1.0 INTRODUCTION

The 749 Van Sinderen Avenue Brownfield Cleanup Program site (the "BCP Site") is comprised of one (1) property and is located in the New Lots section of Brooklyn, New York, and is identified as Block 3865 and Lot 9 on the NYC Tax Map.

PVEDI has prepared a Brownfield Cleanup Program (BCP) application to amend an existing Brownfield Cleanup Agreement (BCA). The proposed amendment is to expand property boundaries on the property listed in the existing BCA. The BCP Site would be amended to include a 0.0826-acre lot to the north of the BCP located at 719 Van Sinderen Avenue, identified as Block 3865 and Lot 21 on the NYC Tax Map.

The amended Site is located in a commercial and industrial area, bordered to the north by 180 New Lots Avenue (mixed-use residential/commercial building), to the east by 650-680 Snediker Avenue (eleven single and double-family residential buildings), to the south by 753 Van Sinderen Avenue (single-story commercial building), and bounded to the west by Van Sinderen Avenue followed by New Lots Avenue MTA L-Train station.

PVEDI Engineering, Architecture & Geology, D.P.C. (PVEDI) prepared a Supplemental Remedial Investigation Work Plan (SRIWP) dated December 2023, revised in August 2024, which was approved by NYSDEC on August 14, 2024. The purpose of this Supplemental Remedial Investigation Addendum (SRI Addendum #2) is to characterize and delineate contaminants originating from the past operations of the amended BCP Site as an auto repair facility and metal works shop identified during a Remedial Investigation performed for the NYC Office of Environmental Remediation (NYC OER) and BCP Supplemental RI activities.

Based on the findings and conclusions of environmental investigations, the following AOCs have been established.

AOC – 1 Petroleum Contamination
AOC – 2 cVOC Contamination

The following is a brief description of the findings in each Area of Concern.

AOC – 1 Petroleum Contamination

Petroleum VOCs were observed in soil at the soil-groundwater interface in the central portion of the site as identified by visual/olfactory and field screening methods, and laboratory analytical data. During the 2023 Remedial Investigation conducted by PVE, petroleum constituents were observed between 17 and 20' below grade in borings SB-1, SB-7, SB- 8, SB-9, SB-10, and SB-11. One (1) soil sample contained one (1) or more petroleum contaminants at concentrations exceeding Unrestricted Use SCOs. The site history includes auto repair operations since at least 1989, therefore petroleum constituents identified in the subsurface warranted a spill to be reported to NYSDEC on July 6, 2023 by PVE (Spill 2302765).

AOC – 2 cVOC Contamination

The Site was historically utilized as a metal working facility from at least 1928 until at least 1989. Adjoining and nearby properties within 480 feet included dry cleaning facilities and metal working facilities since the 1930s. During the 2023 Remedial investigation conducted by PVE, soil vapor samples were collected from 2.0' below grade and 15.0' below grade. Soil vapor samples in the southeastern portion of the Site detected chlorinated VOC (cVOC) concentrations that warrant mitigation. Specifically, PCE was detected in samples SV-5, SV-6, SV-7, SV-9, and SV-11 (max concentration 5,300 $\mu g/m^3$).

1.1 SOURCES OF CONTAMINATION

In February 2025, PVEDI submitted a draft Supplemental Remedial Investigation Report to NYSDEC for review.

The BCP Site was historically developed for manufacturing operations. Uses of the property included one-story warehouse buildings for manufacturing wood products, metal working, enamel usage, and a lumber yard from at least 1928 until at least 1987. By 1989, the property was utilized as an auto body works facility with six (6) individual body shops. In addition, the northern and southern adjoining properties have historically operated as manufacturing facilities and iron works and currently operate as auto body shops.

Eleven (11) soil boring borings, six (6) monitoring wells, and eleven (11) soil vapor points were completed at the Site during the 2023 Remedial Investigation. Based on the findings of this investigation, AOC-1 (petroleum contamination) and AOC-2 (cVOC contamination) were established. In 2024, a Supplemental Remedial Investigation was conducted to delineate contaminants in AOC-1 and AOC-2. The investigation included the completion of an additional twelve (12) soil borings, twelve (12) monitoring wells, six (6) sub-slab soil vapor points in which six (6) were co-located with ambient indoor air samples, and one (1) additional ambient outdoor air sample to determine background ambient air conditions.

SOIL: VOCs and SVOCs were detected at concentrations exceeding both UUSCOs and PWG in soil samples. Metals and Pesticides were detected at concentrations exceeding UUSCOs only. No RRSCOs exceedances were detected in soil samples collected. Of the forty-six (46) soil samples collected, VOCs were detected in seven (7) exceeding any cleanup objective. These include 1,2,4-Trimethylbenzene, Ethylbenzene, and Xylenes in SB-1 (17-18') exceeding PGW, and O-Xylene (1,2-Dimethylbenzene) and Xylenes exceeding UUSCOs in SB-24 (8-10'). The remaining five (5) samples detected Acetone exceeding PGW. It should be noted that this VOC is a common laboratory contaminant and is not considered characteristic of the Site. Two (2) soil samples collected contained one (1) SVOC exceeding PGW and one (1) SVOC exceeding UUSCO, both detected below the soil-groundwater interface between 15-18' bgs.

Three (3) soil samples detected metals exceeding UUSCOs. Contaminants exceeding UUSCOs include Cooper, Lead, and Zinc. Lead was detected in one (1) sample [SB-4 (14-15')] exceeding UUSCOs at maximum concentration of 280 mg/kg.

One (1) pesticide (P,P'-DDE) was detected in two (2) soil samples collected at depths between 8-17 feet bgs at concentrations exceeding UUSCOs.

GROUNDWATER: Multiple VOCs, and at least three (3) SVOCs, four (4) metals were detected in groundwater samples at concentrations exceeding Class GA GQS. VOCs were detected at concentrations exceeding Class GA GQS in thirteen (13) of the twenty-two (22) groundwater samples. SVOCs were detected in fifteen (15) groundwater samples collected. Naphthalene was the only compound detected in thirteen (13) of these samples.

All twenty-two (22) groundwater samples collected detected at least two metal compounds exceeding Class GA GQS. These compounds include Iron, Lead, Magnesium, Manganese, and Sodium. Lead was detected in one (1) sample (TMW-1) exceeding Class GA at maximum concentration of 0.0342 mg/L. Iron, Manganese, and Sodium were also detected exceeding Class GA GQS in the sixteen (16) dissolved samples collected during the 2024 Supplemental Remedial Investigation.

PFAS compounds were detected at concentrations exceeding Part 375 Screening Levels in five (5) of the six (6) locations sampled, however one (1) location sampled was analyzed via USEPA E537, and the analytical results are not valid. It should be noted, the Site does not rely on groundwater for potable uses and redevelopment of the Site will include the use of municipal supplied water.

SOIL VAPOR/INDOOR AIR: Eleven (11) of twenty-one (21) NYSDOH-regulated VOCs were identified in fifteen (15) of the samples collected at concentrations that would warrant mitigation and/or monitoring as indicated in the NYSDOH Soil Vapor/Indoor Air Matrices guidance values. Petroleum related VOCs identified in sub-slab samples collected include 1,2,4-Trimethylbenzene (max. 110 µg/m^3 in SV-1 and SV-2), Ethylbenzene (max. 150 µg/m^3 in SV-9), m,p-Xylene (max. 590 µg/m^3 in SV-6), Naphthalene (max. 62 µg/m^3), O-Xylene (1,2-Dimethylbenzene) (max. 170 µg/m^3 in SV-6 and SV-15), and Toluene (max. 1,800 µg/m^3 in SV-9). Chlorinated VOCs identified in sub-slab samples collected include Tetrachloroethylene (PCE) (max. 5,300 µg/m^3 in SV-6), and Trichloroethylene (TCE) (max. 490 µg/m^3 in SV-13). Samples SV-1 and SV-2 were collected 15-feet bgs while samples SV-6, SV-9, SV-13, and SV-15, were collected between 2 and 3 feet bgs.

SUMMARY: Contaminants exceeding the Unrestricted Use SCOs in soil appear to originate in the fill units that were observed in soils throughout the site. Generally, site history does not appear to be contributing to soil contamination and no source material was identified within the fill unit and sand unit above the soil-groundwater interface.

Contaminants present in groundwater consist of VOCs (namely BTEX compounds), SVOCs (predominately naphthalene), and metals. Several dissolved metals and low-level concentrations

of PFAS were also identified in groundwater. The VOCs in groundwater are present in multiple monitoring wells located through the site. Visual/olfactory contamination in boring logs from permanent monitoring wells were identified at the soil-groundwater interface. VOCs indicative of petroleum contamination appear in groundwater throughout a majority of the site, however vertical accumulation of source material was not identified in any soil borings to the groundwater interface.

Elevated chlorinated solvent concentrations (mainly PCE and TCE) were identified in soil vapor samples collected throughout the southern portion of the Site. Samples were collected from depths at 2', 4', 6', and 15' below grade. Chlorinated VOCs were detected in samples from all various horizontal depths, with the highest concentrations of PCE recorded at 2,400 and 4,200 $\mu g/m^3$ in SV-5 and SV-14, respectively. These concentrations were detected along the eastern boundary of the site, however cVOC concentrations were not detected in soil samples and groundwater collected from the vicinity of this soil vapor plume.

PVEDI prepared a Phase I ESA as part of due diligence in a report dated July 2025. The earliest available historical record, the 1908 Sanborn Map, depicts the subject property as vacant and unimproved. The first structure appears on the 1928 Sanborn Map, identified as a one-story iron works facility. By 1967, the property is depicted as a wood working facility, and by 1977, it is depicted as an auto body shop – a use and structure that remain consistent through Sanborn Maps from 1977 to 2007 and aerial photographs from 1954 to 2022. According to City Directory records, the property was originally located within a manufacturing district, which transitioned to commercial zoning in 2022. The site is currently occupied by an active auto mechanic and repair shop. Site features included a rear yard and general auto repair equipment. Several drums were observed throughout the site, however no petroleum bulk storage, lifts, or other hydraulic equipment were identified. No spills were reported on the property, and no tanks are registered on site. The nearest spill reported with NYSDEC is Spill 2302765 that PVEDI reported following our Remedial Investigation at 749 Van Sinderen Avenue for OER's E-Designation requirements.

1.2 PURPOSE

The purpose of this addendum is to extend the remedial investigation into the amended BCP Site Boundary, which includes the addition of a 0.0826-acre lot onto the northern boundary of the existing BCP Site Boundary. The site history is consistent with the remaining BCP site boundary (749 Van Sinderen Avenue), which included iron works, wood shops, and an auto repair operation. No additional Areas of Concern were established for this Work Plan addendum.

Based on the historical use of the BCP Site and previously summarized results, PVEDI has developed a scope of work to further investigate subsurface conditions. This Work Plan details specific tasks that will facilitate site characterization and ensure compliance with the NYSDEC

BCP requirements. Specifically, when used in concert with results of previous investigations, the findings of the remedial investigation will:

- Describe the amount, concentration, persistence, mobility, form (e.g., solid, liquid), and other significant characteristics of the contaminates present (nature of contaminates).
- Further define the lateral and vertical extent of petroleum contamination identified at the soil-groundwater interface;
- Delineate lateral and vertical extent of site-related contaminants.
- Define the extent to which the contaminants of concern have potential to migrate, and whether potential future migration may pose a threat to human health or the environment.
- Determine the extent to which contaminant levels pose an unacceptable risk to public health and the environment.
- Provide sufficient information to allow for the identification of potentially feasible remedial alternatives.
- Develop Remedial Action Objectives (RAOs) for the Site based on the contaminant characterization results, exposure pathways, and risk evaluation data.

2.0 SUPPLEMENTAL REMEDIAL INVESTIGATION ADDENDUM SCOPE OF WORK

Supplemental Remedial Investigation sampling will focus on delineating the extent of contaminants that have been demonstrated to be present to properly design future remedial alternatives. Sample locations have been selected to identify contaminants where a contaminant source is suspected but previous sampling has been insufficient to conclusively establish the presence or absence of contaminants at concentrations requiring remedial action. In this sense, the Remedial Investigation Scope is presented to provide sufficient detail to develop data to satisfy overall project objectives, but flexibility to adjust for field conditions and observations.

The Sample Summary Table (Table 1) describes the location and depth of each sample, the laboratory analyses and laboratory method number planned for each sample, and the rationale for collecting each sample.

All supplemental RI field work will be conducted in accordance with the Quality Assurance Project Plan (QAPP), and the Health and Safety Plan (HASP), as previously approved in the Supplemental Remedial Investigation Work Plan, dated August 2024. Community air monitoring will be conducted in accordance with the Appendix 1A of DER-10.

2.1 Previous Investigations

Phase I Environmental Site Assessment

In July 2025, PVEDI completed a Phase I ESA at 719 Van Sinderen Avenue (Block 3865 Lot 21) in a report dated July 31, 2025. This assessment has revealed evidence of *recognized environmental conditions* in connection with the subject property:

1. Block 3865 Lot 21, 719 Van Sinderen Avenue was identified with an E-Designation for Hazardous Materials, Air Quality, and Noise. A City Environmental Quality Review (CEQR) #21DCP147K was performed for the EAS submitted in 2021 to DCP which resulted in the E-Designation Number E-632. A Phase I and Phase II ESA (hazardous materials) testing protocol is required to be completed and reviewed by the Office of Environmental Remediation (OER) prior to NYC DOB issuing a building permit. PVEDI considers the hazardous materials protocol of the E-Designation to represent a REC.
2. Historical and current uses of the subject property include, but are not limited to, iron working, woodworking, and auto repair. Presently, the site is used for auto body repair and storage. The use and potential mishandling of chemicals and wastes commonly associated with these operations may contribute to soil and groundwater contamination and pose a potential vapor intrusion concern.
3. The adjoining property to the south (topographically downgradient) is currently enrolled in the New York State Brownfield Cleanup Program. Petroleum contamination has been confirmed in soil, soil vapor, and groundwater at that site during remedial investigation activities. Given the close proximity of this listing to the subject property, similar contamination may exist on-site. Additionally, current uses of nearby properties located

within approximately 15 to 482 feet (topographically upgradient) of the subject property include metal working, auto repair, dry-cleaning, and junkyard operations. The chemicals used and/or wastes generated by such facilities have the potential to impact soil, groundwater, and ultimately soil vapor at the subject property, presenting a potential vapor intrusion concern. The combination of nearby historical and current operations, along with documented contamination to the south, collectively represents a REC.

Phase II Environmental Site Assessment

Phase II investigation activities were completed at the site between July 17 and August 9, 2025. PVEDI anticipated the inclusion of this site into the BCP Site, therefore subsurface investigation activities were completed following the Phase I ESA in preparation of a BCA Amendment and Supplemental Remedial Investigation activities. However, no Phase II ESA report was prepared and this work plan reports our findings. On July 17, 2025, PVEDI mobilized to the site for the collection and analysis of four (4) surface soil samples from the rear yard of the site between 0.0 and 1.0 feet below grade.

On August 7, 2025, three (3) soil borings were completed for due diligence purposes (Phase II ESA). Borings were completed using a track mounted GeoprobeTM 7822DT unit equipped with 5-foot long, 2-inch diameter core barrels (macro-cores) fitted with liners, and sampled continuously to a maximum depth of 35-feet below ground surface (bgs). Discrete (grab) samples were collected from the sampling intervals discussed below in each boring summary. In general, each boring consisted of historic fill, sand, and silt from the ground surface to the bottom of each boring.

SOILS: A total of three (3) soil borings were installed to a maximum depth of 35-feet bgs. The stratigraphy of the site, below ground surface, generally consists of historic fill material from depths of 0.0 to 0.5 feet bgs. Fill consists of brown medium to fine grained sands and some silt comingled with brick and coal ash. The fill is underlain by fine to medium sand with some silt to a depth of at least 35.0 feet bgs. Boring Logs are included as Appendix A. A total of nine (9) soil samples were collected for chemical analysis from the 3 soil borings, and analyzed for the following:

SB-1, SB-2, SB-3, samples were analyzed for:

- Part 375 List - VOCs via USEPA Method 8260;
- Part 375 List - SVOCs via USEPA Method 8270;
- Part 375 List - Metals via USEPA Method 6010/7473;
    - Including cyanide and hexavalent chromium.
- Part 375 List - Pesticides via USEPA Method 8081;
- Part 375 List - Polychlorinated Biphenyls (PCBs) via USEPA method 8082
- 1,4 Dioxane by USEPA Method 8270SIM;

SB-1 (3-5’), SB-2 (3-5’), and SB-3 (3-4’) soil samples were analyzed for the following:

- PFAS/Emerging Contaminants by USEPA Method 1633.

Results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Table 375-6.8 UUSCOs, RRSCOs, and PGWSCOs. Results are summarized below. Tables 2 through 6 include results compared to UUSCO, RRSCO, and PGW for surface soil samples. Tables 7 through 12 includes results compared to UUSCO, RRSCO, and PGW for all subsurface soil samples.

VOCs: No VOCs were detected at concentrations exceeding UUSCOs in any surface or subsurface soil samples.

SVOCs: SVOCs were detected in three (3) of four surface soil samples at concentrations exceeding UUSCOs, RRSCOs, or PGW. No SVOCs were detected exceeding UUSCOs in any of the subsurface soil samples.

- SS-1 (0-1')
  - Benzo(A)Anthracene (3.02 mg/kg)
  - Benzo(A)Pyrene (3.32 mg/kg)
  - Benzo(B)Fluoranthene (3.76 mg/kg
  - Benzo(K)Fluoranthene (1.44 mg/kg)
  - Chrysene (3.24 mg/kg)
  - Dibenz(A,H)Anthracene (0.424 mg/kg)
  - Indeno(1,2,3-C,D)Pyrene (1.96 mg/kg)
- SS-2 (0-1')
  - Indeno(1,2,3-C,D)Pyrene (0.523 mg/kg)

- SS-3 (0-1')
  - Indeno(1,2,3-C,D)Pyrene (0.576 mg/kg)

Metals: Metals were detected in all four (4) surface soil samples at concentrations exceeding UUSCOs, and in three (3) samples (SS-2, SS-3, and SS-4) exceeding RRSCOs. No metals were detected exceeding UUSCOs in any of the subsurface samples collected. Surface metals exceeding RRSCOs include the following:

- SS-2 (0-1')
  - Arsenic (26.4 mg/kg)
  - Barium (557 mg/kg)
  - Lead (729 mg/kg)
- SS-3 (0-1')
  - Barium (427 mg/kg)
  - Lead (575 mg/kg)
- SS-4 (0-1')
  - Arsenic (18.8 mg/kg)
  - Lead (585 mg/kg)

Pesticides: Two of the four collected surface soil samples were detected exceeding UUSCOs. None of the subsurface soil samples were detected at concentrations exceeding UUSCOs. No Pesticides were detected exceeding RRSCOs.

- SS-2 (0-1')
  - P,P'-DDT (0.00684 mg/kg)

- SS-4 (0-1')
  - P,P'-DDT (0.00626 mg/kg)

PCBs: No PCBs were detected at concentrations exceeding UUSCOs and RRSCOs in any surface or subsurface soil samples.

Emerging Contaminants: SB-1 (3-5'), SB-2 (3-5'), and SB-3 (3-5') were analyzed for PFAS and 1,4-Dioxane. No emerging contaminants were detected exceeding UUSCOs and RRSCOs in the subsurface soil samples collected.

SOIL VAPOR: PVEDI installed four (4) temporary sub-slab vapor points for collection and analysis of soil vapor samples to evaluate the potential for a vapor intrusion condition. All four vapor points (SV-1, SB-2, SV-3, and SV-4) were installed to a depth of 3.0 feet bg. Each sub-slab vapor point was installed using a hand drill, polyethylene tubing, and non-VOC emitting clay molded around the tubing to form a seal between the slab and the indoor air. A helium tracer gas was used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) procedure to verify the integrity of the sub-slab vapor points seal. A plastic 5-gallon bucket served as a shroud to keep the helium in contact with the probe during testing. A portable monitoring device was used to analyze a sample of soil vapor for helium prior to sampling. All vapor points passed the helium leak detection test prior to sampling. Following QA/QC protocol, the tubing from the sampling point was purged at 0.2 L/min using a RAE Systems MultiRAE Lite (3 tubing volumes were purged) and then attached directly to a laboratory-certified clean 6L-Summa canister. All summa canisters used in this investigation had a flow comptroller set to collect a sample at 0.2 L/min over a 24-hour period. Sampling rates did not exceed 0.2 L/min. All samples were collected successfully and were submitted to a NYSDOH ELAP-certified laboratory for analysis of VOCs via USEPA Method TO-15. Analytical results were compared to the 2006 NYSDOH Vapor Intrusion Guidance and subsequent amendments released in May 2017 and February 2024.

Three (3) indoor air samples (IA-1, IA-2, and IA-3) were co-located to three interior soil vapor probes (SV-1, SV-2, and SV-3) and were sampled simultaneously with the soil vapor points. SV-4 was located in the rear yard, therefore an indoor air sample was not collected at this location. The three co-located indoor air and soil vapor samples (SV-1/AI-1, SV-2/AI-2, and SV-3/AI-3) indicated concentrations that warrant action above "No Further Action" when compared to the NYSDOH Decision Matrices. Petroleum constituents (1,2,4-Trimethylbenzene and m,p-xylene) were detected in all three of these locations that suggest identify source, resample, or mitigate, based on their indoor air concentrations, likely a result of several

petroleum oil containers located throughout the interior of the facility that operates as an auto repair. PCE was detected in sub-slab samples SV-1 and SV-2 that warrant mitigation or monitoring. Results are summarized in the table below:

Compound	Sample ID	Sub-slab Soil Vapor (µg/m^3)	Indoor Air (µg/m^3)	NYSDOH Decision Matrix
1,2,4-Trimethylbenzene	SV-1/AI-1	2.7 µg/m^3	20 µg/m^3	Identify source(s), resample, or mitigate
	SV-2/AI-2	3.0 µg/m^3	23 µg/m^3	Identify source(s), resample, or mitigate
	SV-3/AI-3	4.0 µg/m^3	21 µg/m^3	Identify source(s), resample, or mitigate
M,p-Xylene	SV-1/AI-1	2.6 µg/m^3	24 µg/m^3	Identify source(s), resample, or mitigate
	SV-2/AI-2	2.5 µg/m^3	26 µg/m^3	Identify source(s), resample, or mitigate
	SV-3/AI-3	3.3 µg/m^3	25 µg/m^3	Identify source(s), resample, or mitigate
Tetrachloroethylene	SV-1/AI-1	230 µg/m^3	11 µg/m^3	Mitigate
	SV-2/AI-2	220 µg/m^3	9.3 µg/m^3	Monitor

No VOCs were detected in SV-4 at concentrations that warrant action above "No Further Action".

Table 13 includes soil vapor and indoor air concentrations compared to NYSDOH guidance values.

2.1 Mobilization and Utilities Investigation

Seven (7) days prior to initiating any field activities, PVEDI will notify NYSDEC and NYSDOH personnel of the anticipated field schedule.

A geophysical survey will be performed prior to drilling and installation of soil borings. The geophysical survey will employ ground-penetrating radar (GPR) and magnetic/electromagnetic equipment to locate anomalies that could be representative of buried infrastructure, such as fuel storage tanks, sewer lines, drain pipes, utilities, and conduits that could provide potential pathways for contaminants, or obstructions to be avoided during drilling.

2.2 Soil Borings & Subsurface Soil

Three (3) soil borings were advanced within the property to a maximum depth of 35 feet, as discussed above. Multi-depth soil samples were collected at three (3) locations in each of the three borings and are described in Table 1. Four (4) supplemental soil borings are proposed to collect soil samples for laboratory analysis (See Figure 8). Two (2) borings will be advanced indoors using a direct push track-mounted Geoprobe™ 7822DT drill rig and two (2) borings will

be advanced in the rear yard using a direct push track-mounted Geoprobe™ 420M drill rig. Both drilling rigs will be equipped with 4-foot long, 2 ¼-inch diameter stainless steel core barrel (macro-cores) fitted with PVC liners. SB-4 and SB-5 will be sampled continuously from ground surface to a maximum depth of 25-feet bgs, or 5 feet below the vertical extent of petroleum contamination if vertical contamination is identified below 25 feet bgs. If shallow refusal is encountered, up to three (3) attempts will be made to complete the soil samples to the target depth. SB-6 and SB-7 will be advanced to the maximum depth of 15-feet bgs. At each location, field personnel will screen soil samples for VOCs using a photoionization detector (PID), and headspace techniques. The project geologist will keep a detailed log of each core: Lithology, grain size, stratigraphic changes, color, occurrence of groundwater, and soil recovery will be recorded. Observations will be made describing the presence of potential contamination in the soil samples based on odor, visual observations, or PID readings.

Up to three (3) discrete/grab soil samples will be collected from each soil boring. Samples will be selected to characterize fill material, surface and subsurface soils, and evaluate conditions at the soil/groundwater interface. Additional intervals may be selected for laboratory analysis from within the contamination zone based on field observations including visual and olfactory indications of contamination as well as direct instrument readings. Soil samples will be screened for VOCs using a PID. Each discrete/grab soil sample interval will be transferred into laboratory provided container. See Section 3.0 and Appendix A of the August 2024 approved SRI Work Plan for more information related to sampling procedure and approved sample containers.

Soil samples will be analyzed for some or all of the following parameters, as specified in Table 1:

- TCL VOCs by USEPA Method 8260C;
- TCL SVOCs by USEPA Method 8270D;
- Target Analyte List (TAL) Metals by USEPA Method 6010C & 7471;
    - Including cyanide and hexavalent chromium.
- TCL PCBs by USEPA Method 8082A;
- TCL Pesticides by USEPA Method 8081B;
- 1,4 Dioxane by USEPA Method 8270SIM;
- PFAS/Emerging Contaminants by USEPA Method 1633.

All samples will be analyzed by a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory providing Analytical Services Protocol (ASP) Category B deliverables. Field duplicates and matrix spike/matrix spike duplicates (MS/MSD) will be collected for quality control/quality assurance (QA/QC) purposes and analyzed for sample parameters described above, in accordance with Table 1. In addition, aqueous equipment field blanks will be collected in the field and laboratory-supplied aqueous trip blanks will accompany the sample shipment (trip blanks analyzed for VOCs only). QA/QC blanks and duplicates will be completed at a frequency of one sample for every 20 field-samples, as required in DER-10. QA/QC blanks and duplicates are included in Table 1.

Upon completion of drilling, each boring will be filled to within 12-inches of ground surface with either the drill cuttings or a cement/bentonite grout mixture (if grossly contaminated media is identified). Boreholes filled with soil cuttings will be completed to ground surface using drilling sand, if necessary. Boreholes filled with grout will be completed with Quickrete to top of groundwater interface and natural soil cuttings/sand, as necessary. All borings will be patched with the appropriate surface materials (e.g., asphalt or concrete patch), depending on the location.

2.3 Groundwater Monitoring Wells

Two (2) permanent 2-inch groundwater monitoring wells will be installed during the remedial investigation. Each well will consist of Schedule 40 slotted PVC screen with a solid PVC riser and a 6-inch annular space . The screened interval will be installed to straddle the water table. SB-4 and SB-5 will be converted to permanent monitoring wells as depicted on Figure 8.

One (1) groundwater sample will be collected from each of the newly installed monitoring wells and will be analyzed for the following:

- TCL VOCs by USEPA Method 8260C;
- TCL SVOCs by USEPA Method 8270D;
- TAL Metals by USEPA Method 6010C & 7471B;
  - Including cyanide and hexavalent chromium;
  - Field filtered and totals;
- TCL PCBs by USEPA Method 8082A;
- TCL Pesticides by USEPA Method 8081B;
- 1,4 Dioxane by USEPA Method 8270SIM;
- PFAS/Emerging Contaminants by USEPA Method 1633.

The monitoring wells will be developed prior to sampling to remove fine-grained materials introduced during drilling and to ensure hydraulic communication with the aquifer. Development will be performed using a dedicated pump or bailer, removing a minimum of three (3) well volumes or until water is relatively free of sediment and field parameters (pH, specific conductance, temperature, and turbidity) stabilize. Groundwater sampling will be conducted no sooner than 24 hours after development using low-flow purging and sampling techniques. A peristaltic pump with dedicated or disposable tubing will be placed within the screened interval, and groundwater will be purged at a rate typically between 0.1 and 0.5 liters per minute while monitoring pH, specific conductance, temperature, turbidity, and dissolved oxygen at regular intervals. Once parameters have stabilized, samples will be collected directly from the discharge tubing into appropriate laboratory-supplied containers, preserved as required, and placed on ice. Groundwater samples for PFAS will be collected in accordance with NYSDEC *Guidelines for Sampling, Analysis, and Assessment of PFAS*, dated April 2023.
All samples will be analyzed by a NYSDOH ELAP-certified laboratory providing Category B deliverables for the analyses listed above. Aqueous equipment field blanks will be collected for QA/QC purposes and analyzed for all sample parameters in accordance with Table 1.

Laboratory- supplied aqueous trip blanks will accompany the sample shipment (trip blanks analyzed for VOCs only).

2.4 Investigation-Derived Waste Management

Investigation-derived wastes (IDW) will be minimized by returning excess soil from soil borings to the original borehole unless grossly contaminated, in accordance with DER-10(3.3)(e). Decontamination wastewater and purged groundwater will be properly containerized regardless of field evidence of gross contamination. If field evidence or laboratory results indicate gross contamination, soil cuttings, decontamination wastewater and groundwater will be drummed containerized and staged near the point of generation and will be properly disposed of based on laboratory results. If free of visible contamination, disposable personal protective equipment (PPE), sampling supplies and disposables will be placed in heavy-duty plastic bags and disposed of properly as general refuse.

In any instance during the performance of this RI, all IDW will be managed in accordance with procedures and methods outlined in DER-10 section 3.3e.

2.5 Data Review

All samples undergoing laboratory analysis will be subject to a third-party data review process in accordance with the QAPP, to ensure the usability of the data collected. Data usability summary reports (DUSRs) documenting any issues with QA/QC will be prepared and included in the RI Report.

3.0 SAMPLE CONTAINERS AND QA/QC SAMPLES

Sample containers will be provided and handled according to the following:

- At the time of mobilization for field work PVEDI personnel will request sample containers be delivered from the laboratory to the Site to minimize potential for cross-contamination. Considering the remote nature of the Site, sample containers may be delivered to an alternate location.
- Container labels will be completed (pen only) after the caps have been placed back on each bottle.

Sample Custody

Field personnel are responsible for maintaining the sample coolers in a secured location until delivery at the laboratory. The record of possession of samples from the time they are obtained in the field to the time they are delivered to the laboratory or shipped off-site will be documented on Chain-of-Custody (COC) forms. The COC forms will contain the following information:

project name; names of sampling personnel; sample number; date and time of collection and matrix; signatures of individuals involved in sample transfer, and the dates and times of transfers.

4.0 GEOTECHNICAL SCOPE OF WORK

4.1 Geotechnical Test Pit

This geotechnical test pit work is being performed **independent of the proposed Remedial Investigation Work Plan (RIWP)** and is intended solely to evaluate subsurface conditions to support foundation design and construction planning.

PVEDI will supervise the excavation of one (1) test pit along the southern foundational wall of the new construction. The test pit will be excavated using standard earth moving equipment (backhoe or track mounted excavator) at site. The test pit will be excavated to a maximum depth of 25-feet below ground surface (bgs). PVEDI personnel will keep a detailed log of the pit which includes lithology, grain size, stratigraphic changes, color, and occurrence of groundwater. Excavated materials will be visually inspected and screened for volatile organic compounds (VOCs) with a photoionization detector (PID). Excavated areas will be restored to their approximate original condition. All waste, if encountered, will remain on site.

The test is currently projected to require 1-2 days of drilling and mobilization activities. Material excavated during test pit advancement will be temporarily stored immediately adjacent to the test pit and will be stored on poly sheeting-covered building slab. Temporarily staged excavated material will be covered with poly sheeting at the end of each day as necessary, and upon completion of the test pit the excavated material will be backfilled within the test pit and concrete will be restored to maintain a cover system following excavation activities. Concrete restoration will be consistent with the surrounding building slab. A schedule of the work is provided below:

Task	**Schedule**
Notification to NYSDEC for test pit scheduled completion date	5 business days prior to scheduled drilling date
Test pit advancement	1-2 business days
daily report and community air monitoring data provided to NYSDEC.	Within 2 business days following completion of test pit

5.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

See Appendix A – Quality Assurance Project Plan of the August 2024 approved SRI Work Plan for additional details.

5.1 Analytical Methods

All samples collected during the RI will be analyzed using EPA-approved analytical methods. See Appendix A – Quality Assurance Project Plan of the August 2024 approved SRI Work Plan for additional details.

5.2 Laboratory

The subcontracted laboratory will be certified by the New York State Department of Health to perform Contract Laboratory Program (CLP) analysis on all media to be sampled during this investigation. The laboratory will perform the sample analysis in accordance with the most recent NYSDEC ASP.

5.3 Data Submittal

Analytical data will be submitted in complete ASP Category B data packs. Procedures for chain of custody, laboratory instrumentation calibration, laboratory analyses, reporting of data, internal quality control, and corrective actions shall be followed as per SW-846 and as per the laboratory's Quality Assurance Plan. Where appropriate, trip blanks, field blanks, field duplicates, and matrix spike, matrix spike duplicate shall be performed at a rate of 5% and will be used to assess the quality of the data. The laboratory's in-house QA/QC limits will be utilized whenever they are more stringent than those suggested by the EPA methods.

5.4 Data Usability Summary Report

The data package will be sent to a qualified, independent, data validation specialist for evaluation of the accuracy and precision of the analytical results. A DUSR will be prepared for the RI data sets to describe the compliance of the analyses with the analytical method protocols detailed in the NYSDEC ASP. The DUSR will provide a determination of whether the data meets the project-specific criteria for data quality and data use. The validation effort will be completed in accordance with NYSDEC Division of Environmental Remediation DUSR guidelines.

6.0 HEALTH AND SAFETY

Field tasks will be performed using industry standard health and safety procedures. A site-specific HASP has been prepared for use by the field team during all field activities. This plan details known and potential hazards of the Site and field tasks as well as air monitoring and emergency procedures. The HASP is presented in Appendix B of the August 2024 approved SRI Work Plan for additional details.

Fact sheets documenting the goals and progress of the project will be prepared at key milestones of the project and distributed to those on the project mailing list. The distribution list is included in the Citizens Participation Plan which is provided in Appendix C of the August 2024 approved SRI Work Plan**.**

6.1 Community Air Monitoring

Where ground intrusive operations are planned, community air monitoring will be performed to protect the downwind community. This Community Air Monitoring Plan (CAMP) data will be submitted to the NYSDEC and NYSDOH on a weekly basis. A PVEDI representative will continually monitor the breathing zone in the vicinity of the immediate work area using PID instrumentation capable of measuring total volatile organic compounds in air at concentrations as low as 1 part per million (PPM). The air in the work zone also will be continually monitored for dust generation using a pDR 1500 hand-held meter or comparable model. Additionally, one (1) upwind and one (1) downwind station, consisting of one (1) PID and one (1) pDR 1500 respectively, will operate continuously during all ground intrusive work with extra care exercised when sampling near adjacent residential properties. Within one (1) business day of any CAMP exceedances detected during monitoring, the NYSDEC and NYSDOH will be notified of actions planned or taken in response to these exceedances. If VOC measurements are detected at 5 ppm above the background for the 15-minute average, or if dust generation is observed at 100 micrograms per cubic meter greater than at background (upwind perimeter) locations, then the intrusive work will be temporarily halted, dust suppression techniques will be implemented and more rigorous monitoring of VOCs and dust will be conducted in accordance with the NYSDOH Generic CAMP.

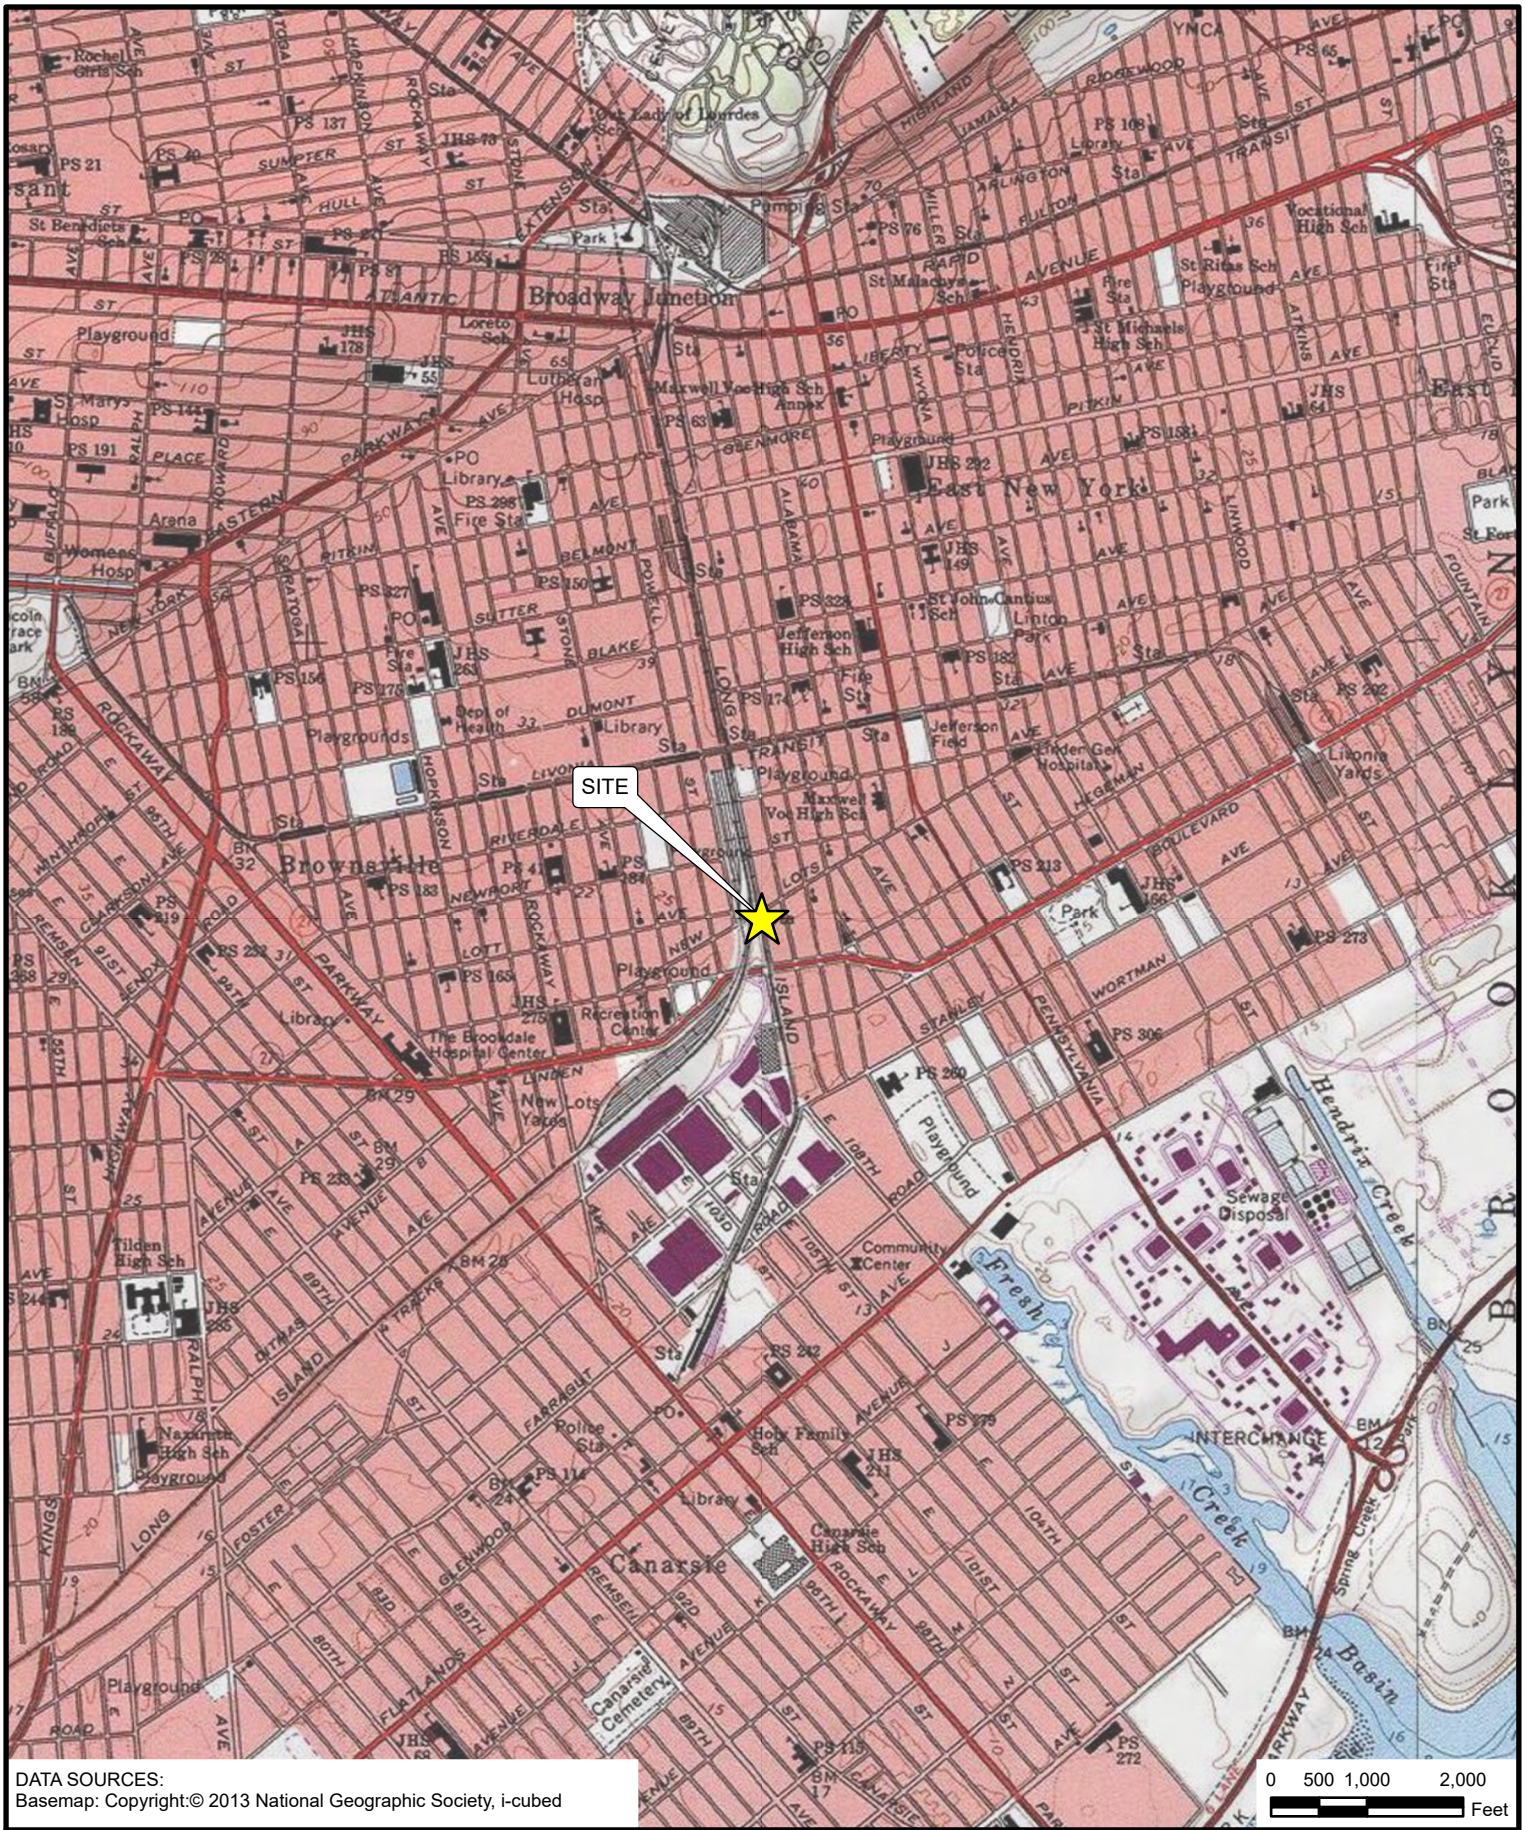

7.0 REPORTING

Daily field reports will be prepared and submitted to NYSDEC and NYSDOH throughout the SRI. Each report will document the sampling activities conducted that day and will present real-time air monitoring data collected in accordance with the Community Air Monitoring Plan (CAMP). The reports will also identify any CAMP exceedances, provide the reason(s) for each exceedance, and describe the corrective actions implemented to mitigate the condition.

Information generated under this Work Plan will be incorporated into the Supplemental Remedial Investigation Report (SRIR).

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit.

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.
J = Detected below the Reporting Limit but greater than or equal to the Method Detection Limit.

Table 8 - Semi-Volatile Organic Compounds in Sub-Surface Soil Samples
Compared to NYSDEC Part 375 Unrestricted Use, Restricted Residential Use, and Protection of Groundwater Soil Cleanup Objectives
719-721 Van Sinderen Avenue, Brooklyn, New York

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.
B = Analyte is found in the associated analysis batch blank.

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.

Notes:
Standards are for Soil Cleanup Objectives per NYSDEC Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and Protection of Groundwater (PGW).
Yellow shading designates those compounds detected at concentrations exceeding UUSCOs.
Orange shading designates those compounds detected at concentrations exceeding PGWSCOs.
Red shading designates those compounds detected at concentrations exceeding RRSCOs.
NE = No standard established.
ND and U = The analyte was not detected.

Notes:
Standards are for NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006),
compared to the February 2024 updates to Soil Vapor/Indoor Air Decision Matrices
Shading indicated above displays values exceeding respective actions
PURPLE indicates Mitigate to minimize current or potential exposures associated with soil vapor intrusion.
ORANGE indicates Identify Source(s) or Resample or Mitigate to minimize current or potential exposures associated with soil vapor intrusion.
YELLOW indicates Monitor to determine wheter concentrations in the indoor air or sub-slab vapor have changed and/or to evaluate temporal influences

NE = No standard established;
ND and U = Not detected at MDL for sample.
NT = Analyte not tested for the indicated sample.
UJ = The analyte was analyzed for but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise
U = Detected less than the Method Detection Limit
B = Analyte is found in the associated analysis batch blank
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample
E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on July 18, 2025 and listed below. The project was identified as your project: **20250316 719 Van Sinderen**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 25G1284

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

25G1284-03	SB-3 (0-1) 20250717	8 oz. Glass Cool to 4° C
25G1284-04	SB-4 (0-1) 20250717	8 oz. Glass Cool to 4° C

Sample and Data Qualifiers Relating to This Work Order

VOA-Jar	VOA sample was taken from a container noncompliant with SW-846 5035A due to a depletion of low-level vials. Results below 200 ug/Kg may be biased low.
VOA-CONT	Non-Compliant - the container(s) provided by the client for soil volatiles do not meet the requirements of EPA SW846-5035A. Results reported below 200 ug/kg may be biased low due to samples not being collected according to EPA SW846 5035A requirements.
S-GC	Two surrogates are used for this analysis. One surrogate recovered within control limits therefore the analysis is acceptable.
S-08	The recovery of this surrogate was outside of QC limits.
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 07, 2025 and listed below. The project was identified as your project: **20250316**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25H0525

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

S-08	The recovery of this surrogate was outside of QC limits.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
ICVE	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
HT-NFD	NFDHA was extracted outside of the 3-day holding time established by 1633A. NFDHA is not a regulated analyte, and does not have a toxicity factor or corresponding EPA Regional Screening Level. These results should not impact data usability
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.
CCVE	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
CAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%)
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Upon arrival to the lab one set of the MS/MSD sample was missing from the WO. Also there is no clear indication on what sample the MS/MSD is for - MAS

Revision Description: This report has been revised to report full comprehensive VOA list for Sample -11.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 28, 2025 and listed below. The project was identified as your project: **20230097 719 Van Sinderen, BK NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25H1961

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Appendix F	Scope and Limitations of Report
Appendix G	User Questionnaire

1.0 Introduction

1.1 Objectives of Report

This Environmental Site Assessment (ESA) is intended to identify *recognized environmental conditions* (RECs) with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and petroleum products on the subject property (defined in Section 3.0). The term *recognized environmental conditions* (REC) is defined in accordance with **ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process** as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Consideration is given to potential impacts to soil, groundwater, vapor, and other media.

1.2 Scope and Limitations of Report

Visual inspection of the subject property, a review of regulatory records and documents, and a review of historical records and documents are performed in accordance with ASTM E1527-21 and the appended Scope and Limitations (Appendix F) with the exception of any special terms and conditions in Section 1.4. Note that, as stated in Practice 1527-21, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and that performance of Practice 1527-21 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, recognizing reasonable limits of time and cost. PVEDI makes no representation of the condition of areas that could not be visually inspected.

1.3 Significant Assumptions

PVEDI assumes that all database records, historical information, interviews conducted, and information obtained from others regarding the subject property are from reliable sources. No attempt was made to independently verify the reliability of said sources, as it is not required to verify the information provided according to Section 7.5.2.1 of ASTM E1527-21. Where access to portions of the site or to structures on the site was unavailable or limited, PVEDI renders no opinion as to the presence of regulated or hazardous materials or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure. Conclusions and recommendations are based on information obtained from said sources and a visual inspection of the subject property on the date listed herein. References and sources used for the preparation of this report are documented in this report.

1.4 Special Terms and Conditions

There were no special terms and conditions.

1.5 User Reliance

The user is the party seeking to use Practice E1527 to complete this environmental site assessment of the subject property. The user has specific obligations for completing a

successful application of Practice E1527 outlined in Section 6 of E1527. Completion of the user questionnaire (attached in Appendix G) helps satisfy these obligations.

In addition to the user, additional parties may rely on the contents of this environmental site assessment as listed below.

User:	Spatial Equity Co. Attn: Teghvir Sethi Elliott Raskin
Authorized to rely on this report:	Spatial Equity Co. 447 Broadway, 2nd Fl New York, NY 10013 And SPEQ88, LLC 729 Van Sinderen LLC 729 Van Sinderen Partners LLC

The scope of this Phase I ESA may not meet the needs of other users. Any reliance on the contents of this report by any third party is the sole responsibility of that party.

1.6 Definitions

Below are some important definitions (as defined in E1527-21) that are not otherwise defined in this report:

Fill dirt: Dirt, soil, sand, or other earth, that is obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of a real property. It does not include material that is used in limited quantities for normal landscaping activities.

Material threat: Obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance, and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Migrate/Migration: For the purposes of a Phase I ESA, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. Vapor migration in the subsurface is described in Guide E2600; however, for the purposes of a Phase I ESA, there is no requirement to apply the Guide E2600 standard to achieve compliance with all appropriate inquiries.

Property Use Limitation: Limitation or restriction on current or future use of a property in connection with response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous substances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

2.0 Site Description

2.1 Subject Property Location

Street Address:	719 Van Sinderen Avenue
Alternate Addresses:	721 Van Sinderen Avenue
Municipality:	Brooklyn
County:	Kings County
State:	New York
Tax Parcel ID:	Block 3865 Lot 21
Lot Size:	0.08 acres/3,600 sq. ft.
Building Size:	One-story auto service garage structure: 2,000 sq. ft.
Zoning:	Commercial (C4-4L)

See Appendix A for site maps. The parcel outline was obtained from the New York City Department of Finance Digital Tax Map (http://gis.nyc.gov/taxmap/). Property information was obtained from New York City Department of Buildings (DOB) and NYCity GIS Map (http://maps.nyc.gov/doitt/nycitymap/).

2.2 General Site Features, Characteristics, and Current Operations

Site Features:	The subject property consists of a single tax parcel improved with a one-story, slab-on-grade structure with no basement. The eastern portion of the property is used as a junkyard and includes a large trailer that serves as the facility's office.
Current Use:	Auto repair and welding shop, and junkyard
Topography:	Subject property is generally flat; local topography gently slopes downward to the south/southeast.
Potable Water Supply:	Municipal supply.
Sewage Disposal System:	Municipal service.
Means of heating/cooling:	Natural gas.

2.3 Current Uses of Adjoining Properties

Adjoining properties are any real property or properties, the border of which is contiguous or partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them. Adjoining parcels were obtained from the New York City Department of Finance Digital Tax Map (http://gis.nyc.gov/taxmap/).

Below is a table describing the current uses of adjoining properties.

Direction from Subject Property	Address	Owner(s)	Occupant(s)/Use	Impact to Subject Property
West	Linden Boulevard	NYC Transit Authority	Transportation & Utility	Not Anticipated
North	180 New Lots Avenue	Van Sinderen Plaza Housing Development Fund Corporation	Mixed Residential & Commercial Buildings	Not Anticipated
Northeast	644 Snediker Avenue	Bibi Sadia Rahman	Multi-Family Walk-up Buildings	Not Anticipated
East	648 Snediker Avenue	Joseph J. Elliott	One- & Two-Family Buildings	Not Anticipated
Southeast	650 Snediker Avenue	Gary W. Edwards	One- & Two-Family Buildings	Not Anticipated
South	723-747 Van Sinderen Avenue	Calmer Than You Are LLC	Transportation & Utility	Potentially
West	Linden Boulevard	LIRR	Railroad Relate	Potentially

3.0 Database Search

A review of state and federal documents and databases was performed to identify recorded hazardous waste or regulated substance activities on or near the subject property. Information from state and federal databases was compiled by Environmental Data Resources (EDR), an independent subcontractor to PVEDI. The information presented below is a summary of this report. A complete listing of the sources searched and a complete copy of the database report are provided in Appendix B. The search distances as assigned in ASTM E1527-21 were used at a minimum for each of the following environmental record sources. Additional reviewed records are provided in Appendix C.

Not all sites identified in the database records can be accurately located due to incomplete or conflicting information supplied to the regulatory agencies. Asterisked (*) sites are indicative of sites listed as un-mappable ("orphan") in the EDR database report. Based on location information provided, the asterisked sites may be located within the appropriate search radius and are included in this Phase I ESA report. Information about these sites can be reviewed in the EDR Radius Map Report in Appendix B.

3.1 Federal and State Hazardous Waste Sites

Federal National Priority List

National Priority Listing (NPL) sites are those listed with the USEPA as hazardous waste disposal sites, also known as Superfund sites. Proposed and delisted NPL site lists are also maintained by the USEPA. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 1.0 mile*:	*Impact to Subject Property*	*Rationale*
NPL	No	0 / 0*	None	Not Present
Proposed NPL	No	0 / 0*	None	Not Present
Delisted NPL	No	0 / 0*	None	Not Present

Federal SEMS

The SEMS (Superfund Enterprise Management System) list details proposed and existing federal Superfund sites pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The USEPA also maintains a SEMS-ARCHIVE list, which tracks sites that have no further interest under the Federal Superfund Program based on available information. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
SEMS	No	0 / 0*	None	Not Present
SEMS-ARCHIVE	No	0 / 0*	None	Not Present

State-Equivalent NPL & SEMS

Inactive State Hazardous Waste Disposal Sites are designated by NYSDEC and are state-equivalent SEMS sites. NYSDEC also maintains an inventory of delisted SHWS. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 1.0 mile*:	*Impact to Subject Property*	*Rationale*
NY SHWS	No	4 / 0*	Not Anticipated	See Below
NY DEL SHWS	No	0 / 0*	None	Not Present

NY SHWS:

- 350 Dewitt Avenue, located 1,134 feet southeast (topographically down-gradient) of the subject property. Sampling in 2012–2013 showed some metal contamination, with one TCE exceedance in groundwater. Most levels were within standards. As of 2013, the site posed no significant threat and required no further action.

- Fromer SEPS Cleaners, located at 242-288 Livonia Avenue, 3,017 feet northeast (topographically down-gradient) of the subject property. Soil, groundwater, and vapor sampling in 2012–2013 found high PCE levels, with a plume and sub-slab vapors exceeding standards. Remediation has been ongoing since 2014 under a Stipulation Agreement.

- 673 Livonia Avenue, 2,839 feet northwest (topographically up-gradient) of subject property. Soil sampling found minor exceedances of benzo(a)pyrene and barium, while VOCs remained below groundwater protection standards. Groundwater had elevated PCE, chloroform, PFOS, and PFOA. Soil vapor showed high levels of PCE, TCE, and petroleum VOCs. No significant threat determination has been made yet.

- Located at 458 East 99th Street, 3,690 feet southwest (topographically down-gradient) of subject property. Limited Phase II and soil vapor intrusion sampling identified PCE and related VOCs in soil and groundwater, with groundwater levels exceeding standards (PCE up to 20.4 ppb). Soil VOCs were below cleanup objectives. Sub-slab and indoor air showed elevated PCE, TCE, and petroleum-related VOCs. No significant threat determination has been made yet.

Based on the distance and/or downgradient nature of these listings in relation to the subject property, PVEDI does not consider these listings to represent RECs.

Hazardous Substance Waste Disposal Sites

The Hazardous Substance Waste Disposal Sites (HSWDS) Inventory is maintained by New York State. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY HSWDS	No	0 / 0*	None	Not Present

3.2 Hazardous Waste Treatment, Storage, or Disposal

RCRA Treatment, Storage, and Disposal Facilities

The database of RCRA facilities for treatment, storage, or disposal of hazardous materials (RCRA-TSDF) is maintained by the USEPA. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
RCRA-TSDF	No	0 / 0*	None	Not Present

RCRA Corrective Action Sites

The USEPA maintains a database of sites within the RCRA Corrective Action program, which are facilities permitted by the USEPA for treatment, storage, or disposal of hazardous waste which have conducted or are currently conducting a corrective action as regulated under the Resource Conservation and Recovery Act. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 1.0 mile*:	*Impact to Subject Property*	*Rationale*
CORRACTS	No	0 / 0*	None	Not Present

3.3 Hazardous Waste Generation

The USEPA maintains a database of facilities that generate hazardous waste. Large Quantity Generators (LQG) generate over 1,000 kg of hazardous waste or over 1 kg of acutely hazardous waste per month. Small Quantity Generators (SQG) generate between 100 kg and 1,000 kg of hazardous waste per month. Conditionally-exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous waste per month. Non-generators are sites that do not presently generate hazardous waste. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
RCRA-LQG	No	0 / 0*	None	Not Present
RCRA-SQG	No	0 / 0*	None	Not Present
RCRA-VSQG	No	0 / 0*	None	Not Present
RCRA NonGen/NLR	No	1 / 0*	Not Anticipated	See Below

RCRA NonGen/NLR:

- Wayne B L Furniture MFG, located at 747 Van Sinderen Ave, an adjoining property to the south (topographically up-gradient) of the subject property. The site was classified as a Large Quantity Generator producing 2-propanone or Acetone, Benzene, Methyl- (or) Toluene. No violations were found in association with this property.

Based on the nature of this listing in relation to the subject property, and the lack of violations associated with this listing, PVEDI does not consider these listings to represent RECs.

3.4 State Landfill and/or Solid Waste Disposal Sites

NYSDEC maintains a database of solid waste disposal facilities (SWF) and landfills (LF). Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property:*	*Properties within 0.5 mile:*	*Impact to Subject Property*	*Rationale*
NY SWF/LF	No	3 / 0*	Not Anticipated	See Below

- DJR Transfer Station Inc., located at 685 Junius Street,464 feet southwest (topographically down-gradient) of the subject property, is identified as an inactive transfer station.

- Brownsville Auto Salvage, located at 257 Hegeman Avenue, 1,013 feet west/southwest (topographically down-gradient) of the subject property, is identified as an inactive vehicle dismantling facility.

- Raben Demolition Co., located at 434 Riverdale Avenue, 1,223 feet north (topographically up-gradient) of the subject property, is identified as an inactive construction and demolition processing facility.

Based on the distance and/or downgradient nature of these listings in relation to the subject property, PVEDI does not consider these listings to represent RECs.

3.5 State Registered Storage Tanks

NYSDEC maintains a database of petroleum bulk storage (PBS) facilities with regulated storage tanks. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
NY UST	No	1 / 0*	None	Not Present
NY AST	No	0 / 0*	None	Not Present

- PBS# 2-612665, located at 679 Van Sinderen Avenue, an adjoining property to the north (topographically upgradient) of the subject property. The following tanks are associated with this listing: One (1) 1,500-gallon AST closed and removed in 2016. No additional information was provided.

Fuel storage tanks operated in accordance with applicable rules and regulations, would not represent a REC, however, unreported releases can occur and would adversely impact the subject property. At this time, PVEDI does not consider this listing to represent a REC.

Chemical Bulk Storage Database

NYSDEC maintains a database of facilities store regulated hazardous substances tanks (CBS), including aboveground tanks with capacities of 185 gallons or greater (CBS AST), and/or in underground tanks of any size (CBS UST). Only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
NY CBS	No	1 / 0*	Not Anticipated	See Below
NY CBS AST	No	1 / 0*	Not Anticipated	See Below
NY CBS UST	No	0 / 0*	None	Not Present

- CBS #2-00207, Brownsville Recreation center (2 listings), located at 1555 Linden boulevard, 1,713 feet southwest (topographically down-gradient) of the subject property. The listing is associated with a 200-gallon, plastic, chlorine tank installed in 1990 and closed-removed in 2007.

Based on the distance and downgradient nature of this listing in relation to the subject property, PVEDI does not consider this listing to represent a RECs.

3.6 Petroleum and Hazardous Material Releases

Emergency Response Notification System

The USEPA Emergency Response Notification System (ERNS) stores information reported to the USEPA on sudden and/or accidental releases of hazardous substances to the environment. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Impact to Subject Property*	*Rationale*
ERNS	No	None	Not Present

Petroleum Spills

NYSDEC maintains a database of petroleum spills reported to the department. Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment.

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

EDR Database Acronym:	*Subject Property*:	*Adjoining Properties*:	*Impact to Subject Property*	*Rationale*
NY SPILLS - Open File	No	1 / 0*	Potentially	See Below
NY SPILLS - Closed File	No	0 / 0*	None	Not Present
NY SPILLS 90	No	0 / 0*	None	Not Present

- Spill #2302765, located at located at 749 Van Sinderen, an adjoining property to the south (topographically down-gradient) of the subject property. A Phase I and II ESA were completed at 749 Van Sinderen Ave, Brooklyn, for a planned affordable housing redevelopment. Petroleum contamination was found in soil, soil vapor, and groundwater, prompting a spill report. Additionally, the site is currently enrolled in the NYSDEC Brownfield Cleanup Program, Site ID # C224405.

Based on the proximity and of this listing in relation to the subject property, PVEDI considers this listing to represent a REC.

State Leaking Storage Tank List

NYSDEC maintains a database of leaking registered storage tank incident reports (LTANKS). Further information can be reviewed in Appendix B.

Open files indicate spills that have not been closed by the lead agency, which may indicate that contamination remains to be remediated and/or the agency has not yet received final confirmation that remedial action is complete. Closed files indicate spills whose files have been closed by the lead agency. Spills are usually closed when the agency determines the contamination relating to the spill has been remediated to meet the applicable standards. Spill files may be closed even though contaminants in soil and groundwater do not meet applicable standards; this is especially true if groundwater is not relied upon for purposes of consumption or other institutional controls exist which minimize or prevent exposure to remaining contamination. Closed spill files always have the possibility of being reopened if additional information is received by the agency that demonstrates an increased risk to human health or the environment. Due to the high frequency of LTANKs in the applicable search radius, only those that cannot be precisely located (orphans) or those thought to have a potentially negative environmental impact on the subject property are summarized below. All LTANKs files, both closed and open, within the search radius were reviewed.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY LTANKS - Open File	No	1 / 0*	Not Anticipated	See Below
NY LTANKS - Closed File	No	29 / 0*	Not Anticipated	See Below

PVEDI personnel have reviewed the thirty (30) LTANKS listings. Based on the distance and/or down-gradient nature of these listings in relation to the subject property and/or the files being closed in accordance with NYSDEC requirements, PVEDI does not consider these listings to represent RECs.

3.7 Brownfield Sites and Environmental Restoration Program Listings

A Brownfield is any real property where redevelopment or reuse may be complicated by the presence or potential presence of hazardous waste, petroleum, pollutants, or contaminants. In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program (NY ERP), the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY BROWNFIELDS	No	6 / 0*	Potentially	See Below
NY ERP	No	0 / 0*	None	Not Present

NY BROWNFIELDS:

- 749 Van Sinderen Avenue, an adjoining property to the south (topographically downgradient) of the subject property. The brownfield site occupies a 20,200-square-foot area improved with six auto body and repair shops. It is situated in a commercial and industrial neighborhood, bordered by residential buildings, commercial properties, and the New Lots Avenue MTA L-Train station. Currently zoned C4-4L, the property was previously designated M1-1 and has been subject to a proposed zoning map amendment and inclusion in a Mandatory Inclusionary Housing area. Historically, the Site was used for manufacturing and industrial purposes, including metal and wood product fabrication and later transitioned to auto repair operations by 1989.

Based on the proximity of this listing to the subject property, PVEDI consider this listing to represent a REC.

PVEDI personnel reviewed the five (5) remaining NY Brownfield listings. Based on the distance and/or down-gradient nature of these listings in relation to the subject property, PVEDI does not consider these listings to represent RECs.

3.8 State Voluntary Cleanup Program Sites

The VCP was established to address the environmental, legal, and financial barriers that hinder redevelopment and reuse of contaminated sites, and to enhance private sector cleanup of Brownfield sites by enabling parties to remediate using private rather than public funds.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
NY VCP	No	5 / 0*	Not Anticipated	Proximity

- 429 Newport Street – HPD NCP Cluster, located at 429 Newport Street, 810 feet north (topographically downgradient) of the subject property. The property was contaminated with pesticides and metals in the groundwater and soil. A work plan has been approved but remediation has not started.

- Glenmore Plastic Industries Inc., located at 807 Bank Street, 1,611 feet south (topographically downgradient) of the subject property.

- Located at 368 Livonia Avenue, 2,051 feet northwest (topographically upgradient) of the subject property. The property was contaminated with metal in the ground water and SVOCs and TAL metals in the soil. Their Remediation plan is currently being implemented.

- Located at 402 Snediker Avenue, 2,246 feet north/northwest (topographically upgradient) of the subject property. The property was contaminated with VOCs, SVOCs, and Total metal in the ground water. The remediation is now complete.

- Federal Express Corp., located at 107-123 Farragut, 2,613 feet south/southeast (topographically downgradient) of the subject property. The site was contaminated with TCE in the groundwater. The site has completed remediation.

Based on the distance and/or downgradient nature of these listings in relation to the subject property, PVEDI does not consider these listings to represent RECs.

3.9 Federal & State Engineering & Institutional Controls, & Activity & Use Limitations

Activity and use limitations (AULs) are legal or physical restrictions or limitations on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants or to prevent activities that could interfere with the effectiveness of a response action protecting public health or the environment. AULs are often recorded at the land title office (commonly the County Clerk's office). AUL information is not typically contained in a chain of title report. In some cases, an AUL may not have been filed at the land title office but may be found in a separate environmental agency database.

Engineering control (EC) and institutional control (IC) listings are maintained by the USEPA and NYSDEC and are controls designed to prevent exposure to contaminants remaining on a site. Engineering and institutional controls are types of AULs. Engineering controls are physical modifications to a site. Institutional controls are legal or administrative restrictions on the use of, or access to, a site.

Readily available EC and IC listings were reviewed by EDR, but other AUL information may be applicable. If an AUL search was conducted as part of the environmental liens search, the results are indicated below. However, AULs may only exist in project documentation, which may not be readily available to the environmental professional. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Impact to Subject Property*	*Rationale*
US ENG CONTROLS	No	None	Not Present
NY ENG CONTROLS	No	None	Not Present
US INST CONTROL	No	None	Not Present
NY INST CONTROL	No	None	Not Present
AULs	No	None	Not Present

3.10 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 U.S.C. §§9607(1) & 9607(r) and similar state or local laws. An environmental liens report was not acquired for this report.

	Subject Property:	*Impact to Subject Property*	*Rationale*
Environmental Liens	N/A	N/A	Not Searched

3.11 Other Conditions of Concern

E-Designation Site list

An (E) designation requires that the fee owner of a property conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP. Details pertaining to these sites can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property:*	*Properties within 0.125 mile:*	*Impact to Subject Property*	*Rational*
NY E DESIGNATION	Yes (1)	2/0*	Potentially	See Below

- Block 3865 Lot 21, 719 Van Sinderen Avenue, The subject property. The property was identified with the City Environmental Quality Review (CEQR) #21DCP147K and E-632. A Phase I and Phase II ESA testing protocol is required to be completed and reviewed by the Office of Environmental Remediation (OER) prior to NYC DOB issuing a building permit. Additionally, specific air quality and noise requirements must be met during redevelopment. Documentation and further information are included in Appendix C of this Report.

- Block 3865 Lot 9, 723-747 Van Sinderen Avenue, The subject property. The property was identified with the City Environmental Quality Review (CEQR) #21DCP147K and E-632. A Phase I and Phase II ESA testing protocol is typically required to be completed and reviewed by the Office of Environmental Remediation (OER) prior to NYC DOB

issuing a building permit. Additionally, specific air quality and noise requirements must be meet during redevelopment.

- Block 3865 Lot 7, 753 Van Sinderen Avenue, The subject property. The property was identified with the City Environmental Quality Review (CEQR) #21DCP147K and E-632. A Phase I and Phase II ESA testing protocol is typically required to be completed and reviewed by the Office of Environmental Remediation (OER) prior to NYC DOB issuing a building permit. Additionally, specific air quality and noise requirements must be meet during redevelopment.

Based on the hazardous materials protocol of the E-Designation, PVEDI considers this listing to represent a REC.

The two (2) remaining NY E-Designation listings were reviewed, and as neither applies to the subject property, they are not considered RECs by PVEDI.

Manufactured Gas Plants

Manufactured gas plants (MGPs) produced gas for fuel until the 1950s. A significant amount of waste and hazardous byproducts were typically generated and often disposed of at the plant, resulting in contamination of the site.

EDR Database Acronym:	*Subject Property*:	*Properties within 1 mile*:	*Impact to Subject Property*	*Rationale*
EDR MGP	No	1 / 0*	Not Anticipated	Proximity

- Belmont Station, located at Belmont, Williams, Alabama, and Stutter Ave, 3,877 feet north/northeast (topographically up-gradient) of the subject property.

Based on the distance of this listings in relation to the subject property, PVEDI does not consider this listing to represent a REC.

Historic Service Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
EDR Hist Auto	No	4 / 0*	Not Anticipated	See Below

- 195 New Lots Avenue, 21 feet northeast (topographically down-gradient) of the subject property, is identified as Chernowsky Jack from 1969 to 1972.

- 654 Junius Street, 27 feet west (topographically down-gradient) of the subject property, is identified as Try Power Transmissions from 1992 to 2001 and CTL automobile from 2011 to 2013.

- 134 New Lots Ave, 29 feet west (topographically down-gradient) of subject property, is identified as Paul's Service center from 1969 to 1970, B & M Texaco from 1972 to 1973, Harolds Truck Repair & Service center from 1991 to 2002, King Jets Auto Repair from 2004 to 2007, Devon & Devon in 2013, and SOS Staffing Services Inc in 2014.

- 106 New Lots Ave, 655 feet west (topographically down-gradient) of the subject property, is identified as Sakman Motors Co from 1992 to 1993.

Based on the distance and downgradient nature of these listings in relation to the subject property, PVEDI does not consider these listings to represent RECs.

Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns but may not show up in current government records searches. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
EDR Hist Cleaner	No	2 / 0*	Not Anticipated	See Below

- New Lots Cleaners & Dryers, located at 681-97 Van Sinderen Avenue, 437 feet north (topographically down-gradient) of the subject property, is identified as a dry cleaner from 1969 – 1971.

- Lott Cleaners Inc., located at 212 New Lots Avenue, 349 feet northeast (topographically down-gradient) of the subject property, is identified as a dry cleaner from 1974 – 1975.

Based on the distance and/or downgradient nature of these listings in relation to the subject property, PVEDI does not consider these listings to represent RECs.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off

of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. Further information can be reviewed in Appendix B.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
US BROWNFIELDS	No	1 / 0*	Not Anticipated	See Below

- Beverly's Place, located at 402 Snediker Avenue, 2,270 feet north (topographically up-gradient) of the subject property. Remediation of the Brownfield site has been completed and the property is now under the Site Management Phase.

Based on the distance of this listing in relation to the subject property, PVEDI does not consider this listing to represent a REC.

UST FINDER

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.25 mile*:	*Impact to Subject Property*	*Rationale*
UST FINDER	No	7 / 0*	Not Anticipated	See Below

- 609-623 Snediker Avenue, 405 feet northeast (topographically downgradient) of the subject property, is listed with one (1) closed UST with capacity of 3,000 gallons.

- Linden Plaza Development LLC, located at 114 New Lots Avenue, 617 feet west (topographically downgradient) of the subject property, is listed with two (2) closed UST with capacities of 3,000 gallons.

- Linden Plaza Development, LLC, located at 666 Powell Street, 711 feet southwest (topographically downgradient) of the subject property, is listed with six (6) closed UST with capacities of 550 gallons.

- 373 Dewitt Avenue, 1,089 feet southeast (topographically downgradient) of the subject property, is listed with one (1) closed UST with capacity of 550 gallons.

- 350 Dewitt Avenue, 1,134 feet south east (topographically downgradient) of the subject property, is listed with one (1) closed UST with capacity of 5,000 gallons.

- Brownsville Recreation Center, located at 1555 Linden Boulevard, 1,173 feet southwest (topographically downgradient) of the subject property, is listed with one (1) open UST with capacity of 6,000 gallons and one (1) closed UST with capacity of 10,000 gallons.

- Plaza Residences (AKA Nobel Drew Ali Plaza), located at 250-252 Lott Avenue, 1,308 feet west (topographically downgradient) of the subject property, is listed with one (1) open UST with capacity of 3,000 gallons and one (1) closed UST with capacity of 3,000 gallons.

Fuel storage tanks operated in accordance with applicable rules and regulations, would not represent a REC, however, unreported releases can occur and would adversely impact the subject property. Based on the distance, downgradient nature, and no spill files associated with these listings, PVEDI does not consider these listings to represent RECs.

UST FINDER RELEASE

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

EDR Database Acronym:	*Subject Property*:	*Properties within 0.5 mile*:	*Impact to Subject Property*	*Rationale*
UST FINDER RELEASE	No	17 / 0*	Not Anticipated	See Below

- Gas Station – ANAR Service station – MTBE, located at 1868 Linden Blvd, 1,813 feet southeast (topographically down-gradient) of the subject property. Status is listed as open.

- Coca Cola, located at 1900 Linden Blvd, 1,880 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

- Sunnydale, located at 400 Stanley Avenue, 2,036 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

- Mobil Station #17-EQ5, located at 1935 Linden Blvd, 2,119 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

- Exxon 765 Pennsylvania Ave, located at 765 Pennsylvania Ave, 2,190 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

- 810 Pennsylvania Ave, 2,412 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

- Former Hess Station 32STA, located at 810 Pennsylvania Ave, 2,412 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

  Former Shell Station, located at 1940 Linden Blvd, 2,440 feet southeast (topographically down-gradient) of the subject property. Status is listed as no further action.

Based on the distance, downgradient nature, and the No Further Action status of the releases listed above, PVEDI does not consider these listings to represent RECs.

4.0 Physical Setting Analysis

The physical setting of the subject property was evaluated by consulting regional maps and other sources. Following is a summary of this review.

4.1 7.5 Minute USGS Topographic Map

According to the Central Park, New York USGS topographic map, the subject property is approximately 55 feet above mean sea level.

4.2 Regional Hydrogeology

Based on topography, groundwater is presumed to flow to the south/southeast, toward the North Channel of Jamaica Bay.

4.3 Bedrock Geology

According to the Lower Hudson Sheet of the Geologic Map of New York and USGS data, bedrock underlying the subject property is Cretaceous sediment.

4.4 Surficial Geology

According to the Lower Hudson sheet of the Surficial Geologic Map of New York, out washed gravel overlies bedrock.

5.0 Site Reconnaissance

PVEDI personnel inspected the subject property on July 17, 2025. The site reconnaissance and interviews were conducted by Jared Roemer. Photographs are attached in Appendix D.

The reconnaissance included a walk-through of all accessible interior common areas of the subject property and exterior locations. Adjoining properties were visually assessed from the subject property boundary, public right-of-ways, or other vantage points, and are summarized in Section 2.3.

5.1 General Site Observations Table

Below are items visually and/or physically observed. Items marked with "†" are defined below.

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
Storage Tanks		X		
Drums†	X			Several drums were observed throughout the property. The drum content is undefined.
Hazardous† or Regulated Substances		X		
Petroleum Products† Containers		X		
Unidentified Substance Containers		X		
Polychlorinated Biphenyls (PCBs)		X		
Evidence of Solid Waste Disposal (including mounds or filled areas)	X			The back yard is currently used as a junk yard for the property.
Strong, Pungent, or Noxious Odors		X		
Pools of Liquid		X		
Stained Soil or Pavement		X		
Corrosion	X			The building showed expected signs of corrosion.
Stressed Vegetation	X			The property backyard had many plants growing in less-than-ideal conditions.
Septic Systems		X		
Pits, Ponds, or Lagoons†		X		
Floor Drains or Sumps†	X			A sump was observed at the rear of the building.
Wastewater†		X		
Liquid discharges into drainage systems, including		X		

Item	Observed at Site or Known to Exist		Further explanation below	Brief notes
	Yes	No		
stormwater				
Wells (including dry wells†)		X		
Other Conditions of Concern		X		

Definitions

Drum: A container (typically, but not necessarily, holding 55 gallons) that may be used to store hazardous substances or petroleum products.

Dry wells: Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and unintentional) and wastewater disposal (often illegal).

Hazardous substance: A substance defined as a hazardous substance pursuant to CERCLA 42 U.S.C.§9601(14), as interpreted by EPA regulations and the courts: "(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, (42 U.S.C. §6921) (but not including any waste the regulation of which under RCRA (42 U.S.C.§§6901 et seq.) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 U.S.C. §7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)."

Petroleum products: Those substances included within the meaning of the petroleum exclusion to CERCLA, 42 U.S.C. §9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to Standard Definitions of Petroleum Statistics.)

Pits, Ponds, or Lagoons: Man-made or natural depressions in a ground surface that are likely to hold liquids or sludge containing hazardous substances or petroleum products. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Sump: A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

Wastewater: Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as stormwater flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

5.2 Site Visit Observations

The subject property consists of one tax parcel located in a densely developed mixed-use (commercial and residential) area with generally flat topography. The 0.08-acre parcel, situated

at 719 Van Sinderen Avenue, is improved with a one-story commercial structure currently occupied by an auto mechanic and welding shop.

The building has a main entrance at the northwest corner and two overhead garage doors on the west side. Internally, the space is divided by a brick wall into two separate areas: the northern portion identified as 719 Van Sinderen Avenue, and the southern portion as 721 Van Sinderen Avenue, which appears to be used primarily for storage.

Adjoining properties include a seven-story mixed-use building to the north, residential homes to the east, and the elevated MTA L-train tracks to the west. The southern adjoining property (749 Van Sinderen Avenue) is occupied by a larger auto repair facility and is listed in the New York State Brownfield Cleanup Program (BCP).

Several drums were observed on the property, including three located on the sidewalk in front of the building and three in the backyard. Some drums appeared to be empty, while others contained unidentified contents.

The backyard, shared by both 719 and 721 Van Sinderen Avenue, is used as a junkyard, with various discarded materials observed, including scrap metal, stacked tires, plastic containers, trash bags, and old wiring.

Corrosion was noted on the main entry and overhead doors, as well as on several metal items stored in the backyard. Stressed vegetation was observed in the rear yard near a broken-down vehicle.

Site conditions were typical of long term operations as an auto repair facility.

6.0 Property History

The history of the subject property and surrounding area was researched through a review of readily ascertainable standard historical sources. These sources may include current and past owners, property records, recorded land title records, property tax files, building department records, and/or zoning and land use records. This review was conducted in order to identify those uses that are likely to have led to recognized environmental conditions. Following is a summary of these findings. Specific sources are documented first, followed by a summary at the end of this section, which may include information initially described in other sections of this report.

6.1 Property Ownership

Property ownership history was researched through the New York City Department of Finance Office of the City Register Automated City Register Information System (https://a836-acris.nyc.gov/CP/). Previous owners and the approximate date of purchase are listed below. This ownership record is based on reasonably attainable information, may be incomplete, and does not constitute a title search.

Seller/Grantor	***Buyer/Grantee***	***Approximate Date of Purchase***
Sam Shafman	Harold Bass	3/22/1973
Harold Bass	Steven Bass	8/19/1994
Steven Bass, Marion Solotoff F/K/A Lahmani Marion	719 Van Sinderen Corp.	11/14/2006

6.2 Topographic Maps

Topographic maps were provided by Historic Aerials (http://www.historicaerials.com/). Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

1889	No structures are depicted on or near the subject property. The roads to the north of the subject property and the railroad are marked.
1891	See 1889 description.
1898	See 1889 description; Multiple structures assumed to be houses have been depicted on what us now New Lots Ave.
1900	See 1898 description.
1903	See 1898 description.
1905	See 1898 description.

1906	See 1898 description.
1908	See 1898 description.
1910	See 1898 description.
1916	See 1898 description.
1924	See 1898 description.
1931	See 1898 description.
1938	See 1898 description.
1947	The subject property is depicted with a structure. The adjacent property to the south appears to be vacant.
1948	See 1898 description.
1958	No structures are depicted on or near the subject property.
1959	See 1898 description.
1961	See 1898 description.
1966	See 1958 description.
1967	See 1958 description.
1970	See 1958 description.
1975	See 1958 description.
1979	See 1958 description.
1999	See 1958 description.
2013	The railroad is not marked. No structures are depicted on or near the subject property.
2016	See 1958 description.
2019	See 1958 description.
2023	See 1958 description.

6.3 Aerial Photographs

Aerial photographs were provided by Historic Aerials (http://www.historicaerials.com/). Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

1954	The lot is used by a square building with small yard on the rear of the subject property. To the south is a structure that appears to be only on the rear half of the property. Railroad tracks and station lie to the west of the property. Rectangular buildings stand to the north and east of the property.
1966	See 1936 description; additionally, the property to the south of the subject property is now a square building taking up it's whole lot.
1980	See 1966 description.
1984	See 1966 description.
1994	See 1966 description.
2004	See 1966 description; the property to the north of the subject property is now an empty lot.
2006	See 2004 description.
2008	See 2004 description.
2009	See 2004 description.
2011	See 2004 description.
2012	See 2004 description.
2013	See 2004 description.
2015	See 2004 description.
2017	See 2004 description.
2019	See 2004 description.
2021	See 2004 description; except the property to the north of the subject property is an apartment building.
2022	See 2021 description.

6.4 Google Street View

Street view photographs were reviewed via Google Street (https://www.google.com/streetview/). Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

2011	Subject Property: A grey brick one-story structure with two garage doors and a sign the

	reads ‘Eastern Welding Auto Machine Shop”/ Adjoining Property: A empty lot lies to the north, an old no longer in use autobody shop lie to the south, the L train stop/route is to the west, and residential housing to the east.
2013	See 2011 description.
2017	Subject Property: See 2011 description. Adjoining Property: Constructed started on the lot to the north. A painted blue one-story brick building with a sign the reads “Auto Body & Repair Shop” is to the south.
2018	See 2017 description.
2022	Subject Property: See 2011 description. Adjoining Property: A seven-story residential/commercial building is located directly to the north of the subject property.

6.5 Fire Insurance Maps

Fire Insurance maps were provided in the EDR report and are attached in Appendix B. Below is a discussion of the changes to the subject property and pertinent changes in surrounding properties:

1887	The Sanborn does not depict the subject property or any adjoining properties.
1907	The Sanborn does not depict the subject property or any adjoining properties.
1908	Subject Property: The subject property is depicted as an empty lot. Adjoining Properties: No environmentally pertinent properties are depicted. Nearby Properties: No environmentally pertinent properties are depicted.
1928	Subject Property: The subject property is depicted as an Iron works facility. The address of the subject property is marked as 717-721 Van Sinderen Avenue. Adjoining Properties: The adjoining property to the south consists of multiple lots containing a lumber yard, an Auto shop, a Sash manufacturer, and a door manufacturer. Nearby Properties: Another Iron works facility lies at the south end of the block. A laundry mat and more manufactures lie to the north of the property.
1950	Subject Property: See 1928 description. Adjoining Properties: The property directly to the south of the subject property is a private garage and is depicted as containing a wood breakfast sets manufacturer and includes a drying room, an enamel spray booth, and a metal working area. The lumber yard is no longer depicted.

	Nearby Properties: To the south is a Plastic Works. To the southwest of the property lay a chem lab, an auto repair shop, and a garage. To the North there was a dry cleaner and an Used Auto dealer.
1966	The map is incomplete. The subject and adjoining properties are not depicted. No environmentally pertinent properties are depicted.
1967	Subject Property: The subject property is depicted as a wood-working facility. Adjoining Properties: The property to the south is a Canvas product manufacturer and a machine shop. Nearby Properties: To the south is and to the southwest there are auto repair shops and a filling station.
1969	Subject Property: See 1967 description. Adjoining Properties: See 1967 description. Nearby Properties: See 1967 description.
1977	Subject Property: The subject property is depicted as an autobody shop. Adjoining Properties: Similar to 1967 description; the wood breakfast sets manufacturer is generically labeled as a manufacturer. Nearby Properties: To the north is a large Auto body shop, and to the southwest there are auto repair shops and a filling station.
1979	Subject Property: See 1977 description. Adjoining Properties: See 1977 description. Nearby Properties: See 1977 description.
1980	Subject Property: See 1977 description. Adjoining Properties: See 1977 description. Nearby Properties: See 1977 description.
1981	Subject Property: See 1977 description. Adjoining Properties: See 1977 description. Nearby Properties: See 1977 description.
1983	Subject Property: See 1977 description. Adjoining Properties: See 1977 description. Nearby Properties: To the north is a large Auto body shop and to the southwest there are auto repair shops.
1986	Subject Property: See 1977 description. Adjoining Properties: See 1977 description. Nearby Properties: To the south there is a site generally labeled manufacturer and to the southwest there are auto repair shops.
1987	Subject Property: See 1977 description. Adjoining Properties: See 1977 description. Nearby Properties: An auto junk yard is depicted approximately 160 feet to the north of the subject property.

1989	Subject Property: See 1977 description. Adjoining Properties: The property to the south is depicted as two auto body repair shops and one mechanic shop. Nearby Properties: To the southwest there are auto repair shops.
1991	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: An auto repair facility is depicted approximately 270 feet to the south of the subject property.
1992	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1989 description.
1993	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1989 description.
1994	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: The auto junkyard to the north of the subject property is no longer depicted.
1995	Subject Property: See 1977 description. Adjoining Properties: The site to the south is depicted as three auto repair shops Nearby Properties: See 1994 description.
1996	Subject Property: See 1977 description. Adjoining Properties: The property to the south is depicted as 4 auto repair shops. Nearby Properties: See 1994 description.
2001	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.
2002	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.
2003	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.
2004	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.
2005	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.

2006	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.
2007	Subject Property: See 1977 description. Adjoining Properties: See 1989 description. Nearby Properties: See 1996 description.

6.6 City Directories

City directories list telephone company records of past occupants and businesses for an address by year and is reviewed to determine if past occupants and businesses of the subject property and adjacent properties may have led to recognized environmental conditions. The city directory report is attached in Appendix B.

Subject Property

719 Van Sinderen Ave
2022 – Bartlett Murvin, Eastern Welding & Auto Machine Shop, Road Wrench
2017 – Eastern Welding & Auto Machine Shop, Eastern Welding Incorporated
2014 – Eastern Welding & Auto Machine Shop, Eastern Welding Incorporated
2010 – Eastern Welding & Auto Machine
2005 – Eastern Welding & Auto Machine INC, Bartlett Murvin, Eastern Welding & Auto Machine
2000 – Barlett Murvin
1997 – Bogie Windel
1985 – New Lots Auto Salvage
1973 – Star Stair Bldrs Inc
1970 – Star Stair Bldrs Inc
1949 – Acme Equip Co hnd trucks, Bodatsky Saml hnd trucks
1940 – Arios Body Co, Fox Iron Wks
1934 – Works

721 Van Sinderen Avenue
1945- Crown n Steel Co

Adjoining Properties

Adjoining property addresses were obtained from the New York City Department of Finance Digital Tax Map (http://gis.nyc.gov/taxmap/) and are listed in Section 2.3. Only environmentally pertinent occupants and businesses are listed below.

723 Van Sinderen Avenue
2022 – Paint masters automobile body repair Inc.
2017 – LS Auto Body Repair, Paint Masters Auto Body
2000 – Dwntwn Auto CLLSN, Uptown Auto CLLSN
1997 – Downtown Auto Collision Inc., Uptown Auto Collision Inc.
1992 – Downtown Auto Collision Inc, Uptown Auto Collision Inc

1970 – East New York Canvas Corp
1965 – ENY Canvas Corp

749 Van Sinderen Avenue
2017 – LS Autobody Repair, T&R Transmissions
2014 – LS Autobody Repair
2005 – J&S Auto Repair & Service, Top Class Auto Repair
2000 – Travis Auto Collision
1992 – Arawak Auto Sales
1945, 1960 – Willoughby Bed & Spring Co
1949 – Imperial Metal Prods Co
1940 – Kings County Millwork Corp

735 Van Sinderen Avenue
2005 – Franks Complete Auto Repair, Eastern Welding & At Machine SP
1995 – CMR Auto Sales
1965 – B&I Body & Fender Repairs Inc

737 Van Sinderen Avenue
2020 – Mr Furnish
2017, 2017 – Ready for Accion Towing
2000 – Artel Properties Inc, Eastern Welding & Auto Machine Shop
1995, 1997 – Artel Properties Inc

739 Van Sinderen Avenue
1945, 1960, 1965, 1970 – Union Chair Co Inc

745 Van Sinderen Avenue
2000, 2005 – LGT Auto Service
1997 – Harvey's Auto Repair, Cromwell Harvey
1995 – Cromwell Harvey

747 Van Sinderen Avenue
2000, 2005 – Jay's Auto Repair
1997 – Jay's Auto Repair, Wayne's Auto Repair
1995 – Wayne's Auto Repair
1992 – V&M Auto Parts Inc
1985 – Amazing Plastic Products Inc
1973, 1976 – BL Wayne Furniture MFG Corp

6.7 Other Records and Interviews

Listed below are additional records requested and/or reviewed as part of this Phase I ESA. If information relevant to the findings and conclusions of this ESA has been received from these departments, it is summarized below and/or in other sections of this report.

Fire Department Records

Pursuant to ASTM Standard E1527-21 Section 8.1.5, records that are obtainable within a reasonable time frame is information that will be provided by the source within 20 calendar days of receiving a public information request. Based on the expected response time of over 20 calendar days for the Fire Department of New York (FDNY), records from this agency are not considered reasonably ascertainable and therefore files were not requested.

NYCity Map

The NYCity Map website, http://maps.nyc.gov/doitt/nycitymap was accessed for records relating to the subject property (Appendix C). The most recent assessment indicates one (1) one-story buildings to be present on the property.

Building Department

NYC Department of Buildings (DOB) records were accessed via http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp (Appendix C). The Department of Finance Building Classification for the lot is G9 – Garage/Gas Station

Any certificates of occupancy, a list of actions, and open violations for the subject property are attached in Appendix C.

NYC Department of Finance

The NYC Department of Finance Office of City Register website, https://a836-acris.nyc.gov/DS/Document Search/BBL, was searched for records relating to the subject property (Appendix C). Property ownership information received from this source is included in Section 6.1.

Interview - Regulatory Agency

No interviews were conducted with regulatory agencies.

Interview - Current Owner

No interviews were conducted with current owners because none were provided by the user.

Interview - Current Operator/Occupant

The current property manager did not possess any specialized knowledge or experience that was material to recognized environmental conditions in connection with the property.

Interview - Past Owner

No interviews were conducted with past owners because none were provided by the user.

Interview - Past Operator/Occupant

The current occupant of the subject property Mr. Ed Downer was interviewed. He had no specific knowledge of the subject property.

Interview - User

The User Questionnaire was answered by Elliott Raskin of Spatial Equity and is attached in Appendix G of this report.

Other Interviews

No other interviews, other than those already mentioned, were conducted.

6.8 Summary of General Property History and Use

The earliest available record, the 1908 Sanborn Map, depicts the subject property as vacant and undeveloped. The first structure appears on the 1928 Sanborn Map, identified as a one-story iron works facility. By 1967, the property is shown as a wood working facility, and by 1977, it is depicted as an auto body shop – a use and structure that remain consistent through Sanborn Maps from 1977 to 2007 and aerial photographs from 1954 to 2022. According to City Directory records, the property was originally located within a manufacturing district, which transitioned to commercial zoning in 2022. The site is currently occupied by an active auto mechanic and repair shop.

7.0 Findings and Conclusions

PVEDI personnel have conducted a Phase I Environmental Site Assessment in conformance with ASTM Standard E1527-21 of the property at 719 Van Sinderen Avenue, Brooklyn, Kings County, New York(the subject property). Any exceptions to, or deletions from, this practice are described in Section 1.4 and 7.5 of this report.

Environmental Concern	Number of Findings
Recognized Environmental Conditions (RECs)	3
Controlled Recognized Environmental Conditions (CRECs)	None
Historical Recognized Environmental Conditions (HRECs)	None
De minimis Conditions	None
Business Environmental Risk (BER)	1
Data Gap/Data Failure	4

7.1 Recognized Environmental Conditions

The definition of a *recognized environmental condition* (REC) is (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or (3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the environment. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the subject property, except for the following:

1. As indicated in Section 3.11 (Other Conditions of Concern) of this report, Block 3865 Lot 21, 719 Van Sinderen Avenue, the subject property, was identified with an E-Designation for Hazardous Materials, Air Quality, and Noise. A City Environmental Quality Review (CEQR) #21DCP147K was performed for the EAS submitted in 2021 to DCP which resulted in the E-Designation Number E-632. A Phase I and Phase II ESA (hazardous materials) testing protocol is required to be completed and reviewed by the Office of Environmental Remediation (OER) prior to NYC DOB issuing a building permit. PVEDI considers the hazardous materials protocol of the E-Designation to represent a REC.
2. As detailed in Sections 5.0 (Site Reconnaissance), 6.4 (Fire Insurance Maps), and 6.5 (City Directories) of this report, historical and current uses of the subject property include, but are not limited to, iron working, woodworking, and auto repair. Presently, the site is used for auto body repair and storage. The use and potential mishandling of chemicals and wastes commonly associated with these operations may contribute to soil and groundwater contamination and pose a potential vapor intrusion concern.

3. As indicated in Section 3.7 (Brownfield Sites and Environmental Restoration Program Listings) and Section 3.11 (Other Conditions of Concern), the adjoining property to the south (topographically downgradient) is currently enrolled in the New York State Brownfield Cleanup Program. Petroleum contamination has been confirmed in soil, soil vapor, and groundwater at that site during remedial investigation activities. Given the close proximity of this listing to the subject property, similar contamination may exist on-site. Additionally, current uses of nearby properties located within approximately 15 to 482 feet (topographically upgradient) of the subject property include metal working, auto repair, dry-cleaning, and junkyard operations. The chemicals used and/or wastes generated by such facilities have the potential to impact soil, groundwater, and ultimately soil vapor at the subject property, presenting a potential vapor intrusion concern. The combination of nearby historical and current operations, along with documented contamination to the south, collectively represents a REC.

7.2 Controlled Recognized Environmental Conditions

The definition of a *controlled environmental condition* (CREC) is a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. Examples of controls include property use restrictions, activity and use limitations, institutional controls, and engineering controls. CRECs are a subset of RECs. This assessment has revealed no evidence of *controlled recognized environmental conditions* in connection with the property.

7.3 Historical Recognized Environmental Conditions

The definition of a *historical recognized environmental condition* (HREC) is a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the property.

7.4 De minimis Conditions

The term *recognized environmental conditions* is not intended to include *de minimis conditions*. *De minimis conditions* generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are *not* RECs or CRECs. This assessment has revealed no evidence of *de minimis conditions* in connection with the property.

7.5 Business Environmental Risk

The definition of *business environmental risk* in accordance with ASTM Standard E1527-21, is a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of *commercial real estate*, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of *business environmental risk* issues may involve addressing on or more non-scope considerations. This assessment has revealed no evidence of *business environmental risks* in connection with the property, except for the following:

1. As indicated in Section 3.11 (Other Conditions of Concern) of this report, Block 3865 Lot 21, 719 Van Sinderen Avenue, the subject property, was identified with an E-Designation for Hazardous Materials, Air Quality, and Noise. A City Environmental Quality Review (CEQR) #21DCP147K was performed for the EAS submitted in 2021 to DCP which resulted in the E-Designation Number E-632. Air Quality and Noise considerations are required to be outlined in a Remedial Action Work Plan for review by the Office of Environmental Remediation (OER) prior to NYC DOB issuing a building permit. PVE considers the Air Quality/Noise protocol of the E-Designation to represent a BER.

7.6 Data Gaps and Data Failures

Data gaps are defined as a lack or inability to obtain information required by ASTM E-1527-21 despite good faith efforts to gather such information. A *data gap* by itself is not inherently significant and is only significant if other information raises reasonable concerns. Examples of *data gaps* are the inability to inspect portions of the subject property during the site inspection, and an inability to identify the historical use of the subject property back to 1940 but the earliest source shows the subject property to be undeveloped.

Data failures are a subset of *data gaps* and indicate a failure to achieve historical research objectives even after reviewing standard historical sources that are reasonably attainable and likely to be useful. *Data failures* can occur when the use of the property was unable to be identified at approximately five-year intervals back to the first use or 1940, whichever is earlier.

The following are data failures or data gaps encountered during this assessment:

1. Records of ownership of the subject property may be incomplete. The ownership record obtained during this assessment is based on reasonably attainable information and does not constitute a title search.

2. Data gaps in excess of five years were encountered during the review of the standard historical sources.

3. Interviews were not conducted with present owners, past owners, or past occupants.

4. No FOIL requests were submitted to the City of New York regarding records pertaining to the subject property. If further information is received at a later date and modifies the conclusions of this report, we will notify the user of the report.

7.7 Conclusions and Opinions

RECs #1 and #2, as identified in Section 7.1, are located on the subject property. There is a high likelihood that historical and current on-site operations—such as iron working, woodworking, and auto repair—have impacted soil, groundwater, and soil vapor quality. REC #3, while not located on the subject property, pertains to an adjoining Brownfield site where confirmed contamination raises concern for potential migration onto the subject property. Given the nature of past and present site activities, the proximity of off-site contamination, and the presence of an E-Designation, a Phase II Environmental Site Assessment is warranted to evaluate subsurface conditions.

Based on other sources consulted during this Phase I ESA the above-referenced data gaps are not significant.

Standard Notes: As part of this Phase I ESA and in accordance with Section 7.5.2.1 of ASTM E 1527-21, PVEDI has made no attempt to independently verify the reliability of information provided. In addition and in accordance with Section 3.2.17 Note 3 of ASTM E 1527-21, a condition identified as a CREC does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 401 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

719 VAN SINDEREN AVENUE
BROOKLYN, NY 11207

COORDINATES

Latitude (North):	40.6587620 - 40° 39' 31.54''
Longitude (West):	73.8989230 - 73° 53' 56.12''

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 02/03/2025 has revealed that there are 4 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 02/20/2025 has revealed that there are 3 NY SWF/LF sites within approximately 0.5 miles of the target property.

BROWNSVILLE AUTO SAL	257 HEGEMAN AVE	WSW 1/8 - 1/4 (0.192 mi.)	L77	234

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/02/2025 has revealed that there are 30 NY LTANKS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 37 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 17 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 7 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 16 E MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
BELMONT STATION	BELMONT, WILLIAMS, A	N 1/2 - 1 (0.734 mi.)	195	807

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

SAKMAN MOTORS CO	106 NEW LOTS AVE	WSW 0 - 1/8 (0.124 mi.)	I53	142

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Description:	"Location: The Site is comprised of one (1) property located in the

749 VAN SINDEREN AVENUE, BROOKLYN, NY (Continued) **S132119336**

New Lots section of Brooklyn, New York and is identified as Block 3865 and Lot 9 on the NYC Tax Map. The Site is located in a commercial and industrial area, bordered to the north by 719 Van Sinderen Avenue (single-story auto repair and machine shop), to the east by 650-680 Snediker Avenue (eleven single and double-family residential buildings), to the south by 753 Van Sinderen Avenue (single-story commercial building), and bounded to the west by Van Sinderen Avenue followed by New Lots Avenue MTA L-Train station. Site Features: The Site is currently improved with three (3) one-story buildings with six (6) individual commercial units and varying facades occupied by six (6) auto repair auto body shop tenants. The overall structure consists of a total 20,200 square feet of commercial buildings. Current Zoning and Land Use: According to the New York City Zoning & Land Use Map1 (ZoLa), t the Project Site is located in Zone C4-4L (commercial). Based on historic zoning maps obtained from the ZoLa map (Attachment 2), which included the years 1961-1994, the Project Site was previously zoned as M1-1 (manufacturing). A detailed analysis of land use, zoning, and public policy was submitted as an Environmental Assessment Statement (EAS) to the Department of City Planning as of July 9, 2021. The proposed action included a zoning map amendment to rezone Block 3865, Lot 6, 7, 9, and 21 from an M1-1 district to a C4-4L district, in addition to a Zoning Resolution as a Mandatory Inclusionary Housing (MIH) area. Past Uses of the Site: The Site was historically developed for manufacturing operations, which included one-story warehouse buildings for manufacturing of wood products, metal working, enamel usage, and a lumber yard from at least 1928 until at least 1987. A 1908 Sanborn map depicts the subject property as unimproved, which is the earliest record available. By 1989, the property was utilized as an auto body works facility with six (6) individual body shops. Site Geology and Hydrogeology: According to the Mineral Resources Online Spatial Data: Geologic maps (usgs.gov), bedrock underlying the Site consists of the Raritan Formation. This formation is Upper Cretaceous in age and composed of an upper clayey, silt (Woodbridge Clay Member) and a lower sand (Farrington Sand Member).The direction of groundwater flow is inferred to be to the south/southeast, based on local topography and proximity to surface water to the east of the Site. Additional details generated during the subsurface investigation is presented below. Soil borings completed during our Remedial Investigation encountered groundwater between 15.29 feet and 17.20 feet below top of slab. Elevation of the property ranges between 16 and 21 feet above mean sea level (amsl). Stratigraphy of the site below ground surface generally consists of historic fill material from depths of 0.0 feet to 5.0 feet below ground surface. Fill consisted of brown medium to fine grained sands with some silt and comingled brick and coal ash. The fill is underlain by fine to medium sand with some silt to a depth of 20.0 feet below ground surface. Refusal was not encountered during drilling activities, and the depth to bedrock is not known. The direction of groundwater flow in unconsolidated sediments is inferred to be to the south/southeast, based on local topography and proximity to surface water to the south/southeast of the Site. "

Env Problem: "Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised

DEC Memo:	OER site. Phase II and Remedial investigation completed. Report to be sent shortly. Summary will be sent in the next couple days. To be assigned to DEC Sekhon when received. PVE performed a Phase I ESA and Phase II ESA at 749 Van Sinderen Avenue in Brooklyn. Our client is in contract to purchase the site for redevelopment into affordable housing. The site has an E-Designation (E-632) for hazmat and noise with OER, and we re in the pre-application phase for the project, but full intention to apply for the VCP. During the Phase II ESA, we identified evidence of petroleum contamination in the subsurface that resulted in us calling the spill. Our client won t close on the property for several months, but we re moving ahead with OER requirements in the meantime (RIR and RAWP). See a few notes from our Phase II below. - Fill material

COMMERCIAL- WAREHOUSE (Continued) **S130465421**

was identified in the top 7 to
8 in all borings. Native sand was below that, and our max boring depth was 25 . - Petroleum
contamination was identified in SB-1 and SB-3 at 17-20 below grade at the soil-groundwater
interface. - Groundwater was observed at 17.0 and 17.5 below grade in temporary wells. - Soil vapor
contamination was elevated in the two deeper samples (-15) - We had a few Phase II ESA data gaps
based on access, but we recently completed a full Remedial Investigation scope in accordance with
our OER-approved Work Plan. That report won t be available for another 2-3 weeks, but wanted to
provide the reports that we have finalized thus far.

Remarks: phase 2 soil and ground water affected.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/10/2002 -NYPD & City Sanitation cleared out a vacant lot where drugs were being sold. They found an oil tanker truck on the site and wanted DEC to remove it. After DEP inspected the truck it was determined there was only a slight skim layer of oil in the truck, city sanitation abandoned vehicles dept accepted the truck. Spill Closed
Remarks:	police cleaning off old lot and have an abandoned tank truck.

DEC Memo:	4/27/2018 - Feng - Duty Desk. Spoke to Abram of DEP (347-768-1478). They found the following drums contained and covered (5) 55-gallon (3) 20-gallon (3) 30-gallon The address is: Van Sinderen Ave in between: Riverdale Ave and Newport Street Brooklyn Assigned the spill to Ryan Piper for drum run. Updated information from Abram Gorgy. A few feet away from the drums, by the light pole, there is a 8'x8' big spill on soil. The side of the street is not paved. He will send the pictures over. Talked to Ryan. He will see how bad it is by the time he has the drum run and determine the next step, i.e. to sweep by the sanitation or hire contractor to remove it. No need for V. Zhune to go for inspection at this time. 5/3/18- DEC Piper- 11 Drums removed as part of 5/2/18 drum run. Spill closed.
Remarks:	5-55 3- 20's and 3- 30's drums contained and covered. Abram Gorgy called to update info . They found soil contamination.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: 01/03/07-Hiralkumar Patel. spoke with officer Mlekusch at NYPD. diesel spilled on street. spoke to fireman at scene. tanker truck carring diesel struck overpass and lost about 250 gal diesel on street. no soil impacted. DEP and sanitation dept. on scene for cleanup. spoke at DEP industrial waste control section. they are on scene with sanitation dept. for cleanup. spoke with Gloria (718-714-2704) at Sanitation. sanitation crew on scene but haven't done any cleanup yet. tanker is still at location under overpass. once tanker removed from site, sanitation will do cleanup. Gloria will call back once she heard more from site. spoke with Mr. Cosmo at DEP industrial waste control. he doesn't have any updates on case. spoke with Gloria at sanitation. she spoke with person who was on scene. sanitation used 5 cubic yards of sand and spill has been cleaned up. Gloria doesn't know wether spill hit sewer or not. she asked to call supervisor Krimsky (718-257-1520). left message for Krimsky. received call from Mr. Krimsky. he believes that spilled oil never reached to any sewer but he is not sure about this. spoke with supervisor Ms. Pekarski (718-965-8265) at FDNY. they responded for initial cleanup. she confirmed that no oil went into sewer system. all cleanedup. no soil/sewer impacted. case closed.
Remarks: FIRE DEPT ON SCENE AND DEP ALSO: UNSURE IF ANY WENT INTO STORM DRAIN: TRUCK HIT OVERPASS

Latitude:	Not reported
Longitude:	Not reported
DEC Memo:	3/11/16: Mahat 10:30am Site Visit : Pipeline background : Buckeye terminal has two lines 601 and 602 which supply jet fuel oil and gasoline respectively from Linden, New Jersey to Long Island City facility. The impacted pipeline (602 -gasoline) had a leak at 1600 Linden Blvd, Brooklyn. The total stretch of the pipeline is 32 mile. The line is out of service at the moment. The flow on the pipeline was stopped automatically with the leak detection system. A clamp has been placed on the leak area around 700 hours this morning. Please refer to the pictures below. Buckeye reported that the total loss from the leak was two barrels. A pressure test on both lines is schedule this afternoon. Once lines passes the pressure test , they will brought back to commission. (They are doing a pressure test on 601 also just to be safe since it was very close to the 602). A permanent repair is scheduled for next week. They are planning to replace the section of the impacted pipeline and replace with the new one. Further excavation to expose the pipe line will be done in order to perform the permanent repair. Miller environmental is pumping out all the foam+water used by FDNY last night. Con Edison is on site and reported one structure (next to Burger King) has been impacted by foam and water. NYCEM, Con Ed, Miller environmental, NY PD, NYPD traffic, MTA LIRR, MTA system safety, and New York state spills response are on site. An inter-agency meeting is schedule at 1330 hours. 1:30PM Mahat Update: Here is an update from 1330 hrs IAM. Pipeline (601-Jet Fuel) is back in service after passing the pressure test as of 1215 hrs. The pressure test on pipeline (602-gasoline) will be completed by 1500 hrs. The test results will supplied to NYSDEC shortly. Buckeye is planning to have a personnel on site as long as the pipe is in commission while the clamp is on. Generated liquid manifest, solid manifest, pressure test

BUCKEYE LINE 602 (Continued) **S118636691**

results, and pictures will be
provided to NYSDEC spills as a standard spill report package. The
middle lane on Linden Boulevard
has reopen leaving one lane closed for Miller Environmental to finish
the job. Miller environmental
is almost done with the power wash operation. They are scheduled to be
done by 1700 hrs. Other
resources were not impacted by the leak. Hence, no environmental
remediation was warranted by the
Department. No further interagency meeting is scheduled. 3/28/16 -
Austin - See also spill #
1511778, Buckeye's report of this spill event (called after the RSE
reminded them of their
obligation to notify the DEC of the spill) Spill # 1511778 closed and
referenced to this spill
(#1511773) - end 4/26/16: Mahat e/c: DEC Mahat received a closure
report via email. It has been
uploaded on D2 for reference. The report consist of Work Plan, Line
Pressure Test Result, Manifest
and narrative of the spill case. Based on the report, pictures, and
site visit, the spill case is
closed on NYSDEC Spill database. No further action is required.

