW-7, 54.8 BTEX. 10/29/2015 - 2Q2015, 7/15/2015. 3/9, 4/6, 5/6/2015, EFR on SVE-1 and STREs on SVE-6/AS-1. 5/12/2015, gauged and sampled 15 monitoring wells. DTW 6.15 to 15.69 feet. Flows to north. MW-2, 3,017.4 BTEX. FW-7, 504.8 BTEX. SVE-1, 768.6 BTEX. FW-9, 74.6 BTEX. 3Q2015, 10/19/2015. 6/11/2015 EFR on MW-2 and SVE-1. 7/14 and 8/7/2015, EFR on SVE-1 and STREs on SVE-6/AS-1. 8/27/2015, gauged 15 monitoring wells and sampled 14 monitoring wells. DTW 10.25 to 15.46 feet. Flows to north. MW-2, 9,914 BTEX, 78.3 MTBE. MW-7, 47.7 BTEX, 12.1 MTBE. FW-7, 596.1 BTEX. SVE-1, 4,550 BTEX. FW-8, 339.7 BTEX. FW-9, 691.9 BTEX. 1/28/2016 - 4Q2015, 1/28/2016. 9/16, 10/9, 11/4/2015, EFR on SVE-1 and STREs on SVE-6/AS-1. 11/10/2015, gauged 13 and sampled 12 monitoring wells. NO LNAPL. DTW 9.51 to 15.94 feet. Flows to north. CW-9, 53.9 BTEX, 55.7 MTBE. MW-2, 2,189.5 BTEX, 34.6 MTBE. FW-9, 426.1 BTEX. SVE-1, 1,161.4 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the block and lot are 434 and 35. The latest deed is dated 4/24/14. The property owner is HESS Retail Stores, LLC, 1 HESS Plaza, Woodbridge, NJ, 07095. The PBS record is #2-297666. The owner is Speedway #7835. Seven USTs were closed and removed from 6/1/92 to 8/1/96. Thirty seven USTs (mostly gasoline 550 gallon tanks) were closed in place on 12/1/79. There are 5 active 4000 gallon USTs - 4 gasoline and 1 diesel. These tanks were installed on 8/1/96. The contacts are as follows: Speedway/Hess

HESS STATION 32530 (Continued) **S104276740**

contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Today I received the EnviroTrac 4/25/16 Quarterly Update Report. On 12/9/15, 1/28/16 and on 2/1/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 2/11/16 MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged. MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were sampled on 2/11/16. Product was not measured in any of the wells. Groundwater was measured at 6.79' and 15.66' below grade and was determined to be flowing northerly. Total BTEX was 2968.1 ppb (856 ppb) at MW-2, non-detect at MW-3 to MW-6 and MW-8 and FW-7, 138.7 ppb (15 ppb benzene) at FW-8, 201.7 ppb (8 ppb benzene) at FW-9, 3.6 ppb at CW-8, 22.1 ppb (13.2 ppb benzene) at CW-9 and 450.3 ppb (12 ppb benzene) at SVE-1. 7/26/16 - Raphael Ketani. Today I received the EnviroTrac July 2016 Quarterly Update Report dated 7/26/16 for the period March to May 2016. On 3/1/16, 4/20/16 and on 5/6/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 5/13/16 MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 5/13/16. Product was not measured in any of the wells. Groundwater was measured at 8.76' and 16.03' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 929.9 ppb (254 ppb) at MW-2, non-detect at MW-3 to MW-8, 143.8 ppb (non-detect benzene) at FW-7, non-detect at CW-8 and at CW-9, 427 ppb (62.9 ppb benzene) at SVE-1 and non-detect at SVE-7. 10/24/16 - Raphael Ketani. I reviewed the EnviroTrac August 2016 Quarterly Update Report dated 10/24/16 for the period June to August 2016. On 6/8/16, 7/13/16 and on 8/9/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 8/10/16 MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7 to FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 8/10/16. Product was not measured in any of the wells. Groundwater was measured at 9.09' and 15.67' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1 and MW-4 to MW-8. MW-2 was 568.5 ppb (247 ppb benzene). FW-7 had 469.5 ppb (20.2 ppb benzene). FW-8 had 180.8 ppb (19.9 ppb benzene). FW-9 had 231.2 ppb (23 ppb benzene). CW-8 had 4.4 ppb. CW-9 had 2.3 ppb. SVE-1 had 373.8 ppb (15.9 ppb benzene). SVE-7 had 4.2 ppb BTEX. 12/19/16 - Raphael Ketani. Today I received an email as a c-c from Ryan Piper, Engineering Geologist I at DEC Region 2, concerning a new spill (#1608842)at the site. The spill concerned oil contaminated surface water flowing off of the site and onto the street in front due to a clogged drain at the northern end of the property. There was an odor complaint as a result. I sent an email to Mr. Fleming, the representative of Speedway, stating that they faced possible fines and legal action for violating the SPDES regulation, 6 NYCRR Part 750.1.3. I also stated that the subject northern drain must be cleaned out immediately and that Speedway must check the drains at its other stations and make sure they can receive precipitation. Mr. Ryan's original email to Mr. Fleming is as below: A neighbor complained about a diesel spill/ condition at the station that is affecting the surrounding neighborhood. I performed a site visit on Sunday Dec 18th in which I observed the condition. Apparently, there are a number of storm drains on the premises, particularly the drain on the north side of the property, that are clogged with sediment causing large puddles to run off into and down the street to a NYCDEP

HESS STATION 32530 (Continued) **S104276740**

storm drain. Combined with poor housekeeping and minor spilling at the Diesel pump island on the North side of the property, this is causing a nuisance odor and adverse condition down the road. Therefore I am directing you to take the appropriate action to address this issue as follows. Control of Storm Water Emanating from 204-222 4th Ave, Brooklyn, NY: As per 6 NYCRR Part 750.1.3, The following discharges into the waters of the State are hereby prohibited, and no SPDES or other permit shall be issued authorizing any such discharge: (d) any discharge from a point source, which is in conflict with a plan or amendment thereto approved pursuant to section 208(b) of the Act and 40 CFR part 35 (see section 750-1.24 of this Part), or any other discharge not permitted by this Part, ECL Article 17, other rules and regulations adopted or applicable pursuant thereto or to the Act, or the provisions of an SPDES permit. During the site visit referenced above, evidence was observed of storm water flowing from 204-222 4th Ave, Brooklyn, NY to the street. As such the Department requires that the storm water from 204-222 4th Ave be directed to onsite drainage systems. Documentation of catch basin cleaning must be submitted to the Department no more than 1 month from the date of this email. Mr. Fleming responded back quickly by email stating that the problem will be immediately corrected. 1/19/17 - Raphael Ketani. Today I received an email from Mr. Russo [(631) 924-3001, EDR@EnviroTrac.com] regarding the plugged drains at the site (spill #1608842). The email had attachments consisting of a site plan showing the 6 catch basin locations, photos of the basins taken on 12/20/16 and photos of the basins taken on 1/17/17. Mr. Russo explained in his email that 3 of the catch basins were noted as not draining during EnviroTrac's 12/20/16 inspection. All of the catch basins were cleaned of debris and jetted for 70 feet by a Speedway contractor on 12/31/16. On 1/17/17, the site was inspected again. This time only CB-3 was not draining properly. Mr. Russo stated that this drain will be addressed again by Speedway's contractor. He stated that he will send the DEC an update regarding the re-establishment of drainage at CB-3. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17 for the period September to November 2016. On 9/2/16, 10/17/16 and on 11/8/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 11/23/16 MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 6, MW-8, FW-7, FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 11/23/16. Product was not measured in any of the wells. Groundwater was measured at 7.55' and 15.55' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 3 to 6, 8 and SVE-7. The samples for FW-9, CW-8, CW-9 and SVE-1 had 1 to 3 low hits. MW-2 was 1091.1 ppb (487 ppb benzene). FW-7 had 899.6 ppb (45.6 ppb benzene). 4/28/17 - Raphael Ketani. Today I received an email from Mr. Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732) 738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017 Quarterly Update Report dated 4/28/17 for the period December to February 2017. On 12/7/16, 1/11/17 and on 2/2/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 2/7/17, MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 7.57' and 15.48' below grade and was determined to be flowing northerly. BTEX was non-detect at MW-3 to 6, 8 and CW-9. The samples for MW-1, FW-7

HESS STATION 32530 (Continued) **S104276740**

to FW-9, CW-8 and SVE-7 had 1 to 4 low hits. MW-2 was 3876.1 ppb (991 ppb benzene). SVE-1 was 1329.4 ppb (38.3 ppb benzene). The PID effluent concentration a SVE-6/AS-1 was 665.3 ppm, 405.6 ppm and 290.8 ppm on 12/7/16, 1/11/17 and 2/2/17, respectively. I approved the report with a comment to Mr. Rennie asking him to explain the extremely high benzene concentration in the groundwater at MW-2. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to May 2017. On 3/7/17, 4/7/17 and on 5/3/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 5/30/17, MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.00' to 18.42' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2699.1 ppb (563 ppb benzene). MW-7 was 110.6 ppb (90 ppb benzene). FW-7 was 252.5 ppb (non-detect for benzene). FW-9 was 81.1 ppb (30.8 ppb benzene). SVE-1 was 5475.7 ppb (48.7 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 324.1 ppm and 175.5 ppm on 3/7/17 and 4/7/17, respectively. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. On 6/14/17, 7/12/17 and on 8/15/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 8/23/17, MW-1 to 3, 5 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.44' to 15.08' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2269.9 ppb (481 ppb benzene). MW-7 was 129.5 ppb (115 ppb benzene). FW-7 was 122 ppb (non-detect for benzene). FW-9 was 126.3 ppb (48 ppb benzene). SVE-1 was 1558.1 ppb (83.1 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 95.3 ppm, 165.4 ppm and 131.2 ppm on 6/14/17, 7/12/17 and 8/15/17, respectively. EnviroTrac requested permission to abandon upgradient and side-gradient wells MW-1, 4, 5, 6, and SVE-7 based upon historical and current analytical data results. I reviewed the data for these wells and determined that their abandonment would not impact the monitoring of the site. 1/31/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Quarterly Update Report dated 1/31/18 for the period September to November 2017. On 9/14/17, 10/30/17 and on 11/6/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 11/21/17, MW-2, 3, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.25' to 15.64' below grade and was determined to be flowing northerly. Wells MW-1, 4 to 6 and SVE-7 were abandoned on 11/6/17. BTEX was non-detect or low at MW-3, 8, FW-7 to 9, CW-8 and CW-9. MW-2 was 3550.6 ppb (791 ppb benzene). MW-7 was not sampled. SVE-1 was 1126.5 ppb (69.5 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 408.1 ppm, 77.7 ppm and 360.9 ppm on 9/14/17, 10/30/17 and 11/6/17, respectively. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/29/2018: Reviewed the report.

HESS STATION 32530 (Continued) **S104276740**

It states that the spill case was reported when petroleum-impacted soil were encountered during underground storage tank (UST) upgrade activities in August 1996. This report covers monitoring period from December 2017 to February 2018. On December 11, 2017, January 16, and February 1, 2018 - EnviroTrac conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. On February 6, 2018 - the consultant gauged ten (10) and sampled eight (8) monitoring wells. On April 12, 2018 EnviroTrac sampled three (3) monitoring wells. Wells Gauged: MW-2, 3, 7, 8; FW-7, 8, 9; CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.68 feet- 18.58 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 355 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 30.6 ug/L (MW-2) BTEX: highest concentrations are in well MW-2 (900ppb) EnviroTrac will continue quarterly groundwater sampling, with the next sampling event scheduled for May 2018. An Update Report summarizing these activities will be submitted to NYSDEC in July 2018. Monthly EFR and STRE events to continue. AD 07/18/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/26/2018: Reviewed the report. This report covers monitoring period from March 2018 May 2018. On March 5, April 11, and May 3, 2018 - the consultant conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - April 12, 2018 four (4) wells were gauged and three (3) monitoring wells were sampled. - May 8, 2018 nine (9) wells were gauged and eight (8) monitoring wells were sampled. Wells Gauged: MW-2, 3, 8; FW-7, 8, 9; CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 8.32 feet - 15.32 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 620 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 56.7 ug/L (MW-2) BTEX concentrations ranged in the site wells from ND in MW-3, MW-8, CW-9 to 2,600ppb in the most contaminated site well MW-2. Current Plans/Proposals: Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report summarizing these activities will be submitted to NYSDEC in October 2018. Continue monthly EFR and STRE events. AD 10/29/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/23/2018: Reviewed the report for the monitoring period: June 2018 August 2018. Work Performed: - June 13, July 24, & August 7, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - August 30, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1. Wells Containing LPH (feet): None. Groundwater Depth: 8.19 feet - 15.02 feet. Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 802 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration:

HESS STATION 32530 (Continued) **S104276740**

44.1 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,440.2 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2018. An Update Report summarizing these activities will be submitted to NYSDEC in January 2019. Continue monthly EFR and STRE events. AD 01/29/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) - edr@envirotrac.com Will review. AD 02/15/2019: Reviewed the report. It states that for the monitoring period: September 2018 November 2018, the following work was performed at the site: - September 4 & November 6, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - October 11, 2018 Conducted EFR on monitoring well SVE-1. - November 12, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.11 feet - 15.23 feet. Groundwater Flow: Northerly. Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 640 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 33.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 2,656.8 ug/L Recommendations: the consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for February 2019. An Update Report summarizing these activities will be submitted to NYSDEC in April 2019. EnviroTrac will continue monthly EFR and STRE events. AD 04/18/2019: Received the following e-mail from Mr. Rennie: Please find attached the most recent Update Report for the above referenced location. Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 05/01/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019 the following work was performed at the site: - December 4, 2018 and January 16 & February 7, 2019 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short-term remediation events (STREs) on SVE-6/AS-1. - February 26, 2019 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 6.71 feet 15.62 feet. Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 694 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.6 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,116.0 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for May 2019. An Update Report summarizing these activities will be submitted to NYSDEC in July 2019. Continue monthly EFR and STRE events. AD 05/07/2019: I had an internal meeting with DEC BCP regarding this site, and was informed that they received an application for this spill case to enter into BCP. If their application will be approved, this spill case will be transferred to BCP section. AD 07/31/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. HESS STATION 32530 (Continued) **S104276740**

for the monitoring period: March May 2019, the following work was performed: at the site: - March 29, April 5, & May 2, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - May 15, 2019 Gauged and sampled ten (10) monitoring wells. GW monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.67 feet 15.24 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 719 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.4 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 3,439.5 ug/L Recommendations: This site will potentially be approved into the New York State Brownfields Program. Until the site is approved into this program, Speedway will continue quarterly groundwater sampling, with the next sampling event scheduled for August 2019. An Update Report summarizing these activities will be submitted to NYSDEC in October 2019. Continue monthly EFR and STRE events. AD 08/23/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 09/19/2019: Reviewed the report. It states that the site is now active gas station. The spill was reported when petroleum-impacted soils were encountered during UST upgrade activities in August 1996. Site Remediation Activities: - June and September 2004 BioSolve injection events were completed in select on-site wells. - October 2008 Monthly Enhanced Fluid Recovery (EFR) events commenced on select wells. - December 2014 Monthly Soil Vapor Extraction (SVE)/Air Sparge (AS) Short-Term Remediation Events (STREs) events commenced on select wells. For the reported monitoring Ppriod: June - August 2019, the following work was performed at the site: - June 6, July 10, & August 1, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - August 12, 2019 Gauged ten (10) and sampled nine (9) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.48 feet 15.33 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 489 ug/L (MW-2) Maximum MTBE Concentration: 28.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 3,901.3 ug/L (MW-2) GW data: Well 08/2018 08/2019 (TVOCs in ppb) MW-2 4440 3900 MW-3 26 ND MW-7 37 19 MW-8 ND ND FW-7 468 52 FW-8 75 NS FW-9 139 1020 CW-8 69 148 CW-9 116 ND SVE-1 4035 863 Recommendations: This site will potentially be approved into the New York State Brownfields Program for a redevelopment project. Speedway is scheduled to complete divestment/UST system removal activities in September 2019. UST system closure reporting and future monitoring/reporting related to this site, if needed, will be conducted by the new property owner (assuming the site is approved into the Brownfields Program). AD 04/21/2020: Received the following email from Mr. Morley of PWG: ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails. Ainura, Please find attached the 1st Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan -- Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/12/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC

HESS STATION 32530 (Continued) **S104276740**

was retained to continue groundwater monitoring at the site. A Supplemental Remedial Investigation (SRI) was performed as part of the sites enrolment into the New York State Department of Environmental Conservation s (NYSDEC s) Brownfield Cleanup Program (BCP) which included groundwater sampling. The groundwater sampling performed during the SRI substituted for the fourth quarter 2019 monitoring event. The subject property is a former retail gasoline fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th avenue to the east, and Union Street to the south. The property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. In October 2019, four (4) 4,000-gallon gasoline USTs, one (1) 4,000-gallon diesel UST, and one (1) 550-gallon wastewater UST were closed and removed from the property. An abandoned 2,000-gallon fuel oil UST near the storage building at the northwest corner of the Site was partially exposed, however the UST was not removed due to nearby utilities and potential for undermining the sidewalk and onsite storage building. Upon completing UST removal, associated product and vent lines were exposed and removed. During the October 2019 UST removal activities, monitoring well MW-3, which was located near the storage building, was destroyed. During the November 2019 SRI, GW018 was installed on the northwest corner of the site. Based on information documented in previous monitoring events, regional groundwater flow is towards the north. GW sampling: PWGC mobilized to the site on Monday, March 9, 2020 to perform quarterly groundwater monitoring activities. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from 7 wells: CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. Monitoring wells FW-8 and FW-9 were dry and were not sampled. Analytical results for samples collected at CW-8, MW-8, GW018, FW-7, MW-2, MW-7 and CW-9 were compared to AWQS. MBTE was detected in MW-2, GW018, FW-7, MW-7, and CW-9 and BTEX was detected in MW-2, CW-8, FW-7, and MW-7. The highest concentration of MBTE was detected in CW-9 (11.0 ug/L). The lowest detectable concentration of MBTE was in GW018 (1.9 ug/L). The highest concentration of BTEX was detected in MW-2 (117.47 ug/L). The lowest detectable concentration of BTEX was in MW-7 (0.16 ug/L). Additionally, the highest concentrations of isopropylbenzene were detected at MW-2, FW-7, and CW-8. Based on these results, the highest degree of impact appears to be located adjacent to the former UST locations located in the central and western portions of the property. Generally, these concentrations were similar to previous sampling events. GW data: Well 08/2018 08/2019 03/2020 (TVOCs in ppb) MW-2 4440 3900 248 MW-3 26 ND destr MW-7 37 19 ND MW-8 ND ND ND FW-7 468 52 49.5 FW-8 75 NS NS dry FW-9 139 1020 NS dry CW-8 69 148 67 CW-9 116 ND 11 SVE-1 4035 863 NS GW018 ND Removal of the sourse of contamination significantly decreased TVOCs in the most contaminated site well MW-2 from 3900 ppb in August 2019 to 248 ppb in march of 2020. The consultanr states that based on analytical data, it appears that the highest levels of residual impact are located adjacent to the former UST areas located in the central and western portions of the site. Analytical results were generally consistent with previous monitoring events performed by Envirotrac. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for May 2020. AD 08/21/2020: Received the following email

HESS STATION 32530 (Continued) **S104276740**

from Mr. Morley: Ainura, Please find attached the 2nd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 09/23/2020: Reviewed the 2nd quarter 2020 report. It states that PWGC mobilized to the site on Thursday, June 18, 2020 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: " Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List. Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from MW-8, GW018, MW07, and CW-9 yielded concentrations of VOCs less than AWQS. MBTE was detected in CW-8, GW018, MW-2 and MW-7, with the concentrations of each under the AWQS of 10 ug/L. The highest concentration of MBTE was detected in MW-7 (9.6 ug/L). The lowest detectable concentration of MBTE was in CW-8 (0.75 ug/L). Detectable concentrations of MBTE were less than AWQS at each sampling location. Benzene was detected at concentrations greater than AWQS at monitoring wells MW-2 and CW-8 with the highest concentration, 35 ug/L, detected at MW-2. Ethylbenzene was detected at a concentration grater than AWQS at MW-2 with a concentration of 11 ug/L. The highest BTEX (benzene, toluene, ethylbenzene, and xylene) was detected in MW-2 (46 ug/L). Additionally, isopropylbenzene and n-propylbenzene was detected above AWQS in samples from MW-2 and CW-8 (11 ug/L and 13 ug/L : 20 ug/L and 15 ug/L, respectively). 1,2,4-trimethylbenzene was detected at a concentration of 77 ug/l at MW-2. 1,2,4-trimethylbenzene, isopropylbenzene, and n-propylbenzene are common compounds associated with petroleum impact. Based on these results, the highest degree of impact appears to be located adjacent to the former UST locations located in the central and western portions of the property. Generally, these concentrations were similar to previous sampling events. At this time, PWGC offers the following recommendations for the site: " Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for September 2020. AD 11/10/2020: Received the following email from Mr. Morley: Ainura, Please find attached the 3rd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/11/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC was retained to continue groundwater monitoring at the site. The subject property is a former retail gasoline fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th avenue to the east, and Union Street to the south. The property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. PWGC mobilized to the site on

HESS STATION 32530 (Continued) **S104276740**

Wednesday, September 23, 2020 to perform quarterly groundwater monitoring activities. Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. Total BTEX was detected in MW-2 at a concentration of 1,015 ug/L. Minimal concentrations or non-detectable concentrations of total were observed in the remaining monitoring wells. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2020. 04/22/2021: Received the following email from Mr. Morley: Ainura, Please find attached the first quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/26/2021: Reviewed the report. It states that PWGC mobilized to the site on Wednesday, March 17, 2021 to perform quarterly groundwater monitoring activities. Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: " Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from wells MW-8, GW018, and CW-9 indicated VOCs less than AWQS. MBTE was detected in MW-2 at 11 ug/L, which is slightly more than the AWQS of 10 ug/L. Sample results from the five other wells yielded concentrations of MBTE that were below AWQS or below the laboratory detection limit. Benzene was detected in the sample collected from MW-7 at 6.9 ug/L. Sample results from the five other wells for benzene were below AWQS or below the laboratory detection limit. Concentrations of total BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six monitoring wells. Additionally, isopropylbenzene was detected at a concentration greater than AWQS in the sample collected from CW-8 with a result of 5.3 ug/L. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were significantly lower than concentrations reported during previous sampling events. Recommendations: At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for June 2021. AD 11/05/2021: Received the following email from Mr. Morley: Ainura, Please find attached the third quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project

