DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was AUSTIN 3/11/03 - SAMUEL- File available in active unassigned spill files. 8/18/2004 Consultant called to say there is a DEC Consent Order on this site which covers the tank. Tank was closed in place. Sangesland requested copies of soil boring/testing done under the tank to prove it is clean. When this information is submitted, DEC will closed the case out. 9/14/2004 Consultant called to say they can not find any historical soil boring work, so they have contracted with Impact Environmental to do new soil borings around the tank and sample them to EPA Method 8260. 10/14/2004 Sangesland reviewed a submittal from Maureen Frazier of Schillinger Environmental. They have hired Impact Environmental to do soil borings. A report should be submitted to DEC by 10/29/2004. 10/20/2004 Impact Environmental called in a new spill on the site. Found Diesel contaminated Soil Ref Spill #0408008 Both of these spills 0408008 and 9708693 have been closed and referred back to the original spill # 9702085 -"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND Transfered from tibbe to sangesland. 5/28/2003 - Property owner had a friend call the DEC to find out how to close out this open case. Sangesland told her the following: 1) Try calling Mike Shaw at Walco (718-596-6212). Ask him what work he did in this building (reattached a broken cover). 2) Bring in either Walco or some other oil burner company. Have them photograph the basement

MIRAMARS DRY CLEANERS (Continued) **1004760296**

floor in the area of the tank and the oil burner. They also need to write a letter to the DEC saying that there are no signs of oil contamination in the basement, There are no cracks in the basement floor. 3) If there are cracks in the basement floor or there is oil around on the floor, you need to hire an environmental company to do some drilling and sample the soil under the cement floor. If there is a problem under the floor, you will need to open the floor and dig out the oil contaminated soil. 6/16/2003 Empire Boiler & Burner wrote a letter with photos to show that the site is on nat gas and no tank exisits. there is no spilled oil. Spill Closed"

Remarks: "CALLER STATES HE RECEIVED A CALL FROM THE FDNY. SPILL WAS CAUSED BY SOME REMOVING A A FITTING AT THE TOP OF THE TANK. SPILL IS OVER 100 GALS. CALLER STATES IT NOT A CUSTOMER OF HIS. TANK WAS CAPED BY WECO AT THE REQUEST OF THE FIRE DEPT."

DEC Memo:	"12/8/10-Vought-Primary off-hours responder. Vought called Jeff McKensey (Advanced Tank Services Cell: 973-229-5897 Off:800-440-8265) to determine if wet or dry leak. Vought called cell number for McKensey and asked him to return call to DEC. Vought called contact on expired PBS #2-605545 which was (RPS Properties - Pearl 718-384-5524) and number was not in service. PBS registration shows one 4000-gallon #2 fuel oil AST In contact with soil and registration expired 4/2/6. Vought called Advanced Tank and RP representative is

APARTMENT BLDG - TTF (Continued) **S118953531**

Brian Kilcoyne (EBI Consulting Fax:781-418-2353 Ph:781-418-2349). Vought called Kilcoyne and left message to return call to DEC. Vought spoke to Kilcoyne and lender is closing on deal this week. No overt evidence of wet leak and as such tank not required to be emptied immediately. Kilcoyne will confirm dry leak. Vought provided Kilcoyne contact info for DEC Falvey as future project manager. Vought prepared TTF letter and had signed by DEC Falvey with one month due date for TTF and immediate due date for registration. Letter sent to owners address as per ACRIS and PBS: RPS Properties, LLC 116 Nostrand Avenue Brroklyn, NY 11205 Sam: (917)468-6871 Site contact: Chasikel Strulovitch (CS Management 718-599-8300 fax: 718-384-0864) with cc to Advanced Tank and ABI. Vought called CS Management and asked for Stulovitch and was told he was away and informed them of oil spill. Vought spoke to Pearl from RPS and informed her or failure and PBS expiration. Vought received call back from McKensey who confirmed that leak was dry leak. 10/18/12 Received call from Greg Ernst of Associated Environmental Services (631)234-4280. He wanted to know what he needed to do to close the case. Owner want to refinance property and bank is requiring needs spill case closure. I sent him the December 2010 ttf letter by email: grege@assocenvsvcs.com. bf 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 05/21/2014 - V. Brevdo Called Greg Ernst of Associated Environmental Services (631)234-4280 to discuss spill case. Left message with the receiptionist. VB 2/2/18 - Spill transferred to Central Office Spills. 2/21/18 - Josh Vaccaro NYSDEC and Randy Whitcher NYSDEC inspected the property on February 21st, 2018. The building appeared to be well maintained and currently functioning as an office building. Nearby properties included office buildings, auto repair shops, and restaurants. -JMV 5/8/18 - Called former owner found on PBS application he stated he stated that he no longer owns the property and took care of the tank prior to selling the site. He did not have any documentation. -JMV 8/10/18 - Central Office Spills Kevin Hale, Randy Whitcher, and Joshua Vaccaro discussed the spill and determined the spill will be closed administratively not meeting standards, based on the following assessment. The spill was a dry tank test failure. Contact with the buildings current owner have been difficult. The former owner who the spill occurred under stated that the tank was repair prior to the sale of the property; no reports are available to confirm. Contact information for the new owner was given (Joe 718-599-3500) several attempts were made to reach Joe but have been unable to get ahold of him. Based on the factors listed above the spill will be closed administratively on August 10, 2018, not meeting standards. Spill Closure report available in D2. - JMV"

Remarks: "5000 gal tank failed test. Repairs being scheduled."

Town:	New York City
Record Added Date:	10/25/2016
Record Updated Date:	12/04/2017
Update By:	DJEVANS
Site Description:	Location: The Site is located in an urban area on the north side of Randolph Street just east of Scott Avenue in an industrial section of Brooklyn. Site Features: Most of the 17,741 SF property is covered with a 15,000 SF warehouse building with a small dirt lot located on the north side of the building and adjacent to the Long Island Railroad (LIRR) right-of-way. Current Zoning and Land Use: The lot and the surrounding area are currently zoned M3-1 (Manufacturing/Industrial). There are no residential uses within the surrounding area. The property is currently vacant. Past Use of the Site: The Site was last used for warehousing by Handy Lee Enterprises, an importer of Asian food products, from approximately 2006 until August 2015. According to the City Directory Abstract, the Site was occupied by a sheet metal fabricator in the 1990s. Prior to this, according to Sanborn Fire Insurance Maps, the Site was associated with the manufacture of ammonia for many decades, from at least 1907 to 1985. Sanborn maps from 1933 through 2007 show two exterior steel ammonia tanks and an acid storage area on adjacent property to the east, with no indication of production operations within the Site. However, the 1907 Sanborn map shows the manufacturing facility in a different location on the block, with components of such facility within the footprint of the current Site (acid tank and evaporation pan) or partially within the footprint of the current Site (storage area, grinding and mixing area, acid chambers). None of the Sanborn maps or other historical resources indicate the use or storage of chlorinated solvents, which are key contaminants of concern at the Site. Site Geology and Hydrogeology: The depth to groundwater is approximately 15 feet below grade, with the flow towards the north.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Region:	2
DER Facility ID:	161550
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill was reassigned from DEC Sigona to Rommel on January 7, On Thursday January 25, 1996, Dave Pulvermiller of MTS Environserve called A.Sigona and informed that the 550 gallon UST which failed a tank test would be removed along with two other 550 gallon gasoline USTs. They would be taking samples and doing a site assessment during the tank removal. The tanks will be registered and will submit a substantial modification application. The tanks will be removed the week of January 29, 1996, and DEC Sigona is planning to view the excavations on Tuesday January 30, 1996 at 3:30 PM. The consultant plans to sample and test using EPA method 8020. 3/10/05 - Received Phase II Investigation Report from Laurel Environmental. Re-assigned to Zhitomirsky for followup. - KST 4/25/2005 I left a message for Carla Sullivan.AZ 4/27/2005 Conversation with Carla Sullivan (Laurel Environmental). They plan to excavate contaminated soil and take post excavation samples. I requested to take groundwater samples if gorundwater is encountered. GWT is 10' below the grade. The tank was located at 1181 Grand Street.This is a warehouse. They will submit a report in June 2005. AZ 7-27-2005 Laurel Environmental informed DEC that they will remove contaminated soils and apply ORC into the exposed groundwater during the week of August 1, 2005. AZ 10/14/2005 I reviewed Soil Removal Report for this spill. A letter was sent to Laurel Env. with my comments. The letter stated that the following deficiencies were noticed in the report: 1. Post excavation soil samples were not taken 2. The site plan was not drawn to scale 3. Groundwater flow direction was not indicated on the plan 4. Well design diagrams were not submitted 5. Soil samples were not collected and screened during well installation. The report stated that analytical results of groundwater samples collected during this investigation indicate minor exceedances of State water quality standards in samples collected from wells MW-1and MW-2. Laurel Environmental recommended no further action with respect to the removed USTs. The Department could not approve no further action at this time. In consultation with J. Kolleeny it was decided that an additional monitoring well should be installed near the excavated area. Soil samples should be collected during well installation and analyzed in a laboratory. Groundwater at the site should be monitored and sampled again three months after the recent samples were taken. Laboratory data should be provided for all compounds analyzed by EPA Method 8021 plus MTBE, and the results compared to State guidelines. These recommendations were mailed to Laurel Env. AZ 1/17/2006 Additional investigation/delineation is pending. Field work has been done. AZ 2/7/2006 I have reviewed a report by Laurel Environmental Assosiates (LEA). The report states that LEA installed 3 one-inch groundwater monitoring wells. On December 16, 2005, LEA purged and sampled the wells. Laboratory analysis inicates that with the exception of a slight exceedance of m and p xylenes and total xylenes at 7 ppb in MW-2, the concentrations of VOCs are below NYSDEC ambient groundwater criteria. According to the report, the tank and contaminated soil have been removed and groundwater treated in-situ.

CONSOLIDATED CARPET (Continued) **S102619094**

Based on this information the spill is closed. This spill case was discussed with Koon Tang on 1/23/2006 and he concurred with this decision. AZ"

DEC Memo:	"12/09/05: This spill transferred from J.Kolleeny to S.Kraszewski. 02/08/07 : DEC lead changed from S. Kraszewski to J. Kann. J.Kann 02/13/09: J.Kann - Discussed the site with Ivy Olberding of PW Grosser. A work plan will be prepared which will include the sampling of 9 existing monitoring wells and analysis for STARS VOCs and SVOCs. 4/28/09: J.Kann - Draft work plan received on 2/25. Comments sent on 3/26. Final Work Plan received on 4/24 and approved on 4/27. 10/06/09: J.Kann - Site visit to observe gw sampling. 1/27/10: J.Kann - ISR submitted on 1/20/10. Spill Closure request. Report needs to be reviewed. 10/28/10: J.Kann - No VOCs or SVOCs were detected in soils. One grounwater well (out of nine) contained minor VOC exceedeances (n, Butylbenzene - 11.9 ppb). A quantitative exposure assessment was performed as per DER-10. According to the report, a complete exposure pathway does not exist. NFA."

Site Description: Location: The Site is located at 152 Graham Avenue in the Borough of Brooklyn, Kings County, NY. The site is located in the East Williamsburg section of Brooklyn, New York. The property is bordered by Graham Avenue on the west, by a three-story mixed commercial/residential building to the north, by a four-story mixed commercial/residential building with a one-story annex and a three-story mixed commercial/residential building to the south, and by a four-story residential building to the east. The three-story building located to the southeast of the site also has a dry cleaner on the first floor. Site Features: The 2,500 square foot (0.057 acre) site parcel is occupied by a three-story building built in 1920. The site parcel also contains an open yard area behind (east of) the structure. The first floor is occupied by a dry cleaner and the upper two floors are occupied by residential apartments. Current Zoning and Land Use: The current site use is a dry cleaner (Top Hat Cleaners) on the first floor with residential apartments on the second and third floors. Past Use of the Site: According to the historical records, a dry cleaner has occupied the 152 Graham Ave location since approximately 1960. A Phase I study at the adjacent property (154 Graham Avenue) identified current and prior occupants of the ground floor retail space (pastry shop, shoe retailer and moving company, among others) which were not likely to be a source for chlorinated VOC impacts beneath the site. The report identifies the dry cleaner at 152 Graham Avenue (Top Hat Cleaners) as the most likely source of the contaminants identified in soil vapor. Site Geology and Hydrogeology: The site elevation is approximately 27 feet above mean sea level. Soil lithology consists of two main types of soils. The first soil type was "fill" material that consisted of fine to medium sand to silt with fine to coarse gravel and traces of brick and other miscellaneous debris. The second type was "natural material" composed of fine to coarse sand to silt with fine to coarse gravel and little clay. Groundwater was encountered between 17.5 feet and 22.5 feet below ground surface. Groundwater flow was determined to be in the north to northwest direction.
Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs). Based upon investigations conducted to date, the primary contaminant of concern

TOP HAT CLEANERS (Continued) **1004758111**

is tetrachloroethene (PCE). Soil - Sampling of soil beneath and behind the site structure was limited due to inability to access the area with a drill rig. Sample results from other media indicate that a source area of higher contaminant concentrations may be present beneath the site structure. Two detections of PCE were observed in soil borings advanced during the Site Characterization. PCE was detected at MW-02 (0.0036 ppm 17 19) and MW-04 (0.0017 ppm 5 6). Both detections are below the NYCRR Part 375 Soil Clean-up Objective of 1.3 ppm for PCE meeting both Unrestricted Use and Protection of Groundwater objectives. Groundwater - PCE was found in groundwater at two of the three boring locations advanced into the water table. Concentrations in contravention of the Class GA Groundwater standard of five (5) ppb were observed at 56 ppb and 10 ppb. Each of these exceedances were located in the public sidewalk immediately off the site parcel. Soil Vapor & Indoor Air A Vapor Intrusion Investigation was performed at the adjacent building to the north (154 Graham Avenue) as part of a real estate transaction. As part of that investigation two sub-slab vapor samples, one basement indoor air sample, and one ambient air sample were collected. At sub-slab location SG2, 43,399 ug/m3 of PCE was detected in soil vapor. (Note that the concentration reported is from a sample that was diluted 600 times. The concentration of PCE in the undiluted sample was 10,171 ug/m3, which exceeded the calibration range of the equipment.) Trichloroethylene (TCE) was detected at 1074 ug/m3 in the diluted sample and at 1504 ug/m3 in the undiluted sub-slab vapor sample. Cis-1,2-dichlorothylene (cis-1,2-DCE) was detected at 2180 ug/m3 in the diluted sample and at 1110 ug/m3 in the undiluted sub-slab vapor sample. Indoor air sampling results identified 44.1 ug/m3 of PCE and 0.43 ug/m3 of TCE in the basement air sample. Special Resources Impacted or Threatened: No special resources were identified on or surrounding the site.

Health Problem: People may contact contaminated soil or groundwater if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Additional investigation of the potential for soil vapor intrusion to occur off-site is needed.

SHWS:
Name: B.C.F. OIL REFINING, INC.
Address: 360-362 MASPETH AVENUE, SOUTHSIDE
City,State,Zip: BROOKLYN, NY 11211
Program: HW
Site Code: 56747
Classification: N
Region: 2
Acres: 1.9
HW Code: 224034
Record Add: 07/14/2004
Record Upd: 04/13/2011
Updated By: JAQUINN
Site Description: The BCF Oil site is located within an urban, industrialized area of East Williamsburg, Brooklyn. Previously existing buildings and above ground storage tanks have been removed, and the property is being used as a Marshall's impound lot. A National Grid facility borders the site on the north, Newtown Creek on the south, a city automobile impound lot on the east and a scrap metal processing facility on the west. The total area is 1.9 acres, of which 0.3 acres is land under water. The property was used as a petroleum distribution facility for many years, starting in the early 1900?s. In 1980, the terminal was modified for use as a waste oil processing facility, and was used for waste oil recycling from 1980 to 1994. Routine sampling detected PCBs in the waste oil, and operations ceased in 1994. The property is zoned M3 (manufacturing/industrial), and it is currently used to store impounded automobiles. The site consists primarily of historic fill placed upon wetlands. Groundwater exists approximately 5 to 10 feet below grade and flows both to the north and south from the site. A remedial investigation of the site has been completed. The site was managed as a single operable unit. See also NYSDEC spill #9406807
Env Problem: Based upon investigations conducted to date, the primary contaminant of concern at the site are those associated with petroleum. Separate phase petroleum contamination has been detected in numerous locations, although mobile product may be more limited. The site was extensively assessed for PCB contamination, but no significant levels of PCBs were detected on site. PCBs were detected in the Newtown Creek sediment, but the sediment contamination appears to be part of a larger problem and not related to releases from the site. A significant threat created by the potential for release of PCB-contaminated oil stored in dilapidated storage tank areas was eliminated by a removal action performed by the USEPA in 2000/2001.

Updated By:	GWCROSS
Site Description:	Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County.It is bounded ny Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. Site Features: The site

KEYSPAN - LNG PLANT GREENPOINT (Continued) **S104787368**

is currently known as the Greenpoint Energy Center, and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial.The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large MGP and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood also conatins a large petroleum spill, apparently unrelated to the MGP. A VCA to address the northeast corner of the property was listed under V00631. This work was undertaken to allow expansion of the existing liquefied gas facility, and included a relatively small portion of the site. A site-wide RI began in the summer of 2012. The RI will be conducted in 3 phases and is scheduled to conclude in late 2014. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with lenticulas silt and till deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek.

Env Problem: According to the USEPA a preliminary assessment (PA) was prepared for the site dated September 24, 1986. The PA was not submitted or reviewed. A draft preliminary site investigaiton report was submitted to the Department in June 2004 for the northeast corner of the site. This report noted MGP DNAPL found across the site in the shallow depths (0-5 feet bgs) This material caused most of the soil samples to fail standards for several SVOCs including naphthalene, benzo(a)pyrene, and benzo(a)anthracene. The area noted was addressed in an IRM, but should be representative of a best-case for the site as a whole as it was in an area which was not actually part of the MGP operations. These exceedances represent a significant threat to the environment, This material is also known to contribute to groundwater contamination and sediment contamination. The site's location, adjacent to Newtown creek, means there is a potential for DNAPL to be leaking into the creek, contaminating sediments and surface water. A RI is currently ongoing. The first phase, begun in July 2012 is focused on the eastern portion of the site, adjacent to Newtown Creek.

Health Problem: Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

Per Bart Polozzitti of Keyspan(516-545-5511), major renovations have occurred at the site. The tank may have been removed, he will forward relevant information when gathered. 01/02/07-Zhune got an e-mail from Bart Polozzitti requesting

KEYSPAN - LNG PLANT GREENPOINT (Continued) **S104787368**

Remarks:	additional time to get the information. He said hopefully he will get it by 02/17/07. Bart Polozzitti cell # 646-2350403 01/09/07 Bart sent the information a tightness test report from Tanknology Corp. and a letter is included. The letter state the following: The subject underground storage tank (361A)located at 287 Maspeth Ave. Brooklyn, New York was tightness tested unsuccessfully on january 7, 1993. The other three fuel thanks on the same facility (Nos. 363, 364 &365) were tested tight on the same day. After repairing the vent connections causing the ullage leak above the level of product, the tank was retested on January 25, 1993 and passed. There was no release at any time to the surrounding environment. Spill Closed " "EIR"

Site Description: The Greenpoint Energy Center is located in the Greenpoint section of Brooklyn, New York. The surrounding area is dominated by industrial and commercial uses with a limited residential area northwest of the the site.
Env Problem: The site is impacted by MGP residuals. Coal tar is present at the site. KeySpan has proposed to remediate the most accessible contamination and leave the remaining contamination in place. The proposed remedy is under review by the department.
Health Problem: Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts

KEYSPAN - LNG PLANT GREENPOINT (Continued) **S104787368**

from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary.

DEC Memo:	"05/23/17-Hiralkumar Patel. 1:17 PM:- spoke with Brittany. they are removing two USTs: one 4,000 gal gasoline and one 1,000 gal diesel UST. during removal of diesel tank, crew noted some odors and upto 100 ppm on PID in soil. the tanks were located on concrete pad at 9 ft bg. crew has removed concrete pad and noted groundwater at bottom of excavation at approx. 10 ft bg. no sheen or product noted on groundwater. D&B will remove tank piping and dispenser islands and will collect endpoint soil and groundwater samples. two new tanks will be installed at the same location. Brittany Gaddy D&B Engineering and Architects, P.C. Ph. (516) 364-9890 Ext. 3439 email: bgaddy@db-eng.com National Grid **site operator** 175 East Old Country Road Hicksville, NY 11801 Attn.: Michael Lauro Environmental Engineering Ph. (516) 545-2562 email: michael.lauro@nationalgrid.com 1:39 PM:- sent letter to Mr. Lauro requiring submission of spill cleanup report by the end of 06/30/17. letter emailed to Mr. Lauro and Brittany. case assigned to DEC Zhune. 8/1/17- Brittany email-As discussed, attached to this email is analytical data, tables and an end point sample location map for NYSDEC review for Spill No. 1701762. Below is a detailed summary of the work that is taking place during the removal and installation of two USTs at the National Grid Greenpoint Energy Center, located at 287 Maspeth Avenue in Brooklyn. National Grid is in the process of removing a 4,000-gallon gasoline UST and a 1,000-gallon diesel UST. Upon removal of the USTs, the Contractor will install 27 concrete filled piles, pour a bottom slab

KEYSPAN - LNG PLANT GREENPOINT (Continued) **S104787368**

and install two new 10,000-gallon USTs in the same location. Existing piping will be removed after the new tanks are in place and the excavation backfilled. End point samples will also be collected for piping excavation as requested by DEC. On May 23, 2017 during excavation related to existing tank removal, some soils were identified that appeared to be impacted due to elevated PID readings and a diesel odor. D&B notified the NYSDEC of a historical petroleum release at the site and a spill case initiated. Soil with elevated PID readings was segregated. Upon removal of the USTs, 14 end point samples were collected and analyzed for the tank excavation. Please see attached for a site plan of the existing fueling station that has been marked with approximate end point sample locations. Table 1, which provides a summary of the removed tanks is attached for reference. Table 2, which provides a summary of PID Readings is also attached for reference. Analytical data related to the endpoint sampling indicates that all VOCs were non detect with the exception of sample GBN which has one exceedance. For sample GBN, benzene was detected at a concentration of 250 ug/kg which exceeds for unrestricted use. This concentration of benzene does not exceed for restricted industrial use. There were several SVOC exceedances for unrestricted and restricted use; however, the Site is known to contain historic fill. Soil borings taken from the area near the USTs show historic fill present up to 12-17 feet below grade.
Additionally, the National Grid Greenpoint Energy Center is a former MGP site and is adjoined by Newtown Creek, a designated Superfund site to the east. As the DEC has requested that the tank closure report include piping excavation endpoint samples, the report cannot be finalized until the new tank installation is complete. However, due to the results of the endpoint sampling below the old USTs, we are requesting NYSDEC review/approval of analytical data provided to close Spill No. 1701762 at this time. A groundwater sample was collected from the base of the former UST excavation. The groundwater sample indicate one VOC (1500 ug/lt Naphathalene)and multiple SVOCs exceedance their repective NYSDEC GWGS. Following the product piping, vent piping and dispensers island removal, five (5) soil sample were collected from those respective areas. All VOC conccentrations were determined to be below their respective SCO’s limits. However, the two (2) samples analyzed via EPA Methos 8270, sample 2 and sample 4, exhibited concentrations of several SVOCs above their respective SCOs. On July 30, 2018 I received an email from John Miller and I spoke with him. The email stated that My name is John Miller and I am the NYSDEC project manager for Greenpoint MGP Site (224052). I was informed recently that National Grid is hoping to close out a spill at the site. My understanding is that any contamination that remains related to the spill would be address under the MPG program. I only just to heard of this issue last week, but after speaking with Grid it sounds like reasonable approach. I wanted to confirm with you whether you agree or not. Do you have any issues or concern?. Based on John Miller’s email that any contamination that remains related to the spill would be addressed under the MPG program # 224052 this spill is closed. Spill closed. "

Site Description: Location The 1.08-acre site is located in the Greenpoint/East Williamsburg industrial section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Please refer to Figures 1 2. Site Features The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning and Land Use The site is zoned for (M1) manufacturing. Per NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication and offices. Past Use of the Site The Department began a Site Characterization in this area in2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, Site ID No. 224121). This property was identified as a potential source of contamination based on its past use. Klink Cosmo Cleaners operated as a commercial dry cleaner from the 1950's to the mid 1990's. During that time, hazardous waste (spent halogenated solvents) was generated under EPA ID no. NYD000824334. Site Geology and Hydrogeology The site is underlain by urban fill unit (0.5-8 feet thick), a sand unit (approximately 100 feet thick) with varying textural features, and the Raritan (clay) Formation approximately 110 feet below ground surface (bgs). Groundwater is present approximately 35 feet bgs and flows north to northeast toward Newtown Creek.
Env Problem: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs and metals. Nature and Extent of Contamination: Soil The VOC source area was identified in the northeast corner of the current building at depths from 1 - 35 feet below ground surface (bgs). Tetrachloroethylene (PCE) was detected in soils on-site at concentrations up to 273 parts per million or ppm, exceeding the soil cleanup objective (SCO) for commercial use (150 ppm) and for the protection of groundwater (1.3 ppm). Trichloroethene (TCE) was detected in two on-site samples which slightly exceed the protection of groundwater SCO (0.47 ppm). PCE contaminated soil exceeding the protection of groundwater SCO extends off-site approximately ten feet to the north and east below the adjacent sidewalks of Vandervoort Avenue and Richardson Street. Metals contamination associated with urban fill was detected in shallow soil on-site. For example, lead was detected up to 2,680 ppm (exceeding the commercial SCO of 1,000 ppm) and arsenic up to 38.7 ppm (exceeding the commercial SCO of 16 ppm). The data does not indicate any off-site metal impacts in soil related to this site. Groundwater Based on the investigations conducted to date, the primary contaminants of concern detected in groundwater include PCE and trichloroethene (TCE). PCE has been found

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

in shallow groundwater at concentrations up to 46,000 parts per billion or ppb (exceeding the groundwater standard of 5 ppb). PCE has also been found in deep groundwater (atop the Raritan clay) up to 4,500 ppb. TCE, a daughter product of PCE, was detected up to 2,100 ppb (exceeding the groundwater standard of 5 ppb). The groundwater plume extends north and east from the site to at least Lombardy street where it becomes co-mingled with contamination originating from other sites. Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 2,090,000 micrograms per cubic meter, or ug/m^3. TCE has been found at concentrations up to 7,380 ug/m^3. Soil vapor intrusion sampling has been completed at twenty off-site structures. Actions described in Section 6.2 were needed to address potential exposure at twelve structures.

Health Problem:	Direct contact with contaminants in the soil is unlikely because the site is covered by a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub?slab depressurization systems (SSDSs) have been installed in twelve off?site residential buildings to prevent the indoor air quality from being affected by the contamination in soil vapor in the area. SSDSs remain available to homeowners in the vicinity of the site who previously rejected the State s offer for a system. The on-site building does not have an SSDS; however, the potential for soil vapor intrusion is being addressed by the soil vapor extraction/air sparge system which is being constructed and will be operated on-site.

Updated By: SXDEWES
Site Description: Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used by a furniture manufacturing company. Numerous

GOODMAN BROTHERS STEEL DRUM CO INC (Continued) **1000190383**

commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. In February 2003 a limited subsurface investigation was performed at the site; a total of nine soil borings were installed with soil samples collected from all nine borings and groundwater samples collected at four locations. The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site, and appears to be a perched unit. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away).

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminants of concern at the site are tetrachloroethene (PCE) and its daughter compounds (trichloroethene, cis-1,2 dichloroethene and vinyl chloride); 1,1,1, trichloroethane (1,1,1 TCA); BTEX compounds (benzene, toluene, ethylbenzene, and xylene); and PCBs. These compounds have been found well above their respective Part 703.5 Class GA standards (shown in parenthesis). PCE has been found up to 30,000 ppb (5 ppb); trichloroethene (TCE) up to 2,800 ppb (5 ppb); cis-1,2 dichloroethene (DCE) up to 140,000 ppb (5 ppb); vinyl chloride up to 2,300 ppb (2 ppb); 1,1,1-TCA up to 15,000 ppb (5 ppb); benzene up to 2,400 ppb (1 ppb); toluene up to 54,000 ppb (5 ppb); ethylbenzene up to 2,400 ppb (5 ppb); total xylenes up to 12,100 ppb (5 ppb); and PCBs (Arochlor-1260) up to 940 ppb (0.09 ppb). All the contaminants listed above (except PCBs) have migrated off-site. - Soil Numerous compounds have been found in excess of their unrestricted use soil cleanup objective (shown in parenthesis). PCE has been found up to 260 ppm (1.3 ppm); TCE up to 140 ppm (0.47 ppm); DCE up to 70 ppm (0.25 ppm); 1,1,1-TCA up to 22 ppm (0.68 ppm); benzene up to 13 ppm (0.06 ppm); toluene up to 520 ppm (0.7 ppm); ethylbenzene up to 88 ppm (1 ppm); total xylenes up to 368 ppm (0.26 ppm); PCBs up to 80 ppm (0.1 ppm); lead up to 1,300 ppm (63 ppm); and mercury up to 240 ppm (0.18 ppm). Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil and groundwater.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This

GOODMAN BROTHERS STEEL DRUM CO INC (Continued) **1000190383**

process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures.

FINDS:

Registry ID: 110000892017

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/11/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

450 JOHNSON AVENUE
450 JOHNSON AVENUE
BROOKLYN, NY 11237

TARGET PROPERTY COORDINATES

Latitude (North):	40.707711 - 40° 42' 27.76''
Longitude (West):	73.930274 - 73° 55' 48.99''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590365.1
UTM Y (Meters):	4506650.0
Elevation:	19 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940597 BROOKLYN, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

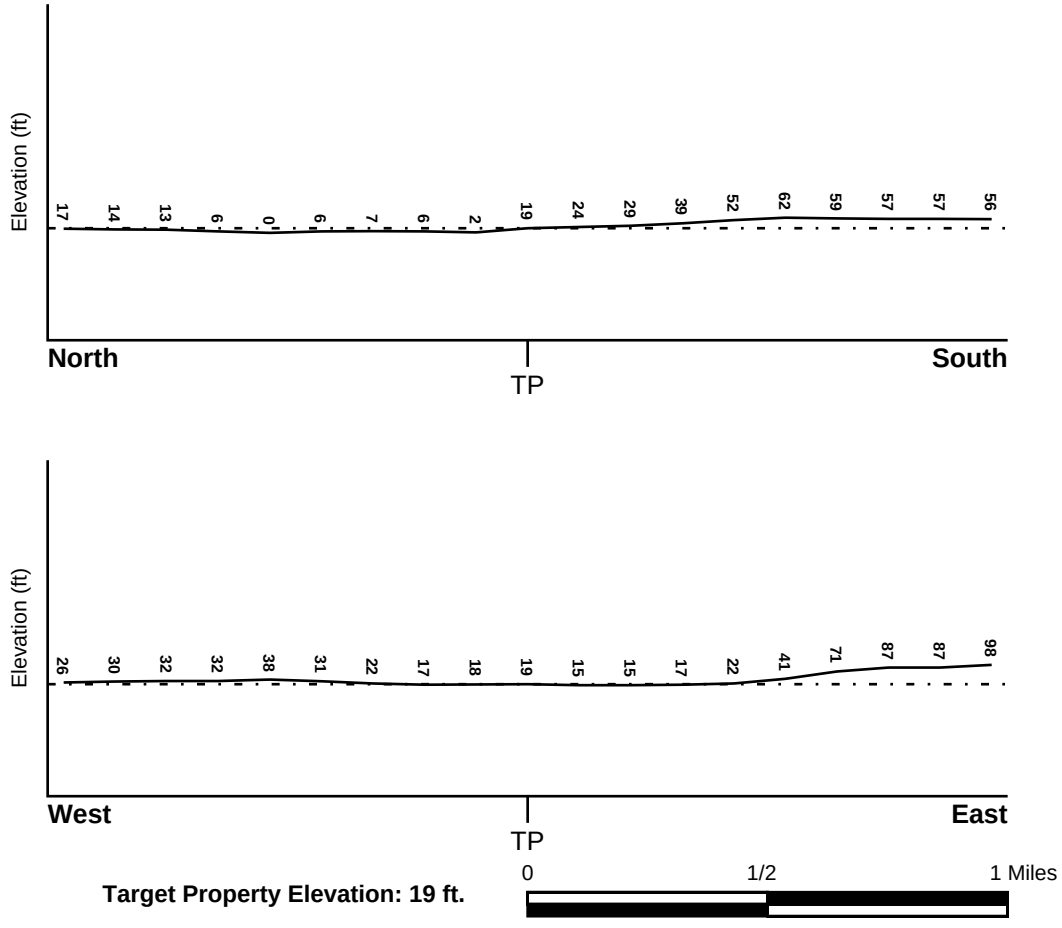
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 19 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970208F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970202F	FEMA FIRM Flood data

3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Basement	1.370 pCi/L	88%	10%	2%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Contact: Andrew Kerr

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

BARGAIN AND SALE DEED WITH COVENANT AGAINST GRANTOR'S ACTS (INDIVIDUAL OR CORPORATION)

THIS INDENTURE, made the 13th December, 2012,

BETWEEN Robert C. Harper, an individual having his principal office at Envelope Manufacturers Corporation, 450 Johnson Avenue, Brooklyn, New York 11237,

party of the first part, and

JBC Land LLC, with an office located at 450 Johnson Avenue, Brooklyn, New York 11237,

party of the second part;

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and No Cents ($10.00) and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows:

Parcel 1

BEGINNING at a point on the northerly side of Ingraham Street, distant 400 feet westerly from the corner formed by the intersection of the northerly side of Ingraham Street with the westerly side of Porter Avenue;

RUNNING THENCE northerly, parallel with Porter Avenue, 100 feet;

THENCE westerly, parallel with Ingraham Street, 50 feet;

THENCE southerly again parallel with Porter Avenue, 100 feet to the northerly side of Ingraham Street; and

THENCE easterly along the northerly side of Ingraham Street, 50 feet to the point or place of BEGINNING.

Section:
Block: 2992
Lots: 21 and 55

NYSBA's Residential Real Estate Forms (9/00) © 2012 Matthew Bender & Co., a member of the LexisNexis Group.

Parcel 2

BEGINNING at a point on the southerly side of Johnson Avenue, distant 300 feet westerly from the corner formed by the intersection of the southerly side of Johnson Avenue with the westerly side of Porter Avenue;

RUNNING THENCE westerly along the southerly side of Johnson Avenue, 100 feet;

THENCE southerly, parallel with Porter Avenue, 200 feet to the northerly side of Ingraham Street;

THENCE easterly along the northerly side of Ingraham Street, 100 feet; and

THENCE northerly, parallel with Porter Avenue, 200 feet to the southerly side of Johnson Avenue at the point or place of BEGINNING.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

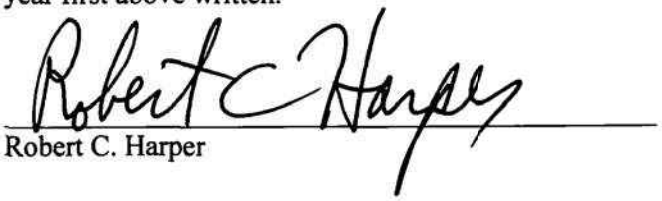
TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.



Robert C. Harper

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) Property receiving service: BOROUGH: BROOKLYN BLOCK: 2992 LOT: 21

(2) Property Address: 450 JOHNSON AVENUE, BROOKLYN, NY 11237

(3) Owner's Name: JBC LAND LLC

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

ECB Query By Location

Premises: 450 JOHNSON AVENUE BROOKLYN **BIN: 3070612 Block: 2992 Lot: 21 CB: 301**

Dept. of Buildings Violations & Compliance	
Total Issued = 1	**Open (Non-Compliance) =** 0

ECB Hearings	
Completed / Defaulted = 1	**Pending =** 0

ECB Number	Dept. of Buildings Violation Status	Respondent	ECB Hearing Status	Viol Date	Infraction Codes	ECB Penalty Due
32044897R	RESOLVED - CURE ACCEPTED	HARPER ROBERT C	CURED/IN-VIO	08/10/2004	B4A	$0.00
	Severity: NON-HAZARDOUS	**Inspect Unit:** BOILER DIVISION		**Viol Type:** BOILER		

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class	
Class 1 - Immediately Hazardous	HAZ - Hazardous - 1968 Building Code
Class 2 - Major	NON-HAZ - Non-hazardous - 1968 Building Code
Class 3 - Lesser	

Violation Status Descriptions
OPEN - No Compliance Recorded
OPEN - Certificate Pending (Certificate of Correction submitted and under review)
OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)
RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required)
RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance)
RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing)
RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)

ECB Hearing Status
CURED/IN-VIO - In Violation/no hearing required
STIPULATION/IN-VIO - No hearing required/in violation
IN VIOLATION - Hearing decision completed
DISMISSED - Hearing decision completed
DEFAULT - Respondent failed to appear at hearing
PUBLICLY-OWNED - No hearing required
PENDING - Awaiting ECB hearing or decision
ADMIT/IN-VIO - In Violation/no hearing required
WRITTEN OFF - Imposed penalty legally uncollectable

If you have any questions please review these Frequently Asked Questions, the Glossary, or call the 311 Citizen Service Center by dialing 311 or (212) NEW YORK outside of New York City.

ATTACHMENT E3 – FEMA FLOOD MAP

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on this map apply only landward of 0.0' National Geodetic Vertical Datum of 1929 (NGVD 29). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was New York State Plane FIPSZONE 3104. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1929. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3182
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by the Department of Information Technology and Telecommunication, City of New York. This information was derived from digital orthophotos produced at a scale of 1:1,200 with 2-foot pixel resolution from photography dated 2004.

Based on updated topographic information, this map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. Also, the road to floodplain relationships for unrevised streams may differ from what is shown on previous maps.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map showing the layout of map panels for this jurisdiction.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

REEL 1211 PAGE 1

THIS INDENTURE, made the 19 day of December, nineteen hundred and Eighty

BETWEEN

LOUIS PURO, residing at 650 Park Avenue,
New York, New York 10022

party of the first part, and

GERALD J. LEVY, c/o Brunel, Cochrane & Levy, Inc.
970 Grand Street, Brooklyn, New York 11211

party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows, to wit:

BEGINNING at a point on the southerly side of Johnson Avenue distant 300 feet westerly from the corner formed by the intersection of the southerly side of Johnson Avenue with the westerly side of Porter Avenue; thence westerly along the southerly side of Johnson Avenue 200 feet; thence southerly parallel with Porter Avenue 100 feet; thence easterly parallel with Johnson Avenue 100 feet; thence southerly parallel with Porter Avenue 100 feet to the northerly side of Ingraham Street; thence easterly along the northerly side of Ingraham Street 100 feet; thence northerly parallel with Porter Avenue 200 feet to the point or place of BEGINNING.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever. THE party of the first part herewith releases any option he may have under agreements dated September 30, 1963 and March 1, 1965, or otherwise, to purchase the Conveyed Premises.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

Property and Owner Information:

(1) Property receiving service: BOROUGH: BROOKLYN BLOCK: 2992 LOT: 17

(2) Property Address: 418 JOHNSON AVENUE, BROOKLYN, NY 11237

(3) Owner's Name: JBC LAND LLC

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address.** DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

THENCE southerly, parallel with Porter Avenue, 200 feet to the northerly side of Ingraham Street;

THENCE easterly along the northerly side of Ingraham Street, 100 feet; and

THENCE northerly, parallel with Porter Avenue, 200 feet to the southerly side of Johnson Avenue at the point or place of BEGINNING.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

BARGAIN AND SALE DEED WITH COVENANT AGAINST GRANTOR'S ACTS (INDIVIDUAL OR CORPORATION)

THIS INDENTURE, made the 13th December, 2012,

BETWEEN Robert C. Harper, an individual having his principal office at Envelope Manufacturers Corporation, 450 Johnson Avenue, Brooklyn, New York 11237,

party of the first part, and

JBC Land LLC, with an office located at 450 Johnson Avenue, Brooklyn, New York 11237,

party of the second part;

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and No Cents ($10.00) and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever;

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows:

Parcel 1

BEGINNING at a point on the northerly side of Ingraham Street, distant 400 feet westerly from the corner formed by the intersection of the northerly side of Ingraham Street with the westerly side of Porter Avenue;

RUNNING THENCE northerly, parallel with Porter Avenue, 100 feet;

THENCE westerly, parallel with Ingraham Street, 50 feet;

THENCE southerly again parallel with Porter Avenue, 100 feet to the northerly side of Ingraham Street; and

THENCE easterly along the northerly side of Ingraham Street, 50 feet to the point or place of BEGINNING.

Section:
Block: 2992
Lots: 21 and 55

NYSBA's Residential Real Estate Forms (9/00) © 2012 Matthew Bender & Co., a member of the LexisNexis Group.