Remarks: clean up is pending still leaking at this time

DEC Memo:	Sangesland spoke to Doug at Eastern Environmental. Industrial building with a history of dry cleaning. Several buried pipes/tanks, only a few have been exposed so far. CSL Letter sent to: Linden Plaza Development LLC. **property owner** (Renaissance Realty Group Inc.) **parent company** 1946 Coney Island Ave. Brooklyn, NY 11223 Attn: Marc Chemtob Ph. (718) 376-5400 (O) (917) 952-9700 (C) email: marc@renrlty.com 09/14/09-Hiralkumar Patel. 5:51 PM:- received email from Doug. Doug mentioned that owner did Phase I as part of refinance and found old tank info. site was built in 1920's at some point it was believed to have been suspect dry cleaners and since then the property has been rented to auto repair tenants for many years. collected representative samples from each tank and by visual and olfactory field sampling think some tanks have a combination, hydraulic oil, transmission fluid, lacquer ,thinner, and water. samples were brought to lab on September 14th, 2009. during the course of the investigation to determine if tanks are present some piping above tanks was discovered to be leaking. as of today two tank tops have been located and tanks appear to be encased in concrete. some impacted soils from leaking pipes have been removed. Doug requested a site meeting. Doug Schrimpf Eastern Environmental Ph. (631) 727-2700 (O) (631) 774-9681 (C) email: DSchrimpf@EasternEnviro.com 09/15/09-Hiralkumar Patel. 9:30 AM:- sent email to Doug and asked him to submit Phase I report for review, prior to any site visit. 9:42 AM:- received call from Doug. till now they found 3 tanks. tanks were installed vertically and tank top is about 3 ft bg. tanks are 10 ft long by 64 inches in diameter (approx. 1500 gal). Doug mentioned that due to surround structures, tanks removal could be tough. asked Doug to send Phase I. 11:02 AM:- received email from Doug with copy of GPR survey result. GPR survey was performed by Don Carlo. GPR survey was performed as found USTs on previous Sanborn maps dated 1950. found eight hyperbolic subsurface anomalies. found two vent lines, one fill port and two stick lines during visual inspection. also

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

found two large dutchboys and six small dutchboys during visual inspection. 11:56 PM:- spoke with
Doug and asked him about Phase I. he mentioned that owner reviewed sanborn maps only. 11:58 AM:-
spoke with Mr. Chemtob. he mentioned that he did Phase I when he baught property and nothing was
found at that time. asked Mr. Chemtob to submit copy of Phase I. ********** following block/lots
owned by Linden Plaza Development LLC.: Block 3862/Lot 1 (building 1):- 789-813 Sackman St, 94-118
New Lots Ave, 640-654 Powell St, 271-281 Hegeman Ave Block 3862/Lot 26 (building 2):- 666-676
Powell St, 283-293 Hegeman Ave PBS #: 2-609739 for 114 New Lots Ave (building 1). as per PBS
record, two 3,000 gal #4 oil USTs were removed in Oct. 2004. PBS #: 2-609740 for 666 Powell Street
(building 2). as per PBS record, six 550 gal gasoline tanks removed. PBS record does not have tank
removal dates, but PBS certificate was printed on 10/20/2004 (tanks could be removed in Oct. 2004
alongwith tanks at 114 New Lots ave site). ********** ---------- following block/lots owned
by Powell Development LLC. (whose address is same as Linden Plaza Development LLC.): Block 3862/Lot
23 (building 3):- 656 Powell Street Block 3862/Lot 24 (building 4):- 660 Powell Street Block
3862/Lot 25 (building 5):- 662 Powell Street ---------- no other spills found for any block/lot.
09/16/09-Hiralkumar Patel. 10:15 AM:- visited site. met Doug and Marc. tanks are located inside
building along Powell Street. two story strcuture located along Powell street from the intersection
of New Lots ave and Powell street to half way along Powell street and then open lots in rest of the
length along Powell street to the intersection of Hegeman Ave and Powell street. no building
numbers posted so could not find which building (650 to 662) has these old tanks. asked Mr. Chemtob
to find out excact block/lot # for building where tanks are located. found petroleum odors inside
building. tanks still contains sludge. Doug collected product sample and waiting for sample result
before pumping product out from tank. pipings runs towards building on right side of the subject
location. Doug will pump out tank and try to remove tanks from ground. if tanks can not be removed,
will do soil and groundwater sampling through tank. found old monitoring well on sidewalk along
Powell street, nearby entrance to tank site. no product found on water in well. auto body repair
shop, car dealership and church at the site. asked Doug to confirm site address (specific with
block/lot). also asked him to expose entire length of pipes for any other areas with contamination
as holes found in pipe above tank location. will remove contamination upto feasible limit. Mr.
Chemtob mentioned that he was planning to develop this site in

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

residential building, but now will
use for commercial purpose only and will use existing building. asked Mr. Chemtob to submit copy of
previous Phase I and tank closure reports for two 3,000 and six 550 gal tanks. 1:56 PM:- spoke with
Doug and asked him to measure distance from the intersection of New Lots ave and Powell street to
the entrance door of building where tanks found. 2:03 PM:- received call from Doug. his crew
measured 111 from the corner of New Lots Ave and Powell street to building entrance where tanks
found. from deed record on ACRIS, it was found that 8 abandoned tanks are located at 650 Powell
street (block 3862/lot 1; lot 1 occupies 135 ft and 5 inches along Powell street from the corner of
New Lots ave and Powell Street). 3:48 PM:- sent letter to Mr. Chemtob requiring Phase I, soil and
GW investigation around tank and endpoint samples. also recommends to register recently found
tanks. letter emailed to Mr. Chemtob and Doug. 09/25/09-Hiralkumar Patel. 1:20 PM:- received Phase
I and previous tank removal reports. abstract of tank closure report for 647 Powell street: -
removed one 550 gal gasoline UST - no staining or smell of gasoline was noted within the perimeter
of the pit - two endpoint soil samples (B-1 and B-2) were collected, at 6-8 ft depth, from within
two accessible sidewalls - samples were analyzed via 8021 method - groundwater was not encountered
in excavation abstract of tank closure report for 666 Powell Street: - removed six 550 gal gasoline
UST - no staining or smell of gasoline was noted within the perimeter of the pit - five endpoint
soil samples (EP-1 through EP-4 and MS-1) were collected, at 8-10 ft depth, from within four
sidewalls and bottom of excavation - samples were analyzed via 8021 method - groundwater was not
encountered in excavation both reports missing scaled site map (including location of tank,
endpoint samples etc.) and lab data. received copy of Phase I, which was prepared on 08/07/2000.
abstract: - as per Phase I, B&M Cleaners and Dyers, Inc. was located at the subject site in 1950. -
aboveground waste oil tanks were noted in 799 & 813 Sackman St - gasoline vents on the roof were
noted on 813 Sackman st - sanborn history maps dated 1977, 1981, 1991 shows gasoline tanks at 799
Sackman street - unidentified tanks are shown on sanborn map dated 1950 at 652 Powell Ave which was
operated by B&M cleaners and dyers, inc. 10/06/09-Hiralkumar Patel. 9:27 AM:- left message for
Doug. 9:39 AM:- received call from Doug. currently they are cleaning tanks and will start tank
removal tomorrow. 10/07/09-Hiralkumar Patel. 4:39 PM:- received message from Doug. they exposed
each tank from top. he mentioned that tank removal could be dangerous. 10/08/009-Hiralkumar Patel.

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

3:15 PM:- visited site. met Randy from Eastern environmental. they exposed all tanks from top. all
tanks are located vertically except one tank in front which runs horizontally. petroleum odors
inside building (could be from contaminated soil in sidewalls in pipes area). Randy cut 3 sq. in.
plate from area about 1 ft above the bottom of each tank and found concrete surface right
underneath the tank. found liquid (could be water) entering into tank from these cuts in tanks.
spoke with Doug. asked him to observed liquid amount tomorrow when they start work and asked to
collect liquid sample if enough in tank. also asked to drill through bottom of one tank in each
grounp to find out thickness of concrete under tanks and to collect soil sample right underneath
the concrete bottom. 10/09/09-Hiralkumar Patel. 9:26 AM:- spoke with Doug about amount of liquid in
each tank. he will talk to his crew working on-site and will call back. 9:37 AM:- received call
from Doug. less than half gallon of water found in most of the tanks. as per Randy, water was clean
and no chemical/petroleum odors. crew drilled through bottom of tank #7 and found at least 19
inches thick concrete. could not drill futher due to machine limitation. as per Doug, clean
concrete came out of drilling. will do drilling in bottom of tank #2 to confirm concrete thickness.
told Doug that as tanks are encased in concrete and as no odors in water entering into tank through
cut open patch, asked him to backfill area once they confirm concrete thickess in tank #2 and
collect endpoint sidewall samples from soil area above the tanks. and then they will start
excavating area next to tanks location where some contamination along pipes. once they clean
contamination or reach excavation limits, asked him to install one boring down to water table to
collect soil and water samples. boring must be done within 5-10 ft distance from tanks. informed
him that the department may require installation of permanent wells based on soiil/water sample
result. 10/13/09-Hiralkumar Patel. 3:45 PM:- received call from Doug. they closed tanks and started
excavating in sidewalls where contamination was found. found larger diameter pipes and product in
it. currently 10 ft in excavation. Doug mentioned that they only can go 13 ft bg. asked him to
collect endpoint samples from limit of excavation from most contaminated spots for full list of
8260 and 8270. 10/14/09-Hiralkumar Patel. 9:00 AM:- visited site. met Randy from Eastern. crew was
excavating rear end of tanks area. dug down to 11 ft depth and still petroleum odors. asked Randy
to collect two endpoint bottom samples for analysis.
10/21/09-Hiralkumar Patel. 12:36 PM:- spoke
with Doug. they dug about 20 ft by 20 ft area to a depth of about 12

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

ft bg. more contamination in
bottom of the excavation and found 1,200 ppm on PID. Doug collected one soil sample from bottom and
sent to lab for full list of VOCs and SVOCs. as no futher excavation is possible, asked him to
backfill existing excavation. he drilled through bottom of excavation and found groundwater at 20
ft depth and odors in water. collected one water sample from bailer for analysis. 12:50 PM:- spoke
with Marc. he mentioned that no water found in excavation and he believes that groundwater
contamination, if any, must be from off-site based on concrete wall thickness around tank. based on
these, he requested no further action letter. informed Marc that 1,200 ppm was noted on PID in soil
at excavation bottom and as per Doug, there was smell in water and based on these information, the
Department requires complete horizontal and vertical soil delineation and delineation of possible
groundwater contamination via installation of at least three monitoring wells. 10/26/09-Hiralkumar
Patel. received email from Doug (at 5:39 PM on 10/23/09) with copy of sample analyticals of two
endpoint bottom samples. email doesn't include site map showing where samples were collected or PID
readings in area from where soil samples were collected. most of the compounds found below
detection limit, but detection limits for VOC compounds for sample Excavation Bottom A were raised
to 500 ppb and detection limits for VOC compounds for sample Excavation Bottom B were raised to
1,000 ppb. 12:35 PM:- received call from Marc to discuss NFA based on results of two endpoint
sample results. informed Marc that the Department requires scaled site map with sampling locations,
depths, PIDs, excavation boundaries and groundwater sample result and then only the department can
discuss about future work. 12:41 PM:- received call from Doug. asked him to submit missing
information. 10/27/09-Hiralkumar Patel. 11:31 AM:- received email from Doug including site map
showing PID readings at different spots in excavation. site map shows PID readings at four spots
ranging from 271 ppm to 1,360 ppm. as per Doug, he sent sample for analysis from spot E that was
collected at 12 ft depth from excavation bottom with PID readings of 1,189 ppm. Doug requested a
site visit on 10/30/09 to discuss future work. 11:47 AM:- left message for Doug and informed him
that site map doesn't show location of samples: Bottom A and Bottom B. also informed that method
detection limits for both samples were raised above 500 ppb and some compounds have TAGM limit
below 500 ppb. asked Doug to schedule a site visit in week of Nov. 2nd, 2009. 1:54 PM:- received
call from Doug. he will revise site map showing location of samples A & B. he is still waiting for

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

groundwater results from lab. 10/30/09-Hiralkumar Patel. received email from Doug (at 6:22 PM on 10/28/09) including site map showing locations of samples A and B and results of groundwater analysis. found 3,300 ppb of 1,2,4-Trimethylbenzene and 590 ppb of Xylene in groundwater sample. 11/03/09-Hiralkumar Patel. 2:30 PM:- visited site. met Doug and Marc. found stained soil in excavation sidewalls, adjacent and in front of bathroom. collected soil from two ft below excavation bottoms (approx. 11 ft) and found 550 ppm (in excavation next to bathroom) and 290 ppm (in excavation in front of bathroom) on PID. based on observations during site visits, groundwater sample result and PID readings from excavation bottom and sidewalls, asked Marc for following: - backfilling of all excavation (as no further excavation is possible) - installation of minimum of three monitoring wells around on-site tanks (one in excavation in front of bathroom, one in excavation adjacent to bathroom and one in area between tanks and main entrance along Powell street) - soil screening during installation of monitoring wells - soil borings every 10 ft along all underground pipes, at least to a depth of 3 ft below pipes, related to tanks - site specific groundwater flow direction - collection of two soil samples from each borings/wells: one at highest PID and second deepest clean/right above water table 12/01/09-Hiralkumar Patel. 1:28 PM:- spoke with Doug. they backfilled excavation and installed three wells. will survey and sample wells. asked Doug to analyze soil samples (collected during well installation) and groundwater samples via 8260 full list and STARS 8270. Doug will survey wells on 12/03/09. 12/28/09-Hiralkmar Patel. 11:25 AM:- received call from Doug. they did well survey and based on groundwater flow direction, installed more borings upgradient and downgradient from tank location. found contamination in groundwater downgradient from tank. Doug was inquiring about remedial methods. asked Doug to submit investigation report for review prior to any comments on remedial methods/plans. Doug will submit report by 01/11/10. 01/19/10-Hiralkumar Patel. received report from Doug (at 5:40 PM on 01/18/10). report is missing following information: - scaled site plan with excavation boundaries and wells/endpoint sample locations - well installation logs - information about any soil samples collected during well installation - vertical delineation of contamination - results of groundwater samples from on-site wells - any wells installed off-site or groundwater samples collected from boring - any soil samples collected during installation of off-site well/boring - groundwater depth - groundwater contour map - soil delineation along remaining pipes

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

crossing north wall into
adjacent building - results of soil samples from 14 borings installed along pipe going towards
front 10:35 AM:- spoke with Doug about incomplete report and found following: - vapor barrier
hasn't installed yet (wrong info in report) - no soil samples collected during installation of
on-site wells - on-site wells hasn't sampled yet as were waiting for DEC to observe sampling. asked
Doug to sample on-site wells without DEC rep - off-site groundwater samples were collected via
boring (no permanent wells) - no soil samples collected during soil delineation along pipe going
towards front but did soil screening only using PID 11:07 AM:- sent email to Doug to submit revised
report with missing information. also asked him for vertical soil delineation, soil delineation
along other pipes and sampling of on-site wells. 01/20/10-Hiralkumar Patel. received email from
Eastern (at 5:58 PM on 01/19/10) including revised report. found revised report incomplete too.
9:07 AM:- sent email to Doug to submit re-revised report with all correct info. 01/25/10-Hiralkumar
Patel. 3:31 PM:- received revised report from Doug without scaled site plan. leaking pipes caused
contamination. Eastern removed about 266.68 tons of soil and excavated down to 12 ft depth. no
further excavation possible. heavy PID readings noted in base of the excavation. installed three
monitoring wells inside property. no soil samples collected during well installation. installed 14
borings, to 5 ft depth, along pipe running towards front and screened soil with PID (no samples
were analyzed). found contaminated soil in 6 ft by 6 ft area. collected groundwater samples from
four probes installed off-site to confirm any off-site migration. no contamination found in
off-site upgradient well. groundwater at the site found at 18 ft bg and flows south/southwest.
revised report missing scaled site map including all sampling locations. 01/26/10-Hiralkumar Patel.
2:38 PM:- sent Stipulation letter to Marc. letter emailed to Marc and Doug. 2:39 PM:- sent email to
Doug requiring to submit scaled site map with locations of all borings/endpoint samples/temporary
gw probes/wells and groundwater flow direction. email copied to Marc. 02/01/10-Hiralkumar Patel.
2:33 PM:- received fax from Mr. Chemtob with signed STIP. 3:36 PM:- spoke with Mr. Chemtob and
asked him to send original in mail. 02/08/10-Hiralkumar Patel. 12:00 PM:- received message from
Doug. 1:33 PM:- spoke with Doug. he inquired about what needs to be done. informed Doug that the
department requires complete delineation of soil and groundwater contamination. 2:01 PM:- sent
email to Doug requiring complete delienation of soil and groundwater contamination. asked to

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

collect soil samples at highest PID and deepest clean. also asked to continue boring under water
table, if soil contamination hit water table. asked to analyze all soil/groundwater samples via
8260/8270 full list. 02/17/10-Hiralkumar Patel. 2:26 PM:- received signed STIP from Mr. Chemtob.
02/18/10-Hiralkumar Patel. 1:38 PM:- received call from Doug. they installed borings, near
previously installed wells, to depth of 28 ft bg (8 ft below water table) and collected soil and
groundwater samples. will send lab data along with site map showing all previous/current sampling
locations and boring logs, once lab data available early next week. forwarded signed STIP for
regional director's signature. 02/24/10-Hiralkumar Patel. 10:37 AM:- received email from Doug. he
installed three borings (ESB-1 to ESB-3) about 3 ft away from previously installed wells. borings
ESB-1 and ESB-3 were installed to depth of 24 ft bg and boring ESB-2 was installed to depth of 30
ft bg. soil was screened below 10 ft depth in all three borings. found high PID readings in all
three borings and high PID readings at the end of borings (1,200 ppm at 22-24 ft in ESB-1, 800 ppm
at 28-30 ft in ESB-2 and 1,300 ppm at 22-24 ft in ESB-3). also, excavted as much soil as possible
at the area around floor drain that revealed contamination during prvious sampling. this additional
soil removal generated approx 35 tons which was in middle of building down to 13 feet in depth.
can't excavate any additional material do to structural concerns with this building . no
information about any soil samples collected during soil borings. 02/25/10-Hiralkumar Patel.
received copy of executed STIP today. STIP was signed by regional director on 02/22/10, but did not
received until today. 9:14 AM:- sent email to Mr. Chemtob including copy of executed STIP and CAP
and asked Mr. Chemtob to submit work plan for complete soil and groundwater delineation by the end
of 03/12/10. email copied to Doug. 9:40 AM:- received email from Doug with results of soil and
groundwater samples collected from recently installed soil borings. soil samples were collected at
13-15 ft depth (right above water table), but there was higher PID readings noted below water table
and no soil samples collected at highest PID. found contamination in soil and groundwater samples.
soil and groundwater analyticals are listed below in notes on date 04/05/10. 10:48 AM:- left
message for Doug and informed that soil samples from recently installed three borings were
collected at depths other than with highest PID and the department requires soil samples at highest
PID and deepest clean. asked him to sample accordingly during next complete delineation work.
03/29/10-Hiralkumar Patel. 8:18 AM:- received report from Eastern with

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

results of soil and
groundwater samples. soil samples collected from six borings installed on and off-site: three
borings were installed next to previously installed wells to delineate vertically and three borings
installed outside to delineate horizontally. six groundwater samples collected: three samples from
previously installed wells and another three groundwater samples from borings installed outside of
building. found contamination in soil and groundwater samples from Boring#3. soil and groundwater
analyticals are listed below in notes on date 04/05/10. submitted report is not acceptable as it is
missing scaled site map (including all excavations, boring/well/endpoint samples), detailed boring
logs and site specific groundwater flow direction. 10:54 AM:- sent email to Doug to submit revised
complete report. email copied to Marc. 04/01/10-Hiralkumar Patel. received revised report from Lou
Bascelli (at 5:07 PM on 03/31/10) from Eastern environmental. revised report is also not acceptable
as missing one scaled site map (instead of multiple maps), site specific groundwater flow
direction, detailed boring logs, well gauging data, lab data etc. 9:31 AM:- sent email to Lou
Bascelli (LouB@easternenviro.com) at Eastern informing that the revised report is also not
acceptable as doesn't include one scaled site map, site specific groundwater flow direction,
detailed boring logs and well gauging data. asked Lou to submit re-revised report. email copied to
Mr. Chemtob. 9:36 AM:- sent email to Mr. Chemtob informing that remedial investigation work plan
was due on 03/09/10 and never submitted which is a violation of the signed STIP. asked Mr. Chemtob
to contact immediately. email copied to Lou and Doug at Eastern. 12:19 PM:- received message from
Mr. Chemtob. 1:09 PM:- spoke with Mr. Chemtob and asked him to submit proper report with required
information and written work plan for addtional work.
04/02/10-Hiralkumar Patel. 8:41 AM:- received
message from Doug. 9:57 AM:- spoke with Doug. asked Doug to submit a report for work done till now
including at least the following: - work description - scaled site map for building 650 including
tank location, excavation boundaries and location of endpoint samples and borings/wells. - general
site map including all off-site locations where borings/wells installed and distance of those
borings/wells in reference to one point - detailed boring logs - well gauging data - site specific
groundwater flow direction - sample results 10:48 AM:- sent email to Doug with above requirement.
email copied to Marc. 04/05/10-Hiralkumar Patel. 12:30 PM:- received report from Eastern. abstract:
- on 12/12/09, three soil borings (BH#1 to BH#3) installed next to previously installed permanent

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

monitoring wells (MW#1 to MW#3) inside the subject site - collected soil samples from borings BH#1
to BH#3 at 13-15 ft depth - collected groundwater samples from wells MW#1 to MW#3 - found
contamination in soil and groundwater samples inside building - on 02/18/10, removed 27.53 tons of
impacted soils from the area around the interior floor drain - contaminated soil was excavated to
approx. 12 ft in depth with 8 ft radius around the floor drain - large concrete pier substructures
were encountered north and south of the excavation, prohibiting further soil removal - no further
excavation possible inside building - on 03/03/10, four soil borings (BH#4 to BH#7) were advanced
to groundwater from the basement floor grade level of 654 Powell st; each sample exhibited heavy
odor and elevated PID readings to groundwater; sheen was visible on groundwater less than
---------- - on 03/04/10, three soil borings (BH#8 to BH310) were advanced to groundwater from the
basement floor grade level of 654 Powell st; each sample exhibited heavy odor and elevated PID
readings to groundwater; sheen was visible on groundwater less than ---------- - on 03/05/10, two
soil borings (BH#11 and BH12) were advanced to groundwater from the basement floor grade level of
646 Powell st; one soil boring was advanced in the automotive yard directly south of 654 Powell Ave
(BH#13); each sample exhibited heavy odor and elevated PID readings to groundwater - on 03/10/10,
total of four soil borings installed: boring BH#14 was installed inside 646 Powell st, boring BH#15
was installed in back side of building 650 Powell st, and borings BH#16 and BH#17 were installed
about 177 ft south of building 645 Powell street (this information is not in text part of the
report, but found in PID reading tables and site map) - on 03/15/10, three soil borings installed
in exterior areas and collected soil (Boring#1 to Boring#3) and groundwater (GW#1 to GW#3) samples
(no permanent wells installed at these borings) - soil samples Boring#1 to Boring#3 were collected
at 15.5 ft depth - report includes a site map (non-scaled) showing groundwater elevation
information - found groundwater elevation at 14 ft 8 inch in MW-1, 14 ft 1 inch in MW-2 and 19 ft 7
inch in MW-3 - as per site map, groundwater is flowing towards southwest less than ---------- -
recommends further delineation of groundwater to the east and southeast of 650 Powell Street soil

04/07/10-Hiralkumar Patel. 10:56 AM:-
sent email to Lou and Doug at Eastern and asked them to submit well gauging data. also asked them
to correct boring notations in PID reading tables. 04/09/10-Hiralkumar Patel. received email from
Lou from Eastern. he mentioned that GW#1 and GW#2 were temporary boring points only and no
permenant wells installed at these locations. 04/12/10-Hiralkumar Patel. 1:39 PM:- sent email to
Lou and asked to submit revised report with all missing information and groundwater contour map.
04/13/10-Hiralkumar Patel. received email from Lou (at 6:20 PM on 04/12/10) with revised report
including information about soil sampling depth from GW#1 to GW#3. but doesn't include well gauging
data and groundwater contour map with site specific groundwater flow direction. 9:40 AM:- sent
email to Lou to submit revised report including information about site specific groundwater flow
direction (including well gauging data and groundwater contour map). 9:42 AM:- left message for
Doug. 9:55 AM:- received call from Lou about missing well gauging data in report. Lou mentioned
about groundwater elevation info included on site map. as well gauging data included on map, asked
Lou to disregard previous email. reviewed groundwater elevation info in both reports: one dated
01/15/10 and second dated 03/31/10. as per groundwater elevation info in report dated 01/15/10,
groundwater is flowing towards southwest. 05/14/10-Hiralkumar Patel. 10:18 AM:- received message
from Doug. 12:49 PM:- spoke with Doug. he mentioned that no additional work has done yet as owner
is looking for finance. Doug also mentioned that another consultant is also doing investigation for
potential buyer. 06/03/10-Hiralkumar Patel. 9:14 AM:- received call from Doug. they will do
additional delineation downgradient tomorrow. 08/02/10-Hiralkumar Patel. 4:38 PM:- left message for
Doug inquiring updates. 08/10/10-Hiralkumar Patel. received message

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

from Doug (at 5:19 PM on
08/09/10). 9:47 AM:- spoke with Doug. they did additional delineation and submitted remediation
cost estimates to Mark. but haven't heard back yet. asked Doug to submit complete delineation
report. 10:24 AM:- left message for Mark. 10:30 AM:- sent email to Mark requiring to submit
investigation report by the end of 08/13/10. email copied to Doug. 1:26 PM:- received message from
Mark. 08/11/10-Hiralkumar Patel. 4:29 PM:- spoke with Mark. he spoke with Doug and will submit
report by tomorrow. 08/13/10-Hiralkumar Patel. received report from Doug (at 7:42 PM on 08/12/10).
abstrat: - three borings (SB-18, SB-19 and SB-20) were installed on eastern sidewalk of Powell
Street - boring SB-18 was installed to 30 ft bg - boring SB-19 was installed to 25 ft bg - boring
SB-20 was installed to 20 ft bg - groundwater found at 15.5 ft bg - three soil samples were
collected at 16.5 ft depth - all three soil samples collected a foot below water table - two
groundwater samples (SB-18 and SB-20) collected from borings - PID readings found in 15-20 ft range
only soil analyticals: ----------SB-20

Isopropylbenzene----------140----------140
n-Propylbenzene----------280----------200
sec-Butylbenzene----------100----------160 11:33 AM:- spoke with Doug. informed him that
borings BH-18, BH-19 and BH-20 were installed on east side of property, across Powell STreet. but
no borings installed south of BH-8, BH-13 or west of BH-4. and also, there is no soil or
groundwater sample results available from south/southwest of the property. also informed him that
the department requires complete delineation of groundwater contamination via collection of samples
and installing wells. discussed with DEC Austin. due to deep soil contamination and dissolved
groundwater contamination, Austin asked to transfer case to remediation group. case transferred to
DEC Vadim. 9-28-10. Spill assigned to George Breen. 10-4-10. Doug called to ask for a meeting in
two weeks or so. He says Marc has a potential buyer who wants to build a Church and School. Marc is
setting up a budget (escrow acct) of $500K to cover cleanup from this point. Potential buyer is
being represented by a former DEC attorney from upstate (Region 4 or 5)(Sommers). Buyer and his
consultants would come down from upstate for the meeting, which would be a roundtable, open forum.
Of course, Marc is looking for concessions from DEC. Doug says Marc is extremely tight and

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

aggressive; difficult to work with. Doug invited me to verify this assessment with Kumar. Doug says dissolved in g/w is the issue. There is no floating product. Dissolved plume has migrated down to Lindin Blvd (not up to New Lots?). He says place belonged to a dry cleaner years ago and perc was released. Price would be $5M with a $3.5M mortgage. Doug said he would e-mail me something. The fact that Marc has a potential buyer may be the reason he had Doug call Vadim to ask that a Project Manager be assigned to the case. 10-12-10. Doug called just before 8 am to see if he could set up a meeting for this week. (MT is not available this week.) The meeting would be to assess status. Doug, his counterpart and Marc Chemtob would be there. I told Doug we were working on assessing status and it might be advisable to review our findings before we meet. Doug just wants to get a date. Marc Chemtob must be pushing him. He says this property is an ideal location for a church, because the area north of New Lots is all residential. I wonder which parcels the Church is buying. They will need a parking lot, perhaps a hall, a residence, a day care, a school. The difference in exposure between a church service and a day care is huge. 10-12-10. Sent letter demanding RIWP to owner, Marc Chemtob, with copy to contractor, Doug. 10-18-10. Doug called this morning to ask for meeting this Wed or Thur with owner, prospective buyer, buyer's consultant, Doug and his hydrogeologist - five people in all. He did not mention the letter. Mark is not available Thur PM. Marc is in precarious position because he is in default of a signed Stip. He may have to comply and pay penalty. Marc wants Doug to secure concessions toward NFA, which is unrealistic. 650 Powell is just a portion of what the owner will be selling and the prospective buyer buying. It is a crucial, central piece, and the most contaminated. Without it, the whole deal would fall through. Doug did not dig down all the way because the roof restricted the equipment he could use. He went down 16 feet. He removed 300 tons. He knows he has to treat the remainder and g/w. He found that the flow is southwest. He is afraid that it may have carried the plume across Linden Blvd. He is thinking of ORC flowing with the g/w, catching up with the plume. The owner wants to limit what he spends. He is willing to put money in escrow for the cleanup as long as the amount is reasonable. Prospective buyer wants assurance that he will not get stuck after he buys in. Doug is anxious for us to see the site. I told Doug to bring pictures to the meeting. 10-21-10. Mark Tibbe called Doug to find out why he kept insisting on having the conference call on Friday after we told him repeatedly we were not available for a call that day and gave him alternatives. I

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

sat in on this call. Doug was
in his office. Doug told us that after Friday the owner would be in
Israel for three weeks. Doug
keeps mentioning his dread of us forcing him to sample across Linden
Blvd. Doug said he definitely
found chlorinated solvents/dry cleaning fluids in the deep wells at
650 Powell. The owner is in a
bind. Years ago he bought up lots of property in this neighborhood for
development. Then the bottom
fell out of the market. The property will no longer sell for what he
hoped for, and on top of that
the contamination is far more extensive than he anticipated. Here he
is now with his first
prospective buyer. Marc is willing to set aside funds in escrow for
the cleanup as long as the
amount of money is small. Doug mentioned his idea of using Regenox for
the cleanup phase. Mark
responded that successes with that method are rare. Mark emphasized
that the Stip Marc signed
obligates him to submit a RIWP, which he has not done. This is a
serious default. 10-29-10.
Conference call with Vadim, Mark Tibbe, Marc Chemtob, Doug Schrimpf,
Daniel P. Michaud of Chazen
Environmental and me. Marc joined us a bit late. Dan was the host. He
says his client, the
non-profit, a church, may buy other parcels adjacent to this one, as
well. This was the first he
had heard of dry cleaning fluid impacting the subsurface. Dan wanted
to know the clean up level we
would hold him to. We do not make concessions in advance. He said he
knows of cases upstate where
100 ppm to even 1000 ppm was allowed for MNA. Were those numbers
combined, or for a single
component? We require that the down-gradient well be clean. We require
that the source material be
removed. We may have already found all the sources (with those USTs
that Doug removed). At this
site we have no wells (to speak of) just data from borings only. We
need permanent wells for MNA.
Marc is inclined to say: if the cleanup is not perfect, but within
budget, we can stop. Doug keeps
mentioning Linden Blvd. Dan told him to stop. Linden Blvd is just too
far away. Dan s experience is
with Brownfields. Doug says Kumar was excellent. We are in the
investigation stage. No remedy in
sight, yet. BCP is a possibility, something to consider. But the tax
break is most meaningful for
people in the upper brackets, not a non-profit. Part 375 is relaxed
for BCP. We would require TOG,
TAGM, unrestricted Part 375. Section A, Jane O Connell, handles BCP.
Dan will call her. To find out
if this site would be accepted Dan has to fill out an application with
exact numbers. That is how
the process works. We do not guess about whether a project qualifies.
In this case the fact that
there are chlorinated solvents from dry cleaning would make admission
into BCP more likely. This is

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

the sort of information Dan wanted from a discussion with us, to sound us out on clean-up standards
we would apply. As a non-profit, they may not be able to fund the clean-up. Because Marc is under a
Stip he has to keep moving forward. He is not allowed to coast hoping a buyer with deep pockets
will show up at some future time. The next step is for Marc to submit a IWP to satisfy the STIP he
signed back in February. Our letter of 10-12-10 calls for him to do this by the end of October
2010. 11-8-10. Doug called on Friday and left a message for me. He says he has a sampling plan
which involves going south and east that he wants to try out on us. He has already missed the end
of October deadline by a week. Deb Engelhardt is now the Project Manager. Doug is the Vice
President. dengelhardt@easternenviro.com. Deb sent in a Work Plan marked draft via e-mail. Plan
called for eleven new borings going south to the edge of Linden Blvd. The plan also called for five
new wells located in sidewalks to the east and south. I called Deb and found out she is not related
to Chris. I told Deb we like to see borings done in stages, step by step. We like to see permanent
monitoring wells installed based on the what the borings reveal about the plume and the geology.
This is contrary to Doug's thinking. He feels he has to cross Linden Blvd and the railroad in his
march to the south with borings. Deb says she will reaccess their approach, put a modification
together and get back to me with it. 11-12-10. Deb sent in a revised IWP via e-mail also marked
Draft. It did not include a revised Figure 2, which is where they showed their proposed sampling
locations. The text said they were deleting the soil borings to the south. The text no longer
referred to a Figure 2, their proposed sampling locations, which of course is what this plume
definition investigation is all about. In her cover e-mail, Deb asked for guidance on monitoring
well construction. I called her, told her to read the spill guidance manual on the DEC website for
well construction guidance. I told her that their IWP must have a plume diagram, which depicts the
current info gleaned through wells and borings and highlights where the plume is not defined, which
is where the investigation must focus. She accepted this guidance as brand new and sensible. She
said she would dash off and comply. She said their prior work was flawed in that borings terminate
at 18 feet, complete analysis was not made. 11-15-10. Doug called for clarification. We spoke for
almost an hour. I got to tell him Marc had xfrred out of R2. I tried to get Doug to see that a
plume map would be essential in understanding the scope of work, the remedy required, monitoring
the progress of remediation and justifying closure. He acknowledged

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

the sampling he has done so far
did not lead to mapping the plume. He has borings all over the place, with contaminated soil in
most places but no wells and g/w data. To deal with this deficiency he first and only thought is to
do more borings. I invited him to focus on delineation, then justifying a remedy, then
substantiating progress and finally justifying closure. He may seek some guidance before getting
back to me. 11-19-10. Deb sent in revised IWP. It eliminated all the borings and proposed five
wells. 11-22-10. I called Deb and explained how drastic the change in approach was. We were
interrupted by lunch. I said we would speak again after lunch. That did not happen. Instead Deb
sent in yet another revision. 11-23-10. Doug called. We had a frank talk. He had no idea he had to
follow DER-10. He felt that particular guidance was for consultants, whereas he is a contractor. I
told him DER-10 would help everyone. He said he appreciated that tip and would follow it. 11-24-10.
Lou called from Eastern for advise on how to comply with DER-10 for the next step in the
investigation work plan. 11-30-10. Lou Bascelli sent in their RIWP via e-mail this am. It came in
four e-mails. It does not provide for determining the direction of g/w flow. 11-30-10. I missed a
call from banker Lou Coniglio, who wanted an update on status. 347-563-9280. 11-30-10. I missed a
call from banker Susan, who wanted an update on status. 617-757-5632. 12-1-10. Lou called to ask
how the review was going because Marc called them and seems anxious. I called back and told Lou I
did not find anything in his WP about determining the direction of g/w flow. He was flabbergasted.
He said he will try to gin something up. Note this is daja vu all over again. Kumar had the same
problem with Lou: 3/29/10. 9:31 AM:- H. Patel sent email to Lou Bascelli (LouB@easternenviro.com)
at Eastern informing that the revised report is also not acceptable as doesn't include one scaled
site map, site specific groundwater flow direction, detailed boring logs and well gauging data.
asked Lou to submit re-revised report. email copied to Mr. Chemtob. 12-1-10. I missed a call from
banker Edward Shea, who wanted to discuss technical matters for the site. He works for the
environmental dept at Soverign Bank. 212-237-1140. 12-2-10. Lou Bascelli e-mailed in USGS g/w
contour maps for the neighborhood. I called him immediately to say that they were not detailed
enough. Whatever techniques USGS used to generate their contour maps we want the investigator to
use inside 650 Powell St and beyond if necessary. You knew what I was talking about, but had never
done this on any project before. I told him Kumar has cited this as a deficiency in every

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

submission the firm has made, and it is a requirement, and a show-stopper. Lou said he would talk to management. 12-2-10. Doug called. This has to be his first time ever writing an IWP. He is trying his best, but the first time for anything is tough. He is getting the pressure from all sides. He says Marc has a huge loan and is defaulting. Bank is threatening to foreclose. Ed Shea called him for info. He is the banks Brownfield attorney. Kumar has been telling him all along (11-3-09, 1-19-10 for example) that he must provide a site specific g/w contour map. Doug did not know what Kumar meant. 12-2-10. Ed Shea called. He said he was an independant attorney working for Soverign bank as his client. I told him I was precluded from speaking to attornies. He said his questions were all technical, and they were. He told me that the owner, Reconnaisance Realty, owns many parcels extending several blocks to the west all the way to Mother Gaston Blvd. These parcels have the shape of an isololeces triangle. He said he spoke to Doug and Doug told him the USTs were closed in place and that contamination could extend all the way down to the RR. He said he had loads of experience; he had been doing this work for many years, and prior to that worked for a chemical company and knows chemistry. He wanted to know about delineation. When I responded we had not yet received an acceptable work plan for a formal investigation, that said it all. He said he had no further questions and said adios. 12-7-10. Lou Bascelli sent in version B of Eastern's RIWP today. It has no cover page and no date. 12-8-10. Lou Bascelli called at 7 am. I told him I had received his work plan. I asked if it were final. I told him I could not get to reviewing it for a few days, because I was busy with other projects. I told him I noticed the figures did not have numbers. I told him the sentence on the top of page 6 about agreement with owner on the depth of wells had me puzzled. He said he would delete it. I told him in the past Eastern had submitted investigation reports that were incomplete. Kumar had sent them lists of the missing items. This document submittal is a WP for another investigation. It will culminate in a report. That report is to be complete in every respect when submitted the first time. Tell us in the WP that you will do the things that will result in a complete report. Give us a table of contents for the report.
Follow Kumar s lists to the letter. 12-10-10. Lou Bascelli emailed his IWP late yesterday. He has it marked Rev 4. I opened it this morning and found that it contain an illustration that shows three proposed gw monitoring wells, and another illustration that shows four in different places. I called Lou to ask about this. He told me the wells are for different

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

purposes. One group is to
determine gw flow direction. The other group to determine dissolved chemicals. I asked if two
different illustrations with the same title would confuse the well installation contractor, or lead
to one set being overlooked. He said his firm was going to be the installation contractor.
12-10-10. Lou sent in another revision after my comments. I had commented on the lack of names and
signatures on the title page, and the lack of titles on the figures, inter alia. After I saw this
revision I called Lou to ask how the three wells shown on page 5 differ in construction from the
four (or maybe two) wells shown on page 8. After much questioning and discussion on the phone Lou
revealed the wells do not differ in construction (all are 4 inch) rather they differ in location,
and date of installation. The wells on page 5 will be installed this mobilization. The page 8 wells
will be installed in later mobilization after the gw direction and speed are known. This will be
after the report is submitted in twelve weeks or less. The proposal gives the schedule in section
4.4 whereas discussion of the gw characterization by means of wells is in section 5. This placement
is deliberate because they intend to delay implementing section 5 for the indefinite future. I told
Lou to write that out clearly and include it, or scuttle that concept. Afterall, their report would
not be a complete investigation report without getting the well data on dissolved compounds, etc.
12-13-10. Lou sent in yet another revision this morning via e-mail. I sent back a detailed set of
comments via e-mail. I included Vadim on this exchange. 12-14-10. Lou sent in yet another revision
this morning via e-mail. He incorporated my detailed set of comments to a great extent, but not
completely. He ignored my comment about the document needing the procedure for developing a well.
He also ignored my comment about needing a schedule with the total elapsed time from approval to
submittal of the RI report. He called me early on. He said he would work on these items and a bunch
of less important items this morning. Lou does not do a thorough job. He changes the drawing that
shows well locations, for example, but he does not change the text. Then he sends me a final
document that says there will be three new wells, as shown on the drawing, which now shows the new
number, which is no longer three. Overnight Lou kept the same nine borings but drastically changed
their locations. Overnight Lou kept the same seven MW but changed the location of three of them. He
also dropped the distinction between wells for g/w flow versus wells for g/w characterization.
Overnight Lou doubled his time on the job estimate. His estimate went from 7 to 10 days per task,

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

to 15 days per task overnight. 12-15-10. Lou sent in yet another revised document late yesterday
afternoon. They come in so fast the date is no longer sufficient to separate them; I have to add
the time of arrival to the date! 12-17-10. After I called Lou and told him what I found wrong in
his RIWP, he made the changes and sent it in with yesterday's date on it. His focus is so narrow. I
had to remind him to update the cover page. I sent approval letter for this version, #12. 2-8-11.
Doug called to ask if I had heard anything about the property going to contract. He says things are
at a standstill. Marc is collecting rent on the property, but not moving forward on the
investigation, delineation, remediation. 631-774-9681 = Doug cell. 6/17/2011 Returned call to Doug
(consultnat for current site owner) at 631-727-2700. Doug does not know the status of negotiations
between current owner and potential buyer of the site. Regarding whether stip liability can be
transferred to new site owner or a new stip has to be execured with new owner (if property
transaction materializes) - I suggested the owner's counsel speak with DEC's OGC - John Urda. Doug
said he will be contacting me about the status when he finds out - hopefully within days. VB
04/16/2012 - Brevdo Received a Remedial Investigation Report from Chazen Companies. Date of
transmittal letter included with the report is April 12, 2012. Brevdo 11/07/2012 - Brevdo E-mail to
Chazen Companies, consultant for RP. Dear Mr. Urban-Mead and Ms. Pereira: Attached to this e-mail
is the Department's approval letter for the revised RAWP dated October 26, 2012. Please note that
the site-specific Health and Safety Plan referred to in the RAWP must be prepared and submitted to
the Department's records before commencement of the field activities associated with the RAWP.
Contact me if you have questions regarding this matter. Vadim Brevdo 10/10/2013 - V. Brevdo
Received e-mail from Chazen Companies (consultant) notifiying of the commencement of field
activities realted to the RAWP dated October 26, 2012 and approved on November 7, 2012. Atatched to
the e-mail was HASP. I replied to e-mail, acknowledged receipt of Chazen's e-mail, notification,
and HASP. Included language in e-mail urging consultant's oversight of contractors to ensure all
health and safety rules are followed during field work implementation. E-mail communication is in
e-docs. 06/10/2016 - V. Brevdo Received phone call (message) in response to my phone inquiry last
week from Chazen Companies. Ms. Pereira no longer works at Chazen, she moved to NYCDEP. Remedial
program at the site has been progressing and concentrations in the groundwater dropped in about
half since three rounds of injections have been implemented. Church

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

has sold the site to a
developer, and developer intends to apply to the NYCBCP to address presence of elevated lead
concentrations in the soil under the City BCP. Project envisions affordable housing. Chazen does
not know if they will be involved with the project under the NYCBCP.
The new owner of the site is
Ebenezer Plaza LLC, c.o. Proceeda. Contact person at Chazen is
845-486-1551. VB 10/31/2019-M.Hoque:
Spill case manager reassigned from Vadim Brevdo to M.Hoque effective October 31, 2019.
12/2/2019-M.Hoque: A Tank closure report received and is being reviewed. The site is now under BCP
program, Bureau B. 7/1/2020-M.Hoque: July 1, 2020 Re: Rational for closure of the spill case #
0906674, 650 Powell, Street, Brooklyn, NY The site is owned by The Church of God of East Flatbush
and consists of seven contiguous tax parcels encompassed by two city blocks and consisting small
automotive body/repair shops. One of the on-site buildings identified as 650 Powell Street,
historically operated as a dry cleaner. In November 2009, a phase I environmental site assessment
was conducted and found petroleum-impacted soils at the site and assigned the spill no. 0906674.
Site investigations found seven (7) 1,500-gallon USTs and one (1) 7500-gallon UST with historical
on-site dry-cleaning operations. Remedial investigation showed petroleum contaminants in soil and
groundwater. About 267 tons of impacted soil was excavated in the vicinity of the tanks. In 2010, a
phase II remedial investigation found VOCs in soil and groundwater. A Stipulation Agreement
R2-20100217-63 signed in 2010. DEC approved a 2011 RIWP proposed for additional investigation and
an in-situ chemical oxidation for the site. Remedial investigation found no evidence of VOC impacts
in soils above the water table but found the presence of two distinct and separate impacted areas
with total VOC concentrations exceeding GW standards. No evidence of free product. In 2012,
remedial investigation found grossly- impacted soils/ or residual source areas in the site. DEC
approved a 2012 RAWP proposed excavation and removal of the contaminated surface soils, injection
of chemical oxidation for on-site residual gasoline related compounds, removal of free product from
the source areas, if discovered. On November 29, 2019, DEC received a tank closure report. The site
is now under a NYSDEC BCP Agreement. In March 2018, DEC approved a RAWP/Decision Document for
removal of all on-site tanks and associated accessories/piping s. Eight (8) previously closed-in
place USTs and remaining 18 USTs on-site discovered were excavated and removed from the site.
Approximately 225 cubic yards of grossly impacted soils were removed from beneath the water table.

LINDEN PLAZA DEVELOPMENT LLC (Continued) **S109943012**

On February 3, 2020, DER spill case manager communicated with BCP project manager (Aron Fischer-CO)
and discussed the future contact point of the site. BCP project manager informed that a Certificate
of Completion (COC) issued in December 2019 and residual impacts to the on-site soils beneath the
water table that exceed PGWSCOs and residual on-site groundwater contamination will be managed by
BCP project manager under the approved Site Management Plan (SMP). Based on discussion with the BCP
PM, review of the environmental survey report, phase I ESA report, Phase II remedial investigation
report, BCP Decision Document, Final Engineering Report (FER), and the Site Management Plan (SMP),
DEC concluded that spill closure is appropriate and closed this spill case on July 1, 2020. (MDH)

Remarks: CONTAMINATED SOIL FOUND. CLEAN UP PENDING.

Date Record Added: 12/23/2019
Date Rec Updated: 01/02/2025
Updated By: AGFISCHE
Site Description: "Location: The project site is located at 672 Powell Street in an urban area in the Brownsville neighborhood of Brooklyn. The property is bordered by New Lots Avenue to the north, Sackman Street to the west, Powell Street to the east, and Hegeman Avenue to the south. The property has an E-designation. Site Features: The site is a 1.26-acre parcel. The site is currently being constructed with two multi-story affordable housing complexes with street level. Current Zoning and Land Use: This site is zoned C2-4 (Commercial/Residential), but was previously zoned industrial. The site is currently being constructed with affordable housing and a community center. Past Use of the Site: The property appears to have been developed since 1928 with various uses including residential building, auto garage, drycleaner, gasoline filling station, auto repair, auto laundry (a.k.a. car wash), warehouse, parking, used auto sales, public center, church, newspaper distribution, restaurant supply, and auto wrecking lot in two areas. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system, sub-slab depressurization system, carbon slurry wall and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes

EBENEZER PLAZA 1 (Continued) **S125896314**

	an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Current Zoning and Land Use: This site is zoned C2-4 (Commercial/Residential), but was previously zoned industrial. The site is currently being constructed with affordable housing and a community center. Past Use of the Site: The property appears to have been developed since 1928 with various uses including residential building, auto garage, drycleaner, gasoline filling station, auto repair, auto laundry (a.k.a. car wash), warehouse, parking, used auto sales, public center, church, newspaper distribution, restaurant supply, and auto wrecking lot in two areas. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system, sub-slab depressurization system, carbon slurry wall and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and

EBENEZER PLAZA 1 (Continued) **S125896314**

	steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 530476
Site Description: "Location: The project site is located at 672 Powell Street in an urban area in the Brownsville neighborhood of Brooklyn. The property is bordered by New Lots Avenue to the north, Sackman Street to the west, Powell Street to the east, and Hegeman Avenue to the south. The property has an E-designation. Site Features: The site is a 1.26-acre parcel. The site is currently being constructed with two multi-story affordable housing complexes with street level. Current Zoning and Land Use: This site is zoned C2-4 (Commercial/Residential), but was previously zoned industrial. The site is currently being constructed with affordable housing and a community center. Past Use of the Site: The property appears to have been developed since 1928 with various uses including residential building, auto garage, drycleaner, gasoline filling station, auto repair, auto laundry (a.k.a. car wash), warehouse, parking, used auto sales, public center, church, newspaper distribution, restaurant supply, and auto wrecking lot in two areas. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system, sub-slab depressurization system, carbon slurry wall and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these

EBENEZER PLAZA 1 (Continued) **S125896314**

controls remain in place and effective."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Code: 530476
Site Description: "Location: The project site is located at 672 Powell Street in an urban area in the Brownsville neighborhood of Brooklyn. The property is bordered by New Lots Avenue to the north, Sackman Street to the west, Powell Street to the east, and Hegeman Avenue to the south. The property has an E-designation. Site Features: The site is a 1.26-acre parcel. The site is currently being constructed with two multi-story affordable housing complexes with street level. Current Zoning and Land Use: This site is zoned C2-4 (Commercial/Residential), but was previously zoned industrial. The site is currently being constructed with affordable housing and a community center. Past Use of the Site: The property appears to have been developed since 1928 with various uses including residential building, auto garage, drycleaner, gasoline filling station, auto repair, auto laundry (a.k.a. car wash), warehouse, parking, used auto sales, public center, church, newspaper distribution, restaurant supply, and auto wrecking lot in two areas. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system, sub-slab depressurization system, carbon slurry wall and groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these

EBENEZER PLAZA 1 (Continued) **S125896314**

controls remain in place and effective."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site. "

Site Description: "Location: The 0.845-acre site is located at 68-78 New Lots Avenue in an urban area in the Brownsville neighborhood of Brooklyn. The site is bordered by New Lots Avenue to the north, Sackman Street to the east, Christopher Avenue to the west and Hegeman Avenue to the south. Site Features: Block 3861, Lot 1 consists of a partially constructed building and active construction. The Site is zoned residential and is currently undergoing construction of the new multi-story affordable housing complex with street-level retail spaces. Current Zoning and Land Use: This site is zoned R7 (residential) with a C2 (commercial) overlay. The site is being developed with a new multi-story affordable housing complex with street-level retail spaces. Past Use of the Site: Past site uses include auto wrecking, auto repair garages, and retail storefronts. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use

EBENEZER PLAZA 2 (Continued) **S130582878**

	restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Description:	"Location: The 0.845-acre site is located at 68-78 New Lots Avenue in an urban area in the Brownsville neighborhood of Brooklyn. The site is bordered by New Lots Avenue to the north, Sackman Street to the east, Christopher Avenue to the west and Hegeman Avenue to the south. Site Features: Block 3861, Lot 1 consists of a partially constructed building and active construction. The Site is zoned residential and is currently undergoing construction of the new multi-story affordable housing complex with street-level retail spaces. Current Zoning and Land Use: This site is zoned R7 (residential) with a C2 (commercial) overlay. The site is being developed with a new multi-story affordable housing complex with street-level retail spaces. Past Use of the Site: Past site uses include auto wrecking, auto repair garages, and retail storefronts. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

The site is bordered by New Lots Avenue to the north, Sackman Street to the east, Christopher Avenue to the west and Hegeman Avenue to the south. Site Features: Block 3861, Lot 1 consists of a partially constructed building and active construction. The Site is zoned residential and is currently undergoing construction of the new multi-story affordable housing complex with street-level retail spaces. Current Zoning and Land Use: This site is zoned R7 (residential) with a C2 (commercial) overlay. The site is being developed with a new multi-story affordable housing complex with street-level retail spaces. Past Use of the Site: Past site uses include auto wrecking, auto repair garages, and retail storefronts. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "

EBENEZER PLAZA 2 (Continued) **S130582878**

Env Problem:	"Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Site Description: "Location: The 0.845-acre site is located at 68-78 New Lots Avenue in an urban area in the Brownsville neighborhood of Brooklyn. The site is bordered by New Lots Avenue to the north, Sackman Street to the east, Christopher Avenue to the west and Hegeman Avenue to the south. Site Features: Block 3861, Lot 1 consists of a partially constructed building and active construction. The Site is zoned residential and is currently undergoing construction of the new multi-story affordable housing complex with street-level retail spaces. Current Zoning and Land Use: This site is zoned R7 (residential) with a C2 (commercial) overlay. The site is being developed with a new multi-story affordable housing complex with street-level retail spaces. Past Use of the Site: Past site uses include auto wrecking, auto repair garages, and retail storefronts. Site Geology and Hydrogeology: The site is predominantly underlain by fluvial deposits consisting of medium sand, with lesser but varying amounts of fine and coarse sand. A varying thickness of miscellaneous surficial fill material is also found throughout the site. The water table lies approximately 15 feet below grade and groundwater flows towards the southeast. "
Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s restricted residential use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of groundwater monitoring. A Site Management Plan (SMP) was completed to

EBENEZER PLAZA 2 (Continued) **S130582878**

manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of groundwater monitoring. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."
Health Problem:	"Remedial actions are complete and measures are in place to prevent people from coming in contact with remaining site contamination."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	10/05/08-Zhune spoke to Alfred from the Office of Emergency Management. He said the Factory (Water Mark) manufacture electroplating . They has a chrome stripping tank. The motor from outside the tank went on fire. The tank never had a leak. DEP hazmat evalutated the Chemicals on the site and found: Potassium Cyanide Sodium Cyanide Nickole Fluoride Hydrochloric acid 10/07/09- Zhune spoke to Donnald Eng from DEP Hasmat (646) 584-6483. He said the spill was contained within the diking system nothing outside or where people were working. The spill has been cleaned up. DEP Hazmat went back to the factory on October/06/08 to confirmed the clean up and everything was cleaned.
Remarks:	NYC OEM reported fire at a furniture factory in Brooklyn. FDNY contacted them to call DEC due to chemicals in the building.