HESS STATION 32530 (Continued) **S104276740**

Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/02/2021: Reviewed the 3rd quarter 2021 report. It states that PWGC mobilized to the site on Monday September 13, 2021 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Water levels were collected using a Solinst Oil / Water Interface Probe. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: " Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to NYSDEC s AWQS. Samples collected from wells MW-2, MW-8, and GW018 indicated VOCs less than AWQS. MBTE was detected below the AWQS of 10 ug/L in all six samples. Benzene was detected in the samples collected from MW-7, CW-8, and CW-9 at concentrations of 22 ug/L, 12 ug/L, and 5.7 ug/L, respectively, which are greater than the AWQS of 1 ug/L. Sample results from the three other wells yielded concentrations of benzene below the laboratory detection limit. Concentrations of BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six wells. Isopropylbenzene was detected in the samples collected from MW-7, CW-8, and CW-9 at of 95 ug/L, 110 ug/L and 6.2/L, respectively, which are greater than the AWQS of 5 ug/L. N-proplybenzene was detected in MW-7 and CW-8 at 150 ug/L and 140 ug/L, respectively, which are greater than the AWQS of 10 ug/L. Sec-butylbenzene was detected in MW-7 and CW-8 at 23 ug/L and 9.5 ug/L, respectively, which are greater than the AWQS of 5 ug/L. Napthalene was detected in the sample collected from CW-8 at a concentration of 12 ug/L which is greater than the AWQS of 5 ug/L. N-butylbenzene was detected in the sample collected from CW-8 at 6.2 ug/L which is greater than the AWQS of 5 ug/L. VOs levels have increased when compared to last quarter s sampling event but overall show decreasing concentrations when compared to previous sampling events. Hydrographs have been developed for each of the seven monitoring wells illustrating the trends in BTEX and MBTE concentrations over time compared to groundwater elevations dating back to May 2016. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were generally lower than concentrations reported during previous sampling events. At this time, PWGC offers the following recommendations for the site: " Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2021. Given that BTEX ranges in the site well s from ND to 27 ppb in well MW-7, his site is a good candidate for a case closure in the future. AD 12/8/21 - Spill transferred to Steven Wu for tracking under BCP site no. C224295. JHO"

Remarks: "removal of under ground tanks-poss soil contamination"

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "R.Piper responded this spill (Secondary Off-hour). 12/19/16- DEC Piper emailed Scott Fleming of Speedway to have drains cleaned. 1/19/17- DEC Piper received notification from Envirotrac that: EnviroTrac, Speedway s environmental consultant, inspected the subject property and the on-site drains on December 20, 2016 (see attachments for inspection photos and site plan). EnviroTrac did notice that three (3) out of the six (6) on-site drains were clogged or not draining to capacity causing an overflow situation. During EnviroTrac s field observations it was noticed that CB-1 was no draining as was evident by the drain being submerged under w ice, CB-4 contained sediment that was frozen solid, and CB-6 also had

SPEEDWAY #7835 - PBS# 2-297666 (Continued) **S119028820**

sediment within. As a result of a drainage issue at this site, Speedway s maintenance division procured a sub-contractor to clean out debris from each drain and sewer jet seventy (70) feet of clogged lines. This work was conducted on December 31, 2016. In order to confirm the cleanout of these drains, EnviroTrac dispatched a technician on Tuesday, January 17, 2017 and noticed that one (1) drain out of the six (6) was still not draining to capacity and had some overflow. This drain (CB-3) is located behind the station kiosk. EnviroTrac notified Speedway s maintenance division of this issue related to CB-3 on Tuesday, January 17, 2017. Speedway s maintenance division will be dispatching a contractor to clean this affected drain. 3/3/17- DEC Piper received notification from Envirotrac that Speedway s maintenance division dispatched a contractor to clean catch basin (CB-3) on February 1, 2017. The cleanout procedure that was utilized consisted of sewer jetting the outflow pipe and as a result, no waste was generated. Based on work to date, this spill is closed."

Remarks: "caller stated that drains are over following in to drains"

514 UNION STREET (Continued) **S127750694**

Town: New York City
Record Added Date: 01/21/2021
Record Updated Date: 06/07/2021
Update By: AMSERVIS
Site Description: "Location: The approximately 0.39-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn, New York, and consists of a one-story brick building occupied by the Royal Palms Shuffleboard Club. The site is located at 514 Union Street and is located at the northern portion of Brooklyn Borough Tax Block 440, Lot 12. The south-adjoining property (p/o Lot 1; formerly the southern portion of Lot 12) is in the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) (BCP Site No. C224220). The east- and west-adjoining parcels are also in the NYSDEC BCP (BCP Site No. C224309). A lot merger application (RP-602 included) was approved by the New York City (NYC) Department of Finance (DOF) on 5 February 2020 to merge former Lots 1, 21, 23 to 26, 47, 48, and the portion of former Lot 12 that comprises BCP Site No. C224220 into new Lot 1. The property at 514 Union Street remained Lot 12. The site is located on the block bound by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. Surrounding properties include single- and multi-story buildings occupied by industrial, commercial and residential occupants. The Gowanus Canal (a National Priorities List [NPL] site) is located about 375 feet west of the site. Site Features: The site is improved with a one-story brick building occupied by The Royal Palms Shuffleboard Club. Current Zoning and Land Use: The site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R7A). Past and Current Use of the Site: The site has be occupied by commercial and industrial facilities since as early a 1886. The site is currently occupied by The Royal Palms Shuffleboard Club. The historical and current site uses include: The Royal Palms Shuffleboard Club (2014 present); Manufacturing and Storage (1993 2007); Dolin Metal Manufacturing Co. (1969 1992); Coca-Cola Bottling Co. of NY (1938 1950); Albro J. Newton Co. Trim and Planning Mill (1904 1915); Kenyon and Newton Sash and Door Factory (1886). Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. The United State Geological Survey (USGS) Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey indicate the bedrock underlying the site is part of the Hartland Formation. The Hartland Formation is comprised of mica schist and quartz-feldspar granulite, with localized intrusions of granite and pegmatite. Based on a previous Langan geotechnical study, bedrock was encountered at about 200 feet below grade surface (bgs) at property located 250 feet northwest of the site. A subsurface investigation has not been conducted at the site, however, subsurface investigations have been conducted at adjoining sites, which now comprise Lot 1. The stratigraphy of the surrounding sites consists of historic fill material underlain by native soil generally

514 UNION STREET (Continued) **S127750694**

characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine- to medium-grained sand with varying amounts of gravel, brick, coal, concrete, asphalt, coal ash, wood, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the surface cover to depths ranging from about 6 to 14 feet bgs. Bedrock was not encountered. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "Sangesland spoke to Marc Califano at Galli Engineering. The building was just purchased and the new owner wanted some work done in the basement. Soil borings were taken through the basement floor and groundwater was found with a sheen on it. They believe there is a 500 gal UST under the floor. This will be investigated in the next couple of days. CSL was sent out to Mr. Mario Procida (owner) 7/14/06 - Raphael Ketani. I tried calling Mr. Procida (718) 299-7000 and Marc Califano of Galli Engineering (631) 271-9292, but could only leave messages. There is a PBS case #2-602516 showing an active 3000 gal. tank with #2 oil. Mr. Califano called me back. He said that the GPR anomalie turned out to be a very old brick and mortar cesspool with feces and oil on the water, not a tank. He took a sample and sent it

PROCIDA REALTY (Continued) **S107782960**

off to a lab for analysis. Once he gets the results back, he will know what to do with the water and oil. He said there is an AST and they will pressure test it. Presently, there are 6 boilers in this commercial building. Some work and some don't. Mr. Califano will send me a RAP. 7/17/06 - Raphael Ketani. I returned Mr. Procida's call (646) 201-0489, but could only leave a voice mail message describing what Mr. Califano and I talked about last friday, 7/14. 7/31/06 - Raphael Ketani. I received a call from Nick Pressly of Pressly & Associates, Inc. (607) 264-9521. He said that he is the environmental consultant for Mr. Procida. He said that Galli Engineering was working for Mr. Greco, the partner, but Mr. Procida is taking the lead. The company address is: 721 County Highway 54, Cherry Valley, NY, 13320. He mentioned that the building is slated for demolition and the soil is scheduled to be removed in 3 years. He asked whether DEC can wait 3 years for cleanup of the site in order to coordinate the 2 projects. I told him that the Spills Unit can't wait so long and that DEC wants a quick cleanup of the site. He mentioned that there is a 550 gal. UST that is filled with sand at the site, aside from the AST. I told him that soil borings will have to be done around the UST and analytical results sent to the DEC. He said he already had the results and will send them to me. I told him that the AST has to be tested, and if it passes, then I will just need the passing tank test report. If it fails, I told him, then I will need soil sampling around this tank, too. I told him that the water in the cesspool will need to be tested and that all of the information should be in an RAP. Mr. Pressly told me that he will put together an RAP and send it to me. 8/8/06 - Raphael Ketani. I tried calling Mr. Pressly, but could only leave a voice mail. 8/10/06 - Raphael Ketani. Mr. Pressly called me and said that he will send me the documents I need tomorrow. He said the RAP will follow next week. 8/16/06 - Raphael Ketani. I received the Phase I and Phase II Environmental Site Assessment reports yesterday. They were produced by Galli Engineering and were dated 1/5/06 and 4/18/06, respectively. The Phase II report indicates that there are no VOC exceedences for the 6 soil samples, but each soil sample has 7 SVOC exceedences, on average, of TAGM RSCOs. The SVOC exceedences are high for SB-5 and very high for SB-6, but the reason for this is not apparent from the soil descriptions in the report, nor from the soil core pictures. The groundwater results for BW-1 had 4 VOC exceedences and 3 SVOC exceedences, but they were not much above TAGM. 8/17/06 - Raphael Ketani. Mr. Pressly called to find out what DEC wanted in an RAP. I told him that I didn't see the need for soil digging based on the VOC and SVOC results alone. I told him that though the SVOCs were high to very high from SB-5 and SB-6, these were combustion products. Also, I told him that the groundwater contamination was not high enough to justify pumping it. Mr. Pressly added that there are a lot of old pipes in the boiler room which no one knows what they lead to or whether there is any free product in them. Additionally, he said that his contractor has already found oil in a pit he dug. I told Mr. Pressly that for these reasons there should be further investigation. He agreed and said that these items will be in the RAP. 8/28/06 - Raphael Ketani. I reviewed the 8/17/06 RAP from Pressly and Associates, Inc. I found it to be satisfactory. However, there was no mention of sampling the liquid in the cesspool. I will send a response letter requesting that sampling be done. 9/29/06 - Raphael Ketani. Mr. Pressly tried to call me. I returned his call (607) 264-9521, but could only leave a voice mail. Mr. Pressly called me

PROCIDA REALTY (Continued) **S107782960**

back and filled me in on what has been taking place. The progress was: removed 4 layers of laid brick soaked with oil in the center of the area where they're working cesspool was 7' deep, pumped it out and cut and sealed a pipe that was feeding storm water found water 2' below floor tank test was done - vent pipe failed, will repair and retest - if fails, will do boring water and oil keep seeping in - already removed 18 drums full tested 2'X2' test pits around center area - no oil was a sheen on water in test pits - pumped center area and they dried up no idea where oil from - adjacent property? or when bricks laid? if tank found tight after repair, will dig 3 more feet down in center, total of 8 feet, and put in 6 well hit old bricks wall and found everything all black - old coal chute? water could be coming through a path via bricks or structures - don't know will put boring next to tank even if found tight center hole stayed dry for several days, then seeping started with oil and water building uses only gas I suggested to Mr. Pressly to sample oil and water separately and send off to lab for fingerprinting to determine whether water is from water main (high chlorides) and whether oil is #6 from adjacent building using #6. He agreed to do this. I also told him that the solution may be to periodically pump out the water collecting in the well (8' deep pit) until is just water. He said he will think about this as $60,000 has already been spent on the project. 10/25/06 - Raphael Ketani. Mr. Pressly called with an update: boiler room was remediated - filled 20 drums with an oil/water mix dug 7 test pits in the floor under floor was 7 layers of brick enlarged central hole in room to 20 feet to collect more oil dug down 4 feet below water table to facilitate collecting more oil tested the 2400 gal. tank with #2 fuel oil in the next room - pipes from tank to boiler failed badly - couldn't hold any pressure did boring next to tank - had 16 of oil in hole will pump out tank, remove tank and excavate soil as much as possible will submit proposal to Procida for tank emptying, removal, soil excavation and further remediation contractor has to leave to start another job on Rikers Island - I told Mr. Pressly that would be alright as long as things keep moving. He said he will send me an interim report for the work that has already been done. Mr. Pressly said that work will resume in January. 3/9/07 - Raphael Ketani. I tried calling Mr. Pressly (607) 264-9521, but could only leave a voice message. 3/12/07 - Raphael Ketani. Mr. Pressly returned my phone call today. He said that the tank had been cleaned out and will be removed soon. He said that all of the oil contaminated soil and material will be removed. His company was finally paid for all of the work and so the interim report will be sent soon. 4/10/07 - Raphael Ketani. I received the Interim Remediation Report dated 4/4/07 and received by DEC on 4/6/07. The report contained a log for the days that work was done, hand drawn plans for the boiler room at several different stages of boiler and equipment removal and site investigation, color pictures of what was found, analytical results, and a bill from Environmental Closures for all of the debris that was removed. The soil analytical results were for TH-1 to TH-3, and TH-8. TH-2 was completely non-detect, and TH-3 and TH-8 had several hits each, but these were well below the RSCO limits. TH-1 had 6 VOC hits and 2 SVOC hits, but they were all below the RSCOs. 7/25/07 - Raphael Ketani. I tried to call Mr. Pressly (607) 264-9521, but could only leave a message. From my 10/25/06 notes, it was stated by Mr. Pressly that the work will resume in January. 9/28/07 - Raphael Ketani. The tank that was removed is still listed as in service. I received a call from

PROCIDA REALTY (Continued) **S107782960**

Cristine Beaver of Dvirka & Bardilucci Consulting Engineers (516) 364-9890, ext 3056. She said her company is the consulting company for the NYC School Construction Authority and the SCA is thinking of buying the building. She wanted to know the status of the site. She said that she had some records and reports at her office, but it was very confusing. I explained to her what was going on. She said the oil tank has been cleaned out, but it is still there. I called up Mr. Pressly and he said that nothing has happened because he hasn't been involved in the project for a while. I asked him about the cesspool. He said that it wasn't a cesspool, but merely a depression. I asked him about the oil in the holes. He said that it has been removed. He added that only the oil below the leaking tank wasn't removed. He suggested that the owners were looking for a remediation contractor and that I call Ryan Tunstall (718) 299-7000, ext 216 directly. I tried to reach Mr. Tunstall, but could only leave a message. 10/17/07 - Raphael Ketani. I tried to reach Mr. Tunstall, but could only leave a message. I gave him one week to return my call, or else DEC will start to initiate some type of action. I checked the PBS registration. The 3,000 gal. tank is still listed as in service. The following items need to take place: 1) PBS revision to show the tank as removed 2) removal of oil below the former tank location with end point samples 3) removal of oil and contaminated soil and debris that may be remaining at site 10/22/07 - Raphael Ketani. I spoke with Mr. Procida and Sarah Williams (project manager for the development of the site). Mr. Procida asked that DEC hold off 1 year before requiring the removal of the contaminated soil that was below the tank. He said this was because there may be extensive contamination and it would be easier to get it when the building is down (he wants to convert the property to apartment housing). I told him that DEC wont wait so long for the property to be remediated. I told him that the tank has to be registered as removed, the contaminated soil has to be removed and end-points taken. He said that he will get Mr. Pressly to come back and do soil sampling where the tank used to be. If the contamination is not extensive and deep, then he will have it removed very soon. He asked that I give him some time to have the sampling done, the analytical results returned and a determination made as to what will happen. I told him that will be alright. I also told him that any open wells should be checked for more returning oil. He said this will be done. Mr. Pressly (607)264-9521 called me back. He said that Mr. Procida contacted him to do the work of investigating the soil that was under the tank. He said he will put together the proposal to Mr. Procida and that, hopefully, he will be able to start soon. 11/6/07 - Raphael Ketani. I tried to contact Mr. Pressly, but could only leave a message. The tank is still listed as in service. Mr. Pressly called me back. He said that Sarah Williams, the company's attorney, called him and asked for his work proposal. He said that he will correct the PBS and submit his proposal by sometime next week. 11/7/07 - Raphael Ketani. Mr. Pressly (607) 264-9521 called to say that geoprobing will begin at the site on 11/16/07. I received a letter from Sarah Williams, Esq., of 505 Carroll Street Development Group, LLC. Attached to the letter was a copy of tank removal/abandonment affidavit from A.L. Eastmond. 11/15/07 - Raphael Ketani. Mr. Pressly called to say that he filled out the PBS form and was sending it in with a check. 11/20/07 - Raphael Ketani. Mr. Pressly called with an update. He said he put in a boring near the door to the boiler room. He did borings south of the first one and found oil at two locations in the soil at 33' and

PROCIDA REALTY (Continued) **S107782960**

63' away, but not further from the first boring at 114' away. Then he did boring PB-5 and found oil. There was oil at 30' from PB-5, but not at 130' away. The water table is at 3' to 5' below the basement floor. Mr. Pressly said that it's a big, old oil spill - a huge spill - and that the best way to clean it up would be to dig it up after the building is torn down. He said he thought that because of the high water table, the foundation was constraining the oil contamination. I asked him how long will it be before the building is demolished. He said 12 to 18 months. I told him Spills can't wait that long. He said he will talk to the owners of the site and see what their plans are. 12/3/07 - Raphael Ketani. I checked the PBS registration. It still shows the tank as active. 12/14/07 - Raphael Ketani. Today I received a letter report dated 12/11/07 from Pressly & Associates regarding a soil investigation of the site. I reviewed the report. The soil analyticals were below TAGM, with the exception of total xylenes for SB-1. SB-2 was a composite sample. SB-3 was never tested for. SB-4 was broken in transport. 12/17/07 - Raphael Ketani. I tried to contact Mr. Pressly about the report, but could only leave a message. 12/18/07 - Raphael Ketani. I spoke to Mr. Pressly and asked him about the sampling that was performed. He said that SB-3 looked a lot like PB-2 in the soil cores. So he didn't send off a sample for SB-3. I asked him why he did a composite of SB-2 and SB-5. He said that both soil cores looked equally contaminated. I told Mr. Pressly that, in the future, a sample should be sent off from each boring that is done whether or not they look the same during a visual inspection. I told him this is how DEC wants the sampling done. He said he will do this in the future. I told Mr. Pressly that DEC wants the oil to be remediated now, not in 2009. I told him his company can either arrange to have it dug out or do soil treatment. He said that soil treatment would be the preferred method as there are rows of shelves with large heavy fabric rolls in the building. The site is an active fabric warehouse and the rolls can't be moved anywhere. I told him this is fine and to send a remediation plan for DEC approval. He said he will. I sent a letter to Sarah Williams, Esq. explaining that soil remediation has to take place now, not in 2009, and that the tank has to be listed as closed and removed. 12/24/07 - Raphael Ketani. I received a copy of the PBS registration form for the 3000 gal. tank. In an attached letter to me, Ms. Williams stated that the signed form went to Albany PBS. 1/2/08 - Raphael Ketani. I received a FAXed copy of a letter Ms. Williams had sent to Albany DER for registering the tank as removed, along with a change in ownership for the site. This is a response letter to DER returning the PBS application as incomplete. Her original PBS application was returned as it was missing ownership information, the federal tax I.D., the date of tank removal and documentation. 1/8/08 - Raphael Ketani. Mr. Pressly (607) 264-9521 called regarding how many soil samples to take after the soil treatment solution has been injected. He said that he is using RegenOx. The company supplying the chemical told him it takes only 3 weeks to break down the oil. I told him that the longer the chemical is allowed to react, the lower the contamination concentrations will be. He said he will do 6 treatment confirmation borings. I told him that sounded fine. 1/11/08 - Raphael Ketani. Today I received a short cover letter with a copy of the corrected PBS registration attached showing that the 3000 gal. tank is listed as closed and removed. 1/15/08 - Raphael Ketani. I spoke to Mr. Pressly today. He told me that the owner gave the go-ahead to do the RegenOx injecting. The

PROCIDA REALTY (Continued) **S107782960**

owner wants to move things along quickly. So it will happen very soon. He intends to do 1 round of groundwater sampling shortly after the RegenOx is injected. Mr. Pressly also sent me the RAP for the RegenOx injections. The only comment I had was that he should test the soil samples via methods 8260 and 8270, not STARS. 1/24/08 - Raphael Ketani. Mr. Pressly e-mailed me today that soil excavation will start the week of 2/4 (weather contingent). RegenOx will be added to the excavated soil at this time. On 2/28, drilling will begin and so will RegenOx injections. 2/4/08 - Raphael Ketani. I received an e-mail from Mr. Pressly stating that the excavation of the contaminated soil will take place through to the end of the week. Also, he stated that drilling and injection of the solution will take place from 2/25 to 3/7/08. 2/29/08 - Raphael Ketani. Mr. Pressly called to state that solution injection has been taking place all this week and will continue into next week. 3/27/08 - Raphael Ketani. Nick Canonico of NOVA Consulting (718) 343-4440 called to inquire about the site. He said that he was hired by a potential buyer and that he is trying to find out as much as he can about it. I let him know a few of the details regarding the contaminated soil and groundwater. 3/28/08 - Raphael Ketani. Mr. Pressly (607) 264-9521 called me. He said that they will take 6 soil samples during the first week of April to see how well the oil was broken down. He mentioned that they did the first injections at the perimeter of the oil pool in the subsurface and then worked inwards. The injection holes were 10 feet apart. Fifteen thousand gallons of solution were used. When they got to the location of the source, the oil started coming out of the drill holes. However, he said it was not enough to collect. He will start the 6 borings on April 1, 2008. I told him I will be there to see the work at 10AM on April 1. 4/1/08 - Raphael Ketani. I made the scheduled site visit and met Nick Pressly of Pressly & Associates, Inc., and Nick Canonico of NOVA Consulting (cell (516) 244-4069). Mr. Pressly showed me a map he had drawn showing about 80 solution injection points and some refusal points. He showed me around the two level wharehouse that stores rolls of fabric. I could see the white caps of the injection wells. He showed me the area where the tank used to be. There was crystallized RegenOx at this site. He showed me where the soil had been excavated in the boiler room. The work was taking place on the lower level. Mr. Pressly explained that the geoprobe company was coming to do confirmatory soil borings to see how well the RegenOx dissolved the oil. The drilling company arrived and did one boring for Mr. Pressly and I. There were broken up pieces of the concrete floor and about 6 inches of sandy, gravelly soil. The soil was wet and oil stained. The oil odors were strong. Mr. Pressly stated that he will have the crew do about a dozen or so confirmatory borings. I asked him why he was doing the borings after about 4 weeks from the date of injection. He said that RegenOx recommended sampling after 3 or 4 weeks. They told him that the solution looses effectiveness after that time. He said he planned on another round of treatment if the rest of the confirmatory samples looked as bad as this first one. We planned out a few more confirmatory boring locations and after that I left. Mr. Pressly sent me an e-mail later in the day. He stated that the boring he did just outside the lower level garage door entrance was free of product. 4/28/08 - Raphael Ketani. Mr. Pressly called to say that the second round of treatment solution injections took place last friday, 4/25/08. He said that he double dosed the worst areas - next to the tank pit and next to the elevators. The injection process was