Parcel 2

BEGINNING at a point on the southerly side of Johnson Avenue, distant 300 feet westerly from the corner formed by the intersection of the southerly side of Johnson Avenue with the westerly side of Porter Avenue;

RUNNING THENCE westerly along the southerly side of Johnson Avenue, 100 feet;

THENCE southerly, parallel with Porter Avenue, 200 feet to the northerly side of Ingraham Street;

THENCE easterly along the northerly side of Ingraham Street, 100 feet; and

THENCE northerly, parallel with Porter Avenue, 200 feet to the southerly side of Johnson Avenue at the point or place of BEGINNING.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part, covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

Customer Registration Form for Water and Sewer Billing

Property and Owner Information:

(1) Property receiving service: BOROUGH: BROOKLYN BLOCK: 2992 LOT: 21

(2) Property Address: 450 JOHNSON AVENUE, BROOKLYN, NY 11237

(3) Owner's Name: JBC LAND LLC

Additional Name:

Affirmation:

☑ Your water & sewer bills will be sent to the property address shown above.

Customer Billing Information:

Please Note:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, the property being placed in a lien sale by the City or Service Termination.

B. Original bills for water and/or sewer service will be mailed to the owner, **at the property address or to an alternate mailing address**. DEP will provide a duplicate copy of bills to one other party (such as a managing agent), however, any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her liability to pay all outstanding water and sewer charges. Contact DEP at (718) 595-7000 during business hours or visit www.nyc.gov/dep to provide us with the other party's information.

Owner's Approval:

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A & B under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

Phase I Environmental Site Assessment Report

440-450 Johnson Avenue & 79 Ingraham Street, Brooklyn, NY

May 21, 2019

HydroTech Environmental Engineering and Geology, DPC appreciates the opportunity to work for Mr. Robert Harper at the property located at 440-450 Johnson Avenue and 79 Ingraham Street in Brooklyn, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, HydroTech personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. Part 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,

HydroTech Environmental Engineering and Geology, DPC

1.0 EXECUTIVE SUMMARY

HydroTech Environmental Engineering and Geology, DPC. (HydroTech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property located at 440-450 Johnson Avenue and 79 Ingraham Street New York. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-13. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions. All work was performed under the supervision of a HydroTech Project Manager and under the guidance of a HydroTech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I ESA has identified the following Recognized Environmental Conditions.

- The suspect presence of an underground gasoline tank at 450 Johnson Avenue (§4.0);
- The historical use as a metal foundry and current use as heavy-duty machinery for envelope production at the Subject Property at 440-450 Johnson Avenue (§5.0);
- The presence of a Potential Vapor Encroachment Condition (§5.0).
- The presence of 11 groundwater monitoring wells at the Subject Property and six (6) groundwater monitoring wells at the adjacent properties (§6.0).

The following Non-Scope Consideration was identified:

- The suspect presence of lead-based paint (§7.0).

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

ES EXECUTIVE SUMMARY

The following provides a brief summary of the controls implemented for the Site, as well as the inspections, monitoring, maintenance and reporting activities required by this Site Management Plan:

Site Identification: V00170, Popular Hand Laundry, 88 Ingraham Street, Brooklyn, NY

Institutional Controls:

1. The property subject to this Declaration of Covenants and Restrictions is as shown on Figure 1.
2. Unless prior written approval by the New York State Department of Environmental Conservation (NYSDEC) or, if the NYSDEC shall no longer exist, any New York State agency or agencies subsequently created to protect the environment of the State and the health of the State's citizens, hereinafter referred to as "the Relevant Agency," is first obtained, where contamination remains at the property subject to the provisions of the Site Management Plan (SMP), there shall be no construction, use or occupancy of the property that results in the disturbance or excavation of the property which threatens the integrity of the engineering controls (ECs) or which results in unacceptable human exposure to contaminated soils.
3. The owner of the property shall not disturb, remove, or otherwise interfere with the installation, use, operation, and maintenance of the ECs required for the remedy, which are described in the SMP, unless in each instance the owner first obtains a written waiver of such prohibition from the NYSDEC or relevant agency.
4. The owner of the property shall prohibit the property from ever being used for purposes other than for Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) or Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv) without the express written waiver of such prohibition by the NYSDEC or relevant agency.
5. The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Kings County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain approval to do so from the NYSDEC.
6. The owner of the property shall provide access to and cooperate with the Responsible Party (RP) to allow the RP to arrange for a periodic certification, prepared and submitted by a professional engineer or environmental professional acceptable to the NYSDEC or relevant agency, which will certify that the institutional controls (ICs) and ECs put in place are unchanged from the previous certification, comply with the SMP, and have not been impaired.

7. The owner of the property and the RP shall continue in full force and effect any ICs and ECs required for the remedy and maintain such controls, unless the owner or the RP first obtains permission to discontinue such controls from the NYSDEC or relevant agency, in compliance with the approved SMP, which is incorporated and made enforceable hereto, subject to modifications as approved by the NYSDEC or relevant agency.
8. The Declaration is and shall be deemed a covenant that shall run with the land and shall be binding upon all future owners of the property, and shall provide that the owner and its successors and assigns consent to enforcement by the NYSDEC or relevant agency of the prohibitions and restrictions that the Voluntary Cleanup Agreement requires to be recorded, and hereby covenant not to contest the authority of the NYSDEC or relevant agency to seek enforcement.
9. Any deed of conveyance of the property, or any portion thereof, shall recite, unless the NYSDEC or relevant agency has consented to the termination of such covenants and restrictions that said conveyance is subject to the Declaration of Covenants and Restrictions.
10. A sub-slab depressurization system (SSDS) installed at the Site will be certified and inspected on an annual basis.

Engineering Controls:

1. Cover system
2. Sub-Slab depressurization system

Inspections:	Frequency:
1. Cover inspection	Annually
Monitoring:	
1. SSDS Wells (SV-5 and SV-6)	Annually
2. Groundwater Monitoring Wells (NW-2@20', NW-2@30', and MW-2) Annually in 2017 and 2018	Annually
Maintenance:	
1. SSDS Blower maintenance	Annually
Reporting:	
1. Periodic Review Report	Annually
2. Groundwater Monitoring Report	Annually

Further descriptions of the above requirements are provided in detail in the latter sections of this SMP.

JULY 2017

CERTIFICATIONS

I, Dale C. Konas, PE, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Remedial Action Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Remedial Action Work Plan.

I certify that the data submitted to the Department with this Final Engineering Report demonstrates that the remediation requirements set forth in the Remedial Action Work Plan and in all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established for the remedy.

I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in a Declaration of Covenants and Restrictions created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such Declaration has been recorded.

I certify that a Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site, including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by the Department.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Dale C. Konas, PE, of 5 Old Dock Road, Yaphank, NY 11980, am certifying as Owner's Designated Site Representative for the site.

FINAL ENGINEERING REPORT

1.0 BACKGROUND AND SITE DESCRIPTION

88 Ingraham Realty Corp., Popular Hand Laundry, and Cleaners of Richmond Hill, Inc. entered into a Voluntary Cleanup Agreement (VCA) with the New York State Department of Environmental Conservation (NYSDEC) in September 1998, to investigate and remediate a 0.2-acre property located in Brooklyn, Kings County, New York. Remedial measures were implemented at the Site to address soil, soil vapor, and groundwater contamination. The property is and will be used for commercial use.

The Site is located in the County of Kings, New York and is identified as Section 10, Block 2998 and Lot 19 on the City of New York Tax Map # 13B. The Site is situated on an approximately 0.2-acre area bounded by Ingraham Street to the north, a commercial property to the south, a commercial property to the east, and a commercial property to the west (see Figure 1). The boundaries of the Site are fully described in Appendix A: Survey Map, Metes and Bounds.

An electronic copy of this FER with all supporting documentation is included as Appendix B.

2.0 SUMMARY OF SITE REMEDY

2.1 REMEDIAL ACTION OBJECTIVES

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) were identified for this site.

2.1.1 Groundwater RAOs

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore ground water aquifer, to the extent practicable, to pre-disposal/pre-release conditions.
- Prevent the discharge of contaminants to surface water.
- Remove the source of ground or surface water contamination.

2.1.2 Soil RAOs

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.

- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.1.3 **Soil Vapor RAOs**

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a Site.

2.2 DESCRIPTION OF SELECTED REMEDY

The Site was remediated in accordance with the remedy selected by the NYSDEC in the RAWP dated August 1998, the Final Air Sparge (AS)/ Soil Vapor Extraction (SVE) System Design dated September, 2008, and the approval letter from NYSDEC dated June 17, 2016 (SSD Design Plan).

The factors considered during the selection of the remedy are those listed in 6NYCRR 375-1.8. The following are the components of the selected remedy:

1. Construction and maintenance of a soil cover system consisting of the building concrete floor slab to prevent human exposure to remaining contaminated soil/fill remaining at the site;

2. The operation of an Air Sparge (AS) / Soil Vapor Extraction (SVE) system to address groundwater contamination and provide a means of depressurization of the underlying building soil to prevent vapor migration into the occupied space of the building.;

3. Installation and operation of a Sub-Slab Depressurization (SSD) system as a replacement for the above mentioned AS/SVE system for the purpose of maintaining a negative pressure in the underlying soil of the building and prevent the migration of vapors into the building occupied space;

4. Execution and recording of a Declaration of Covenants and Restrictions to restrict land use and prevent future exposure to any contamination remaining at the site.

5. Institutional Controls (IC);

- The property subject to this Declaration of Covenants and Restrictions is as shown on Figure 1.
- Unless prior written approval by the NYSDEC or, if the NYSDEC shall no longer exist, any New York State agency or agencies subsequently created to protect the environment of the State and the health of the State's citizens, hereinafter referred to as "the Relevant Agency," is first obtained, where contamination remains at the property subject to the provisions of the SMP, there shall be no construction, use or occupancy of the property that results in the disturbance or excavation of the property which threatens the integrity of the ECs or which results in unacceptable human exposure to contaminated soils.
- The owner of the property shall not disturb, remove, or otherwise interfere with the installation, use, operation, and maintenance of the ECs required for the remedy, which are described in the SMP, unless in each instance the owner first obtains a written waiver of such prohibition from the NYSDEC or relevant agency.
- The owner of the property shall prohibit the property from ever being used for purposes other than for Commercial as described in 6 NYCRR Part 375-1.8(g)(2)(iii) and Industrial as described in 6 NYCRR Part 375-1.8(g)(2)(iv) without the express written waiver of such prohibition by the NYSDEC or relevant agency.
- The use of groundwater underlying the property is prohibited without necessary water quality treatment as determined by the NYSDOH or the Kings County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain approval to do so from the NYSDEC.
- The owner of the property shall provide access to and cooperate with the responsible party to allow the responsible party to arrange for a

periodic certification, prepared and submitted by a professional engineer or environmental professional acceptable to the NYSDEC or relevant agency, which will certify that the ICs and ECs put in place are unchanged from the previous certification, comply with the SMP, and have not been impaired.

- The owner of the property shall continue in full force and effect any ICs and ECs required for the remedy and maintain such controls, unless the owner first obtains permission to discontinue such controls from the NYSDEC or relevant agency, in compliance with the approved SMP, which is incorporated and made enforceable hereto, subject to modifications as approved by the NYSDEC or relevant agency.

- The Declaration is and shall be deemed a covenant that shall run with the land and shall be binding upon all future owners of the property, and shall provide that the owner and its successors and assigns consent to enforcement by the NYSDEC or relevant agency of the prohibitions and restrictions that the VCA requires to be recorded, and hereby covenant not to contest the authority of the NYSDEC or relevant agency to seek enforcement.

- Any deed of conveyance of the property, or any portion thereof, shall recite, unless the NYSDEC or relevant agency has consented to the termination of such covenants and restrictions that said conveyance is subject to the Declaration of Covenants and Restrictions.

- A sub-slab depressurization system (SSDS) installed at the Site will be certified and inspected on an annual basis.

6. Development and implementation of a Site Management Plan for long term management of remaining contamination as required by the Declaration of Covenants and Restrictions, which includes plans for: (1) Institutional and Engineering Controls, (2) monitoring, (3) operation and maintenance and (4) reporting;

7. Periodic certification of the institutional and engineering controls listed above.

3.0 INTERIM REMEDIAL MEASURES, OPERABLE UNITS AND REMEDIAL CONTRACTS

The remedy for this Site was performed as a single project, and no interim remedial measures, operable units or separate construction contracts were performed.

4.0 DESCRIPTION OF REMEDIAL ACTIONS PERFORMED

Remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved RAWP for the Popular Hand Laundry Site, dated August 1998 by Dvirka and Bartilucci (D&B), the Final Air Sparge (AS)/ Soil Vapor Extraction (SVE) System Design dated September, 2008 by Tyree, and the approval letter from NYSDEC dated June 17, 2016 for the SSD Design Plan. All deviations from the RAWP and SSD Design Plan are noted below.

4.1 GOVERNING DOCUMENTS

4.1.1 Site Specific Health & Safety Plan (HASP)

All remedial work performed under this Remedial Action was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal OSHA.

The Health and Safety Plan (HASP) was complied with for all remedial and invasive work performed at the Site.

4.2 REMEDIAL PROGRAM ELEMENTS

4.2.1 Contractors and Consultants

- EnviroTrac, Yaphank, NY: Operation, Maintenance, and Monitoring (OM&M) of AS/SVE system, installation of SSD system, and all groundwater, soil, soil gas, and indoor air sampling conducted from DATE to the time of this report.
- Blasko Electric, Long Island City, NY: Installation of all electrical components associated with the installation of the SSD system.
- Engineer of Record: Dale C. Konas, PE, EnviroTrac Engineering PE PC, Yaphank, NY

4.2.2 Site Preparation

- August 8, 2016 - Mobilization: EnviroTrac mobilized to the Site on this date in preparation of the installation of the SSD system and the decommissioning of the AS/SVE system. This included taking delivery of all equipment and machinery to be utilized;

- Agency Approvals and Permits;
    - August 1997 – NYSDEC approval of RAWP
    - June 17, 2016 – NYSDEC approval of SSD Remedial Design Plan.

4.2.3 Documentation of agency approvals required by the RAWP and SSD Design Plan are included in Appendix D. 4.2.3 General Site Controls

- Site security: The installation of the SSD system and decommissioning of the AS/SVE system was conducted over the course of one work day. The work zone was cordoned off using traffic cones, wooden barricades, and caution tape. At the conclusion of the construction related tasks, the work zone isolation devices were removed;
- Job site record keeping: All applicable job site records were recorded into a daily field log on an as needed basis. The log included personnel present onsite, logs of subcontractors onsite, tailgate safety meeting minutes, photo documentation of construction and demolition activities, and records of SSD system startup testing;

4.2.4 Reporting

- Photo Log: The digital photo log required by the RAWP is included in electronic format in Appendix E.

4.3 REMEDIAL PERFORMANCE/DOCUMENTATION SAMPLING

4.3.1 Previously Installed AS/SVE System

A SVE/AS remediation system, consisting of one (1) SVE well (SVE-1) and one (1) AS well (AS-1) located in the sidewalk to the north of the Site building, was previously installed and operated by Miller Environmental Group, Inc. (MEG) at the Site from 2001 to 2005. The controls for the system were installed in the partial basement of the building. Figure 2 shows the location of the MEG SVE/AS system. In 2005, Tyree demonstrated that the MEG SVE/AS system was designed insufficiently and replaced that system with a new SVE/AS system at the Site in 2008. The Tyree SVE/AS system consisted of two (2) SVE wells (SV-5 and SV-6) and two (2) AS wells (AS-3 and AS-4) that were installed beneath the building slab. The AS portion of the Tyree system operated from 2009 to August, 2015. The SVE portion of the Tyree system operated from 2009 to August, 2016.

Figure 3 shows the Tyree SVE/AS system. Based on SVE/AS system monitoring data, EnviroTrac recommended that the AS portion of the system be shut down since groundwater contaminants had reached asymptotic levels. The AS portion of the system was shut down in August, 2015. The SVE system remained in operation to address potential vapor intrusion concerns. The Status Report dated October, 2015 by EnviroTrac concluded that concentrations in groundwater did not rebound with the AS system off. Furthermore, although SVE emissions indicate trace recoverable chlorinated compounds were present, the SVE operation would continue pending a vapor intrusion investigation. The groundwater monitoring results reported in the following Status Reports from December, 2015 to June, 2016 showed an overall continued decreasing trend of target VOCs in wells located within the building footprint.

Influent and effluent air samples were collected from the SVE system by EnviroTrac in August, 2015 and October and November, 2016. Readings were also measured from the influent and effluent sampling ports using a photoionization detector (PID). Tables 1 and 2 summarize the SVE emissions in August, 2015 and in October and November, 2016. PID readings were reported in quarterly Status Reports, which were provided to the NYSDEC. PID readings measured from October, 2015 to July, 2016 for the SVE influent port ranged from 0.0 to 4.0 parts per million (ppm). PID readings measured from October, 2015 to July, 2016 for the SVE effluent port ranged from 0.0 to 1.6 ppm.

In August, 2016, the SVE system was shut down and replaced with a SSDS blower or fan that draw vapors from the existing SVE wells (SV-5 and SV-6) in the building. The SVE/AS system shed was then disconnected and removed from the Site.

4.4 CONTAMINATION REMAINING AT THE SITE

4.4.1 Soil

Remaining soil contamination is located beneath the Site near the former dry cleaning machine, near a washer and trough in the southern portion of the building, in the central portion of the garage, and in the basement near the sewer piping. The soil sample results indicated that DCE and VC were detected above the NYSDEC UUSCOs in shallow (6’-7’ below grade) soil and PCE was detected above the NYSDEC RUSCO near the washer machine and trough and RRUSCO within the central portion of the garage, both within the shallow soil (0’-4’ below grade). All soil sample concentrations were detected below the NYSDEC Commercial Use Soil Cleanup Objectives. The soil contamination

will remain in place to maintain the structural integrity of the building at the Site. Table 3 summarizes the remaining soil sample exceedances above the NYSDEC UUSCOs collected during 1996-1997 and 2005. Figure 2 shows the historical soil sample target CVOC results above NYSDEC UUSCOs.

4.4.2 Groundwater

Remaining groundwater contamination is present beneath the Site and downgradient of the Site along Ingraham Street. In June, 2015, EnviroTrac made the argument that contamination found in off-Site wells were likely attributable to an off-Site source of solvent groundwater contamination caused by other responsible parties located upgradient of the Site. The Status Report for the December, 2015 sampling requested that monitoring wells located within the building and off-Site along the northern portion of Ingraham Street should no longer be sampled due to poor well construction (small diameter size) for some of the wells, limited ability to gain access to the interior of the building, and an overall decrease in groundwater contamination levels when compared to previous groundwater monitoring events.

Based on the December, 2015 (last indoor groundwater sampling event), DCE is present in the wells SV-6 (20'), MW-6 (30'), G-2, AS-3, and AS-4 above the NYSDEC Groundwater Standard. DCE results range from 13 to 86 ug/l. The most recent groundwater sampling event performed for the wells located along the south side of Ingraham Street occurred in September, 2016 which shows an overall decrease in groundwater contamination levels for multi-level well NW-2 and MW-2 when compared to previous groundwater monitoring events. DCE, PCE, TCE, and VC were not detected in MW-2. The concentrations of DCE, PCE, TCE, and VC detected in NW-2@20', NW-2@30', NW-2@40', and NW-2@50' were detected above the NYSDEC Groundwater Standards, but were overall similar to the concentrations detected during the June, 2016 event. Table 4 summarizes the groundwater monitoring well sample target CVOC results collected from the interior wells within the building from 2009 to December, 2015. Table 5 summarizes the groundwater monitoring well sample target CVOC results collected from the exterior wells along the south side of Ingraham Street from 2005 to September, 2016. Figure 4 shows the groundwater sample target CVOC results above NYSDEC Groundwater Standards for the latest sampling event in September, 2016.

4.4.3 Soil Vapor and Indoor Air

Remaining soil gas contamination is present beneath the building at the Site. Based on the soil vapor intrusion investigation results performed at the Site in February, 2016,

mitigation is required for Site building due to the concentrations of PCE and TCE in the sub-slab soil vapor. In August, 2016, the previous SVE/AS system was disconnected and removed after reaching asymptotic levels for both soil and groundwater and replaced with a SSDS, which is the current operating mitigation system. Table 6 summarizes the soil gas sampling results from October, 2004, June, 2006, and February, 2016. Table 7 summarizes the indoor and outdoor/ambient air sampling results from October, 2004, June, 2006, and February, 2016. Figure 5 shows the historical and most recent soil gas well locations, sub-slab soil vapor sample locations, indoor air sample locations, and outdoor/ambient air locations with target CVOC results.

Since contaminated soil, groundwater, and soil vapor remain beneath the Site after completion of the Remedial Action, Institutional and Engineering Controls are required to protect human health and the environment. These Engineering and Institutional Controls (ECs/ICs) are described in the following sections. Long-term management of these EC/ICs and residual contamination will be performed under the Site Management Plan (SMP) approved by the NYSDEC.

4.5 CAP SYSTEM

Exposure to remaining contamination in soil/fill at the Site is prevented by a soil cover system placed over the site. This cover system is comprised of a minimum of 12 inches of concrete building slabs. Figure 6 shows the location of each cover type built at the Site. An Excavation Work Plan, which outlines the procedures required in the event the cover system and/or underlying residual contamination are disturbed, is provided in Appendix B of the SMP.

4.6 OTHER ENGINEERING CONTROLS

Since remaining contaminated soil, groundwater, and soil vapor exists beneath the site, Engineering Controls (EC) are required to protect human health and the environment. The Site has the following primary Engineering Controls, as described in the following subsections.

4.6.1 SSD System

The results of a soil vapor intrusion investigation performed in February, 2016 at the Site, showed that PCE and TCE present in the sub-slab soil gas was elevated and mitigation was required. A letter dated June 17, 2016 from the NYSDEC approved

EnviroTrac's SSDS Design Plan dated June 16, 2016 and allowed the Tyree SVE/AS system to be disconnected, removed, and replaced with a SSDS. In August, 2016, the Tyree SVE/AS system shed was disconnected and removed from the Site and replaced with an SSDS blower/fan. Figure 2 shows the Engineering Controls for the Site, which include the SSDS Site Plan and SSDS Radius of Influence.

4.6.1.1 Conceptual Remedial Approach

The SSD system is comprised of a vacuum blower that was connected to the existing network of piping that is used to induce a vacuum at the two (2) existing SVE wells located within the building. The vacuum provides a negative pressure gradient under the entire extent of the floor slab, thereby eliminating the potential for soil vapor to migrate into the building.

4.6.1.2 System Design and Installation:

The SSD system uses the two (2) existing SVE wells, SV-5 and SV-6, which are constructed of 2-inch diameter schedule 40 PVC and consist of 5-feet of riser pipe and 15 feet of 0.02-slotted screen, located beneath the concrete slab floor within the building. The SVE well piping, which is routed up to and along the first-floor ceiling, exits the front, or north side, of the building. The individual lateral pipes, which are constructed of 2-inch schedule 40 PVC, are manifolded together into one (1) 4-inch schedule 40 PVC header prior to connecting to the inlet of the vacuum blower, which is mounted to the exterior wall of the building. The effluent connection of the blower was piped upward along the exterior wall of the building and discharges approximately 2-feet above the second story roof line. The vacuum blower utilized is a model HS2000E, manufactured by RadonAway and is capable of producing a minimum of 40cfm @ a vacuum of 15 "H2O. The blower consists of an integral enclosure rated for indoor/outdoor use and an internal condensate bypass. Electrical power is provided to the blower via the existing electrical service, which consists of a 100A distribution panel, located within the basement of the building. An outdoor rated 110V GFCI electrical outlet with a weather resistant cover was installed adjacent to the vacuum blower and the blower power cord in connected. As-built drawings for the installed SSD system are included as Figure 8 and Figure 9.

During the startup of the SSD system, the system was tested and found to be operating as designed, and providing adequate vacuum to the building sub-slab soils. Vacuum response readings were collected from the network of vacuum monitoring points located throughout the building. Readings collected ranged from 0.021 to 0.390 "H2O, which exceeds the minimum vacuum requirement of 0.020 "H2O (5 pascals). Recorded

results of the system startup testing can be seen in Appendix H. It should be noted that in order to maintain the minimum required vacuum response throughout the footprint of the building, a minimum operational vacuum of 11.0 “H2O and a flow rate of 20 cfm should be maintained at each of the two extraction points.

4.6.1.3 SSD System O&M

A copy of the SSD system O&M manual is included in Appendix G for reference. The O&M manual includes instructions relating to the startup, shutdown, and operation of the system, and includes specific component manufacturers instructions, manuals, and warrantee information.

Procedures for monitoring, operating and maintaining the SSD system are provided in the Operation and Maintenance Plan in Section 4 of the Site Management Plan (SMP). The Monitoring Plan also addresses inspection procedures that must occur after any severe weather condition has taken place that may affect on-Site ECs.

The active SSD system will not be discontinued unless prior written approval is granted by the NYSDEC and the NYSDOH. In the event that monitoring data indicates that the SSD system may no longer be required, a proposal to discontinue the SSD system will be submitted by the remedial party to the NYSDEC and NYSDOH.

4.7 INSTITUTIONAL CONTROLS

The Site remedy requires that a Declaration of Covenants and Restrictions be placed on the property to (1) implement, maintain and monitor the Engineering Controls; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and, (3) limit the use and development of the Site to commercial or industrial uses only.

The Declaration of Covenants and Restrictions for the Site was executed by the Department on November 16, 2015, and filed with the New York City Clerk on November 16, 2015. The County Recording Identifier number for this filing is 2016010500232001. A copy of the Declaration and proof of filing is provided in Appendix C.

4.8 DEVIATIONS FROM THE REMEDIAL ACTION WORK PLAN

A SVE/AS remediation system, consisting of one (1) SVE well (SVE-1) and one (1) AS well (AS-1) located in the sidewalk to the north of the Site building, was previously installed and operated by MEG at the Site from 2001 to 2005. The controls for the system

were installed in the partial basement of the building. This system was installed to comply with the RAWP dated 1998 by D&B.

In 2005, Tyree demonstrated that the MEG SVE/AS system was designed insufficiently (was not addressing the on-Site soil and groundwater contamination) and replaced that system with a new SVE/AS system at the Site in 2008. Tyree submitted the Final AS/SVE System Design Including Operation, Maintenance and Monitoring Manual to the NYSDEC in September, 2008. The Tyree SVE/AS system consisted of two (2) SVE wells (SV-5 and SV-6) and two (2) AS wells (AS-3 and AS-4) that were installed beneath the building slab. The AS portion of the Tyree system operated from 2009 to August, 2015. The SVE portion of the Tyree system operated from 2009 to July, 2015 by Tyree, and by EnviroTrac in August, 2015. Based on SVE/AS system monitoring data, EnviroTrac recommended that the AS portion of the system be shut down since groundwater contaminants had reached asymptotic levels. Draft SMP and FER reports were submitted to the NYSDEC by Tyree in June, 2015.

The AS portion of the system was shut down in August, 2015. The SVE system remained in operation to address potential vapor intrusion concerns. The Status Report dated October, 2015 by EnviroTrac concluded that concentrations in groundwater did not rebound with the AS system off. Furthermore, although SVE emissions indicate trace recoverable chlorinated compounds were present, the SVE operation would continue pending a vapor intrusion investigation. The groundwater monitoring results reported in the December 2015 Status Report show a continued decreasing trend of target VOCs in wells located within the building footprint.

A soil vapor intrusion investigation was performed in February, 2016 by EnviroTrac to determine if a mitigation system was required to address any remaining vapors beneath the Site building. Based on the soil vapor intrusion investigation results, mitigation is required for the Site building due to the concentrations of PCE and TCE in the sub-slab soil vapor. In August, 2016, the SVE system was shut down and replaced with a SSDS blower that draw vapors from the existing SVE wells (SV-5 and SV-6) in the building. The SVE/AS system shed was then disconnected and removed from the Site. The SSDS Design Plan was submitted to the NYSDEC on June 16, 2016. Post mitigation indoor air sample results will be provided to the NYSDEC in a separate document.

TABLES

Table 1
SVE Vapor Sampling Results - VCP Site No. V00170
Popular Hand Laundry Site
88 Ingraham St.
Brooklyn, NY

Sample Date August 20, 2015

Air Emission VOCs- Pounds Per Hour

Emission rates in terms of pounds per hour (lbs/hr) for VOCs are calculated using the pollutant emission rate in parts per million (ppm/dry), flow rate in dscfm (Qs), molecular weight of the pollutant (MW), 60 minutes /hour, divided by 385.3x $10E^6$ dscf/lb-mole @ 68 F.

$$\text{Lbs/hr} = \frac{\text{PPM x Qs x MW x 60}}{385.3\text{x } 10E^6}$$

Notes:

Influent and effluent vapor samples collected on October 1, 2015 represent Soil Vapor Extraction (SVE) ba
Extraction (SVE) baseline concentrations.
With the SVE system operating, the Air Sparge (AS) was turned on and a vapor sample was collected on 11/9/15.
After allowing the SVE/AS systems to operate for 3 days, a second influent vapor sample was collected on 11/11/15.

General Notes:

1. To retard soil gas entry, large openings through concrete slabs, wood, and other floor assemblies in contact with the soil, such as spaces around bathtub, shower, or toilet drains, will be filled or closed with materials that provide a permanent airtight seal such as non-shrink mortar, grouts, expanding foam, or similar material designed for such application. Smaller gaps around all pipes, wire, or other objects that penetrate the concrete slab or other floor assembly will be made airtight with an elastomer joint sealant or polyethylene tape, as defined in ASTM C920-87, and applied in accordance with the manufacturer's recommendations. All control joints, isolation joints and any other joints in concrete slabs or between slabs and foundation walls will be sealed. Joints, cracks, or other openings around all penetrations exterior walls below the ground surface will be sealed with an elastometric sealant that provides an airtight seal.
2. Exhaust piping will terminate at least 12 inches above the surface of the roof, in a location at least 10 feet away from any window or other opening into the conditioned spaces of the building or any adjoining or adjacent builing that is less than 2 feet below the exhaust point.
3. The in-line vacuum blower will be installed on the western exterior wall as depicted in "Proposed SSDS Piping Layout", Figure 2. The blower will be a RadonAway HS2000E blower with electrical switch box capable of 72 CFM at 10" WC, or equivalent. The fan is to be installed as per the manufacturer's specifications.
4. All components of the sub slab depressurization system will be in accordance with ASTM E 2121-12 "Standard Practice for Installing Radon Mitigation Systems in Existing Low-rise Residential Buildings".

1.0 INTRODUCTION

Shaw Environmental & Infrastructure Engineering of New York, P.C. (Shaw), has prepared this Site Characterization (SC) Report summarizing the collection of soil, groundwater and soil vapor samples at the Ingraham Street Site (Site Number 224142) located at Ingraham Street, East Williamsburg, Kings County, New York (Site) (**Figure 1**). The primary purpose of the SC was to determine whether the site meets the definition of a Class 2 hazardous waste site by confirming or denying the presence of soil, soil vapor or groundwater impacts and determining whether or not the site poses a significant threat to public health and/or environment. The work discussed herein was conducted in accordance with Work Authorization (WA) D006132-15 provided to Shaw on October 19, 2010, discussions with the New York State Department of Environmental Conservation (NYSDEC), the November 18, 2013 approved Amendment and recent sampling and research tasks requested by the NYSDEC.

1.1 Site Description and Location

1.1.1 Site Description

The Site, located off Ingraham Street, represents the off-site portion of the Popular Hand Laundry Site. The Site is located adjacent to and downgradient from the Popular Hand Laundry Site (Site No. V00170) which is an industrial area, whose reported historical uses included paper box manufacturing, metal works, drum storage and cleaning, and dry cleaning operations. The aPopular Hand Laundry Site is currently being evaluated under the Voluntary Cleanup Program (VCP). Remedial Investigations (RIs) conducted between 1997 and 2001 and the installation of an air sparge/soil vapor extraction system have been completed at this VCP site as part of a remedial action (conducted in 2001).

Land use to the north and west of the Site is primarily industrial/commercial, while to the east and south, land use consists of industrial/commercial and residential housing.

1.1.2 File Review/Property History Assessment

Shaw conducted an e-regulatory file review/property history assessment for the Site. The purpose of this file review/property history assessment was to characterize historic site usage and identify potential environmental impacts (i.e. spills, poor housekeeping management) that may exist or be originating from the surrounding properties.

To accomplish the goal, Shaw reviewed information from the Environmental Data Resources (EDR) Radius Map Report with GeoCheck, Sanborn® Maps, EDR City Directory Abstracts, aerial photographs, historic topographic maps, as well as files provided by the NYSDEC. All EDR reports have been included as **Appendix A**.

The Ingraham Street Site (designated as Property in the EDR Reports) was identified in the following environmental databases:

Database(s) Listed	Comments
Underground Storage Tank (UST) and Historic Underground Storage Tank (HIST UST)	The Property is listed on the Underground Storage Tank database that contains registered USTs. The data comes from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database.
RCRA-NonGen	The Property is named in EPA's database of sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.
FINDS	The Property appears on the list of Facility Index System/Facility Registry System which contains information about the facility and guides to other sources containing more detail.
MANIFESTS	The Property has shipped hazardous waste and has tracked that waste on a manifest.
VCP	The Property is named as a site with a Voluntary Cleanup Program.
DRYCLEANERS	The Property is named on the listing of registered drycleaners.

According to the EDR report, there are two registered dry cleaning facilities located within approximately 0.25 miles of the Property. Neither of these two dry cleaner facilities has reported spills or incidences that have occurred per the EDR database search.

Sites identified in the NY Spills database were reviewed. There are 26 spills that have occurred within approximately 0.125 miles from the Property. One site, called Browning-Ferris Industry, located at 105-115 Thames Street, had a spill that occurred in 1998. The spill was the result of approximately 50 gallons leaking from a 500 gallon gasoline tank. A report submitted to NYSDEC in December of 1998 revealed high benzene, toluene, ethylbenzene, and xylene (BTEX) results in soils. In March of 2000, NYSDEC was notified that soil and groundwater contamination remained onsite, and a proposal to conduct further investigation was submitted by the site owner. Groundwater and soil sampling occurred at the site. In September of 2010, existing monitoring wells were surveyed and no free phase product was identified, where some

VOCs still existed in groundwater (no methyl t-butyl ether [MTBE]). No soil contamination was identified at this time. The spill was closed in December of 2010.

The EDR report also shows that there have been 58 leaking storage tank incident reports submitted, and closed, between 1986 and 2011 in the vicinity of the Property. All are located approximately 0.5 miles from the Property. The leaks were reported to be caused by tank test failures, tank failures or tank overfills. There are also 44 historical leaking tanks within approximately 0.5 miles from the Property.

In addition, the EDR report states that there is one site, Newtown Creek, which is located within 1-mile of the Property that is listed on the National Priorities List (NPL), the proposed NPL list, and the federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list. This site is said to have a contaminated sediment plume which is the result of numerous industrial activities along Newtown Creek.

2.0 SCOPE OF WORK

2.1 Field Sampling Activities

2.1.1 Phase I

The first round of field activities at the Site began on December 14, 2011 and concluded on December 13, 2012. In accordance with the Work Plan for this Site, approved by the NYSDEC on December 20, 2010, Shaw conducted a sampling campaign to further characterize the extent of apparent impacts at the Site, including the collection of samples from soil and water matrices.

The approved scope of work anticipated the completion of the following tasks:

- Installations of 15 Membrane Interface Probe (MIP) Survey points. These points provided "real-time" data and assisted in determining the locations and completed depth/construction of the monitoring wells. The intent in completing the MIP survey was to:
  - Optimize sampling intervals and locations;
  - Identify "zones" of highest impact and allow "visualization" of the potential contaminant plume;
  - Refine the identification and characterization of potential "source areas" at or near the site; and
  - Characterize geologic conditions and delineate any potential confining layers or similar stratigraphic layers or lenses that could impact groundwater flow at the site.

  Potential sampling locations at the site were limited due to site access, utilities and/or physical limitations (curbs, sidewalks and related infrastructure). Consequently, any sampling completed was on the site or within "Right-of-ways" that were clear of utilities. It was understood that actual sampling locations and completed depths could change based upon the results of the MIP survey.
- Advancement of five borings as monitoring wells, two of which were proposed as multi-level wells. Multi-level monitoring wells were used to sample and monitor groundwater levels at various isolated depths in a single borehole, making it easier to determine vertical flow and contaminant distribution with depth.

  Three of the five monitoring wells were proposed to be installed as 2-inch PVC monitoring wells to a depth of 20 feet bgs. The remaining two monitoring wells were to be multi-level wells to depths of 10, 20, 30, 40 and 50 feet bgs. These monitoring wells were proposed to be installed to assess soil and groundwater quality across the area/site.

  The three 2-inch monitoring wells and 50-foot nested monitoring wells were anticipated to be continuously screened/characterized to their determined depth. One soil sample was to be collected per monitoring well location for laboratory analysis. Samples were to

be collected at the depth exhibiting the highest head space reading on the photoionization detector (PID) or visible staining and/or the soil/groundwater interface as detailed in Shaw's Field Activity Plan (FAP) which was submitted to NYSDEC under separate cover. Additionally, quality control samples were to be collected (1 duplicate, 1 matrix spike/matrix spike duplicate (MS/MSD) and 1 rinse blank). All samples were to be analyzed for VOCs by United State Environmental Protection Agency (USEPA) method 8260B.

- Upon completion of the field work, all MIP locations and newly installed monitoring wells were to be surveyed by a New York State Licensed Surveyor. A detailed topographic base map of the site and immediate vicinity was to be developed. The property lines of the parcel were also proposed to be placed on the base map.

After an on-site meeting with the NYSDEC Project Manager following the results of MIP surveys, the following changes were made to the original Work Plan:

- Installation of one 2-inch monitoring well instead of three, as proposed in the Work Plan;
- Installations of two nested wells to 50-feet bgs;
- Advancement of five soil borings (two borings with 40-foot bgs depths and three borings with 20-foot bgs depths) between the MIP Survey points;

Upon completion of all field sampling activities, the following samples were collected:

- 14 (plus two duplicate and quality assurance/quality control [QA/QC]) subsurface soil samples from soil borings;
- 18 (plus two duplicate and QA/QC) groundwater samples from two nested monitoring wells and one 2-inch monitoring well

Details regarding the monitoring well installation and all sampling methods are discussed in this section; analytical results are discussed in **Section 3**. **Figure 2** presents the locations of each monitoring well and all other points from which samples were collected. A photographic log documenting the well installation and sampling activities is included as **Appendix B**.

2.1.2 Phase 2

Shaw personnel remobilized to the Site on January 7, 2014 to complete additional sampling activities to further delineate the potential source or sources of PCE and TCE that were found near the VCP site, including the installation of subsurface soil borings and monitoring wells along with the collection of samples from soil, air, and water matrices.

The approved executive summary amendment anticipated the completion of the following tasks:

- Installation of five additional soil borings (designated SB-6 through SB-11).
- Installation of two nested monitoring wells (designated MLW-3 and MLW 4) along Johnson Avenue.

- Collection of groundwater samples from both the newly installed monitoring wells and three previously installed monitoring wells (MLW-1, MLW-2 and MW-6).
- Advancement of seven borings to evaluate soil vapor conditions at the site. The borings were to be completed as "permanent" soil vapor points to facilitate the collection of soil vapor samples.
- Review of plans and specifications of the sewer system in this area in an attempt to identify potential preferred vapor phase transport pathways.
- Completion of a site survey to determine coordinates of new soil vapor implants and monitoring wells.

Details regarding the monitoring well installation and all sampling methods are discussed in **Section 2.4**; analytical results are discussed in **Section 3**. **Figure 2** presents the locations of each monitoring well and all other points from which samples were collected. A photographic log documenting the well installation and sampling activities is included as **Appendix B**.

2.2 MIP Survey

A total of 12 MIP Survey points (designated MIP-1 through MIP-12) were advanced at the Site by Zebra Environmental, Inc. of Lynbrook, New York (Zebra) between December 19, and December 21, 2011 at the locations indicated on **Figure 2**. The MIP logging data is included as **Appendix C**.

The MIP probe was advanced through the unconsolidated deposits to a maximum depth of 52 feet bgs. The system incorporated a down-hole, permeable membrane detector attached to gas detectors at the surface. The gas detectors included a flame ionization detector (FID), PID and an electron capture detector (ECD). Each detector is optimized for sensitivity to a certain group or type of contaminant. The ECD is typically used for chlorinated (PCE, TCE) compounds, the PID is used for detection of aromatic compounds (BTEX compounds) and the FID is used for straight chain hydrocarbons such as methane or butane. A more extensive description for the MIP logging data can be found in **Appendix C.**

2.3 Soil

2.3.1 Subsurface Soil Borings

During the first round of field activities, a total of eight soil borings (designated SB-1 through SB-5, MW-6, MLW-1, and MLW-2) were advanced at the Site by Zebra at the locations indicated on **Figure 2**. The soil borings were advanced through the unconsolidated deposits to a maximum depth of 50 feet bgs. The soil borings were logged by a Shaw geologist using the

Unified Soil Classification System (ASTM D 2487-85) and field screened for VOCs using a MiniRae PID. Drill logs are included as part of **Appendix D** and field notes relating to this task are included as part of **Appendix E**. Stratigraphic cross section maps (A-A' and B-B') showing subsurface geology are presented as **Figures 3** and **4**.