Updated By:	MJKOMORO

Site Description: "Location: The 50,000 square foot (1.38 acre) site is located at 350 DeWitt Avenue, Brooklyn, NY in an urban area. The site is bordered by DeWitt Avenue and single-family residential units to the north, by Hinsdale Street to the east, by a one story industrial/manufacturing building to the south, and by Snediker Avenue and single- and multi-family residential units to the west. Site Features: The site is occupied by a 1 story manufacturing facility. There is asphalt-oaved parking along the east side of the site building. Current Zoning/Use(s): The site is zoned as M1-1, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The Site is an industrial building that houses manufacturing of plumbing and lighting fixtures, bathroom accessories and hardware for commercial and residential markets. A former employee at Watermark reported that the company was illegally dumping industrial waste into the New York City sewer system. During the metal-plating process, waste water containing metals such as Copper, Zinc, Chromium, and Silver is generated. Proper disposal of the waste water requires a costly, multi-step process that ensures any solid toxic materials be removed by a regulated waste-hauler. Watermark instead disposed of the industrial waste water, which included the hazardous metals, through a hose inserted in a floor drain. NYCDEP obtained water samples from within the floor drain and the results showed high

350 DEWITT AVE (Continued) **U000406087**

levels of metals including but not limited to Copper, Zinc, Chromium, and Silver. NYCDEP personnel noted that when they went to sample the floor drain, they encountered soil in the drain, suggesting that the drain is physically compromised and partially open to the underlying soil. Site Topography, Geology and Hydrogeology: Fill material is encounted to five feet bgs, underlain by layers of fine to medium silty sand and silt. Groundwater is encountered at about 10-12 feet bgs. In general, groundwwater flow direction is southerly of the site."

Env Problem: "Nature and Extent of Contamination: Information is based on the results of water samples collected by NYCDEP during the preliminary investigation of the site. TCLP lead was found at concentrations of up to 53.8 ppm and TCLP nickel was found at concentrations of up to 5.5 ppm. Analysis for total metals found cyanide at up to 107 ppm, lead at up to 500 ppm, chromium at up to 327 ppm, selenium at up to 372 ppm, nickel at up to 53.6 ppm, arsenic at up to 4.4 ppm, and barium at up to 124 ppm. The floor drain s discharge line was traced in July 2012 and found to enter the main house trap and discharges to the municipal sewer on the northern side of the site. In September 2013, a preliminary site characterization was completed in accordance with the NYSDEC required scope of work. Work was completed within the time frame specified in the scope of work. Seven borings were completed along the drain line, and soil and groundwater samples were collected to determine subsurface conditions in this portion of the site. All samples were analyzed for VOCs and metals (total and dissolved). In general, fill material was encounted to five feet bgs, underlain by layers of fine to medium silty sand and silt. Groundwater was encountered at 10-12 feet bgs. No VOCs were detected in the soil samples above the 6 NYCRR Part 375 industrial SCOs. Only TCE exceeded the groundwater standard at one location (9.8 ug/l). No metals were detected in the soil samples above the industrial SCOs. Total metals in groundwater were generally above the standards, but dissolved metals were well below the standards. The exception to the groundwater results was iron, manganese and sodium, where results for dissolved metals were above the groundwater standards. This is typical for groundwater in this area. Based on these data results, the site classification was changed from P to N . Significant Threat: Based on the data results discussed above, it was determined that no significant threat exsits at the site and no further action is warranted at this time."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO Site assigned to C. Whitfield during backlog initiative. No files received from region. Matched to PBS #2-604996. PBS database indicates tank was closed in place 5/1/02, and replaced with one 6000 gallon and one 3000 gallon tank. Neither the orignial spill report nor the NYC Dept. of Buildings indicate any #2 fuel oil was released. Unable to reach appropriate staff at CNY Dept. of Parks & rec for documentation. Next step is to pursue documentation for closure. Received from Donna Gray at Rec Center copy of Affadavit for closure in place of 10,000 gallon fuel tank. Document states tank was purged, cleaned and filled with concrete on 4/9/03. The contractor, James McCulagh Co., Inc., certified all work was performed in accordance with contract terms & conditions. Documents sent for e-filing. Ms. Gray suggested Al Simoncini, supervisor of shops for CNY Parks & Rec (718-965-7757) as a contact if more info is needed. 6/19/08 On 6/2/08 received closure repoprt requesting closure of spill from Renee Wong of Roux Associates. Soil boring results show exceedances in a number of parameters. bf 6/2/09 received e-mail from Renee Wong requesting status of spill case. 4/18/11 bf: Prepared the e-mail below with the status of the spill at the request of R. Austin. This case will probably be transferred to another case manager. Recently, a consent order was signed with NYC regarding PBS and remediation issues involving the mayoral agencies' facilities that have heating oil tanks on their properties. A list of 39 spills was attached to this CO, and those projects will have to follow the proscribed investigation/remediation process in this order. ---------- e-mail

BROOKLYN RECREATION CTR (Continued) **S104951044**

below: Spill 0012906 Status Report This spill case was opened as a result of a tank test failure on 3/7/01. According to documentation found in the closure report received by the Department on 6/2/08, prior to closing, the tank's interior was inspected and no corrosion or holes were found. No discussion of a cause for the tank system failure was provided. However, visual signs of petroleum contamination and petroleum odors were found when the tank top was excavated. There is still contamination present according to the analytical summary from the closure report, which is attached. The sampling analytical report was prepared on 6/25/02, shortly after the tank was closed (5/1/02). In order to close the spill case, the contaminated soil will need to be removed or treated. Since the tank was closed in place, the removal or treatment of the contaminated soil will probably be difficult. The closure report is in e-docs, but I still have the hard copy at my desk. 11/30/11 Case referred to V. Brevdo as per R. Austin. bf 12/23/11 Saved 5/22/08 closure request in e-docs. Assigned spill to V. Brevdo in database. When I was putting report in e-docs, I noticed that I did not reassign the case as stated above. bf 12-27-2011 This spill is reassigned from V. Brevdo to Alex Zhitomirsky, as per V. Brevdo instructions. Emailed LiRo and received the following response by S. Frank: We will pull together whatever information we have and forward it to you. AZ 2-6-2012 A 10,000 gal #2 tank was closed in-place in May 2002 and replaced with a 6,000 gal #2 fuel UST. A tank closure report issued June 10, 2003. Soil concentrations in (3) of (6) soil samples exceeds CP-51 SCL. LiRo proposed soil excavation. AZ 4-4-2012 An email was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed a Site Excavation Plan dated December 28, 2011. The plan proposed an excavation oan area in the vicinity of the former fill poet and installation of one boring/well. The Work Plan is approved. If contamination is found beyond the proposed area of excavation, it should be removed, if feasible. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work. Sincerely, Alex Zhitomirsky AZ 1-2-2014 Received an excavation summary report dated 7-12-2013. The report stated that the spill was report when on March 8, 2001, a 10,000 gal #2 oil fuel tank failed a tightness test. The tank was closed in place and could not be excavated since it is located below the interior of the recreation center. On December 28, 2011, LiRo submitted a Soil Excavation Work Plan which was approved by DEC. On February 25, 2012, LiRo excavated and removed approximately 11.63 tons of soil from the former fill port area. On June 13, 2013, LiRo completed a soil boring to 25-feet below ground surface and collected a soil sample and a groundwater grab sample. LiRO COLLECTED five end-point samples from the excavation. There were no CP-51 list VOCs or SVOCs reported at concentrations above the NYSDEC SCLs in any sample. A soil sample and a groundwater sample from the boring LSB-01 exhibited no exceedances. I called S. Frank and left a message for

BROOKLYN RECREATION CTR (Continued) **S104951044**

him. AZ 1-6-2014 Based on the report report dated July 12, 2013, soil contamination still exists where the former 10,000 gal #2 oil tank was closed in place. I contacted S. Frank. He will get back to me with more information. AZ 2-10-2014 E-mail from S. Frank: Alex, Based on your phone call, we looked at alternatives for Brownsville. The attached letter explains the conditions. It is not feasible to excavate any further. We could however conduct some soil vapor/indoor air sampling if that will help. Let me know if you would like us to proceed with soil vapor sampling. Thanks Steve 3-11-2014 Contacted S. Frank. Currently we don't know if soil/groundwater contamination exist in the source area. I inquired if soil/groundwater samples could be collected withing the source area. S. Frank will get back to me with this info. AZ 7-10-2014 Reviewed excavation Summary Addendum Letter dated 2-10-2014. Soil excavation was conducted at the exterior wall adjacent to the former fill port. The piping run inside of the building is less than 10' in length. THE fill pipes and the tank are buried beneath the finished recreational facility floor. Due to the size of the tank further excavation work is not feasible inside of the building. LiRo suggested to conduct a vapor intrusion evaluation with sub-slab and indoor air sampling. This approach was approved during DEC/DDC meeting on May 29, 2014. AZ 10-20-2014 The following e-mail was sent to S. Frank/V. Brevdo: Dear Steve, I have reviewed a Sub-Slab Soil Sampling Report and Vapor/Air Sampling Plan. The Plan recommended collection of indoor ambient air and sub-slab soil vapor samples. Unfortunately, the plan did not indicate the location of the sub-slab sample. As per our telephone conversation on 10-20-2014, two sub-slab soil vapor samples should be taken as close as possible to the location of the former UST. Also, a plan indicating locations of the sub-slab samples should be included in the Vapor/Air Sampling Plan. Please resubmit the Plan with the required changes. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 2-9-2015 An e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a revised vapor/air sampling plan for this site. This plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site. Sincerely, Alex Zhitomirsky 1-28-2016 Reviewed a Soil Vapor/Air Sampling Report and Spill Closure Request dated 10/23/2015. In 2001 10,000-gallon #2 Oil Fuel tank failed the tightness test.. UST was closed in place in 2003. The tank was not removed due to its location below the interior of the recreation center's weight room. In November 2002 soil samples were collected from holes drilled through the interior wall of the UST.. Prior to the soil samples collection, the UST was cleaned and accessed via the manway. The UST was inspected and found to be in very good condition. Total VOC concentrations ranged between non-detect and 40,137 ppb. Additional, one 0or more SVOCs ranged between 21,570 ppb and 491,948 ppb. In 20013 the fill port was excavated. Endpoint samples were collected. All VOCs were reported at concentrations below detection limit. In June 2013, a single soil boring was completed immediately east of the excavation. The boring was terminated at 25-feet bgs. No contaminats above limits were recorded. An unfiltered groundwater grab sample was collected. The total VOC concentration in groundwater sample was 118 ppb. In April 2014, two soil grab samples were collected beneath the floor slab. All petroleum-related VOC were reported below detection limits. In May 2015 two sub soil vapor probes were installed. Analytical results for the ambient indoor-air samples reported no VOC above standards. 1-29-2016 Discussed the site with S. Frank. He will collect more

BROOKLYN RECREATION CTR (Continued) **S104951044**

information on air sampling and groundwater sampling. Left a message for s. Frank asking him to forward me an electronic copy of the report and a short narrative for submittal to DOH. AZ 2-3-2016 The following e-mail was received from S. Frank, LiRo: Dear Alex, I have attached an electronic copy of the report and spill closure request that we prepared for the Brownsville Recreation Center (spill #0012906). The site is an indoor recreational facility operated by the New York City Department of Parks and Recreation. The spill number was opened as a result of a tank tightness test failure of a former heating oil tank that is located beneath a weight/ping pong room area at the recreational facility. The tank was cleaned and closed in place in 2003. The weight/ping pong room has a concrete floor slab covered with a rubber mat and will continue to be used for recreation in the future. Because of the building constraints and operations, the room is not accessible to drilling equipment and therefore, soil borings or monitoring wells cannot be installed. LiRo, however, was able to collect soil samples near the tank by drilling through an adjacent boiler room wall to support closure of the spill. At NYDEC s request for air data, LiRo conducted sub-slab vapor and indoor air sampling in the weight/ping pong room. The sub-slab vapor and indoor air samples were collected simultaneously. The results of the soil sampling and vapor/air sampling are detailed in the attached report. Sincerely, Stephen Frank, Senior Geologist Associate 2-3-2016 The following e-mail was sent to Michael Hughes (NYSDOH) and V. Brevdo: Hi Michael, Please take a look at the attached report. I would like to close this spill. As you can see, the consultant performed air sampling. I would appreciate if your team can evaluate the results of the air sampling and let me know if I can close this spill. Thank you, Alex Zhitomirsky 2-11-2016 The following email was received from Michael Hughes (DOH): Hi Alex, I reviewed the report and while the levels are not indicative of a problem, it is difficult to render an opinion of the site and current status without all of the information. The report references a workplan for the sampling, in the future it would be useful to include us in that review to make sure all the necessary information is provided. For example, there are no details about the sample collection such as condition of the building, temperature etc. No outdoor sample was collected and the expanded list of petroleum compounds were not included in the analysis. All of these elements are described in the DOH Vapor Intrusion Guidance as well as the Air Sampling and Analysis Guidance, neither of which are referenced in the report. If you are comfortable with the characterization of subsurface contamination (soil/water) and are ok to proceed with closing the spill then I will not request any additional investigation. As I mentioned the levels in SG and the indoor air are not indicative of a problem but some data gaps exist. In the future please try to include us earlier in the process to avoid these gaps and an opportunity to make sure that all elements of an indoor air/sub-slab investigation are included. Let me know if you want to discuss further. I copied Chris at City Health and Justin in BEEI so both are aware of these site activities. Michael J. Hughes, Section Chief Exposure Characterization and Response Bureau of Toxic Substance Assessment Corning Tower, Rm 1748 Albany, NY 12237 518-402-7810 Michael.hughes@health.ny.gov 7-27-2016 The following email was sent to S. Frank: Dear Steve, I have reviewed a report for the above site resubmitted in May 2016. The report stated that all fill port petroleum impacted soils were removed from the excavation

BROOKLYN RECREATION CTR (Continued) **S104951044**

completed in February 2013. There was no free-phase product observed at the site. All eight soil samples collected in 2013-2014 reported VOC concentrations non detect. Groundwater sample taken in 2013 exhibited 118 ppb of the total VOC. According to the report, there were no sub-slab vapor VOCs reported at concentrations above the standards. Two compounds were reported slightly above indoor air database concentrations. The building is non-residential. Based on this information, LiRo recommended closure of this spill. I concur with this proposal. This spill is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 - Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov

DEC Memo:	01/19/06-HIralkumar Patel. Sent out CSL to Mr. Toran, who is the owner of this building as per propety shark. we don't have any other phone number than the fire department who reported it. the other phone number on report (that 718-827-3676) is wrong. 01/27/06-Hiralkumar Patel. Received call from Mr. Toran. As per him, the oil company had made a delivery. and after that the tenant came up with odor complaints and notified Keyspan because tenant was thinking that it was gas leaking. so Keyspan notified Fire department. when fire department went on site, they found the oil tank was overfilled. So fire department notified us. 4 families are living in this apartment. apartment has 2 tanks, each has capacity of 275 Gal. Oil company: Jenning & Jenning oil company. Contact numbers for Mr. Toran (516) 382-6800 (O) (347) 365-6972 (H) Mr. toran will call me back with Oil company's phone number. 01/31/06-Hiralkumar Patel. Spoke with Toran, he will call me back with oil company's phone number. 02/01/06-Hiralkumar Patel. Received call from Mr. Toran. OIl company number is (718) 827-3679. 02/02/06-Hiralkumar Patel. Talked with Clovis Jennings at oil company. as per him, they have delivered oil day or two before incident. and the cause of this spill was supply line leakage. when they reached on site, they found 2-2.5 gal of oil on solid concrete floor. there are no cracks on floor and no drain. its all cleaned up. no odor in building. they have checked boiler room also. no oil found in boiler room. all the lines, to and from tank, are aboveground. Spoke with Anthony about super's name and phone number. he doesn't have super's number now but will call me back. name of the super is Williams Powell. 02/03/06-Hiralkumar Patel. Received call from Anthony. Super's number is 646-706-9482. Left message for super. Spoke with Mr. Powell. there is no odor in basement now. its all cleaned up. floor is in good condition. Case closed.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

UST:

Name:	GLENMORE PLASTIC INDUSTRIES
Address:	807 BANK STREET
City,State,Zip:	BROOKLYN, NY 11236
Id/Status:	2-000004 / Unregulated/Closed
Program Type:	CBS
Region:	STATE
DEC Region:	2
Expiration Date:	N/A
UTM X:	593083.49382
UTM Y:	4500977.47118
Site Type:	Manufacturing (Other than Chemical)/Processing

Tank Info:

Tank Number:	001
Tank ID:	725
Tank Status:	Closed - Removed
Material Name:	Closed - Removed
Capacity Gallons:	4000
Install Date:	12/01/1955
Date Tank Closed:	09/22/2022
Registered:	True
Tank Location:	Underground
Tank Type:	Steel/carbon steel
Material Code:	0001

GLENMORE PLASTIC INDUSTRIES INC (Continued) **1000317329**

Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported

DEC Memo:	6/20/05- Reassigned to Benjamin 1/20/10. J.Krimgold reviewed the case and found that the initialy report address Williams Street does not exists in NYC. Most likely the address is Williams Avenue. This address corresponds with PS 260 and this facility has a UST that stors #4 oil. TTF letter was sent to: Raymond Correa NYC Board of Education 28-11 Queens Plaza North, L.I.C., NY 11101 08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo 10/09/14-Hiralkumar Patel. reviewed available documents for DEC DeMeo. alternate address: 857-897 Williams Ave, 342-352 Stanley Ave no other spills found. PBS #: 2-354309. as per PBS record, the site has two (2) 7,500 gal #4 oil USTs, in-service, installed in Aug. 1953. NYC Department of Education Field Operations - Fuel Division 44-36 Vernon Blvd. Long Island City, NY 11101 Attn.: Munendra Sharma Ph. (718) 349-5752 as per tank testing record, on PBC edocs, both #4 oil tanks failed a tightness test on 04/13/1995 (subject spill) and both tanks passed the test on 06/16/1995. 11/18/14 TJD File review -

PUBLIC SCHOOL 260 - BROOKLYN K260 (Continued) **U000409385**

as per above, both tanks failed tightness tests on 4/13/95 and passed subsequent tightness tests on 6/16/95. Test reports uploaded to DECDOCS from PBS EDOCS. No further information available regarding cause of failure or repairs performed. Spill administratively closed.

Remarks: ATTEMPTED TO CONTACT FLOYD LIVERMONE, N/A 4/17/95 1:30 P.M., MIKE GIUSTINIANI - STATE ENVIRONMENT - TANKS TO BE PUMPED OUT -

DEC Memo:	6/5/2013 Sangesland spoke to Al Mignone 718-334-9121 cell 646-235-3183. He's the head? of Sanitation Dept Facilities???? He says the hydraulic piston is into the ground about 7-8ft and the line from the hydraulic oil tank is buried about 4ft deep and runs a length of about 20ft. He does not know where the leak happened. Once the leak was noted, the tank attached to lift was drained and some excavation work was done. Sangesland asked for 3 soil samples. One adjacent to the piston and about 2-3 ft blow the bottom of the piston, the other 2 soil samples spaced out along the length of the buried hydraulic oil line, also about 2-3 ft below the depth of the line. Al said he does not know if Sanitation will hire an outside environmental contractor to do this work, or if he will try to get someone in-house at Sanitation to take the soil samples (either via geo-probe or via a backhoe trench). Sangesland said the only requirement was a P.E. needs to supervise the work and sign off on the samples. Submittal needs photos and a scale site plan along with lab VOC & SVOC results. 12/24/2013 - This spill case has been re-assigned to V. Brevdo as Steve Sangesland no longer works in DER. Informed Jeff Vought of Spill Prevention and Response of this re-assignment. There was earlier concurrence that DDC spills which were assigned to Steve S. will be re-assigned to Section B as it manages DDC spills. VB. 02/12/2014 - Received Site Specific Investigation Plan from DDC/Liro, dated February 2014. V.B. 02/14/2014 - Issued Approval Letter for Site Specific Investigation Plan. VB 07/16/2014 - V. Brevdo DSNY-DDC Cioffe Repair Shop, 106-01 Avenue D, Brooklyn (Spill No. 1206870) Spill Case Closure Rationale July 16, 2014 The Site is located approximately 3,400-feet north of the confluence of Fresh Creek and Jamaica Bay. The facility located at the site is owned and operated by DSNY. On October 12, 2012, a leak was found during tank tightness testing. Subsequently, the UST system failed test and a spill case was opened by the Department. No previous investigations of this spill case have been conducted. On

CIOFFE NYC STATION (Continued) **1000228783**

February 12, 2014 NYCDDC and its engineering consultant, Liro Engineers, Inc. (Liro), submitted Site Specific Investigation Plan to investigate potential petroleum impacted soil and ground water due to UST tightness test failure. The purpose of this investigation was to identify the presence or absence of petroleum contamination, evaluate the need for corrective action, and recommend a remedial approach if correction action was required. The Site Specific Investigation Plan entailed the advancement and installation of four (4) ground water monitoring wells. Soil and ground water samples were be collected and analyzed for VOCs and SVOCs. The depth to ground water and product thickness (if present) would be measured. The Department approved Site Specific Investigation Work Plan on February 14, 2014. Site Investigation Report was submitted to the Department on July 14, 2014. Site Investigation was conducted from March through June 2014. There were minor field observations (i.e. elevated Photo Ionization Detector PID Readings) of impacts to soil observed during the completion of monitoring well soil borings. One VOC compound (Total Xylenes) was detected above soil cleanup objective in one soil sample but did not impact groundwater concentrations above drinking standards. There were no field observations of impacts to soil during the excavation and removal of 46-gallon UST. All VOCs were below cleanup objectives. Free phase product was not observed during drilling, well installation, soil excavation and UST removal or during groundwater sampling events. All groundwater CP-51 list VOCs were reported below groundwater standards. Low concentrations of CP-51 list SVOCs were reported in site soil and groundwater samples consistent with urban fill, as observed in site boring logs. Based on the minimal levels of reported petroleum-related contamination in soil and groundwater samples, Liro recommended closure of this spill case. The Department closed spill case effective July 16, 2016. V. Brevdo

Remarks: Hoist tank failed. Lift will be removed and remediate if necessary.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	11-04-2005 Last report was submitted in April 2005 (3 months later). GW contamination is ranging from total VOCs 524 ppb to 830 ppb. Downgradient well SVE-7 (MW-7) has 830 ppb total VOCs and increasing trend. There is no well downgradient of SVE-7. Also gw in MW-3 contains 775 ppb total TVOCs. Total VOCs in soil is 3,900 ppb, total SVOCs in soil is up to 168,800 ppb. SVOCs are leaching into the soil. Plume migrates downgradient and is unstable. No clean sentinel well. AZ 12-05-2005 This is a new spill. Site was discussed in a meeting with NYCDDC and Shaw on November 9, 2005. DDC stated that this tank failure should be investigated. Shaw responded that the tank has been removed. AZ 4/10/2006 A request for spill investigation was e-mailed to Greyhawk (Andris H. Ledins). AZ 8/4/2006 A follow up request for a new spill investigation was sent via e-mail to Andris Leddins (Greyhawk). AZ 8/8/2006 E-mail received from Andy Leddins (Greyhawk): During the transition, Greyhawk did not receive any information regarding the heating oil tanks at this site. After speaking with Ms. Fatemeh Ashkan of DDC, we were able to obtain information on a previous heating oil tank circa 2003 and have obtained these documents although they are not relevant to your question. DDC presently has no information regarding this spill number you reference in their files. DDC has placed a call to DOS representatives regarding this spill number. The individual responsible for this area is out of the office for a few days but should return by the end of the week. We are collectively hoping that we can get some information regarding this particular spill number at that time. We will keep you apprised as best we can. AZ 12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 the remedial progress was discussed. Greyhawk does not have a proposal yet and they will submit them to DEC soon. Chlorinated vapors were recorded at the site. AZ 5-10-2007 An e-mail was sent to DDC/Roux/Greyhawk: Roux recommended reducing groundwater monitoring frequency from quarterly to semi-annual at this site. Also, Roux recommended removing MW-02 from the sampling program. DEC concurs with these proposals. ORC sock should be installed in MW-03 (DEC requested this installation in

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

August 2006). No proposals for investigation of spill#0500514 were submitted. At the meeting with DDC Greyhawk stated that they will submit proposals to DEC soon. Chlorinated vapors were previously recorded at the site. Were chlorinated vapors monitored for? What are the results of the monitoring? AZ 8-27-2007 Received and reviewed report from Roux dated June 15, 2007. The report listed as an upcoming task obtaining additional information about Spill#0500514 which was reported as a result of a 2,000 gallon tank test failure. On May 23, 2007, Roux requested a copy of the tank test report from the NYCDOS Building Maintenance Director via e-mail. Another e-mail was sent to the Maintenance Director on June 4th. If it is discovered that a release occured from the tank that failed the test, then appropriate action will be taken. An e-mail was sent to Roux/DDC: Spill #0500514 should be investigated, as it was previously requested by DEC. AZ 4-21-2008 Received and reviewed report from Roux dated February 11, 2008. The report listed as an upcoming task obtaining additional information about Spill#0500514 which was reported as a result of a 2,000 gallon tank test failure. An e-mail was sent to the NYC DOS Director on June 4, 2007. If it is discovered that a release occurred from the tank that failed the test, then action will be taken after obtaining DEC approval. AZ 12-11-2008 Contacted Alexander Mignone (NYC DOS assistant chief bureau OF Building management 718-334-9121). His boss asked him to provide info on this tank but he does not have any. He contacted Michael Seppe 9 Fenley & Nicol asking for the info regarding 2,000 gal tank failure. He is waiting for the report. NYCDOS should provide Roux with a copy of the tank test report and the actual location at the site of 2,000 gal. AZ 2-25-2009 According to Roux's report dated November 24, 2008, a follow up e-mail was sent by Roux to several NYCDOS personnel on November 19, 2008, requesting any information regarding any tank work. Roux will continue to follow up with this contact. If it's discovered that a release occurred from the tank that failed the test, then appropriate action will be taken. AZ 2-9-2011 The spill was transferred to LiRo. In a report dated Sept. 2010, LiRo stated that they will investigate spill #0500514 to determine if additional petroleum releases have been made that require remediation. AZ 10-19-2011 In a report dated June 2011, LiRo stated that this spill is related to a tank test failure of unknown material reported on April 12, 2005. Based upon this spill report date and other UST installation dates and construction, LiRo believes this spill is related to the gasoline USTs and spill 9513357. Based on the LiRo's report this spill is closed and consolidated with spill #9513357. The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed semi-annual monitoring report for the above site dated June 6, 2011. The report stated that based on the spill#0500514 report date and the other UST installation dates and construction, LiRo believes that this spill is related to the gasoline USTs and that contamination has been adequately addressed under spill#9513357. LiRo proposed consolidation of spills # 9513357 and #0500514. Based on the documentation provided to date, spill case 0500514 has been closed and consolidated with spill #9513357. All further investigation/remediation should be tracked under spill #9513357. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, AZ

Remarks: isolate and retest

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. 6-7-2005 This site is addressed under NYCDDC CO. AZ 10-06-05 AS/SVE system was installed at the site.AZ 11-04-2005 Last report was submitted in April 2005 (3 months later). GW contamination is ranging from total VOCs 524 ppb to 830 ppb. Downgradient well SVE-7 (MW-7) has 830 ppb total VOCs and increasing trend. There is no well downgradient of SVE-7. Also gw in MW-3 contains 775 ppb total TVOCs. Total VOCs in soil is 3,900 ppb, total SVOCs in soil is up to 168,800 ppb. SVOCs are leaching into the soil. Plume migrates downgradient and is unstable. No clean sentinel well. I am not recommending this site for closure. AZ 12-05-2005 There was a recent tank failure at the site (2005) which should be investigated. AZ 2-13-2006 Reviewed a monitoring report submitted on Dec.22, 2005 (January through June 2005). Total VOC concentrations are up to 1400 ppb, SVOC are up to 459 ppb. An increase in SVOCs was observed in MW-3. AZ 4-14-2006 Contacted Andy Ledins of Greyhawk. He proposed to temporary shut down the system due to difficult transition efforts and administrative requirements (transfer of contractors and subcontractors). ROUX is currently preparing a report with recommendations for the site. I suggested to run the system until the report is issued. Andy could not provide the date when the report will be issued. AZ. 6-8-2006 At the meeting with DDC/Greyhawk/Roux on 5/23/2006 DEC concurred that the system could be shut down. They could remove the system and leave underground structures intact. As per Greyhawk, there are two hot areas on two different sides of the site. AZ 8/21/2006 Left a message for Andy Leddins (Greyhawk). AZ 8/16/2006 Conversation with Andy Leddins (Greyhawk). I approved recommendations made in June 22, 2006, report received by DEC on August 7, 2006. ORC will be implemented, The system will remain shut down but it will not be dismantled. E-mail confirming DEC approval was sent to Andy Leddins. AZ 5-10-2007 Reviewed a monitoring report submitted on January 31, 2007 (July through December 2006). The only monitoring well with VOCs detected above NYSDEC AWQSGV was MW-03 - total VOCs detected was 729 ppb on November 3, 2006. ORC sock has not been installed (DEC concurred with ORC installation in August 2006). Roux recommended reducing groundwater monitoring frequency from quarterly to semi-annual. DEC concurred. Roux recommended removing MW-02 from the sampling program. DEC concurred. E-mail was sent to DDC/Roux/Greyhawk:5-10-2007. An e-mail was sent to DDC/Roux/Greyhawk: Roux recommended reducing groundwater monitoring frequency from quarterly to semi-annual at this site. Also, Roux recommended removing MW-02 from the sampling program. DEC concurs with these proposals. ORC sock should be installed in MW-03 (DEC requested this installation in August 2006). No proposals for investigation of spill#0500514 were submitted. At the meeting with DDC Greyhawk stated that they will submit proposals to DEC soon. Chlorinated vapors were previously recorded at the site. Were chlorinated vapors monitored for? What are the results of the

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

monitoring? AZ 8-27-2007 Reviewed semi-annual monitoring report submitted on June 27, 2007 (January through March 2007). ORC sock is installed in MW-03. MW-03 exhibited total VOCs of 664 ppb and total SVOCs of 820 ppb. No downgradient groundwater well is monitored at the site. The downgradient well should be installed. I called B. Morrissey (Roux) and requested installation and monitoring of a downgradient well. An e-mail was sent to Roux/DDC No downgradient groundwater well is monitored at the site. The downgradient well should be installed. Also, Spill #0500514 should be investigated, as it was previously requested by DEC. AZ 8-14-2008 I contacted B. Morrissey over the phone. Brian asked if they can permanently remove the AS/SVE system as per February 2008 report. I replied that the report did not contain this request. According to the report, the anomalous VOC concentrations were reported in September 2007 for monitoring wells MW-02 and MW-03. This appeared to be the result of inadvertent switch in the respective identities of these two wells. We will need to keep the system at the site for some time due to the gw sampling results. Also, the downgradient well should be installed as per previous DEC's request. AZ 2-25-2009 Reviewed semi-annual monitoring report submitted on December 1, 2008 (January through September 2008). On May 2, 2008 Roux installed a a monitoring well downgradient of MW-03 and collected soil samples.VOCs were detected in the soil sample collected but four SVOCs were detected above NYSDEC RSCOs. Roux will replace ORC socks in MW-02 and MW-03. MW-03 on 9/3/08 had total VOC concentrations of 1012 ppb and total SVOC concentrations of 525 ppb (increase from 531 ppb and 144 ppb respectively). AZ 2-9-2011 This spill was transferred to LiRo in February 2010. Reviewed site turn-over status report and semi-annual monitoring report dated Sept. 21, 2010. Total VOCs in MW-03 837 ppb. Limited VOC soil contamination was detected in the smear zone (7'-9') at AS-01 ans SVE-2. AS/SVE system appears to have reduced the MTBE contamination. On March 11, 2010, a trace amount of free product was noted in well RXMW-01. An e-mail was sent to LiRo/F. Ashkan/V. Brevdo: I have reviewed site turn-over report and semi-annual monitoring report. LiRo recommended that confirmation soil sampling adjacent to wells AS-01 and SVE-2 should be performed. This recommendation is approved. Also LiRo recommended replacement of monitoring wells MW-02 and RXMW-01, investigation of other spills at this property, semi-annual monitoring and fingerprint analysis of the free product. These recommendations are approved. All active tanks should be field located as per LiRo recommendation. ORC socks should be installed following the well sampling and depending on sampling results. AZ 12-20-2011 Reviewed USTs closure report submitted in September 2011. Two 2,000 gallon gasoline double wall fiberglass coated steel tanks and underground piping were closed in place. PID readings of up to 97 ppm were observed in soil samples. VOC were detected in 3 samples. Petroleum odors and petroleum product was observed in soil sample LSB-10 (10-15 bgs). AZ 4-26-2013 LiRo will complete four soil borings and install one monitoring well to delineate contamination observed in the vicinity of boring LCSB-10 and monitoring well MW-03 and to provide data to evaluate the feasibility of Soil Excavation. AZ 10-23-2013 Reviewed report dated March 15, 2013. September 2012 soil sample results reported no VOCs or SVOCs at concentrations above SCL. The July 2012 VOC and SVOC groundwater concentration for all monitoring wells were within the lower range of previously reported concentrations. Therefore, the remaining residual soil contamination is limited to a small area in

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

the immediate vicinity of LCSB-10, north of the closed in place USTs, and may be the source of the dissolved-phase concentrations reported in well MW-03. The dissolved phase VOC groundwater plume does not extend off-site. AZ 10-24-2013 An e-mail was sent to S. Frank/V. Brevdo/F. Ashkan: Dear Steve, I have reviewed a monitoring report for the above site dated March 15, 2013. I concur with your proposal to decommission the AS/SVE system. All wells must properly abandoned. If these wells are set in groundwater, they should be checked for the presence of free phase product. Groundwater monitoring should be performed semi-annually. Sincerely, Alex Zhitomirsky 3-19-2014 Reviewed report dated 8/22/2013 The report stated that September 2012 investigation results demonstrated that the remaining soil contamination is limited to a small area in the immediate vicinity of LCSB-10 north of the closed in place USTs. The residual contamination may be the source of the dissolved -phase concentrations reported in well MW-03. The plume does not extend off-site. AZ 12-17-2014 Reviewed semi-annual report dated 5/19/2014 The report stated that EFR events were completed at three well locations in January, February and April 2014. No free phase product was observed. The plume does not extend off-site. AZ 06-19-2015 Reviewed semi-annual report dated 01/14/2015 LiRo will conduct a one-time In-Situ Chemical Oxidation (ISCO) Pilot Test injection of hydrogen peroxide at two locations near soil boring LCSB-10 and well MW-03. No free phase product was observed. The plume does not extend off-site. AZ 05-20-2016 Reviewed semi-annual report dated 11/3/2015 LiRo will conduct a one-time In-Situ Chemical Oxidation (ISCO) Pilot Test injection of hydrogen peroxide at two locations near soil boring LCSB-10 and well MW-03. The test should be performed in the first quarter 2016. No free phase product was observed. The plume does not extend off-site. AZ 07-29-2016 Reviewed semi-annual report dated 02/18/2016 LiRo will conduct a one-time In-Situ Chemical Oxidation (ISCO) Pilot Test injection of hydrogen peroxide at two locations near soil boring LCSB-10 and well MW-03. The test should be performed in the first quarter 2016. The highest Total VOC contamination was recorded in MW-03 and ranged from 880 ppb (April 2015) to 216 ppb (October 2015). No free phase product was observed. The plume does not extend off-site. AZ 01-19-2018 Reviewed semi-annual report dated 08/15/2017 for the period of November 2016 to June 2017. The highest Total VOC contamination was recorded in MW-03 and ranged from 174 ppb (Sept. 2016) to 740 ppb (March 2017). Total SVOC concentration in MW-03 was 686 ppb and was higher than in the previous sampling event (378 ppb). No free phase product was observed. The plume does not extend off-site. AZ 05-2-2019 Reviewed semi-annual report dated 09/4/2018 for the period of January 2018 to June 2018. The highest Total VOC contamination was recorded in MW-03 and ranged from 859 ppb (Sept. 2017) to 493 ppb (March 2018). Total SVOC concentration in MW-03 was 479 ppb in March 2018. No free phase product was observed. The plume does not extend off-site. AZ 07-9-2020 Reviewed semi-annual report dated 09/4/2018 for the period of July 2019 to December 2019. The August 2011 soil sampling results determined that residual soil contamination is limited to a small area in the immediate vicinity of LCSB-10, north of the closed in-place USTs. The residual contamination may be the source of the dissolved-phase concentrations reported in well MW-03. The overall trend at the wells used to monitor the spill is stable with respect to TVOC and TSVOC concentrations. Free-phase product was not observed at any well location used to monitor Spill No. 9513357. Elevated TVOC and TSVOC

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

concentrations persist at well MW-03. The contamination is localized and the elevated TVOC and TSVOC concentrations at this location could be potentially attributed to contamination within the well filter pack. AZ 4-16-2021 Reviewed semi-annual report dated 2-10-2021. The August 2011 soil sampling results determined that residual soil contamination is limited to a small area in the immediate vicinity of LCSB-10, north of the closed in-place USTs. The residual contamination may be the source of the dissolved-phase concentrations reported in well MW-03 or the well may be comprised by contamination within the well filter pack. As recommended in the July 2019 to December 2019 SAMR, well MW-03 was replaced with well MW-03R in June 2020. The July 2020 groundwater results at replacement well MW-03R represent a significant reduction in TVOC and TSVOC concentrations compared to the former well with a filter pack compromised by localized contamination. The July 2020 TVOC and TSVOC groundwater concentrations reported for well MW-03R were an order of magnitude less than historical levels at this location indicating that well MW-03 was compromised. Well MW-02R, destroyed during the September 2019 removal of tanks No. 003 and No. 004, was replaced in February 2020 with MW-02R2. Results from the MW-02R2 July 2020 groundwater sampling reported little change in TVOC and TSVOC concentrations compared to MW-02R results however the MW-02R/02R2 concentrations were all 20 ?g/L or less. Based on the tank closure in the spill area, the replacement well soil sample results, and groundwater sampling replacement wells/existing wells, LiRo recommended closure of Spill Number 9513357. Upon approval LiRo will schedule monitoring well decommissioning in accordance with NYSDEC s November 2009 Groundwater Monitoring Well Decommissioning Policy (CP-43). Based on the latest data and LiRo recommendations, this spill is closed. The following e-mail was sent to V. Brevdo/S. Frank: Dear Steve, I have reviewed a report for the above site dated February 10, 2021. Based on the tank closure in the spill area, the replacement well soil sample results, and groundwater sampling replacement wells/existing wells, LiRo recommended closure of Spill Number 9513357. I concur with this recommendation. Spill Number 9513357 is closed. Alexander Zhitomirsky Professional Geologist I, Division of Environmental Remediation

Remarks: 2 2000 GALLON TANKS MANIFOLDED TOGETHER. TANKS BEING EVACUATED, NEW PIPING TO BE INSTALLED, AND SITE TO BE UPGRADED. FURTHER TO FOLLOW AS NEEDED. ALSO SEE SPILL # 9702982.

DEC Memo:	10-06-05 AS/SVE system was installed at the site.AZ 11-04-2005 Last report was submitted in April 2005 (3 months later). GW contamination is ranging from total VOCs 524 ppb to 830 ppb. Downgradient

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

well SVE-7 (MW-7) has 830 ppb total VOCs and increasing trend. There is no well downgradient of
SVE-7. Also gw in MW-3 contains 775 ppb total TVOCs. Total VOCs in soil is 3,900 ppb, total SVOCs
in soil is up to 168,800 ppb. SVOCs are leaching into the soil. Plume migrates downgradient and is
unstable. No clean sentinel well. I am not recommending this site for closure. AZ 2-13-2006
Reviewed a monitoring report submitted on Dec.22, 2005 (January through June 2005). Total VOC
concentrations are up to 1400 ppb, SVOC are up to 459 ppb. An increase in SVOCs was observed in
MW-3. AZ 6-12-2006 At the meeting with DDC/Greyhawk/Roux on 5/23/2006 DEC concurred that the system
could be shut down and removed. CM will implement soil vapor survey.A 8/9/2006 Left a message for
Andy Leddins (Greyhawk). Quaterly report subitted by Greyhawk on July 13, 2006, referred to
incorrect spill numbers for this site. AZ 8/16/2006 Conversation with Andy Leddins (Greyhawk). I
approved recommendations made in June 22, 2006 report received by DEC on August 7, 2006. ORC will
be implemented, The system will remain shut down but it will not be dismantled. AZ 5-10-2007
Reviewed a monitoring report submitted on January 31, 2007 (July through December 2006). The only
monitoring well with VOCs detected above NYSDEC AWQSGV was MW-03 - total VOCs detected was 729 ppb
on November 3, 2006. ORC sock has not been installed (DEC concurred with ORC installation in August
2006). Roux recommended reducing groundwater monitoring frequency from quarterly to semi-annual.
DEC concurred. Roux recommended removing MW-02 from the sampling program. DEC concurred. E-mail was
sent to DDC/Roux/Greyhawk:5-10-2007. An e-mail was sent to DDC/Roux/Greyhawk: Roux recommended
reducing groundwater monitoring frequency from quarterly to semi-annual at this site. Also, Roux
recommended removing MW-02 from the sampling program. DEC concurs with these proposals. ORC sock
should be installed in MW-03 (DEC requested this installation in August 2006). No proposals for
investigation of spill#0500514 were submitted. At the meeting with DDC Greyhawk stated that they
will submit proposals to DEC soon. Chlorinated vapors were previously recorded at the site. Were
chlorinated vapors monitored for? What are the results of the monitoring? AZ 4-22-2008 Received and
reviewed report from Roux dated February 11, 2008. I sent e-mail to DDC/Roux/Greyhawk/VB requesting
identification of the waste oil tank and addressing the spill. Contaminated soil was discovered
during the tank pull. AZ 4-23-2008 Received an-e-mail from Wendy Monterosso (Roux). They are trying
to obtain information from the DOS maintenance department regarding this particular spill.
Recently, DOS requested to be provided with the party that reported

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

the spill. I contacted Wendy
Monterosso and provided her with necessary information. AZ 2-25-2009
According to Roux report dated
November 24, 2008, a site visit was performed on November 20, 2008 to interview site personnel
regarding this spill. Further information will be provided in the next monitoring report by Roux.
An e-mail was sent to Roux: I have reviewed Roux's report addressing this spill and dated November
24, 2008. The report stated that Roux will obtain additional information about Spill#0200942 by
submitting FOIA request to NYSDEC. It should be noticed that I have provided Wendy Monterosso
(Roux) with the information contained in NYSDEC files on 4-23-2008. Investigation of this spill
should be performed to confirm that no soil/groundwater contamination has resulted from the spill
#0200942. AZ 2-9-2011 The spill was transferred to LiRo. In a report dated Sept. 2010, LiRo stated
that they will investigate spill #0200942 to determine if additional petroleum releases have been
made that require remediation. AZ 10-21-2011 LiRo submitted an additional work investigation plan
to complete investigation near the waste oil tank. 3 wells will be installed. After the
investigation is completed, it will be decided if the site requires remediation. The following
e-mail was sent to S. Frank and F. Ashkan: Dear Steve, I have reviewed additional site
investigation plan submitted in June 2011. This work plan is approved. The Responsible Party and
its contractors are solely responsible for the safe execution of all invasive work performed at the
site, and in particular, are responsible for identifying subsurface utilities and safeguarding the
structural integrity of any excavations, buildings, utilities, and other structures both on- and
off-site that may be adversely affected by the work. The Responsible Party and its contractors must
obtain any local, state or federal permits or approvals that may be required to perform the work
necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely
responsible for the implementation of all appropriate health and safety measures during the
performance of this work. AZ 2-24-2012 The following email was sent to S. Frank/F. Ashkan/V.
Brevdo: Dear Steve, I have received semi-annual monitoring report and additional investigation work
plan dated December 28, 2012. LiRo proposed to advance one additional boring and one additional
monitoring well to delineate contamination in the vicinity of boring LSB-10. This work plan is
approved. The Responsible Party and Contractors are responsible for the safe execution of the Work
Plan. Sincerely, AZ 4-24-2013 Reviewed semi-annual monitoring report for the monitoring period of

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

October 201 through March 2012. LiRo will install three monitoring wells (LMW-04-LMW-06) AS PROPOSED IN THE jUNE 6, 2011, SAMR to invstigate spill No.0300942. This investigation was approved by DEC on October 21, 2011. AZ 10-23-2013 Reviewed semi-annual monitoring report dated March 2013. LMW-04 through LMW-06 September 2012 soil sample results report no VOC or SVOC concentrations above the NYSDEC SCLs. The September/October soil and groundwater results indicated no petroleum release from the waste oil UST. However, during the February 2013 monitoring event, 0.03' of free phase product was present in monitoring well LMW-06. Laboratory analysis identified the product as hydraulic fluid. A petroleum absorbent sock was installed in the well. AZ 3-18-2014 Reviewed a monitoring report dated August 22, 2013. During 2013 monitoring event a small amount of free phase product was present in LMW-06.The product was identified as hydraulic fluid. The source of the oil is likely from a surface release within the service bay where the well is located. AZ 4-29-2014 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Semi- Annual Monitoring Report for this site dated December 23, 2013. The report stated that September/October 2013 soil and groundwater investigation results indicated no petroleum release from the waste oil UST. The small amount of free phase product was observed in monitoring well LMW-06 during the February 2013 sampling event has not been observed in monitoring well since that event. Laboratory analysis identified the product as hydraulic fluid likely a result of subsurface release within the service bay. Based on the above information this spill is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

from compliance with any
applicable laws and regulations. Please be advised that you should maintain a permanent file of all
documentation and correspondence regarding this case for future use as the Department's files may
not be maintained indefinitely. Sincerely, Alexander Zhitomirsky
4-16-2022 Reviewed report dated
2-10-2021. Well LMW-06 contained 0.18 feet of product during an April 2020 well gauging event.
Petroleum identification of the product through laboratory analysis was not successful due to
insufficient sample volume. Wells LMW-04 and LMW-06 were installed in September 2012 to investigate
Spill No. 0200942 associated with a 1,000 gallon waste oil tank. During the February 2013 sampling
event, well LMW-06 contained 0.03 feet of product. Laboratory analysis identified the product as
hydraulic fluid. The appearance of the product observed in LMW-06 in April 2020 resembled the
product observed in the well in February 2013. Well gauging conducted in July 2020. and September
2020, following the installation of a petroleum absorbent sock in the well in May 2020, reported no
measurable product in the well. Supplemental monitoring without the petroleum absorbent sock in the
well is warranted to determine the significance of the product observation during the January to
December 2020 monitoring period. On 4-16-2021, I have discussed this spill with S. Frank (LiRo). We
agreed that due to the reappearance of free phase product in well LMW-06 this spill should be
reopened. AZ 4-16-2021 The following email was received from S. Frank (LiRo): Dear Alex, Thank you
for your call regarding the DSNY Brooklyn East 17 site. Below is the summary of product conditions
that you requested related to spill #0200942. During an April 28, 2020 well gauging event, 0.18 of
product was measured in well LMW-06, a well that was installed to investigate closed spill #
0200942. On May 7, 2020 LiRo collected a product sample from the well for laboratory analysis. Due
to insufficient product quantity in the sample petroleum identification was not possible.
Appearance of the product resembled hydraulic fluid that was identified through petroleum
identification analysis of a February 2013 LMW-06 product sample. LiRo returned to the site on May
22, 2020 and installed a petroleum absorbent sock in the well. Product thickness on May 22 was
0.08. Subsequent well gauging events on July 7, 2020 and September 29, 2020 reported no measurable
product in LWW-06. Based on these conditions, Spill # 0200942 should be re-opened. We will continue
to monitor the situation and if no product reappears by June 2021, we will recommend closing the
spill again. Sincerely, Steve 2-4-2022 Reviewed report dated
9-15-2021. Well LMW-06 contained 0.18

BROOKLYN EAST 17 DOS -DDC (Continued) **S103570734**

feet of product during an April 2020 well gauging event. As recommended in the February 10, 2021
SAMR, the petroleum absorbent sock was removed from the well to determine if product would return.
Following the removal of the petroleum absorbent sock on February 9, 2021, monthly well gauging at
LMW-06 was conducted. No product was observed in the well from March 2021 to September 2021. Based
on the LMW-06 well gauging conducted during the monitoring period, LiRo recommended closure of
Spill Number 0200942. Upon spill closure, the wells associated with the spill will be properly
decommissioned. This proposal is approved and spill 0200942 was closed. AZ

Remarks: while doing tnak pulll cont. soil was found.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 11/25/97 mmm:PBS RECORDS INDECATE THAT TANKS OVERDUE FOR TESTING BY 3 YEARS. SPILL # 88-00531 ALSO ACTIVE FOR THE SITE, FOR TANK #4 FAILING TT ON 4/16/88 (SULLIVAN). SULLIVAN SPILL WILL BE CLOSED AND THIS SPILL NUMBER WILL REMAIN ACTIVE FOR THE SITE. 1/2/2004 Reassigned from Mulqueen to Sun. 12/16/2005 - Feng - Reassigned from Sun to Feng as per Sun. (RJF) 10/30/06 Reassigned from Tang to Sun. (MS) 11/16/06 Sun sent Outstanding Violation/Tank Test Failure letter to Eric S. Miller, owner of Arnold's Service Station at 1868 Linden Blvd on 11/09/06, requiring the following to be received by December 9, 2006: 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. (JS/MS) 1/4/07: Above letter was returned (no such name). Found a recent tank renewal application for same address and sent letter (same as above) to Mr. Tzali Hirschler on 1/3/07. (JS/MS) 3/7/07: Received some documents associated with a UST upgrade including invoices and confirmation from tank installation company. Reviewing, however submittal is not pertaing to tank test failure. (JS/MS) 8/1/07: ACRIS search also indicates Mr. Eric Miller as person responsible for satisfaction of morgage. Need to further research current and accurate contact info and telephone number. (JS/MS) 1/24/08: Sol Hirschler at 516.901.1666. 4/24/08: 2nd clean up letter sent to Eric Miller (2x, different addr for Ham II Realty) and Tzali. 2006 tank test report and 1995 soil boring logs + GW data does not address this 1997 spill. (JS/MM) 5/12/08: Sent 2nd letter + SIWP for subsurface investigation report. (JS/MM) 5/14/08: Dean Sommer (518-438-9907 x236) called; representing Tzali Hirschler. Trying to put documents together, not quite sure who is responsible.(JS/MM) 5/20/08: JS received voicemail from Jeff Ruderman, attorney for Eric Miller; Miller bought property but had an agreement with the previous owner. Previous owner would be responsible for all environmental concerns. Sent email to Jeff for clarification. (JS/MM) 5/21/08: Extension granted to Miller/Ruderman. Due 7/23/08. (JS/MM) 7/16/08: Preferred Environmental retained, requesting extension and FOIL request. SIWP due 9/7/08. (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/8/08: PES late with SIWP. (JK/MM) 12/30/08: Spoke with Jill Haimson. She said they have been trying to get a road opening permit. I told her I didn't have any documents from her and the last correspondence was Preffered's request for an extension for the SIWP. She said she will pull the file and see what documents she has. (JK/KG) 01/06/09: Rec'd following email from Bill Schlageter. SIWP under review. Kathleen: As requested, attached is the Site Investigation Work Plan to be conducted by Preferred Environmental Services at the Citgo Station at 1868 Linden Boulevard, Brooklyn, NY. We are currently obtaining the required sidewalk opening permit and anticipate receipt of same sometime next week. As soon as we have a set schedule, I will update you. In the interim, please do not hesitate to contact me or Jill.

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

Thank You, Bill (JK/KG) 01/07/09: SIWP approved and letter sent to Eric Miller. SIR due 03/31/09. Scope of work includes installation of 6 borings, collection of soil and GW samples, and submission of SIR. DEC approved the work plan with the following modifications: GW samples must be collected from exisitng accessible wells, any damaged wells should be replaced, permanent wells should be installed where contamination is encountered, additional borings/wells should be installed as necessary to fully delineate contamination plume, new and existing wells should be surveyed, and soil and GW samples should be collected at all boring locations. (JK/KG) 01/27/09: Rec'd phone call from Bill concerning modifications requested by DEC to the approved work plan. He stated all of the existing wells are in bad condition and will not be able to collect samples from them. DEC requested wells to be installed where contamination was encountered. Instead of installing permanent wells the day the borings are conducted he would like to first submit the soil and GW samples for lab analysis. Then, based on the lab results, Preferred will submit a report with recommendations for well locations. After the wells are installed they will be surveyed. I told him that was okay. Groundwater and soil samples will be collected from all 6 borings. He expects to get the sidewalk permits this week and anticipates work to commence next week. (JK/KG) 02/09/09: Rec'd email from Bill on 02/06/09 stating that site work is tentatively scheduled for 02/12/09. (JK/KG) 04/08/09: Rec'd email from Bill: I apologize, but the report for 1868 Linden Boulevard, Brooklyn has been delayed between revisions between our office and the client's attorney. We expect to have the report to your office in the next few days. Pleas bear with us and I apologize for the inconvenience. Pdf of report was submitted on 4/8/09; under review. (JK/KG) 04/16/09: Investigation on 2/12/09 included 6 borings and collection of soil and groundwater samples. GW results: GW-1: Total VOCs plus oxygenates - 46,318.4 ug/L GW-2: Total VOCs plus oxygenates - 33,290.0 ug/L GW-3: Total VOCs plus oxygenates - 39,638.4 ug/L GW-4: Total VOCs plus oxygenates - 144.76 ug/L GW-5: Total VOCs plus oxygenates - 427.3 ug/L GW-6: Total VOCs plus oxygenates - 25.74 ug/L Soil: VOCs detected above TAGM RSCOs in SB-2(8-10') and SB-3(8-10'). Preferred has indicated that a RAP is necessary. A letter was sent to the RP requiring a RAP be submitted by 6/5/09. At a minimum the RAP will propose installation of permanent monitoring wells, delineation of the groundwater contaminant plume, a groundwater elevation survey, and installation of a soil and groundwater treatment system. (JK/KG) 06/01/09: Rec'd a call from Bill Schlageter requesting a 2 week extension to submit the RAP. I asked him to send an email requesting an extension. Kathleen: As we discussed, Preferred is respectfully requesting that the NYSDEC grant us an extension on the June 5, 2009 deadline to prepare the NYSDEC-required Remedial Action Plan (RAP) for the above-referenced property. We are in the process of developing a scope of work to address the remaining on-site impacts and need some more time to finalize the specifics of same. I thank you in advance for your patience. Regards, Bill Bill, Your request for an extension is granted. The new deadline for submission of the RAP is June 19, 2009. Feel free to contact me if you have any questions. Thanks, Kathy (JK/KG) 06/22/09: I spoke to Bill Shlageter and he said he sent Mr. Miller a proposal for two different remedial options and is waiting for his approval. (JK/KG) 07/06/09: Rec'd the following email from Jill Haimson: We have been conferring with Mr. Miller relative to the above parcel and have provided him with various remedial options that

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

the NYSDEC would find acceptable. He has indicated that he is having internal meetings and will make a decision by the end of the week. We will reach back out to you early next week to confirm a conceptual scope and overall schedule for implementation. Thanks and we will talk to you shortly. Jill S. Haimson 08/05/09: Sent an email to Jill requesting an update on the status of the RAP. (JK/KG) 08/06/09: Rec'd email from Jill: The client has decided to contract with us for the preparation of the RAP - he has been out of the country for the last two weeks and will be back in 1-2 weeks. At that time, he will execute our contract and we can set a schedule for the submission of the RAP. We're getting there! Jill S. Haimson (JK/KG) 08/31/09: Spoke to Jill Haimson, she said Mr. Miller accepted Preferred's proposal. She will call Mr. Miller and get back to me next week. (JK/KG) 09/30/09: Follow up with Haimson and Miller. RAP is past due. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 12/15/2009: PDF copy of the RAP was submitted. DL to eDocs. AD 12/28/2009: Received a hard copy of the RAP. Will review. Changed site priority from P0 to P1. AD 01/07/2009: Reviewed the RAP. Preferred Env. proposes application of a bioremediation agent. The proposed remediation will consist of the in-situ soil and GW treatment using a bioremediation technology by MicroBac International, Inc. This involves injection of natural bacteria. Scope of work includes: - installation of one injection well and rehabilitation of four existing wells for use in application of MicroBac injection; - installation of three permanent monitoring wells; - application of MicroBac and associated nutrients via 5 injection wells; - monthly sampling of DO, ferrous iron and other relevant parametrs. - quarterly GW sampling for one year with reporting to DEC. The GW contamination is not delineated at the site. Additional wells should be installed. Discussed the RAP with J. Kolleeny of DEC. Called and spoke with Bill Schlageter of Preferred Env. Requested to submit a revised work plan for monitoring wells installation only. Two additional wells should be installed at the site. Off-site wells MW-6 and MW-7 should be sampled if feasible, if not - they should be replaced. After all wells will be installed, surveyed and sampled, RAP can be reviewed by DEC. Response is due January 19, 2010. AD 02/17/2010: Received an e-mail from B. Schlageter of Preferred Env. saying: Bill Schlageter 2/17/2010 6:15 PM Ms. Doronova: We spoke relative to this project a few weeks ago as the NYSDEC has additional requirements other than those set forth in the Remedial Action Work Plan submitted by Preferred on behalf of the property owner. Could you please send a letter or e-mail documenting these additional requirements so that we may pass them on to the property owner as an additional scope specifically required by NYSDEC beyond what was proposed in our RAWP? Thank You Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES Certified Port Authority of New York and New Jersey (PANYNJ), NYS and NYC Women-Owned Business Enterprise (WBE) 323 Merrick Avenue North Merrick, New York 11566 Tel: (516) 546-1100 ext. 22 Fax: (516) 213-8213 Cell: (917) 715-0752 AD 02/18/2010: Sent an e-mail to Mr. Schlageter: Dear Mr. Schlageter: As we discussed it previously, DEC opinion is that the groundwater contamination is not delineated at the site. Additional wells should be installed. A revised work plan for monitoring wells installation only, should be submitted to DEC for review and approval. Two additional wells should be installed at the site. Off-site wells MW-6 and MW-7 should be sampled if feasible, if not - they should be replaced. After all

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

wells will be installed, surveyed and sampled, a investigation summary report with a proposed remedial actions can be reviewed by DEC. Response is time sensitive. 06/22/2010: Called and spoke with Bill Schlageter regarding submission of the report. He said that the owner of the site was out of contry, so they were not able to discuss with him new scope of work. he will contact the owner and will send a status update info till July 1, 2010. AD 07/15/2010: Called and left a message to Mr. Schlageter. Later spoke with B. Schlageter. Mr. Schlageter aked for an official letter from DEC with an additional investigation request. Requsted him to send a recent contact info of the owner including his e-mail address. AD 07/21/2010: Received an e-mail from B. Schlageter saying: Ms. Doronova: As you requested, the current property owner information is as follows: Mr. Eric Miller Iberia World Foods 1900 Linden Boulevard Brooklyn, New York 11207 Please copy me on any correspondence with the property owner. Thank you, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist AD 07/26/2010: Issued a letter with a request for additional investigation. Mr. Schlageter does not have e-mail address of the owner. Sent the letter to Mr. Schlageter, so he can forward it to Mr. Miller. DL pdf copy to eDocs. Response is due August 16, 2010. AD 08/13/2010: Received an e-mail from B. Shlageter: Ainura: I am requesting a few more days on the work plan for 1868 Linden Boulevard, Brooklyn, NY. I have spoken to the property owner and provided him with our proposal, but he is not available this afternoon, and I feel that I won t have his authority by Monday to submit our work plan to you. Thank you for your patience and cooperation. Bill William J. Schlageter Operations Manager/Senior Hydrogeologist . AD 08/16/2010: Received an e-mail from Bill: Ainura: As required by the NYSDEC, attached is the investigation work plan for the above-referenced property for your review. Please contact me with any comments. Regards, Bill William J. Schlageter DL the work plan to eDocs. Will review. AD 08/27/2010: Reviewed the work plan. It proposes installation of up to eight (8) two-inch diameter groundwater monitoring wells. If the off-site groundwater monitoring wells MW-6 and MW-7 are located, only six wells will be installed and wells 6 and 7 will be rehabilitated; The investigation work plan also includes: Collection and laboratory analysis of up to 12 soil samples for VOCs; Survey, gauging and sampling of all installed groundwater monitoring wells (up to eight) with groundwater samples submitted for VOCs plus fuel oxygenates by USEPA Method 8260. A summary investigation report to be submitted to NYSDEC including boring logs, groundwater flow map, data table and a proposed remedial action. AD 09/01/2010: Issued and sent an approval letter with a comment regarding a soil sampling interval. DL pdf copy to eDocs. AD 06/24/2011: called and spoke with Bill Schlageter of Preferred regarding implementation of the RAP. He said that because the site owner travel a lot, and spends majority of the year outside of the country, it if difficult to get hold of him and schedule a field work at the site. Asked Bill to provide an info for the owner's assistant, to whom I can sent a letter requiring expedition of the site remediation. This info will be submitted shortly. AD 08/2011: Did not receive any information from Preferred. AD 01/12/2012: called and spoke with Bill Shlageter. There was no any changes in the site status. Issued and sent a letter to the owner by certified mail (#7006 0100 0006 2620 3504)with a reqirement to perform site investigation and to submit a summary report by March 8, 2012. DL the pdf copy of the letter to eDocs. AD 02/14/2012: Received a call from

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

B. Schlageter of Preferred. He said that the site owner contacted them to proceed with site investigation. Bill asked for a copy of the letter sent to the owner. Sent him the copy. AD 02/16/2012: Received the following e-mail from Bill saying: Ainura : We have scheduled the field activities for the Thursday and Friday February 23-24, 2012. Please let me know if you will attend the delineation activities. Regards, Bill William J. Schlageter Operations Manager/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES AD 02/17/2012: Received an e-mail from B. Schlageter saying: Ainura: We are planning on conducting the sampling and well installation activities next week February 23-24, 2012. As we will not receive lab data until March 7, 2012 and need some time to evaluate data and discuss results with the client, we are respectfully requesting that the NYSDEC grant us a three (3) week extension of the deadline to submit the subsurface investigation summary report from March 8, 2012 to March 29, 2012. Please let me know if this request is granted. Thank you, Bill Sent him an e-mail granting deadline extension till March 29, 2012. AD 04/03/2012: Received the following e-mail from Bill: Ms. Doronova: Attached is the report on the soil and groundwater delineation conducted by Preferred Environmental Services on behalf of the Property Owner for 1868 Linden Boulevard, Brooklyn, New York. Please review and feel free to contact me to discuss. An original copy and CD will follow by mail. Regards, Bill DL the report to eDocs. AD 04/09/2012: Received a hard copy of the report. Will review. AD 05/16/2012: Reviewed the Soil and Groundwater Delineation report. It states that the purpose of the February - March 2012 investigatory activities were to further delineate the extent of previous gasoline-related impacts identified in soil and groundwater at the subject property. Additional subsurface investigation was conducted on February 12, 2009 by Preferred which consisted of the following: Installation of six soil borings at the site via a Geoprobe; Collection and laboratory analysis of nine soil samples; Installation of six temporary groundwater monitoring wells utilizing the Geoprobe; Collection and laboratory analysis of six groundwater samples; and Completion of an elevation survey and the development of a groundwater flow map. Based on the results of subsurface investigation is was concluded that petroleum-related impacts to soil and groundwater are present at the site and the highest concentrations of gasoline-related organic compounds and gasoline-related fuel oxygenates were identified adjacent to the in-service USTs. Eight monitoring wells were installed at the site. Upon installation, the 8 new groundwater monitoring wells, and 3 existing groundwater monitoring wells (MW-1, MW-2 and MW-4) were gauged for the presence of free-phase product. Upon gauging of the wells, free phase product was present in 5 wells: MW-1, MW-2, MW-13, MW-14 and MW-16/MW-7. All of these wells are located south of and proximate to historic dispensing areas, and/or USTs (such as MW-2). The three out of five wells with the thickest free phase product were identified as: MW-13 (1.41 feet); MW-1 (1.01 feet); MW-2 (0.81 feet). These three wells are located immediately south and adjacent to the historic and current gasoline dispensing areas. The six monitoring wells that did not contain free product (MW-4, MW-9, MW-10, MW-11, W-12 and MW-15/MW-6) were subsequently developed and sampled. TVOCs ranged in concentrations from 10.93 ug/L in MW-12 to 11,820 ug/L in MW-11. With the exception of MTBE at a concentration of 120 ug/L in MW-15/MW-6, no fuel oxygenates were detected above their MDLs in any of the six groundwater samples. Based upon the above, Preferred

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

recommends a product recovery via a Vacuum Enhanced Fluid Recovery (VEFR) program. The VEFR program should consist of the periodic and repeated sustained use of a vacuum truck, exerting a strong vacuum on these wells to remove free phase product. Product recovery testing should be performed in tandem with these efforts, to ascertain the actual product thickness, and to assess the best available and most appropriate technology to address this issue. Additionally, a means to eliminate the continued introduction of gasoline from fueling operations should be developed and implemented in tandem with the VEFR. Upon the successful removal of free phase product to minimal and non-recurring levels, a subsequent remedial program should be designed to address the remainder of residual gasoline related impacts (e.g., dissolved phase) on and off-site. AD 05/17/2012: Called and spoke with B. Schlageter of Preferred. Requested to submit a detailed pilot study work plan for the proposed EFR. he asked for an official letter for RP to get their approval. Will issue a letter. AD 07/02/2012: Issued and sent a recommendation approval letter addressed to Mr. Miller with a request to submit a brief work plan for EFR. DL pdf copy of the letter to eDocs. AD 08/20/2012: Received an IRM work plan for EFR. It states that according to the results of subsurface investigation, petroleum-related impacts to soil and groundwater are present at the site and that the highest concentrations of gasoline-related compounds and LNAPL were identified in the vicinity of the in-service USTs. Preferred proposes a Vacuum Enhanced Fluid Recovery (VEFR) on a weekly basis as an interim remedial measure to remove free product from five site wells. Upon the successful removal of free phase product, remedial action will be proposed to address the remaining residual gasoline related impacts on and off-site. additional delineation of free product plume is needed. AD 08/27/2012: Discussed the IRM work plan with J. Koleeny of DEC. called and talked with B. Shlageter of Preferred. He agreed to additional delineation. Issued and sent a letter which approves the IRM work plan with the following comments: - A brief work plan for delineation of the free product plume should be prepared and submitted to DEC for review and approval; - Groundwater sampling should be performed at the site on a quarterly basis. DL pdf copy of the letter to eDocs. AD 01/24/2013: Called to B. Schlageter of Preferred Env. regarding report submission. He informed me that the report is ready and he will submit it soon. AD 03/05/2013: Received an e-mail from J. Haimson of Preferred with an attached report. DL the report to eDocs. Will review. AD 05/01/2013: Reviewed the report. It is a summary of continued monitoring, and prior pump down tests and product recovery activities conducted by Preferred Environmental Services (Preferred) from August 2012 through February 2013 at the site. From August 2012 through February 2013, Preferred implemented remedial activities including the Vacuum Enhanced Fluid Recovery (VEFR) program, monitoring and a pump down test. On-site and off-site monitoring wells were gauged using an oil-water interface probe, to identify wells needing product recovery. When the VEFR program was initiated, a vacuum truck was utilized to exert a strong vacuum on monitoring wells identified to have free-phase product within them. EFR: The first VEFR event was performed on August 31, 2012. A total of 398 gallons was recovered from groundwater monitoring wells 1, 2, 4, 7, 10, 11, 13, and 14. All monitoring wells had a non-measurable thickness of free floating product with the exception of off-site monitoring well MW-7, which reported a thickness of 0.65 feet. The second VEFR event was performed on October 8, 2012. A total of 95

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

gallons was recovered from MW-7. Again, MW-7 had the only measurable free floating product, with a thickness of .03 feet. Waste manifests were obtained for each VEFRs and are provided as an attachment. Evaluation of the ongoing monitoring after the VEFRs noted the continued absence or very limited measurable product from Mid October 2012, November - December 2012 (no measurements were done in this time frame due to Tropical Storm Sandy and inability to access wells due to snow piles), and through January 30, 2013. As of January 30, 2013, no measurable free phase product was present at MW-1, MW-2, MW-4, MW-6 to MW-14. Pump Test: During the initial VEFR event on August 31, 2012, a time-rated product recovery test on selected groundwater monitoring wells was performed to ascertain the actual product thickness and associated product and groundwater elevation recovery rate. Monitoring wells 7, 14, 13, 1, 2, and 11 were selected due their specific characteristics and historic product levels. Groundwater monitoring well, MW-7, had the greatest product recovery rate with .01 feet of product recovered at intervals greater than ten (10) minutes. However, no more than a total of .04 feet of product was observed to have been recovered from the MW-7 while Preferred was on-site performing the product recovery test. Conclusions and recommendations: From August 2012 through February 2013, remedial activities and/or continued monitoring efforts were conducted at the site. The results of this effort are summarized below: An initial scope of multiple VEFR and product recovery test events were completed; Continued monitoring of the site has proved that a drastic reduction of free-floating product levels had occurred on all on-site monitoring wells to non-measurable levels as of January 30, 2013; The only groundwater monitoring well to periodically exhibit free floating product is the off-site MW-7 monitoring well. The recovery rate of product within the well is greater than .001 ft of product/minute. No product was measurable as noted in January 30, 2013; Based upon the removal of free-phase product and the non-resurgence of significant measurable product over the last few months (inclusive of the potential effects from Tropical Storm Sandy flooding), it appears that the product phase was likely trapped and may not re-occur. Based upon the results of the VEFR, continued monitoring program and absence of free phase product, in order to develop a final remedy for this property, Preferred proposes to conduct an updated round of groundwater sampling, inclusive of those wells that have not been sampled before, wherein product was present. This will enable a determination of what level of remediation is still required, as well as the best available and most appropriate technology to address the remaining dissolved phase impacts present in deep soils and groundwater. If agreeable, a new round of groundwater sampling will be conducted as soon as feasible. AD 06/03/2013: Called and spoke with B. Shlageter of Preferred regarding GW report submission. He said that they sampled the wells few weeks ago and are in a process of preparing the report. It will be submitted to DEC approximately by June 14, 2013. AD 09/09/2013: Received the following e-mai from J. Haimson: Hi Ainura please find attached: Summary Monitoring Report & Update for NYSDEC Spill 97-09774, Service Station - 1868 Linden Blvd, Brooklyn, New York 11207. A hard copy is being sent as well. Thanks and best regards. Jill S. Haimson, CGWP, PG Principal PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 DL the report to eDocs. Will review. AD 10/09/2013: Reviewed the report. It states that from April 2013, remedial activities and/or continued monitoring

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

efforts conducted at the commercial property at 1868 Linden Blvd, Brooklyn, NY. The results of this effort are summarized below: Continued monitoring of the Subject Property has proved that a drastic reduction of free floating product levels had occurred on all on-site monitoring wells to non-measurable levels as of January 30, 2013; The only groundwater monitoring well to periodically exhibit free floating product is the off-site MW-7 monitoring well. The recovery rate of product within the well is greater than 0.001 ft of product/minute. No free phase product was measurable as noted in January 30, 2013; Based upon the removal of free-phase product and the non-resurgence of significant measurable product over the last few months (inclusive of the potential effects from Tropical Storm Sandy flooding), it appears that the product phase was likely trapped and may not re-occur; and Based upon the results of the VEFR, continued monitoring program and absence of free phase product, in order to develop a final remedy for this property, Preferred proposed to conduct an updated round of groundwater sampling, inclusive of those wells that have not been sampled before, wherein product had formerly been present. This will enable a determination of what level/type of spill remediation is still required, as well as the best available and most appropriate technology to address the remaining dissolved phase impacts present in deep soils and groundwater. As per this recommendation, a new round of groundwater sampling was conducted on April 11, 2013, which is documented in this report. Groundwater samples were collected from ten (10) monitoring wells (MW-1, MW-2, MW-4, MW-6 (MW-15), and MW-9 to MW-14) on April 11, 2013. MW-7 (MW-161) was not sampled due to the presence of an intermittent sheen. Subsequent to the groundwater sampling of the existing wells across the study area, a measurement of water levels were recorded. During January 30, 2013 and April 11, 2013, no free phase floating product was identified in any of the ten (10) monitoring wells (MW-1, 2, 4, 6 (a.k.a. MW-15), MW-7 (a.k.a. MW-16), 9, 10, 11, 12, 13 and 14) evaluated, with the exception of the very limited and intermittent product noted at MW-7 (sheen to 0.01 foot). Depth to water ranged from 10.75 feet below grade surface (bgs) to 12.60+ feet bgs in April 2013. The highest concentrations of residual petroleum impacts to groundwater were detected in samples MW-1 (3,388 u/L), MW-13 (3,361 ug/L), MW-14 (2,509 ug/L), MW-2 (1,046 uL), MW-11 (1,989 u/L), with lower TVOC concentrations reported at the other wells. Preferred concludes that there is a clear correlation with the presence of remaining elevated TVOCs with respect to wells with prior history of free-phase product as measured in March 2, 2012. This specifically includes MW-1, MW-2, MW-13 and MW-14. Three wells are located next to each other and all are hydrogeologically downgradient of the dispenser islands. It is common for wells that previously contained free-phase floating product to continue to demonstrate slightly elevated concentrations due to the propensity for the former product to have coated the interior of the well screen and surface of the sand pack. A comparison of VOC concentrations in groundwater from April 2013 to the prior sampling round in March 2012 noted the following significant information: TVOCs decreased dramatically at MW-4 (from 184 ug/L to 27 ug/L); decreased to non-detect at MW-9; decreased from 1,476 ug/L to 327 ug/L at MW-10 with no oxygenates detected historically; a ten-fold decrease was reported at MW-11 from 11,820 ug/L down to 1,989 ug/L, with a low level new detection MTBE; very slight increase in MW-12 (less than one order of magnitude) of VOCs and oxygenates; decreased from 1,328 ug/L to 628 ug/L at MW-15

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

(MW-6), including a decrease in oxygenate concentrations. An evaluation of the April 2013 groundwater data with comparison to historical data clearly demonstrates a significant reduction in the presence of any residual floating product coupled with a large decrease in dissolved phase gasoline constituents. Based upon this information, Preferred recommens continuing monitoring of groundwater conditions on a semi-annual basis as an appropriate next step in the remedial process for this property. As free-phase floating product has virtually diminished, and dissolved phase concentrations have also decreased substantially due to the removal of product and continued natural attenuation, the next groundwater sampling round is proposed for October 2013. 07/14/2014: Called and spoke with B. Schlageter regarding site status update. He will contact site owner and get back to us. AD 01/2015: called and left a message to Mr. Schlageter. AD 06/28/2017: called and spoke with B. Schlageter. They did not work for the site for a long time. Will send a letter. AD 01/2018: Called and left a message to Mr. Schlageter. AD 06/2019: Called and left a message to Mr. Miller on 718-649-0045. AD 03/11/2021: Called and spoke with Mr. DeLa Llero (site operator - 718-649-0045; PBS# 2-269050). Spoke with him and explained that this old spill is still open and that they need to sample all site wells to gain some info regarding current site status and plan for further steps. Mr. DeLa Llero will contact the site owner and will get back to DEC. AD 12/15/2021: Called and spoke with Mr. DeLa Llero. He will contact site owner. Later in the day received a phone call from Dan of Preferred Env. He was contacted by the RP and was interested what are the DEC requirements for the site. Told him to sample all site wells to see the current GW situation at the site and to propose further actions based on the numbers. AD 02/22/2022: Received an email from Jonathan Agosta from DEC's Legal Department regarding preparation on getting the long-term open spill cases with no cooperation from RP under Order/Stipulation. Included this case into the list. AD 04/04/2022: Received a message from Mr. Agosta regarding scheduling a meeting for the spills in the list for Order/Stipulation. It was agreed to schedule the meeting for April 20th, 2022 at 11 AM. AD 04/20/2022: Met with Mr. Agosta to discuss the CAP for the Order. It was agreed that the prepared CAP is adequate and will be sent to the RP with the Order. AD 05/10/2022: Received the following email from Bill Schlageter of Preferred Env.: Hi Ainura: I wanted to follow-up with you. I know that Dan was speaking to you with respect to this site, but he is no longer with us. I have a note from Dan in our file that he spoke to you about our round of quarterly groundwater sampling completed at the property in February 2022. We are preparing the report and will have it over to you later this week. Can you call me to discuss, the owner received a violation notice from the NYSDEC and wants to know why? Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 05/11/2022: Called and spoke with Bill. Explained to him that the order was issued for the RP because they were not cooperating with the site cleanup. He said that according to the latest GW data, the most contaminated site well has around 4,000 ppb of TVOCs. Told Bill that with these levels, they need to prepare a RAP. He will talk with his client. The report will be submitted shortly. AD 05/16/2022: Received the email from Bill: Good Morning Ms. Doronova: Attached

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

please find the Quarterly groundwater sampling report for the recent groundwater sampling conducted in the First Quarter of 2022. Please review. We are proposing to conduct another round of groundwater sampling (2nd Quarter 2022) prior to developing an approach for future activities. Ms. Allana Miller, owner representative for the Subject Property has requested to be copied on all correspondence associated with this property. She is copied on this e-mail. Thank you, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will Review. AD Later in the day received the following email from the site owner: Hello Ms. Doronova: I first want to emphasize that, as second generation ownership, we take this matter very seriously. If Bill s below proposal for additional testing is accepted, and therefore, a proposed remedial action cannot be submitted until August, we would like to request an extension to respond to the Consent Order in the anticipation that we would like to narrow the scope of the Consent Order once we have agreed on the realm of an acceptable remedial action plan. Please confirm if this is acceptable to the NYSDEC. We appreciate the consideration. Alanna Alanna F. Miller, Esq. General Counsel Iberia Foods Corp./Brooklyn Bottling 1900 Linden Blvd. Brooklyn, NY 11207 Email: alanna.miller@iberiafood.com AD 05/26/2022: Reviewed the report. It states that on February 10, 2022, the consultant performed sampling of monitoring wells to evaluate current groundwater quality and assess any residual petroleum impacts associated with NYSDEC Spill No. 97-09774. Preferred mobilized to the Subject Property on February 10, 2022 to attempt to collect groundwater samples from the eleven (11) groundwater monitoring wells. During the sampling events, MW-7 (a.k.a. MW-16) was unable to be sampled as an inoperable truck was parked above the well. Monitoring wells MW-9, MW-10, and MW-13 could not be located and appear to have been paved over. Preferred was able to successfully sample 7 out of 11 wells: MW-1, MW-2, MW-4, MW-6, MW-11, MW-12 and MW-14 on February 10, 2022. One or more petroleum-related VOCs were detected within all seven (7) groundwater monitoring wells at concentrations above their applicable laboratory MDLs. One (1) or petroleum-related VOCs were reported in each of groundwater samples at concentrations in exceedance of their associated NYSDEC Class GA SGVs. Total Volatile Organic Compounds (TVOCs) ranged in concentration from 5.97 micrograms per liter (ug/L) at MW-2 (cross/upgradient), to 3,981.6 ug/L at MW-1, the location of a well which had formerly contained free phase floating product in 2012. One (1) fuel oxygenate compound, Methyl tert-butyl ether (MTBE) was detected (at a concentration of 23 ug/L in mW-1) in exceedance of its respective Class GA SGV. A comparison was made of TVOs detected in groundwater during the February 10, 2022 sampling event to historic groundwater data available for the Subject Property (March 2012, April 2013, and August 2014). A decrease in TVOCs were noted in samples collected from MW-1, MW-2, MW-6, MW-11 and MW-12. A slight increase in TVOCs was noted in the sample collected form MW-4 compared to the prior TVOCs were slighted elevated in MW-4 above the as compared to the most recent sampling data available from MW-4 (April 2013). The TVOC increase was minor and since MW-4 is considered an upgradient well this slight increase in TVOCs concentrations is not considered significant. The concentration of TVOCs in MW-4 reported in February 2022 was however, lower than that

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

reported in 2012. The February 2022 laboratory data indicates that there continues to be an area of residual petroleum impacts in groundwater in the vicinity of wells MW-1, MW11, MW-14 and extending off-site to MW-6. This area is in the immediate proximity of existing and historic underground storage tanks (USTs) and is downgradient of dispensing areas. A decrease in petroleum-related VOCs were noted across the Subject Property (with the exception of the upgradient well (MW-4)) indicating that natural bacteria present within the aquifer are actively breaking down the residual petroleum compounds. Additional efforts may be required to achieve compliant groundwater conditions at the Subject Property. If acceptable to the NYSDEC, the next round of quarterly groundwater sampling will be completed in June of 2022, with a Summary Report provided in July of 2022. A remedial determination will be made based upon the data collected in June 2022 and if necessary a Remedial Action Work Plan (RAWP) can be provided in August 2022. AD 06/01/2022: Received the following email from Ms. Miller: Hello Ms. Doronova: I would like to follow up on both my below request and Bill s request. Appreciate it. Alanna Alanna F. Miller, Esq. General Counsel Iberia Foods Corp./Brooklyn Bottling 1900 Linden Blvd. Brooklyn, NY 11207 Email: alanna.miller@iberiafood.com Sent her the following response: Dear Ms. Miller, The Department approves your proposal for additional groundwater sampling in the second quarter of 2022 to gain more information. Please note that, based on the data provided from February 2022 sampling event, a RAP will be required to be prepared for the site. Feel free to contact me if you have questions or comments regarding this matter. Sincerely, Ainura Doronova - Environmental Engineer AD 06/16/2022: Received a notice from Mr. Agosta that the Order for this site was fully executed. AD 07/21/2022: Received the following email from Bill Schlageter: Good Morning Ainura: Attached please find the 2nd Quarter 2022 QGSR for Spill No. 97-09744 at 1868 Linden Boulevard, Brooklyn, New York. Please feel free to contact me to discuss. Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will review. AD 08/18/2022: Reviewed the 2nd quarter 2022 report. It states that quarterly groundwater sampling was completed by Preferred on behalf of Arnold s Service Station to evaluate current groundwater quality and assess any residual petroleum impacts associated with NYSDEC Spill No. 97-09774. Preferred mobilized to the Subject Property on June 27, 2022, to collect groundwater samples from the eleven (11) groundwater monitoring wells. During the sampling event, MW-7 (a.k.a. MW-16) was unable to be sampled as an inoperable truck was parked above the well. As indicated in the May 2022 Quarterly Groundwater Sampling Report (QGSR), monitoring wells MW-9, MW-10, and MW-13 could not be located and appear to have been paved over. Preferred was able to successfully sample wells MW-1, MW-2, MW-4, MW-6, MW- 11, MW-12 and MW-14 on June 27, 2022. Prior to sampling, all monitoring wells were gauged with a sonic oil/water interface probe. Depth to groundwater measurements on February 10, 2022 ranged from 10.97 to 17.23 feet below grade surface (bgs). No free phase petroleum (floating product) was detected at any of the groundwater monitoring well locations during June 27, 2022 sampling event. Comparison of the depth-to-water measurements to the casing elevations confirms a southeasterly groundwater flow direction, which is consistent with

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

historic groundwater information. During the sampling, a minimum of three-to-five screen interval volumes of water was purged at each well location prior to the collection of a representative sample, in accordance with the protocols established in NYSDEC DER-10. The containerized groundwater samples were immediately placed into an ice-filled cooler and transported to the laboratory. A petroleum sheen was noted on purge water generated from MW-1. All purge water was run through a carbon bucket prior to discharge to the ground surface. All groundwater samples were submitted for laboratory analysis to York Analytical Laboratories, a NELAP/NYSDOH ELAP certified laboratory for NYSDEC CP-51 VOCs by EPA Method 8260 plus MTBE and Fuel Oxygenates. Samples were transported to the lab in an ice-packed cooler, and were submitted under appropriate Chain of Custody (COC) protocols. Groundwater analytical results were then compared to the NYSDEC Ambient Water Quality Standards and Guidance Values (SGVs) and Groundwater Effluent Limitations for Class GA potable groundwater. One (1) or more petroleum-related VOCs were detected within all seven (7) groundwater monitoring wells at concentrations above their applicable laboratory MDLs. With the exception of the groundwater sample collected form MW-2, one (1) or more petroleum-related VOCs were reported in each of groundwater samples at concentrations in exceedance of their associated NYSDEC Class GA SGVs. TVOCs ranged in the site wells from 1.57 ug/L at MW-2 (cross/upgradient), to 3,9992.50 ug/L at MW-1, the location of a well which had formerly contained free phase floating product in 2012. One (1) fuel oxygenate compound, tert-Amyl Methyl Ether(TAME) was detected (at a concentration of 57 ug/L in MW-14) in exceedance of its respective Class GA SGV. A comparison was made of TVOCs detected in groundwater during the June 27, 2022 to historic groundwater data available for the subject property (March 2012, April 2013, August 2014 and February 2022). A general decrease in TVOCs has been noted in in samples collected form all wells since 2014. Of note, during the most recent rounds of groundwater sampling (February and June of 2022), a significant decrease in TVOCs was noted in the samples collected from MW-2 to as low as 1.57 ug/L. The June 2022 laboratory data indicates that there continues to be an area of residual petroleum impacts in groundwater in the vicinity of wells MW-1, MW-11, MW-14 and extending off-site to MW-6. This area is in the immediate proximity of existing and historic underground storage tanks (USTs) and is downgradient of dispensing areas. A decrease in petroleum-related VOCs were noted across the site indicating that natural bacteria present within the aquifer are actively breaking down the residual petroleum compounds. Conclusions and recommendations: Although TVOCs have decreased from prior sampling event, based upon the detected concentrations of TVOCs in groundwater (ranging from 1.57 ug/L to 3,992.5 ug/L), remedial efforts may be warranted to continue to reduce TVOCs concentrations to acceptable concentrations. A remedial approach is being evaluated to address the residual impacts. In accordance with the approved revised Corrective Action Plan associated with NYSDEC Spill No. 97-09774, a Remedial Action Work Plan (RAWP) will be prepared and submitted within 45 days of the approval of this Quarterly Groundwater Sampling report. A RAWP is due. AD 03/2023: Received a call from Mr. Schlageter. Discussed the site. a RAWP is needed to be submitted. Bill needs a confirmation from DEC regarding submitted report in order to proceed with RAWP preparation. Later, received the following email from Bill: HI Ainura: It was nice speaking to you today. Can you reply confirming

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

that you have received the monitoring report form July 2022 and it is accepted by the NYSDEC. Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Sent him the following email: Hi Bill, I confirm that the report dated July 2022 was received and reviewed by DEC. Based on the results of the sampling performed at the site, a Remedial Action Work Plan should be prepared and submitted to the Department for review and approval. Please follow the CAP schedule for all submissions to DEC. Feel free to contact me if you have questions regarding this matter. Sincerely, Ainura Doronova - Environmental Engineer AD 05/12/2023: Received the following email from Bill Schlageter: Hi Ainura: I am requesting a week extension to provide the RAWP to address the gasoline-impacts associated with the above-referenced spill. Please confirm that we will be afforded the week s extension with the new due date of May 22, 2023. Regards, Bill The extension request was granted. AD 05/25/2023: Received the following email from Bill: HI Ainura: The client s attorney is reviewing the draft RAWP at this moment. As soon as I get their review back, I will send the RAWP in. Hopefully by early next week. Bill William J. Schlageter, NYS Licensed PG AD 06/05/2023: Received the following email from Bill: Hi Ainura: Attached please find the Remedial Action Work Plan to address the gasoline-related impacts to soils and groundwater at the property located at 1868 Linden Boulevard, Brooklyn, NY associated with NYSDEC Spill No. 9709774. Please review and feel free to contact me with any questions or comments. Regards, Bill William J. Schlageter, NYS Licensed PG Vice President/Senior Hydrogeologist PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 516 546 1100 fax 516 213 8213 Will review. AD 07/05/2023: Reviewed the work plan. The RAWP has been prepared to reduce contaminants present in soil and groundwater concurrently with the continued operation of the existing gasoline service station located at 1868 Linden Boulevard, Brooklyn, New York (the site). More specifically, the Remedial Action will include the application of an In-situ Chemical Oxidant technology (RegenOx) into soils and groundwater via temporary injection points at targeted areas across the site. The site consists of 20,000 square foot commercial lot occupied by three (3) contiguous buildings at the southern portion. These buildings are currently occupied as a convenience store, subway sandwich shop and miscellaneous storage building. An active gasoline station consisting of three (3) dispensing islands, an overhead canopy and four (4) Underground Storage Tanks (USTs) are located at the central and northern portions of the site. The property is serviced with municipal water and sewer. The current NYSDEC Petroleum Bulk Storage Registration (ID No. 2-269050) indicates that there are four (4) USTs registered to the site (Tank Nos. 001 through 004). Tank No. 001 is a 4,000 gallon double wall steel/carbon steel/iron diesel UST, Tank No. 002 is a 2,000-gallon gasoline/ethanol UST, Tank No. 003 is a 2,000-gallon double wall steel/carbon steel/iron diesel UST and Tank No. 004 a 2,000-gallon gasoline/ethanol UST. A total of sixteen (16) groundwater monitoring wells (MW-1 through MW-16) have been installed historically on and adjacent to the site. The results of the most recent groundwater sampling activities reported elevated concentrations of gasoline-related VOCs in groundwater ranging in concentrations from 1.57 ug/L (MW-2) to 3,992.50 ug/L (MW-1). No free

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

product was detected in any of the sampled wells with the exception of the trace amount (0.01 foot) in well MW-7 during the April 2013 sampling event. Based upon the results of the most recent (June 2022) groundwater sampling event, the NYSDEC has requested that a remedial program be implemented at the Subject Property to address residual fuel oil impacts. ISCO Application was selected as the Preferred's remedy option for this project. This remedial option is the most cost effective and will involve the least site disturbance and/or business interruption at the site, while at the same time effectively remediating the gasoline-related impact to soil and groundwater at the site. It will include: - Installation of three (3) groundwater monitoring well; - Application of 3,270 pounds of RegenOx Part A/Part B ISCO in 5% solution via temporary injection points; - Conduct three (3) rounds of RegenOx Application; - Obtain a NYCDOT Hydrant permit for water supply during application events; and - Conduct four (4) rounds of post application quarterly groundwater sampling. Scope of Work The scope of work is to inject a total of 9,810 pounds of the Chemical Oxidant RegenOx into soils and groundwater across the Subject Property. Prior to the applications, three (3) new two (2) inch diameter groundwater monitoring wells will be installed at the site. The wells will be installed to replace former wells MW-9 (MW-9R), MW-10 (MW-10R) and as a sentinel well downgradient of MW-7/MW-16 (MW-17). The wells will be installed via hollow stem auger drilling technology and drill cuttings will be placed into 55-gallon drums for off-site transportation and disposal. The ISCO (RegenOx) is proposed to be applied via 22 injection points in three (3) separate events in three (3) targeted areas at the site: Area # 1 Southwest of UST Farm Treatment Interval: Seven (7) to seventeen (17) feet bgs - Treatment Area: 1,100 square feet +/- - Injection Points: 11 Temporary Injection Points - RegenOx amount: 1,686 pounds per injection event - Water amount: 2,050 gallons per injection event Area # 2 Northeast of UST Farm - Treatment Interval: Seven (7) to seventeen (17) feet bgs - Treatment Area: 300 square feet +/- - Injection Points: 3 Temporary Injection Points - RegenOx amount: 405 pounds per injection event - Water amount: 510 gallons per injection event Area # 3 Northern portion and upgradient - Treatment Interval: Seven (7) to seventeen (17) feet bgs - Treatment Area: 800 square feet +/- - Injection Points: 8 Temporary Injection Points - RegenOx amount: 1,179 pounds per injection event - Water amount: 1,435 gallons per injection event Injection Monitoring: Prior to and during injection events, each of the groundwater monitoring wells will be gauged utilizing a sonic oil/water interface probe, depth to product, depth to water and depth to bottom readings will be recorded at each groundwater monitoring well at the site. Should any free-phase floating product be detected in any of the groundwater monitoring wells, the ISCO application will be postponed. In addition to gauging, wells MW-1, MW-2, MW-12, MW-14, MW-15 (MW-6), MW-16 (MW-7) and MW-17 will be monitored for pH, conductivity, ORP and dissolved Oxygen (D.O.). During injection events, if pH readings exceed 11, ISCO will be temporarily halted and a fresh water application will be injected until pH readings drop below 11. Once below 11, the ISCO application will resume. Each ISCO application event will take between seven (7) and nine (9) days. ISCO Application Events are to be implemented two (2) months apart from each other providing for a four (4) month schedule for application. One (1) month after the third ISCO application, the first quarterly sampling event will be completed to evaluate the effectiveness of the remedy. As part of the

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

quarterly groundwater sampling, wells MW-1, MW-2, MW4, MW-9R, MW-10R, MW-11, MW-12, MW-15 (MW-6), MW-16 (MW-7) and MW-17 will be purged and sampled. AD 07/13/2023: Issued and sent a RAWP approval letter to Ms. Miller. AD 02/01/2024: Received the following email from Mr. Zweier: Good Morning Ms. Doronova, Attached please find a summarized update of work completed to date at the above-referenced property including the first round of ISCO injections as part of the remedial scope approved in the document dated June 2023. Please don't hesitate to reach out with any questions or comments during your review. A second round of injections at the site is planned for February 2024. We will notify the NYSDEC upon the start of the second round. Best, Christopher P. Zweier Project Manager, Environmental Scientist PREFERRED ENVIRONMENTAL SERVICES 323 Merrick Avenue North Merrick, New York 11566 work: 516 546 1100 cell: 516 729 3293 fax: 516 213 8156 Will review. AD 03/05/2024: Reviewed the report. It summarizes the first round of in-situ chemical oxidation (ISCO) events conducted by Preferred Environmental Services (Preferred) in relation to the NYSDEC Spill No. 97-09774 at Arnold s Service station located at 1868 Linden Boulevard, Brooklyn, NY (Subject Property). The ISCO event was completed in accordance with the approved Remedial Action Work Plan (RAWP) prepared by Preferred for the Subject Property, dated June 2023. Geophysical Survey and Well Installation: On October 17 and 18, 2023, Preferred mobilized to the site with Coastal Environmental Solutions (Coastal). Coastal mobilized a ground-penetrating radar and magnetometer to complete a geophysical survey, and additionally mobilized a Geoprobe equipped with hollow-stem augurs for the installation of three (3) wells - MW-9R and MW-10R, and MW-17. All three (3) proposed well locations were cleared by the geophysical survey, which detected no subgrade obstructions in the area of any of the proposed wells. During this geophysical survey, all proposed ISCO application locations were also cleared to prepare for the subsequent injections. All three (3) wells were successfully installed to a depth of 20 ft bgs, consisting of a 10-foot screen and 10-foot riser, and were finished with an 8-inch diameter steel manhole cover. Soils generated during well installation were screened and logged by Preferred s geologist for lithological characteristics and field evidence of petroleum impact. All soil cuttings generated during drilling were placed in 55-gallon drums pending future disposal. After installation, each well was purged of an appropriate volume of groundwater to clear fines from the completed well and reduce groundwater turbidity. Twelve (12) gallons were purged from MW-9R, fifteen (15) gallons were purged from MW-10R, and twenty (20) gallons were purged from MW-17. A sheen was detected in purge water from all three wells, and a slight layer of free product was observed at MW-17. Purge water was additionally placed in 55-gallon drums pending future disposal. Pre-Clearing: From December 11 through December 14, 2023, Preferred and Coastal mobilized to the site to pre-clear the proposed injection point (IP) locations. Upon clearing each location, all areas were backfilled using the soil generated from hand-clearing, and all asphalt surfaces were patched. In areas where subgrade obstructions were encountered, IP points were relocated as needed and pre-clearing re-commenced. RegenOx Injection: From December 15 to December 28, 2023, Preferred mobilized to the site for injections of the RegenOx compound. Prior to and during each injection event, each of the groundwater monitoring wells were gauged using a sonic oil/water interface probe. Depth to product, depth to water, and depth to bottom readings were recorded for each well. Each

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

well was additionally monitored for pH, conductivity, oxidation-reduction potential (ORP), and DO throughout the span of injections. Throughout this round of injection events, a total of 3,256 lbs of the RegenOx compound were injected across all areas during this round. Upon any occurrence of the injection material daylighting in the injection points or ground surface, injection was temporarily halted or relocated. A second round of injections will be conducted in February 2024, with a third and final round of injections to be scheduled two (2) months after the completion of the second round. AD 05/10/2024: Received the following email from Mr. Zweier: Good afternoon, Ms. Doronova, Attached please find a summarized update of work completed to date at the above-referenced property including the third round of ISCO injections as part of the remedial scope approved in the document dated June 2023. Please don't hesitate to reach out with any questions or comments during your review. The first round of post-injection groundwater sampling at the site is planned for May 27, 2024. Best, Christopher P. Zweier Project Manager, Environmental Scientist PREFERRED ENVIRONMENTAL SERVICES NYS, NYC, PANY/NJ, New York City School Construction Authority-certified WBE 323 Merrick Avenue North Merrick, New York 11566 work: 516 546 1100 cell: 516 729 3293 fax: 516 213 8156 Will review. AD 06/04/2024: Reviewed the report. It summarizes the third round of in-situ chemical oxidation (ISCO) events conducted by Preferred at Arnold s Service station located at 1868 Linden Boulevard, Brooklyn, NY (site). The ISCO event was completed in accordance with the approved Remedial Action Work Plan (RAWP) prepared by Preferred for the Subject Property, dated June 2023. RegenOx Injection: From April 15 to April 23, 2024, Preferred mobilized to the site for injections of the RegenOx compound, a chemical oxidation technology produced by Regenesis, which includes a sodium percarbonate oxidizer complex activated by a surface catalyst system. During the first round of injections in December 2023, all IP locations were pre-cleared to 6 ft bgs by saw cutting through the asphalt at grade surface and using a stainless-steel hand auger, an air knife, and a utilivac to ensure that no subgrade obstructions were present in any proposed IP location. Upon clearing each location, all areas were backfilled using the soil generated from hand-clearing, and all asphalt surfaces were patched. In areas where subgrade obstructions were encountered, IP points were relocated as needed and pre-clearing re-commenced. During the second and third round of injections, each ISCO Injection Point was located in the same locations precleared during the first injection event. Prior to and during each injection event, each of the groundwater monitoring wells were gauged using a sonic oil/water interface probe. Depth to product, depth to water, and depth to bottom readings were recorded for each well. Each well was additionally monitored for pH, conductivity, oxidation-reduction potential (ORP), and dissolved oxygen (DO) throughout the span of injections. Throughout this round of injection events, RegenOx compound was injected in a mixture of water, mixed in a ratio of 1 pound of RegenOx compound in 1.25 gallons of water. Total quantities injected were as follows: - Zone 1: 1648 lbs of RegenOx compound in 2060 gallons of water, among eleven (11) ISCO injection points - Zone 2: 408 lbs of RegenOx compound in 510 gallons of water, among three (3) ISCO injection points - Zone 3: 1200 lbs of RegenOx compound in 1500 gallons of water, among eight (8) ISCO injection points. A total of 3,256 lbs of the RegenOx compound were injected across all areas during this

CLOSED-LACKOF RECENT INFO (Continued) **S102959961**

round. Upon any occurrence of the injection material daylighting in the injection points or ground surface, injection was temporarily halted or relocated. This was the final round of injections. A groundwater sampling event will be scheduled with the completion of this final round. AD

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD Tank Test Failure letter sent to: Sunnydale Farms Inc. 400 Stanley Ave Brooklyn, NY 11207 Attn: Raymond Kearney 5/10/05. J.Krimgold spoke to Mark Turoff (Energy Tank & Environmental Services) at 917-750-1843. He has done a site assessment at this site. Most likely the site will require spill investigation due to the contamination found so far. He will submit a report this week. Owner wants to have a CO or stip for this site. Owner: Stanley Eisenberg phone 561-414-7221 400 Stanley Ave Brooklyn, NY 11207 08/09/05. - spoke to Mark Turoff. (E-mail address- ENVCOM3@aol.com) there are four 5,000 gallon fuel tanks with some containing diesel. there are are four 10,000 gallon heating oil tanks, mostly no. 2 and was some No. 4. Mark will send me the address of the property owner so that a stipulated agreement can be sent. S. Scharf 08/10/05 - Spoke to Stanley Eisenberg. I sent Stanley a stipulation agreement. Accountant: Daphne Stasco (Email: Dstasco@optline.net DJSpergamentadvisors.com) 115 Quaker ridge Manhasset, NY 11030 08/12/05- Spoke to Stanley Eisenberg. He will sign the stipulation agreement and send it back in to me. He has hired a company called Pro-Test (ENVCOM30@AOL.COM) that will: Submit the required I&R work plan for 400 stanley ave. For 383-389 Stanley ave there are tanks also. they will test, and if fail get new spill nubmer and will address all the tanks at once. 400 stanley Ave has 4-5,000 tanks for gasoline to be removed, and 4-10,000 fuel oil tanks of which three have already been closed ad the 4th on requires closure.- S. scharf 383-389 Stanley Ave will also require remediation. 09/20/05- Called Pro Test to talk to either John or tom (son)Liddy. Not in Told worker that Eisenberg signed the stipulation and we are waiting for the work plan to attache to it.-S.Scharf. John Leddy calls back same day. will submit the required work plan. 09/23/05- John Leddy from Pro-Test called. He will be submitting a work plan. proTest wants to start on the 4-10,000 gallon tanks on the north end. Pro-Test Inc 410 Lexington Ave North Babylon, NY 11704 (631)-321-4670 10/07/05 Several calls with John Leddy. Overall, Pro-Test has removed the concrete cover on the 4-10,000 gallon fuel oil tanks. Three of the four tanks were previously abandoned in place with slurry. removed the fourth

STANITA SERVICE CORP - VACANT LOT (Continued) **1001961664**

tank, washed it and cut it up for removal. Oil contaminated soils on north and south side and under abondoned tanks. So far, Protest has removed 275 yards of soil and are segregating contaminated versus non-contaminated. He will assess the situation monday and make a decision as to whether to pull the abandoned ones in order to complete remediation.- Steven scharf- PM. Thursday and Friday 10/20-1/05 have tested stockpiled soils and will have allied Waste remove this week. Week of 10/31/05- On tuesday took out contaminated soils from a back hoe delivered by Stanley Eisenberg. Work has started on the 5-4,000 gallon gasoline tanks. Four are diesel and one is gasoline. The tank contents have been pumped out by petroleum tanks cleaners. The Gas tanks will be cleaned on monday.- S. Scharf 11/29/05- In the area of the 5-4,000 gallon motor fuel tanks, two additional tanks were identified. All the motor fuel tanks were cleaned, cut up and removed from the site. All the soils from the heating oil tanks were tested, manifiested and removed from the site. Spoke to both John Leddy of Protest and Ray Carney. A status report is coming ASAP and there is a request to fill in the pit around the former 10,000 gallon tanks.- S. Scharf 12/02/05- Spoke with John Leddy. Need to put in two monitoring wells for northern heating oil tank removal. GW is evident at the bottom of the pit and need to confirm that all the heating oil is out. Therefore, put one well on either side and fill in the pit.- S. Scharf 12/05/05- Spoke to Ray Carney of Red Banana Inc. Will approve the monitoring wells so that filling in pits can proceed. Already has soil stockpiled.- S. Scharf 12/07/05-spoke to John leddy of Pro Test. I will get him MW approval letter and he will put it on the work schedule. S. Scharf 12/13/05- Letter sent to ProTest summerizing work ot date, need for wells on north and need for further investigation on south.- S. Scharf January 2006. brought in a cotractor to do a magnetonmetry survey. found eight 550 gallon tanks. Search of NYC records confirmed the eight tanks installed in 1958. Contractor was brought in to remove the eight tanks, that were all empty. confirmatory sampling showed no problems in these areas. Sunnydale made a proposal to offsite dispose of the excavated materials, fill in the excavation and install monitoring wells and insitu injecction wells. approval was granted on this action for the northern tanks 2/06- S. Scharf 2-3/06-The five-4,000 fuel tanks were removed and several hundred yards of dirt. Adjacent tanks, eight-550 gallon tanks were discovered and removed. additional soils were stockpiled. The removed tanks were deconned, cut up and removed for Scrap. All the stockpiled soils were tested, manfiested and properly disposed offsite. I reviewed the proposal to back fill the holes and install monitoring wells and wells that chemox can be injected in. I approve plan and Red Banana will be submitting the remediation plan. S. Scharf 3/06- Holes have been backfilled and wells have been installed. per converartion with Ray Carney.- S. Scharf 6/06- Send letter to Ray Carney that the wells need to be monitored now and in near future for detemination whether to close spill or use chem-ox. 7/06- Mark turo calls as Sunnydale Farms Env. consultant. 917-750-1843. He will sample wells for Stars on 7/11/06.-S. Scharf 9/06- Energy, Tank and Environmental Services Inc. report on the groundwater sampling is approved and the spill is officially closed by correspondence on 9/7/06. S. Scharf

Remarks: 5 tanks tested all failed Tanks 4 and 5 are also 4000 gallons and were tested with the same test method as the other 3 tanks.