PROCIDA REALTY (Continued) **S107782960**

successful. 5/21/08 - Raphael Ketani. Mr. Pressly sent me an e-mail that the confirmatory soil sampling round for the second round of treatment solution injections will start on 5/27/08. He also asked for an approval letter for the 1/14/08 RAP that DEC said was approved via an e-mail. I sent the approval letter today. 5/27/08 - Raphael Ketani. Mr. Canonico called to ask what would close the spill case for DEC. I told him that the soil end point results and the groundwater results would have to be about at the TAGM limits or below. He said that Mr. Pressly is taking the end point samples today. 5/30/08 - Raphael Ketani. Mr. Pressly sent an e-mail today requesting confirmation that DEC wanted groundwater samples to be taken. I responded back that we did want new groundwater samples taken in the worst areas as the last set of groundwater data is from 2006. I told him that data is old and we need to see what the present levels of contamination are in order to have a basis that there is no threat from the groundwater. I also checked the PBS registration (#2-602516). It shows the tank as closed and removed. 6/25/08 - Raphael Ketani. I received an e-mail from Mr. Pressly regarding remediation progress at the site. The e-mail stated that on 5/27/08, two soil samples from the eastern side of the plume exceeded TAGM limits. They vacuumed out free product from the eastern wells that are in the vicinity of the former tank location and did a third round of RegenOx injections. The free product didn't return during the week. Mr. Pressly recommended doing another round of confirmatory soil borings within the eastern plume and groundwater sampling. I concurred in my response e-mail that DEC approves the additional sampling. I spoke to Mr. Pressly (607) 264-9521. He said that they will go back on 7/17/08 to collect new soil samples and groundwater samples. 7/14/08 - Raphael Ketani. Mr. Pressly called today. He said that it's been a month since the third round of treatment solution injections took place. So they will do confirmatory soil sampling in the former tank on friday. He said that they had injected 5000 gal. of solution and they believe the contamination is below TAGM now. 7/23/08 - Raphael Ketani. Yesterday Mr. Pressly sent me the analytical results for the third treatment round confirmatory soil samples and one groundwater sample. I reviewed the results. The groundwater sample from Well #64 had hits in the hundreds of ppb for 8 VOCs and 1500 ppb of 2-methylnaphthalene, with 2 other SVOCs in the hundreds of ppb. Samples T-1 and T-2 had results that were below TAGM. Sample T-3 had 4 VOC hits up to 30,000 ppb, and a 2-methylnaphthalene hit of 115,000 ppb. I sent Mr. Pressly a letter stating that more water should be removed from well #64 and that another treatment is necessary for the soil at T-3. 8/1/08 - Raphael Ketani. David Sweeney of PDS Carroll Street, LLC called me up (718) 768-6726. He said that his company just bought the property. He said that they buy commercial/industrial properties and preserve the structures without developing them. He said that his company is in contact with Mr. Pressley and they are pursuing the cleanup of the site, as per DEC's instructions. 8/27/08 - Raphael Ketani. Today I received the 8/25/08 Remedial Action Plan which was produced by Pressly & Associates and submitted by Sarah Williams, counsel for Procida Realty. The plan gave a history of the installation of the solution injections wells and the levels of soil contamination that were found after each round of treatment. The report concluded by stating that a fourth round of soil treatment will be conducted within the former tank area, and that confirmation soil and water samples will be taken after the fourth round. Also, the other

PROCIDA REALTY (Continued) **S107782960**

injection wells that were installed outside the tank area will be abandoned. The report contained manifests for soil that was removed and soil and groundwater analytical results reports for the tank grave sampling, sampling after each treatment round, and a sample of the groundwater. 10/20/08 - Raphael Ketani. I received the analytical report for the groundwater at well #64 and the soil at T-3 (now called S-1). The groundwater had 4 VOC hits in the double digits (up to 97 ppb) and 4 SVOC hits up to 440 ppb of phenanthrene. The only SVOC of significance was naphthalene at 200 ppb. Sample S-1 had 11 combined hits of VOCs and SVOCs. The only exceedences were total xylenes at 1680 ppb. 2-methylnaphthalene was at 11000 ppb, but the RSCO limit is 36,400 ppb. I spoke to Mr. Pressly (607) 264-9521 about the results. I told him that the DEC didn't see the need to do additional work at the site based upon the latest soil and groundwater analyticals. I told him that DEC is closing the spill case. He said that he will send a closer report. I told him that DEC will review it when it is received and E-doc it, but that we are not holding up the closing of the spill case as we feel there is enough information to do a closure right now. He said that he will send the report soon. Based upon all of the sets of analytical results submitted by Pressly & Associates, and the closed PBS case, I am closing the spill case."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:
Name: 473 PRESIDENT STREET
Address: 473 PRESIDENT STREET
City,State,Zip: BROOKLYN, NY 11215
Program: BCP
Site Code: 507634
Acres: 0.460
HW Code: C224220
SWIS: 2401
Town: New York City
Record Added Date: 05/08/2015
Record Updated Date: 11/22/2021
Update By: GWBURKE
Site Description: "Location: The 473 President Street site is located in an urban area in Brooklyn, NY. It is located in the southern portion of Block 440, Lot 12. The Gowanus Canal is approximately 350 ft to the west of the site. The site is bounded by a shuffleboard club to the north, a former electronics-waste recycler to the west, President Street to the south, and a former casket company to the east. Site Features: The site is comprised of a 1 story warehouse that is fully utilized. Current Zoning and Land Use: The site is vacant and was a former bicycle retailer, a furniture maker, and a showroom for a light designer. It is currently zoned M1-2 (commercial and light industrial uses). The proposed development project calls for demolition of the existing structures and the construction of a mixed-use residential and commercial building, in accordance with zoning laws for that area, with ground floor retail and parking. The development will coincide with the development activities at the neighboring site, President St. Portfolio, BCP Site No. C224309. The nearest residential area is across President Street, but the proposed redevelopment will be largely residential. Past Use of the Site: The site has an industrial history dating to the 1880s. From 1886 to 1928, the site was a sash and door factory, and later a mill with a machine shop and boilers. In 1938 the Coca-Cola Bottling Co. operated

473 PRESIDENT STREET (Continued) **S121933761**

two gasoline underground storage tanks (USTs) as part of their site activities. From 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. There is an open spill from a failed tank test which resulted in petroleum-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill in the upper 10 feet. The fill consists of brown, medium to fine sand with varying amounts of gravel, brick, concrete, asphalt, coal fragments, coal ash, slag, and wood. Hardened coal tar was observed within the fill layer in a boring located in the southeastern portion of the site. The fill layer was underlain mainly by brown fine sand with varying amounts of silt and clay. Groundwater is approximately 10 foot below ground surface. The regional groundwater table is relatively flat with a slight gradient to the west towards the Gowanus Canal. "

Env Problem:

"Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, emerging contaminants, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, emerging contaminants, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include petroleum-related and chlorinated VOCs, SVOCs consisting primarily of Polycyclic Aromatic Hydrocarbons (PAHs), lead, mercury, and arsenic. Soil: Benzene was found in soil at a maximum concentration of 2.1 parts per million (ppm), exceeding the protection of groundwater soil cleanup objective (SCO) of 0.06 ppm. Ethyl benzene was found in soil at a maximum concentration 32 ppm, exceeding the protection of groundwater standard of 1 ppm. Toluene was found in soil at a maximum concentration of 5.5 ppm, exceeding the protection of groundwater standard of 0.7 ppm. Xylenes (total) were found in soil at a maximum concentration of 250 ppm, exceeding the protection of groundwater standard of 0.26 ppm. Trichloroethene (TCE) was found in soil at a maximum concentration of 5.1 ppm, exceeding the protection of groundwater standard of 0.47 ppm. Cis-1,2-Dichloroethylene was found in soil at a maximum concentration of 3.7 ppm, exceeding the protection of groundwater standard of 0.25 ppm. 1,2,4-Trimethylbenzene was found in soil at a maximum concentration of 100 ppm, exceeding the protection of groundwater standard of 3.4 ppm. 1,3,5-Trimethylbenzene was found in soil at a maximum concentration of 29 ppm, exceeding the protection of groundwater standard of 8.4 ppm. Arsenic was found in soil at a maximum concentration of 203 ppm, exceeding the restricted residential standard of 16 ppm. Lead was found in soil at a maximum concentration of 1080 ppm, exceeding its restricted residential standard of 400 ppm. Mercury was found in soil at a maximum concentration of 18 ppm, exceeding its restricted residential standard of 0.73 ppm. Benzo(a)anthracene was found at a maximum concentration of 34 ppm, exceeding its restricted residential standard of 1 ppm. Benzo(a)pyrene was found at a maximum concentration of 29 ppm, exceeding its restricted residential standard of 1 ppm. Benzo(b)fluoranthene was found at a maximum concentration of 35 ppm, exceeding its restricted residential standard of 1 ppm. Diben(a,h)anthracene was found at a maximum concentration of 2.6 ppm, exceeding its restricted residential standard of 0.33 ppm. Indeno(1,2,3-cd)pyrene was found at a maximum concentration of 17 ppm, exceeding its restricted residential standard of 0.5 ppm. Data does not indicate any off-site impacts in soil related to this site.

473 PRESIDENT STREET (Continued) **S121933761**

Groundwater: TCE and its associated degradation products are found in groundwater on the northern half of the site at levels exceeding groundwater standards (5 parts per billion - ppb) with a maximum concentration of 1,300 ppb. Benzene was found exceeding its groundwater standard (1 ppb) at a maximum concentration of 3,500 ppb. Ethylbenzene was found exceeding its groundwater standard (5 ug/L) at a maximum concentration of 2,000 ppb. Toluene was found exceeding its groundwater standard (5 ppb) at a maximum concentration of 740 ppb. Xylene (total) was found exceeding its groundwater standard (5 ppb) at a maximum concentration of 6,900 ppb. Cis-1,2-Dichloroethylene was found exceeding its groundwater standard (5 ppb) at a maximum concentration of 4,900 ppb. 1,2,4-Trimethylbenzene was found exceeding its groundwater standard (5 ppb) at a maximum concentration of 1,600 ppb. 1,3,5-Trimethylbenzene was found exceeding its groundwater standard (5 ppb) at a maximum concentration of 470 ppb. Arsenic was found exceeding its groundwater standard (25 ppb) at a maximum concentration of 38.2 ppb. Naphthalene was found exceeding its groundwater standard (10 ppb) at a maximum concentration of 427 ppb. Data does not indicate any off-site impacts in groundwater related to this site. Sub-Slab Soil Vapor and Indoor Air: Trichloroethene (TCE) was detected at a maximum concentration of 39,000 micrograms per cubic meter (ug/m3) in the soil vapor, and 23.9 ug/m3 in indoor air. Tetrachloroethene (PCE) was detected at a maximum concentration of 440 ug/m3 in the soil vapor, and 2.81 ug/m3 in indoor air. Cis-1,2-dichloroethene (DCE) was detected at a maximum concentration of 95 ug/m3 in the soil vapor, and 0.218 ug/m3 in indoor air. Data indicates there is the potential for off-site impacts in soil vapor related to this site. "

Health Problem: "People will not come into contact with contaminated soil or groundwater since the site is covered with a building and concrete unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future onsite development. Environmental sampling indicates that soil vapor intrusion is a concern for offsite buildings."

Update By: JCGRATHW
Site Description: "Location: The on-site 473 President Street site is located in an urban area in Brooklyn, Kings County. It is located in the southern portion of Block 440 Lot 12. The Gowanus Canal is approximately 350 ft to the west of the site. Site is bounded by a shuffleboard club to the north, an e-waste recycler to the west, President Street to the south, and a casket company to the east. Fulton Works MGP site is 1

473 PRESIDENT STREET - OFF-SITE (Continued) **S101508966**

block to the north. Site Features: The on-site is comprised of a 1 story warehouse that is fully utilized. Current Zoning and Land Use: The site is an active warehouse for a bicycle company, a furniture maker, and a showroom for a light designer. It is currently zoned for M1-2, commerical to light industrial. The nearest residential area is across President Street. Past Use of the Site: The on-site has an industrial history back to the 1880s. In 1886 to 1928, the site was a sash and door factory and later a trim and planing mill with machine shop and boilers. In 1938 the Coca-Cola Bottling Co was the operator with two gasoline USTs. In 1969 to the 1990s, the site was occupied by Dolin Metal Manufacturing Co. From 1993 to 2007, the building was occupied by manufacturing and storage. Currently the site is occupied by a furniture maker, a lighting designer, and a bicycle retailer. There is an open spill from a failed tank test which may have resulted in BTEX-contaminated soils on-site. The spill number is 9412605. Site Geology and Hydrogeology: The soils of the area consist of urban fill for the top 10 feet. The groundwater is approximately 10 foot below ground surface at the site. Based on the topography of the land, the local groundwater flows in a westerly direction, towards the Gowanus Canal. "

Env Problem: "The on-site investigation yielded the following results: Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs)(only during the pre-application investigation), pesticides, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include TCE, BTEX (Benzene, Toluene, Ethylbenzene, Xylene), naphthalene, Polycyclic Aromatic Hydrocarbons (PAHs - a class of SVOCs), Lead, Mercury, and Arsenic. Soil Soil borings were installed and samples collected as part of the remedial investigation. Concentrations exceeding the Commercial SCOs were found for PAHs, arsenic, lead, and mercury. Primarily the top 10 foot of material, known as historic fill, exceeds the SCOs for PAHs, lead, mercury, and arsenic. Spatially, the native materials were most contaminated in the northern corner near a suspected gasoline tank with trichloroethene (TCE) and BTEX. Groundwater TCE and its associated degradation products are found in groundwater on the northern half of the site moderately exceeding groundwater standards (5 ug/L) with a maximum concentration of 1300 ug/L. Fuel breakdown products (i.e. BTEX and naphthalene) were found in groundwater on the northern portion of the site at concentrations exceeding the standard near the suspected gasoline tank. Soil Vapor TCE, tetrachloroethene (PCE), and cis-1,2-dichloroethene (DCE), were detected in sub-slab soil vapor at significantly elevated concentrations. "

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 8/5/03 Received email from A. Lapine, Delta. Delta proposing to install three off-site monitoring wells; one on the west-side sidewalk off of 4th Ave and the other two on the east-side sidewalk of Degraw. 12/3/03 Reassigned from Vought to Foley. Avg depth to groundwater: 19'bgs Flow generally southwest Total BTEX: ND-5541ppb (9/4/03) Total MTBE: 0.48-386,000ppb (9/4/03) 0.41', 0.66', 0.42, 0.38, 0.17' LNAPL detected in MW-2 (5/10/02, 8/8/02, 12/4/02, 3/26/03 and 9/4/03 respectively) 0.05', 0.37' and 0.29' LNAPL detected in MW-4 (8/8/02, 12/4/02, 3/26/03) Off-site delineation to start Q4 2003 with 3 monitoring wells. File

BP AMOCO STATION #3887 (Continued) **S103036428**

review: Subsurface Hydrocarbon Assessment Report (Delta, 10/3/01) Report references Baltec 6/10/98 UST Closure Report for 14 USTs. Lab analysis of soil samples from excavation identified VOCs/SVOCs in excess of guidance values. 11/10-11/11/99 Delta advanced 12 soil borings between 7 to 20 ft. Lab analysis of soil samples identified between one and eight VOCs in excess of TAGM in 11 of 14 samples. Four of those were samples where methylene chloride was the only VOC identified(a common lab contaminant). 5/22-5/23/00 Delta installed three monitoring wells and collected soil samples for VOC analysis. BTEX ranged from 213ppb(MW-1, 10-12') to 106,370ppb (MW-1, 20-22'). MTBE ranged from 58.6ppb (MW-2, 20-22') to 313ppb (MW-1, 20-22'). Total VOCs ranged from 736ppb (MW-1, 10-12') to 415,493ppb(MW-1, 20-22'). 6/28/00 Gauged four tank wells and three monitoring wells. Groundwater samples were collected from three monitoring wells. Tank wells were dry. Total BTEX ranged from 53ppb(MW-3) to 2009ppb(MW-1). MTBE ranged from 7ppb(MW-3) to 1430ppb(MW-1). Total VOCs ranged from 126ppb(MW-3) to 6282ppb(MW-1). 4/2/01 & 4/26/01 Delta gauged 5 monitoring wells and 4 tank wells and collected samples. Total BTEX ranged from 141ppb(MW-3) to 11798ppb(MW-4). MTBE ranged from 17ppb(MW-3) to 7030ppb(MW-4). Total VOCs ranged from 191ppb(MW-3) to 19,702ppb(MW-4). 12/9/03 Received 2002 quarterly reports and second quarter 2003 report.(KMF) 4/2/04 Received Nov 2003 SHAR Addendum report (Delta, 3/31/04) for installation of three downgradient wells (MW-8, MW-9, MW-10) on other side of building. DTW 16.5'bgs. Installed to 24'bgs. No VOCs detected in soil samples. Need more recent monitoring reports. 8/9/04 3Q03 - BTEX from ND(MW-3) to 5541ppb (MW-6). MTBE from ND(MW-3) to 386,000ppb (MW-6). 0.17' LNAPL detected in MW-2. 8/9/04 4Q03 - BTEX from ND(MW-3 and MW-8) to 44,755ppb (MW-2). MTBE from ND(MW-3) to 63,500ppb (MW-6). 0.01' LNAPL detected in MW-2. 8/9/04 1Q04 - BTEX from ND(MW-3) to 14,823ppb (MW-2). MTBE from 0.79(MW-3) to 34,100ppb (MW-6). 8/9/04 2Q04 - BTEX from ND(MW-3, MW-8 and MW-9) to 4,797ppb (MW-4). MTBE from ND(MW-3) to 9,850ppb (MW-5). 0.07' LNAPL in MW-2. 4/27/05 Portfolio meeting-Source is dispensers. GW 16-20'bgs. Will verify if gw is perched. Indoor air model completed 2/05 which lead Delta to install cluster vapor well and run TO-3 analysis. Summa canister will be done since benzene MDL less than 80ug/m3. Reassess exposure. Soil gas survey to define LNAPL impacts. 6/1/05 Subsurface Hydrocarbon Assessment Report received for installation of MW-11 and MW-12, offsite. No BTEX/VOCs detected above RSCOs in soil. 8/1/05 3Q04 - No LNAPL present. DTW 16-20'bgs. BTEX from ND(MW-3,8,9) to 17040(MW-4). MTBE from ND(MW-3) to 38500ppb(MW-6). 6/28/05 4Q04- 0.02' LNAPL in MW-2. BTEX from ND(MW-3,9,11,12) to 13360ppb(MW-4). MTBE from ND(MW-3) to 21900ppb(MW-5). 8/2/05 Subsurface Hydrocarbon Assessment Report received for MW-13 and MW-14, offsite. No BTEX, MTBE or other VOCs in excess of RSCOs. Napthalene was detected in MW-13 above GWQS. 11/9/05: Reviewed the quarterly monitoring report dated October 7, 2005. Fourteen wells sampled on 2/15/05. No free product present. Max BTEX is 16390ppb in MW-4 and max MTBE is 22500ppb in MW5. BTEX and MTBE increased in MW-1 and MW-2. 11/25/05: Reviewed the quarterly report dated 11/3/05. Fourteen monitoring wells sampled on May 27, 2005. Max BTEX is 8190ppb (MW4) and max MTBE is 18200ppb (MW5). Fluctuating concentrations in some wells. 11/29/05 3Q05- DTW 15.45-20.81'bgs. No LNAPL present since 5/04. BTEX from ND(MW-3,8,9,11,12,13,14) to 5847ppb(MW-4). MTBE from ND(MW-3) to 13900ppb(MW-5). 12/19/05 Received Subsurface Assessment Report dated 12/6/05 which documents installation of one cluster well(VCW-1) for

BP AMOCO STATION #3887 (Continued) **S103036428**

vapor monitoring installed 4/4/05. DTW on 5/12/05 ranged from 15.51-20.08'bgs. GW movement varies in relation to topography, lithology, elevations of recharge and discharge areas and man-made influences but generally flows to the west-southwest. VCW-1 was advanced to 21'bgs(approx DTW). Soil samples collected at (17-18'bgs) and (20-21'bgs) showed total BTEX at ND and 220ppb respectively and MTBE at 596ppb and 789ppb respectively. Three vapor samples were collected (VCW-1A(17.5-18'bgs), VCW-1B(11.5-12'bgs), VCW-1C(5.5-6'bgs)) by Summa canister on 4/14/05 and 7/19/05. Total BTEX in VCW-1A was 20mg/m3. VCW-1B and VCW-1C were both ND. MTBE was detected in soil above RSCOs during installation. 3/3/06 Received 4Q05 report- Sampled 8 of 14 wells. DTW 13.35-20.25'bgs. No LNAPL. BTEX from ND(MW-3,8,11,12,13,14) to 17916ppb(MW-4). MTBE from ND(MW-3,8) to 298000ppb(MW-6). Additional on-site data to be collected to enhance site conceptual model for RAP preparation. 3/16/06 Met with BP and Delta. DTW 16-20'bgs. MTBE spike in MW-6 may be due to rise in watertable. Installed cluster vapor well downgradient of MW-5 & MW-6. Vapors only at interval right above watertable. 6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 9/26/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 7/26/2006, by Delta. Sampled on 2/15/2006. DTW 13.50' to 20.38' bg. Flows to south-southwest. No LNAPL. Total BTEX range from ND (MW-3, 8, 9, 11, 12, 13, and 14) to 12,850 ppb (MW-4). MTBE from ND (MW-3, 12) to 131,000 ppb (MW-6). (RJF) 9/28/2006 - Feng - Portfolio meeting with BP and Delta. Residual contaminant probably beneath the pump island area, but delineation can't be done under the pump island canopy due to the safety issue. Delta will continue to monitor and eva site model and remedial alternatives. IRM of bioBarrier in downgradient to treat the groundwater before it migrate off site submitted next quarter. (RJF) 1/4/2007 - Feng - 2Q2006, 11/29/2006, by Delta. Groundwater sampled and gauged 6/6/2006, 14/14 monitoring wells. DTW 14.91' to 20.23' bg. Flows west. No LNAPL. MW-1, 5,664 ppb BTEX, 49.3 ppb MTBE. MW-2, 5,610.2 ppb BTEX, 311 ppb MTBE. MW-3, ND BTEX, less than 1 ppb MTBE. MW-4, 15,207 ppb BTEX, 82 ppb MTBE. MW-5, 3,074.2 ppb BTEX, 2,810 ppb MTBE. MW-6, 3,348 ppb BTEX, 133,000 ppb MTBE. MW-7, 38.2 ppb BTEX, 7,450 ppb MTBE. MW-8, ND. MW-9, ND. MW-10, 80.14 ppb BTEX, 127 ppb MTBE. MW-11, ND BTEX, 34.4 ppb MTBE. MW-12, ND BTEX, 4.8 ppb MTBE. MW-13, ND BTEX, 9.3 ppb MTBE. MW-14, ND BTEX, 4.8 ppb MTBE. (RJF) 6/12/2007 - Feng - 3Q2006, 1/29/2007. Groundwater sampled 8/28/2006. 14/14 monitoring wells were sampled. DTW 14.14' to 20.05' bg. Flows to southwest. No LNAPL. MW-1, 5,655 ppb BTEX, 42.9 ppb MTBE. MW-2, 5,658 ppb BTEX, 308 ppb MTBE. MW-3, ND. MW-4, 14,250 ppb BTEX, 121 ppb MTBE. MW-5, 3,237 ppb BTEX, 1,520 ppb MTBE. MW-6, 3,604 ppb BTEX, 109,000 ppb MTBE. MW-7, 152 ppb BTEX, 8,190 ppb MTBE. MW-10, 84 ppb BTEX, 174 ppb MTBE. MW-11, 20.7 ppb MTBE. MW-8, MW-9, MW-12, MW-13, and MW-14, ND. 6/13/2007 - Feng - 4Q2006, 3/6/2007. Groundwater sampled 11/27/2006. DTW 14.79' to 20.27' bg. Flows to west. No LNAPL. MW-1, 1,378 ppb BTEX, 118 ppb MTBE. MW-2, 3,040 ppb BTEX, 241 ppb MTBE. MW-3, ND. MW-4, 6,366 ppb BTEX, 145 ppb MTBE. MW-5, 3,201 ppb BTEX, 1,690 ppb MTBE. MW-6, 55.2 ppb BTEX, 791 ppb MTBE. MW-7, 18.8 ppb BTEX, 580 ppb MTBE. MW-8, 10.4 ppb MTBE. MW-9, ND. MW-10, 64.1 ppb BTEX, 193 ppb MTBE. MW-11, 12, 13, and 14, ND. (RJF) 7/24/2007 - Feng - 1Q2007, 5/4/2007. Groundwater sampled 2/17/2007. 12/14 monitoring wells were sampled. DTW 15.24' to 20.73' bg. Flows to west. LNAPL in MW-2 (0.08'). MW-1, not accessible. MW-2, 0.08' LNAPL. MW-3, ND. MW-4, 3,643 ppb BTEX, 50.4 ppb MTBE. MW-5, 3,134 ppb BTEX, 5,580 ppb MTBE. MW-6, 58.8 ppb BTEX, 1,120 ppb MTBE.