Soil samples were collected continuously from the ground surface to the groundwater table using a DPT/GeoProbe® 6610DT rig outfitted with 5-foot Macro-Core samplers and acetate liners to provide vertical characterization of contaminant impacts as well as stratigraphic information for the Site. The borings were advanced to a maximum depth of 50-feet bgs and samples were collected at the 2-foot depth interval exhibiting the highest PID reading. In instances where the soil had a PID reading of zero, samples were collected at the 2-foot interval directly above the water table.

As previously noted, a total of 14 samples were collected from the eight soil boring locations and sent to Chemtech Consulting Group, Inc. (Chemtech) of Mountainside, New Jersey under proper chain-of-custody (COC) for analysis of VOCs using USEPA Method 8260B. All QA/QC samples were collected in accordance with the protocol described in the Quality Assurance Project Plan (QAPP). Laboratory data packages are included as **Appendix F** and the data is summarized in **Table 1**.

Five additional soil borings (designated SB-1A through SB-5A) were advanced at the Site by Zebra at the locations indicated on **Figure 2** between January 7, 2014 and February 18, 2014. The soil borings were advanced through the unconsolidated deposits to a maximum depth of 49 feet bgs where refusal was encountered. This was due to refusal of the 2.25 inch casing rods on tight gravelly silts. As proposed in this work scope amendment, three soil samples per boring were obtained for laboratory analysis. The soil borings were logged by a Shaw geologist using the USCS (ASTM D 2487-85) and field screened for VOCs using a MiniRae PID. Drill logs are included as part of **Appendix D** and field notes relating to this task are included as part of **Appendix E**.

Soil samples were collected continuously from the ground surface to the bottom of the boring using a DPT/GeoProbe® 6620DT rig outfitted with 5-foot Macro-Core samplers and acetate liners to provide vertical characterization of contaminant impacts as well as stratigraphic information for the Site. The borings were advanced to a maximum depth of 49-feet bgs and three samples were collected per boring at the 2-foot depth interval exhibiting the highest PID reading, the 2-foot depth interval above the observed water table and at the bottom of the hole.

A total of 15 samples were collected from the five soil boring locations and sent to Chemtech under proper COC for analysis of VOCs using USEPA Method 8260B. All QA/QC samples were collected in accordance with the protocol described in the QAPP. Laboratory data packages are included as **Appendix F** and the data is summarized in **Table 1**.

2.4 Groundwater

2.4.1 Monitoring Well Installation

Three monitoring wells were installed on Site between December 2011 and February 2012. Two were completed as nested monitoring wells (approximately 50 feet bgs; designated MLW-1 and MLW-2) and the third was completed as a shallow monitoring well (approximately 25 feet bgs; designated MW-6). Locations for the monitoring wells (**Figure 2**) were determined after discussions with the NYSDEC Project Manager. The monitoring wells were located based on local groundwater flow of the Site and general utility and right-of-way evaluations.

The nested monitoring wells were installed using a DPT/Geoprobe® GP-6610 DT rig equipped with a 3.5-inch casing rod and well drive point to advance a 2-inch diameter multi-level well with five channels to depths of 10, 20, 30, 40 and 50-feet bgs. The shallow monitoring well was installed using 3.5-inch casing rod and well drive point to advance a 2.0 -inch diameter "pre-packed" 0.020-inch Schedule 40 PVC slotted screen and casing to the appropriate depth. The shallow monitoring well was constructed with 10-feet of slotted screen and the nested monitoring wells were installed using 2-feet of manmade slotted screens at various intervals from 8-feet to 10-feet bgs, 18-feet to 20-feet bgs, 28-feet to 30-feet bgs, 38-feet to 40-feet bgs, and 48-feet to 50-feet bgs. The annular space between the well casing and surrounding soil was filled with #2 well sand to a depth approximately 3 to 4-feet above the screen intervals followed by 3 to 6-feet of bentonite directly above the sand pack. The remaining annular space was filled with grout to approximately 1-foot beneath the surface where the monitoring wells were finished with flush mounted road boxes and concrete anchor pads. Additional details regarding the monitoring well installation can be found in the drill logs included as **Appendix D**. After the installation was complete, the three monitoring wells were developed using the GeoPump until clear water was obtained.

Two additional nested monitoring wells were installed on Site between January 7 and January 20, 2014. The two nested monitoring wells, designated MLW-3 and MLW-4, were installed to depths of 45 feet bgs and 40 feet bgs, respectively. The locations for the monitoring wells were determined after discussions with the NYSDEC Project Manager based on local groundwater

flow/potential contaminant transport from the Site as well as the presence of buried utilities and inaccessible areas that may adversely affect ingress and egress to local businesses during the installation of the monitoring wells. The auger failed to reach the desired depth and encountered refusal at 37 feet bgs during the initial installation of MLW-4. The drilling subcontractor (Zebra) changed the method of monitoring well installation to direct push via 3.75 and/or 3.25 inch casing rods and drive points after receiving approval from the NYSDEC Project Manager. The direct push method obtained maximum depths of 40 and 45 feet bgs. The initially proposed construction of four (4) channel nested monitoring well network was modifed to a three (3) channel nested cluster because the drill rig could not reach the desired 50 foot depth.

MLW-3 had final installation intervals of 15-feet bgs, 30-feet bgs and 45-feet bgs. The 15 and 30 foot intervals were installed in the same drive casing constructed with 010 slot PVC screen. The 15 foot interval consists of a 10 foot screen (5-15 feet bgs) while the 30 foot interval contains a 5 foot lengths of screen (25- 30 feet bgs). Sand pack consisting of #1 sand, was placed in the annular space around the well casing and surrounding soil to approximately 2 feet above the screened 25 - 30 foot interval (sand pack to 23 feet bgs) followed by time release bentonite pellets to 20 feet bgs. The boring was then filled with #1 sand to 15 feet bgs. At this depth the 15 foot well was installed consisting of a 10 foot 010 slotted 1 inch PVC screen. The sand pack consisted of #1 sand to 3 feet bgs. Bentonite time release pellets were placed above the sand pack. The remaining annular space was filled with concrete. The monitoring wells were finished with a flush mounted road box in one concrete anchor pad.

MLW-3's 45-foot interval was installed in an immediately adjacent 3.75 inch casing rod and well drive point. The 5 foot screened interval consists of 1 inch 010 slotted PVC. The #1 sand pack extends from 38 feet to 45 feet bgs, followed by a two foot seal of time release bentonite pellets. The remaining annular space was filled with #1 sand to five feet bgs followed by bentonite to 1 foot bgs. The remaining annular space was filled with concrete and finished with a flush mounted road box and finish in the same concrete anchor pad as the previously described locations.

MLW-4 installed via three separate advancements of direct push 3.25 inch casing rods to the final installation intervals of 15-feet bgs, 30-feet bgs, and 40-feet bgs. Subsurface refusal of the direct push methodology did not allow for the desired depth of the nested monitoring well but the depth was encountered after switching to a narrower diameter casing rod following an unsuccessful attempt via 3.75 inch casing rods. MLW-4's 15 foot interval consists of a 10 foot screen (5-15 feet bgs), the 30 and 40 foot intervals consist of 5 foot length screens (25-30 feet

bgs and 35-40 feet bgs); all screens are 010 slotted 1 inch PVC. The 5 to 15 foot interval was constructed with a #1 sand pack to 3 feet bgs followed by time release bentonite pellets to 1 foot below grade. The 25 to 30 foot interval consists of #1 sand pack to 23 feet bgs followed by a 2 foot bentonite pellet time release seal. The annular space above consists of #1 sand to 5 feet bgs followed by bentonite to 1 foot bgs. The 35 to 40 foot interval is constructed with a #1 sand pack to 33 feet bgs followed by a 2 foot bentonite pellet time release seal. The annular space above consists of #1 sand to 5 feet followed by bentonite to 1 foot bgs. All the remaining annular space from the MLW-4 intervals were filled with concrete and finished with individual flush mounted road boxes in one concrete anchor pad.

Additional details regarding the monitoring well installation can be found in the drill logs included as **Appendix D**. .The newly installed MLW monitoring wells were developed via a peristaltic pump fitted with a stainless steel Watterra check valve until clear water was observed. Drill cuttings generated during the failed auguring method were drummed, characterized and disposed of by Innovative Recycling Technologies, Inc. (IRT). Development water was containerized and disposed of by IRT Waste manifests are included as **Appendix I**.

2.4.2 Monitoring Well Sampling

Phase 1

Shaw personnel collected the first round of groundwater samples on March 15, 2012 from the three monitoring wells (MLW-1, MLW-2 and MW-6) installed in December 2011 and February 2012. The four channels of the nested monitoring wells MLW-1 and MLW-2 (20, 30, 40, & 50-feet bgs) and the shallow monitoring well, MW-6, were sampled. Prior to sampling, each of the monitoring wells were gauged for depth-to-water and depth-to-bottom. After gauging was completed low flow sampling techniques were used. Water quality parameters (temperature, specific conductivity, dissolved oxygen (DO), pH, oxidation-reduction potential (ORP), and turbidity) were collected using a Yellow Springs Instruments (YSI) multi-parameter water quality probe and recorded at five minute intervals. Groundwater purging was considered complete once any of the parameters had stabilized. Monitoring well channel MLW-1 (18-20 feet) did not have sufficient water to use the low-flow sampling technique. With the NYSDEC Project Manager's permission, Shaw collected a "grab" groundwater sampling from this location. The field sampling data sheets are included as **Appendix G**. A total of nine samples plus an appropriate number of QA/QC (1 duplicate, 1 MS, 1 MSD) samples were collected and secured for shipment to Chemtech under proper COC for analysis of VOCs via USEPA Method 8260B.

On May 10, 2012 Shaw personnel returned to the Site to collect a second round of groundwater samples from MLW-1 and MLW-2 (20, 30, 40, and 50 feet bgs) and MW-6 using the same protocol as stated above. Again, monitoring well location MLW-1 (18-20 feet) did not have sufficient water to use the low-flow sampling technique and a "grab" groundwater sample was collected from this interval. The field sampling data sheets are included as **Appendix G**. A total of nine samples plus one duplicate, one MS/MSD, and one Trip Blank sample were collected and secured for shipment under proper COC to Chemtech for analysis of VOCs using USEPA Method 8260B.

Phase 2

Shaw personnel returned to the site between February 17, 2014 and February 19, 2014 to collect groundwater samples from MLW-2 (20, 30, 40 and 50 feet bgs), MLW-3 (5-15, 20-30, and 40-45 feet bgs), MLW-4, and MW-6 using the same protocol as stated above. The field sampling data sheets are included as **Appendix G**. A total of nine samples plus one duplicate, one MS/MSD, and one Trip Blank sample were collected and secured for shipment under proper COC to Chemtech for analysis of VOCs using USEPA Method 8260B.

An additional round of groundwater samples was collected on May 14, 2014 from monitoring wells MLW-1 (20, 30, and 50 feet bgs), and MLW-4 (5-15, 25-30, and 35-40 feet bgs) using the same protocol as stated above. The field sampling data sheets are included as **Appendix G**. A total of six samples plus one duplicate, one MS/MSD, and one Trip Blank sample were collected and secured for shipment under proper COC to Chemtech for analysis of VOCs using USEPA Method 8260B.

All field notes are included as **Appendix E**. Analytical data from this event is included as **Appendix F** and summarized in **Table 2**. The analytical data results from the March and May 2012 sampling events are discussed further in **Section 3** of this report.

2.5 Soil Vapor

2.5.1 Soil Vapor Point Installation

During the second round of field activities, seven borings were advanced to evaluate soil vapor conditions along Ingraham Street and Johnson Avenue. Zebra advanced the boring via direct push, utilizing a DPT/Geoprobe® GP-6620 DT rig. Once the desired depth was reached, a six-inch steel mesh implant fitted with 0.25-inch laboratory grade teflon tubing was placed in the borehole. The borehole was backfilled with #1 sand to a minimum of six inches above the

screened interval and bentonite was placed above the #1 sand to 0.5 feet bgs. The tubing was secured and finished at grade in a concrete apron with a roadbox. The bentonite was allowed to cure for 24 hours prior to sampling. The four soil vapor locations along Ingraham Street (SV-1, 5, 6 and7) were installed to a depth of 8.5 feet bgs. Following advancement of the boring along the south side of Johnson Avenue, which is now defined as SV-2, water was observed in the open boring at 8.5 foot requiring that the depth of installation for the three soil vapor points (SV-2, 3 and 4) was changed to 5 feet bgs. Zebra installed seven "permanent" soil vapor points to depths ranging from 5 to 8.5 feet bgs along Ingraham Street and Johnson Avenue.

Additional details regarding the soil vapor point installation can be found in the field notes, included as **Appendix E**.

2.5.2 Soil Vapor Sampling

Six soil vapor samples, one duplicate sample and one ambient air sample were collected on February 20, 2014 from the newly installed soil vapor points. A sample was not collected from soil vapor implant SV-3 because it contained water. Prior to sampling, the soil vapor points were tested for infiltrating atmospheric gas using a helium tracer gas and detector following procedure outlined in Shaw's Field Activities Plan (FAP, provided under separate cover) and in accordance with the NYSDOH VI Guidance. Upon completion of the tracer gas test, the tubing was purged of approximately two to three probe volumes at a flow rate of less than 0.2 liters per minute. PID readings were collected and recorded during the purging process.

All eight samples were collected in "batch certified" one liter summa canisters fitted with 2-hour flow regulators in accordance with the procedures described in Shaw's FAP. Sampling continued until there was approximately five inches of mercury (Hg) remaining in the canister. After collection, the samples were sent to Pace Analytical in Minneapolis, MN (Pace) for analysis of VOCs via USEPA method TO-15.

Laboratory data packages for these samples are included in **Appendix F**; the data is summarized in **Table 6** and presented on **Figure 13**. Field data sheets for the air sampling are included in **Appendix E**.

2.6 Site Survey

On March 15, 2012 Hirani Engineering & Land Surveying, P.C. (Hirani) of Jericho, New York completed a survey of the Site. The survey included the surrounding properties, MIP point locations, soil borings as well as new and existing monitoring wells. Hirani provided Shaw with

coordinates in NYS Plane North American Datum (NAD) 1983 and groundwater monitoring well elevations in North American Vertical Datum (NAVD) 1988. Hirani personnel returned to the Site on May 20, 2014 to survey the new monitoring wells and soil vapor implant points. Shaw used the information provided by Hirani to create the basemap for **Figures 2** through **13**. There is an elevation difference of 10.13 ft mean sea level (MSL) between MLW-1 (23.47 ft) and MLW-4 (12.34 ft) and it appears the slope is to the northwest. A table with the survey information is included as **Table 5**.

2.7 Data Quality Control/Quality Assurance and Management

All samples from this investigation were collected in a manner that was consistent with the protocol described in Shaw's QAPP. Field Duplicates, MS/MSD, and Rinse Blank samples were all collected with each different sample matrix at a frequency of one per every twenty samples. Additionally, all analytical results from these samples were evaluated for data usability by a third party data validator, Data Validation Services (DVS) of North Creek, NY. DVS' deliverable to Shaw included a data usability summary report (DUSR) and revised Form I data packages that include data qualifiers the validator determined to be necessary. DUSRs and all subsequent deliverables have been included in **Appendix H**.

2.8 Investigation Derived Waste Management

The hauling and disposal of waste drums on March 15, 2012, May 10, 2012, January 14, 2014, January 24, 2014, and February 19, 2014 were completed by Innovative Recycling Technologies Inc., Lindenhurst, New York. The hazardous waste was disposed of at one of two locations: Chemtron Corporation in Avon, Ohio or Republic Environmental Systems (PA), LLC in Hatfield, Pennsylvania. The waste disposal manifests are included as **Appendix I**.

2.9 Sewer Survey

Shaw personnel conducted research on the Ingraham sewer lines as well as the sewer lines perpendicular to Ingraham Street between Porter Avenue and Knickerbocker Avenue to determine if the sewers are or have been contributing to the impacts observed in the area or were serving as potential conduits or preferential pathways for vapor phase transport. Shaw personnel obtained maps (**Appendix J**) from the New York City Department of Environmental Protection (NYCDEP). The maps provided the installation/removal/renovation dates, pipe construction, contents and location of all City-owned pipes in this area. No historic information on previous sewer conditions, size, material, depth, bedding material, replacement was available.

3.0 ANALYTICAL RESULTS

3.1 MIP Survey Results

As previously discussed, the MIP work was completed between December 19 and December 21, 2012; 422 feet were logged by Zebra at 12 locations during this time. The 12 points were advanced at depths of between 22 and 52 feet bgs. The MIP report prepared and interpreted by Zebra personnel can be found in **Appendix C**. A summary of the report findings is presented below.

MIP Point SH01

This location was advanced to 31 feet bgs. The log spikes likely indicated a mixture of sands from 0-20 feet bgs, silts from 20-23 feet bgs and silty clay from 23-31 bgs. Results of the ECD log and PID log had corresponding spikes indicating the presence of chlorinated solvent breakdown products from 3-12 feet bgs. A pronounced spike occurred from 19-27 feet bgs indicating higher levels of chlorinated compounds at those depths. According to small FID spikes, there may be a mixture of organic compounds at this location.

MIP Point SH02

This location was advanced to 35 feet bgs. The log spikes showed a mixture of sands from 0-7 feet bgs and silts from 7-35 feet bgs. Results of the ECD log and PID log indicated spikes which pointed to the presence of chlorinated solvent breakdown products from 15-34 feet bgs. A pronounced spike occurred at from 19-27 feet bgs implying higher levels of chlorinated compounds at those depths. No FID spikes were recorded.

MIP Point SH03

This location was advanced to 38 feet bgs. It appeared that sands were present from 0-7 feet bgs and silts from 7-38 feet bgs with chlorinated solvent breakdown products from 7-35 feet bgs with the highest presence of chlorinated solvents lcoated in the 20-26 ft bgs interval. According to small FID spikes there may have been a mixture of organic compounds at this location.

MIP Point SH04

This location was advanced to 31 feet bgs. The log spikes indicated a mixture of sands from 0-6 feet bgs and silts from 6-31 feet bgs. Results of the ECD log and PID log had corresponding spikes which suggested the presence of chlorinated solvent breakdown products from 11-30 feet bgs with the largest spike in the 28-29 foot interval. No FID spikes were recorded.

MIP Point SH05

This location was advanced to 22 feet bgs. The log spikes likely indicated a mixture of sands from 0-5 feet bgs and silts from 5-22 feet bgs. It appeared that chlorinated solvents may have been present between 9 and 21 feet bgs with the largest concentration in the 20 to 22 foot interval. No FID spikes were recorded.

MIP Point SH06

This location was advanced to 41 feet bgs. Sands appeared to be present between 0-9 feet bgs and silts from 9-41 feet bgs. Logs indicated the presence of chlorinated solvents between 8 and 33 feet bgs. No FID spikes were recorded.

MIP Point SH07

This location was advanced to 27 feet bgs. The log spikes indicated a mixture of sands from 0-9 feet bgs, silty clay between 9 and 11 feet bgs and silts from 11 to 27 feet bgs. The logs showed that low levels of chlorinated solvents may have been present between 8 and 26 feet bgs. No FID spikes were recorded.

MIP Point SH08

This location was advanced to 23 feet bgs. The log spikes implied a mixture of sands from 0-6 feet bgs, silty clay between 6 and 8 feet bgs and silts from 8 to 23 feet bgs. The logs suggested that low levels of chlorinated solvents may have been present between 8 and 22 feet bgs. No FID spikes were recorded.

MIP Point SH09

This location was advanced to 31 feet bgs. The log spikes likely indicated a mixture of sands and fill between 0-6 feet bgs, silt with clay at 6-10 feet bgs and silts with sands at 10 to 31 feet bgs. Logs showed the likely presence of chlorinated solvents and breakdown products between 7 and 20 feet bgs with the highest concentrations in the 20 to 27 foot bgs interval. No FID spikes were recorded.

MIP Point SH010

This location was advanced to 46 feet bgs. It appeared that a mixture of sand, silts and clays were located between 0 and 14 feet bgs and silts with sands from 14 to 46 feet bgs. There was an indication that high levels of chlorinated solvents and breakdown products were likely present between 6 and 45 feet bgs; the highest concentration likely in the 24 to 30 foot interval. No FID spikes were recorded.

MIP Point SH011

This location was advanced to 45 feet bgs. Mixtures of sand, silts and clays were likely located between 0 and 14 feet bgs and silts with sands from 14 to 45 feet bgs. Logs showed that high levels of chlorinated solvents and breakdown products were likely present between 6 and 44 feet bgs with the highest concentration likely in the 21 to 28 foot interval. No FID spikes were recorded.

MIP Point SH012

This location was advanced to 52 feet bgs. Mixtures of sand, silts and clays appeared to be located between 0 and 14 feet bgs and silts with sands from 14 to 52 feet bgs. Logs indicated that high levels of chlorinated solvents and breakdown products were likely present between 6 and 50 feet bgs with the highest concentration likely in the 32 to 38 foot interval. No FID spikes were recorded.

3.2 Soil Sampling

3.2.1 Subsurface Soil Boring Samples

A total of 29 subsurface soil samples were collected from eight soil boring locations on the Site between December 2011 and February 2014. Each sample interval was screened with a PID and logged by a Shaw geologist. The soil types encountered at the Site were generally fine to coarse sands with some gravel, pebbles, and little silt generally consistent with the observed MIP results and interpretations. In addition small sections of clayey silt/silty clay were also found at some locations. The soil borings were advanced to depths between 20 feet and 50 feet; the depths to water ranged in these borings were encountered between15 feet bgs and 23 feet bgs. A more extensive description for each boring can be found in the soil boring logs included as **Appendix D**. Field notes are included as **Appendix E**.

The analytical results are summarized and compared to NYSDEC's Department of Environmental Remediation (DER) Recommended Soil Cleanup Objectives (SCOs) for unrestricted use (UUSCO) and restricted commercial use as presented in 6NYCRR Part 375 (December 2006) in **Table 1** for VOCs, and the complete analytical data package is included as **Appendix F** and summarized in the following paragraphs. All detections for VOCs are shown graphically on **Figures 5 and 6**.

No analytes were detected above UUSCOs or restricted commercial SCOs in December 2011. Although there were several analytes detected in soil samples collected during the February 2012

sampling event, only TCE and PCE were detected above the UUSCOs. Both detections above the UUSCOs were detected in soil sample SB-5 (34 ft – 35 ft). TCE was detected at 5 mg/kg and PCE was detected at 850 mg/kg. Only the PCE detected exceeded the restricted commercial SCO. Acetone, methylene chloride, cis-1,2-DCE, TCE and PCE were also detected in samples during the February 2012 sampling event but at concentrations lower than the UUSCO. Soil sample results are presented on **Table 1**.

Four compounds, vinyl chloride, cis-1,2-DCE, TCE and PCE were detected above UUSCOs during the January and February 2014 sampling event. Detection ranges above the UUSCOs (minimum to maximum) for these compounds are summarized in the following bullets.

- Vinyl chloride; 0.0357 mg/kg in SB-2A (13 ft – 15 ft) to 0.15 mg/kg in SB-4A (26 ft -28 ft);
- Cis-1,2- DCE; 0.26 mg/kg in SB-3A (30 ft – 32 ft) to 1.7 mg/kg SB-4A (26 ft – 28 ft).
- PCE; 1.8 mg/kg in SB-3A (23 ft – 25 ft) to 3.4 mg/kg in SB-2A (41 ft – 43ft).
- TCE; 0.54 mg/kg in SB-4A (26 ft -28 ft).

Vinyl chloride, cis-1,2-DCE, TCE, PCE, acetone, methylene chloride, 1,2,4-trimethylbenzene, 1,1,2,2-tetracloroethane and 1,1-dichloroethenethat were also detected in samples during the January 2014 sampling event but at concentrations lower than the UUSCO. Soil sample results are presented on **Table 1**. No compounds were detected above the restricted commercial SCOs during the January 2014 and February sampling event. Detections are shown on **Figures 5 and 6**.

3.3 Groundwater Sampling

As previously discussed, groundwater samples were collected from three wells (installed in December 2011 and February 2012) during the March and May 2012 sampling events and five wells during the February and May 2014 sampling events. The analytical results in µg/L (micrograms per liter or parts per billion [ppb]) are summarized and compared to NYSGWQS as defined in the Technical & Operational Guidance Series (TOGS) 1.1.1 on **Table 2** and are shown graphically on **Figures 7, 8, and 9**. The complete analytical data package is included in **Appendix F**. Shaw was unable to gauge the depth-to-water in MLW-1 and MLW-2 during the sampling events because the interface probe was too large to advance within the multi-channel wells. Groundwater quality parameters are in **Tables 3 and 4**.

3.3.1 March 2012 Groundwater Sampling

Fifteen (15) separate compounds were reported among the 10 groundwater samples (including one duplicate sample) collected during the March 2012 sampling event. Eight of these 15 compounds had at least one detection that exceeded the applicable NYSGWQS; the detections that exceeded the NYSGWS are presented below:

- 1,1-dichloroethane (1,1-DCA); 11 µg/L(MLW-2 (38-40)) to 72 µg/L (MLW-1 (18-20));
- 1,1-dichloroethene (1,1-DCE); 15 µg/L (MLW-6);
- 1,1,1-trichloroethane (1,1,1-TCA); 8.8 µg/L (MLW-1(18-20));
- cis-1,2-DCE; 13 µg/L (MLW-1(18-20)), 99 µg/L (MLW-1 (18-20))and 8,100 µg/L (MW-6);
- MTBE; 15 µg/L (MLW-2 (18-20)), 1,200 µg/L (MLW-2 (38-40))and 1,800 µg/L (MLW-2(28-30));
- PCE; 8.8 µg/L (MLW-1 (18-20)) and 970 µg/L (MW-6)
- TCE; 7.6 µg/L (MLW-1 (28-30)), 24 µg/L (MLW-1 (18-20)) and 2,400 µg/L (MW-6); and,
- Vinyl Chloride; 590 µg/L (MW-6).

Additionally, there were no detections for 11 compounds whose reporting limit was greater than the applicable NYSGWQS.

3.3.2 May 2012 Groundwater Sampling

During the May 2012 sampling event, there were 13 compounds detected and 11 of those had at least one detection above the applicable NYSGWQS. The detections that exceeded the NYSGWS are presented below:

- 1,1-DCA; 9.4 µg/L (MLW-2 (38-40)), 9.7 µg/L (MLW-2 (38-40) DUP) and 41 µg/L (MLW-1(18-20));
- 1,1-DCE; 16 µg/L (MW-6);
- 1,1,1-TCE; 7 µg/L (MLW-1(18-20));
- Chloroform; 29 µg/L (MLW-1 (38-40))
- cis-1,2-DCE; 5.6 µg/L (MLW-2(38-40 DUP), 17 µg/L (MLW-2(28-30), 160 µg/L (MLW-2(18-20) and 13,000 µg/L (MW-6);
- trans-1,2-DCE; 63 µg/L (MW-6);
- MTBE; 1,100 µg/L (MLW-2(38-40) DUP), 1300 µg/L (MLW-2 (38-40)) and 2,000 µg/L (MLW-2 (28-30);
- PCE; 6.4 µg/L (MLW-1 (18-20)), 14 µg/L (MLW-2(18-20) and 620 µg/L (MW-6); and,

- TCE; 7 µg/L (MLW-2(38-40), 9.2 µg/L (MLW-1(18-20), 50 µg/L (MLW-2(18-20) and 2,400 µg/L (MW-6);
- Vinyl Chloride; 8.4 µg/L (MLW-2 (18-20)) and 770 µg/L (MW-6).

Additionally, there were no detections for 11 compounds whose reporting limit was greater than the applicable NYSGWQS.

3.3.3 February 2014 Groundwater Sampling

During the February 2014 sampling event, there were 14 detections of VOCs. Eight of the 14 VOCs detected had at least one NYSGWQS exceedance. The exceedances are presented below:

- 1,1-DCA; 8.6 µg/L (MLW-2);
- 1,1-DCE; 15.3 µg/L (MW-6);
- cis-1,2-DCE; 1,200 µg/L (MLW-4), 1,700 µg/L (MLW-4 DUP), 7,800 µg/L (MW-6);
- MTBE; 14.1 µg/L (DUP-1), 150 µg/L (MLW-3 (20-30)) and 310 µg/L MLW-2(4));
- trans-1,2-DCE; 75.7 µg/L (MW-6);
- PCE; 180 µg/L (MW-6);
- TCE; 520 µg/L (MW-6); and,
- Vinyl Chloride; 310 µg/L (MLW-4), 440 µg/L (DUP-1), 550 µg/L (MW-6).

Additionally, there were no detections for five compounds whose reporting limit was greater than the applicable NYSGWQS.

3.3.4 May 2014 Groundwater Sampling

During the February 2014 sampling event, there were 13 detections of VOCs. Six of the 13 VOCs detected had at least one NYSGWQS exceedance. The NYSGWQS exceedances are as follows:

- 1,1-DCA; 8.9 µg/L (MLW-4 (35-40)) and 10.7 µg/L (MLW-1-CH2);
- cis-1,2-DCE; 41.9 µg/L (MLW-1-CH2), 360 µg/L (DUP), 380 µg/L (MLW-4(25-30)), 1,100 µg/L (MLW-4(5-15)) and 1800 µg/L (MLW-4(35-40));
- PCE; 9.4 µg/L (MLW-1-CH2);
- TCE; 8.1 µg/L (MLW-1-CH2); and,
- Vinyl Chloride; 350 µg/L (MLW-4(5-15)), 460 µg/L (MLW-4 (35-40), 480 µg/L (MLW-4 (25-30), 540 µg/L (MLW-4(35-40)).

Additionally, there were no detections for five compounds whose reporting limit was greater than the applicable NYSGWQS.

3.4 Soil Vapor Sampling

Six soil vapor samples, one duplicate (of SV-5) sample and one ambient outdoor air sample were collected on February 20, 2014. A comparison of minimum and maximum range for compounds detected in the soil vapor samples (not ambient outdoor air) listed in the NYSDOH Vapor Intrusion Guidance is summarized below.

- Carbon tetrachloride; 2 detections; 0.31 µg/m^3 (SV-2) to 0.44 J µg/m^3 (SV-4).
- 1,1,1-TCE; 3 detection; 0.71 J µg/m^3 (SV-5) to 6 J µg/m^3 (SV-1)
- cis-1,2-DCE; 5 detections; 1.7 J µg/m^3 (SV-5) to 250 µg/m^3 (SV-7)
- PCE; 7 detections; 1.21 µg/m^3 (SV-4) to 3,865 µg/m^3 (SV-1)
- TCE; 7 detections; 0.43 µg/m^3 (SV-2) to 806 µg/m^3 (SV-1)
- Vinyl Chloride; 2 detections; 0.33 µg/m^3 (SV-2) to 19.7 µg/m^3 (SV-4).

In general, the highest cis-1,2-DCE, TCE and PCE detections observed were on Ingraham street. Soil vapor sample results are presented on **Table 6**.

3.5 DUSR Summary

In general, the results are considered "usable either as reported or with minor qualification as estimated in value". However, the 1,4-dioxane results for the groundwater and aqueous QA/QC samples are considered "not usable due to poor instrument performance inherent with that compound."

The blind field duplicates showed acceptable correlations as did the MS/MSDs for MW-6 (aqueous) and MW-1(22). The MS for MW-6(19-20) showed acceptable recoveries however, the MSD did not. No qualification of the data was made. The matrix spikes in sample MLW-1 (38-40) during the May sampling event did not show acceptable recoveries and duplicate correlations for 2-butanone, 4-methyl-2-pentanone, and m,p-xylene. The results for these compounds have been estimated and should be considered low biases.

The vinyl chloride results for MLW-1 (18-20) and MLW-1 (28-30) were qualified as estimated because the initial and/or continuing calibration standard results was not within validation guidelines. Additionally, the acetone, 1,2,4-trichloroprobenzene and the 1,2,3-tichlorobenzene results for the May 2012 sampling event were also estimated for the same reason.

Finally, as noted in the DUSR report, the dilution analyses of MLW-2(28-30), MLW-2(38-40) and MW-6 during the May 2012 sampling event were immediately run after the undiluted analyses of these samples. This did not follow proper analytical protocols. Since the potential for carryover contribution was high for MTBE in MLW-2 (28-30) and MLW-2 (38-4) as well as for chlorinated compound sin MW-6, those results were qualified as estimated and may have a high bias.

More detail is provided in the DUSR reports which are included in as **Appendix H**.

3.6 Groundwater Elevations

Depths to water were not obtainable for the multi-channel wells during the March or May groundwater sampling events. Shaw remobilized to the Site with a smaller interface probe on September 26, 2012 and December 13, 2012 to collect groundwater elevation data. MLW-1 was not gauged during the September event because Shaw did not have property access. Groundwater Contour Maps depicting the September and December 2012 gauging results are presented as **Figures 10** and **11**. Groundwater elevations are presented in **Tables 3 and 4**.

The September 2012 Groundwater Contour Map (**Figure 10**) shows that groundwater generally flows north towards MLW-2. There is a groundwater elevation high spot at MW-6 (9.43 feet bgs). The difference in groundwater is 4.07 feet across the Site.

The December 2012 Groundwater Contour Map (**Figure 11**) shows a lesser (2.17 ft) groundwater elevation change between the monitoring wells. No monitoring well had a significant difference in groundwater elevation in comparison to the other monitoring wells. Groundwater elevations were averaged across the intervals (where applicable) for contouring purposes. MW-3 and NW-2 had the highest groundwater elevation (7.76 feet bgs) and MLW-2 had the lowest groundwater elevation (5.59 feet bgs). Groundwater appears to be flowing to the northwest which is generally consistent with the September 2012 gauging event.

The February 2014 Groundwater Contour Map (**Figure 12**) shows that groundwater is flowing northwest to west.

Since there were only two monitoring wells sampled in May 2014 a groundwater contour map could not be created. Depth to water in monitoring well MLW-1's channels ranged between 16.20 feet bgs to 16.35 feet bgs during this sampling event. Depth to water measurements, were between 7.25 feet bgs and 7.75 feet bgs in MLW-4's channels during the same event.

3.7 Sewer Survey

According to the Sewer Mapping Figure (**Appendix J**), there is a relief combined sewer line that connects Ingraham Street to Johnson Avenue. The line was installed circa 1985; however, the shape, material and diameter are not known.

The as-built drawing (**Appendix J**) shows a cross-section/plan view of the west to east sewer line on Ingraham Street which shows elevations and a clear slope from Porter Avenue to Knickerbocker Avneue. The plan view also reference the perpendicular spur (circa 1985 line described above) which connects the Ingraham Street sewer line to Johnson Avenue sewer line near 63 Ingraham Street. According to this figure, the spur was remaintenanced circa 1985 and was plug in 2006 if not before 2006.

4.0 INVESTIGATION FINDINGS

Soil and groundwater data generated during the course this SC indicate the following findings:

1. The general topography slopes to the north/northwest. The depth to groundwater at the Site ranges between 6.35 and 16.55 feet bgs. There is a 10.13 ft (MSL) elevation difference between MLW-1 and MLW-4.
2. Existing soil and geologic borings indicate that the Site is underlain by a mixture of inter-bedded sands, clays and silts typical of this area.
3. A MIP survey conducted at the Site indicates that chlorinated VOCs and breakdown products are present in the area. According to the MIP survey, chlorinated VOCs and the associated breakdown products were generally observed between 8 and 31 feet bgs with the highest concentrations being observed between 23 and 28 feet bgs. Moreover, chlorinated VOC concentrations in MIP-7 and MIP-8 (located on Ingraham Street, adjacent to the Popular Hand Laundry Site) had the lowest perceived chlorinated VOCs and breakdown products. The highest chlorinated VOCs and breakdown products observed during the MIP survey were in MIP-10, MIP-11 and MIP-12 located in the Ingraham Sidewalk across the street from the Popular Hand Laundry.
4. The majority of the chlorinated VOC soil impacts were observed in SB-5 (34-35 ft). This boring is the furthest west location on the northern side of Ingraham Street. Cis-1,2-DCE, TCE and PCE were all detected at concentrations greater than the unrestricted SCO.
5. Although there were chlorinated VOCs detected above NYSGWQS in several of the groundwater samples collected from the monitoring wells, the highest concentrations were observed in MW-6. In general the detections observed were the highest during the May 2012 sampling event. Groundwater concentrations in MLW-1, located upgradient of the Popular Hand Laundry Site, show chlorinated VOCs greater than the NYSGWQS during these sampling events. Furthermore, most of the chlorinated VOC detections appear to decrease (in MLW-1) between the March 2012 and May 2014 sampling events.
6. PCE and TCE concentrations in groundwater fluctuates between non-detect and exceeding applicable NYSGWQS between the four groundwater sampling events. .
7. PCE breakdown products (cis-1,2-DCE, 1,1-DCA, and vinyl chloride) decreased in MLW-1 between the March 2012 and May 2014 sampling events. There was an increase for cis-1,2-DCE and vinyl chloride in MW-6 and MLW-2 between the March 2012 and May 2012 events and a decrease in these concentrations between May 2012 and May 2014 sampling events. 1,1-DCA concentrations did not change significantly between the March 2012 and May 2014 sampling event in either MW-6 or MLW-2.
8. It appears that the sewer spur discussed in Section 2.8 is located approximately 11 feet bgs. The highest soil quality impacts observed during this assessment occurred at approximately 41 feet bgs. Although results from the MIP survey indicated that chlorinated solvents may be presents between 3 and 50-feet bgs, the survey indicated potential for the highest chlorinated

solvents were likely to be located between 19 and 38 feet bgs. Soil sample results from the 2011, 2012 and 2014 sampling events confirm this. PCE was detected in soil vapor at a concentration of 2,509 µg/m^3 in SV-6 which is approximately100 feet north of the spur (lateral). SV-5 (50 feet from spur) had a PCE soil vapor concentration of 2,102 µg/m^3.

9. PCE and TCE were detected in all soil vapor samples. The two highest PCE detections (3,865 µg/m^3 and 2,712 µg/m^3) and the two highest TCE detections (806 µg/m^3 and 524 µg/m^3) were observed in the furthest west (SV-1) and furthest east (SV-7) locations along the north side of Ingraham Street. Soil vapor detections on Johnson Avenue were less than 5 µg/m^3 for PCE and less than 1 µg/m^3 for TCE.

Notes:
All results are in milligrams per kilogram (mg/kg) or parts per million (ppm) except for the trip blanks (TB) and field blanks (FB) which are in micrograms per liter (ug/L) or parts per billion (ppb);
Analytical results are compared to NYSDEC Soil Clean-Up Objectives for Unrestricted and Restricted Commercial uses, obtained from 6 NYCRR Part 375, December 14, 2006;
NGV - No Guidance Value provided by 6 NYCRR Part 375;
RSCO - Recommended Soil Cleanup Objective (SCO);
b - The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3;
c - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site;
f - Protection of ecological resources SCOs were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the Department to calculate a protection of ecological resources SCO according to the TSD;
ft bgs - Feet below ground surface;
Bold - Indicates analyte detected by laboratory;
Shaded - Indicates the reported value exceeds the UNRESTRICTED RSCO value;
U - The compound was analyzed for but not detected. The value provided is the laboratory reporting limit;
J - The numerical value provided is an estimated quantity;
Q - Indicates LCS control criteria did not meet requirements;
B - Analyte found in associated Method Blank;
E - Value exceeds calibration range;
R - The data are unusable. The analyte may or may not be present;
* - values outside of QC limits;
D - Compound was analyzed at secondary dilution;
NA - not analyzed.

Notes:
All results are in milligrams per kilogram (mg/kg) or parts per million (ppm) except for the trip blanks (TB) and field blanks (FB) which are in micrograms per liter (ug/L) or parts per billion (ppb);
Analytical results are compared to NYSDEC Soil Clean-Up Objectives for Unrestricted and Restricted Commercial uses, obtained from 6 NYCRR Part 375, December 14, 2006;
NGV - No Guidance Value provided by 6 NYCRR Part 375;
RSCO - Recommended Soil Cleanup Objective (SCO);
b - The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3;
c - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site;
f - Protection of ecological resources SCOs were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the Department to calculate a protection of ecological resources SCO according to the TSD;
ft bgs - Feet below ground surface;
Bold - Indicates analyte detected by laboratory;
Shaded - Indicates the reported value exceeds the UNRESTRICTED RSCO value;
U - The compound was analyzed for but not detected. The value provided is the laboratory reporting limit;
J - The numerical value provided is an estimated quantity;
Q - Indicates LCS control criteria did not meet requirements;
B - Analyte found in associated Method Blank;
E - Value exceeds calibration range;
R - The data are unusable. The analyte may or may not be present;
* - values outside of QC limits;
D - Compound was analyzed at secondary dilution;
NA - not analyzed.