DEC Memo:	This spill is associated with a former spill from the site #0404235 which was closed out in Sept 2006 by Steve Scharf (DEC Albany). Region 2 just got this new spill report (0706859) for the site at 400 Stanley Ave Brooklyn. Delta Environmental has done some new drilling on the site (Phase 2 ?) and has found problems with soil and water. Since this site already had a spill that was investigated and closed out, we should probably try to compare the previous sample results to the current results and determine what we'll do with this site. 9/21/2007 Steve Scharf - DEC Albany - Forwarded the following response to a request for a hard copy of the Aug 2006 report. All the reports were filed together here in the Central office by spill number and then shipped back to the region. There were a number of 550 gallon tanks and soils removed and sent offsite. Also two of the three 10,000 fuel oil tanks were removed, the other had filled with concrete a while back and was abandoned onsite. Monitoring well data did not show any offsite impacts from the removed source area(s). What part of the site was Delta drilling on when this was found? DEC needs to: 1) Connect with Delta Environmental & determine what work was done, what work they intend to do, etc. 2) Review the old & new sample results to determine what work needs to be done. 01/23/08- Rec'd Phase II Acquisition Subsurface Assessment Report prepared by Delta Consultants.The report was prepared in response to a request by the client(Stanley Realty & Malta Realty,LLC) to assess and document subsurface environmental conditions on the subject site.On July 2007, four borings were advanced on the subject site to a depth of 10 to 19 ft.Soil samples were taken

STANITA SERVICE CORP - VACANT LOT (Continued) **1001961664**

from both above the soil water
interface and below the soil water interface.Samples were analyzed for
VOCs/SVOCs according to EPA
Methods 8260/8270.Three of the four soil borings were converted to
temporary monitoring wells for
ground water sampling purpose.Delta collected three GW samples from
the three wells.Light non
aqueous phase liquid(LNAPL) was not detected in any of the temporary
wells.Laboratory analysis of
soil and ground water showed minor exceedances of one or two VOC/SVCOs
which are residual in
nature, and do not warrant further remediation.Considering non
residential nature of the
property,extent of the residual contaminaton,absence of sensitive
receptor, this spill case is
closed.(SR)

DEC Memo:	Site remediation tracked under spill no. 94-06497. See also spill nos. 90-10771, 91-05582, and 92-12401. 4/16/2004: Site management transferred from Sigona to Rommel. (Rommel) 10/8/2004: Transferred from Rommel to Harrington (central office). (Rommel) 12/2/2004: SI work plan approved. (Harrington) 7/18/2005: Sent letter to Exxon Mobil approving SI report. Requested quarterly EFR events at MW-15, MW-18, and MW-19 until gw remedy is implemented. Also requested additional gw well east of MW-7 in order to further delineate upgradient edge of contaminant plume. (Harrington) 9/23/2005: Sent letter to Exxon Mobil approving supplemental SI work plan. (Harrington) 2/26/2006: Sent e-mail to Exxon Mobil approving the sensitive receptor survey report. (Harrington) 4/7/2006: Sent e-mail to Exxon Mobil approving both the supplemental SI report and the feasibility study work plan. (Harrington) 8/15/2006: Approved the in-situ remedial work plan. Plan calls for the pilot testing of chem-ox technology in the eastern portion of the site. (Harrington) 6/19/2007 - Haggerty - Management transferred from Dave Harrington to Mike Haggerty 9/26/07 - Haggerty - approved moving back sampling one month this quarter. Station upgrade underway during the month of September would have prevented some wells from being sampled. Subsequent quarterly sampling will stay on previous schedule. 6/4/08 - Haggerty: sent approval of -Quarterly EFR events can be discontiued -MW's 12,14,16,17,20 can be removed from the sample network although they should be maintained as viable wells. I would like to continue sampling MW-7 as the sole upgradient well. 8/12/08 - Haggerty: reviewed QMR. Gave the following comments Kleinfelder states on the first page, A review of

MOBIL STATION (Continued) **S102672574**

groundwater quality data indicates a generally decreasing trend in concentrations of both BTEX and
MTBE in the MW's included in the sampling network with the exceptions of MW-5 and MW-18, which show
fluctuating trends. I believe that MW-1, MW-4, and MW-19 concentrations fluctuate to an equal
extent. MW-5 and MW-18 as well as MW-1, MW-4, and MW-19 are all located in the southeast portion of
the site. Dating back to the mid-1980's, the south- southeast portion of the site has shown the
greastest groundwater impact. Groundwater may be being feed by residual contaminated soil from the
old 550gal tanks or a heavily contamination smear zone directly underneath the old 550's/current
canopy. These fluctuations in groundwater concentrations lead me to believe this area will not
naturally degrade in a reasonable time-frame. Up to this point, ExxonMobil has performed several
remedial technologies to reduce contaminate concentrations. 11/20/08 - sent email to ExxonMobil
requiring a Remedial Investigation Work Plan/ Feasibilty Study must be submitted within 60 days.
Kleinfelder intended to propose MNA. PM stated that MNA will not be sufficient considering the
amount of residual contamination. 2/11/09 - Haggerty: approved Remedial Investiation work plan
April 2010 Approved RegenOx Pilot Study to address remaining groundwater contamination April 15,
2009. PM on-site May 13, 2009 while injection points were being installed (10 injection points).
Feasibility report approved but additional injection of RegenOx is warranted to determine is this
technology is viable. Mixed results encountered after the initial Pilot test. Additional injection
took place in 2/10. PM reviewed 2nd injection report. Additional groundwater monitoring needed to
evaluate effectiveness May 2010 Final determination of whether RegenOx is a viable remedial
technology still pending. Addtional groundwater monitoring required August 2010 - Site Status
Update/ Feasibility Report under review Oct.2010 - A work plan is due 11/13/10 (SD) January 2011 -
site divested to BOLLA EM REALTY February 2011 - SI work plan under review March 2011 - Approved
work plan to delineate soil contamination in the eastern portion of the site. RegenOx injections
had no effect on dissolved conc June 2011 - reviewed soil investigation report. contamination
confirmed to be limited to the saturated zone. Arcadis will evaluate of the feasibility of using
the SVE/AS components remaining on-site to determine whether its stall vaible. Feasibility report
will be included in the next SSUR Sept. 2011 - Arcadis intends to retrofit the existing SVE/AS
infrastructure and install more AS wells in the southeast corner. RAP due in 45days November 2011 -
received RAP/CAP for SVE/AS December 2011 - approved RAP/CAP with

MOBIL STATION (Continued) **S102672574**

conditions. Bolla has CO for this
site. Water table dropped ~1.5ft causing LNAPL to re-appear. New SPill called in until
fingerprinting confirms age of product February 2012 - SSUR due this month. LPH fingerprinting will
be included. April 2012 - SSUR and fingerprinting data was not sufficient proof that the product
was from a new release. The water table dropped significantly and residual LNAPL trapped within
smear zone pore space was liberated June 2012 - SSUR under review. August - installation of new
SVE/AS system underway December 2012 - CAP is under review. This is a Bolla site and already has a
CO under the global order 1/7/13-spoke with Dave Tracy from Arcadis. he has revised the CAP per my
comments and the CAP is with Bolla's attorney. I told him it would be best to have this approved by
before I go out on medical leave May 2013 - Arcadis is currently renting a SVE trailer. Plans to
improve the system underway October 2013 - trenching for the new SVE/AS system will begin 11/4/13.
Additional system wells have already been installed June 2014 - Haggerty: Last update was
incorrect. SVE/AS system installed but ConEd is dragging their feet to give the system the final
approval to turn the system on. August 2014 - Haggerty: system operational. September 2014 -
Haggerty: AS component of the system shutdown until it could be reprogramed. The system couldn't
maintain the 0.5lbs/hr effluent limit with the full SVE/AS system operating. The system will be
programmed to cycle through the AS wells rather than all operating at once at least until the
influent concentration decreases significantly. January 2016 - Haggerty: approved temporary
shutdown of system to monitor for rebound. December 2016 - Haggerty: a small amount of NAPL (0.08')
was encountered in MW-9 side-gradient to the current USTs. This area was historically clean so the
SVE/AS was designed to provide coverage to this area of the site. PM requested a well be installed
downgradient to the USTs. December 2017 - Haggerty: additional well downgradient of USTs installed
and groundwater appears clean. Groundwater monitoring will continue. SVE/AS system achieved
objective. 8/20/18 - Haggerty: reviewed receptor evaluation report. Spill closed.

Record Added Date:	06/05/2018
Record Updated Date:	08/16/2024
Update By:	SMQUANDT
Site Description:	"Site Features: Two industrial buildings that had occupied most of the site have been razed, and the site is presently an empty, unpaved lot. Current Zoning and Land Use: The site is zoned M1 1 and located in an industrial business zone (IBZ). Along Van Sinderen Avenue, there are currently other manufacturing, industrial, and transportation uses, with many vacant buildings. The surrounding area to the east is composed of predominantly residential and commercial uses. Past Use of the Site: Historic records indicate that the site was developed for industrial and manufacturing uses, including furniture, sash, door and blind manufacturing and woodworking between 1905 and 2015. The site has remained vacant since 2015. Site Geology and Hydrology: Surface topography at the site is generally level and lies at an elevation of approximately 35 feet above mean sea level. The surrounding area gradually slopes down to the south. Site lithology consists of historic fill materials (including sand,

JEAN'S PLACE (Continued) **S132691295**

gravel, silt, brick, concrete, and asphalt) from just below the surface to depths up to approximately seven to 10 feet below grade. Groundwater is located approximately 30 feet below grade at the site and flows in a southerly direction. There are no surface water bodies or streams on or immediately adjacent to the site. "

Env Problem: "Nature and Extent of Contamination Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and per and polyfluoroalkyl substances (PFAS). Soil vapor was analyzed for VOCs. The primary contaminants of concern are SVOCs in soil and chlorinated VOCs in soil vapor. The soil, groundwater, and soil vapor contaminants appear to be associated with historic fill and former industrial operations at the site and an adjacent parcel. Soil The volatile organic compound (VOC), trichloroethene (TCE), was detected at a concentration of 0.54 parts per million (ppm), below its Restricted Residential SCO of 21 ppm. No VOCs were detected at concentrations exceeding the RRSCOs. Up to 23 semi volatile organic compounds (SVOCs) were detected in nine of 16 soil samples. The highest concentrations of each VOC were detected in one sample near the middle of the site. These included benzo(a)anthracene at a maximum concentration of 230 ppm compared to its RRSCO of 1 ppm, benzo(a)pyrene at 190 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 77 ppm (RRSCO is 3.9 ppm), chrysene at 230 ppm (RRSCO is 3.9 ppm), dibenzo(a,h)anthracene at 35 ppm (RRSCO is 0.33 ppm), fluoranthene at 520 ppm (RRSCO is 100 ppm), indeno(1,2,3 cd)pyrene at 130 ppm (RRSCO is 0.5 ppm), phenanthrene at 610 ppm (RRSCO is 100 ppm), and pyrene at 480 ppm (RRSCO is 100). No metals were detected at concentrations exceeding the RRSCOs. No PCBs or pesticides were detected in any of the soil samples analyzed. Groundwater Groundwater was encountered at approximately 30 feet below grade and flows in a southerly direction. Groundwater sampling results were compared to the NYSDEC ambient water quality standards (AWQS). The results of the groundwater sampling showed that up to six VOCs were detected in all four groundwater samples collected. PCE was detected at a concentration of 5.7 parts per billion (ppb), and 8.0 ppb, both exceeding the AWQS of 5 ppb. Chloroform was detected at 20 ppb, above its AWQS of 7 ppb. No other VOCs were detected at concentrations exceeding AWQS. No SVOCs, PCBs or pesticides were detected in the groundwater samples. Soil Vapor The chlorinated solvents TCE and PCE were detected in the soil vapor beneath the site with the highest concentration of PCE 94,000 micrograms per cubic meter (g/m3) on the northeastern portion of the site near the site boundary and the highest concentration of TCE at 3,200 g/m3 on the southeastern portion of the site."

Health Problem: "The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater is not used for drinking and the site and surrounding areas are served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to

JEAN'S PLACE (Continued) **S132691295**

	soil vapor intrusion for any future on-site development. Environmental sampling indicates soil vapor intrusion associated with this site is a potential concern for off-site buildings."

BROWNFIELDS:

Name:	JEAN'S PLACE - OFF-SITE
Address:	485 VAN SINDEREN AVENUE
City,State,Zip:	BROOKLYN, NY 11207
Program:	BCP
Site Code:	635663
Acres:	Not reported
HW Code:	C224275A
SWIS:	2401
Town:	New York City
Record Added Date:	04/22/2022
Record Updated Date:	04/29/2024
Update By:	SMQUANDT
Site Description:	"Site Features: Two industrial buildings that had occupied most of the site were recently razed. Presently, the site is an empty, unpaved lot. Current Zoning and Land Use: The site is zoned M1 1 and located in an industrial business zone (IBZ). Along Van Sinderen Avenue, there are currently other manufacturing, industrial, and transportation uses, with many vacant buildings. The surrounding area to the east is composed of predominantly residential and commercial uses. Past Use of the Site: Historic records indicate that the site was developed for industrial and manufacturing uses, including furniture, sash, door and blind manufacturing and woodworking between 1905 and 2015. The site has remained vacant since 2015. Site Geology and Hydrology: Surface topography at the site is generally level and lies at an elevation of approximately 35 feet above mean sea level. The surrounding area gradually slopes down to the south. Site lithology consists of historic fill materials (including sand, gravel, silt, brick, concrete, and asphalt) from just below the surface to depths up to approximately seven to 10 feet below grade. Groundwater is located approximately 30 feet below grade at the site and flows in a southerly direction. There are no surface water bodies or streams on or immediately adjacent to the site."
Env Problem:	"On-site soil vapor has concentrations of PCE at 94,000 ?g/m3 and TCE at 6,500 ?g/m3. Private residential properties abut part of the property. On-site Nature and Extent of Contamination Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides, and per and polyfluoroalkyl substances (PFAS). Soil vapor was analyzed for VOCs. The primary contaminants of concern

JEAN'S PLACE - OFF-SITE (Continued) **S132691307**

are SVOCs in soil and chlorinated VOCs in soil vapor. The soil, groundwater, and soil vapor contaminants appear to be associated with historic fill and former industrial operations at the site and an adjacent parcel. Soil The volatile organic compound (VOC), trichloroethene (TCE), was detected at a concentration of 0.54 parts per million (ppm), below its Restricted Residential SCO of 21 ppm. No VOCs were detected at concentrations exceeding the RRSCOs. Up to 23 semi volatile organic compounds (SVOCs) were detected in nine of 16 soil samples. The highest concentrations of each VOC were detected in one sample near the middle of the site. These included benzo(a)anthracene at a maximum concentration of 230 ppm compared to its RRSCO of 1 ppm, benzo(a)pyrene at 190 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene at 77 ppm (RRSCO is 3.9 ppm), chrysene at 230 ppm (RRSCO is 3.9 ppm), dibenzo(a,h)anthracene at 35 ppm (RRSCO is 0.33 ppm), fluoranthene at 520 ppm (RRSCO is 100 ppm), indeno(1,2,3 cd)pyrene at 130 ppm (RRSCO is 0.5 ppm), phenanthrene at 610 ppm (RRSCO is 100 ppm), and pyrene at 480 ppm (RRSCO is 100). No metals were detected at concentrations exceeding the RRSCOs. No PCBs or pesticides were detected in any of the soil samples analyzed. Groundwater Groundwater was encountered at approximately 30 feet below grade and flows in a southerly direction. Groundwater sampling results were compared to the NYSDEC ambient water quality standards (AWQS). The results of the groundwater sampling showed that up to six VOCs were detected in all four groundwater samples collected. PCE was detected at a concentration of 5.7 parts per billion (ppb), and 8.0 ppb, both exceeding the AWQS of 5 ppb. Chloroform was detected at 20 ppb, above its AWQS of 7 ppb. No other VOCs were detected at concentrations exceeding AWQS. No SVOCs, PCBs or pesticides were detected in the groundwater samples. Soil Vapor The chlorinated solvents TCE and PCE were detected in the soil vapor beneath the site with the highest concentration of PCE 94,000 micrograms per cubic meter (g/m3) on the northeastern portion of the site near the site boundary and the highest concentration of TCE at 3,200 g/m3 on the southeastern portion of the site."

Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	PBS Line Test Failure: NYC Transit thought they had a water leak in a sump. They called Franklin Co. to vac out the sump and found diesel, not water. 5 feet away are 2 large tanks (4,000 gal double walled tanks) Tanks were tested OK, lines were tested but failed. The line will be dug out, repaired and tested again. 08/13/08-Zhune spoke to Bob Laga from Franklin Co. (718) 762-5200. He said the fill line failed. Franklin Co. repaired the line, they put flex conector. Tank was retested and passed the test. As per Bob No realese to the Environment, no stain, no odors, no nothing. NYC Transit will send the report. 11/24/08 NYC transit sent a letter and testing data attached. the letter stated that the leak was located at the fill box, no soil was impacted. spill Closed
Remarks:	LINE TEST AND FAILED IS LOCKED OUT : WILL DO MORE TESTING

DEC Memo:	12/23/2015: Rashad Spill reassigned from DeMeo to Omar as per DeMeo. 105-01 Foster Ave has alternate addresses of 105 Foster Ave, 101-111 Foster Ave, 1035-1059 Mc Donald Avenue, and 22 Parkville Avenue. There is previous spill#9907462 which was closed in 2005 due to a 50 gall spill from compressor, spill#9702982 for 105-02 Foster ave was closed in 2003 where gw contamination was from 524ppb-830ppb for total VOCS, other wells had VOCS around 800ppb and 3,900ppb was found in soil, spill#0201126 which was closed in 2006 found contamination while pulling tank, after high level contamination was found monitoring continued until levels declined resulting in closure. PBS#2-601806 was found for DSNY there are 7 active USTs, two 2000 gallon gasoline tanks, two 4000 gallon biodiesel tanks, 1 3000 gallon hydraulic oil and 1 3000 gallon motor oil tank, and one 1000 gallon waste/used oil tank. No documents in D2 found. 12/23/2016: Rashad Spill will be administratively closed as spill was contained to back up unit and no resources were reported to be affected.
Remarks:	1129 THE CALLER ADVISED DISPATCH THE SPILL CAUSE IS UNKNOWN AT THIS TIME. INVESTIGATIONS HAVE BEGUN. THE SPILL WAS CONTAINED TO A BACK UP UNIT. THE CLEAN UP WILL BE PENDING INVESTIGATION. ALL LINES TO THE DIESEL TANKS HAVE BEEN TEMP SHUT OFF UNTIL FIXING OF THE UNITS HAVE BEEN COMPLETED.

Tank Info:

Tank Number:	001
Tank Id:	50688
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
H00 - Tank Leak Detection - None

BASEMENT TANK ROOM - TTF (Continued) **U003396742**

	L09 - Piping Leak Detection - Exempt Suction Piping
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service

DEC Memo:	08/12/05- Reviewed the ISRP submitted by Shaw Envtl., dated June 23,2005. The soil analytical results reveal no exceedances of VOCs above NYSDEC soil cleanup criteria, and minor exceedances of some SVOCs in 50% of the soil samples with the highest TSVOCs being 113,900ppb in one sample from boring GW-5. The depth to groundwater at the site is 10' bgs. Four of the ten groundwater samples exhibit very minor exceedances of two VOCs and two samples exhibit minor exceedances of one SVOC compared to NYSDEC water quality guidance values. The soil and groundwater results corroborate with the spill report that the source of this contamination is waste oil. Shaw states that the area of highest soil SVOC contamination, GW-5, resides under the garage floor, and that the risks associated with attempting soil excavation in this area outweighs any benefits that excavation will provide. The Department endorses Shaw s statement and concurs with their recommendation of quarterly groundwater sampling of the on-site wells to monitor the levels of groundwater contamination as the natural attenuation progresses.- II 3/09/06: This

BROOKLYN EAST 18 DOS -DDC (Continued) **S104950985**

spill transferred from I.
Islam to Q. Abidi. 8/18/06 DEC lead transferred from Q. Abidi to J.A. Maisonave. - JAM 12/14/06
Reviewed Semi-Annual Monitoring Report submitted by Roux/Greyhawk. The last round of groundwater
monitoring took place on August 7, 2006 and only one well showed an exceedance for MTBE at 69ppb.
This site poses now threat to human health or the environment. This spill case will be closed and a
NFA letter will be issued. - JAM

Remarks: while doing a tank pull ground cont was found.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 5-16-2005 Reviewed Remediation System O&M Report for January through December 2004 submitted on April 26, 2005. AS and SVE systems are operating. VOCs detected above the TOGS guidance values. No vacuum measurments in vapor/monitoring wells. AZ 11-04-2005 Last report was submitted in April 2005 (3 months later). GW contamination is ranging from total VOCs 524 ppb to 830 ppb. Downgradient well SVE-7 (MW-7) has 830 ppb total VOCs and increasing trend. There is no well downgradient of SVE-7. Also gw in MW-3 contains 775 ppb total TVOCs. Total VOCs in soil is 3,900 ppb, total SVOCs in soil is up to 168,800 ppb. SVOCs are leaching into the soil. Plume migrates downgradient and is unstable. No clean sentinel well. I am not recommending this site for closure. AZ
Remarks:	CALLER IS DOING A TANK UPGRADE AT SITE AND FOUND CONTAMINATION AROUND FILL PORTS. SAME AS SPILL # 9513357.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/08/93: REPLACED ELBOW RETESTED AND PASSED 4/19/93 NO CONTAMINATION FOUND. 04/16/04-File Update by Sun: - TRi-nnual Report-September 2003 through 2004, prepared by William Schaefer of GSC-Twelve (12) wells were gauged and sampled on 12/30/04, including (MW-1 through MW-4, MW-7. MW-9 through MW-14, MW-18, and SVE-1). Groundwater depths ranged from 10.35 feet to 12.82 feet. Groundwater flow direction was towards southwest. MW-10 had the maximum Benzene concentration of 730 ug/l. MW-13 had the maximum MTBE concentration of 77 ug/l. An SVE/AS system is now operating on site. 08/22/05-File Update by Sun: Also refer to Spill #98-10899 at the same location. (Sun) 10/28/05: Project reassigned from Sun to Andersen. Reviewed the triannual report dated 6/2/05. The site is making good progress with the SVE system currently in use. 1/26/06: 1/25/06 meeting with Quantum, NYSDEC, and GSC/Kleinfelder:SVE will be turned off and a remedial action plan developed for peak in MW-8 (may use ORC), there can't be additional release because this station is not an active station). 3/9/06: Reviewed monitoring report dated 2/27/06. Max BTEX 17,770 (MW8), max MTBE 66 (MW2). Depth to water 10 ft. Eleven wells sampled on 12/14/05. SVE will be shut off and bioremediation used in MW8. Request to remove sampling of MW3 was approved. 6/23/06: Received triannual monitoring report dated 6/14/06. SVE/AS shutoff. Max BTEX 17,730ppb (MW8) and max MTBE 40ppb (MW2). RAP required for MW's:1,4,7,8,10,11,14. Discuss during meeting scheduled for 6/28/06. 6/30/06: Meeting on 6/28/06 with Hess, Quantum, NYSDEC, EnviroTrac and GSC. An RAP utilizing regenox will be submitted. An upgradient source in MW-11 is suspected, from Exon or Mobil. 7/11/06: RAP workplan for bioremediation using RegenOx conditionally approved. Workplan proposed RegenOx application only to MW-8. Groundwater sampling showed rebounding in MW-10 and MW-11 following shut down of the SVE/AS system in February 2006. Conditional RAP approval required RegenOx application to MW-10 and MW-11. 9/6/06: Received cc of a letter requesting permission from current property owner to inject regenox. 10/16/06: Received email from Gail Helfrick: Despite several attempts, we have not been able to contact the property owner in order to revise the access agreement to allow for this work scope. Currently, we are trying to obtain contact information through the currrent tenant. 10/20/06: Sent letter to Mr. Karron, current owner, to request access. 11/1/06: Reviewed triannual report dated October 25, 2006. Groundwater sampled on August 10, 2006. Rebounding in MW 1, 4, 10, 11. High residual concentrations in MW 8. Regenox use planned

MERIT STANLEY (Continued) **S103574868**

in MW 8, 10, 11, but access is problematic. 11/10/06: Letter to Mr. Karron returned to sender. 11/16/06: Emailed Gail Helfrick to confirm Mr. Karron's address. 12/11/06: Sent email to Hess to followup on access for implementation. 12/18/06: Received email from Aaron Lapine of Delta: We are not sure of the property owner's address. When Kleinfelder sent (via certified mail) the access letter to the address they had, the letter could not be delivered. Kleinfelder was not sure if it was because the property owner moved or just that no one was home to sign the certified letter receipt. Kleinfelder then dropped off a copy of the access letter and recently the NYSDEC letter to the tenant and requested that the tenant forward the letters to the property owner. Until site access is confirmed with the property owner, the injection event cannot be occur. Delta will work with Kleinfelder to confirm access by obtaining the owner's correct address and confirming with the tenant that the information was delivered to the owner. 1/17/07: Meeting on 1/16/07 with Hess, Delta, and NYSDEC. Mr. Karrons address is still unknown. 2/22/07: Received email from Aaron Lapine : Access has not yet been granted. We have not been able to locate the property owner. We performed a review of NYC tax records and the owner is listed as 810-820 Pennsylvania Avenue Corporation and the mailing address given is the site address. I have called the current tenant (Buddy's Car Wash) numerous times and have only been able to get a hold of the manager once. The manager would not give me the owner's mailing address only his name (Boris Thomas), but stated if I called back the same day after 2pm Boris would be at the car wash. When I called back, I was told they did not know anyone by the name of Boris Thomas. I have been unable to contact the manager since then. Although we were trying to locate the owner's current address, we re-sent the access agreement via FedEx to the car wash property. 3/5/07: Resent access required letter to Mr. Karron at: 70 Curtis Avenue Manasquana, NJ 08736 and 810-820 Pennsylvania Avenue Corp. c/o Soloman and Bernstein 1178 Broadway, 5th Floor New York, NY 10001-5404 3/6/07: Reviewed the Site Status Report. Wells sampled on 12/1/06. Fluctuating concentrations. Max BTEX 13,520 ppb (MW11), max MTBE 40 ppb (MW2). RAP not implemented because of access issues. 3/14/07: Letter to 810-820 Pennsylvania Avenue returned to sender. 3/20/07: Spoke to Mr. Karron (site owner) (914-960-9213, akarron@optonline.net). He will provide access for RAP implementation. 5/24/07: Received email from Aaron Lapine: We are currently working with property owner for access. We have discussed the possibility of mobile AS/SVE treatment event(s) as an alternative to RegenOx, since it is less intrusive than the injections. 7/6/07: Reviewed update report. Groundwater sampled on 4/27/07. Fluctuating groundwater concentrations. Max BTEX 614 (MW8). Mobile short term SVE/AS proposed and approved. The mobile AS/SVE event would utilize air sparge points SP-6, SP-7, SP-9, and SP-9, and SVE wells MW-4, MW-8, MW-10, and MW-11. One 8 hour event will be performed, and used as a pilot test for this technology. 8/3/07: Approved use of method TO3 to analyse air effluent samples. 10/16/07: Spoke to Tim Fisher. Mobile SVE/AS will be conducted on 10/17/07. Effluent air sample will be collected. Report willbe submitted by the end of the month. 12/3/2007 - Feng - Reviewed update report, 10/26/2007. The monitoring wells were gauged and sampled on 8/15/2007. DTW 9.95' to 12.19' bg. Flows to south. No LNAPL. Max BTEX 3,340 ppb (MW-4). Max MTBE 20 ppb (MW-2). Mobile SVE/AS event on 10/17/2007. Next round sampling will be in 12/2007. (RJF) 2/13/08 - Carlson - Reviewed October 2007 - January 2008 Site Status Update

MERIT STANLEY (Continued) **S103574868**

Report. A mobile AS/SVE event was conducted on October 17, 2007. The event indicated extractable hydrocarbons are still present in the subsurface. Hess plans on restarting the existing SVE/AS system. Groundwater sampled on December 21, 2007. Max BTEX 5,050 ppb (MW11), max MTBE 12 ppb (MW2). 5/7/08 - Carlson: May 7th meeting with Hess and Envirotrac. They ordered parts to repair and restart system. Upgradient delineation required. 7/7/08 - Carlson: Reviewed June 2008 Update Report. Wells sampled on 4/9/08. Fluctuating concentration in some wells. Maximum BTEX concentration 12,291 ppb (MW4). Maximum MTBE concentration 8 ppb (MW2). Sent to email to Erin Quell: when will system be restarted, IP required for upgradient well as per may 7th meeting. 10/22/08 - Carlson: Meeting with Hess, NYSDEC, and Envirotrac. Delineation workplan due 2/09. When will system be restarted? Do not connect all wells to system when it is restarted. 11/17/08 - Carlson: Reviewed update report dated October 2008. Wells sampled on 8/21/08. MW4 was not sampled - no reason provided. Maximum BTEX concentration 4,729 ppb (MW11). System has not been restarted yet. 11/19/08 - Carlson: Emailed Ed Russo - When will system be restarted? 12/11/08 - Carlson: Received email from Ed Russo: the system was re-activated on 12/3/08. The SVE system was activated first and PID readings were recorded as a range from ND to 2.5 ppm. The air sparge system was then activated and PID readings increased to 183 ppm. We are evaluating ways to optimize the performance of the system and will do so in order to maximize recovery from the areas of the most impact. We are scheduled for another round of O&M next week and then system O&M will continue on a monthly basis thereafter. Results of system O&M events will be submitted within all future site update reports. 2/20/09 - Carlson: Reviewed January 2009 Update Report. System restarted on 12/3/08. Wells sampled on 11/26/08. Maximum BTEX concentration 3,545 ppb (MW4). 3/18/09 - Carlson: Meeting with Hess and Envirotrac. IP deadline extended to May 2009. Hess notes that there are many potential upgradient sources in the area (Wendys). 5/6/09 - Carlson: Reviewed April 2009 update report. AS/SVE system was restarted. Wells sampled on 2/27/09. Maximum BTEX concentration 5,414 ppb (MW11). Dissolved concentrations are still fluctuating. 8/10/09 - Carlson: Reviewed update report. SVE/AS restarted, low PID, is it effective? Report states hess will propose an investigation plan. 8/19/09 - Carlson: Meeting with Hess. Work plan will be submitted. 10/8/09 - Carlson: Reviewed IP. Hess states that upgradient Mobil spill is off-site source, Mobil should install additional downgradient wells 11/10/09 - Carlson: Emailed DEC Haggerty requesting Mobil install an additional well downgradient of MW15. 11/17/09 - Carlson: Reviewed update report, SVE/AS in operation. only trace PID recovered from SVE/AS system. 1/27/2010 - Carlson: Meeting with Hess. Off-site delineation issue has not been resolved. Review case file and null IP internally. 2/5/2010 - Carlson: Reviewed 4th Quarter 2009 Update Report. SVE/AS in operation. 5/20/2010 - Carlson: Meeting with Hess. NYSDEC to review file and discuss delineation with upgradient exxonmobile site. 5/27/2010 - Carlson: Reviewed update report. SVE to be shut down due to low recovery. 8/13/2010 - Carlson: Reviewed July 2010 Update Report. SVE/AS shutdown. Hess to provide soil data to determine if an off-site plume is affecting property. 11/10/11 - Carlson: Reviewed October 2011 Update Report. SVE/AS shutdown. General increase in dissolved concentrations in several upgradient wells. Need to review case file for potential ugradient sources. 2/6/2012 - Carlson: Spoke to Joseph Rennie. LNAPL in two wells. Weekly bailing to occur. NEED

MERIT STANLEY (Continued) **S103574868**

TO REVIEW CASE FILE FOR SOIL POTENTIAL UPGRADIENT SOURCES. Significant soil impact was left after tank removal in 1998. 2/22/2012 - Carlson: Left message for DEC Michael Haggerty 518-402-9768 (Central Office PM for upgradient Mobil Spill 9406497). Recent reports are not in edocs. Spoke to Michael Haggerty - recent Mobil reports were uploaded to edocs. Left message for Joe Rennie - need to ask him: 1) was recent product ID'd, 2) which wells recently had product, and 3) were soil borings completed since SVE/AS was shut down to see if system successfully remediated soil impact? 2/23/2012 - Carlson: Spoke to joe rennie. Product was not sent to a lab for fingerprinting. LNAPL is bring recovered. Recommended installing soil borings to see how much soil impact remains after SVE/AS treatment. 3/14/2012 - case review and discussed with DEC Raphael Ketani and Hassan Hussein. Need proof on whether there are upgradient sources impacting the Hess site. A letter sent to Hess requiring additional delineation in upgradient. Work Plan by 4/13/2012. Wendy's property resident: Penbrow Inc., 1916 Linden Blvd, Brooklyn, NY 11207 Wendy's property owner: Briad Wenco LLC, 30 Vreeland Road, Apt #A, Florham Park, NJ 07932-1904 7/17/2012 - 1Q2012, 4/30/2012, by EnviroTrac. LNAPL in some wells. MW-7, 0.21' on 2/2/2012, 0.21' on 2/7/2012 and 0.17' on 2/14/2012. MW-10, 0.84' on 2/7/2012, 0.72' on 2/14/2012. MW-11, 0.52' on 2/2/2012, 0.39' on 2/7/2012 and 0.28' on 2/14/2012. Groundwater sampled on 2/2/2012. MW-4, 2,239.5 ug/L BTEX, MTBE ND. MW-10, 7,723.9 ug/L BTEX, MTBE ND. MW-1, 2,018 ug/L BTEX, MTBE ND. MW-9, 4,384.7 ug/L BTEX, MTBE ND. MW-18, 18,330 ug/L BTEX, MTBE ND. MW-2, 1,575.9 ug/L BTEX, MTBE ND. Hand bailed LNAPL from the 3 wells MW-7, MW-10 and MW-11 on 2/27/2012 and 2/14/2012. Placed absorbent socks in monitoring wells MW-7 and MW-11 to enhance product recovery. email to Hess/EnviroTrac We reviewed the 1Q2012 report. Product was present in some of the monitoring wells, MW-7, MW-10 and MW-11. I see that the product was hand bailed twice during this quarter. Based on the thickness of the product, you need to have a more aggressive product removal method. I don't find any history of the occurrence of product in the report. Is this the first time product show up in these wells? As I can see from the hydrographs, water table also drops 1-2 feet during this quarter and the product show up. Have the LNAPL sampled? If not, please do so. And according to our notes, we required some work plan for upgradient delineation. How is that going? 10/19/2012 - 2Q2012, 7/31/2012, by EnviroTrac. The groundwater was sampled on 5/8/2012. Gauged on 3/27/2012, LNAPL in MW-10 and MW-11, removed and replaced absorbent socks from MW-7, MW-10 and MW-11. Gauged on 4/5/2012, LNAPL in MW-7, MW-10 and MW-11, removed and replaced an absorbent sock in monitoring well MW-11. Gauged on and 5/8/2012, LNAPL in MW-8, MW-10 and MW-11. DTW 12.51 to 14.94. Flows to southeast. MW-8, 0.35' LNAPL. MW-10, 0.36' LNAPL. MW-11, 0.40' LNAPL. MW-4, 6,469 BTEX, MTBE ND. MW-1, 3,025 BTEX, 7.7 MTBE. MW-9, 543.5 BTEX, 0.69J MTBE. MW-7, 4,619 BTEX, 6.6J MTBE. MW-2, 1,166.3 BTEX, 1.8J MTBE. AS/SVE shutdown due to no recovery. Continue monthly gauging and product bailing and quarterly sampling. The next sampling will be in August 2012. 10/24/2012 - STIP along with a comment letter on case reivew was sent to Hess/EnviroTrac. DEC required: 1) fingerprint the product. 2) more aggressive product removal. 3) provide all previous soil borings/monitoring wells installation information. 4) upgradient delineation. 5) explain the discrepancies in between the PBS record and the reported removed tanks. Need signed STIP by 11/23/2012. 1/18/2013 - 3Q2012, 10/31/2012, by EnviroTrac. 6/6/2012 and 7/12/2012, LNAPL in MW-10,

MERIT STANLEY (Continued) **S103574868**

hand bailed. Removed and replaced absorbent socks from MW-7, MW-8, MW-10 and MW-11. Groundwater was sampled on 8/2/2012. No LNAPL in the August sampling event. DTW 11.67 to 13.92 bg. Flows to southeast. MW-4, 4,695.4 BTEX, MTBE ND. MW-11, 18,053.8 BTEX, MTBE ND. MW-1, 8,440 BTEX, MTBE ND. MW-10, 24,207.7 BTEX, MTBE ND. MW-9, 2,484.7 BTEX, MTBE ND. MW-7, 6,467.5 BTEX, MTBE ND. Hess reiterates its request to have Exxon Mobil complete a full delineation of its plume to include the Wendy's property located north of the former Merit Station. 1Q2013, 4/30/2013, by EnviroTrac. Groundwater was sampled on 2/14/2013. DTW 10.13 to 11.33 feet. Flows to south-southeast. NO LNAPL. MW-11, 678.8 BTEX. MW-1, 3,761 BTEX, 7 MTBE. MW-10, 11,024 BTEX. MW-8, 64.4 BTEX. MW-9, 62.4 BTEX, 2.2 MTBE. MW-2, 85.68J BTEX, 7 MTBE. Hess reiterates its request to have Exxon Mobil complete a full delineation of its plume to include the Wendy's property located north of the former Merit Station. 2Q2013, 7/31/2013. Work performed on 5/23/2013. DTW 10.71 to 13.04 feet. Flows to south-southeast. MW-11, 1735.47J BTEX. Mw-4, 3,566 BTEX. MW-10, 4,990.9 BTEX. MW-1, 2,961 BTEX. MW-8, 1,759 BTEX. Mw-9, 55.7 BTEX. MW-2, 272.7 BTEX. 10/30/2013 - DEC K. Hale, J. Vought, S. Mahat and J. Feng conducted site visit. Met with the carwash owners Richie Krause and Mannuel Viegas. The carwash has been there for 30 years and the building has been there for 15 years. According to the owners, there is a pumping well for the carwash operation and the well water has been used for the bathroom. The owners do not know the location of the pumping well and the water from the well has never been sampled. They have agreement with Hess that Hess will take care of the spill. 11/14/2013 - Reviewed the monitoring data trend with R. Austin and J. Vought. DEC will send letter to Wendy's for information. 11/22/2013 - Letter was sent to Wendy's property owner: Pennbrow, Inc, at 181-06 Tudor Road, Jamaica, NY 11432. DEC requires: 1) Submission of a detailed site history including: previous site usage; current and historical petroleum storage (including tank removals and abandonments; location, sizes of tanks removed/abandoned and types of product stored); tightness test results, the number of tanks; associated spill numbers if any; and the Petroleum Bulk Storage (PBS) Registration and Record. 2) Submission of any records or information regarding subsurface investigations that have been done at the property (e.g. a subsurface investigation that would have been done for the purpose of a property transaction). Response by 30 days. 11/5/2014 - 1Q2014, 4/30/2014. Monitoring on 11/13/2013. DTW 11.02 to 13.31 feet. Flows to south-southeast. MW-1, 2,745.2 BTEX. MW-10, 5,841.5 BTEX. MW-2, 64.7 BTEX. 2Q2014, 7/31/2014. Groundwater monitoring on 5/31/2014. DTW 10.12 to 12.48 feet. Flows to south-southeast. AS/SVE shutdown due to non-detected recovery. MW-11, 913 BTEX. MW-4, 29.5 BTEX. Mw-10, 608.8 BTEX. MW-1, 1,601.2 BTEX. MW-8, 1,594 BTEX. Hess reiterates its request to have ExxonMobil complete a full delineation of its plume to include the Wendy's property located north of the former Merit Station. 11/17/2014 - 3Q2014, 11/7/2014. AS/SVE shutdown due to non-detect recovery. 8/31/2014, sampled groundwater. DTW 0.67 to 13.05 feet. Flows to south-southeast. MW-11, 379.12J BTEX. MW-4,

MERIT STANLEY (Continued) **S103574868**

4,218.3 BTEX. MW-10, 5,690.6J BTEX. MW-1, 2,493.5 BTX. MW-8, 4,786 BTEX. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought 3/30/16 - Raphael Ketani. This spill case has been assigned to me effective today. According to ACRIS, the owner of the property is 810-820 Pennsylvania Avenue Corp., c/o Solomon & Bernstein, 351 Broadway, Third Floor, NY, NY, 10013. The block and lot are 4346 and 12. PBS case record #2-297372 lists Perrier Auto Wash, Inc. as the owner. Their address is 810 Pennsylvania Avenue. One 275 gallon waste oil tank is in service. One 4000 gallon UST was closed in place. Eight USTs of various sizes were closed and removed on 2/1/98. According to a 10/24/12 case note, a Stipulation was sent to HESS with a return date of 11/23/12. Also, the DEC required that the product be fingerprinted, more aggressive removal take place, provide all prior soil boring and well installation information, upgradient delineation, and explain the discrepancies between the PBS record and the reported tank removals. The Stipulation was never returned. The case notes indicate the following total VOCs concentrations for the groundwater samples: date very high results high results 8/2/12 MW-10, 11 MW-1, 4, 7, 9 11/15/12 MW-1, 10 MW-4, 8, 11 2/14/13 MW-10 MW-1 5/23/13 MW-1, 4, 8, 10, 11 11/13/13 MW-1 and 10 5/31/14 MW-1 and 8 8/31/14 MW-1, 4, 8 10 Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com Mr. Butler's mailing address is: Speedway, LLC, 500 Speedway Drive, Enon, OH 45323. Other spill cases for the site include: 8801521: name = 810 Penn. Ave., tank overfill, 150 gals. of gas into the sewer, sewer was flushed and there was no sign of gasoline, case closed 9/30/88 8801651: name = Merit, tank test failure (which tank not indicated), closed 11/2/88 9010161: name = 810 Penn. Ave., 2000 gal. and 4000 gal. tanks failed their integrity tests, will excavate, isolate and retest, closed 7/22/94 and referred to spill 9214515 9301033: name = 810 Penn. Ave., tank overfill, contained with Speedi-Dri, closed 5/24/93 9810899: name = Merit Station, digging for a foundation and found contaminated soil, closed 8/22/05 and referred to 9214515 According to a 10/30/13 case note, a site visit was made. As part of the visit, staff asked about the water supply well. Personnel at the site stated that the water was used for the bathroom. However, the location of this well was unknown. An 11/22/13 case note indicates that a letter was sent to the owners of the Wendy's restaurant. In the letter, the owners were asked to provide all historical records and records of any previous investigations. A response date was set by DEC as 12/22/13. - There is no documentation in the case file regarding Wendy's. The 11/5/14 case note regarded the second quarter 2014 report. In the report, it was stated that the AS/SVE system had been turned off because the results were non-detect. 4/11/16 - Raphael Ketani. As there has been no communication nor report submissions by the representatives of Speedway or EnviroTrac since the submission of the third quarter 2014 quarterly report, I sent an email to Mr. Butler, Mr. Russo and Mr. Rennie requesting the latest groundwater report. I also wrote that they were in violation of the Stipulation Agreement as it was never returned. Lastly, I included that they must respond to the DEC requirements as described in the 10/24/12 case note. 4/25/16 - Raphael Ketani. I received the below email from Mr. Russo: This correspondence is in response to your email below regarding the former Hess/Merit station 32STA. Please note that Speedway/EnviroTrac was conducting quarterly sampling,

MERIT STANLEY (Continued) **S103574868**

monitoring, and reporting up until October 2014. In October 2014, Speedway LLC (Speedway) purchased the retail assets of Hess Corporation and is now the responsible party with respect to New York State Department of Environmental Conservation (NYSDEC) Spill # 92-14515. As a result of this sale, we now longer have access to the property. On December 15, 2014, EnviroTrac notified the NYSDEC case manager via email of this situation that site access is pending a new access agreement. An access agreement is currently being pursued between the current property owner and Speedway, and as a result, we cannot conduct any work on the subject property until access is finalized. Quarterly sampling, monitoring, and reporting will resume immediately upon obtaining access. Please be advised that we have consistently been in communication with the NYSDEC regarding updates on the status of NYSDEC s up-gradient investigations, as follows: 2/6/2012 EnviroTrac/Hess submitted a FOIL request to review NYSDEC case files regarding the up-gradient Mobil spill case and there have been numerous follow up correspondences between NYSDEC and EnviroTrac/Hess on FOIL status. 4/3/2012 - Speedway emailed NYSDEC case manager to respectfully request that the NYSDEC allow Hess to complete a detailed file review of the NYSDEC's documents prior to moving forward with or committing to any additional actions. 10/24/2012 NYSDEC letter to Hess. 11/21/2012 EnviroTrac/Hess response to 10/24/2012 NYSDEC letter. 1/10/2013 NYSDEC provided reports to EnviroTrac/Hess regarding the Mobil spill case. 11/22/2013 NYSDEC sent a letter to Pennbrow Inc/Wendy s asking for a detailed site history and a summary of investigations performed on their property. 8/15/2014 EnviroTrac requested via email with NYSDEC case manager a status of Pennbrow Inc./Wendy's subsurface investigation and followed up with the NYSDEC on 1/29/15, 11/16/15, and 1/4/16. 12/15/2014 EnviroTrac notified NYSDEC case manager via email that site access is pending new access agreement. 4/2/2015 - EnviroTrac received email correspondence from NYSDEC noting that they have received a Phase 1 from the adjacent up-gradient Wendy's property (former service station), and that NYSDEC is working on a determination on who will conduct an investigation. 7/7/2015 - Ed Russo (ETNY) spoke to June Feng (NYSDEC case manager). June stated that she will look into Wendy's progress related to a Phase 2 ESA that the NYSDEC required of Wendy's and she will get back to us re: the status. To our knowledge to date, there has been no up gradient delineation by Mobil or any correspondence from Pennbrow (the Wendy s property owner). Please be advised that Speedway reiterates its request to have Mobil complete a full delineation of its plume to include the Wendy s property located north of the Former Merit Station. Copies of any correspondence can be provided, upon request. Product Removal/Fingerprint Pending site access, and if product is present, Speedway and EnviroTrac will aggressively remove product during future monitoring events. PBS/Tank Removal Discrepancies Speedway/EnviroTrac to research PBS records and tank removal reports and will rectify discrepancies.
****
********** I checked the UIS database for the former service station address at 1916 Linden Boulevard, Brooklyn. However, I did not find a spill case listing, nor a PBS case listing. The NYC Department of Buildings database also lists various alternative addresses for this location. So I checked addresses 1918 to 1938 Linden Boulevard, 786 to 196 Pennsylvania Avenue and 787 to 797 Sheffield Avenue. However, no Spills cases nor any PBS cases were found in the UIS system. The ESA Phase I for the Wendy's property was

MERIT STANLEY (Continued) **S103574868**

archived in the DECdocs system. The Phase I was written by Executive Environmental Group, Inc. at 1373 Coney Island Avenue in Brooklyn, (718) 677-1007. The date of the Phase I is 11/26/03. There is a cover letter attached dated 12/4/13 from Natalie Gurin of Eiseman Levine Lehrhaupt and Kakoyiannis at 805 Third Avenue, NY, 10022, (212) 752-1000. According to the Phase I the present Wendy's property contained dwellings up until 1967. From 1967 to 1981 the property was occupied by a filling station. The Phase II still hasn't been received by the Department. I will write a letter to Ms. Gurin requesting that some type of subsurface investigation take place at the Wendy's property. 4/26/16 - Raphael Ketani. I sent a letter to Ms. Gurin (representing Pennbrow, Inc.)requesting the submission of a Phase II RIWP by June 3, 2016. The latest address in ACRIS for Penbrow, Inc. is 331 Madison Avenue, NY, 10017 - according to a 3/10/11 UCC-1 document. However, there is a deed from the nineteen nineties which shows the address Penbrow, Inc., 181-06 Tudor Road, Jamaica, NY 11432. The property is block and lot 4346 and 6. A UCC-3 Continuation document in ACRIS shows the party Briad Wenco, LLC, c/o The Briad Group, 78 Okner Parkway, Livingston, NJ, 07039. 5/24/16 - Raphael Ketani. Wayne Lehrhaupt (212) 752-1000, the attorney for Norman Bobrow of Penbrow, Inc., called inquiring about the DEC's 4/26/16 letter requesting the Phase II RIWP. He explained that Ms. Gurin had received the letter shortly after 4/26/16, but he hadn't received it until yesterday. He asked how the DEC came to the conclusion that an investigation was necessary. I told him that, based upon my review of the case file and the case notes, information was found that indicated the existence of a source of contamination. I added that the information also suggested the existence of an upgradient source. Lastly, I stated that Ms. Feng (the previous DEC case manager) had requested a Phase II Report. However, the Phase II was never done. Mr. Lehrhaupt said that he understood what I was saying. He asked whether a magnetic survey would be required. I told him that if one hadn't been done before, then one should be done now. Mr. Lehrhaupt mentioned that he was used to working with a private individual out on Long Island who does environmental work. I told Mr. Lehrhaupt that the DEC would require a report with a site map to scale with surveyed locations, surveyed water table elevation data, a groundwater flow map, soil sample descriptions, the full suite of VOC and SVOC analyses and more. I asked whether his environmental person was knowledgeable about what would be included in a Phase II. He said that he wasn't sure. He asked whether the DEC could recommend a company which is familiar with the area. I told him that the DEC doesn't make recommendations, but there are dozens of environmental companies in the metropolitan area from which to choose. Lastly, Mr. Lehrhaupt asked for an extension of the Phase II RIWP submission date. I asked him whether July 11th would be alright. He said he will call me back today with the answer. With that, the conversation ended. 5/25/16 - Raphael Ketani. Today I received the green return card for the 4/26/16 letter I had sent Ms. Gurin. 6/16/16 - Raphael Ketani. Today Dave Yudelson of Sieve Paget and Riesel (law firm; (212) 421-2150/ cell (917) 295-6449) called regarding the DEC's 4/26/16 letter requesting the Phase II investigation for the Wendy's facility. He said that he had been hired by Wendy's (1916 Linden Blvd.) and needed the documents from the case file for the HESS station site. He said that he was aware there was an indication that the groundwater contamination was coming from upgradient. I retrieved the documents from the DECdocs system that I thought would be useful

MERIT STANLEY (Continued) **S103574868**

to Mr. Yudelson for his review and put them on my Desktop. However, I sent him an email that he needed to make a formal FOIL request since this was the DEC policy. Later, I looked through one report for the site and came across two spill case numbers. The first was for a MOBIL station and was #9406497. The second was for an EXXON station and was #9409096. I also found an air photo in the latest report for the site. It showed that the MOBIL station was due north of the site on the north side of Linden Blvd. (1935 Linden Blvd.). The EXXON station was to the northeast and on the other side of Linden Blvd. Its address is 765 Pennsylvania Avenue. The EXXON spill case was closed on 7/27/11. However, the MOBIL station spill case was still active. The latest case notes for the MOBIL case indicated that the air sparge system had been restarted during 2014. A 2011 report for the MOBIL site showed that there still were very high total BTEX concentrations in the groundwater both onsite and off site to the south. 6/28/16 - Raphael Ketani. Mr. Yudelson (212) 421-2150/ cell (917) 295-6449) had made a FOIL request for the reports associated with the site. The request number was W008818-062116. The date of the request was 6/21/16. 7/8/16 - Raphael Ketani. Mr. Yudelson (law firm; (212) 421-2150/ cell (917) 295-6449) sent me an email requesting an extension of the deadline for responding to the Department's requirement that an investigation take place at the Wendy's location. I set the new deadline as August 1, 2016. 8/1/16 - Raphael Ketani. I received the August 2016 P.W. Grosser (PWGC) SIWP for the Wendys property at 1916 Linden Boulevard, Brooklyn. The plan was dated 8/1/16. I began my review. The work plan really takes the form of a historical review of the spills at the MOBIL station (#9406497; 1935 Linden Blvd.), the former EXXON (now Gulf) station (#9409096; 1939 Linden Blvd.) and at the subject former HESS station. In the beginning and the latter parts of the work plan, PWGC stated that much more documentation is needed from the EPA, the State and the City regarding all 3 sites, along with specific documents from the spill files for each site, so that they can create a Preliminary Conceptual Site Model (PCSM) before they undertake an investigation of the Wendy's Restaurant property. The reason for this, they state, is to that a better focused plan of action can be created and so that data gaps can be identified. Even after all of this information is obtained, they intend to further refine their PCSM in order to improve their focus and plan of action. Only after all of this has been done will they initiate an investigation. They did not indicate when this investigation would eventually take place. The notes below form a synopsis of this work plan. PWGC states that the owners of the former HESS station (hereafter referred to as the HESS station) stated that the contamination below their site was coming from the upgradient MOBIL station site and the upgradient former EXXON station site (hereafter referred to as the EXXON station). No investigation will take place by Pennbrow until all of the available documentation regarding the sites can be evaluated. They believe that a review of this documentation will support the conclusion that the sources of the contamination are the HESS station, the MOBIL station and the EXXON station. The depth to groundwater is from 10 to 12 feet below grade. The regional groundwater flow varies from the southeast to the southwest. PWGC performed site visits at all 3 sites on 7/19/16. The MOBIL station had the components of a remedial system, but they were uncertain whether is was operating. The EXXON station had a remedial system, but it appeared to be abandoned. The HESS station remedial system was not operating. The Wendy's property was used as a gas

MERIT STANLEY (Continued) **S103574868**

station from 1967 to 1981. After this period, a new building was constructed as the Wendy's Restaurant. A gas station was present at the HESS location from 1949 to 1988. In 1988, HESS changed from a gas station to an auto repair service and a car wash. A filling station existed at the EXXON location from 1928 to 1950. An EnviroTrac September 2009 report indicated that the HESS pumps, USTs and piping were removed during January and February of 1998. Soil was removed to 5 feet beyond the limits of the tank field and from 2 to 6 feet below the pipes and fills. Residual soil contamination was identified from 5 to 12 feet below grade. LNAPL was present in the HESS MW-7, 8, 10 and 11 wells to July 2012 (the case notes from the previous DEC case manager, June Feng, indicate that there was no NAPL in these wells from 2014 onward). A quarterly report for HESS stated that there was very high groundwater MTBE contamination up to 120,000 ppb. Figure 3 indicated the thickness of the LNAPL at the monitoring wells on the HESS site during 2012 as well as the extent of the residual LNAPL in the soil. The information was presented in the work plan for wells MW-1 to MW-3, 7, 8 and 18 for the period June 1995 to August 2000. The data concerned only the MTBE concentrations. The results were up to 120,000 ppb. Figure 4 presented the dimensions of the core of an MTBE plume that appears to have migrated from the MOBIL site. Historical BTEX concentrations had been greatest at MW-8 (34,200 ppb)during March 2003, at MW-10 ((31,762 ppb) during November 2011 and at MW-11 (34,420 ppb) during April 2002. The available information in the case record included groundwater sampling results through August 2014. EnviroTrac in their September 2009 report indicated their concerns that the contamination was from the MOBIL site. In this report, it was requested that the DEC ask MOBIL to further delineate the contamination. The report also indicted that the DEC requested HESS to investigate the potential upgradient sources. The Stipulation Agreement (Stip) sent to HESS required HESS to have the LNAPL fingerprinted that was found in the wells during 2012, implement a more aggressive LNAPL removal program, provide all previous soil boring/monitoring well installation data and related information, conduct an upgradient delineation and explain the discrepancies between the PBS record and the reported tank removal performed during 1998. According to PWGC, it was not clear whether the Stip was executed or if the requested information had been provided. Correspondences in the DEC case file indicated that HESS requested multiple times that EXXON and MOBIL fully delineate the MTBE plume and include the Wendy's property. It was unknown whether this was done. During January 2013, the DEC provided reports to HESS and EnviroTrac regarding the MOBIL site spill case. In addition, it was discovered that the car wash utilizes a pumping well to supply water. However, the location is not known. MOBIL site spill #9406497 is still active. The ARCADIS November 2011 report indicated that 18 wells had been sampled in connection with the October 1997 Stip. The depth to groundwater was found to be from 11 to 12.5 feet below grade and to be flowing to the southeast. Two non-potable wells were located within 300 meters to the south-southeast. Fifteen USTs had been removed during 1989 and were replaced with five 4000 gallon USTs. During January 2008, the report indicated that LNAPL was found in MW-18 (south of the dispensers) during August 2006. The LNAPL recovery system operated from January 1985 to March 20, 1992. The AS/SVE system operated from April 1995 to October 1998. EFR events took place from August 2005 to June 2008. From May 2009 to February 2010, RegenOx injections took place. On 6/4/08, the DEC approved the

MERIT STANLEY (Continued) **S103574868**

removal of MW-12, 14, 17 and 20 from the sampling array. MW-9 and MW-11 contained MTBE at up to 95,000 ppb from January 1995 to September 1997. According to PWGC, this indicated that the spill had occurred prior to 1995. MTBE was detected in MW-13 during October 1998 at 23,000 ppb. PWGC stated in the work plan that the EXXON site spill case #9409096 was still open. However, this spill case was closed on 7/27/11. A Preliminary Conceptual Site Model (PCSM) had been developed in order to obtain a general understanding of the Wendy's property. The PCSM considered the site history and context, including the fate and transport, potential sources, release mechanisms and the physical and chemical mechanisms controlling fate and transport. PWGC stated that there is ongoing source contamination originating from HESS. They also stated that there is source contamination at MOBIL and that it is affecting HESS. They indicated the location and extent of the MTBE plume from MOBIL in Figure 4 of the work plan. PWGC stated that data gaps were identified through the PCSM in connection with the quality and source of the groundwater that is flowing onto and off of the site (HESS). Before the site investigation is undertaken, the data gaps should be addressed to the extent practicable so that the PCSM can be refined and the site investigation focused. PWGC defined the data gaps as the need to obtain all work plans, reports and documents concerning the HESS site, including the Stipulation Agreement, fingerprint analysis, PBS record discrepancy resolution documentation, pumping well documents, soil boring logs, well installation logs, groundwater results since August 2014, access to all wells, and specific reports in the UIS system from the MOBIL and EXXON case files. The objective of the Site Investigation Work Plan (SIWP) is to reduce the uncertainty regarding the quality and source of the groundwater that is flowing onto and off of the Wendy's site as it relates to known sources of contaminated soil and groundwater. The scope of work includes: sampling up gradient MOBIL site wells MW-12 to MW-16 and HESS downgradient wells MW-4 and MW-11. PWGC will gauge and collect the usual field measurements and collect additional data via the documents for the HESS site, the MOBIL site and the EXXON site for a more comprehensive scope of work. Upon receipt of these documents, PWGC would review them for additional data gaps. A Remedial Investigation Report (RIR) will be sent to the DEC. Figure 3. There is a pool of product in the northeast quarter of the HESS site with the center of the pool being 0.84' of product. Wells MW-7, 8, 10 and 11 (upgradient) had from 0.21' to 0.56' (the data is from 2012 as no product is present in the wells since 2014). However, the figure does not indicate that any USTs were ever in this area. Figure 4. An MTBE plume is depicted as emanating from MOBIL wells MW-9 and MW-11. As drawn, it extends from the MOBIL station, then under the Wendy's location and ends under the HESS site. Groundwater flow is southeast. The Sanborn maps were at the end of the work plan. The 1950 map showed a dairy in the northern part of the future Wendy's property and two filling stations across Linden Boulevard and another one to the east of the future HESS site. A metal products manufacturing building was shown to have existed on other maps for many decades in the northwest quarter of the future HESS site. A 1967 map shows a filling station in the exact location of the future Wendy's Restaurant location (the center of this property). The 1977 map was the first to show the filling station and the auto laundry on the future HESS property. It also showed that the previous filling station building did not exist, but another one was constructed at

MERIT STANLEY (Continued) **S103574868**

the southern boundary of this property and was adjacent to the metal products building. The 1981 map showed the filling station in the south and east parts of the future HESS property with the metal products facility still present. The 1983 map was the first to show the Wendy's building at its present location. The 2001 map showed that the HESS filling station was now a car wash and that the filling station to the east across Pennsylvania Avenue was also now just a car wash. The last map in the work plan was for 2007 and depicted essentially the same conditions as in the 2001 map. I checked Google Earth and viewed a current photo of the HESS site. The property still contains the car wash and the historical metal products manufacturing building is still there. However, from the emptiness of the parking spaces around this building, it is not clear that there is metal products manufacturing taking place at this location.