BP AMOCO STATION #3887 (Continued) **S103036428**

MW-7, 12.3 ppb BTEX, 1,120 ppb MTBE. MW-8, BTEX ND, 8.1 ppb MTBE. MW-9, BTEX ND, 1.3 ppb MTBE. MW-10, 53.4 ppb BTEX, 194 ppb MTBE. MW-11, BTEX ND, 6.7 ppb MTBE. MW-12, BTEX ND, 1.3 ppb MTBE. MW-13, BTEX ND, 3 ppb MTBE. MW-14, BTEX ND, 4.6 ppb MTBE. (RJF) 12/12/2007 - Feng - 2Q2007, 8/6/2007. Active Service Station. 14 monitoring wells were gauged 5/11/2007. DTW 14.66' to 20.19' bg. Flows to southwest. No LNAPL. 14 monitoring wells were sampled 5/11/2007. BTEX range Nd to 12,500 (MW-5). MTBE range ND to 12,500 ppb (MTBE). (RJF) 1/8/2008 - Feng - 3Q2007, 11/1/2007. Active Service station. The monitoring well network was gauged and sampled on 8/30/2007. 14 monitoring wells were gauged. DTW 14.58' to 19.94' bg. Flows to southwest. No LNAPL. 14 monitoring wells were sampled. BTEX range ND to 5,136 ppb (MW-4). MTBE range ND to 17,900 ppb (MW-5). (RJF) 2/13/2008 - Feng - 4Q2007, 1/4/2008. Active Service Station. The monitoring wells network was gauged and sampled on 11/21/2007. 14 wells were gauged. DTW 15.44' to 20.59' bg. Flows to southwest. No LNAPL. 13 wells were sampled. BTEX range ND to 8,479 ppb (MW-4). MTBE range ND to 22,800 ppb (MW-5). (RJF) 6/16/2008 - Feng - 1Q2008, 4/3/2008. Active service station. The monitoring wells network was gauged and sampled 2/25/2008. 9 monitoring wells were gauged and sampled. DTW 15.81' to 20.85' bg. Flows to southwest. No LNAPL. BTEX range ND to 2,500 ppb (MW-2). MTBE range ND to 20,000 ppb (MW-5). 10/29/2008 - 2Q2008, 8/11/2008, by Delta. Active service station. The monitoring well network was gauged and sampled 5/29/2008. 14 wells were gauged. No LNApL. DTW 15.33' to 20.75' bg. Flows to southwest. 14 wells were sampled. BTEX range ND to 2,956 ug/L (MW-4). MTBE range ND to 16,000 ug/L (MW-5). (RJF) 3/4/2009 - 3Q2008, 12/13/2008, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled 7/29/2008. 14 wells were gauged. NO LNAPL. DTW 15.10' to 20.45' bg. Flows to southwest. 14 wells were sampled. Max benzene 1,200 ug/L (MW-5). Max BTEX 1,443 ug/L (MW-5). Max MTBE 72,000 ug/L (MW-6). 4Q2008, 1/29/2009, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled on 11/17/2008. 14 wells were gauged. LNAPL in MW-2 (0.03'). DTW 14.53' to 20.24' bg. Flows to southwest. 14 wells were sampled. Max benzene 1,200 ug/L (MW-5). Max BTEX 3,024 ug/L (MW-4). Max MTBE 5,800 ug/L (MW-5). (RJF) 5/21/2009 - Reviewed the Investigation Work Plan, dated 3/31/2009, by Delta. Delta proposes to install 3 monitoring wells, but one of the proposed wells, MW-17 is contingent upon whether it is safe to install the well because the utilities over there. Work plan is approved. SHARA is due within 90 days, August 21, 2009. (RJF) 10/8/2009 - 2Q2009, 8/21/2009, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled on 5/18/2009. 3 monitoring wells were installed in 6/2009. SHARA summarizing the well installation activities will be submitted under separate cover. 14 wells were gauged. LNAPL in MW-2 (0.04'). DTW 15.07' to 20.59' bg. Flows to west southwest. 13 wells were sampled. MW-2 was not sampled. Max benzene 1,100 ug/L (MW-4). Max BTEX 6,362 ug/L (MW-4). Max MTBE 2,400 ug/L (MW-5). (RJF) 10/16/2009 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated August 20, 2009, by Delta. On June 25, 2009, three monitoring wells MW-15, MW-16 and MW-17 were installed using a Geoprobe 6610 hollow stem auger and direct push. Final depth to 22 feet for MW-15, 23 feet for MW-16 and 21 feet for MW-17. 7 soil samples were collected. MW-15 (13-13.5'), ND. MW-15 (15.5-16'), 217 ug/kg BTEX, 580 ug/kg VOCs. MW-15 (19.5-20'), 33,800 ug/kg BTEX, 57,340 ug/kg VOCs. MW-16 (9.5-10'), 150 ug/kg BTEX, 840 ug/kg VOCs. MW-16 (16.5-17'), BTEX ND, 860 ug/kg

BP AMOCO STATION #3887 (Continued) **S103036428**

VOCs. MW-16 (19.5-20'), 160 ug/kg BTEX, 800 ug/kg VOCs. MW-17 (14.5-15'), ND. All the wells were guaged on 8/6/2009, DTW 14.78' (MW-13) to 20.26' (MW-5). MW-15, 19,010 ug/L BTEX, 24,029 ug/L VOCs. MW-16, 44 ug/L BTEX, 101 ug/L VOCs. MW-17, ND. Delta also proposes a pilot study for sulfate solution injection. 1,000 gallons of MgSO4 in concentration of 25,000 mg/L will be injected into MW-15 and monitor the rest of the monitoring wells. Comments on the pilot study to Delta. NO monitoring wells shall be used as application wells and do not use wells at the edge of the plume where also near the subway tunnel. Revised work plan within 30 days. (RJF) 10/30/2009 - Tibbe forwarded the MSDS of Megnesium Sulfate Heptahydrate to NYCT for review. 11/5/2009 - email from Jennifer Wuotinen of NYCT. Mark, Our Industrial Hygiene group does not see any issues with BP Amoco using this product. 11/5/2009 - 3Q2009, 10/30/2009, pdf, by EnviroTrac. Active BP Service station. The monitoring well network was gauged and sampled on August 6, 2009. the site was re-surveyed on August 19, 2009. 17 wells were gauged. NO LNAPL. DTW 14.78' to 20.26' bg. Flows to west southwest. 17 wells were sampled. Max benzene 820 ug/L (MW-5). Max BTEX 19,010 ug/L (MW-15). Max MTBE 1,600 ug/L (MW-5). (RJF) 2/2/2010 - approval of the sulfate pilot work plan is sent to BP. The report summarizing the pilot result will be in by 7/2010. (RJF) 6/8/2010 - 4Q2009, 2/5/2010, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on 11/23/2009. 17 wells were gauged. NO LNAPL. DTW 15.29 - 20.71' bg. Flows to west-southwest. 17 wells were sampled. Max benzene 1,400 ug/L (MW-4). Max BTEX 32,080 ug/L (MW-15). Max MTBE 1,600 ug/L (MW-5). 1Q2010, 4/19/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 2/9/2010. 16 wells were gauged, MW-11 was not gauged due to an object stuck in the well. NO LNAPL. DTW 13.62 - 20.79' bg. Flows to west-southwest. 17 wells were sampled. Max benzene 460 ug/L (MW-5). Max BTEX 25,040 ug/L (MW-15). Max MTBE 1,200 ug/L (MW-5). 08/06/2010: This spill was temporarily (for 6 months) transferred to A. Doronova. - AD 08/09/2010: Received a pdf copy of the pilot test report. DL to eDocs. AD 10/14/2010: Received a pdf copy of the third quarter 2010 monitoring report. Dl the report to eDocs. AD 4/11/2011 - Spill transferred back to JFeng. 4/25/2011 - email from Chris Meyer of Anteagroup. Good Morning June Attached is the next monitoring report for the above-referenced project. Chris eDoc 1Q2011 report. JF 7/8/2011 - 1Q2011, 4/11/2011, by Anteagroup. The groundwater samples were collected on 2/14/2011. 15 wells were sampled. Max BTEX 17,450 ug/L (MW-15). Max MTBE 22,000 ug/L (MW-6). Flows to southwest. 10/27/2011 - 2Q2011, 9/1/2011, by Antea Group. The groundwater samples were collected on June 17, 2011. 16 wells were sampled. High BTEX and MTBE in multiple wells. MW-1, 1,630 ug/L BTEX, 58 ug/L MTBE. MW-2, 1,464 ug/L BTEX, 87 ug/L MTBE. MW-4, 4,920 ug/L BTEX, 160 ug/L MTBE. MW-5, 1,129 ug/L BTEX, 1,400 ug/L MTBE. MW-15, 19,150 ug/L BTEX, less than 5.0 ug/L MTBE. 7/6/2012 - 1Q2012, 4/27/2012, by Antea Group. The groundwater samples were collected on 2/14/2012. MW-1, 1,360 ug/L BTEX, 31 ug/L MTBE. MW-2, 1,172 ug/L BTEX, 93 ug/L MTBE. MW-4, 4,186 ug/L BTEX, 180 ug/L MTBE. MW-5, 1,253 ug/L BTEX, 1,400 ug/L MTBE. MW-6, 25.1 ug/L BTEX, 25 ug/L MTBE. MW-7, 76.5 ug/L BTEX, 64 ug/L MTBE. MW-10, 68 ug/L BTEX, 150 ug/L MTBE. MW-15, 17,078 ug/L BTEX, less than 2.5 ug/L MTBE. 9/21/2012 - 2Q2012, 7/30/2012, by Antea Group. The groundwater samples were collected on 5/24/2012. The next sampling will be in August 2012. MW-1, 233 BTEX, 14 MTBE. MW-2, 711 BTEX, 62 MTBE. MW-4, 2,968 BTEX, 72 MTBE. MW-5, 657 BTEX, 1,000 MTBE. MW-6, 18 BTEX, 21 MTBE. MW-7, 25.1 BTEX, 53

BP AMOCO STATION #3887 (Continued) **S103036428**

MTBE. MW-10, 43.9 BTEX, 42 MTBE. MW-15, 16,770 BTEX, less than 5.0 MTBE. 11/15/2012 - Reviewed the Work Plan Execution-30 Day Notification Letter and Bioremediation Application Program Work Plan Addendum, dated August 14, 2012. There will be 12 injection events, 1,000 gallon of sulfate solution at concentration of 25,000 mg/L will be injected into MW-1 and MW-5 in each event. Reviewed 3Q2012, dated 10/31/2012 and couldn't find the injection information. DEC was also copied on the letter to EPA for UIC notification. email to Chris Meyer of Antea Group Have you started the sulfate injection yet? I looked at the Notification Letter but I didn't find anything in the quarterly report. Please include all the information regarding the injection in the quarterly report, like what you did for some other injection sites, so I could know what you are doing. As I see, what you proposed is more of a gradually process. There will be 12 injection events, 1,000 gallon of sulfate solution will be injected into MW-1 and MW-5 in each event. Since this site is near the subway line, you may need to have MTA's permission before injecting the solution. Let me know. Well Abandonment Report, 11/9/2012. Abandoned monitoring well MW-11. 4/22/2013 - 4Q2012, 1/31/2013, by Antea Group. MW-1, 1,330 BTEX, 10 MTBE. MW-2, 761 BTEX, 74 MTBE. MW-4, 2,028 BTEX, 88 MTBE. MW-5, 1,398 BTEX, 1,300 MTBE. MW-6, 1,104 BTEX, 15,000 MTBE. MW-7, 68.2 BTEX, 64 MTBE. MW-15, 23,847 BTEX, less than 10 MTBE. 9/18/2012, sulfate injection into MW-1 and MW-15. 10/31/2013 - 1Q2013, 5/3/2013. The groundwater was sampled on 2/15/2013. MW-1, 2,040 BTEX. MW-2, 1,601 BTEX, 34 MTBE. MW-4, 4,619 BTEX, 130 MTBE. MW-5, 1,474 BTEX, 780 MTBE. MW-6, 1,532 BTEX, 12,000 MTBE. MW-7, 61.9 BTEX, 81 MTBE. MW-15, 13,028 BTEX. 2Q2013, 7/30/2013. Groundwater was sampled on 5/13/2013. MW-1, 2,200 BTEX. MW-2, 968 BTEX, 29 MTBE. MW-4, 2,049 BTEX, 190 MTBE. MW-5, 1,776 BTEX, 1,200 MTBE. MW-6, 1,299 BTEX, 4,900 MTBE. MW-7, 354 BTEX, 99 MTBE. MW-15, 7,824 BTEX. 11/6/2014 - 2Q2014, 7/28/2014, by Antea Group. Groundwater was sampled on 5/30/2014. MW-1, 1,775 BTEX, 9.6 MTBE. MW-2, 4,514 BTEX. MW-4, 930 BTEX. 70 MTBE. MW-5, 294 BTEX, 240 MTBE. MW-6, 716 BTEX, 3,100 MTBE. MW-7, 52.8 BTEX, 93 MTBE. MW-15, 3,163 BTEX. 4/15/2015 - 4Q2014, 1/30/2015. Monitoring on 11/20/2014. LNAPL in MW-2 (0.01'). MW-1, 1,947 BTEX, 22 MTBE. MW-4, 642 BTEX, 76 MTBE. MW-5, 216 BTEX, 240 MTBE. MW-6, 1,467 BTEX, 4,500 MTBE. MW-7, 35.7 BTEX, 84 MTBE. MW-15, 1,897 BTEX. 1Q2015, 4/15/2015. MW-5, 464 BTEX, 330 MTBE. MW-6, 47.3 BTEX, 18 MTBE. MW-7, 24.2 BTEX, 57 MTBE. MW-15, 1,081 BTEX. 3/30/2016 Feng - This spill is transferred from J. Feng to J. Vought as per J. Vought. 10/6/2016 - Feng - This spill is transferred from J. Vought to J. Feng as per J. Vought. 1/19/2017 - Feng - 3Q2016, 10/28/2016. Monitoring on 8/9/2016. MW-2, 1,620 BTEX, 13 MTBE. MW-4, 120 BTEX, 7.8 MTBE. MW-5, 323 BTEX, 230 MTBE. MW-6, 138 BTEX, 75 MTBE. MW-7, 18.1 BTEX, 58 MTBE. MW-15, 3,706 BTEX. MW-16, 15 MTBE. 4Q2016, 1/13/2017. Monitoring on 11/9/2016. LNAPL in MW-2, 0.01'.

BP AMOCO STATION #3887 (Continued) **S103036428**

MW-4, 86 BTEX. MW-5, 297 BTEX, 190 MTBE. MW-6, 69.7 BTEX, 60 MTBE. MW-7, 16.7 BTEX, 50 MTBE. MW-15, 4,308 BTEX. MW-16, 1 BTEX, 16 MTBE. 5/10/2017 - Feng - 1Q2017, 4/25/2017. Monitoring on 2/7/2017. MW-2, 1,466 BTEX, 7.9 MTBE. MW-4, 443.7 BTEX, 13 MTBE. MW-5, 234 BTEX, 140 MTBE. MW-6, 126.6 BTEX, 62 MTBE. MW-7, 13.6 BTEX, 50 MTBE. MW-10, 0.98 BTEX, 16 MTBE. MW-15, 4,812 BTEX. MW-16, 14 MTBE. 5/31/2017 - Feng - This spill is transferred from June Feng to Jeffrey Vought as per Jeffrey Vought. 8/2/17-Vought-Received phone call and email from Antea(Meyer) with respect to status of RAWP. Vought asked him to resend RAWP. Meyer sent email dated 7/11/17 with RAWP and email that As discussed. Aside from BP s motivations to push this forward, the property owner is also concerned with progress. Vought performed a preliminary review of the proposal and data and noted: a maximum residual BTEX concentration of around 4000ppb Total BTEX in MW-15 which was directly on the sidewalk adjacent to the R,N,D Subway Line; depth to groundwater is from 15-20'bg and depth of adjacent subway is much greater and groundwater contour maps do not reflect a flow direction towards the subway; a decrease in Total BTEX concentration in MW-15 since 2011; the proposal included approximately 9000-gallons of water with a total mass loading of 18,000 pounds; MTA approval is needed for the bio application work. Vought discussed site with RSE and then sent email to Antea(Meyer) with cc to BP Onufrak that Chris, When you get a chance please give me a call regarding this site. After further consideration, review of the data and discussion with Randy, I think the spill may warrant closure without the carbon injection and a confirmatory call to NYCT Transit to ensure no impact, but I know consistency is important to BP and I don t want to alter from the established course. Thanks! . Vought added RAWP to D2. 8/3/17-Vought-Received voicemail message from Meyer and Onufrak. Vought returned call and spoke to Meyer and he noted that neither Antea or ARCADIS had any objections to spill closure. Spill closure based on following: maximum residual BTEX concentration of around 4000ppb Total BTEX in MW-15 which was directly on the sidewalk adjacent to the R,N,D Subway Line; depth to groundwater is from 15-20'bg and depth of adjacent subway is much greater and groundwater contour maps do not reflect a flow direction towards the subway at MW-15 which is the remaining hotspot of groundwater contamination; a significant decrease in Total BTEX concentration in MW-15 where in 2011 at was 17,450ppb Total BTEX and now is around 5000ppb Total BTEX indicating that the remaining groundwater contamination is naturally attenuating; proposal included approximately 9000-gallons of water with a total mass loading of 18,000 pounds which may impair structure of adjacent NYCT subway which is a sensitive receptor; MTA review would be needed for the bio application work and would likely have concerns regarding the proposed injection next to their subway; no reported impacts to adjacent down-gradient NYCT subway considering 20 years since spill was opened and contamination was much worse during early spill history; spill is not a threat to the wider community as per DEC Central Office guidance; further soil and groundwater cleanup is not feasibly cost effective as per CP-51 Soil Cleanup Guidance. Vought sent email to NYCT Michael Mandac with cc to Meyer/Onufrak that Mike, I hope this email finds you well in your new position at NYCT Systems Safety. I am looking to close a BP Spill at the above address that has had a long investigation and cleanup history over the past 20 years. The remaining residual groundwater contamination is in a well in the sidewalk at the gas station that is immediately adjacent to the R/N/D subway line along 4th Avenue and the Department

BP AMOCO STATION #3887 (Continued) **S103036428**

recognizes that that residual groundwater contamination in the sidewalk will continue to naturally attenuate over time. Question for you before we close the spill: Do we have any reported petroleum issues in the subway adjacent to this address? Thanks! Vought received reply from Onufrak that Hi Jeff, We are not aware of any planned use change for this site. We are a tenant. Our landlord has not made us aware of any changes. 8/4/17-Vought-Received reply from NYCT Mandac that Hi Jeff,Thanks for the kinds words. I ll need a couple of days to get some answers from the different groups involved with the subway station itself and the subway lines. Vought sent reply with cc to Onufrak and Meyer that Mike, Thanks for looking into it and we look forward to your reply! Received reply from NYCT Mandac that Jeff, The different station and MOW engineering groups have both reported no petroleum issues along the D/N/R/W line and by the 4th Avenue station. NYCT has no objections to the DEC closing out this spill. Vought replied to NYCT Mandac with thanks and note that spill will be closed. Spill closed by Vought and closure letter sent to BP Onufrack with cc to Meyer and added to D2. "

Remarks: "UNKNOWN EXACT DATE OF THE SPILL.THEY GOT THE RESULTS BACK TODAY FROM GROUND SAMPLES TAKEN.SPILL HAS NOT BEEN CLEANED UP. SPILL REASSIGN FROM O'DOWD TO ROMMEL. "

DEC Memo:	"Delivery today to Monties Resturant in Brooklyn. Bottom of the tank has a pinhole leak PTC ((718) 624-4842; Anthony P. Lara) has been called and is at the site now pumping out the tank. 11/7/2005 Sangesland confirmed that PTC completed a surface cleanup of the site. PTC submitted a proposal to replace the tank. Unknown what the condition under the slab floor is. Hold open until the full basement area is checked or until subsurface has been checked. 12/8/05 - Raphael Ketani. I spoke to Anthony P. Lara of PTC. He said that PTC cleaned up the spilled oil and pumped out the two leaking 275 gal.

