> *Records Requested: Brooklyn Block 434, Lots 1 and 12. 601 Union Street, NY 11215, . Athenica Environmental Services is seeking information for the above referenced property with respect to the following: reported spills or releases of petroleum or hazardous materials, air permits or complaints, environmental Quality Review Actions (SEQRA), violations and/or fines, and reports of investigations or inspections relating to the environmental condition of the property. Alternate addresses may include 231-249 3rd Avenue, 602-614 Sackett Street, 601-609 Union Street, and 613-621 Union Street.*

The facility 2-601627 is regulated under the Department's Petroleum Bulk Storage Program (PBS). The facility name is SJ FUEL CO. INC., and is located at 601 Union Street. The facility status is active, and the facility registration/license expired 11/02/2013.

Be advised that your request has been denied in accordance with one or more of the following provisions of the Public Officers Law (POL):

- POL 87.2.f. Could endanger the life or safety of any person if disclosed.
- POL 87.2. Critical infrastructure information which, if disclosed, could jeopardize the health, safety, welfare or security of the state, its residents or its economy, within the meaning of POL 86.5.

If you believe you have been unlawfully denied access to records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. Please reference FOIL #W101904-060122 in all future correspondence concerning this request. Thank you.

Sincerely,

Region 2 FOIL Coordinator

DEC Memo:	"3/3/2021- DEC Piper spoke with consultant. Site had several investigations done in recent years and found low level soil and groundwater contamination. Owner is looking to enter the VCP program and has already hada pre-application meeting with DEC. Application has not been submitted though will be shortly. Site will have to adhere to spills requirements if not accepted. Report to be sent to DEC Piper and DEC Kim for review. 12/21/2021- email sent to and received by consultant. site entered VCP program c224329, managed by Nathan Freeman in Albany. Spill transferred to Nathan for follow up and closure."

Site Description:	"Location: The site is situated in an urban area surrounded by commercial and residential properties. The site was initially comprised of two (2) parcels (Block 433 and Lots 28 and 46), however, it should be noted that Lot 28 and Lot 46 have been merged as of March 29, 2021 and the site is now identified only as Lot 28. The subject property has a total footprint of approximately 33,550 square

585 UNION STREET, 577-599 UNION STREET (AKA 586 SACKETT STREET), BROOKLYN, NY 11217 (Continued)

feet (SF). Site Features: The main site features are two (2) single-story warehouse buildings. Current Zoning and Land Use: The site is currently zoned for manufacturing (M1-2) and is located within the Gowanus Canal Corridor as well as the Red Hook-Gowanus Brownfield Opportunity Areas. The surrounding parcels are used for a combination of residential, commercial and light industrial/manufacturing purposes. Past Use of the Site: Historic Sanborn Fire Insurance maps indicate that as early as 1889, lot 28 was used as a timber yard and lot 46 contained a single building used as a paint shop. The 1938 map depicts water distilling on lot 46, and lot 28 was improved with the current warehouse structure which was utilized by the NY Fire Department as an automobile repair garage and by the Telegraph Department for storage. By 1950, lot 28 was used by the NY Fire Department Telegraph Bureau, and by 1982, the South Brooklyn Casket Company occupied the entire site. Site Geology and Hydrogeology: The ground surface within the site is generally flat and the elevation of the property is approximately +15 (NAVD-88) feet. During previous investigation activities, groundwater was encountered at depths ranging from 11 to 15 feet below ground surface (bgs). Based on United States Geological Survey (USGS) mapping, groundwater is inferred to flow to the west toward the Gowanus Canal, which is located approximately 800 feet west of the Site. The site is not located in the 100-year or 500-year flood zone, however, Federal Emergency Management Agency (FEMA) flood maps show that the site is located adjacent to the 500-year flood zone associated with the Gowanus Canal to the west. Based on observations made during soil boring activities, subsurface soil at the site consisted of urban fill, which was primarily comprised of slag, brick, and gravel in a brown medium-grained sand matrix. Urban fill was encountered at a depth interval from grade to 15 feet bgs throughout the majority of the site. Neither native material, nor bedrock was encountered during this investigation."

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo:	"need to send TTF letter no PBS for this address. 4/28/05. J.Krimgold reviewed a letter report submitted by Mercury Tank & Pump dated April 25, 2005. According to the report a 550 gal #2 oil tank failed the test due to disconnected pipe fittings on the top of the tank. The tank was empty at the time of test. Tank top was excavated,tank was cleaned up and filled with concrete slurry. Before this a hole was drilled through the bottom of the tank to obtain a soil sample. All analytes were found below TAGMs objectives. NFA letter. "
Remarks:	"Doing a tank test on an old heating tank that no one knew was there. No contamination found or evidence of a leak. Ullage failure... unsure of any removal of tank."

Record Updated Date:	06/07/2021
Update By:	JHOCONNE
Site Description:	"Location The site is located in an urban area in the Gowanus neighborhood of Brooklyn. The Site is bounded by Sackett Street to the north, Union Street to the south, 4th Avenue to the east, and commercial properties to the west. Site Features The site was a gasoline filling station and was improved with a 360 square foot at grade storage building, a cashier s kiosk, and a canopy covering the pump islands. The site is no longer being used as a filling station and the kiosk has been removed. Current Zoning and Land Use The site is zoned M1-2 for light manufacturing and is surrounded by similarly zoned properties and residential zoned properties to the east. Past Use of the Site Based on information gathered as part of the February 2019 Phase I ESA, the site was first developed in approximately 1906 and used for residential/commercial purposes from approximately 1906 to 1961. In the early 1960s, the residential/commercial buildings were demolished, and a gasoline station was constructed in 1965. The site has been used as a gasoline station since then. Site Geology and Hydrogeology The stratigraphy of the site, from the surface down, consists of primarily historic urban fill, characterized by loosely compacted fine to coarse sand with fragments of brick and concrete, to depths ranging from 12 to 21 feet below grade across the site. Historic urban fill material is underlain by silty light brown sand, underlain by a layer of grey sandy clay material with organic matter (wood, roots) present in the matrix. Groundwater at the site is approximately 14 feet below grade and generally flows towards the north/northwest. "
Env Problem:	"Nature and extent of contamination Based upon investigations conducted to date, the primary contaminants of concern for the site include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals. Soil - VOCs including 1,2,4-Trimethylbenzene was found in soil at concentrations of 2,100 parts per million (ppm) compared to restricted residential soil

204 4TH AVENUE, 204 4TH AVENUE, BROOKLYN, NY 11217 (Continued)

	cleanup objective (RRSCO) of 52 ppm and the protection of groundwater SCO (PGSCO) of 3.9 ppm. Xylenes was found at concentrations of 3,600 ppm (RRSCO is 100 ppm, PGSCO is 1.6 ppm). SVOCs including benzo(a)anthracene was found at concentrations of 120 ppm (RRSCO is 1 ppm). Benzo(b)fluoranthene was found at concentrations of 110 ppm (RRSCO is 1 ppm). Metals including lead was found at concentrations of 3,170 ppm (RRSCO is 400 ppm), arsenic was found at 542 ppm (RRSCO is 16 ppm). Groundwater - VOCs including benzene was found in groundwater at concentrations of 9.6 parts per billion (ppb) compared to Ambient Water Quality Standards (AWQS) of 1 ppb. 1,2,4,5-Tetramethylbenzene was found at concentrations of 61 ppb (AWQS is 5 ppb). SVOCs including acenaphthene was found at concentrations of 64 ppb (AWQS is 20 ppb). Metals including arsenic was found at concentrations of 33.61 ppb (AWQS is 25 ppb). Soil Vapor - VOCs including 2,2,4-Trimethylpentane was found throughout the site but at highest concentration at the north-east portion of the site at concentrations of 509,000 micrograms per cubic meter (ug/m3). DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 01/23/2004-Sun-File Review by Sun: Site Status Update Report, Aprip 2003 through August 2003, by Geological Services Corp (GSC), dated 10/16/2003: Six (6) monitorin wells were gauged and sampled on July 17, 2003. A soil vaplr extraction well (SVE-1) was installed on July 30, 2003 and pilot test on SVE-1 was conducted on August 8, 2003. No LPH was detected. The groundwater depth ranged from 11.74 feet to 15.68 feet, and groundwater flow was in northwest direction.

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

MW-2 has the maximum BTEX concentration of 11,400 ug/l and maimum MTBE concentration of 1,800 ug/l. Work performed during this period included repair and patch leak from wall in oil closet located in the subway, installation of three additional wells. A remedial action plan will be submitted by GSC based on the results of the pilot test. Per Hess' letter to DEC dated 10/28/2003, Hess is working with the New York City Transit Authority (NYCTA) to address an apparent hydrocarbon sheen in conjunction with groundwater seepage within a subsurface subway station utility closet. (Sun) 01/22/2004- Site visit by Joe Sun and Mark Tibbe on 1/22/2004. Inspection with Mike Matri of Hess and William Schaefer of GSC showed that some slight infiltration of groundwater continues where the urethane grout waterproofing did not adhere to the concrete. GSC has recommended a second waterproofing event utilizing a hydraulic concrete product. The product is now waiting for NYCTA's approval. (Sun) SEE Also Spill Nos. 0104798/0201876. 05/05/04-File Update by Sun: On 05/05/04 Sun sent a letter to Hess requiring complete delineation of soil and groundwater contamination, submittal of an Investigation Summary report followed by a Remedial Action Plan. The Department set a deadline of May 28, 2004 for signing the Stipulation Agreement. (Sun) 06/06/05 File Update by Sun: On 06/06/05, Sun sent a letter to Hess' Project Manager, Mike Matri, informing him that the Department approves Hess proposed plan to take the opportunity of station renovation commencing in June, 2005 to install below ground environmental remediation infrastructure for future remediation of petroleum impacted soil and groundwater. Specifically, the Department approves the following planned installations at the station: 1.Installation of three additional SVE wells (PMW-8 through PMW-10). 2.Modification of existing 2-inch well FW-7 to include a 1-inch injection line which will be piped to the proposed remediation system location, The piping will potentially be used in the future for injection purposes (e.g., Biosolve, chemical oxidation and/or bioremediation). 3.Monitoring wells SVE-1, MW-2, and the three proposed SVE wells (PMW-8 through PMW-10) will have environmental piping installed from the wells to the proposed system location area. The Department requires a formal Remedial Action Plan (RAP) in conjunction with the station redevelopment activities be submitted by

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

Hess during the third quarter of 2005. (Sun) 10/19/2005: Project reassigned from Sun to Andersen 10/19/2005: Reviewed hydrogeologic groundwater report dated 8/29/2005. Report indicated liquid phase hydrocarbons and BTEX concentrations of up to 19,520 ppb. Report indicated that informal proposed remedial action plan discussed in abovementioned 6/6/05 entry is delayed and possibly canceled. The report states Amerada Hess Corporation will either request an extension to submit the currently proposed Remedial Action Plan or to submit a revised Remedial Action Plan . The next triannual sampling event is scheduled for November 2005. Additionally, a Stip was sent out on 5/5/04, which was never signed due to Hess waiting for a Consent Order. 10/25/05: Mailed a failure to sign Stip letter. Stip signature due on 11/15/2005. 1/26/06: 1/25/06 meeting between Quantum, NYSDEC, and GSC/Kleinfelder. The site in under redevelopment. An RAP will be prepared. Delineation will be investigated on the other side of 4th avenue. 3/1/06: Signed stipulation agreement, effective date 2/23/06. Investigation plan due 4/24/06. 4/24/06: Reviewed the site status update report/investigation plan dated 4/21/06. Report indicates that additional delineation on the east side of 4th avenue is not feasible due to utilites. Max BTEX 28,587 ppb (SVE1) and max MTBE 1,710 ppb (MW2). Depth to water 10-15 ft. RAP due 6/22/06. 5/25/06: Pilot testing on 5/25/06 6/29/2006: Meeting with Hess, NYSDEC, Quantum, EnviroTrac and GSC on 6/28/2006. RAP in progress. Endpoint sampling will be submitted for spill bucket replacement excavation. 7/28/06: RAP submission deadline extended to 9/21/06. 8/9/06: Conference call with Hess, Quantum, and GSC/Kleinfelder. The ROI during SVE pilot testing was only 10 ft. A Hivac pilot test will be performed on 8/10/06 to try to increase the ROI. If it fails an extension will be required to perform additional testing prior to RAP submittal. 8/11/06: Received phone call from Gail Helfrick. A HVAC test was performed which did not result in a significant increase in the RIO. An RAP will be submitted on 9/21/06 as planned, but will require additional sampling to improve the ROI. 8/15/06: See spill 06-02980. The RAP should include remediation for the soil contamination from spill 06-02980. 9/12/06: Received RAP. SVE proposed. Pilot testing was conducted on May 25, 2006 and August 10, 2006. Two existing wells

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

(MW-3 and SVE-1), and six proposed wells (SVE-2 - SVE-7) wil be used as extraction points to be connected to a SVE remediation system. The ROI varies from 10 to 50 feet throughout the site. Soil samples will be collected during installation of the new SVE wells, as well as from a soil boring proposed adjacent to MW-6. During system startup operation and maintenance visits will be conducted daily for three days, followed by weekly for the first monthy, followed by monthly. Based on start-up testing, a determination will be made as to whether emission treatment is necessary. Contamination from spill 06-02980 addressed, spill 06-02980 closed and consolidated with 9605719. Numerous sensitive receptors: subway, utilities, basements, schools, Gowanus Canal. AS not proposed due to the proximity of the subway, which runs parrallel and adjacent to the site. RAP conditionally approved, with additional groundwater treatment required. 9/21/06: Received phone call from Gail Helfrick (Quantum) and Al Tonn (GSC-K) requesting that the RAP be approved without additional gw treatment. Confirmed that additional gw treatment is required for MW-2, SVE-1, and FW-8. 10/3/06: Received email from gail helfrick: This email is to confirm our conversation on Tuesday, September 26, 2006 regarding the Remedial Action Plan (RAP) for Hess Station # 32530 in Brooklyn, New York. In the RAP, Hess proposed the installation and operation of a Soil Vapor Extraction system at the site. The NYSDEC approved the proposal for SVE, and also requested groundwater remediation. Based on our conversations, it was agreed that Hess would install underground piping for groundwater treatment during the installation of the SVE system. It was further agreed that Hess would operate the SVE system for 1 full year, and during that year, Hess would 1) evaluate the performance of the SVE system on a monthly basis, 2) continue to monitor roundwater quality (March, July and November), and 3) submit progress reports to the NYSDEC (May, September and January). If after that 1 year period, the data demonstrates that groundwater remediation is necessary, alternative remedial technologies will evaluated and discussed with the NYSDEC. 10/4/06: Received update report dated 9/27/06. Groundwater samples collected on 7/27/06. BTEX 38,200 ppb (SVE1), mtbe 208 ppb (SVE1). SVE implementation required. 12/11/06: Sent email to Hess to followup on implementation schedule. 12/18/06: Received email from Hess: We still

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

hope to be able to obtain the MTA permits needed to complete the subsurface intrusive work by January 10, 2007. Once these permits are obtained, we will provide the NYSDEC a schedule for system installation. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. SVE implementation in progress. 3/26/07: Reviewed update report. Wells sampled on 12/26/06. Max BTEX 30,720 ppb (SVE1). Max MTBE 1,000 ppb (MW2). SVE implementation in progress. 5/31/07: Reviewed site status report. Wells sampled on 3/16/07. Max BTEX 25,280 ppb (SVE1). Max MTBE 410 ppb (MW2). SVE installation in progress. 9/20/07: Reviewed site status report. Wells sampled in July 2007. LNAPL in MW 2 (0.03 ft).Max BTEX 30,370 ppb (SVE1). SVE startup planned for November 2007. Sent letter requiring RAP addendum for groundwater treatment (pipes for water removal are planned on being installed as a back-up plan). And increased sampling frequency to quarterly sampling. 5/14/08 - Carlson: Meeting on May 7th 2008 - Hess/Envirotrac will submit a RAP addendum. Reviewed First Quarterly 2008 Update Report. Wells sampled on 2/5/08. Max BTEX concentration 24,220 ppb (SVE1), max MTBE concentration 71 ppb (SVE1). MW-2 was dry. 8/7/08 - Carlson: Reviewed July 2008 Update Report. Wells sampled on 5/22/08. Maximum BTEX concentration 43,693 ppb (SVE1). Maximum MTBE concentration 554 ppb (MW2). RAP Addendum will be submitted under a separate cover. Emailed Hess/Envirotrac requiring submission of RAP Addendum by 9/8/08. Received email from Ed Russo stating that 9/8/08 deadline can probably be met. 9/8/08 - Carlson: The Department approved an extension until 10/1/08 to submit an RAP Addendum. 10/22/08 - Carlson: Meeting with Hess/Envirotrac. RAP Addendum will be submitted by 12/15/08. 11/20/08 - Carlson: Reviewed October 2008 Update Report. Wells sampled on 8/14/08. Maximum BTEX concentration 41,837 ppb (SVE1). RAP Addendum not received. Sent failure to comply letter. Start legal proceedings if RAP Addendum not submitted by 12/5/08. 12/23/08 - Carlson: Received Remedial Action Plan Addendum. Two SVE system, two wells strippers, and monthly dual phase extraction events proposed. Revised RAP Addendum required with following modifications: 1) removal of two wells from SVE system, 2) relocation of two of the proposed monitoring wells, 3) startup report must be submitted, 4) inclusion of more detailed information about the well strippers. 2/19/09 - Carlson: Received email from Ed Russo