Notes:
All results are in milligrams per kilogram (mg/kg) or parts per million (ppm) except for the trip blanks (TB) and field blanks (FB) which are in micrograms per liter (ug/L) or parts per billion (ppb);
Analytical results are compared to NYSDEC Soil Clean-Up Objectives for Unrestricted and Restricted Commercial uses, obtained from 6 NYCRR Part 375, December 14, 2006;
NGV - No Guidance Value provided by 6 NYCRR Part 375;
RSCO - Recommended Soil Cleanup Objective (SCO);
b - The SCOs for commercial use were capped at a maximum value of 500 ppm. See TSD section 9.3;
c - For constituents where the calculated SCO was lower than the rural soil background concentration, as determined by the Department and Department of Health rural soil survey, the rural soil background concentration is used as the Track 1 SCO value for this use of the site;
f - Protection of ecological resources SCOs were not developed for contaminants identified in Table 375-6.8(b) with "NS". Where such contaminants appear in Table 375-6.8(a), the applicant may be required by the Department to calculate a protection of ecological resources SCO according to the TSD;
ft bgs - Feet below ground surface;
Bold - Indicates analyte detected by laboratory;
Shaded - Indicates the reported value exceeds the UNRESTRICTED RSCO value;
U - The compound was analyzed for but not detected. The value provided is the laboratory reporting limit;
J - The numerical value provided is an estimated quantity;
Q - Indicates LCS control criteria did not meet requirements;
B - Analyte found in associated Method Blank;
E - Value exceeds calibration range;
R - The data are unusable. The analyte may or may not be present;
* - values outside of QC limits;
D - Compound was analyzed at secondary dilution;
NA - not analyzed.

Notes:
All concentrations reported in micrograms per liter (µg/L, equivalent to parts per billion);
(1) New York State Groundwater Quality Standards (NYSGWQS) obtained from NYSDEC Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values;
NVG - No standard value listed by NYSGWQS;
BOLD values indicate that the analyte was detected;
Shaded values indicate that the analyte exceeds the NYSGWQS;
* - % Recovery outside QC Limits;
** - The principal organic contaminant standard for groundwater of 5 µg/L applies to this substance;
*** - Applies to the sum of cis- and trans-1,3-Dichloropropene;
U - Indicates that the analyte was not detected at the reporting limit shown;
J - The numerical value provided is an estimated quantity;
R - The data are unusable. The analyte may or may not be present;
Q - Indicates the LCS did not meet the control limits requirements;
NJ - The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value;
D - Compound was analyzed at secondary dilution.

Notes:

All concentrations reported in micrograms per liter (µg/L, equivalent to parts per billion);

(1) New York State Groundwater Quality Standards (NYSGWQS) obtained from NYSDEC Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values;

NVG - No standard value listed by NYSGWQS;

BOLD values indicate that the analyte was detected;

Shaded values indicate that the analyte exceeds the NYSGWQS;

* - % Recovery outside QC Limits;

** - The principal organic contaminant standard for groundwater of 5 µg/L applies to this substance;

*** - Applies to the sum of cis- and trans-1,3-Dichloropropene;

U - Indicates that the analyte was not detected at the reporting limit shown;

J - The numerical value provided is an estimated quantity;

R - The data are unusable. The analyte may or may not be present;

Q - Indicates the LCS did not meet the control limits requirements;

NJ - The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value;

D - Compound was analyzed at secondary dilution.

R - The data are unusable. The analyte may or may not be present;
Q - Indicates the LCS did not meet the control limits requirements;
NJ - The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value;
D - Compound was analyzed at secondary dilution.

NOTES:
1. All wells are 2.0-inch diameter;
2. All parameters were collected via Low Flow through a YSI 6820 Multi-Parameter water quality probe except MLW-1 (20')
3. All results represent final purge water parameters collected immediately prior to sampling;
4. 'feet MSL' - Feet above Mean Sea Level;
5. 'feet BTOC' - Feet Below Top Of Casing. The top of the well casing was used as a reference point to calculate groundwater elevations;
6. ^{0}C - Degrees Celsius;
7. mS/cm - Microsiemens per centimeter;
8. mg/L - Milligrams per Liter. This unit is equivalent to parts per million (ppm);
9. SU - Standard pH Units;
10. mV - Milivolts;
11. NTU - Nephelometric Turbidity Units.
12. NAM - Not Able to Measure;
13. NM - Not measured.

Notes:

All results are in µg/m^3 (micrograms per cubic meter).

Bold - Indicates analyte detected by laboratory.

U - The compound was not detected at the indicated concentration.

J - Data indicates the presence of a compound that meets the identification criteria. The result is less than the quantitation limit but greater than MDL. The concentration given is an approximate value.

E (Organics) - Indicates the analyte 's concentration exceeds the calibrated range of the instrument for that specific analysis.

E (Inorganics) - The reported value is estimated because of the presence of interference.

D - The reported value is from a secondary analysis with a dilution factor. The original analysis exceeded the calibration range.

Demographic Profile

EJSCREEN EJ Indexes

Eleven primary environmental justice (EJ) indexes of EJSCREEN, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJSCREEN provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJSCREEN home page.

Census Block Group EJ Indexes (percentile)	
Particulate Matter (PM 2.5)	87.2
Ozone NATA Diesel PM	86.4
NATA Air Toxics Cancer Risk	90.8
NATA Respiratory Hazard Index (HI)	92.5
Traffic Proximity	79.3
Lead Paint Indicator	97.4
Superfund Proximity	99.5
Risk Management Plan (RMP) Proximity	88.3
Hazardous Waste Proximity	99.8
Wastewater Discharge Proximity	76.1

Number of EJ Indexes Above 80th Percentile
9

Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 US Census and American Community Survey data, and are accurate to the extent that the facility latitude and longitude listed below are correct. The latitude and longitude are obtained from the EPA Locational Reference Table (LRT) when available.

General Statistics	
Total Persons	991,662
Population Density	37,467/sq.mi.
Percent Minority	70%
Households in Area	377,007
Housing Units in Area	412,844
Households on Public Assistance	18,802
Persons Below Poverty Level	449,258

Geography	

Age Breakdown - Persons (%)	
Children 5 years and younger	67,606 (7%)
Minors 17 years and younger	224,159 (23%)
Adults 18 years and older	767,504 (77%)
Seniors 65 years and older	98,250 (10%)

Race Breakdown - Persons (%)	
White	418,365 (42%)
African-American	314,864 (32%)
Hispanic-Origin	307,383 (31%)

Geography

Substance Details

Internal Tracking Number: 1648468
Substance Type: Miscellaneous Object
Systematic Name: Facility-wide permit requirements
Definition:
Permits provide information about the release and management of pollutants at a source, including the identity and amounts of pollutants that can be released and the management practices used to meet pollution control limits.
Additional Metadata

For more information about the substance, you may click one of the links below to take you to the relevant section:

VERSION: RELEASE/4.9.2

Newtown Creek Superfund Site
CAG Technical Meeting
July 24th, 2018

544119

Presentation Overview

- CSTAG Recommendations 2015
- In-depth look at progress made on CSTAG Recommendations
  - NAPL Delineation
  - NAPL Mobility
  - Shoreline Assessment
  - Ebullition
- Path Forward

Contaminated Sediments Technical Advisory Group (CSTAG) Meetings/Recommendations

- CSTAG Recommendations provided (July 2015)
- EPA response outlining goals (October 2015)
- Follow-up meeting with CSTAG (July 2017)
- Many CSTAG recommendation completed - some are ongoing.
- Summary of CSTAG recommendations and progress is summarized in the following slides

Summary of 2015 CSTAG Recommendations

- Recommendation 1/4/9 – Potential sources of recontamination and their significance
- Recommendation 3 – Coordination with NYSDEC
- Recommendation 5 – Lines of evidence for assessing sediment deposition
- Recommendation 6/14 – NAPL impacts and evaluation strategies
- Recommendation 7 – Analyses for evaluating benthic risk
- Recommendation 10 – Approaches for establishing background concentrations
- Recommendation 11/15 – Collection and use of fish contamination data and baseline sampling

Recommendation 1 – Identify all piped conveyances and estimate contributions to contaminant loadings

- Completed point source and groundwater investigations (Dec. 2015)
- Initial modeling of point source loadings and groundwater submitted with Draft RI Report (Nov. 2016). Under revision by the NCG.

Recommendation 4 - Refine Conceptual Site Model (CSM) to more accurately quantify significance of other sources (erosional shorelines, groundwater, and leaking bulkheads)

- Erosional shoreline sediment and shoreline seep sampling conducted in October 2017.
- Round 2 groundwater seepage measurements completed by USGS in June 2017. Report will be used to refine groundwater loading estimate and support groundwater modeling.
- Erosional and seepage data will be incorporated into the revised Draft RI.
- Review of existing upland data/reports to identify potential upland sources in progress.

Recommendation 9 – Develop plan for evaluation of NYCDEP CSO data and non-EPA-approved data

- EPA reviewed NYCDEP CSO data
- NYCDEP CSO dataset is similar to that collected under EPA oversight
- Non-EPA-approved data is evaluated on a case-by-case basis

Recommendation 3 – Increase collaboration with NYSDEC's Clean Water Act program

- NYSDEC participates in project conference calls, meetings, and reviews major documents
- Coordinating with EPA CWA, NYSDEC, and New York City on path forward under Superfund program.

Recommendation 5 – Multiple lines of evidence for assessing sediment deposition

- CSTAG felt sedimentation rates were too high and needed to be reviewed and refined
- Modeling technical working group developing site erosion/deposition rates for various reaches of the creek
- Lines-of-evidence approach being used

Recommendation 6 – Consider using removal action to more quickly remediate NAPL sources

- Ongoing evaluation of the RI data
- NAPL refinement and mobility field work completed in Spring 2018
- EPA is currently assessing potential upland sources

Recommendation 14 – Evaluate ebullition as transport mechanism and NAPL delineation .

Field Investigations:

- Qualitative and Quantitative ebullition surveys ongoing
- Further NAPL delineation and NAPL mobility assessment (completed in Spring 2018)

Recommendation 7 – Analyses for evaluating benthic risk

- Revised Draft BERA to include robust discussion of potential impacts to benthic invertebrates
- Revised draft to be distributed
- This could be a topic discussed in detail at future CAG meetings

Recommendation 10 – Approaches for establishing background concentrations

- Fourteen candidate reference areas, representing four categories, were identified, sampled, and evaluated
- BERA
  - Four areas representing different categories were selected for the BERA
  - All reference areas sampled for contaminants of concern, and physical parameters
  - Newtown Creek data were compared to each individual reference area and to a combined "Reference Envelope" using all four areas as one data set
- RI
  - Background concentration evaluation used all 14 reference areas
  - EPA is currently evaluating background values for the RI

Recommendation 11/15 – Collection and use of fish contaminant data and baseline sampling

- Round 1 biota sampling completed in Spring/Summer 2014
- Round 2 biota sampling is in progress - Spring/Summer 2018
- All rounds include collection fish, crab, and bivalve tissue samples

Recommendation 2 – Meaningful community involvement and outreach efforts

- Community Involvement Plan completed
- Working with CAG on independent meeting facilitator
- Worked with the CAG to install Fishing advisory signage and provide outreach materials in multiple languages

Recommendation 8 – Develop a data management plan

- Data is delivered to Region 2 in accordance with EPA Regional Electronic Data Deliverable (EDD) guidelines
- Data is uploaded to EQuIS environmental database, reviewed, and evaluated

Recommendation 12 – Division of site into smaller decision units

- Site divided in reaches in RI Report for data evaluation (e.g., main stem, turning basin, tributaries)
- Division into smaller decision units will be done in the FS

Recommendation 13 – Bulkheads contribution to contamination and potential for improvements

- Currently being addressed on case-by-case basis
- Collapses/bulkhead modifications under purview of NYSDEC and USACE. EPA coordinates with NYSDEC and USACE on Superfund aspects
- To be evaluated in detail as part of the FS

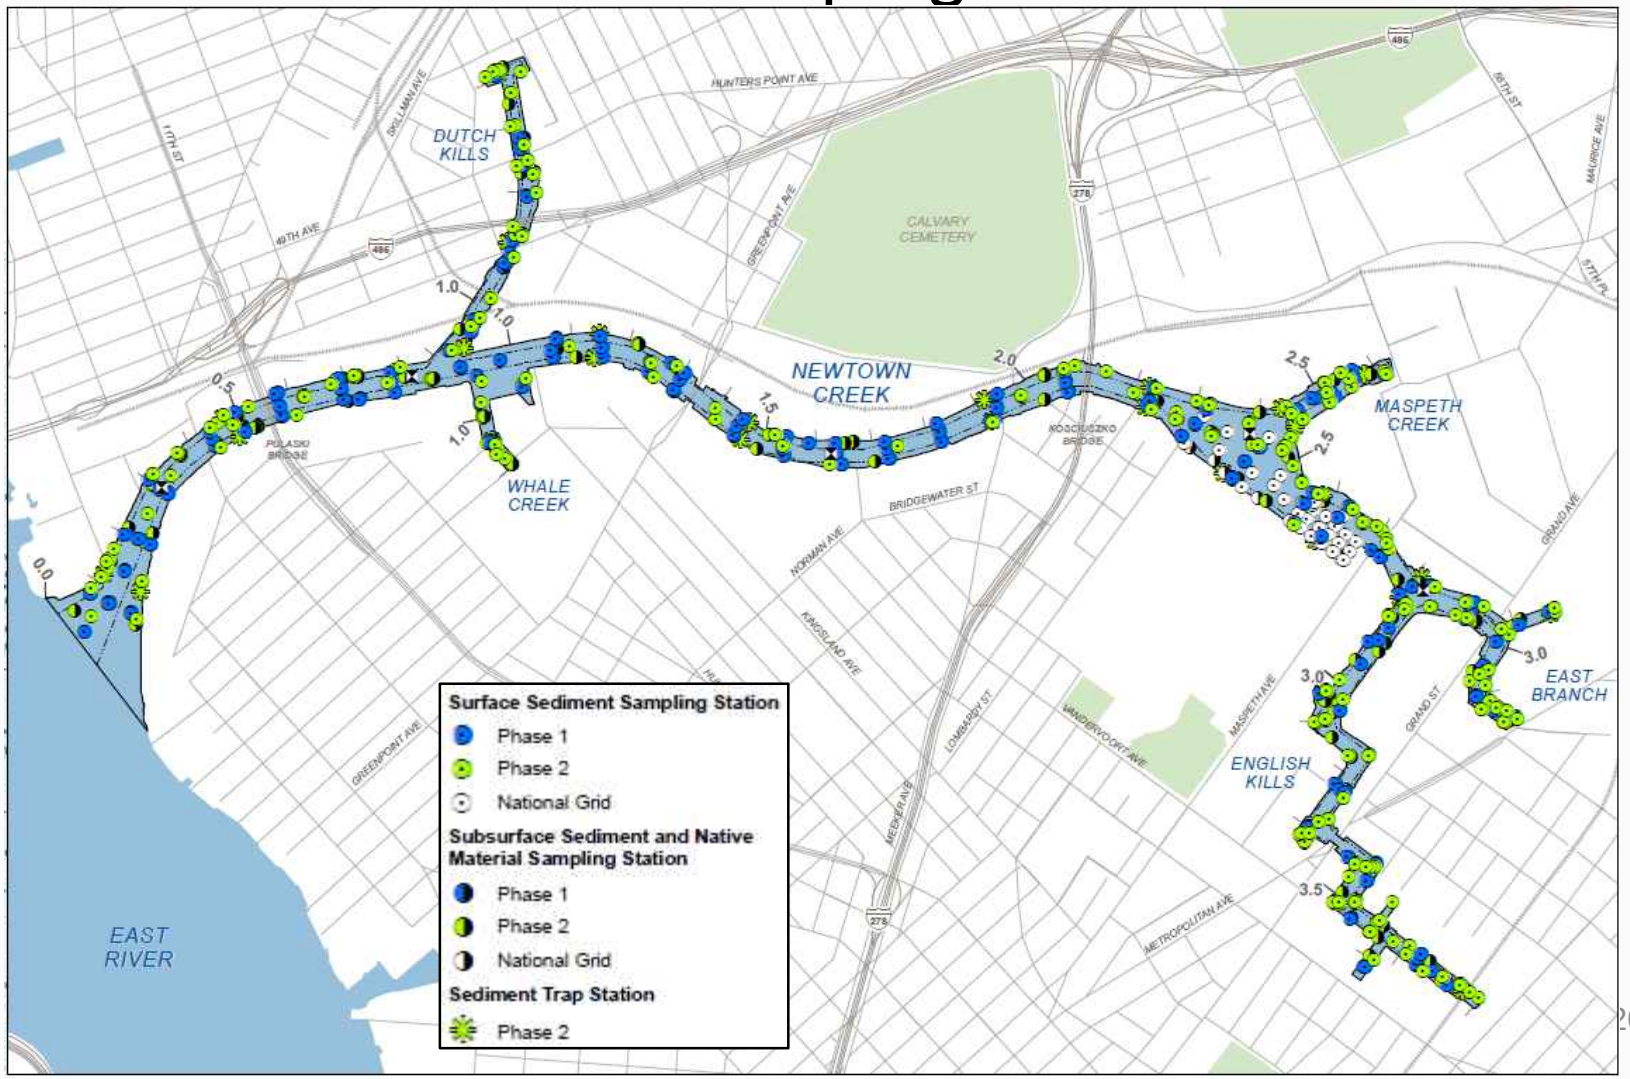
In-depth look at progress

- NAPL Delineation
- NAPL Mobility
- Shoreline Assessment
- Ebullition

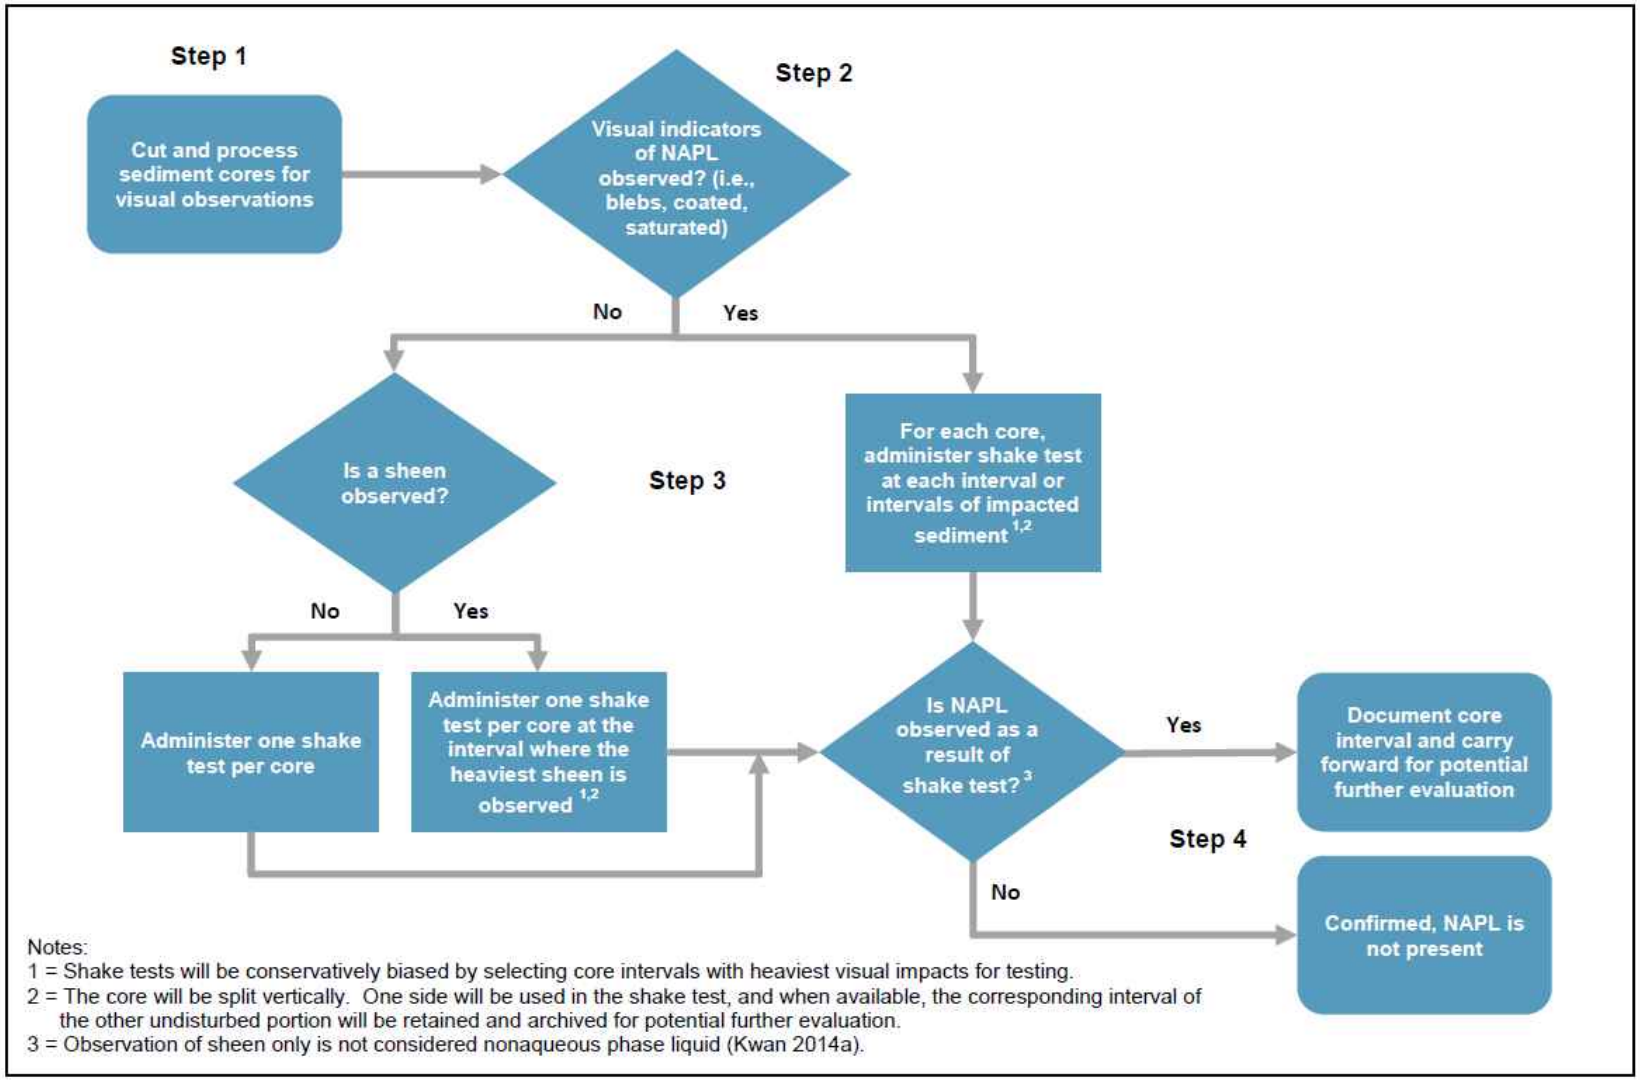
NAPL Delineation

- Phase 1 - Visual observations of cores showed evidence of NAPL in some creek areas
- Phase 2 -
  - Refined NAPL identification process and included standard NAPL visual identification methods and shake testing
  - Developed process for categorizing NAPL in cores (shake test and visual observations)
  - Evaluated Phase 2 NAPL data and Identified key NAPL areas (Category 2/3 areas)
- FS Field Work – Required collection of additional NAPL cores to refine the vertical and horizontal distribution of NAPL in Category 2/3 areas

NAPL Delineation – RI Sampling Locations

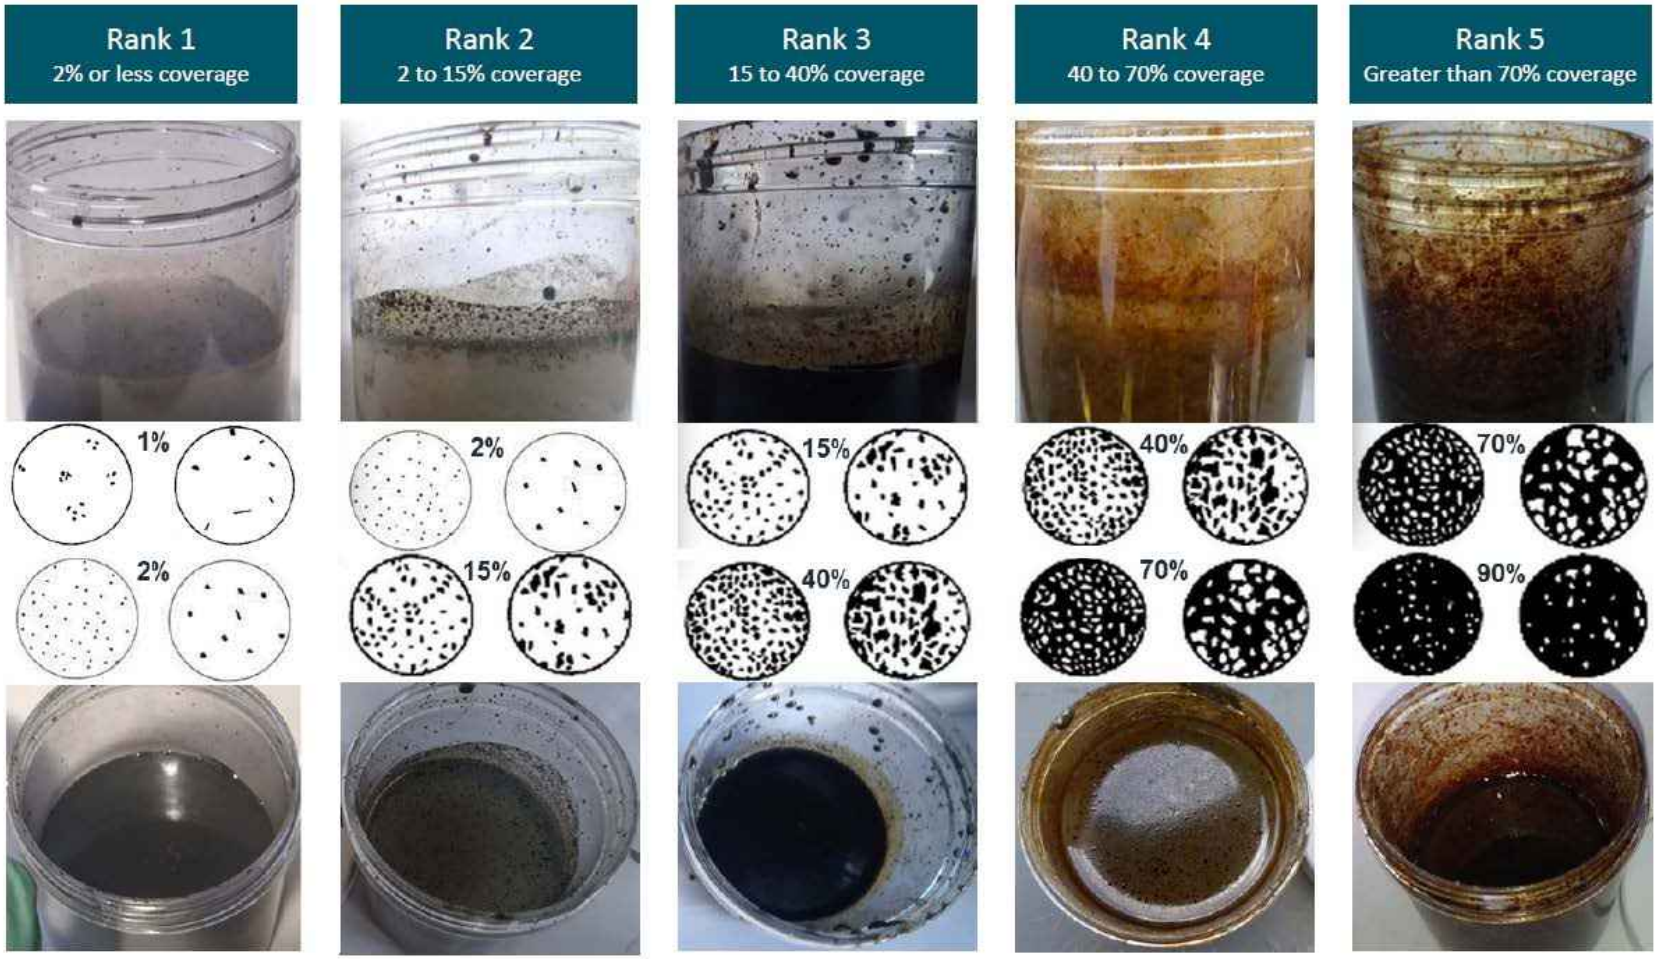


NAPL Delineation – Flow Chart for Field Identification of NAPL



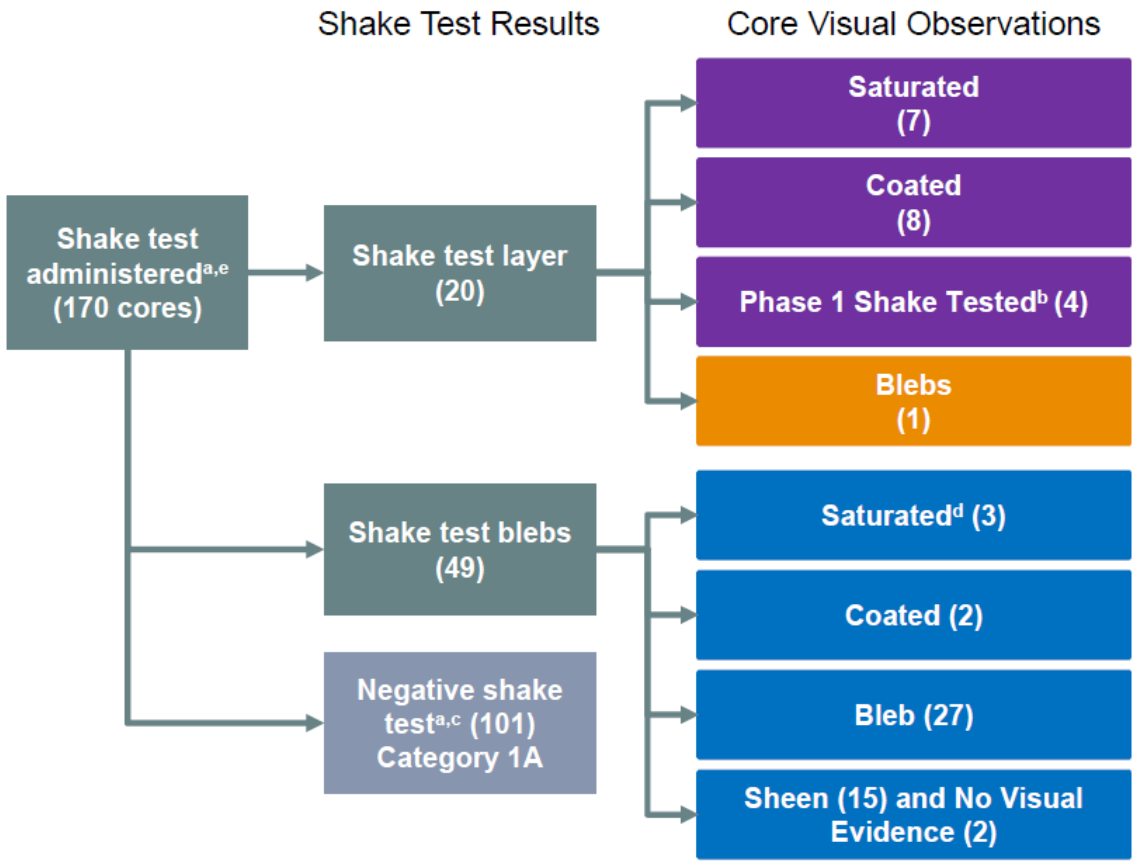
Notes:
1 = Shake tests will be conservatively biased by selecting core intervals with heaviest visual impacts for testing.
2 = The core will be split vertically. One side will be used in the shake test, and when available, the corresponding interval of the other undisturbed portion will be retained and archived for potential further evaluation.
3 = Observation of sheen only is not considered nonaqueous phase liquid (Kwan 2014a).

NAPL Delineation – Shake Test Bleb Rank Scale



Note: Comparison charts for visual estimation depicted above from the *Manual of Field Geology* (Compton 1962).

NAPL Delineation – Flow Chart for Shake Test Evaluation

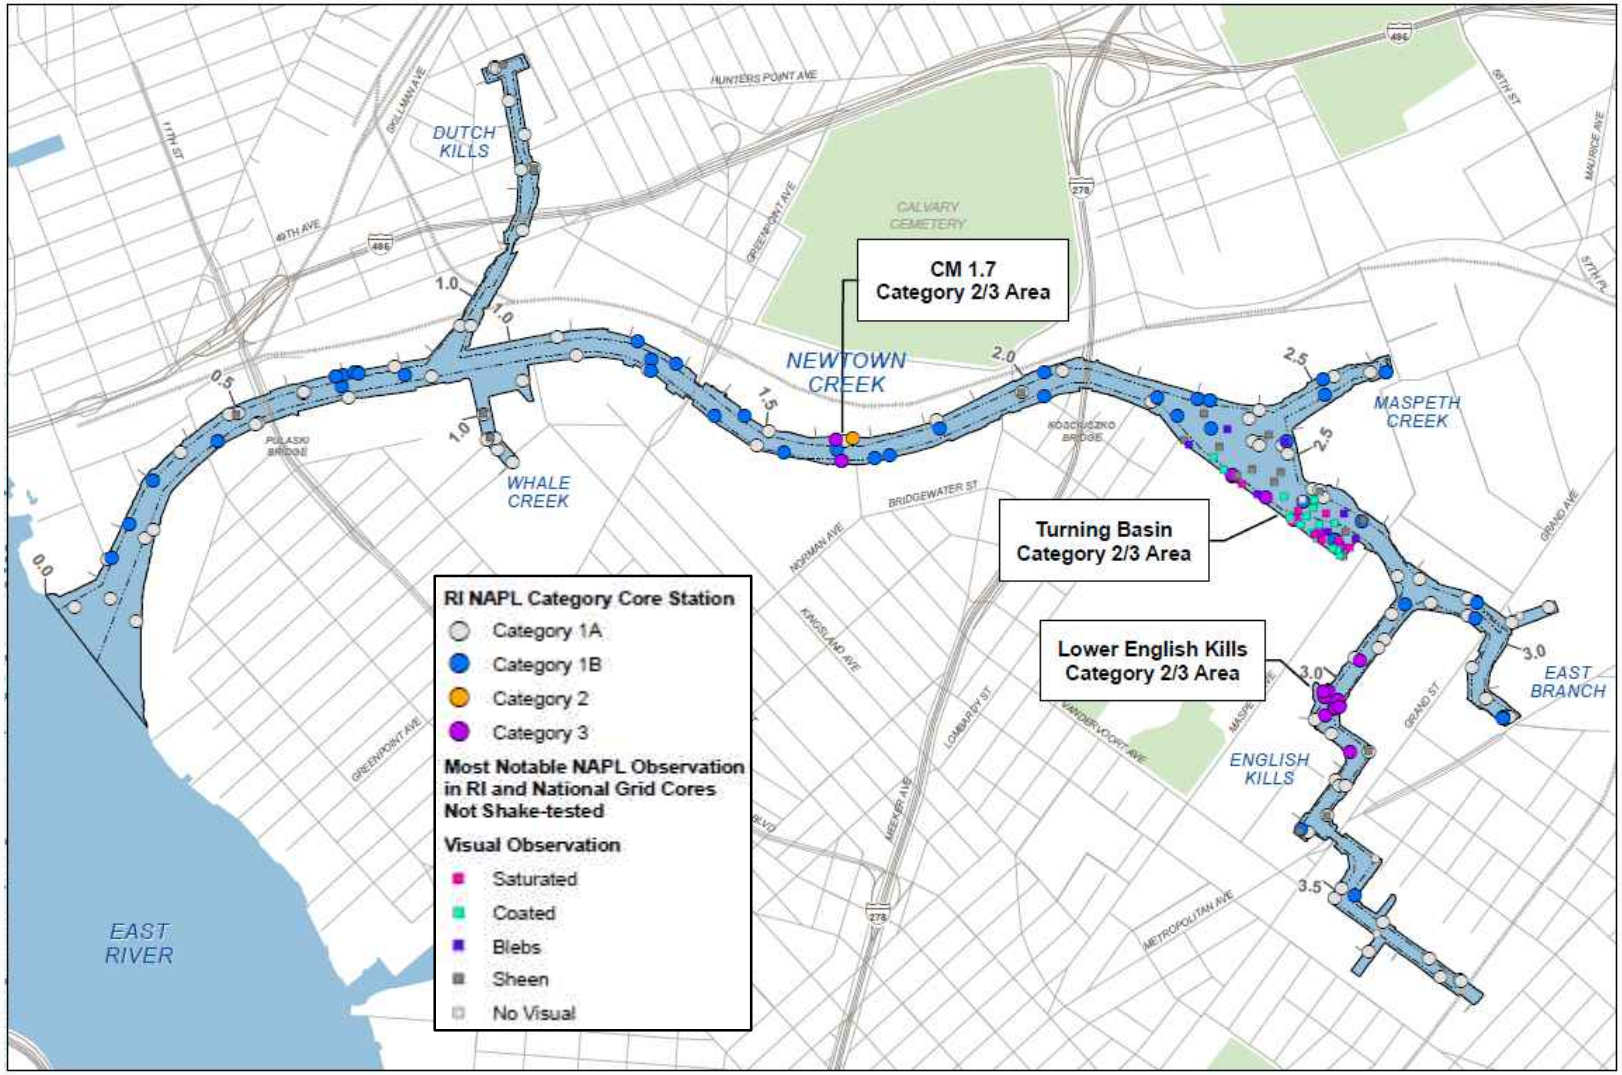


Notes:
a = Includes four additional cores with no visual evidence that were not shake tested—referred to as Phase 2 deviation cores.
b = Phase 1 visual observations include oil-coated and oil-wetted. Cores will be treated as Category 3.
c = Count includes one Phase 1 core with a negative shake test.
d =Three Category 1B cores have saturated visual observations. The shake test for one of these cores (EK093SC-A) was not performed on the saturated visual observation interval. EK093SC-A was evaluated as part of the English Kills area Category 2/3 process.
e =Count includes 19 Phase 1 archive cores processed in Phase 2.