RESTURANT/RESIDENCE (Continued) **S107416639**

tanks under the stairs. He gave an estimate to Frank Perone, the owner ((718)745-3576/(917) 805-6048), regarding what it would cost to remove the 2 tanks, replace them with one new 275 gal. tank, and do the below floor investigation. Mr. Perone told him he would get someone else. When I talked to Mr. Perone, he said that his brother had contacted Ferrantino Fuel ((718) 832-6700) for the below floor investigation. He said he would call me back regarding the extent of the oil spill investigation. I will send a contaminated soil letter to Mr. Perone at 1427 Bay Ridge Parkway, Brklyn., 11228-2212. 12/9/05 - Raphael Ketani. I called Ferrantino Fuel and spoke to one of the supervisors there. He said Ferrantino didn't do a below floor investigation and he had no information if one was ever planned. Mr. Joseph Orechio (one of the owners; (718) 745-3576) called me to say that PTC had cleaned up the spilled oil in the tank vault under the street. He said the vault walls are cobble stone with a cement floor. He said only about 2 gals. was spilled. Mr. Orechio said that he switched his oil company to Blue Diamond. I told him that a soil investigation still needs to be done. He said he would get someone to do it. Anthony Lara of PTC called me back. He said that Mr. Orechio told him to do the soil investigation. Mr. Lara said that he will do 5 borings. One at each corner and one in the middle. He will take end point samples and send me the analyticals. Mr. Lara doesn't know whether there are any cracks in the vault floor, but he said about 20 gals. had leaked from the tanks. 12/9/05 Ketani sent a do work letter 12/20/05 - Raphael Ketani. Anthony of PTC called me to say that Mr. Orechio declined his services for the soil investigation. I called up Mr. Orechio, but could only leave a voice mail message. 12/22/05 - Raphael Ketani. Mr. Issac Mungra of A. L. Eastmond & Son (718)378-7000 called to say that his company may be doing the soil investigation at the site. He will let me know if he gets the job, but first he has to inspect the tank vault. 12/28/05 - Raphael Ketani. I spoke to Mr. Mungra in person at another site. He told me that he plans to do one soil boring at each end of the tank and take soil samples at the bottom of the sump on the other side of the wall. I told him this would be sufficient for now. 6/21/06 - Raphael Ketani. Today I received a FAX from Isaac of Eastmond with a floor plan for the 3 borings that were taken, the analytical results for the soil samples, and a detailed description of what type of work was performed. The analytical results showed no contamination was present in the soil and the concrete floor was described as solid with no indications of cracks or crevices. Isaac also called me to say that the 2 tanks were replaced with new ones. Based upon the above documentation, I am closing the spill case."

Remarks: "clean up is in process."

Record Added Date:	03/13/2020
Record Updated Date:	11/15/2021
Update By:	GWBURKE

Site Description: "Location: The 0.73-acre site is located in an urban area in the Gowanus neighborhood of Brooklyn and consists of two non-contiguous parcels on Brooklyn Borough Tax Block 440: the E Waste Parcel and the Pontone Parcel. The two parcels are separated by BCP site No. C224220, 473 President Street. The two primary addresses associated with the site are 469 President Street and 532-542 Union Street. The site is located on the block bounded by Union Street to the north, 3rd Street to the east, President Street to the south, and Nevins Street to the west. The Gowanus Canal, a National Priorities List (NPL) site, is located about 275 feet west of the E Waste Parcel. Site Features: The E-Waste Parcel is a one-story brick and concrete building which had been occupied by an electronics recycling facility. The ground floor of the E-Waste Parcel was used as a warehouse and an office, and a partial second floor level was used for office space. The Pontone Parcel consists of an interconnected one- to three-story brick building which had been occupied by a casket manufacturer and had offices on the second and third floors. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 16c, the site is located in an M1-2 manufacturing zoning district. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale and storage facilities. Offices, hotels and most retail uses are also permitted in M1 districts. The 30 January 2019 draft Gowanus zoning proposal by the NYC Department of City Planning (DCP), if approved, would rezone the site to a mixed-use district that permits residential uses (M1(3)/R6A and M1(3)/R7A). Surrounding properties include single and multi-story buildings occupied by industrial, commercial and residential tenants. Past and Current Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1886. The E-Waste Parcel was used as a blacksmithery, rag storage facility, dental manufacturing facility, parking area, warehouse, and electronics recycling facility. The E-Waste Parcel is currently unoccupied. The Pontone Parcel was used as a factory, woodworking and engraving facility, auto repair shop, painting place, and casket manufacturing facility. The Pontone Parcel is currently unoccupied. Proposed development calls for demolition of

PRESIDENT STREET PORTFOLIO (Continued) **S126218335**

existing structures and construction of a mixed-use residential and commercial building with ground floor. Site Geology and Hydrogeology: Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of historic fill material that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. Based on a previous study at a neighboring property, bedrock is present at about 200 feet below grade surface (bgs). Site stratigraphy consists of historic fill material underlain by native soil generally characterized as fine- to medium-grained sand with varying amounts of silt, clay, and gravel. Historic fill material, characterized as unconsolidated, fine-grained sand with varying amounts of gravel, brick, coal, concrete, glass, slag, organics, tar-like material, white ashy material, and silt, was encountered beneath the site to depths ranging from about 6 to 14 feet bgs. Groundwater at the site was encountered at elevations ranging from about 9 to 13 feet bgs. The inferred groundwater flow direction is generally to the west-northwest toward the Gowanus Canal and former Mill Pond. Groundwater flow is restricted by predominantly fine-grained deposits (silt) to the west of the Pontone Parcel. These fines create a localized rise in groundwater elevation that drops as grain size coarsens towards the E-Waste Parcel, continuing towards the Gowanus Canal."

Env Problem:

"Nature and Extent of Contamination: Soil was analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, emerging contaminants, and metals. Groundwater was analyzed for VOCs, SVOCs, pesticides, emerging contaminants, and metals. Based upon investigations conducted to date, the primary contaminants of concern for the site include VOCs, polycyclic aromatic hydrocarbons (PAHs - a class of SVOCs), lead, mercury, copper, and arsenic. Soil: Several SVOCs (specifically, polycyclic aromatic hydrocarbons, or PAHs) were detected including benzo(a)anthracene at a maximum concentration of 120 parts per million, or ppm, exceeding its restricted residential soil cleanup objective (RRSCO) of 1 ppm, benzo(a)pyrene at a maximum concentration of 90 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at a maximum concentration of 130 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at a maximum concentration of 38 ppm (RRSCO is 3.9 ppm, chrysene at a maximum concentration of 100 ppm (RRSCO is 3.9 ppm), dibenz(a,h)anthracene at a maximum concentration of 16 ppm (RRSCO is 0.33 ppm), indeno(1,2,3-cd)pyrene at a maximum concentration of 63 ppm (RRSCO is 0.5 ppm), fluoranthene at a maximum concentration of 260 ppm (RRSCO is 100 ppm), and pyrene at a maximum concentration of 200 ppm (RRSCO is 100 ppm). Metals found include arsenic at a maximum concentration of 126 ppm (RRSCO is 16 ppm), barium at a maximum concentration of 497 ppm (RRSCO is 400 ppm), lead at a maximum concentration of 8,220 ppm (RRSCO is 400 ppm), mercury at a maximum concentration of 6.58 ppm (RRSCO is 0.81 ppm), copper at a maximum concentration of 41,900 ppm (RRSCO is 270 ppm), cadmium at a maximum concentration of 13.9 ppm (RRSCO is 4.3 ppm), and zinc at a maximum concentration of 25,400 ppm (RRSCO is 10,000 ppm). Tar-like material was encountered in the soil at depths ranging from 7 to 10 feet bgs. This material encompasses an area of about 400 square feet and is located in the northeast portion of the Pontone Parcel. No VOCs, PCBs or pesticides were detected at concentrations exceeding their respective RRSCOs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Several VOCs were detected in groundwater. Trichloroethene (TCE) and its associated degradation

PRESIDENT STREET PORTFOLIO (Continued) **S126218335**

products were found in groundwater on the western half of the site at levels exceeding the Ambient Water Quality Standard (AWQS) for TCE of 5 parts per billion, or ppb with a maximum concentration of 2,400 ppb. Benzene was found at a maximum concentration of 1.3 ppb (AWQS is 1 ppb). Cis-1,2-dichloroethene (Cis-1,2-DCE) was found at a maximum concentration of 2,500 ppb (AWQS is 5 ppb). 1,1-Dichloroethene (1,1-DCE) was found at a maximum concentration of 29 ppb (AWQS is 5 ppb). The following SVOCs were found at concentrations exceeding their respective standards: benzo(a)anthracene at a maximum concentration of 0.96 ppb (AWQS is 0.002 ppb); benzo(a)Pyrene at a maximum concentration of 0.87 ppb; benzo(b)fluoranthene at a maximum concentration of 1.1 ppb (AWQS is 0.002 ppb); benzo(k)fluoranthene at a maximum concentration of 0.45 ppb (AWQS is 0.002 ppb); chrysene at a maximum concentration of 0.84 ppb (AWQS is 0.002 ppb); and indeno(1,2,3-c,d)pyrene at a maximum concentration of 0.58 ppb (AWQS is 0.002 ppb). Perfluorooctanoic Acid (PFOA) was found exceeding its maximum contaminant level (MCL) of 10 ppt at a maximum concentration of 119 ppt. Perfluorooctanesulfonic Acid (PFOS) was found exceeding its MCL of 10 ppt at a maximum concentration of 27.3 ppt. Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor and Indoor Air: TCE was detected at a maximum concentration of 1,730 micrograms per cubic meter (ug/m3) in the soil vapor, and 31.3 ug/m3 in indoor air, above the TCE Air Guideline Value of 2 ug/m3. Concentrations of TCE in the soil vapor and concurrent indoor air are above the threshold for mitigation of vapor intrusion. DCE was detected at a maximum concentration of 139 ug/m3 in the soil vapor and was not detected in indoor air. 1,1-DCE was detected at a maximum concentration of 8.05 ug/m3 in the soil vapor and was not detected in indoor air. Data does not indicate that there is the potential for off-site impacts in soil vapor related to this site."

Health Problem: "Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People will not come into contact with contaminated soil or groundwater since the site is covered with buildings and concrete unless they dig below the ground surface. Volatile organic compounds in the soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that the potential exists for the inhalation of site contaminants due to soil vapor intrusion for the existing buildings onsite as well as any future on-site development. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 11/15/2005: Lead transferred to Joe White as part of the Spill Initiative Project. 12/08/2005: Joe White spoke sith James Merlo, the NYC Schools spill coordinator, who will be sending the closeoout report for this spill. 1/9/2006: Mr Merlo indicated that this property is not managed by the NYC Division of School Facilities but is privately owned. 1/23/2006: Joe White sent a letter to school superintendent requesting additional information. A copy of this letter is on eDocs files system for our records. 1/27/2006: Joe White received a call from the school maintennce, Vinnie Peters (718-923-1650) who indicated that they had no records for the spill and the contact number for the Berger firm that did the work did not work. However, Vinnie indicated that there is no obvious problem currently at the site and no work is ongoing at present to address any problem and they are not aware of any problem. This spill was addressed in the past and work concluded. Joe White will follow up to see if we can get something from the Berger firm to document closure. 11/16/06 - Austin - Reassigned to Rahman for followup/review - end 11/19/09 Letter was sent to(asking pertinent documents) P.S. 372, The Children s School 512 Carroll Street Brooklyn, NY 11215 Attn: Lorraine Boyhan(sr) 12/14/09 Rec'd letter requesting extension of report submittal.Letter is from Wingate,Kearney & Cullen,LLP.(sr) 04/5/10 Rec'd email from Katie Coon.She is with Wingate,Kearney & Cullen.She has requested the copy of the Phase II report to the tenant.Once she receives the report, she will forward it to DEC.(sr) 5/30/14 - Austin - Spill transferred from Rahman to Mahat for followup - end 11/5/14: Mahat e/c : An email was sent out to Mr. Munendra Sharma inquiring recent data/report on the spill case. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 11/2/2016: Rashad 512 Carroll Street has alternate addresses of 512-522 Carroll Street and 2-34 Denton Place. No additional spills found, PBS#2-346667 found for site there is a 5000 gallon #2fuel oil UST converted to non regulated use. Various letters found in D2. 11/8/2016: Rashad Sent email to Ms. Guterman: I was previously reassigned a spill from 512 Carroll Street in Brooklyn for P.S 372. I have found a Phase 1 for this site prepared by Louis Berger and I am looking for the Phase 2 report, as well as any documentation stating if further work was completed. Any additional information on this site would be much appreciated so that I may close out this older spill. Thank you. Review of paper documents yielded Phase 1 and Phase 2 reports, they have been uploaded to D2. Brief Review of Phase 1 is as follows: The complex will be comprised of three buildings, the church, the school building, and the recreational center. The site consists of a two story brick building with a basement and has been used for educational and recreational purposes since being built in the 1920s. To the east of the site is a car wash and auto repair facility. Also a Con Ed facility is located adjacent to the south of the site. The mail school and church use a 5000 gallon #2fuel oil UST. One 10,000 gallon AST is located in the main building. Review of Phase 2 is as follows: The investigation consists of three temporary well points, three soils borings along the perimeter, and 2 borings in the basement. Groundwater was encountered in soil borings from 14-18ftbg. SB-04 (3-4ft): No VOCs or SVOCs were detected in soil sample. SB-05 (0-3ft): No VOCs were detected, SVOCs were detected slightly above standards in soil. SB-01 Water Sample: Benzene-229ppb, toluene-1570ppb, ethylbenzene-853ppb, xylene-1020ppb, 1,2,4 trimethylbenzene-337ppb, naphthalene-3930ppb. SB-02 Water Sample:

PUBLIC SCHOOL (Continued) **S106469867**

Benzene-8.65ppb, Naphthalene-393ppb. SB-03 Water Sample: Benzene-21.9ppb, toluene-61.3ppb, Ethylbenzene-67.7ppb, Naphthalene-921ppb Sheen and odor were observed in all three groundwater wells. The report concludes that there is petroleum contamination in soil and groundwater, however the source could not be determined. They recommend construct a vapor barrier to prevent migration of VOCs from soil gas into basement . 11/18/2016: Rashad Received email from Lee Guterman yesterday: In response to your request, we have pulled the attached information from our project files. These documents include a Phase II Environmental Site Investigation report for the site, an IAQ Report, and a letter regarding suitability for occupancy of the building basement. Our records indicate that this information was shared with the property owner back in 2004. We would recommend that you reach out directly to the landlord if you have any further questions, since he would be better positioned to address any work that may have been done after our involvement. Three files were attached to email. Files need to be reviewed. 11/17/17 - Obligado - spill transferred to Obligado from Omar as per Austin 1/17/2017 Austin This spill report is being transferred from Rashad Omar to Andre Obligado end. 12/19/2017 - Austin - Project transferred from Andre Obligado to Rick Lin - end 10/20/17-Lin-No elevated soil contamination was found in the soil samples and sheen was found in the monitoring wells. Based on database search, found a spill site across the street at 505 carrol st, Brooklyn (spill# 0602894). The spill at 505 carroll was reported in 2006. They found soil and groundwater contamination at the site from phase I and II and found the leak to be from an UST at the site. The UST has since been removed. Soil injection was performed to treatment the contamination. The spill was closed in 2008 based on soil and groundwater results. Since the source of the contamination was removed, any residue contamination at 512 carol is expected to attenuate naturally. Case closed."

Remarks: "LAB RESULTS BACK , 5 BORINGS, OBTAINED ELEVATED READINGS TYPE OF CHEMICALS FOUND IN SOIL, SEMIVOLATILES; IN GROUND WATER HAD VOC'S MAINLY DEALING WITH BTECHS ALSO SOME SEMIVOLATILES IN GROUNDWATER"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 002
Tank Id: 55194
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
G03 - Tank Secondary Containment - Vault (w/o access)
A00 - Tank Internal Protection - None

ADMIRAL METALS (Continued) **U000408644**

B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
F00 - Pipe External Protection - None
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

CON EDISON (Continued) **1018280848**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Name:	272 4TH AVENUE
Address:	272 4TH AVENUE
City,State,Zip:	BROOKLYN, NY 11215
Program:	BCP
Site Code:	590723
Acres:	0.200
HW Code:	C224298
SWIS:	2401
Town:	New York City
Record Added Date:	06/18/2019
Record Updated Date:	08/15/2019
Update By:	LSZINOMA
Site Description:	"Location The site is located at 272 4th Avenue, and includes the addresses 264 4th Avenue through 270 4th Avenue, and 544 through 554 Carroll Street. The Site is located in the Gowanus section of Brooklyn, New York. The site was abutted to the northeast by Carroll Street, followed by a cafe; to the northwest by an auto repair shop, followed by a community garden; to the southeast by 4th Avenue, followed by apartment buildings and a furniture store; and to the southwest by a bar/cafe, followed by a New York City Transit (NYCT) system substation. Site Features The site consists of one tax lot on an approximately 8,900-square foot parcel. The site contains an approximately 17,800-gross-sf, two-story commercial building with a partial cellar, constructed around 1931. The building is operated as an automobile collision repair facility, which occupies both the first and second stories of the building. Current Zoning and Land Use The current zoning designation of the site is M1-2 (manufacturing district). The surrounding area is predominately mixed-use residential and commercial, with some industrial uses; however, an area-wide rezoning is currently underway. Past Use of the Site The April 2019 Phase I ESA indicated that site had numerous historical automotive uses, with some commercial and residential uses. The site was mostly vacant with a single dwelling and a stable with attached sheds in 1888. An apparent marshland was depicted, which appeared to be filled in on subsequent maps. The Property was developed into part of a bottle facility, with the stable remaining in 1906. In 1926, the

272 4TH AVENUE (Continued) **S125465242**

Property was developed into a two-story garage with two gasoline tanks. In 1951, the first floor of the Property building converted into an auto repair shop with a filling station and gasoline tanks, while the second floor remained a garage. In 1965, the filling station and associated gasoline tanks were no longer depicted, and the Property became an auto sales and service shop with a ga 1982, the Property remained an auto service shop, but was no shown as an auto sales shop. Site Geology and Hydrology Based on the U.S. Geological Survey Brooklyn, New York 2013 Quadrangle map, the site is approximately 25 feet above mean sea level. Groundwater was encountered at the site between approximately 11 and 16 feet below the building slab, an estimated 12.5 feet below sidewalk grade along Fourth Avenue. Groundwater is expected to flow west-southwest across the site towards the Gowanus Canal, which is approximately 0.25 miles west of the site. Eight Soil borings, which were advanced to 20 feet below sidewalk grade across the site, encountered historic fill material underlain by native brown silt."

Env Problem: "Based on the investigations conducted to date, the primary contaminants of concern for the Site are petroleum-related Volatile Organic Compounds (VOCs), chlorinated VOCs, Polycyclic Aromatic Hydrocarbons (PAHs), and metals. Soil Soil sample analytical results obtained during the Phase II investigation were compared to NYSDEC Part 375 Restricted Residential Soil Cleanup objectives (RRSCOs). Twenty-seven VOCs were detected in the soil samples with total concentrations ranging from 0.0003 to 26.8 mg/kg. No VOCs were detected above the RRSCOs in the soil samples. The VOCs 1,2,4-trimethylbenzene, chlorobenzene, and total xylenes were detected at concentrations above their respective Unrestricted Use Soil Cleanup Objectives (UUSCOs) in one or more of the soil samples. Chlorobenzene was detected at 1.9 mg/kg, above the Protection of Groundwater standard. A total of nine PAHs were detected above the UUSCOs and/or RRSCOs in one or more of seven of the soil samples collected. The PAHs benzo(a)anthracene [maximum (max.) 9.6 mg/kg] compared to RRSCO of 1 mg/kg. Benzo(a)pyrene (max. 7.5 mg/kg)compared to RRSCO 1mg/kg. Benzo(b)fluoranthene (max. 10 mg/kg)compared to RRSCO of 1 mg/kg. Chrysene (max. 9.3mg/kg) compared to RRSCO of 3.9 mg/kg. Dibenzo(a,h)anthracene (max. 1.2 mg/kg) compared to 0.33 mg/kg. Indeno(1,2,3-cd)pyrene (max. 5.2 mg/kg) compared to RRSCO of 0.5 mg/kg. A total of six metals were detected above the UUSCOs and/or RRSCOs in one of more of 10 of the soil samples collected. Arsenic (max. 29 mg/kg)compared to RRSCO of 16 mg/kg, lead (max. 1,800 mg/kg) RRSCO of 400 mg/kg and mercury (max. 24.1 mg/kg) RRSCO of 0.81 mg/kg were detected above their respective RRSCOs in one or more of the soil samples. No PCBs were detected in the three soil samples submitted for laboratory analyses. Groundwater Groundwater samples collected during previous investigations were compared to the NYSDEC Ambient Water Quality Standards (AWQS). Petroleum-related VOCs were detected at concentrations above the AWQS in two of the groundwater samples, including: 1,2-dichlorobenzene [3.4 micrograms per liter (?g/L)] AWQS of 3 ug/L, p- & m xylenes (6.6 ?g/L) AWQS of 5 ug/L, and o- xylenes (5.2 ?g/L) AWQS of 5 ug/L, 1,2,4,5-trimethylbenzene (9 ?g/L) AWQS of 5 ug/L, chlorobenzene (7.1 ?g/L) AWQS of 5 ug/L, and methylene chloride (14 ?g/L) AWQS of 5 ug/L. Seven PAHs were detected at concentrations that exceeded the AWQS in one or more of the groundwater samples analyzed, including: benzo(a)anthracene (max. 2.6 ?g/L) AWQS of 0.002 ug/L, benzo(a)pyrene (max. 2.2 ?g/L) AWQS of non detect (ND), benzo(b)fluoranthene (max.

272 4TH AVENUE (Continued) **S125465242**

3.0 ?g/L) AWQS of 0.002 ug/L, benzo(k)fluoranthene (max. 1.1 ?g/L) AWQS of 0.002 ug/L, chrysene (max. 2.3 ?g/L) AWQS of 0.002 ug/L, indeno(1,2,3-cd)pyrene (max. 1.1 ?g/L) AWQS of 0.002 ug/L, and phenol (max. 3.8 ?g/L) AWQS of 1 ug/L. The highest concentrations were detected in groundwater in the southern portion of the Site. Soil Vapor - Soil vapor samples collected were compared to New York State Department of Health Guidance for Evaluating Soil Vapor Intrusion in the State of New York. Tetrachloroethene (PCE) and Trichloroethene (TCE) at the northwest corner of the site were detected at values which required mitigation, 7120 ug/m3 and 372 ug/m3 respectively. PCE was also detected inside the office building on the east side of the site at 1890 ug/m3 which is also above the mitigation threshold."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN transfered from tang/sullivan to tibbe. see also 9314103 and 0306012 at the same location. 09/23/03 Transferred from Tibbe to Sun 10/01/03 Joe Sun of NYSDEC spoke to Jeff Bohlen of Envirotrac (Consultant to Verizon) regarding the removal of two (2)x4000 gallon FRP USTs, which are scheduled to be removed today, 10/01/03. J.Bohlen stated that they will take the end samples next Tuesday or Wednesday . He will call again to confirm the time and date for DEC people to be at the site to witness the soil sampling. 10/02/03- Sun- Faxed letter to John Quatrale of Verizon and Jeff Bohlen of EnviroTrac requesting the area to be excavated in conjunction with the tank removal activities currently progressing on site. Soil excavation will remove the source of the groundwater contamination, and accelerate the remediation of the spill site. Since source material exists under the sidewalk, an attached letter can be used to expedite the DOT permit acquisition. 10/03/2003-Sun-Spoke with John Quatrale of Verizon about excavation of contaminated soils at 318 Nevins Street. He stated that he agrees with DEC's recommendation to excavate the area on south side of Union Stret. Per DEC's request, Verizon will proceed to expedite the DOT permit acquisition immediately. We will meet next week at the site to further survey the facility when Envirotrac starts to take end samples. 10/7/2003-Sun & Vought visited the Verizon's site and met John Quatrale of Verizon and Jeff Bohlen of Envirotrac. At the time of our visit, one 4000 gallon gasoline FRP UST was already removed. Based on our discussion, Verizon will take one end sample for every twenty five (25) feet on each side wall and one ground water sample on the bottom of the tank. The extent of excavation will be based on the PID readings. The analysis of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) will be performed using EPA Methods 8260 & 8270, respectively. Verizon will excavate another 4000 gallon fiberglass coated steel UST (diesel tank) on 10/9/2003. 1/5/06: Case

NEVIN ST GARAGE (Continued) **S103274088**

reassigned to Andersen. Reviewed the quarterly report for April - June 2005. There is a strong decrease in contaminants by natural attentuation. Max BTEX 2,855 (MW8) and max MTBE 110 (MW 8 and 9). 1/12/06: Reviewed quarterly third 2005 quarterly report. Increase in contaminant concentration in the hotspot (MW-8 and MW12). Wait one more quarter and send and RAP required letter. Max BTEX 6,791 ppb (MW8) and max MTBE 145 ppb (MW8). 2/9/06: Reviewed fourth quarterly 2005 report. Fluctuating concentrations in MW-8. Max BTEX 3991 ppb and max MTBE 137 ppb. Sent RAP required letter. 4/6/06: RAP approved. Two closed-in-place 2,000 gallon tanks will be removed and soil excavated. 4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. Two closed in place tanks will be removed. There is old fill material and concrete remnants of old buildings in the ground. This site is adjacent to the Gowanus Canal. 5/4/06: Access letter sent to envirotrac for MTA permit. 5/11/06: Received first quarterly 2006 report. Excavation and tank removal planned for 5/15/06. Max BTEX 4,348ppb (MW8), max MTBE 61 ppb. 8/25/06: One 2,000 gallon diesel and one 2,000 gallon gasoline previously abandoned USTs were removed in May 2006. Impacted soil was removed to limits of excavation (tieback wall of gowanus canal and retaining wall). A petroleum sheen was seen in water in excavation and 838 gallons of was were removed with a vacuum truck. Two endpoint samples collected, no VOC exceedances, some sVOC exceedances. Two monitoring wells were installed in the excavation (MW16 and MW17). Groundwater sampled on 6/15/06. Max BTEX 3,806 ppb in MW8, max MTBE 27ppb in MW17. Third quarter 2006 gw sampling scheduled for September. 11/27/06: Received July - September 2006 update report. Wells sampled on 9/11/06. Max BTEX 5,164 ppb in MW8. Fluctuating gw concentrations. This is the second sampling event since source removal. An RAP may be required after next sampling event. 2/22/07: Reviewed update report. Wells sampled on 12/15/06. Max BTEX 1,648 ppb (MW8), max MTBE 46 ppb (MW17). Local treatment of MW8 may be required if it does not naturally attenuate. 5/24/07: RAP required for groundwater treatment of MW8. Due 7/5/07. 7/6/07: Received RAP for MNA until the end of 2007. At that time, if the level of contamination warrants remedial action, the feasibility of chemical oxidation in the area of mw8 will be evaluated . 8/30/07: Reviewed update report. Wells sampled on 6/8/07. Max BTEX 833 ppb (MW8), max MTBE 120 ppb (MW17). MNA until fourth quarter 2007. 7/2/08 - Carlson: Reviewed January - March 2008 update report. Wells sampled on 3/26/08. Max BTEX 1,848 ppb (MW8). Report states a workplan will be submitted under a separate cover. Emailed Tom Bosshard - what is the expected workplan submittal date. 7/3/08 - Carlson: Received email from Tom Bosshard. RAP will be submitted by July 31, 2008. 8/6/08 - Carlson: Approved Remedial Work Plan for the use of Regenox. Regenox will be injected into four new injection wells in the sidewalk adjacent to wells MW8 and MW12. 8/7/08 - Carlson: Received email from John Quatrale: Labor negotiations are ongoing and the union is working without a contract since August 3, this may drag on for some time. That said, I am still trying to get the work done before the end of the month and will advise as to the actual scheduled date. 8/25/08 - Carlson: Received OMMP rep 8/25/08. Injection well installation scheduled for 9/9/08. Received email from Tom Bosshard : Please note that baseline monitoring for parameters outlined in the OMMP will be conducted during the third quarter ground-water sampling event, which will be conducted during the week of September 8th. We expect to conduct the RegenOx injection in late September or October, prior to the fourth quarter

NEVIN ST GARAGE (Continued) **S103274088**

ground-water sampling event scheduled for December. Reviewed April through June 2008 Update Report. Wells sampled on June 20, 2008. Depth to water 4 - 9 ft. Maximum BTEX concentration 12,370 ppb (MW8). 10/17/08 - Carlson: Reviewed July 2008 - September 2008 Update Report. Wells sampled on 9/7/08. Maximum BTEX concentration 720 ppb in MW12. Six injection wells installed and Regenox injected in September 2008. Monitoring wells MW8 and MW12 will be sampled in October 2008 to evaluate Regenox effectiveness. 3/5/09 - Carlson: Reviewed October - December 2008 Quarterly Report. Regenox injected in November. Spike in MW8 may be from dissolution resulting from Regenox. Regenox injection planned again in May 2009. 5/4/09 - Carlson: Reviewed update report. General decrease in contaminant concentrations. Another regenox injection planned in may 2009. 8/20/09 - Carlson: Reviewed April 2009 through June 2009 Update Report. A third injection event was performed in May 2009. BTEX,TVOCs are still high in MW8. 12/18/09 - Carlson: Reviewed update report. EFR planned on December 10 to recover contaminants desorbed by Regenox. 2/19/2010 - Carlson: Reviewed update report. EFR conducted in December 2009 prior to December sampling event. Impacted groundwater remains in MW8. Another EFR planned prior to March sampling event. 5/13/2010 - Carlson: Reviewed update report. EFR on 3/3/2010. Wells sampled on 3/30/2010. Low dissolved concentrations. Another EFR event planned prior to June sampling event. 8/27/2010 - Carlson: Reviewed April 2010 through June 2010 Update Report. EFR conducted from MW8. Spike in concentration in MW8. Quarterly EFR and groundwater sampling to continue. 11/9/2010 - Breen. July through September Update report received from Environtrac. EFR extraction at MW-8 on 9-7-10. Next event scheduled for December. 2/17/2011 - Breen. Paper copy of October-December 2010 Update rpt received from Environtrac. 08/08/11: This spill case transferred from G. Breen to J. Kolleeny. Reviewed Update Rpt for Jan. thru March 2011 by EnviroTrac, submitted on 5/9/11 (in eDocs). Rpt gives results of 3/29/11 GW sampling event. High levels of contam continue to persist in MW-8, which had 7,410 ug/L total VOCs (down from 13,031 ug/L in Dec. 2010). Off-site up-gradient well MW-11 had 343 ug/L tVOCs (up a little from 322 ug/L in Dec. 2010), and up-gradient on-site well MW-12 had 401 ug/L tVOCs, up from 320 ug/L in Dec. 2010; contam in both MW-11 and MW-12 is primarily benzene (320 ug/L benzene in MW-11; 400 ug/L in MW-12). Rpt states that EFR events will continue at MW-8 on regular basis, with next EFR event scheduled for June 2011, and GW sampling to be conducted 2 or 3 weeks after that. Spoke with Tom Bosshard of EnviroTrac, who mentioned they found an unknown monitoring well across Union St. from MW-8, and wondered if I knew who installed it and if it would be OK for them to sample it for addt'l up-gradient GW data. I could not find a nearby open spill case, but told Tom I see no reason not to sample well. I suggested that they should measure depth to bottom of well and determine screened interval to make sure well will provide reliable data. He said they would. Changed site priority ranking to P2, because site is in post-injection monitoring phase. - J. Kolleeny 03/16/12: On 3/13/12, got phone message from Gavin Zollo of EnviroTrac asking that I review proposal in Sept. - Dec. 2011 Update Rpt to remove a number of monitoring wells from quarterly sampling program. I reviewed EnviroTrac's Update Rpts for April-June 2011, July-Sept. 2011, and Oct.-Dec. 2011, submitted 8/9/11, 11/18/11, and 3/13/11, resp. (all in eDocs). Rpts show no impacts in wells proposed for removal from quarterly GW mon. program, but increasing total VOCs in well MW-8 and

NEVIN ST GARAGE (Continued) **S103274088**

to lesser extent in off-site wells MW-11 and MW-18 (across Union St. from MW-8). For June 2011 sampling event, MW-8 had 11,381 ug/L total VOCs, MW-11 had 439 ug/L tVOCs (MW-18, referred to in rpt as unknown well, was not sampled, but rpt states that well will be inspected during Sept. 2011 event and if in satisfactory condition, will be sampled). In Sept. 2011, MW-8 had 12,671 ug/L tVOCs, MW-11 had 331 ug/L tVOCs, and MW-18 had 36 ug/L tVOCs. (Rpt notes that DEC conducted a spill search of area which did not reveal any open or closed spills that might explain presence of well MW-18; also says EnviroTrac requests that DEC conduct addt'l review of properties up-gradient of site to northeast of Verizon site to try to find reason this well was installed, and states that it appears that an off-site source is impacting Verizon's up-gradient monitoring well network.) For Dec. 2011 sampling event, MW-8 had 16,454 ug/L tVOCs, MW-11 had 423 ug/L tVOCs, and MW-18 had 343 ug/L tVOCs. Rpt recommends removing wells MW-3, MW-4, MW-6, MW-7, MW-10, MW-13, MW-15, MW-16 & MW-17 from quarterly GW sampling schedule; these wells would continue to be gauged for depth to water and presence of product on quarterly basis and would be sampled annually during September GW monitoring event. On 3/16/12, I sent email to Gavin Zollo of EnviroTrac: Gavin, I've looked over EnviroTrac's Update Rpt for Sept. thru Dec. 2011 for this spill site, dated 3/13/12, and want to send out email approving recommendations to eliminate most on-site wells from quarterly sampling program but to continue to gauge them quarterly and sample them annually. Can you please provide contact info for your client, including name, position, address and email address? Also, looking back over last three quarterly status rpts, I notice that total VOC concentrations in problematic well MW-8 have steadily increased, from about 11,000 ug/L to over 16,000 ug/L! This is in spite of EnviroTrac performing quarterly EFR events on well and recently adding air sparging at several nearby wells that were installed for chem ox injections. Do you have any thoughts as to what might be going on at well MW-8? If you're going to suggest an up-gradient off-site source, I'm sorry but I don't buy it. First, even tho EnviroTrac's rpts refer to MW-8 as an off-site well, I don't consider it to be off site, just because it's in sidewalk. It's in immediate vicinity of Verizon's USTs that are known to have leaked. Second, concentrations in wells across street, MW-18 and MW-11, are much lower, which argues against an off-site plume reaching MW-8 from an up-gradient source. Third, as concentrations in MW-8 have increased, moderate VOC levels in wells across street have also increased, suggesting to me that they are responding to whatever is going on at MW-8; possibly there is some tidal effect from nearby Gowanus Canal smearing contamination in MW-8 over toward MW-18 and MW-11. Anyway, please let me know your thoughts on this, and please provide contact info for someone at Verizon. Gavin wrote back: Jon, Please send all correspondence for any Region 2 Verizon facilities, including 318 Nevins Street, to Tom Bosshard. After a recent rearrangement of their envt'l group he is current Envt'l Manager for Verizon in NY area. His info is below: Thomas H. Bosshard, CPG Environmental Manager, Verizon Global EH&S Compliance 501 North Ocean Avenue, Patchogue, New York 11772 O: 631-654-7920, F: 631-475-2217, C: 631-901-8272 thomas.bosshard@verizon.com Jeff Bohlen, who is out in field today, and myself will review other points mentioned in your email and get back with you next week. Thank you for expediting your review of current rpt prior to our next sampling event. We appreciate your efforts. - J. Kolleeny 03/19/12: I sent email to Tom Bosshard of

NEVIN ST GARAGE (Continued) **S103274088**

Verizon, cc to Gavin Zollo of EnviroTrac: Dear Mr. Bosshard: I have reviewed Update Rpt for Sept. thru Dec. 2011 pertaining to this spill site, prepared by EnviroTrac Envt'l Svcs and submitted on 3/13/12. Rpt presents results of GW sampling performed at site in Dec. 2011, as well as historical GW sampling data. Based on data, EnviroTrac recommends removing monitoring wells MW-3, MW-4, MW-6, MW-7, MW-10, MW-13, MW-15, MW-16 & MW-17 from quarterly GW sampling schedule; these wells would continue to be gauged for depth to water and presence of free product on quarterly basis and would be sampled annually during September GW monitoring event. This recommendation is approved. However, DEC notes that contaminant levels in well MW-8, located in sidewalk along Union Street and in vicinity of removed gasoline & diesel USTs, have steadily increased over last three sampling events, from ~11,000 ug/L total VOCs in June 2011 to over 16,000 ug/L total VOCs in Dec. 2011. This increase has occurred in spite of quarterly enhanced fluid recovery events being performed on this well, plus recent addition of air sparging using several nearby injection wells installed for application of chemical oxidant. DEC requests that EnviroTrac review available historical soil data from UST removal and from install'n of monitoring and injection wells to evaluate possibility that residual soil contamination in this area may be acting as an ongoing source of GW contamination. If contaminant levels in MW-8 continue to remain elevated, addt'l remedial actions may be required to address contamination. Please feel free to contact me if you have any questions. - J. Kolleeny 03/20/12: Received email response from Gavin Zollo of EnviroTrac, with cc's to Jeff Bohlen of EnviroTrac and Tom Bosshard of Verison Envt'l: John, Per your request, attached is hydrograph of MW-8 with notes of significant events. As you can see, water table elevation has increased over last few years by approx 2-3 ft. A rise in water table appears to correlate with higher BTEX concentrations and following injection of RegenOx, BTEX apparently desorbed from soil resulting in higher BTEX concentrations as compared to previous levels (this is common with RegenOx and tapers off with time). I suggest we continue with EFR/Air Sparging schedule and evaluate BTEX levels after 6 months (following 3rd quarter sampling in September). If you have any questions, please contact me. I wrote back, with same cc's: Gavin, Thanks for your comments and for hydrograph of well MW-8. It is very possible that rise in water table elevation and effects of RegenOx injections may explain increase in VOC concentrations in well MW-8. I agree with your suggestion that EnviroTrac continue with EFR/air sparging program and re-evaluate GW conditions after 3rd quarter 2012 sampling event. Email exchange is in eDocs, with hydrograph attached as last page. - J. Kolleeny 07/05/12: Reviewed Update Rpt - Jan. thru March 2012 by EnviroTrac, submitted with transmittal sheet dated 4/13/12 and received 4/16/12 (in eDocs). Rpt states that enhanced fluid recovery was performed on worst well, MW-8, on 3/16/12, recovering 1,536 gals of GW, and portable air sparge system was also used to enhance recovery of residual soil vapors in vicinity of MW-8 by injecting air into surrounding injection wells IW-1 thru IW-3; effluent air had PID readings up to 31 ppm. GW samples were collected on 3/30/12 from wells MW-8, MW-9, MW-11, MW-12 and MW-18. Well MW-8 had 11,344 ug/L total BTEX (down from 12,018 ug/L in December 2011) and 17,528 ug/L total VOCs (up from 16,454 ug/L in December 2011); MW-11 had 344.5 ug/L tVOCs (down from 423.2 ug/L in Dec. 2011), MW-12 had 200 ug/L tVOCs (down from 261.1 ug/L in Dec. 2011), and MW-18 (which rpt

NEVIN ST GARAGE (Continued) **S103274088**

refers to as up-gradient) had 272.5 ug/L tVOCs (down from 343.4 ug/L in Dec. 2011). Well MW-18 seems to be cross-gradient to me, and contam there is likely due to tidal smearing from nearby Gowanus Canal. Rpt states that EFR events in conjunction with air sparging events will continue at MW-8 on quarterly basis, with next event scheduled for June 2012, followed by GW sampling 2-3 weeks later. - J. Kolleeny 09/14/12: Reviewed Update Rpt April-June 2012 by EnviroTrac, submitted with transmittal sheet dated 8/20/12 (in eDocs). GW sampling on 6/28/12 showed worst well, MW-8, had 10,487 ug/L total VOCs (down from 17,528 ug/L in March 2012); well MW-11 had 501 ug/L tVOCs (up from 345 ug/L in March 2012) and well MW-18 had 341 ug/L tVOCs (up from 273 ug/L in March 2012). Rpt states that quarterly EFR events will continue to be performed on MW-8 in conjunction with AS events at surrounding injection wells, with next event scheduled for Sept. 2012; 3rd quarter 2012 GW sampling event will be conducted 2 or 3 weeks after EFR/AS event. Also, received phone call from Mark Godick of AKRF (914-922-2356), consultant to property owner (Verizon is tenant), who is trying to get NYC to rezone property. They plan to develop property with a bldg in a year or so; bldg will likely cover former UST area (but not sidewalk where MW-8 is located), and they will likely be excavating soil, perhaps dewatering, and installing vapor barrier beneath bldg (GW too shallow for SSDS). They will be doing a RAP for NYCOER related to this. We discussed remedial options for Verizon and whether re-development could interfere with spill cleanup, and agreed that this is unlikely since main residual impacts appear to be in sidewalk along Union St., not in former UST area. Mark will be in touch in future. - JK 10/25/12: Met with Tom Bosshard of Verizon and Jeff Bohlen of EnviroTrac; Vadim Brevdo and Paul John of DEC also attended (sign-in sheet in eDocs). Verizon's lease expires at end of 2013, and they plan to close bldg by mid-December 2012. To expedite spill closure, they propose to excavate soil in sidewalk area around problem well MW-8 down to GW. I suggested they also apply oxidizing chemicals to GW in excavation; they agreed. They will prepare and submit work plan for excavation, separate from 3rd quarter monitoring rpt. - J. Kolleeny 12/04/12: Reviewed Update Rpt July 2012 through Sept. 2012 by EnviroTrac, submitted under transmittal letter dated 11/28/12 (in eDocs). Rpt summarizes performance of EFR on well MW-8, and presents results of Sept. 2012 GW sampling event. EFR was done on Sept. 8, 2012, recovering total of ~1,135 gals of GW. Results of GW sampling on Sept. 25, 2012 show MW-8 had 7,147 ug/L total VOCs, down from 10,487 ug/L in June 2012; MW-11 had 381 ug/L tVOCs, down from 501 ug/L in June 2012; MW-12 had 330 ug/L tVOCs, up from 230 ug/L in June 2012; MW-18 had 92 ug/L tVOCs, down from 341 ug/L in June 2012. Rpt states that remedial alternatives for area of MW-8 are currently being evaluated; in meantime, quarterly GW monitoring and EFR events will continue, with next round scheduled for December 2012. - J. Kolleeny 01/30/13: Reviewed Update Rpt Oct. thru Dec. 2012 by EnviroTrac, dated 1/23/13 (in eDocs). EFR was conducted on MW-8 on 12/11/12, with air sparging at nearby injection wells; during EFR with sparging, PID monitoring of effluent air stream at MW-8 gave readings up to 101 ppm. Vacuum measurements taken at nearby wells show no measurable vacuum influence; however, water levels in nearby wells decreased slightly, indicating creation of capture zone around MW-8. Total of 600 gals of water were recovered during 8-hr event. GW sampling on 12/28/12 showed significant decrease in VOCs in worst well MW-8, which had 2,690 ug/L total VOCs, down from 7,147 ug/L in

NEVIN ST GARAGE (Continued) **S103274088**

Sept. 2012, and was 3rd consecutive quarterly decrease. Well MW-11 had 206 ug/L tVOCs (down from 381 ug/L in Sept. 2012) and well MW-12 had 331 ug/L tVOCs (~same as 330 ug/L in Sept. 2012). Rpt states that quarterly GW monitoring will continue, and that remedial plan to address area of MW-8 will be submitted under separate cover. - J. Kolleeny 02/01/13: Reviewed Addt'l Remedial Work Plan by EnviroTrac, dated 1/31/13 (in eDocs). Work Plan proposes excavation of soil from vicinity of persistently most-contaminated well MW-8, in sidewalk along Union St adjacent to site, and application of RegenOx"! and ORC Advanced to excavation. Existing on-site monitoring wells will be abandoned, and any wells destroyed during excavation will be replaced for post-excavation GW monitoring, which will be performed and reported on quarterly basis. Work plan includes a Community Air Monitoring Plan (after request by DEC). I sent letter (in eDocs) to Tom Bosshard of Verizon, cc to Jeff Bohlen of EnviroTrac, approving plan but asking that end-pt soil samples be collected from excavation sidewalls if feasible, to document soil conditions at excavation limits. - J. Kolleeny 08/07/13: Reviewed 4/29/13 Update Rpt Jan. thru March 2013 by EnviroTrac (in eDocs as Post-Excavation Status Rpt). Summarizes excavation of contam soil in sidewalk area along Union St. during Feb. 2013. Excavation done in two parts; from first area, two sidewall and one bottom end-pt soil samples were collected, results showed no significant residual impacts. In 2nd area, one bottome end-pt sample was collected (due to sheeting, no sidewalls could be collected); results again showed no significant residual impacts. Prior to backfilling, RegenOx and ORC Advanced were applied to both excavation areas. Well MW-8 (historically worst well) was destroyed during excavation but was reinstalled during backfilling. Total of 82.64 tons of soil were removed. After excavation, all on-site monitoring wells were properly abandoned (as previously approved by DEC). On March 29, 2013, off-site (i.e., sidewalk) wells MW-8, MW-9, MW-11, MW-12 and MW-18 were gauged and sampled. No free product detected. Results show MW-8 had 8,644 ug/L total VOCs, up from 2,690 ug/L in Dec. 2012; well MW-11 had 214.5 ug/L tVOCs, up from 206 ug/L in Dec. 2012. EnviroTrac states that increases are likely due to disturbance of subsurface by excavation and application of chem ox. Quarterly GW monitoring will continue, with next event to be in June 2013. - J. Kolleeny 12/04/13: Reviewed 8/27/13 Update Rpt April-June 2013 by EnviroTrac (in eDocs). Results of June 2013 GW sampling event show well MW-8 had 4,052 ug/L total VOCs (down from 8,644 ug/L in March 2013), well MW-12 had 220 ug/L tVOCs (same as in March 2013), well MW-18 had 81 ug/L tVOCs (up from 37 ug/L in March 2013). EnviroTrac attributes tVOCs decrease in MW-8 to excavation of contam soil source material and subsequent chem ox application, states that well network will continue to be sampled on quarterly basis, in Sept. and Dec. 2013. - JK 01/27/14: Reviewed 10/29/13 Update Rpt June-Sept. 2013 by EnviroTrac (in eDocs). Results of Sept. 2013 GW sampling event show well MW-8 had 4,378 ug/L total VOCs (up from 4,052 ug/L in June 2013), well MW-12 had 391 ug/L tVOCs (up from 220 ug/L in June 2013), well MW-18 had 9 ug/L tVOCs (down from 81 ug/L in June 2013). EnviroTrac notes that total BTEX in well MW-8 decreased from 1,983 ug/L in June 2013 to 1,814 ug/L in Sept. 2013, and attributes this to excavation of contaminated source material and subsequent chem ox/ORC application. Rpt states that well network will continued to be sampled quarterly, with Dec. 2013 event. - J. Kolleeny 02/18/14: Reviewed 1/15/14 Update Rpt Sept.-Dec. 2013 by EnviroTrac (in eDocs). Results of 12/24/13 GW sampling show well MW-8 had 11,332 ug/L total