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

in response to 12/23/08 letter. Monthly O&M visits requiring monthly WS water effluent testing, monthly SVE air discharge testing by PID, and quarterly SVE air discharge testing by laboratory. Revised letter addendum required. 3/11/09 - Carlson: Reviewed update report dated January 2009. Wells gauged and sampled on 11/5/08. LNAPL at depth of 0.02 ft in MW2. Maximum BTEX concentration 12,672 ppb (SVE1). 3/18/09 - Carlson: Meeting with Hess/Envirotrac. Revised addendum due in April 2009. 5/7/09 - Carlson: Reviewed April 2009 Update Report. Revised addendum letter overdue. Emailed John Schenkewitz about overdue letter/report. 5/11/09 - Carlson: Received revised RAP Addendum letter. Issued approval letter. 5/28/09 - Carlson: Well installation scheduled for 6/22/09. 8/7/09 - Carlson: Reviewed update report. Monthly EFR IRM ongoing. What is status of RAP implementation? 8/19/09 - Carlson: Meeting with Hess. RAP addendum will be submitted to include air sparge on the eastern portion on the site. 10/21/09 - Carlson: Reviewed RAP addendum. Issued approval letter. SVE/AS will be installed, except in sidewalk (because of subway). SVE in sidewalk with HVAC events to treat impacted groundwater. 11/17/09 - Carlson: Reviewed update report. Monthly HVAC events from sidewalk wells ongoing. SVE/AS system installation in progress. 1/27/2010 - Carlson: Meeting with Hess. 2/5/2010 - Carlson: Reviewed update report. EFR conducted in September and October. SVE/AS installation not begun yet. 5/20/2010 - Carlson: Meeting with Hess. They are working with MTA because the property is adjacent to the subway. 5/27/2010 - Carlson: Reviewed April 2010 Update Report. Six AS wells and one MW installed. HVAC was not conducted this quarter. 7/22/2010 - Carlson: Reviewed wastewater UST closure report. Tank abandoned in place with concrete slurry. Endpoint samples collected from the east wall (clean) and north wall (trace VOCs/sVOCs detected). West wall/south wall were not accessible for sample collection. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. EFR events ongoing. System construction pending NYCTA permits. 5/9/11 - Obligado - This spill transferred to Obligado as per Brevdo. I reviewed the 4Q10 update report. Free product (0.03 ft) was found in MW2. MAx BTEX 17674 ug/L in SVE1. They are still waiting for MTA permits. 8/30/11 - Obligado - I reviewed the 2Q11 update report. They are still waiting on NYCTA permits. Max BTEX is 9800 ug/L. No product

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

detected this quarter. 11/14/11 - Carlson: Reviewed October 2011 update report. System construction pending NYCTA permits. Monthly EFR ongoing. 3/13/2012 - The site has SVE/AS system operation pending on the NYCTA's permission. Spoke to the consultant who works for the property owner next door in the Union Street. Groundwater contamination was identified during their Phase 2 investigation. Advised to call in for a spill number and prove to DEC it is from Hess site as they believe. 8/23/2012 - 1Q2012, 4/30/2012, by EnviroTrac. The groundwater was sampled on 2/13/2012. DTW 9.98 to 15.70 feet. Flows to north. No LNAPL. The remediation system construction is pending permit approval by NYCTA. CW-9, 560.1 BTEX, 182 MTBE. MW-7, 7.52J BTEX, 22.8 MTBE. Flows to north. CW-9, 53.9 BTEX, 55.7 MTBE. MW-2, 2,189.5 BTEX, 34.6 MTBE. FW-9, 426.1 BTEX. SVE-1, 1,161.4 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the block and lot are 434 and 35. The latest deed is dated 4/24/14. The property owner is HESS Retail Stores, LLC, 1 HESS Plaza, Woodbridge, NJ, 07095. The PBS record is #2-297666. The owner is Speedway #7835. Seven USTs were closed and

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

removed from 6/1/92 to 8/1/96. Thirty seven USTs (mostly gasoline 550 gallon tanks) were closed in place on 12/1/79. There are 5 active 4000 gallon USTs - 4 gasoline and 1 diesel. These tanks were installed on 8/1/96. The contacts are as follows: Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com 4/26/16 - Raphael Ketani. Today I received the EnviroTrac 4/25/16 Quarterly Update Report. On 12/9/15, 1/28/16 and on 2/1/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 2/11/16 MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged. MW-2 to 6, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were sampled on 2/11/16. Product was not measured in any of the wells. Groundwater was measured at 6.79' and 15.66' below grade and was determined to be flowing northerly. Total BTEX was 2968.1 ppb (856 ppb) at MW-2, non-detect at MW-3 to MW-6 and MW-8 and FW-7, 138.7 ppb (15 ppb benzene) at FW-8, 201.7 ppb (8 ppb benzene) at FW-9, 3.6 ppb at CW-8, 22.1 ppb (13.2 ppb benzene) at CW-9 and 450.3 ppb (12 ppb benzene) at SVE-1. 7/26/16 - Raphael Ketani. Today I received the EnviroTrac July 2016 Quarterly Update Report dated 7/26/16 for the period March to May 2016. On 3/1/16, 4/20/16 and on 5/6/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 5/13/16 MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 5/13/16. Product was not measured in any of the wells. Groundwater was measured at 8.76' and 16.03' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 929.9 ppb (254 ppb) at MW-2, non-detect at MW-3 to MW-8, 143.8 ppb (non-detect benzene) at FW-7, non-detect at CW-8 and at CW-9, 427 ppb (62.9 ppb benzene) at SVE-1 and non-detect at SVE-7. 10/24/16 - Raphael Ketani. I reviewed the EnviroTrac August 2016 Quarterly Update Report dated 10/24/16 for the period June to August 2016. On 6/8/16, 7/13/16 and on 8/9/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 8/10/16 MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 8, FW-7 to FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 8/10/16. Product was not measured in any of the

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

wells. Groundwater was measured at 9.09' and 15.67' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1 and MW-4 to MW-8. MW-2 was 568.5 ppb (247 ppb benzene). FW-7 had 469.5 ppb (20.2 ppb benzene). FW-8 had 180.8 ppb (19.9 ppb benzene). FW-9 had 231.2 ppb (23 ppb benzene). CW-8 had 4.4 ppb. CW-9 had 2.3 ppb. SVE-1 had 373.8 ppb (15.9 ppb benzene). SVE-7 had 4.2 ppb BTEX. 12/19/16 - Raphael Ketani. Today I received an email as a c-c from Ryan Piper, Engineering Geologist I at DEC Region 2, concerning a new spill (#1608842)at the site. The spill concerned oil contaminated surface water flowing off of the site and onto the street in front due to a clogged drain at the northern end of the property. There was an odor complaint as a result. I sent an email to Mr. Fleming, the representative of Speedway, stating that they faced possible fines and legal action for violating the SPDES regulation, 6 NYCRR Part 750.1.3. I also stated that the subject northern drain must be cleaned out immediately and that Speedway must check the drains at its other stations and make sure they can receive precipitation. Mr. Ryan's original email to Mr. Fleming is as below: A neighbor complained about a diesel spill/ condition at the station that is affecting the surrounding neighborhood. I performed a site visit on Sunday Dec 18th in which I observed the condition. Apparently, there are a number of storm drains on the premises, particularly the drain on the north side of the property, that are clogged with sediment causing large puddles to run off into and down the street to a NYCDEP storm drain. Combined with poor housekeeping and minor spilling at the Diesel pump island on the North side of the property, this is causing a nuisance odor and adverse condition down the road. Therefore I am directing you to take the appropriate action to address this issue as follows. Control of Storm Water Emanating from 204-222 4th Ave, Brooklyn, NY: As per 6 NYCRR Part 750.1.3, The following discharges into the waters of the State are hereby prohibited, and no SPDES or other permit shall be issued authorizing any such discharge: (d) any discharge from a point source, which is in conflict with a plan or amendment thereto approved pursuant to section 208(b) of the Act and 40 CFR part 35 (see section 750-1.24 of this Part), or any other discharge not permitted by this Part, ECL Article 17, other rules and regulations adopted or applicable

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

pursuant thereto or to the Act, or the provisions of an SPDES permit. During the site visit referenced above, evidence was observed of storm water flowing from 204-222 4th Ave, Brooklyn, NY to the street. As such the Department requires that the storm water from 204-222 4th Ave be directed to onsite drainage systems. Documentation of catch basin cleaning must be submitted to the Department no more than 1 month from the date of this email. Mr. Fleming responded back quickly by email stating that the problem will be immediately corrected. 1/19/17 - Raphael Ketani. Today I received an email from Mr. Russo [(631) 924-3001, EDR@EnviroTrac.com] regarding the plugged drains at the site (spill #1608842). The email had attachments consisting of a site plan showing the 6 catch basin locations, photos of the basins taken on 12/20/16 and photos of the basins taken on 1/17/17. Mr. Russo explained in his email that 3 of the catch basins were noted as not draining during EnviroTrac's 12/20/16 inspection. All of the catch basins were cleaned of debris and jetted for 70 feet by a Speedway contractor on 12/31/16. On 1/17/17, the site was inspected again. This time only CB-3 was not draining properly. Mr. Russo stated that this drain will be addressed again by Speedway's contractor. He stated that he will send the DEC an update regarding the re-establishment of drainage at CB-3. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17 for the period September to November 2016. On 9/2/16, 10/17/16 and on 11/8/16 VEFRing was conducted at SVE-1 and short term remediation events were conducted at SVE-6/AS-1. On 11/23/16 MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged. MW-1 to 6, MW-8, FW-7, FW-9, CW-8, CW-9, SVE-1 and SVE-7 were sampled on 11/23/16. Product was not measured in any of the wells. Groundwater was measured at 7.55' and 15.55' below grade and was determined to be flowing northerly. Total BTEX was non-detect at MW-1, 3 to 6, 8 and SVE-7. The samples for FW-9, CW-8, CW-9 and SVE-1 had 1 to 3 low hits. MW-2 was 1091.1 ppb (487 ppb benzene). FW-7 had 899.6 ppb (45.6 ppb benzene). 4/28/17 - Raphael Ketani. Today I received an email from Mr. Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732) 738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017 Quarterly Update Report dated 4/28/17 for the period December to

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

February 2017. On 12/7/16, 1/11/17 and on 2/2/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 2/7/17, MW-1 to 6, MW-8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not measured in any of the wells. Groundwater was measured at 7.57' and 15.48' below grade and was determined to be flowing northerly. BTEX was non-detect at MW-3 to 6, 8 and CW-9. The samples for MW-1, FW-7 to FW-9, CW-8 and SVE-7 had 1 to 4 low hits. MW-2 was 3876.1 ppb (991 ppb benzene). SVE-1 was 1329.4 ppb (38.3 ppb benzene). The PID effluent concentration a SVE-6/AS-1 was 665.3 ppm, 405.6 ppm and 290.8 ppm on 12/7/16, 1/11/17 and 2/2/17, respectively. I approved the report with a comment to Mr. Rennie asking him to explain the extremely high benzene concentration in the groundwater at MW-2.
8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17 for the period March to May 2017. On 3/7/17, 4/7/17 and on 5/3/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 5/30/17, MW-1 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.00' to 18.42' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2699.1 ppb (563 ppb benzene). MW-7 was 110.6 ppb (90 ppb benzene). FW-7 was 252.5 ppb (non-detect for benzene). FW-9 was 81.1 ppb (30.8 ppb benzene). SVE-1 was 5475.7 ppb (48.7 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 324.1 ppm and 175.5 ppm on 3/7/17 and 4/7/17, respectively. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August 2017. On 6/14/17, 7/12/17 and on 8/15/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 8/23/17, MW-1 to 3, 5 to 8, FW-7 to 9, CW-8, CW-9, SVE-1 and SVE-7 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.44' to 15.08' below grade and was determined to be flowing northerly. BTEX was non-detect or low at MW-1, 3 to 6, 8, FW-8, CW-8, CW-9 and SVE-7. MW-2 was 2269.9 ppb (481 ppb benzene). MW-7 was 129.5 ppb (115 ppb benzene). FW-7 was 122 ppb (non-detect for benzene). FW-9 was 126.3

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

ppb (48 ppb benzene). SVE-1 was 1558.1 ppb (83.1 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 95.3 ppm, 165.4 ppm and 131.2 ppm on 6/14/17, 7/12/17 and 8/15/17, respectively. EnviroTrac requested permission to abandon upgradient and side-gradient wells MW-1, 4, 5, 6, and SVE-7 based upon historical and current analytical data results. I reviewed the data for these wells and determined that their abandonment would not impact the monitoring of the site. 1/31/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Quarterly Update Report dated 1/31/18 for the period September to November 2017. On 9/14/17, 10/30/17 and on 11/6/17 VEFRing was conducted at SVE-1 and short term remediation events (STREs) were conducted at SVE-6/AS-1. On 11/21/17, MW-2, 3, 8, FW-7 to 9, CW-8, CW-9 and SVE-1 were gauged and sampled. Product was not detected in any of the wells. Groundwater was measured at 8.25' to 15.64' below grade and was determined to be flowing northerly. Wells MW-1, 4 to 6 and SVE-7 were abandoned on 11/6/17. BTEX was non-detect or low at MW-3, 8, FW-7 to 9, CW-8 and CW-9. MW-2 was 3550.6 ppb (791 ppb benzene). MW-7 was not sampled. SVE-1 was 1126.5 ppb (69.5 ppb benzene). The PID effluent concentration at SVE-6/AS-1 was 408.1 ppm, 77.7 ppm and 360.9 ppm on 9/14/17, 10/30/17 and 11/6/17, respectively. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/29/2018: Reviewed the report. It states that the spill case was reported when petroleum-impacted soil were encountered during underground storage tank (UST) upgrade activities in August 1996. This report covers monitoring period from December 2017 to February 2018. On December 11, 2017, January 16, and February 1, 2018 - EnviroTrac conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. On February 6, 2018 - the consultant gauged ten (10) and sampled eight (8) monitoring wells. On April 12, 2018 EnviroTrac sampled three (3) monitoring wells. Wells Gauged: MW-2, 3, 7, 8; FW-7, 8, 9; CW-8, 9, and SVE-1 Wells Containing LPH (feet):

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

None Groundwater Depth: 7.68 feet- 18.58 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 355 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 30.6 ug/L (MW-2) BTEX: highest concentrations are in well MW-2 (900ppb) EnviroTrac will continue quarterly groundwater sampling, with the next sampling event scheduled for May 2018. An Update Report summarizing these activities will be submitted to NYSDEC in July 2018. Monthly EFR and STRE events to continue. AD 07/18/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/26/2018: Reviewed the report. This report covers monitoring period from March 2018 May 2018. On March 5, April 11, and May 3, 2018 - the consultant conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - April 12, 2018 four (4) wells were gauged and three (3) monitoring wells were sampled. - May 8, 2018 nine (9) wells were gauged and eight (8) monitoring wells were sampled. Wells Gauged: MW-2, 3, 8; FW-7, 8, 9; CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 8.32 feet - 15.32 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 620 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 56.7 ug/L (MW-2) BTEX concentrations ranged in the site wells from ND in MW-3, MW-8, CW-9 to 2,600ppb in the most contaminated site well MW-2. Current Plans/Proposals: Continue quarterly groundwater sampling, with the next sampling event scheduled for August 2018. An Update Report summarizing these activities will be submitted to NYSDEC in October 2018. Continue monthly EFR and STRE events. AD 10/29/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/23/2018:

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

Reviewed the report for the monitoring period: June 2018 August 2018. Work Performed: - June 13, July 24, & August 7, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - August 30, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1. Wells Containing LPH (feet): None. Groundwater Depth: 8.19 feet - 15.02 feet. Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 802 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 44.1 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,440.2 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for November 2018. An Update Report summarizing these activities will be submitted to NYSDEC in January 2019. Continue monthly EFR and STRE events. AD 01/29/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) - edr@envirotrac.com Will review. AD 02/15/2019: Reviewed the report. It states that for the monitoring period: September 2018 November 2018, the following work was performed at the site: - September 4 & November 6, 2018 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short term remediation events (STREs) on SVE-6/AS-1. - October 11, 2018 Conducted EFR on monitoring well SVE-1. - November 12, 2018 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.11 feet - 15.23 feet. Groundwater Flow: Northerly. Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1. Maximum Benzene Concentration: 640 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 33.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 2,656.8 ug/L Recommendations: the consultant will continue quarterly groundwater sampling, with the next sampling event scheduled for February 2019. An Update Report summarizing these activities will be submitted to NYSDEC in April 2019. EnviroTrac will continue monthly

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

EFR and STRE events. AD 04/18/2019: Received the following e-mail from Mr. Rennie: Please find attached the most recent Update Report for the above referenced location. Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 05/01/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019 the following work was performed at the site: - December 4, 2018 and January 16 & February 7, 2019 - Conducted enhanced fluid recovery (EFR) events on monitoring well SVE-1 and short-term remediation events (STREs) on SVE-6/AS-1. - February 26, 2019 Gauged and sampled ten (10) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1. Wells Containing LPH (feet): None Groundwater Depth: 6.71 feet 15.62 feet. Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 694 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.6 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 4,116.0 ug/L Recommendations: Continue quarterly groundwater sampling, with the next sampling event scheduled for May 2019. An Update Report summarizing these activities will be submitted to NYSDEC in July 2019. Continue monthly EFR and STRE events. AD 05/07/2019: I had an internal meeting with DEC BCP regarding this site, and was informed that they received an application for this spill case to enter into BCP. If their application will be approved, this spill case will be transferred to BCP section. AD 07/31/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager phone: 631.924.3001 - email: joer@envirotrac.com EnviroTrac Ltd., 5 Old Dock Road Yaphank, NY 11980 Will review, AD 08/02/2019: Reviewed the report. It states that for the monitoring period: March May 2019, the following work was performed: at the site: - March 29, April 5, & May 2, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - May 15, 2019 Gauged and sampled ten (10) monitoring wells. GW monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.67 feet 15.24 feet Groundwater Flow: Northerly Wells Sampled: MW-2,