---------- Case manager's review notes for the August 2016 P.W. Grosser (PWGC) SIWP : Having reviewed the work plan as submitted by P.W. Grosser Corporation, I determined that it did not follow the work plan format typically used by industry and therefore was deficient. There were no descriptions or figures showing where PWGC would install soil borings and wells on the Wendy's property. Also, there were no statements, nor figures regarding the geophysical methods that would be used to locate any structures (e.g. USTs) that may still exist on site. PWGC indicated in their SIWP that they would look for and review documents concerning the other sites, but not documents for the Wendy's property. In all likelihood, New York City agencies (e.g. Fire Department, Department of Design and Construction, the real property department and the taxation department) must have some types of records which may indicate the former presence of USTs. Also, the various historical societies may have their own records of the general area, if not the Wendy's property itself. Still, PWGC does not mention any intent to review possible Wendy's records at these sources. Lastly, the wording of the SIWP takes the form of a very extensive literature search and review and a modeling exercise. Because of the above deficiencies, I disapproved the SIWP. 8/9/16 - Raphael Ketani. I sent an email to Joe Rennie of EnviroTrac (631) 924-3001 asking whether Speedway had signed a new access agreement for continuing the environmental monitoring work. I added that if they hadn't, then the State will take enforcement action against them. I also called him to give him the above information. Mr. Rennie stated that he will pass the information along to Mr. Butler. I told him that Mr. Butler was the main recipient of the email. Speedway/Hess contact: Matthew Butler, (732) 738-2924, MButler1@Speedway.com Consultants: Edward Russo (EnviroTrac), (631) 924-3001, EDR@EnviroTrac.com Joseph Rennie (EnviroTrac), (631) 924-3001, JoeR@EnviroTrac.com Michael Haggerty (518) 402-9688 in the DEC Central Office in Albany is the case manager for the MOBIL spill (#9406497). He sent me the ARCADIS August 2016 Receptor Evaluation Report dated 8/8/16 for the MOBIL station. I reviewed the report. The AS/SVE system was restarted on 8/28/14, but the VOC concentrations temporarily exceeded the capacity of the catalytic oxidizer. In light of this, the AS part of the system was shut down. However, it was restarted on 12/11/14 after the system logics were reprogrammed. A total of 14.71 lbs. of BTEX and 1898 lbs. of total petroleum hydrocarbons were recovered since the system had been restarted on 8/28/14. The system was shut down during February 2016 as per DEC approval in order to check for contaminant rebound.

MERIT STANLEY (Continued) **S103574868**

The depth to groundwater varies from 10 to 12 feet bgs and the flow direction is to the south. The latest groundwater monitoring took place on 6/13/16. Groundwater samples were collected from MW-1 to 7, 9, 11, 13, and 15 to 19. The samples were analyzed for BTEX, MTBE and ethanol. The analytical results for the groundwater samples from well MW-3 had 320 ppb of ethylbenzene and some low hits. The sample from MW-4 had 1100 ppb ethylbenzene and 1300 ppb total xylenes, along with a few low results. Both wells MW-3 and MW-4 are on site in the southeast corner of the MOBIL station. The results for the groundwater samples from the other on site wells were either entirely non-detect or had non-detects and low hits. The samples from off site down gradient wells MW-13, 15 and 16 were entirely non-detect, except for 8 ppb of MTBE in the sample from MW-13. All of the above results suggest that any contamination that is in the groundwater under the Former HESS site IS NOT from the MOBIL site spill. I sent a copy of the ARCADIS August 2016 Receptor Evaluation Report to Mr. Rennie and Mr. Russo at EnviroTrac. Mr. Russo called me up afterwards and stated that HESS is no longer involved in the project. He added that the access issue was between the owner, 810-820 Pennsylvania Avenue Corporation, and Speedway and that I should contact Mr. Butler and send him the report. Hearing this, I sent Mr. Butler at the ARCADIS report. I also asked Mr. Butler to expedite the access agreement. Later, I looked up the ownership of the Speedway property. The CEO is Abraham Karron at 810-820 Pennsylvania Avenue Corp., 70 Curtis Avenue, Manasquan, NJ, 08736. 8/11/16 - Raphael Ketani. I sent a letter and 4 reports by email to Mark Chertok of Sive Paget & Riesel (SPR), Joyce E. Kung of SPR and to Richard T. Kampf of P.W. Grosser Consulting Engineer & Hydrogeologist, PC. The letter explained that the Department was sending the EnviroTrac first to third quarter 2014 groundwater monitoring reports as requested by P.W. Grosser. I added that we were also including the August 2016 groundwater monitoring report for the up gradient MOBIL station. I explained in the letter that the data in the MOBIL report indicated that the contamination at monitoring wells MW-13, 15 and 16 was very low. So, there was little or no contaminated groundwater coming from this site. In addition, I stated, that the data did not provide evidence of an MTBE plume. I also stated that staff at the Department had noticed that the only wells which had high groundwater contamination at the former HESS site were MW-1, 4, 8 and 10, which were located up gradient from the tank field. I mentioned that the groundwater samples from the wells down gradient had very low analyte concentrations. Continuing, I stated that, given the above information, it was the Department's determination that the contaminated groundwater was coming from the Wendy's property. In light of this, the Department was requiring the submission of a new investigation work plan which will include a geophysical survey of the property, soil borings and the installation of groundwater wells. I set a deadline of 9/9/16 for the submission of this work plan. Pennbrow, Inc. latest address is: 488 Madison Avenue, 19th Floor, NY, 10022 Mark Chertok's contact information at SPR Law is: mchertok@sprlaw.com; (212) 421-2150 Ms. Kung's contact information is: 460 Park Avenue, 10th Floor, NY, 10022;jkung@sprlaw.com/(212) 421-2150/(646) 378-7288 Mr. Kampf's contact information is: Richard T. Kampf, PG, Director, rkampf@pwgrosser.com 8/16/16 - Raphael Ketani. Mr. Butler (732) 738-2924/MButler1@Speedway.com sent me an email today stating that Speedway has been granted access to the site. A groundwater monitoring report will be submitted during September. 8/17/16 -

MERIT STANLEY (Continued) **S103574868**

Raphael Ketani. Mr. Kampf (212) 786-7420/rkampf@pwgrosser.com called me today. He said that the geophysical survey of the Wendy's property will take place on 8/23/16. I told him that the DEC would like the footprint of the Wendy's Restaurant to also be investigated. He said that he didn't know how this could be done. I told him that an acoustic instrument survey may work through the restaurant floor. He said that he will see what can be done. I added that the DEC would like a cover letter explaining what will take place and a map showing the where the geophysical transects will be run. Mr. Kampf stated that the transects will just be whatever the width of the instrument is and they will run as many transects as necessary. I told him this would be fine. Additionally, Mr. Kampf asked for any well construction logs from previous EnviroTrac reports and any soil contamination delineation reports. I told him that I will look and see what we have. With that, the conversation ended. 8/18/16 - Raphael Ketani. Mr. Kampf called me earlier today and stated that he could not find a company which could do a geophysical survey within the Wendy's as the tables and chairs are fixed to the floor. I told Mr. Kampf that if he can't find a geophysical service that can do the work, then he should just say so in a cover letter to the geophysical survey plan. Mr. Kampf stated that he would do this. Later, as the soil borings report and the well construction report were not in the electronic archive, I searched for them in the paper file. However, they were not in the paper file, either. As a result, I sent letters to Merit Oil Corporation and HESS Corporation requesting these documents. The letters were sent to the following addresses: Manager, Environmental Management Division, Merit Oil Corporation, 551 West Lancaster Avenue, Haverford, PA, 19041-1419. Dawn M. Coughlin, Manager, Marketing and Refining Remediation, HESS Corporation, 1 HESS Plaza, Woodbridge, NJ, 07095. 8/22/16 - Raphael Ketani. On 8/19/16, I received an email from Mr. Kampf memorializing and adding to our discussion over the phone on 8/17/16 regarding the Wendy's property. In his 8/19/16 email, Mr. Kampf wrote that his client has authorized P.W. Grosser to move ahead with the geophysical survey of the Wendy's property. The owner of the Wendy's has stated that there is no basement and the building is heated by gas. The geophysical survey will be conducted both outside and inside the building. A contractor will be hired to conduct the survey. A Fischer TW-6 metallic locator (type RD8000 pipe and cable locator) will be used to detect buried tanks and other ferrous anomalies. Any detections will be followed up with a GPR survey. A cart mounted GPR device will be used at a 2 to 3 foot spacing in both directions. A mini-GPR will be used inside the restaurant in order to locate objects directly below the building. I approved the geophysical plan. In the latter part of his email, Mr. Kampf again asked for any contamination delineation information and any well construction information for the former HESS site. He also asked for information regarding the MOBIL site. I responded by email and wrote that staff had looked in both our electronic archive and our file cabinets for any records concerning the contamination and the wells at the HESS site. However, we had not found such documentation. I explained that letters had been sent to MERIT and HESS requesting any documents that concerned the soil contamination and well construction. I added that the MOBIL site is managed in our Albany office and that he should make a FOIL request. I sent him the FOIL website address. 8/23/16 - Raphael Ketani. I received a call from Mr. Kampf (212) 786-7420 (rkampf@pwgrosser.com) today. The GPR survey took place as scheduled. However, nothing was found. Mr. Kampf

MERIT STANLEY (Continued) **S103574868**

explained that the GRPR was done outside the restaurant and inside the restaurant. They were able to move the tables and chairs in the dining area. So they were successful in their attempt to look under the slab the restaurant sits on, though the kitchen area was not as well surveyed as it was tight quarters. Mr. Kampf added that it was possible that tanks were still there as the GPR could look only 3 feet down. He commented that he was not sure the geophysical survey would be able to pick up any tanks. He stated that they may try electrical resistivity as a deeper sensing tool. He has been speaking with a contractor for this service and they told him that the signal penetrated as deep as 29 feet at one site. Mr. Kampf added that he thought the restaurant was sitting on historical fill. I told him that I wasn't sure the contractor would be able to get a clear picture regarding whether tanks were underground or not. I added that I thought they would come up with just a lot of interference because of the fill. Mr. Kampf stated that he will have to discuss this with the contractor before trying the method to see under the restaurant. The client stated that if no tanks are found, then he wants the spill case to close. A request was sent to the Fire Department for any records regarding USTs under the property. I asked Mr. Kampf what he would do if the resistivity machine sensed one object her and then one somewhere else, but nothing else. He said he wasn't sure what he would do next. I told him that the best investigative method may be to do a series of soil borings with wide spacing just to see whether any contamination is present underground. Mr. Kampf asked whether he should forego the resistivity testing and just do soil borings. I told him that I wasn't sure. He commented that they would be doing an investigation based on a contamination concentration gradient. He added that he will get back to me regarding the resistivity testing method. With that, the conversation ended. 8/25/16 - Raphael Ketani. Mr. Kampf (212) 786-7420 (rkampf@pwgrosser.com) sent me the below email today with an attachment showing the draft proposed boring plan: As discussed earlier this week, the geophysical survey performed at the above-referenced property on August 23rd did not indicate evidence of the presence of underground storage tanks (USTs). Pursuant to our subsequent discussions, we understand that NYSDEC does not believe that performing an electrical resistivity (ER) survey is likely to provide any additional useful information with regard to locating USTs beneath the building. Based upon discussions with our contractors, we have come to a similar conclusion. As such, we are finalizing a work plan that includes soil sampling, and, if warranted based on the soil sampling results, groundwater sampling. As discussed, the objective of the soil sampling investigation would be to evaluate whether the Wendy's restaurant may be the source of the dissolved-phase petroleum hydrocarbon (gasoline) - related constituents in groundwater observed in monitoring wells at the former Hess property. As previously presented in the August 2016 Subsurface Investigation Work Plan we submitted to NYSDEC, the data indicate that the former Hess property is the source of these dissolved-phase constituents given the presence of residual LNAPL on that property resulting form Hess' failure to characterize and remove contaminated soil in the northern portion of its property during the 1998 UST removal action. As discussed, based on the conceptual site model presented in the August 2016 Subsurface Investigation Work Plan, we have prepared a sampling approach that will evaluate concentration gradients of gasoline-related total petroleum hydrocarbons along two transects (A

MERIT STANLEY (Continued) **S103574868**

- A' and A - A'') that extend from the approximate center of the residual LNAPL mass and former UST locations on the former Hess property and which extend to the north / north west across the Wendy's property. Soil samples would be analyzed for TPH-GRO (total petroleum hydrocarbons - gasoline range organics). Please find attached a figure that presents the proposed sampling locations. Please note that extensive coordination will be required with Wendy's to ensure that there is minimal disruption to their business operations. Please let me know if you agree with this approach or if have any questions or comments and would like to discuss the proposed scope of work in greater detail. We intend to finalize the work plan and re-submit for your approval next week. We intend to perform the work as quickly as possible, pursuant to contractor availability.

---------- I responded to Mr. Kampf's email with the following comments: I have reviewed the draft proposed boring plan. Let me first say that I am not sure whether doing a contaminant concentration gradient analysis will definitively point to one location or the other (former HESS site) as being the source. However, the choice is yours to do this. We will simply review the data and make our own conclusions. Secondly, any initial investigation should include more borings at the Wendy s property than have been depicted. We suggest conducting the additional borings as we have indicated on our revised plan (see attached). We make this suggestion as there is no record regarding where the USTs or the pump islands used to be during the time that the property contained the filling stations. Additionally, all soil and groundwater analyses should conform to methods 8260B and 8270C. We ask for the expanded lists in order to see which volatiles and SVOCs will show up. If only a limited number of VOCs and SVOCs appear in the initial samples, then we would allow the testing to be for a limited suite of analytes the STARS list of 14 VOCs and 16 SVOCs. Lastly, the boring map you have sent me shows old information for the subsurface conditions at the former HESS site. We had sent P.W. Grosser the third quarter 2014 EnviroTrac groundwater monitoring report. In this report, they indicate that there is no NAPL in wells MW-7, 8, 10 and 11. 8/30/16 - Raphael Ketani. Mr. Kampf (212) 786-7420 (rkampf@pwgrosser.com) called me today. He said that P.W. Grosser and the client agreed to the extra borings requested by DEC. He also said that he wanted to have the soil and groundwater samples analyzed just for the STARS list of VOCs since this was a gas station and also since the HESS site was being tested only for VOCs. I told Mr. Kampf that this would be fine and to send the Department a cover letter confirming our agreement about doing only VOC analyses and about conducting the additional borings. He said he would. 8/31/16 - Raphael Ketani. Today I received the letter that I had sent to Merit Oil Corp. in which I had requested copies of any documents they may have regarding the site. The envelope was unopened and marked by the U.S. Post Office Not Deliverable as Addressed. The sticker was dated 8/27/16. The address I used for Merit appeared to be a legitimate one that I had copied from Merit's web page. 9/7/16 - Raphael Ketani. I reviewed the revised investigative boring work plan which was submitted by Mr. Kampf by email on 9/6/16. Eleven soil borings will be performed through the Wendy's property. Eight of these boring locations were chosen by P.W. Grosser. Three were chosen by the DEC. Each borings will be drilled to 20 feet bgs. The soil samples will be analyzed for CP-51 Table 2 VOCs (14 VOCs) and TPH GRO. The work will take place on

MERIT STANLEY (Continued) **S103574868**

9/13/16 and on 9/14/16. I sent Mr. Kampf an email approving the work plan. 9/12/2016 - Colton McPartland. Scanned paper file for DEC Raphael Ketani and placed on computer desktop for future bulk upload once naming convention is received from DEC Jane Obrecht. 9/13/16 - Raphael Ketani. Mr. Kampf (212) 786-7420/(716) 392-4933 (rkampf@pwgrosser.com) called me early this morning to say that 2 borings situated in the drive-thru lane had been completed to 13.5 and 15.5 feet below grade, respectively. He added that some dark stained soil was collected which had petroleum odors. The samples will be sent to the lab for analysis. 9/19/16 - Raphael Ketani. I received an email from Mr. Kampf on 9/16/16. The email stated the following: Pursuant to the work plan approved by NYSDEC on September 7, 2016 regarding 1916 Linden Blvd, we performed the Subsurface Investigation this week which included advancing a total of 12 soil borings to approximately 20 ft bgs. Please refer to the attached sketch, which shows a site plan, including the location of the 12 soil borings. The groundwater table was present at approx 11.5 to 13 ft bgs. Boring logs indicate the presence of a petroleum hydrocarbon-related smear zone approximately 8 to 10 ft thick (approx. 12 - 13 to 20 - 23 ft bgs) at the three soil borings that were advanced farthest south along the boundary between the Wendy s and former Hess property (SB003, SB008, and SB009). Moving north, on the western side of the restaurant, the smear zone thickness decreased to approximately 5.5 ft (approx. 13.5 to 19 ft bgs) at SB001 and SB002) and to about 5 ft thick at SB012. PID readings also generally decreased with distance from the boundary of the former Hess gas station. SB010 and SB011, located further to the west, did not indicate any evidence of petroleum contamination. On the eastern side of the restaurant, also north of the former Hess property, the smear zone thickness decreased to approximately 6 ft (approx. 11.5 to 17.5 ft bgs) at SB004 and SB007, 3.5 ft at SB005 (approx. 11.5 to 15 ft bgs), and 1ft thick at SB006 (approx.. 13 to 14 ft bgs). PID readings also generally decreased with distance from the boundary of the former Hess gas station. There was no evidence of petroleum hydrocarbon-related constituents compounds above the water table at any boring location, no indication of the presence of any USTs, and no evidence that a petroleum hydrocarbon release has taken place on the Wendy’s property. In summary, a total of 17 samples were collected for analysis from 12 borings. The observed thinning out of the smear zone from south, along the former Hess property boundary, to north, across the Wendy’s property, supports the conclusion that the petroleum hydrocarbon material observed in borings at the Wendy’s property originated from spill(s) that took place at the former Hess property. We will have analytical results next week. I reviewed the Site Plan keeping in mind the text of Mr. Kampf’s associated email. It seemed reasonable that the smear zone should be thickest at the border with the former HESS station. This was because HESS wells MW-8, 10 and 11 did have free product up to 2012. I sent a response email to Mr. Kampf stating that he should send the DEC a report with analytical summary tables, the raw data package, boring logs, a description of the work which had taken place and any other information which is pertinent. 9/27/16 - Raphael Ketani. I reviewed the EnviroTrac 9/27/16 August 2016 Update Report. On 8/17/16, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 10.71 to 13.04 feet. Flow was southeasterly. The groundwater analytical results for the samples

MERIT STANLEY (Continued) **S103574868**

from MW-2, 9, 12 to 14 and 18 were either completely non-detect for BTEX or were mostly non-detect with only one or a few very low hits. MW-1, 4, 7, 8, 10 and 11 had BTEX concentrations that varied from 737.5 ppb to 5884 ppb. These wells were located either in the former UST area (MW-7) or in the northern part of the site where soil contamination had been extensive and where AS/SVE actions had been concentrated. The benzene results were either low or moderate in concentration for the high BTEX samples. The AS/SVE system remained shut down due to non-detect recovery. Speedway intends to conduct a pilot test during the fourth quarter of 2016 to evaluate the efficiency of the mobile AS/SVE system and the inactive remediation system. Operation and maintenance take place monthly and groundwater sampling takes place quarterly. The next sampling round will take place during November 2016. I approved the report without comment. 11/1/16 - Raphael Ketani. I reviewed the P.W. October 2016 Grosser Site Investigation Report dated 10/28/16 for the Wendy's Restaurant property. A gas station operated at 1916 Linden Boulevard from 1950 to 1967 and then from 1969 to 1977. Between 1981 and 1983, a new commercial building was constructed. The INTRODUCTION section of the report states that, according to the DEC, a lot of contaminated soil was left under the HESS site after the tanks were removed during 1998. It is also stated that the extent of the soil contamination was not fully delineated. Additionally, P.W. Grosser states that the petroleum contamination from HESS had migrated under the Wendy's property. The P.W. Grosser investigation did not find USTs under the property nor petroleum contamination above the water table. The smear that was found decreased in thickness away from the HESS site. Following the INTRODUCTION, the report explains in detail the history of the investigation and remediation work at the HESS site. Information is also provided regarding the environmental monitoring by EnviroTrac. Depth to groundwater is from 11 to 15 feet bgs and flow is to the south. In Section 4.0 - Subsurface Investigation Activities, it is explained that EnviroProbe Services Inc. performed a geophysical survey on 8/23/16. A cart mounted GPR and an RD unit were utilized. The GPR penetration depth was generally 3 feet with a penetration depth of 3.5 feet in the rear (far parking lot) of the property. Tanks, piping, anomalies and utilities were looked for. The survey took place in a grid pattern. Rebar and possible steel mesh were detected at 4 inches below grade. However, no tanks or piping were found. From 9/13/16 to 9/14/16, 12 soil borings were installed from 16 to 24 feet below grade. A Geoprobe machine was used to conduct the borings. Soil samples were generally collected from the interval above the water table, or the interval with the highest PID reading. Nine of the 12 borings showed signs of petroleum contamination. The depth to groundwater was from 11.5 to 13.5 feet bgs. A smear zone was discovered from 7.5 to 10.5 feet in thickness in the 3 borings that were located along the property boundary with the former HESS station (SB003, SB008 and SB009). A Preliminary Conceptual Site Model (PCSM) was incorporated into the Site Investigation Work Plan which was previously submitted. The PCSM considered site history and context, including factors incluencing distribution and fate and transport. The factors included the potential sources, release mechanisms and the physical-chemical mechanisms that control fate and transport. The CSM was refined based upon the information obtained via the site investigation. P.W. Grosser then explained how LNAPL would behave in the subsurface (i.e. how it might migrate) as is typically stated in a hydrogeology

MERIT STANLEY (Continued) **S103574868**

textbook and included a typical diagram. Their explanation amounted to them building a case for the contamination having come from the former HESS site. They used information from the historical reports for the site. In the CONCLUSIION section of the report, they list 16 points to support their claim that the Wendy's property does not have a spill and that the contamination below ground at 1916 Linden Boulevard is entirely from the spill at the former HESS station. Table 1 listed the soil analytical results for the samples that had been collected. The set of analytes were the STARS list of 16 gasoline VOCs. The great majority of the VOC sample results were either very low or had very low to low hits with high exceedences for only total xylenes. The samples from SB004, SB005, SB007, the shallow sample from SB008 and the shallow sample from SB009 had high to very exceedences for one or both trimethylbenzene analytes and total xylenes. Only the samples from SB005 and SB007 had high naphthalene exceedences. Figures 1 to 5 were the same figures as were presented in previous P.W. Grosser reports. Figure 6 showed a cross section of the smear zone from SB003 to SB012. The smear zone was shown to decrease in thickness from 10 feet to 3 feet, respectively. The total BTEX concentrations decreased from 8.59 ppm at SB003 to 0.075 ppm at SB012, with the exception of 142.51 ppm in the deeper sample from SB002. Figure 7 showed that the smear zone decreased in thickness from about 6 feet at SB009 to about 3 feet at SB005. The total BTEX concentrations were 1301.3 ppm in the shallow sample and 1.0201 ppm in the deep sample from SB009, respectively. The lowest concentration was 1.68 ppm at SB006 along this transect. However, the shallow and deep results for the middle location at SB007 were 1158.4 ppm and 1575.5 ppm, respectively. The shallow and deep samples from SB004 (between SB009 and SB007) were 84.02 ppm and 396.3 ppm, respectively. Figure 8 showed the BTEX results for soil samples taken from the 12 borings locations. Most of the results were either entirely non-detect, or had only low hits, or had moderate to high total xylene exceedences with the other analytes being low to moderate in concentration. The shallow soil sample at SB009 had 3 high exceedences. The shallow soil sample at SB007 had 110 ppb of ethylbenzene and 970 ppb of total xylenes. The deep soil sample at SB007 had 210 ppb of ethylbenzene and 1300 ppb of total xylenes. Sanborn maps were included as Attachment 1. No tanks were depicted on the maps for the Wendy's property. Attachment 2 contained NYC PBS search documentation. Attachment 3 showed the extent of the soil excavation at the former HESS site. Attachment 4 showed the soil vapor extraction and air sparge piping layout for the former HESS site. Attachment 5 contained the groundwater gauging and elevation data. Attachment 6 contained the BTEX-MTBE-groundwater elevation graphs. Attachment 7 contained the Enviroprobe Service report dated 8/23/16. The information in this report had been included in the body of the text for the SIR. Attachment 8 contained the borings logs. In general, fill material extended from 0 to 5 feet below grade. Natural sediments consisting of either silty sand, sand or gravelly sand start at depths from 4 to 7 feet below grade. The zone of contamination (smear zone or gray to dark gray sand zone) typically extended from 13 to 17 feet below grade. At some boring locations, the gray zone with petroleum odors extended continuously from 12 or 13 feet below grade to total depth at 20 or 24 feet. The York Analytical Laboratories Inc. 9/21/16 analytical report was Attachment 9. 11/8/16 - Raphael Ketani. The information in the October 2016 P.W. Grosser report appeared to have been generated by methods which are

MERIT STANLEY (Continued) **S103574868**

typically used by the environmental industry. The resulting data was coherent and consistent. So I approved the SIR. However, a deeper penetrating geophysical survey would have been more definitive. 11/9/16 - Raphael Ketani. I contacted Mr. Kampf by phone (212) 786-7420/(716) 392-4933 (rkampf@pwgrosser.com) and discussed whether there were any other geophysical methods which could definitely penetrate deeper below the Wendy's property, given the subsurface conditions. Mr. Kampf stated that he had discussed this issue with several geophysical companies and none could guarantee that their instruments could give results for depths below about several feet (about 3 to 4 feet below grade). As a result of our conversation, I sent a letter to Penbrow, Inc. at 488 Madison Avenue, 19th Floor, Manhattan, New York, 10022. In the letter, I stated that, in consideration of the information in the SIR, the Department has determined that the Wendy's property is not a source of environmental contamination. A pdf file of the letter was sent by email and a hard copy was sent to Penbrow. 2/2/17 - Raphael Ketani. I reviewed the EnviroTrac January 2017 Quarterly Update Report dated 1/31/17. On 11/29/16, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 10.95 to 13.11 feet. Flow was southeasterly. The groundwater analytical results for the samples from MW-9, 12, 14 and 18 were non-detect for BTEX. The samples from MW-2 and MW-13 had a few low hits. For the other samples, the BTEX concentrations were 2475 ppb (19 ppb benzene) at MW-1, 2834.4 ppb (5.4 ppb benzene) at MW-4, 138.1 ppb at MW-7, 529.8 ppb (234 ppb benzene) at MW-8, 3508.1 ppb (4.1 ppb benzene) at MW-10, and 7130 ppb (non-detect benzene) at MW-11. The AS/SVE system remained shut down due to non-detect recovery. 4/28/17 - Raphael Ketani. Today I received an email from Mr. Butler that he is leaving Speedway. He stated that John Engdahl [jjengdahl@speedway.com (732) 738-2923] will take over his duties. 5/2/17 - Raphael Ketani. I reviewed the EnviroTrac April 2017 Quarterly Update Report dated 4/28/17. On 2/21/17, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 10.63 to 12.79 feet. Flow was southeasterly. The groundwater analytical results for the samples from MW-9, 12 to 14 and 18 were either entirely non-detect for BTEX or had one very low hit. The sample from MW-2 had 35.5 ppb of BTEX. For the other samples, the BTEX concentrations were 1901.2 ppb (23.2 ppb benzene) at MW-1, 8497.8 ppb (17.8 ppb benzene) at MW-4, 228.3 ppb at MW-7, 6312 ppb (906 ppb benzene) at MW-8, 6639.1 ppb (4.1 ppb benzene) at MW-10, and 141.1 ppb (non-detect benzene) at MW-11. I approved the report without comment. 8/1/17 - Raphael Ketani. I reviewed the EnviroTrac July 2017 Quarterly Update Report dated 7/28/17. On 5/19/17, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 11.74 to 14.03 feet below grade. Flow was southeasterly. The groundwater analytical results for the samples from MW-2, 9, 12 to 14 and 18 were either entirely non-detect for BTEX or had a low concentration. For the other samples, the BTEX concentrations were 2257.2 ppb (40.2 ppb benzene) at MW-1, 16,130 ppb (110 ppb benzene) at MW-4, 473 ppb at MW-7, 1560.8 ppb (345 ppb benzene) at MW-8, 5222.4 ppb (3.4 ppb benzene) at MW-10, and 3829 ppb (non-detect benzene) at MW-11. 10/31/17 - Raphael Ketani. I reviewed the EnviroTrac October 2017 Quarterly Update Report dated 10/30/17 for the period June to August

MERIT STANLEY (Continued) **S103574868**

2017. During August 8th and 9th, the remediation system was dismantled and removed. On 8/15/17, 12 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7 to 14 and 18. Product was not detected in any of the wells. Groundwater was found at 11.47 to 14.11 feet below grade. Flow was southeasterly. The groundwater analytical results for the samples from MW-12 to 14 and 18 were either entirely non-detect for BTEX or had a low concentration. For the other samples, the BTEX concentrations were 4654 ppb (100 ppb benzene) at MW-1, 215.2 ppb (77.5 ppb benzene) at MW-2, 5562.9 ppb (49.9 ppb benzene) at MW-4, 2658 ppb (248 ppb benzene) at MW-7, 423.6 ppb (17.1 ppb benzene) at MW-8, 186.4 ppb (3.3 ppb benzene) at MW-9, 10,580.7 ppb (10.7 ppb benzene) at MW-10, and 14,201.3 ppb (1.3 ppb benzene) at MW-11. 1/23/18 - Raphael Ketani. I reviewed the EnviroTrac January 2018 Update Report dated 1/23/18 for the period September to November 2017. On 11/22/17, 9 wells were gauged and sampled. The wells gauged and sampled were MW-1, 2, 4, 7, 9 to 12 and 14. Product was not detected in any of the wells. Groundwater was found at 12.05 to 14.26 feet below grade. Flow was south-southeasterly. The groundwater analytical results for the samples from MW-12 and 14 were either entirely non-detect for BTEX or had a low concentration. For the other samples, the BTEX concentrations were 4684 ppb (140 ppb benzene) at MW-1, 1446.4 ppb (788 ppb benzene) at MW-2, 63.6 ppb (1.4 ppb benzene) at MW-4, 1061.2 ppb (195 ppb benzene) at MW-7, 219.6 ppb (6.7 ppb benzene) at MW-9, 9350.1 ppb (10.1 ppb benzene) at MW-10, and 8183.7 ppb (3.7 ppb benzene) at MW-11. 05/01/2018: This spill case was transferred to A. Doronova - AD. AD Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com DL the report to DDocs. Will review. AD 05/27/2018: Reviewed the report. the spill case was opened due to tank test failure reported on March 31, 1993. This report covers monitoring period: December 2017 February 2018. On February 7, 2018 - the consultant gauged and sampled twelve monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 11.02 feet to 13.30 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 900 ug/L (MW-2) Maximum MTBE Concentration: 2.3 ug/L (MW-8 & MW-13) BTEX: MW-2 (1,000ppb), MW-8 (4,300ppb), MW-10 (6,500ppb) and MW-11 (17,000ppb) Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for May 2018. An update report summarizing these activities will be submitted to NYSDEC in July 2018. IRM should be proposed for the site. AD 07/20/2018: Received the following e-mail from Mr. Rennie of EnviroTrac: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 07/31/2018: Reviewed the report. It states that this spill was assigned to the site in March 1993 and associated with the onsite underground storage tank (USTs) system. The USTs were excavated and removed from the former Merit Station in January-February 1998. In the process, 595.11 tons of soil was excavated and transported offsite for disposal. A Soil Vapor

MERIT STANLEY (Continued) **S103574868**

Extraction and Air Sparge (SVE/AS) Remediation System was installed and operated on the former Merit Station from February 2000 to February 2006 and then from December 2008 through April 2010. In April 2010, based on the conclusion that asymptotic mass removal rates had been achieved the system was shut down. Beginning in the first quarter of 2010, Hess began documenting its concern of the presence of upgradient offsite sources of petroleum hydrocarbons and the influence on the former Merit Station conditions to the NYS DEC. Hess reiterated its concerns about offsite upgradient contributions to the former Merit Station in January 2011, when it requested the NYS DEC require ExxonMobil to delineate the petroleum hydrocarbon dissolved phase ground water plume associated with its station located at 1935 Linden Boulevard, which was assigned NYS DEC Spill # 94-06497 (the Mobil Station). Subsurface Investigation - 1916 Linden Boulevard, Brooklyn, NY In October 2016, in response to an April 26, 2016 NYS DEC request, P.W. Grosser, on behalf of the property owner (Pennbrow, Inc.), completed a subsurface investigation of the property located immediately to the north of the former Merit Station (the site). - 1916 Linden Boulevard operated as a gasoline service station from sometime between 1950 and 1967. A new gasoline station was constructed between 1969 and 1977. Sometime between 1981 and 1983 the property use changed from gasoline station to the its current use as a fast food restaurant. - Regional ground water flow direction is southeast - southwest (see Section 2.4), which would make the Mobil station assigned NYS DEC Spill # 94-06497 hydraulically upgradient of 1916 Linden Boulevard (see Section 2.7.1.). Based on the referenced ground water flow direction, the site would be hydraulically downgradient of the Mobil Station and 1916 Linden Boulevard. Looked into reports for 1916 Linden Blvd (Wendy's restaurant-adjacent to the site) and 1935 Linden Blvd (Mobil station across the road). There are 4 wells along the Linden Blvd which belongs to Mobil station site. These wells located across the Linden Blvd from the Mobil station, along the Wendy's restaurant property line on a sidewalk. No elevated BTEX concentration were detected in these wells except for well MW-15 with 98 ppb (BTEX) in December 2017. There are also wells MW-4, MW-8 and MW-11 which are located along the property line between Wendy's and Hess station (the site) and belong to Hess station. GW data February 2018 (BTEX ppb): MW-4 - 421 MW-8 - 4,335 MW-11 - 16,811 Called to Mr. Rennie to discuss the site. Left a message. Called and spoke with Mobil Stations PM from Albany - Mike Haggerty. He provided with most recent GW report for his site (Mobile station - possible source of an off-site contamination according to Speedway's claim). AD 08/02/2018: Discussed the site and an off-site source claim with J. Kolleeny. Discussed two up-gradient sites (Wendy's and Mobil). Since GW data from Mobil site (from 12/2017) indicate ND concentrations of BTEX for all site wells except for one well (MW-4) and no off-site migration of dissolved phase confirmed by the off-site wells (ND for BTEX) located across the Linden Boulevard, Wendy's site could be a probable source attributing to the contamination in the Speedway northern wells. AD 08/03/2018: Had a conference call with Speedway (John Engdal) and EnviroTrac (Ed Russo) regarding their report with an off-site source claim. Discussed the site; asked questions regarding: - free product in wells MW-4, MW-8 and MW-11. LNAPL was last time detected in these wells in 2012. - end-point soil samples in the northern part of the UST and dispenser island field; - distance between Mobil and former Hess stations; - surveying of the site wells; - is there any UST present at the site;

MERIT STANLEY (Continued) **S103574868**

It was decided that EnviroTrac will make historical groundwater diagrams and will re-send UST closure report (due to the poor quality of the submitted one). One additional wells may be will be installed at the property boundary to get more soil and GW data. Down-gradient wells with elevated levels of BTEX should be addressed. AD 08/07/2018: Had a meeting with V. Brevdo and J. Kolleeny to discuss the claim, neighboring sites and all site-related data. It was decided that based on the following: - the most recent report for Mobil station, which indicate that the local groundwater flow direction is from north to south (and ND levels of petroleum contamination in monitoring wells close to the southern property boundary and off-site wells); - the most recent groundwater monitoring report from Speedway, which indicate that the local groundwater flow direction is from north to south (and high levels of petroleum contamination in monitoring wells close to the northern property boundary; - Sanborn Fire Insurance Maps indicating that a gasoline filling station was formerly located on Wendy's restaurant property; - a subsurface investigation performed in 2016 by P.W. Grosser confirmed the presence of petroleum contamination in soil on 1916 Linden Blvd' it is possible that petroleum impacts on 1916 Linden blvd. property may be contributing to the contamination observed in wells on the Speedway property, near its boundary. No groundwater samples were collected on 1916 Linden Blvd. during the 2016 investigation by P.W. Grosser, and thus no local groundwater flow direction has been established at the site. Therefore, it was agreed that a letter will be issued to the Wendy's property owner with a request that a groundwater investigation be performed on his property by installing monitoring wells at the locations where the highest levels of soil contamination were identified by P.W. Grosser in 2016 borings SB003, SB004, SB005, SB007, SB008 and SB009. The newly installed wells should be surveyed to establish groundwater flow direction at the site, and groundwater samples should be collected to evaluate groundwater quality. Speedway consultant - EnviroTrac was advised to install additional well at the property boundary to confirm an off-site source claim. AD 08/08/2018: Issued and sent a certified letter (#7016 1370 0001 8372 0385) to Norman Bobrow of Pennbrow Inc. (Wendy's site owner) with a request to perform a GW investigation at his property. A work plan for such investigation should be submitted by October 8, 2018. AD 08/31/018: DEC was contacted by Mark Chertok, the attorney for the Wendy s property owner, who asked that DEC provide reports related to the former Hess station. After consulting with DEC s Regional Attorney Patrick Foster, the requested documents were sent to Mr. Chertok. AD 10/04/2018: DEC received a letter from P. W. Grosser which argued that there is no basis for the requested groundwater investigation. Spoke with Patrick Foster - DEC Regional Attorney regarding this case. AD 10/12/2018: I, Vadim Brevdo and Jonathan Kolleeny met with the Regional Attorney to discuss P.W. Grosser s response and to consider further actions. It was agreed that the RA would issue a letter to the Wendy s site owner insisting that a groundwater investigation be performed. AD 10/29/2018: Received the following e-mail from Mr. Rennie: Dear Ms. Doronova, Please find attached the most recent Update Report for the above referenced location. Sincerely, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com Will review. AD 11/13/2018: Reviewed the submitted 3rd quarter 2018 report. It states that

MERIT STANLEY (Continued) **S103574868**

EnviroTrack on August 21, 2018, gauged and sampled eleven monitoring wells at the site. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-10, MW-12 through MW-14 & MW-18. Wells Containing LNAPL: None. Groundwater Depth: 10.77 feet to 13.10 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-10, MW-12 through MW-14, & MW-18. GW data: Maximum Benzene Concentration: 563 ug/L (MW-8) Maximum MTBE Concentration: 1.4 ug/L (MW-14 & MW-18) Total VOCs Range: 21,122.6 ug/L (MW-4) Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for November 2018. An update report summarizing these activities will be submitted to NYSDEC in January 2019. - According to the latest GW sampling results, BTEX concentrations increased in the following wells: MW-4 from 1,800ppb to 16.930ppb; MW-10 from 10,500ppb to 11,680ppb and MW-8 from 3,290ppb to 7,602ppb. All of these wells are located up-gradient of the former USTs field, two of them are on the property line. AD 11/20/2018: At Mr. Chertok s request, I and Jon Kolleeny met with PW Grosser representative - Mr. Richard Krampf to discuss technical aspects of DEC s requirements for the Wendy s groundwater investigation. DEC requested installation, surveying and sampling of a minimum of three on-site monitoring wells to obtain additional data to help evaluate the off-site source claim. P. W. Grosser agreed to discuss this request with their client and his attorney, and will get back to DEC soon with their response. AD 11/20/2018: After the meeting with Mr. Krampf called and spoke with Mr. Rennie of EnviroTrack regarding missing soil data along the property line. He will look for the info in their archive. AD 11/30/2018: Received a message from Joe Rennie of Envirotrack regarding DEC requirement for soil sampling data along the property line from monitoring wells. According to him, they were unable to locate such data in their archive. Additional soil and groundwater investigation may be needed. AD 12/05/2018: Called and left a message to Ed Russo. Later in the day received a call from Joe Rennie. He said that they will look into Speedway files to find soil data for the up-gradient wells. AD 12/13/2018: called and left a message to Ed Russo. AD 01/18/2019: I was informed by EnviroTrac that Speedway representative - John Engdahl is no longer with the company and that new representative was not appointed yet. 01/30/2019: Received the following e-mail from Ed Russo: Ainura attached is the most recent update report for your review/files. Let us know if you have any questions or comments. Thanks. Edward Russo - Senior Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - 516.523.6714 (Cell) - edr@envirotrac.com Will review. AD 02/25/2019: Reviewed the report. It states that the current site status - Car Wash/Auto Detailing Center. For the monitoring period: September 2018 November 2018, the following work was performed at the site: - November 6, 2018 - Gauged and sampled eleven monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-12, MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.31 feet to 12.51 feet. Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-12, MW-14, & MW-18 Maximum Benzene Concentration: 21.6 ug/L (MW-4) Maximum MTBE Concentration: 1.3 ug/L (MW-14) Total VOCs Range: ND (non-detect) 7,365.7 ug/L Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for February 2019. An update report summarizing these activities will be

MERIT STANLEY (Continued) **S103574868**

submitted to NYSDEC in April 2019. AD Also received the following e-mail from Ed Russo regarding new Speedway contact person for NY sites: Ainura, As requested, please direct NYSDEC correspondence for the above referenced spill to: Brian C. Davis - Environmental Representative Advanced - Speedway LLC 500 Speedway Drive, Enon, OH 45323 (937) 863-6919 Office - (937) 207-7722 Cell - (937) 863-6078 Fax - bcdavis@speedway.com Thanks, Joe Rennie Joseph Rennie - Project Manager - EnviroTrac Ltd. - 5 Old Dock Road, Yaphank NY 11980 631.924.3001 (Office) - 631.924.5001 (Fax) - joer@envirotrac.com AD 04/30/2019: Received a 1st quarter 2019 monitoring report. Will review. AD 05/20/2019: Reviewed the report. It states that for the monitoring period: December 2018 February 2019, the following work was performed at the site: - February 15, 2019 - Gauged and sampled twelve monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.32 feet to 12.59 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 9.4 ug/L (MW-1) Maximum MTBE Concentration: 4.7 ug/L (MW-14) Total VOCs Range: ND (non-detect) 4,045.4 ug/L Well 02/2019 (TVOCs in ppb) MW-1 1,432 MW-4 2,377 MW-8 481 MW-10 4,045 MW-11 1,562 Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for May 2019. An update report summarizing these activities will be submitted to NYSDEC in July 2019. AD 07/30/2019: Received the following e-mail from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager phone: 631.924.3001 - email: joer@envirotrac.com EnviroTrac Ltd., 5 Old Dock Road Yaphank, NY 11980 Will review. AD 07/31/2019: Reviewed the report. It states that for the monitoring period: March May 2019, the following work was performed at the site: - May 14, 2019 - Gauged and sampled twelve monitoring wells. GW monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.21 feet to 12.49 feet Groundwater Flow: South-southeasterly W ells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 336 ug/L (MW-8) Maximum MTBE Concentration: 1.8 ug/L (MW-14) Total VOCs Range: ND (non-detect) 5,541.9 ug/L Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for August 2019. An update report summarizing these activities will be submitted to NYSDEC in October 2019. AD 10/29/2019: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 11/26/2019: Reviewed the report. It states that for the monitoring period: June August 2019, the following work was performed at the site: - August 15, 2019 - Gauged and sampled twelve monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.38 feet to 12.69 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7 through MW-14, & MW-18 Maximum Benzene Concentration: 243 ug/L (MW-8) Maximum MTBE Concentration: 1.6 ug/L (MW-14) Total VOCs Range: ND (non-detect) 6,321.4 ug/L Well 02/2019 05/2019 08/2019 (TVOCs in ppb) MW-1 1,432 1,407 1,342 MW-4 2,377 298 5,225 MW-8 481 5,542 6,084 MW-10 4,045 3,560 6,122 MW-11

An update report summarizing these activities will be submitted to NYSDEC in January 2021. AD 12/21/2020: Received the following email from Mr. DiVincent: Good afternoon Ainura, I am inquiring about the status of the investigation of off-site impacts in regards to the above referenced site. Specifically, I wanted to know if any information has been provided in regards to the off-site impacts associated with the Wendy s Restaurant property located at 1916 Linden Blvd, Brooklyn, NY (former gasoline station from 1967 to 1981), pursuant to the attached letter. If you could please let me know the status of the investigation of the off-site impacts that may be impacting the Hess site, that would be greatly appreciated. Happy holidays. Thanks, Nick Nicholas DiVincent Maser Consulting 400 Valley Road - Suite 304 - Mt. Arlington, NJ 07856 C: 551-206-0638 P: 973-398-3110 ext: 4571 www.maserconsulting.com AD 12/22/2020: Called and spoke with Mr. DiVincent. His company was hired by the site owner. Discussed the site conditions, off-site contamination claim and further actions needed. Later in the day called and spoke with Mr. Rennie of the EnviroTrack. He also received an email from Mr. DiVincent yesterday, but did not contact him yet. Mr. Rennie told me that there were talks about selling the site. He will contact the Speedway representative and will update DEC. AD 01/04/2021: Received an email from Mr. DiVincent: Good morning Ainura, As a follow up to our phone conversation on 12/22, can you please send me a copy of the soil investigation report for the upgradient Wendy s Restaurant property located at 1916 Linden Blvd, Brooklyn, NY? Thank you, Nick Nicholas DiVincent Maser Consulting C: 551-206-0638 P: 973-398-3110 ext: 4571 AD 01/05/2021: Called and left a message to Mr. DiVincent asking to send me an official request with his client information on whose behalf he is making this request. Later in the day received the following response from Mr. DiVincent: Hi Ainura, To clarify, we have been hired by the property owner for the subject property located at 810 Pennsylvania Ave., Brooklyn, NY and are requesting a copy of the report on their behalf. Thank you, Nick Nicholas DiVincent Maser Consulting C: 551-206-0638 P: 973-398-3110 ext: 4571 AD 01/28/2021: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. February 2006 AS/SVE system was shut down. December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. April 2010 AS/SVE system was shut down due to non-detect recovery. Current Site Status: Car Wash/Auto Detailing Center. For the reported monitoring period: June 2023 August 2023, the following work was performed at the site: - August 1, 2023 - Gauged and sampled eleven monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-13 & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.55 feet to 12.04 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-13 & MW-18 Maximum Benzene Concentration: 418 ug/L (MW-8) Maximum MTBE Concentration: 1.0 ug/L (MW-13) Total VOCs Range: ND 11,528.5 ug/L Historical GW data (TVOCs) Well 11/2020 02/2021 05/2021 08/2021 05/2022 08/2022 11/2022 02/2023 05/2023 08/2023 MW-1 665 208 241 559 71 239 418 63 33 186 MW-2 ND ND ND ND ND ND ND ND ND ND MW-4 6,454 7,232 2,400 7,454 1,526 5,110 1,379 256 296 11,528 MW-7 2.4 23 140 ND ND ND ND 2 ND ND MW-8 15,980 8,840 3,120 6,095 2,967 8,668 NS 8,745 6,646 2,987 MW-9 ND ND ND ND ND ND ND ND ND ND MW-10 6,609 3,264 2,499 1,621 2,770 6,354 5,454 5,748 2,098 3,502 MW-11 5,225 NS 2,223 3,036 753 1,056 9,604 626 976 2,179 MW-12 ND ND ND ND ND ND ND 5 ND ND MW-13 ND NS 393 225 NS 125 NS 190 39 227 MW-14 10 53 15 5 39 8 3 27 57 NS MW-18 ND ND ND ND ND ND ND ND ND ND Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for November 2023. An update report summarizing these activities will be submitted to NYSDEC in January 2024. AD 01/29/2024: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. Joseph Rennie Project Manager EnviroTrac Ltd. phone: 631.924.3001 - email: joer@envirotrac.com 5 Old Dock Road Yaphank, NY 11980 - https://envirotrac.com Will review. AD 02/27/2024: Reviewed the 4th quarter 2023 report. It states that the following remediation activities were historically performed at the site: February 2000 Air sparge (AS)/Soil Vapor Extraction (SVE) system in operation. February 2006 AS/SVE system was shut down. December 2008 AS/SVE system is re-activated and monthly operations and maintenance (O&M) begins. April 2010 AS/SVE system was shut down due to non-detect recovery. Current Site Status: Car Wash/Auto Detailing Center. For the reported monitoring period: September 2023 December 2023, the following work was performed at the site: - December 4, 2023 - Gauged and sampled eleven (11) monitoring wells. Groundwater Monitoring: Wells Gauged: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9 through MW-12, MW-14 & MW-18 Wells Containing LNAPL: None Groundwater Depth: 10.41 feet to 12.68 feet Groundwater Flow: South-southeasterly Wells Sampled: MW-1, MW-2, MW-4, MW-7, MW-8, MW-9

MERIT STANLEY (Continued) **S103574868**

through MW-12, MW-14 & MW-18 Maximum Benzene Concentration: 3.0 ug/L (MW-1) Maximum MTBE Concentration: Non-Detect (ND) all wells Total VOCs Range: ND 9,981.1 ug/L Historical GW data (TVOCs) Well 02/2021 05/2021 08/2021 05/2022 08/2022 11/2022 02/2023 05/2023 08/2023 12/2023 MW-1 208 241 559 71 239 418 63 33 186 90 MW-2 ND ND ND ND ND ND ND ND ND ND MW-4 7,232 2,400 7,454 1,526 5,110 1,379 256 296 11,528 5,161 MW-7 23 140 ND ND ND ND 2 ND ND 1.6 MW-8 8,840 3,120 6,095 2,967 8,668 NS 8,745 6,646 2,987 7 MW-9 ND ND ND ND ND ND ND ND ND ND MW-10 3,264 2,499 1,621 2,770 6,354 5,454 5,748 2,098 3,502 1,860 MW-11 NS 2,223 3,036 753 1,056 9,604 626 976 2,179 9,981 MW-12 ND ND ND ND ND ND 5 ND ND ND MW-13 NS 393 225 NS 125 NS 190 39 227 NS MW-14 53 15 5 39 8 3 27 57 NS ND MW-18 ND ND ND ND ND ND ND ND ND ND TVOCs levels in site wells indicted sharp fluctuations comparing to the previous sampling round. Well MW-4 decreased from 11,528 ppb to 5,161 ppb, MW-8 decreased from 2,987 ppb to 7 ppb, MW-10 from 3,502 to 1,860 ppb and well MW-11 indicated increase from 2,179 ppb to 9,981 ppb. The consultant should monitor TVOCs levels during next sampling round and present some conclusions to DEC on these patterns. Recommendations: Speedway will continue with quarterly groundwater sampling. The next groundwater sampling event is scheduled for February 2024. An update report summarizing these activities will be submitted to NYSDEC in April 2024. AD 04/29/2024: Received the following email from Mr. Rennie: Ainura - Please find attached the most recent Update Report for the above referenced location. DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was AUSTIN 3/11/03 - SAMUEL- File available in active unassigned spill files. 3/3/05 - Austin - Reassigned to Rahman 03/31/05-Rahman- Sent a letter. 06/21/05 rahman: Spoke with their lawyer. he has been advised to install soil borings around the tank to reveal the level of contamination. They will get back to DEC soon. 02/08/06 Sharif Rahman-I spoke with Joseph Sardar, faxed him the letter previously sent to him and hwe will contact DEC with all required documents. 05/05/06 Sharif Rahman-Spoke with Joseph Sardar,(718)599-4848 few times and told him to send papers about the repair work that was done to fix the problem.He indicated that the property has been sold. 08/14/06 Rahman- Inspected the site on 08/09/06, could not get access as that's an abandoned place now.The building was completely closed. Tank tightness testing result of 04/27/05 done by Pro Test, shows thank & system passed the test.As per Pro test, test on 04/09/98 failed due to loose fitting on the manway, not because the tank was leaking. Spill is closed.
Remarks:	tank tested anf failed. .

DEC Memo:	3/16/22-lin-Previously unknown UST was found during demolition activities at 803 Rockaway Avenue in

COMMERCIAL (Continued) **S128661028**

Brooklyn. A tank contractor vacuumed the tank contents and then the UST was relocated and placed on
top of plastic sheeting. Consultant performed soil screening in the tank grave of the UST and
observed visibly stained soil, petroleum-like odors and soil screening readings above 100 ppm with
a PID. Additional excavation was performed to determine the full extent of the spill area and
perform spill endpoint sampling once field evidence of impacted soil was not present. All excavated
impacted soil was stockpiled on plastic sheeting. The extent of the excavation was extended
approximately 20 x 20 x 20 feet from grade. The northern sidewall was the only sidewall that had
soil exposed to allow for a spill endpoint sample. The remaining three sidewalls of the excavation
were extended to old concrete foundation elements and excavation. Excavation continued downward to
about 20' below sidewalk grade the water table was encountered and excavation was halted. DEC
requested a groundwater sample to be taken from the bottom of the excavation for analysis.
6/1/22-Lin-Recieved spill closure report. UST was removed and contaminated soil was excavated down
to groundwater at 18' bgs. Stained soil was excavated horizontally to the pre-existing concrete
foundation to the east, west, and south. One endpoint soil sample was collected from the north side
wall and one groundwater sample was collected at the bottom of the excavation. Soil sample results
came back below unrestricted standards. Groundwater sample results show no significant exceedances.
Case closed.

Remarks: UNDERGROUND TANK. CLEANUP PENDING.

BOARD OF ED TTF (Continued) **S113494344**

Patel. alternate address: 564-586 Hegeman Ave, 781-833 New Jersey Ave, 1961-1965 Linden Blvd, 774-802 Vermont Street, 824 Vermont Street no other spills found. PBS #: 2-356530. as per PBS record, the site has following tanks: - one (1) 15,000 gal #4 oil UST, in-service, installed in May 1939 - one (1) 275 gal diesel AST on legs, in-service, installed in Jun. 2000 - one (1) 60 gal diesel AST on legs, in-service, installed in Jun. 2000 the subject spill case was reported due to tightness test failure of 15,000 gal #4 oil tank. 04/06/16-Hiralkumar Patel. 1:06 PM:- spoke with Munendra Sharma at NYC Board of Education and informed him about the open spill case at the site. he will check record and submit any available documents. 1:10 PM:- spoke with Marissol at PTC and inquired her about tank test failure. she mentioned that after initial tank system failure, PTC has not done any other work at the site. 1:17 PM:- left message at school (718-257-4034). 04/07/16-Hiralkumar Patel. 10:03 AM:- received call from Vinnie, school custodian. he started working at the site in Mar. 2016 and doesn't know about tank system test failure in 2013. 07/25/17-Hiralkumar Patel. 2:25 PM:- went to site for inspection, but no access available. 12/20/17-Hiralkumar Patel. 10:45 AM:- visited site and met Dale at school. he mentioned that site has ASTs for diesel fuel and 15,000 gal UST for #4 oil. he also mentioned that the #4 oil tank was cleaned last week. inspected 275 gal diesel AST in basement. no signs of spill noted from the tank. fill port and vent line for the diesel AST are located on building's western foundation wall along New Jersey Ave, approx. 30 ft south of northwest corner of the building. the 15,000 gal #4 oil UST is located under a front yard adjacent to building's northern foundation wall along Hegeman Ave, approx. 70 ft east of northwest corner of the building. a vent pipe is located along the building wall, a stick line observed in grass and the remote fill port is located along curb. the tank is located adjacent to boiler room. inspected boiler room. no signs of oil noted on boiler room floor, but noted stains on boiler room's northern wall (bottom 3 ft) where UST is located on other side. also noted closed piping in area where tank system's existing piping are located. no odors noted in boiler room. during inspection, found a measuring stick in boiler room near the tank gauge. Dale mentioned that they measure product level in UST using a measuring stick as gauge may not be working. Abe Dasilva **school custodian** PH. (718) 257-4034 10:55 AM:- spoke with Mr. Sharma. he mentioned that Riteway Tank Maintenance has cleaned out the UST last week, but they did not perform any system test. asked Mr. Sharma to test the tank system. 2:42 PM:- sent letter to Mr. Sharma requiring submission of documents (by the end of 01/31/18) related to tank system failure reported in 2013, and subsurface investigation report (by the end of 02/28/18) including investigation for possible contamination around the tank (based on observations of stained boiler room wall). letter emailed to Mr. Sharma. 07/16/18-Hiralkumar Patel. 9:00 AM:- visited site and met Paul. Riteway crew excavated soil above the tank, adjacent to the property fence. found little oil on rain water puddle at the bottom of the excavation. also noted oil seeping from north sidewall (in approx. 15 ft wide area) along sidewalk. suggested Paul to backfill excavation on tank top, as no further excavation is possible. inspected boiler room's northern wall where stained surface was noted during inspection on 12/20/17. Paul checked stained area and confirmed that those stains were actually result of dust accumulation on wall and not due to any oil seepage. based on this observations, no subsurface investigation is needed around the tank as required in

BOARD OF ED TTF (Continued) **S113494344**

letter dated 12/20/17. based on all available information, the subject spill case is administratively closed and merged with spill #: 1803911. 12:24 PM:- sent email to Mr. Sharma. informed him that subsurface investigation, as listed in letter dated 12/20/17, is not required around the UST and spill case is administratively closed.

DEC Memo:	12/7/2021 - Feng - Desk Duty. Spoke to Donald Reilly of Global Fueling. The site is in Decommissioning Stage 2 that the tanks to be disconnected (close-in-place), by 2/2022. There were 2 gasoline tanks and 2 diesel tanks. #1 gasoline 4,000-gallon tank failed the pressure decay test. There is still 3,000 gallons inside the tank. He cannot exactly tell whether it is dry or wet leak, but he suspected that's the line problem. The plan is to separate the line and rest. I require that if it is a wet leak, then the tank is needed to be emptied immediately and follow up by necessary investigation. Discussed with Veronica Zhune and spill is assigned to her for follow up. Donald Reilly Global Fueling 631-943-2897 JPezdan@HenrichInc.com Carlos Gomez 551-255-6818 3/24/22- Spoke to Carlos. He said they signed the project. He will send the report to DEC. 5/5/22- Carlos emailed the report dated 5/5/22. The facility was in the process to decommission the stage II system back in December to meet the deadline that was due in February 2022. The stage II system collects the vapor when dispensing fuel into our vehicles. In order to decommission the stage II system the inspector had to perform a pressure decay test and pressure vacuum valve test to make sure vapor are not released to the environment. Unfortunately, the pressure decay test failed and we were required to report it to NYSDEC per NY State Regulations. There was no actual release of product to the environment. Upon father investigation we found out that the piping for the Automatic tank gauge rotted. See attached image: CAUSE OF tEST fAILURE UPS fOSTER Ave.PNG The attached file name UPS FOSTER Ave REPAIR.pdf will provide detailed information of the work that was completed to replace the ATG PROBE RISER, See Image: IMGApr 27 2022 10_48_42.jpeg. Finally, the system was tested again and it passed the pressure decay test and pressure/vacuum valve test and the system past, See page 4 and 5 of the attached file name:2-601437 UPS 104-01 FOSTER AVE BROOKLYN NY 2022 STG 2 DECOM.pdf. Spill Closed.

Site Description:	"Location: The site is located at 107-23 Farragut Rd. in the Canarsie section of Brooklyn, NY, and is known as the former Duralab Equipment Corporation Facility. It is identified on the Kings County Tax Map as Section 24, Block 8156, Lot 1. The 6.6 acre site is bordered on the south by Farragut Rd., on the east by East 108th St., on the north by the Long Island Railroad and on the west by East 105th St. Site Features: The site contains a parking lot and a 165,000 square foot building that was built in 1971, with an addition constructed in 1986. Current Zoning: The property is owned by New York City and subleased by Federal Express through Cargex Corp. The building and

FEDERAL EXPRESS CORP (Continued) **1000148573**

parking lot are used by Fed Ex as a shipping facility and major distribution center. The surrounding area is composed of residential, industrial and commercial uses. Institutional controls (deed restrictions) were executed in April 2006 that prohibit residential usage on the property. Historical Use: From 1971 to 1997 a cabinet manufacturer operated on the site and used trichloroethene as a degreaser. Site Geology and Hydrogeology: Approximately 10 feet of fill materials overlay glacial outwash deposits of fine to medium sand with little silt. These deposits extend to a depth of approximately 175 ft bgs and reportedly become coarser with depth. Bedrock occurs at approximately 400 feet bgs. The groundwater table was encountered at approximately 10 ft bgs in the glacial outwash aquifer. Groundwater flow direction is towards the east-northeast. "

Env Problem: "Nature and Extent of Contamination: The site was contaminated with trichloroethylene (TCE) which was used as a degreaser at the former Duralab facility located on the site. TCE was detected in groundwater in the range of 100 to 240,000 ppb when the site underwent an investigation in 1998. A Soil Vapor Extraction and Air Sparging (SVE/AS) system was operated for more than two years and remediated a large portion of the groundwater contamination. The system was shut down after the mass of TCE contamination in groundwater was reduced to asymptotic levels. Post remedial groundwater monitoring was performed and indicated that the residual groundwater contamination is not migrating from the site. After five years of monitoring for natural attenuation, residual contamination remains in the groundwater and is being evaluated. "

Health Problem: "There are no known human exosure pathways for chemicals in the on-site subsurface soil. Although groundwater is contaminated, public water serves the surrounding community. The NYSDOH and NYSDEC will be evaluating the need to conduct additional investigations to determine the potential for soil vapor intrusion into structures on or near the site."

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Region: 2
Acres: 0.566
HW Code: 224283
Record Add: 09/06/2018
Record Upd: 03/11/2021
Updated By: JHOCONNE
Site Description: "Location: The 24,645 square feet (0.566 acre) site is located at 242-288 Livonia Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site is occupied by a strip mall with several commercial tenants. The former dry cleaner tenant space is now occupied by a deli. The deli is the westernmost unit. Other tenants on the site include a Chinese take-out restaurant, a pizza restaurant, a check cashing business and a supermarket. The building contains a basement below the units. Current Zoning and Land Use: The site is currently zoned as R-6 and is surrounded by residential and other commercial parcels. The site is bounded on the north by Livonia Avenue, to the east by two high-rise residential buildings, to the south by the rear driveway for the strip mall and a parking lot, and to the west by Rockaway Avenue. Past Use of the Site: A portion of the site was previously occupied by Sep s Cleaners (250 Livonia Avenue) which performed dry cleaning operations and was listed as a Resource Conservation and Recovery Act Small Quantity Generator of spent halogenated wastes. Site Geology and Hydrogeology: The Site-specific vadose zone geology generally consists of brown to dark brown medium-grained sand with occasional silt, minor and sporadic clay, and, in the shallower soil, some fill materials including brick and wood fragments. The Site-specific geology in the saturated zone generally consists of brown medium-grained sand with occasional silt and gravel. The water table is located some 20 feet below grade."
Env Problem: "Nature and Extent of Contamination: Soil Soil samples taken from 16 locations in the alleyway at the rear of the Site revealed elevated concentrations of tetrachloroethylene (PCE) in an area approximately 30 feet long by the width of the alleyway. The highest concentration of PCE was 370 ppm and concentrations ranged from 0.057 ppm to 2.8 ppm at depth (16-20 ft-bgs) and 0.3 to 370 ppm in the shallow sample (0-6 ft-bgs) compared to the Unrestricted Use SCO of 1.3 ppm. In addition, a second smaller hot spot area was delineated directly east of the primary hot spot where the maximum concentration of PCE was 4.2 ppm. The breakdown products of PCE were detected in the soil but not at significant concentrations. One sample was analyzed for SVOCs, PCBs and pesticides, but none were detected above the Unrestricted Use SCOs. Groundwater Geoprobe groundwater samples were obtained from 20 locations. These locations were within the soil hot spot area, and up-, side- and down-gradient of the hot spots. The sampling results were grouped by depth as shallow (20-22 ft-bgs), intermediate (30-32 ft-bgs) and deep (40-42 ft-bgs). The analytical results showed that a groundwater plume, defined by concentrations of PCE combined with its breakdown products exceeding 100 parts per billion (ppb), emanates from the area of soil contamination mentioned above and advances in the downgradient direction. The highest concentration detected was 39,000 ppb in the shallow groundwater and 2,500 ppb at depth in the same location which corresponds with the area of soil contamination. Soil Vapor PCE and cis-1,2-dichloroethene were detected at up to 140,000 (PCE) and 14,678 g/m3 (DCE) in the sub-slab vapor of the basements in the on-site building. Remediation at the site is ongoing under a Stipulation Agreement (see spill no. 0712821). An air sparging/soil vapor extraction system has been operating on the site

FORMER SEP S CLEANERS (Continued) **S127478102**

	since July 2014 and has resulted in improvement to the contaminant concentrations. Site Management will be tracked under this site number."
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

The Site-specific geology in the saturated zone generally consists of brown medium-grained sand with occasional silt and gravel. The water table is located some 20 feet below grade."
Env Problem: "Nature and Extent of Contamination: Soil Soil samples taken from 16 locations in the alleyway at the rear of the Site revealed elevated concentrations of tetrachloroethylene (PCE) in an area approximately 30 feet long by the width of the alleyway. The highest concentration of PCE was 370 ppm and concentrations ranged from 0.057 ppm to 2.8 ppm at depth (16-20 ft-bgs) and 0.3 to 370 ppm in the shallow sample (0-6 ft-bgs) compared to the Unrestricted Use SCO of 1.3 ppm. In addition, a second smaller hot spot area was delineated directly east of the primary hot spot where the maximum concentration of PCE was 4.2 ppm. The breakdown products of PCE were detected in the soil but not at significant concentrations. One sample was analyzed for SVOCs, PCBs and pesticides, but none were detected above the Unrestricted Use SCOs. Groundwater Geoprobe groundwater samples were obtained from 20 locations. These locations were within the soil hot spot area, and up-, side- and down-gradient of the hot spots. The sampling results

FORMER SEP S CLEANERS (Continued) **S127478102**

were grouped by depth as shallow (20-22 ft-bgs), intermediate (30-32 ft-bgs) and deep (40-42 ft-bgs). The analytical results showed that a groundwater plume, defined by concentrations of PCE combined with its breakdown products exceeding 100 parts per billion (ppb), emanates from the area of soil contamination mentioned above and advances in the downgradient direction. The highest concentration detected was 39,000 ppb in the shallow groundwater and 2,500 ppb at depth in the same location which corresponds with the area of soil contamination. Soil Vapor PCE and cis-1,2-dichloroethene were detected at up to 140,000 (PCE) and 14,678 g/m3 (DCE) in the sub-slab vapor of the basements in the on-site building. Remediation at the site is ongoing under a Stipulation Agreement (see spill no. 0712821). An air sparging/soil vapor extraction system has been operating on the site since July 2014 and has resulted in improvement to the contaminant concentrations. Site Management will be tracked under this site number."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description: "Location: The 24,645 square feet (0.566 acre) site is located at 242-288 Livonia Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site is occupied by a strip mall with several commercial tenants. The former dry cleaner tenant space is now occupied by a deli. The deli is the westernmost unit. Other tenants on the site include a Chinese take-out restaurant, a pizza restaurant, a check cashing business and a supermarket. The building contains a basement below the units. Current Zoning and Land Use: The site is currently zoned as R-6 and is surrounded by residential and other commercial parcels. The site is bounded on the north by Livonia Avenue, to the east by two high-rise residential buildings, to the south by the rear driveway for the strip mall and a parking lot, and to the west by Rockaway Avenue. Past Use of the Site: A portion of the site was previously occupied by Sep s Cleaners (250 Livonia Avenue) which performed dry cleaning operations and was listed as a Resource Conservation and Recovery Act Small Quantity Generator of spent halogenated wastes. Site Geology and Hydrogeology: The Site-specific vadose zone geology generally consists of brown to dark brown medium-grained sand with occasional silt, minor and sporadic clay, and, in the shallower soil, some fill materials including brick and wood fragments. The Site-specific geology in the saturated zone generally consists of brown medium-grained sand with occasional silt and gravel. The water table is located some 20 feet below grade."

Record Upd: 07/16/2024
Updated By: CXMAYCOC
Site Description: "Location: The 0.23-acre site is located at 673 Livonia Avenue in Brooklyn, Kings County, NY in an urban area. Site Features: The site currently consists of a vacant, 8,300 square foot, one-story, slab-on-grade, concrete warehouse building with a concrete driveway to the north. A former UST below the northwest corner of the driveway was closed and removed sometime prior to 1991. Current Zoning and Land Use: The site is currently zoned as R6 (medium-density residence district) with a C2-3 (local retail/service district) overlay and is surrounded by other residential and retail commercial parcels. The site is bound to the north by Dumont Avenue, to the east by Wyona Street, to the south by Livonia Avenue as well as the MTA 2 and 3 aboveground subway lines, and to the west by Vermont Street. Past Use of the Site: The current building was constructed between 1954 1966 and was most recently occupied by Fleetwood Cabinet Co for furniture manufacturing and spray-painting operations from 1985 2017. Historical on-site uses include a knitting mill, textile processing, and dry-cleaning. Site reconnaissance during June 2021 observed a vent pipe reportedly connected to an out-of-service 2,500-gallon #2 fuel oil UST under the northern driveway. An empty 55-gallon drum and two active 250-gallon aboveground storage tanks were observed inside the building as well as evidence of spray-painting on the walls and floor slab in the southeast corner. Site Geology and Hydrogeology: Sub-surface samples collected in June 2021 identified soil consisting of red-brown sand and brown sandy silt. Groundwater was encountered at approximately 22.5 feet below grade and flows at a slight gradient (0.001 ft/ft) to the southeast."
Env Problem: "Nature and Extent of Contamination: SOIL No VOCs were detected at concentrations exceeding the applicable protection of groundwater soil cleanup objectives (PGSCO). PCE was detected at a maximum concentration of 0.17 parts per million (ppm) compared to the PGSCO of 1.3 ppm, and TCE at a maximum concentration of 0.11 ppm (PGSCO is 0.47 ppm). One SVOC, benzo(a)pyrene, was identified as exceeding the restricted commercial (RC) SCO of 1 ppm at a maximum of 1.69 ppm. One RCRA metal, barium, was detected at a maximum concentration of 723

673 LIVONIA AVENUE (Continued) **S129982655**

ppm (RCSCO is 400 ppm). GROUNDWATER PCE was detected at concentrations exceeding the applicable Ambient Water Quality Standard (AWQS) of 5 parts per billion (ppb) at a maximum concentration of 8.98 ppb. Chloroform was detected at a maximum of 28 ppb (AWQS is 7 ppb). Detected TCE concentrations did not exceed the AWQS of 5 ppb at a maximum of 0.95 ppb. PFOS was detected at a maximum concertation of 0.0747 ppb (AWQS is 0.01 ppb) and PFOA at a maximum of 0.0635 ppb (AWQS is 0.01 ppb). SOIL VAPOR PCE and TCE were detected at maximum concentrations of 180,000 micrograms per cubic meter (ug/m3) and 52,700 ug/m3, respectively. Additionally, the degradation compounds cis-1,2-dichloroethene and trans-1,2-dicholorethene were detected at maximum concentrations of 16,500 ug/m3 and 1,870 ug/m3. Several petroleum-related VOCs were also detected, including benzene (max. 94 ug/m3), toluene (max. 1,800 ug/m3), ethylbenzene (max. 170 ug/m3), and total xylene (max. 800 ug/m3). --- Significant Threat: No evaluation has been made thus far to determine if the contaminants represent a significant environmental threat. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description: "Location: The 0.14 acre (6,000 square feet) site is located at 458 East 99th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It is situated approximately 180 feet northwest of the intersection of East 99th Street and Foster Avenue. The site is bordered to the northeast by East 99th Street followed by Whisky Shippers & Movers and a manufacturing/warehouse type building; to the southwest by Home Deco Design; to the southwest by Gotham Steel Supply and Saba Live Poultry; and to the northwest by Affordable

458 EAST 99TH STREET (Continued) **S121933847**

Glass Auto Inc. and United Trading. Site Features: The Site currently consists of a single story commercial building totaling approximately 5,000 square feet. The building is constructed to the near lot line and abutted by concrete-paved land to the northeast and northwest. The building is slab-on-grade, steel-frame construction with walls of concrete masonry units and brick. The building includes a small office area, a storage room and restrooms. The remainder of the building is used for warehouse purposes. Current Zoning and Land Use: The site is currently zoned as manufacturing M1-1 and is surrounded by warehouses, auto repair and commercial uses. The nearest residential properties are located 350 feet away to the southeast. Past Use of the Site: Historical records identified the property as occupied by a dry cleaning chemicals warehouse from at least 1966 through 1973. It is not known if chlorinated solvents were stored at the property. Building records identified an oil burner application and there is a possible UST at the site. The site is currently occupied by Pinnacle Lift of New York, a fork lift sales, service, parts and rental establishment. The identified contamination is likely attributed to the former dry cleaner chemical warehouse usage. Site Geology and Hydrogeology: Three soil borings conducted in 2016 identified soil consisting mainly of brown medium-fine sand from 5 feet to 16 feet below ground surface (ft-bgs), which was the boring terminus. The first 1 foot consisted of the concrete slab (5) followed by brown black fill. Groundwater was encountered at 11 ft-bgs. General flow is to the east-southeast."

Env Problem: "Nature and Extent of Contamination: Thus far a limited Phase II and soil vapor intrusion sampling have been conducted. Soils and groundwater were analyzed for volatile organic compounds (VOCs) only. Contaminants of concern identified by these limited investigations are tetrachloroethylene (PCE) and its daughter compounds trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), and trans-1,2-DCE. In addition, the chlorinated VOC 1,1-dichloroethane (1,1-DCA) was also identified in groundwater. Soil Samples were collected from 10 to 11 ft-bgs at two of the borings and from 1.5 to 2.5 ft-bgs at the third boring based on observations and field screening. Low concentrations of VOCs were detected in the soil samples, specifically 0.054 ppm of PCE, 0.0147 ppm TCE, 0.0568 ppm of cis-1,2 DCE, and 0.00147 ppm of trans-1,2 DCE which are well below the applicable soil cleanup objectives for those compounds. Groundwater PCE was detected in all three wells above the applicable groundwater standards, at a maximum concentration of 20.4 ppb. Other exceedances include cis-1,2 DCE at a maximum concentration of 15.8 ppb, and 1,1-DCA at a maximum concentration of 22.1 ppb. Soil Vapor No soil vapor samples were taken as part of the Phase II ESI. Sub-slab vapor (SSV), indoor and ambient air samples were subsequently taken on December 28, 2016 and the analytical results revealed PCE (990 g/m3), TCE (154 g/m3), acetone (543 g/m3), n-hexane (225 g/m3), propylene (145 g/m3), isopropanol (119 g/m3) and ethanol (137 g/m3). Indoor air had elevated concentrations of acetone (1680 g/m3), isopropanol (1530 g/m3), toluene (1670 g/m3), m,p xylenes (275 g/m3), and PCE (28.3 g/m3). Ambient air had acetone (45.1 g/m3), isopropanol (47.2 g/m3) and toluene (26.6 g/m3). "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description:	"Location: The site is located on the southwest side of East 99th Street and Foster Avenue in Brooklyn, NY. The surrounding area is generally commercial and industrial along East 99th Street and the surrounding neighborhood. The surrounding area consists of manufacturing, commercial and warehouse facilities. Site Features: The site is a single lot, 6,000 square foot, parcel, improved by a one (1) story office/ warehouse building, with no basement, and an

458 EAST 99TH STREET (Continued) **S121933847**

	alleyway on the north side of the subject building. The subject building covers the majority of the lot, with the exception of the alleyway. Past Uses of the Site: The site was unimproved land as early as 1907 through at least 1950 and developed with the existing structure by 1952. The subject site was occupied by a dry-cleaning chemical warehouse between at least 1966 and 1973. Current Zoning and Land Use: The site is zoned El-Warehouse. The building is currently occupied by Euro Wood Working and is used for wood working, assembling of cabinets, etc. There is no manufacturing conducted at the site. Site Geology and Hydrology: Based on site-specific sampling, the depth to groundwater is approximately 11 feet below grade. Based upon topographic map interpretation and site observations, the shallow groundwater in the vicinity of the subject site, the inferred direction of groundwater flow is to the east-southeast. "
Env Problem:	"The laboratory analytical report from June 2016 indicated that PCE was detected in ground water samples GW-1, GW-2, and GW-3 at concentrations exceeding the state standard. Additionally, 1,1-DCA and cis-1,2-DCE were detected in ground water sample GW-3 at concentrations exceeding state standards. The sampling conducted during this investigation indicates that impact to the subsurface at the subject site has occurred. Low concentrations VOCs were detected in soil and elevated concentrations of VOCs exceeding NYSDEC water quality standards were detected in three ground water samples. The soil vapor and ambient air sampling procedure was conducted in conformance with the New York State Department of Health (NYS DOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York , dated October 2006: - Carbon Tetrachloride - No Further Action - Tetrachloroethylene - Monitor / Mitigate - 1,1,1 - Trichloroethane (1,1,1 - TCA) - No Further Action - Trichloroethene (TCE) - Monitor "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/27/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

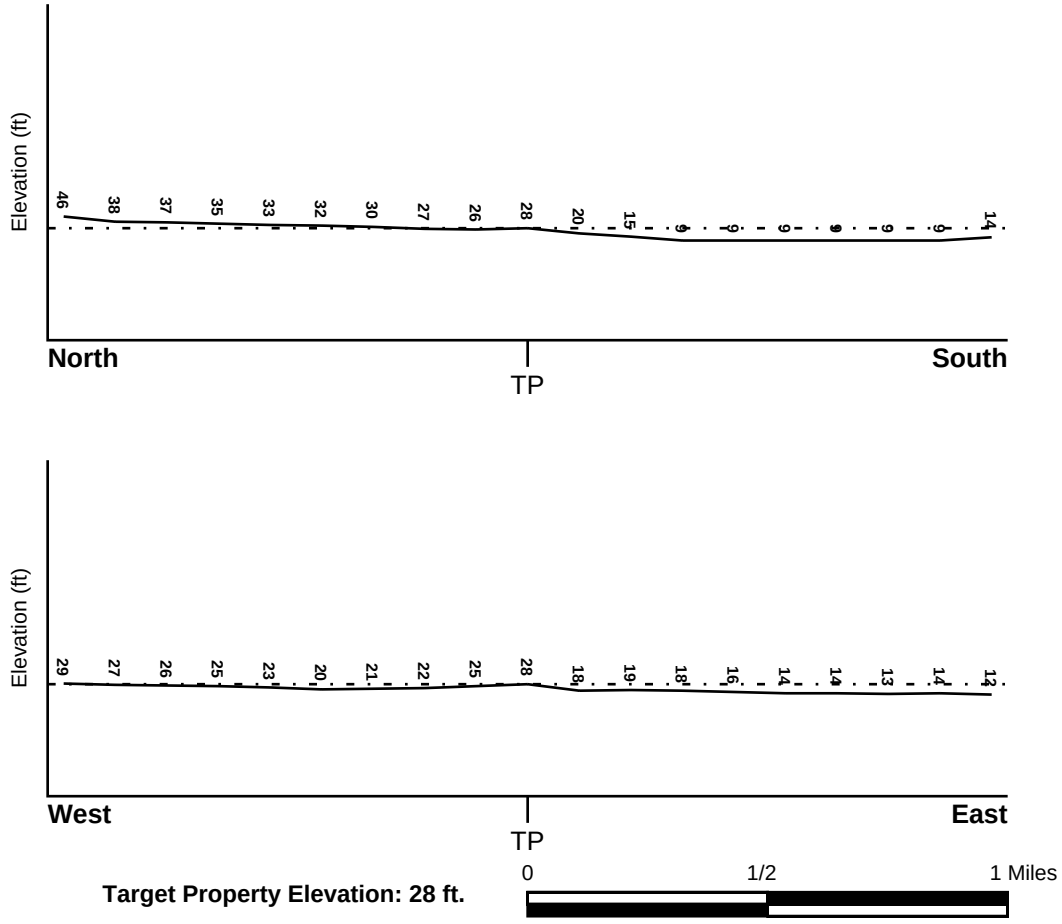

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 28 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970075C	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

719 VAN SINDEREN AVENUE
BROOKLYN, NY 11207

COORDINATES

Latitude (North):	40.6587620 - 40° 39' 31.54''
Longitude (West):	73.8989230 - 73° 53' 56.12''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	593081.6
UTM Y (Meters):	4501249.0
Elevation:	28 ft. above sea level

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 9 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
LOT 21,TAXBLOCK 3865 719 VAN SINDEREN AVE BROOKLYN, NY	NY E DESIGNATION NY NYC LAND USE	N/A
719 SNEDIKER AVENUE 719 SNEDIKER AVENUE BROOKLYN, NY 11207	NY NYC LAND USE	N/A

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: A review of the RCRA-LQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

719 VAN SINDEREN AVENUE, BROOKLYN, NY
719 VAN SINDEREN AVENUE
BROOKLYN, NY 11207

TARGET PROPERTY COORDINATES

Latitude (North):	40.658762 - 40° 39' 31.54''
Longitude (West):	73.898923 - 73° 53' 56.12''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	593081.6
UTM Y (Meters):	4501249.0
Elevation:	28 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

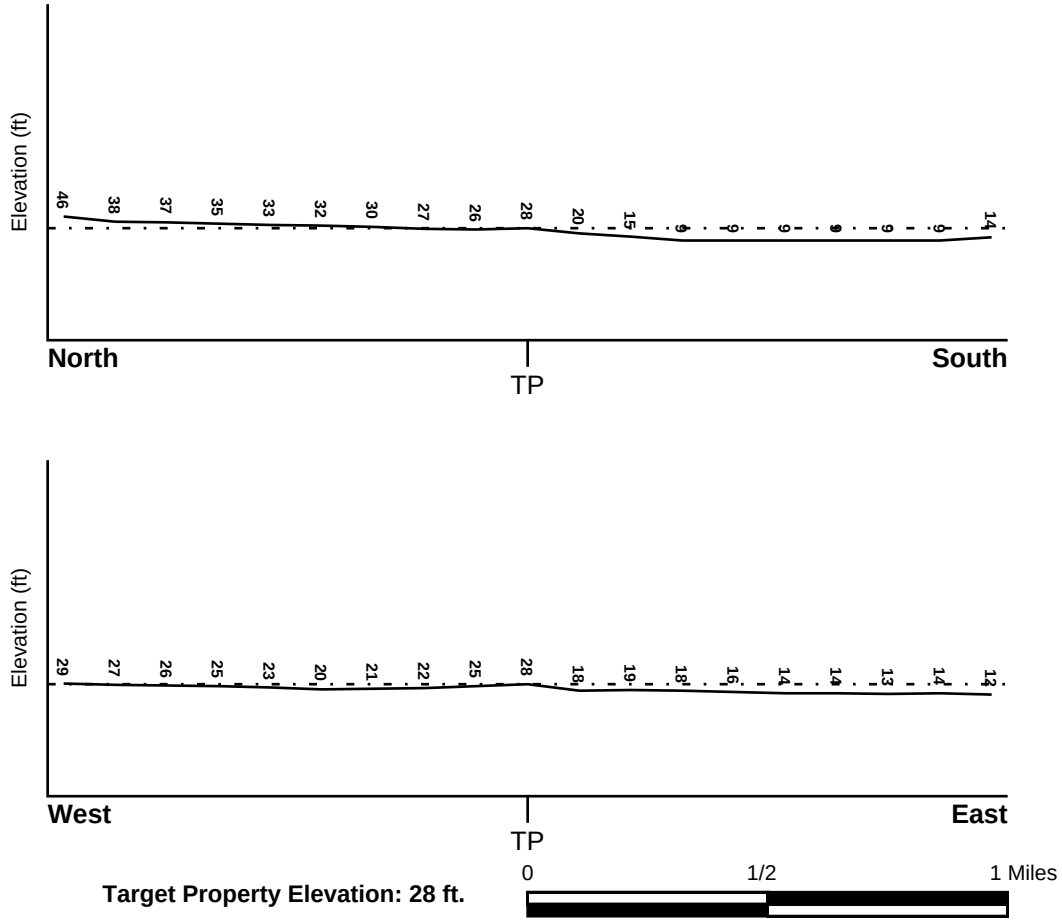

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 28 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970075C	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
3604970065B	FEMA Q3 Flood data
3604970074B	FEMA Q3 Flood data
3604970218F	FEMA FIRM Flood data
3604970219F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Qualifications

ERIK J. DRAIJER, PE, QEP

Senior Project Manager
Environmental Services

edraijer@pve-llc.com
646-602-4999

ABOUT

Erik is an experienced Senior Project Manager with broad-based knowledge of managing and conducting field investigations, including soil, groundwater, and soil vapor sampling, as well as remediation system design and management. At PVE, he is responsible for project management, including project scoping, coordination with subcontractors, correspondence with regulatory agencies, data management, reporting, and client relations. He is responsible for a broad range of due diligence and transaction-based projects, as well as brownfield redevelopment and voluntary cleanup projects across the United States. Erik is also involved in business development, staffing decisions, and is in a leadership development role.

PROFESSIONAL PRACTICE AREAS

- Brownfield Redevelopment Services, including State Regulatory Programs
- Conceptual Site Modeling, Contaminant Fate and Transport
- Due Diligence Assessments
- Ecological Reviews
- Environmental Assessments in accordance with Part 50/58 for the Department of Housing and Urban Development (HUD)
- Federal (HUD), State, and Locally-financed Affordable Housing Assessment Services Industrial Hygiene Services
- Noise Remedial Action Plans
- Noise Studies and Abatements
- NY State's Brownfield Cleanup Program (BCP) Experience
- Phase II Environmental Site Assessments
- Remedial Action Work Plans in Accordance with NYC Requirements
- Subsurface Investigations
- Toxicological Analysis
- Vapor Mitigation Design

EDUCATION

University of Massachusetts, Amherst
Bachelor of Environmental Science
Minor in Resource Economics

LICENSES & CERTIFICATIONS

Professional Engineer: New York

OSHA 30-HR Construction Safety

OSHA 40-HR Hazardous Waste Operations and Emergency Response Health and Safety Training

Qualified Environmental Professional (QEP)

AFFILIATIONS

American Red Cross Biomed Specialist

Board of Directors, NYC Brownfield Partnership

NJDEP Radon Measurement and Mitigation Technician

TENURE

PVE: Since 2017

MARIANA VERRI

Project Manager
Environmental Services

mverri@pve-llc.com
646-602-4999

ABOUT

As a Project Manager for Environmental Services, Mariana supports the group's directors and managers in a variety of projects, including environmental due diligence, site characterization, and remediation. Throughout projects, she is relied on for input relating to technical and regulatory matters to ensure that investigations are designed to meet State and Federal requirements.

Mariana has broad experience in managing and performing a variety of investigations, including soil borings, groundwater monitoring well installation and sampling of all environmental media. She is also responsible for assembling site characterization data and creating site maps using ArcGIS Pro and ArcMap to present project-specific data in visual format.

In addition to her site characterization and reporting experience, Mariana is experienced in the requirements necessary to satisfy NYC and State Brownfield Cleanup Program standards, including New York City E-designation requirements for hazardous materials, noise and air quality. Mariana has prepared remedial investigation and remedial action plans for both State and City programs. In addition, she has managed lead-based paint inspections using X-ray Fluorescence analysis and clearance testing following federal, state, and local regulatory agencies.

PROFESSIONAL PRACTICE AREAS

- Lead-Based Paint Inspections
- NYC E-Designation Program Requirements
- NYC Voluntary Cleanup Program Project Management
- NYS Brownfield Program Requirements
- Phase I and II Environmental Site Assessments

JARED ROEMER

Environmental Scientist, Environmental

jroemer@pvedi-ae.com
646-602-4999 ext. 330

ABOUT

As an environmental scientist with PVEDI, Jared focuses on research, data analysis and problem-solving to address various environmental issues. He collects and analyzes data from various soil, water and air samples, and monitors environmental conditions using GIS and other modeling software. His responsibilities include Site Assessments, Phase I and II ESA's, Brownfield Remediation and Cleanup Programs, Hazardous Building Materials Abatements, Community Air Monitoring Programs (CAMP), Remedial Investigations, Remedial Action Plans, Real Estate Transactions and Due Diligence.

PROJECT EXPERIENCE

- AutoCAD
- Construction Oversight
- Soil and Groundwater Sampling
- Data Collection and Analysis
- Drilling Oversight
- Environmental Sampling
- GIS
- Indoor Air Sampling
- Phase I & II Environmental Site Assessments
- Site Inspections
- Soil Boring Classification
- Sub-Slab Sampling
- Vapor / Air Monitoring
- Well Development

EDUCATION

Virginia Tech:
Bachelor of Science, Environmental Science

TENURE

PVEDI: Since 2024

Appendix F:

Scope and Limitations of Report

SCOPE OF SERVICES

PHASE I ENVIRONMENTAL SITE ASSESSMENT

The main objective of this Scope of Services is to identify recognized environmental conditions, specifically: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. This Scope of Services meets or exceeds Standard Practice E 1527-21 for Phase I Environmental Site Assessments.

A. REVIEW OF ENVIRONMENTAL RECORDS AND HISTORICAL SOURCES

1. Environmental Record Sources

Partridge Venture Engineering, PC doing business as PVE Engineering ("PVE") will obtain and review public records from standard sources that will help identify recognized environmental conditions relevant to the subject property:

Federal NPL Site List
Federal Delisted NPL Site List
Federal CERCLIS List
Federal CERCLIS NFRAP List
State Registered Storage Tanks Lists
Federal RCRA Generators List
Brownfields Sites
Federal RCRA TSD List
Federal ERNS List
State Lists of Hazardous Waste Sites
State Leaking Underground Storage Tank Lists
State Landfill/Solid Waste Disposal Site Lists
State VCP Sites

To the extent necessary, PVE will check one or more of the following additional records or local sources:

Local Lists of Landfill/Solid Waste Disposal Sites
Fire Department
Planning Department
Local Lists of Hazardous Waste/Contaminated Sites
Building Permit/Inspection Department
Local/Regional Pollution Control Agency
Local/Regional Water Quality Agency
Local Electric Utility Companies
Local Lists of Registered Underground Storage Tanks
Local Records of Emergency Release Reports
Local Records of Contaminated Public Wells
Department of Health/Environmental Division

2. Physical Setting Sources

PVE will review one or more of the following Physical Setting Sources:

USGS 7.5 Minute Topographic Map
USGS or State Bedrock Geology Maps
USGS or State Groundwater Maps
USGS or State Surficial Geology Maps
Soil Conservation Service Soil Maps

3. Historical Use Information

PVE will consult one or more historical sources to develop a history of previous uses or occupancies of the subject property in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions:

Aerial Photographs
Property Tax Files
USGS 7.5 Minute Topographic Map
Building Department Records
Fire Insurance Maps
Recorded Land Title Maps
Local Street Directories
Zoning/Land Use Records

B. SITE RECONNAISSANCE

On a visit to the property, PVE will visually and physically observe the property and any structures (interior and exterior) to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The site reconnaissance will include:

Periphery of the Property
Interior of Structures
Periphery of Structures
Current Uses of Property

Past Uses of Property
Past Uses of Adjoining Properties
Geologic and Topographic Conditions
Description of Structures
Potable Water Supply
Hazardous Substances
Storage Tanks
Pools of Liquid
PCB Containing Equipment
Stains or Corrosion
Pits, Ponds, Lagoons
Stressed Vegetation
Wastewater
Septic Systems
Current Uses of Adjoining Properties
Uses of Surrounding Properties
Hydrogeologic & Hydrologic Conditions
Roads
Sewage Disposal System
Petroleum Products
Odors
Drums and Containers
Means of Heating & Cooling
Drains & Sumps
Stained Soil or Pavement
Solid Waste
Dry wells, Injection wells, Floor drains

C. INTERVIEWS WITH OWNERS, OCCUPANTS, AND GOVERNMENT OFFICIALS

PVE will conduct interviews with individuals familiar with the uses and conditions on the subject property. Questions may be asked in person, by telephone, or in writing. An attempt will be made to interview one or more of the following:

User of the Phase I ESA
Owner or Key Site Manager
Current Owners or Occupants
Past Owners or Occupants

and one or more government officials:

Local Fire, Health, or Environmental Agencies

Interviewees will be asked to provide helpful documents, if available:

Site Plans, Maps, Drawings or Surveys
Environmental Site Assessment Reports
Environmental Audit Reports
Environmental Permits
Petroleum Bulk Storage Registrations
Material Safety Data Sheets
Community Right-to-Know Plan
Safety Plans
Hydrogeologic Reports
Notices or Correspondence from Agencies Regarding Environmental Violations
Hazardous Waste Generator Notices or Reports
Geotechnical Studies

D. REPORTPREPARATION

PVE will prepare a written evaluation of the subject property summarizing results of the Records Review, Site Reconnaissance, and Interviews. The following will be included in the report:

Site and Vicinity Characteristics
Description of Structures and Other Improvements
Current Uses of the Property
Past Uses of the Property
Current & Past Uses of Adjoining Properties (to the extent identified)
Site Location Map
Site Features Map
Summary of Environmental Records
Review Physical Setting
Historical Use
Hazardous Substances Stored, Handled or Disposed
Petroleum Products Stored, Handled or Disposed
Indications of Solid Waste Disposal
Findings and Conclusions
List of Information Sources

Note: No attempt will be made to verify the presence of asbestos, radon, lead-based paint, lead in drinking water, or wetlands. PVE can provide additional services relating to those matters if requested.

Scope and Limitations of Report

Scope:

The specific components of this investigation are as follows:

Records Review:

Federal and State records were reviewed and compiled into report format by an independent subcontractor to PVE. The following are some of the reasonably ascertainable standard environmental record sources consulted:

- U.S. Environmental Protection Agency (USEPA) Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list;
- USEPA CERCLIS No Further Remedial Action Planned list;
- USEPA National Priority List (NPL) and Delisted NPL sites;
- Resource Conservation and Recovery Act (RCRA) list of hazardous waste generators, both small quantity and large quantity (SQG and LQG) and RCRA Treatment, Storage, and Disposal (TSD) facilities list;
- USEPA Emergency Response and Notification System (ERNS) list;
- Petroleum Bulk Storage Inventory list (PBS);
- Leaking Storage Tank list and/or Spills List;
- Solid Waste Facility Register (SWF);
- Brownfields and/or Voluntary Cleanup Program sites;
- Practically reviewable local records.

Environmental Setting:

Compiled through review of the following physical setting sources:

- United States Geological Survey (USGS) 7.5 Minute Topographic Maps
- Surficial and/or Bedrock Geology maps

History

The history of the site and of the surrounding area was developed based on consultation with any or all of the following reasonably ascertainable standard historical sources: aerial photographs, site maps, topographic maps, property tax files and interviews with owners, operators and local officials.

Limitations and Exceptions of Assessment

This report is intended for the sole use of the Client listed on the cover page to this Report and Section 1.5 and must be used in its entirety. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users, and any use or re-use of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

This written analysis is an assessment of the property completely described in Section 2.0 and depicted in Appendix A and is not valid for any other property or location. It is a representation of the property analyzed as of the dates of the record reviews and site inspection. This report does not apply to any activities or events resulting in contamination after the date of site inspection or historic research.

Observations were made as indicated within the report. Where access to portions of the site or to structures on the site was unavailable or limited, PVE renders no opinion as to the presence of regulated or hazardous material or to the presence of indirect evidence relating to hazardous or regulated material in that portion of the site or structure.

This Environmental report was performed in accordance with ASTM E 1527-21 **Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process**. The findings and conclusions contained herein must not be considered scientific certainties, but probabilities based on professional judgment concerning the significance of the limited data gathered during the course of this study. The following potential site conditions are outside the scope of this report and were not the subject of analysis during this investigation: asbestos-containing materials, radon, lead-based paint, lead in drinking water, and wetlands.

Conclusions and findings of this report are based in part on certain information provided by federal, state, and local officials and other parties referenced herein, and on information contained in the files of governmental agencies available at the time of this report. Reasonable attempts were made to interview users and property owners. No attempt was made to independently verify the accuracy or completeness of any information reviewed or received. The information provided on present and past property ownership does not constitute a title search.

As stated in 1527-21, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and that performance of Practice 1527-21 is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, recognizing reasonable limits of time and cost.

Also, as per 1527-21, the level of inquiry is variable: Not every property warrants the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment is guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.

Appendix G:

User Questionnaire

Phase I ESA User Questionnaire

Based on ASTM 1527-21 Appendix X-3

PROJECT NAME: Van Sinderen

LOCATION: 719 Van Sinderen Avenue, Brooklyn, NY 11207

DATE: 7/31/25

The "user" of the Phase I ESA is identified as the entity for whom this Assessment is being prepared. A "User Questionnaire" should be completed by the user and submitted to the environmental professional to aid in gathering information that may identify RECs at the property. This questionnaire is a prerequisite in order to qualify for one of the Landowner Liability Protections[1] (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), and without it, can result in a determination that "*all appropriate inquiries*" is not complete. P**lease answer all questions listed below to the best of your knowledge**. Answers such as "Unknown" or "N/A" are acceptable and comply with ASTM requirements. If you have any questions regarding this questionnaire, please feel free to contact us.

1. Did a search of recorded land title records (or judicial records where appropriate) identify any **environmental liens** filed or recorded against the property under federal, tribal, state, or local law? If so, discuss below.

Not to our knowledge.

2. Did a search of recorded land title records (or judicial records where appropriate) identify any **activity and use limitations** (AULs) -- such as engineering controls, institutional controls, or land use restrictions -- that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state, or local law? If so, discuss below.

Not to our knowledge.

3. As the user of this ESA, do you have any **specialized knowledge or experience** related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Please discuss your site knowledge in detail.

We have no specialized knowledge or experience related to the property. We only know it's past and current use and some of the likely contaminants that were used as part of business operations, including petroleum and oil.

[1] *Landowner Liability Protections* is the term used to describe 3 types of potential defenses to Superfund Liability in EPAs *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* issued March 6, 2003.

4. Does the **purchase price** being paid for this property reasonably reflect the **fair market value** of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Please discuss.

Yes, the purchase prices being paid reflects the fair market value of the property after the East New York Rezoning Plan, which increased property values in the area substantially.

5. Are you aware of **commonly known or reasonably ascertainable information** about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: Do you know the past uses of the property? Do you know of specific chemicals that are present or once were present at the property? Do you know of spill or other chemical releases that have taken place at the property? Do you know of any environmental cleanups that have taken place at the property? If so, discuss below.

The past use of the property was as an automotive and mechanical shop. We are not aware of specific chemicals, but assume that petroleum and mechanical/ motor oil were present in large quantities at the property, and may have leached into the ground.

6. Based on your knowledge and experience related to the property, are there any **obvious indicators** that point to the presence or likely presence of contamination at the property? If so, discuss below.

The past use of the property as a mechanical and automotive shop suggests that mechanical contaminants may be present on the property.

7. Please briefly describe **why** this Phase I ESA is being conducted. If for a property transaction, please indicate the type of transaction (sale, purchase, exchange, etc.).

This Phase 1 ESA is being conducted as part of a property transaction and prior to development/construction of affordable housing on the site.

8. Please describe the **type** of property. For example, commercial, residential, industrial, warehouse, etc.

The current property use is commercial/industrial. The future property use will be residential.

9. Please give the complete and correct **address** for the property, and the section, block, and lot number(s). If the mailing address differs from the location address (i.e., sometimes town boundaries do not match ZIP code town names), please provide the location address. Please provide any alternate and/or previous addresses of the property. If possible, please provide the environmental professional with site maps or documentation showing property location and property boundaries.

719 Van Sinderen Avenue, Brooklyn, NY 11207. Block 3865, Lot 21.

10. Are there any out-of-scope services desired for this Phase I ESA? Out-of-scope services may include an ASTM E2600-10 Tier 1 Vapor Encroachment Screen or inspecting for lead, asbestos, or radon and reporting the findings of the inspection. Please list any out-of-scope services you may wish to include.

No.

11. Please identify who the report will be issued to, ***including an address***.

Elliot Raskin, 447 Broadway, 2nd Floor, New York, NY 10013

12. Please identify all parties who will **rely** on the contents of the Phase I ESA report.

Developer, general contractor, design professionals, and subcontractors will on rely on Phase 1 ESA report.

13. Please identify the **site contact** and how the contact can be reached to set up a site inspection.

Elliot Raskin, elliot@spatialequity.com

14. Please identify a **key site manager** (with contact information) with good knowledge of the uses and physical characteristics of the property. This may be the same as the site contact.

Same as site contact.

15. Please identify any *current or former* **owners**, **occupants**, and/or **operators** (with contact information) that we may contact.

Current owner/operator/occupant(s):

Ed Downer, (718) 600-9468

Former owner/operator/occupant(s):

16. Are there any prior site assessment reports, documents or correspondence concerning the property which may be pertinent to the environmental professional? If so, please describe them and provide copies if possible.

Not that we are aware of.

17. Please use the remaining space to provide any other relevant information regarding the subject property.

Respondent: Elliot Raskin **Signature:** Elliot Raskin

Company: Spatial Equity Co **Title:** Assistant Developer **Date:** 7/31/25