NEVIN ST GARAGE (Continued) **S103274088**

VOCs (up from 4,378 ug/L in Sept. 2013), well MW-11 had 155 ug/L tVOCs (up from 72 ug/L in Sept. 2013), well MW-12 had 280 ug/L tVOCs (down from 391 ug/L in Sept. 2013). Rpt states that rebounding of VOC concentrations in GW is common after chem ox / ORC applications and is likely cause of increase in VOCs in well MW-8. This seems somewhat dubious, as RegenOx & ORC Advanced were applied to open excavation (i.e., not injected) in Feb. 2013, and this was 4th GW sampling event since then. On 1/15/14, Gavin Zollo of EnviroTrac sent email noting that 4th Quarter 2013 rpt being sent summarizes 4th quarterly event since remedial actions, and requesting meeting to discuss future options. On 2/12/14, I did prelim review of rpt and emailed Gavin with suggested meeting date of 3/5/14; on 2/14/14, Gavin confirmed date was good for meeting. - J. Kolleeny 03/07/14: On 3/5/14, met with Tom Bosshard of Verizon and Jeff Bohlen of EnviroTrac to discuss site status and future course of action. DEC stated that spill cannot be closed yet in light of increased VOC concentrations in well MW-8; Verizon & EnviroTrac agreed, but noted that many remedial actions have been performed at site, including two UST removals with soil excavation, chem ox injections, vacuum-enhanced fluid recovery plus air sparging, and most-recent soil excavation in sidewalk area of MW-8 (well was replaced) plus application of chem ox to open excavation. I suggested further quarterly monitoring of well MW-8 only, with annual sampling of other wells; however, if results for MW-8 show decreasing trend before year is over, other wells should be sampled in support of spill closure. Verizon/EnviroTrac agreed with this suggestion. After meeting, on 3/6/14, Tom Bosshard sent email to document these discussions: Jon, Thank you to Vadim and yourself for your time in meeting with Jeff and myself yesterday to discuss spill case. As you know, Verizon NY has expended a great deal of effort in remediating this spill site, and is appreciative of DEC s continued guidance as we continue on path to spill closure. Most recently, remedial efforts included soil excavation and chemical oxidation application in area of off-site monitoring well MW-8 in Feb. 2013, followed by four quarters of GW monitoring and sampling through Dec. 2013 utilizing five off-site monitoring wells. As discussed and mutually agreed during yesterday s meeting, Verizon NY proposes to continue quarterly monitoring and sampling at monitoring well MW-8 in 2014 during months of March, June, September and December, and conducting annual monitoring and sampling at monitoring wells MW-9, 11, 12 and 18 during month of December 2014, at which time request for spill closure will again be considered. Results of quarterly monitoring and sampling at MW-8 will also be continually evaluated, and MW-9, 11, 12 and 18 may be monitored and sampled prior to December 2014 if a trend in quarterly dissolved concentrations at MW-8 supports a spill closure request. I sent email reply: Tom, Thanks for your email documenting our discussions from Wednesday's meeting and agreed-upon future course of action for this spill site. - J. Kolleeny 05/28/14: Reviewed Update Rpt January thru March 2014 by EnviroTrac, dated 4/25/14 (in DecDocs). Rpt presents results of GW sampling of well MW-8 on 3/20/14, showing well had 2,725 ug/L total VOCs, down from 11,332 ug/L in Dec. 2013. Rpt states that monitoring of MW-8 will continue, with next sampling event scheduled for June 2014. - J. Kolleeny 10/15/14: Reviewed Update Rpt April-June 2014 by EnviroTrac, dated 7/1/14 (in DecDocs). Rpt presents result of June 20, 2014 sampling of well MW-8, showing well had 3,248 ug/L total VOCs (up from 2,725 ug/L in March 2014). Rpt states that GW monitoring will continue, with next sampling event for MW-8 in Sept.

NEVIN ST GARAGE (Continued) **S103274088**

2014, and with annual sampling of all remaining wells (MW-8, MW-9, MW-11, MW-12 & MW-18) in Dec. 2014, at which time results will be re-evaluated for petitioning for spill closure. - J. Kolleeny 12/15/14: Reviewed Update Rpt July-Sept 2014 by EnviroTrac, dated 11/7/14 (in DecDocs). Sampling of well MW-8 in Sept 2014 showed 2,658 ug/L total VOCs (down from 3,248 ug/L in June 2014). Rpt states that wells MW-8, MW-9, MW-11 and MW-18 will be sampled in Dec. 2014 for annual GW sampling event. Rpt also states that well MW-12 (in Union St sidewalk to SE of MW-8) was found to have been destroyed, and that Verizon does not intend to replace well. Rpt states that results of post-remediation quarterly GW monitoring will continue to be summarized in quarterly reports and continually evaluated for request of spill closure. - JK 02/23/15: Reviewed Update Rpt Oct.-Dec. 2014 by EnviroTrac, dated 1/12/15 (in DecDocs). GW sampling on 12/19/14 showed well MW-8 had 7,260 ug/L total VOCs (up from 2,658 ug/L in Sept. 2014), well MW-9 had 4.3 ug/L tVOCs (had 4.8 ug/L tVOCs when last sampled in Dec. 2013), well MW-11 had 158.6 ug/L tVOCs (had 155.1 ug/L tVOCs when last sampled in Dec. 2013), well MW-12 had 282.4 ug/L tVOCs (had 280 ug/L when last sampled in Dec. 2013), well MW-18 had 7.9 ug/L tVOCs (had 3.2 ug/L tVOCs when last sampled in Dec. 2013). Rpt notes that construction activities in sidewalk along Union St. were noted during Sept. 2014 GW sampling event, and EnviroTrac speculates that such ground disturbance activities may have caused increase in VOCs in MW-8 this quarter, which was a departure from previous 3 quarters. EnviroTrac recommends another GW sampling event in March 2015 to evaluate request for spill closure. - JK 06/04/15: Reviewed Update Rpt & Request for Spill Closure, Jan. through March 2015 by EnviroTrac, dated 4/3/15 (in DecDocs). On 3/16/15, a GW sample was collected only from problem well MW-8, as I agreed to in discussions with EnviroTrac. Sample result showed well MW-8 had 1,158 ug/L total VOCs (down from 7,260 ug/L in Dec. 2014, an upward fluctuation or spike which EnviroTrac stated was likely attributable to construction activities in Union Street sidewalk near MW-8 in Fall 2014, possibly related to subsurface utilities). Well MW-8 had only 12 ug/L of benzene (down from 72 ug/L in Dec. 2014). Based on overall decreasing trend in VOC levels in MW-8, absence of significant impacts in other site-related wells, and substantial remedial efforts undertaken at site (including UST removals, soil excavations, application of oxygen-releasing material and chemical oxidant (to open excavations and via injections), performance of vac truck extraction events, EnviroTrac requests spill closure. I agree spill closure is appropriate based on remedial actions performed, relatively low residual contaminant levels, and decreasing trend in contaminant levels, which is likely to continue by natural attenuation processes. I closed spill case, sent spill closure letter (in DecDocs) to Thomas Bosshard of Verison, cc to Jeff Bohlen of EnviroTrac. - J. Kolleeny"

Record Updated Date: 02/01/2022
Update By: HMDUDEK
Site Description: "Location: The site is situation in an urban areas surrounded historically by mainly industrial properties. The Gowanus Canal, a USEPA National Priorities List (NPL) site, is located directly adjacent to the site and was once a vital cargo transportation hub prior to the mid-20th century. The subject property has a total footprint of approximately 102, 070 square feet (SF). Site Features: the main site feature are one (1) single-story commercial building and a bulkhead along Gowanus Canal frontage. Current Zoning and Land Use: The site is currently zoned with the M1-4/R7-2 designation, which is representative of residential zoning. The site, prior to a zoning change that went into effect in November 2021 by the NYCDCP, was previously located within a M2-1 designation. The M2-1 designation is a district characterized by a middle g60round between light and heavy industrial areas. The surrounding parcels have also been re-zoned and presently are within the M1-4/R7-2 designation as well. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that the site was used as a lumber yard as early as 1886 through the 1910s. Kopper s Seaboard Coke Co. is depicted as the occupant of the site from circa 1922 until the 1950s, during this time the site was used as a yard designed to receive coke for barges, screen and deliver to trucks for distribution to consumers. The current on-site structure was reportedly constructed in 1958 and was occupied by a motor freight stations through the 1960s through the late 1970s. Subsequently, the building was utilized by NY Telephone

318 NEVINS STREET (Continued) **S128529087**

Co., Bell Atlantic and Verizon. Site Geology and Hydrogeology: The ground surface within the site is generally flat and the elevation of the property is approximately +10 (NAVD-88) feet. During previous investigation activities, groundwater was encountered at depths ranging from 5 to 7.5 feet below ground surface (bgs). Based on United States Geological Survey (USGS) mapping, groundwate inferred to flow to the west-northwest toward the Gowanus Can which is located directly adjacent to the site. According to the Federal Emergency Management Agency (FEMA), the site is located within a Special Flood Hazard Area (SFHA), Zone AE, characterized by having a 1 percent annual chance of flooding. Historic investigation reports prepared for the site characterized subsurface soil as historic fill material consisting of fine-grained sand with varying amounts of gravel, brick and concrete. The fill material was encountered at grade to depths of 6 to 9 feet bgs throughout the majority of the site. The fill material was reportedly underlain by sand and clay. In addition, a clay layer was observed at approximately 10 feet bgs throughout the site. Bedrock was not encountered during historic investigations. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Town: New York City
Record Added Date: 04/04/2018
Record Updated Date: 03/06/2020
Update By: DJEATON
Site Description: "Location: The site is located in an urban area along the Gowanus Canal, within the Borough of Brooklyn, on the northwest corner of Nevins Street and Degraw Street. Site Features: The site is currently improved with a two-story building, which occupies approximately 2,000 square feet of the parcel (242 Nevins Street) and a one-story building, which occupies approximately 16,000 square feet of the parcel (254 Nevins Street). The remainder of the parcel consists of parking, storage, and outdoor work areas associated with the buildings operations, to include vehicle and equipment storage and repair. Current Zoning and Land Use: The site is currently zoned for industrial and manufacturing use (M2-1 district). The buildings are occupied by an automobile repair facility, commercial hauler, automobile upholsterer, production studio, plumbing contractor and general contractors whose operations include vehicle and equipment repair. Adjoining parcels are used for industrial, parking, and open space/recreational purposes, with the surrounding area generally consisting of industrial/commercial uses. Past Uses of the Site: Past use of the site includes a coal company (approximately 1886 to 1950), automobile/vehicle repair (approximately 1938 to 1950, and 2013 to present), an unpermitted solid waste management facility (prior to 1994), a Resource Conservation and Recovery Act Large Quantity Generator (1988), and various trucking and contracting companies (approximately 1969 to present), including a petroleum transporter. Site Geology and Hydrogeology: The site is located in a developed

242 NEVINS STREET (Continued) **S105841715**

area of Brooklyn, generally covered with paved roads, walkways and buildings. The subsurface strata at the site consists of historic fill material characterized by loose silty sand with varying amounts of silt, sand, gravel, ash, asphalt, brick, clinkers, cobblestone, concrete, glass fragments, metal, and wood extending to depths of as great as 15 feet below grade surface (bgs). The historic fill material is underlain by alluvial deposits consisting of poorly sorted sands with gravel and marsh deposits, referred to as meadow mat, which consists of interbedded sands, clays and silts. Bedrock (Fordham Gneiss) was encountered at a depth of about 159 feet bgs. Groundwater was encountered between 4.54 and 5.6 feet bgs and generally flows westward toward the Gowanus Canal."

Env Problem: "US Environmental Protection Agency (EPA) has determined that the property is part of the Gowanus Canal Superfund Site that is listed on the National Priorities List. Additionally, under ECL 27-1405(2)(e), there is currently an EPA environmental enforcement action related to contamination at the property, therefore the site was denied entry to the NYS BCP."

DEC Memo: "Ketani responded to the site. 7/6/11 - Raphael Ketani. I arrived at the site at about noon time. The site was a large yard with a gray building on the back left corner that fronts on Nevins Street. The address is 242 Nevins Street (near Degraw and Nevins), Brooklyn, 11217. Several companies had their signs on the corrugated fence. These companies were Brooklyn Truck & Equipment, Phoenix Services

242 NEVINS STREET (Continued) **S105841715**

Corp. (718) 567-2023, and Cole Partners, Inc. (718) 875-8300. I entered the yard and saw a red painted trailer (posssibly with a cement pump) on the left that had been leaking hydraulic fluid. The floor of the front half of the yard appeared to be partially paved and partially laid with paving stones. There was a steel plate in one location with holes in it. Vehicles were parked on both sides of the front half of the yard, but I did not see any leaks. Next, I went to the back half of the yard. The ground appeared to be only dirt. There were vehicles and construction machines parked along the west side and north edges of the yard. The Gowanus Canal bordered the west side of the yard and the water level was nearly even with the yard (maybe 3 feet below ground level). Most of the trucks belonged to two different garbage carting companies, M&G Carting, 303 5th Avenue, NY, 10016, (212) 689-0332, and Flash Recycling, 132 Ludlow Street, NY, 10002, (212) 673-6194 (Prince Street Station, P.O. Box 515, NY, 10012). Some of the trucks had leaked either motor oil or hydraulic oil. There was oil on the ground near one of the Flash Recycling trucks. One of the M&G Carting trucks looked like it hadn't been operational for a long time. There was a rolling container near this truck with many plastic bottles that had contained motor oil. I didn't see any leaking from the container, but this was not a proper container for liquids of any kind. After my tour of the back half of the yard, I entered the gray building. In many places, there was oil on the floor. I saw a zipper drain that looked like it may contain sludge. I entered the office of Brooklyn Truck & Equipment and met ECO Jennifer Okonuk (718) 482-4885 and the owner of the business, Bob Hepplewhite (718) 237-7976. ECO Okonuk informed me that she had called in the spill. She had been making inspections of garages when she came across Brooklyn Truck & Equipment. She said that she had issued two tickets to Mr. Hepplewhite, for noisome and unwholesome. Mr. Hepplewhite, ECO Okonuk and myself toured the garage. ECO Okonuk pointed out the area with oil saturated Speedi Dri next to a 275 gal. waste oil tank and a 275 gal. tank that Mr. Hepplewhite said contained fresh motor oil for the trucks. One of the workers at the garage dug through the Speedi Dri and showed us that there was a concrete floor below. I pointed out to Mr. Hepplewhite that there were containers of motor oil on racks in the back of the oil contaminated area. He said that these weren't his and that they were empty and had been there since before he had moved his business in. Mr. Hepplewhite added that the oil tank next to them also wasn't his and he knew nothing about it. Next, we went outside to the yard. I asked Mr. Hepplewhite about the trucks. He said that he makes extra money by leasing space for parking the trucks. I pointed out the spilled oil, the rolling container with oil bottles, and the derelict truck. I told him that he had to inform M&G Carting and Flash Recycling and get them to clean up the site and remove the oil bottles and the derelict leaking truck (ECO Okonuk claimed it was leaking). He said that he will do this. ECO Okonuk and I asked about the steel plate in the back half of the yard and the perforated steel plate in the front half of the yard, and whether he leased both halves. Mr. Hepplewhite said that he leased only the gray building and the back half of the yard. He added that the plates covered sewer tanks. He went on to say that when it rains, the entire yard floods 8 to 10 inches because the sewers back up under the street. Mr. Hepplewhite added that even the Gowanus Canal floods during the rain storms and spills into his yard. The yard and the vicinity is a low area. ECO Okonuk told me that she has seen this happen, too. He also

242 NEVINS STREET (Continued) **S105841715**

stated that the building to the south can not be sold because there is oil underground from the coal gasification that took place many years ago. Mr. Hepplewhite commented that the EPA and the NYC DEP did borings throughout the yard and elsewhere because of the underground contamination. While we were in the yard, Andrew Kelly, enforcement officer - Emergency Response Engineer with the ER Unit (718) 595-4761 of the NYC DEP arrived. We went back inside the shop and I went over what needed to be done to clean up the site. These items were: 1) clean up the saturated Speedi Dri and make sure fresh absorbent is kept at this location for any future spills that take place 2) hire an environmental company to do soil borings in the saturated area, along the sides of the zipper drains and in the back half of the yard - if contamination is found, then it will have to be cleaned up 3) call M&G and Flash and have them clean up their spills 4) clean up the floor of the garage and have someone keep on top of the spills with absorbent and power washing (Mr. Hepplewhite stated that the garage is powerwashed once a month) 5) hire a company to clean out the zipper drains (Mr. Hepplewhite said that there is a plug at the end of the last zipper and that nothing can flow to the sewers) I told Mr. Hepplewhite that the DEC will be sending a contaminated soil letter to him and to the owners of the property with a C-c to ECO Okonuk. I added that we will want a clean up report after everything is done. Mr. Hepplewhite said that he understood. There was one other spill case for the site. It was #0510846. It involved a 200 gal. oil spill to the yard and the street and the sewer on 12/16/05. Bonafide Energy was the responsible party. A valve had broken. The site was cleaned up by 4/21/06 and the case was closed. 7/8/11 - Raphael Ketani. I tried contacting M&G Carting (212) 689-0332 to let them know that they have to clean up the spilled oil around and under their trucks. However, I reached the answering machine of Frank Mormando. I left a message for him to contact me. I contacted Billy Huang, the owner of Flash Recycling (212) 673-6194. I told him that he had to clean up the spilled oil from under and around his trucks and the pool of stinking leachate. He said that he will get one of his crew to do this. I told him that the oil has to be put in an appropriate container for oil disposal and that the DEC will do an inspection next week to see whether he has complied with our request. I added that if the oil and leachate aren't cleaned up, then he could face fines and penalties. Mr. Huang said that the oil and leachate will be removed. I looked up the property ownership using ACRIS. The latest deed for block and lot 418 and 1 is held by 242 Nevins, Inc., 444 Third Avenue, Brklyn, 11215. The deed date is 7/27/05, it was prepared on 10/5/05, and filed on 1/12/06. The property manager is Marino Mazzei, Bonified Realty, 140 Portland Road, Highland, NJ, 07732, (718) 788-2222. I spoke to Mr. Mazzei and told him about the leaking red painted trailer, the leaking trucks and the spills at Brooklyn Truck & Equipment. I told him that Mr. Hepplewhite will take care of the spills in his garage and that the trucking companies have been notified about the spills from their trucks. Mr. Mazzei said that he will visit the site and see to it that everything is cleaned up. I sent a CSL to 242 Nevins, Inc. regarding the hydraulic fluid that is leaking from the red trailer and the leaking trucks. Another CSL went to Mr. Mazzei regarding the same issues. I also sent Mr. Hepplewhite (718) 237-7976 and Mr. Mazzei CSLs with the 5 items from above. Later, Mr. Mormando, the owner of M&G Carting (212) 689-0332, called me back. He said that he will clean up the spill under and around his trucks and he will have the rolling container emptied.