Categories:

3, 2	Further evaluation
1B	Targeted evaluation
1A	No further evaluation

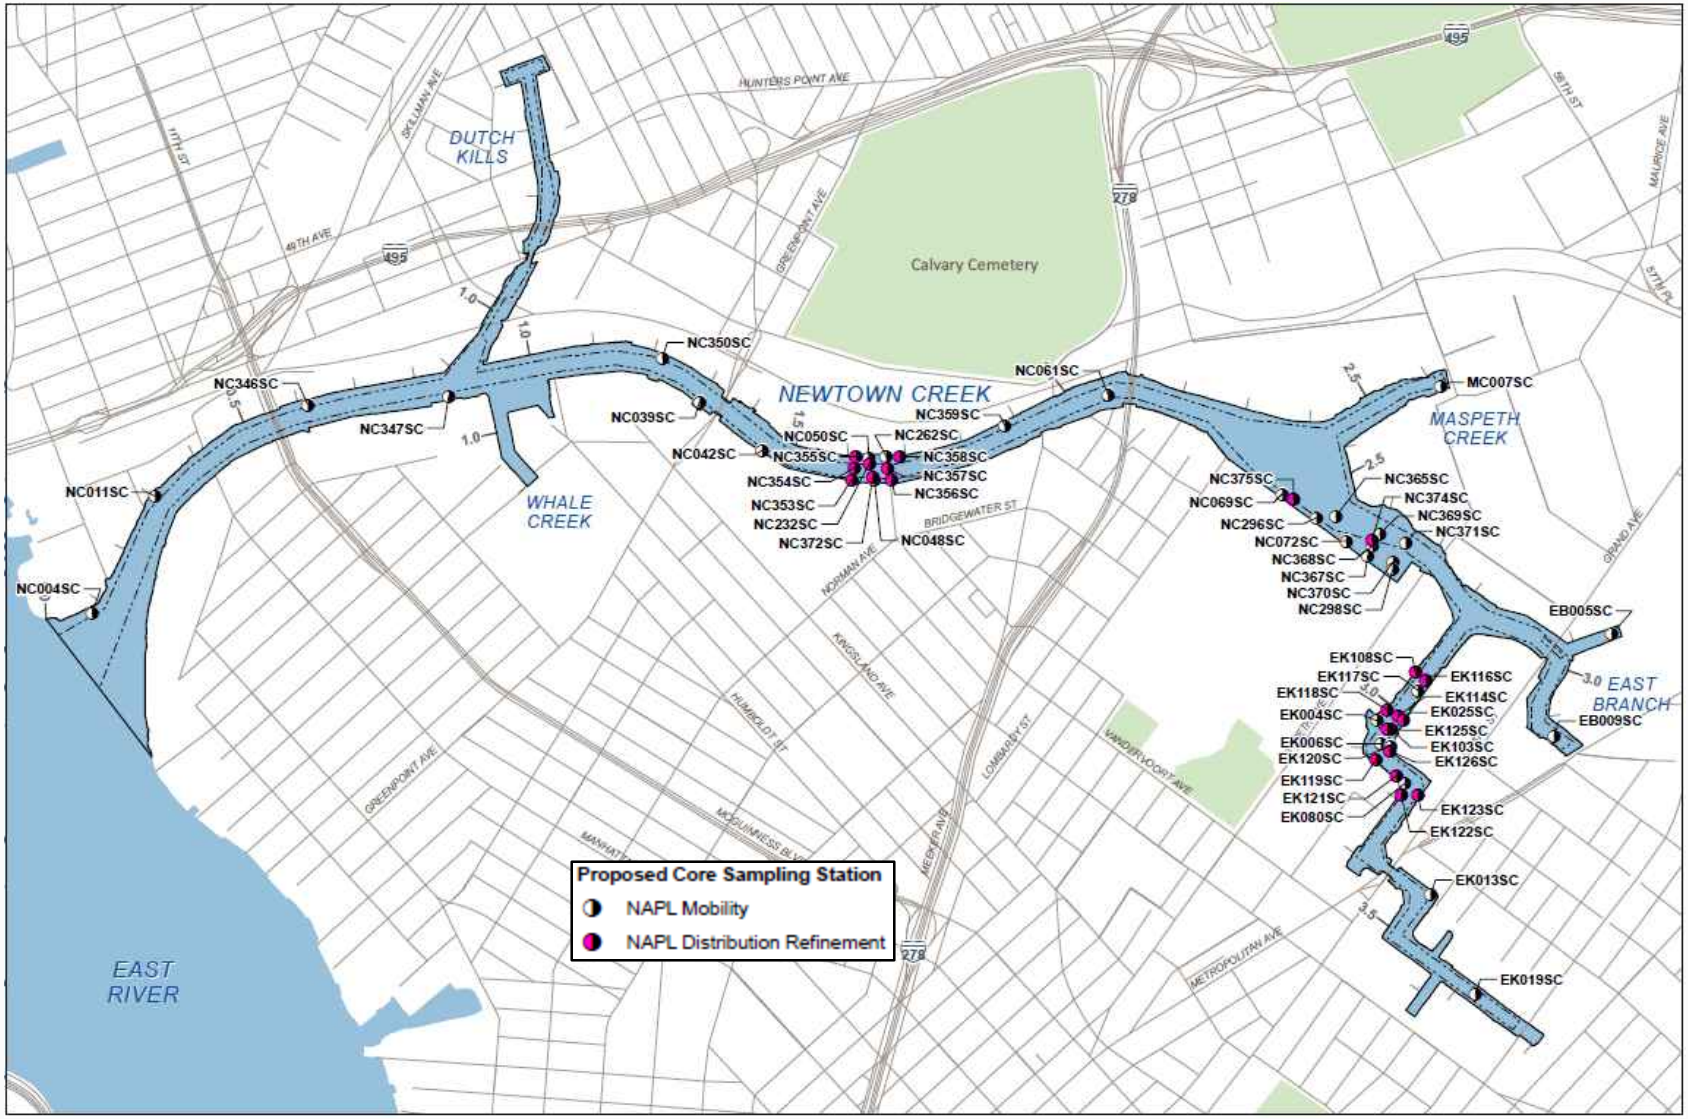
NAPL Delineation – RI NAPL Categories



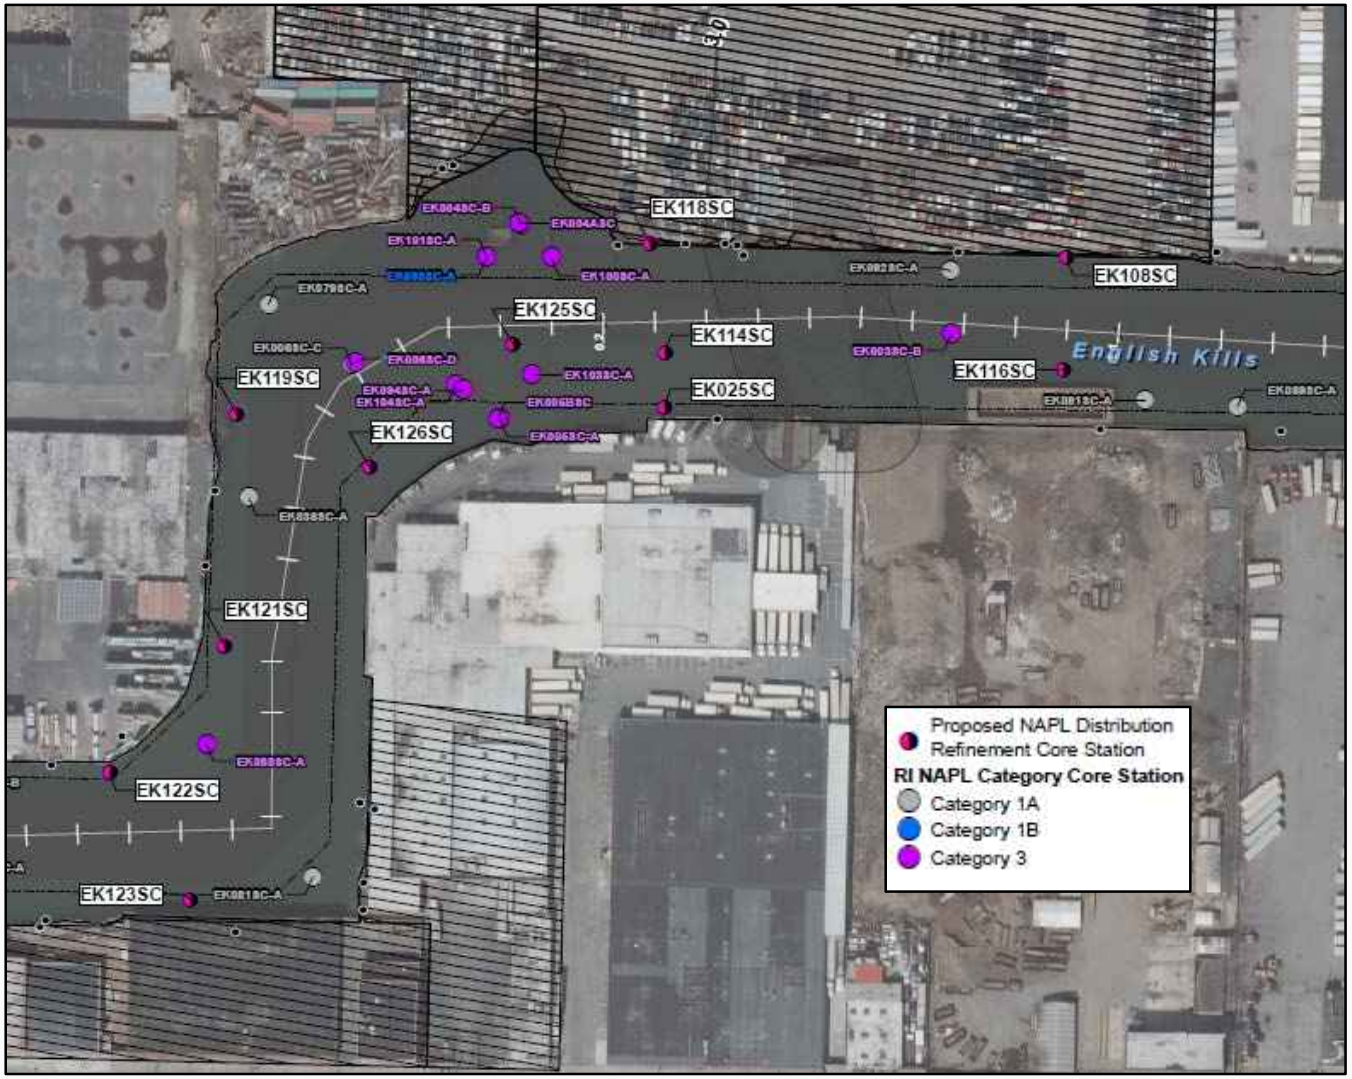
NAPL Distribution Refinement

- Collect and process additional cores in NAPL Category 2/3 areas
- Refine the lateral and vertical boundaries of NAPL in Category 2/3 areas
- Includes core collection, visual observations, and shake tests
- Data will be used to support evaluation of remedial alternative in the FS.

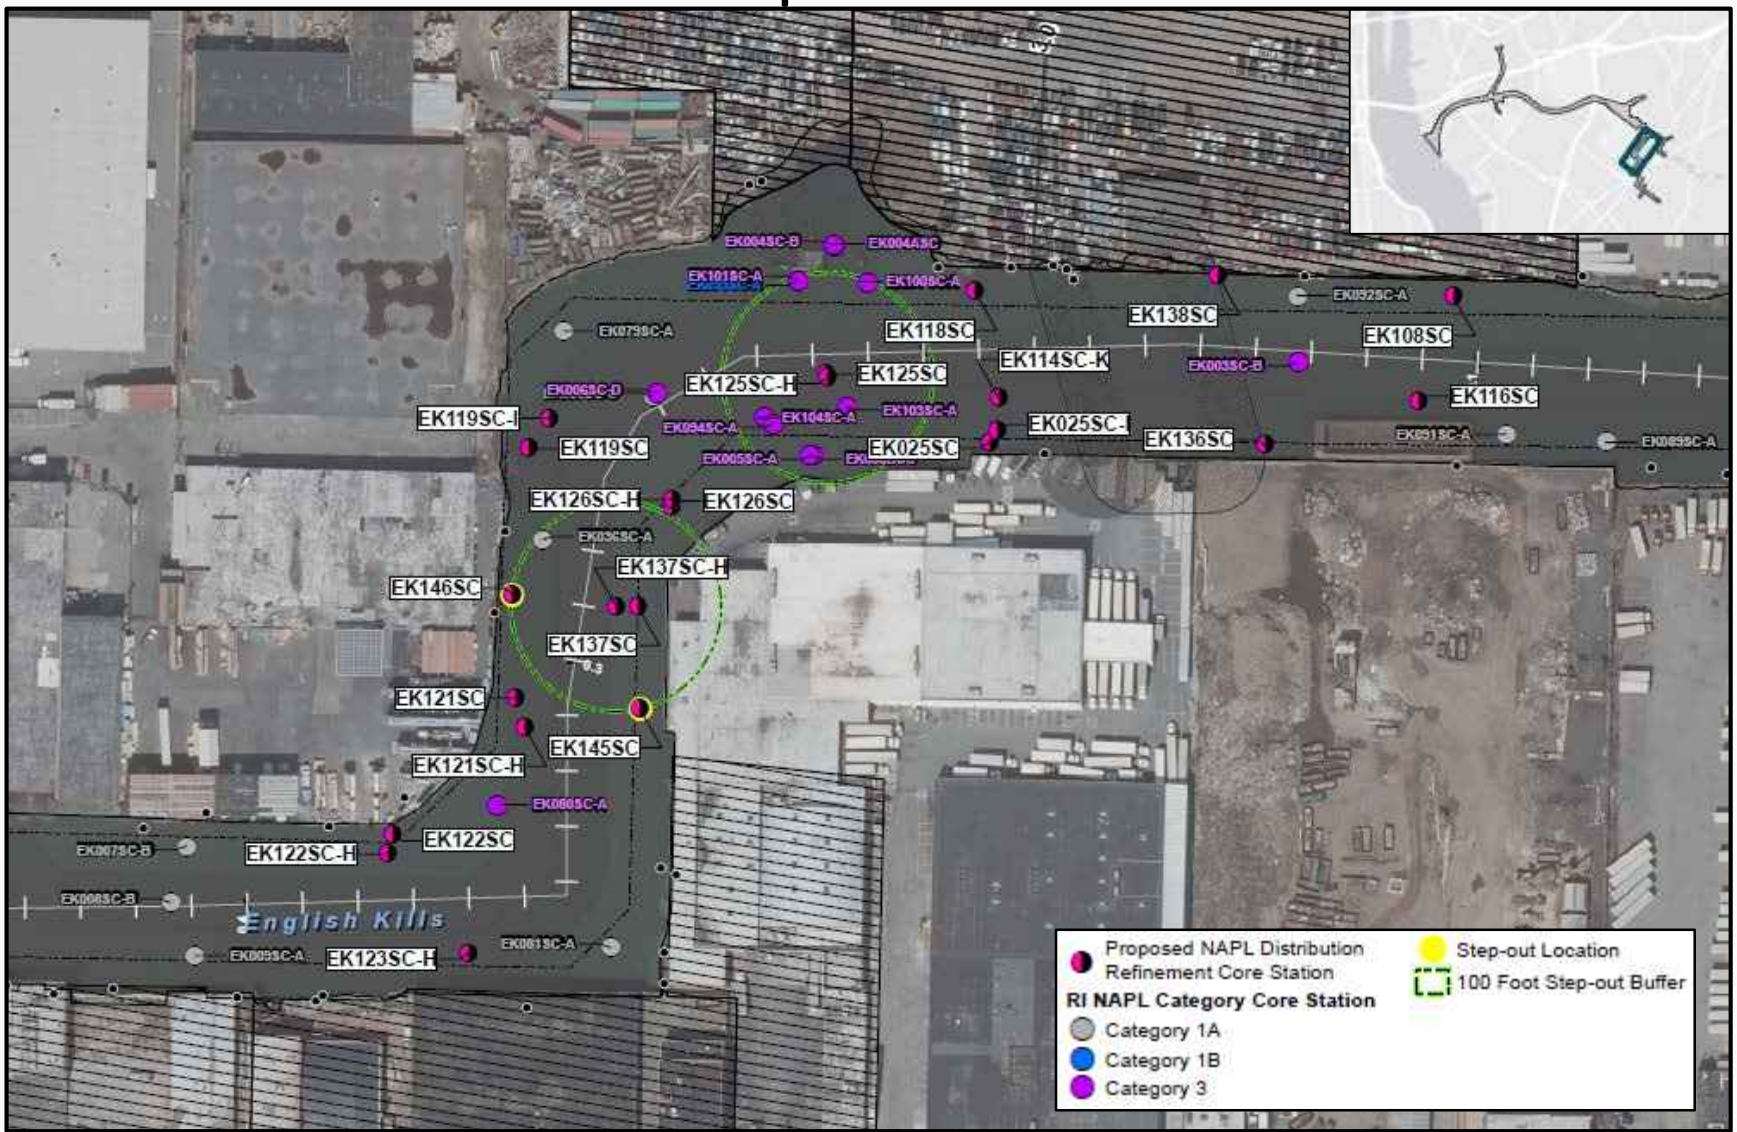
NAPL Refinement – Sampling Locations



NAPL Refinement – Sampling Locations (example English Kills)



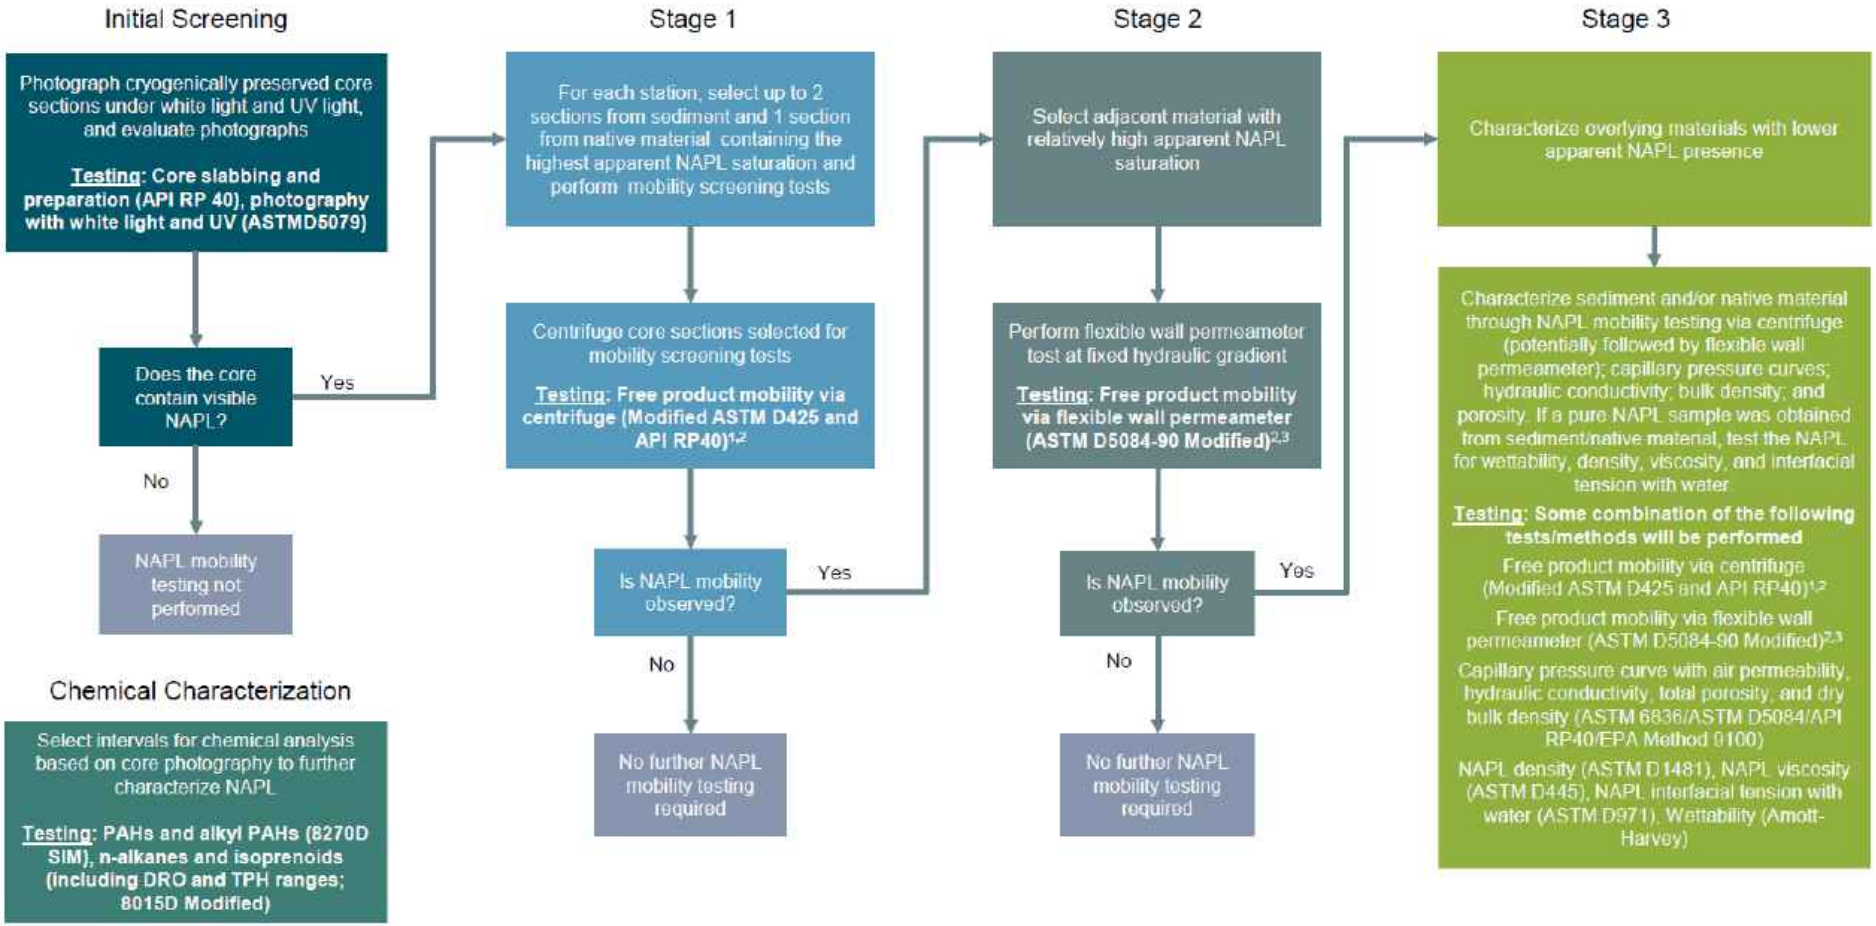
NAPL Refinement – Step-out Cores



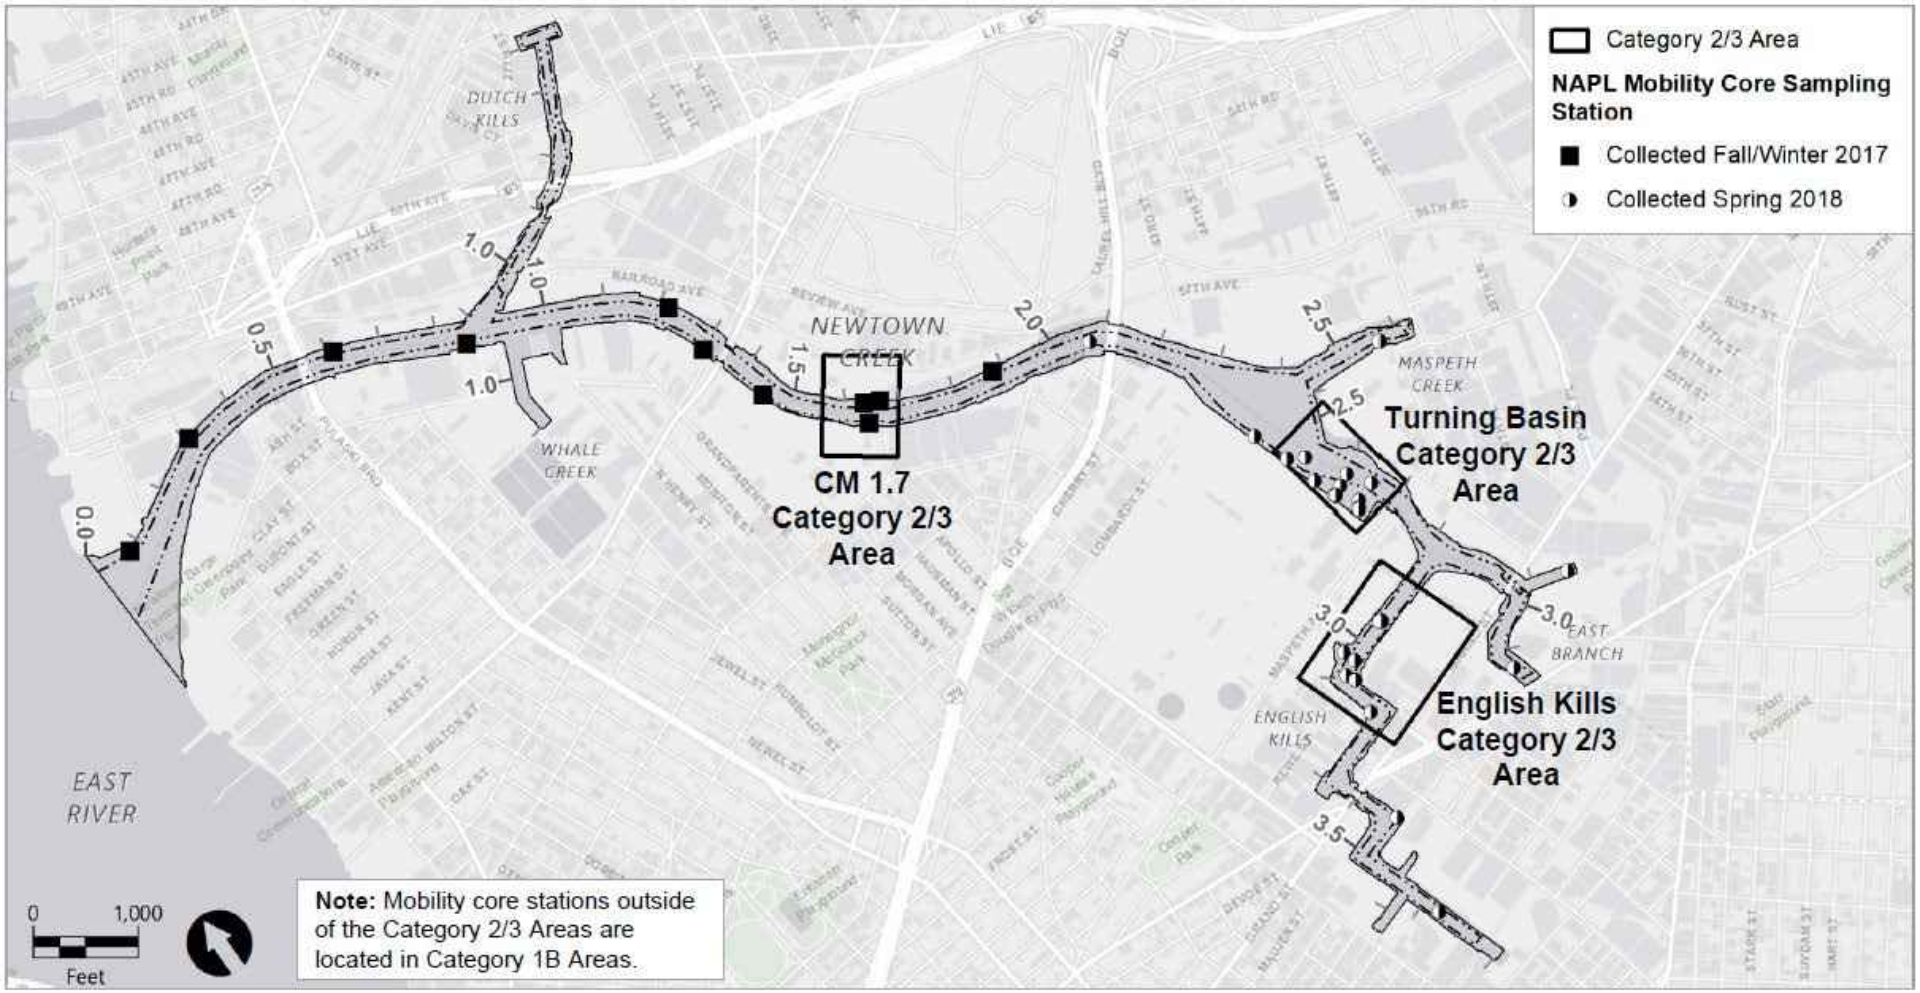
NAPL Mobility

- Characterize NAPL mobility and other physical parameters
  - Characterize potential for mobility in areas most likely to contain potentially mobile NAPL
  - Confirm lack of mobility in areas where RI indicated mobility is unlikely

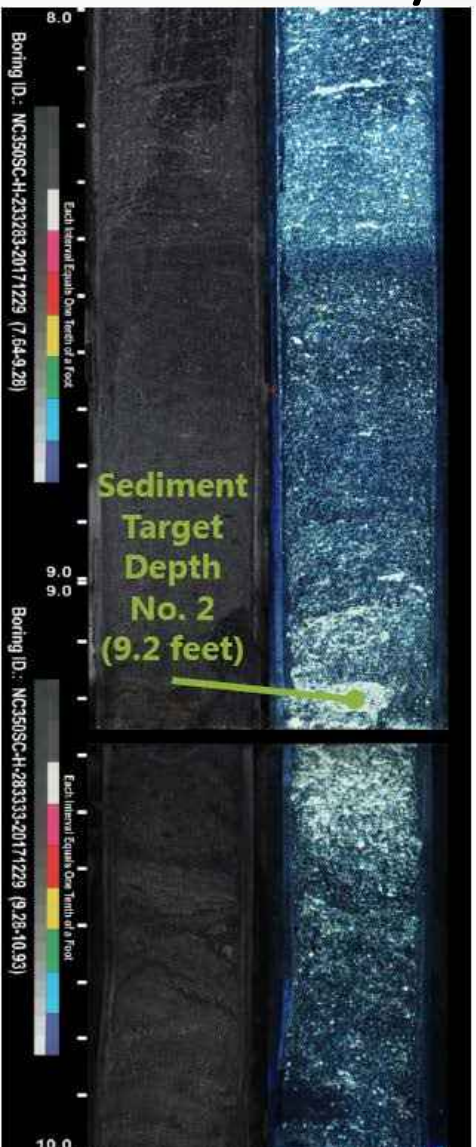
NAPL Mobility – Staged Approach for Testing

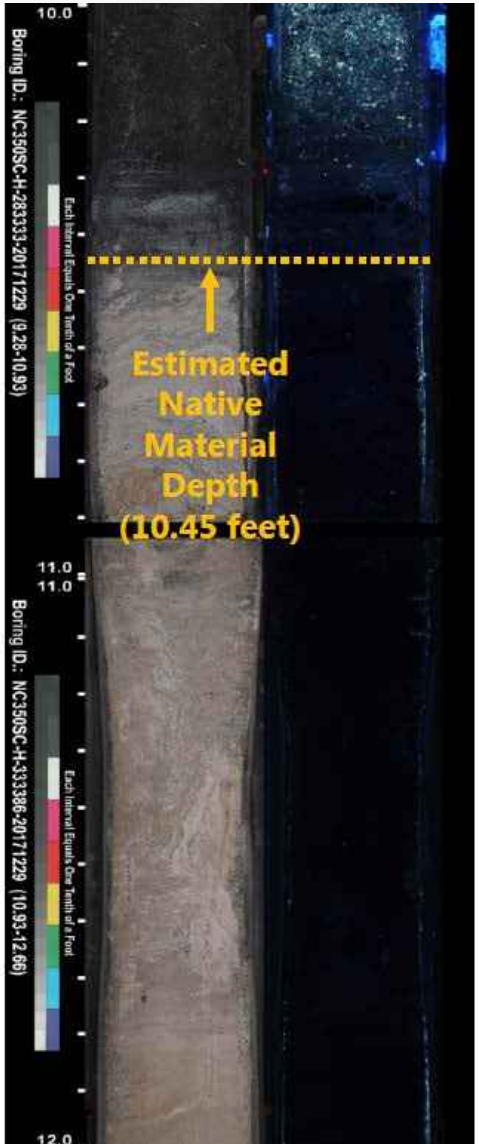


NAPL Mobility – Core Stations



NAPL Mobility





NAPL Mobility Testing Results

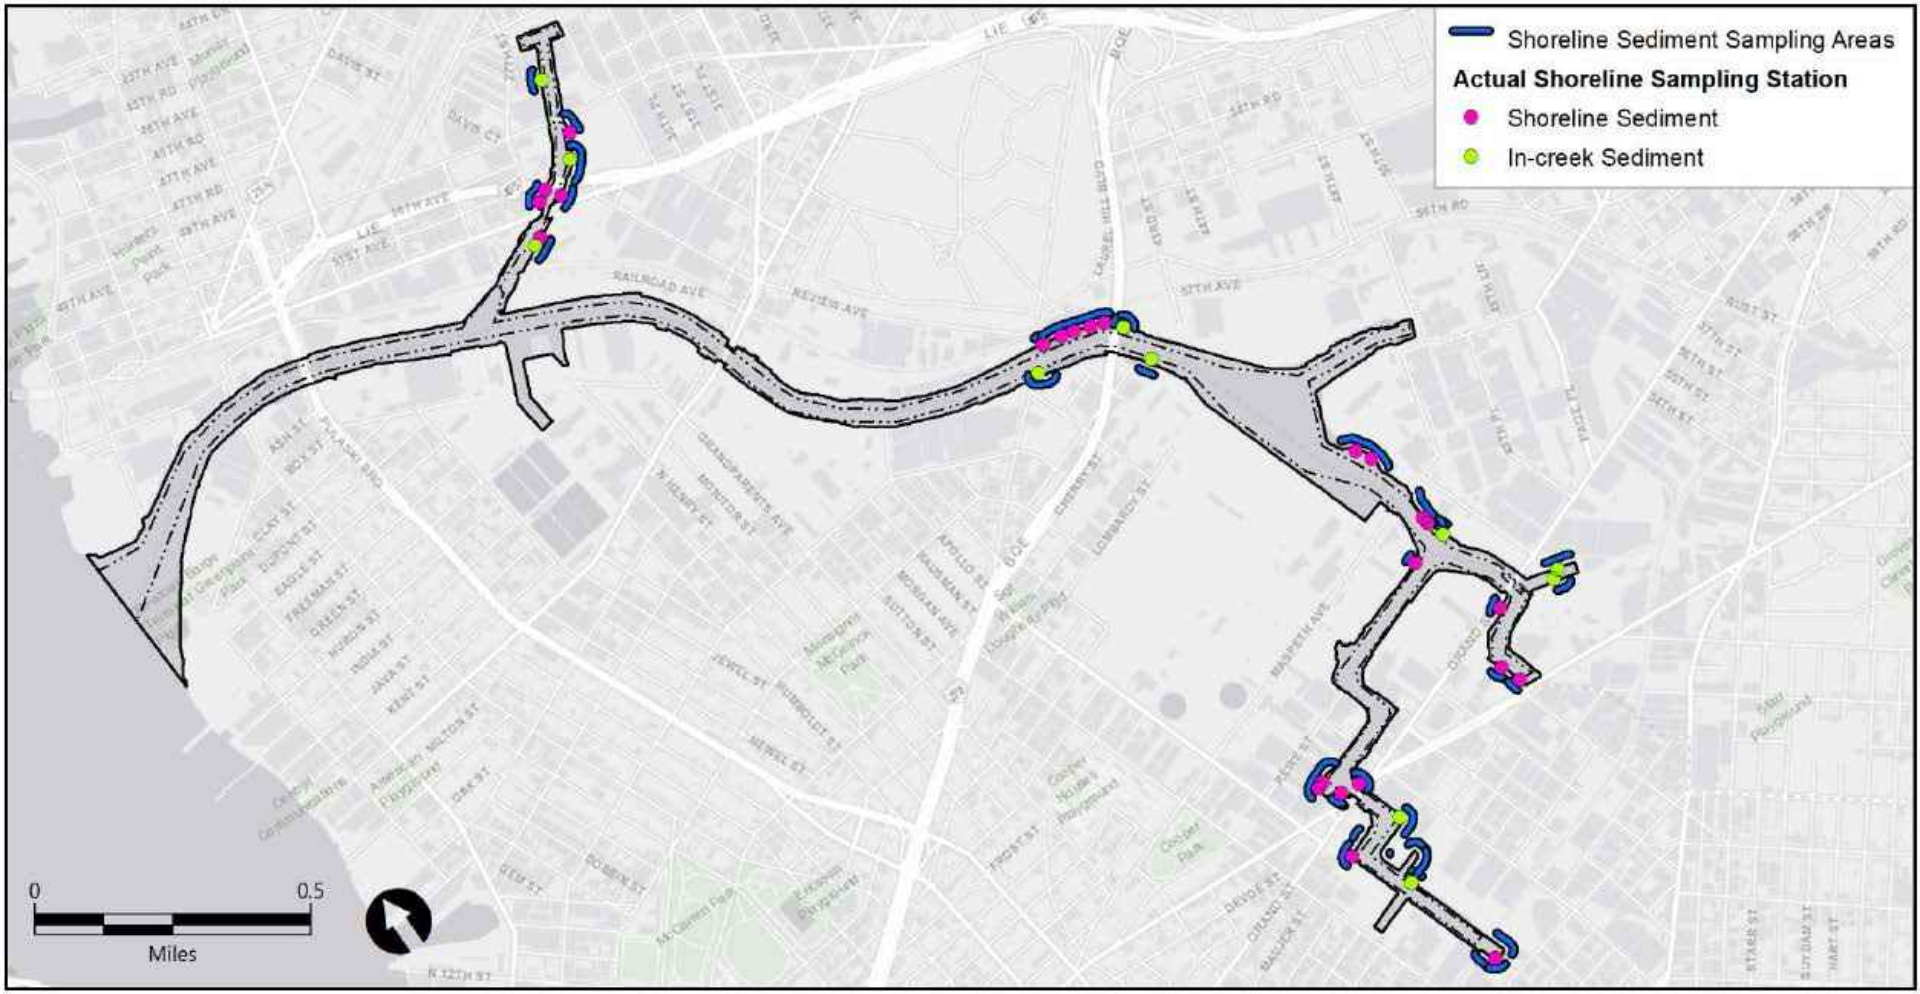
- Initial testing including centrifuging sample at 25 times gravity for 10 hours.
- Initial testing results did not indicate mobile NAPL in the cores tested.
- Testing of cores from other areas of the creek are currently being conducted.

