CERTIFICATION

I, Jason J. Hayes, certify that I am currently a Qualified Environmental Professional as defined in Title 6 of the official compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10).

DRAFT

_____

Jason J. Hayes, P.E., LEED AP

DRAFT

1.0 INTRODUCTION

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of 450 Johnson Ave Brooklyn LLC for the property located at 450 Johnson Avenue in the East Williamsburg neighborhood of Brooklyn, New York (the site). 450 Johnson Ave Brooklyn LLC (the Volunteer) is enrolled in the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) pursuant to the Brownfield Cleanup Agreement (BCA) executed on May 29, 2024.

The objective of the Remedial Investigation (RI) is to investigate and characterize the nature and extent of environmental conditions at the site and to evaluate whether any contamination is emanating from the site. The RI will generate a data set sufficient to perform a qualitative on- and off-site human health exposure assessment and to evaluate remedial alternatives. This RIWP was developed in accordance with the process and requirements identified in the NYSDEC Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation (May 2010); NYSDEC Sampling, Analysis and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (April 2023) (NYSDEC PFAS Guidance); and the New York State Department of Health (NYSDOH) "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates) (NYSDOH Decision Matrices).

DRAFT

2.0 SITE BACKGROUND

2.1 Site Description

The site is approximately 35,000 square feet (approximately 0.8 acres) in area, located in the East Williamsburg neighborhood of Brooklyn, New York and is identified as Block 2992, Lot 17 on the Brooklyn Borough Tax Map. The site is in the middle of the city block bound by Johnson Avenue to the north, Porter Avenue to the east, Ingraham Street to the south, and Knickerbocker Avenue to the west, and has 200 feet of frontage along Johnson Avenue and 150 feet of frontage along Ingraham Street. The English Kills, a tributary of Newtown Creek, is located approximately 250 feet north of the site. A site location map is provided as Figure 1 and a site plan is provided as Figure 2.

The site is developed with three inter-connected buildings and a parking lot:

- A two-story, 2,500-square-foot commercial warehouse and office building; and a one-story, 7,500-square-foot warehouse currently operated by All Season Restoration, Inc. (dba Servpro, a cleaning and restoration contractor);
- A one-story, 20,000-square-foot commercial warehouse, currently operated by Simply Stino's Inc. (a beverage distributor); and
- A 5,000 square-foot asphalt-paved parking lot, currently used by Simply Stino's Inc.

A sewer easement for a 90-inch-diameter sewer exists on the western part of the site, transecting the site from Johnson Avenue to Ingraham Street. The New York City Department of Environmental Protection (NYCDEP) standard width for sewer easements is typically 15 feet on either side of the sewer; however, the easement was recorded prior to the formation of the NYCDEP and the city entity that is referenced in the easement text is the Brooklyn Borough President's Office.

According to the New York City Planning Commission (NYCPC) Zoning Map 13b, dated March 19, 2024, the site is located in an M1-2 manufacturing area. An M1-2 area is characterized by light industry such as woodworking and auto repair shops, and often serves as a buffer between manufacturing and adjacent residential or commercial areas. Current and future land uses at the site are consistent with this zoning designation.

2.2 Surrounding Property Land Use

The site is located in a mixed-use area with multi-story commercial, light industrial and residential buildings. The following is a summary of surrounding property use:

DRAFT

Direction	Adjoining Properties	Surrounding Properties
North	Johnson Avenue followed by a parking lot and the southernmost edge of Newtown Creek (English Kills)	Parking lots, Newtown Creek, multi-story commercial buildings
East	One four-story commercial/industrial use building	Multi-story commercial and industrial buildings
South	Ingraham Street followed by two two-story industrial buildings	Multi-story commercial, industrial, and residential buildings
West	A two-story industrial building	Multi-story commercial, industrial, and residential buildings

Public infrastructure (storm drains, sewers, and underground utility lines) exists within the streets surrounding the site. A land use map showing the adjacent and surrounding properties is provided as Figure 3.

Land use within a half-mile radius includes residential, commercial, light industrial and institutional uses and park land. The nearest ecological receptor is the English Kills, a tributary of Newtown Creek, located approximately 250 feet north of the site. Sensitive receptors, as defined in DER-10, located within a half-mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	Peter Jay Sharp Health Center (approx. 0.09 miles east of the site)	89 Porter Avenue Brooklyn, NY 11237
2	Bethany Christian Church (approx. 0.14 miles southeast of the site)	42 Porter Avenue Brooklyn, NY 11237
3	La Pena Pentecostal Church (approx. 0.19 miles southwest of the site)	34 Morgan Avenue Brooklyn NY, 11237
4	Justice Gilbert Ramirez Park (approx. 0.21 miles southwest of the site)	62 White Street Brooklyn NY, 11206
5	La Finca Community Garden (approx. 0.26 miles south of the site)	1036 Flushing Avenue Brooklyn NY, 11237
6	PS145 (approx. 0.38 miles southwest of the site)	100 Noll Street Brooklyn, NY 11206

DRAFT

7	Bushwick United HDFC 2 (approx. 0.38 miles south of the site)	77 Wilson Avenue Brooklyn, NY 11237
8	Williamsburg Charter High School - K473 (approx. 0.39 miles southwest of the site)	198 Varet Street Brooklyn, NY 11206
9	I.S. 349 Math, Science & Tech. (approx. 0.42 miles south of the site)	35 Starr Street Brooklyn, NY 11221
10	Young Women's Leadership School of Brooklyn (approx. 0.44 miles southwest of the site)	325 Bushwick Avenue Brooklyn, NY 11206
11	PS196 / MS582 (approx. 0.45 miles west of the site)	207 Bushwick Ave. Brooklyn, NY 11206
12	Maria Hernandez Park (approx. 0.43 miles southeast of the site)	64 Irving Avenue Brooklyn, NY 11237
13	P.S. 123 Suydam (approx. 0.46 miles southeast of the site)	100 Irving Avenue Brooklyn, NY 11237
14	East Williamsburg Scholars Academy K477 (approx. 0.47 miles northwest of the site)	850 Grand Street Brooklyn, NY 11211
15	The High School for Enterprise, Business and Technology (approx. 0.47 miles northwest of the site)	850 Grand Street Brooklyn, NY 11211
16	PROGRESS High School for Professional Careers (approx. 0.47 miles northwest of the site)	850 Grand Street Brooklyn, NY 11211

2.3 Site Physical Conditions

2.3.1 Topography

The site elevation ranges from about 12 feet above mean sea level (amsl) on the northern side to about 19 feet amsl on the southern side, according to geographic information system (GIS) elevation data. The grade of the three buildings is approximately level, while the surrounding area slopes north toward Newtown Creek. The southern sides of all three buildings on the site are approximately five feet below the surface grade of the parking lot and the northern entrances are level with Johnson Avenue.

DRAFT

2.3.2 Geology

The site is located in a developed area of Brooklyn, New York that is generally covered with paved roads, public walkways and buildings. The built environment is generally underlain by uncontrolled fill used for construction and development since the 1800's. According to the "Bedrock and Engineering Geologic Maps of Kings and Queens Counties, New York, and Parts of Bergen County, New Jersey" by Charles A. Baskerville, et al., the bedrock underlying the site is the Hartland Formation. The Hartland Formation east of the East River is comprised of interbedded units of gray thinly laminated muscovite-biotite-quartz schist with minor garnet; gray fine-grained biotite-muscovite-quartz schist; white to pinkish white, light-green-weathering fine- to medium-grained gneissic quartz-microcline-muscovite-biotite-plagioclase granite with minor garnet; dark-greenish-black quartz-biotite-hornblende amphibolite with some white and/or pink granite pegmatite; and gray unevenly foliated sillimanite-plagioclase-muscovite-biotite-microcline-quartz gneissic schist with minor garnet.

The site is underlain by fill predominantly consisting of gray and orange brown to dark brown fine to medium sand and silt with varying amounts of brick, glass, metal, wood, coal, coal ash, and tile pieces. The fill was observed from surface grade to a depth of approximately 8 to 17 feet below grade surface (bgs) during previous environmental investigations. Brown, orange-brown, and gray fine sand with varying amounts of gravel, clay, organics, and silt was observed below the fill. Bedrock was not encountered; however, based on Langan's experience in the surrounding area, bedrock is expected to be present over 200 feet bgs.

2.3.3 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, coverage by impervious surfaces, and subsurface structures. Other factors influencing groundwater include depth to bedrock, the presence of anthropogenic fill, and variability in local geology and groundwater sources or sinks.

Groundwater was observed between approximately 5 and 15 feet bgs during previous environmental investigations. Based on the general topography of the surrounding area, inferred groundwater flow is to the north, towards Newtown Creek.

Infiltration of precipitation to the water table is likely minimal due to the current presence of impervious surfaces throughout the site. The majority of runoff drains to city sewers and then to one of the several wastewater treatment plants that serve the city. Groundwater in Brooklyn

DRAFT

is not used as a potable water source. Potable water provided to the City of New York is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

2.3.4 Wetlands

Wetlands were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands map. There are no designated wetlands on the site. Newtown Creek, an estuarine and marine deepwater wetland, is located approximately 250 feet north of the site.

2.3.5 Subsurface Infrastructure

A sewer easement for a 90-inch-diameter sewer exists on the western part of the site, transecting the site from Johnson Avenue to Ingraham Street. The New York City Department of Environmental Protection (NYCDEP) standard width for sewer easements is typically 15 feet on either side of the sewer; however, the easement was recorded prior to the formation of the NYCDEP and the city entity that is referenced in the easement text is the Brooklyn Borough President's Office.

Based on correspondence from the NYCDEP in March 2023, a field investigation was performed to confirm the presence, location, and condition of the sewer. The NYCDEP sewer was confirmed to traverse the site and was identified to be an active combined sewer that was in good condition at the time of the investigation. Based on available surveys, the top of the sewer is anticipated to be situated at about elevation (el) 6.5, referenced to the North American Vertical Datum of 1988 (NAVD88), which corresponds to about 13 to 14 feet bgs. Groundwater was previously observed between about 5 and 15 feet bgs and the sewer may be situated below the groundwater table. Therefore, contaminant migration through the sewer is possible and groundwater elevation and flow direction will be further evaluated during implementation of the RIWP. NYCDEP correspondence related to the sewer identification is provided in Appendix A.

2.4 Summary of Previous Environmental Investigations

Environmental reports and related documents prepared for the site include the following (copies are provided in Appendix A):

- Phase I Environmental Site Assessment (ESA), prepared by Langan, dated 23 August 2019
- Phase II Environmental Site Investigation (ESI) prepared by Langan, dated 24 September 2019
- Supplemental Site Investigation Report, prepared by Langan, dated 28 September 2022

The following presents a summary of relevant findings for each report.

<u>Phase I Environmental Site Assessment, prepared by Langan, dated 23 August 2019</u>

Langan prepared a Phase I ESA on behalf of Prologis, Inc. for the site in accordance with ASTM E1527-13 and the USEPA AAI Rule, for the purpose of identifying recognized environmental conditions (RECs) in connection with the site. At the time of the site reconnaissance, the property was occupied by Envelope Manufacturers Corp., but manufacturing was no longer occurring.

The following RECs were identified in the Phase I ESA:

- REC 1 – Current and Historical Site Use

  Historical records indicate the site had been used for a variety of industrial operations since at least 1907, including as a lumber yard (1907-1951), an auto garage (1928-1934), a metal working facility (1933), a paper box manufacturing facility (1951), and an envelope manufacturing facility (1992-2019).

  During the site reconnaissance, a septic holding tank was observed in the northeast corner of the site. One gasoline underground storage tank (UST) was reported in the northeast corner of the site (1933) and presumed to have been removed, as the location of the septic tank and former gasoline UST appeared coextensive. Two fuel oil USTs to support former oil burning boilers were reported at the site (1912-1990) but were not observed during the site reconnaissance.

- REC 2 – Current and Historical Operations of Surrounding Properties

  The area surrounding the site has been used for industrial purposes since at least 1888 through the present. Activities have included rail freight yards, plastics manufacturing, pharmaceutical manufacturing, a coal yard, auto repair shops, metal working, a dry cleaners/laundry, and miscellaneous manufacturing.

  There is a known historical presence of chlorinated volatile organic compounds (VOC) in groundwater in the Ingraham Street Sidewalk project, which adjoins the site to the south. The Ingraham Street Sidewalk project (New York State Hazardous Waste Site [SHWS] ID No. 224142) is classified as a potential (P) site in the New York State Superfund Program. The Ingraham Street Sidewalk site represents the off-site portion of the Popular Hand Laundry Site (VCP Site No. V00170), which the NYSDEC certified to be completed (i.e., remediated) in June 2017. Reported historical uses of this VCP Site included paper box manufacturing, metal works, drum storage and cleaning, and dry-cleaning operations.

Phase II Environmental Site Investigation, prepared by Langan, dated 24 September 2019

A Phase II ESI was performed for the site between July 15 and 19, 2019. The scope of the investigation included a geophysical survey assessing subsurface anomalies and potential presence of USTs, collection of 19 soil samples from 16 soil borings, collection of 7 groundwater

samples from 6 temporary wells, and collection of 3 co-located sub-slab vapor and indoor air samples.

The following is a summary of the findings:

- *Geophysical Survey*: Floor drains with a network of subsurface conveyance piping are present in the northeast portion of the site. A septic tank was identified in this same area, with the geophysical surveys suggesting the conveyance piping of the floor drains route to the tank.

Soil

- *Subsurface Observations*: Surficial concrete was underlain by fill to depths of approximately 8 to 17 feet bgs. Fill generally consisted of gray, orange-brown, and brown silt and sand with varying amounts of brick, glass, coal, coal ash, and tile pieces. Native soil underlying fill was identified from about 8 feet to 21 feet bgs (deepest boring terminus) and generally consisted of brown, orange-brown, brown-and-gray silty fine sand with varying amounts of gravel, clay, organics and silt.
- Petroleum-like odors or elevated PID readings were observed in two borings (SB03 from 10 to 14 feet bgs and SB04 from 8 to 15 feet bgs) in the northeastern part of the site, and in one boring (SB16 from 0.5 to 6 feet bgs) in the southwestern part of the site. N-propylbenzene was detected at a concentration of 6.7 milligrams per kilogram (mg/kg) in boring SB04, above the NYSDEC Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (6 NYCRR) Part 375 Protection of Groundwater (PGW) Soil Cleanup Objectives (SCO).[1]
- Semivolatile organic compounds (SVOC) (specifically polycyclic aromatic hydrocarbons [PAH]) and metals are present in the fill layer. Detections of SVOCs ranged from 0.28 mg/kg to 4.3 mg/kg. Benzo(a)pyrene (ranging from 2.0 to 4.3 mg/kg) and arsenic (67 mg/kg) concentrations exceeded the 6 NYCRR Part 375 Restricted Use-Industrial (RUI) SCO.
- Chlorinated VOCs, vinyl chloride and cis- and trans-1,2-dichloroethethene (DCE), were detected above the 6 NYCRR Part 375 PGW SCOs in one soil sample collected from within the water table (14 to 14.5 feet bgs) at boring SB08.

Groundwater

- Chlorinated VOCs (tetrachloroethene [PCE], trichloroethene [TCE], cis-1,2-DCE, and vinyl chloride) were detected above NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGV) for Class GA

[1] Soil boring locations are shown on Figure 4.

DRAFT

groundwater in groundwater samples from three temporary monitoring wells (TMW04, TMW07, and TMW08).[2]

- Petroleum-related compounds were detected above SGVs in groundwater samples from wells two temporary monitoring wells (TMW03 and TMW04).

Sub-slab Vapor and Indoor Air

- Petroleum-related and chlorinated VOCs were detected in sub-slab soil vapor and indoor air samples. The total VOCs detected in sub-slab vapor ranged from 2,907 micrograms per cubic meter (µg/m^3) in SSV03 to 5,593 µg/m^3 in SSV01,[3] with detections in indoor air ranging from 305 µg/m^3 in IA01 to 989 µg/m^3 in IA02. When evaluating the sub-slab vapor and indoor air samples using the NYSDOH Decision Matrices, the resulting recommendations range from "no further action" to "mitigate." Detected concentrations of VOCs in indoor air did not exceed NYSDOH air guidance values (AGV).

Supplemental Site Investigation Report, prepared by Langan, dated 28 September 2022

The supplemental site investigation was conducted on July 28, 29, and August 1, 2022 and consisted of:

- Installation of 9 soil borings to 8 to 30 feet bgs and collection of 19 soil samples
- Installation of 2 monitoring wells to 19 feet bgs and collection of 2 groundwater samples
- Installation of 1 soil vapor sampling point to 13 feet bgs, and 1 sub-slab soil vapor sampling point, and collection of 2 soil vapor samples
- Collection of quality assurance/quality control (QA/QC) samples

The following is a summary of the findings:

Soil

- *Subsurface Observations*: Fill predominantly consisting of brown to dark brown, silty fine to medium sand with varying amounts of coal, fine red gravel, glass, metal, and wood was observed from surface grade to approximately 15 to 17 feet bgs (fill was present at the terminus of certain soil borings). Light brown, fine to medium-grained sand with varying amounts of clay and gravel was observed below the fill to the boring terminus.
- Petroleum-like impacts (odors, staining, and/or PID readings above background) were observed in soil boring SB26.[4] Petroleum-related compounds were not detected in soil at levels exceeding the PGW or RUI SCOs at this location.

[2] Monitoring well locations are shown on Figure 5.
[3] Soil vapor sample locations are shown on Figure 6.
[4] Soil boring locations are shown on Figure 4.

DRAFT

- Soil samples contained VOCs, SVOCs, and metals at concentrations exceeding PGW SCOs, and SVOCs and metals at concentrations exceeding RUC and/or RUI SCOs. Toxicity characteristic leaching procedure (TCLP) lead was detected in boring SB08 at a concentration of 7.88 milligrams/liter (mg/L), exceeding the Resource Conservation and Recovery Act (RCRA) Characteristic of Hazardous Waste limit for lead. PCE and TCE were detected in boring SB23 from 1 to 3 feet bgs at concentrations of 20 mg/kg and 1.4 mg/kg, respectively, exceeding the PGW SCOs. Vinyl chloride was also detected in boring SB23 in a sample collected from 13 to 15 feet bgs at a concentration of 0.029 mg/kg, exceeding the PGW SCO.

Groundwater

- Chlorinated VOCs (PCE, cis-1,2-DCE, and vinyl chloride) were detected above SGVs in groundwater samples from temporary monitoring wells TMW09 and TMW10.

Soil and Sub-slab Vapor

- Chlorinated VOCs (PCE and TCE) were detected at concentrations of 5,520 µg/m^3 and 365 µg/m^3, respectively, which are above the NYSDOH Decision Matrix A thresholds that trigger a recommendation of "mitigate" in the absence of associated indoor air data. Total VOC concentrations were detected in sub-slab vapor at a maximum of 6,975 µg/m^3 in sample SSV04.

The data presented in the Phase II ESI Report and the Supplemental Site Investigation Report were not validated at the time of reporting; however, the data will be validated and presented in a Data Usability Summary Report included in the forthcoming Remedial Investigation Report (RIR).

A summary of soil, groundwater, and soil vapor sampling results are provided on Figures 4, 5, and 6, respectively.

2.5 Preliminary Areas of Concern

Based on site history and the findings of the previous studies, the preliminary areas of concern (PAOC) to be further investigated during the remedial investigation (RI) are described below and shown on Figure 7:

PAOC 1: Chlorinated Solvents in Shallow Soil

Chlorinated solvents were detected in shallow soil at a depth interval between 1 and 3 feet bgs in the southern part of the site. One sample from the 1-to-3-feet bgs interval in boring SB23 contained PCE and TCE at concentrations of 20 mg/kg and 1.4 mg/kg, respectively, above the PGW SCOs. The deeper sample from this boring, taken from the 13-to-15-feet bgs interval, contained PCE and TCE at concentrations of 0.0098 mg/kg and 0.0032 mg/kg, respectively (three

to four orders of magnitude lower than the shallower interval). Additional investigation is needed to determine the potential for and extent of any release of chlorinated solvents from historical site operations in this area.

PAOC 2: Chlorinated Solvents in Groundwater and Soil Vapor

Chlorinated solvents were detected in groundwater and soil vapor at the site during previous investigations. PCE and TCE were detected in sub-slab vapor at concentrations of 5,520 µg/m^3 and 365 µg/m^3, respectively, which warrants mitigation in future development according to the NYSDOH Decision Matrix. No further sampling is proposed as any future development will include mitigation of this exposure pathway.

There is a known historical presence of chlorinated volatile organic compounds (VOC) in groundwater in the Ingraham Street Sidewalk project, which adjoins the site to the south at a hydraulically upgradient location. The Ingraham Street Sidewalk project (SHWS ID No. 224142) is classified as a "P" site in the New York State Superfund Program and represents the off-site portion of the Popular Hand Laundry Site (VCP Site No. V00170), which the NYSDEC certified to be completed (i.e., remediated) in June 2017. Reported historical uses of this VCP Site included paper box manufacturing, metal works, drum storage and cleaning, and dry-cleaning operations.

A Site Characterization Work Plan (dated May 15, 2024) for the Ingraham Street Sidewalk Project was prepared by HRP Associates, Inc. (HRP) to investigate the extent of chlorinated solvent-related impacts in soil, groundwater, and soil vapor in the public right-of-way centered around 88 Ingraham Street (the former Popular Hand Laundry VCP site) and between three other remediation sites (including the site described by this RIWP). The Site Characterization Report for the Ingraham Street Sidewalk project is forthcoming and additional investigation at the site (beyond that described in this RIWP) may be required to further investigate the findings of the off-site CVOC investigation. Additional investigation at the site will be coordinated with the NYSDEC and NYSDOH for review and approval prior to implementation.

PAOC 3: Elevated Mercury in Soil

Mercury was detected in soil sample SB21_1-3 at a concentration of 49 mg/kg, above the RUI SCO. This sample was not analyzed using TCLP, and further investigation is required to determine if hazardous concentrations of mercury are present in this area.

PAOC 4: Elevated Lead in Soil

Lead was detected in soil samples SB23_1-3 and SB09_3.0-3.5 at concentrations of 1,990 mg/kg and 1,050 mg/kg, respectively. The sample from SB09 was not analyzed using TCLP, and further investigation is required to determine if hazardous concentrations of lead are present in this area. TCLP lead was detected in boring SB23 at a concentration of 7.88 mg/L, exceeding the RCRA Characteristic of Hazardous Waste limit for lead. Additional investigation is needed to delineate the extent of hazardous lead impacts.

PAOC 5: Observed Petroleum Impacts

Petroleum impacts (odors and elevated PID readings) were identified in the northeastern part of the site during previous investigations. Methyl tert-butyl ether (MTBE), a gasoline additive, was detected in groundwater above its SGV in this area. No petroleum-related chemicals were detected in soil samples in the area. Historical site use as an auto garage with a former gasoline UST (presumed to have been removed) may have contributed to contamination in the subsurface in the northeastern corner of the site. Additional investigation is needed to further characterize and delineate the extent of petroleum impacts in this area.

Petroleum-related VOCs (1,2,4-trimethylbenzene, 2,2,4-trimethylpentane, benzene, cyclohexane, ethylbenzene, heptane, hexane, toluene, and/or xylenes) were detected in sub-slab vapor and indoor air across the existing buildings at concentrations triggering recommendations ranging from "monitoring" to "mitigate" when evaluated against the NYSDOH Decision Matrices.

PAOC 6: Site-wide Contaminated Fill

The property is in an urban area that has been developed since the late 1800s. Fill of unknown origin was used to level the area for development. SVOCs and metals characteristic of contaminated fill widely used during this time were detected in soil samples across the site.

Previous environmental investigations identified contaminated fill predominantly consisting of brown to dark brown silty fine to medium sand with varying amounts of coal, fine red gravel, glass, metal, and wood observed from surface grade to approximately 15 to 17 feet bgs (fill was present at the terminus of certain soil borings). Additional soil borings will supplement existing data to delineate the extent of contaminated fill.

DRAFT

3.0 SCOPE OF WORK

The objective of this RIWP is to investigate and characterize "the nature and extent of the contamination at and/or emanating from the site," per Environmental Conservation Law (ECL) Article 27, Title 14 (Brownfield Cleanup Program, or BCP). The rationale for each sampling location in relation to the PAOCs and analytical parameters for each proposed sample are provided in Table 1. The field tasks are discussed in more detail in the following sections.

Geophysical Survey

- Perform a site-wide geophysical survey to identify potential USTs and clear investigation locations of underground structures and utilities. Sampling locations may be relocated as necessary based on the findings of the geophysical survey.

Soil Borings and Sampling

- Advance 12 soil borings to a maximum depth of 20 feet bgs or refusal.
- Collect up to 4 samples from each soil borings for a total of up to 48 soil samples (plus quality assurance/quality control [QA/QC] samples) for laboratory analysis.
- Advance 18 hazardous metal delineation soil borings (RIB11, RIB12, and RIB13 and six associated step-out borings from RIB11 and RIB12 and three associated step-out borings from RIB13) to 8 feet bgs.
    - Certain samples collected from RIB11 and associated step-outs will also be analyzed for VOCs to delineate shallow chlorinated solvent impacts.
- Collect up to 4 soil samples from each delineation soil boring for a total of up to 72 soil samples (plus QA/QC samples) for laboratory analysis. Select samples will be placed on hold, pending initial results, as described in Section 3.2.2 and Table 1.

Monitoring Well Installation and Sampling

- Install and develop 9 permanent monitoring wells, 3 of which are re-installations of previously drilled temporary monitoring wells.
- Collect 1 groundwater sample from each monitoring well (plus QA/QC samples) for laboratory analysis.
- Survey and gauge monitoring wells to establish groundwater elevations and evaluate flow direction.

DRAFT

Soil Vapor Point Installation and Sampling

- Install 8 temporary soil vapor points to about 5 feet bgs or 2 feet above the observed groundwater table, whichever is shallower.
- Collect 1 soil vapor sample from each soil vapor point for laboratory analysis.

A soil vapor intrusion (SVI) evaluation was performed during Langan's 2019 Phase II ESI and sub-slab vapor and indoor air results yielded a recommendation ranging from "no further action" to "mitigate" when evaluated against the NYSDOH decision matrices. As such, the previous analytical results confirm the need for a vapor mitigation system beneath the on-site building prior to full-time occupancy and additional sub-slab vapor and indoor air sampling is not proposed under this RIWP. The on-site buildings are currently limited to commercial warehousing.

Modifications to this scope of work may be required: 1) due to site operations, equipment or other access restrictions; 2) in the event that unexpected contamination is detected and additional analytical data is needed; and 3) to adequately characterize and delineate subsurface impacts in compliance with the BCP, regulations and applicable investigation guidance documents (e.g., DER-10). NYSDEC and NYSDOH will be contacted to obtain approval for these modifications.

The field investigation will be completed in accordance with NYSDEC DER-10 Guidance and the procedures specified in the Health and Safety Plan (HASP) and the Quality Assurance Project Plan (QAPP) included as Appendices B and C, respectively. A Community Air Monitoring Plan will be implemented during this investigation (see Section 3.7.2 and Appendix D).

The names, contact information and roles of the principal personnel who will participate in the investigation are listed below. The HASP contains emergency contact information (HASP Table 5) and a map with a route to the nearest hospital (HASP Figure 2). Résumés for Langan employees involved in the project are included in the QAPP (Appendix C).

3.1 Geophysical Survey

Langan will coordinate with a geophysical contractor to clear subsurface testing locations of potential subsurface utilities and to locate any additional USTs or other suspect anomalies. The site-wide geophysical survey will be completed using a collection of geophysical instruments, including electromagnetic and utility line locator instruments and ground-penetrating radar (GPR). Borings will be relocated as necessary to avoid subsurface utilities, infrastructure, or other impediments identified during the survey.

3.2 Soil Investigation

3.2.1 Drilling and Logging

An environmental drilling subcontractor will advance 12 soil borings (designated RIB01 through RIB10, RIB14 and RIB15) to 20 feet bgs and 18 soil borings (RIB11 through RIB13 and associated step-out borings) to 8 feet bgs to further investigate the PAOCs identified in Section 2.5. A plan showing the proposed boring locations is included as Figure 7. A Langan engineer, geologist, or scientist will document the work, screen the soil samples for environmental impacts, and collect environmental samples for laboratory analyses under the direct supervision of a Qualified Environmental Professional.

Soil borings will be advanced using direct-push drilling technology (Geoprobe). Soil will be screened continuously to the boring termination depth with a PID equipped with a 10.6 electron volt (eV) bulb and for visual and olfactory evidence of environmental impacts (e.g., staining and odor). Soil descriptions will be recorded in a field log. Boring logs will be presented in the RIR.

If non-aqueous phase liquid (NAPL) and/or grossly contaminated material (GCM) contamination is encountered, the NAPL/GCM will be delineated vertically and horizontally from the soil boring where NAPL/GCM was observed. NAPL/GCM soil delineation will be conducted in accordance with the NYSDEC "Delineation of NAPL Contamination General Guidance" document, which is included in Appendix E.

3.2.2 Soil Sampling and Analysis

Soil Borings RIB01 through RIB10, RIB14 and RIB15

Up to four grab soil samples will be collected from each soil boring for laboratory analysis. For borings RIB01 through RIB10, RIB14 and RIB15:

- One sample will be collected from the shallow fill layer between 0 to 2 feet bgs;
- One sample will be collected from the groundwater interface, if encountered;
- One sample will be collected from the bottom of the uncontrolled fill layer, or, if encountered, from the interval exhibiting the greatest degree of contamination (where observed based on the presence of staining, odor, and/or PID readings above background);
- One sample will be collected from the first underlying depth interval without evidence of a chemical or petroleum release (i.e., native soil), if present;

If distinct zones of grossly-contaminated material are identified in the soil boring, two additional samples will be collected – one in the impacted interval and one in the interval below the observed impacts.

The samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to attempt to maintain a temperature of approximately 4°C) for delivery to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples will be analyzed using the latest USEPA methods as follows:

- Part 375 List and Target Compound List (TCL) VOCs by USEPA methods 8260C/5035
- Part 375 List and TCL SVOCs by USEPA method 8270D
- Part 375 List pesticides by USEPA methods 8081B
- Part 375 List PCBs by USEPA method 8082A
- Target Analyte List (TAL)/Part 375 List metals (including cyanide and hexavalent and trivalent chromium) by USEPA Methods 6010C/7471B/9010C/7196A.
- PFAS by EPA Method 1633. A list of the PFAS compounds is provided in Table 2.
- 1,4-dioxane by EPA Method 8270D

DRAFT

Delineation Borings RIB11 through RIB13

- Lead Delineation:
    - Samples from the two shallowest intervals (0-2 feet bgs and 2-4 feet bgs) of RIB11 and RIB12 (4 samples) and from the two shallowest intervals (0-2 feet bgs and 2-4 feet bgs) of the three 5-foot step-out borings of both RIB11 and RIB12 (12 samples) will be analyzed for total lead and TCLP lead by USEPA Method 1311.
    - Samples collected from the two deeper intervals (4-6 feet bgs and 6-8 feet bgs) of RIB11 and RIB12 (4 samples) and from the two deeper intervals (4-6 feet bgs and 6-8 feet bgs) in the three 5-foot step-out borings of both RIB11 and RIB12 (12 samples), and all samples from the three 10-foot step out borings of both RIB11 and RIB12 (24 samples) will be placed on hold at the laboratory pending initial TCLP lead analytical results.
- Mercury Delineation
    - Samples from the two shallowest intervals (0-2 feet bgs and 2-4 feet bgs) of RIB13 (2 samples) and from the two shallowest intervals (0-2 feet bgs and 2-4 feet bgs) of the three 10-foot step-out borings (6 samples) will be analyzed for total and TCLP mercury by USEPA Method 1311
    - Samples from the two deeper intervals (4-6 feet bgs and 6-8 feet bgs) of RIB13 (2 samples) and from the two deeper intervals (4-6 feet bgs and 6-8 feet bgs) of the three 10-foot step-out borings (6 samples) will be placed on hold pending results from shallower samples
    - Based on the results of the TCLP evaluation, additional speciation sampling will be performed (via selective sequential extraction methods) at up to four locations exhibiting the highest concentrations of TCLP mercury to determine the species and potential mobility of mercury at the site. Additional speciation sampling will not be performed at initial sample locations that do not have detections of TCLP mercury.
- Chlorinated Solvent Delineation
    - Samples from all intervals (0-2 feet bgs, 2-4 feet bgs, 4-6 feet bgs, and 6-8 feet bgs) from boring RIB11 (4 samples) and all intervals (0-2 feet bgs, 2-4 feet bgs, 4-6 feet bgs, and 6-8 feet bgs) of the three 10-foot step-out borings (12 samples) will be analyzed for VOCs.

DRAFT

Non-disposable, down-hole drilling equipment and sampling apparatus will be decontaminated between locations with Alconox and water. The proposed soil samples are summarized in Table 1.

QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.3 Groundwater Investigation

3.3.1 Monitoring Well Installation

Six soil borings (RIB01 through RIB05, and RIB15) will be advanced to approximately five feet below the groundwater table, which is estimated to be at approximately 5-15 feet bgs, then converted into permanent groundwater monitoring wells (RIMW01 through RIMW05, and RIMW15). Additionally, three wells (TMW02, TMW08, and TMW09) will be re-installed at locations previously sampled with temporary wells. A plan showing the proposed well locations is included as Figure 7.

Wells will be installed across the observed water table and will be constructed with 2-inch diameter, threaded, flush-joint, polyvinyl chloride (PVC) casing and 0.01-inch slot well screens (approximately 10 feet in length). Clean sand will be used to fill the annulus around the screen up to approximately two feet above the top of the screened interval. A 2-foot-thick bentonite seal will be installed above the sand and the borehole annulus will be grouted to the surface. The wells will be finished with flush-mounted steel manhole covers. Management of investigation-derived waste (IDW) is discussed in Section 3.5.

Following installation, the wells will be developed using a surge block across the well screen to agitate and remove fines. The surge block will be moved within the well screen in 2-to-3-foot increments for approximately 2 minutes per increment. After surging, the well will be purged via pumping until the water becomes clear (having turbidity less than 50 Nephelometric Turbidity Units [NTU]). The well will then be allowed to equilibrate for a minimum of one week before collecting groundwater samples.

3.3.2 Monitoring Well Survey

The location and elevation of the groundwater monitoring wells (top of casing elevations) will be surveyed. Elevations of the top of monitoring well casings and protective well casings will be surveyed to the nearest 0.01 foot. Vertical control will be established by surveying points relative to the North American Vertical Datum of 1988 (NAVD88) by a NYS-licensed land surveyor. Two synoptic gauging events will be performed to document static water levels at approximate high- and low-tide conditions. Elevation data will be used with the synoptic groundwater well gauging data to prepare groundwater contour maps to evaluate the direction of groundwater flow.

3.3.3 Groundwater Sampling and Analysis

One groundwater sample will be collected from each of the nine monitoring wells, as summarized in Table 1. Prior to sampling, the monitoring wells will be gauged for static water levels and each well will be purged. Physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity) will be allowed to stabilize within the ranges specified in the USEPA's Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells (dated July 30, 1996, and 4th revision September 19, 2017). Samples will be collected with a peristaltic pump and dedicated polyethylene tubing (or similar pump apparatus). Non-disposal components of the pump will be decontaminated with Alconox and water between each sample location. Development and purge water will be containerized for off-site disposal. Management of investigation-derived waste (IDW) is discussed in Section 3.5.

The groundwater samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of approximately 4°C) for delivery to the laboratory. Groundwater samples from newly installed well locations and re-installed wells (TMW02, TMW08, and TMW09) will be analyzed using the latest USEPA methods as follows:

- TCL VOCs by USEPA method 8260C
- TCL SVOCs by USEPA method 8270D
- Pesticides by USEPA method 8081
- PCBs by USEPA method 8082A
- Metals (filtered and unfiltered) by USEPA method 6010C/7470
- Hexavalent and Trivalent Chromium by USEPA method 3060
- Total Cyanide by USEPA Method 9012B
- Extractable petroleum hydrocarbons (EPH) [C19-C36] by Massachusetts Department of Environmental Protection (MADEP) Method Rev 2.1
- PFAS by EPA Method 1633
- 1,4-dioxane by EPA Method 8270D-SIM

QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.4 Soil Vapor Investigation

3.4.1 Soil Vapor Point Installation

Eight temporary soil vapor points (RISV01 through RISV07 and RISV14) will be installed in accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New

York" (October 2006, with updates). Proposed soil vapor sample locations are shown on Figure 7 and summarized in Table 1.

Soil vapor points will be installed about 5 feet bgs or 2 feet above the observed groundwater table (whichever is shallower). The soil vapor points will consist of a dedicated 1.875-inch polyethylene implant threaded into inert sample tubing that will extend to surface grade. A clean sand filter pack will be placed around the screen implant and the remaining annular space will be sealed with hydrated bentonite to surface grade.

A seal check will be performed at each installed sub-slab vapor point with a helium tracer gas before and after sample collection. Prior to sampling, three tubing volumes will be purged from the soil vapor point using a multi-gas monitor, with a flow rate of about 0.15 liters per minute. The multi-gas monitor will also be used to screen the vapor for the presence of VOCs.

3.4.2 Soil Vapor Sampling and Analysis

Samples will be collected in general accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates). Before collecting vapor samples, three vapor probe volumes (i.e., the volume of the sample implant and tubing) will be purged from each sample point at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE® meter (or equivalent). Purged soil vapor will be monitored for VOCs with the MultiRAE® during this process.

A helium tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC technique to document the integrity of each soil vapor point seal before and after sampling. The tracer gas will be introduced into a container surrounding the vapor point and seal. Helium will be measured from the sampling tube and inside the container. If the sample tubing contains more than 10% of the tracer gas concentration that was introduced into the container, then the seal is considered compromised and should be enhanced or reconstructed to reduce outside air infiltration.

After integrity of each seal is confirmed, soil vapor samples will be collected into laboratory-supplied, batch-certified clean 2.7- or 6-liter Summa® canisters with calibrated flow controllers over a 2-hour sampling period.

During the sampling event, a NYSDOH Indoor Air Quality Questionnaire and Building Inventory form will be completed to identify preferential pathways, building features and/or materials on-site that may affect the interpretation of the sampling results.

A log sheet for each soil vapor sample will be completed to record sample identification, date and time of sample collection, sampling depth, name of the field engineer responsible for

sampling, sampling methods and equipment, vapor purge volumes, volume of vapor extracted, flow rate, and vacuum of canisters before and after sample collection.

All vapor samples will be analyzed for VOCs by USEPA Method TO-15. The proposed vapor sample analyses are summarized in Table 1. QA/QC procedures to be followed are described in the QAPP provided as in Appendix C.

3.5 Data Management and Validation

Laboratory analyses of soil and groundwater will be conducted by a NYSDOH ELAP-approved laboratory in accordance with USEPA SW-846 methods and NYSDEC Analytical Services Protocol (ASP) Category B deliverable format. Environmental data will be reported electronically using the database software application EQuIS as part of NYSDEC's Environmental Information Management System (EIMS).

Table 1 summarizes the proposed samples and laboratory analyses. QA/QC procedures required by the NYSDEC ASP and SW-846 methods, including initial and continuing instrument calibrations, standard compound spikes, surrogate compound spikes, and analysis of other samples (blanks, laboratory control samples, and matrix spikes/matrix spike duplicates), will be followed. The laboratory will provide sample bottles, which will be pre-cleaned and preserved in accordance with the SW-846 methods. Where there are differences in the SW-846 and NYSDEC ASP requirements, the NYSDEC ASP shall take precedence.

Data validation will be performed in accordance with the USEPA Region 2 Standard Operating Procedures (SOPs) for data validation and USEPA's National Functional Guidelines for Organic and Inorganic Data Review, Technical and Administrative Guidance Memorandum (TAGM) Solid Waste Guidance (SW-96-09) Development and Review of Site Analytical Plans, and DER-10 Appendix 2B Section 2.0. Tier 1 data validation (the equivalent of USEPA's Stage 2A validation) will be performed to evaluate data quality. Tier 1 data validation is based on completeness and compliance checks of sample-related quality control results including:

- Holding times;
- Sample preservation;
- Blank results (method, trip, and field blanks);
- Surrogate recovery compounds and extracted internal standards (as applicable);
- Laboratory control samples and laboratory control sample duplicates recoveries and relative percent difference (RPDs);
- Matrix spike and matrix spike duplicate recoveries and RPDs;
- Laboratory duplicate RPDs; and

DRAFT

- Field duplicate RPDs.

A Data Usability Summary Report (DUSR) will be prepared by the data validator and reviewed by the quality assurance manager before issuance. The DUSR will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain-of-custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. Additional details on the DUSRs are provided in the QAPP in Appendix C.

3.6 Management of Investigation-Derived Waste

Soil cuttings will be returned to the borehole unless:

- Free product or grossly contaminated soil is present in the cuttings;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability; or
- The soil cannot fit into the borehole.

Boreholes requiring disposal of drill cuttings will be filled with hydrated bentonite chips or clean sand and capped with asphalt or concrete. Excess IDW, including soil cuttings, purged groundwater, and decontamination fluids, will be containerized in properly labeled and sealed United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drums and staged for future waste characterization and off-site disposal at a facility permitted to accept the waste. The drums will be staged in an area on-site, pending receipt of laboratory data and off-site disposal at an appropriate facility. IDW will be removed from the site within one month of completing the investigation. The site will be secured during and after investigation to prevent public access to the site.

3.7 Air Monitoring

The work will be conducted under a Health & Safety Plan (HASP), and air monitoring will be conducted for site workers in addition to the Community Air Monitoring Program (CAMP) for the community. Air monitoring results will be recorded in the field book during the investigation activities, downloaded from field instruments and summarized in the RIR.

3.7.1 Worker Air Monitoring

Air monitoring of the breathing zone will be performed periodically during drilling and sampling activities to document health and safety protection for the work team. VOCs will be monitored with a portable PID in accordance with the HASP (Appendix B). If air monitoring during intrusive operations identifies the presence of VOCs, the field engineer will follow the guidelines outlined in the HASP regarding action levels, permissible exposure, engineering controls, and personal

protective equipment. If the VOC action level is exceeded, work will cease and the work location will be evacuated. Monitoring will continue until the levels drops to permissible limits, at which point, work will resume with continued monitoring. If high levels persist, field activities will be halted and the work relocated to another area. If dust emissions are observed, work will stop and dust suppression measures (i.e., water spray) will be implemented.

3.7.2 Community Air Monitoring Plan

In addition to air monitoring in the worker breathing zone, community air monitoring will be performed in compliance with the NYSDOH Generic CAMP, which is included as Appendix D.

The CAMP will consist of continuous monitoring for VOCs and dust emissions during ground-intrusive activities (i.e., soil boring and monitoring well installation). Upwind concentrations will be measured at the start of each workday to establish background concentrations. VOCs and dust emissions will be continuously monitored at the upwind and downwind perimeters of the work zone during any ground-intrusive work performed at the site. If ground-intrusive activities are performed indoors, air monitoring stations will be placed at the upwind and downwind perimeters of the on-site building.

VOC monitoring will be conducted with a PID equipped with a 10.6 eV lamp (or equivalent). Dust emissions will be monitored using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM10) and capable of averaging a period of 15 minutes (or less) for comparison to the airborne particulate action level (e.g., DustTrak or equivalent). If dust emissions are observed, work will stop and dust suppression measures will be implemented.

3.8 Green Remediation Standards

Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and site management of the remedy as per the NYSDEC DER-31 Green Remediation Policy (DER-31). DER-31 requires the following green remediation/sustainability concepts be considered and/or implemented, to the extent feasible, during investigations:

- Increase energy efficiency/minimize total energy use and direct and indirect CO2/greenhouse gas (GHG) emissions to the atmosphere
- Reduce emissions of air pollutants
- Minimize habitat disturbance and create or enhance habitat or usable land
- Conserve natural resources such as soil and water; promote the sequestration of carbon through reforestation or afforestation
- Minimize fresh water consumption and maximize water reuse during daily operations and treatment processes

DRAFT

- Prevent long-term erosion, surface runoff, and off-site water quality impacts; prevent unintended soil compaction
- Minimize waste or implement beneficial use of materials that would otherwise be considered a waste
- Minimize equipment and truck idling and use sustainably produced biofuels to reduce discharges of pollutants and GHGs to the atmosphere
- Utilize clean diesel (new or retrofitted) equipment to reduce emissions to the atmosphere
- Minimize truck travel for disposal to save energy and reduce emissions

During implementation of this RIWP, the following elements will be incorporated, to the extent feasible, to reduce GHGs and other emissions:

- Use of Ultra Low Sulfur Diesel in vehicles and machinery by drilling contractor
- Use of diesel exhaust purifier and scrubbers on machinery (drill rigs) by drilling contractor
- Minimization of idling of all vehicles (including construction equipment) in accordance with 6 NYCRR Part 217 Motor Vehicle Emissions, Subpart 217-3 Idling Prohibition for Heavy Duty Vehicles
- Reduction of materials consumption and off-site transport by reuse of non-impacted drilling spoils as backfill within the boring of origin and containerization of drilling spoils exhibiting visual, olfactory, and instrumental signs of contamination.