242 NEVINS STREET (Continued) **S105841715**

7/12/11 - Raphael Ketani. Mr. Mazzei cell (347) 231-6440 called. He said that everything that the DEC was concerned about in the garage and in the yard has been cleaned up. He invited me to check the place. I told him that I will this week. However, I added that Mr. Hepplewhite still has to hire an environmental company to do soil borings in the former oil saturated area and along the sides of the zipper drains. He said that he understood. 7/19/11 - Raphael Ketani. The CSL to 242 Nevins Inc. was returned in an unopened envelope as ATTEMPTED - NOT KNOWN. 8/5/11 - Raphael Ketani. I made an unannounced site visit. The oil spill under the red trailer had been cleaned up. The small oil spills next to and around the garbage trucks had also been cleaned up. The small rolling trash dumpsters (about 1.5 cu. yds. each) had been emptied. I met Mr. Hepplewhite. He showed me the area inside the garage that had been badly affected by spilled oil. He said that the oil was actually on sheets of plywood, not on the garage floor. This appeared to be true as most of this area of the garage floor was very clean as if there had never been oil tanks here. It was cleaner than it could have been if someone had power washed the floor. All of the tanks and buckets had been removed. However, I did see a darkened corner of this area next to the racks which used to hold containers of oil. I knelt down at this corner, but didn't sense any oil odors. I assumed the darkening to be the result of moisture as it had rained heavily earlier during the week and the corrugated walls were not sealed to the floor. There still were mud puddles in the backyard where the garbage trucks were. Next, he showed me the new location of the waste oil tank. It was now in a larger tank which served as secondary containment - should any of his workers spill oil while transfering it to the tank. The tank was in between the two back garage doors. Mr. Hepplewhite showed me the zipper drains. They were now covered by steel plates which fit flush with the garage floor. The plates had holes so that wash water can enter the drains. He lifted up one plate and I could see the concrete bottom of the drain. There were no odors and the bottom of the drain looked to be in good condition without any cracks. Lastly, he showed me the drums of sediment that had been removed from the drains. The lids were securely attached to the drums and they looked to be ready for pickup. Mr. Hepplewhite said that the person who runs the waste oil pickup company will arrange for the drums to be picked up. I looked at the floor of the shop and it was very clean, except for a small puddle under one engine. This engine had just been drained. I pointed this out to Mr. Hepplewhite and he said that the spill will be cleaned up immediately. After this, I left. As the former waste oil tank area was very clean and as the zipper drains didn't smell as if they had oil and were in good condition, I decided that soil borings weren't necessary at the site. As the spills appeared to have been remediated, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case. DLE had issued tickets. So their case will remain active. "

Remarks: "The whole ground of the garage is saturated. Been dumping there for 6 years. No clean up as of yet."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Common Name of Substance: Gasoline/Ethanol

Tightness Test Method: 34
Date Test: 06/24/2021
Next Test Date: Not reported
Pipe Model: E
Modified By: KXLIU

SUDANCO GAS STATION, INC. (Continued) **U003065840**

Last Modified: 07/30/2021

Equipment Records:

G00 - Tank Secondary Containment - None
I03 - Overfill - Automatic Shut-Off
F09 - Pipe External Protection - Urethane
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
A01 - Tank Internal Protection - Epoxy Liner
B07 - Tank External Protection - Retrofitted Sacrificial Anode
C02 - Pipe Location - Underground/On-ground
E04 - Piping Secondary Containment - Double walled UG
L02 - Piping Leak Detection - Interstitial - Manual Monitoring
H05 - Tank Leak Detection - In-Tank System (ATG)
D11 - Pipe Type - Flexible Piping

Tank Number: 003
Tank ID: 22892
Tank Status: Closed - Removed
Material Name: Closed - Removed
Capacity Gallons: 550
Install Date: 03/01/1974
Date Tank Closed: 01/01/1997
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

CON EDISON - 3RD AVE (Continued) **1000111635**

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U151
Waste Description: MERCURY

BROWNFIELDS:

Name:	THIRD AVENUE YARD
Address:	222 FIRST STREET
City,State,Zip:	BROOKLYN, NY 11215
Program:	BCP
Site Code:	533255
Acres:	6.770
HW Code:	C224245
SWIS:	2401
Town:	New York City
Record Added Date:	10/05/2016
Record Updated Date:	03/25/2021
Update By:	HMDUDEK
Site Description:	"Location: The BCP site is the Con Edison Third Avenue Yard Service Center located in an urban area in Brooklyn, NY. The Property occupies a city block (approximately 6.77 acres) and is bounded to the north by 1st Street, to the south by 3rd Street, to the west by 3rd Avenue, and to the east by 4th Avenue. Current Site Features: The

THIRD AVENUE YARD (Continued) **S120706183**

Property is entirely covered by contiguous impervious surfaces consisting of buildings, asphalt pavement and concrete. The property is fenced in with secure access points located on 3rd and 1st Streets. Seven functional areas are present at the Property: Stores Building; Operations and Transportation Buildings; Pole/Cable Reel Storage Area; Flush Truck Facility (used to receive and treat flush truck wastes); South Undergound Storage Tanks (UST) Area (contains two 2,500 gallon USTs containing gasoline and diesel fuel); Former North UST Area (previously contained gasoline and diesel USTs) and paved parking lots. Current Zoning and Land Use: The Property is zoned M1 2 (commercial/industrial). Con Edison currently uses the Property as a utility service center. Operations include indoor storage, pole/cable reel storage, operation of fleet fuel dispensing, auto repair garage, parking of fleet and staff vehicles, administrative offices, and flush truck area. The surrounding area is mostly commercial/light industrial. Past Use of the Site: The property consisted of a tidal wetland until 1860 when the property was backfilled. A baseball stadium was present until approximately 1918, when it was converted into warehouse space. Between 1918 and the time the Property was acquired by Brooklyn Edison Company, Inc. (predecessor to the current owner) in 1925 the property was used mainly for warehouse and trucking operations. After being acquired by Brooklyn Edison, the Property has been used as an electric utility work out location. From at least 1933 to 1964, a portion of the Property fronting Fourth Avenue also housed gasoline service stations leased to third party operators. In 1947, a concrete pit was constructed on the southern corner of the property for dewatering sludge recovered from Con Edison electric manholes/vaults. This pit was connected to the municipal sewer and was utilized until 1974 when it was decommissioned and the current Flush Truck facility was constructed in the same location. Site Geology and Hydrogeology: The subsurface soil includes three primary lithologies that include urban fill, the naturally occurring marsh deposits and underlying sands and silt. The urban fill is continuous across the Property, extends from ground surface to 20 to 25 feet below ground surface (ft bgs) and consists of sand and silt, gravel, cobbles, concrete, brick, slag, cinders, coal fragments, glass, wood, shells, and metal. Beneath the fill and on top of the silt clay layer are discrete lenses of more coarse grained sand and gravel. Underlying fill at the Property is naturally occurring deposits, which consist primarily of silt, clay and peat. The presence of shell and plant fragments suggests that these are tidal marsh deposits. The shallow water table occurs in the fill layer beneath the Property at depths ranging from 7 12 ft bgs. Generally, groundwater flow at the property is to the west. "

Env Problem:

"The majority of the contamination encountered during previous investigations at the site consist of petroleum-related compounds however polychlorinated biphenyls (PCBs) were detected in shallow soil. Subsurface Soil: Several semi-volatile organic compounds (SVOCs) were detected above industrial soil cleanup objectives (SCOs). For example, naphthalene was detected at 6,500 ppm compared to an commercial SCO of 500 ppm Surface Soil: PCBs was detected up to 430 ppm compared to an commercial SCO of 1 ppm. Groundwater: Petroleum dissolved-phase contamination was detected above Ambient Water Quality Standards and Guidance Values. For example, naphthalene was detected at 20,000 parts per billion (ppb) compared to a guidance value of 10 ppb. Free-phase oil or light non-aqueous phase liquid (LNAPL) was encountered floating of the water table in the

THIRD AVENUE YARD (Continued) **S120706183**

	northeastern corner of the site where gasoline and diesel underground storage tanks were previously located. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY / ARAKHAN 7/25/02 Met with M. Sicherman and Sam Arakhan to discuss the high PCB readings in the employee parking lot. She explained that this spill was called in and was thought to be gasoline. We discussed combining the UST and PCB investigations. (KMF) 9/5/02 Phonecall from Maureen Sicherman. So far, they cannot locate 14 tanks. Suggested Con Ed submit proposal to do a site investigation. (KMF) 9/16/02 Phone converstaion with M. Sicherman. Submitting letter on how they're going to locate tanks. Not going to try GPR because they've tried this in the area before and were unsuccessful. Going to dig 5'deep trenches and test pits based on information from property records and Sanborne maps. These records indicate tanks were removed in 1964 (they disappear from map to map). QAPP/Workplan being rewritten. (KMF) 9/25/02 Received UST Investigation proposal from M. Gonzalez. (KMF) 10/9/02 Phone conversation with M. Sicherman. Include diesel as contaminant and PCBs. Use Fuel oil contaminated soil TAGM 4046. Will send letter confirming conversation. (KMF) 10/9/02 Relayed Sam Arakhan's comments to M. Sicherman. Requested site map and MW-2 location. (KMF) 10/10/02 Spoke with M. Sicherman. Will address comments when she receives a letter. (KMF) 10/10/02 Sent out letter in response to scope of work. (KMF) 11/4/02 Received QAPP for the Groundwater Investigation and Remedial Action Plan for PCBs and unknown USTs in the employee parking lot dated May 28, 2002 (revised November 1, 2002). 11/21/02 Yesterday afternoon found wall of tank while trenching. Appear to be heating oil tanks (maybe 250gal). Clean Harbors uncovered another tank while looking for port to first tank. Excavation is 40'X20'. Asked about 30day requirement to notify DEC to close the tanks. Replied that this did not apply in this case. Also directed her to arrange to register the tanks. (KMF) 11/21/02 Update: Removed 3 drums of oily sludge from tanks. Will fully characterize and analyze for PCBs. Regular turnaround for rolloff waste characterization of soils and sludge. Appendix B Category B deliverables will cause them to store rolloff for about a month. 11/25/02 Construction management was proceeding this morning and saw two tanks ad adjacent two tanks. Four tanks altogether. Appear to be 550gal. Will sample liquid and determine flash point and product. (KMF) 11/25/02 Update: UST-II area (where they had shifted the soil within the excavation) was expanded another 5' north and uncovered top of tanks. Found mostly water inside. Took samples and saw some sludge at bottom. 12/11/02 Update: PCB confirmatory sampling results are not yet available. All potentially impacted soil from around lube tanks had been excavated and samples collected from soil. Also reported as hazardous for lead. Will be disposed of as such. At the south area, gas tanks liquids were treated as hazardous for benzene. (KMF) 12/17/02 Mariela Gonzalez informed me that an additional 6 tanks were located and were full of water. Will sample for oil ID, PCBs and RCRA. Soil is stained under the other 4 tanks. Concrete anchoring slab was broken out (approx 4 thick) and contamination was found. Waiting to see if water

THIRD AVENUE YARD (Continued) **U001832241**

in excavation percolates. Will inspect graves tomorrow afternoon if possible. (KMF) 12/19/02 Met with M. Gonzalez and Chad of Jacques Whitford. Met to discuss results of preliminary samples. She will send a summary of results with an updated map of tank areas. Mariela is concerned about levels of metals and requested that DEC negotiate cleanup levels and amounts of soil to be removed. Sidewalk on east side of UST-II area mat be undermined. One high PCB hit (26ppm) on south side of PCB-II area. Mariela is concerned about how much soil will need to be removed from this area. Will research test pit data and determine extent of contamination in this area if possible. UST-I area - no tanks were found initially. Found two lube oil tanks when trench was extended. Additionally 6 tanks located north of UST-I area. Samples have been taken from the tanks. (KMF) 1/05/04 Arakhan PCB cleanup and removal of old USTs have been completed. ConEd (Maria Gonzalez) will submit report shortly. Subsequent to completion of PCB remediation, elevated concentrations of BTEX/gasoline detected in monitoring wells. Additional investigation and remediation efforts conducted. (JHO) 4/22/04: Con Edison submits UST Closure Summary Report for 14 tanks uncovered during excavation and removal of PCB contamianted soil associated with the employee parking lot. The report documents post-excavation soil sampling resultsfor PCBs, VOCs and SVOCs. 5/27/04: E-mail from Con Ed (M. Gonzalez) transmitting results of May 2004 groundwater sampling event. To summarize, there are low to moderate conentrations of BTEX compounds in groundwater which exceed standards. For example, benzene = 22 ppb max, toluene = 15 ppb max, ethylbenzene = 140 ppb max, xylene = 170 ppb max. See eDocs for results. (JHO) 6/7/04: revised groundwater contour map submitted by Con ed. See eDocs. (JHO) 6/8/04: e-mail to Con Ed Mariela Gonzalez: This is the third different groundwater contour/flow direction that I have seen for this site. I guess the addition of the wells around the north UST area helped get a better handle on it. I reviewed the groundwater analytical data for both the employee parking lot and the Service Center tanks [NOTE - see spill no. 9808009 for Service Center spill - JHO]. I think we are dealing with two distinct plumes, based on the following observations: 1. I don’t see any MTBE associated with the employee parking lot plume. If this was, in fact, the leading edge of the plume from the Service Center, I would expect to see MTBE in addition to the BTEX. 2. The presence of lead in the employee parking lot soils also leads me to believe this is a plume of older gasoline (leaded gas, no MTBE). How long before the new building is to be constructed on the employee parking lot? My suggestion would be to use ORC on this plume (hopefully we can do this now before construction begins) and install two wells each in the sidewalk adjacent to MW-1 and MW-3. (JHO) 6/10/04: E-mail update from M. Gonzalez: I’m glad you had the chance to catch up with this site. It is my understanding that construction activities at this site may begin in early August or September. [NOTE: Con Ed is planning on constructing a new office building on the former employee parking lot area.- JHO] Regarding ORC application at this site, I believe that because of the aggressive remediation at this site (more than 9,000 tons of soil removed and all 14 USTs removed) and the current levels of VOCs in GW -range between 11 ppb (Benzene) to 160 ppb (Xylenes), it wouldn’t be necessary. It seems like the plume is stable and mainly around the MW1. I know that we have a short window of opportunity to do it and with the ORC treatment being able to get a faster remediation conditions to achieve a NFA, rather than waiting and monitoring GW for much longer

THIRD AVENUE YARD (Continued) **U001832241**

time. So, I'm open to discuss. Perhaps, we could perform one ORC application but limited to the North Area (around MW1), since the middle and south areas (where MW2 and MW3) are clean. The approximate cost of ORC application for the north area is $30-40 K. Regarding installation of additional MWs, we need to further evaluate the number and the location required because heavy presence of all kind of underground utilities between the property and the Fourth Ave. Within the property say, by the north-east corner (about 60-65 feet north of MW1) is a possibility. MW1 and MW 3 will be preserved. I'll be calling you to discuss. (JHO) 6/25/04: e-mail from M. Gonzalez proposing ORC injection for wells at parking lot, as follows: Jane, here attached the GW flow contour for the 3rd Ave Yard (combining the MWs at the Service Center and the parking Lot). Also, FE [First Environment]used Regenesis calculation web tool to determine the optimal grid size and ORC material required for a limited ORC injection to address VOCs exceedances in the MW#1. I provided FE the end-point soil results for the North excavation area. John plotted the soil VOC results in the proposed ORC injection site Plan. (Note: I took a second look to those end-point soil VOCs concentration, and they are below the TAGM Recommended Cleanup objective to protect GW, Also to note that excavation at the north area went down to 10-11 feet, in contrast to the south or TP15 area which were excavated as deep as 14 feet.) I would like to schedule the ORC application at the Parking Lot ASAP. See eDocs for e-mail and attachments. (JHO) 7/9/04: E-mail to Con Ed Gonzalez approving ORC proposal: I reviewed the info you e-mailed me on June 25 and agree with the ORC proposal with one change: I'd like FE to install one new monitoring well in the sidewalk downgradient of the ORC injection area. I know you told me that well MW-1 will be spared from the construction activities, but I'd still like to have a monitoring point that is outside of the immediate injection zone. (JHO) 7/23/04: e-mail from Con Ed Gonzalez: This note to update you with our plans regarding the ORC project at the 3rd Ave yard Parking Lot. * Monday, July 26: A field walk among Remediation, CM, the consultant and subcontractor is scheduled at 9 AM. We will be reviewing the scope of work and selecting the injection points. Also we will be reviewing utility drawings and the code 753 markups so that we can select a location for the requested sentinel MW. *The ORC implementation will commence on July 30th. *Pending on MW location, if for example is to be done outside the site property (on the sidewalk), a street permit will have be secured, at this time we don't know, or at which sidewalk the MW will be installed, therefore, upon Monday field walk, I'll update you regarding proposed schedule to install this MW. (JHO) 7/26/04: site visit with Con ed (Mariela Gonzalez, Vinny Desiderio and Ulrick Samuel) and First Environment (John Engdahl). 2 additional wells will be installed to the northeast and southeast of existing well MW-1 in the former parking lot area. Both proposed wells are within property/fence line.(JHO) 7/26/07: e-mail from Con Ed Gonzalez: As we discussed, I'm attaching GW data from the original three MWs installed at the parking Lot. These wells were destroyed during soil excavation. Also attached is GW data (three rounds of data) for the existing MW#3 (at the south area). I only summarized VOCs since SVOC are either ND or below GW standards. And to document, below I typed some of the clarifications regarding the scope of work: - Two MWs (could be 2 diameter) to be installed at about 5' south and north of the ORC injection borders. The wells to be located the closest possible toward the property fence at 4th Ave, but inside the parking

THIRD AVENUE YARD (Continued) **U001832241**

lot property. - At these two MW locations, soil sampling is not anticipated since wells are being drilled on clean sand from 0 to 10'. If soil below 10' shows any evidence of contamination (odor, color or high PID readings) then a soil sample above the GW elevation should be collected. - The MW #1 and #2 will be extended out [NOTE: converted to stick up wells - JHO] so that the MWs are not covered during paving/site surface restoration activities. E-mailed response to Gonzalez: The concentrations in groundwater from the one round of sampling of the original wells in the south tank area indicates no detectable VOCs. These wells were closer to the tanks (the ostensible source of the contamination). The concentrations in new MW-3 seem to be fairly consistent, and are low. You can stick to the original plan - i.e., ORC for the north tank area. The south area will be capped with the new building, preventing any further rainwater infiltration. I would recommend that well MW-3 be sampled on the same frequency as the north area wells in order to track any remaining contaminant concerns. NOTE ADDED 9/11/07 BY JHO - there were 14 x 550-gallon gasoline USTs located in the northern area, which is the source of the contamination. (JHO) 7/28/04: NFA letter for PCBs in soil issued to Con Edison. (SKA) 9/24/04: E-mail from M. Gonzalez transmitting lab results for soil and groundwater collected during installation of additional monitoring wells. High concentrations of gasoline constituents were noted in soil along fence line, where no soil was previously excavated. The original excavation for the PCB contamianted soil encountered a number of 550-gallon gasoline USTs, which were excavated and removed. However, in an effort to prevent the fence along the site perimeter from collapsing, excavation was halted before reaching clean end-points. The two new wells (MW-4 and MW-5) were installed in the native material. Concentrations in soil in the native material range from ND for benzene to 1416 ppm for xylenes. Groundwater collected from wells MW-1, MW-3, MW-4 and MW-5 show moderate to high conentrations of dissolved BTEX (highest benzene = 1730 ppb, toluene = 7070 ppb, ethylbenzene = 3170 ppb, xylene = 16,600 ppb). These are the concentrations following ORC injection, which was completed on July 31, 2004. 10/5/04: Con Ed submits report on September 2004 monitoring well installation and groundwater sampling event. 8/6/07: e-mail from John Engdahl (First Environment) transmitting conceptual proposal for surfactant injection to enhance product recovery efforts: Attached please find our memo summarizing the recent investigation activities and the proposed investigation (soil gas) and remediation (VEFR w/ surfactant injection) for the 3rd Avenue Employee Parking Lot. Your expedited review of the document would be greatly appreciated, particularly the soil gas sampling portion. We followed the NYS DOH guidance document, however the guidance document does not specifically address our situation (i.e., near slab samples for VI assessment purposes, unconfined surface cover, etc.). We developed our scope based on our experience and knowledge from other sites and other guidance documents, including the NJDEP, EPA, ITRC, and API. We have schedule the GeoProbe for this Thursday, August 9, 2007. See eDocs for memo. (JHO) 8/9/07: e-mail response to First Environment (Engdahl): As we discussed on the phone this morning, NYSDOH has reviewed the soil vapor sampling plan and finds it acceptable. You will not need to run the SIM method, since the TO-15 detection limits should be sufficient. Please make sure to tell the lab what contaminants you are specifically interested in (i.e., BTEX). As for the proposal for surfactant flushing, please send a hard copy of the memo with the

THIRD AVENUE YARD (Continued) **U001832241**

revised figure to: Jim Harrington NYSDEC - Bureau of Technical Support 625 Broadway Albany, NY 12233-7020 Please send me a hard copy of the revised figure, and e-mail me a PDF version as well. NOTE: memo saved in eDocs contains both original and revised site plan. (JHO) 8/22/07: Spoke with Jim Harrington, DER Technical Support - he has assigned this to Kevin Carpenter, who will review the proposal and provide comments. (JHO) 1/31/14 - Remedial action work plan recieved from consultant recommended surfactant injection to address LNAPL which has been recurring in site wells. Sent comments/questions reply via email. (JOC) 2/27/14 - discussed with Con Edison PM Gonzalez 2/26. She would be check with consultant for response to my questions/comments. (JOC) 6/2/15 - received email from consultant 5/22/15 that they conducted a round of groundwater sampling in March 2015 and based on their findings they would like to discuss modifying their prior proposal, which had been for surfactant injection. Latest round did not see LNAPL in any wells, while dissolved VOC contaminants remain: in 8 wells sampled, 2 had low VOC concentrations, 2 had concentrations about 1 ppm (0.7 and 1.1) and 4 had concentrations in excess of 5 ppm (6.4, 7, 20 and 26 ppm) for CP-51 VOC list contaminants. The 5/22 email includes that an in-situ bio-augmentation program will most likely be the preferred approach, but that updated conditions and other site specifics must be first evaluated, and included that they would like to discuss the matter. Responded by email on 5/22 that I would be available to discuss it and provided some dates to do so. Awaiting response from consultant/Con Edison. (JOC) 7/14/16 had conference call 6/15/15 with Con Ed (Gonzalez), First Environment (Lattanzi) went through that the prior excavation work stayed within the property line and with the continued elevated dissolved concentrations that there remained a need for further work under the sidewalk, bringing up again that the old property drawing shows the old fill lines for the former gasoline station on the sidewalk along the curb; Mr. Lattanzi talked about the difficulty of work with the utilities under the sidewalk (e.g., sewer and subway ductwork) and the adjacent subway under 4th Avenue; the conversation ended with Ms. Gonzalez advising that FE s contract was ending very shortly, that Con Ed would be working on transitioning the project over to their other consultant AECOM. Department staff met with Con Edison on May 10, 2016 and July 8, 2016 to discuss Con Edison’s 3rd Avenue Yard overall and how to move forward with a comprehensive approach. Anticipate feedback from Con Edison shortly.(JOC) 11/18/2016 Austin This spill report is being transferred from Joe O Connell to Jennifer Kann - end. 06/05/17: J.Kann - as per Jeff spill reassigned to Kumar. 6/8/17 - Haggerty: Closed/consolidated under Site C224245. Further investigation and remediation will be conducted under the BCP."

Remarks: "HISTORICAL SPILL FOUND DURING SOME TEST BORINGS. NO SEWERS OR WATERWAYS. NO SMOKE OR FIRE. NO PRIVATE PROPERTY AFFECTED. CON EDISON REFERENCE NUMBER NOT AVAILABLE AT THIS TIME."

Name:	GOWANUS VILLAGE I, LLC - 420 CARROLL STREET
Address:	420 CARROLL STREET
City,State,Zip:	BROOKLYN, NY 11217
Program:	BCP
Site Code:	356610
Acres:	0.920
HW Code:	C224118
SWIS:	2401
Town:	New York City
Record Added Date:	12/09/2005
Record Updated Date:	02/15/2007
Update By:	brwolose
Site Description:	"This is a new BCP application and pertains to the Gowanus Village I, LLC-420 Carroll Street located at 420 Carroll Street, Brooklyn, Kings County. This site is approximately .92 acres in size. Current use of this site is commercial and future use of this site will be residential. Suspected contaminants at this site are chlorinated solvents, pesticides, SVOCs and PCBs. These contaminants are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility in conjunction with the Department of Health. 8/30/06: the BCP Application was denied."
Env Problem:	"Information submitted with the BCP application and additional information submitted regarding the environmental conditions at the site were reviewed. It was determined that due to lack of known contamination and the unlikely potential for contamination would not complicate the redevelopment of the site, the application was denied."