Shoreline Assessment

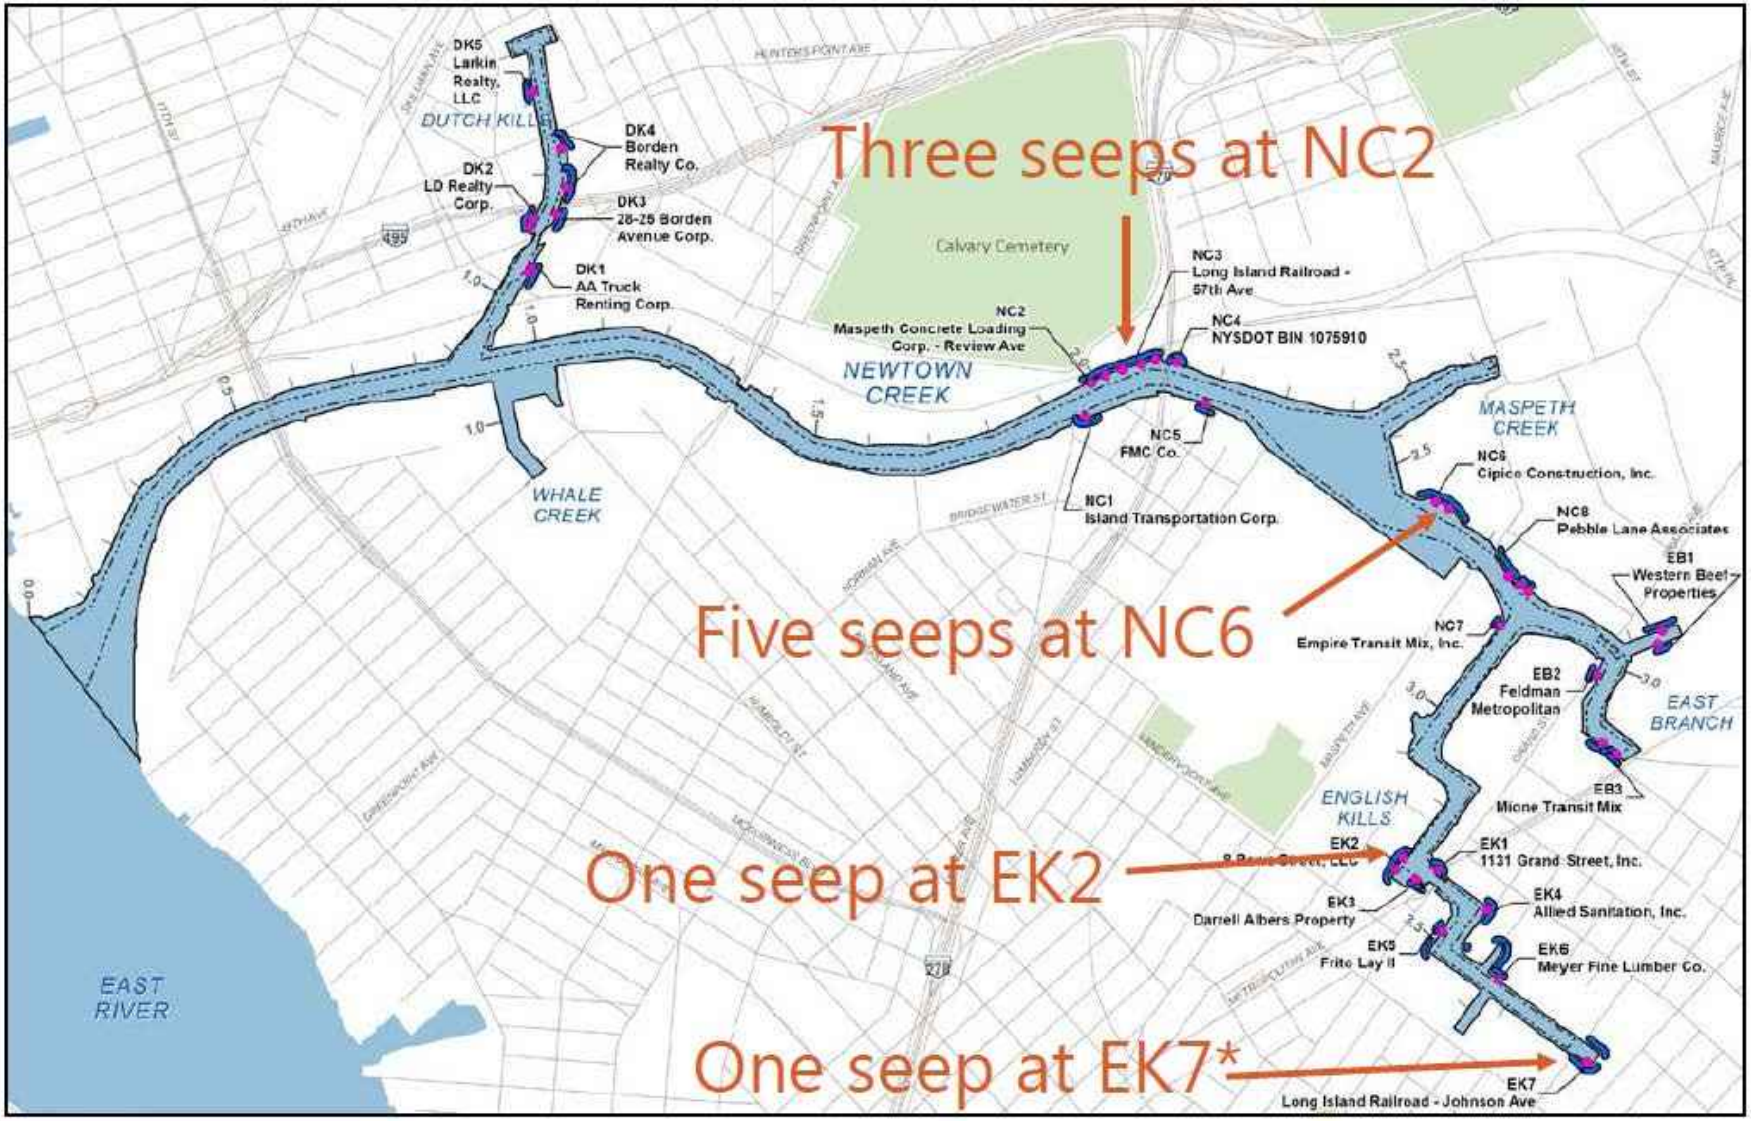
Goal: Further characterize contaminant distributions in and near potentially erodible shorelines and identify potentially significant source areas

- Sediment sampling
  - Prioritized areas of elevated sediment concentrations or data gaps
  - Sampling complete at 23 selected sites (total of 35 samples)
- Opportunistic Seep
  - Nine seeps were sampled

Shoreline Assessment – Sediment Sampling



Shoreline Assessment – Seep Sampling



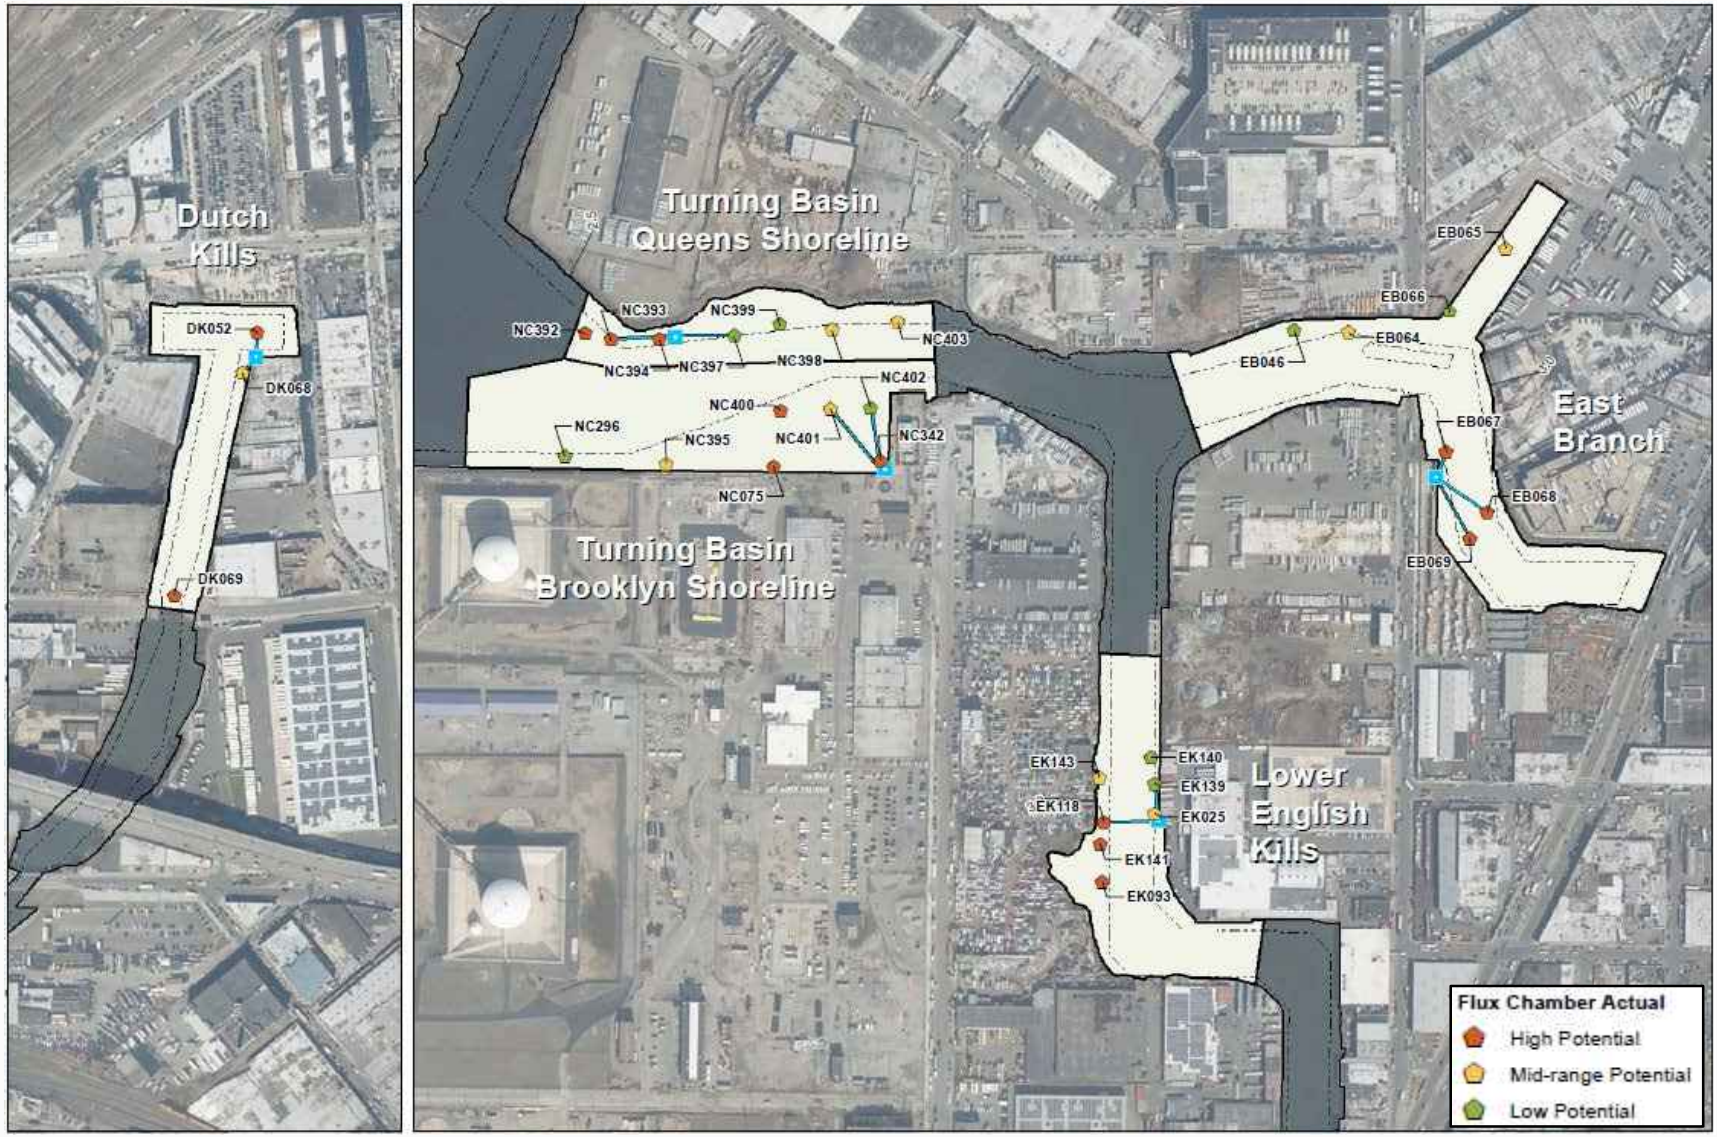
Ebullition

- Goals:
  - Measure upward fluxes of gas and NAPL/contaminants from the mudline to the surface water
  - Evaluate the effect of environmental conditions on gas ebullition-facilitated NAPL/contaminant transport
- Rationale for selecting areas
  - Survey areas were selected to represent the parts of the Creek with the highest gas ebullition-facilitated NAPL transport potential

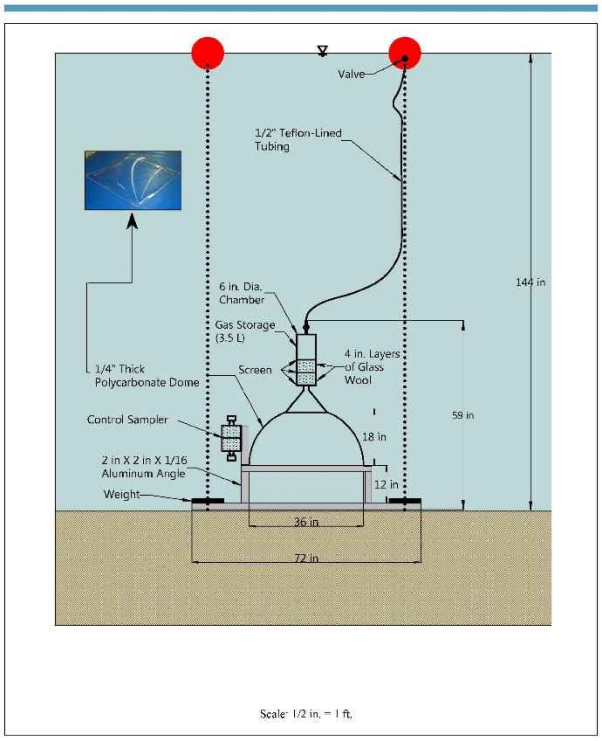
Ebullition Survey and Pilot Study

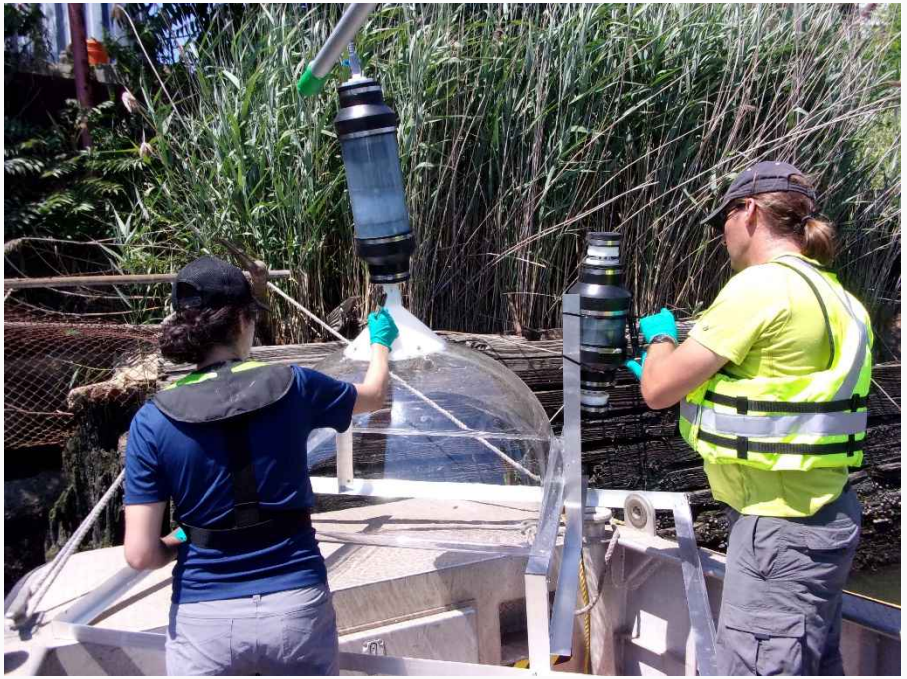
- Completed two qualitative ebullition surveys (2015, 2016)
- Quantitative ebullition pilot test completed in Sept 2017
- First Event of full-scale ebullition quantitative investigation July 2018
- Second full-scale ebullition event scheduled for fall 2018.

FS Field Investigation - Ebullition

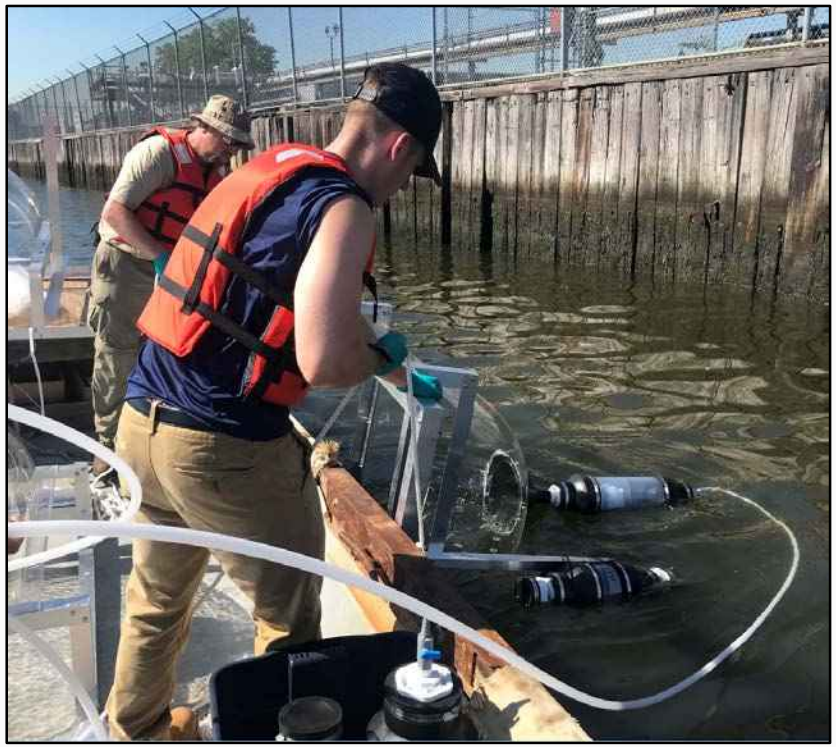


Flux Chambers:





FS Investigation - Ebullition



Next Steps

- RI Report – Final Draft
- RI Modeling – Hydrodynamics and Sediment Transport – Final Draft
- BHHRA – Final
- BERA – Revised Draft

NEW YORK STATE | Department of Environmental Conservation

FACT SHEET

Voluntary Cleanup Program

Popular Hand Laundry
88 Ingraham Street
Brooklyn, NY 11237

SITE No. V00170
NYSDEC REGION 2

December 2017

NYSDEC Certifies Cleanup Requirements Achieved at Voluntary Cleanup Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to Popular Hand Laundry (the "site") located at 88 Ingraham Street, Brooklyn, NY under New York State's Voluntary Cleanup Program (VCP) have been met. Please see the map for the site location.

The cleanup activities were performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. (collectively, the "Volunteer") with oversight provided by NYSDEC. NYSDEC has issued a release letter to the Volunteer regarding the site. Copies of the release letter and Final Engineering Report (FER), which documents the completion of the site remedy, are available at the location(s) identified under "Where to Find Information."

Completion of the Project: The following activities have been completed to achieve the remedial action objectives:

- Installation, operation and maintenance of Air Sparge (AS)/Soil Vapor Extraction (SVE) to address contamination in soil and groundwater beneath the site;
- Installation and operation of a sub-slab depressurization system (SSDS) following termination of the AS/SVE system operations to prevent migration of contaminated vapor into the on-site building;
- Maintenance of a site cover system consisting of the concrete floor slab;
- Publication of a Site Management Plan (SMP) for long-term management of residual contamination as required by the Declaration of Covenants and Restrictions, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting; and
- Recording of a Deed Restriction, documenting required IC/ECs, to prevent future exposure to any residual contamination remaining at the site and to ensure implementation of the SMP.

Final Engineering Report Approved: NYSDEC has approved the FER, which:

- Describes the cleanup activities completed.
- Certifies that cleanup requirements have been achieved for the site.
- Describes any ICs/ECs to be used. An institutional control is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An engineering control is a physical barrier or method to manage contamination such as a surface cap or vapor barrier.
- Certifies that an SMP for any engineering controls used at the site has been approved by NYSDEC.

Next Steps: With receipt of a release letter, the Volunteer has no liability to the State for contamination at or coming from the site, subject to certain conditions. A release letter may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

Where to Find Information:
Project documents are available at the following location(s) to help the public stay informed.

NYSDEC, Region 2 Office
47-40 21st Street
Long Island City, NY 11101
Call in advance: (718) 482-4900

Who to Contact:
Comments and questions are always welcome and should be directed as follows:

www.dec.ny.gov/chemical/8442.html

VOLUNTARY CLEANUP PROGRAM

Site Description and Background: The 0.2-acre site is located on Ingraham Street in Brooklyn, New York and is identified as Section 10, Block 2998 and Lot 19 on the City of New York Tax map. The site is located in a generally industrial neighborhood bounded by Ingraham Street to the north, a commercial property to the south, a commercial property to the east, and a commercial property to the west. The site was formerly occupied by a commercial dry cleaning business. Investigations at the site undertaken prior to the remediation identified chlorinated volatile organic compounds (including the dry cleaning solvent tetrachloroethylene) in soil, groundwater and soil vapor at the site.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the Site ID, V00170) at:

http://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=3

Voluntary Cleanup Program: New York's Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on “greenfield” Site.

For more information about the VCP, visit:

http://www.dec.ny.gov/chemical/8442.html

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.

Receive Site Fact Sheets by Email

Have site information such as this fact sheet sent right to your email inbox. NYSDEC invites you to sign up with one or more contaminated sites county email listservs available at the following web page:

www.dec.ny.gov/chemical/61092.html

It’s quick, it’s free, and it will help keep you better informed. As a listserv member, you will periodically receive site-related information/ announcements for all contaminated sites in the county(ies) you select.

Note: Please disregard if you already have signed up and received this fact sheet electronically.

Demographic Profile

EJSCREEN EJ Indexes

Eleven primary environmental justice (EJ) indexes of EJSCREEN, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJSCREEN provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJSCREEN home page.

Census Block Group EJ Indexes (percentile)	
Particulate Matter (PM 2.5)	87.2
Ozone NATA Diesel PM	86.4
NATA Air Toxics Cancer Risk	90.8
NATA Respiratory Hazard Index (HI)	92.5
Traffic Proximity	79.3
Lead Paint Indicator	97.4
Superfund Proximity	99.5
Risk Management Plan (RMP) Proximity	88.3
Hazardous Waste Proximity	99.8
Wastewater Discharge Proximity	76.1

Number of EJ Indexes Above 80th Percentile

Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 US Census and American Community Survey data, and are accurate to the extent that the facility latitude and longitude listed below are correct. The latitude and longitude are obtained from the EPA Locational Reference Table (LRT) when available.

General Statistics	
Total Persons	995,313
Population Density	37,544/sq.mi.
Percent Minority	70%
Households in Area	377,607
Housing Units in Area	413,426
Households on Public Assistance	18,887
Persons Below Poverty Level	452,376

Geography	
Radius of Selected Area	3 mi.
Center Latitude	40.70713
Center Longitude	-73.93008

Site Record

Administrative Information

Site Name: Ingraham Street Sidewalk GW
Site Code: 224142
Program: State Superfund Program
Classification: P *
EPA ID Number:

Location

DEC Region: 2
Address: Ingraham Street
City: Brooklyn Zip: 11237
County: Kings
Latitude: 40.707155254
Longitude: -73.93008533
Site Type:
Estimated Size: 0 Acres

Site Owner(s) and Operator(s)

Site Description

This site began as a sidewalk groundwater study based on the results of the off-site investigation for the Popular Hand Laundry site (site No.V00170) located at 88 Ingraham Street in East Williamsburg, NY. Location: The site is located in the northern public sidewalk of Ingraham Street across from the Popular Hand Laundry VCP site between Knickerbocker Avenue and Porter Avenue in Kings County, New York. Site Features: The site includes the sidewalk/street area immediately in the vicinity of three monitoring wells placed on the sidewalk across from the Popular Hand VCP site. Current Zoning and Land Use: The site area is zoned as M1-2, which allows for light manufacturing, commercial, limited residential and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately two hundred feet west of the site, along Ingraham Street. Past Use of the Site: Historical uses in the immediate vicinity of the impacted wells includes paper box manufacturing, metal works, drum storage and cleaning, and a dry cleaner. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands

to a depth of approximately 15 feet. Soils beneath the fill layer consist of a sandy silt and silt layer with well-graded sand ranging between 15 to 32 feet below grade. The sandy silt and silt layer is underlain by a sandy silt layer. Depth to groundwater is about 15 feet below grade, and groundwater flow direction based on the latest well elevation survey was determined to be toward the north.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type
trichloroethene (TCE)
cis-1,2-dichloroethene
tetrachloroethene (PCE)
vinyl chloride

Site Environmental Assessment

Nature and Extent of Contamination: The primary contaminants of concern at the site include volatile organic compounds (VOCs), specifically, tetrachloroethene (PCE), trichloroethene (TCE), and associated breakdown products. These chlorinated solvents are found in soil(e.g., at the water interface and saturated zone), groundwater and soil vapor at varying concentrations. While no specific contaminant source area has been identified, historical groundwater sampling suggests that the current contaminant concentrations may have migrated from multiple sources including up-gradient Popular Hand Laundry site (site No. V00170) and are migrating north/northwest. Soil: Based upon investigations to date, soil sampling did not report contaminants of concern at levels exceeding soil cleanup objectives (SCOs) in the vadose (unsaturated) zone. Initial sampling event revealed TCE and PCE in a soil sample (34-35 ft. bgs) at 5 mg/kg (ppm) and 850 ppm, respectively. Additional investigation was conducted in the vicinity of this boring and the maximum detections vs. applicable SCOs are as follows: TCE at 0.54 ppm vs. 0.47 ppm, PCE at 3.4 ppm vs. 1.3 ppm, and Cis-1,2-Dichloroethylen (DCE) at 1.7 ppm vs. 0.25 ppm. Groundwater: PCE, TCE, DCE, and vinyl chloride (VC) contamination in groundwater were generally lower in concentration in the north (south of Johnson Avenue) and reached a maximum concentration in the southern portions of the plume (north of Ingraham Street). Groundwater sampling indicates VOCs contamination above Class GA groundwater standards. Maximum groundwater detections vs. standards are as follows: PCE at 970 parts per billion (ppb) vs. 5 ppb, TCE at 2,400 ppb vs. 5 ppb, DCE at 13,000 ppb vs. 5 ppb, and VC at 770 ppb vs. 5 ppb. Soil Vapor: Elevated levels of VOCs were detected in soil vapor. In general, the highest concentrations of PCE, TCE and DCE in soil vapor were detected on the northern sidewalk of Ingraham Street at the respective concentrations of 3,865 micrograms per cubic meter (ug/m3), 806 ug/m3 and 250 ug/m3. No indoor air samples were collected in the adjacent buildings, access was denied.

Site Health Assessment

People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains its water from a different source that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion on and off-site.

---

* **Class P Sites:** "DEC offers this information with the caution that it should not be used to form conclusions about site contamination beyond what is implied by the classification of this site, namely, that there is a potential for concern about site contamination. Information regarding a Class P site (potential Registry site) is by definition preliminary in nature and unverified because the DEC's investigation of the site is not yet complete. Due to the preliminary nature of this information, significant conclusions or decisions should not be based solely upon this summary."

Site Owner(s) and Operator(s)

Site Description

Location: The site is located at 88 Ingraham Street in Brooklyn, NY. Site Features: It consists of a two story building with an adjoining garage. The building comprises approximately 11,000 sq ft. and occupies the entire site. Current Zoning/Use: The site is currently used as for storage and restoration of antique furniture and artwork. The surrounding area is industrial. Historical Use: Since 1933 the building has been used for skein dying, dry cleaning and laundry operations. The site was acquired by Popular Hand Laundry (circa 1970) which operated dry cleaning services. Prior to 1970, a dry cleaning and laundry facility was operated by Klink. The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type
Hazardous Substances
tetrachloroethene (PCE)
trichloroethene (TCE)

Site Environmental Assessment

Nature and extent of contamination: Post remediation: remediation at the site is complete. prior to remediation, the primary contaminants of concern were the chlorinated solvents tetrachloroethene and trichloroethene in soil, groundwater and soil vapor. Remediation has successfully achieved soil cleanup objectives for commercial and industrial use. Remaining contamination in soil vapor is being managed under a Site Management Plan.

Site Health Assessment

Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

POPULAR HAND LAUNDRY (DAR SITE ID #38)

Address:	88 Ingraham Avenue, Brooklyn, New York 11237 (also known as "Popular Uniform," "Popular Uniform Rental," "Popular Uniform Rental Service," and "Popular Hand Laundry and Cleaners of Richmond Hill, Inc.")
Tax Lot Parcel(s):	Brooklyn Block 2998, Lot 19
Latitude:	40.70716
Longitude:	-73.93008
Regulatory Programs/ Numbers/Codes:	USEPA ID No. NYD020592838, AFS No. 3604700174, NYSDEC Site Code V00170, PBS No. 2-602710
Analytical Data Status:	☐ Electronic Data Available ☒ Hardcopies only ☐ No Data Available

1 SUMMARY OF CONSTITUENTS OF POTENTIAL CONCERN (COPCs) TRANSPORT PATHWAYS TO THE CREEK

The current understanding of the transport mechanisms of COPCs from the upland portions of the Popular Hand Laundry site (site) to Newtown Creek is summarized in this section and Table 1 and supported in following sections.

Overland Transport

The site is located approximately 521 feet from Newtown Creek and associated waterways. This is not a complete historical or current pathway.

Bank Erosion

The site is not adjacent to Newtown Creek or associated waterways. This is not a complete historical or current pathway.

Groundwater

Chlorinated volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals were found at elevated concentrations at the site during investigations conducted between 1996 and 2011 (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Brothers

Environmental Services, Inc. 2006a, 2006b; Tyree Environmental Corp. 2008, 2011; NYSDEC 2011). Groundwater elevation measurements indicate that groundwater flow is northward (Tyree Brothers Environmental Services, Inc. 2006b; NYSDEC 2011); in the direction of English Kills. This pathway is historically complete, and there is insufficient evidence to make a current pathway determination.

Overwater Activities

This site is not adjacent to Newtown Creek or associated waterways and has no overwater activities. This is not a complete historical or current pathway.

Stormwater/Wastewater Systems

This site is within the Newtown Creek Water Pollution Control Plant (WPCP) sewershed. Stormwater and wastewater discharges from the site flow into a combined municipal sewer system. When the combined flows exceed the system's capacity, untreated combined sewer overflows (CSOs) are discharged through Outfall NC-015, which discharges into the southeast end of English Kills, a tributary to Newtown Creek (NYCDEP 2007). Site records indicate intermittent exceedances between 1992 and 1998, including two consecutive years on New York City's Significant Noncompliance List. No current or historical industrial wastewater discharge (IWD) or other permits were found in available documents. To the extent that wastewater discharges are coincident with CSO events, this pathway is potentially historically complete. There is insufficient evidence to make a current pathway determination.

Information regarding on-site stormwater infrastructure and management was not identified in files available for review. There is insufficient evidence to make a historical or current pathway determination for direct discharge of stormwater and wastewater.

Air Releases

The site is listed in the Air Facility System (AFS) as having historical violations, though the nature and extent of these violations are not specified. The AFS also indicates the site likely held an air permit; however, no historical or current permits were located in available documents. Air releases are a potentially complete historical pathway. There is insufficient evidence to make a historical or current pathway determination.

DRAFT

2 PROJECT STATUS

The site is a New York State Department of Conservation (NYSDEC) Voluntary Cleanup Program (VCP) "Class A" site (i.e., a non-registry site in a remedial program where work is underway and not yet complete). The remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. (NYSDEC 2011). Records indicate that the site was a Resource Conservation and Recovery Act (RCRA) hazardous waste large quantity generator (LQG) in 1985 and, most recently, a non-generator in 2007 (EDR 2010). A summary of investigation and remedial activities at the site is provided in the following table:

Activity		Date(s)/Comments
Phase 1 Environmental Site Assessment	☐	
Site Characterization	☐	
Remedial Investigation	☒	Investigations between the years 1996 and 2011 include collection of soil vapor samples, indoor air samples, subsurface soil and groundwater samples (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Brothers Environmental Services, Inc. 2006a, 2006b; Tyree Environmental Corp. 2008, 2011; NYSDEC 2011).
Remedy Selection	☒	Install an air sparging groundwater remediation/soil vapor extraction system, and a groundwater monitoring system (ENB Unknown; Tyree Environmental Corp. 2008).
Remedial Design/Remedial Action Implementation	☒	Site Environmental Assessment conducted including Remedial Investigations as described above. Remediation work is underway and is not yet complete (NYSDEC 2011).
Use Restrictions (Environmental Easements or Institutional Controls)	☐	
Construction Completion	☐	
Site Closeout/No Further Action Determination	☐

4 PROPERTY DESCRIPTION

The site occupies approximately 0.17 acre[1] within the Newtown Creek WPCP sewershed.. A two-story building with an adjoining garage comprises approximately 11,000 square feet and occupies almost the entire site.

The site and surrounding area are zoned for manufacturing. An extensive network of roads and buildings surrounds the site. The area between the site and English Kills consists entirely of impervious surface area and includes two buildings, two main roads, and a paved parking lot as shown in Figure 1. Elevation levels decrease from the site towards English Kills.

[1] Acreage is an approximation of the site tax parcel using geographic information system data.

DRAFT

5 CURRENT SITE USE

The site is currently used for storage and restoration of antique furniture and artwork (NYSDOS 2011).

6 SITE USE HISTORY

Prior to the 1970s, occupants of the site included a skein dyeing operation sometime around 1933, a dry cleaner operation around 1951, and Klink, a dry cleaning and laundry facility (Sanborn 1915a, 1915b; NYSDEC 2011).

88 Ingraham Realty Corporation registered in New York State as a domestic business corporation in November 1971 (NYSDOS 2011). A deed indicated 88 Ingraham Realty Corporation owned the site in 1972 (Zimmerman 1972). Records also indicate Popular Hand Laundry occupied the site sometime around 1970 and operated a dry cleaning service (NYSDEC 2011). 88 Ingraham Realty Corporation and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. operated under the same chief executive officer; therefore, it is likely Popular Hand Laundry operated at the site even though it was owned by 88 Ingraham Corporation (Zimmerman 1972; NYSDOS 2011).

Popular Hand Laundry and Cleaners of Richmond Hill, Inc. merged out of the site in November 1998 (NYSDOS 2011). The site was vacant for a period of time before its current use (EBN Unknown).

7 CURRENT AND HISTORICAL AREAS OF CONCERN AND COPCs

The current understanding of the historical and current potential upland and overwater areas of concern at the site is summarized in Table 1. The following sections provide brief discussion of the potential sources and COPCs at the site requiring additional discussion.

7.1 Uplands

Potential historical and current contaminant sources at the site include equipment and products used in skein dying, dry cleaning and laundry operations (see Attachment 1), and an underground storage tank (UST). The primary COPCs for these sources include

DRAFT

chlorinated VOCs (including tetrachloroethene [PCE], dichloroethylene [DCE], trichloroethene [TCE], vinyl chloride [VC], benzene, ethylbenzene, methylene chloride and total xylenes), SVOCs (including benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[k]fluoranthene, chrysene, dibenz[a,h]anthracene and naphthalene), metals (including arsenic, barium, beryllium, copper, iron, magnesium, manganese, mercury, nickel, sodium, thallium and zinc), and petroleum products (including No. 2 fuel oil).

The site was a registered petroleum bulk storage (PBS) facility (PBS No. 2-602710; NYSDEC 2011). In 1982, a 3,000-gallon steel/carbon steel UST was installed at the site (EDR 2010). Records indicate the UST historically stored No. 2 fuel oil (NYSDEC 2011). The tank was equipped with an overfill product level gauge and secondary containment (synthetic liner); however, was lacking tank leak detection, internal and external tank protection, and external pipe protection (EDR 2010). The tank was closed in January 2001 and removed in January 2002 (EDR 2010; Tyree Environmental Corp. 2011).

The site began generating hazardous waste code F002 in June 1985 (USEPA 1985). The site was classified as a RCRA hazardous waste LQG in 1985 and a non-generator between the years of 1999 and 2007 (EDR 2010). Waste manifests were on file for the site for disposal of waste code F002 (e.g., "halogentated solvents and still bottoms from the recycling of solvent") between the years of 1986 and 1990 (EDR 2010). Available RCRA documents indicate the site received one violation in March 1987 (violation type was unspecified; EDR 2010). According to records, compliance was achieved for this violation.

7.2 Overwater Activities

This site is not adjacent to Newtown Creek or associated waterways and has no overwater activities.

7.3 Spills

Reviewed records did not indicate current or historical spills.

DRAFT

8 PHYSICAL SITE SETTING

8.1 Geology

Generally, soils encountered beneath the site consisted of fill material from 0 to 2 feet below land surface (bls) followed by a glacial moraine (till) consisting of clay, sand, gravel, and boulders from 2 to 13 feet bls (Dvirka and Bartilucci Consulting Engineers 1997).

Records reviewed for this summary indicate a total of 11 soil borings have been completed at the site with limited geologic information recorded. Many of the soil borings only targeted the upper 2 feet of soil encountered beneath the building slab with the remainder terminating at the water table (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Brothers Environmental Services, Inc. 2006b).

8.2 Hydrogeology

Records reviewed for this summary indicate groundwater was detected beneath the site at approximately 12 to 15 feet bls (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Brothers Environmental Services, Inc. 2006b). Local instances of perched water were encountered on the site; however, were limited, and measurements of groundwater elevation indicate that groundwater flow is northward, which is the direction of regional groundwater flow (Tyree Brothers Environmental Services, Inc. 2006b; NYSDEC 2011).

Soil-Vapor Investigations	☒ Yes ☐ No

9.1.1 Soil Investigations

Soil investigations were conducted at the site between the years of 1996 and 2008. Soil samples were generally collected beneath the concrete slab and at other intervals above the water table. Available documents indicate approximately 23 samples were submitted and

analyzed for VOCs, SVOCs, and metals (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Environmental Corp. 2008).

Five of the total 23 soil samples were collected and analyzed prior to the installation of a remediation system at the site in October 2001. Of those samples, analytes that exceeded their respective recommended soil cleanup standards are summarized in the following table:

Analyte	Units	Minimum Soil Concentration	Maximum Soil Concentration
Surface (0 to 2 feet)			
VOCs			
PCE	µg/kg	ND	11,000
SVOCs			
Benzo(a)anthracene	µg/kg	ND	3,600
Benzo(a)pyrene	µg/kg	ND	3,800
Benzo(b)fluoranthene	µg/kg	ND	2,500
Benzo(k)fluoranthene	µg/kg	ND	3,600
Chrysene	µg/kg	ND	3,800
Dibenz(a,h)anthracene	µg/kg	ND	200
Metals			
Arsenic	mg/kg	2.9	33.8
Barium	mg/kg	38.2	404
Beryllium	mg/kg	0.34	0.51
Copper	mg/kg	13.4	329
Iron	mg/kg	15,100	29,400
Mercury	mg/kg	0.33	1.7
Nickel	mg/kg	10	19.2
Zinc	mg/kg	32.4	384
Subsurface (>2 feet)			
VOCs			
DCE	µg/kg	ND	9,500
Metals			
Beryllium	mg/kg	0.68	0.68
Copper	mg/kg	34.8	34.8
Iron	mg/kg	22,900	22,900

DRAFT

Analyte	Units	Minimum Soil Concentration	Maximum Soil Concentration
Mercury	mg/kg	0.73	0.73
Nickel	mg/kg	18.5	18.5
Zinc	mg/kg	73.4	73.4

Notes:
µg/kg – microgram per kilogram
DCE – dichloroethene
mg/kg – milligram per kilogram
ND – not detected
PCE – tetrachloroethene
SVOC – semi-volatile organic compound
VOC – volatile organic compound

In general, soil samples collected at the site indicated low levels of VOCs (Dvirka and Bartilucci Consulting Engineers 1997); however, two COPCs for the site, PCE and DCE, exceeded NYSDEC recommended soil cleanup objectives in both surface and subsurface samples. SVOCs and metals were also found at elevated concentrations at the site, namely iron and zinc; however, it is possible the source of these contaminants was not a result of discharges at the site, but rather characteristic of the fill material that was used to construct the building (Dvirka and Bartilucci Consulting Engineers 1997).

Surface and subsurface soil samples collected and analyzed after installation of the remediation system at the site are discussed in the remediation section of this site summary (Section 10).

9.1.2 Soil-Vapor Investigations

Soil vapor samples and indoor air samples collected at the site during investigations conducted between 1997 and 2006 found PCE, TCE, DCE, and VC at maximum concentrations of 6,104 µg/m^3 for PCE, 2,526 µg/m^3 for TCE, 2,260 µg/m^3 for DCE, and 46 µg/m^3 for VC (Tyree Environmental Corp. 2008; NYSDEC 2011). Sub-slab vapor samples indicated that elevated chlorinated solvents and petroleum products were present, and PCE concentration was detected at maximum concentrations of 572,000 µg/m^3, TCE at 45,200 µg/m^3, and total petroleum VOCs at 15,765 µg/m^3 (NYSDEC 2011).

DRAFT

9.1.3 Soil Summary

Soil investigations conducted at the site prior to the installation of the remediation system indicate exceedances of NYSDEC cleanup values for VOCs, SVOCs, and metals in surface and subsurface soil. Soil-vapor investigations indicate elevated concentrations of chlorinated solvents and petroleum products were also present at the site.

9.2 Groundwater

Groundwater Investigations	☒ Yes ☐ No
NAPL Presence (Historical and Current)	☐ Yes ☒ No
Dissolved COPC Plumes	☒ Yes ☐ No
Visual Seep Sample Data	☐ Yes ☐ No ☒ Not Applicable

9.2.1 Groundwater Investigations

Groundwater investigations were conducted at the site between the years of 1996 and 2011. Groundwater samples were collected from monitoring wells screened across and below the water table. Available documents indicate approximately 38 samples have been collected and analyzed for VOCs, SVOCs, and metals (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Brothers Environmental Services, Inc. 2006a; Tyree Environmental Corp. 2008, 2011).

Nine of the total 38 groundwater samples were collected and analyzed prior to the installation of a remediation system at the site in October 2001. Of those samples, analytes that exceeded their respective recommended groundwater cleanup standards are summarized in the following table:

Analyte	Units	Minimum Groundwater Concentration	Maximum Groundwater Concentration
VOCs			
DCE	ppb	ND	5,500
Benzene	ppb	ND	2
Ethylbenzene	ppb	ND	11
Methylene Chloride	ppb	ND	7

DRAFT

Analyte	Units	Minimum Groundwater Concentration	Maximum Groundwater Concentration
PCE	ppb	ND	550
Total Xylenes	ppb	ND	30
TCE	ppb	ND	470
VC	ppb	ND	460
SVOCs			
Naphthalene	ppb	ND	12
Metals[1]			
Iron	ppb	155	4,120
Magnesium	ppb	24,400	51,300
Manganese	ppb	862	7,830
Sodium	ppb	62,500	150,000
Thallium	ppb	ND	14.9

Notes:
1 – Filtered samples only.
DCE – dichloroethylene
PCE – tetrachloroethene
ppb – part per billion
ND – not detected
SVOCs – semi-volatile organic compound
TCE – trichloroethene
VC – vinyl chloride
VOC – volatile organic compound

Groundwater samples collected at the site indicate historically elevated concentrations of VOCs, SVOCs, and metals. Primary COPCs for the site (i.e., DCE, PCE, TCE and VC) exceeded their NYSDEC groundwater standards of 5 ppb, 5 ppb, 5 ppb, and 2 ppb; respectively (Dvirka and Bartilucci Consulting Engineers 1997; Tyree Environmental Corp. 2008).

Groundwater samples collected and analyzed after installation of the remediation system at the site are discussed in the remediation section of this site summary (see Section 10).

DRAFT

9.2.2 Groundwater Summary

Groundwater investigations conducted at the site prior to the installation of the remediation system indicate exceedances of NYSDEC cleanup values for chlorinated VOCs and metals in groundwater.

9.3 Surface Water

Surface Water Investigation	☐ Yes	☒ No
SPDES Permit (Current or Past)	☐ Yes	☒ No
Industrial Wastewater Discharge Permit (Current or Past)	☒ Yes	☐ No
Stormwater Data	☐ Yes	☒ No
Catch Basin Solids Data	☐ Yes	☒ No
Wastewater Data	☒ Yes	☐ No

9.3.1 Stormwater and Wastewater Systems

Information regarding on-site stormwater infrastructure and management was not identified in documents available for review. This site is within the Newtown Creek Water WPCP sewershed. Stormwater and wastewater discharges from the site flow into a combined municipal sewer system. When the combined flows exceed the system's capacity, untreated CSOs are discharged through Outfall NC-015, which discharges into the southeast end of English Kills, a tributary to Newtown Creek (NYCDEP 2007).

9.3.2 Industrial Wastewater Discharge Permit

An Industrial Pretreatment Program Progress Report indicated that P-Case No. 1448 (Popular Uniform Rental Service) was issued a permit effective May 31, 1995 (NYCDEP 1996). However, no current or historical IWD or other permits were found in available documents.

Industrial Pretreatment Program Progress Reports indicate the site was classified a Tier II P-Case with directives (P-Case No. 1448) site between the years of 1992 and 1994 (NYCDEP 1992, 1993a, 1993b, 1994a). That is, the site was not subject to categorical standards (i.e., a non-significant industrial user [SIU]) and did not discharge more than

DRAFT

25,000 gallons a day of process wastewater to a public sewer. However, the site was still monitored and regulated by the Industrial Wastes Control Section (IWCS) of the New York City Department of Environmental Protection (NYCDEP) Bureau of Clean Water and by the Industrial Pretreatment Program (NYCDEP 1992). "Directives"[2] were control documents requiring P-Case establishments to self-monitor their process wastewater periodically (NYCDEP 1992). Monitoring results for the years 1992 and 1993 show no exceedances at the site (NYCDEP 1992, 1993a). No data were found for 1994. The site was also listed as a Tier II P-Case in 1995 (NYCDEP 1995); no directives were specified and no exceedances for the year 1995 were found in available documents (NYCDEP 1996).

The site was re-classified as a SIU between the years of 1996 and 1998 (NYCDEP 1996, 1997, 1998). A SIU site is one whose operations involve processes that are subject to a nationwide categorical standard. SIU sites are also monitored more rigorously than non-SIU sites. Monitoring results for the years 1996 and 1998 showed no exceedences at the site (NYCDEP 1996, 1998). A 1997 report identified the site as receiving a violation(s) between January 1, 1996, and December 31, 1996, either for discharge exceedances or for late reporting (the specific nature and extent of the violation(s) was not reported in available documents; NYCDEP 1997).

In 2000, the site was reclassified back to a non-SIU (NYCDEP 2000), and in 2001 reclassified from a P-Case to a Z-Case (i.e., the site either went out of business or terminated the process of concern; NYCDEP 2001).

The site was listed on New York City's Significant Noncompliance[3] List for two consecutive years; during the periods of July 1, 1992, to June 30, 1993, and July 1, 1993, to June 30, 1994, (NYCDEP 1994a, 1995). The site was found to be in "significant noncompliance with applicable pretreatment standards and other requirements" as published by NYCDEP in accordance with Title 40 Part 403.8(f)(2) (vii) of the Code of Federal Regulations and Title 15, Section 19-10 (g) of the Rules of the City of New York (NYCDEP 1994a, 1995).

[2] The July 1990 General Pretreatment Regulation amendments, specifying 5-year control documents, transformed "directives" essentially into permits (NYCDEP 1992).
[3] Significant noncompliance is defined in 40 CFR 403.8 (f) (2) (vii) (NYCDEP 1994, 1995).

9.3.3 Wastewater Data

Minimal wastewater data were reported in Industrial Pretreatment Program Progress Reports (NYCDEP 1992, 1993a, 1996, 1997, 1998). The only noted exceedances reported did not include details of the nature or extent of the exceedances.

9.3.4 Surface Water Summary

No information on stormwater infrastructure at the site was available. This site is within the Newtown Creek WPCP sewershed. According to City records, stormwater and wastewater discharges from the site flow into a combined municipal sewer system. When the combined flows exceed the system's capacity, untreated CSOs are discharged through Outfall NC-015, which discharges into the southeast end of English Kills, a tributary to Newtown Creek. Records indicate the site was issued an IWD permit; however, no permits were found in available documents. Industrial Pretreatment Program Progress Reports indicate the site's intermittent classifications as a SIU and non-SIU site between the years of 1992 and 2001. The site has historical violations on file; however, the nature and extent of these violations are unknown. The site was found in 1992 to be in significant noncompliance with applicable pretreatment standards and other requirements.

9.4 Sediment

Creek Sediment Data ☐ Yes ☐ No ☒ Not Applicable

Sediment investigation information was not found in reviewed documents.

9.5 Air

Air Permit ☐ Yes ☒ No

Air Data ☐ Yes ☒ No

9.5.1 Air Permit

The site is listed in the AFS (AFS No. 3604700174) database as being monitored for carbon monoxide (CO), nitrogen oxides (NO_x), particulate matter (PM), sulfur dioxide (SO_2), VOCs, and "facility-wide permit requirements" (USEPA 2011). This suggests that an air permit

exists for the site; however, no historical or current air permits were found in available documents. The AFS database also indicates that the site was in violation in June 1994 and January 2006. Violation types were unspecified (USEPA 2011).

10 REMEDIATION HISTORY (INTERIM REMEDIAL MEASURES AND OTHER CLEANUPS)

Site assessments and VCP activities for the site have been conducted since December 1996. In October 2001, Miller Environmental Group installed a Soil Vapor Extraction (SVE) and Air Sparging (AS) remedial system. The SVE system was maintained by Miller Environmental Group until October 21, 2004. Miller Environmental Group also removed a 3000-gallon UST heating oil tank on January 17, 2002 (Tyree Environmental Corp. 2011).

During a site visit on June 1, 2005, Tyree Environmental Corp. inspected the existing remediation system and found it operating; however, with questionable efficiency because it appeared necessary system maintenance had not been performed (Tyree Brothers Environmental Services, Inc. 2006a).

On December 14 and 15, 2005, Tyree Environmental Corp. conducted a comprehensive subsurface investigation. Six sampling points were installed at varying depths and 18 soil samples and 6 groundwater samples were collected (Tyree Environmental Corp. 2011). Based on the results, the soil samples from 0 to 4 feet below grade (2 total) still exceeded NYSDEC soil cleanup objectives (Tyree Environmental Corp. 2011). Contaminant levels of compounds in the soil in the remaining 16 soil samples were either not detected in the samples or were found at levels below NYSDEC soil cleanup objectives (i.e., soil samples obtained below the depth of 4 feet met NYSDEC soil cleanup objectives). Groundwater samples collected exceeded NYSDEC groundwater standards at the three sampling locations (Tyree Environmental Corp. 2011). Exceedances of NYSDEC cleanup levels are summarized in the following table:

DRAFT

Analyte	Units	Minimum Concentration	Maximum Concentration	NYSDEC Standard
Soil (0 to 4 feet)				
VOCs				
PCE	µg/kg	10	19,400	1,400
Groundwater				
VOCs				
DCE	ppb	47 (14 to 18 feet)	260 (16 to 20 feet)	5
TCE	ppb	5 (26 to 30 feet; 36 to 40 feet)	28 (16 to 20 feet)	5
VC	ppb	2 (24 to 28 feet)	3 (16 to 20 feet)	2

Notes:
µg/kg – microgram per kilogram
DCE – dichloroethylene
NYSDEC – New York State Department of Environmental Conservation
PCE – tetrachloroethene
ppb – parts per billion
TCE- - trichloroethene
VC – vinyl chloride
VOCs – volatile organic compound

Elevated levels of VOC contamination in the soil directly beneath the concrete floor suggest the potential for indoor air quality issues should these compounds volatilize into the interior air space of the building (Tyree Brothers Environmental Services, Inc. 2006a).

As shown in the following table, a comparison of the perched groundwater sampling data to the groundwater data compiled by Dvirka and Bartilucci Consulting Engineers in December 1996 revealed a marked reduction in the levels of VOCs at similar sampling points under the building footprint over the approximate eight year period (Tyree Brothers Environmental Services, Inc. 2006a).

DRAFT

Analyte	Units	1996		June 2005		December 2005	
		Min	Max	Min	Max	Min	Max
Groundwater							
VOCs							
DCE	ppb	ND	5,500	0.2	14.2	47	260
PCE	ppb	ND	87	0.16	5.19	---	---
TCE	ppb	ND	300	---	---	5	28
VC	ppb	ND	440	---	---	0.38	3

Notes:
--- – no exceedance reported
DCE – dichloroethylene
PCE – tetrachloroethene
ppb – parts per billion
ND – not detected
ppb – parts per billion
TCE- - trichloroethene
VC – vinyl chloride

The levels of VOCs in the system wells reported in June 2005 compared with those reported beneath the building in December 2005; however, indicate the radius of influence (ROI) of the existing remediation system limits the system's ability to further reduce the levels of VOCs in the perched groundwater under the building footprint (see Attachment 2; Tyree Brothers Environmental Services, Inc. 2006a).

The AS/SVE system installation was completed in October 2009 and initially started in May 2010 (Tyree Environmental Corp. 2011).

In February 2011, Tyree Environmental Corp. collected 18 groundwater samples at the site with results indicating an overall decrease in contaminant concentrations in all wells, with the exception of one location that contained increased concentrations of breakdown compounds. NYSDEC groundwater standard exceedances were still present for key COPCs, including DCE, PCE, TCE, and VC.

Based upon the data obtained, the system is removing approximately 0.011 pounds per day of VOCs (Tyree Environmental Corp. 2011). Remediation is still ongoing at the site (NYSDEC 2011).

- Storm Drain

NOTES:

1. Outfall Labeling: BB: Bowery Bay; NC(B/Q): Newtown Creek, Brooklyn/Queens; ST: Stormwater.
2. Outfall locations are preliminary, compiled, estimated data based on New York City Department of Environmental Protection (NYCDEP) maps and tabulated data and other resources. Many outfall locations were taken from the New York City Shoreline Survey Program: Newtown Creek Water Pollution Control Plant Drainage Area, NYCDEP, March 31, 2003. Other locations were taken from an excerpt from a similar report from 2008 (the complete report was not included in files available for review). Finally, some outfall locations were inherited from previous Anchor QEA and Newtown Creek Project work. Latitudinal and longitudinal data provided in the 2003 and 2008 NYCDEP reports were rounded to the nearest second. This resulted in potential outfall location discrepancies of up to approximately 200 feet. All outfall locations are currently under field verification.
3. Aerial Photos: New York State Division of Homeland Security and Emergency Services, 2010.
4. Site Boundaries are based on New York City parcels data.
5. Coarse topographic contours are derived from U.S. Geological Survey 10-meter data.

FACT SHEET

Voluntary Cleanup Program

Popular Hand Laundry
88 Ingraham Street
Brooklyn, NY 11237

SITE No. V00170
NYSDEC REGION 2

December 2017

NYSDEC Certifies Cleanup Requirements Achieved at Voluntary Cleanup Site

The New York State Department of Environmental Conservation (NYSDEC) has determined that the cleanup requirements to address contamination related to Popular Hand Laundry (the "site") located at 88 Ingraham Street, Brooklyn, NY under New York State's Voluntary Cleanup Program (VCP) have been met. Please see the map for the site location.

The cleanup activities were performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. (collectively, the "Volunteer") with oversight provided by NYSDEC. NYSDEC has issued a release letter to the Volunteer regarding the site. Copies of the release letter and Final Engineering Report (FER), which documents the completion of the site remedy, are available at the location(s) identified under "Where to Find Information."

Completion of the Project: The following activities have been completed to achieve the remedial action objectives:

- Installation, operation and maintenance of Air Sparge (AS)/Soil Vapor Extraction (SVE) to address contamination in soil and groundwater beneath the site;
- Installation and operation of a sub-slab depressurization system (SSDS) following termination of the AS/SVE system operations to prevent migration of contaminated vapor into the on-site building;
- Maintenance of a site cover system consisting of the concrete floor slab;
- Publication of a Site Management Plan (SMP) for long-term management of residual contamination as required by the Declaration of Covenants and Restrictions, including plans for: (1) Institutional and Engineering Controls (IC/ECs); (2) monitoring; (3) operation and maintenance; and (4) reporting; and
- Recording of a Deed Restriction, documenting required IC/ECs, to prevent future exposure to any residual contamination remaining at the site and to ensure implementation of the SMP.

Final Engineering Report Approved: NYSDEC has approved the FER, which:

- Describes the cleanup activities completed.
- Certifies that cleanup requirements have been achieved for the site.
- Describes any ICs/ECs to be used. An institutional control is a non-physical restriction on use of the site, such as a deed restriction, when contamination left over after the cleanup action makes the site suitable for some, but not all uses. An engineering control is a physical barrier or method to manage contamination such as a surface cap or vapor barrier.
- Certifies that an SMP for any engineering controls used at the site has been approved by NYSDEC.

Next Steps: With receipt of a release letter, the Volunteer has no liability to the State for contamination at or coming from the site, subject to certain conditions. A release letter may be modified or revoked if, for example, there is a failure to comply with the terms of the order or agreement with NYSDEC.

Where to Find Information:
Project documents are available at the following location(s) to help the public stay informed.

NYSDEC, Region 2 Office
47-40 21st Street
Long Island City, NY 11101
Call in advance: (718) 482-4900

Who to Contact:
Comments and questions are always welcome and should be directed as follows:

VOLUNTARY CLEANUP PROGRAM

Site Description and Background: The 0.2-acre site is located on Ingraham Street in Brooklyn, New York and is identified as Section 10, Block 2998 and Lot 19 on the City of New York Tax map. The site is located in a generally industrial neighborhood bounded by Ingraham Street to the north, a commercial property to the south, a commercial property to the east, and a commercial property to the west. The site was formerly occupied by a commercial dry cleaning business. Investigations at the site undertaken prior to the remediation identified chlorinated volatile organic compounds (including the dry cleaning solvent tetrachloroethylene) in soil, groundwater and soil vapor at the site.

Additional site details, including environmental and health assessment summaries, are available on NYSDEC's Environmental Site Remediation Database (by entering the Site ID, V00170) at:

http://www.dec.ny.gov/cfmx/extapps/derexternal/index.cfm?pageid=3

Voluntary Cleanup Program: New York's Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on “greenfield” Site.

For more information about the VCP, visit:

http://www.dec.ny.gov/chemical/8442.html

We encourage you to share this fact sheet with neighbors and tenants, and/or post this fact sheet in a prominent area of your building for others to see.

Receive Site Fact Sheets by Email

Have site information such as this fact sheet sent right to your email inbox. NYSDEC invites you to sign up with one or more contaminated sites county email listservs available at the following web page:

www.dec.ny.gov/chemical/61092.html

It’s quick, it’s free, and it will help keep you better informed. As a listserv member, you will periodically receive site-related information/ announcements for all contaminated sites in the county(ies) you select.

Note: Please disregard if you already have signed up and received this fact sheet electronically.

Demographic Profile

EJSCREEN EJ Indexes

Eleven primary environmental justice (EJ) indexes of EJSCREEN, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJSCREEN provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJSCREEN home page.

Census Block Group EJ Indexes (percentile)	
Particulate Matter (PM 2.5)	87.2
Ozone NATA Diesel PM	86.4
NATA Air Toxics Cancer Risk	90.8
NATA Respiratory Hazard Index (HI)	92.5
Traffic Proximity	79.3
Lead Paint Indicator	97.4
Superfund Proximity	99.5
Risk Management Plan (RMP) Proximity	88.3
Hazardous Waste Proximity	99.8
Wastewater Discharge Proximity	76.1

Number of EJ Indexes Above 80th Percentile

Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 US Census and American Community Survey data, and are accurate to the extent that the facility latitude and longitude listed below are correct. The latitude and longitude are obtained from the EPA Locational Reference Table (LRT) when available.

General Statistics	
Total Persons	995,313
Population Density	37,544/sq.mi.
Percent Minority	70%
Households in Area	377,607
Housing Units in Area	413,426
Households on Public Assistance	18,887
Persons Below Poverty Level	452,376

Geography	
Radius of Selected Area	3 mi.
Center Latitude	40.70713
Center Longitude	-73.93008
Land Area	94%
Water Area	6%

Income Breakdown - Households (%)	
Less than $15,000	80,031 (21.72%)
$15,000 - $25,000	43,700 (11.86%)
$25,000 - $50,000	88,707 (24.07%)
$50,000 - $75,000	62,018 (16.83%)
Greater than $75,000	94,013 (25.51%)

Age Breakdown - Persons (%)	
Children 5 years and younger	68,181 (7%)
Minors 17 years and younger	226,167 (23%)
Adults 18 years and older	769,146 (77%)
Seniors 65 years and older	98,476 (10%)

Race Breakdown - Persons (%)	
White	417,296 (42%)
African-American	321,508 (32%)
Hispanic-Origin	307,546 (31%)
Asian/Pacific Islander	74,424 (7%)

Site Record

Administrative Information

Site Name: Ingraham Street Sidewalk GW
Site Code: 224142
Program: State Superfund Program
Classification: P *
EPA ID Number:

Location

DEC Region: 2
Address: Ingraham Street
City: Brooklyn Zip: 11237
County: Kings
Latitude: 40.707155254
Longitude: -73.93008533
Site Type:
Estimated Size: 0 Acres

Site Owner(s) and Operator(s)

Site Description

This site began as a sidewalk groundwater study based on the results of the off-site investigation for the Popular Hand Laundry site (site No.V00170) located at 88 Ingraham Street in East Williamsburg, NY. Location: The site is located in the northern public sidewalk of Ingraham Street across from the Popular Hand Laundry VCP site between Knickerbocker Avenue and Porter Avenue in Kings County, New York. Site Features: The site includes the sidewalk/street area immediately in the vicinity of three monitoring wells placed on the sidewalk across from the Popular Hand VCP site. Current Zoning and Land Use: The site area is zoned as M1-2, which allows for light manufacturing, commercial, limited residential and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately two hundred feet west of the site, along Ingraham Street. Past Use of the Site: Historical uses in the immediate vicinity of the impacted wells includes paper box manufacturing, metal works, drum storage and cleaning, and a dry cleaner. Site Geology and Hydrogeology: Soil at the site consists of historic fill mixed with silty sands

to a depth of approximately 15 feet. Soils beneath the fill layer consist of a sandy silt and silt layer with well-graded sand ranging between 15 to 32 feet below grade. The sandy silt and silt layer is underlain by a sandy silt layer. Depth to groundwater is about 15 feet below grade, and groundwater flow direction based on the latest well elevation survey was determined to be toward the north.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type
trichloroethene (TCE)
cis-1,2-dichloroethene
tetrachloroethene (PCE)
vinyl chloride

Site Environmental Assessment

Nature and Extent of Contamination: The primary contaminants of concern at the site include volatile organic compounds (VOCs), specifically, tetrachloroethene (PCE), trichloroethene (TCE), and associated breakdown products. These chlorinated solvents are found in soil(e.g., at the water interface and saturated zone), groundwater and soil vapor at varying concentrations. While no specific contaminant source area has been identified, historical groundwater sampling suggests that the current contaminant concentrations may have migrated from multiple sources including up-gradient Popular Hand Laundry site (site No. V00170) and are migrating north/northwest. Soil: Based upon investigations to date, soil sampling did not report contaminants of concern at levels exceeding soil cleanup objectives (SCOs) in the vadose (unsaturated) zone. Initial sampling event revealed TCE and PCE in a soil sample (34-35 ft. bgs) at 5 mg/kg (ppm) and 850 ppm, respectively. Additional investigation was conducted in the vicinity of this boring and the maximum detections vs. applicable SCOs are as follows: TCE at 0.54 ppm vs. 0.47 ppm, PCE at 3.4 ppm vs. 1.3 ppm, and Cis-1,2-Dichloroethylen (DCE) at 1.7 ppm vs. 0.25 ppm. Groundwater: PCE, TCE, DCE, and vinyl chloride (VC) contamination in groundwater were generally lower in concentration in the north (south of Johnson Avenue) and reached a maximum concentration in the southern portions of the plume (north of Ingraham Street). Groundwater sampling indicates VOCs contamination above Class GA groundwater standards. Maximum groundwater detections vs. standards are as follows: PCE at 970 parts per billion (ppb) vs. 5 ppb, TCE at 2,400 ppb vs. 5 ppb, DCE at 13,000 ppb vs. 5 ppb, and VC at 770 ppb vs. 5 ppb. Soil Vapor: Elevated levels of VOCs were detected in soil vapor. In general, the highest concentrations of PCE, TCE and DCE in soil vapor were detected on the northern sidewalk of Ingraham Street at the respective concentrations of 3,865 micrograms per cubic meter (ug/m3), 806 ug/m3 and 250 ug/m3. No indoor air samples were collected in the adjacent buildings, access was denied.

Site Health Assessment

People may come into contact with contaminated groundwater or soil if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains its water from a different source that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion on and off-site.

---

* **Class P Sites:** "DEC offers this information with the caution that it should not be used to form conclusions about site contamination beyond what is implied by the classification of this site, namely, that there is a potential for concern about site contamination. Information regarding a Class P site (potential Registry site) is by definition preliminary in nature and unverified because the DEC's investigation of the site is not yet complete. Due to the preliminary nature of this information, significant conclusions or decisions should not be based solely upon this summary."

Site Owner(s) and Operator(s)

Site Description

Location: The site is located at 88 Ingraham Street in Brooklyn, NY. Site Features: It consists of a two story building with an adjoining garage. The building comprises approximately 11,000 sq ft. and occupies the entire site. Current Zoning/Use: The site is currently used as for storage and restoration of antique furniture and artwork. The surrounding area is industrial. Historical Use: Since 1933 the building has been used for skein dying, dry cleaning and laundry operations. The site was acquired by Popular Hand Laundry (circa 1970) which operated dry cleaning services. Prior to 1970, a dry cleaning and laundry facility was operated by Klink. The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north.

Contaminants of Concern (Including Materials Disposed)

Contaminant Name/Type
Hazardous Substances
tetrachloroethene (PCE)
trichloroethene (TCE)

Site Environmental Assessment

Nature and extent of contamination: Post remediation: remediation at the site is complete. prior to remediation, the primary contaminants of concern were the chlorinated solvents tetrachloroethene and trichloroethene in soil, groundwater and soil vapor. Remediation has successfully achieved soil cleanup objectives for commercial and industrial use. Remaining contamination in soil vapor is being managed under a Site Management Plan.

Site Health Assessment

Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

To: Deirdre Casey
Subject: FOIA Request EPA-R2-2019-006719 Submitted

This message is to confirm your request submission to the FOIAonline application: View Request. Request information is as follows:

- Tracking Number: EPA-R2-2019-006719
- Requester Name: Deirdre Casey
- Date Submitted: 06/21/2019
- Request Status: Submitted
- Description: Re: Freedom of Information Request
  440-448 Johnson Avenue (Block 2992, Lot 17)
  450 Johnson Avenue (also 83-89 Ingraham Street) (Block 2992, Lot 21)
  79-81 Ingraham Street (Block 2992, Lot 55)
  Brooklyn, New York
  Langan Project No. 170588001

  Dear Sir or Madam:

  Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.
  The Subject Property is located at 440-448 Johnson Avenue, 450 Johnson Avenue (also 83-89 Ingraham Street) and 79-81 Ingraham Street in Brooklyn, New York. The Subject Property comprised of three lots referenced as Block 2992, Lots 17, 21, and 55. The Subject Property is bound by parking lots for FedEx and LIRR to the north, two four-story industrial/commercial buildings to the east, a parking lot/storage area and a number of 1-2 story industrial/commercial buildings to the south, and a parking lot/storage area and a two-story industrial/commercial building to the west.

  Please contact me at 212-479-5650 with any questions or send your response to my attention at dcasey@langan.com or at the below address:

  Langan Engineering and Environmental Services, P.C.
  21 Penn Plaza
  360 West 31st Street, 8th floor
  New York, New York 10001-2727

  Thank you in advance for your cooperation.

  Sincerely,

  Langan Engineering, Environmental, Surveying

and Landscape Architecture, D.P.C.

Deirdre Casey

EPA-HQ-2019-006719 has been processed with the following final disposition: Full Grant.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Washington, D.C. 20460

OFFICE OF
GENERAL COUNSEL

JUN 25 2019

Ms. Deirdre Casey
Langan Engineering, Environmental, Surveying,
Landscape Architecture and Geology, D.P.C
360 West 31st Street, 8th Floor
New York, NY 10001

RE: Request Number EPA-HQ-2019-006719

Dear Ms. Casey:

This letter is in response to your Freedom of Information Act (FOIA) request, identified above, that you submitted to the U.S. Environmental Protection Agency (EPA). Your request is seeking records concerning:

440-448 Johnson Avenue. Brooklyn, New York
450 Johnson Avenue, Brooklyn, New York
83-89 Ingraham Street, Brooklyn, New York
79-81 Ingraham Street, Brooklyn, New York

The information that you are seeking about a specific property is publicly available through the EPA's MyProperty online database.

The MyProperty database below will provide you with information concerning records the EPA has about a specific property, and it can be accessed at the website at the link below:

http://www.epa.gov/myproperty/

Because the information you requested is publicly available, your FOIA request for this information will be closed. Agencies are not required to provide FOIA requesters with records that fall within the proactive disclosure provision of the FOIA, subsection (a)(2), and which are already made available to the public, typically on the agency's website. See, 5 U.S.C. § 552(a)(3); 40 C.F.R. § 2.101(c).

If no responsive records are identified, MyProperty will generate a "No Records Certificate."

If MyProperty identifies responsive records that you cannot retrieve them through MyProperty or if you need help with the MyProperty website, please contact EPA's FOIA Public Liaison at hq.foia@epa.gov or (202) 566-1667.

This letter concludes our response to your request. You may appeal this response by email at hq.foia@epa.gov, or by mail to the EPA's National FOIA Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2310A), Washington, DC 20460 or through FOIAonline if you are an account holder. If you are submitting your appeal by hand delivery, courier service, or overnight delivery, you must address your correspondence to 1200 Pennsylvania Avenue, N.W., Room 5315, Washington, DC 20460. Your appeal must be in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90-calendar-day limit. Appeals received after 5:00 p.m. EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek dispute resolution services from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202) 566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; email, ogis@nara.gov; telephone, (202) 741-5770 or (877) 684-6448; or fax, (202) 741-5769.

Your File # 170588001

Dear Ms. Casey:

This will acknowledge receipt of your request for records under the Freedom of Information Law, received by this office on June 21, 2019.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.

FOIL #: 19-06-331
Project #: 170588001

Dear Ms. Casey:

This letter is regarding your Freedom of Information Law request of June 21, 2019, which is currently being processed.

Please be advised this Office is unable to respond to your request by the date previously given to you because a diligent search for responsive documents is still being conducted.

We estimate that this Office will complete its process by August 20, 2019. The Department will notify you in writing when or if the responsive materials are available for release, or if the time needed to complete your request extends beyond the above date.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

FOIL #: 19-06-331
Project #: 170588001

Dear Ms. Casey:

This letter responds to your Freedom of Information Law request of June 21, 2019, in which you requested environmental records pertaining to "440-448 Johnson Avenue, 450 Johnson Avenue (also 83-89 Ingraham Street) and 79-81 Ingraham Street in Brooklyn, New York."

Please be advised that after conducting a diligent search, no records responsive to your request have been located. Please note that this location is in the vicinity of several cleanup sites. Records of the type you have requested may be maintained by the New York State Department of Environmental Conservation. You may contact this office at:

Records Access Officer
New York State Department of Environmental Conservation
625 Broadway
Albany, NY 12233-1500
Phone: (518) 402-9522
Fax: (518) 402-9018
Email: access.records@dec.ny.gov

Please be further advised that records pertaining to asbestos abatement may be maintained by the New York State Department of Labor Asbestos Control Bureau. The contact information for this office is as follows:

Records Access Officer
New York State Department of Labor
State Office Campus, Building 12, Room 509
Albany, New York 12240
Fax: (518) 485-1819

Should you feel that you have been unlawfully denied access to records, you may appeal such denial in writing within 30 days to the Records Access Appeals Officer, Division of Legal Affairs, Empire State Plaza, 2438 Corning Tower, Albany, New York 12237-0026.

If you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

Re: Freedom of Information Request
440-448 Johnson Avenue (Block 2992, Lot 17)
450 Johnson Avenue (also 83-89 Ingraham Street) (Block 2992, Lot 21)
79-81 Ingraham Street (Block 2992, Lot 55)
Brooklyn, New York
Langan Project No. 170588001

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The Subject Property is located at **440-448 Johnson Avenue, 450 Johnson Avenue (also 83-89 Ingraham Street) and 79-81 Ingraham Street** in **Brooklyn, New York**. The Subject Property comprised of three lots referenced as **Block 2992, Lots 17, 21, and 55**. The Subject Property is bound by parking lots for FedEx and LIRR to the north, two four-story industrial/commercial buildings to the east, a parking lot/storage area and a number of 1-2 story industrial/commercial buildings to the south, and a parking lot/storage area and a two-story industrial/commercial building to the west.

Please contact me at 212-479-5650 with any questions or send your response to my attention at dcasey@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.
21 Penn Plaza
360 West 31st Street, 8th floor
New York, New York 10001-2727

Thank you in advance for your cooperation.

Langan Project No. 170588001

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKs), asbestos abatement, and any other environmental reports that your department may have.

The Subject Property is located at **440-448 Johnson Avenue, 450 Johnson Avenue (also 83-89 Ingraham Street) and 79-81 Ingraham Street** in **Brooklyn, New York**. The Subject Property comprised of three lots referenced as **Block 2992, Lots 17, 21, and 55**. The Subject Property is bound by parking lots for FedEx and LIRR to the north, two four-story industrial/commercial buildings to the east, a parking lot/storage area and a number of 1-2 story industrial/commercial buildings to the south, and a parking lot/storage area and a two-story industrial/commercial building to the west.

Please contact me at 212-479-5650 with any questions or send your response to my attention at dcasey@langan.com or at the below address:

Langan Engineering and Environmental Services, P.C.

Dear Sir / Madam:

After a thorough search of our files, we did not find records for the following reason:

☐ A) No Records for the (Child / ren) have been located on the Lead Poisoning Prevention Programs's record system.

☒ B) No Environmental Records were found for the address and / or apartment requested.

☐ C) Printout of child's blood lead level, (copy attached), is the only information in the Lead Poisoning Prevention Program's record system.

Sincerely,

Ben Del Percio
Record Services Unit Coordinator

Re: Asbestos Containing Materials and Lead Containing Paint Survey Memo
450 Johnson Ave
440 & 450 Johnson Ave, Brooklyn, New York
Langan Project No.: 170588001

INTRODUCTION

The field survey of the subject sites (440/450 Johnson Ave, Brooklyn, NY) was conducted on July 10, 2019 by Langan's Harsh Patel, NYCDEP-certified asbestos investigator and NYSDOL-certified asbestos inspector. The objective of this limited survey was to identify the presence/absence of asbestos containing materials (ACM) and lead containing paint (LCP) that would have potential impact in connection with the purchase of the property. The following summarizes our findings.

The contracted and completed scope of services included sampling of building interior and external wall surface; Langan's scope of work did not include building's roofs and destructive sampling.

Certifications and Accreditations, Asbestos Laboratory Analytical Report and Chain of Custody are provided in the Attachments.

SUMMARY OF SURVEY AND FINDINGS

The findings of our survey are discussed below.

ACM Results

Twenty-five (25) representative bulk samples of suspect ACM were collected during the survey. Materials determined or assumed to be ACM are summarized in the table below:

Material	Material Location	Results	Estimated Quantity of ACM	
Pipe insulation (observed)	1st Floor - 440 Johnson Ave (2 Story Bld.)	ACM	4	LF
Pipe insulation (Estimated concealed)	440 & 450 Johnson Ave – all 3 Buildings	ACM	200	LF

Material	Material Location	Results	Estimated Quantity of ACM	
Door insulation	440 Johnson Ave (2 Story Bld.)	Assumed ACM	100	SF
Mastic/glue behind wooden wall panel	440 Johnson Ave (2 Story Bld.)	Assumed ACM	1,200	SF
Suspect flooring materials concealed below plywood (i.e. additional layers of floor tile, mastic, vapor barrier, etc.)	2nd Fl - 440 Johnson Ave (2 Story Bld.)	Assumed ACM	2,150	SF
Window caulking/glazing	Exterior	Assumed ACM	11	Unit
Built-up roofing/flashing/mastic materials	Main Roofs - 440 & 450 Johnson Ave - All 3 Buildings	Assumed ACM	36,000	SF

Materials determined to be non-ACM are summarized in Table 1 (attached).

LCP Results

Limited LCP screening of painted surfaces was conducted during our site visit. As per 40 CFR Part 745, Toxic Substances Control Act (TSCA), Title IV (Lead Exposure Reduction), the term ''lead-based paint'' means paint or other surface coatings that contain lead in excess of 0.5 percent by weight. Based on the lab results, all paint samples collected and analyzed were below 0.5 percent by weight; therefore, Non-LCP.

Refer to Table 2 in the attachments for a summary of test results.

RECOMMENDATIONS

ACM

Asbestos Control Program (ACP), Title 15, Chapter 1 of the New York City Department of Environmental Protection (NYCDEP) regulates all asbestos abatement activities occurring within the City of New York. The ACP regulations also require asbestos surveys and abatement work to be performed by a NYCDEP certified asbestos investigator and asbestos workers, respectively.

The New York City Department of Building (NYCDOB) requires an ACP notification to be included with the renovation/demolition permit applications. The notification is performed using ACP 5 or ACP 20/21 forms.

Asbestos containing materials were identified in buildings space. Refer to Table 1 for summary of asbestos survey findings.

LCP

Limited samples of painted surfaces were collected during our site visit. Based on the lab results, all paint samples collected and analyzed were below 0.5 percent by weight; therefore, Non-LCP. Overall, the painted surfaces were in fair to poor conditions.

Please note that although as per 40 CFR Part 745, TSCA, Title IV (Lead Exposure Reduction), the term ''lead-based paint'' means paint or other surface coatings that contain lead in excess of 1.0 milligrams per centimeter square or 0.5 percent by weight, the Occupational Safety and Health Administration (OSHA) considers any concentration of lead in paint to be lead containing paint. Regardless of the lead concentrations in paint, the contractor shall comply with 29 CFR 1926.62, OSHA regulations, and take precautionary measures for dust control and limit employee exposure to lead dust during the renovations/demolition.

Painted surfaces that would be impacted by planned activities such as drilling, cutting, scrapping, etc. and create dust should be properly addressed by following safe work practices, good housekeeping procedures and/or following proper abatement procedures. Grinding and sanding of paint without HEPA filter exhaust, open flame gas fired torch, unconfined abrasive blasting, and chemical strippers containing methylene chloride or other human carcinogenic chemicals are not recommended.

LIMITATIONS AND EXCEPTIONS

A full protocol ACM and LCP paint survey was not performed as part of our scope of work. Prior to performing any planned renovation and/or redevelopment activities, a full protocol asbestos survey of the buildings will be necessary to confirm the ACM findings.

Door insulation	440 Johnson Ave (2 Story Bld)	Assumed ACM	100	SF	~ 5 doors
Mastic/glue behind wooden wall panel		Assumed ACM	1,200	SF	--
Suspect flooring materials concealed below plywood (i.e. additional layers of floor tile, mastic, vapor barrier, etc.)	2nd Fl - 440 Johnson Ave (2 Story Bld)	Assumed ACM	2,150	SF	Although FT-1, FT-2 & FT-3 were confirmed to be non-ACM, additional suspect materials may exist below plywood.
Window caulking/glazing	Exterior	Assumed ACM	11	Unit	Approximately eleven (11) window opening
Built-up roofing/flashing/mastic materials	Main Roofs - 440 & 450 Johnson Ave - All 3 Buildings	Assumed ACM	36,000	SF	--
Non-ACM FINDINGS					
Wall plaster patch (1 layer)	1st Fl - 440 Johnson Ave (2 Story Bld)	Non-ACM	--	--	The materials identified as Non-ACM are based on analysis of one sample of each material. A full protocol sampling as her EPA and NYSDOL regulations will be necessary inorder to deem a material as Non-ACM.
Sair wall plaster (1 layer)		Non-ACM	--	--	
Gypsum board		Non-ACM	--	--	
Joint compound		Non-ACM	--	--	
Ceiling plaster (2 layer)	2nd Fl - 440 Johnson Ave (2 Story Bld)	Non-ACM	--	--	
Wall plaster (2 layer)		Non-ACM	--	--	
12'' sq. grey ft		Non-ACM	--	--	
Glue associated with 12'' sq. grey ft		Non-ACM	--	--	
12'' sq. white ft		Non-ACM	--	--	
Glue associated with 12'' sq. white ft		Non-ACM	--	--	
Beige ft & mastic below		Non-ACM	--	--	
2' x 4' Ceiling panels with pin holes & grooves		Non-ACM	--	--	

Table 1 - SUMMARY OF PRELIMINERY ASBESTOS ASSESSMENT FINDINGS Prologis - 450 Johnson Ave 440 & 450 Johnson Ave, Brooklyn, NY					
Material	**Location**	**Survey Results**	**Estimated Quantity of ACM**		**Notes/Comments**
2' x 4' Ceiling panels with pin holes & large grooves	450 Johnson Ave (1 Story Bld)	Non-ACM	--	--	The materials identified as Non-ACM are based on analysis of one sample of each material. A full protocol sampling as her EPA and NYSDOL regulations will be necessary inorder to deem a material as Non-ACM.
Gypsum board		Non-ACM	--	--	
Joint compound		Non-ACM	--	--	
12'' sq. Brown ft & mastic		Non-ACM	--	--	
Wall plaster (2 layer)		Non-ACM	--	--	
Flue patch cement		Non-ACM	--	--	
Exterior stucco plaster		Non-ACM	--	--	

A material with asbestos content greater than one percent (>1.0%) is considered as an asbestos-containing material (ACM). Concentrations in weight percent.

Table 2 - SUMMARY OF BULK PAINT CHIP SAMPLE ANALYSIS Prologis - 450 Johnson Ave 440 & 450 Johnson Ave, Brooklyn, NY			
SAMPLE ID NUMBER	**DESCRIPTION OF HOMOGENEOUS MATERIAL**	**SAMPLE LOCATION**	**RESULTS**
ACM/Assumed FINDINGS			
P-1	Yellow paint chip sample on brick wall	1st Fl - 440 Johnson Ave (2 Story Bld)	0.014% WT
P-2	Beige paint chip sample on plaster wall	2nd Fl - 440 Johnson Ave (2 Story Bld)	0.033% WT
P-3	Yellow paint chip sample brick wall	440 Johnson Ave (1 Story Bld)	0.018% WT
P-4	Yellow paint chip sample on brick wall	450 Johnson Ave (1 Story Bld)	0.046% WT
P-5	Beige paint chip sample on plaster wall		<0.0080% WT

Notes: AS per 40 CFR Part 745, Title IV (Lead Exposure Reduction), lead based paint means lead in excess of 0.5% by weight. Occupational Safety and Health Administration (OSHA) considers any concentrations of lead in paint as lead containing paint.

WT = Concentractions is weight percent.

Quantitative Analysis (Semi/Full):Bulk Asbestos Analysis-PLM by EPA 600/M4-82-020 per 40 CFR or ELAP198.1 (friable) and 198.6 (NOB) samples for New York.

NAD=no asbestos detected, NA/PS=Not Analyzed/Positive Stop, Trace=<1%,FBGL=Fiberglass, CELL=Cellulose,CHRY=Chrysotile,Amo=Amosite,CRO=Crocidolite,ANTH=Anthophylite, TRE=Tremolite, ACT=Actinolite, NA=not applicable.

PLM is not consistently reliable in detecting Asbestos in floor coverings and similar non friable organically bound materials. NAD or Trace results by PLM are inconclusive.

TEM is currently the only method that can be used to determine if this material can be considered or treated as non asbestos containing in NY State.

All samples were prepared and analyzed in accordance with the EPA "TEM Method for Identifying and Quantifying Asbestos in Non-Fibrous Organically Bound Bulk Samples" ELAP 198.4".

ORG%=Ashed Organic%, AII= Acid Insoluble Inorganic%, ASI= Acid Soluble Inorganic%

This "Summary of Analytical Results "shall not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, ELAP or any agency of the U.S Government. The results relate only to the items tested. This report may not be reproduced, except in full, without the written approval of AEL .Atlas Environmental lab did not collect the analyzed samples and thus accepts no liability with regard to their collection and/or maintenance . AEL relies on client's data. The liability of Atlas Environmental Lab corp with respect to the services charged, shall in no event exceed the amount of the invoice.