3.9 Qualitative Human Health Exposure Assessment

A Qualitative Human Health Exposure Assessment will be conducted in accordance with Appendix 3B of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. The Assessment will be submitted in the RIR.

3.10 Fish and Wildlife Resource Impact Analysis

If necessary, a Fish and Wildlife Resources Impact Analysis (FWRIA) will be conducted in accordance with Section 3.10.1 and Appendix 3C of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. The assessment will be submitted in the RIR.

DRAFT

4.0 REPORTING

4.1 Remedial Investigation Report

Following completion of the RI and receipt of analytical data, an RIR will be prepared in accordance with the applicable requirements of DER-10 Section 3.14. The report will:

- Describe site history and previous investigations
- Describe site environmental conditions
- Describe sampling methodology and field observations
- Evaluate analytical results and describe findings
- Summarize green remediation principles implemented during the RI
- Provide conclusions and recommendations for any further assessment (if warranted)

The RIR will summarize the nature and extent of contamination at each area of concern and identify unacceptable exposure pathways (as determined through a Qualitative Human Health Exposure Assessment). DUSRs will be included in the RIR, and electronic data deliverables will be submitted to the NYSDEC EQuIS database prior to submission of the draft RIR.

The RIR will include soil boring and well construction logs, sampling logs, tabulated analytical results, figures, and laboratory data packages. The tabulated analytical results will be organized in table format and include sample location, media sampled, sample depth, field/laboratory identification numbers, analytical results and the applicable Standards, Criteria, and Guidance (SCGs) pertaining to the site and contaminants of concern for comparison. The report will include scaled figures showing the locations of soil borings, monitoring wells, and sub-slab vapor points, sample concentrations above SCGs for each media, groundwater elevation contours and flow direction, and, if appropriate, groundwater contaminant concentration contours.

The RIR will be provided in an electronic format to the NYSDEC.

4.2 Daily Reports

Daily reports will be prepared and submitted to the NYSDEC and NYSDOH project managers by the end of each day following the reporting period and will include:

- Progress updates
- Photographic documentation
- Identification of samples collected
- Locations and references to a site map for completed activities
- A summary of any and all community complaints with relevant details, including contact information

DRAFT

- A summary of CAMP findings, including elevated concentrations and response actions, if any
- An explanation of notable site conditions
- A list of anticipated work for the following reporting day

Daily reports are not intended to notify the NYSDEC of emergencies (e.g., accident, spill), request changes to the RIWP, or communicate other sensitive or time-critical information. However, such conditions will also be included in the daily reports. Emergency conditions and changes to the RIWP will be communicated directly to the NYSDEC Project Manager.

The NYSDEC-assigned project number will appear on all reports.

DRAFT

5.0 SCHEDULE

The table below presents an anticipated schedule for the proposed RI and reporting following the approval of the RIWP. If the schedules changes, it will be updated and submitted to the NYSDEC.

Milestone	Weeks from NYSDEC Approval of RIWP	Estimated Duration (weeks)
RI Mobilization	4	2
RI Field Investigation	6	4
Laboratory Analysis	10	3
Remedial Investigation Report Preparation and Submission to the NYSDEC	13	6

Exceedance Summary:

10 - Result exceeds NYSDEC SGVs

NOTES:
1. TAX PARCEL DATA PROVIDED BY THE NEW YORK CITY DEPARTMENT OF CITY PLANNING.
2. WORLD TOPOGRAPHIC BASEMAP IS PROVIDED THROUGH LANGAN'S ESRI AND ARCGIS SOFTWARE LICENSING AND ARCGIS ONLINE.
3. GROUNDWATER SAMPLE ANALYTICAL RESULTS ARE COMPARED TO THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) TITLE 6 OF THE OFFICIAL COMPILATION OF NEW YORK CODES, RULES, AND REGULATIONS (NYCRR) PART 703.5 AND THE NYSDEC TECHNICAL AND OPERATIONAL GUIDANCE SERIES (TOGS) 1.1.1 AMBIENT WATER QUALITY STANDARDS AND GUIDANCE VALUES FOR CLASS GA WATER (HEREIN COLLECTIVELY REFERENCED AS "NYSDEC SGVs").
4. ug/l - MICROGRAM PER LITER
5. <RL - NOT DETECTED
6. ALL SAMPLES WERE COLLECTED DURING THE 2022 INVESTIGATION.

QUALIFIERS:
U - THE ANALYTE WAS ANALYZED FOR, BUT WAS NOT DETECTED AT A LEVEL GREATER THAN OR EQUAL TO THE LEVEL OF THE RL OR THE SAMPLE CONCENTRATION FOR RESULTS IMPACTED BY BLANK CONTAMINATION.

PAOC 1 - Chlorinated Solvents in Shallow Soil
PAOC 2 - Chlorinated Solvents in Groundwater
PAOC 3 - Elevated Mercury in Soil
PAOC 4 - Elevated Lead in Soil
PAOC 5 - Observed Petroleum Impacts
PAOC 6 - Site-wide Historic Fill

Table 1
Proposed Sample Summary
Remedial Investigation Work Plan

Ingraham Street Logistics
450 Johnson Avenue
Brooklyn, NY

Langan Project No. 170588003

Notes:

1. Soil sample depth intervals will be determined in the field.
2. Soil samples to be analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
3. TBD = to be determined
4. VOC = volatile organic compound
5. SVOC = semivolatile organic compound
6. PCB = polychlorinated biphenyl
7. TCL = Target Compound List
8. TAL = Target Analyte List
9. QA/QC = quality assurance/quality control
10. NA = not applicable
11. PFAS = per- and polyfluoroalkyl stubstances limited to the list of compounds designated by NYSDEC (method 1633 40-compound list)
12. USEPA = United States Environmental Protection Agency

Table 2
List of Per- and Polyfluoroalkyl Substances
Remedial Investigation Work Plan

Ingraham Stree Logistics
450 Johnson Avenue
Brooklyn, NY

Langan Project No. 170588003

Compound Name	Analytical Method
Perfluoroalkyl sulfonic acids	USEPA Method 1633
Perfluorobutanesulfonic acid (PFBS)	
Perfluoropentanesulfonic acid (PFPeS)	
Perfluorohexanesulfonic acid (PFHxS)	
Perfluoroheptanesulfonic acid (PFHpS)	
Perfluorooctanesulfonic acid (PFOS)	
Perfluorononanesulfonic acid (PFNS)	
Perfluorodecanesulfonic acid (PFDS)	
Perfluorododecanesulfonic acid (PFDoS)	
Perfluoroalkyl carboxylic acids	
Perfluorobutanoic acid (PFBA)	
Perfluoropentanoic acid (PFPeA)	
Perfluorohexanoic acid (PFHxA)	
Perfluoroheptanoic acid (PFHpA)	
Perfluorooctanoic acid (PFOA)	
Perfluorononanoic acid (PFNA)	
Perfluorodecanoic acid (PFDA)	
Perfluoroundecanoic acid (PFUnA)	
Perfluorododecanoic acid (PFDoA)	
Perfluorotridecanoic acid (PFTrDA)	
Perfluorotetradecanoic acid (PFTeDA)	
Per- and Polyfluoroether carboxylic acids	
Hexafluoropropylene oxide dimer acid (HFPO-DA)	
4,8-Dioxa-3H-perfluorononanoic acid (ADONA)	
Perfluoro-3-methoxypropanoic acid (PFMPA)	
Perfluoro-4-methoxybutanoic acid (PFMBA)	
Nonafluoro-3,6-dioxaheptanoic acid (NFDHA)	
Fluorotelomer sulfonic acids	
4:2 Fluorotelomer sulfonic acid (4:2-FTS)	
6:2 Fluorotelomer sulfonic acid (6:2-FTS)	
8:2 Fluorotelomer sulfonic acid (8:2-FTS)

Subject: Phase I Environmental Site Assessment
450 Johnson Avenue
Brooklyn, New York
Langan Project: 170588001

Dear Ms. Frentzel:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) is submitting this Phase I Environmental Site Assessment (ESA) for the property located at 450 Johnson Avenue in Brooklyn, New York.

We appreciate the opportunity to assist you with this project. If you have questions or need information clarified, please call Mr. Andrew Kerr at 510.874.7015.

Sincerely yours,

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
450 Johnson Avenue
Brooklyn, Kings County, New York

E1.0 EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan) has performed this Phase I Environmental Site Assessment (ESA) for the property known as:

- 450 Johnson Avenue, Brooklyn, New York

The approximate location of the Site is shown on **Figure 1**, **Appendix A**. This Phase I ESA was performed on behalf of Prologis, Inc. (User) to assist with a possible purchase of the Site.

This Phase I ESA was performed using the guidelines and limitations of the following: 1) ASTM International (ASTM) Practice E1527-13 (Standard Practice for ESAs: Phase I ESA Process), and 2) the United States Environmental Protection Agency's (USEPA) 2006 standards for All Appropriate Inquiry (AAI) Rule (40 CFR Part 312).

The objective of this Phase I ESA was to identify the presence or likely presence of hazardous substances or petroleum products in, on or at a property as defined in ASTM E1527 13 as a Recognized Environmental Condition (REC).

E1.1 Facility Description

General information relative to the Site is outlined below. The approximate locations of Site features and the areas surrounding the Site are depicted on **Figure 2**, **Appendix A**.

The Site is an approximate 0.80-acre area located on the southern side of Johnson Avenue, that includes three land parcels (Lots 17, 21, and 55) within Block 2992. The 450 Johnson Avenue address is formally associated with Lot 21, with alternative addresses of 440 Johnson for Lot 17 and 79 Ingraham Street for Lot 55. The Site is located in an industrial and commercial section of the East Williamsburg neighborhood of Brooklyn; the Site is zoned as M1-2 for light industrial use per the New York City Planning Commission Zoning Map 13b (**Attachment 1**, **Appendix E**).

The Site is developed with three buildings and a parking lot as detailed below:

Lot 17: a two-story 2,500 square foot (ft^2) warehouse and office building, and one-story 7,500 ft^2 warehouse

Lot 21: a one-story 20,000 ft^2 warehouse

Lot 55: a 5,000 ft^2 parking lot

The warehouse portion of the three buildings are interconnected and utilized for one single use: envelope manufacturing. The location of the buildings and parking lot relative to the Site is depicted on **Figure 2**, **Appendix A**.

The Site is owned by JBC Land LLC and has been occupied by Envelope Manufacturers Corp. since at least 1992 for the manufacturing of envelopes.

E1.2 Property History

The Site has been developed since at least 1907 as a lumber yard (1907-1951), an auto garage (1928-1934), for metal working (1933), for paper box manufacturing (1951), as a repair shop (1951), and for envelope manufacturing (1992 - present). The existing buildings were constructed in 1931.

E1.3 Environmental Database and File Review

The review of the environmental database report prepared by Environmental Data Resources, Inc. (EDR) indicates that the Site is listed in five (5) separate State and Federal databases. These include Resource Conservation and Recovery Act (RCRA) – Conditionally Exempt Small Quantity Generators List (CESQG), Facility Index System (FINDS), USEPA Enforcement and Compliance History Online (ECHO), New York Manifest (Manifest), and Aerometric Information Retrieval System (US AIRS). The RCRA-CESQ and NY Manifest listings are associated with the generation of ignitable waste (D001) at the Site. The FINDS and ECHO database listings identified the Site as a RCRA Generator, a US AIRS site and a New York Facility Information System (FIS) site. The US AIR database listing indicated the Site is a permitted air emission facility.

E1.4 Findings

Two RECs and two Business Environmental Risks (BERs) were identified in association with the Site.

REC 1 – Current and Historical Site Use

Historical records indicate the Site has been utilized for a variety of industrial operations between 1907 and the present, including as a lumber yard (1907-1951), an auto garage (1928-1934), a metal working facility (1933), a paper box manufacturing facility (1951), and an envelope manufacturing facility (1992-present).

During the site reconnaissance, a septic holding tank was observed in the northeast corner of Lot 21. One gasoline underground storage tank (UST) has also historically been reported in the northeast corner of Lot 21 (1933), and is presumed removed as the location of the septic tank and former gasoline UST appear consistent with each other. Two fuel oil USTs to support former oil burning boilers were reported at the Site (1912-1990), but were not observed during the site reconnaissance.

REC 2 – Current and Historical Operations of Surrounding Properties

The area surrounding the Site has been used for industrial purposes since at least 1888 through the present. Activities have included rail freight yards, plastics manufacturing, pharmaceutical manufacturing, a coal yard, auto repair shops, metal working, a dry cleaners/laundry, and miscellaneous manufacturing.

One off-site and adjoining (upgradient) property, Ingraham Street Sidewalk GW (case ID No. 224142) is listed in the New York State Voluntary Cleanup Program (VCP) database. Chlorinated volatile organic compounds (VOCs) are constituents of concern in groundwater and soil vapor.

BER 1 – Historic Fill

Based on the findings of previous subsurface investigations in the surrounding areas completed by Langan, it is likely that historic fill is present on the Subject Property. Management and disposal of historic fill material will require special considerations during potential future development of the Subject Property.

BER 2 – Asbestos Containing Material (ACM) and Lead Based Paint (LBP)

A limited survey of building materials identified the presence of ACM materials on the Site, including insulation, mastic, flooring materials, caulk, and roofing materials. No LBP was identified. A full survey of building materials would be required as part of building renovations or demolition relating to future redevelopment of the Site.

1.0 INTRODUCTION

Langan Engineering and Environmental Services, Inc. (Langan) has completed this Phase I Environmental Site Assessment (ESA) for the 450 Johnson Avenue property in Brooklyn, New York (the Site), located as shown in **Figure 1** included in **Appendix A**. This ESA was performed on behalf of Prologis, Inc. (User) to assist with a possible purchase of the Site.

1.1 Purpose

The purpose of this Phase I ESA is to:

(1) Identify Recognized Environmental Conditions (RECs) in connection with the Site, as defined in ASTM International's (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

(2) Utilize the guidelines of United States Environmental Protection Agency (USEPA) 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 All Appropriate Inquiry (AAI) Rule for the development and implementation of the scope of services.

Phase I ESAs can also categorize identified items as a Business Environmental Risk (BER). A BER is defined by ASTM E1527-13 as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of *commercial real estate*, not necessarily limited to those environmental issues required to be investigated in this practice."

1.2 Scope of Services

This Phase I ESA was conducted utilizing a standard of good commercial and customary practice that is consistent with ASTM E1527-13. Significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 are noted in Section 1.4 of this report. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably

ascertainable information and environmental data relating to the Site; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Site; and conducting a Site reconnaissance. The specific scope of this assessment included the following:

1. Site reconnaissance to observe the condition of the Site and assess its location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of surrounding properties from public rights-of-way to identify obvious potential environmental conditions on neighboring properties. The reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Site, and then progressing to adjacent and surrounding properties. Photographs taken as part of the site reconnaissance are provided in **Appendix B**.

2. An interview of Mr. Joseph Matheson, a plant manager at the Site for the past 16 years.

3. As per ASTM E1527-13, questionnaires were provided to the User and Owner to obtain information related to the Site.

4. A review of environmental databases maintained by the USEPA, federal, state, and local agencies within the approximate minimum search distance. Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut prepared the environmental database report, which is included in **Appendix C**.

5. Physical characteristics of the Site were determined through referenced sources for topographic, geologic, soils, and hydrologic data.

6. A review and interpretation of aerial photographs, historical topographic maps, Sanborn Fire Insurance Maps (Sanborn maps), and city directories to identify previous activities on and in the vicinity of the Site. Copies of these historical documentation reports, generated by EDR, are included in **Appendix D**.

7. A review and interpretation of additional historical documentation reports from local county and other records. Pertinent portions of selected reports have been included in **Appendix E**.

8. The performance of a limited hazardous materials survey of accessible portions of the Site's warehouse, office, and roof. This limited survey was performed to identify the presence/absence of asbestos containing material (ACM) and lead based paint (LBP)

materials. A full demolition survey for the presence and quantity of hazardous materials on Site was not conducted. Twenty-five (25) samples were collected for ACM testing and five samples were collected for LBP testing. A memorandum summarizing the limited survey is included in **Appendix F**. Limited desktop or visual evaluations of the potential for radon, lead in drinking water, wetlands and mold material were also conducted as part of this Phase I ESA.

1.3 User Reliance

The User requested no special terms or conditions regarding this Phase I ESA. Langan has prepared this report specifically for the use of the User. Other parties cannot rely on this Phase I ESA, and the conclusions thereof, unless Langan receives a written request from User and Langan issues a "Reliance Letter". The relying party will be subject to the same limitations agreed to by the User.

1.4 Deletions and Deviations

This Phase I ESA has been performed using the guidelines of ASTM Standard E1527-13 (Standard Practice for ESA: Phase I ESA Process). No expressed or implied representation or warranty is included or intended in the report, except that the services were performed within the limits prescribed by the User, and with the customary thoroughness and competence of our profession. Significant deletions and deviations were not made to the above referenced standards.

1.5 Limitations, Assumptions, and Data Gaps

This Phase I ESA was prepared for the Site on behalf of the User. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Site addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, as described above, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comport to those prescribed in the ASTM Standard E1527-13.

Limited sampling of accessible, in-place building materials was also performed for ACM as part of this Phase I ESA. Other environmental sampling (e.g. soil samples from corings or borings, soil gas or vapor samples from probes, and groundwater samples from borings or wells) were not performed.

This Phase I ESA was not intended to be a definitive investigation of all possible environmental impacts at the Site. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of RECs and BERs at the Site. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular property. Therefore, Langan cannot "insure" or "certify" that the Site is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by the User, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The findings and opinions provided in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Site, as it existed at the time of our Site reconnaissance.

The scope of services performed for this study did not include the following: cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and biological agents. Limited desktop or visual evaluations of the potential for radon, lead in drinking water, wetlands, mold, and polychlorinated biphenyl (PCB) containing material was conducted as part of this Phase I ESA.

This Phase I ESA was completed with the following data gaps:

- Complete responses to FOIA requests have not been received.

The above listed data gap is not expected to impact the overall conclusions of this Phase I ESA. If information becomes available which alters the conclusions of this Phase I, an addendum will be issued.

1.6 Consultant Qualifications

The signatures of the environmental professional(s) responsible for this Phase I ESA are provided on the submittal letter and/or cover page of this report.

The qualifications of the environmental professionals that conducted this ESA are presented in the resumes provided in **Appendix G**. Langan declares that, to the best of our professional knowledge and belief, the individuals responsible for this Phase I meet the definition of Environmental Professional as defined in #312.10 of 40 CFR 312. Langan has specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

This Site is 450 Johnson Avenue in Brooklyn, Kings County, New York, an approximately 0.80-acre area located on the southern side of Johnson Avenue and northern side of Ingraham Street (see **Figure 2**, **Appendix A**). The Site is officially comprised of Lots 17, 21, and 55 of Block 2992, with Lot 21 associated with the 450 Johnson Avenue address and Lots 17 and 55 associated with the 440 Johnson and 79 Ingraham Street addresses, respectively. The Site is situated in an industrial neighborhood of Brooklyn and, according to the New York City Department of Finance, and is listed with a Building Classification of F4/F5-Factory/Industrial and G6-Garage/Gas Station.

The Site is bound by the following properties:

North	Johnson Avenue, followed by parking lots for FedEx and Long Island Railroad (LIRR) subcontractors
South	Ingraham Street, followed by a parking lot/storage area and one- to two-story industrial/commercial buildings
East	Two four-story commercial/industrial buildings
West	A parking/storage lot and a two-story commercial/industrial building

2.2 Improvements

The overall Site configuration is shown on **Figure 2**, **Appendix A**. The Site occupies a total square footage of approximately 35,000 square feet (ft^2) or 0.80-acres. The Site is developed with three buildings and a parking lot:

- **Lot 17.** A two-story, 2,500 ft^2 warehouse and office building and a one-story, 7,500 ft^2 warehouse (alternative address of 440 Johnson Avenue)
- **Lot 21.** A one-story, 20,000 ft^2 warehouse (alternative address of 450 Johnson Avenue)
- **Lot 55.** A 5,000 ft^2 asphalt paved parking lot (alternative address of 79 Ingraham Street). The parking lot contains parking for approximately 16 vehicles.

The Site is accessed via two loading docks and four doorways on Johnson Avenue, and the parking lot is accessed from Ingraham Street.

2.3 Owner, Site Manager, and Occupant Information

The Site is owned by JBC Land LLC and is currently occupied by Envelope Manufacturers Corp.

2.4 Zoning

According to the New York City Planning Commission Zoning Map 13b (**Attachment E1, Appendix E**), the Site is located in a M1-2 manufacturing area. A M1-2 area is characterized by light industry such as woodworking and auto repair shops, and often serves as a buffer between manufacturing and adjacent residential or commercial areas.

2.5 Utilities

Utilities for the Site are as follows:

- Electricity is provided by Consolidated Edison Company of New York (Con Ed);
- Natural gas is provided by National Grid; and
- Potable water and sanitary sewer are provided by the New York City Water Supply System.

2.6 Current Use

The Site is currently occupied by Envelope Manufacturers Corp. Envelope Manufacturers Corp. was no longer manufacturing at the time of site reconnaissance.

3.0 REGIONAL DESCRIPTION AND PHYSICAL SETTING

3.1 Topography

According to the United States Geological Survey (USGS) 7.5-Minute Series topographic map of Brooklyn, New York (see **Figure 1, Appendix A**), the Site is situated at approximately 20 feet above mean sea level (ft amsl). According to the EDR Radius Map Report, the Site sits at an elevation of approximately 19 ft amsl. During site reconnaissance, Lot 55 was observed to be approximately five feet higher than the surrounding area, and the interior of Lots 17 and 21 were observed to slope slightly down and north towards Johnson Avenue.

3.2 Surface Water

Newtown Creek is a 3.8 mile long tributary leading to the East River. The southern terminus of Newtown Creek, also known as English Kills, is located approximately 250 feet north of the Site. Surface water was not observed within Site boundaries.

3.3 Floodplains

The Site is located in an area that is currently mapped by the Federal Emergency Management Agency (FEMA) Map Service Center as being an area of minimal flood hazard (Zone X). Zone X is defined by FEMA as "areas of minimal flood hazard from the principal source of flood in the area and determined to be outside the 0.2 percent annual chance floodplain". A copy of the map is included in **Attachment E2**, **Appendix E** .

3.4 Geology

Based on a review of the "Bedrock and Engineering Geologic Maps of Kings and Queens Counties, New York, and Parts of Bergen County, New Jersey" by Charles A. Baskerville, et al. the bedrock underlying the Site is the Hartland Formation. The Hartland Formation is comprised of a dark gray, medium to coarse-grained muscovite-biotite-garnet (mica) schist and gray fine-grained quartz-feldspar granulite with biotite and garnet, with localized concentrations of granite and intrusions of coarse-grained granitic pegmatite.

Based on investigations in the area, the Site cover is likely underlain by historic fill.

3.5 Hydrology and Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers,

stream valleys, ponds, and wetlands. A broader, interconnected hydrogeological network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeological and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

Groundwater depth is estimated to be about 7 to 16 feet below ground surface (ft bgs) and groundwater flow is anticipated to the north toward Newtown Creek. A site-specific study of groundwater depth and flow direction has not been identified or conducted.

3.6 Surrounding Properties

The Site is surrounded by industrial and commercial properties, as summarized below:

North / Northeast

100 Knickerbocker Avenue	Parking lot for FedEx Ground Transport vehicles
Johnson Avenue	Parking for LIRR subcontractors

South

82-86 Ingraham Street	A one-story and a two-story industrial building
88 Ingraham Street	A one-story and a two-story industrial building

East

474 Johnson Avenue	Four-story commercial and industrial building
91 Ingraham Street	Four-story commercial and industrial building

West

431 Johnson Avenue	Two-story commercial/industrial building
71 Ingraham Street	Two-story commercial/industrial building
75 Ingraham Street	Industrial storage lot

Many of the buildings noted above included more than one business, with few markings or identification of business name or type. Some information regarding occupants for nearby buildings on Johnson Avenue is included in the City Directory report included in **Appendix D**.

4.0 SITE AND REGIONAL HISTORY

The Site is located in an industrial neighborhood of Brooklyn, New York that was historically used for agriculture until the mid-1800s. By 1907, industrial, commercial and residential development were present in the surrounding area.

Previous occupants of the Site based on information provided by the EDR City Directory report include auto garages and manufacturers of envelopes. A summary is included in **Section 4.4**.

4.1 Aerial Photographs

Langan reviewed 16 aerial photographs provided by EDR to help evaluate past uses and relevant characteristics of the Site and surrounding properties:

- July 01, 1924
- January 01, 1941
- April 21, 1951
- January 04, 1954
- April 12, 1961
- February 23, 1966
- October 19, 1974
- October 29, 1976
- July 25, 1980
- March 26, 1984
- March 09, 1991
- April 04, 1994
- 2006 (date unreported by EDR)
- 2009 (date unreported by EDR)
- 2013 (date unreported by EDR)
- 2017 (date unreported by EDR)

EDR's Aerial Photo Decade Package report, which contains a copy of each photo, is provided in **Appendix D**. Features noted in the photographs are discussed below:

1924 Photograph. Lots 17 and 55 of the Site appear developed. Lot 21 is undeveloped. The area surrounding the site is characterized by industrial and residential development including rail yards and vacant land. The southern terminus of Newtown Creek is located approximately 250 feet north of the Site.

1941 Photograph. Lot 21 is occupied by an industrial building covering the entirety of the lot. The configuration of Lot 21 remains largely the same in aerials photographs to present day. Many vacant areas to the north and northeast of the Site have been improved with industrial development.

1951 Photograph. Parking and material storage is depicted at Lot 55; this use remains largely the same in aerial photographs to present day. The southern terminus of Newtown Creek has been widened to the west and east.

1961-1966 Photographs. The earlier widening of Newtown Creek to the west and east has been partially filled in.

1974-2017 Photographs. The Site appears as it does today and is developed with the two buildings on Lots 17 and 21 and a paved lot used for parking and storage on Lot 55. Surrounding properties are developed with buildings that appear in the current building configuration.

4.2 Topographic Maps

Langan reviewed historical topographic maps from EDR for the years: 1897, 1898, 1899, 1947, 1956, 1967, 1979, 1955 and 2013. A copy of EDR's Historical Topo Map Report is provided in **Appendix D**.

The following information was obtained about the Site and/or the immediate areas near the Site from the topographic maps:

1897-1947 Maps	The Site and surrounding properties to the west, south, and east are located in a densely developed area. The surrounding properties to the north appear undeveloped. The Site is situated at approximately 20 ft amsl. Newtown Creek is located north of the Site.
1947 Map	A rectangular, one-story building on Lot 21 is depicted in the same configuration it appears in present day. The Varick Ave Freight Yard is located east of the Site, and Bushwick Terminal is located west of the Site. The L subway line is present approximately 240 feet south of the Site, running beneath Harrison Place. Elevations in the area remain general similar to that of the previous maps.
1956 Map	Structures are not depicted on-site and on several nearby properties, based on map emphasis and/or detail. Select industrial and institutional buildings remain present in surrounding areas.
1967 Map	Two large industrial buildings are present northwest of the Site across Johnson Avenue.
1979-1995 Maps	Three industrial buildings are present northeast of the Site across Johnson Avenue.

2013 Map No structures are depicted on this topographic map.

4.3 Sanborn Maps

Langan reviewed historical Sanborn Fire Insurance maps from EDR for the years: 1888, 1907, 1933, 1951, 1965, 1968, 1977, 1979, 1980, 1981, 1982, 1986, 1987, 1988, 1989, 1990, 1991, 1993, 1994, 1995, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. A copy of EDR's Sanborn Fire Insurance maps are provided in **Appendix D**. Features noted in the maps are discussed below:

1888. The Site and surrounding areas were undeveloped. Newtown Creek is visible north of the Site.

1907. Lots 17 and 55 were labeled "Borough Lumber Co.: 2nd Hand Lumber, and Lot 21 was undeveloped. Surrounding properties were labeled as being used for coal storage, construction supply storage, as an ice depot, as a wagon building facility and for wood working. The southern terminus of Newtown Creek has been widened to the east and west and appears channelized.

1933. Lot 21 was improved with a one-story auto garage with a gasoline tank in the northeast corner of the building. Lot 17 was used for metal working, wood working, and lumber storage. Lot 55 was occupied with a one-story lumber shed and office. Surrounding property use included casket manufacturing, a coal yard and a paint spraying facility.

1951. The building on Lot 21 was occupied by a paper box manufacturer. The Lot 17 building was occupied by a warehouse and a repair shop. Lot 55 was unimproved and used for as lumber storage. Surrounding property use included casket manufacturing, drum and barrel cleaning, dry cleaning, metal works and a paint spraying facility.

1965 – 1968. The building on Lot 21 was used as a plastic products warehouse. The building on Lot 17 was used for baled feather storage. Lot 55 was unimproved and used for storage. Surrounding property use included auto repair, casket manufacturing, laundry, metal works, a paint spraying facility and plastics manufacturing.

1977 – 1986. Lot 55 was improved with a one-story commercial building and otherwise used for parking. The configuration and usage of Lots 17 and 21 remained the same as the 1965-1968 maps. Surrounding property use included auto repair, casket manufacturing, laundry, metal working, a paint spraying facility and pharmaceutical manufacturing.

1987 – 1991. Lots 17 and 21 were occupied by a warehouse and a building used for storage. Surrounding property use included auto repair, casket manufacturing, laundry, metal working, a paint spraying facility and pharmaceutical manufacturing.

1991 – 1995. Lots 17 and 21 were occupied by a manufacturing facility and a building used for storage. Surrounding property use included laundry, metal working and a paint spraying facility.

2001 – 2007. The building previously shown on Lot 55 was demolished. The configuration and usage of Lots 17 and 21 remained the same as the 1991-1995 maps. Surrounding property use included laundry, metal working and a paint spraying facility.

4.4 Historic Site Occupants (City Directory Review)

Langan reviewed a city directory search and abstract provided by EDR. For each address, the directory lists the name of the corresponding occupant at approximate five year intervals. Business directories including city, cross reference, and telephone directories were reviewed, if available, for the years spanning 1928 through 2014. The City Directory Report is included in **Appendix D**. A summary of the occupant listings for the Site addresses is below:

Address	Reported Year	Reported By	Occupant
450 Johnson Ave	1992-2005	EDR	Envelope Manufacturers Corp
	1985	EDR	Consolidated Spring Corp
	1976-1980	EDR	Folio Printing Corp.
	1934	EDR	Johnson Ingraham Garage
	1928	EDR	Stagg H Garage

4.5 Historic Site Ownership

Historical ownership of the Site according to information retrieved from Automated City Register Information System (ACRIS) website (http://www.nyc.gov/html/dof/html/jump/acris.shtml), is summarized below by lot.

Date	Party 1	Party 2
Lot 17		
1/15/1981	Louis Puro and Jacob Puro	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.
2/25/1981	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.	Doogle Associates
3/26/1981	Michael L. Puro	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.
4/17/1981	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.	Doogle Associates
12/20/1988	Doogle Associates	Robert Harper
12/17/2012	Robert Harper	JBC Land LLC
Lot 21		
1/15/1981	Louis Puro and Jacob Puro	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.
2/25/1981	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.	Doogle Associates
3/26/1981	Michael L. Puro	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.
4/17/1981	Gerald J. Levy, c/o/ Brunel, Cochrane & Levy, Inc.	Doogle Associates
1/23/2006	New York City Industrial Development Agency	Robert C. Harper
12/17/2012	Robert C. Harper	JBC Land LLC
Lot 55		
1/23/2006	New York City Industrial Development Agency	Robert C. Harper
12/17/2012	Robert C. Harper	JBC Land LLC

A printout of the information from the ACRIS website is included as **Attachment E3** in **Appendix E**.

4.6 Environmental Orders, Liens, Use Limitations

Langan reviewed an environmental lien and activity use limitation report provided by EDR. Langan did not identify environmental orders, liens, or use limitations associated with the Site. The Environmental Lien and AUL Search is included in **Appendix D**.

4.7 Valuation Reductions for Environmental Issues

Langan has not identified established, public reductions in the valuation of the Site for environmental issues.

4.8 Prior Assessments

Langan was provided with one previous Phase I ESA report for the Site. A summary of assessment findings is provided below.

Phase I ESA – May 21, 2019

A Phase I ESA was performed by HydroTech Environmental Engineering and Geology, DPC in May 2019 (HydroTech, 2019) for Mr. Robert Harper. The assessment identified the following RECs:

- A suspected gasoline UST on Lot 21;
- Historical site use as a metal foundry and for envelope production;
- Potential vapor intrusion at the Site; and
- The presence of groundwater monitoring wells in the sidewalks on the north and south sides of the Site, with additional groundwater monitoring wells on nearby properties to the east and south.

The report also discussed an area where drums were cleaned using solvents and stored, but did not present its location. The drums were reportedly disposed of by an approved waste handler monthly. The report further described the suspected gasoline UST as 'decommissioned' according to the former Site owner, indicating it may be abandoned in place. Additionally, peeling paint was observed on the first floor of Lot 21, and based on the age of building construction (1931), the report concluded it may be LBP.

During the site reconnaissance, twelve monitoring wells were observed in the sidewalks immediately adjoining the Site, six along Johnson Avenue and six along Ingraham Street. The drum storage area described in the Hydrotech Phase I was not identified, however drum storage was observed throughout the site. Additional information is provided in Section 5.4. Selected portions of this Phase I ESA report are included in **Attachment E5**, **Appendix E**.

5.0 SITE RECONNAISSANCE AND INTERVIEWS

The site reconnaissance was performed on July 10, 2019 by Deirdre Casey of Langan. The Site reconnaissance was conducted in a systematic manner, focusing first on the interior of the warehouse located on Lots 17 and 21 inspecting the storage area, manufacturing areas, office space and roof, and finishing with the parking lot on Lot 55 and adjoining properties. The weather on the day of the site reconnaissance was sunny with an approximate ambient temperature of 85 degrees Fahrenheit. Photographs from the site reconnaissance visit are provided in **Appendix B**.

The assessment of the adjacent and surrounding properties was limited to identifying, if possible, indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products. The assessment was also intended to collect information the general topography of the surrounding area.

5.1 Interviews

Langan interviewed Mr. Joseph Matheson during the site reconnaissance. Mr. Matheson is a plant manager at the Envelope Manufacturers Corp and has worked at the Site for 16 years.

5.2 Site Features and General Reconnaissance Observations

The Site is located in an industrial and commercial section of the East Williamsburg neighborhood of Brooklyn, New York. The locations of select environmental observations discussed in the following sections as encountered during the Site reconnaissance are identified on **Figure 3**, **Appendix A**.

Site Use

The Site is owned by JBC Land LLC and is occupied by Envelope Manufacturers Corp. Lot 17 was improved with a two story warehouse and office building and a one-story warehouse, Lot 21 is improved with a one-story warehouse and Lot 55 is improved with an asphalt-paved parking lot. The warehouse portion of the three buildings were interconnected and utilized for a single use, envelope manufacturing. The existing buildings on Lot 17 and 21 were constructed in 1931. The warehouse space on Lot 17 was primarily utilized for storage and the warehouse space on Lot 21 was primarily utilized for envelope production. Envelope Manufacturers Corp. was in the process of ceasing operations at the time of site reconnaissance and production was no longer taking place. Some chemical and material storage was still occurring at the time of the Site

Reconnaissance, as discussed in Section 5.4 and the other subsections of this 'site features' portion of the report below.

Structures

The Site occupied a total square footage of approximately 35,000 ft^2 or 0.80 acres and was developed with an asphalt-paved parking lot and three buildings. Two boiler rooms were observed on the Site, one in the central part of Lot 17 and one in a partial cellar in the northeast corner of Lot 21. The partial cellar is accessible through a sidewalk hatch on Johnson Avenue.

Overall Condition / Upkeep

Cracks were observed throughout the building slab and isolated staining was observed on the slab underneath large equipment. Paint appeared to be peeling from ceiling supports and walls. Limited areas of adhesive and ink staining were observed on the production area floor. Additional information on this condition is presented in the *Stained Soil and/or Surfaces* section and Section 5.6 below.

Vaults

Langan observed a tank of unknown size in a subsurface vault located in the northeast corner of Lot 21 that is likely indicative of a septic tank. Pipes from the south (assumed to be a floor drain connection) and the east (assumed to be a restroom connection) were connected to the tank. The vault was constructed of stone and mortar and a tank access hatch was identified in the vault. An organic odor was noted around the vault. While the tank appeared to be a septic tank, Mr. Matheson indicated the facility is connected to the New York City Department of Environmental Protection (NYCDEP) sewer and that the presumed septic tank may be a holding tank for site waste water prior to discharge to the NYCDEP sewer system. The vault and vault interior are identified in **Photos #16** and **#17, Appendix B**. The septic holding tank was observed in a location, consistent with the former location of a gasoline tank noted on the 1933 Sanborn map.

Odors

Organic odors were noted in the area of the presumed septic tank vault, located in the northeastern part of Lot 21.

Pools of Liquids

Langan did not observe pools or ponded liquids at the Site during the reconnaissance.

Pits, Ponds, or Lagoons

Langan observed seven drainage pits and two sump pits during the site reconnaissance. These drainage features are discussed in greater detail in **Section 5.6**.

Stained Soil and/or Surfaces

Large envelope printing and folding machines are located throughout Lot 21. Minor to heavy staining was observed surrounding most machinery. Machinery was staged on top of concrete with no large cracks, breaches, or other pathways to the subsurface. Staining around envelope machinery is featured in **Photo #5**, **Appendix B**. Three areas of ink staining were observed on Lot 21. According to Mr. Matheson, all inks used on-site are water based. Ink staining on Lot 21 is featured in **Photo #6, Appendix B.**

The concrete floor in the remainder of the warehouse was generally free of staining and in average condition.

Lot 55 was a fully asphalt-paved lot. A recycling compactor staged on top a concrete pad was observed in the northeast corner of the parking lot. No staining or other evidence of a discharge was observed on the asphalt or the recycling compactor pad.

Stressed Vegetation

No stressed vegetation was observed at the Site during the Site reconnaissance.

Abandoned Equipment / Waste

The facility was no longer operational at the time of site reconnaissance. All equipment was inactive and tagged for auction.

5.3 Stormwater

Stormwater catch basins were not observed within the Site boundary. One stormwater catch basin was observed immediately adjoining the Site along Johnson Avenue. Additional stormwater catch basins were observed further along Johnson Avenue. These catch basins drain to the NYCDEP sewer system. Staining and indications of a release were not observed near catch basins.

5.4 Material & Waste Storage

No dumpsters were present onsite. Mr. Matheson indicated that during past production at the facility, solid waste generated on-site was collected in a box staged on a forklift. The box was loaded into a box truck periodically for off-site disposal.

Chemicals were observed to be stored near machinery on Lot 21, in a mechanical maintenance area, and in an office. Chemicals in the mechanical maintenance area were staged on shelves, in cabinets, or on wooden pallets on top of a concrete floor with no staining or other evidence of a release. Cleaning supplies including bleach products an insecticides were observed in the office area.

Chemical storage observed on-site is summarized in the table below:

Chemical	Size	Quantity
Toluene	1-gallon pail	1
Ethyl Alcohol	55-gallon drum	1
Lubricant	5-gallon bucket	3
	14-ounce tube	22
Hydraulic Oil	5-gallon bucket	2
	7-gallon bucket	1
	15-gallon bucket	5
	55-gallon drum	3
SS-80 Electric Solvent Degreaser	15-gallon bucket	1
WD-40	5-gallon bucket	2
Fire Extinguisher	10-pound can	10
Water Based Ink	5-gallon bucket	15
Ink Defoamer	54-gallon bucket	1
Acrylic	1-gallon pail	2
Repair Compound	8.6-ounce can	11
Belt Conditioner	11-ounce can	16
Adhesive	275-gallon tote	2
	3-gallon jug	28
Cooling Water Treatment	15-gallon drum	4
Lubricant/Coolant	5-gallon bucket	4
Waste Oil	5-gallon bucket	9
Motor Oil	1.5-gallon jug	12
Speedy Cleaner	55-gallon drum	1

5.5 Storage Tanks

Underground Storage Tanks (USTs):

As discussed in **Section 5.2**, a presumed septic holding tank of an unknown size was identified in a subsurface vault in the northeast corner of Lot 21. This tank was observed in approximately the same location as a gasoline tank noted on the 1933 Sanborn map.

A partial cellar boiler room was located on the northeast corner of the Site. No evidence of an aboveground storage tank (AST) or UST was observed in this area.

A liquid level measurement gauge (a petrometer) and associated piping were observed on a wall within the boiler room located on Lot 17. A concrete patch near the petrometer was noted, which may represent the location of a former UST. The piping and concrete patch are identified in **Photos #18** and **#19, Appendix B.**

Aboveground Storage Tanks (ASTs):

Langan did not observe ASTs during site reconnaissance.

5.6 Wastewater Discharges

Septic Systems

Langan observed a presumed septic tank in the northeast corner of Lot 21. This tank is discussed in greater detail in **Section 5.2**.

Wastewater

According to Mr. Matheson, all wastewater generated on-site is discharged to the NYCDEP sewer.

A collection of drainage features were observed inside the buildings on the property, including seven floor drains, seven drainage pits, four roof drains, two sump pits, and one trench drain. Sediment and debris was observed in the floor drains and drainage pits, preventing the collection of much information about the construction, routing, and/or disposition. Observations that were possible included the following:

- The drainage and sump pits appeared to be constructed of concrete including a concrete base, and floor drains appeared to be connected to subsurface piping.
- One drainage pit located in the southwestern part of Lot 17 was observed to contain a

sewer clean out (**Photo #11**, **Appendix B**).

- Roof drains were observed extending from the roof to the subsurface through a network of pipes that are presumed to connect with the NYCDEP sewer system.
- Two sump pits were observed in the partial basement on Lot 21 and were partially filled with water (**Photo #15**, **Appendix B**).
- The sump pits appeared to be constructed of concrete including a concrete base.
- A trench drain was observed along the northern boundary of Lot 17 at the opening of the loading bay. This drain appeared to be clogged with sediment and no longer functional.
- Staining was observed around one floor drain in the central part of Lot 21. Staining was purple in color and interpreted as a mix of printing ink and waste adhesive (**Photo #6**, **Appendix B**).

Two stormwater drains were observed on Lot 55 that are presumed to connect with the NYCDEP sewer system. No staining, odors or other evidence of a release was observed around these drains.

5.7 Air Emissions

Langan did not observe air emissions at the time of the Site reconnaissance. Exhaust vents for both boilers were observed on the building roof. Additional ventilation fan exhaust points were observed on the roof. The Lot 17 boiler exhaust and exhaust fans are identified on **Photo #21**, **Appendix B**.

5.8 PCBs

Four dry-type electrical transformers were observed at the Site. All four transformers were staged on concrete with no staining or other evidence of a release in the surrounding area. A dry type transformer identified in the northeast corner of Lot 21 is identified in **Photo #9**, **Appendix B**.

Three hydraulically powered scissor lift tables were observed on Lot 21. These lifts were powered by hydraulic oil reservoirs located on the legs of the lift and installed in a concrete depression on the floor. The concrete beneath the hydraulic reservoirs appeared to be in good condition with no staining or other indications of a release. A typical hydraulic scissor lift table is identified in **Photo #20**, **Appendix B**.

5.9 Groundwater Wells

Langan did not observe environmental monitoring wells within the Site during the reconnaissance, however monitoring wells were observed in the sidewalks immediately adjoining the Site to the north and south. Six monitoring wells were observed along Ingraham Street, and six were observed along Johnson Avenue. The wells are associated with two adjoining regulatory sites, 88 Ingraham Realty Corp/Popular Uniform (VCP Site No. V00170) and Ingraham Street Sidewalk Groundwater Project (NY SHWS Site Code 224142). Additional information about these sites is provided in Section 6.1.2.

6.0 ENVIRONMENTAL RECORDS REVIEW

6.1 Federal and State Database Review

Langan reviewed an environmental database search report, prepared by EDR, for the Site and surrounding area. The EDR report is a listing of properties identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM Standard Practice for E1527-13. This information is reported to Langan by EDR, and to EDR by government sources; therefore, neither Langan nor EDR can verify the completeness or accuracy of the database information. Langan reviewed each environmental database on a record-by-record basis to estimate if certain Sites identified in the report are suspected to represent a potential impact to the Site. A copy of regulatory database information was provided by EDR and is included in **Appendix C**.

Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Any Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The Site address 450 Johnson Avenue is listed in five (5) separate state and federal databases. These include Resource Conservation Recovery Act (RCRA) – Conditionally Exempt Small Quantity Generators (CESQG), Aerometric Information Retrieval System (US AIRS), Facility Index System (FINDS), Enforcement Compliance History Online (ECHO), and NY Manifest.

The following summary table lists the number of properties by database within the prescribed search radius appearing in the EDR Radius Map Report:

Database (Date of Government Version)	Minimum Search Area	Site Listed	Cases Within Search Area
Federal			
Superfund Enterprise Management System Archive (SEMS and SEMS-ARCHIVE) (06/06/2019)	1/2 mile radius	No	1
Resource Conservation and Recovery Act –Large Quantity Generators (RCRA –LQG) (03/27/2019)	Target Property and Adjoining Properties	No	0
RCRA –Small Quantity Generators (RCRA –SQG) (03/27/2019)	Target Property and Adjoining Properties	No	2
RCRA – Conditionally Exempt small Quantity Generators List (CESQG) (03/27/2019)	Target Property and Adjoining Properties	Yes	0

Database (Date of Government Version)	Minimum Search Area	Site Listed	Cases Within Search Area
Enforcement Compliance History Online (ECHO) (04/09/2019)	Target property	Yes	0
US Institutional Controls and Engineering Controls (05/29/2019)	½ mile radius	No	0
State, Local, and Tribal			
NY SWF/LF (Solid Waste Facility Directory) (04/01/2019)	1/2 mile radius	No	19
NY Leaking Tanks (LTANKS) (05/14/2019)	1/2 mile radius	No	40
New York Historic Leaking Tanks (HIST-LTANKS) (07/07/2005)	1/2 mile radius	No	0
Petroleum Bulk Storage Facilities (PBS) Underground Storage Tank (UST) and Aboveground Storage Tanks (AST) Databases (03/27/2019)	Adjoining Properties	No	5
New York State Hazardous Waste Sites (NY SHWS) (05/15/2019)	1 mile radius	No	12*
Additional Environmental Sources			
US Brownfields (06/04/2019)	1/2 mile radius	No	0
New York Manifest (NY Manifest) (05/01/2019)	1/4 mile radius	Yes, 1	90
New York Brownfields (05/13/2019)	1/2 mile radius	No	6*
New York Voluntary Clean Up Site (NY VCP) (02/18/2019)	1/2 mile radius	No	8*
Integrated Compliance Information System (ICIS) (04/08/2019)	1/8 mile radius	No	0
New York Institutional Control, Engineering Control (NY INST/ENG CONTROL) (05/15/2019)	1/2 mile radius	No	4
Other Ascertainable Records			
RCRA NonGen/NLR (3/1/2018)	Target Property and Adjoining Properties	No	1
Formerly Used Defense Sites (FUDS) (05/21/2019)	1 mile radius	No	0
Facility Index System (FINDS)/FRS (06/05/2019)	Target Property	Yes	0
New York SPILLS (NY SPILLS) (05/14/2019)	1/8 mile radius	No	13
US AIRS (09/26/2017)	1/8 mile radius	Yes	0
NY DRYCLEANERS (06/10/2019)	1/4 mile radius	No	2
EDR High Risk Historical Records			
EDR Hist MGP	1/2 mile radius	No	3
EDR Hist Auto	1/8 mile radius	No	1
EDR Hist Cleaner	1/8 mile radius	No	1

**Of seven orphan sites identified in the EDR report, five were located within the applicable search radii. These include one VCP site, 1 NY Brownfields listing, and four SHWS listings.*

A description of the reviewed databases is provided in the EDR Radius Map Report **(Appendix C)**. Supplementary information was identified in EPA and New York State Department of Environmental Conservation (NYSDEC) Online Databases (**Attachment E5, Appendix E**). A summary of Site database listings and other properties identified within the prescribed search area is presented below.

6.1.1 Site Listings

A summary of the Site listings is included below.

Envelope Manufacturing Corp – 450 Johnson Avenue
(RCRA-CESQG, NY Manifest, FINDS, ECHO and US AIRS)

The USEPA regulates hazardous waste under RCRA, which identifies and tracks hazardous waste from the point of generation to the point of disposal. RCRA permitted Treatment, Storage, Disposal (RCRA-TSD) facilities are those which treat, store, and/or dispose of hazardous waste. Conditionally Exempt Small Quantity Generators (CESQG) generate no more than 2,100 pounds of hazardous waste per month.

Envelope Manufacturing Corp (EPA ID No. NYD987006996) is identified as a RCRA-SQG (generated more than 100 kg but less than 1,000 kg per month) from 1992 to 2006 and a RCRA-CESQG from 2006 to present. Waste types consist of D001 (ignitable wastes). No violations were identified.

The Site was listed in FINDS and ECHO databases for its listing as a RCRA-CESQG, a US AIRS regulated site and a New York Facility Information System (FIS) site. The US AIRS listing is related to a facility-wide permit for miscellaneous objects that can potentially release air emissions. The Site was in compliance with its permit as of the most recent update on May 7, 2014. The FIS is the NYSDEC information system for tracking environmental facility information found across the state, it does not necessarily indicate the presence of an environmental condition of concern.

The Site is also listed in the NY MANIFEST database which tracks hazardous waste manifest information under EPA ID No. NYD987006996. Two manifests were identified - one for an unreported waste, and one for D001 non-listed ignitable wastes. No violations or enforcement actions are associated with the listing.

These listings appear to be related to historical operations on the Site.

6.1.2 Neighboring Property Listings

Langan reviewed the EDR listings of off-site facilities, NYSDEC and USEPA Databases for additional information of nearby properties. The following three adjacent properties or cases in the near vicinity of the Site are those most likely to represent potential environmental concerns to the Site. Locations of each Site or case are included on **Figure 3**, **Appendix A**.

Newtown Creek (230 feet North of the Site)
(SEMS, ID NYN000206282)

The Newtown Creek is a tidal arm of the New York-New Jersey Harbor estuary. Industrial development along the Newtown Creek and its tributaries since the 1800's included the filling of former marsh areas. Former industrial activities included oil refining, copper smelting, fertilizer production, ship building, saw mills, and coal yards. Industrial pollution and dumping have contributed to current contamination levels. The entirety of the Newtown Creek was designated as a Federal Superfund site in 2010. Sediment contamination includes volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), metals, and polychlorinated biphenyl (PCBs). The USEPA is currently executing characterization studies, and a final remedy has not yet been selected. Potentially responsible parties (PRP) were identified as contributors to contamination at Newtown Creek and included oil refineries, gas companies, electric companies adjoining the Newtown Creek. The Site was not included as a PRP. Based on the nature of the contaminants, down-gradient location, and its distance, the listing does not represent a concern for the Site.

88 Ingraham Realty Corp/Popular Uniform – 88 Ingraham St (Nearby Property to South) (NY ENG/INST Controls, RCRA-SQG [EPA ID No. NYD020562838], NY VCP [VCP Site No. V00170], NY Manifest)

This listing is related to the former Popular Hand Laundry property immediately south of the Site across Ingraham Street. Contaminants of concern include VOCs, SVOCs and metals in soil, soil vapor and groundwater. According to a December 2017 Fact Sheet issued by the NYSDEC, the 88 Ingraham Realty property achieved cleanup requirements at the site.

This property is also listed as a RCRA-LQG from 1985 to 1999, a RCRA-NonGen from 1999 to 2011 and a RCRA-SQG from 2011 to present. Waste consisted of F002 (spent halogenated solvent. One written informal violation was assigned to this generator on March 30, 1987 and compliance was achieved on the same day. The Site is also listed in the NY MANIFEST under EPA ID No. NYD020592838. One manifest was identified for the transport of PCE (D039), TCE (D040) and spent halogenated solvents (F002). No violations or enforcement actions are associated with the listing.

Off-site investigation related to this listing is discussed below as the Ingraham Street Sidewalk property.

Ingraham Street Sidewalk Groundwater Project (Southern Adjoining Area)
(NY SHWS Site, Code 224142)

An orphan SHWS listing for "Ingraham Street Sidewalk GW" was identified during off-site investigations related to the 88 Ingraham Realty Corp VCP site (V00170). This SHWS listing identifies three monitoring wells across from 88 Ingraham Street, indicating the sidewalk adjoining the Site to the south. Groundwater sampling identified VOCs exceeding applicable groundwater standards. Indoor air samples were not collected.

Due to the location and immediate adjacency of this listing to the Site and the presence of contaminants in groundwater, the potential of groundwater and soil vapor impacts migrating to the Site exists.

6.1.3 Orphan Listings

According to EDR, an orphan listing is a property that cannot be mapped due to poor or inadequate address information. There were seven orphan listing identified by the EDR search. Two listings were outside the applicable search radius for the identified databases, two were located approximately 0.1 miles north east and cross gradient, and two were described as not qualifying for the listed database. The remaining site, Ingraham Street Sidewalk GW, is discussed above.

6.2 Local Agency Review

Langan submitted Freedom of Information Act (FOIA) Requests on June 21, 2019 to the United States Environmental Protection Agency (USEPA), New York State Department of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH), New York City Department of Environmental Protection (NYCDEP), New York City Department of Health (NYCDOH) and the Fire Department of New York (FDNY). To date, complete responses have not been received from the NYSDEC. The USEPA, NYSDOH and NYCDOH did not identify responsive records. Copies of FOIA requests and responses are provided in **Attachment E6**, **Appendix E**. Selected portions of three offsite reports, are included in **Attachment E5**. A list of documents received from each agency is below:

NYSDEC

- Five access stipulation agreements for 85-89 Harrison Place from March 2012 to May 2014 as part of the Ingraham Sidewalk SHWS (site code 224142) investigation.

- An undated tag map for groundwater analytical results on the 88 Ingraham site and off-site wells, an undated and highlighted Sanborn Map, and a Well Drilling and Development Plan figure by Tyree Environmental Corp for 88 Ingraham Street dated October 8, 2006.
- A Site Work Plan by Shaw Infrastructure & Environmental Engineering of NY, P.C. (Shaw) dated October 21, 2013 for the Ingraham Sidewalk SHWS (site code 224142) investigation.
    - Appendix J of this report includes NYCDEP figures depicting a Relief combined sewer line transecting Ingraham Street to Johnson Avenue, that appears to project across the site near the Lot 17 and 55 boundary. The approximate location of the line is shown on **Figure 3**. Appendix J is included in **Attachment E5** in **Appendix E**, with the map also includes as **Attachment E9** in **Appendix E**.
- A Site Characterization Report by Shaw dated February 2015 for the Ingraham Sidewalk SHWS (site code 224142) investigation.

NYCDEP

- A Division of Emergency Response and Technical Assessment (DERTA) FOIL report for an incident that occurred at Lot 21 on January 17, 2011 was provided. The Incident involved a service line causing a smoking manhole that lead to elevated carbon monoxide. The electrical pull pox provided a conduit for carbon monoxide fumes to enter the Lot 21 building.
- A DERTA FOIL report for an incident that occurred at 88 Ingraham Street, the southern adjoining property, on August 6, 2010. The incident involved the identification and removal of an abandoned drum of non-hazardous waste water.
- A DEP Complaint system general inquiry report for a complaint that occurred at 88 Ingraham Street, the southern adjoining property, on November 9, 1998. This complaint involved the storage of hazardous chemicals on-site following cessation of operations. This complaint was noted as "no further action required; remediation complete".

FDNY

- Records for Block 2992, Lot 17 (440 Johnson Avenue) that indicate the presence of a 1,080-gallon no. 2 fuel oil UST on February 3, 1998 when there was a conversion from heating oil to natural gas.
- Records for Block 2992, Lot 21 (450 Johnson Avenue) indicating the presence of a 2,500-gallon no. 2 fuel oil tank on January 8, 1993 when there was a conversion from heating oil to natural gas.

- No records for tanks at Block 2992, Lot 55 (79 Ingraham Street).

The Site Characterization Report by Shaw for the Ingraham Sidewalk SHWS indicated that chlorinated VOCs above NYSDEC Title 6 of the Official Compilation of New York Codes, Rules and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (NYSDEC SGVs) Elevated soil vapor concentrations were identified in up-gradient monitoring wells on Ingraham Street and down-gradient monitoring wells on Johnson Avenue. Selected portions of the Shaw report, are included in **Attachment E5**.

Online Database Review

Langan conducted a review of the online databases maintained by various New York City departments. Information obtained from each database are described by department below.

New York City Department of Buildings

Langan conducted a records search through the NYCDOB online query system on June 21, 2019. The Site is comprised of three individual lots, the details of each are provided below:

Address	Block, Lot	Building Identification Number (BIN)	Department of Finance Classification
440-448 Johnson Avenue	Block 2992, Lot 17	3325627	F5 – Factory/Industrial
450 Johnson Avenue, 83-89 Ingraham Street	Block 2992, Lot 21	3070612	F4 – Factory/Industrial
79-81 Ingraham Street	Block 2992, Lot 55	3070616	G7 – Garage/Gas Station

Certificates of occupancy (CO) were identified for all three lots. Details for each are provided below by lot:

- Block 2992, Lot 17 (440 Johnson Avenue)
  - CO No. 51554 dated July 12, 1928 lists a one-story building used for 'ordinary use' and 'factory'. The owner is noted as NKC Holding.
- Block 2992, Lot 21 (450 Johnson Avenue)
  - CO No. 46299 dated September 1, 1927 lists the one-story building a "boiler room for factory". The first floor use, second floor use and owner name are illegible.
  - CO No. 104798 dated March 18, 1942 lists a boiler room in the cellar and a factory on the ground floor. No owner is noted.

- Block 2992, Lot 55 (79 Ingraham Street)
    - CO No. 82338 dated May 7, 1937 lists the building use as an 'office'. The owner name is illegible.
    - CO No. 82916 dated June 17, 1937 lists a "stone cutting shop in connection with stone yard" on the first floor. No owner is noted.

A copy of the NYCDOB property profile report and records are included in **Attachment E7, Appendix E**.

Actions and Relevant Observations

The NYCDOB portal lists the following actions, jobs and violations for each lot:

- Lot 17 had one DOB violation, one jobs, and 40 actions.
    - The actions were related to alterations, building notice, certificate of occupancy, docket, oil burner application, new building, plumbing and a DOB violation.
        - New building actions were dated 1902, 1905, 1928, 1946, and 1949, predating site development observed in Sanborn Maps.
        - Two applications for No. 2 fuel oil burner were filed in 1912 and 1946.
- Lot 21 had ten DOB violations, one ECB violation, three jobs, and 38 actions.
    - The actions were related to alterations, building notice, construction, elevator, electric signage, oil burner applications, new buildings, plumbing and DOB violations.
        - The new building actions were dated 1923 and 1924, around the time of site development. The oil burner applications were dated 1955 and 1965.
        - An alteration dated 1933 was labelled "GASTANK" indicating a possible install date for the gasoline UST identified in the 1933 Sanborn Map.
- Lot 55 had 12 actions and no violation or jobs
    - The actions were related to alterations, certificates of occupancy and new buildings. The new building actions were dated 1936, around the time of site development.

No information regarding current gasoline and fuel tank size or status was available; fuel oil and/or gasoline USTs may exist at the Site.

New York City Planning Commission

According to the New York City Planning Commission (NYCPC) Zoning Map 13b **(Attachment E1**, **Appendix E)**, the Site is located in a M1-2 manufacturing area. A M1-2 area is characterized by light industry such as woodworking and auto repair shops, and often serves as a buffer between manufacturing and adjacent residential or commercial areas. A copy of the zoning map is included in **Attachment E1**, **Appendix E**.

Historical industrial use for the Site and surrounding area was identified during review of NYCPC documents. However the uses were non-specific, therefore, no RECs were specifically identified for the Site.

NYCDEP Clean Air Tracking System (CATS)

Langan conducted a records search through the NYCDEP CATS online query system on June 21, 2019. Records were identified for Lots 17 and 21. One boiler record for Lot 17 details a certificate to operate an industrial boiler that expired in April 2018. The fuel type was not provided. Records for seven boilers at Lot 21 were identified. These records detail the registration cancellation of two industrial process equipment permits the expiration of one industrial permit, the cancellation of a natural gas powered boiler registration, the cancellation of two No. 2 fuel powered boilers, and the current registration of one natural gas powered boiler.

A copy of NYCDEP CATS records are provided in **Attachment E8, Appendix E**.

7.0 SUPPLEMENTAL CONSIDERATIONS

7.1 Wetlands

Wetlands were not observed within Site boundaries. The NYSDEC Environmental Resource Mapper identifies riverine, estuarine and marine deepwater areas mapped approximately 230 feet north of the Site in the Newtown Creek as shown on **Figure 2, Appendix A.**

7.2 Asbestos

Potential ACM building materials were identified within the Site buildings during the Site reconnaissance. Twenty-five (25) non-destructive samples were collected from the warehouse, office, roof, and building exterior including insulation, plaster, joint compounds, mastic, ceiling panels, flooring materials, caulk, gypsum board, flue cement, and roofing materials. Seven (7) materials sampled were identified to be assumed ACM material including insulation, mastic, flooring materials, caulk and roofing materials. A summary of results and quantity estimates is provided in **Appendix F**.

7.3 Lead-In-Paint

The use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm^2) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act. Five (5) non-destructive samples were collected from paint throughout the warehouse space and the office. Material sampled was determined to be non-LBP. A summary of results is provided in **Appendix F**.

7.4 Lead-In Drinking Water

Lead has historically been used in pipes, solder, and fittings used in water distribution systems and building plumbing. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing fittings. The EPA action level for lead in public drinking water is 0.015 parts per million (ppm) or 15 parts per billion (ppb).

Municipal water service is provided to the Site by New York City. Potable water is obtained from 19 reservoirs and three controlled lakes within portions of Hudson County and Catskill Mountains. Based upon review of the New York City 2018 Drinking Water Supply and Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water

Act (SDWA) and local municipal drinking water standards, including those for lead. As such, no further assessment for lead was conducted.

7.5 Radon

According to the USEPA Radon Zone Map, the Site is located in Zone 3, which indicates a predicted average indoor radon screening level less than 2 pCi/L. According to the EDR Report, 51 radon tests have been conducted in Kings County with results indicating that 100 percent of living areas and 88 percent of basements have radon concentrations less than 4 pCi/L, which is the USEPA action level for mitigation. Based on the non-residential use scenario, it is Langan's opinion that radon impacts to the subject buildings are unlikely.

7.6 Mold

Potential mold conditions were not observed during the Site reconnaissance.

8.0 FINDINGS AND RECOMMENDATIONS

Langan's findings from the Phase I ESA are summarized below.

8.1 Known or Suspect RECs and BERs

Two RECs and two BERs were identified in association with the Site. The RECs and BERs include:

REC 1 – Current and Historical Site Use

Historical records indicate the Site has been utilized for a variety of industrial operations between 1907 and the present, including as a lumber yard (1907-1951), an auto garage (1928-1934), a metal working facility (1933), a paper box manufacturing facility (1951), and an envelope manufacturing facility (1992-present).

During the site reconnaissance, a septic holding tank was observed in the northeast corner of Lot 21. One gasoline underground storage tank (UST) has also historically been reported in the northeast corner of Lot 21 (1933), and is presumed removed as the location of the septic tank and former gasoline UST appear consistent with each other. Two fuel oil USTs to support former oil burning boilers were reported at the Site (1912-1990), but appear now removed.

REC 2 – Current and Historical Operations of Surrounding Properties

The area surrounding the Site has been used for industrial purposes since at least 1888 through the present. Activities include rail freight yards, plastics manufacturing, pharmaceutical manufacturing, a coal yard, auto repair shops, metal working, a dry cleaners/laundry and miscellaneous manufacturing.

One off-site and adjoining (upgradient) property, Ingraham Street Sidewalk GW (New York State Hazardous Waste Site [SHWS] ID No. 224142) is listed in the New York State VCP database. Chlorinated VOCs are constituents of concern in groundwater and soil vapor.

BER 1 – Presumed Historic Fill

Based on the findings of previous subsurface investigations in the surrounding areas completed by Langan, it is likely that historic fill is present on the Subject Property. Management and disposal of historic fill material will require special considerations during potential future development of the Subject Property.

BER 2 – Asbestos Containing Material (ACM) and Lead Based Paint (LBP)

A limited survey of building materials identified the presence of ACM materials on the Site, including insulation, mastic, flooring materials, caulk, and roofing materials. No LBP was identified. A full survey of building materials would be required as part of building renovations or demolition relating to future redevelopment of the Site.

8.2 Other Items

The staining noted on the concrete slab surrounding large machinery and around one floor drain is considered de minimis, given that they were atop concrete in average condition with no large cracks, breaches or other pathways to the subsurface.

8.3 Conclusion

Langan conducted this Phase I ESA with a standard of commercial and customary practice using the local standard of case that is consistent with ASTM E1527-13.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/11/2019 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NEWTOWN CREEK Cerclis ID:: 206282 EPA Id: NYN000206282	***SOUTH END OF IVY HIL***	***N 1/4 - 1/2 (0.486 mi.)***	***AZ321***	***960***

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/11/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
NEWTOWN CREEK Site ID: 0206282 EPA Id: NYN000206282	***SOUTH END OF IVY HIL***	***N 1/4 - 1/2 (0.486 mi.)***	***AZ321***	***960***

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there are 7 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/13/2019 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 12/31/2018 has revealed that there are

EXECUTIVE SUMMARY

19 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/13/2019 has revealed that there are 40 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 33 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY MOSF UST sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/13/2019 has revealed that there are 13 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 67 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal

Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/15/2019 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

FLUSHING DRY CLEANER Facility Id: 2-6104-00998	1065 FLUSHING AVENUE	S 1/8 - 1/4 (0.197 mi.)	U174	434

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 3 NY HSWDS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

GREENPOINT	287 MASPETH AVENUE	N 1/2 - 1 (0.862 mi.)	BB331	1017

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
IDEAL SERVICENTER	66 KNICKERBOCKER AV	SSW 0 - 1/8 (0.090 mi.)	I63	190

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

- Site Description: Location: The site is located at 88 Ingraham Street in Brooklyn, NY. Site Features: It consists of a two story building with an adjoining garage. The building comprises approximately 11,000 sq ft. and occupies the entire site. Current Zoning/Use: The site is currently used as for storage and restoration of antique furniture and artwork. The surrounding area is industrial. Historical Use: Since 1933 the building has been used for skein dying, dry cleaning and laundry operations. The site was acquired by Popular Hand Laundry (circa 1970) which operated dry cleaning services. Prior to 1970, a dry cleaning and laundry facility was operated by Klink. The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north.
- Env Problem: Nature and extent of contamination: Post remediation: remediation at the site is complete. prior to remediation, the primary contaminants of concern were the chlorinated solvents tetrachloroethene and trichloroethene in soil, groundwater and soil vapor. Remediation has successfully achieved soil cleanup objectives for commercial and

The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north.
Env Problem: Nature and extent of contamination: Post remediation: remediation at the site is complete. prior to remediation, the primary contaminants of concern were the chlorinated solvents tetrachloroethene and trichloroethene in soil, groundwater and soil vapor. Remediation has successfully achieved soil cleanup objectives for commercial and industrial use. Remaining contamination in soil vapor is being managed under a Site Management Plan.
Health Problem: Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination

Site Description: Location: The site is located at 88 Ingraham Street in Brooklyn, NY.

88 INGRAHAM REALTY CORP (Continued) **1000425382**

Site Features: It consists of a two story building with an adjoining garage. The building comprises approximately 11,000 sq ft. and occupies the entire site. Current Zoning/Use: The site is currently used as for storage and restoration of antique furniture and artwork. The surrounding area is industrial. Historical Use: Since 1933 the building has been used for skein dying, dry cleaning and laundry operations. The site was acquired by Popular Hand Laundry (circa 1970) which operated dry cleaning services. Prior to 1970, a dry cleaning and laundry facility was operated by Klink. The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north.

FINDS:

Registry ID: 110000774840

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

BASIC ADHESIVES INC (Continued) **1000246346**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"9/21/07 bf: Called Allan Hoffman 718-381-3000 and left message to call me back. Sent ttf letter to: Allan Hoffman Cornell Beverages, Inc. 105 Harrison Place Brooklyn, NY 11237 9/24/07 Received call from Donna Hoffman. Tank failed with a dry leak and the tank is ot in use at this time. She said that she they are working on the repair or closure of the tank. They are not sure which they want to do at this time. She did not know how to proceed on repairs. I told her that her tank company may do repairs and she should contact them or another company. She also wanted to know about closure. I told her it would need to be emptied and cleaned prior to filling it with sand, cement, or foam. If it's removed in place, it would also need emptying and cleaning prior to its removal. I told her I sent Allan Hoffman a letter on Friday explaining how to proceed. bf 10/31/07 On 10/12/07, received letter from A. Hoffman. They are in the process of locating a company to do the repair work. They only fill the tank half full and that was the approximate level at which the test was performed. Leak is a dry leak. he will be having surgery on 10/16 and will be recovering two weeks after that. bf 11/8/07 Received call from A. Hoffman. He requested a list of contractors to repair tank. I faxed him the list and disclaimer. Fax:718-381-3001. bf 4/11/08 received letter from Allan Hoffman of Cornell. Fill box was replaced by Empire Fuel and the work order was attached. Passing tank test results were also attached. 10/15/08 Informed by Alan Hoffman that fill box is above ground so any spills would be visible. bf"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Site Description:	Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site.

Env Problem: Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion.

A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem:	Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion.

Site Description:	Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site.

Env Problem: Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. Site Description: Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site.

Env Problem: Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion.

Site Code: 58133
Site Description: Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site.
Env Problem: Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan.
Health Problem: Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion.

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F009
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Violation Status: No violations found

FINDS:

Registry ID: 110004477842

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number:	001
Tank Id:	233043
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
J02 - Dispenser - Suction Dispenser
G00 - Tank Secondary Containment - None
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.

FINDS:

Registry ID: 110055208163

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Registry ID: 110004334060

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name:	HEATHER
DEC Memo:	"10/16/18 - Desk Duty - Obligado - Desk Duty - I spoke to Heather. The spill is on a fedex facility. No drains impacted. Speedy dry has been put down. A contractor is enroute. She will email me when the cleanup is complete. 11/20/18 - Obligado - I received a Correction Action Final Report. Clean up was performed by Hepaco. They used absorbent materials and generating (2) 55-gallon metal drums of impacted materials. According to the report, no evidence of significant environmental impact remains. Non-hazardous waste manifests were provided. Spill closed."

Name: FORMER JAYER PLATING
Address: 2 INGRAHAM ST
City,State,Zip: EAST WILLIAMSBURG, NY 11206
Program: HW
Site Code: 57074
Classification: N
Region: 2
Acres: 0.5
HW Code: 224036
Record Add: 02/21/2002
Record Upd: 02/28/2018
Updated By: JEBROWN
Site Description: Site being handled under BCP - C224036 Location: The Former Jayer Plating site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills.
Env Problem: This site is now in the BCP as 2 Ingraham Street site (C224036). Project was reclassed to N.

Site Description:	2 Ingraham Street, site represents the Block 3084, Lot 1, in the Williamsburg Area of Brooklyn, NY 11206. The site is a 0.5 acre

2 INGRAHAM STREET - OFF-SITE (Continued) **S110487597**

warehouse. The property is bordered by Ingraham Street to the north, by Marrisson Place to the south, by Bogart Street to the west and by Morgan Avenue to the east. The current use of the site is commercial. Before 1998, the building was used for cloth manufacturing and one of its section was used as a plating factory (Former Jayer Plating Co.). In spring 1998, the warehouse was vacant. The neighbourhood was mixed industrial, residential, and commercial. In the western section of the warehouse, where the plating factory has operated a deep corroded dry drain was noticed. In this area the concrete floor was also broken and corroded, perhaps due to waste bath residues of the metal plating processes on the floor. The VCP investigation was not compleated and the Volunteer Cleanup Agreement negotiations have been closed . See project C224036

Record Updated Date: 01/14/2019
Update By: GWBURKE
Site Description: Location: The 2 Ingraham Street site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. The primary contaminants of concern at the site include metals, SVOCs, and VOCs. Environmental investigation in the area revealed concentrations of metals, SVOCs, and VOCs exceeding Standards, Criteria, and Guidance values (SCGs) in the soil and/or groundwater. Soil: Based upon investigations to date, sub-surface soils are contaminated with metals, SVOCS, and VOCs. Results from soils sampling reported metals (chromium, lead, mercury, and nickel), SVOCs (polyaromatic hydrocarbons or PAHs), and VOCs(tetrachloroethene or PCE). The PAHs contamination in soils is likely related to the presence of historic fill. Maximum detections vs. applicable unrestricted use or protection of groundwater soil cleanup objectives (UUSCO/PGWSCO) are as follows: chromium at 8,400 ppm vs. 19 ppm, lead at 607 ppm vs. 63 ppm, mercury at 1,790 ppm vs. 0.73 ppm, nickel at 3,720 ppm vs. 130 ppm, several PAHs including benzo(a)pyrene at 16 ppm vs. 1 ppm, and PCE at 1.9 ppm vs. 0.47 ppm. Mercury and nickel (up to 18.2 ppm, and 433 ppm, respectively) were detected off-site at soil boring SSB7N. Lead (up to 106 ppm) was detected off-site at soil boring SB8. Groundwater: Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: chromium at 110,000 parts

2 INGRAHAM STREET - OFF-SITE (Continued) **S110487597**

per billion (ppb) vs. 50 ppb, lead at 461 ppb vs. 25 ppb, and nickel at 90,900 ppb vs. 100 ppb. PCE (up to 17 ppb) and mercury (up to 3.3 ppb) were detected in off-site downgradient groundwater at MW-7. Chromium, lead, and nickel (up to 10,800 ppb, 802 ppb, and 8,690 ppb, respectively) were detected off-site in down-gradient groundwater at MW-8. Trichloroethene up to 140 ppb was detected off-site in groundwater at MW-6. Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor. The maximum concentrations of PCE and 1,1,1-Trichloroethane in sub-slab soil vapor were detected in the northwestern/northeastern portion of the site at the respective concentrations of 827 micrograms per cubic meter (ug/m3) and 1,220 ug/m3. In addition, soil vapor intrusion (SVI) levels for methylene chloride (e.g., 42 ug/m3 [below the slab] and 20.5 ug/m3 [indoor air]) require additional assessment, investigation or mitigation in accordance with NYSDOH SVI matrices. Therefore, additional sampling is needed to determine whether actions are needed to address soil vapor intrusion on- and off-site. Significant Threat: Recent public events held at the site and past unapproved activities are likely to increase the risk of direct contact with the contamination visually observed on the surface of the slab and/or slab areas with broken concrete in which the upper soils likely contain hazardous waste levels of contamination. Contravention of SCOs for metals pose a significant threat to human health due to accessibility. Also, metals contamination in soil at the source area exceeds respective industrial and/or protection of groundwater SCOs. This has resulted in contamination of shallow groundwater at levels several orders of magnitude above standards, creating a significant threat to the environment.

Health Problem: Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People may come into contact with contaminants in soils if they dig below the surface or contact exposed soil. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the event the site is re-occupied and for any future buildings developed on the site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site.

Site Description:	This project (2 Ingraham Street Off-Site, C224036A) was created to investigate for potential off-site impacts from the 2 Ingraham Street BCP Site (C224036). Location: This site is the off-site component to the 2 Ingraham Street Site located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The BCP site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The BCP site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the BCP site is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the BCP site was used as an orphanage. In 1948, the BCP site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the BCP site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The BCP site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills.
Env Problem:	Nature and Extent of Contamination: The primary contaminants of concern off-site include metals, and volatile organic compounds (VOCs). Previous environmental investigation in the area revealed concentrations of metals and VOCs exceeding Standards, Criteria, and Guidance values in the soil and/or groundwater. Based upon investigations to date, shallow soils (up to 5 feet below ground surface) are contaminated with metals. Data results from soils sampling reported metals (lead, mercury and nickel). Maximum detections vs. applicable unrestricted use or protection of groundwater cleanup objectives are as follows: lead at 106 parts per million (ppm) vs. 63 ppm, mercury at 18.2 ppm vs. 0.73 ppm, and nickel at 433 ppm vs. 130 ppm. Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater

2 INGRAHAM STREET - OFF-SITE (Continued) **S110487597**

	detections vs. standards are as follows: tetrachloroethene at 17 parts per billion (ppb) vs. 5 ppb, trichloroethene at 140 ppb vs. 5 ppb, chromium at 10,800 ppb vs. 50 ppb, and nickel at 8,690 ppb vs. 100 ppb.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

FINDS:

Registry ID: 110006449593

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Not a generator, verified

Violation Status: No violations found

FINDS:

Registry ID: 110063800310

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DER Facility ID:	293056
DEC Memo:	"Phase 1 & Phase 2 done - found petroleum mixed with paint 10.14.05 SR// Sharif rec'd the site assesment report with remedial action plan. I suggested to prepare a health & safety plan, set a time frame to complete the remedial work and installation of monitoring wells to confirm the ground water flow.Paul Stewart of ACT,Inc will forward DEC an addendum. 12/20/05-Sharif//Case was transferred to Koon Tang for reassignment since the site is going through extensive remedial activities. 1/11/2006 - Feng - File reviewed by Feng: 1) On 5/2005, ATC performed Phase I/Phase II Environmental Site Assessment (ESA) for the site, and found elevated VOCs present in soil and groundwater beneath the western portion of the sotrage yard. and the source might be the historical gasoline UST and storage of solvents. 2) On 10/25/2005, ATC proposed RAP to remediate the site. a) removal of contaminated soil beneath the storage yard, b) install monitoring wells. DEC approved the RAP. Waiting for soil excavation report, MWs installation, and groundwater sampling results. 2/1/2006 - Feng - call from Caroline Cadalso (ACT) stated that about 700 tons of soil were excavated, endpoint samples were taken. groundwater encountered at 12' and it looks like perched water. They plan to install the monitoring well deeper, down to 25'-35' bg to delineate the extend of contamination. approved. (RJF) 3/22/2006 - Feng - Remedial Closure Report, prepared by ACT, dated 3/20/2006. ACT excavated the contaminated soil from Area A, B, C and D down to depth of 12' bg. Endpoint samples show high PERC concentration found in Area B and Area D. Extend the excavation of soil in Area B, and 2nd round of soil samples show low concentration (only one were sent for lab analysis). Confirmatory samples were taken from Area D, show low concentration (only one were sent for lab analysis). 3 MWs were installed and groundwater contour were provided. Groundwater flows to northwest. Analyticals show low concentration. ACT requested spill closure. Spill closure request was denied and letter sent requiring 2 more monitoring wells in the 2 former drain. According to Phase II site assessment, high PERC has been found in former drain B (soil boring SB-3). Installtion report due 5/31/2006. 4/24/2006 - Feng - Addendum to Closure Report dated 3/20/2006, 4/5/2006 submitted by Advanced CleanUp Technologies, Inc. 2 monitoring wells were installed in the former Drain B (W-5) and former Drain D (W-4). Groundwater depth encounterred at 10'. Screen depth of 25'-35' bg. low Soil concentration. Groundwater samples show low concentration, 8.73 ppb of Trichloroethene, 11.4 ppb Tetrachloroethene and 10.9 ppb 1,2-dichloroethene in W-4. Request closure. Emailed to Caroline

EMEQUIFT CHEMICAL CORP - MISC (Continued) **S118953501**

Cadalso and inquired if it is perched or true groundwater at 10' and if we missed the groundwater at 10'-25'. (RJF) 5/31/2006 - Feng - Have been discussed with DEC Joe Sun. Spill closed for: 1) source removal, soil was excavated down to 12' bg and endpoint samples are in low concentration. 2) The groundwater encountered at about 10 feet is perched water due to low recharge. 3) The groundwater samples taken from 12' bg in Phase II is present in fill material (fill material found from 12' to 20' bg). 4) 5 Groundwater samples collected from 25' to 35' bg show low contamination (given that contaminants are PCE and TCE, deeper gw was selected). 5) Sensitive Receptor survey was done and it is fine. Spill closed and NFA issued. (RJF)"

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

ENEQUIST CHEMICAL CO INC (Continued) **1000350776**

corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

. Waste code: F009
. Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 01/20/1993
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

FINDS:

Registry ID: 110004332936

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 11/01/1997
Capacity Gallons: 1000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 03/28/2014
Register: True
Modified By: NRLOMBAR
Last Modified: 04/14/2017
Material Name: hydraulic oil

Tank Number: 009
Tank Id: 54991
Material Code: 0010
Common Name of Substance: Hydraulic Oil

Equipment Records:

J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
G01 - Tank Secondary Containment - Diking (Aboveground)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 01/01/1990
Capacity Gallons: 550
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 03/28/2014

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D018
. Waste name: BENZENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 13761.5

DEC Memo:	"06/07/11-Zhune. The City of New York Department of Sanitation (DSNY) sent a letter dated 02/23/11. the letter stated that this spill was generated as a result of the release of an unkmnown petroleum product to the pavement in the front of the facility. Housekeeping is listed as the cause of the spill on the NYSDEC Spill incidents Database. DSNY promptly responded to this spill. There is no reason to believe that the spill penetrated the concrete and reached the soil or groundwater. Pictures taken from the front of the faci;lity shows that the concrete sidewalk is free of any visible stains. Spill Closed. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TRANSFERRED FROM Y.KRIMGOLD TO KOLLEENY TO II. ISLAM 5/6/05- The site is under remediation by LiRo Engineers through the installation of a multi-phase extraction system to address contamination at the site. Reviewed the qurterly monitoring report (Nov./04-Jan./05) and noted that the system is performing well. Routine monitoring and sampling will continue at the site.Installed the monitoring report in the eDoc Folder. - II 7/6/05- Reviewed the Feb.-Apr./05 monitoring report. GW and Soil monitoring results show that the MPE system is functioning well and remediating site's soil and GW effectively.LiRo plans sampling of MW-10 and MW-11 to have them analyzed for TPH fingerprint as free product persists in these two wells. The MPE system operation should continue as recommended. The proposed 5 soil boring locations are approved for next round of soil samplings. Routine monitoring is to be continued. Installed the report in the eDoc Folder.- II. 9/19/05- Reviewed the May-July/05 monitoring report.Vapor and discharge monitoring results show that the MPE system is effectively collecting and treating contamination. Soil sampling was not required during this monitoring period. GW data show that the remedial system has improved site GW quality. MPE system operation will continue and system components will be adjusted as needed.Filed the report in the eDoc folder.- II 3/07/06: This Spill is transferred from I. Islam to Q. Abidi. 3/31/06: Reviewed Quarterly Monitoring Reports for Aug.-Oct. and Nov.-Dec. 2005. Sent E-mail to DDC. The data show that since the MPE system began operating, groundwater quality has improved at the site, although minor contamination persists. Soil sampling results from four locations out of five were in compliance with NYSDEC standards, except one boring LBR-6 near Stewart Ave. still has significant contamination. Management of the site is being transferred to Greyhawk. The Department suggests that the new CM should review the data and evaluate the site. Extraction well EW-21 is broken and EW-10 is clogged. They should perform another round of groundwater sampling and based on the results, they should recommend a future course of action.- QA 04/10/06: Received email from Andris Ledins of Greyhawk stating that operation of multi-phase extraction system with an air stripper at the site has caused extensive scaling problems in the system and in the sewer discharge pipe at the DOS facility, essentially blocking the pipe which had to be replaced. (See photos in eDocs images folder.) Greyhawk requested permission to shut down the system (rather than making costly repairs), re-evaluate the contaminant levels at the site, and propose an alternative remedial approach. In phone conversation with Andy, I agreed with this approach and asked him to send an email formalizing our conversation, which I could respond to and approve. - J. Kolleeny 04/11/06: Received email from Andy Ledins of Greyhawk summarizing our phone conversation of the previous day regarding suspension of system operation while considering alternate remedial technologies, and asking that I confirm my concurrence with this course of action. I sent email stating that I agreed with the course of action and approving suspension of system operation, but asked that the system

DSNY BK DISTRICT 3 GARAGE (Continued) **U001840268**

be left in place until a new remedial strategy is proposed and approved. I noted that if multi-phase extraction still turns out to be the best way to address site conditions, they could try operating the system bypassing the air stripper to reduce scaling problems, as has been done at other DDC sites (e.g., Queens N. 7). - J. Kolleeny 07/20/06: Reviewed Quarterly Monitoring Report for March-June 2006 submitted by Roux (Greyhawk's consultant). Sent following email to Afsar Samani of DDC: Results of March 2006 groundwater sampling indicate there are low to moderate levels of groundwater contamination persisting in several wells along east edge of site. MPE system at site was shut down in early 2006, with DEC approval, due to accumulation of mineral scale in facility's sewer discharge pipe, with understanding that Greyhawk/Roux would consider alternate remedial technologies. In monitoring report, Roux recommends following: 1. Maintaining system shutdown status and securing system, which will remain on-site. 2. Performing soil vapor investigation, with work plan to be submitted under separate cover. 3. Continuing quarterly groundwater monitoring. 4. Reducing frequency of monitoring well gauging for water levels and presence of free product from monthly to quarterly. 5. Recovering any free product encountered with an appropriate method, such as EFR or bailing. 6. Following soil vapor study, providing a recommendation for future action as appropriate. These recommendations are approved. Please be advised that management of this site and spill case are being transferred to Joseph Maisonave of my staff, so future reports and correspondence regarding the site/spill should be directed to Mr. Maisonave. - J. Kolleeny 7/20/06 DEC lead transferred from Q. Abidi to J.A. Maisonave. - JAM 6/29/07 Roux submitted a request to reduce groundwater monitoring from quarterly to semi-annually at five sites including this one. I sent an email approval today. - JAM 7/1/08 Site Update: Reviewed Quarterly Monitoring Report for the period July through Dec 2006 submitted by Roux and dated Jan. 31, 2007. On the Dec. 1, 2006 sampling event, VOCs were detected at total concentrations ranging from ND in six wells to 390ug/L in MW-06. MTBE and Benzene were the only compounds detected above NYSDEC AWQSGVs. No SVOCs were detected. The monitoring frequency has already been reduced from quarterly to semi-annual. Report uploaded to eDocs. Reviewed Quarterly Monitoring Report for the period Jan through Mar 2007 submitted by Roux and dated June 15, 2007. During the Jan 2007 sampling event, VOCs were detected at total concentrations ranging from ND in two monitoring wells to 250ug/L in MW-06. Wells MW-07 and MW-06 consistently have the highest concentrations and are located near former gasoline tanks (closed-in-place) along Stewert Ave. No SVOCs were detected. Report uploaded to eDocs. Reviewed Semi-annual Monitoring Report for the period April through Sept 2007 submitted by Roux and dated Feb. 11, 2008. Groundwater samples were collected in May and Sept 2007. During the Sept 2007 sampling event, total VOC concentrations were detected ranging from ND in three wells to 181ug/L in well MW-07. Results were similar in May and wells MW-06 and MW-07 consistently have the highest concentrations. ORC socks were installed in well MW-07 on Nov 20, 2007 and in MW-06 on Dec 3, 2007. Roux recommends the following: 1) Maintain system shutdown status and secure the MPE system, which will remain on-site. 2) Continue using ORC socks in monitoring wells MW-06 and MW-07. 3) Continue semi-annual groundwater monitoring (gauging and sampling). 4) Remove wells MW-10, MW-11, MW-12, MW-15 and PT-01 from the monitoring program. 5) Remove SVOCs from the monitoring program. The

DSNY BK DISTRICT 3 GARAGE (Continued) **U001840268**

NYSDEC also received email correspondence on June 25, 2008 from Brian Morrissey of Roux requesting that the MPE system be permanently removed from the site. This request was made by the new property owner since DOS has vacated the site. I sent an email today approving all the above recommendations. Email uploaded to eDocs. - JAM 11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ 2-28-2011 Reviewed Turn-over status report and semi-annual monitoring report dated November 4, 2010. Total VOC concentrations in groundwater increased. The following e-mail was sent to S. Frank, F. Ashkan and V. Brevdo: Dear Steve, I have reviewed site turn-over status report and semi-annual report dated November 4, 2010. Medium to high level VOCs levels were detected in soil. Free phase product is present in one well. LiRo proposed analysis of bio-remediation parameters and EFR in one well. These proposals are approved. USTs closed in place should be removed if feasible. Hot spot soil excavation should be considered as a remedial strategy. AZ 12-05-2011 An email was sent to S. Frank/V. Brevdo/F.Ashkan: Dear Steve, I have reviewed Additional Investigation Work Plan for this site dated September 2, 2011. The plan proposed performing a geophysical survey to determine locations of the two 550 gallon gasoline USTs. If the tanks are located they should be removed, if feasible. Also, the plan proposed additional soil investigation. This proposal is approved. The report stated that some discrepancies exist regarding the tank status. All discrepancies should be clarified and correct information verified in the next monitoring report. Corrected information should be submitted to the PBS Section. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. AZ 3-20-2012 Reviewed semi-annual monitoring report dated December 28, 2011, and covering April- September 2011. Residual soil moderate to high level VOCs were detected in the vicinity of UST Area 1 and along Stewart Ave.The contamination was detected in the smear zone (9.5-11.5 bgs). Groundwater contamination is present. Free phase product is intermittently present in well MW-14. A GPR survey was performed to determine the status of tanks 001 and 002 in UST Area 1 but the results will be discussed in the next monitoring report. DEC approved an additional soil investigation which has not not been performed yet. AZ 1-31-2013 GPR investigation confirmed that there are some discrepancies in PBS records. ORC socks will continue to be utilized. The approved additional site investigation was tentatively scheduled in the fourth quarter of 2012. An updated PBS Registry will be submitted to DEC. AZ 7-11-2013 Reviewed monitoring report dated January 23, 2013. the approved additional site investigation is tentatively scheduled for the second quarter 2013. An updated PBS Registry application will be submitted to NYSDEC once approved by NYC DOS. AZ 9-25-2013 Reviewed monitoring report dated June 12, 2013. The approved additional site investigation is tentatively scheduled for the third quarter of 2013. Product removal from well MW-14 will

DSNY BK DISTRICT 3 GARAGE (Continued) **U001840268**

continue via petroleum absorbent socks. If product levels trend upward, additional product removal methods will be considered. The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed a monitoring report for this site dated June 12, 2013. I approve removal of monitoring well MW-05 from the sampling schedule. Sincerely, Alex Zhitomirsky 6-25-2014 I have reviewed a semi-annual monitoring report dated 12-9-2013. Product removal from well MW-14 will continue via absorbent socks. An absorbent sock will be placed in well MW-05, if free phase product is present. ORC socks are installed in two wells. The following e-amil was sent to Steve Frank/V. Brevdo: Dear Steve, I have reviewed a monitoring report for the above site. Based upon the recent groundwater sampling, LiRo recommends that wells MW-02 and MW-03 be removed from the site sampling program. I concur with this recommendation. Sincerely, Alexander Zhitomirsky 3-11-2015 I have reviewed a semi-annual monitoring report dated 5-20-2014. Elevated residual VOC concentrations were reported in September 2013 in soil at depths 8.5'-10' in the vicinity of borings LBR-11 through LBR-13. Free phase product has been intermittently reported in wells MW-14 and MW-05. AZ 5-26-2015 I have reviewed a semi-annual monitoring report dated 10-17-2014. Elevated residual VOC concentrations were reported in September 2013 in soil at depths 8.5'-10' in the vicinity of borings LBR-11 through LBR-13. Free phase product has been intermittently reported in wells MW-14 and MW-05. ORC socks are installed in wells MW-06 and MW-07. The maximum total VOC concentration during the August 2014 sampling was 47 ppb. Well MW-17 was not sampled due to a vehicle that was parked over the well. AZ 1-25-2016 I have reviewed a semi-annual monitoring report dated 6-23-2015. Elevated residual VOC concentrations were reported in September 2013 in soil at depths 8.5'-10' in the vicinity of borings LBR-11 through LBR-13. Free phase product has been intermittently reported in wells MW-14 and MW-05. Free-phase product was measured in well MW-05 during August 26, 2013, January 8, 2015 and in April 2015 sampling events following purging. A TPH product sample was collected and identified the product as weathered #2 fuel oil/diesel. The free-phase product was removed via absorbent socks. AZ 8-9-2016 I have reviewed a semi-annual monitoring report dated 1-18-2016. Elevated residual VOC concentrations were reported in September 2013 in soil at depths 8.5'-10' in the vicinity of borings LBR-11 through LBR-13. Free phase product has been intermittently reported in wells MW-14 and MW-05. Free-phase product was measured in well MW-05 during May 11, 2015, June 26, 2015 and in August 20, 2015 sampling events following purging. On June 26, 2015, product thickness was 1.91'. A TPH product sample was collected and identified the product as weathered #2 fuel oil/diesel. b The free-phase product was removed via absorbent socks. LiRo will advance two soil borings in the vicinity of MW-05. LiRo will determine the integrity of extraction wells EW-19 and EW-20. The wells will be gauged to determine presence/absence of free-phase product. AZ 4-3-2017 I have reviewed a semi-annual monitoring report dated 7-14-2016. During this monitoring period, free-phase product was measured in MW-01 at thickness ranging from 0.66' to 1.27'. Product had not been measured in this well since 2005. A product sample was collected in February 2016 and identified as fuel oil (similar to MW-05). Free -phase product was removed via EFR in March-April 2016. This well is not located near the current diesel fueling operations. An inspection of the well head and general vicinity did not indicate the source as a surface spill. LiRo

DSNY BK DISTRICT 3 GARAGE (Continued) **U001840268**

initiated weekly EFR in June 2016 and will continue until product levels return to historic levels. LiRo will advance five soil borings and install four wells in the vicinity of monitoring wells MW-01 and MW-05. AZ 6-20-2017 I have reviewed a semi-annual monitoring report dated 12-29-2016. LiRo will continue to utilize ORC socks, weekly EFR. LiRo will install passive product skimmers in wells LMW-02, LMW-03 and LMW-04 to enhance product recovery. Also, they will complete installation of additional borings/monitoring wells to delineate soil contamination and product sources. Free-phase product was measured in three new monitoring wells installed in August 2016.Free -phase product in LMW-02 has thickness of 2.15'. Product was reported as #2 fuel oil. AZ 2-7-2018 I have reviewed a semi-annual monitoring report dated 2-7-2017. The product remains on site and with the exception of wells LMW-04 and MW-05, the product IS mainly confined TO UST area 1 and UST area 3 below the concrete flooring. The source of free-phase product has not been determined. DSNY has not provided LiRo with any tank testing data. Product thickens ranged from 0.01' to 1.05'. Product was encountered in 8 wells.LiRo will continue to utilize ORC socks, weekly EFR. LiRo will install additional passive product skimmers. Also, they will investigate conducting tightness testing on the lines for the OWS. In addition, they will collect another round of product samples. AZ 8-3-2018 I have reviewed a semi-annual monitoring report dated 1-11-2018. The product remains on site. During this monitoring period product thickness have ranged from a sheen to 1.8'. The area impacted by free-phase product appears t be delineated. It's possible that the product was previously bound in soil, however, due the dramatic drop in groundwater elevations, it was released from the soil pores. LiRo estimated the amount of free-phase product in the subsurface at approximately 500-675 gallons. LiRo will continue EFR as an IRM measure. I have contacted S. Frank and stated that more aggressive remedial approach (passive product pumps) should be used at the site. LiRo will look into it. AZ 2-8-2018 I have reviewed a semi-annual monitoring report dated 7-31-2018. EFR appears to be reducing the free-phase product area and thickness. LiRo estimated volume of free-phase product as approximately 500-675 gallons. The product remains on site. During this monitoring period product thickness have ranged from 0.06' to 0.78'. AZ"

Remarks: "Groundwater and soil contamination was found during subsurface investigation."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

APT COMPLEX (Continued) **S105998649**

KRIMGOLD Called John (718) 497-6044, left message. Allison Walsh returned call. Allison is a Lawyer, representing APT Complex, (John). She asked that the tank test failure letter sent to her. Her address is 460 Park Avenue New York, NY 10022. # (212) 421-2150 Letter was prepared and sent 4/10/03. This facility is not registered with PBS E.R. Tank test letter was returned 5/2/03. Tank test failure letter sent to John 349 Scholes Street Brooklyn, NY 11206 E.R. 10/22/03. YK. Facility registered on 4/25/03 PBS # 2-608900. However, TT is overdue. 2/2/2004. YK faxed an old TTF letter dated April 10, 2003 to David Yudelson (212-421-2150 X 219) attorney for this property. 2/23/04. J.Krimgold talked to David Y. Tank taken out of service but not close yet. Trade-Winds did soil borings(?). He should call me back today with more info. 3/24/04. J.Krimgold reviewed a letter report prepared by Trade-Winds dated 3/16/04. 3 soil samples was taken by drilling through the tank bottom of 3000 gal tank and 2 samples from 1100 gal tank. All came out negative. NFA letter on 3/24/04. "

Remarks: "tank test failure "

Date Record Added:	12/21/2011
Date Rec Updated:	03/26/2019
Updated By:	SNBOLLER
Site Description:	Location: The Site is situated on an approximately one-acre parcel bounded by Boerum Street and commercial properties to the north; by Bogart Street and commercial properties to the east; by McKibbin Street and a New York City Park and residential property to the south; and by a concrete facility adjacent and to the west. It is identified as Block 3083 and Lots 16 and 30 on the Kings County Tax Map. Current Uses/Zoning: The Site, which is currently vacant, is located in an industrial area of Kings County (Brooklyn) and is zoned MI-2 (Manufacturing District). The surrounding parcels are primarily industrial and manufacturing, with some residential properties nearby. Historical Uses: The Site was undeveloped land prior to the early 1900 s. F.H. Kalfleisch Chemical Works occupied a portion of the Site starting around 1907. Between 1951 and 1990, the Site hosted lacquer spraying operations. The Site assumed various configurations

353 MCKIBBIN STREET (Continued) **S106704102**

with portions of the site being used for different purpose between 1954 through 1994. The Site became vacant and undeveloped since 1994. Geology: The Site is located in the Atlantic Coastal Plain Physiographic Province. Bedrock beneath the Site consists of Pre-Cambrian Age crystalline metamorphic and igneous rock. No bedrock outcrops exist at the Site. Depth to bedrock at the Site is unknown, but is likely greater than 200 feet below ground surface (bgs). Surficial materials have been mapped as Pleistocene Age deposits of the Upper Glacial Aquifer, Gardiners Clay and Jameco Formation. Soils mantling the Site have been identified as Urban Fill. Urban fill consists of construction debris, rock, and ash. Based on information obtained from environmental borings, the Site is underlain by approximately 7 feet of urban fill. Glacial deposits underlie the urban fill and consist predominately of varying percentages of silt, sand and gravel. Hydrogeology: Shallow ground water is present in the fill material and/or the glacial deposits present beneath the Site. Depth to ground water is approximately 9 feet to 15 feet bgs. The predominant ground water table flow is north-northwest. The deep ground water flow is to the north.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Soil - Concentrations of regulated compounds that exceed RSCOs were observed at varying degrees in subsurface soil samples collected across the Site and along the off-Site perimeter. VOC concentrations greater than TAGM #4046 RSCOs are present predominately in the areas identified as Hotspot #1 and Hotspot #2. The extent of SVOCs detected at concentrations that exceed the individual TAGM #4046 RSCOs in subsurface soils is widespread across the Site and off-Site locations and predominately located in the urban fill deposits. Groundwater - VOCs were detected at concentrations that exceed TOGS in five of ten ground water samples collected from the shallow overburden aquifer, and each of the three sample collected from the deep portion of the overburden aquifer. Hydraulically upgradient monitoring well MW-9 did not exhibit VOC detections above TOGS. On the Site s northern property boundary, MW-6 and MW-7 represents hydraulically downgradient monitoring wells, and VOCs were not detected above TOGS in ground water samples collected from these downgradient wells. The ground water sample collected from monitoring well MW-12 contained the greatest number of VOCs detected above TOGS and the highest concentrations of VOCs. The location of MW-12 is near and hydraulically cross gradient of Hotspot #1 where shallow subsurface soil samples exhibited TCE concentrations three orders of magnitude above TAGM #4046 RSCOs. Trimethylbenzene detected at concentrations above the TOGS values of 5 ug/l is limited to shallow ground water collected from Monitoring Wells MW-3 and MW-5. The location of Monitoring Well MW-5 is near the boundary of Hotspot #2. Soil Gas - Soil gas samples were collected at temporary sample locations SG-1 through SG-4 and permanent sample locations SV-1 through SV-4 to characterize soil gas within the boundary of the Site and along the perimeter of the Site and to evaluate potential effects of soil gas on indoor air. Table 5 presents the soil gas analytical results. All soil gas samples analyzed exhibit detectible concentrations of VOCs. The soil gas samples exhibiting the highest concentration of chlorinated hydrocarbons were collected from Soil-gas Probe SV-4. Soil-gas Probe SV-4 is located hydraulically cross gradient of the Site and groundwater samples and subsurface soil samples collected from Monitoring Well MW-9 (located adjacent to SV-4) exhibited no VOCs at concentrations above screening criteria. Therefore, it is

353 MCKIBBIN STREET (Continued) **S106704102**

	unlikely that the concentrations of chlorinated hydrocarbons detected in soil gas samples collected from SV-4 are the result of volatilization of VOCs from a local on-Site groundwater source. Subsurface soil above the water table in Hotspot # 2 and/or off-Site impacts are potential sources of chlorinated hydrocarbons in off-Site soil gas. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile and semi-volatile organic compounds in soil, trichloroethene and trimethylbenzene in groundwater and chlorinated VOCs in soil vapor.
Health Problem:	People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Since some contaminated soils remain at the site below concrete or clean backfill, people are not expected to come into contact with contaminated soils unless they dig below surface materials. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions have been taken on-site to address the potential for soil vapor intrusion to occur. Environmental sampling indicates that off-site soil vapor intrusion is a potential exposure pathway and actions have been recommended to address exposure concerns.

Site Code: 333585
Site Description: Location: The Site is situated on an approximately one-acre parcel bounded by Boerum Street and commercial properties to the north; by Bogart Street and commercial properties to the east; by McKibbin Street and a New York City Park and residential property to the south; and by a concrete facility adjacent and to the west. It is identified as Block 3083 and Lots 16 and 30 on the Kings County Tax Map. Current Uses/Zoning: The Site, which is currently vacant, is located in an industrial area of Kings County (Brooklyn) and is zoned MI-2 (Manufacturing District). The surrounding parcels are primarily industrial and manufacturing, with some residential properties nearby. Historical Uses: The Site was undeveloped land prior to the early 1900 s. F.H. Kalfleisch Chemical Works occupied a portion of the Site starting around 1907. Between 1951 and 1990, the Site hosted lacquer spraying operations. The Site assumed various configurations with portions of the site being used for different purpose between 1954 through 1994. The Site became vacant and undeveloped since 1994. Geology: The Site is located in the Atlantic Coastal Plain Physiographic Province. Bedrock beneath the Site consists of Pre-Cambrian Age crystalline metamorphic and igneous rock. No bedrock outcrops exist at the Site. Depth to bedrock at the Site is unknown, but is likely greater than 200 feet below ground surface (bgs). Surficial materials have been mapped as Pleistocene Age deposits of the Upper Glacial Aquifer, Gardiners Clay and Jameco Formation. Soils

353 MCKIBBIN STREET (Continued) **S106704102**

mantling the Site have been identified as Urban Fill. Urban fill consists of construction debris, rock, and ash. Based on information obtained from environmental borings, the Site is underlain by approximately 7 feet of urban fill. Glacial deposits underlie the urban fill and consist predominately of varying percentages of silt, sand and gravel. Hydrogeology: Shallow ground water is present in the fill material and/or the glacial deposits present beneath the Site. Depth to ground water is approximately 9 feet to 15 feet bgs. The predominant ground water table flow is north-northwest. The deep ground water flow is to the north.

Env Problem: Nature and Extent of Contamination: Prior to Remediation: Soil - Concentrations of regulated compounds that exceed RSCOs were observed at varying degrees in subsurface soil samples collected across the Site and along the off-Site perimeter. VOC concentrations greater than TAGM #4046 RSCOs are present predominately in the areas identified as Hotspot #1 and Hotspot #2. The extent of SVOCs detected at concentrations that exceed the individual TAGM #4046 RSCOs in subsurface soils is widespread across the Site and off-Site locations and predominately located in the urban fill deposits. Groundwater - VOCs were detected at concentrations that exceed TOGS in five of ten ground water samples collected from the shallow overburden aquifer, and each of the three sample collected from the deep portion of the overburden aquifer. Hydraulically upgradient monitoring well MW-9 did not exhibit VOC detections above TOGS. On the Site s northern property boundary, MW-6 and MW-7 represents hydraulically downgradient monitoring wells, and VOCs were not detected above TOGS in ground water samples collected from these downgradient wells. The ground water sample collected from monitoring well MW-12 contained the greatest number of VOCs detected above TOGS and the highest concentrations of VOCs. The location of MW-12 is near and hydraulically cross gradient of Hotspot #1 where shallow subsurface soil samples exhibited TCE concentrations three orders of magnitude above TAGM #4046 RSCOs. Trimethylbenzene detected at concentrations above the TOGS values of 5 ug/l is limited to shallow ground water collected from Monitoring Wells MW-3 and MW-5. The location of Monitoring Well MW-5 is near the boundary of Hotspot #2. Soil Gas - Soil gas samples were collected at temporary sample locations SG-1 through SG-4 and permanent sample locations SV-1 through SV-4 to characterize soil gas within the boundary of the Site and along the perimeter of the Site and to evaluate potential effects of soil gas on indoor air. Table 5 presents the soil gas analytical results. All soil gas samples analyzed exhibit detectible concentrations of VOCs. The soil gas samples exhibiting the highest concentration of chlorinated hydrocarbons were collected from Soil-gas Probe SV-4. Soil-gas Probe SV-4 is located hydraulically cross gradient of the Site and groundwater samples and subsurface soil samples collected from Monitoring Well MW-9 (located adjacent to SV-4) exhibited no VOCs at concentrations above screening criteria. Therefore, it is unlikely that the concentrations of chlorinated hydrocarbons detected in soil gas samples collected from SV-4 are the result of volatilization of VOCs from a local on-Site groundwater source. Subsurface soil above the water table in Hotspot # 2 and/or off-Site impacts are potential sources of chlorinated hydrocarbons in off-Site soil gas. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile and semi-volatile organic compounds in soil, trichloroethene and trimethylbenzene in groundwater and chlorinated VOCs in soil

353 MCKIBBIN STREET (Continued) **S106704102**

vapor.
Health Problem: People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Since some contaminated soils remain at the site below concrete or clean backfill, people are not expected to come into contact with contaminated soils unless they dig below surface materials. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions have been taken on-site to address the potential for soil vapor intrusion to occur. Environmental sampling indicates that off-site soil vapor intrusion is a potential exposure pathway and actions have been recommended to address exposure concerns.

Site Code: 333585
Site Description: Location: The Site is situated on an approximately one-acre parcel bounded by Boerum Street and commercial properties to the north; by Bogart Street and commercial properties to the east; by McKibbin Street and a New York City Park and residential property to the south; and by a concrete facility adjacent and to the west. It is identified as Block 3083 and Lots 16 and 30 on the Kings County Tax Map. Current Uses/Zoning: The Site, which is currently vacant, is located in an industrial area of Kings County (Brooklyn) and is zoned MI-2 (Manufacturing District). The surrounding parcels are primarily industrial and manufacturing, with some residential properties nearby. Historical Uses: The Site was undeveloped land prior to the early 1900 s. F.H. Kalfleisch Chemical Works occupied a portion of the Site starting around 1907. Between 1951 and 1990, the Site hosted lacquer spraying operations. The Site assumed various configurations with portions of the site being used for different purpose between 1954 through 1994. The Site became vacant and undeveloped since 1994. Geology: The Site is located in the Atlantic Coastal Plain Physiographic Province. Bedrock beneath the Site consists of Pre-Cambrian Age crystalline metamorphic and igneous rock. No bedrock outcrops exist at the Site. Depth to bedrock at the Site is unknown, but is likely greater than 200 feet below ground surface (bgs). Surficial materials have been mapped as Pleistocene Age deposits of the Upper Glacial Aquifer, Gardiners Clay and Jameco Formation. Soils mantling the Site have been identified as Urban Fill. Urban fill consists of construction debris, rock, and ash. Based on information obtained from environmental borings, the Site is underlain by approximately 7 feet of urban fill. Glacial deposits underlie the urban fill and consist predominately of varying percentages of silt, sand and gravel. Hydrogeology: Shallow ground water is present in the fill material and/or the glacial deposits present beneath the Site. Depth to ground water is approximately 9 feet to 15 feet bgs. The predominant ground water table flow is north-northwest. The deep ground water flow is to the north.
Env Problem: Nature and Extent of Contamination: Prior to Remediation: Soil - Concentrations of regulated compounds that exceed RSCOs were observed

353 MCKIBBIN STREET (Continued) **S106704102**

at varying degrees in subsurface soil samples collected across the Site and along the off-Site perimeter. VOC concentrations greater than TAGM #4046 RSCOs are present predominately in the areas identified as Hotspot #1 and Hotspot #2. The extent of SVOCs detected at concentrations that exceed the individual TAGM #4046 RSCOs in subsurface soils is widespread across the Site and off-Site locations and predominately located in the urban fill deposits. Groundwater - VOCs were detected at concentrations that exceed TOGS in five of ten ground water samples collected from the shallow overburden aquifer, and each of the three sample collected from the deep portion of the overburden aquifer. Hydraulically upgradient monitoring well MW-9 did not exhibit VOC detections above TOGS. On the Site s northern property boundary, MW-6 and MW-7 represents hydraulically downgradient monitoring wells, and VOCs were not detected above TOGS in ground water samples collected from these downgradient wells. The ground water sample collected from monitoring well MW-12 contained the greatest number of VOCs detected above TOGS and the highest concentrations of VOCs. The location of MW-12 is near and hydraulically cross gradient of Hotspot #1 where shallow subsurface soil samples exhibited TCE concentrations three orders of magnitude above TAGM #4046 RSCOs. Trimethylbenzene detected at concentrations above the TOGS values of 5 ug/l is limited to shallow ground water collected from Monitoring Wells MW-3 and MW-5. The location of Monitoring Well MW-5 is near the boundary of Hotspot #2. Soil Gas - Soil gas samples were collected at temporary sample locations SG-1 through SG-4 and permanent sample locations SV-1 through SV-4 to characterize soil gas within the boundary of the Site and along the perimeter of the Site and to evaluate potential effects of soil gas on indoor air. Table 5 presents the soil gas analytical results. All soil gas samples analyzed exhibit detectible concentrations of VOCs. The soil gas samples exhibiting the highest concentration of chlorinated hydrocarbons were collected from Soil-gas Probe SV-4. Soil-gas Probe SV-4 is located hydraulically cross gradient of the Site and groundwater samples and subsurface soil samples collected from Monitoring Well MW-9 (located adjacent to SV-4) exhibited no VOCs at concentrations above screening criteria. Therefore, it is unlikely that the concentrations of chlorinated hydrocarbons detected in soil gas samples collected from SV-4 are the result of volatilization of VOCs from a local on-Site groundwater source. Subsurface soil above the water table in Hotspot # 2 and/or off-Site impacts are potential sources of chlorinated hydrocarbons in off-Site soil gas. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile and semi-volatile organic compounds in soil, trichloroethene and trimethylbenzene in groundwater and chlorinated VOCs in soil vapor.

Health Problem: People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Since some contaminated soils remain at the site below concrete or clean backfill, people are not expected to come into contact with contaminated soils unless they dig below surface materials. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions have been taken on-site to address the potential for soil

353 MCKIBBIN STREET (Continued) **S106704102**

vapor intrusion to occur. Environmental sampling indicates that off-site soil vapor intrusion is a potential exposure pathway and actions have been recommended to address exposure concerns.

Site Code: 333585
Site Description: Location: The Site is situated on an approximately one-acre parcel bounded by Boerum Street and commercial properties to the north; by Bogart Street and commercial properties to the east; by McKibbin Street and a New York City Park and residential property to the south; and by a concrete facility adjacent and to the west. It is identified as Block 3083 and Lots 16 and 30 on the Kings County Tax Map. Current Uses/Zoning: The Site, which is currently vacant, is located in an industrial area of Kings County (Brooklyn) and is zoned MI-2 (Manufacturing District). The surrounding parcels are primarily industrial and manufacturing, with some residential properties nearby. Historical Uses: The Site was undeveloped land prior to the early 1900 s. F.H. Kalfleisch Chemical Works occupied a portion of the Site starting around 1907. Between 1951 and 1990, the Site hosted lacquer spraying operations. The Site assumed various configurations with portions of the site being used for different purpose between 1954 through 1994. The Site became vacant and undeveloped since 1994. Geology: The Site is located in the Atlantic Coastal Plain Physiographic Province. Bedrock beneath the Site consists of Pre-Cambrian Age crystalline metamorphic and igneous rock. No bedrock outcrops exist at the Site. Depth to bedrock at the Site is unknown, but is likely greater than 200 feet below ground surface (bgs). Surficial materials have been mapped as Pleistocene Age deposits of the Upper Glacial Aquifer, Gardiners Clay and Jameco Formation. Soils mantling the Site have been identified as Urban Fill. Urban fill consists of construction debris, rock, and ash. Based on information obtained from environmental borings, the Site is underlain by approximately 7 feet of urban fill. Glacial deposits underlie the urban fill and consist predominately of varying percentages of silt, sand and gravel. Hydrogeology: Shallow ground water is present in the fill material and/or the glacial deposits present beneath the Site. Depth to ground water is approximately 9 feet to 15 feet bgs. The predominant ground water table flow is north-northwest. The deep ground water flow is to the north.
Env Problem: Nature and Extent of Contamination: Prior to Remediation: Soil - Concentrations of regulated compounds that exceed RSCOs were observed at varying degrees in subsurface soil samples collected across the Site and along the off-Site perimeter. VOC concentrations greater than TAGM #4046 RSCOs are present predominately in the areas identified as Hotspot #1 and Hotspot #2. The extent of SVOCs detected at concentrations that exceed the individual TAGM #4046 RSCOs in subsurface soils is widespread across the Site and off-Site locations and predominately located in the urban fill deposits. Groundwater - VOCs were detected at concentrations that exceed TOGS in five of ten ground water samples collected from the shallow overburden aquifer, and each of the three sample collected from the deep portion of the overburden aquifer. Hydraulically upgradient monitoring well MW-9 did not exhibit VOC detections above TOGS. On the Site s northern

353 MCKIBBIN STREET (Continued) **S106704102**

property boundary, MW-6 and MW-7 represents hydraulically downgradient monitoring wells, and VOCs were not detected above TOGS in ground water samples collected from these downgradient wells. The ground water sample collected from monitoring well MW-12 contained the greatest number of VOCs detected above TOGS and the highest concentrations of VOCs. The location of MW-12 is near and hydraulically cross gradient of Hotspot #1 where shallow subsurface soil samples exhibited TCE concentrations three orders of magnitude above TAGM #4046 RSCOs. Trimethylbenzene detected at concentrations above the TOGS values of 5 ug/l is limited to shallow ground water collected from Monitoring Wells MW-3 and MW-5. The location of Monitoring Well MW-5 is near the boundary of Hotspot #2. Soil Gas - Soil gas samples were collected at temporary sample locations SG-1 through SG-4 and permanent sample locations SV-1 through SV-4 to characterize soil gas within the boundary of the Site and along the perimeter of the Site and to evaluate potential effects of soil gas on indoor air. Table 5 presents the soil gas analytical results. All soil gas samples analyzed exhibit detectible concentrations of VOCs. The soil gas samples exhibiting the highest concentration of chlorinated hydrocarbons were collected from Soil-gas Probe SV-4. Soil-gas Probe SV-4 is located hydraulically cross gradient of the Site and groundwater samples and subsurface soil samples collected from Monitoring Well MW-9 (located adjacent to SV-4) exhibited no VOCs at concentrations above screening criteria. Therefore, it is unlikely that the concentrations of chlorinated hydrocarbons detected in soil gas samples collected from SV-4 are the result of volatilization of VOCs from a local on-Site groundwater source. Subsurface soil above the water table in Hotspot # 2 and/or off-Site impacts are potential sources of chlorinated hydrocarbons in off-Site soil gas. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile and semi-volatile organic compounds in soil, trichloroethene and trimethylbenzene in groundwater and chlorinated VOCs in soil vapor.

Health Problem: People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Since some contaminated soils remain at the site below concrete or clean backfill, people are not expected to come into contact with contaminated soils unless they dig below surface materials. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions have been taken on-site to address the potential for soil vapor intrusion to occur. Environmental sampling indicates that off-site soil vapor intrusion is a potential exposure pathway and actions have been recommended to address exposure concerns.

Record Added Date: 03/15/2011
Record Updated Date: 02/08/2016
Update By: SXDEWES
Site Description: Location: The 353 McKibbin Street Off-Site (site) area is located in Brooklyn, Kings County. This site is related to the 353 McKibbin on-site property parcels (Site Number C224102) which are being addressed separately under the NYSDEC Brownfield s Cleanup Program (BCP). The area of concern subject to this work is considered off-site from the BCP property and reflects the investigation of contamination that migrated from that BCP site. Off-site sidewalks and road right-of-way areas were investigated. This work is being carried as a result of the BCP site being found to represent a significant threat to public health and/or the environment due to the migration to off-site areas. Current Uses/Zoning: The BCP site and off-site investigation area are located in an industrial section of Kings County (Brooklyn) and are zoned M1-2 (Manufacturing District). The surrounding parcels are primarily industrial and manufacturing, with some commercial and residential properties nearby and within the investigation area Historic Uses: The BCP project property was undeveloped land prior to the early 1900 s. F.H. Kalfleisch Chemical Works occupied a portion of the site starting around 1907. Between 1951 and 1990, the site hosted lacquer spraying operations. The BCP site property s use changed several times between 1954 and 1994 with portions of the property being used for different purposes. The site has been vacant/undeveloped since 1994. Geology and Hydrology: Based on information obtained from environmental borings, the site is underlain by approximately 7 feet of urban fill. Glacial deposits underlie the urban fill and consist predominately of varying percentages of silt, sand and gravel. Depth to bedrock at the Site is unknown, but is likely greater than 200 feet below ground surface (bgs). Shallow ground water is present in the fill material and/or the glacial deposits present beneath the Site. Depth to ground water is approximately 9 feet to 15 feet bgs. The predominant ground water table flow is north-northwest. The deep ground water flow is to the north.
Env Problem: Nature and Extent of Contamination: Based upon investigation activities conducted to date, the primary contaminants of concern in the off-site areas included chlorinated volatile organic compounds (CVOCs) and in particular trichloroethene (TCE). Soil - No CVOCs exceeding NYSDEC unrestricted Soil Cleanup Objectives (SCOs) were detected in off-site soil samples. Groundwater - Ten monitoring wells were sampled during the off-site investigation. Groundwater samples from four monitoring wells exceeded NYSDEC groundwater standards. All four wells are located on Boerum St. which borders the site to the north. The CVOCs exceeding standards were TCE at up to 16 ppb, and related compounds cis-1,2- dichloroethene (DCE) and tetrachloroethene (PCE), both with a maximum concentration of 22 ppb. The groundwater standard for each of these three compounds is 5 ppb. No further downgradient groundwater sampling was conducted. Soil Vapor CVOCs were detected in 9 of 11 off-site soil vapor locations. The highest concentrations, up to 2200 ug/m3 of TCE, are off the northeast corner of the site. Another location nearby had a concentration of 900 ug/m3 of TCE and 700 ug/m3 of PCE. PCE was also detected at 77 ug/m3 on Ingraham St., approximately 200 feet east of the site. TCE and PCE samples at other locations tested were generally 10 ug/m3 or less. Multiple offers of sub-slab vapor and indoor air sampling were made or attempted via mail, telephone, and staff visits to the

353 MCKIBBIN STREET (Continued) **S106704102**

	owners/occupants of 92 Bogart Street and the nearest known residential properties, three houses located approximately 300 east of the site on Ingraham Street. No responses were received.
Health Problem:	People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings; however, nearby property owners have declined the agencies sampling offers.

The surrounding parcels are primarily industrial and manufacturing, with some residential properties nearby. Historical Uses: The Site was undeveloped land prior to the early 1900 s. F.H. Kalfleisch Chemical Works occupied a portion of the Site starting around 1907. Between 1951 and 1990, the Site hosted lacquer spraying operations. The Site assumed various configurations with portions of the site being used for different purpose between 1954 through 1994. The Site became vacant and undeveloped since 1994. Geology: The Site is located in the Atlantic Coastal Plain Physiographic Province. Bedrock beneath the Site consists of Pre-Cambrian Age crystalline metamorphic and igneous rock. No bedrock outcrops exist at the Site. Depth to bedrock at the Site is unknown, but is likely greater than 200 feet below ground surface (bgs). Surficial materials have been mapped as Pleistocene Age deposits of the Upper Glacial Aquifer, Gardiners Clay and Jameco Formation. Soils mantling the Site have been identified as Urban Fill. Urban fill consists of construction debris, rock, and ash. Based on information obtained from environmental borings, the Site is underlain by approximately 7 feet of urban fill. Glacial deposits underlie the urban fill and consist predominately of varying percentages of silt, sand and gravel. Hydrogeology: Shallow ground water is present in the fill material and/or the glacial deposits present beneath the Site. Depth to ground water is approximately 9 feet to 15 feet bgs. The predominant ground water table flow is north-northwest. The deep ground water flow is to the north.

Env Problem:

Nature and Extent of Contamination: Prior to Remediation: Soil - Concentrations of regulated compounds that exceed RSCOs were observed at varying degrees in subsurface soil samples collected across the Site and along the off-Site perimeter. VOC concentrations greater than TAGM #4046 RSCOs are present predominately in the areas identified as Hotspot #1 and Hotspot #2. The extent of SVOCs detected at concentrations that exceed the individual TAGM #4046 RSCOs in subsurface soils is widespread across the Site and off-Site locations and predominately located in the urban fill deposits. Groundwater - VOCs were detected at concentrations that exceed TOGS in five of ten ground water samples collected from the shallow overburden aquifer, and each of the three sample collected from the deep portion of the overburden aquifer. Hydraulically upgradient monitoring well MW-9 did not exhibit VOC detections above TOGS. On the Site s northern property boundary, MW-6 and MW-7 represents hydraulically downgradient monitoring wells, and VOCs were not detected above TOGS in ground water samples collected from these downgradient wells. The ground water sample collected from monitoring well MW-12 contained the greatest number of VOCs detected above TOGS and the highest concentrations of VOCs. The location of MW-12 is near and hydraulically cross gradient of Hotspot #1 where shallow subsurface soil samples exhibited TCE concentrations three orders of magnitude above TAGM #4046 RSCOs. Trimethylbenzene detected at concentrations above the TOGS values of 5 ug/l is limited to shallow ground water collected from Monitoring Wells MW-3 and MW-5. The location of

353 MCKIBBIN STREET (Continued) **S106704102**

Monitoring Well MW-5 is near the boundary of Hotspot #2. Soil Gas - Soil gas samples were collected at temporary sample locations SG-1 through SG-4 and permanent sample locations SV-1 through SV-4 to characterize soil gas within the boundary of the Site and along the perimeter of the Site and to evaluate potential effects of soil gas on indoor air. Table 5 presents the soil gas analytical results. All soil gas samples analyzed exhibit detectible concentrations of VOCs. The soil gas samples exhibiting the highest concentration of chlorinated hydrocarbons were collected from Soil-gas Probe SV-4. Soil-gas Probe SV-4 is located hydraulically cross gradient of the Site and groundwater samples and subsurface soil samples collected from Monitoring Well MW-9 (located adjacent to SV-4) exhibited no VOCs at concentrations above screening criteria. Therefore, it is unlikely that the concentrations of chlorinated hydrocarbons detected in soil gas samples collected from SV-4 are the result of volatilization of VOCs from a local on-Site groundwater source. Subsurface soil above the water table in Hotspot # 2 and/or off-Site impacts are potential sources of chlorinated hydrocarbons in off-Site soil gas. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile and semi-volatile organic compounds in soil, trichloroethene and trimethylbenzene in groundwater and chlorinated VOCs in soil vapor.

Health Problem: People are not drinking contaminated groundwater because the area is served by a public water supply not affected by the site. Since some contaminated soils remain at the site below concrete or clean backfill, people are not expected to come into contact with contaminated soils unless they dig below surface materials. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions have been taken on-site to address the potential for soil vapor intrusion to occur. Environmental sampling indicates that off-site soil vapor intrusion is a potential exposure pathway and actions have been recommended to address exposure concerns.

East Rockaway, NY 11518 Attn: Anthony Mastronardi 8/28/03 1100 Hrs - Sawyer - Met Patricia Badding of Environmental Management services (908)604-2291, Tony Mastonardi the property owner and ATS Environmental the driller at the site to take samples. There were 5 samples taken from the south and west sides of the tank. 9/17/03 1111 Hrs - Sawyer - I received the partial results showing slightly elevated levels of some benzos and chrysene in soil borings 4 and 5. 11/01/03 - Sawyer - Received report of findings by Patty of Environmental Management, Inc. This report contained disposal documentation and PBS registration. I was told by another inspector that some fill of NYC has elevated semi volatiles and this should not be a problem. Closed.h "

Remarks: "caller says there is no permits and that oil is in the soil while digging is going on and nothing being done about clean up"

DEC Memo:	"after discussing with DEC Austin, case transferred to DEC Patel. 04/20/12-Hiralkumar Patel. DEC remarks from 11/06/1992 to 04/19/12 are stored separately in e-docs. DEC Vought forwarded email from DEC Ketani who received email from Bill Hughes from GeoQuest, Inc. dated 02/07/12. Bill mentioned that scaffolding company has left the site and left mess behind. they are currently cleaning up the site. Bill Hughes GeoQuest, Inc. Ph. (860) 243-1757 Ext. 103 (860) 402-9592 (C)

NYC DEP HAZ MAT (Continued) **S102143390**

email: williamhughes01@gmail.com 1:00 PM:- left message for Bill at GeoQuest. 2:00 PM:- visited site with DEC Vought. site contains lots of junk left behind by scaffolding company. no environmental work in progress. found multiple wells (some destroyed and some in bad condition) on and around the property. Vought showed a large aboveground tank in concrete vault along south side of the property. some rainbow and silver sheen (could be mixed of biological and petroleum) observed on water in creek along north of the site. 04/27/12-Hiralkumar Patel. 10:16 AM:- received message from Bill. 11:43 AM:- spoke with Bill. he mentioned that due to access issue with the previous tenant (scaffolding company) for couple of years and large piles of junk left behind after tenant left, no environmental work is in progress at the site. once all the scaffolding junk removed, they are planning to conduct additional soil/gw investigation for additional data. asked him to send summary of work done till now and future plan. also asked him to submit property owner's contact information. 5/8/12-Vought-Vought and Patel held teleconference with NYSOAG Judith Karpen and State will only release lien upon cleanup of site to satisfaction of NYSDEC. Karpen noted that new owner was English Kills and former owner was Corpus Christi and that Corpus Christi declared bankruptcy and as a result State will receive minor settlement amount in lieu of total monies spent. Karpen noted that Corpus Christi may have secured eight million dollar loan for cleanup (as per former OAG Buss) but not sure if monies are being used for cleanup and also not sure whether Corpus Christi or English Kills is supervising cleanup. Karpen will begin file research upon completion of file review by DEC Patel and subsequent call to NYSOAG Karpen. Spill transferred to DEC Patel as per RSE. 05/18/12-Hiralkumar Patel. completed review of available documents and found following: 1) 10/12/2006: Robert Feller from Bond, Schoeneck & King, PLLC sent fax including a singed copy of Agreement for Discharge of Environmental Liens. RCC & York Associates, Inc. signed the agreement. RCC agreed on following terms: - payment of $ 25,000 upon execution of this agreement - upon completion of cleanup of environmental contamination to the satisfaction of NYS DEC, RCC or its assigns, heirs, or successors of interest, shall pay $ 100,000 - upon receipt of the final payment, DEC shall issue a release of its said environmental liens against the said property 2) 05/27/2009: DEC Ketani referred case to legal as no response to the STIP letter (dated 03/18/09). 05/23/12-Hiralkumar Patel. 2:40 PM:- received email from Bill including summary of work done by GeoQuest and disposal manifests for soil removed during removal of eastern tanks (400,000 gal and 200,000 gal). GeoQuest is planning to remove southern tanks (total five tanks). once the tank complex has been removed and extent of the sub-surface structure is known, a proposed plan of action for determining the extent of the subsurface contamination will be submitted. Bill will visit the site on 05/30/12. 05/24/12-Hiralkumar Patel. alternate address: 192-200 Morgan Ave MOSF #: 2-1500. MOSF registration showing tanks still in-service. registration expired on 03/31/1991. other spill #: 8808176, 9105949, 9112693, 9208755 and 9211657 spill # 8808176 was reported on 01/13/1989 as 100 gal #2 oil dumped into creek. case closed on 08/07/1995. no documents on e-docs. spill # 9105949 was reported on 09/03/1991 as #6 oil found in creek which might be coming from a 55 gal abandoned drum or from bulkhead. case closed 09/19/1991. spill # 9112693 was reported on 03/12/1992 as 50 gal #6 oil spilled. case closed on 03/13/1992. spill # 9208755 was reported

NYC DEP HAZ MAT (Continued) **S102143390**

on 10/29/1992 as 50 gal #6 oil sludge spilled during tank cleaning operation. spill cleaned up by Citi Fuel. case closed on 02/05/1998. spill # 9211657 was reported on 12/23/1992 by DEC Mitchell due to contamination found in wells as part of PIN job. 05/25/12-Hiarlkumar Patel. 12:43 PM:- spoke with DEC legal regarding case initiation and confirmed no legal action from region 2 office as owner was doing work. 05/30/12-Hiralkumar Patel. 1:30 PM:- visited site. met Bill. found tank removal operation at the site. crew already removed more than 70% of the tank #1 (which is closest to the Morgan Ave - 647,000 gal tank). found about 12 inches thick concrete pad under the tank metal. water found on the side of the tank pad and oil found on water. no petroleum odors noticed. Bill mentioned that tank removal operation begun probably at the beginning of the month. informed him that the department has not received any work plans or notification to MOSF regarding removal of the tanks. after discussing with DEC Austin, asked Bill to stop tank removal work immediately and informed him that work should only be resumed after getting approval from the Department. Bill spoke with property owner and requested a meeting in DEC office. informed Bill that meeting can be scheduled once required work plan/documents submitted to the Department. during visit, met with Jacques Guillet (914-309-4317), contractor who is removing tank metals. informed him about no more work without the department's approval. 2:30 PM:- spoke with Ms. Karpen. she found the Agreement for Discharge of Environmental Liens (dated 10/12/2006) in her file. she will review available documents to see if any consent order or STIP signed for cleanup work. informed her about a meeting requested by RP. she mentioned that she needs to review the entire file and the work plan/documents, that will be submitted by RP, before any meeting with RP. she requested copy of work plan/documents, once submitted. 05/31/12-Hiralkumar Patel. discussed with DEC Austin and DEC Vought. Austin required submission of following documents: - work plan for tanks removal including community air monitoring plan and health and safety plan - submission of MOSF application for tanks closure - copy of NYC DOB's work permit for tanks removal - documentation about notification to FDNY 1:52 PM:- received email from Bill. he mentioned that the site owner has a prospective tenant who would rent part of the space (starting in two weeks), but currently, access to the area being rented is blocked by physical obstacles on the ground. Bill asked if they can move stockpiled soil to other part of the site and remove already cut-up steel off-site. discussed with DEC Austin. Austin approved to move soil and metal to other part of the site, but no off-site disposal without approval of the work plan. 2:25 PM:- spoke with Bill and informed him that the department approves moving of stockpiled soil and cut-up steel to other part of the site, but does not approve off-site disposal of any material until all required documents submitted and approved. asked him to send property owner's contact info. asked Bill about well monitoring. Bill mentioned that wells were lastly checked in 2009 before scaffolding removed. after removing scaffolding, most of the wells are covered under dirt/metal and are not accessible. asked Bill about DOB work permit. he believes that permit is not needed for tank removal. asked him to check with NYC DOB regarding required work permit. 06/01/12-Hiralkumar Patel. 2:01 PM:- received email from Bill including property owner's contact info. English Kills Ventures LLC c/o Asher Zwebner, Trustee 5014 16th Avenue, Suite 110 Brooklyn, NY 11219 6:15 PM:- sent email to Bill and asked to provide owner's phone number and email address. 06/05/12-Hiralkumar Patel. 11:08 AM:- received email from Bill. he

NYC DEP HAZ MAT (Continued) **S102143390**

mentioned that property owner asked to send documents to their attorney. Robert H. Feller, Esq. **property owner's attorney** Bond, Schoeneck & King, PLLC. 111 Washington Avenue Albany, NY 12210-2211 Ph. (518) 533-3222 Fax (518) 533-3299 email: rfeller@bsk.com 1:44 PM:- received email from Bill. due to open tank excavation pit, he requested to backfill it using on-site stockpiled soil. 2:33 PM:- forwarded Bill's email to DEC Austin for review. 6/6/12-Vought-DEC Patel received email from GeoQuest (Bill Hughes Ph:860-243-1757 Cell:860-402-5292) that When you closed down the site on Wednesday (5-30-12) you may not have realized that a dangerous condition resulted - an open pit. Granted, the work area is theoretically closed to any and all persons and/or vehicles, but we all know that stuff happens. In addition, the open pit is subject to flooding which could result in a multitude of unforeseeable problems including exacerbating the danger of this site condition.We propose the following solution: 1) Continue the removal of the steel bottom of the tank (at the very least) and store the steel on-site. The next level of action would be to also remove the steel back wall (south wall), remaining steel west wall (only about 30% still remains), and remove the remainder of the north wall (storing all removed steel on-site, of course). 2) Back-fill the open pit with the on-site soil as you and I discussed. The on-site soil is fill removed from the tank top and walls which exhibits no sign of any contamination. The backfilling of this area would eliminate a very dangerous situation. 3) Consider allowing the stored steel to be removed from the site. It could be used to pay for the rental equipment. Steel is steel- it is not a source of contamination. 4) Consider the power of inertia- the longer a project remains stalled, the harder it is to get it moving again. Regards. DEC Patel forwarded email to RSE with request for advisement and RSE forwarded mail to DEC Vought asking to look into matter. Vought called and spoke to Geoquest who noted that tanks bottoms were approximately 5-6'below grade on concrete and close to groundwater. Geoquest also noted that the concrete under the tanks was at groundwater level. Vought after concurring with DEC Farrar called back Geoquest and noted that backfilled soils must meet STARS Memo #1 parameters. Vought also called and spoke to NYCOEM McIntyre who noted that site is not in a NYC Program and as such there are to date no institutional or engineering controls for site but that if applicants are interested in alternate SCOs associated with a different program then they should call NYCOER Chawla. Vought spoke to DEC Patel who noted that when he was onsite last week he also noted to contractor that wells will need to be installed at the tank locations through the concrete. Vought to meet Hughes on site at 1pm today and required that: 1)samples be collected from the soil pile analyzied for Full List 8260/8270 (due to history of chlorinated solvents) 2)note that wells will be required in the future in the backfilled areas 3)Submission of analyticals to DEC for review prior to use as backfill. Vought received callback from Hughes who noted that site was zoned M-1(manufacturing). Vought performed site visit and received call from Hughes who noted that his car broke down in Brooklyn and he will not be able to make it to site but will arrange to have sampling company come to site and collect sam[ple. Vought repeated that sample must be collected for 8260/8270 Full List and compared to STARS Memo#1 values. Vought observed approximately 2O' high by 70' long pile of soil up against large MOSF tank but noted no petroleum odors or staining in pile. Vought also observed standing water in open tank pit and water was connected to soil as west wall

NYC DEP HAZ MAT (Continued) **S102143390**

of UST removed down to tank bottom. No sheen or product in water in tank pit. Bottom of tank pit composed of concrete pad and steel(of which is scheduled to be removed). Vought met English Kills (Arthur Schwartz Ph:732-309-2063) onsite and discussed tank removal and future use of site (which may be parking lot for buses) as well as need for installation of wells at tank location through concrete pad as per DEC Patel. Vought also observed approximately 6' width of soil between steel tank and outer support wall with no staining as well. Note soil pile covering many monitoring wells. Rush turnaround time will be requested for soil samples as well. Vought sent email update to Kumar. 6/7/12-Vought-Received message from Hughes and returned call and left message to return call with confirmation of sample collection. Vought received callback from Hughes who was enroute to site to perform soil sampling of proposed soils for backfill (EPA 8260/8270 Full List) due to former presence of chlorinated solvents as well as petroleum in tank. Results to be compared to STARS Alternative Guidance values and examined for possible Haz Waste contaminants as well. Results should be received and Hughes will follow up with Vought on Friday. 06/12/12-Hiralkumar Patel. 11:58 AM:- received email from Bill including sample results. three samples were collected. some SVOCs found in samples. found maximum 460 ppb of Naphthalene in one sample. Bill requested approval to backfill the excavation. DEC Austin and DEC Vought inspected site. based on observations during the site inspection, Austin mentioned that the department does not approve backfilling of the tank excavation. he asked for a meeting in DEC office, with property owner. 2:36 PM:- spoke with Bill and informed him about the discussion with DEC Austin. asked him to set up meeting with property owner. 4:25 PM:- sent email to Bill. informed him that the department does not approve backfilling of the excavation. informed him that the department requests a meeting with property owner. asked him to provide timing for the meeting. email copied to DEC Vought, DEC Austin, Judy Karpen, Jay Soltis (jsoltis@geoquestinc.com) and Marc Casslar (mcasslar@geoquestinc.com). 06/14/12-Hiralkumar Patel. 11:51 AM:- received email from Bill. he mentioned that him, Marc Casslar (GeoQuest) and Robert Feller (owner's attorney) will meet at 10 AM on 06/20/12, in DEC office. spoke with DEC Austin. he requested presence of property owner. he mentioned that if owner brings his attorney, then DEC attorney will be present in the meeting and it will be an enforcment issue. 2:32 PM:- spoke with Bill and informed him about discussion with DEC Austin. Bill asked to reply by email. 06/18/12-Hiralkumar Patel. discussed with DEC Vouth, DEC Austin and Judith Karpen. Ms. Karpen is still reviewing legal documents. as the legal review is pending, Austin mentioned that the meeting on 06/20/12 will be to discuss technical issues only. 3:31 PM:- sent email to Bill including meeting agenda. informed him that this meeting will be for technical discussion only. email copied to DEC Austin, DEC Vought, Judy Karpen, Jay Soltis and Marc Casslar. 06/20/12-Hiralkumar Patel. 10:00 AM:- discussed with DEC Austin, DEC Vought, Bill, Marc Casslar, Robert Feller and Ryan Karben during meeting in DEC office and agreed upon following: - notification to NYC DOB and FDNY (if applicable) - submission of MOSF application for tanks removal - monitoring of bulkhead during low tide for possible oil seepage into the creek and installation of boom, if product seepage noted - submission of tank removal plan, including health and safety plan and CAMP, by the end of 07/16/12 - subsurface soil and groundwater investigation, at and around the tanks location during

NYC DEP HAZ MAT (Continued) **S102143390**

discussion, Bill mentioned that removal of remaining tanks would take another 6-8 months and subsurface investigation will be peformed after that. informed RP that the department requires delineation under the tank pads, via installation of wells through the pads. also, the department may require replacement of wells, if existing wells are destroyed or clogged. during discussion, Austin approved to use on-site stockpiled soil to backfill the tank excavation and RP agreed that depends on future site use, backfilled soil may be removed during future development. asked RP to submit MOSF application for tanks removal. Ryan Scott Karben, Esq. **owner's representative** Law Office of Ryan Scott Karben 11 Tara Drive Pomona, NY 10970 Ph. (914) 536-4402 email: ryan@ryankarben.com 1:01 PM:- spoke with Judy. she mentioned that due to statue of limitation, she can not enforce for money spent more than 6 years ago. also, there is no dicussion about spill remediation in the Agreement for Discharge of Environmental Liens signed by RCC & York Associates, Inc. in 2006. she also mentioned that bankruptcy court has found environmental liens be not valid. 06/29/12-Hiralkumar Patel. 3:50 PM:- spoke with Bill and informed him that a STIP agreement will be mailed today. 4:06 PM:- sent STIP letter to Mr. Feller. informed him that the signed STIP and a tank removal plan (including schedule) must be submitted by the end of 07/27/12. letter emailed to Mr. Feller, DEC Austin, DEC Urda, Ms. Karpen, Bill, Mr. Casslar and Mr. Karben. 07/05/12-Hiralkumar Patel. 12:14 PM:- received email from Bill including MOSF notification, tank removal plan and health & safety plan (including CAMP). 1:02 PM:- sent email to Bill. informed him that a signed stipulation must be submitted to the Department prior to review of any work plans. email copied to DEC Austin, DEC Urda, Ms. Karpen, Mr. Felller, Mr. Casslar and Mr. Karben. 07/12/12-Hiralkumar Patel. received email from Mr. Casslar (at 6:11 PM on 07/11/12) including revised STIP and CAP. Mr. Casslar noted following nine reasons for changes in STIP and CAP: - the spill occurred in 1992, more than 20 years ago - the oil terminal has been closed for almost 20 years - all of the tanks were emptied, cleaned, and inspected more than 18 years ago - active remediation of groundwater was conducted for about 8 years - NYSDEC concluded almost 8 years ago that no further benefit could be achieved from active groundwater remediation - all of the work was conducted under the supervision of the NYSDEC - no new spills have occurred since the facility was closed - the site has been used and occupied at various times in the last 20 years and there is no indication that a risk to human health or safety exists; and - throughout time the importance of removing the tanks has been continuously discussed 07/18/12-Hiralkumar Patel. discussed with DEC Austin, DEC Vought, DEC Urda and Ms. Karpen. Ms. Karpen will discuss with Patrick Hallaway in AG's office to discuss about third party claim to the spill fund by the property owner. discussed submitted revised CAP and changed as needed. Urda will revised the CAP after gets update from Ms. Karpen. 07/31/12-Hiralkumar Patel. visited site. found water in tank excavation area. some sheen observed on water. 3:23 PM:- received email from Ms. Karpen inquiring if English Kills had a Phase I done prior to purchasing the property. 08/01/12-Hiralkumar Patel. 4:43 PM:- sent email to Ms. Karpen. informed her that the department does not have any Phase I report in file and doesn't know if English Kills ever conducted Phase I investigation. 08/03/12-Hiralkumar Patel. received call from DEC Urda. he will arrange a conference call with AG's office and spill fund. 08/07/12-Hiralkumar Patel. yesterday

NYC DEP HAZ MAT (Continued) **S102143390**

(08/06/12), DEC Austin, DEC Vought, DEC Urda, DEC Ben Conlon, Ms. Karpen (AG's office), Bonnie Riggi (AG's office), Luzette Baker (spill fund) and Patrick Halloway (spill fund) discussed the case and decided to send a consent order. spoke with DEC Urda. he has asked DEC Leszek to review available MOSF documents and waiting for his response before drafting response to the revised STIP sent by RP. 3:48 PM:- spoke with DEC Ian Beilby who inquired about spill # 1202045, which was reported by BCP contractor as they noticed some sheen in water near the site. informed Ian that no sheen observed during the site visit on 05/31/12 and based on site observation, case 1202045 is closed. during conversation, Ian mentioned that they have meeting with EPA on 08/09/12 regarding Newtown Creek cleanup project and will discuss about possible impact to the creek from the Morgan Terminal. asked Ian to update after meeting. 08/13/12-Hiralkumar Patel. 3:33 PM:- received call from DEC Beilby. he mentioned that EPA and respondent's consultant (Anchor QEA) are considering sending a letter (104E request) to English Kills Ventures LLC requiring to submit all investigation/compliance documents for review. 08/14/12-Hiralkumar Patel. 2:47 PM:- received email from DEC Beilby. he will send CD of available documents to AnchorQEA. 08/14/12-Ian Beilby CD with edoc files sent to AnchorQEA for review and possible 104e request. 08/16/12-Hiralkumar Patel. 12:38 PM:- received email from DEC Michele Albert including copy of cover letter that was sent to Anchor QEA (with document CD). 09/06/12-Hiralkumar Patel. reviewed tank removal plan, submitted previously on 07/05/12. abstract of tank removal plan: - fill material removed from the top and sides of the tank will be assigned to one of two piles - if soil appears normal with no dark stains or odor it will be placed onto a clean pile - if soil has dark stains or odor or if it registers on a PID meter it will be placed onto a dirty pile and be stored on and under plastic for sampling, laboratory analysis and eventually off-site disposal - when half of the bottom plate has been removed, the excavation resulting from the tank removal will be partially backfilled to allow the excavator to move into the tnak area to reach the remainder of the bottom plate and the tank back wall - upon completion of the removal of each tank section, the excavation for that tank section will be backfilled and compacted to grade - use of previously excavated clean fill from the on-site clean pile is done with the understanding that in the future, this fill may have to be sampled and/or remediated the tank removal plan does not discuss about endpoint sampling. 10/23/12-Hiralkumar Patel. received email from DEC Urda (at 10:39 AM on 10/17/12) including copy of email from Mr. Feller. Mr. Feller sent signed copy of the consent order. as per the Corrective Action Plan of the Consent Order, the Department must be notified two days prior to backfilling of any part of the excavation and the Department may require collection of endpoint soil and groundwater samples. waiting for copy of fully executed Consent Order. 11/13/12-Hiralkumar Patel. 11:46 AM:- received email from DEC Urda including fully-executed order. 11/29/12-Hiralkumar Patel. 4:07 PM:- spoke with Bill. they started work about 2-3 days ago. 12/05/12-Hiralkumar Patel. 2:55 PM:- visited site. crew was working in tank pit, cutting angle brackets to the south wall of tank. no structural supports were observed to the south wall. also noted that the tank pit was partially backfilled, without prior notification to the department as required in signed consent order. 3:25 PM:- left message for Bill and asked him to ensure worker's safety. 3:50 PM:- sent email to Bill regarding operation at the site. asked him to

NYC DEP HAZ MAT (Continued) **S102143390**

ensure safe operation. email copied to DEC Urda and Mr. Feller. 12/06/12-Hiralkumar Patel. 11:08 AM:- received email from Bill. he has spoke with Jacques and was informed that there is still a piece of the bottom plate attached to the south wall as well as the eastern end wall and the angle brackets are for tank stiffness, and are not for structural integrity. 2:16 PM:- spoke with Bill regarding partial backfilling of excavation without prior notice to the department. he mentioned that the excavation was partially backfilled so a backhoe can be used for further work. he mentioned that soil in tank excavation pit will be tested as part of investigation after tank removal and removed, if found contaminated. 12/10/12-Hiralkumar Patel. received email from Bill (at 4:18 PM on 12/09/12). he mentioned that when remedial investigation work plan is submitted, the soil in the area occupied by the tanks will be addressed along with the soils on the remainder of the property. 01/22/13-Hiralkumar Patel. 9:00 AM:- visited site. first section of the tank is removed completely and area has been backfilled to grade. no crew was on-site. 03/20/13-Hiralkumar Patel. 10:45 AM:- visited site. crew was removing the tank. the site is divided in two sections: section towards Morgan Ave is occupied by buses and section towards the water is occupied by construction equipments. 05/04/13-Hiralkumar Patel. another spill reported at the site (spill #: 1301162) by FDNY as fire occurred in tank pit during tank removal. 1:30 PM:- visited site. FDNY had left. met with Jacques Guillet, site supervisor. he mentioned that due to very hot weather, some of the left over oil got vaporized and flash fire occurred. FDNY extinguished the fire and stopped work until they get fitness certificate. FDNY issued violation order (# A181083). Mr. Guillet mentioned that work will resume only after necessary documents submitted to FDNY. inspected tank pit. only eastern section of last tank left. found burned steel in tank pit. no odors noted. as per Mr. Guillet, no one was injured. 05/06/13-Hiralkumar Patel. 9:17 AM:- DEC Urda forwarded email from Mr. Feller (dated 05/02/13). Mr. Feller mentioned that tank removal report will be submitted by 05/31/13, as approved by DEC. 05/24/13-Hiralkumar Patel. 11:03 AM:- received call from Bill. he inquired about document from previous contractors regarding cleaning of tanks. 11:10 AM:- sent email to Bill including copy of report from Winston Contracting dated 02/25/1995. 05/31/13-Hiralkumar Patel. 10:42 AM:- received email from Bill including tank removal report. abstract: - two tanks (# 6 and 7) in eastern tank complex - five tanks (# 1 through 5) in southern tank complex - tanks were fabricated on the site from individual steel plates with welded seams - tank structures were supported with internal steel angle brackets welded into a rigid pattern - soil was placed on the exterior of the tanks to create bunders , and appeared to consist of the same fill-type materials underlying the property - both the eastern (with two tanks # 6 and 7) and southern (with five tanks # 1 through 5) tank complexes were constructed approx. 4 ft bg - on-site soil, including bunkering material, was utilized to backfill the excavations - during the remvoal of the tank bottom plates, small quantities of free product were occasionally observed on groundwater - when encountered, the oil was collected using oil absorbent material - total of 835.84 tons of soil, from removal of eastern tanks, transported in Mar. 2012 - total of 1,696.63 tons of soil, from removal of southern tanks, transported in Aug. 2012 2:18 PM:- tank removal report forwarded to Ms. Karpen. 2:22 PM:- sent email to Bill and asked to submit remedial investigation work plan and tank

NYC DEP HAZ MAT (Continued) **S102143390**

registration forms as per item # 5 and 6 of the correction action plan of the signed consent order. email copied to DEC Urda, Ms. Karpen, Mr. Casslar, Mr. Feller and Mr. Karben. 05/31/13-Hiralkumar Patel. 2:57 PM:- received email from Bill. he inquired if tank removal report is accepted. he mentioned that investigation work plan will be submitted within 30 days of acceptance of the tank removal report. he also mentioned that required tank registration forms will be submitted upon approval of the remedial investigation work plan. 06/04/13-Hiralkumar Patel. discussed with DEC Leszek regarding submission of MOSF/PBS forms. he mentioned that required tank registration forms should be submitted now to correct the tank status. 06/05/13-Hiralkumar Patel. 3:02 PM:- sent email to Bill. informed him that the tank removal report is accepted. informed him that as per the signed consent order, a remedial investigation work plan is due within 30 days of submission of the tank removal report. asked him to submit the work plan on or before June 30, 2013. also asked him to submit required tank registration forms now instead of waiting for work plan approval. email copied to DEC Urda, Ms. Karpen, Mr. Casslar, Mr. Feller and Mr. Karben. 06/20/13-Hiralkumar Patel. 11:41 AM:- received email from Bill including PBS/MOSF applications. 06/25/13-Hiralkumar Patel. discussed with DEC Leszek about PBS/MOSF forms. he mentioned that hard copy must be submitted with original signature. 12:56 PM:- sent email to Bill and asked him to submit hard copy of required PBS/MOSF forms with original signature. 06/28/13-Hiralkumar Patel. received signed hard copy of PBS/MOSF forms. gave forms to DEC Leszek for review and processing. 07/01/13-Hiralkumar Patel. received email from Marc Casslar from GeoQuest including Remedial Investigation Work Plan. abstract: - total of 12 soil borings wil be advanced to the base concrete slab of the former southern tank complex - for the eastern tank complex, a total of 8 soil borings will be advanced to the base concrete slab - 2 of the borings in each complex will be advanced through the slab to a total depth of 12 ft bg - soil with the highest PID readings or the most visual or olfactory contamination will be collected for lab analysis - soil samples will be analyzed for DRO, VOCs by 8260B and PAHs by 8270 - five (5) additional borings will be developed as 1 inch monitoring wells, with 5 ft of screen and sufficient riser, in the vicinity of the former tanks - work can commence within 90 to 120 days after the acceptance of this work plan - report should be completed within 180 days after commencement work the proposed work plan is not acceptable for following reasons: - it proposes to begin work within 90 to 120 days after the acceptance of the work plan. the department requires that investigation work must begin within 45 days of work plan approval - it propose to submit report within 180 days after commencement of work. the department requires that Remedial Investigation Report must be submitted within 120 days of work plan - a scaled site map must be submitted including all previous boring/well locations and location of proposed borings/wells - it proposes installation of 1 inch well with 5 ft screen. work plan does not specify minimum depth of proposed wells. the proposed wells must be at least 2 inch in diameter and must be installed to minimum depth of 12 ft bg with 10 ft of screen - all existing monitoring wells must be gauged and sampled 10:26 AM:- spoke with Marc at GeoQuest. asked him to submit revised work plan with following changes: - investigation work must begin within 45 days of department’s approval (instead of within 90 to 120 days) - Remedial Investigation Report must be submitted within 120 days of department’s approval (instead

NYC DEP HAZ MAT (Continued) **S102143390**

of 180 days after commencement of work) - revised scaled site map including all previous boring/well locations, alongwith location of proposed borings/wells - wells must be at least 2 inch in diameter and must be installed to minimum depth of 12 ft bg with 10 ft of screen - gauging/sampling of all existing monitoring wells Marc mentioned that site access may be issue for field work. informed him that the site is being used as parking lot, occupied by buses which can be moved for field work. Marc mentioned that Bill is out of office till next week and will submit revised work plan upon his arrival. 3:40 PM:- received message from Sam Levin, attorney for property owner. Sam Levin Ph. (347) 564-3597 07/02/13-Hiralkumar Patel. 1:16 PM:- spoke with Mr. Levin. he inquired about insurance carrier of previous property owners. informed him that no such information seen in file. suggested him to review available files. he will talk to Bill. 07/19/13-Hiralkumar Patel. 4:12 PM:- received email from Bill including work plan, with changes in work schedule only. but no changes about well diameter or depth. 08/02/13-Hiralkumar Patel. Bill proposed to install total 20 soil borings to the base concrete slab in former two tank fields, but soil above concrete bases are basically on-site backfill soil which was removed from around the tanks during tank removal. as such there is no need to sample this soil again. instead deeper and larger diameter monitoring wells are needed at the source area. 1:26 PM:- spoke with Bill. informed him that the department requires minimum 4-inch wells at former tank locations, to a minimum depth of 12 ft bg with 10 ft of screen. asked him to submit revised work plan. Bill asked to send email with comments on work plan. 08/06/13-Hiralkumar Patel. discussed with DEC Vought. as stated in signed consent order, complete delineation (on- and off-site) is required. 11:12 AM:- spoke with Bill. informed him that the department requires complete delineation of contamination, which includes impact to off-site also. asked him to submit revised work plan including off-site delineation. strongly suggested him to locate previous monitoring wells and sample existing wells prior to finalizing the work plan. Bill asked for written note about the requirements. 1:52 PM:- sent email to Bill. informed him that as per the signed consent order, the department requires complete delineation of contamination. asked him to submit a revised RIWP, by the end of 09/13/13, including on- and off-site delineation. suggested him to locate and sample existing wells prior to finalizing the RIWP. email copied to DEC Urda, Mr. Feller, Jay Soltis (jsoltis@geoquestinc.com) and ekvllc@gmail.com. 08/20/13-Hiralkumar Patel. 4:35 PM:- received message from Bill. 08/21/13-Hiralkumar Patel. 12:42 PM:- left message for Bill. 08/22/13-Hiralkumar Patel. 11:29 AM:- received message from Bill. 08/26/13-Hiralkumar Patel. 12:52 PM:- spoke with Bill. he inquired about reason for 4 inch well. informed him that 4 inch wells are preferred in case product recovery or other remediation needed. he mentioned that as there was not much oil found on concrete pad during tanks removal, property owner wants to install 2 inch well. informed him that its ok to install 2 inch well now, but the department may require to install larger diameter well based on investigation results. he agreed to it. Bill will submit work plan by first week of Sept. 2013. 09/13/13-Hiralkumar Patel. 2:05 PM:- received email from DEC Beilby. he mentioned that EPA will visit site on 09/18/13 to determine whether there are any likely on-site point source discharges to Newtown Creek. 10/03/13-Hiralkumar Patel. 12:19 PM:- received email from DEC Beilby. Anchor QEA indicated that the morgan

NYC DEP HAZ MAT (Continued) **S102143390**

oil terminal would not likely be targeted for sampling because of a lack of discharge. 10/29/13-Hiralkumar Patel. received email from Bill (at 2:02 PM on 10/28/13) including a revised work plan. Bill proposes to install total of twenty (20) soil borings to the base concrete slab of the former tank complexes. two borings will be advanced to 12 ft bg. three (3) 2-inch wells will be installed to 15 ft depth, with 10 ft of screen. Bill also proposes to sample seven (7) existing wells. the submitted work plan does not include information about number of wells available at the site and it only proposes to investigate soils and groundwater in the footprint and vicinity of the former tank complexes. 11/14/13-Hiralkumar Patel. 2:55 PM:- spoke with Bill. discussed about existing wells and complete delineation. Bill mentioned that they found total 12 wells. out of 12 wells, product found in 5 of the existing wells. asked Bill to submit a revised work plan including site map with location of all existing wells and information about product in existing wells. informed him that further delineation may be requuired, based on investigation results. 3:17 PM:- sent email to Bill and asked to submit a revised work plan. 11/26/13-Hiralkumar Patel. received email from Bill (at 4:14 PM on 11/20/13) including work plan with revised site map including location of wells where free product found. 12/20/13-Hiralkumar Patel. 11:30 AM:- sent letter to property owner approving work plan, pending inclusion of immediate gauging of wells to determine product thickness, installation of absorbent socks in impacted wells and weekly monitoring/removal of product from wells. asked owner to submit monthly records of well gauging/product removal activities and investigation report by the end of 06/30/2014. letter emailed to Bill, DEC Urda and Mr. Feller. 01/08/14-Hiralkumar Patel. DEC Peter Malaty (Fish, Wildlife and Marine Resources) visited site earlier today to inspect bulkhead at the site. during inspection, he noted spill of unknown amount of motor fuel onto the soil, from one of the parked bus at the site. he sent pictures taken during the site visit. 11:28 AM:- left message for Bill and informed him about unreported spill, from a bus, at the site. asked him to call back with bus company's information. informed him that the department requires reporting of this spill incident and cleanup of spilled material. 11:36 AM:- sent email to Bill including pictures received from DEC Peter. informed Bill that the department requires reporting of this spill incident and immediate cleanup. also asked him to provide bus company's information. 01/10/14-Hiralkumar Patel. 12:28 PM:- received call from Bill. discussed about unreported spill under the parked bus. he will ask bus owner/operator to report the spill. Bill mentioned that spill was cleaned up. spoke with Bill about installation of absorbent socks in well and removing product. he mentioned that no work has been done yet and they believe that installing absorbent socks in wells would not do any benefit. asked Bill to submit written reply to the requirement of well gauging/product removal as listed in letter dated 12/20/13. 03/10/14-Hiralkumar Patel. 10:43 AM:- received email from Bill including addendum to remedial investigation work plan dated 10/18/13. Bill proposed to install an appropriate absorbent sock , as soon as practical, into each of the contaminated wells and weekly checking and repalcement of these socks. specific work schedule is missing in the addendum. 04/23/14-Hiralkumar Patel. 1:33 PM:- left message for Bill. 06/02/14-Hiralkumar Patel. 4:48 PM:- received email from Bill including a letter including summary of interim remedial measures. on 05/14/14, GeoQuest gauged wells previously reported to

NYC DEP HAZ MAT (Continued) **S102143390**

contain LNAPL (MW-14, MW-15, MW-28A, MW-34 and MW-40) and installed absorbent socks. they visited site again on 05/21/14 and replaced the absorbent socks. found product in all five wells during both visits. product thickness (in ft): ---------05/14/14-----05/21/14 MW-14------0.90---------0.72 MW-15-----0.001--------0.001 MW-28A----0.001--------0.001 MW-34------6.20---------0.01 MW-40------1.50---------0.45 absorbent sock weight difference (in oz) on 05/21/14: ---------weight diff. MW-14------25.8 MW-15-------3.0 MW-28A------1.1 MW-34------11.0 MW-40------47.7 06/23/14-Hiralkumar Patel. 3:44 PM:- received email from Bill including a letter including summary of interim remedial measures. on 06/11/14, GeoQuest gauged wells with the installed absorbent socks. a previously obstructed well (MW-12) has been available and installed absorbent sock in it. previously reported to contain LNAPL (MW-14, MW-15, MW-28A, MW-34 and MW-40) and installed absorbent socks. they visited site again on 05/21/14 and replaced the absorbent socks. found product in all five wells during both visits. product thickness (in ft): ---------06/11/14 MW-12------0.001 MW-14------0.001 MW-15------0.001 MW-34------0.001 MW-40------0.001 absorbent sock weight difference (in oz) on 06/11/14: ---------weight diff. MW-14------35.6 MW-15-------5.1 MW-28A------2.0 MW-34-------4.2 MW-40------42.5 10/28/14-Hiralkumar Patel. 11:24 AM:- received email from Bill including remedial investigation report. abstract: - on 06/09/14, installed 20 soil borings in the area under and around the former bulk storage tanks - twelve (12) soil borings (B-1 through B-12) were advanced to a depth of 5 ft within the footprint of the former southern tank complex, six (6) soil borings (E-1 through E-6) were advanced to a depth of five ft within the footprint of the former eastern tank complex, and two borings (B-13 and B-14) were advanced to a depth of 15 ft bg along the north side of the southern tank complex - ten soil samples were submitted for lab analysis - on 06/10/14, three (3) 2-inch monitoring wells, with ten (10) ft of screen, were installed to a depth of fifteen (15) ft bg - total of ten monitoring wells were sampled for analysis: seven existing wells (FN-19, FN-20, FN-22, FN-28A, FN-31, FN-35 and FN-39) and three new wells (GQ-41, GQ-42 and GQ-43) - boring logs shows the predominant material encountered in the footprint of each tank complex was: brown, dark brown or black sand with silt or sand, silt, and clay, with a variety of crushed materials: asphalt, brick, pieces of concrete, stone, coal, plus ceraimc, glass, metal, wood and paper - groundwater was encountered at 3.5 ft bg in boring B-13 and B-14 - direction of groundwater flow across the site 'would be expected' to be predominantly west to east and from south to north ---------- - the exception is on the southern side of the former Southern tank complex where it is believed that the 17 ft high bunkering wall filled with permeable fill, has influenced the local flow direction, forcing a reported southeasterly flow direction ---------- - very minor VOCs detection noted in few samples - SVOCs were detected in all soil samples (backfill material found in soil borings) - using absorbent socks in wells with product, a total of 1.5 gal of product has been removed to-date - there are at least two USTs still on-site including a 3,000 to 5,000 gal UST in a vault in the northwest corner of the site and a 1,000 gal heating oil tank on the south side of the terminal buiding - recommends removal of remaining tanks and continuation of interim-remedial measures (product recovery using absorbent socks in wells with product) the report is missing site map with location of existing tanks and well

NYC DEP HAZ MAT (Continued) **S102143390**

FN-28A. 11/04/14-Hiralkumar Patel. 8:57 AM:- sent email to Bill. asked him to submit site map with location of existing tanks and well FN-28A. also asked him to submit records of interim remedial measures as per the department's letter dated 12/20/13 (copy attached in email). email copied to Aaron Abraham (aarbenabe@yahoo.com), Marc Casslar (mcasslar@geoquestinc.com), Jay Soltis (jsoltis@geoquestinc.com) and lepmanagement89@gmail.com. 11/06/14-Hiralkumar Patel. 2:14 PM:- received email from Bill including site map with location of existing tanks and well FN-28A. Bill mentioned that location of FN-28/FN-28A is uncertain. according to well location maps available to GeoQuest, there should be two wells close together off of the eastern end of the office buildiing, labeled FN-28 and FN-28A, but when GeoQuest did the well usability survey in September 2013 they could only locate one well. Bill will refer this well from now on as FN-28A. 11/10/14-Hrialkumar Patel. 9:15 AM:- received email from Bill including well monitoring data table, which was previously submitted in June. 10:22 AM:- sent email to Bill and asked him to submit interim remedial measure record from June to Nov. email copied to lepmanagement89@gmail.com, Mr. Abraham, Mr. Casslar, Mr. Soltis. 12/24/14-Hiralkumar Patel. 12:08 PM:- received email from Bill: My apologies, there have been no sock exchanges since our last report. We initiated the Interim Remedial Measures (IRM) and made our first report, but, while the initial levels were high, the levels dropped quickly to near zero floating product and we wanted to wait a bit to see if the levels would rebound and by how much. We just completed another round and it appears that the levels, for the most part, have remained low except for one well- FN-40, which still shows some floating product. We were unable to access FN-34 for this round of sampling. absorbent sock weight difference (in oz) on 11/11/14: ---------weight diff. MW-12-------7.5 MW-14------38.5 MW-15------29.0 MW-28A------8.8 MW-40------54.8 01/21/15-Hiralkumar Patel. 8:57 AM:- left message for Bill inquiring update about recommended tank removal. 01/28/15-Hiralkumar Patel. 3:03 PM:- received call from Bill. asked him about status on recommended tank removal. he mentioned that they are waiting for approval from DEC on investigation report. he also mentioned that owner is planning to use the site as it is and there is no redevelopment plan at this time. 07/10/15-Hiralkumar Patel. received email from Paul McGaha (at 6:02 PM on 06/22/15) from McGaha Consulting including well gauging record. Mr. McGaha was recently contracted to assist with project. he inspected site on 06/12/15 and gauged seven existing wells (MW-12, MW-14, MW-15, MW-28A, MW-34, MW-39 and MW-40). 2.35 ft of floating product was noted in well MW-15. absorbent socks with weight difference were found in wells MW-12, MW-28A and MW-40. Paul McGaha McGaha Consulting, Inc. Ph. (908) 285-1207 Fax (888) 680-2762 email: paul.mcgaha@mcgahaconsulting.com Mr. McGaha mentioned that responsible parties will be initiating a remedial action at the property upon approval of the remedial investigation report (dated Sep. 2014 and submitted on 10/28/14). in that report, GeoQuest recommended removal of two USTs and continuation of interim remedial measure program. 09/02/15-Hiralkumar Patel. 1:39 PM:- spoke with Mr. McGaha. informed him that property owner has failed to comply with a requirement of weekly well gauging and monthly submission of well gauging report. Mr. McGaha recommended use of a more active remedial method instead of absorbent socks. asked him to submit a written plan for review. 2:38 PM:- sent email to Mr. McGaha and asked to submit

NYC DEP HAZ MAT (Continued) **S102143390**

written plan for alternative remedial method. email copied to LEP Management (lepmanagement89@gmail.com). 12/11/15-Hiralkumar Patel. a new spill report (# 1509305) received from a member of Newton Creek Alliance. spill report was filed due to oil slick and heavy sheen noted in creek adjacent to the subject site. 3:35 PM:- spoke with Mr. McGaha. he mentioned that this afternoon, he was informed about sheen along side of the property but doesn't think it came from the site. they will install absorbent booms in the creek. 4:10 PM:- inspected site. no sheen noted on water in the creek. 4:36 PM:- spoke with Mr. McGaha. informed him about observations during the site visit. he mentioned that booms will be installed this weekend. 12/14/15-Hiralkumar Patel. 7:52 AM:- left message for Mr. McGaha. 11:15 AM:- received email from Mr. McGaha including some pics. he mentioned that booms were deployed early Saturday morning. residual sheen was present on the water, therefore, the booms were allowed to cross the waterway closer to the boats docked in the inlet, and pulled back to their current position to collect the floating material causing the sheen. a security camera has been focused on the area to monitor the conditions. Mr. McGaha submitted pics from security camera. pics taken on 12/12/15 at 9:13 am, 10:27 am, 11:45 am, 12:02 pm, 1:03 pm, 2:10 pm, 3:15 pm, and 4:35 pm. Paul mentioned that the condition will continue to be monitored and the boom will not be removed until the condition is no longer present. pics show sheen on water. 11:23 AM:- received email from Mr. McGaha including interim remedial measure report. abstract: - report included well gauging data since May 2014 - since May 2014, wells FN-12, FN-14, FN-15, FN-28A and FN-40 were gauged on 05/14/14, 05/21/14, 06/11/14, 12/11/14, 06/12/15 and 09/21/15 - well FN-39 was also gauged during 06/12/15 and 09/21/15 events - absorbent socks have been used to collect LNAPL in wells exhibiting floating product - based on available data, groundwater elevations fluctuate between 1.32 ft above mean sea level at FN-12 in Dec. 2014 to 8.88 ft above mean sea level at FN-34 in May 2014 - total of 3.38 gal of oil have been collected using the absorbent socks since May 2014 - weight of oil was converted to gallons using the specific gravity of #6 fuel oil - site has acquired equipment capable of pumping LNAPL from the groundwater table during liquid product recovery events - based on product recovery amount, Morgan Terminal requests that the frequency of petroleum pumping and absorbent sock removal and replacement be modified to biweekly events. Morgan Terminal also requests that the reporting frequency and submission of Interim Remedial Measures Progress Reports be modified to quarterly reporting product thickness (in ft) in wells:

06 12/15/15-Hiralkumar Patel. received email from Willis (at 4:28 PM on 12/14/15) from Newtown Creek Alliance including pics of the creek showing sheen. Willis went to the site and met property owner and manager. Willis mentioned that property owner, Arthur, made strong claims that no product was migrating off his property and likely

NYC DEP HAZ MAT (Continued) **S102143390**

someone spilled a quart of oil into the water. 8:30 AM:- after discussing with DEC Austin last night, visited site this morning during high tide. minor non-recoverable sheen noted on water in the creek. based on observations during the site visit, it looks like the site has been divided into following four sections: - eastern end of the property (the former eastern tank complex) has been separated from the rest of the site using chain-linked fence. there are sheds on the eastern most part of the site, along the water so could not inspect waterbody from the land - the former southern tank complex area is now occupied by a lumber yard - the remaining area of the site between the creek and the former tank complex (southern tank complex) is used as a parking lot occupied by a private bus company - the northwest corner of the site (former maintenance building), immediately west of the end of the creek, is used as parking lot also noted repaved parking lot around the former maintenance building and a wooden deck along the bulkhead, on east of the former maintenance building. as per available site maps, few monitoring wells were installed around the former maintenance building, including well FN-46 which is along the bulkhead and closest to the point where sheen noted on creek recently. during site visit, there were some vehicles parked on-site and could not see any of the formerly installed monitoring wells around former maintenance building in remaining open area. 9:36 AM:- spoke with Mr. McGaha inquiring about well gauging data. he mentioned that property owner has hired someone who gauge and remove product from the monitoring wells and Paul has prepared report based on data received from property owner. asked Mr. McGaha to send email confirming this activity and including contact information for the person who is gauging wells and removing product. also asked him to schedule gauging of all monitoring wells in presence of DEC personnel. informed him that this may require moving parked vehicles. 2:02 PM:- sent email to Mr. McGaha and asked him to submit - an email (or a letter) confirming his involvement in the project (active field duties vs report preparation/submission based on information collected/submitted by others) - contact name and number for the person/contractor who is gauging on-site wells and recovering product - photographs from the security camera at every hour beginning at 5 PM on 12/12/2015 email copied to DEC Austin, DEC DeMeo, DEC Urda, LEP Management (lepmanagement89@gmail.com) and Arthur Schwartz (aschwartzesq@optonline.net). reviewed NYC ACRIS record and noted that the site has been sold to new property owner in Mar. 2014. Greenpoint Bushwick LLC. **current property owner** 675 3rd Avenue, 8th Floor New York, NY 10017 2:55 PM:- sent email to Mr. McGaha and asked to submit property owner/manager's contact information. email copied to LEP Management and Arthur Schwartz. 3:02 PM:- spoke with Aaron Cohen, property's leasing manager. he is aware of the issue in the creek. he mentioned that property owner (represented by Robert Feller) is planning to conduct further investigation in this matter. he also mentioned that a local contractor (Newtown Williamsburg) was gauging the wells and recovering product. asked Mr. Cohen to schedule a field work for well gauging and product recovery, in presence of DEC personnel. he agreed to it and will ask Mr. McGaha/well gauging technician to schedule this work, in this week. Mr. Cohen mentioned that project managers from DEC Permit unit were on-site recently regarding bulkhead permit issue. Aaron Cohen **property's leasing manager** LEP Management Ph. (347) 901-9045 email: lepmanagement89@gmail.com 3:36 PM:- received email from Mr. McGaha. he mentioned that McGaha Consulting, Inc. has

NYC DEP HAZ MAT (Continued) **S102143390**

provided consulting services for the property including a site visit to demonstrate the operation of the interface meter and well gauging procedures to the previous on-site technician responsible for collection of well gauging data and just last week a second visit to demonstrate the operation of the interface meter and well gauging procedures to the site's new on-site technician. Mr. McGaha has made recommendations for the improvement of well gauging techniques and have prepared a proposal to deliver a mobile pumping system to remove free product from the wells containing free product using a double diaphragm pump. Mr. McGaha was also requested to prepare a standard Interim Remedial Measures Report submission containing well gauging data that is collected and provided by the property's on-site technician, which was recently provided by email. Mr. McGaha mentioned that the on-site technician responsible for well gauging is Mr. Issac Gut. Isaac Gut **on-site technician for well gauging** Ph. (914) 319-1104 (347) 771-7927 email: gut.isaac@gmail.com 3:38 PM:- received email from Mr. McGaha including photographs from on-site security camera. 3:55 PM:- spoke with Sandra Reyes-Guerra (Regional Environmental Permit). she and Justin Falls (DEC Habitat Protection) were on-site as part of bulkhead repair permit application. Sandra doesn't recall noticing any sheen on water. 12/16/15-Hiralkumar Patel. received email from Mr. McGaha (at 9:58 PM on 12/15/15) confirming field work on 12/18/15. 8:00 AM:- visited site. inspected western end of the creek, along the bulkhead east of the former maintenance building. noted some sheen on water. 8:51 AM:- sent email to Mr. McGaha. informed him about a wooden deck in the area of monitoring well FN-46 which is along the bulkhead and closest to the point where sheen noted in creek recently. asked him to have this deck lifted, if possible, for access during field work on 12/18/15. informed him that a new well may be needed in this area, if accessing existing well is not possible. 12/17/15-Hiralkumar Patel. 8:00 AM:- visited site. found sheen on water near the bulkhead at the end of the creek. re-inspected area around the former maintenance building. found formerly installed monitoring well FN-34. some part of the parking lot has been repaved. reviewed NYC ACRIS record and google maps and noted following: - the former Morgan Terminal site occupied lots 101, 207, 220, 160 and 157 on block 2942 - the creek is divided in two sections: north and south and both sections are part of private property - the northern half section of the creek is part of lot # 105 - the southern half section of the creek is subdivided. the eastern portion of the subdivided creek is actually lot # 157 and the western portion of the subdivided creek is part of lot # 101 - all five morgan terminal lots (101, 207, 220, 160 and 157) were owned by Corpus Christi Resources, LLC. from 10/2007 to 12/2008 - all five morgan terminal lots were owned by English Kills Ventures, LLC. from 12/2008 to 04/2014 - in Apr. 2014, former morgan terminal lots were sold to different entities: * lot 101 to Greenpoint Bushwick LLC. * lot 207 to Bushwick Star Management LLC. * lot 157 to 192 Morgan Realty LLC. * lots 220 and 160 to Morgan Williamburg LLC. owners for all five lots have same address: 675 3rd Avenue, 8th Floor New York, NY 10017 12/18/15-Hiralkumar Patel. 11:30 AM:- visited site. met Steve (McGaha Consulting) and Isaac (owner's representative) and gauged wells FN-12, FN-14, FN-15A, FN-22, FN-28A, FN-34, FN-39 and FN-40. inspected creek and noted some sheen on water. - well FN-34 is located in northwest corner of the site, west of the former maintenance building. no product found on top of the water, but heavy tar like material noted on side of the well casing and at the bottom

NYC DEP HAZ MAT (Continued) **S102143390**

of the well. - well FN-28A is located east of the two-story building. no product noted in this well - wells FN-12, FN-14, FN-15A, FN-22, FN-39 and FN-40 are located in alley (access to 190 Morgan Ave) on south side of the former southern tank complex. - well FN-39 is located on south side of the alley. no product noted in this well - well FN-15A is located north side of the alley (adjacent to former tank complex wall). free phase petroleum product noted in the well. due to product viscosity, water interface was not used to measure thickness. a product sample was collected for fingerprint analysis. - well FN-12 is located on north side of the alley (adjacent to former tank complex wall and east of well FN-15). no product noted in this well. - well FN-40 is located on south side of alley (south of well FN-12). 0.4 ft of product noted in this well, and noted diesel like odors. - well FN-14 is located in middle of alley (southeast of well FN-12 and closest accessible well to 190 Morgan Ave). free phase product noted in the well. due to clogged bottom, could not measure product thickness. product sample collected for fingerprint analysis. diesel like odors noted in the well - well FN-22 is located far south end of the open lot on south side of the property. no product noted in this well 1:46 PM:- spoke with Mr. Cohen and informed him about finding product in wells. asked him to analyze product samples. due to diesel like odors in wells located in the alley, went to site 190 Morgan Ave which is a bus repair facility. met with on-site operator who refused to provide name and number. he provided business email (jbrserviceinc@gmail.com) and allowed access to the repair area for inspection. noted a waste oil tank along south wall of the facility. I left site after this. Steve was going to check two more wells: FN-16 (east of FN-15 and adjacent to former tank complex wall) and FN-19 (at curb on southwest side of the site and at the entrance of the alley) 12/21/15-Hiralkumar Patel. 9:27 AM:- spoke with Mr. McGaha and discussed observations during the site visit. asked him to submit a summary of field activity on 12/18/15. 9:35 AM:- spoke with Mr. Cohen. based on field observations, asked him to immediately remove product from the impacted monitoring wells and conduct weekly well gauging/product recovery, for at least a month. Mr. Cohen inquired about approval of remedial action report submitted in Oct. 2014. informed him that the report recommended removal of two on-site tank systems. after reviewing the report, the department had discussed tank removal activity with consultant at that time and waiting for result of tank removal activities. 12/23/15-Hiralkumar Patel. 8:18 AM:- left message for Mr. McGaha inquiring about status on product removal from impacted wells at the site. 8:20 AM:- left message for Mr. Cohen inquiring about status on product removal from impacted wells at the site. 8:25 AM:- sent email to Mr. Cohen and Mr. McGaha. asked them to submit document confirming removal of free phase product from impacted monitoring wells. 11:10 AM:- spoke with Mr. McGaha. he is going to the site today to deliver the pump system for product removal. he believes that product from the impacted wells will be removed today. asked him to send email, once product removed from the wells. 12/24/15-Hiralkumar Patel. 9:38 AM:- sent email to Mr. Cohen and Mr. McGaha inquiring about document confirming removal of free phase product from the impacted wells. 11:00 AM:- received email from Isaac. he mentioned that today they will be pump wells with product and gauge accessible wells. 11:02 AM:- sent email to Isaac. asked him to provide information about amount of oil recovered from each well and to re-gauge existing wells. email copied to Mr. Cohen and Mr. McGaha. 2:00 PM:- received email from Isaac. he

NYC DEP HAZ MAT (Continued) **S102143390**

mentioned that they are having trouble with the pump. 12/28/15-Hiralkumar Patel. received email from Isaac (at 6:28 PM on 12/24/15). he gauged eight wells and found product in one well. he is unable to pump out oil due to pump issue. received another email from Isaac (at 6:51 PM on 12/24/15) including gauging data for eight wells. almost 2 ft product found in well FN-15A. 12/29/15-Hiralkumar Patel. 8:52 AM:- sent email to Isaac inquiring update on removal of free phase product from impacted monitoring wells at the site. email copied to Mr. Cohen and Mr. McGaha. 12/30/15-Hiralkumar Patel. 10:50 AM:- left message for Mr. Cohen inquiring update on product removal from impacted monitoring wells. 10:53 AM:- left message for Mr. McGaha. 11:03 AM:- received email from Isaac stating that pump does not work. 11:10 AM:- sent email to Isaac. informed him that if the pump does not work, then alternate method must be used. also informed him that the Department requires immediate removal of free phase petroleum product from the impacted monitoring wells at the site and document confirming such activity must be submitted to the Department no later than COB December 31, 2015. email copied to Mr. Cohen and Mr. McGaha. 01/04/16-Hiralkumar Patel. received email from Isaac (at 7:50 PM on 12/31/15). they gauged wells today and found 2 ft of product in well FN-15A. he mentioned that product was removed from the impacted well. they have not found product in other wells. they are working on uncovering more wells. 1:20 PM:- sent email to Isaac and asked to provide schedule for this week's well gauging activities so site visit can be made. email copied to Mr. McGaha and Mr. Cohen. 01/05/16-Hiralkumar Patel. received email from Isaac (at 4:40 PM on 01/04/16). he will be on-site on 01/08/16 to gauge the wells. 01/08/16-Hiralkumar Patel. 9:15 AM:- visited site and met Patrick, person working for property management. while at the site, witnessed gauging of two monitoring wells: FN-14 and FN-15A. thin layer of product noted in well MW-14 and approx. 1 ft of product noted in well MW-15A. asked Patrick to remove product from the wells. he will continue gauging other wells. inspected creek and found no sheen on water. 10:59 AM:- spoke with Isaac and asked him to continue weekly well gauging and product removal until further notice. 1:03 PM:- sent email to Mr. McGaha and asked to submit report for fingerprint analysis. email copied to Mr. Cohen. 2:29 PM:- received email from Isaac including well gauging summary. product found in well FN-15A only. 2:59 PM:- received email from Mr. McGaha. he has not received fingerprint results yet. 01/15/16-Hiralkumar Patel. received email from Isaac (at 6:38 PM on 01/14/16) including well gauging data. out of seven monitoring wells gauged, product found (approx. 1 ft) in well FN-15A only. 01/19/16-Hiralkumar Patel. 12:25 PM:- received email from Mr. McGaha including result of fingerprint analysis for two product samples collected on 01/12/16. Mr. McGaha stated results present the findings of undermined . I have requested the laboratory provide any additional details available regarding the carbon chain length etc. reviewed fingerprint sample results. as per lab report, two product sample (White Top & Black Top) were collected on 01/12/16. also as per comments in the lab report: petroleum hydrocarbon chromatogram most closely resembles diesel fuel / fuel #2. the sample was quantitated against C9-C alkane hydrocarbon standard. 01/20/16-Hiralkumar Patel. 10:36 AM:- spoke with Mr. McGaha regarding product sample collection for fingerprint analysis. he mentioned that result of product samples collected on 12/18/16 were inconclusive, so they collected another set of samples on 01/12/16. informed Mr. McGaha that as per gauging data from Isaac, product

NYC DEP HAZ MAT (Continued) **S102143390**

found in only one well FN-15A during gauging on 12/24/15, 12/31/15, 01/08/16 and 01/14/16. asked him to submit result of fingerprint analysis for product samples collected on 12/18/15 and information about from where the two product samples were collected on 01/12/16. reviewed chain-of-custody submitted with fingerprint analysis report and it was noted that the sample was collected from NJ. also, there is no indication anywhere in the report that these product samples were collected from 200 Morgan Ave. 10:51 AM:- spoke with Mr. McGaha again and informed him about sampling location (NJ) noted in chain-of-custody. at this time, he mentioned that sampling report he submitted yesterday is actually for samples collected on 12/18/16. he thinks lab filled up the chain-of-custody when samples were dropped there. asked him to send letter report including sample result and explaining issues with chain-of-custody. 11:05 AM:- left message for Mr. Cohen. 2:00 PM:- received email from Mr. McGaha explaining information noted on chain-of-custody. Regarding the fingerprint samples collected on 12/18/2015. The results of these samples were submitted on January 19, 2016. Today you pointed out errors on the chain of custody related to these samples. The information on the chain of custody is wrong. Steve collected the samples on 12/18/2015, when you were on-site, and dropped the samples to our office location that evening. Steve told me the labels for the samples were filled out, but he did not have a chain of custody. I requested another individual to get the samples to the laboratory. It is at this point that the sample was mishandled and errors were introduced into the process. After our phone call I took a closer look at the chain of custody and attempted to determining what happened to the samples. Just before but also after our second phone call, I learned that the samples were not dropped off to the laboratory until after the Christmas and New Year holidays. When they were dropped off, they were dropped to our sales representative for Phoenix Laboratories for delivery to Phoenix Laboratory. The laboratory sales representative completed the chain of custody so that the samples could be processed. The information for the chain of custody was provided by the individual who was requested to get the samples to the laboratory. Unfortunately, for fear of reprimand for not delivering the samples on time, that individual did not consult Steve or I for the correct details for the chain of custody. When inquiring about the time-frame to receive the results I was presented with an excuse for the delay which. The samples were obviously mishandled. I take full responsibility for this situation. I chose an under-qualified person to complete what I considered to be a simple task, and get the samples to the laboratory. The chain of custody was completed poorly, at best, and is the only reason for this communication. The transport of the samples to the laboratory had nothing to do with the responsible party for Morgan Terminal. The samples from Morgan Terminal were analyzed by a NY State certified laboratory. The fingerprint analysis samples delivered to Phoenix were the only fingerprint analysis samples we have collected since 12/18/2015. I apologize for the situation and I will again offer to re-sample the product for fingerprint analysis to eliminate issues related to the sample handling and chain of custody errors caused during sample delivery to the laboratory. 01/25/16-Hiralkumar Patel. 1:01 PM:- sent email to Mr. McGaha. informed him that the department has not received a report for field work conducted on 12/18/15. asked him to submit report, including details about product sample and analysis and results of subsequent well gauging/product recovery activities.

NYC DEP HAZ MAT (Continued) **S102143390**

email copied to Mr. Cohen and Arthur Schwartz (aschwartzesq@optonline.net). 01/26/16-Hiralkumar Patel. received email from Mr. McGaha (at 10:47 PM at 01/25/16) including an interim remedial measures progress report. abstract: - a magnetometer survey was performed to locate all monitoring wells at the property that have been covered or for which the current location is currently not visible or known. the report is missing date and result of this survey ---------- - wells FN-12, FN-14, FN-15, FN-22, FN-28A, FN-34 and FN-39 (and also FN-40 which is not listed in text part of the report) were gauged on 12/18/16 - sample of LNAPL was collected from FN-14 and FN-15 - groundwater elevations fluctuate between 1.32 ft above mean sea level at FN-12 in Dec. 2014 to 8.88 ft above mean sea level at FN-34 in May 2014 - morgan terminal has removed 1.029 gal of oil during the reporting period between 12/14/15 and 01/15/16 - owner requested to modify well gauging/product recovery schedule from weekly to bi-weekly the submitted report is considered incomplete due to: - missing results of magnetometer survey - site map including location of formerly removed tanks and all the wells installed in past whether it is visible or not at this point 1:46 PM:- sent email to Mr. McGaha and asked him to submit revised report including following: 1. result of magnetometer survey performed (to locate all monitoring wells at the property that have been covered or for which the current location is currently not visible or known) at the site, including date of the survey. 2. a scaled site map including current site use, existing structures, tank systems and monitoring wells. ask him to mark working condition of each available monitoring well. also informed Mr. McGaha that the Department does not agree with the proposed Remedial Action Schedule submitted in the report and requires continuation of weekly well gauging/product removal. asked him to submit a revised report no later than COB February 05, 2016. email copied to Mr. Cohen. 02/03/16-Hiralkumar Patel. 10:13 AM:- sent email to Mr. McGaha and asked him to include results of weekly well gauging for the week of Jan. 18, Jan. 25 and Feb. 1st, in the revised report (due on 02/05/16). email copied to Mr. Cohen. 02/09/16-Hiralkumar Patel. 1:31 PM:- spoke with Mr. McGaha and inquired him about report. he just received some missing information about well monitoring/gauging last week and the report will be submitted by tomorrow morning. 02/10/16-Hiralkumar Patel. 2:06 PM:- received email from Mr. McGaha including amended interim remedial measures progress report. the amended report includes date (12/16/15) and result of magnetometer survey, description of existing site use and location of on-site structures, and results of well gauging conducted on 02/05/16. on-site wells were not gauged on 01/22/16 and 01/29/16 as site was covered with snow. during well gauging on 02/05/16, 2.4 ft of product found in well FN-15. 02/16/16-Hiralkumar Patel. received email from Mr. McGaha (at 5:27 PM on 02/12/16) including well gauging data for week of Feb. 8th. total of ten wells (FN-12, FN-14, FN-19, FN-22, FN-28, FN-34, FN-39, FN-40, GW-42 and GQ-43) were gauged. record does not include result for well FN-15. record includes numbers, but does not include information about what this numbers represent to. also there is no result for well FN-15. 9:16 AM:- sent email to Mr. McGaha inquiring about result for well FN-15. also inquired about numbers listed in last week's well gauging data. email copied to Mr. Cohen, Cameron Hendrick (deweyhendrick@yahoo.com) and Arthur Schwartz (aschwartzesq@optonline.net). 11:58 AM:- sent letter to English Kills Ventures LLC requiring submission of revised RIR including: 1)

NYC DEP HAZ MAT (Continued) **S102143390**

continuation of weekly groundwater monitoring/product removal, 2) inspection/maintenance of boom in the creek and 3) further groundwater delineation via installation of monitoring wells along creek. asked property owner to submit revised RIR no later than 05/31/16. letter emailed to Mr. McGaha, Mr. Feller and Mr. Cohen. letter copied to DEC Austin, DEC Vought, DEC DeMeo and DEC Urda. 03/24/16-Hiralkumar Patel. 12:04 PM:- received email from Mr. McGaha including a aerial map with proposed location of two monitoring wells. Mr. McGaha mentioned that they have added new absorbent boom in the waterway adjacent to the property to address the sheen on the water that has been/is being observed in the last several months. the new boom does not extend across the entire waterway, and does not capture material that may be entering the waterway from the outfall at the end of the waterway. the goal is to determine if the sheen originates from outfall or another location. they have also performed a dye trace of drains at the subject building to determine if the source of the sheen on the waterway could originate from piping below the property. a magnetometer was used to locate additional monitoring wells at the property. they have located 11 monitoring wells. additional effort has been scheduled to continue this effort. repair of the damaged wells is also being scheduled. the magnetometer also identified an anomaly near the small structure at the north side of the property. additional investigation of the anomaly is proposed including a small excavation above the anomaly. Mr. McGaha mentioned that weekly well gauging is continuing. 03/25/16-Hiralkumar Patel. 2:42 PM:- sent email to Mr. McGaha and asked him to submit a scaled site map including all existing wells and location of proposed monitoring wells. email copied to Arthur Schwartz and Mr. Cohen. 04/07/16-Hiralkumar Patel. received email from Mr. McGaha (at 10:17 PM on 04/06/16) including a site map with location of two proposed wells. he mentioned that the wells at the property will be repaired and re-surveyed for horizontal position and elevation following the installation of the two proposed wells. he also mentioned that the survey will allow for an improved scaled map, but they do not anticipate improving the maps until the survey is complete. 04/08/16-Hiralkumar Patel. 3:08 PM:- sent email to Mr. McGaha and informed him that proposed well locations look fine. 06/02/16-Hiralkumar Patel. received email from Mr. McGaha (at 12:55 PM on 06/01/16) including remedial investigation report. abstract: - remedial investigatory efforts performed at the site between Feb. 2016 and May 2016: weekly well gauging and LNAPL removal; monitoring well repair; magnetometer survey; dye trace - two (2) 2-inch monitoring wells (MC-1 and MC-2) were installed at the south and west side of bulkhead at the end of inlet, to a depth of 20 ft bg with 15 ft of screen - during the well installation the soil was screened using PID. PID readings were not detected above background levels - site is underlain by dark, very loose to medium compacted, fine to medium-grained sand with a trace pebbles, silt, brick and concrete - at 12 ft a peat layer consisting of very soft to medium compacted peat and/or organic silt with trace plant fibers and fine sand was encountered - soil samples were not collected during installation of wells MC-1 and MC-2 -------- - groundwater samples were collected from MC-1 and MC-2 - found CVOCs in groundwater sample from MC-2 - wells FN-12, FN-14, FN-15, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 were gauged weekly - during the reporting period, absorbent socks were used to collect LNAPL form wells - in addition to absorbent socks, a double diaphragm pump is used to collect LNAPL

NYC DEP HAZ MAT (Continued) **S102143390**

directly from wells containing LNAPL during regular product recovery events - based on all available data, groundwater elevations fluctuate between 1.32 ft above mean sea level at FW-12 in Dec. 2014 to 15 ft above mean sea level at FN-34 in May 2014 - presence of LNAPL is currently limited to an isolated area surrounding FN-14, FN-15 and FN-40 - manholes of the nine of the existing wells (FN-12, FN-14, FN-15, FN-22, FN-28, FN-34, FN-39, FN-40 and FN-42) were replaced - magnetometer survey was helpful in locating a total of 12 existing monitoring wells at the site (these wells were known for last couple of years) - magnetometer survey was hindered by the presence of steel storage container near the office building, therefore, the location of 550 gal heating oil tank could not be determined - the 3,000 gal diesel tank was not located at the property and it is presumed that the tank was previously removed - one anomaly indicative of a suspect UST was identified during the magnetometer survey. the anomaly was located 8 ft east from the south corner of the ancillary building at the north side of the property. the anomaly was approx. 4 ft wide and extended approx. 3 ft from the wall of the ancillary building. the asphalt paving was removed above the area of the anomaly and soil was excavated to a depth of 5 ft bg, however, no UST or evidence of petroleum were discovered in this location - in an effort to investigate potential sources related to the oil sheen identified on the English Kills, the drains at the bus area and the domestic drains within the building were tested with a non-hazardous dye. dye was not identified in the creek ---------- - during a period of low tide, the skeleton of what appears to be a boat was observed in the mud at the bottom of the inlet below the water - based on the initial site characterization soil samples collected by Fenley & Nicol in 1993 and the more recent soil samples collected by GeoQuest in 2014, the contaminants identified in soil are considered historic fill and not related to a specific discharge incident or area of concern ---------- groundwater analyticals: ----------MC-2 1,2-Dichlorobenzene----------40 1,3-Dichlorobenzene----------4 1,4-Dichlorobenzene----------10 Chlorobenzene----------8 cis-1,2-Dichloroethene-------11 Vinyl Chloride----------12 - during weekly gauging since Mar. 2016, product found in wells FN-14 (0.01 to 0.31 ft), FN-15 (0.01 to 0.49 ft) and FN-40 (0.13 to 0.60 ft) recommendations: - probing the mud with a tile probe is recommended to determine if an un-natural structural may be present in the mud below the creek - additional investigation for detection of chlorinated compounds in MC-2 - bi-weekly (instead of weekly) gauging of wells - further investigation for USTs using GPR Survey 06/13/16-Hiralkumar Patel. 2:08 PM:- left message for Mr. McGaha. asked him to submit missing boring/well logs for MC-1/MC-2 and Appendix A. also asked him to call back to discuss use of Proposed Conceptual Approach to Site Remediation dated 07/11/2005. 2:09 PM:- sent email to Mr. McGaha and asked to submit missing information in the report. email copied to Mr. Schwartz and Mr. Cohen. 06/16/16-Hiralkumar Patel. received email from Mr. McGaha (at 2:32 PM on 06/15/16). he mentioned that missing information will be submitted in few days. 08/31/16-Hiralkumar Patel. 11:16 AM:- sent email to Mr. McGaha and asked him to submit missing information immediately. email copied to Mr. Schwartz and Mr. Cohen. 12:03 PM:- received email from Mr. McGaha including boring logs for MC-1 and MC-2 and Remediation System Evaluation report prepared for EPA dated 06/04/2003. as per boring logs: - concrete fill and silty sand noted in both borings -

NYC DEP HAZ MAT (Continued) **S102143390**

both borings were installed to 20 ft bg - groundwater was found at 11 ft bg in MC-1 and 10 ft in MC-2 - gross contamination encountered at 12-13 ft bg - PID reading above 100 ppm recorded below 5 ft depth in MC-1 with maximum of 950 ppm recorded at the end of boring - PID readings noted below 5 ft depth in MC-2 with maximum of 150 ppm at the end of boring Mr. McGaha mentioned that to make the deadline for the submission of the recent report, he relied on verbal communication with Derik, the field technician on-site during the recent field work, regarding the description of soil at MC-1, MC-2, and the soil at the anomaly investigated. Mr. McGaha questioned Derik about gross contamination in MC-1, he described the area of moist and black with an obvious odor. Derick described the layer as having the texture of wood chips. Mr. McGaha stated that this observation did not translate into groundwater contamination, based on the analytical results of the groundwater sample at MC-1, however, the finding warrants further investigation. he intends to inspect the bulkhead on the water side at the same depth to determine if the gross contamination can be associated with the sheen observed on the water. this work will be performed during the investigation of the structure identified on the bottom of the waterway. 09/13/16-Hiralkumar Patel. 1:44 PM:- received message from Mr. McGaha. he mentioned that during well monitoring, they noted product in one of the two wells installed along bulkhead. they are planning to install a pneumatic skimmer to recover product. Mr. McGaha will submit a written work plan for review. 09/15/16-Hiralkumar Patel. 1:01 PM:- sent email to Mr. McGaha and asked him to submit a revised RIR (including discussion of elevated PID readings and field observations that were noted in the boring logs) and results of well monitoring/product recovery since May 2016, by the end of 09/30/16. email copied to Mr. Cohen and Mr. Schwartz. 09/20/16-Hiralkumar Patel. 1:07 PM:- received email from greenpoint11237@gmail.com (without any name) stating that the new well that we installed near the bulkhead recently which has been showing small amounts of oil, we are pumping the oil every day as per Mr. Mcgaha suggestion. Additionally, the two booms that were installed in the water will be changed soon. 09/23/16-Hiralkumar Patel. 2:21 PM:- received email from Mr. McGaha including interim remedial measure report. 09/28/16-Hiralkumar Patel. received email from Mr. McGaha (at 8:56 PM on 09/27/16) including link to amended RIR. 10/26/16-Hiralkumar Patel. DEC Falls came to discuss issues at the site. they received an application for bulkhead repair permit. informed DEC Falls about petroleum contaminated soil and groundwater at the site. 11/01/16-Hiralkumar Patel. 3:30 PM:- received email from Mr. McGaha including interim remedial measure report for Oct. 2016. 11/07/16-Hiralkumar Patel. abstract of amended RIR dated 09/30/16: - two wells (MC-1 and MC-2) were installed - concrete fill and silty sand noted in both borings - both borings were installed to 20 ft bg - groundwater was found at 11 ft bg in MC-1 and 10 ft in MC-2 - gross contamination encountered at 12-13 ft bg - PID reading above 100 ppm recorded below 5 ft depth in MC-1 with maximum of 950 ppm recorded at the end of boring - PID readings noted below 5 ft depth in MC-2 with maximum of 150 ppm at the end of boring - on 09/11/16, LNAPL was identified in well MC-1 - the fact that LNAPL was not immediately identified in MC-1, suggests that the LNAPL could originate closer to the bulkhead and/or north of MC-1, placing a potential source of LNAPL under the boiler house building. the boiler house building is downgradient of the 3,000 gal diesel potentially existing UST location - a magnetometer survey failed to identify the 3,000 gal UST

NYC DEP HAZ MAT (Continued) **S102143390**

- will conduct ground penetrating radar survey to locate 3,000 gal UST - if the ground penetrating radar survey does not locate the UST, a hole will be dug by hand to determine if the USTs are in the areas identified on historical maps - monitoring wells (FN-12, FN-14, FN-15, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2) gauged weekly - absorbent socks and double diaphragm pump were used to collect LNAPL - groundwater flow tends to be in a northeast direction - proposes to excavate immediately adjacent to the bulkhead that parallels Morgan Ave to a depth of 14 ft bg to investigate presence of sheen on both side of bulkhead in area of MC-1. the size of the excavation will be limited to 14 ft bg inside the bulkhead, and is expected to be the width of a single backhoe bucket (2 ft) and 6-8 ft long to allow the arm of the excavator to reach the required depth - will remove any LANPL from the excavation and install a 4 inch diameter recovery sump - property owner proposes to use previously approved conceptual approach dated 07/11/2005 - during weekly gauging, found product in wells FN-15 and FN-40 - report notes that well FN-12 is in close proximity to a water line that has somehow been damaged and is leaking water. the water level is just below grade from 09/02/16 through 09/16/16. abstract of interim remedial measure report dated Oct. 2016: - gauged wells FN-12, FN-14, FN-15, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 - total of 5.87 gal of oil have been collected using the absorbent socks since May 2014 - total of 3.91 gal of oil have been collected by pumping since Dec. 18, 2015 - will replace boom in creek - will install an active LNAPL skimmer near the bulkhead to the Newtown Creek inlet that parallels Morgan Ave (in area of well MC-1) - weekly gauging data from 09/16/16 through 10/28/16 shows presence of product in wells FN-15, FN-40 and MC-1 (0.38 ft on 09/23/16) discussed with DEC Austin and DEC Vought. based on result of historical investigation and recent groundwater monitoring, the department will request: - installation of additional monitoring wells (south of FN-40, east of FN-14, northeast of FN-14, couple of well on north side of former southern tank complex, at least two wells east of MC-2 along the bulkhead) to confirm containment of plume and for continuous monitoring/product removal - continuation of well monitoring/product removal (on monthly basis) and submission of quarterly reports until site development a meeting with property owner is needed to discuss future actions and submission of a RAWP. 3:06 PM:- spoke with DEC Falls regarding requirements for bulkhead permit application. he mentioned that missing information in the application can be discussed during meeting with property owner in office. Caroline Kwan Project Manager Special Projects Branch U.S. Environmental Protection Agency Ph. (212) 637-4275 email: kwan.caroline@epa.gov Supinderjit Kaur Remedial Project Manager EPA, Region 2, ERRD-SPB-MPS PH. (212) 637-4167 email: kaur.supinderjit@epa.gov 11/08/16-Hiralkumar Patel. 8:52 AM:- left message for (and sent email to) Mr. McGaha requesting a call back. email copied to Mr. Schwartz and Mr. Cohen. 11/10/16-Hiralkumar Patel. 1:34 PM:- received call from Mr. McGaha. informed him that to discuss further remediation activities at the site and actions related to bulkhead repair/replacement work, the department likes to meet property owner, environmental contractor/consultant and contractor for bulkhead work. Mr. McGaha will call back after discussing with property owner. 11/18/16-Hiralkumar Patel. 12:04 PM:- received email from Mr. McGaha confirming meeting on 12/14/16. 12/06/16-Hiralkumar Patel. spoke with Mr. McGaha. he confirmed that Mr. Schwartz, Allan and himself will

NYC DEP HAZ MAT (Continued) **S102143390**

meet DEC on 12/14/16. asked him about any consultant/engineer who will be handling bulkhead repair/replacement project. he will contact property owner. 12/14/16-Hiralkumar Patel. 1:00 PM:- met with Mr. Schwartz, Mr. McGaha, Allan Francis, DEC Vought, DEC Urda, DEC Chan, DEC Greco and DEC Falls. Mr. Schwartz mentioned that they are planning to replace rotted sections of bulkhead above water line and planning to work during low tide. DEC permit unit has asked for detailed plan on bulkhead repair work, including containment procedure and counter measures on-hand. asked Mr. Schwartz to inform DEC prior to beginning of bulkhead work and report immediately of any petroleum discharge issue during bulkhead work. to remediate remaining petroleum contaminated areas at the site, Mr. McGaha proposed following: - a test pit trench perpendicular to bulkhead in the area of well MC-1 - placement of larger diameter recovery well in proposed trench in area of MC-1 with installation of skimmer at beginning and possible use of pump & treat technique later on - a pump test prior to beginning pump & treat operation in area of MC-1 to confirm radius of influence - in-situ remediation using oxidants in alley - a pilot test prior to application of oxidants in alley prior to in-situ remediation at the site, informed Mr. Schwartz and Mr. McGaha that the department requires additional monitoring wells to the north, east and south of existing wells MW-15, MW-14 and MW-40 to confirm plume containment and effectiveness of in-situ remediation. Mr. Schwartz mentioned that a re-zoning application has been submitted to city department for redevelopment of the site in a manufacturing building. asked Mr. Schwartz to submit copy of re-zoning application. Allan Francis **site manager** Ph. (347) 859-6925 email: allanfrancis73@gmail.com Arthur Schwartz, esq. PH. (732) 905-1008 email: arthur@aschwartzesq.com 2:59 PM:- sent email to Mr. McGaha requesting property owner’s mailing address. email copied to Mr. Francis, Mr. Schwartz and LEP Management. 12/16/16-Hiralkumar Patel. 1:47 PM:- received email from Mr. McGaha including mailing address for property owner. Novack Burnbaum Crystal LLP. 675 Third Avenue, 8th Floor New York, NY 10017 Attn.: Edward Burnbaum 3:30 PM:- sent letter to owners of lot # 101 (Greenpoint Bushwick LLC.) and 207 (Bushwick Star Management LLC.) including approval for amended RIR dated 09/30/16 and requiring submission of RAWP within 90 days of the date of this letter (as per the signed consent order). asked them to include following in RAWP, which was agreed upon during meeting: 1) details about installation of sentinel wells on lot 207, 2) sampling methodology during installation of sentinel wells, 3) test pit investigation at location of MC-1, 4) active remediation at location of MC-1 and 5) application of oxidants to treat groundwater contamination on lot 207. letter emailed to DEC Urda, DEC Greco, DEC Falls, DEC Chan, Mr. Schwartz, Mr. McGaha and LEP Management. 12/19/16-Hiralkumar Patel. 2:52 PM:- received email from Mr. Schwartz including a copy of letter to NYC Dept. of City Planning. as per the letter, a site redevelopment is proposed including one (1) 10-story building. one of the site plan shows garage in cellar. no other construction details are available. 12/23/16-Hiralkumar Patel. 2:21 PM:- received email from Mr. McGaha including interim remedial measure report for Nov. 2016. -wells FN-12, FN-14, FN-15, FN-19, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 were gauged - based on all available data, groundwater elevations fluctuate between 1.22 ft bg at FN-12 on 08/18/16 to 13.85 ft bg at MC-1 on 11/25/16 - total of 4.31 gal of oil have been collected by pumping since Dec, 2015 - weekly gauging data from 11/08/16 through 12/02/16

NYC DEP HAZ MAT (Continued) **S102143390**

shows presence of product in wells FN-15 (0.12 to 0.65 ft) and FN-40 (0.14 to 0.25 ft) 01/11/17-Hiralkumar Patel. received email from DEC legal including copy of full-executed modification to the consent order. 01/26/17-Hiralkumar Patel. received email from Mr. McGaha (at 6:40 PM on 01/25/17) including interim remedial measure report for Dec. 2016. -wells FN-12, FN-14, FN-15, FN-19, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 were gauged - based on all available data, groundwater elevations fluctuate between 1.22 ft bg at FN-12 on 08/18/16 to 13.85 ft bg at MC-1 on 11/25/16 - total of 4.40 gal of oil have been collected by pumping since Dec, 2015 - wells were gauged three times in Dec. 2016: 12/02/16, 12/06/16 and 12/22/16 - gauging data shows presence of product in wells FN-15 (0.22 to 0.33 ft) and FN-40 (0.18 to 0.24 ft) - proposes to submit a remedial action work plan by 03/13/17 02/06/17-Hiralkumar Patel. DEC Austin received an email (on 02/04/17) from Seth Friedland. he mentioned that his client is seeking to develop the site and they are having an exploratory meeting with OER on 02/08/17. Seth D. Friedland Friedland Law, LLC. PH. (212) 344-1400 Ext. 202 (917) 902-6386 Fax (212) 344-8735 Efax (646) 304-1916 email: sfriedland@friedland.law discussed with OAG Karpen and informed her about scheduled meeting between site developer and NYC OER. inquired her about status on environmental lien on property. 2/27/17-Vought-Conference call on 2/24/17 with RSE, Vought, and Patel. Friedland noted that the site developer he is working for is Arthur Schwartz, who is also the current property owner. Friedland noted that he and Schwartz went to OER to seek possible help on having NYC Dept of Planning rezone the site via a zoning application and were hoping that OER could facilitate the process. Friedland noted that they are considering redeveloping the property for commercial purposes and were intending to perform excavation for at least one underground level . Friedland noted that at time of conference call, his only authorized role was in the rezoning effort but that he may be also brought in as counsel for the environmental issues. Friedland also noted he know nothing of the bulkhead issues with DEC Permits and DEC to send him copy of last email chain. Friedland also noted that Magaha was currently working on RAP as previously discussed with DEC. Freidland also noted he knew of prior Consent Order on site and may possibly want to explore closure of the Consent Order so that Schwartz may enter the OER BCP Program. RSE and Vought replied that any possible closure of the Consent Order would have to go through DEC OGC. Friedland noted that they would proceed with developing the RAP until the possible zoning change is approved and that he would get back to DEC with more information. 2/27/17-Vought-Received email on 2/26/17 from Friedland with cc to RSE and DEC Patel that Randy, Jeff and Kumar, Glad we were able to catch up on Friday. In response to your questions and requests for further information about the project, and DEC s interest in the proposed development of this site, here is some further information about the proposed development project and the zoning changes that are going to be needed to see it through to fruition. Any assistance that DEC can provide of course would be very much appreciated. Here is a very quick summary of the our client s interaction so far with the Department of City Planning (DCP) on the critical zoning issues: First meeting with DCP on February 4, 2016: We need Zoning map amendment from M3-1 to M1-5 that would enable the redevelopment of the Premises with a ten (10) story, 495,370 square foot building. (A copy of the architect s renderings showing the proposed building is attached). Designed to align with

NYC DEP HAZ MAT (Continued) **S102143390**

the City s vision of the North Brooklyn IBZ. The proposal now contains one building (as opposed to two), which rises to ten (10) stories, and consists of 495,370 square feet of commercial floor area (office and retail building). (A copy of the most recent revised Proposed Plans from December 2016, is also attached hereto). Met with City Planning again, January 2017 (LAST MONTH): At that meeting, the following was discussed: 1)Need to Further Revise the plans to depict a more realistic proposal that will incorporate the following: a.Noise; b.Emissions; c.What floor plates could be used without the sky exposure plane; d.Parking whether we need all the proposed spaces and whether we should have the cellar parking when it is prone to flooding; e.Incorporating higher than the current 12 floor to ceiling heights; f.Pedestrian and vehicular (truck) access; g.Creek access; h.Flood resiliency; i.Types of businesses and how the newly constructed buildings will meet their needs; j.Ventilation - if there is going to be manufacturing use shared with commercial use; 2)Create an urban planning report to support the case for the density, which will include: a. Transportation; b. Neighboring uses; c.Waterfront esplanade 3.Marketing/real estate analysis that shows the proposed uses are needed in this neighborhood. Thanks again, and enjoy the remainder of your week-end. Regards . Vought added attached rendering and revised proposed plans to D2. Vought sent reply to Friedland with cc to RSE, Patel, OGC Urda, NYSOAG Karpen, DEC Greco and DEC Falls that Seth, It was good talking to you as well on Friday and thanks for the email below as well as the attached conceptual site plans. The plans show the development of an underground parking garage so this would certainly be optimum as it would likely allow for source removal down to and including the water table. The Department can assist in expediting the review of any proposed plans as well as participate in any meetings to facilitate approval of such plans. I will also inform both OGC and the NYSOAG of your possible request, as per our teleconference, to close the Consent Order, pending the rezoning of the site. I will also forward you the email chain with regards to the bulkhead and Permit issues we discussed on Friday. Thanks as well and keep us posted. Vought sent OGC Urda and NYSAOG Karpen spill notes above from Fridays call. Vought sent another email to Friedland that Seth, After checking my emails, I realized I have no external emails regarding the Bulkhead Permit request. Please contact Tamara Greco or Justin Falls, copied above, for more information regarding the permit request, if needed. Thanks, . Vought received reply from Friedland with cc to all that Thanks very much, Jeff. I sincerely appreciate it. 03/24/17-Hiralkumar Patel. 12:58 PM:- received email from Mr. McGaha including remedial action work plan. summary: - selected remedial alternatives involves isolating the historic fill over the entire footprint of the site with a cap in areas not already capped with asphalt or concrete and treating residual areas of petroleum contamination using in-situ chemical oxidation and multi-phase extraction for residual LNAPL, establishing an declaration of covenant and restrictions and environmental easement, along with site management plan and operation, maintenance and monitoring plan - capping of currently exposed soil will be performed using a demarcation layer, followed by subgrade material asphalt paving - in-situ chemical oxidation is proposed in the vicinity of monitoring wells FN-14, FN-15 and FN-40 - oxidant solutions would be injected into the soil and groundwater through 15 injection points constructed as temporary well points to a depth of approx. 4-5 ft bg, or 0-2 ft below the water table - three additional

NYC DEP HAZ MAT (Continued) **S102143390**

monitoring wells would be installed to monitor progress of oxidation remediation efforts in this area - multiphase extraction will be performed at the bulkhead with the Newtown Creek and near MC-1 to removal LNAPL and groundwater contamination - multiphase extraction will be operated until LNAPL is removed and groundwater contamination meets stable and acceptable concentrations - following completion of RAWP implementation, quarterly groundwater monitoring would be implemented to document effectiveness of the remedy - groundwater would be samples for one year (four monitoring events) ---------- - track 4 - industrial restricted use soil cleanup objectives are proposed ---------- the work plan does not include sampling methodology during installation of sentinel wells.
07/10/17-Hiralkumar Patel. 10:25 AM:- spoke with Mr. McGaha inquiring about current status on product recovery. he will submit report and interim work plan to address LNAPL contamination. 09/18/17-Hiralkumar Patel. received email from Mr. McGaha (at 11:55 AM on 09/12/17) including an interim remedial measure progress report (last report submitted on 01/25/17). report included results of gauging events conducted until 09/05/17. since 12/22/16, product noted in following wells: product thickness (in ft):
----------FN-14------FN-15------FN-40------MC-1
01/12/17----------0.12-------0.12
03/09/17----------0.28-------0.66
03/30/17----------0.42----------5.14
04/06/17----------0.68-------0.31------3.59
04/19/17----------0.36----------4.89
04/28/17----------0.29-------0.75------3.71
05/11/17----------0.62-------1.56------3.72
05/26/17----------0.46----------3.37
06/02/17----------0.81----------3.01
08/08/17--------0.20-------0.30----------1.10
08/15/17--------0.10-------0.20----------0.80
08/23/17--------0.10-------0.20----------0.40
08/29/17--------0.10-------0.10----------0.29
09/05/17--------0.20-------0.20----------0.40 Mr. McGaha is preparing proposal for operation of an alternative LNAPL remediation system. received email from DEC Ian Beilby. he received pics from NYC's consultant claiming NAPL seeping from bulkhead along the site. 09/20/17-Hiralkumar Patel. 1:15 PM:- visited site and met Arron Abraham (347-773-9633, aarbenabe@yahoo.com) from property management office. inspected creek inlet adjacent in northwest corner of the site (near well location MC-1). noted two layers of sausage booms covering southern half of bulkhead which is owned by former morgan terminal. minor sheen was noted within boom area. no signs of product were noted outside the booms. need to re-inspect area during low tide. 09/25/17-Hiralkumar Patel. received powerpoint presentation from DEC Ian Beilby. pics show seepage of free product from bulkhead towards northern section of inlet which is not covered by booms. 10:08 AM:- sent email to Mr. McGaha inquiring about plan for alternative LNAPL remediation system. email copied to LEP Management, Mr. Schwartz and Mr. Abraham. 09/27/17-Hiralkumar Patel. 9:30 AM:- visited site and met Mr. Abraham. noted heavy sheen between absorbent booms and bulkhead. some of the sheen had escaped boom area as one end of the boom was in air during low tide. spoke with Mr. McGaha. asked Mr. Abraham and Mr. McGaha to adjust booms to contain oil seepage. also asked Mr. McGaha about remediation plan. after reviewing pump option, he wants to use previously proposed remedial

NYC DEP HAZ MAT (Continued) **S102143390**

method: installation of sump between well MC-1 and bulkhead and pumping oil into oil/water separator and discharge water into sewer system after getting necessary permit. 10/03/17-Hiralkumar Patel. 11:51 AM:- received email from Mr. Abraham. he mentioned that a hard boom with sweeps will be installed in the creek. 10/04/17-Hiralkumar Patel. 10:25 AM:- left message for Mr. Abraham inquiring about installation of hard boom and sweeps, and update on site redevelopment plans. 11/04/17-Hiralkuamr Patel. 5:30 PM:- visited site while investigating a report of oil sheen (spill #: 1707515) in Newtown Creek. found free phase product between the bulkhead and boom in the creek. petroleum sheen were noted outside the boom area. a drainage pipe was visible in bulkhead wall due to low tide at the time of inspection. no signs of oil discharge from the drainage pipe. 11/09/17-Hiralkumar Patel. 12:16 PM:- left message for Mr. McGaha. 11/16/17-Hiralkumar Patel. received email from Wardah Azhar from CDM Smith (EPA consultant working on Newtown Creek superfund cleanup) inquiring about the site. Wardah Azhar CDM Smith Ph. (303) 383-2364 email: azharw@cdmsmith.com 11/28/17-Hiralkumar Patel. 11:16 AM:- received message from Mr. McGaha. he mentioned that remediation system for LNAPL has been installed. 12:02 PM:- spoke with Mr. McGaha. he mentioned that a remediation system has been installed and he likes to discuss it prior to turning it on. asked Mr. McGaha to submit details about the remediation system for review. 12/07/17-Hiralkumar Patel. 12:28 PM:- left message for Ms. Azhar. 12:37 PM:- received call from Ms. Azhar. she requested copy of documents/reports received since 2015. 12/11/17-Hiralkumar Patel. as instructed, reports requested by CDM were sent to DEC Austin. 06/07/18-Hiralkumar Patel. DEC Austin forwarded email from Newtown Creek Alliance including site pics of collapsed bulkhead. 8:11AM:- left message for Mr. McGaha. DEC Piper inspected the site and found no sheens emanating from the shoreline. discussed with DEC Stephen Watts in permits. Steve mentioned that they have sent a second incomplete notice on 12/28/16 for an application originally received on 07/20/15. they have not received any response after that. 07/11/18-Hiralkumar Patel. 10:59 AM:- spoke with Mr. McGaha and inquired him about details of remediation system as discussed in Nov. 2017. he mentioned that the system was installed and being managed/monitored by owner’s on-site representative. Mr. McGaha will submit remediation system details and summary of work performed since Sept. 2017, by end of the week. Mr. McGaha doesn’t know anything about bulkhead work. 07/13/18-Hiralkumar Patel. 1:19 PM:- sent email to Mr. McGaha and asked him to submit remediation system design details and summary of work performed since Sept. 2017. 1:33 PM:- received email from Mr. McGaha including an IRM progress report and design details of LNAPL recovery system installed at well location MC-1. the LNAPL recovery system has been running since Oct. 2017 and has collected approx. 140 gal of oil. according to on-site system attendant, since the LNAPL pumping system has been installed, a significant decrease has been observed on the sheen in the Newtown Creek. also as per site attendant, bulkhead was partially collapsed at the site. report also mentioned that a water leak occurred in the alley in Feb. 2018, causing water to rise to grade in wells FN-39 and FN-12, making it impossible to measure a depth to water at these wells. few weeks later, 04/10/18, wells FN-15a and FN-14 were also under water. the water line leak is reportedly going to be repaired in the near future. report included results of gauging events conducted until 07/03/18. since 09/05/16 (last IRM report), product

NYC DEP HAZ MAT (Continued) **S102143390**

was noted in following wells: product thickness (in ft):
----------FN-14------FN-15------FN-40
12/01/17----------0.18
05/29/18--------0.91-------0.82 06/05/18--------0.70-------1.10
06/12/18--------0.01-------0.69 06/19/18--------0.02-------0.09
06/26/18--------0.01-------1.10 07/03/18----------0.80
08/10/18-Hiralkumar Patel. spoke with DEC Falls. he inspected site on 06/21/18 after bulkhead collapsed. he noticed repair activity without proper permit and asked to stop work. when he re-inspected the site in early July, bulkhead work was completed. Justin issued a NOV on 07/17/18. recently, he received a permit application to legalize previously replaced bulkhead. 09/05/18-Hiralkumar Patel. 12:40 PM:- visited site. currently, the site is being used by a lumber company and almost entire site is full of lumber. on-site tenant mentioned that they moved to the site in Nov. 2017 and doesn't know anything about on-site well monitoring. inspected water channel along the side of the property. silver sheen was noted within/outside the boom at the end of the channel near well MC-1. found partially sunken boat (boom around it) in middle of the channel along the side of the property. no sheen was noted around the boat. inspected on-site building near well MC-1 (former maintenance building), but no oil recovery system was found within the building. inspected alley on south side of the site. multiple 5 gal oil pails and two 55 gal drums were found along the building wall. 5 gal pails were empty but open. one of the drum was closed, but the other drum contained oil to the top and was open. 1:12 pm:- left message for Mr. McGaha and informed him about pails/drums in alley. asked him to immediately secure oil drum and remove other containers. 1:59 PM:- received call from Mr. McGaha. he mentioned 5 gal pails and 55 gal oil drum were removed from the site when lumber company occupied the site. the closed drum contains boom/dirt removed during well monitoring activities. he also confirmed that site representative has closed the oil drum. oil drum and pails will be removed soon. asked Mr. McGaha to schedule a site inspection. 10/05/18-Hiralkumar Patel. 9:30 AM:- visited site and met Mr. McGaha and Arron Abraham. Mr. McGaha showed location of oil recovery tank which is near northeast corner of main building, between the building wall and south bulkhead at the end of water channel. a compressor for the oil recovery system is in basement of main building. total of 240 gal of oil has been recovered since beginning of oil recovery using double diaphragm pump. the 275 gal tank was pumped out last month. asked Mr. McGaha to submit details about time duration and amount recovered from well MC-1. inspected wells in alley on south side of the site where oil found in well FN-15 only. based on shallow depth of groundwater beneath the alley and detection of oil in only one well now, suggested Mr. McGaha/Mr. Abraham to expedite remediation via soil excavation, removal of free phase product and installation of a larger diameter well in the excavation to recover any remaining product. Mr. McGaha will discuss with property owner. Mr. McGaha also proposed to install an another well, north of well MC-1 to increase product recovery using two wells, instead of one. asked him to submit email with plan for additional well installation and remediation via excavation (if approved by property owner) in south alley. 02/07/19-Hiralkumar Patel. discussed with DEC general counsel regarding compliance of existing consent order and pending bulkhead violations. DEC legal will contact property owner to discuss possible way to expedite both petroleum remediation and correction of bulkhead violations.

NYC DEP HAZ MAT (Continued) **S102143390**

02/12/19-Hrialkuamr Patel. 9:28 AM:- sent email to Mr. McGaha requesting update regarding proposed installation of an additional well near MC-1 to expedite LNAPL recovery, and possible excavation in south alley to remove heavily contaminated material. email copied to lepmanagement89@gmail.com. 03/11/19-Hiralkumar Patel. received email from Mr. McGaha (at 7:49 PM on 03/10/19) including a RAWP. 04/19/19-Hiralkumar Patel. reviewed RAWP submitted on 03/10/19. the RAWP proposes: 1) isolating the historic fill over the entire footprint of the site with in areas not already capped with asphalt or concrete, 2) treating residual areas of contamination via excavation (approx. 25 ft by 35 ft to a depth of 5 ft bg) in alley. endpoint samples from sidewalls will be collected after excavation in alley. bottom samples will not be collected as excavation will be below the water table. a larger diameter (not specified in the RAWP) will be installed with excavation area for post remediation well gauging for a period of three months. 3) multi-phase extraction (including oil/water separator and discharge permit) for LNAPL near well MC-1 via installation of additional recovery wells. multiphase extraction will be operated until LNAPL is removed and groundwater contamination meets stable and acceptable concentrations 4) establishing an declaration of covenant and restrictions and environmental easement. one of the prohibition will be residential land usage without NYSDEC approval 5) submission of site management plan including groundwater sampling from existing wells. groundwater will be sampled for one year (four monitoring events) for VOCs, SVOCs and metals. the RAWP needs to be revised due to following: - the work plan does not include size of replacement well in the alley after excavation - the work plan proposes to analyze soil samples for EPH and SVOCs, and not VOCs/SVOCs - schedule milestone refers to weeks from remedial action start 10:16 AM:- spoke with Mr. McGaha and discussed the proposed RAWP dated Mar. 2019. he mentioned that a 6 inch well will be installed in excavation in alley. informed Mr. McGaha that a revised RAWP is needed including following: - well size in alley excavation - all soil/groundwater samples must be analyzed for VOCs/SVOCs/metals - schedule milestone should be weeks from the RAWP approval (not weeks from remedial action start) 05/08/19-Hiralkumar Patel. 10:45 AM:- sent email to Mr. McGaha and asked him to submit a re-revised RAWP including/correcting following: - size of replacement well that will be installed in the alley after excavation - analysis of all samples for VOCs and SVOCs - schedule milestones should be weeks from the RAWP approval instead of weeks from remediation action start - clarification on # of recovery wells that will be installed around the existing well MC-1 email copied to lepmanagement89@gmail.com, Arthur Schwartz (arthur@aschwartzesq.com) and Aaron Abraham (aarbenabe@yahoo.com). **unapproved RAWP Mar. 2019 on desktop.** **MOSF documents on e-docs are only part of larger file in box located in basement storage.** **RAWP on desktop. need to review.**"

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

02/24/06-Vought-Spoke with Ted Yen and tank closure report. 02/27/06-Hiralkumar Patel. Abstracts of Tank Closure Report: - Work performed: notification with NYSDEC for closure of tanks, excavation, cleaning/purging and removal of eleven (11) 550 gallon gasoline USTs - total of 239.78 tons of contaminated soil was removed from the site and transported to Soil Safe Inc. Bridgeport in Logan Township NJ. - soil and site assessments were conducted using PGM 30 PID. - based on visual and olfactory evidence, there was some contamination localized in the area located on the west perimeter of the tank grave near the fill pipes. (PID readings 80-150 ppm) - six end point soil samples (EP-1, EP-2, EP-3, EP-4, BS-1 & BS-2) taken from the four side walls and mid-grave east and mid-grave west. - groundwater flow is assumed to be in a westerly direction. - no groundwater intrusion in the pit. - groundwater contamination was identified from a Phase-II subsurface assessment previously conducted by Giorgio Envirnomental. - no private wells in the vicinity of tanks. - two groundwater wells were installed at depth of 22'-24' on two separate locations on the subject property. One monitoring well installed on the middle of the previous tank grave and second well was installed on northwest of the previous tank grave (east of office) Report Review Letter, with the requirement of water sample at middle of previous tank grave, sent out to James Ruggiero. faxed to Ted yen at don carlo. 03/28/06-Hiralkumar Patel. REceived fax from Don Carlo regarding groundwater sample result. but i have received only first four pages, and doesn't have lab results. Spoke with Danny and he told me that he going to drop report personally today. 04/04/06-Vought-Received and reviewed groundwater analyticals received from Don Carlo Environmental Services-3/27/06. Groundwater analyticals show 130ppb benzene(MW1), 1600ppb toluene(MW1), 1200ppb ethylbenzene(MW1), 4400ppb xylene(MW1) and 300ppb napthalene(MW1). Spill referred to DEC Austin for transfer due to groundwater contamination. 04/06/06-Vought-Spill transferred from DEC Vought to DEC Tang as per DEC Austin due to groundwater contamination and need for long term remediation. 4/12/06 - reviewed the case file. Will wait for the next round of groundwater sample before assigning the priority. - KST. 10/30/06 - Reassigned from Tang to Sun. (JS/MS) 1/3/07: Called Don Carlo (Ted Yen) and left message with secretary inquiring about latest round of ground water sampling at site. Expecting a return call. (JS/MS) 3/1/07: Followed up with Don Carlo- client has not yet paid them for the last round of groundwater sampling, once payment is received, sampling will be performed. (JS/MS) 7/28/07: Client has paid and on-site sampling is to be conducted on 7/15/07 as per Dan from DCS Services. (JS/MS) 1/24/08: MS spoke to Ted to get update. He said property came under new ownership and he is waiting for them to approve proposal to continue work. He will call back this afternoon or tomorrow to let me know details as he was out of office. (MS/JS) 2/5/08: DCES is taking 5th sampling event in 3 weeks from today. Danny from DCES is emailing all results to DEC to obtain electronic copies. (JS/MS) 4/3/08: Spoke to Danny Singh from Don Carlo. Reported frozen groundwater in monitoring wells. Supposed to resample 4/10/08. (JS/MM) 4/23/08: Email from Don Carlo (JS/MM) Please be advised that the groundwater samples at the above referenced site were collected as per our telephone conversation; however, the samples weren't collected on April 10, 2008 they were collected approx one week later. The samples were sent to York Analytical Laboratories in Stratford, CT for analysis. Upon receipt of the analytical results, you will receive the necessary lab data together with our Groundwater

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

monitoring table. Danny Singh 06/02/08: Received groundwater table from Don Carlo Environmental; missing lab results from latest round of sampling. Ask to resubmit and correct for updated TAGM 4046 table. York Labs MDL for MTBE, BTEX 50 ppb to 125 ppb...when groundwater standards are 0.7/5/10 ppb (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/13/08: Danny Singh stated Don Carlo did not sample because owner did not give permission to sample (JK/MM) 01/06/09: Left message with receptionist for Danny Singh to call back with update. (JK/KG) 01/15/09: Tried to call Don Carlo, but no answer (JK/KG) 01/26/09: Left message with receptionist for Danny Singh to call back with update. (JK/KG) 02/03/09: K. Green sent D. Singh email: Mr. Singh, I will be managing Spill No. 0510000 located at 1175 Flushing Avenue from now on, under supervision of Jon Kolleeny. My contact information is provided below. Can you please provide me with an update on status of this site? Latest rpt I have is a GW monitoring rpt for samples collected in April 2008. Have you been able to collect any samples since then? Please feel free to contact me if you have any questions. Response from Singh: Ms. Green, We have tried several times to contact owner for monies to continue with GW monitoring at site. Todate no response were gained. Our office will not continue with monitoring until money is received from client. (JK/KG) 02/09/09: Letter sent to Ruggiero requesting: Dept requires that a subsurface investig work plan be prepared & submitted for our review by 3/13/09. Work plan should include install'n of at least one addt'l monitoring well to further delineate GW contaminant plume and determine GW flow direction. During well install'n, soil must be sampled continuously and screened with a PID, and sample with highest PID reading and sample just above water table should be submitted for lab analysis. New and existing wells should be surveyed so that local GW flow direction can be determined, and GW samples should be collected from all wells for lab analysis. Work plan should include a site location map and a site plan showing current and former tank locations and locations of existing and proposed monitoring wells, and a North arrow and scale bar must be included on site plan. An investigation summary rpt with conclusions and recommendations should be submitted to DEC. SIWP due 3/19/09. (JK/KG) 02/17/09: Letter sent on 2/9/09 to Mr. Ruggiero at 1175 Flushing Ave was returned to sender. Addressee moved and did not leave a forwarding address. Sent Danny Singh an email to see if he has any contact information for Mr. Ruggiero. (JK/KG) 02/23/09: No response from D. Singh pertaining contact info for Ruggiero. Property Shark gives an address for Ruggiero in Howard Beach, NY. Re-sent letter requesting work plan be submitted by 3/27/09. Letter sent to 163-14 92nd St, Howard Beach, NY 11414. J. Kolleeny also sent an email to D. Singh requesting updated contact info (if any) for Ruggiero. (JK/KG) 03/25/09: On 3/4/09 Jon rec'd call from D. Singh stating that Ruggiero rec'd letter and the work will be performed. Singh was supposed to fax a letter to Jon. (JK/KG) 03/31/09: I spoke to D. Singh to find out status of site. He said DCES just received payment from Ruggiero and once the check clears they will begin to prepare the work plan. He will give me an update in the next couple of days.(JK/KG) 04/06/09: Rec'd voice message from D. Singh on 4/3/09 stating that payment has been rec'd and he has begun preparing the work plan. He was requesting an extension until 4/6/09. Rec'd pdf of work plan; under review. (JK/KG) 04/13/09: Rev'd work plan and spoke to D. Singh about making some revisions. He will resubmit a pdf of the revised plan and send me a hard copy. (JK/KG) 04/21/09: Rec'd pdf of revised Subsurface

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

Investigation & GW Monitoring Well Work Plan dated 4/20/09. D. Singh will mail hardcopy. Letter sent approving work plan; investig summary rpt is due 6/19/09. Scope of work includes install'n of an addt'l monitoring well, collection of soil and GW samples, and submission of investig summary rpt. Letter states that new and existing wells should be surveyed so that local GW flow direction can be determined and that proposed well MW-3 should be installed as close as possible to existing on-site building, conditions permitting. D. Sing has indicated that property is a metal scrap/salvage yard and open space is limited. (JK/KG) 06/15/09: Rec'd pdf and hardcopy of Envt'l Subsurface Assessment rpt dated 6/5/09 prepared by Don Carlo. Spoke to D. Singh and requested well install'n/boring log for W-3 and site map. He said wells were not surveyed because owner did not want to pay to have it done. Well W-3 was installed on 4/22/09 and all wells were sampled for GW on 4/23/09. No SVOCs or VOCs detected in soil samples collected from B-3 (W-3). No SVOCs or VOCs detected in GW in W-2 and W-3. No SVOCs detected in GW in W-1. Detected VOCs include: Benzene (99 ug/L), n-Butylbenzene (59 ug/L), Ethylbenzene (990 ug/L), Isopropylbenzene (68 ug/L), Napthalene (850 ug/L), n-Propylbenzene (150 ug/L), 1,2,4-Trimethlybenzene (2,200 ug/L), 1,3,5-Trimethlybenzene (640 ug/L), m,p-Xylene (3,700 ug/L), o-Xylene (91 ug/L). (JK/KG) 06/16/09: Rec'd pdf of boring log for W-3 and site plan with well locations. I spoke to Danny Singh and requested a well construction log as well. I asked him if depths given on GW analysis table were depths to water measured for each sample. He said they were. There is a huge discepency in depths. W-1 and W-2 were installed to depths of 22 and 24 ft bgs and measured depths to water vary from 32' bgs to 14' bgs (i.e., deeper than total depth of well). Danny said he would look into it. I also asked him what kind of probe they were using to measure depth to water. He said it is an electronic water sensing device and it doesn't detect product. I also asked him to find out what is smallest interval probe can detect, since usually it is 0.01'. He said he doesn't have well construction details for W-1 or W-2. I asked him if W-3 was installed as close to building as possible and he said that it was. There is a scale for trucks directly behind building and well was installed next to a dumpster in an area that would be accessible. (JK/KG) 06/18/09: Letter dated 6/17/09 sent to Ruggiero requiring a work plan for a supplemental subsurface investigation be submitted by 7/17/09. Wells must be surveyed. A Stipulation Agreement was issued to Ruggiero on 6/18/09. Signed stip is due on 7/2/09. (JK/KG) 07/02/09: Rec'd faxed copy of signed Stipulation Agreement. Called Mr. Ruggiero (718-381-1000 or 718-791-4351) and he said a hard copy of Stip would be delivered today. He wanted clarification on letter sent on 6/17. I told him contaminant plume needs to be delineated and that was reason DEC is requiring a work plan for further investigation. He said he contacted a surveyor but they were not familiar with surveying monitoring wells. I explained to him process of surveying wells. Rec'd original signed Stip. (JK/KG) 07/06/09: Stipulation Agreement was executed on 7/3/09. (JK/KG) 07/14/09: Rec'd messsage from Zeb Youngman of P.W. Grosser (631-589-6353). Spoke to Youngman on 7/14. He said he was contacted by Ruggiero to submit a proposal for the additional investigation. If PWGC's proposal is accepted he will need some extra time to submit the work plan. (JK/KG) 07/20/09: Rec'd call from Ruggiero. He informed me that he has hired PWGC and a work plan will be submitted soon. Rec'd an email from Youngman as well, stating he will have the work plan by 7/23/09. (JK/KG) 07/23/09: Rec'd pdf of

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

Monitoring Well Installation / Groundwater Monitoring Work Plan dated 7/21/09 submitted by PWGC. The work plan proposes installation of one permanent and three temporary monitoring wells, collection of groundwater samples, a groundwater elevation survey, and implementation of quarterly groundwater monitoring at the site for one year. The work plan was approved with the following comments: During well installation, soil must be sampled and screened continuously, and the sample with the highest PID reading and the deepest dry soil sample should be submitted for laboratory analysis. If PID readings are not detected, only the deepest dry soil sample need be analyzed. In addition to surveying the existing and new monitoring wells, well construction details such as well depth and screened interval should be determined for the existing wells. If the existing wells are not screened appropriately to assess groundwater conditions, additional wells will need to be installed. Well construction logs should be provided for all wells. The proposal to limit quarterly monitoring to a one-year period is not approved at this time. The results of this investigation should be presented in a summary report with conclusions and recommendations for further action. An investigation summary report is due by 9/25/09. Email for Ruggiero - JCR327@aol.com (JK/KG) 07/29/09: Rec'd call from Youngman. He was at the site today to survey and assess the condition of the existing wells. He sent a revised site plan showing the GW flow direction and proposed location of the new well, as well as GW elevation survey data. (eDocs)(JK/KG) 08/03/09: A copy of the executed Stip sent certified mail to Ruggiero was returned to the Dept. as unclaimed. It was resent to Ruggiero via email and regular mail. Spoke to Ruggiero and he said he receives mail at the Howard Beach address. (JK/KG) 08/05/09: Rec'd an email from Youngman stating that PWGC will be installing the well and performing soil and groundwater sampling on 8/7. (JK/KG) 09/21/09: Rec'd call from Ruggiero. He said PWGC has proposed injections and he wanted to know if it would be a good approach for site. I told him that I would have to review recent data when rpt is submitted. Once rpt is submitted & reviewed he would like to discuss PWGC's recommendations as soon as possible. He can be reached on his cell phone (718-791-4351). Rec'd Monitoring Well Installation / First Quarter Groundwater Monitoring Report dated 9/21/09 submitted by PWGC. On 8/7/09 one permanent and three temporary monitoring wells were installed. Soil and GW contamination was encountered. The new and existing monitoring wells were surveyed and groundwater flow is northerly. Soil samples were collected at 10-12' and 14-16' bgs from borings GW-1, 2, and 3 and at 10-12' bgs from MW-4. Depth to water is approximately 12' bgs. VOCs in excess of RSCO's were found in GW-1 (10-12' and 14-16'), GW-2(14-16'), and GW-3(14-16'). Summary of GW samples: MW-1: Total VOCs - 2,779 ug/L MW-2: Total VOCs - 185 ug/L MW-3: Total VOCs - 3.26 ug/L MW-4: Total VOCs - 4.04 ug/L GW-1: Total VOCs - 9,217 ug/L GW-2: Total VOCs - 7,570 ug/L GW-3: Total VOCs - 2,849 ug/L PWGC recommends chemical oxidation and ORC injections, followed by quarterly monitoring and reporting. Need to respond to recommendations. Contaminant plume needs to be delineated prior to remedial action. (JK/KG) 09/22/09: A letter was sent to Ruggiero requiring a brief work plan with a diagram showing the proposed locations for the new wells by 10/23/09. At least 2 wells should be installed: one to the NE of the former USTs and one to the SW of the former USTs. Soil samples should be collected during installation. After the wells have been installed and sampled a remedial action plan detailing PWGC's

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

proposed remedial strategy should be submitted. (JK/KG) 09/23/09: Zeb Youngman called to discuss the requirement to install additional wells. He doesn't think they are necessary. I told him that the contaminant plume needs to be delineated prior to implementing remedial action. The well proposed to the SW of the former USTs does not need to be installed at this time. (JK/KG) 11/3/09 Spill case transferred from J. Kolleeny to J.A. Maisonave. - JAM 11/4/09 Spoke to Zeb Youngman. He will be submitting a work plan to install additional monitoring wells and propose RegenOx injections to address soil and GW contamination. - JAM 1/20/10 Reviewed the Remedial Action Work Plan (RAWP) submitted by P.W. Grosser (PWG) via email on January 4, 2010. The report is dated December 2009. The work plan proposes injecting chemical oxidants and oxygen releasing compounds to address groundwater contamination in the former UST area and installing two (2) additional monitoring wells to fully delineate groundwater contamination. Details are as follows: 1. 15 injection points in an area approximately 30 X 50 feet. 2. Based on RegenOx calculations, a total of 2,640 lbs of RegenOx and 450lbs of ORC advanced will be injected in 2 events. 3. First injection event will consist of 1,500 lbs of RegenOx (750 lbs each of Part-A and Part-B) 4. Second injection event will consist of a mixture of 1,110 lbs of RegenOx (750 lbs of Part-A, 360 lbs of Part-B) and 450 lbs of ORC advanced. 5. Installing 2 monitoring wells to the North and South of the Former UST area to fully delineate groundwater contamination. I issued a response letter to James Ruggiero approving the installation of the two monitoring wells. The locations of the wells should be modified as shown on a diagram, which was attached and issued with the letter. A third well should be installed to the northwest of the on-site building, between existing wells MW-2 and MW-4, also shown on the diagram. Groundwater samples should be collected from all wells and analyzed for the TAGM 4046 list of petroleum related VOCs as well as for chlorinated solvents (in response to the one boring have a solvent odor according to the Sept 2009 well installation report). A summary report should be submitted for review prior to implementing the proposed remedy and should include any changes to the remedy based on new information. The RAWP and DEC response letter are uploaded to eDocs. - JAM 2/5/10 Received an email from Jon Eichler from PW Grosser. The 3 monitoring wells will be installed Saturday, February 6th. - JAM 3/31/10 Received the Supplemental Monitoring Well Installation and Sampling Report submitted by PW Grosser dated March 15, 2010. On February 6, 2010, three new monitoring wells (MW-5 through MW-7) were installed and well MW-4 was re-installed because it had been destroyed. Groundwater was encountered at approx. 12 feet. Soil was screened and sampled only in new wells. PID readings above background were only observed in well MW-7 from 4' to 12' below grade. A soil sample was collected from deepest dry soil interval in each of wells and also from 5'-7' depth interval of MW-7 (highest PID reading). Laboratory results showed several VOCs in soil samples collected from MW-6 and MW-7, however, concentrations were below RSCOs. No VOCs were detected in soil from well MW-5. Groundwater samples were collected from wells MW-1 through MW-7. VOCs were detected at concentrations exceeding DEC standards from wells MW-1, MW-2, MW-5, MW-6, and MW-7, and Total VOCs ranged from 58 ug/L in well MW-5 to 12,413 ug/L in well MW-1. Even though well MW-1 had highest concentration of Total VOCs, well MW-2 had highest concentrations of petroleum related VOCs (MW-1 had Acetone concentration of 11,500 ug/L). Total BTEX concentration in well MW-2

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

was 2,517 ug/L. Contamination in MW-2 has always been relatively low in previous sampling events (185 ug/L Total VOCs from August 2009 sampling event). PW Grosser does not propose any changes in the RAWP, which was submitted in January 2010, even though the Total VOC concentrations increased in well MW-2. On March 31, 2010, DEC issued a letter appproving the RAWP and states that, Follow-up groundwater sampling must be performed subsequent to the chemical oxidant and ORC injections to evaluate the effectiveness of the remedy. If this remedy is not effective at reducing groundwater contamination, then additional remediation will be required. The report and the approval letter are uploaded to eDocs. - JAM 10/20/10 From emails with Jim Eichler: First round of ChemOx injections performed on July 30 and 31, 2010. The second round of injections occurred on September 11, 2010. The first post-injection sampling is scheduled for Tuesday, October 26, 2010. The Remedial Action Report should be completed in November 2010. - JAM 05/09/11: This spill case is transferred from J. Maisonave to J. Kolleeny. Received email from John Eichler of PW Grosser: We are performing a round of quarterly GW monitoring at 1175 Flushing Avenue in Brooklyn this Friday. I sent email reply asking him to send me pdf's of any rpts more recent than their 3/15/10 Suppl'tal Mon Well Install'n & Sampling Rpt, and noting that Joe Maisonave's notes indicated he was expecting a Remedial Action Rpt in late 2010. Eichler sent reply: We re finalizing RAR. We ve had some delays with project, but chemox injections went smoothly. We ll have RAR to you soon. - J. Kolleeny 06/03/11: Reviewed May 2011 Remedial Action Rpt by P.W. Grosser (in eDocs). Rpt summarizes injections of RegenOx and ORC Advanced in August and Sept. 2010 and gives results of GW sampling done in Feb. and Oct. 2010, before and after injections. Most impacted wells, MW-1 and MW-2, showed significant declines in contaminant levels after injections: MW-1 had 1,021 ug/L total VOCs in Oct. 2010, down from 12,413 ug/L in Feb. 2010; MW-2 had 892 ug/L tVOCs in Oct. 2010, down from 4,540 ug/L in Feb. 2010. Rpt recommends replacing wells MW-5 and MW-7, which were damaged/destroyed (resp.) by site activities, and continued quarterly GW sampling to monitor contam trends. I sent email (in eDocs) to James Ruggiero (RP, jcr327@aol.com), cc to John Eichler of PWGC, approving these recommendations. Changed site priority ranking from P0 to P2 since site is in follow-up monitoring after remedial action. - J. Kolleeny 04/13/12: Received email from John Eichler of PWGC, with attached pdf file of GW Mon Rpt by PWGC (rpt was dated Jan. 2012 until I pointed this out to John, then he sent rpt with April 2012 on title page; both are in eDocs). Email stated: Jon, Attached is GW mon rpt for this site. We intend to replace damaged monitoring wells and perform another round of sampling in very near future. I will give you 2 weeks notice of this fieldwork. Please contact me with your questions and comments. Rpt presents results of GW sampling in Dec. 2011; four of 7 wells were sampled; MW-3 and MW-7 could not be found and MW-5 is partially filled with sediment so could not be sampled. Sample results for wells sampled show significant impacts only in MW-1, which had 4,207 ug/L total VOCs (up from 1,748 ug/L in May 2011). PWGC recommends continued quarterly GW sampling and replacement of wells MW-3, MW-5 and MW-7. I sent email (in eDocs) to James Ruggiero (RP, jcr327@aol.com), cc to John Eichler, approving continued quarterly GW sampling and replacement of wells MW-5 and MW-7; said MW-3 need not be replaced at this time, but if significant increases in VOCs are seen in wells MW-4 and/or MW-7, then MW-3 should be replaced. I further noted that if contam in MW-1 does not

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

decrease significantly, then addt'l injections and/or other remedial actions may be warranted. - JK 10/04/12: Received email from John Eichler of PWGC: Jon, We will be replacing and repairing damaged monitoring wells at Spill Site # 05-10000 located at 1175 Flushing Avenue in Brooklyn on Saturday, October 13, 2012. We will sample wells approximately 2 weeks after that. Please contact me if you have any questions or comments. Thank you. - J. Kolleeny 03/06/13: I sent email to John Eichler of PWGC: John, It's been a while since I've heard anything about this site or received a GW monitoring rpt. Latest GW data I have are from Dec. 2011 (submitted in an April 2012 monitoring rpt). Your email below [10/4/12] states that damaged monitoring wells at site were to be replaced in Oct. 2012, and then sampled two weeks afterwards. Were damaged wells replaced? If so, which ones? April 2012 rpt indicates that well MW-5 was dry, having been partly filled in with sediment; MW-5 is only well down-gradient of former UST area, where RegenOx/ORC Advanced injections were performed, so replacement (or flushing/redevelopment) of that well is critical. Have monitoring wells (replaced and previously existing) been sampled? I've had an inquiry regarding this site from my supervisors here at DEC. Please provide a project update as soon as possible. Received email reply from Eichler: Jon, We replaced monitoring wells MW-2 and MW-7, and repaired MW-4. I checked MW-5 during repair and it appears to be viable. So all of wells, with exception of MW-3 (consistently outside impacted area), are ready to be sampled. I have impressed upon owner importance of sampling wells as soon as possible. I expect that he will respond quickly and I will let you know as soon as we schedule a round. Please contact me if you would like to discuss this further. I then sent reply: Thanks for your quick response. If I understand your email correctly, replacement wells were installed but no GW sampling has been done at site since Dec. 2011. Please let me know if you need me to contact owner about doing sampling. Eichler sent reply: Thanks. Jaime Ruggiero (owner) just responded to me. It looks like we re back on track. I will contact you next week with schedule. - J. Kolleeny 04/16/13: On 4/84/13, I sent email to John Eichler of PWGC: John, Have you been able to schedule a round of GW sampling at this site? Recently, DEC has been concerned about housekeeping practices at this site (an active scrap processing facility), and I would like to be able to confirm that on-site activities are not adversely impacting monitoring wells and GW in general. Please let me know as soon as possible. On 4/16/13, Eichler sent reply: Jon, We re looking to sample monitoring wells at 1175 Flushing Ave, Brooklyn on Saturday, May 4. Please contact me if you have any questions. - J. Kolleeny 06/05/13: Received email from John Eichler of PWGC: Jon, I just wanted to let you know that we did sample monitoring wells at 1175 Flushing Ave on May 29th. I am expecting data soon and will prepare a rpt for your review. Please contact me if you have any questions. - JK 10/23/13: I sent email to John Eichler of PWGC: John, I haven't heard from you about this site in a while (since April 2013). Was a round of GW sampling performed? If so, was a rpt prepared? Please send update on status of site, and if GW sampling was done, please send monitoring rpt or at least lab data. Eichler sent reply: Jon, I ll send you data tables for last round of sampling, and a rpt. Owner of property is looking to redevelop site. Redevelopment would include some more remediation. I will contact you soon to discuss this with you. - J. Kolleeny 11/05/13: Received email from John Eichler of PWGC: Jon, Attached is historical data table for 1175 Atlantic [sic]

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

Avenue, Brooklyn. As you know, site underwent an initial remedial excavation and subsequent chemical injection. However, gasoline-related VOCs remain elevated in portions of site. I will call you soon to discuss site s options. Data (in eDocs) show significant increases in contam levels in a number of wells: well MW-1 had 6,159 ug/L total VOCs (up from 4,207 ug/L in Dec. 2011), well MW-2 had 24,002 ug/L tVOCs (up dramatically from 86 ug/L in Dec. 2011), well MW-4 had 392 ug/L tVOCs (up from ND in Dec. 2011), well MW-7 had 992 ug/L tVOCs (up from 144 ug/L in Dec. 2011). I sent email to Eichler: John, Thanks for sending May 2013 GW data. I took a quick look and compared results with data from Dec. 2011, and I'm a little alarmed by dramatic increase in total VOCs in well MW-2. That well only had 86 ug/L total VOCs in Dec. 2011, but May 2013 result shows 24,000 ug/L tVOCs! A site plan in April 2012 rpt shows well MW-2 on up-gradient edge of site (along Stewart Ave.), in terms of GW flow direction. Were wells gauged in May 2013 to determine up-to-date flow direction? Do you have any ideas of what could have caused dramatic increase in total VOCs in well MW-2? Feel free to call to discuss. Eichler sent reply: Jon, MW-2 is one of wells we re-installed (due to damage) prior to last sampling. While new location is only a few ft from old location (in order to avoid vehicles), it seems we hit a hotter spot. I will call you. - J. Kolleeny 07/24/14: Reviewed GW Monitoring Rpt May 2014 by PW Grosser Consulting, Inc., received via email from John Eichler on 7/22/14 (in DecDocs). Eichler's email stated: Jon, Attached for your review is Monitoring Well Sampling Rpt for 1175 Flushing Ave in Brooklyn. Results of this most recent sampling round indicate a decrease in contaminant concentrations. PWGC recommends continued GW monitoring and removal of a recently-discovered out-of-service fuel oil UST located in subject building. Please contact me with your questions and comments. Rpt presents results of well gauging and sampling in May 2014. No LNAPL was detected in any wells. Depth to water/water table elevation measurements suggest GW flow to NE. GW samples were collected from 5 existing mon wells; well MW-7, in area of site operations (auto scrapping), was destroyed (2nd time a well at that location has been destroyed by site ops). Sample results show well MW-1 had 2,675 ug/L total VOCs (down from 6,159 ug/L in May 2013), well MW-2 had 1,110 ug/L tVOCs (down dramatically from 24,002 ug/L in May 2013), well MW-3 was ND (same as in May 2013), well MW-4 had 0.92 ug/l of benzene (below std), with no other detections (down from 392 ug/L in May 2013), well MW-5 was ND (down from 22 ug/L tVOCs in May 2013), well MW-6 had 4 VOC J detections of ~1-2 ug/L each (was ND in May 2013). Rpt states that absence of contam in up-gradient wells MW-5 & MW-6 indicate contam is from on-site source, and based on contam levels in MW-1 & MW-2, PWGC recommends continued GW sampling to monitor GW quality trends. Rpt makes no mention of recently discovered fuel oil UST mentioned in Eichler's email. On 7/24/14, I sent email to Eichler, cc to James Ruggiero, RP (jcr327@aol.com): John, Thanks for monitoring rpt. I agree with recommendation to remove out-of-service fuel oil UST. Tank should be registered and listed as removed by filing a PBS Application/Information Correction Form, and a UST Closure Assessment should be performed and results presented in a Closure Rpt. I also agree with recommendation for addt'l GW sampling to monitor trends in contaminant concentrations. However, I'm not sure if we have ever agreed formally on a GW monitoring schedule for this site. Table 3 in rpt, with historical GW sampling results, shows sampling events performed at irregular intervals ranging from about 6

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

months to about a year and a half. Other spill sites I manage which have comparable contaminant levels in GW are usually on a quarterly sampling schedule, and I'd like to require quarterly sampling at this site as a way to keep closer track of GW trends, evaluate possible need for addt'l remedial injections, and expedite movement of this case towards closure. Please discuss this with your client and let me know if he will agree to this schedule. Also, I'd like to request two small modifications to future monitoring rpts: (1) Table 2 lists main gasoline-related compounds that DEC regulates, which is good, but it lacks a line for Total VOCs; please add a line for Total VOCs to this table in future rpts. (2) Table 3, with historical GW data, provides a complete list of all VOCs; analyte list should be reduced to report only gasoline-related VOCs as listed in Table 2. These changes will help facilitate my review of rpts. Please let me know if these changes can be made to monitoring rpts. Feel free to contact me if you have any questions/comments. - J. Kolleeny 06/08/15: Reviewed GW Mon Rpt for May 2015 (in DecDocs), submitted via email from John Eichler of PW Grosser on 6/1/15. GW gauging & sampling in April 2015 showed no LNAPL detected; well MW-1 had 3,596 ug/L total VOCs (up from 2,675 ug/L in May 2014), well MW-2 had 1,566 ug/L tVOCs (up from 1,110 ug/L in May 2014), well MW-3 was not sampled, well MW-4 was virtually ND (same as May 2014), well MW-5 had 25 ug/L tVOCs (was ND in May 2014), well MW-6 had 20 ug/L tVOCs (up from ND in May 2014), well MW-7 has been destroyed by site operations (for 2nd time). Rpt states that MW-3 is consistently located outside of contaminant plume. Water table map shows GW flow direction to SE. Rpt text concludes that contam levels decreased after chem ox injections, but then increased in May 2013, possibly due to changes in water table elevations or GW flow direction related to dewatering in subway tunnel adjacent to site; levels decreased again in May 2014. Data for May 2015 show migration of contam from source area around MW-1 in direction of GW flow to NE (?sic) towards MW-2. PW Grosser recommends continued sampling to monitoring GW quality trends at site. - J. Kolleeny Spill transferred from J. Kolleeny to K. Forster since property is part of the BCP (K. Forster) 3/30/17: Working with BCP Consultant, Environmental Business Consultants, to submit a work plan for the off-site groundwater investigation. - K. Forster Consultant is awaiting disposal facility acceptance based on waste characterization sampling results. Remedial work is anticipated to begin in April. jeb (3/29/2018)"

Remarks: "phase 2 investigation."

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

CON EDISON (Continued) **1019901845**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"4/4/16 - See BCP C224210, K. Forster, PM. Spill to remain open until BCP complete. 10/5/17 TJD Site inspection. The former junk yard operating at this address is no longer in business. All structures have been removed from the property and the parcel is now vacant. As per above note this site is in the BCP program which is being managed by Central Office DER staff. Following the inspection, DeMeo (R2) contacted Forster (CO) regarding this reported housekeeping condition at a former junk yard site - based upon staff discussions the following decision has been made. Spill 1305242 is closed and cross-referenced to spill 0510000. CO DER staff will manage both the spill and BCP project simultaneously. "
Remarks:	"sheen noted on water, c/u pending, DEC Inspection"

Contact Name:	CALLER
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Spill Nos. 0305740 and 0204630 have been consolidated under this Spill No. 8/20/02: FUTURE DEPT OF SANITATION DISTRICT 1 AND 4 GARAGE. HIGH LEVELS OF PCB'S. HWR MEETING WITH LIRO ON 8/20/02. SMM. 10/16/03 1030 Hrs - Sawyer - I discussed with Roland Fisher of Tyree Environmental the contaminated soil in the area of the removal of the two 550 gallon tanks. He told me about the excavation planned for 10/20. I informed him that this site had tested high for PCB's in the past. This factor must also be addressed. 10/20/03 1030 Hrs - Sawyer - Met with Roland Fisher and Barry Aronowitz of Arnell Construction Corp. at the site. They had a back hoe dig out approximatly 35 cubic yds with no endpoints in site. Overall contractor stopped excavation with plans to meet and discuss another path of remediation. 02/15/06 File reviewed, DOS has submitted various reports. D. Wolterding had previous contact with the DOS, recommended signing agreement - no legal agreement signed. 03/29/06 Recommended next: Transfer project from spills to Haz Waste Remediation, PCBs an issue here. BURA to forward to BURC/REGION."
Remarks:	"caller doing site work found contaminated soil."

BROWNFIELDS:

Name:	FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP.
Address:	1181 FLUSHING AVENUE
City,State,Zip:	BROOKLYN, NY 11237
Program:	BCP
Site Code:	505316
Acres:	0.502
HW Code:	C224210
SWIS:	2401
Town:	New York City
Record Added Date:	03/10/2015
Record Updated Date:	01/08/2019
Update By:	GWBURKE
Site Description:	Location: The Former Universal Scrap Metal Processors Corp. site is located in an urban area in the East Williamsburg neighborhood of Brooklyn, Kings County. The irregularly-shaped site has approximately 109 feet of street frontage on Flushing Avenue and 203 feet of street frontage on Stewart Avenue. Site Features: The property was partially developed with a 1-story 4,500 square foot commercial building which was constructed in 1931, but demolished in 2016. The site is currently vacant, surrounded by a fence and unpaved. Current Zoning and Land Use: The site is located in a M1-2 zone which allows nearly all industrial type uses. Additional uses are allowed, including

FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP. (Continued) **S117394468**

office, hotel, and retail. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. The scrap metal operation which previously occupied the building and property no longer operates. Past Use of the Site: The entire property was used as a railroad freight yard from sometime between 1888 and 1907 to sometime between 1951 and 1965. The south end of the site was utilized as a filling station from approximately 1955 until at least 2003. The southern portion of the site and the building were used for auto repair from 1955 until 2007. The northern portion of the property was used as an auto scrap yard from 1981 through 2007. From 2007 through 2014 the property was used as a scrap metal facility. In January 2006, under Spill #0510000, eleven (11) 550-gallon gasoline underground storage tanks (USTs) and 240 tons of petroleum-impacted soil were removed, and a chemical oxidant was applied to treat groundwater. Site Geology and Hydrogeology: Soil at the site is described as historic fill to a depth of approximately 4 feet below the surface followed by native brown fine sand with silt. The bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Bedrock was not encountered during the remedial investigation, but is anticipated to reside at depths greater than 100 feet below grade. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Depth to groundwater at the site is approximately 12 feet below grade and flows to the north/ northeast, toward the English Kills Channel. Groundwater flow is also highly variable as it may be influenced by the subway tunnel which runs underground north of the site.

Env Problem:

Site soils and groundwater have been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and poly chlorinated biphenyls (PCBs). Soil vapor has been analyzed for VOCs. Soil: Several VOCs have been detected in site soils, primarily petroleum constituents including 1,2,4-trimethylbenzene at concentrations up to 910 parts per million (ppm) (Unrestricted Use Soil Cleanup Objective (UUSCO) is 3.6 ppm), 1,3,5-trimethylbenzene up to 320 ppm (UUSCO is 8.4), benzene up to 1.9 ppm (UUSCO is 0.06 ppm), ethylbenzene up to 190 ppm (UUSCO is 1 ppm), n-propylbenzene up to 140 ppm (UUSCO is 3.9 ppm), n-butylbenzene up to 70 ppm (UUSCO is 12 ppm), sec-butylbenzene up to 23 ppm (UUSCO is 11 ppm), m-p-xylenes up to 720 ppm (UUSCO is 0.26 ppm), o-xylene up to 260 ppm (UUSCO is 0.26 ppm), toluene up to 20 ppm (UUSCO is 0.7 ppm), and naphthalene up to 17 ppm (UUSCO is 12 ppm). Chlorinated volatile organic compounds (CVOCs) were detected at two locations, including tetrachloroethene at concentrations up to 22 ppm (UUSCO is 1.3 ppm), cis-1,2-dichloroethene up to 27 ppm (UUSCO is 0.25 ppm), trans-1,2-dichloroethene up to 2.3 ppm (UUSCO is 0.19), and vinyl chloride up to 3 ppm (UUSCO is 0.02 ppm). Several Polycyclic aromatic hydrocarbons (PAHs) were also detected in shallow subsurface soils, including benzo(a)anthracene at concentrations up to 1.5 ppm (UUSCO is 1 ppm), benzo(a)pyrene up to 1.1 ppm (UUSCO is 1 ppm), indeno(1,2,3-cd)pyrene up to 0.72 ppm (UUSCO is 0.5 ppm), benzo(b)fluoranthene up to 1.1 ppm (UUSCO is 1 ppm), benzo(k)fluoranthene up to 0.9 ppm (UUSCO is 0.8 ppm), and chrysene up to 1.6 ppm (UUSCO is 1 ppm). Metals, including mercury were

FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP. (Continued) **S117394468**

detected at concentrations up to 1.57 ppm (UUSCO is 0.18 ppm), barium up to 446 ppm (UUSCO is 350 ppm), cadmium up to 7.67 ppm (UUSCO is 2.5 ppm), copper up to 266 ppm (UUSCO is 50 ppm), lead up to 754 ppm (UUSCO is 63 ppm), and zinc up to 1,100 ppm (UUSCO is 109 ppm). Groundwater: Several petroleum-related VOCs were detected in site groundwater including 1,2,4-trimethylbenzene up to 1,400 parts per billion (ppb) (NYSDEC groundwater quality standard is 5 ppb), 1,3,5-trimethylbenzene up to 400 ppb (standard is 5 ppb), benzene up to 380 ppb (standard is 1 ppb), ethylbenzene up to 940 ppb (standard is 5 ppb), isopropylbenzene up to 79 ppb (standard is 5 ppb), m-p-xylenes up to 3,700 ppb (standard is 5 ppb), methyl ethyl ketone up to 780 ppb (standard is 50 ppb), MTBE up to 66 ppb (standard is 10 ppb), naphthalene up to 250 ppb (standard is 10 ppb), n-butylbenzene up to 20 ppb (standard is 5 ppb), sec-butylbenzene up to 13 ppb (standard is 5 ppb), n-propylbenzene up to 200 ppb (standard is 5 ppb), o-xylene up to 1,500 ppb (standard is 5 ppb), and toluene up to 1,100 ppb (standard is 5 ppb). Minor detections of CVOCs were also found, including tetrachloroethene at concentrations up to 8.1 ppb (standard is 5 ppb), and trichloroethene up to 7.4 ppb (standard is 5 ppb). Metals were also detected in site groundwater, including lead at concentrations up to 59 ppb (standard is 25 ppb), barium up to 1,330 ppb (standard is 1,000 ppb), cadmium up to 18 ppb (standard is 5 ppb), magnesium up to 95,100 ppb (standard is 35,000 ppb), manganese up to 44,800 ppb (standard is 300 ppb), sodium up to 343,000 ppb (standard is 20,000 ppb), and iron up to 868,000 ppb (standard is 300 ppb). The manganese, magnesium, and sodium is believed to be naturally-occurring. PCB-1016 was also detected at 0.16 ppb (standard is 0.09 ppb). Soil Vapor: In soil gas, several CVOCs were detected, including tetrachloroethene up to 34.3 micrograms per cubic meter (ug/m^3), trichloroethene up to 11.3 ug/m^3, cis-1,2-dichloroethene up to 109 ug/m^3, and vinyl chloride up to 2,530 ug/m^3. Benzene was detected up to 1,140 ug/m^3.

Health Problem: The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site.

DEC Memo:	"1/14/2015 - Feng - Duty Desk. Left call back information to the receptionist at EBC (631-504-6000) and asked Charles Sosik to call back. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 03/31/2016: This spill case was transferred to A. Doronova. - AD 05/20/2016: called and left a message for Mr. Sosik with the receptionist. AD 09/20/2016: Called and left a message to Mr. Sosik with the receptionist. AD 09/29/2016: Looked for the owner information on the Internet. Found records saying that Riverside Developers USA is the property owner. called and spoke with the receptionist. Her name is Rachel Mittelman. She informed me that they are longer involved with this property. She will find out the new owner info. AD 09/30/2016: Received a phone call from Joe Greenfeld. He was referred by Ms. Mittelman. He is representative of the new owner of the site. The company name is All Year Management. Phone numbers: (718)623-9430, ext.111, 110,989; (917)-470-3650. He said that they will retain Mr. Sosik's company to deal with this spill. He will gather more info and get back. AD 01/19/2017: Called and left a message for Mr. Greenfeld regarding update info. Later in the day received a call from Mr. Greenfeld. He said that they still work with Mr. Sosik on the site remediation, and that a work plan will be submitted to DEC shortly. AD 06/29/2017: Called and spoke with Charlie Sosik. He informed me that this site is in Brownfield Program and is managed by Albany. He will sent an e-mail with info. AD"
Remarks:	"contamination based on sample results"

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: This property is located in Brooklyn (Block #2962 - lots 1, 5, & 37), and is owned by Rhino Trust (Albert Realty Co.). The site is a vacant lot, except for two, one-story shed buildings in a state of disrepair. The site has a develop- ment history dating back to the early 1900's; site uses have included an asphalt paving company and a lumber company. As a result of an environmental survey of this site conducted in 1988 and 1989, traces of 4-chloroaniline, pentachlorophenol, butyl-ben zylpthalate; di-N-butylphthalate and flouranthene were found. Metals and total petroleum hydrocarbons were also found in the soils, surface and groundwater. Contamination of soils by metals was found to include: silver, barium, cadmium, chromium , iron, lead and copper. Concentrations of metals in the groundwater exceeded groundwater quality standards for lead and iron. Rhino Trust has carried out a supplemental site assessment under a consent order in the summer of 1992. An interpretation of the analytical results from the previous investigation has been inconclusive due to data gaps in the reports. Rhino Trust performed a Supplemental Site Assessment, and the fieldwork was completed in 1994. The PRP has removed the contaminated soils. Hazardous waste is no longer present and significant threat no longer exists.
Env Problem: Contaminated soils have been removed but groundwater contamination evidently due to construction and demolition debris (non-hazardous), still exists.

Name:	FRITO LAY
Address:	202-218 MORGAN AVENUE
City,State,Zip:	BROOKLYN, NY 11237
Site Code:	407689
HW Code:	C224133
Control Code:	18
Control Type:	ENG
Date Record Added:	10/22/2013
Date Rec Updated:	05/31/2017
Updated By:	CHPOST
Site Description:	Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel.
Env Problem:	The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site.
Health Problem:	The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied.
Dump:	False

Site Code: 407689
Site Description: Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel.
Env Problem: The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site.
Health Problem: The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied.

Dt record added:	10/22/2013
Dt rec updated:	05/31/2017
Updated By:	CHPOST
Site Code:	407689
Site Description:	Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel.
Env Problem:	The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site.
Health Problem:	The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied.

The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel.
Env Problem:	The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site.
Health Problem:	The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"Sangesland spoke to Vicky at Island Tank. This is a heating oil tank

APT BUILDING TANK (Continued) **S106972250**

in the garage area of an apartment building. Island Tank is already doing the dig out and knows to take the end point samples. No Tank Test Failure or Contaminated Soil letter was sent. 09.22.05 SR// Sharif spoke with Mr. Friedman . He informed me Island Tank took care of the problem. I tried to hold Vicky but not able. 12/09/05-Sharif// I rec'd report prepared by Island Tank.The UST was 3000 gallons and was removed from the property as clean scrap metal.Six end point samples were taken from the UST cavity. Approx. 26 yards of contaminated soil was removed from the hole.Soil analytical result came back almost clean with no significant contaminants left at the site.Disposal manifests are provided. NFA action required."

Remarks: "LINES ON 3000 GALLON TANK ARE ROTTED AND THEY NEED TO REMOVE SOME CONTAMINATED SOIL"

DEC Memo:	"05/17/06-Hiralkumar Patel. Spoke to Jim at Protest. it was 1500 gal AST. tank was cleaned in past and doesn't have manhole. and Jim found dry leak and thinks it is from patch on top of tank. he hasn't find any oil stains on floor. he has send proposal to owner and planning

APARTMENT BUILDING (Continued) **S107789405**

to clean tank and to put manhole on tank. haven't found PBS number. Spoke to Derek. he is process of buying this property and gave current owner's name and number. Joseph Heimlich (718) 381-2405 As per Derek, he has closing of this property on Jun 30 2006. once he will get property on his name, he will remove tank and system. owner is not using tank currently. asked him to send tank test results and letter signed by current owner and purchaser stating that they will remove tank after closing and tank is not in use currently by end of tomorrow. told Derek that as this tank is more than 1100 gal capacity, it has to be registered with PBS eventhought they are planning to remove it after Jun. Spoke to Joseph. as per him, he has turn off boiler and tank is not in use currently. tank has oil less than half of the volume. told Joseph that if Department receive letter from him and Derek, Department can wait till they remove tank. but tank has to registered with PBS now. send out letter with tank registration requirement. faxed to Joseph and Derek. Joseph Heimlich 35 Meadow Street Brooklyn, NY 11206 FAX (718) 381-2875 05/19/06-Hiralkumar Patel. Received letter from Joseph and Derek. abstract: - owner is selling property and property is set to close on or about July 30, 2006. - heating season is over and boiler is currently turned off and will remain turned off through contract closing date - based on tank test, owner has cancelled all scheduled oil deliveries and suspended oil delivery service until further notice. 08/01/06-Hiralkumar Patel. spoke with Derek. he is no longer in process of buying this property. spoke with Joseph. owner has removed oil, clean tank and sealed it back. he didn't do any isolation test or system test after tank cleaning. asked Joseph to do system test again. he will call ABC tank for further testing. 08/02/06-Hiralkumar Patel. received call from Robert from ABC Tank. they will do system test probably next week. Robert will call once he gets test result. 08/29/06-Hiralkumar Patel. spoke with Donna at ABC Tank. they have changed rubber gasket on tank. she doesn't have any information about system test. she will check and call back. received call from Donna. she got test result and will fax it. got passing system test in fax. tank is registered now. PBS#: 2-610289 based on available informations, case closed."

DEC Region: 2
DER Facility ID: 246620
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT TTF letter sent 3/8/2004 Sangesland spoke to consultant (Sharima Ryan) with RND Services. They have pulled the tank and pulled approx 220 tons of contaminated soil. The soil is staged on site pending the return of lab results. End point samples were taken from the pit. A report with all work done will be forwarded to the DEC soon . 3/15/04-Vought-Spill transferred from Rommel to Vought. 9/12/05 - Obligado - file transferred from Vought to obligado 1/20/06 - Obligado - Review UST Closure Report, submitted by Sharima Ryan (845-348-6355) at RND Services Inc, August 4, 2004. On 2/25/04 one 1080 gallon diesel UST was excavated. 7 inches of residual product was removed from the UST and drummed for disposal. Excavation was observed to be visually contaminated with separate phase petroleum beneath western edge of UST. Minimal amount of produt was recovered. 220 tons of contaminated soil were removed. Final screening of the excavation indicated that some residual soil contamination may have remained in the excavation and that the groundwater may have been affected . Excavation was 23.5 ft by 18/7 ft by 11 feet deep, where gw encountered. Before excavation was backfilled on 3/2/04, 60 lbs of ORC was applied and slurried in the injection. 4 6-inch diameter sump wells were installed, screed 5 to 12 ft below grade. Seven post excavation sidewall samples were collected. Notable soil results in ppb: PE2 - 120 benzene, 6500 ethylbenzene, 33700 xylenes, PE5 - 14000 napthalene, 1930 xylenes Report recomends collection of one ground water sample. Called Sharima, left message to call DEC. 1/24/06 - Obligado - Called Adrian Cooper left message to call back the DEC. Send letter requiring GW sample. Due date of 3/1/06. 3/23/06 - Obligado - Called Adrian Cooper. Spoke with David Hillcoat. He said he is working with RND and they collected a sample and they will contact me. 3/28/06 - Obligado - Called RND Shamira Ryan, said they have been retained to do the work and would have the results by 4/28/06. 6/5/06 - Obligado - Reviewed Gw Sampling report. GW impacts in excess of standards in one ground water sample- MW4. Sent letter requiring sampling of all accessible ground water wells. Due date 9/5/06. 9/28/06 - Obligado - Called Sharima Ryan at RND. Left message to call the DEC. 10/23/06 - Obligado - Spoke to Sharima Ryan. They have not been able to sample yet, but they have been retained to do the work. Expects to do the sampling within 2 weeks and submit in 6 weeks. 12/4/06 - Obligado - Received 1 Quarterly Monitoring report. All 4 monitoring wells were sampled on 11/1/06. No LNAPL detected. Minor exceedences of ground water standards in 3 of 4 monitoring wells. BTEX - from ND (MW3) to 28 ppb (MW1). Napthalene 25 (MW3) to 72 ppb (MW24). Max total VOCs 137 ppb. 1/10/07 - Sent letter to Cooper requiring 2 additional rounds of sampling. follwoing additioanl sampling a petition for closure may be submitted with sensitive receptor survey. 1/17/07 - Obligado - Spoke with Sharima Ryan, they need an additional month to do the sampling. They will sample in March and submit the report by April. 4/27/07 - Obligado - Review April 07 monitoring report. minor VOC exceedences. max VOCs 123 ppb in MW2. No product detected. 11/19/07 - Obligado - I was informed by Kumar Patel that there was another spill in the vicinity of this site, sp#9911504, in which contaminated soil was found in a NYC utility excavation at the intersection of Moore and White St. I

COOPER TANK & WELDING COR (Continued) **S106385393**

called Sharima Ryan to see what was the status of the most recent sampling report. She said it was completed and she was reviewing it. I told her the Department needed a more complete site plan of the entire cooper property to show where the excavation is in relation to the intersection where the spill was found. She said she will go out to the site the week after Thanksgiving. 2/22/08 - Obligado - Review the January 17, 2008 monitoring report. GW levels of VOCs in all wells are in <100 ppb range, similar to previous sampling. Call Sharima Ryan to make sure she makes a gw flow determination for the sensitive receptor survey. The UST area is 250 ft from the corner of White and Moore street. 07/09/10-Hiralkumar Patel. while investigation spill near 236 Moore Street, found soil and groundwater contamination. based on groundwater flow direction, this contamination could be coming from the subject site. reviewed all previous documents from DDC regarding soil investigation as part of new water main installation in 2000/2001:

Sharima Ryan RND Services Inc. Ph. (845) 348-6355 Fax (845) 348-1791 email: spryan@rndservicesinc.com 07/13/10-Hiralkumar Patel. 9:01 AM:- received call from Ms. Ryan. informed her about required investigation. 07/15/10-Hiralkumar Patel. 11:51 PM:- sent letter to Mr. Cooper requiring Phase I, soil/gw delineation (via monitoring wells) around previously removed diesel UST and soil/gw investigation (via soil borings) in southeast corner of the property (as DDC found contamination under sidewalk near that corner). letter emailed to Mr. Hillcoat and Ms. Ryan. 12:27 PM:- received email from Mr. Hillcoat. he requested extension to submit report. 07/23/10-Hiralkumar Patel. 9:25 AM:- spoke with Mr. Hillcoat. informed him that deadline can be extended if project is in progress. Mr. Hillcoat mentioned that RND will visit site on 07/26/10 for further evaluation. Mr. Hillcoat also mentioned that they are using 35 gal aboveground drum of ZEP Z Green solution to clean metals before painting. 08/02/10-Hiralkumar Patel. 11:52 AM:- received call from Vincent from Gannett Fleming Engineers, consultant hired for future work. they are reviewing available information and will submit Phase I and work plan. he requested a deadline extension. asked him to send email with new proposed date. Vincent Frisina Gannett Fleming Engineers Ph. (516) 364-4140 Ext 1323 (516) 491-6541 (C) Fax (516) 921-1565 email: vfrisina@gfnet.com 08/04/10-Hiralkumar Patel. 1:21 PM:- received letter from Vincent requesting time extension until 09/30/10 to submit Phase I and investigation work plan. 08/06/10-Hiralkumar Patel. 11:35 AM:- sent email to Vincent approving time extension and asked to submit Phase I report and investigation work plan by end of 09/30/10. email copied to Mr. Hillcoat. 09/28/10-Hiralkumar Patel. 3:15 PM:- received email from Vincent with copy of Phase I and work plan. abstract of Phase I: - subject property is approx. 18 ft above mean sea level - depth to groundwater at the site is approx. 10 to 15 ft bg - nearest water body is Newtown Creek, which is located 0.39 mile from the subject site to the northeast - East river is located approx. 1.5 miles from the site to the west - according to sanborn map from 1933, the

COOPER TANK & WELDING COR (Continued) **S106385393**

subject site included 70-car capacity garage with associated gasoline tank - according to sanborn map from 1933, surrounding properties included: auto painting, junk yards (one junkyard includes a gasoline tank), 50-car capacity garage with associated gasoline tank, 40-car capacity garage with associated gasoline tank, a filling station with three gasoline tanks, small ice cream factory - according to sanborn map from 1951, site had two private garages - according to sanborn map from 1951, the ice cream factory in neighbourhood was replaced with a 40-car capacity garage with associated gasoline tank - according to sanborn map from 1965, trucking garage in neighbourhood was replaced with an auto repair shop and private garage and the junk yard in neighbourhood was replaced with a parking lot - according to sanborn map from 1979, parking lot in neighbourhood was converted to auto wrecking Vincent proposed to install four borings: one in each corner of the property. he also proposed to convert these borings into 2 inch wells and collect two soil and one groundwater sample from each boring. the proposed work plan is not acceptable, as proposed borings are more than 200 ft away from previous tank location and from each other. also, the proposed work plan doesn't include the work schedule. 09/30/10-Hiralkumar Patel. 2:57 PM:- sent email to Vincent. asked him to submit block/lot numbers of adjacent properties which included junk yards, garage, auto repair shop, gasoline tanks, filling station etc. also, asked him to submit a revised work plan including installation of minimum of three wells within 20 ft distance from the former tank location and installation of boring(s) in southeast corner of the property. informed Vincent that revised work plan must include a work schedule. asked Vincent to submit required documents by end of 10/08/10. email copied to Mr. Hillcoat. 10/04/10-Hiralkumar Patel. 2:11 PM:- received message from Vincent. 10/05/10-Hiralkumar Patel. 2:30 PM:- left message for Vincent. 10/08/10-Hiralkumar Patel. 10:44 AM:- spoke with Vincent. he mentioned that to find out block/lot numbers of all properties in neighbourhood with history of junk yard/garage/gasoline tanks etc. will require lots of effort and it will be time consuming. aksed Vincent to find out these block/lot numbers, if possible, quickly. informed Vincent that the department may require these block/lot numbers after reviewing results of Phase II report. also, asked him to install well within 20 ft distance from the former tank location. Vincent mentioned that they want to keep well location proposed in property corners and will add wells around tank. also asked to collect at least one groundwater sample in southeast corner of the property and couple of soil borings around that area. asked Vincent to submit work plan by end of 10/12/10. 10/12/10-Hiralkumar Patel. 1:07 PM:- received email from Vincent including revised work plan. Vincent propose to install total of eight borings (three around former tanks, three in southeastern corner, one in northeastern and one in northwestern corner) and six of these borings (three around former tanks, one in southeastern corner, one in northeastern corner and one in northwestern corner) will be converted into 2 inch diameter wells. two soil samples will be collected from each borings. all soil and groundwater samples will be analyzed for full list VOCs + chlorinated solvents and STARS 8270. Vincent also mentioned that after defining site specific groundwater flow direction, they will look for potential off-site sources listed in phase I report (junk yards/gas station/gasoline takns/garage etc.) 1:45 PM:- sent work plan approval letter to Mr. Cooper and asked to submit report by end of 11/30/10. letter emailed to Mr. Hillcoat and Vincent.

COOPER TANK & WELDING COR (Continued) **S106385393**

11/22/10-Hiralkumar Patel. 2:26 PM:- received email from Vincent. due to holidays, he will submit report by 12/10/10. 12/10/10-Hiralkumar Patel. 3:48 PM:- received email from Vincent with report. abstract: - site lies approx. 18 ft above mean sea level - found groundwater from approx. 5.7 to 9.5 ft bg (9.18 to 10.97 ft above mean sea level) - well survey indicated a predominant groundwater flow direction of north-northeast <----- - installed eight borings: three borings were advanced within 20 ft of the former UST location, three within the site's southeastern corner, one in site's northeastern corner and one in site's northwestern corner - six of these borings, exclusive of two within the southeastern corner, were convereted to monitoring wells - 2 inch diameter wells were installed with 10 ft of screen - each boring was advanced to approx. 5 ft below the groundwater interface - two soil samples were collected from each borings: one with highest PID or representative of upper soil horizon and second sample from deepest dry zone - during borings, groundwater was found below 6 ft depth, so screens were installed from 5 ft depth, but after a week, water was found above the screen level in wells around the former diesel UST - no odors or sheen observed on water in any well - based on groundwater flow direction, well MW-NE-7 is downgradient from the former diesel tank area - based on water elevation data, groundwater in well MW-UST-1 was found 1.7 ft deeper than well MW-UST-2 and these two wells are about 25-30 ft apart from each other <-------- - found VOC contamination (Xylene: 1,440, 1,2,4-Trimethylbenzene: 16,000 ppb) in soil sample from SB-UST-3S (6-8.75 ft bg) only, no contamination found in sample SB-UST-3D (8.75-10 ft bg) - no VOC contamination found in any other soil sample - found SVOC contamination only in samples SB-SE-6D (5-5.75 ft bg), SB-NE-7S (2-6 ft bg) and SB-UST-2S (4-6 ft bg); backfill material found in all borings - no chlorinated compounds found in any soil sample <---------- - found minor VOC contamination (maximum 110 ppb of Ethylbenzene) in groundwater sample from well SB-SE-6 in southeast corner of the property (close to 236 Moore Street) - found chlorinated compounds (TCE - 8.4 ppb, PCE - 19 ppb) in groundwater sample from MW-NW-8, well installed in northwest corner of the property <---------- - no PID readings found in borings SB-UST-2, SB-NE-7 and SB-NW-8 - minor PID readings found in SB-UST-1 (max 65.5 ppm at 6-8 ft) and SB-UST-3 (max 80.1 at 8.75-10 ft) - heavy PID readings and strong odors noticed in borings installed in southeast corner (towards the 236 Moore Street) except boring SB-SE-4 where refusal found at 8 ft depth PID readings in SB-SE-5 and SB-SE-6 (depth in ft and PID in ppm): boring------water-----PID starting-------PID at-------highest PID---------PID at depth depth water table with depth boring end SB-SE-5-------6--------86.7 at 6-7--------86.7--------1,426 at 14-15----1,426 at 14-15 SB-SE-6-------6--------50.1 at 6-7--------50.1--------1,221 at 12-13----1,221 at 12-13 - in both borings in southeast corner, soil samples were collected above water table where no PID was recorded and no soil sample collected below water table where more than 1,000 ppm recorded on PID and strong odors noted 12/22/10-Hiralkumar Patel. 4:14 PM:- spoke with Vincent. due to 1.7 ft difference in water table in wells MW-UST-1 and MW-UST-2 and due to well screen about 3.7 ft below water table in well MW-UST-1, asked Vincent to re-survey and re-sample all six wells. 4:19 PM:- left message for Mr. Hillcoat requiring re-survey and re-sampling of all wells. 4:43 PM:- sent email to Mr. Hillcoat requiring re-survey and re-sampling of all six wells. asked him to analyze water samples for CP-51 list +

COOPER TANK & WELDING COR (Continued) **S106385393**

chlorinated compounds. email copied to Vincent. 12/23/10-Hiralkumar Patel. 3:29 PM:- received email from Mr. Hillcoat. he mentioned that Vincent will submit schedule for re-survey and re-sampling in first week of January. 01/06/11-Hiralkumar Patel. 11:04 PM:- received message from Vincent. 11:55 PM:- spoke with Vincent. he inquired about what needs to be done: re-survey or gauging only. asked him to re-survey all wells to confirm previous data. 02/08/11-Hiralkumar Patel. 10:05 AM:- sent email to Vincent inquiring updates regarding re-survey and re-sampling of all existing wells on the property. email copied to Mr. Hillcoat. 10:12 AM:- received email from Vincent. he will submit amended report by 02/10/11. 02/11/11-Hiralkumar Patel. 3:06 PM:- received email from Vincent including report. all wells were re-surveyed and re-sampled. groundwater found flowing towards south-southeast direction. minor VOC contamination found in well MW-3 (near former diesel tank) and MW-6 (in southeast corner). during re-survey, found about 2 ft of difference in water table in wells MW-7 and MW-8. minor changes observed in reamining wells. there is still about 1.5 ft difference in water level in wells MW-1 and MW-2. 4:36 PM:- spoke with Vincent. as two different groundwater flow direction found, asked him to regauge wells again. Vincent mentioned that he did re-gauging last week and found groundwater flow direction returning to the northeast direction as found in first round. Vincent also mentioned that wells MW-7 and MW-8 are located in backyard where most of the snow was and some may have melted and raised the water table. asked Vincent to send summary letter with the result of third gauging event. 02/15/11-Hiralkumar Patel. 2:30 PM:- spoke with Mr. Hillcoat. Mr. Hillcoat mentioned that previous diesel tanks had direct fill and there was no dispenser island, but they were using hand pump to fill tanks on machinery. based on available information and based on groundwater flow fluctuation, asked him to investigate soil and groundwater under the Moore Strete sidewalk which will cover the south side of the previous diesel tanks. also asked him to find out location of gasoline tank which is reported on 1933 Sanborn Map. 2:58 PM:- left message for Vincent to submit result of third gauging event. 3:04 PM:- sent email to Mr. Hillcoat requiring soil/groundwater investigation under the Moore street sidewalk, south of the former diesel tank area. also asked him to find out location of the former gasoline tank which is reported on the 1933 Sanborn Map. asked Mr. Frisina to submit schedule for additional investigation by 02/25/11. email copied to Vincent. 02/16/11-Hiralkumar Patel. 9:32 AM:- left message for Mr. Hillcoat. 9:39 AM:- received call from Vincent inquiring how many borings needed on Moore street sidewalk, south of the former diesel tanks. asked him to install about 3 to 4 borings on sidewalk and convert one of the boring into permanent well. asked him to collect soil and groundwater samples from each boring. as chlorinated compounds were not found in groundwater samples from wells around the former diesel tank area, asked him to analyze new soil/groundwater samples for STARS VOCs only and not for chlorinated solvents, except a groundwater sample from a well that will be installed on the sidewalk. asked Vincent to send site map with proposed boring locations. 3:50 PM:- received email from Vincent including result of third gauging event. during re-gauging on 02/04/11, groundwater found flowing towards the East. 02/17/11-Hiralkumar Patel. 2:36 PM:- received email from Vincent. he mentioned that the lot # 47 (on which the sanborn maps shows gasoline tank) was occupied by truck rental firm up until 1981. Cooper Tank baught this lot # 47 in Nov. 1981.

COOPER TANK & WELDING COR (Continued) **S106385393**

Vincent also sent copy of deed document. Vincent mentioned that cooper only conducted welding operation on this lot. reviewed Phase I. garage with capacity of 70 cars was located on lot 47, which is at the intersection of White Street and Moore Street, from 1933 to 1979. reviewed old NYC DDC reports for spill #: 9911504. - as per report dated 12/20/1999, more than 1,000 ppm was recorded on PID from 11 to 15 ft depth in boring SB-3 which was installed next to Cooper Tank; groundwater found at about 9 ft depth; found TCE (18.9 ppb) and PCE (6.2 ppb) in groundwater sample from SB-3; no borings were done by Mr. Farhi's property; two borings were done close to former ice-cream factory and no contmaination found - during further investigation by NYC DDC, heavy soil contamination was found in soil sample at 4-8 ft depth (borings MW-1, MW-15 and MW-18) in the northwestern corner of the intersection of the White Street and Moore Street; these borings were installed on western sidewalk of White Street, along lot # 47 of Cooper tank where gasoline tank was located 02/18/11-Hiralkumar Patel. 10:12 AM:- received message from Mr. Hillcoat. he mentioned that they baught a lot in 1981 and then between 1981 and 1984, on-site structures were demolished and the current structure was built. 3:52 PM:- received email from Vincent including work plan from additional investigation. 02/28/11-Hiralkumar Patel. discussed with DEC Austin. based on history of gasoline tank on lot # 47 and soil contamination found by NYC DDC along lot # 47, Austin mentioned that further investigation is needed at the site. 11:55 AM:- sent email to Vincent and informed him to wait for work plan approval as currently reviewing old data. email copied to Mr. Hillcoat. 03/02/11-Hiralkumar Patel. discussed with DEC Mark and DEC Austin. 03/22/11-Hiralkumar Patel. 11:02 AM:- sent email to Mr. Hillcoat and Vincent requesting a meeting. 03/24/11-Hiralkumar Patel. scheduled a meeting in office at 3 PM on 03/31/11. 03/31/11-Hiralkumar Patel. after reviewing old data and historical use of the property, requires soil investigation on south side of the former diesel tank area (on north sidewalk of Moore Street - based on contamination found in SB-UST-3) and soil/groundwater investigation on Lot 47 and west sidewalk of White Street near Lot 47 (based on gasoline tanks on Lot 47). investigation on Lot 47 and outside of Lot 47 must include installation of minimum of three monitoring wells and complete horizontal and vertical delineation (as found high PID at 14 ft depth in SB-SE-5 and SB-SE-6). 2:30 PM:- met with Mr. Hillcoat, Vincent and Mr. Inyard (Gannett Fleming) in office. based on available information, asked Mr. Hillcoat to investigate soil under the north sidewalk of Moore Street (south of former diesel tank area). asked him to install two soil borings (instead of three as proposed in work plan dated 02/18/11) down to water table and collect soil and groundwater sample. also discussed about historical gasoline tank on Lot 47. based on soil sample results during NYC DDC work in the street and gasoline tank on lot 47, asked Mr. Hillcoat for soil and groundwater investigation inside the property (on lot 47) and also on the west sidewalk of White Street (along lot 47). informed Mr. Hillcoat that the Department requires minimum of three monitoring wells inside the lot 47 and these wells must be installed around the location of former gasoline tanks. Mr. Hillcoat mentioned that they will do GPR survey to locate old tank location, but if could not find it, they will use location showed on Sanborn Map (which is along the south wall of building on lot 47). also asked for soil and groundwater investigation along the west sidewalk of White street as DDC found contamination in 1999/2000. suggest Mr. Hillcoat to install two more

COOPER TANK & WELDING COR (Continued) **S106385393**

wells on the west sidewalk of White street as they will have all equipments on-site for investigation. asked to collect two soil samples (one with the highest PID and one deepest clean) and groundwater samples from each borings/wells. asked to continue delineation below water table, if finds contamination below water table. asked to analyze all soil and groundwater samples via full list of VOCs and STARs list of SVOCs for the first round of sampling. if finds any chlorinated solvents, then further investigation is needed. if no other VOCs found other than STARs VOCs then future samples can be analyzed for STARs list only. informed Mr. Hillcoat that a new spill number will be generated for the site because of suspected gasoline contamination. 3:29 PM:- sent work plan approval letter to Mr. Hillcoat. asked him for investigation under the north sidewalk of the Moore Street (south of the former diesel tank area). asked him to install soil boring at the proposed SB-UST4 and SB/MW-UST-5 locations. suggested him to install a monitoring well at SB/MW-UST-5 for future monitoring, if needed. asked to submit investigation report by 05/06/11. letter emailed to Mr. Hillcoat and Vincent. 04/20/11-Hiralkumar Patel. 3:22 PM:- received call from Vincent. they have scheduled boring/well installation in middle of next week (04/27 or 04/28). they will install one permanent well and will collect groundwater sample once well developed. 05/02/11-Hiralkumar Patel. 2:06 PM:- received call from Vincent. they installed boring/well on south side of former diesel tank area and will submit report by end of 05/25/11. 05/26/11-Hiralkumar Patel. received report from Vincent (at 5:07 PM on 05/25/11). two borings installed on north sidewalk of Moore Street, south of former diesel tank area. less than 15 ppm recorded on PID. one soil sample at the highest PID reading was collected from each boring. one boring converted to a 2 inch permanent well with 10 ft screen from 2 to 12 ft bg. no VOC contamination found in soil samples. found some SVOC contamination in one soil sample where some coal found in soil. 7.9 ppb Benzene found in groundwater sample collected from well installed on sidewalk. report missing lab data. 06/06/11-Hiralkumar Patel. 2:22 PM:- received missing lab data. based on available information, case closed. 06/09/11-Hiralkumar Patel. 10:57 AM:- sent spill closure letter to Mr. Cooper. letter emailed to Mr. Hillcoat and Vincent. **refer to spill #: 0751350 and 1100020 also.**"

Spills Initiative 7/28/05 - Spoke with Peter Reimann of Miron Lumber. He faxed over report of soil sampling (referenced in spill # 0103036) that was sent to EPA. Report indicated a clay/silt layer (above the water table) that had high levels of BTEX. -Maloney 8/1/05 - Spoke with Paul Sherwood of Phoenix Environmental Tech, Inc (author of the previously cited report). He stated that as far as he knew, no further work was done on the site. -Maloney 10/05 - Site was sent back to the Region for follow-up. - Maloney Albany review (above) - kamalone 1/29/07 - Austin - Transferred from Albany assignment to Patel in R-2 office for further work - end 03/02/07-Hiralkumar Patel. found soil investigation report. Phoenix Envinronmental submitted soil investigation report on 06/22/01. abstract: - did four borings around abandoned underground gasoline tank - borings B1 through B3 were advanced to 12 ft bg and B4 was advanced to approx. 16 ft bg - in borings B1, B2 and B3, the soil sample from 8 to 10 ft bg was collected for analysis - in boring B4, the sample exhibiting highest PID reading (7-8 ft, 1185 ppm) and the deepest sample (14-16 ft) were collected for analysis. - based on regional groundwater elevation and topographics maps, depth to groundwater is estimated to be approx. 25 ft - result for sample B4 (7-8 ft): ----------B4 benzene----------400 toluene----------19,000 ethylbenzene----------17,000 total xylene----------94,000 1,2,4 trimethylbenzene----23,000 1,3,5 trimethylbenzene----73,000 naphthalene----------17,000 03/09/07-Hiralkumar Patel. visited site on 03/08/07. met Manny at site. site occupies by Miron Lumber. currently site has following tanks at site (PBS #: 2-016217): 4000 gal gasoline UST 2000 gal diesel UST 275 gal lube oil AST in contact of soil 200 gal other oil AST on leg Owner of property: Darek Messing Miron Lumber Co. Inc. 268 Johnson Avenue Brooklyn, NY 11206-9028 PH. (718) 497-1111 Ext. 201 Fax (718) 366-0357 spoke with Manny today. he mentioned that current owner baught this property in 2003 and as per his knowledge they are using only one 2000 gal diesel tank. he doesn't know anything about 4000 gal gasoline UST. asked Manny to send scaled site plan for entire site including each tank location. also asked him to change PBS record information. sent subsurface investigation report to Manny (mannymiron2000@aol.com) which was submitted by PEI on 06/22/01. 03/13/07-Hiralkumar Patel. sent letter to Mr. Messing requiring soil/groundwater delineation, tank registration and surrounding area site plan with locations of all former/current USTs and associated pipings. letter faxed to Mr. Messing. 03/19/07-Hiralkumar Patel. received message from John Servider, owner's attorney. left message for John. John Servider Ph. (718) 894-6300 (O) (914) 879-5857 (C) Fax (718) 894-4417 03/23/07-Hiralkumar Patel. received call from John. he told that they have done phase II investigation before current owner baught this property. he will check record and will submit copy of that report. if no report found, owner will hire contractor for required work. 04/05/07-Hiralkumar Patel. received letter from John with copy of Phase II report, which was originally submitted by Phoenix envinromental. John requesting closure of spill based on findings in report (groundwater at about 25 ft, no contamination found in sample B4 at 14-16 ft, which found contaminated at depth 7-8 ft). left message for John requiring further work as per letter sent on 03/13/07. 04/19/07-Hiralkumar Patel. received message from John. spoke with John. explained him that DEC requires soil/groundwater delineation based on phase II report. he mentioned that they have done another Phase I recently, which he will send copy to DEC.

CLOSED-LACKOF RECENT INFO (Continued) **U001839163**

06/14/07-Hiralkumar Patel. left message for Mr. Messing to submit investigation report. 06/22/07-Hiralkumar Patel. received message from John Servinder, owner's attorney. left message for John. 07/25/07-Hiralkumar Patel. left message for John and Mr. Messing. 10/11/07-Hiralkumar Patel. left message for John and Mr. Messing. 11/02/07-Hiralkumar Patel. found PBS expired. <---------- sent CSL with STIP to Mr. Messing, after discussing with DEC Austin and DEC Urda. STIP faxed to Mr. Messing. 11/13/07-Hiralkumar Patel. received fax from John including signed STIP and cathodic protection survey result. 11/19/07-Hiralkumar Patel. sent copy of fully executed STIP to Mr. Messing. faxed copy to Mr. Messing and Mr. Servider. 01/22/08-Hiralkumar Patel. received call from Ted Yen (631-321-4670) from Protest asking regarding work required. explained Ted to find number of tanks at site and register any unregistered tank. second has to test each tank system for any leak. if testing not possible or finds leak, then requires soil and/or groundwater delineation and based on investigation report, may require RAP. asked Ted to talk to owner and ask to submit work plan for approval, prior to any work. 02/20/08-Hiralkumar Patel. left message for Mr. Messing. spoke with Bob at Protest. they sent proposal yesterday and waiting to hear back. 03/20/08-Hiralkumar Patel. spoke with Bob at Protest. they just got proposal signed. during conversation, Bob mentioned that Pheonix environmental called two spill reports for same problem; one after subsurface investigation and one after soil excavation. as per Bob, second spill number, which was reported during excavation, was closed out based on submitted documents. asked Bob to provide spill number. found following spill cases reported to subject site: 1. 8904846: reported on 08/15/1989 after tank test failure for 2000 gal diesel tank. case closed in lack of sufficient information 2. 0103036: reported on 06/19/2001 after findings of contaminated soil. case closed and referred to this open case. there are no reports submitted to above both cases and no proper cleanup/remediation performed after cases reported. during earlier site visit, owner's representative (Manny) mentioned that they are currently using one 2000 gal diesel tank only. now based on earlier cases, requires complete delienation around diesel tank also (as reported leaking before). spoke with Bob again. mentioned him that old closed cases were closed administratively and doesn't mean they satisfied state's requirements. Bob mentioned that all the tanks that are registered under 268 Johnson ave site, are actually spread in multiple parcels with different addresses. asked Bob to submit site map with all building and locations of tank, dispenser island and fill ports, before drafting work plan. alternate addresses: 264-266 Johnson Ave 268 Johnson Ave 270-272 Johnson Ave 274-278 Johnson Ave 300 Johnson Ave 04/08/08-Hiralkumar Patel. received fax from Bob from Protest including site map showing tank locations in reference to building addresses. as per fax from protest, site has total of five tanks as follow: - one 4000 gal diesel UST at 272 Johnson Ave, which is in service as per PBS record (PBS record shows it is gasoline tank) <----- - one 2000 gal diesel UST at 256 Johnson Ave, which is in service as per PBS record - one 200 gal hydraulic oil AST at 256 Johnson Ave, which is in service as per PBS record - one 300 gal motor oil AST at 256 Johnson Ave, which is in service as per PBS record (PBS record shows 275 gal AST) - one 1000 gal UST at 256 Johnson AVe, which is not in PBS list site map shows one 1000 gal UST at 256 Johnson ave, which is not listed in PBS record and PBS record shows one 550 gasoline UST which was closed-in place in 2000 and is

CLOSED-LACKOF RECENT INFO (Continued) **U001839163**

not included on map. left message for Bob at Protest. PBS registration hasn't renewed yet (04/08/08). received call from Bob. he mentioned that tank size information on map is what he got from owner. he hasn't measure any tank. so the tank which is abandoned in place could be 550 gal, which is recorded on PBS file. Bob mentioned that 2000 gal diesel tank at 256 Johnson ave is not in service, but not closed out properly. asked Bob for following work: - tightness test for 2000 gal diesel tank (as tank test failure reported earlier). if tank fails, he will pump out any product from tank. - regardless of tank test result, soil investigation around 2000 gal diesel UST - soil investigation along underground lines for 2000 gal diesel UST - soil investigation at remote fill port and dispenser island for 2000 gal diesel UST - soil investigation around 1000 (could be 550) gal abandoned tank also asked Bob to check whether 1000 gal tank was abandoned properly or not. and asked to find dispenser island and fill port for abandoned gasoline tank and if finds, then soil investigation at those locations also. Bob will submit proposal for required work. asked Bob to inform about proposal approval by April 18, 2008. 05/15/08-Hiralkumar Patel. received fax from Bob from Protest. they will do tank test for existing in-use tank and will investigate soil around tanks, lines, remote fill port and dispenser islands. will inspect previously abandoned tank also. work will start from May 30, 2008. 06/16/08-Hiralkumar Patel. received fax from Protest. they tested 2000 gal diesel tank and found wet leak. they also found oil/water separator while digging up the 1000 gal UST. found contaminated soil and liquid oil inside oil/water separator. couldn't inspect bottom of separator. found 1000 gal UST abandoned properly with concrete. spoke with Bob at protest. as per him, 2000 gal diesel tank doesn't have any product, but only contains sludge at bottom. will do isolation test once gets authorization. spoke with Anthony at Miron Lumber, who is handling site. asked Anthony to finish isolation test. Anthony Montalbano General Manager Miron Lumber Ph. (718) 497-1111 Ext. 202 (347) 219-0606 (C) fax (718) 418-4088 email: amontalbano@mironsupply.com 07/08/08-Hiralkumar Patel. spoke with Anthony. he mentioned that RAM did test. Anthony will call back with contact info at RAM. asked Anthony about soil investigation around tanks. he mentioned that they have signed contract with Protest and waiting for them. spoke with Bob at Protest. asked him about status of soil investigation. they were waiting for response from owner regarding isolation test and removal of oil/water seperator and other work, but hasn't heard yet. asked Bob to call back by end of tomorrow (07/09/08) to cofirm about futher work. 07/10/08-Hiralkumar Patel. received call from Bob from Protest. he tried to contact Anthony, but no success. 07/11/08-Hiralkumar Patel. spoke with Tom at Protest and Anthony at MIron Lumber. they had some miscommunication regarding signing contract and payment. Tom will submit work plan for soil delineation and schedule for such work, including isolation test, by end of 07/18/08. 07/21/08-Hiralkumar Patel. received email from DEC Urda with copy of Commissioner's order to Miron Lumber. the order was drafted on July 15, 2008 and as per the order, respondent must submit soil/groundwater delineation report within 30 days after service of this order. DEC Jacob mentioned that current gasoline tank at the site is totally illegal if single wall tank installed in 1989. he mentioned that if PBS record is accurate then tank must be pulled out immediately. he asked for meeting with responsible party. spoke with DEC Urda. he mentioned that responsible party has 30 days to respond

CLOSED-LACKOF RECENT INFO (Continued) **U001839163**

and if no response within 30 days, then legal will work on this case. he also mentioned that this is final order from Commissioner and doesn't need to send any further letter. 07/28/08-Hiralkumar Patel. received message from Bob from Protest. spoke with Bob. they tested 2000 gal diesel tank only and it passed. they also found vent and dispenser lines tight. found leak in remote fill line. will do soil investigation along fill line and also around tank. suggest Bob to go through Commissioner's order that responsible party might have by now. received fax from Bob with 2000 gal diesel tank isolation test record updates. 08/12/08-Hiralkumar Patel. spoke with Bob at Protest. they did soil delineation and will submit report by tomorrow. Bob spoke with owner regarding commissioner's order and owner mentioned to Bob that owner's attorney will work on it. Bob will ask owner to call the department regarding commissioner's order. 08/18/08-Hiralkumar Patel. spoke with Mr. Montalbano regarding commissioner's order. Mr. Montalbano mentioned that he didn't received any documents. got Mr. Montalbano's email address. spoke with DEC John. asked him if it is ok to send email to Mr. Montalbano with copy of commissioner's order. John asked to hold any action and he will talk to person in Albany. John will call back. 08/19/08-Hiralkumar Patel. received call from DEC Urda. he spoke with person in Albany and found that commissioner's order was served to site owner as well as their attroney and as they didn't responded within 30 days, they are in violation. Urda asked to send copy of Commissioner's order to Anthony via email and asked them to contact the department regarding payment of penalties and submission of investigation report. sent email to Anthony with copy of commissioner's order. asked him to contact me regarding investigation of spill incident and storage tank and to DEC Urda regarding violations. 08/22/08-Hiralkumar Patel. received call from DEC Urda. he asked to hand deliver commissioner's order to Anthony. visited site. hand delivered commissioner's order to Anthony. also asked him to contact DEC Jacob regarding tank registration information. 08/29/08-Hiralkumar Patel. received report from Protest. abstract: - did isolation test on 2000 gal diesel UST system: tank only, vent line and dispenser line passed - found removed fill line corroded at the connection to the tank and fill line failed test - tank was pumped and cleaned and the excavation was back filled in anticipation of legally abandoning the tank - performed soil delineation around 2000 gal diesel UST and 1000 gal previously abandoned UST, along length of the remote fill line every 5 ft - samples along fill line were collected from depth of 5 to 6 ft bg - samples around two tanks were collected from depth of 10 to 12 ft bg - tested 4000 gal diesel UST at 272 Johnson ave and system passed - no contamination found in any samples report missing following: - boring logs - sampling between tanks and remote fill for diesel tank - scaled site map with north arrow summary: - Bob from Protest mentioned on 06/16/08 that there was wet leak found in 2000 gal diesel UST. they also found oil/water separator while digging up the 1000 gal UST and found contamianted soil and liquid inside this oil/water separator. no information available regarding condition of oil/water separator bottom - according to subsurface investigation report from Phoenix, contamination was found in soil at boring B-4 in northwest corner of 1000 gal abandoned UST, at depth of 7-8 ft bg, but clean soil was found at 14-16 ft depth 09/05/08-Hiralkumar Patel. spoke with Bob at Protest regarding wet leak in 2000 gal tank, oil/water separator and sampling between tank and fill line location. Bob mentioned that they

CLOSED-LACKOF RECENT INFO (Continued) **U001839163**

found wet leak when they tested entire system for 2000 gal diesel tank, but during isolation test, they found that tank had about 8 inches of sludge and fill line was running to depth 6 inches above tank bottom (means fill line end was inside sludge) and as fill line had holes in it, it resulted into wet leak. regarding sampling between tank and remote fill line location, Bob told that remote fill line runs inside concrete conduit and there is no room for sampling between this concrete conduit and tank location. regarding oil/water separator, after removing oily water, Bob found concrete box in good condition with no cracks. Bob mentioned that oil/water separator is still open and they have proposed to abandon it properly with concrete slurry. asked Bob to submit boring logs and scaled site map (with location of oil/water separator and distance between tanks and remote fill line). 09/09/08-Hiralkumar Patel. signed affidavit of service (for delivery of commissioner's order), prepared by DEC Urda. 09/18/08-Hiralkumar Patel. left message for Bob to submit missing documents. 10/09/08-Hiralkumar Patel. received boring logs and site map (including oil/water seperator). boring log missing PID readings. spoke with Bob at Protest. asked him to submit boring log with PID values during borings. 10/14/08-Hiralkumar Patel. received borings logs from Bob. no high PID values found during borings. previous report from 2001 showed contamination in sample B-4 at 7-8 ft bg and that sample was taken between 1000 gal UST and oil/water seperator. during recent investigation, Protest did soil boring B-17 in same area to depth of 13 ft, but no contamination found. based on recent investigation report, no further action requires in terms of spill investigation or cleanup. 01/14/09-Hiralkumar Patel. discussed with DEC Urda. he asked to close case and he will follow up with property owner regarding violations. case closed."

Remarks: "test was aborted and near started"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Cross Ref Spill #0311991 CALLED BRUCE FEFFER, WHO CONFIRMED TANK TEST FAILURE. REQUEST TANK TEST FAILURE LETTER BE ADDRESSED TO HIM, AT 61 BROADWAY SUITE # 1050 NEW YORK, NY 10006 Called Marc Ricciardi, who confirm tank test failure. However could not say whether tank is registered. Did give on- site contact person as Steffen, # (516) 790-5535. Tank Test failure letter was sent to BRUCE FEFFER, ON 4/3/2003. PS This tank is UNREGISTERED, Application Form was sent, so that tank can be REGISTERED. E.R. 10/15/2003 Charlie Schmidgall of Aggressive Envir. 5,000 gal Tank will be pulled within 60 days and DEC asked for 4 sidewall and 2 bottom samples. 3/24/2004 Sangesland spoke to Carla Weinpahl of ERM (212-447-1900) She said the client dropped Aggressive Environmental and switched over to ERM in late January 2004. Ms. Weinpahl stated that Aggressive had pulled the tank, did one round of samples, pulled more soil and did another round of samples. Results show some exceedences of PAH (SVOCs), but the argument is made that this is consistant with industrial fill in this part of Brooklyn. The DEC reviewed these numbers and compared them to the RSCO values on TAGM 4046. Based on this information and the present site use, the spill number 0300112 associated with the petroleum spill from the tank is closed out. Spill number 0311991 was associated with contamination found in another portion of the property. Organic Compounds identified as Chlorinated Solvents and Pesticides were found in sample R3656. Based on DEC Policy, the property owner and/or their consultant is directed to the state Brownfield Program. Not a spill report - property owner and/or consultant is referred to the Brownfield Cleanup Program website for futher information in having the DEC review the results from this site investigation See www.dec.state.ny.us/website/der/bcp/ "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 1/26/2004 Sangesland spoke to Charlie Schmidgall of Agressive Environmental. There was a tank on one side of the property that failed a tank test (see spill #0300112). This tank was

COMMERCIAL PROPERTY (Continued) **S105998592**

registered and then pulled. After tank pull, minor oil contamination was found and removed. New problem appears to be heavy pesticides & solvents found in endpoints. 253 tons of soil have been pulled. PERC is present along with a hit for Dichlorobenzene (28,000ppb) There is no history of dry cleaners at/near the site, also no history of solvents. Sangesland spoke to Austin who said that there may have been a lab mixup. He suggested that another round of samples may be appropriate. This message was left on Agressive Environmental's answering machine. 3/24/2004 Sangesland spoke to Carla Weinpahl of ERM (212-447-1900) She said the client dropped Aggressive Environmental and switched over to ERM in late January 2004. Ms. Weinpahl stated that Aggressive had pulled the tank, did one round of samples, pulled more soil and did another round of samples. Based on this information and the present site use, the spill number 0300112 associated with the petroleum spill from the tank is closed out. Spill number 0311991 was associated with contamination found in another portion of the property. Organic Compounds identified as Chlorinated Solvents and Pesticides were found in sample R3656. Based on DEC Policy, the property owner and/or their consultant is directed to the state Brownfield Program: Not a spill report - property owner and/or consultant is referred to the Brownfield Cleanup Program website for further information in having the DEC review the results from this site investigation See: www.dec.state.ny.us/website/der/bcp/ "

Remarks: "an unknow amount of pseticides and solents spilled. none of it has been cleaned up. it was detected in the stars soil sample labrotory narrative."

Updated By: dcwalsh
Site Description: The Technical Metal Finishers Company was a plating company located in a light industrial/residential area. The company is out of business and the site is abandoned. The site was discovered in June 1982 when a fire occurred at the abandoned plant. The facility contained waste acids, caustics and cyanides stored in tanks and drums. The wastes contained in the tanks and drums were removed by a contractor hired by NYC Dept. of Environmental Protection. Clean up has been initiated by NYC Dept. of Environmental Protection through contract with Radiac Research Corporation. All tanks and debris have been removed from site and soil has been excavated. The building was demolished, and all work has been completed.
Env Problem: The site was delisted from the Registry as removal action conducted at the site has removed all hazardous waste.
Health Problem: NYSDOH has insufficient information to fully evaluate the potential for human exposures.