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 719 micrograms per liter (ug/L) (MW-2) Maximum MTBE Concentration: 37.4 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 3,439.5 ug/L Recommendations: This site will potentially be approved into the New York State Brownfields Program. Until the site is approved into this program, Speedway will continue quarterly groundwater sampling, with the next sampling event scheduled for August 2019. An Update Report summarizing these activities will be submitted to NYSDEC in October 2019. Continue monthly EFR and STRE events. AD 08/23/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 09/19/2019: Reviewed the report. It states that the site is now active gas station. The spill was reported when petroleum-impacted soils were encountered during UST upgrade activities in August 1996. Site Remediation Activities: - June and September 2004 BioSolve injection events were completed in select on-site wells. - October 2008 Monthly Enhanced Fluid Recovery (EFR) events commenced on select wells. - December 2014 Monthly Soil Vapor Extraction (SVE)/Air Sparge (AS) Short-Term Remediation Events (STREs) events commenced on select wells. For the reported monitoring Ppriod: June - August 2019, the following work was performed at the site: - June 6, July 10, & August 1, 2019 - Conducted EFR events on monitoring well SVE-1 and STREs on SVE-6/AS-1. - August 12, 2019 Gauged ten (10) and sampled nine (9) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-2, 3, 7, 8, FW-7, 8, 9, CW-8, 9, and SVE-1 Wells Containing LPH (feet): None Groundwater Depth: 7.48 feet 15.33 feet Groundwater Flow: Northerly Wells Sampled: MW-2, 3, 7, 8; FW-7, 9; CW-8, 9, and SVE-1 Maximum Benzene Concentration: 489 ug/L (MW-2) Maximum MTBE Concentration: 28.8 ug/L (MW-2) Total VOCs Range: Non-detect (ND) 3,901.3 ug/L (MW-2) GW data: Well 08/2018 08/2019 (TVOCs in ppb) MW-2 4440 3900 MW-3 26 ND MW-7 37 19 MW-8 ND ND FW-7 468 52 FW-8 75 NS FW-9 139 1020 CW-8 69 148 CW-9 116 ND SVE-1 4035 863 Recommendations: This site will potentially be approved into the New York State Brownfields Program for a redevelopment project. Speedway is scheduled to complete divestment/UST system removal

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

activities in September 2019. UST system closure reporting and future monitoring/reporting related to this site, if needed, will be conducted by the new property owner (assuming the site is approved into the Brownfields Program). AD 04/21/2020: Received the following email from Mr. Morley of PWG: ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails. Ainura, Please find attached the 1st Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan -- Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/12/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC was retained to continue groundwater monitoring at the site. A Supplemental Remedial Investigation (SRI) was performed as part of the sites enrolment into the New York State Department of Environmental Conservation s (NYSDEC s) Brownfield Cleanup Program (BCP) which included groundwater sampling. The groundwater sampling performed during the SRI substituted for the fourth quarter 2019 monitoring event. The subject property is a former retail gasoline fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th avenue to the east, and Union Street to the south. The property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. In October 2019, four (4) 4,000-gallon gasoline USTs, one (1) 4,000-gallon diesel UST, and one (1) 550-gallon wastewater UST were closed and removed from the property. An abandoned 2,000-gallon fuel oil UST near the storage building at the northwest corner of the Site was partially exposed, however the UST was not removed due to nearby utilities and potential for undermining the sidewalk and onsite storage building. Upon completing UST removal, associated product and vent lines were exposed and removed. During the October 2019 UST removal activities, monitoring well MW-3, which was located near the storage building, was destroyed. During the November 2019 SRI, GW018 was installed on the northwest corner of the site. Based on information documented in previous monitoring events, regional

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

groundwater flow is towards the north. GW sampling: PWGC mobilized to the site on Monday, March 9, 2020 to perform quarterly groundwater monitoring activities. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from 7 wells: CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. Monitoring wells FW-8 and FW-9 were dry and were not sampled. Analytical results for samples collected at CW-8, MW-8, GW018, FW-7, MW-2, MW-7 and CW-9 were compared to AWQS. MBTE was detected in MW-2, GW018, FW-7, MW-7, and CW-9 and BTEX was detected in MW-2, CW-8, FW-7, and MW-7. The highest concentration of MBTE was detected in CW-9 (11.0 ug/L). The lowest detectable concentration of MBTE was in GW018 (1.9 ug/L). The highest concentration of BTEX was detected in MW-2 (117.47 ug/L). The lowest detectable concentration of BTEX was in MW-7 (0.16 ug/L). Additionally, the highest concentrations of isopropylbenzene were detected at MW-2, FW-7, and CW-8. Based on these results, the highest degree of impact appears to be located adjacent to the former UST locations located in the central and western portions of the property. Generally, these concentrations were similar to previous sampling events. GW data: Well 08/2018 08/2019 03/2020 (TVOCs in ppb) MW-2 4440 3900 248 MW-3 26 ND destr MW-7 37 19 ND MW-8 ND ND ND FW-7 468 52 49.5 FW-8 75 NS NS dry FW-9 139 1020 NS dry CW-8 69 148 67 CW-9 116 ND 11 SVE-1 4035 863 NS GW018 ND Removal of the sourse of contamination significantly decreased TVOCs in the most contaminated site well MW-2 from 3900 ppb in August 2019 to 248 ppb in march of 2020. The consultanr states that based on analytical data, it appears that the highest levels of residual impact are located adjacent to the former UST areas located in the central and western portions of the site. Analytical results were generally consistent with previous monitoring events performed by Envirotrac. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for May 2020. AD 08/21/2020: Received the following email from Mr. Morley: Ainura, Please find attached the 2nd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 09/23/2020: Reviewed the 2nd quarter 2020 report. It states that PWGC mobilized to the site on Thursday, June 18, 2020 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: " Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List. Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from MW-8, GW018, MW07, and CW-9 yielded concentrations of VOCs less than AWQS. MBTE was detected in CW-8, GW018, MW-2 and MW-7, with the concentrations of each under the AWQS of 10 ug/L. The highest concentration of MBTE was detected in MW-7 (9.6 ug/L). The lowest detectable concentration of MBTE was in CW-8 (0.75 ug/L). Detectable concentrations of MBTE were less than AWQS at each sampling location. Benzene was detected at concentrations greater than AWQS at monitoring wells MW-2 and CW-8 with the highest concentration, 35 ug/L, detected at MW-2. Ethylbenzene was detected at a concentration grater than AWQS at MW-2 with a concentration of 11 ug/L. The highest BTEX (benzene, toluene, ethylbenzene, and xylene) was detected in MW-2 (46 ug/L). Additionally, isopropylbenzene and n-propylbenzene was detected above AWQS in samples from MW-2 and CW-8 (11 ug/L and 13 ug/L : 20 ug/L and 15 ug/L, respectively). 1,2,4-trimethylbenzene was detected at a concentration of 77 ug/l at MW-2. 1,2,4-trimethylbenzene, isopropylbenzene, and n-propylbenzene are common compounds associated with petroleum impact. Based on these results, the highest degree of impact appears to be located adjacent to the former UST locations located in the central and western portions of the property. Generally, these concentrations were similar to previous sampling events. At this time, PWGC offers the following recommendations for the site: " Continue quarterly groundwater sampling at CW-8, MW-8,

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for September 2020. AD 11/10/2020: Received the following email from Mr. Morley: Ainura, Please find attached the 3rd Quarter 2020 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 12/11/2020: Reviewed the report. It states that The property ownership changed in November 2019 and PWGC was retained to continue groundwater monitoring at the site. The subject property is a former retail gasoline fueling station, fueling operations ceased in October 2019. The lot measures approximately 19,000 square-feet and is bounded by Sackett Street to the north, commercial properties to the west, 4th avenue to the east, and Union Street to the south. The property is improved with a 360-square foot at-grade storage building, and a cashier s kiosk. PWGC mobilized to the site on Wednesday, September 23, 2020 to perform quarterly groundwater monitoring activities. Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring wells FW-7, FW-8 and FW-9 were observed to be dry at the time of field activities and could not be sampled. Total BTEX was detected in MW-2 at a concentration of 1,015 ug/L. Minimal concentrations or non-detectable concentrations of total were observed in the remaining monitoring wells. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2020. 04/22/2021: Received the following email from Mr. Morley: Ainura, Please find attached the first quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f. 631.589.8705 Will review. AD 05/26/2021: Reviewed the report. It states that PWGC mobilized to the site on Wednesday, March 17, 2021 to perform quarterly groundwater monitoring activities.

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: " Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to AWQS. Samples collected from wells MW-8, GW018, and CW-9 indicated VOCs less than AWQS. MBTE was detected in MW-2 at 11 ug/L, which is slightly more than the AWQS of 10 ug/L. Sample results from the five other wells yielded concentrations of MBTE that were below AWQS or below the laboratory detection limit. Benzene was detected in the sample collected from MW-7 at 6.9 ug/L. Sample results from the five other wells for benzene were below AWQS or below the laboratory detection limit. Concentrations of total BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six monitoring wells. Additionally, isopropylbenzene was detected at a concentration greater than AWQS in the sample collected from CW-8 with a result of 5.3 ug/L. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were significantly lower than concentrations reported during previous sampling events. Recommendations: At this time, PWGC offers the following recommendations for the site: - Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for June 2021. AD 11/05/2021: Received the following email from Mr. Morley: Ainura, Please find attached the third quarter 2021 spill monitoring report for 204 4th Ave in Brooklyn for your review. Please let me know if you have any questions or concerns. -Ryan Ryan Morley, PG - Project Manager 630 Johnson Ave, Suite 7 Bohemia, NY 11716 w. 631.589.6353 f.

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

631.589.8705 Will review. AD 12/02/2021: Reviewed the 3rd quarter 2021 report. It states that PWGC mobilized to the site on Monday September 13, 2021 to perform quarterly groundwater monitoring activities. Groundwater monitoring consisted of measuring depth to water and total well depth measurements for the nine monitoring wells at the site. Water levels were collected using a Solinst Oil / Water Interface Probe. Groundwater analytical results were compared to the NYSDEC Ambient Groundwater Quality Standards (AWQS). Samples were collected from CW-8, MW-8, GW018, MW-2, MW-7, and CW-9. Monitoring well FW-7 was observed to be dry at the time of field activities and could not be sampled. The samples were analyzed for the presence of: " Volatile Organic Compounds (VOCs) by USEPA method 8260 NYSDEC CP-51 List Monitoring Well Sampling Results: Analytical results for samples collected at CW-8, MW-8, GW018, MW-2, MW-7, and CW-9 were compared to NYSDEC s AWQS. Samples collected from wells MW-2, MW-8, and GW018 indicated VOCs less than AWQS. MBTE was detected below the AWQS of 10 ug/L in all six samples. Benzene was detected in the samples collected from MW-7, CW-8, and CW-9 at concentrations of 22 ug/L, 12 ug/L, and 5.7 ug/L, respectively, which are greater than the AWQS of 1 ug/L. Sample results from the three other wells yielded concentrations of benzene below the laboratory detection limit. Concentrations of BTEX comprised of solely the detections of Benzene, as the other three compounds were not detected at any of the six wells. Isopropylbenzene was detected in the samples collected from MW-7, CW-8, and CW-9 at of 95 ug/L, 110 ug/L and 6.2/L, respectively, which are greater than the AWQS of 5 ug/L. N-proplybenzene was detected in MW-7 and CW-8 at 150 ug/L and 140 ug/L, respectively, which are greater than the AWQS of 10 ug/L. Sec-butylbenzene was detected in MW-7 and CW-8 at 23 ug/L and 9.5 ug/L, respectively, which are greater than the AWQS of 5 ug/L. Napthalene was detected in the sample collected from CW-8 at a concentration of 12 ug/L which is greater than the AWQS of 5 ug/L. N-butylbenzene was detected in the sample collected from CW-8 at 6.2 ug/L which is greater than the AWQS of 5 ug/L. VOs levels have increased when compared to last quarter s sampling event but overall show decreasing concentrations when compared to previous sampling events. Hydrographs have been developed for each of the seven monitoring wells illustrating the trends in

HESS STATION 32530, 204-222 4TH AVENUE, BROOKLYN, NY (Continued)

BTEX and MBTE concentrations over time compared to groundwater elevations dating back to May 2016. Based on these results, remaining petroleum impact in groundwater above AWQS appears to be located adjacent to the former UST locations located in the central and western portions of the property. Analytical results were generally consistent with previous monitoring events in terms of which locations exhibited the highest degree of impact, however the concentrations of VOCs were generally lower than concentrations reported during previous sampling events. At this time, PWGC offers the following recommendations for the site: " Continue quarterly groundwater sampling at CW-8, MW-8, GW018, FW-7, MW-2, MW-7, and CW-9. The next sampling event is scheduled for December 2021. Given that BTEX ranges in the site well s from ND to 27 ppb in well MW-7, his site is a good candidate for a case closure in the future. AD 12/8/21 - Spill transferred to Steven Wu for tracking under BCP site no. C224295. JHO"

Remarks: "removal of under ground tanks-poss soil contamination"

USER QUESTIONNAIRE FOR PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER'S RESPONSIBILITIES

To:	**From:** Evan Greenberg
Company:	**Fax:** 718-784-4085 **Phone:** 718-784-7490
Fax: **Phone:**	**Email:** Egreenberg@athenica.com
Email:	**Date:** June 3, 2022
Site Name: 601 Union Street	**Pages:** 3

Site Address: 601-621 Union Street, Brooklyn, NY 11215

As the person or entity seeking to use this report (the "User"), in order to qualify for any of the federal liability defenses available under the Comprehensive Environmental Response Compensation, and Liability Act ("CERCLA"), and as part as the ASTM E1527-05 standard, please complete this questionnaire and, if available, provide the indicated documentation.

1. **Environmental Cleanup Liens or Activity and Use Limitations**

Have you searched for the existence of environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state or local law? ☐ Yes ☐ No

Have you searched for and/or are you aware for any Activity and Use Limitations (AULs) that are in place or that have been filed or recorded in a registry? This may include engineering controls, land use restrictions, or institutional controls that are in place for the subject property. ☐ Yes ☐ No

If yes, please provide either a copy the results or their summary on a separate page.

If you have not done a title record search, do you want the Consultant to perform the search for an additional fee? If yes, please initial _____. Consultant will contact you with the applicable fee. ☐ Yes ☐ No

2. **Specialized Knowledge**

Do you have any specialized knowledge of the subject property, the conditions of adjoining properties, and any other experience relevant to the inquiry for purposes of identifying conditions indicative of releases or threatened releases at the subject property? ☐ Yes ☐ No

If yes, please provide the information summary on a separate page.

3. **Relationship of Purchase Price to Fair Market Value**

Do you believe that the purchase price reflects any contamination on the site? ☐ Yes ☐ No

If yes, on a separate page please document the information you considered, whether there is a difference in price, and if so, whether the difference in price is due to the presence of releases or threatened releases on the subject property.

4. **Commonly Known or Reasonably Ascertainable Information**

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? ☐ Yes ☐ No

If yes, please include which of the following information:

(a.) Do you know the past uses of the property? ☐ Yes ☐ No

(b.) Do you know of specific chemicals that are present or once were present at the property? ☐ Yes ☐ No

(c.) Do you know of spills or other chemical releases that have taken place at the property? ☐ Yes ☐ No

(d.) Do you know of any environmental cleanups that have taken place at the property? ☐ Yes ☐ No

If yes to any of the above, please describe this commonly known or reasonably ascertainable information on a separate page.

5. **Degree of Obviousness and Ability to Detect Contamination**

In gathering information for this Environmental Site Assessment, have you encountered any obvious signs or evidence of contamination at the property? ☐ Yes ☐ No

If yes, on a separate page, describe what information you took into account regarding the degree of obviousness and ability to detect contamination.

6. **Helpful Documents**

Are you aware of any documents that may be helpful in the review and analysis of environmental conditions at the subject property (partial information may be provided); such as:

Environmental Site Assessment (Phase I or Phase II) reports; ☐ Yes ☐ No

Environmental compliance audit reports; ☐ Yes ☐ No

Environmental permits (i.e., NPDES permits, hazardous waste disposal permits, wastewater permits, etc.); ☐ Yes ☐ No

Registrations for underground and/or above-ground storage tanks;	☐ Yes ☐ No
Material Safety Data Sheets for materials stored/used at the site;	☐ Yes ☐ No
Health and Safety Plans, Preparedness and Prevention Plans, or Spill Prevention Plans;	☐ Yes ☐ No
Correspondence from any government agency relating to past or current violations of environmental laws with respect to the subject property;	☐ Yes ☐ No

If yes to any of the above, please provide either a copy of these documents or their summary on a separate page.

HydroTech Job No. 220058

Phase II Environmental Site Assessment Report

601-607 Union Street
Brooklyn, NY

October 19, 2022

HydroTech Environmental Engineering and Geology, DPC appreciates the opportunity to work for the Avdoo & Partners Development at the property located at 601-607 Union Street in Brooklyn, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, HydroTech personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. Part 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,

HydroTech Environmental Engineering and Geology, DPC

1.0 EXECUTIVE SUMMARY

HydroTech Environmental Engineering and Geology, DPC (HydroTech) has performed a Phase II Environmental Site Assessment (Phase II ESA) at the property located at 601-607 Union Street (Block 434, Lots 1 and 12), in the Gowanus section of Brooklyn, New York. This Phase II ESA was conducted on behalf of Avdoo & Partners Development based upon the recent July 2022 Phase I ESA findings prepared by Athenica Environmental Services, Inc. (Athenica).

This Phase II ESA consisted of Ground-Penetrating Radar (GPR) survey, the installing and sampling of series of soil, groundwater and soil vapor/sub-slab probes. A Hydro Tech geologist screened all soil samples in the field for organic vapors utilizing a Photoionization Detector. Selected soil and groundwater samples were analyzed at a State-certified laboratory for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PCBs. Part of the soil samples and all the groundwater samples were also analyzed for PFAs and 1,4-Dioxane. Soil vapor and sub-slab vapor samples were analyzed for VOCs.

The results of the Phase II ESA are contained in this report.

- No visual evidence of any petroleum free product or the sheen was identified beneath the property.
- Petroleum related VOCs were found most abundant in deep soil between 8-12 feet from the vicinity of the oil/water separator in the mid-northern portion of the building, which might be indicative of impact of leakage from the associated sub-grade equipment. No notable levels of chlorinated VOCs were observed in the soil.
- Petroleum-range and chlorinated VOCs were detected in groundwater marginally exceeding their respective regulatory standards but none of the exceedances should be indicative of spills or significant impact from historic and/or current use of the Site for auto repair.
- Groundwater is present between 12.3 feet to 13.75 feet underneath the property. Groundwater flow direction was not determined in this investigation but is assumed to be west-southwest towards the Gowanus Canal based upon the investigation performed in the western adjacent Site across Third Avenue.
- Several SVOCs including PAHs and metals were detected in shallow and deep soil at concentrations exceeding Unrestricted Use Soil Cleanup Objectives. Part of the detected PAHs and metals including arsenic, barium, lead, zinc and mercury also exceeded their respective Restricted Use Soil Cleanup Objectives for Restricted Residential and Commercial. The presence of the PAHs and the metals is likely attributed to the presence of urban fill material beneath the Site, which is consistent with the soil screening results and its historic and current use. The presence of the SVOCs and metals is not indicative of any adverse impact.

- One emerging contaminant, PFOA, was in soil beneath the southern portion of the Site at a concentration exceeding its NYSDEC Guidance Value for Unrestricted Use.
- SVOCs and dissolved metals were identified in the groundwater beneath the Site, which are likely attributed to regional groundwater quality or associated with the urban fill.
- Emerging contaminants including 1,4-dioxane PFOS and PFOA were identified in groundwater beneath the Site at concentrations exceeding their respective NYSDEC Guidance Value.
- No significant concentrations of petroleum-range VOCs were identified in soil vapor or sub slab vapor. Chlorinated solvents such as PCE and TCE were identified in soil vapor and sub slab vapor at concentrations requiring mitigation as per the NYSDOH Decision Matrix. Considering their absence and/or presence only at trace levels in the soils, the soil vapor impact from chlorinated-range VOCs is likely attributed to an off-site source.

No effort has been made to perform any investigation beyond what is included in this report. The observations included herein summarize the results of the environmental activities up to the date of the fieldwork and the date of this report.

The following sections provide the details and specific information pertaining to the various components of the Phase II ESA.

2.0 INTRODUCTION & SCOPE OF WORK

2.1 Introduction

HydroTech Environmental Engineering and Geology, DPC has been retained by Avdoo & Partners Development (the "Client") to perform a Phase II Environmental Site Assessment (Phase II ESA) of the property located to 601-607 Union Street in the Gowanus section of Brooklyn, New York. This property will hereafter be referred to as the "Site".

2.2 Site Description

The Subject Property is identified as NY Tax Block 434; Lot 1 and 12 and located at 601-607 Union Street, Brooklyn, NY with a total area of 37,553 square feet (SF). Specifically, Lot 1 is 21,055 SF in area and is currently fully developed with a 1-story building with a partial cellar (appr. 500 SF) in the northeast portion. The cellar is approximately 9 feet below grade.

The building is operated as warehouse/office for a petroleum trucking and management company, including on-Site truck repair and maintenance. A mezzanine level is also maintained in the northeastern portion and utilized as office space. The slab-on-grade portion of the building is fully covered with concrete slab. An oil/water separator is in the north central portion of the building and is in line with the sewer connection. A 6-foot by 6-foot steel cover is located atop the separator. The interior of the separator was unable to be accessed. A steel vent pipe is located through the roof along the northern wall of the building, and is likely associated with the separator.

The partial cellar is mostly covered with concrete slab with a small area excluded, which was exposed due to historic tank removal or other limited soil intrusive work as per the client. One 3,000-gallon aboveground storage tank (AST) enclosed in concrete and one 550-gallon #2 AST with no enclosure were observed in the northwestern corner of the cellar. Both tanks are filled with #2 fuel oil. Light stains were observed in the concrete floor in the direct vicinity of the tank. The previous Phase I by Athenica in July 2022 indicated that there was another 550-gallon AST observed in the cellar, which was removed prior to this investigation. In addition, the previous Phase I indicated there were four 275-gallon AST for waste oil were observed on the first floor of the building (three in the northern portion and one in the central portion). None of these small-capacity tanks were observed during this investigation.

Lot 12 is utilized as open parking and storage yard with an asphalt cover.

Access to the building is located along Sackett Street to the north, Third Avenue to the west and Union Street to the south. Access to the parking lot is located along Sackett Street to the north and Union Street to the south.

The vicinity of the Site consists of industrial/manufacturing/residential properties. The topography of the area in the vicinity of the Site slightly slopes downward to the west, towards the Gowanus Canal. **Figure 1** provides a Site Plan.

2.3 Geology & Hydrology

The Site is located in eastern side of Third Avenue between Sackett Street and Union Street, New York. The elevation of the Subject Property is approximately 18 feet above mean sea level (USGS 7.5- Brooklyn, New York Quadrangle, 2013).

Brooklyn, New York is located in the western portion of Long Island. Long Island consists of a wedge-shaped mass of unconsolidated deposits that overlie ancient basement rock.

The thickness of these deposits ranges from approximately 100 feet on the Island's north shore to approximately 2,000 feet in some portions of the south shore. These deposits contain ground water that is the sole source of drinking water for the Island's over 3.1 million residents.

The major landforms of Long Island of importance to the hydrologic system are the moraines and outwash plains, which originated from glacial activity. The moraines represent the farthest extent of the glacial advances. The moraines consist of till, which is a poorly sorted mixture of sand, silt, clay, gravel and boulders. The till is poor to moderately permeable in most areas. Outwash plains are located to the south of the moraines. The outwash plains were formed by the action of glacial melt water streams, which eroded the headland material of the moraines and laid down deposits of well-sorted sands, silts and gravels. These outwash deposits have a moderate to high permeability.

The **Upper Glacial Aquifer** is the uppermost hydrogeologic unit. This aquifer encompasses the moraine and outwash deposits, in addition to some localized lacustrine, marine and reworked materials. A relatively high horizontal hydraulic conductivity and a low vertical hydraulic conductivity characterize the outwash plain portion of this unit. Since the water table is situated in the Upper Glacial Aquifer.

The **Magothy Formation** directly underlies the Upper Glacial Aquifer in the vicinity of the site. This formation is a Cretaceous coastal-shelf deposit, which consists principally of layers of sand and gravel with some interbedded clay. This formation ranges from moderate to highly permeable. A clay layer in some parts of Long Island confines the uppermost portion of the aquifer. The Magothy is Long Island's principal aquifer for public water supply. The United States Environmental Protection Agency (USEPA) has classified the Long Island aquifer system as a sole source aquifer.

The **Raritan Formation** is the deepest unit and rests directly above the bedrock units. This formation is comprised of a sand member (**Lloyd Aquifer**) and a clay member (**Raritan Clay**). The Lloyd sand extends southward from Flushing Bay to the Atlantic Ocean. The thickness of the sand member ranges in depth from 200 to 800 feet below sea level and increases in thickness to the southeast. The clay member acts as an aquitard confining the lower Lloyd aquifer between the clay and the underlying bedrock.

According to the investigation, groundwater was encountered from 12.30 to 13.75 feet below ground surface (bgs). According to the investigation performed at 585 Union

Street (BCP Site #C224329) located on the west side of Third Avenue between Sackett Street and Union Street and less than 100 feet from the Subject Property, groundwater flow direction is toward the west-southwest, in the direction of Gowanus Canal.

2.4 Objective & Project Goals

The objective of this Phase II ESA was to address the Recognized Environmental Conditions (RECs) identified in the July 2022 Phase I ESA prepared by Athenica and specifically include the following:

- The historic and current use as industrial, manufacturing, auto repair and fuel oil storage/handling uses of the Site at the Subject Property;
- The historic and/or current industrial, automotive service, and gasoline station uses of the surrounding properties;
- Open spill #2009932 was reported on March 9, 2021, approximately 50 feet to the west at 585 Union Street. Investigation identified contamination in soil and groundwater;
- Open spill #9605719 was reported on August 2, 1996, approximately 315 feet to the east at 204-222 4th Avenue. Investigations identified contamination in soil vapor and groundwater; and
- The Potential Vapor Encroachment Condition (PVEC) from on-Site operations and off-Site properties with documented releases to soil vapor and groundwater.

The intent of this Phase II was to determine if the above RECs have impacted the environmental quality of the Site.

Appendix A provides the text portion of the Phase I ESA.

All related portions of the fieldwork were performed, at a minimum, in accordance with acceptable industry standards. These acceptable industry standards include, but are not limited to, the ASTM Standard Guide for Phase II Environmental Site Assessments (E 1903-11), the New York State Department of Environmental Conservation (NYSDEC) Bureau of Spill Prevention & Response Sampling Guidelines and Protocols, March 1991 and the DER-10 Technical Guidance for Site Investigation and Remediation, May 2010.

3.0 PHASE II ENVIRONMENTAL SITE ASSESSMENT

3.1 Introduction

The investigation was accomplished through the performance of the Ground-Penetrating Radar (GPR) survey, the installation and sampling of seventeen (17) soil probes, eight (8) temporary groundwater monitoring wells, two (2) soil vapor probes and six (6) sub-slab vapor probes. HydroTech performed the fieldwork on September 7 through 9, 2022 and the drilling was performed by Coastal Environmental Solutions, Inc.

Prior to the performance of the fieldwork, a New York City One-Call Public Utility mark-out was requested. Confirmation number 222410278 was issued to the mark-out.

Appendix B contains photographs of the fieldwork.

3.2 Fieldwork

Ground-Penetrating Radar (GPR) Survey

The GPR survey was performed to determine if any anomalies, including underground storage tanks (USTs), are present at the Site and to clear all sampling locations of any potential subsurface obstructions.

The GPR survey was performed utilizing a GSSI SIR-3000 Control Unit and a 400-megahertz shielded antenna. The GPR operator wheeled the antenna over the predetermined grid. The GPR takes one "scan" per set unit. The number of scans per unit is based upon the estimated sizes of targets. As each scan is performed, the antenna emits specific radar amplitude into the subsurface. The amplitude of the radar reflected back to the antenna is based upon the differences in the dielectric constants of the subsurface materials. The difference in amplitude obtained during each scan is graphically displayed on the Control Unit, which are then interpreted by the GPR operator at the time of the survey. Additional interpretations are then conducted in the office using computer software.

An oil/water separator is identified in the mid-portion of the building. No other anomalies indicative of USTs or any other subsurface structures were identified during the GPR survey. The survey also cleared all sampling locations of subsurface obstructions. A copy of the GPR report is included as **Appendix C**.

Soil Probes

The soil probes were designated as SP-1 through SP-17 were installed during the investigation. Prior **Figure 1** provide the location the of the soil probes. The soil probes were installed to the water table, which was generally encountered at 12 feet below grade and 3 feet below the cellar slab.

The soil probes were installed utilizing direct-push technology. Soil samples were collected at 2-foot intervals utilizing a five-foot long Macro core sampler fitted with dedicated acetate liners. Each sampler was installed with 1½-inch diameter drill rods.

A HydroTech geologist performed infield characterization and screening of each soil sample utilizing the Unified Soil Classification System and a Photo Ionization Detector (PID). The general soil type identified consists of a layer of black silty sand with pebbles and crushed concrete or asphalt pieces from surface down to 2-6 feet, and was then underlain by brown and black silty sand with or without rocks and pebbles.

An organic vapor reading of 428.1 parts per million (ppm) was detected in the 8 to 10 foot sample from SP-10 and 465.1 ppm was detected in the 10 to 12 foot sample from SP-11. No significant organic vapor readings were noted in the remaining soil samples. **Appendix D** provides soil probe logs.

Based upon the in-field screening results, one (1) soil sample was selected from each soil probe for confirmatory analysis. These samples include the 8-10 foot samples from SP-1, SP-2, SP-10, SP-16, the 10-12 foot samples from SP-3, SP-12, SP-13, the 4-6 foot samples from SP-4, SP-17, the 6-8 foot samples from SP-5, SP-14, SP-15, the 2-4 foot sample from SP-6, the zero to 2 foot sample from SP-7 and the 1-3 foot samples from SP-8 and SP-9.

Temporary Groundwater Monitoring Wells

Temporary groundwater monitoring wells MW-1 through MW-8 were installed during the investigation. Prior **Figure 1** provides the locations of the temporary groundwater monitoring wells.

All groundwater probes were installed utilizing direct-push technology. Temporary monitoring wells in the open yard (MW-1 through MW-3) and in the slab-on-grade (MW-6 through MW-8) consisted of a 15-foot screen with a slot size of 0.020 inches and solid riser varied between 5 to 6 feet long. Temporary monitoring well installed in the cellar level (MW-4 and MW-5) had a 5-foot screen. A copy of well construction logs is included in **Appendix E**.

Prior to collection of groundwater samples, depth to groundwater was measured with oil/water interface probe, which ranges between 12.30 to 13.75 feet bgs. No free product was noted in any temporary well. A table summarizing the measured depth to water is included as **Table 1**. A copy of the well monitoring log is included in **Appendix E**.

Groundwater samples were obtained utilizing an inertial pump consisting of a stainless-steel check valve and ball. The inertial pump was fitted with dedicated polyethylene tubing, which allowed the groundwater to be brought up to the ground surface for collection. Each groundwater sample was then placed into three (3) pre-cleaned bottleware including ambers, plastic bottles (with and without preservation) and vials (with preservation) and appropriately labeled.

Soil Vapor Probes

Two (2) soil-vapor probes designated as SV-1 and SV-2 were converted from SP-2 and SP-4 after the soil sampling. Six (6) sub-slab vapor probes, designated SSB-1 through SSB-6 were installed inside the building. Prior **Figure 1** provides the location of soil-vapor and sub-slab vapor probes. The soil vapor probes were installed utilizing direct-push technology. The sub-slab vapor probes were installed with hand drill.

The soil-vapor probes and sub-slab vapor probes were constructed in accordance with the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006). Each vapor probe consists of a stainless-steel screen or implant fitted with inert tubing (e.g., polyethylene) of ¼-inch diameter and of laboratory quality to the surface. The soil-vapor probes were installed in the subsurface soil at a depth of approximate 10 feet bgs. The sub-slab vapor probe was installed at a depth of 3 inches below the basement slab. Each soil-vapor and sub-slab vapor probe was then sealed above the sampling zone with bentonite slurry to prevent outdoor air infiltration. The soil-vapor and sub-slab vapor probes were finished at grade with a concrete seal.

A soil vapor sample from each soil and sub-slab vapor probes was collected utilizing a 6-liter pre-cleaned, passivated, evacuated whole air Summa® Canister. A 60-cm^3 plastic syringe was used to purge approximately 1 to 3 implant volumes (i.e. the volume of the sample probe and tube) prior to collecting the soil vapor samples. The sampling canister was then connected to a flow control valve set to collect the 6-L sample over a period of 2 hours at a rate of less than 0.05 liter per minute. **Appendix E** provides a copy of the soil-vapor sampling log.

In order to ensure the integrity of the borehole seal and to verify that ambient air is not inadvertently drawn into the sample, a tracer gas (Helium) was applied to enrich the atmosphere in the immediate vicinity of the sampling location. A portable monitoring device MGD-2002 Helium-Hydrogen Lead Detector; Model 83-219, was utilized to analyze a real time sample of soil vapor from the soil vapor sampling point for the tracer prior to purging and after sampling. Plastic sheeting was also used to keep the tracer gas in contact with the soil vapor point during the sampling. No Helium (<0.01 ug/m^3) was detected with the Helium-Hydrogen Lead Detector prior or after sampling.

3.3 Laboratory Analytical

All soil samples were transmitted under proper chain of custody procedures to a State-certified laboratory. The soil and groundwater samples were analyzed for volatile organic compounds (VOCs) in accordance with EPA 8260, semi-volatile compounds (SVOCs) in accordance with EPA 8270, Target Analyte List metals, Pesticides/PCBs in accordance with EPA 8081/8082. Four of the soil samples and all groundwater samples were also analyzed for PFAs via EPA 537 Isotope Dilution and for 1,4-Dioxane via EPA 8270 SIM. The vapor samples were analyzed for VOCs via EPA Method TO-15. Laboratory reports are provided as **Appendix G**.

4.0 ANALYTICAL RESULTS

4.1 Soil Results

Table 2 provides the analytical results for all soil samples. The tables also provide a comparison to the NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Soil Cleanup Objectives for Restricted Residential (RRSCOs) and for Commercial Use (RCSCOs) from 6 NYCRR Part 375 for the results of VOCs, SVOCs, Pesticides, PCBs and metals. The concentrations reported in **Table 2** for VOCs, SVOCs, Pesticides, PCBs, Metals and 1,4-dioxane are in milligrams per kilogram (mg/kg). The detected concentrations of 1,4-dioxane and PFAs were compared to NYSDEC Guidance Value for Unrestricted Use and Residential Use. The concentrations reported in **Table 2** for PFAs are in microgram per kilogram (ug/kg).

As **Table 2** indicates, total VOCs ranges from 0.014 mg/kg in SP-14 (6-8) to 104.33 mg/kg in SP-11 (10-12). Acetone was detected in SP-15 (6-8) at a concentration of 0.057 mg/kg exceeding its respective UUSCO but below RRSCO. Chlorinated VOCs including 1,4-dichlorobenzene (3.4 mg/kg) in SP-11 (10-12) and methylene chloride (max. 5.1 mg/kg) in SP-1 (8-10), SP-2 (8-10) and SP-6 (2-4) were detected at concentrations exceeding their respective UUSCOs but below RRSCOs. Petroleum VOC and its derivatives such as 1,2,4-trimethylbenzene (3.7 mg/kg), n-butylbenzene (25 mg/kg), n-propylbenzene (max. 29 mg/kg), sec-butylbenzene (22 mg/kg) and total xylene (1.1 mg/kg) in SP-10 (8-10) and SP-11 (10-12) were detected at concentrations exceeding their respective UUSCOs but below RRSCOs. No other VOCs were detected in any of the soil samples at concentrations exceeding UUSCOs.

Various SVOCs, categorized as Polycyclic Aromatic Hydrocarbons (PAHs) including acenaphthene (23.8 mg/kg), benzo(a)anthracene (max. 40.5 mg/kg), benzo(a)pyrene (max. 54.8 mg/kg), benzo(b)fluoranthene (max. 21 mg/kg), benzo(k)fluoranthene (max. 28.2 mg/kg), chrysene (max. 43 mg/kg), dibenzo(a,h)anthracene (max. 4.41 mg/kg), fluoranthene (107 mg/kg), indeno(1,2,3-cd)pyrene (max. 24.9 mg/kg) and pyrene (183 mg/kg) were detected in SP-1 (8-10), SP-2 (8-10), SP-4 (4-6), SP-6 (2-4), SP-9 (1-3), SP-12 (10-12), SP-14 (6-8), SP-15 (6-8) and SP-16 (8-10) were detected at concentrations exceeding their respective UUSCOs. Except acenaphthylene, all the forementioned PAHs were also detected in most of the samples exceeding their respective RRSCOs and/or RCSCOs. No other SVOCs were detected in any of the soil samples at concentrations exceeding UUSCOs. Concentrations of total SVOCs ranges from no detection in SP-5 (6-8) to 671.98 mg/kg in SP-15 (6-8).

Metals including arsenic (max. 106 mg/kg), barium (max. 4,910 mg/kg), copper (max. 181 mg/kg), lead (max. 2,400 mg/kg), nickel (max. 451 mg/kg), silver (max. 7.08 mg/kg), zinc (max. 2,980 mg/kg), mercury (max. 47.1 mg/kg) and chromium, trivalent (max. 109 mg/kg) were detected individually or collectively in all samples at concentrations exceeding their respective UUSCOs. Among the forementioned metals, the concentrations of lead in SP-4 (4-6), SP-9 (1-3), SP-11 (10-12), SP-12 (10-12) and SP-14 (6-8) and mercury in SP-7 (0-2), SP-11 (10-12), SP-13 (10-12) and SP-14 (6-8) also exceed their respective RRSCOs; and the concentrations of arsenic in SP-3 (10-12), SP-7 (0-2), SP-9 (1-3), SP-12 (10-12) and SP-13 (10-12), barium in SP-6 (2-4), SP-7 (0-2), SP-9 (1-3) and SP-

12 (10-12), lead in SP-3 (10-12), SP-6 (2-4), SP-7 (0-2), SP-10 (8-10), nickel in SP-9 (1-3), zinc in SP-6 (2-4) mercury in SP-1 (8-10), SP-4 (4-6), SP-9 (1-3), SP-10 (8-10), SP-12 (10-12), SP-16 (8-10) and SP-17 (4-6) also exceed their respective RCSCOs. No other metals were detected at concentrations exceeding their respective regulatory standards.

PFAs including Perfluoroheptanoic acid (PFHpA), Perfluorohexanoic acid (PFHxA), Perfluoro-n-butanoic acid (PFBA) and Perfluorooctanoic acid (PFOA) were detected in SP-4 (4-6), SP-6 (2-4), SP-8 (1-3), SP-12 (10-12) and SP-13 (10-12). Among the detected compounds, PFOA in SP-4 (4-6) was found at a concentration of 1.62 ug/kg exceeding its respective NYSDEC Guidance Value for Unrestricted Use.

No pesticides, PCBs or 1,4-dioxane were detected in soil samples.

4.2 Groundwater Results

Table 3 provide the analytical results for all groundwater samples. **Table 3** also provides a comparison to the 6 NYCRR Part 703.5 Class Groundwater Quality Standards (GQS) for the results of VOCs, SVOCs, Pesticides, PCBs and metals. The results for 1,4-dioxane and PFAs were compared to NYSDEC Guidance Value. The concentrations reported in **Table 3** are in micrograms per liter (ug/L).

As **Table 3** indicates, benzene was detected in MW-7 at a concentration of 6.21 ug/L, which exceeds its GQS. No other VOCs were detected in any of the groundwater samples at concentrations exceeding their respective GQS.

SVOCs including benzo(a)anthracene (max. 0.36 ug/L), benzo(a)pyrene (max. 0.19 ug/L), benzo(b)fluoranthene (max. 0.16 ug/L), benzo(k)fluoranthene (max. 0.17 ug/L), chrysene (max. 0.37 ug/L) and indeno(1,2,3-cd) pyrene (max. 0.1 ug/L) were detected MW-2 through MW-4, MW-7 and MW-8 at concentrations exceeding their respective GQS. No other SVOCs were detected in any of the groundwater samples at concentrations exceeding their respective GQS.

One pesticide, 4,4'-DDD, was detected in MW-1 at a concentration less than its GQS. No other pesticides or PCBs were detected in any samples.

Various metals detected in groundwater samples. Among the detected metals, concentrations of dissolved metals including barium (max. 3,170 ug/L), chromium (max. 339 ug/L), copper (213 ug/L), lead (max. 9,230 ug/L), magnesium (max. 146,000 ug/L), manganese (max. 12,100 ug/L), nickel (max. 1,990 ug/L), sodium (max. 938,000 ug/L), zinc (max. 11,700 ug/L), antimony (max. 11.3 ug/L) and beryllium (max. 136 ug/L) exceeded their respective GQS in part of or all samples.

The compound 1,4-Dioxane was detected in MW-6 at a concentration of 1.54 ug/L, which exceeds its NYSDEC Guidance Value.

Several PFAs were detected in all groundwater samples including 1H,1H,2H,2H-Perfluorooctanesulfonic acid (6:2 FTS), Perfluorobutanesulfonic acid (PFBS), Perfluoroheptanoic acid (PFHpA), Perfluorohexanoic acid (PFHxA), Perfluoro-n-butanoic acid (PFBA), Perfluorooctanesulfonic acid (PFOS), Perfluorooctanoic acid

(PFOA) and Perfluoropentanoic acid (PFPeA). The concentrations of PFOS (max. 0.042 ug/L) in both MW-5 and MW-7 and PFOA (max. 0.070 ug/L) in all groundwater samples with the exception of MW-8 are present at concentrations exceeding their respective NYSDEC Guidance Value.

4.3 Soil Vapor Results

Table 4 provides the TO-15 results for the soil vapor samples from SV-1 and SV-2 and sub-slab vapor samples including SSB-1 through SSB-6. The concentrations reported in **Table 4** are in micrograms per cubic meter (ug/m^3). The vapor results were compared to the NYSDOH Soil Vapor/Indoor Air Matrix as shown in **Table 5**.

As **Table 4** indicates total VOC concentrations range from 109.7 ug/m^3 in SSB-4 to 2,141.7 ug/m^3 in SSB-6.

Chlorinated VOCs including 1,1-dichloroethane (3.9 ug/m^3), chloroethane (0.44 ug/m^3), chloroform (max. 4.2 ug/m^3), chloromethane (max. 2.3 ug/m^3), cis-1,2-dichloroethylene (max. 7.2 ug/m^3), dichlorodifluoromethane (max. 2.1 ug/m^3), methylene chloride (max. 5.2 ug/m^3), tetrachloroethylene (PCE) (max. 550 ug/m^3), trans-1,2-dichloroethylene (2.2 ug/m^3), trichloroethylene (TCE) (max. 240 ug/m^3) and trichlorofluoromethane (freon 11) (max. 1.2 ug/m^3) were detected individually or collectively in all vapor samples.

According to NYSDOH Soil Vapor/Indoor Air Matrix, the concentrations of cis-1,2-dichloroethene and TCE in SSB-1 and PCE in SSB-3 might either require no further action or require monitoring/mitigation in these locations. The concentrations of TCE (240 ug/m^3) and PCE in SSB-2 (550 ug/m^3) will require mitigation based upon the matrix.

Petroleum related VOCs including BTEX compounds (benzene, toluene, ethyl benzene and xylenes) and their derivatives were commonly detected in all vapor samples. The total concentration of BTEX compounds range from 13 ug/m^3 in SV-1 to 152.1 ug/m^3 in SSB-3.

5.0 DISCUSSION OF RESULTS

5.1 Soil Quality

Acetone was detected in one sample exceeding its respective UUSCOs, which is considered a commonly known laboratory contaminant and should not raise any concern. Trace to low levels of petroleum-range and chlorinated VOCs were detected in shallow and deep soil from several locations exceeding their respective UUSCOs. The exceedances is mostly abundant in the vicinity of the oil/water separator as evidenced by the analytical results of samples from the SP-10 and SP-11 and is consistent with the soil screening results with a maximum PID reading of 465.1 ppm. Therefore, these exceedances might be indicative of petroleum related impact of leakage from the associated sub-grade equipment.

Several SVOCs including the PAHs were detected at concentrations exceeding its respective UUSCOs. The presence of PAHs is typically associated with the presence of urban fill material beneath the Site, which is consistent with the soil screening results.

Metals were detected at low to elevated levels exceeding their respective UUSCOs and/or RRSCOs. Several locations might be considered hotspots for metals as the detected levels are exceeding their respective RCSCOs. Among the RCSCO exceedances, it should be noted that lead was found in shallow soil from SP-6 and in deep soil from SP-3, SP-7 and SP-10 at concentrations above 1,000 mg/kg and mercury was found in deep soil from SP-9, SP-12 and SP-16 at concentrations above 10 mg/kg. Arsenic and barium were also observed in the forementioned SP-6, SP-7 and SP-9 significantly exceeding their respective RCSCOs. These locations are mostly situated in the northern portion of the open yard and the building and also southern portion of the open yard. This presence of metals is indicative of the presence of urban fill material beneath the Site.

Several PFAs compounds were detected in the collected soil samples and PFOA was detected in one sample "SP-4 (4-6)" at a concentration exceeding its respective NYSDEC Guidance Value for Unrestricted Use.

No pesticides, PCBs or 1,4-dioxane were detected in collected samples.

5.2 Groundwater Quality

Groundwater was encountered at approximately between 12.3 feet to 13.75 feet bgs. No evidence of free product was identified on the groundwater.

Benzene was detected in groundwater beneath the southern portion of the Site at a concentration only slightly exceeding its GQS. However, since benzene was not identified in soil at the Site, its presence does not represent a significant impact. Trace to low levels of VOCs were detected in the groundwater collected from the vicinity of the oil/water separator, but none of the detected compounds exceeded their respective regulatory standards and the overall VOCs levels was observed considerably low.

Several SVOCs were identified in groundwater beneath the entire Site at concentrations exceeding their respective GQS. The SVOC noted in soil at concentrations exceeding regulatory standards were associated to the urban fill present beneath the site and the SVOCs in groundwater are likely attributed to regional groundwater quality rather than an on-site release.

Dissolved metals were identified in the groundwater across the site, which might be either attributed to regional groundwater quality or associated with the urban fill present beneath the site considering the depth to water at the Site.

The compound 1,4-Dioxane was detected in one temporary well, MW-6 exceeding its respective NSYDEC Guidance Value. PFOS and PFOA were detected in most of the locations except MW-8 at concentrations exceeding their respective NYSDEC Guidance Value.

No pesticides or PCBs were detected in any locations exceeding their respective regulatory standards.

5.3 Soil Vapor Quality

Petroleum range and chlorinated VOCs were detected beneath the property as evidenced by the analytical results of all vapor samples.

No significant impact were found in the open parking and storage yard based upon the analytical results of SV-1 and SV-2.

Chlorinated VOCs including TCE and PCE were found most abundant in SSB-2 at levels exceeding their respective mitigation level established by NYSDOH. Moderate levels of these compounds and derivative compound (cis-1,2-dichloroethylene) were also found in sub-slab samples (SSB-1 and SSB-3) at grade level with a decreasing trend toward the south. The detected levels at these two locations might either trigger no further action or require monitoring/mitigation.

Given the fact that there is no evidence of significant contamination related to the chlorinated solvents in any of the soil or groundwater samples, the presence of these chlorinated compounds may be related to soil vapor intrusion from an off-site source.

6.0 CONCLUSIONS

Based upon the findings of the investigation, the following conclusions are provided:

- No visual evidence of any petroleum free product or the sheen was identified beneath the property.
- Petroleum related VOCs were found most abundant in deep soil between 8-12 feet from the vicinity of the oil/water separator in the mid-northern portion of the building, which might be indicative of impact of leakage from the associated sub-grade equipment. No notable levels of chlorinated VOCs were observed in the soil.
- Petroleum-range and chlorinated VOCs were detected in groundwater marginally exceeding their respective regulatory standards but none of the exceedances should be indicative of spills or significant impact from historic and/or current use of the Site for auto repair.
- Groundwater is present between 12.3 feet to 13.75 feet underneath the property. Groundwater flow direction was not determined in this investigation but is assumed to be west-southwest towards the Gowanus Canal based upon the investigation performed in the western adjacent Site across Third Avenue.
- Several SVOCs including PAHs and metals were detected in shallow and deep soil at concentrations exceeding Unrestricted Use Soil Cleanup Objectives. Part of the detected PAHs and metals including arsenic, barium, lead, zinc and mercury also exceeded their respective Restricted Use Soil Cleanup Objectives for Restricted Residential and Commercial. The presence of the PAHs and the metals is likely attributed to the presence of urban fill material beneath the Site, which is consistent with the soil screening results and its historic and current use. The presence of the SVOCs and metals is not indicative of any adverse impact.
- One emerging contaminant, PFOA, was in soil beneath the southern portion of the Site at a concentration exceeding its NYSDEC Guidance Value for Unrestricted Use.
- SVOCs and dissolved metals were identified in the groundwater beneath the Site, which are likely attributed to regional groundwater quality or associated with the urban fill.
- Emerging contaminants including 1,4-dioxane PFOS and PFOA were identified in groundwater beneath the Site at concentrations exceeding their respective NYSDEC Guidance Value.
- No significant concentrations of petroleum-range VOCs were identified in soil vapor or sub slab vapor. Chlorinated solvents such as PCE and TCE were identified in soil vapor and sub slab vapor at concentrations requiring mitigation as per the NYSDOH Decision Matrix. Considering their absence and/or presence only at trace levels in the soils, the soil vapor impact from chlorinated-range VOCs is likely attributed to an off-site source.

7.0 RECOMMENDATIONS

Based upon the conclusions put forth in this report, following recommendation is provided:

- Any soil that is excavated and bound for offsite disposal, should be characterized, transported and disposed at permitted facilities.
- For any future development at the site, the impact of soil vapor should be mitigated via engineering controls.

9.0 EXCLUSIONS & DISCLAIMERS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, HydroTech Environmental Engineering and Geology, DPC may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to HydroTech Environmental Engineering and Geology, DPC.at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, HydroTech Environmental Engineering and Geology, DPC did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the Subject Property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, HydroTech Environmental Engineering and Geology, DPC renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non-hazardous or hazardous material, in that portion of the subject property or structure. In addition, HydroTech Environmental Engineering and Geology, DPC renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

HydroTech Environmental Engineering and Geology, DPC did not perform testing or analyses to determine the presence or concentration of asbestos at the subject property or in the environment of the subject property under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where an outside laboratory has conducted such analyses, HydroTech Environmental Engineering and Geology, DPC

has relied upon the data provided and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the subject property.

Any GPR survey described above was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. HydroTech Environmental Engineering and Geology, DPC does not accept responsibility for survey limitations due to inherent technological limitations or site-specific conditions, however, made appropriate effort to identify and notify the client of such limitations and conditions. In particular, please note that the survey described above does not represent a full utility clearance survey and does not relieve any party of applicable legal obligations to notify a utility one-call service prior to excavating or drilling.

NOTES:

Q is the Qualifier Column with definitions as follows:

B=analyte found in the analysis batch blank

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U/ND=analyte not detected at or above the level indicated

NS=No standard available for target analyte

= sample exceeds NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives

NOTES:

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U/ND=analyte not detected at or above the level indicated

NS=No standard available for target analyte

= sample exceeds NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives

= sample exceeds NYSDEC Part 375 Restricted Use Soil Cleanup Objectives - Restricted Residential

= sample exceeds NYSDEC Part 375 Restricted Use Soil Cleanup Objectives - Commercial

NOTES:

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

P=result is estimated and cannot be accurately reported due to levels encountered or interferences

U/ND=analyte not detected at or above the level indicated

NS=No standard available for target analyte

= sample exceeds NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives

NOTES:

Q is the Qualifier Column with definitions as follows:

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U/ND=analyte not detected at or above the level indicated

NT=analyte is not target analyte for this sample

NS=No standard available for target analyte

= sample exceeds NYSDEC TOGS Standard and Guidance Value - GA

NYSDOH Soil Vapor Decision Matrices

601-607 Union Street, Brooklyn

Sample ID	Sample Type	Matrix A				Matrix B			Matrix C	NYSDOH Decision Matrices [2]
		1,1-Dichloroethene	Carbon Tetrachloride	cis-1,2-dichloroethene	Trichloroethene	1,1,1-Trichloroethane	Methylene Chloride	Tetrachloroethene	Vinyl Chloride	
SV-1	Soil Vapor	ND	ND	ND	**0.51**	ND	**1.30**	**1.30**	ND	**No Further Action [3]**
SV-2	Soil Vapor	ND	ND	ND	**0.47**	ND	**1.30**	**4.80**	ND	**No Further Action**
SSB-1	Sub-Slab Vapor	ND	ND	**7.20**	**21.0**	ND	**1.80**	**92**	**0.60**	**No Further Action, Monitor [4], Mitigate [5]**
SSB-2	Sub-Slab Vapor	ND	ND	**0.40**	**240**	ND	**1.40**	**550**	ND	**Mitigate**
SSB-3	Sub-Slab Vapor	ND	ND	ND	**2.60**	ND	**1.30**	**150**	ND	**No Further Action, Monitor, Mitigate**
SSB-4	Sub-Slab Vapor	ND	**0.31**	ND	**0.71**	ND	**1.20**	**17.0**	**0.21**	**No Further Action**
SSB-5	Sub-Slab Vapor	ND	ND	ND	**2.50**	ND	**1.60**	**5.30**	ND	**No Further Action**
SSB-6	Sub-Slab Vapor	ND	ND	ND	**2.00**	ND	**5.20**	**5.00**	ND	**No Further Action**

Note:

(1) All the concentrations are reported in microgram per cubic meter (ug/m^3)

(2) The NYSDOH Decision Matrices are the May 2017 version. The concentration of each compound in each vapor sample may trigger different levels of actions and the action with the highest level will be listed as recommended by NYSDOH.

(3) No further action is recommended to address human exposure.

(5) NYSDOH recommends monitoring (sampling on a recurring basis), including but not necessarily limited to sub-slab vapor, basement air and outdoor air sampling, to determine whether concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences. Monitoring might also be recommended to determine whether existing building conditions (e.g., positive pressure heating, ventilation and air-conditioning systems) are maintaining the desired mitigation endpoint and to determine whether changes are needed. The type and frequency of monitoring is determined based on site-, building- and analyte-specific information, taking into account applicable environmental data and building operating conditions. Monitoring is an interim measure required to evaluate exposures related to soil vapor intrusion until contaminated environmental media are remediated.

(4) NYSDOH recommends mitigation to minimize current or potential exposures associated with soil vapor intrusion. The most common mitigation methods are sealing preferential pathways in conjunction with installing a sub-slab depressurization system and changing the pressurization of the building in conjunction with monitoring. The type, or combination of types, of mitigation is determined on a building-specific basis, taking into account building construction and operating conditions. Mitigation is considered a temporart measure implemented to address exposures related to soil vapor intrusion until contaminated environmental media are remediated.

Concentration of the analyte triggers the recommended action

1.0 INTRODUCTION

On 9/7/2022 & 9/8/2022, Coastal Environmental Solutions, Inc (Coastal) personnel performed a limited geophysical investigation at 601 Union Street, Brooklyn, NY. The areas of interest included sections of the interior of the building on site, the partial basement of the building, and the asphalt parking lot along the side of the building. Surface conditions consisted of concrete and asphalt.

2.0 SCOPE OF WORK

1. Locate and mark detectable underground utilities within accessible areas throughout the property for the purposes of clearing soil boring locations.

3.0 EQUIPMENT

ImpulseRadar PinPointR Ultra-Wide Band (UWB) Penetrating Radar System

Ground Penetrating RADAR (GPR) is a non-destructive geophysical method that produces a continuous cross-sectional profile of subsurface features in real time. GPR operates by transmitting both high and low frequency electromagnetic wave pulses down into the ground through a transmitter in the antenna. The transmitted electromagnetic waves reflect off materials with contrasting dielectric properties from surrounding medium such as underground storage tanks, utilities, distinct contacts between different earth materials, and other various subsurface objects. The antenna receiver collects the reflected electromagnetic waves which are then interpreted by the operator.

The ImpulseRadar PinPointR UWB GPR utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame which rolls over the surface. The total depth of penetration achieved with the antenna can be up to 10 feet but widely varies based on site-specific subsurface conditions. Conductive materials in the soil attenuate the GPR signal causing a decrease in effective depth of penetration and clarity.

Vivax-Metrotech vLoc3-Pro Receiver/Transmitter

The vLoc3-Pro Receiver is a hand-operated antenna capable of detecting electromagnetic (EM) fields emitted from a source. The EM antenna can detect pipes and cables in the ground at depths of up to 20 feet using active or passive tracing techniques. Passive tracing is the act of locating an underground utility through the detection of electrical or radio signals travelling along conductive utilities. Active tracing is used in conjunction with the Transmitter that is directly connected to the target utility or to a conductive rodder within a non-conductive line. A signal is sent through the utility at a specific frequency that can be detected by the Receiver. The detectability of a target utility depends on many factors including access to the target utility, grounding, depth of utility, conductivity, and other site-specific factors.

TW-6 Pipe and Cable Locator

The TW-6 Pipe and Cable locator is a handheld magnetometer which utilizes a transmitter-receiver pair attached to opposite ends of a handle and carried approximately 1-2ft from the surface. The magnetometer induces an electromagnetic (EM) field into the ground that is generated by the

transmitter. Once the induced EM field passes through a buried metallic object, it generates a secondary EM field which is detected by the receiver, generating an audible tone. Based on the calibration of the magnetometer, the audible tone reflects the strongest response as the highest pitched sound, trailing off on all sides of the peak. This piece of technology can be used to detect subsurface features such as metallic USTs, large diameter conductive pipes, and buried manholes, especially in areas in which traditional GPR methods cannot be utilized, such as overgrown or uneven surfaces.

4.0 METHODOLOGY

1. A subsurface investigation was performed in close proximity to the client proposed soil boring locations. Active and passive detection methods were utilized with the VLoc3-Pro receiver/transmitter. Coastal personnel direct connected to all accessible and traceable pipes, conduits, valve covers, and any other surface feature throughout the site. A passive scan was performed throughout the site to detect any potential underground utilities that could not be located with active scan.
2. The TW-6 was utilized to sweep accessible areas around the suspected UST location in 3-to-5-foot spacings for readings that may represent a buried metallic anomaly. Upon detection of a reading, the approximate size and shape of the anomalous area was marked on the surface to be investigated further with GPR.
3. GPR was utilized to further characterize the approximate dimensions, depth, and shape of the anomalies located with the TW-6. The remainder of the areas around the suspected UST location was scanned with GPR in 3-to-5-foot spacing to locate any anomalous features not previously detected such as non-conductive piping and former excavations.
4. All findings were marked on the surface utilizing the American Public Works Association (APWA) recommended color code, seen below:

WHITE	Proposed Excavation
PINK	Temporary Survey Markings (Approximate UST Locations, Soil Boring Locations)
RED	Electric Power Lines, Cables, Conduit and Lighting Cables
YELLOW	Gas, Oil, Steam, Petroleum or Gaseous Materials
ORANGE	Communication, Alarm or Signal Lines, Cables or Conduit
BLUE	Water (Domestic and Fire Lines)
PURPLE	Irrigation (Not commonly used)
GREEN	Sewers and Drain Lines

5.0 SUMMARY OF FINDINGS

Utility Locate

Coastal personnel conducted a utility locate within all accessible areas of concern. Within the partial basement, no utilities were detected. The asphalt parking lot was partially accessible between the parked oil trucks and the pooled water from heavy rain earlier in the week. The boring locations within the lot were cleared and Coastal did not identify any utilities within proximity to the boring locations. Within the building, Coastal identified and marked a series of drain lines (marked in green) as well as a possible UST covered by a heavy steel plate. The vent leading off

this possible tank was traced to a vertical pipe leading to the roof of the building. Boring locations around these findings were cleared.

Limitations

The effective depth of GPR penetration was limited to approximately 2 feet below the concrete within the building and 4 feet within the asphalt parking lot. The limiting factor was likely due to soil conductivity attenuating the GPR signal, shallow bedrock containing moisture, or non-conductive materials utilized for the utilities. The GPR and TW-6 is unable to be utilized within close proximity to parked vehicles and exterior walls. Multiple areas were inaccessible due to the presence of vehicles and large pools of water.

Disclaimer

The subsurface investigation was performed by Coastal after considering the limits of the scope of work and the time constraint for the investigation. The investigation that is described in this report was undertaken in accordance with current accepted standards and practices of the geophysical survey industry. The results and interpretations that are presented are based on professional judgment and are as accurate as can reasonably be achieved. However, no geophysical equipment can accurately depict all subsurface features due to the geology and environmental conditions of the subsurface. Any intrusive work in proximity to identified anomalies should be carefully considered and cross-referenced with all available site-specific documentation. Coastal is not liable for the use, interpretation, or application of the data and information in this report.

PHOTOS & GPR SCREENSHOTS

Photo 1 – Photo of the partial basement prior to drilling activities. Soil borings here were installed with the remote access Geoprobe seen above.

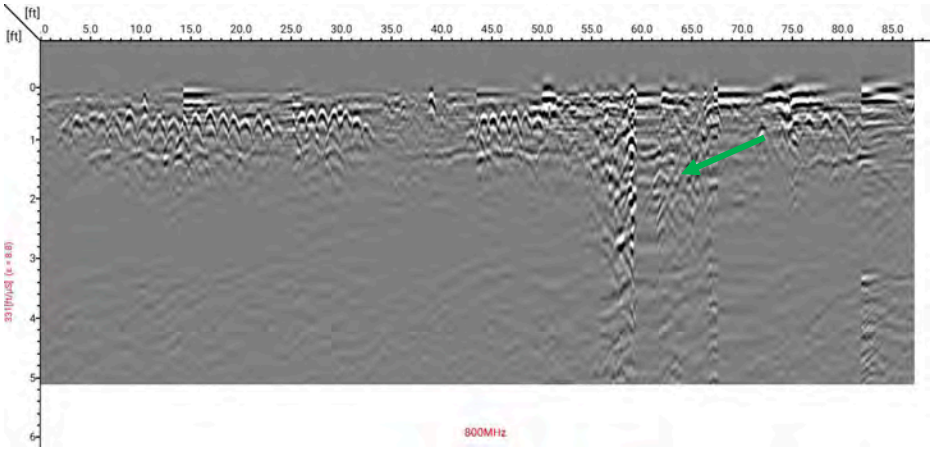

Photo 2 – GPR screenshot showing the reinforced concrete floor present. The GPR signal fails to return below the concrete slab at an approximate depth of 1.5-2 feet below grade. Floor drain lines were visible at approximately 1 feet below grade (green).

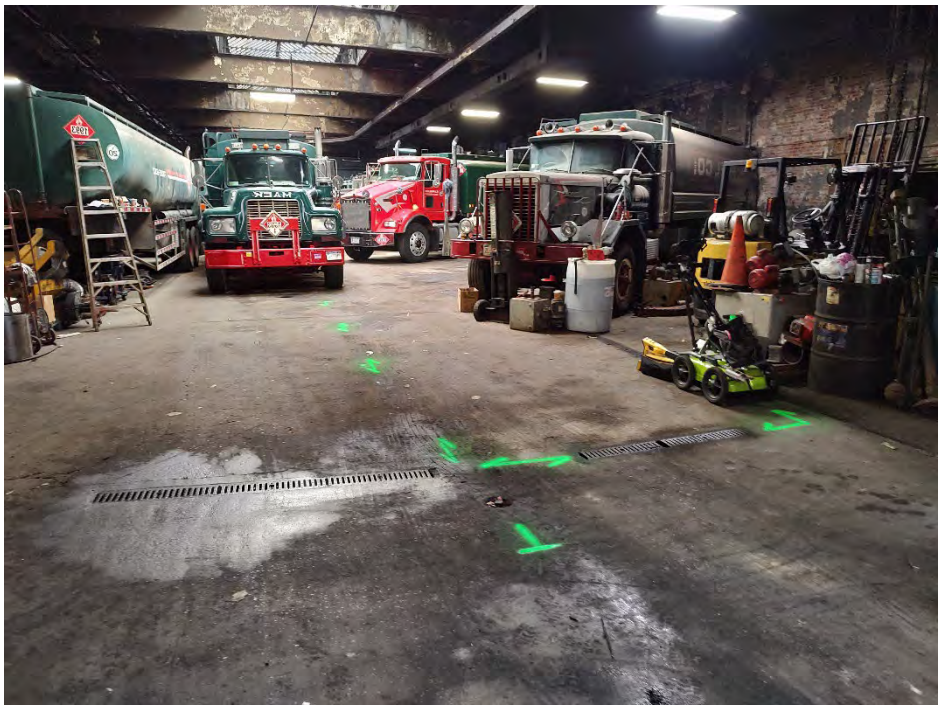

Photo 3 – Photo of the floor drains present in the area (marked in green) spanning the length of the building.

Photo 4 – Photo of the suspected UST location (left of the garage door) and the floor drains present in the area (marked in green).

WELL MONITORING LOG SHEET

Project Name: 220058 | Date: 09/08/22

Client: Avdoo & Partners Development | Instrument: Interface Probe

Site Location: 601-607 Union Street, Brooklyn, NY | Spill No.: _____

Monitoring Schedule: Monthly : _____ Quartely : _____ Bi-Annually :_____

Legend

S = Snow D = Dry G = Gone C = Can't Locate
DTW = Depth to Water DTP = Depth to Product PT = Product Thickness ND = None Detected

Monitoring Well	D.T.P.	D.T.W.	P.T.
MW-1	ND	13.5 ft	
MW-2	ND	13.2 ft	
MW-3	ND	13.3 ft	
MW-4	ND	4.7 ft	
MW-5	ND	4.64 ft	
MW-6	ND	13.75 ft	
MW-7	ND	12.3 ft	
MW-8	ND	12.73	

Notes: All measurements in feet, below the nortnern top of well casing

Reported By:

Ammarah Zaidi

Appendix G: NYSDOH Questionnaire

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Ammarah Zaidi Date/Time Prepared 9/9/22

Preparer's Affiliation Env. Engineer Phone No. (631) 307-6487

Purpose of Investigation Phase II Investigation

1. OCCUPANT: S.J. Fuel + Co

Interviewed: Y / (N)

Last Name: — First Name: —

Address: 601 Union Street, Brooklyn, NY 11215

County: Kings

Home Phone: (718)855-6060 Office Phone: —

Number of Occupants/persons at this location ~5 Age of Occupants —

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / (N)

Last Name: Avdoo First Name: Shlomi

Address: 221 West 37th Street

County: Manhattan

Home Phone: — Office Phone: —

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial/Multi-use)
Industrial	Church	Other: ___

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? ___—___

If the property is commercial, type?

Business Type(s) Fueling Company

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 2 Building age 72

Is the building insulated? Y / (N) How air tight? Tight / Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

N/A

Airflow near source

passive

Outdoor air infiltration

open gates

Infiltration into air ducts

N/A

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	(concrete)	stone	brick
b. Basement type:	full	crawlspace	(slab)	other _____
c. Basement floor:	(concrete)	dirt	stone	other _____
d. Basement floor:	uncovered	(covered)	covered with _____	
e. Concrete floor:	(unsealed)	sealed	sealed with _____	
f. Foundation walls:	(poured)	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	(Y) / N			
k. Water in sump?	(Y) / N / not applicable			

Basement/Lowest level depth below grade: 8 (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Cracks in slab floor; drains/sump in basement

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply) None

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Stream radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	(Fuel Oil)	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: fuel

Boiler/furnace located in:	(Basement)	Outdoors	Main Floor	Other _____
Air conditioning:	Central Air	Window units	(Open Windows)	None

Are there air distribution ducts present? Y / (N)

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time (Occasionally) Seldom Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	tanks
1st Floor	garage / parking /
2nd Floor	
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? (Y) / N

b. Does the garage have a separate heating unit? Y / (N) / NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) / N / NA
Please specify_____

d. Has the building ever had a fire? Y / (N) When?_____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?_____

f. Is there a workshop or hobby/craft area? (Y) / N Where & Type? Garage, court / trades

g. Is there smoking in the building? Y / (N) How frequently?_____

h. Have cleaning products been used recently? Y / (N) When & Type?_____

i. Have cosmetic products been used recently? Y / (N) When & Type?_____

j. Has painting/staining been done in the last 6 months? Y / (N) Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented? _____

n. Is there a bathroom exhaust fan? (Y) / N If yes, where vented? _____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type? _____

Are there odors in the building? Y / (N)
If yes, please describe: _____

Do any of the building occupants use solvents at work? (Y) / N
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist

If yes, what types of solvents are used? Auto mechanic, fuel oil delivery.

If yes, are their clothes washed at work? Y / (N)

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / (N) Date of Installation: _____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply:	(Public Water)	Drilled Well	Driven Well	Dug Well	Other: _____
Sewage Disposal:	(Public Sewer)	Septic Tank	Leach Field	Dry Well	Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: N/A

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

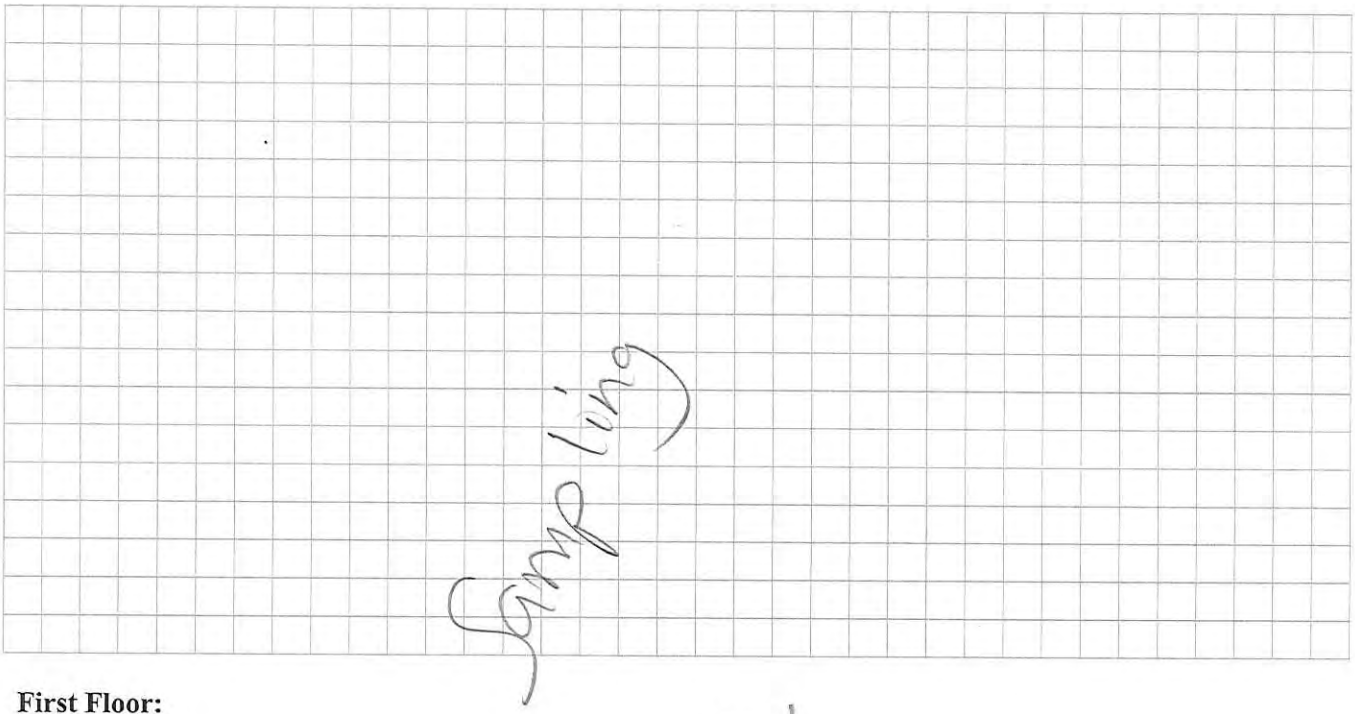
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

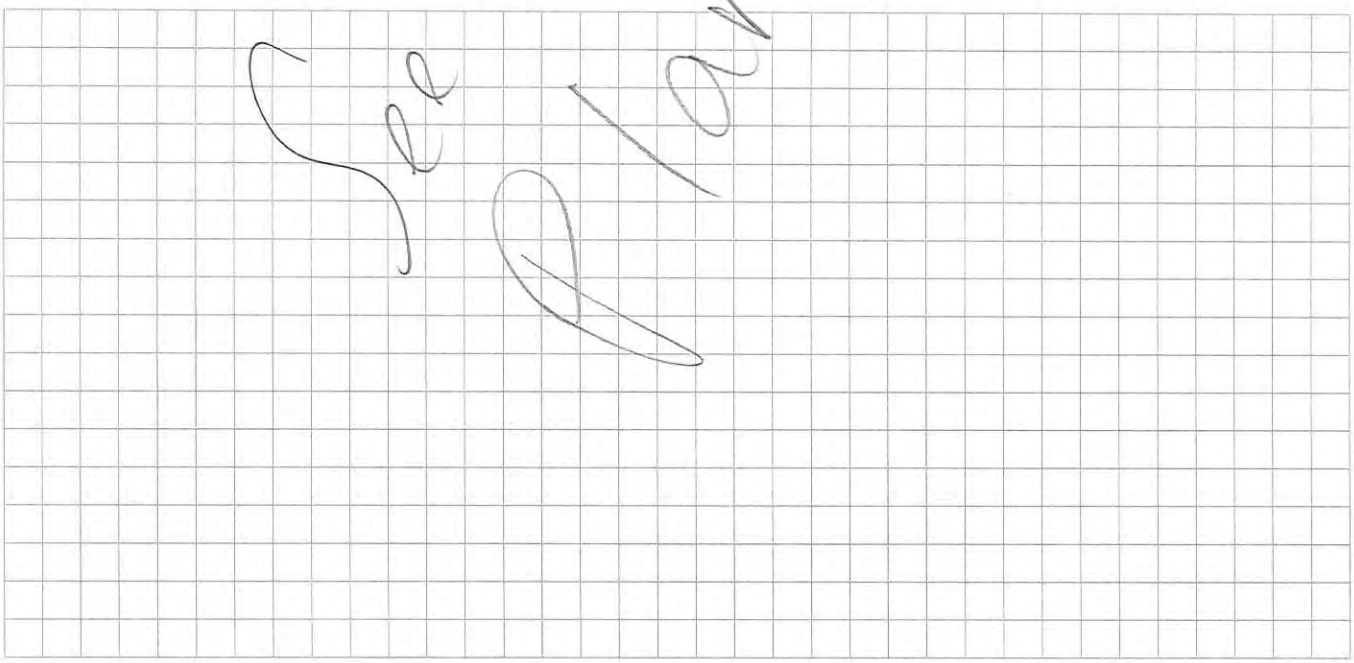
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



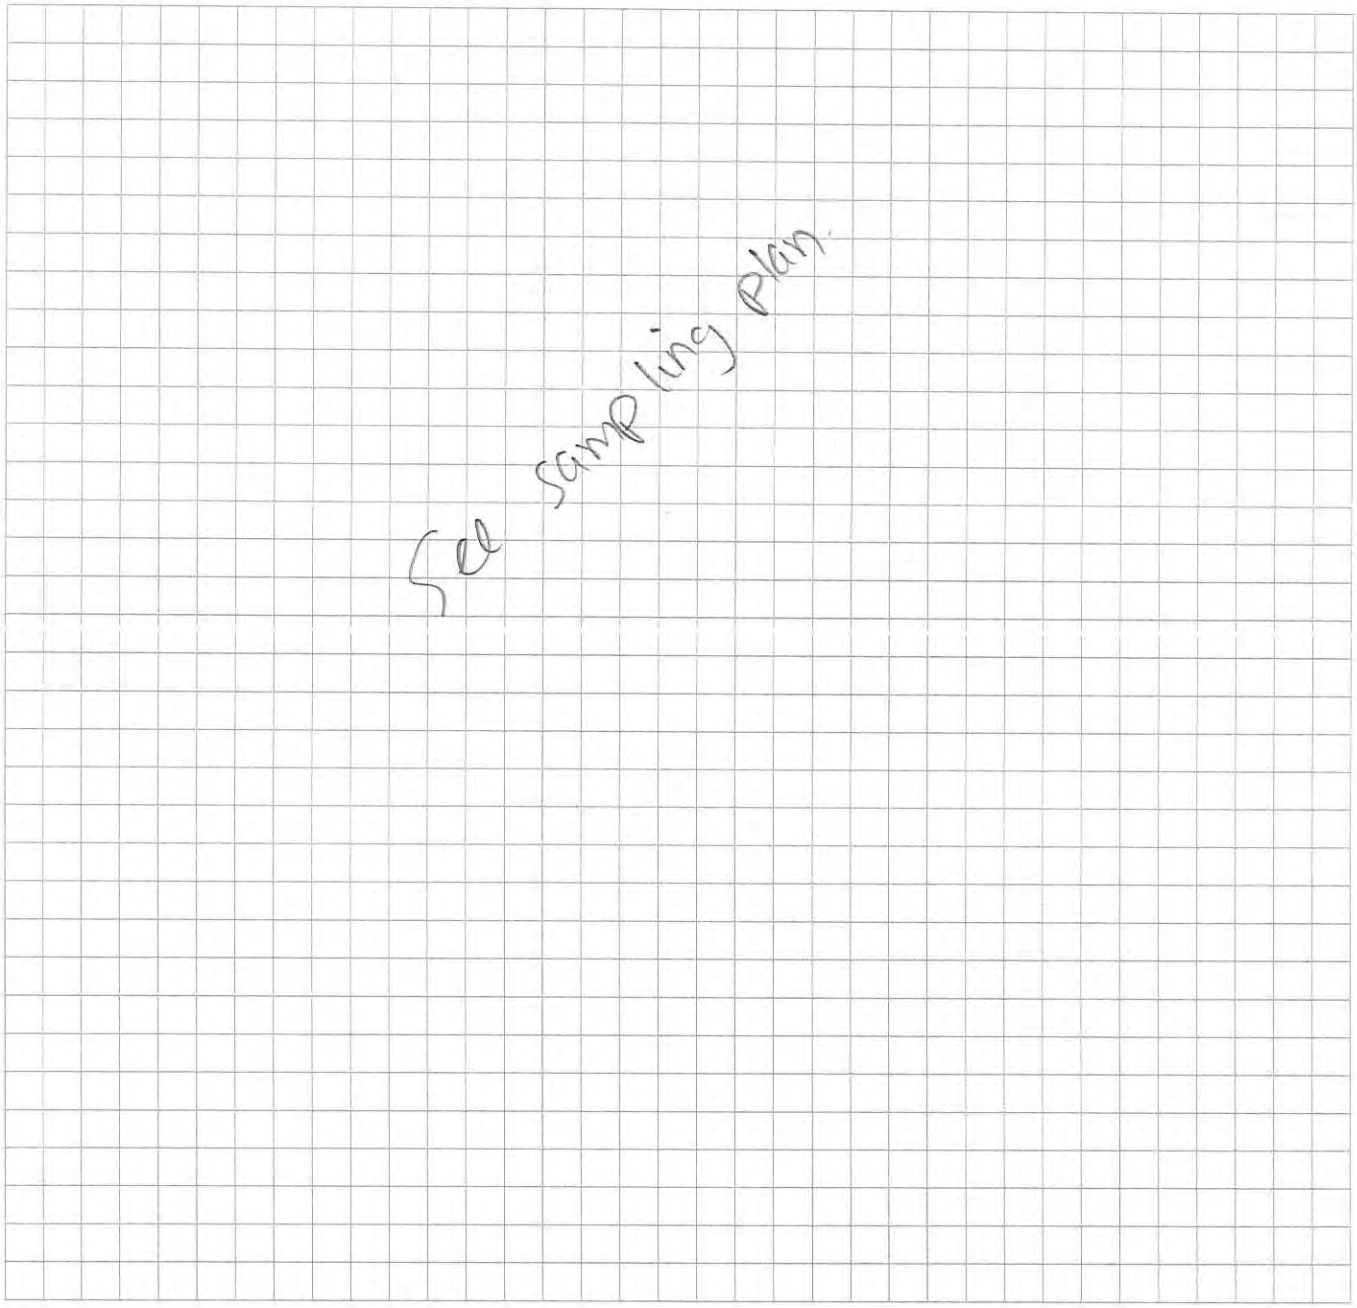
First Floor:



12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Mini Rae 3,000

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N
basement	Gas tank	3000	AST	fuel grade #2	0.0	y
1st Floor	fuel oil for trucks	-	-	fuel	0.2	N

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 07, 2022 and listed below. The project was identified as your project: **220058 601-607 Union St., Brooklyn, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22I0332

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

22I0332-09	SP-9 (1-3)	40mL Vial with Stir Bar-Cool 4° C
22I0332-10	SP-10 (8-10)	40mL Pre-Tared Vial + 10mL MeOH; Cool to 4° C
22I0332-11	SP-11 (10-12)	40mL Pre-Tared Vial + 10mL MeOH; Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

PF-CCV-L	The CCV recovery was slightly below acceptable limits for the qualified compound. However, sample results are not biased low because results are corrected for isotope recovery.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-SRD1	The serial dilution for this element was outside control limits.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
PF-CCV-H	The CCV recovery was slightly above acceptable limits for the qualified compound. However, sample results are not biased high because results are corrected for isotope recovery.
S-08	The recovery of this surrogate was outside of QC limits.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
PCB-Q	The Aroclor pattern exhibited by the sample did not match reference Aroclors or their mixtures. The Aroclor identified is a best effort assignment based upon analyst interpretation.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported

RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 08, 2022 and listed below. The project was identified as your project: **220058 601-607 Union St., Brooklyn, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22I0453

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
Cal-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
HT-01R	This flag indicates that the sample was initially analyzed within recommended hold time and that a re-run was performed outside of the hold time.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
QR-02	The RPD result exceeded the QC control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
PF-CCV-L	The CCV recovery was slightly below acceptable limits for the qualified compound. However, sample results are not biased low because results are corrected for isotope recovery.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-08	The recoveries of matrix spike compounds meet Laboratory Control Limits, however are outside of NJDEP DKQP limits. The data are qualified as such and the data user should take note.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.

NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Due to laboratory error, hexavalent chromium analysis for GW samples MW-1, MW-2 and MW-3 were inadvertently missed upon receipt. The client was contacted on 9/9/22 and the laboratory was instructed to proceed with out of hold analysis.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 09, 2022 and listed below. The project was identified as your project: **220058 601-607 Union St., Brooklyn, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22I0526

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: **Date:** 09/15/2022

YORK
ANALYTICAL LABORATORIES INC

Sample and Data Qualifiers Relating to This Work Order

TO-LCS-L The result reported for this compound may be biased low due to its behavior in the analysis batch LCS where it recovered less 70% of the expected value.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 09, 2022 and listed below. The project was identified as your project: **220058 601-607 Union St., Brooklyn, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22I0530

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: **Date:** 09/23/2022

Sample and Data Qualifiers Relating to This Work Order

M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
Cal-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.
M-BS	The recovery for this element in the batch blank spike recovered slightly outside of control limits
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
PF-CCV-L	The CCV recovery was slightly below acceptable limits for the qualified compound. However, sample results are not biased low because results are corrected for isotope recovery.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
S-08	The recovery of this surrogate was outside of QC limits.
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.

Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: One 1L amber for sample MW-7 was received broken. 1L used for Pest/PCB extraction. The lab was instructed to cancel 1,4-Dioxane and use for SVOCs (500mL). Hex chrome missed. The lab was instructed to proceed with out of hold analysis for these samples.

GEOPHYSICAL SURVEY REPORT

Coastal Environmental Solutions, Inc.

GEOPHYSICAL INVESTIGATION REPORT

601 Union Street, Brooklyn, NY
Date of Investigation: 7/1/2025

Prepared for:

Vektor Consultants
37 W. 37th Street, 6th Floor
New York, NY 10018

Prepared By:

Eric Schnopp
GPR Technican
Coastal Environmental Solutions, Inc.
PO Box 342
Medford, New York 11763

1.0 INTRODUCTION

On 7/1/2025, Coastal Environmental Solutions, Inc (Coastal) personnel performed a limited Geophysical Investigation at 601 Union Street, Brooklyn, NY. The areas of interest included the inside of the office building located at the above address, and the adjacent parking lot. Surface conditions consisted of concrete and asphalt.

2.0 SCOPE OF WORK

1. Locate and mark detectable underground utilities and other subsurface features in client-indicated investigation areas to clear proposed soil boring and vapor locations.

3.0 EQUIPMENT

ImpulseRadar PinPointR Ultra-Wide Band (UWB) Penetrating Radar System

Ground Penetrating RADAR (GPR) is a non-destructive geophysical method that produces a continuous cross-sectional profile of subsurface features in real time. GPR operates by transmitting both high and low frequency electromagnetic wave pulses down into the ground through a transmitter in the antenna. The transmitted electromagnetic waves reflect off materials with contrasting dielectric properties from surrounding medium such as underground storage tanks, utilities, distinct contacts between different earth materials, and other various subsurface objects. The antenna receiver collects the reflected electromagnetic waves which are then interpreted by the operator.

The ImpulseRadar PinPointR UWB GPR utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame which rolls over the surface. The total depth of penetration achieved with the antenna can be up to 10 feet but widely varies based on site-specific subsurface conditions. Conductive materials in the soil attenuate the GPR signal causing a decrease in effective depth of penetration and clarity.

Vivax-Metrotech vLoc3-Pro Receiver/Transmitter

The vLoc3-Pro Receiver is a hand-operated antenna capable of detecting electromagnetic (EM) fields emitted from a source. The EM antenna can detect pipes and cables in the ground at depths of up to 20 feet using active or passive tracing techniques. Passive tracing is the act of locating an underground utility through the detection of electrical or radio signals travelling along conductive utilities. Active tracing is used in conjunction with the Transmitter that is directly connected to the target utility or to a conductive rodder within a non-conductive line. A signal is sent through the utility at a specific frequency that can be detected by the Receiver. The detectability of a target utility depends on many factors including access to the target utility, grounding, depth of utility, conductivity, and other site-specific factors.

TW-6 Pipe and Cable Locator

The TW-6 Pipe and Cable locator is a handheld magnetometer which utilizes a transmitter-receiver pair attached to opposite ends of a handle and carried approximately 1-2ft from the surface. The magnetometer induces an electromagnetic (EM) field into the ground that is generated by the transmitter. Once the induced EM field passes through a buried metallic object, it generates a

secondary EM field which is detected by the receiver, generating an audible tone. Based on the calibration of the magnetometer, the audible tone reflects the strongest response as the highest pitched sound, trailing off on all sides of the peak. This piece of technology can be used to detect subsurface features such as metallic USTs, large diameter conductive pipes, and buried manholes, especially in areas in which traditional GPR methods cannot be utilized, such as overgrown or uneven surfaces.

4.0 METHODOLOGY

1. A subsurface investigation was performed in close proximity to the client proposed soil boring locations. Active and passive detection methods were utilized with the VLoc3-Pro receiver/transmitter. Coastal personnel directly connected to all accessible and traceable pipes, conduits, valve covers, and any other surface feature throughout the site. A passive scan was performed throughout the site to detect any potential underground utilities that could not be located with active scan.
2. (If applicable) The TW-6 was utilized to sweep accessible areas around suspected UST locations in 3-to-5-foot spacings for readings that may represent a buried metallic anomaly. Upon detection of a reading, the approximate size and shape of the anomalous area was marked on the surface to be investigated further with GPR.
3. GPR was utilized to further characterize the approximate dimensions, depth, and shape of the anomalies located with the TW-6. The remainder of the areas around the suspected locations were scanned with GPR in 3-to-5-foot spacing to locate any anomalous features not previously detected such as non-conductive piping and former excavations.
4. All findings were marked on the surface utilizing the American Public Works Association (APWA) recommended color code, seen below:

WHITE	Proposed Excavation/Limits of Investigation
PINK	Temporary Survey Markings (Approximate UST Locations, Soil Boring Locations)
RED	Electric Power Lines, Cables, Conduit and Lighting Cables
YELLOW	Gas, Oil, Steam, Petroleum or Gaseous Materials
ORANGE	Communication, Alarm or Signal Lines, Cables or Conduit
BLUE	Water (Domestic and Fire Lines)
PURPLE	Irrigation, Slurry Lines, Reclaimed Water
GREEN	Sewers and Drain Lines

5.0 SUMMARY OF FINDINGS

Geophysical Investigation

Coastal personnel conducted a limited Geophysical Investigation within all areas of concern as indicated by the client. Coastal visually identified all surface features related to utilities during our initial investigation of the property. Within the sidewalk on the north and east sides of the property, including electric, natural gas, and sanitary, and water. Once entering the building all utilities connected overhead except the waterline which was marked in blue paint. A sump pump line and multiple drains were also detected and marked out inside of the building. In the open parking lot,

site lighting was detected at 2ft blgs. It was marked out in red paint and labeled S.L. A vault was detected on the sidewalk next to the business, but no signs of a UST were detected. The client had documentation of a proposed UST on site, while the vault was detected no traces of a UST were discovered. All the boring and vapor locations were cleared and safe prior to drilling activities.

Limitations

The effective depth of GPR penetration was limited to approximately 3.5 feet below the concrete and asphalt grade surfaces. The limiting factor was due to soil conductivity attenuating the GPR signal. The GPR and TW-6 were unable to be utilized within close proximity to parked vehicles and exterior walls. TW-6 was also unable to be utilized over metal-reinforced concrete.

Disclaimer

The subsurface investigation was performed by Coastal after considering the limits of the scope of work and the time constraint for the investigation. The investigation that is described in this report was undertaken in accordance with current accepted standards and practices of the geophysical survey industry. The results and interpretations that are presented are based on professional judgment and are as accurate as can reasonably be achieved. However, no geophysical equipment can accurately depict all subsurface features due to the geology and environmental conditions of the subsurface. Any intrusive work in proximity to identified anomalies should be carefully considered and cross-referenced with all available site-specific documentation. Coastal is not liable for the use, interpretation, or application of the data and information in this report.

PHOTOS & GPR SCREENSHOTS

DAILY STATUS REPORTS AND CAMP RESULTS

vEKtor consultants

DAILY STATUS REPORT

Prepared By: Victor Chang

NYSDEC BCP Site No:	C224392	**Date:**	July 1, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	P. Cloudy/Int. Rain, 72-88 ^{0}F
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:
Environmental Consultant: Vektor Consultants – Ben Neumann & Victor Chang
Geophysical: Coastal Environmental Solutions – Eric Schnopp
Driller: Coastal Environmental Solutions – Brandon Sullivan
NYSDEC Representative: WSP – Chris Disclafani

Work Activities Performed:

- Coastal mobilized with Geoprobe 6011DT direct-push drill rig to advance 5 soil borings: 25SB-6, 25SB-10, 25SB-11, 25SB-12, 25SB-13, and 25SB-14 to depths ranging between 12 and 15 feet below grade. All work was conducted in accordance with the Remedial Investigation Work Plan (RIWP) dated February 21, 2025.
- Coastal performed a geophysical investigation to clear all sampling locations of subsurface obstructions and utilities.
- Groundwater was encountered at approximately 12 feet bgs during advancement of soil borings. Soil was retrieved continuously in 5-foot intervals and field screened with a photo ionization detector (PID) for presence of contamination, odor, and staining. No elevated PID readings, evidence of staining, or olfactory odors were observed in any of the soil samples.
- Soil samples were collected from each of the borings and submitted for laboratory analysis for TCL VOCs, TCL SVOCs, TAL Metals, mercury, pesticides, herbicides, and PCBs, including requisite quality assurance/quality control (QA/QC) samples. All samples were immediately placed in a cooler with ice after labeling and transported to Pace Analytical Services of Westborough, Massachusetts under proper chain of custody procedures.

Community Air Monitoring Program

Real-time Community Air Monitoring Plan (CAMP) was implemented during all intrusive work at an upwind and a downwind location. The CAMP stations were relocated as needed based on the area of work. No CAMP exceedances were observed.

Problems Encountered

N/A

Planned Activities for the Next Day

Work will continue in accordance with the RIWP including the advancement of soil borings, installation of groundwater monitoring wells and soil vapor points, and the collection and submitting of soil samples for laboratory analysis.

Samples Collected:

The following samples were collected as per the Remedial Investigation Work Plan dated February 21, 2025:

Soil Boring ID	Sample Depths (ft)	Vertical Representation
25SB-6	(0-2’)	Shallowest (below slab)
	(11-10’)	Deepest interval above groundwater
25SB-10	(0-2’)	Shallowest (below slab)
	(11-10’)	Deepest interval above groundwater
25SB-11	(0-2’)	Shallowest (below slab)
	(11-10’)	Deepest interval above groundwater
25SB-12	(0-2’)	Shallowest (below slab)
	(11-10’)	Deepest interval above groundwater
25SB-13	(0-2’)	Shallowest (below slab)
	(11-10’)	Deepest interval above groundwater
25SB-14	(0-2’)	Shallowest (below slab)
	(7-9’)	Intermediate interval below fill layer
	(11-12’)	Deepest interval above groundwater

DAILY STATUS REPORT

Prepared By: Victor Chang

NYSDEC BCP Site No:	C224392	**Date:**	July 7, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	P. Cloudy, 75-86 ^{0}F
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:

Environmental Consultant: Vektor Consultants – Ben Neumann & Izzy Hettleman

Driller: Coastal Environmental Solutions – Brandon Sullivan & Jason Rosser

NYSDEC Representative: WSP – Chris Disclafani

Work Activities Performed:

- Coastal continued using a Geoprobe 6011DT direct-push drill rig to advance soil borings to facilitate the collection of waste characterization samples to facilitate soil disposal facility approvals in Grids A3, A4, B3, and B4 to depths ranging between 5 and 12 feet below grade. Soil samples were collected as five-point composite samples with a volatile organic compound (VOC) grab sample for each depth interval representative of the respective waste characterization grid. Additional total and TCLP samples were collected in the same grids to confirm historically elevated concentrations of lead and mercury to supplement disposal facility approvals.
- Soil samples were collected from each of the borings and submitted for laboratory analysis for TCL+10 VOCs, TCL+20 SVOCs, TAL Metals, TCLP RCRA 8 Metals, PCBs, hexavalent chromium, mercury, boron, molybdenum, ammonia, tin, pesticides, herbicides, EPH, and RCRA characteristics. All samples were immediately placed in a cooler with ice after labeling and transported to Pace Analytical Services of Westborough, Massachusetts under proper chain of custody procedures.

Community Air Monitoring Program

Real-time Community Air Monitoring Plan (CAMP) was implemented during all intrusive work at an upwind and a downwind location. The CAMP stations were relocated as needed based on the area of work. No CAMP exceedances were observed.

Problems Encountered

N/A

Planned Activities for the Next Day

The remedial investigation will continue in accordance with the RIWP including the advancement of soil borings, installation of groundwater monitoring wells and soil vapor points, and the collection and submitting of soil and soil vapor samples for laboratory analysis. Collection of waste characterization samples to facilitate disposal facility approvals will continue.

Samples Collected:

Waste characterization samples were collected in Grids A3, A4, B3, and B4.

DAILY STATUS REPORT

Prepared By: Victor Chang

NYSDEC BCP Site No:	C224392	**Date:**	July 11, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	P. Cloudy, 73-84 ^{0}F
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:

Environmental Consultant: Vektor Consultants – Ben Neumann & Peter Rathsack

Driller: Coastal Environmental Solutions – Patrick Kirwa & Paul Nelson

NYSDEC Representative:– WSP - Chris Disclafani; NYSDEC – Rafi Alam

Work Activities Performed:

- Coastal mobilized an Eijkelkamp SonicSampDrill SRS ML rotosonic drill rig to advance soil borings to evaluate the source of Grossly Contaminated Material (GCM) and Non-Aqueous Phase Liquid (NAPL) material at the site, and if discovered to delineate the nature and extent of contamination.
- No GCM/NAPL were observed in the soil boring, however, under the direction of NYSDEC two samples were collected at the depth intervals 27-28 and 40-41 feet below grade and placed on hold until further direction is received.
- One of two of the borings, GCM #2 for the GCM investigation consists of two soil borings was advanced and completed to approximately 90 feet below grade surface. All soil drill cuttings were containerized in 55-gallon steel drums and boreholes were patched to match pre-existing conditions at the end of the workday.
- All work was done in accordance with the On-Site Contaminant Delineation letter dated January 23, 2025, from the NYSDEC.

Community Air Monitoring Program

Real-time Community Air Monitoring Plan (CAMP) was implemented during all intrusive work at an upwind and a downwind location. The CAMP stations were relocated as needed based on the area of work. No CAMP exceedances were observed.

Problems Encountered

N/A

Planned Activities for the Next Day

The GCM investigation will continue with installation of GCM #1. The remedial investigation will continue in accordance with the RIWP including collection and submitting of groundwater and soil samples for laboratory analysis.

Samples Collected:

GCM (27-28) and GCM2 (40-41) were collected from soil boring GCM #2 and placed on hold.

DAILY STATUS REPORT

Prepared By: Victor Chang

NYSDEC BCP Site No:	C224392	**Date:**	July 14, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	P. Cloudy, 76-83 ^{0}F
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:

Environmental Consultant: Vektor Consultants – Ben Neumann & Peter Rathsack

Driller: Coastal Environmental Solutions – Steve Kuhn & Paul Nelson

NYSDEC Representative:– WSP - Chris Disclafani

Work Activities Performed:

- Coastal continued the Grossly Contaminated Material (GCM) and Non-Aqueous Phase Liquid (NAPL) investigation at the site and advanced the second boring location GCM #1 with an Eijkelkamp SonicSampDrill SRS ML rotosonic drill rig to 90 feet below grade. All soil drill cuttings were containerized in 55-gallon steel drums and boreholes were patched to match pre-existing conditions at the end of the workday.
- The GCM investigation was concluded as no GCM was found in either of the two borings, GCM #1 and GCM #2. All work was done in accordance with the On-Site Contaminant Delineation letter dated January 23, 2025, from the NYSDEC.
- Vektor Consultants continued with the Remedial Investigation (RI) and sampled groundwater monitoring wells MW-1, MW-2, and MW-5.

Community Air Monitoring Program

Real-time Community Air Monitoring Plan (CAMP) was implemented during all intrusive work at an upwind and a downwind location. The CAMP stations were relocated as needed based on the area of work. No CAMP exceedances were observed.

Problems Encountered

- During drilling an overhead fire sprinkler line was damaged which caused water to leak from the pipe. Work was paused and the water was contained to prevent off-site migration. FDNY came on site and shut off the sprinkler system valve. A plumber was scheduled to fix the sprinkler line. Work resumed after receiving confirmation from FDNY and NYSDEC.

Planned Activities for the Next Day

The remedial investigation will continue in accordance with the RIWP including collection and submitting of groundwater and soil samples for laboratory analysis.

Samples Collected:

MW-1, MW-2, MW-5 and requisite QA/QC samples.

DAILY STATUS REPORT

Prepared By: Ben Neumann

NYSDEC BCP Site No:	C224392	**Date:**	July 15, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	Overcast to sunny, 73-93 ^{0}F
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:

Environmental Consultant: Vektor Consultants – Ben Neumann & Peter Rathsack

NYSDEC Representative: WSP - Chris Disclafani

Plumbers: JK Plumbing & Heating – Rafael Chuqui

Work Activities Performed:

- JK Plumbing & Heating reported to the site to repair the sprinkler line damaged during drilling events in connection with the GCM investigation performed on July 14, 2025.
- Vektor Consultants continued with the Remedial Investigation (RI) and sampled groundwater monitoring wells MW-3, MW-6, and MW-7.

Community Air Monitoring Program

- Intrusive drilling was not performed on July 15, 2025. Therefore, air monitoring was not performed.

Problems Encountered

- None

Planned Activities for the Next Day

- The remedial investigation will continue in accordance with the RIWP including collection and submitting of groundwater samples for laboratory analysis.

Samples Collected:

- MW-3, MW-6, and MW-7

DAILY STATUS REPORT

Prepared By: Ben Neumann

NYSDEC BCP Site No:	C224392	**Date:**	July 16, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	Sunny, 73-90 ^{0}F
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:

Environmental Consultant: Vektor Consultants – Ben Neumann

NYSDEC Representative: WSP - Chris Disclafani

Surveyors: Montrose Surveying Co. – Mark Leechong & Ivan Chegda

Work Activities Performed:

- Montrose surveyors surveyed the locations of the onsite monitoring wells in addition to two offsite monitoring wells in the sidewalk.
- Vektor Consultants continued with the Remedial Investigation (RI) and sampled groundwater monitoring wells MW-4, MW-8, B8DW, and B10D.

Community Air Monitoring Program

- Intrusive drilling was not performed on July 16, 2025. Therefore, air monitoring was not performed.

Problems Encountered

- None

Planned Activities for the Next Day

- The remedial investigation is complete. Further activities are not currently planned.

Samples Collected:

- MW-4, MW-8, B8DW, and B10D

DAILY STATUS REPORT

Prepared By: Ben Neumann

NYSDEC BCP Site No:	C224392	**Date:**	August 21, 2025
Project Name:	601-607 Union Street, Brooklyn, NY	**Weather:**	Sunny, 60-73 ^{0}F, Rain, Overcast, Windy
Applicant Name:	601 Union Street Owner LLC		

Personnel On-Site:

Environmental Consultant: Vektor Consultants – Ben Neumann & David Klein

Drillers: Coastal Environnemental Solutions, Inc. – Paul Nelson

NYSDEC Representative: WSP - Chris Disclafani

Surveyors: Montrose Surveying Co. – Mark Leechong & Ivan Chegda

Work Activities Performed:

- Installed six soil borings to 30 feet bgs throughout the site to vertically delineate soil contamination identified during the Remedial Investigation. The borings were installed in the original locations of 25SB-4, 25SB-5, 25SB-6, 25SB-9, 25SB-10, and 25SB-11.
- Montrose surveyors surveyed the locations of the onsite monitoring wells in addition to two offsite monitoring wells in the sidewalk.

Community Air Monitoring Program

- Real-time Community Air Monitoring Program (CAMP) was implemented during all intrusive work at an upwind and a downwind location. The CAMP stations were relocated as needed based on the area of work. No CAMP exceedances were observed.

Problems Encountered

- None

Planned Activities

- Vektor Consultants will return to the site on Tuesday, August 26, 2025 to continue the delineation of soil contamination identified during the Remedial Investigation.

Samples Collected:

- 25SB-4X: (6-7'), (7-8'), (9-10'), (13-15'), (15-17'), (17-19'), (19-21'), (21-23'), (23-25'), (25-27'), (27-29'), & (29-30')
- 25SB-5X: (12-14'), (14-16'), (16-18'), (18-20'), (20-22'), (22-24'), (24-26'), (26-28'), & (28-30')
- 25SB-6X: (6-7'), (7-8'), (9-10'), (10-12'), (12-14'), (14-16'), (16-18'), (18-20'), (20-22'), (22-24'), (24-26'), (26-28'), & (28-30')
- 25SB-9X: (2-4'), (4-6'), (6-8'), (8-10'), (10-12'), (12-14'), (14-16'), (16-18'), (18-20'), (24-26'), (26-28'), & (28-30')
- 25SB-10X: (7-8'), (12-14'), (14-16'), (16-18'), (18-20'), (20-22'), (22-24'), (24-26'), (26-28'), & (28-30')
- 25SB-11X: (7-8'), (12-14'), (14-16'), (16-18'), & (18-20')

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments and solids are reported on a dry weight basis unless otherwise noted. Tissues are reported "as received" or on a wet weight basis, unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Pace Project Manager and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	601-607 UNION ST	**Lab Number:**	L2541375
Project Number:	25030019	**Report Date:**	07/14/25

Case Narrative (continued)

Report Submission

July 14, 2025: This final report includes the results of all requested analyses.

July 11, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2541375-10 and -11: The Client IDs were changed at the client's request.

Perfluorinated Alkyl Acids by 1633

L2541375-02: The Extracted Internal Standard recoveries were above the acceptance criteria for 1h,1h,2h,2h-perfluoro[1,2-13c2]octanesulfonic acid (m2-6:2fts) (274%), 1h,1h,2h,2h-perfluoro[1,2-13c2]decanesulfonic acid (m2-8:2fts) (356%), n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (d3-nmefosaa) (189%), and n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (d5-netfosaa) (156%). Since the sample was non-detect to the RL for all associated target analytes, re-analysis was not required.

L2541375-14: The sample has elevated detection limits due to limited sample volume available for analysis.

WG2086488-2: The sample was re-analyzed due to QC failures in the original analysis. The results of the re-analysis are reported.

The WG2086488-2 LCS recovery associated with L2541375-14 is above the acceptance criteria for 4,8-dioxa-3h-perfluorononanoic acid (adona) (146%); however, the associated sample is non-detect to the reporting limit for this target analyte. The results of the original analysis are reported.

Semivolatile Organics by SIM

L2541375-14: The Field Blank has concentrations above the reporting limits for naphthalene and 2-methylnaphthalene. The sample was re-extracted with the method required holding time exceeded and was non-detect for these target compounds. The results of both extractions are reported.

Project Name:	601-607 UNION ST	**Lab Number:**	L2541375
Project Number:	25030019	**Report Date:**	07/14/25

Case Narrative (continued)

Total Metals

L2541375-01 through -13: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG2089197-3 MS recoveries performed on L2541375-01 do not apply for aluminum (323%), calcium (287%), iron (0%), lead (0%), magnesium (167%), manganese (127%), and zinc (413%) because the sample concentrations are greater than four times the spike amounts added.

The WG2089197-3 MS recoveries performed on L2541375-01 are outside the acceptance criteria for antimony (24%), barium (284%), and copper (70%). A post digestion spike was performed and was within acceptance criteria.

The WG2089197-3 MS recovery performed on L2541375-01 is outside the acceptance criteria for arsenic (68%). A post digestion spike was performed and yielded an unacceptable recovery of 72%. The serial dilution recovery was not applicable; therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The WG2089197-4 Laboratory Duplicate RPDs performed on L2541375-01 are outside the acceptance criteria for barium (28%), calcium (37%), magnesium (28%), and zinc (45%) due to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