APPENDIX G

RESUMES OF ENVIRONMENTAL PROFESSIONALS

MIMI RAYGORODETSKY

SENIOR ASSOCIATE / VICE PRESIDENT

ENVIRONMENTAL ENGINEERING

Ms. Raygorodetsky sources and directs large, complex environmental remediation and redevelopment projects from the earliest stages of pre-development diligence, through the remediation/construction phase, to long-term operation and monitoring of remedial systems and engineering controls. She has a comprehensive understanding of federal, state and local regulatory programs and she uses this expertise to guide her clients through a preliminary cost benefit analysis to select the right program(s) given the clients' legal obligations, development desires and risk tolerance. She is particularly strong at integrating the requirements of selected programs and client development needs to develop and design targeted and streamlined diligence programs and remediation strategies. Ms. Raygorodetsky is also highly skilled in integrating remediation with construction on large urban waterfront projects, which tend to more complex than landside projects.

ROBERT (RORY) S. JOHNSTON, PE, BCEE

PRINCIPAL/VICE PRESIDENT

ENVIRONMENTAL & GEOTECHNICAL ENGINEERING

Mr. Johnston's consulting career spans over 30 years ranging from geotechnical engineering on large industrial projects to environmental investigation and remediation. At Langan a key part of his role is to lead client development in various market sectors, including an emphasis on the oil and gas markets.

Mr. Johnston's consulting career spans over 30 years ranging from geotechnical engineering on large industrial projects to environmental investigation and remediation, including over 20 years of experience with with the PANYNJ managing large multi- disciplinary environmental and engineering projects. His experience includes all aspects of geotechnical engineering for a wide range of industrial, commercial, private, and government clients. He has been involved in the geotechnical design and construction management of a wide range of infrastructure projects around the nation, major improvements at all NYC airports, baseball stadiums, landfills, refineries, LNG facilities, industrial developments, and more. Mr. Johnson has conducted and directed extensive site investigations, developed geotechnical and environmental solutions, and provided oversight of the implementation of these solutions.

Langan Project: 170588001

Dear Ms. Frentzel:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) is submitting the enclosed *Phase II Environmental Site Investigation (ESI) – 450 Johnson Avenue, Brooklyn, New York*. Our scope of services for this project consisted of advancing exploratory soil borings to 21 feet below ground surface and collecting and analyzing soil, groundwater, sub-slab soil vapor and indoor air samples.

We appreciate the opportunity to assist you with this project. If you have questions or need information clarified, please call Mr. Andrew Kerr at (510) 874-7015.

Sincerely,

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

PHASE II ENVIRONMENTAL SITE INVESTIGATION
450 Johnson Avenue
Brooklyn, New York

1.0 INTRODUCTION

This Phase II Environmental Site Investigation (ESI) was performed for the property referred to as 450 Johnson Avenue (the Site). The Site is a 0.80-acre parcel of land in the East Williamsburg neighborhood of Brooklyn, New York. The Site is located on the city block bound by Johnson Avenue to the north, Porter Avenue to the east, Ingraham Street to the south, and Knickerbocker Avenue to the west. A site location map is provided as **Figure 1** and a sampling location plan is provided as **Figure 2.**

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan) conducted a Phase I Environmental Site Assessment (ESA) for the Site in July 2019. The results of the assessment identified two Recognized Environmental Conditions (RECs) and two Business Environmental Risks (BERs).

This Phase II ESI was performed to obtain additional environmental information regarding the two RECs. This summary report describes the scope of services conducted and the results of the investigation. Background information is presented below, with additional information available in the Phase I ESA report (Langan, 2019).

2.0 BACKGROUND

2.1 Site

The Site is comprised of Kings County Tax Block 2992, Lots 17, 21, and 55 and is located in an industrial and commercial section of the East Williamsburg neighborhood of Brooklyn. The Site is developed with three inter-connected buildings and a parking lot:

Lot 17: a two-story, 2,500 square foot (ft^2) warehouse and office building and one-story, 7,500 ft^2 warehouse

Lot 21: a one-story, 20,000 ft^2 warehouse

Lot 55: a 5,000 ft^2 asphalt-paved parking lot

The warehouses at the Site are interconnected and used for envelope manufacturing.

2.2 Phase I ESA Findings

The Phase I ESA for Site was conducted in July 2019 as referenced above. The findings of the assessment included the identification of two RECs and two BERs as summarized below:

REC 1 – Current and Historical Site Use

REC 2 – Current and Historical Operations of Surrounding Properties

BER 1 – Historic Fill

BER 2 – Asbestos Containing Material (ACM) and Lead Based Paint (LBP)

Additional detail regarding these findings is provided in the Phase I ESA report, dated August 23, 2019 (Langan, 2019).

This Phase II ESI was designed to collect additional information regarding the RECs.

3.0 PHASE II EVALUATIONS

3.1 Scope and Timing

Langan completed the following scope of services as part of this Phase II ESI:

- Investigated the floor drain network, the potential subsurface municipal sewer line on-property, and potential presence underground storage tanks (USTs).
- Collected 19 soil samples from 16 exploratory soil borings advanced to a maximum depth of 21 feet below ground surface (bgs).
- Collected seven groundwater samples from six temporary wells.
- Collected three co-located sub-slab vapor and indoor air samples.

The Phase II ESI scope of services was completed between July 15 and 19, 2019.

A summary of the analysis performed on soil, groundwater, soil vapor and indoor air samples is presented in **Table 1**, with the location of completed investigation points shown on **Figure 2.**

3.2 Field Investigation Methods

The field investigation methods used to complete the Phase II ESI are summarized below. The activities are described in the general order of completion.

Pre-investigation Tasks

The soil and groundwater sampling was completed after the following pre-investigation tasks:

- Eastern Environmental Solutions, Inc. (Eastern) of Manorville, New York submitted a New York State One Call ticket prior to the initiation of drilling activities. Utility mark outs were limited to public property (i.e. the street and sidewalk immediately adjoining the Site to the north and south).
- Proposed boring locations were located to investigate RECs identified in the Phase I ESA and to evaluate the subsurface conditions on each of the different lots. The tentative locations of each boring were spray-painted on the surface of the Site.

Geophysical

Prior to intrusive drilling activities, Subsurface Environmental Technologies Inc. (SET) of Pennington, New Jersey conducted a geophysical survey on July 15, 2019. The geophysical survey was observed by a Langan field scientist and included the use of ground penetrating radar (GPR) and electromagnetic (EM) detectors to attempt to locate potential subsurface utilities, USTs and/or subsurface structures and to clear proposed boring locations. Borings were relocated as necessary to avoid buried structures. The geophysical report prepared by SET is included in **Appendix A**.

Exploratory Borings and Soil Sampling

Sixteen (16) exploratory borings were drilled between July 16 and 19, 2019. Borings were advanced by Eastern using a portable Geoprobe 420M direct push machine rig. The boreholes were advanced by hydraulically pushing a 2.25-inch diameter stainless steel sampler containing 3-foot-long acetate liners into the subsurface. The boreholes were advanced to between 6 and 21 feet bgs. Groundwater was typically encountered at 8 to 15 feet bgs.

Soils were logged based on the Unified Soil Classification System (USCS) system, with completed boring logs are included in **Appendix B**. Soils retrieved from the acetate liner were screened for the presence of volatile organic compounds (VOCs) using a photo-ionization detector (PID) with a 10.6 eV bulb and calibrated with 100 parts per million (ppm) isobutylene reference gas.

Nineteen (19) soil samples were collected, including 17 samples from the historic fill layer and one sample and a duplicate from the native soil. Samples were collected by removing the soil in the acetate liner from the chosen sample depth and placing the soil into laboratory-provided containers. Sample jars were sealed and stored in a cooler with ice for transport to the analytical laboratory.

Temporary Monitoring Wells and Groundwater Sampling

Six borings were converted to temporary monitoring wells by inserting a 1-inch diameter poly-vinyl chloride (PVC) casing into select soil boreholes. The temporary well annulus was packed with No. 2 sand. The wells were gauged with a precleaned oil/water interface probe to the nearest 0.01 foot to measure static groundwater levels prior to sampling. Prior to sampling, a peristaltic pump fitted with dedicated, disposable polyethylene tubing was used to purge each groundwater monitoring well. Monitoring well effluent was pumped into a flow-through cell with a water quality monitoring probe attached. The probe was used to monitor pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation-reduction potential. Groundwater samples were collected into laboratory-supplied sample jars using low flow techniques.

Sample jars were secured in plastic bags or laboratory-provided, bubble-wrap pouches, and stored in a cooler with ice for transport to the analytical laboratory. Dissolved metals samples were filtered in the field using a 10 micron filter and appropriately denoted on the chain of custody. Groundwater sampling logs are provided in **Appendix C**.

Sub-slab Vapor and Indoor Air Sampling

Three sub-slab soil vapor points were installed using the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006) and its subsequent updates. Sub-slab vapor points were installed using a portable Geoprobe 420M direct push machine rig to about 2 inches beneath the base of the foundation slab. The vapor collection points consisted of 2-inch-long probes and inert polyethylene. The annulus (i.e., the sampling zone) around the probe was filled with a No. 2 sand followed by a hydrated bentonite seal to the top of the floor slab.

Before collecting vapor samples, a minimum of three implant volumes (i.e., the volume of the sample probe and tubing) was purged from each sample port at a rate of less than 0.2 liters per minute while monitoring for VOCs using a RAE Systems MultiRAE® meter.

A helium tracer gas was used consistent the NYSDOH protocols to confirm the integrity of each soil vapor sampling point seal before and after sampling. The tracer gas was introduced into a container, which shrouded the vapor point and seal. Helium was measured from the sampling tube and inside the container. If the sample tubing contained more than 10% of the tracer gas concentration that was introduced into the container, then the seal was considered compromised. Sub-slab vapor construction and sampling logs are provided in **Appendix D**.

The co-located indoor air samples were collected at a height above the ground to represent the breathing zone (about 3 to 5 feet). Sub-slab vapor and indoor air samples were collected over an 8-hour sampling period.

Laboratory Analysis

The soil, groundwater, sub-slab vapor, and indoor air samples were transported to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory (Alpha Analytical, Inc. of Westborough, MA [ELAP ID #11148]). Soil analysis included target compound list (TCL) VOCs, TCL semivolatile organic compounds (SVOCs), target analyte list (TAL) metals and/or polychlorinated biphenyls (PCBs). Groundwater analysis included TCL VOCs, TCL SVOCs, and dissolved metals. Sub-slab vapor and indoor air samples were analyzed for VOCs.

4.0 RESULTS

4.1 Geophysical Survey

The geophysical survey was conducted across the Site, with the exception of areas blocked by manufacturing equipment. The geophysical survey revealed the following:

- Inferred subsurface conveyance piping connecting the floor drains in the northeast portion of Lot 21.
- A septic tank in a subsurface vault in the northeast portion of Lot 21, with subsurface drain lines from the nearby floor drains in the area appearing to trace toward and connecting to the tank.
- No indicators of the potential sewer or combined sewer relief line discussed in the Phase I ESA (Langan, 2019). The sewer relief line may still exist onsite as the vertical extent of the geophysical survey was limited to about 5 feet bgs given the presence of a reinforced concrete slab and fill material.
- No observed geophysical patterns or anomalies indicative of a UST.

4.2 Lithology and Presence of Groundwater

The lithology encountered at the Site included a surficial layer of 5-inch thick asphalt or 6-inch thick concrete, underlain by historic fill to depths of about 8 to 17 feet bgs. Historic fill generally consisted of gray, orange brown, and brown silt and sand with varying amounts of brick, glass, coal, coal ash,

and tile pieces. Petroleum-like odors and/or elevated PID readings were encountered/measured in SB03 from 10 to 14 feet bgs, SB04 from 8 to 15 feet bgs, and SB16 from 0.5 to 6 feet bgs.

Native soil underlying historic fill was identified from about 8 feet to 21 feet bgs (deepest boring terminus) and generally consisted of brown, orange brown, brown and gray silty fine sand with varying amounts of gravel, clay, organics and silt. Bedrock was not encountered during this investigation.

Groundwater was encountered between about 8 and 15 feet bgs.

4.3 Soil Analytical Results

Soil analytical results from 19 soil samples, including one duplicate, are summarized in **Table 2**. The table includes applicable reference soil cleanup objectives. A copy of the laboratory analytical reports is attached in **Appendix E**.

The following is a summary of the results:

- Selected VOCs were detected, but only one result (vinyl chloride at 15 mg/kg) was at a concentration above the Restricted Use Commercial (RUC) or Restricted Use Industrial (RUI) Soil Cleanup Objectives (SCOs).
- Periodic SVOCs were also detected, but only benzo(a)pyrene and dibenzo(a,h)anthracene in samples from soil borings SB08, SB09, SB10, and SB15 were at concentrations above the RUC or RUI SCOs.
- Metal detections, but with only four compounds (arsenic, barium, lead, and mercury) detected at concentrations above the RUC SCOs. Also, the detections above the RUC SCO were in only five of the 19 samples, including the samples from soil borings SB07, SB09, SB11, SB13 and SB16. Only one metal (arsenic) in one sample (SB07_4.5-5.0), was detected at a concentration above the RUI SCO.
- PCBs not detected in any of the collected soil samples.

4.4 Groundwater Analytical Results

Groundwater analytical results from the seven groundwater samples, including one duplicate, are summarized in **Table 3**. The tables include applicable reference standards and guidance values. A copy of the laboratory analytical reports is attached in **Appendix E**.

The following is a summary of the results:

- Eleven VOCs, including 1,2,4,5-tetramethylbenzene, chloroform, cis-1,2-dichloroethene, isopropylbenzene, n-butylbenzene, n-propylbenzene, sec-butylbenzene, tert-butyl methyl ether, tetrachloroethene (PCE), trichloroethene (TCE), and vinyl chloride, were detected at concentrations above the New York State Department of Environmental Conservation (NYSDEC) Technical and Operation Guidance Series (TOGS) 1.1.1. Ambient Water Quality Standards and Guidance Values for Class GA Groundwater (SGVs). The detections above SGVs were in four of the seven temporary groundwater monitoring wells, including wells TMW03, TMW04, TMW07, and TMW08.

- Six SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-c,d)pyrene, were detected at concentrations above the SGVs. The detections above SGVs were in six of the seven temporary groundwater monitoring wells, including wells TMW02, TMW03, TMW04, TMW07, and TMW08.

- Four dissolved metals, including iron, magnesium, manganese, and sodium, were detected at concentrations above the SGVs. The detections above SGVs were in each of temporary groundwater monitoring wells.

4.5 Sub Slab Soil Vapor and Indoor Air Analytical Results

Air analytical results from the three co-located sub-slab vapor and indoor air samples are summarized in **Table 4**. The tables include applicable reference guidance values. A copy of the laboratory analytical reports is attached in **Appendix E**.

A summary of the sub-slab vapor and indoor results is the following:

- Petroleum-related and chlorinated VOCs were detected in sub-slab soil vapor samples. Total VOCs were detected at concentrations ranging from 2,907 micrograms per cubic meter (µg/m^3) in SSV03 to 5,593 µg/m^3 in SSV01. Total VOCs were detected in indoor air samples at concentrations ranging from 305 µg/m^3 in IA01 to 989 µg/m^3 in IA02.

- VOCs in indoor air were not detected above the NYSDOH Air Guidance Values (AGVs).

New York State currently does not have standards or criteria for allowable concentrations of VOCs in soil vapor. In lieu of regulatory standards, Decision Matrices published in the 2006 NYSDOH Soil

Vapor Intrusion Guidance, updated in 2017, were used to evaluate sub-slab vapor and indoor air concentrations. NYSDOH Decision Matrices (Matrices A, B, and C) address the compounds PCE, TCE, 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethene, cis-1,2-dichloroethene, vinyl chloride, methylene chloride and carbon tetrachloride. The comparison indicate the following items:

- Sub-slab and indoor air concentrations of PCE, 1,1,1-TCA, 1,1-dichloroethene, cis-1,2-dichloroethene, vinyl chloride, and carbon tetrachloride yield recommendations ranging from "no further action" to "identify source and resample or mitigate".

- Sub-slab and indoor air concentrations of carbon tetrachloride in SSV01 and IA01 yields a recommendation of "monitor".

- Sub-slab and indoor air concentrations of TCE in SSV02 and IA02 yields a recommendation of "monitor".

- Sub-slab and indoor air concentrations of methylene chloride in SSV03 and IA03 yields a recommendation of "identify sources and resample or mitigate".

5.0 FINDINGS

The following is a summary of findings from the Phase II ESI:

- Floor drains with a network of subsurface conveyance piping area present in the northeast portion of Lot 21. A septic tank was identified in this same area, with the geophysical surveys suggesting the conveyance piping of the floor drains route to the tank.

- Historical fill is present from surface grade to approximately 8 feet bgs, with groundwater present at a depth of approximately 8 to 15 feet bgs. The presumed groundwater flow direction is to the north, based on the location of the English Kills waterway and groundwater maps from the Ingraham St Sidewalk site.

- An area of weathered petroleum appears located in the northeast portion of Lot 21 based on field observations and the presence of petroleum related compounds identified in groundwater samples from wells TMW03 and TMW04. The source is unknown, but the proximity of this area to the nearby partial cellar is noted, given that it houses the existing facility boiler and formerly housed an oil-powered boiler.

- Impacts typically associated with urban fill including periodic detections of SVOCs (specifically PAHs) and metals are present in surficial soils at the Site. Detections of SVOCs ranged from 0.28 mg/kg to 4.3 mg/kg, but with only four results of benzo(a)pyrene (2, 2, 2.3, and 4.3 mg/kg) being over the RUI SCO. Detections of metals were variable, but with only the detection of arsenic in one sample at 67 mg/kg being above the RUI SCO.

- Chlorinated VOC impacts appear to principally be PCE, TCE, vinyl chloride, and breakdown products in groundwater, with some detections of vinyl chloride and the cis and trans 1,2-dichloroethethene (DCE) compounds in a water –bearing zone depth soil sample in the boring SB08 area. There is a known historic presence of CVOCs in groundwater in the Ingraham Street Sidewalk project, which adjoin the Site to the south[1]. Generally, concentrations of CVOCs in groundwater at the Site were highest in TMW07 and TMW08 along the southern boundary, appearing to grade to lower or not detected at TMW04 located in the northeast part of the Site. Concentrations of CVOCs in TMW07 and TMW08 ranged from 32 ug/L to 250 ug/L, one to two orders of magnitude lower than concentrations of CVOCs observed in wells in the Ingraham Sidewalk site, which had detections of 620 ug/L of PCE and 13,000 ug/L of cis 1,2-DCE in 2012, and 540 ug/L of vinyl chloride and 1,800 ug/L of cis 1,2-DCE in 2014. The soil CVOC results were more limited, with only one exceedance of the RUC SCO (vinyl chloride at 15 mg/kg) and each of the detections being in a 14 to 14.5 foot sample from boring SB08, which was co-located with temporary well TMW08. The detected CVOC concentrations in both soil and groundwater likely represent the known CVOCs from an off-site source rather than a source within the Site, given the concentration gradient of CVOCs and the historic northward direction of groundwater flow.

- Petroleum-related and chlorinated VOCs were detected in sub-slab soil vapor and indoor air samples, but with none of the indoor air results being in excess of NYSDOH AGVs. The total VOCs detected in sub-slab vapor ranged from 2,907 µg/m^3 in SSV03 to 5,593 µg/m^3 in SSV01, with detections in indoor air ranging from 305 µg/m^3 in IA01 to 989 µg/m^3 in IA02. When applying sub-slab vapor and indoor air samples to the NYSDOH Decision Matrices, the resulting recommendations range from "no further action" to

[1] Regulatory site Ingraham Street Sidewalk GW (case ID No. 224142) is an active site in the New York State Hazardous Waste Program. This listing includes groundwater identified in the Ingraham Street sidewalk as impacted with CVOCs exceeding applicable groundwater standards.

"monitor". Detected concentrations of VOCs in indoor air did not exceed NYSDOH AGVs.

3	N/A	Trip Blank	TB_071919	N/A		VOCs

Notes:

1. VOC = volatile organic compound
2. SVOC = semivolatile organic compound
3. PCB = polychlorinated biphenyl
4. N/A = Not applicable
5, IA = Indoor air
6. Indoor air samples were colleced at about 3 to 5 feet above the ground surface

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Commercial and Restricted Use Industrial Soil Cleanup Objectives (SCO).
2. Only detected analytes are shown in the table.
3. Analytes detected with concentrations above Restricted Use Commercial SCOs are **bolded.**
4. Analytes detected with concentrations above Restricted Use Industrial SCOs are shaded.
5. Analytical results with reporting limits (RL) above the lowest applicable criteria are italicized.
6. Sample DUP01_071619 is a duplicate sample of SB03_14.0-14.5.
7. - - = Regulatory limit for this analyte does not exist
8. bgs = below grade surface
9. mg/kg = milligrams per kilogram
10. % = percent
11. NA = Not analyzed

Qualifiers:

J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.

U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Commercial and Restricted Use Industrial Soil Cleanup Objectives (SCO).
2. Only detected analytes are shown in the table.
3. Analytes detected with concentrations above Restricted Use Commercial SCOs are **bolded.**
4. Analytes detected with concentrations above Restricted Use Industrial SCOs are shaded.
5. Analytical results with reporting limits (RL) above the lowest applicable criteria are italicized.
6. Sample DUP01_071619 is a duplicate sample of SB03_14.0-14.5.
7. -- = Regulatory limit for this analyte does not exist
8. bgs = below grade surface
9. mg/kg = milligrams per kilogram
10. % = percent
11. NA = Not analyzed

Qualifiers:

J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.

U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Notes:

1. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Restricted Use Commercial and Restricted Use Industrial Soil Cleanup Objectives (SCO).
2. Only detected analytes are shown in the table.
3. Analytes detected with concentrations above Restricted Use Commercial SCOs are **bolded.**
4. Analytes detected with concentrations above Restricted Use Industrial SCOs are shaded.
5. Analytical results with reporting limits (RL) above the lowest applicable criteria are italicized.
6. Sample DUP01_071619 is a duplicate sample of SB03_14.0-14.5.
7. - - = Regulatory limit for this analyte does not exist
8. bgs = below grade surface
9. mg/kg = milligrams per kilogram
10. % = percent
11. NA = Not analyzed

Qualifiers:

J = The analyte was detected above the Method Detection Limit (MDL), but below the RL; therefore, the result is an estimated concentration.

U = The analyte was analyzed for, but was not detected at a level greater than or equal to the RL; the value shown in the table is the RL.

Subject: Geophysical Investigation Results
450 Johnson Avenue
Brooklyn, New York 11237

Dear Ms. Casey:

Subsurface Environmental Technologies, LLC (SET) is pleased to present this letter report to *LANGAN* of New York, New York describing the methods and results of a geophysical investigation conducted at the Johnson Avenue Site in Brooklyn, New York. The survey areas were for this investigation were primarily focused on twenty-five (25) roughly 20-foot by 20-foot areas surrounding proposed soil boring (SB) locations indicated on Figures 2-5 below. SET was also requested to survey the sidewalk along the northern side of the warehouse as well as the parking lot located to the south along Ingraham Avenue (see Figure 1). The terrain within the investigation areas was relatively flat, relatively free of surface obstructions, and was comprised primarily paved-asphalt, concrete, and sporadic gravels. The field activities for this project were completed by SET personnel on July 15, 2019.

Objectives

The primary objective of this geophysical investigation was to identify potential underground hazards such as utility pipelines, USTs, or anomalous subsurface features that may adversely affect planned drilling events at twenty-five (25) proposed SB locations. The secondary objective of this geophysical investigation was to perform a GPR survey to identify underground storage tanks (USTs) or evidence of prior removal such as possible excavations or areas of disturbed soils that may be related to former USTs. To meet these objectives, SET used a GSSI SIR 3000 System (GPR) with 350 and 400-megahertz (MHz) ground-penetrating radar antennas, a Fisher TW-6 M-Scope, and an RD7000 radio frequency (RF) device by Radiodetection, Inc.

Instrumentation

Ground Penetrating Radar (GPR)

Ground Penetrating Radar (GPR) is a near surface geophysical method based on the transmission of repetitive, high-frequency electromagnetic (EM) pulses emitted from a transmitting antenna to probe the Earth. The EM pulses emitted from the transmitting antenna

propagate through the subsurface at a velocity that is directly related to the electrical properties of the subsurface. When an EM wave contacts an interface of differing electrical properties (e.g. dielectric constant), part of that energy is returned to surface in the form of a reflected signal. The reflected signal is detected by a receiving transducer, displayed on the control unit screen, and recorded on an internal hard drive. The control unit records a continuous cross-section of the subsurface by plotting the two-way travel time of the EM pulse, relative to the distance traveled by the GPR antenna along to ground surface. To determine depth, two-way travel time values are converted using known soil velocity functions. GPR field procedures include system calibration, test run completion, and profile collection and interpretation. GPR Data collected in the field can be analyzed both in the field and in the office, should further analysis be required.

Fisher TW-6 M-Scope

The M-Scope is an electromagnetic (EM) instrument used to detect the presence of buried metallic objects such as buried drums, metallic conduits, or miscellaneous metallic debris buried within the upper 3 to 5 feet of the subsurface. The Fisher M-Scope uses the principle of electromagnetic induction. A primary coil broadcasts a radio signal from a transmitting antenna and induces secondary electrical currents along buried metallic objects. This secondary electrical current in turn produces a secondary magnetic field, which is then detected by a receiving antenna. Peak responses are observed when the instrument is moved directly over a metallic object. Peak responses are observed by the operator in real time using the analog meter and audible output signals.

Radio-Frequency Method (RF)

The Radio Detection RD4000 multi-frequency utility locating system was used directly over and around each proposed SB location. This instrument consists of a receiver/tracer and a remote transmitter, which operates at frequencies between 8 kilohertz (kHz) and 200 kHz. The unit provides audio and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hookup. The receiver output provides measured field strength of the received signal and varies an audible pitch that is dependent upon the distance to the utility. By carefully adjusting the gain of the receiver, it is possible to determine the location of the utility and to separate it from possible adjacent utilities. In addition, the receiver can be used in 60 kHz passive mode to identify active electrical lines or lines that possess an induced current.

Field Survey Design and Procedures

SET utilized the industry standard protocol for geophysical field surveys during this investigation. This standard protocol includes proper equipment setup, equipment calibration,

multiple test-run completions, observation of surface metals, the assessment of data quality in the field, and overall quality assurance during final report preparation and presentation. Because of the size and nature of the anomalies targeted for this investigation, SET used a tight spacing for collecting geophysical data. The GPR transects were collected in varying orientations across the site. These GPR transects were spaced at approximately 2-foot intervals throughout the survey areas except where obstructions were encountered at the ground surface such as production equipment, shelving units, and other miscellaneous site features. SET typically collects a minimum of 5-10 profiles over each anomalous GPR response or area of concern to provide a more detailed perspective of the subsurface. It was not possible to collect GPR data in areas where surface obstructions were present.

Results and Discussion

Underground Storage Tanks

SET did not observe any geophysical responses that may indicate the presence of a buried UST within the survey areas. All M-Scope and GPR responses were analyzed for characteristic signatures such as anomalously high or low EM responses, or strong, hyperbolic GPR signatures of reasonable dimension. SET did observe an affixed vent pipe near the northeastern corner of the property along the Johnson Avenue sidewalk, but no geophysical evidence suggested the presence of a UST. Additionally, SET did not observed evidence of prior UST removal such as an area of disturbed soil, excavation flank walls, or other evidence of prior earthwork.

Interior Area of Disturbed Soil/Concrete and Visible Supply/Return Lines

SET visually observed a set of supply/return lines exiting the boiler room to the north (see Site photo 11 on Figure 3). These pipes were exposed at the ground surface at the time of this survey and extended roughly 18 feet north-northwest of the boiler room entrance and abruptly changed to a westerly orientation and into a block wall. At the same location on the opposite side of the wall (see Site Photo 7 on Figure 3), SET observed a small, roughly 3-foot wide by 6-foot long area of disturbed soil and cut concrete. GPR data in this area displayed a more chaotic response that the surrounding area, suggesting that this area had possibly been re-worked at some point in the past. SET was limited in survey space at this location but attempted to move shelving to image the area. No geophysical evidence of a UST was detected in this vicinity.

Soil Boring Location Surveying and Utility Locating

SET performed a geophysical survey and private utility mark-out (PUM) surrounding a total of twenty-five (25) proposed drilling locations. The locations selected as a final drilling point displayed geophysical characteristics which were not indicative of buried utility pipelines, USTs, or anomalous zones that may adversely affect drilling operations. SET determined these points as final when both the RF and M-Scope instrument responses were constant, and when GPR

responses were did not indicate the presence of buried objects. All locations deemed free of subsurface obstructions were marked on site with white spray paint (shown as a common crosshair symbol). The approximate positions of these features can be seen below in Figures 1-6 These positions are intended for general reference purposes only; refer to field markings for actual locations and ground positions.

Suspected Septic Holding Tank

SET detected one suspected septic holding tank (SSHT) near the washroom in the northeastern portion of the warehouse (see Figure 1). The SSHT was identified upon removing a sheet metal cover which exposed a large, roughly 4-foot by 6-foot vault which had a sewage-like odor. Additionally, piping could be seen extending to the north from this structure and are likely associated with drainage from the adjacent washrooms. SET also observed what appeared to be an outlet pipe extending toward Johnson Avenue from the north side of the tank. Characteristic GPR signatures were observed over this SSHT such as a strong, flat reflector (see GPR 158 on Figure 1). This type of response has been consistently observed by SET over this type of target at many sites. No other septic system components such as vents, lateral lines, or leach fields were detected on site.

Closing

The geophysical data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses is based on the past results of similar surveys, although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees have bene made or inferred regarding the presence or absence of additional objects or targets beyond those identified or beyond the detection limits of the instrumentation used in this investigation.

It was a pleasure working with you on this project, and we look forward to conducting geophysical investigations for you in the future.

Sincerely,

Subsurface Environmental Technologies, LLC.

Notes:

(1) The objective of this geophysical investigation was to identify potential underground hazards such as utility pipelines, USTs, or anomalous subsurface features that may adversely affect planned drilling events at numerous proposed SB locations. To meet these objectives, SET used a GSSI SIR 3000 System (GPR) with a 400-megahertz (MHz) ground-penetrating radar antenna, a Fisher TW-6 M-Scope, and an RD7000 radiofrequency (RF) device by Radiodetection, Inc.
(2) All locations deemed free of subsurface obstructions were marked on site with white spray paint (shown as a crosshair symbol). The approximate positions of these features can be seen in the data table above. Note that these positions are of sub-meter accuracy and were not obtained by a licensed land surveyor. These positions are intended for general reference purposes only.
(3) The items on this figure may not be all inclusive. SET does not warrant the fact that additional buried features may be present at this site.

Notes:
1. Well depths and groundwater depths were measured in feet below the top of well casing.
2. Well and tubing diameters are measured in inches.
3. PID = Photoionization Detector
4. PPM = Parts per million
5. pH = Hydrogen ion concentration
6. ORP = Oxidation-reduction potential, measured in millivolts (mV)
7. DO = Dissolved Oxygen, measured in milligrams per liter (mg/L)
8. DTW = Depth to water
9. mS/cm = milli-Siemens per centimeter
10. NTU = Nephelometric Turbidity Unit

APPENDIX D

Sub-Slab Vapor Construction Logs

SUB-SLAB SOIL VAPOR SAMPLING LOG SHEET

Sample Number: SSV01_071719

PROJECT: 450 Johnson Avenue	**PROJECT NO.:** 170588001
LOCATION: Brooklyn, NY	**SURFACE ELEVATION AND DATUM:** NA
DRILLING FIRM OR LANGAN INSTALLER: Eastern Environmental Solutions, Inc.	**INSTALLATION DATE STARTED:** 7/17/2019 **DATE FINISHED:** 7/17/2019
INSTALLATION FOREMAN: Josh Falk (Eastern)	**SAMPLE DATE STARTED:** 7/18/2019 **DATE FINISHED:** 7/18/2019
INSTALLATION EQUIPMENT: Geoprobe® 420 M	**TYPE OF SAMPLING DEVICE:** 2.7-Liter Summa Canister
INSPECTOR: Deirdre Casey (Langan)	**SAMPLER:** Deirdre Casey (Langan)
POTENTIAL SAMPLE INTERFERENCES: Drilling ocurring in the adjoining warehouse space.	**WEATHER CONDITIONS (PRECIP., TEMP., PRESS., WIND SPEED AND DIR.):** Temp: 73-95° Farenheit; Wind: NE 0-10 mph; Precipitation: Overcast, rain 0900-1100; Pressure: 29.9 in Hg

METHOD OF INSTALLATION AND PURGING:

Eastern Environmental advanced sub-slab vapor point to 3 inches below the top of the slab. A small amount of No. 2 sand was backfilled into the borehole to set the vapor tubing. No. 2 sand was backfilled around the tubing to 1 inch bgs, and the remainder of the borehole was sealed with bentonite.

TUBING TYPE/DIAMETER: 1/4-Inch Teflon-lined Polyethylene Tubing	**TYPE OF MATERIAL ABOVE SEAL:** Bentonite
IMPLANT SCREEN TYPE/LENGTH/DIAMETER: None	**SEAL MATERIAL (Bentonite, Beeswax, Modeling Clay, etc.):** Bentonite
BOREHOLE DIAMETER: 2-Inch	**FILTER PACK MATERIAL (Sand or Glass Beads):** No. 2 Sand

INSTALLATION FOREMAN: Josh Falk (Eastern)	**SAMPLE DATE STARTED:** 7/19/2019 **DATE FINISHED:** 7/19/2019
INSTALLATION EQUIPMENT: Geoprobe® 420 M	**TYPE OF SAMPLING DEVICE:** 2.7-Liter Summa Canister
INSPECTOR: Deirdre Casey (Langan)	**SAMPLER:** Deirdre Casey (Langan)
POTENTIAL SAMPLE INTERFERENCES: Drilling ocurring in the adjoining warehouse space.	**WEATHER CONDITIONS (PRECIP., TEMP., PRESS., WIND SPEED AND DIR.):** Temp: 72-89° Farenheit; Wind: NE 5-12 mph; Precipitation: None (sampling indoors); Pressure: 29.8 in Hg

METHOD OF INSTALLATION AND PURGING:

Eastern Environmental advanced sub-slab vapor point to 3 inches below the top of the slab. A small amount of No. 2 sand was backfilled into the borehole to set the vapor tubing. No. 2 sand was backfilled around the tubing to 1 inch bgs, and the remainder of the borehole was sealed with bentonite.

TUBING TYPE/DIAMETER: 1/4-Inch Teflon-lined Polyethylene Tubing	**TYPE OF MATERIAL ABOVE SEAL:** Bentonite
IMPLANT SCREEN TYPE/LENGTH/DIAMETER: None	**SEAL MATERIAL (Bentonite, Beeswax, Modeling Clay, etc.):** Bentonite
BOREHOLE DIAMETER: 2-Inch	**FILTER PACK MATERIAL (Sand or Glass Beads):** No. 2 Sand

PROJECT: 450 Johnson Avenue	**PROJECT NO.:** 170588001
LOCATION: Brooklyn, NY	**SURFACE ELEVATION AND DATUM:** N/A
SAMPLER: Eastern Environmental Solutions, Inc.	**SAMPLE DATE STARTED:** 7/18/2019 **DATE FINISHED:** 7/18/2019
INSPECTOR: Deirdre Casey	**TYPE OF SAMPLING DEVICE:** 2.7-Liter Summa Canister
POTENTIAL SAMPLE INTERFERENCES: Drilling ocurring in the adjoining warehouse space.	**WEATHER CONDITIONS (PRECIP., TEMP., PRESS., WIND SPEED AND DIR.):** Temp: 73-95° Farenheit Wind: NE 0-10 mph Precipitation: Overcast, rain 0900-1100 Pressure: 29.9 in Hg

METHOD OF INSTALLATION AND SAMPLING:

Langan field screened the sample location with a MiniRAE 3000 photoionization detector prior to sampling. Sample consisted of 2.7L Summa canister fitted with an 8-hour flow control valve. The flow controller valve was opened to initiate the 8-hour sample collection. The sample and flow controller were checked each hour during sampling to ensure proper operation.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: 450 JOHNSON AVENUE **Lab Number:** L1931245
Project Number: 170588001 **Report Date:** 08/01/19

Case Narrative (continued)

Report Submission
August 01, 2019: This final report includes the results of all requested analyses.
July 18, 2019: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt
L1931245-01: The Client ID was specified by the client.

Volatile Organics
L1931245-01, -02 and -03: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.
L1931245-01: The surrogate recoveries are outside the acceptance criteria for toluene-d8 (136%) and 4-bromofluorobenzene (254%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.
L1931245-02: The surrogate recovery is outside the acceptance criteria for 4-bromofluorobenzene (133%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

Total Metals
L1931245-01, -02, -03 and -04: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.
The WG1260848-3 MS recovery, performed on L1931245-01, is outside the acceptance criteria for mercury (171%). A post digestion spike was performed and was within acceptance criteria.
The WG1260871-3 MS recoveries for aluminum (379%), iron (0%) and manganese (161%), performed on L1931245-01, do not apply because the sample concentrations are greater than four times the spike amounts

Project Name:	450 JOHNSON AVENUE	**Lab Number:**	L1931245
Project Number:	170588001	**Report Date:**	08/01/19

Case Narrative (continued)

added.

The WG1260871-3 MS recoveries, performed on L1931245-01, are outside the acceptance criteria for cadmium (56%), chromium (46%), nickel (72%) and thallium (70%). A post digestion spike was performed and yielded unacceptable recoveries for cadmium (64%), chromium (74%), nickel (79%) and thallium (79%). The serial dilution recovery was not applicable; therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The WG1260871-3 MS recovery, performed on L1931245-01, is outside the acceptance criteria for potassium (73%). A post digestion spike was performed and was within acceptance criteria.

The WG1260871-3 MS recovery, performed on L1931245-01, is outside the acceptance criteria for magnesium (0%). A post digestion spike was performed and yielded an unacceptable recovery of 52%. The serial dilution recovery was acceptable; therefore, the matrix test passed for the sample matrix.

The WG1260871-4 Laboratory Duplicate RPDs for chromium (24%), lead (27%), magnesium (67%), manganese (42%) and potassium (35%), performed on L1931245-01, are outside the acceptance criteria. The elevated RPDs have been attributed to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	450 JOHNSON AVENUE	**Lab Number:**	L1931245
Project Number:	170588001	**Report Date:**	08/01/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number:	170588001	**Report Date:**	08/02/19

Case Narrative (continued)

Report Submission

August 02, 2019: This final report includes the results of all requested analyses.

July 19, 2019: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

L1931524-06, -07 and -08: The Client IDs were specified by the client.

L1931524-06, -07 and -08: The sample was received above the appropriate pH for the Dissolved Metals analysis. The laboratory added additional HNO3 to a pH <2.

L1931524-06, -07 and -08: At the client's request, unfiltered Semivolatile Organics analysis was performed; the results are reported as L1931524-09, -10 and -11, respectively.

Semivolatile Organics

The WG1261662-2/-3 LCS/LCSD recoveries, associated with L1931524-09 through -11, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Total Metals

L1931524-01 through -05: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Dissolved Metals

The WG1261422-3 MS recoveries, performed on L1931524-08, are outside the acceptance criteria for antimony (144%) and manganese (126%). A post digestion spike was performed and was within acceptance

Project Name:	450 JOHNSON AVE.	**Lab Number:**	L1931524
Project Number:	170588001	**Report Date:**	08/02/19

Case Narrative (continued)

criteria.

The WG1261422-3 MS recoveries for calcium (153%), iron (270%) and magnesium (141%), performed on L1931524-08, do not apply because the sample concentrations are greater than four times the spike amounts added.

The WG1261422-4 Laboratory Duplicate RPDs for arsenic (29%), performed on L1931524-08, is above the acceptance criteria; however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	450 JOHNSON AVE.	**Lab Number:**	L1931524
Project Number:	170588001	**Report Date:**	08/02/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

July 23, 2019: This final report includes the results of all requested analyses.

July 23, 2019: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The Client IDs and analyses performed were specified by the client.

Volatile Organics

L1931803-07: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (42%) and the surrogate recovery for 4-bromofluorobenzene (137%) were outside the acceptance criteria; however, re-analysis achieved similar results: 1,4-dichlorobenzene-d4 (41%) and 4-bromofluorobenzene (143%). The results of both analyses are reported.

Semivolatile Organics

The WG1261662-2/-3 LCS/LCSD recoveries, associated with L1931803-09 through -11, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Total Metals

L1931803-04 through -08: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	450 JOHNSON AVE.	**Lab Number:**	L1931803
Project Number:	170588001	**Report Date:**	07/23/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on July 17, 2019. The canister certification results are provided as an addendum.

L1931865-02: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson
