Prepared By: Budhiono Riyanto

WEATHER	Snow		Rain		Overcast		Partly Cloudy		Bright Sun	X
TEMP.	< 32		32-50		50-70		70-85	X	>85	

NYSDEC BCP Site No:	C224392	Date:	7/22/2026
Project Name:	601-607 Union Street Site 601-607 Union Street, Brooklyn, NY		

Consultant: Vektor Consultants- Budhiono Riyanto	Personnel On-Site: KMI – Foundation/Excavation Contractor RYC Turbos – Piling Subcontractor
--	--

Work Activities Performed:

- KMI exported 8 truckloads (approximately 200 CY) of hazardous materials from Grid WC3A to Clean Earth of North Jersey in Kearny, NJ, and 4 truckloads (approximately 100 CY) of asphalt to Allocco Recycling in Brooklyn, NY.
- KMI removed the previously cleaned 3,000-gallon tank from the northeastern portion of the site and placed it along the southwestern portion of the site to be removed by a licensed tank contractor at a later date.
- RYC Turbos performed general housekeeping onsite.
- One upwind and two downwind CAMP stations were set up as described below.
- No odors or evidence of release were observed during the work.
- As part of the remedial program, to evaluate the remedy with respect to green and sustainable remediation principles, an environmental footprint analysis was completed. The environmental footprint analysis was completed using an accepted environmental footprint analysis calculator, SEFA (Spreadsheets for Environmental Footprint Analysis, USEPA). Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction, and material use were estimated, and goals for the project related to these green and sustainable remediation metrics. The following footprint was calculated at the Site. It was estimated that approximately 14,905 pounds of greenhouse gas emissions (GHG) emissions (carbon dioxide equivalents of global warming potential), 82 pounds of NOx emissions, 23 pounds of SOx emissions, 97 pounds of particulate matter (PM) emissions, and 1 pounds of hazardous air pollutants (HAPs) were emitted during the reporting period at the Site. The majority of the emitted pollutants were due to off-site scopes, including laboratory analysis.

Community Air Monitoring Program (CAMP)

Upwind and downwind CAMP stations were placed near the perimeters of the Site during intrusive work. A downwind CAMP was positioned in the southwestern portion of the Site, and a second downwind CAMP station was in the southern portion of the Site along the adjoining neighboring building. The upwind CAMP station was in the northeastern portion of the Site.

Background Levels (Initial Readings at Start of Day):

PID: 0.0 ppm Dust: 22.9 µg/m³

Highest Levels:

PID: 0.0 ppm Dust: 43.6 µg /m³

No Downwind Respirable Dust concentrations were detected in exceedance of the New York State Department of Health Generic CAMP Response Levels at a work area CAMP station.

No VOC concentrations were detected in exceedance of the New York State Department of Health Generic CAMP Response Levels at a work area CAMP station.

Problems Encountered

- None

Planned Activities for the Next Week/Month: 3,000-gallon AST removal, mobilization, C&D export and soil export sitewide, dewatering, foundation formwork

	A-5	Total greenhouse gas emissions	Tons CO2e*	7.5	0.0	0.0	0.0	0.0	0.0	7.5
Land & Ecosystems		Qualitative Description								

* Total greenhouse gases emissions (in CO2e) include consideration of CO2, CH4, and N2O (Nitrous oxide) emissions.

"MMBtu" = millions of Btus

"MG" = millions of gallons

"CO2e" = carbon dioxide equivalents of global warming potential

"MWh" = megawatt hours (i.e., thousands of kilowatt-hours or millions of Watt-hours)

"Tons" = short tons (2,000 pounds)

The above metrics are consistent with EPA's Methodology for Understanding and Reducing a Project's Environmental Footprint (EPA 542-R-12-002), February 2012

Notes:
