Remarks: 03/08/12-Hiralkumar Patel. 2:29 PM:- left message for Matt. 2:58 PM:- received call from Matt. site is currently vacant, but will be developed as residential building with basement. they did Phase II investigation as part of e-designation. during investigation, found PID readings and staining in soil in boring closer to on-site tank. they have collected samples for analysis. he also mentioned that there was previous limited investigation done at the site. asked him to submit copy of all available environmental reports. also asked him to submit property owner's contact info. he mentioned that owner has filed application for city's brownfield program. informed him that the investigation report must be submitted to the department for review and approval. Matthew Carroll Tenen Environmental Ph. (646) 606-2332 email: mcarroll@tenen-env.com alternate addresses: 22-36 Canon Place no other spills found. PBS #: 2-608287. as per PBS record, the site has one 2,000 gal #2 oil UST, currently in-service. PBS registration expired on 02/18/08. less than ---------- Hudson Caton LLC. **property owner** 826 Broadway, 11th Floor New York, NY 10003 Attn.: David Kramer email: dkramer@hudsoninc.com **email got from DOB permit application** 3:53 PM:- sent email to Matt and asked to submit reports for review. asked him to submit documents/information to DEC Rahman. email copied to Mr. Kramer and DEC Rahman. case assigned to DEC Rahman. 01/23/13- Site characterization report in edocs.The site is located at 22-36 Caton Place(Block 5320, Lot 55).Testing includes 63 soil samples at multiple depths from 31 soil borings, 14 ground water samples from 9 monitoring wells, 11 soil vapor samples from 11 locations.Testing does not indicate any significant source of chlorinated solvent contamination from the site.Chlorinated solvent in soil vapor measured. Petroleum contamination recorded in soil/ground water near the leaking UST.GW has been measured at approx. 42 ft bgs. Petroleum impacts were detected at the northwest corner of the UST locations.Test pits revealed presence of two 550 gallon non fuel USTs and one 2,000 gallon fuel oil UST.No evidence of free product or grossly contaminated soil was encountered. In the most recent ground water sampling, no petroleum impacts were detected in ground water above the Class GA Standards.Elevated levels of chlorinated solvents, predominantly TCE, are present at the site, showing highest concentration along the upgradient boundary. 08/09/13 Submitted PBS application for tank removal.(sr) 5/30/14 - Austin - Spill transferred from Rahman to Mahat for followup - end 4/12/16: Mahat DEC Mahat uploaded the Closure report submitted on 3/16/16 to D2. Based on the provided closure report, the Department does not warrant any further remedial work on the site. Please refer to the uploaded report for reference. Spill case is closed on NYSDEC Spill Database.

DEC Memo:	TTF letter sent to: Mr. Jerry Lemmermann 718-745-3500 JAL Management 9437 Shore Rd. Brooklyn, NY 11209 3/8/10 On 5/5/10, received phone call and e-mail from Thomas Szabo. He told me that the tank was repaired and retested and passed. he sent e-mail that included ttt and invoice of repairs. I told him on the phone that I need a letter from Petroleum Tank Cleaners regarding any signs of released petroleum, if any, and an explanation of what was repaired. He said that he would get that and confirmed this in his e-mail. bf 3/10/10 Yesterday, received message from Tom Szabo. He had questions on PBS Application. I answered questions. He will send application to PBS Albany. He will send me a scanned copy of the application and the closure letter from PTC. bf 3/11/10 Spoke with Bob lamotta of Petroleum Tanks coupling was replaced on top of tank and no indication of a petroleum release. bf 3/22/10 Received PTC letter by e-mail on 3/16/10. nfa. bf

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 4/22/2004 Sangesland spoke to Isaac at Eastmond. He said the tank is #6 oil/ 10,000 gal buried and has a longterm leaking problem. Temp tanks will go in tomorrow. Eastmond will contact Sawyer to discuss cleanup. 11/18/04 - Sawyer - Received closure information in the form of end-point analysis and waste disposal manifest. However, some semi-volatiles were slightly above RSCO, but because of the location of the grave and permanent abandonment of the tank there should be no further impact. No further action needed. Closed.
Remarks:	Caller is looking to see what is causing the failure to fix the situation, they are working on setting up temporary tanks.

DEC Memo:	seal on a pump let go causing sump pump to pump it into the street cleaning up with speedy dry
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/14/2002-VOUGHT-Site visit by Vought on 2/3/2002. Building super is Charles Pulliam (718-941-5782). Building manager is Noel Debatista (Triboro Management-718-476-8377). Spill caused by pump failure. Spill entered sump pump in basement and was ejected out into the street via a curb pipe. Spill contained with Speedy Dry. Spill cleaned by Petroleum Tank Cleaners (718-624-4842) on Feb 6 who washed and cleaned the boiler room with biodegradable chemical degreaser and pumped out and cleaned sump pit. PTC disposed of 2 55gal drums.

APARTMENT BUILDING (Continued) **S106000870**

(Recieved letter from PTC). Received letter of repair from Effecient Combustion and Cooling Corporation (516-795-5828) who installed new pump and disposed of old pump. No sewers or drains affected and spill was on concrete floor in basement and asphalt parking lot. Spill closed.

DEC Memo:	Sangesland spoke to Abraham at NY City Tank Testing -office 718-731-7011 cell 646-321-2876 He said there was a tank test failure. They dug down to the top of the tank and had several barrels of contaminated soil. They took sidewall samples. There were NO samples taken under the tank or down the side of the tank (below tank depth level). When Sangesland asked for sammple through the bottom of the tank or down the side of the tank, Abraham said the owner would be taking the tank out of service in the summer and this case would need to wait until then to get the final samples. 3/14/2012 Sangesland reviewed a Soil Sample report which was submitted. - See eDocs All values were below DEC State limits. Spill Case has been closed out.
Remarks:	caller was not sure if it is #2 or #6 fuel. dry leak failure, unknown if repair or replacement will be done

Tank Info:

Tank Number: 001
Tank Id: 8727
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F06 - Pipe External Protection - Wrapped
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
H00 - Tank Leak Detection - None
I00 - Overfill - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - In Place
Pipe Model: Not reported
Install Date: 07/01/1932
Capacity Gallons: 3000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 03/12/2012
Register: True

UNDERGROUND - TTF (Continued) **S107781407**

accepted. TTF letter on hold. assigned to DEC Demeo for followup. 5/20/16 TJD File review. Closure report submitted by Petroleum Tank Cleaners. As per report, 5K #4 FO AST failed tightness test on May 7th, 2014. On May 29th, 2014, the contractor isolated the tank and lines and retested separately - the tank, fill, suction and return lines all passed isolation tests. The vent line failed. The vent piping on AST was subsequently replaced by unidentified contractor. On June 14th, 2014, PTC returned to the location and performed a full system test with passing test results. Based upon the documentation provided the dry leak associated with the failed vent piping has been repaired. No further action is required. All documentation has been uploaded to DECDOCS. Spill closed.

Remarks: clean up pending clean up

Site Description: The site is an empty lot located behind the Silver Rod Drugstore. The previous owner operated a furniture refinishing factory at the site for approximately 30 years. The NYC Dept. of Environmental Protection received a statement from several area residents indicating that they had witnessed employees of the furniture company bury drums on the site. Residents, according to a signed statement, were also informed by former employees, that drums were buried on site. A Phase I investigation was completed during 1985 and recommended further investigation. A consent order between the Department and Silver Rod Drugstore has been signed and the Phase II field investigation has been completed. The work plan for remediation was approved by NYSDEC in December, 1991. Contaminated soil at the site was removed in February, 1992. Final soils test results indicate that hazardous waste has been satisfactorily removed.

Env Problem: There are no environmental problems remaining associated with the disposal of hazardous waste at this site. The site was delisted from the Registry as removal action conducted at the site has removed all

Remarks:	Sangesland left a voice message asking for a summary of what work was done and requested results of tests. 04/15/13-Hiralkumar Patel. alternate address: 4202-4204 18th Avenue, 4208 18th Ave, 4210 18th Ave, 4212 18th Ave, 818 Seton Place, 818 E 3rd Street based on google street view, building 818 Seton Place is not anywhere near 4202 18th Ave. there are two story buildings at 4208 and 4212 18th Ave. there is Jerusalem Auto Sales (917-450-6913) and New Liberty Auto Repair (347-417-6262) at 4202 18th Ave. no other spill records found for the site. PBS #: 2-600425. as per PBS record, the site has/had following tanks: - one 275 gal waste oil AST in-service - one 2,000 gal gasoline UST closed-in-place, installed in July 1974 and closed in Mar. 1996 - two 550 gal gasoline USTs closed-in-place, closed in Mar. 1996 spoke with Fazir at 347-417-6262. Fazir mentioned that New Liberty Auto Repair left the site couple of years ago and doesn't know who occupy the site. 12:45 PM:- spoke with William at Jerusalem Auto Sales. William refused to provide property owner's contact information, but will ask him to call back. Shapiro Living Trust **property owner** 1653 55th Street Brooklyn, NY 11204 Attn.: Adam 12:50 PM:- spoke with Romeo Santos at Don Carlo. he was contacted by administrator of the trust fund and provided previous investigation report which showed contamination. currently, Romeo is negotiating work proposal. asked Romeo to provide copy of previous investigation report and contact number for administrator. Romeo Santos Don Carlo Environmental Ph. (718) 857-3100 email: doncarllo@aol.com 1:06 PM:- spoke with Mr. Talmud. he will call back. Shapiro Living Trust **property owner** c/o Steve Talmud Administrator 5 Patriots Court East Brunswick, NJ 08816 Ph. (732) 698-9690 email: steve@talmudfamily.com 1:18 PM:- received call from Mr. Talmud. he is planning to remove old tank systems and oil/water separator and any associated contamination, prior to selling the property. he will send copy of previous environmental investigation reports for review. currently, the site is being used to park vehicles. 1:31 PM:- received email from Mr. Talmud including geophysical report and Phase II reports. abstract of geophysical report: - analysis of the GPR data at the site allowed the delineation of eight (8) possible USTs: seven (7) in the paved area to the south and one (1) in front of center garage bay - a possible oil-water separator fed by floor drains was observed near the interior of the southern-most garage

4202 18TH AVENUE (Continued) **S113405137**

door - two concrete-filled possible remote fill ports were observed in the sidewalk along E 3rd Street. these were traced and found to terminate in the area of possible USTs in the southern paved area - observed two possible vent pipes, traced into the southern paved area in the vicinity of the possible marked USTs - evidence of a former pump island was observed in the southern paved area abstract of Phase II: - based on publically available records, the structure on the site was constructed circa 1933 - installed eight (8) soil borings - five of the borings (SB-2, SB-3, SB-4, SB-5 and SB-6) targeted the suspect gasoline USTs and former pump island - three of the borings targeted the waste oil tank (SB-1), oil-water separator (SB-7) and floor drain system (SB-8) - two of the soil borings were advanced to a terminal depth of 20 ft bg - a thin clay layer was observed at depths ranging from 0.5 to 2 ft bg - groundwater was not encountered in any boring - in the absence of staining, odors, or elevated PID readings, the sample depths were biased towards the approx. invert of the suspect UST or piping run - found contamination in sample SB-3 which was collected from former dispenser island area - found PCE above method detection limit in sample from 1-1.5 ft depth from SB-7 which was installed near oil-water separator soil analyticals:
----------SB-3 (at 5-5.5 ft)
Toluene----------4,010
Ethylbenzene----------12,000
Xylene----------199,000
1,2,4-Trimethylbenzene-------590,000
1,3,5-Trimethylbenzene-------208,000
Naphthalene----------86,300 Phase II investigation is incomplete due to following: - missing investigation along remote fill lines - soil borings installed to depth of 15 ft bg (except boring SB-1 which was installed to 20 ft bg), at approx. invert of tanks and no sampling done at deeper intervals - no investigation for groundwater quality - only shallow (2 ft bg) sampling near oil-water separator where PCE found - requires further deeper investigation throughout site 2:55 PM:- spoke with Mr. Talmud. informed him that the Department requires further investigation. he mentioned that due to tenant on-site, they can not excavate and remove tank and oil-water systems now. as tank systems were not in use since 1996, suggested him to conduct groundwater investigation via installation monitoring wells, until excavation occurs. he will talk to his consultant. 04/17/13-Hiralkumar Patel. 2:02 PM:- left message for Mr. Talmud. 2:40 PM:- received call from Mr. Talmud. discussed about groundwater depth below grade before deciding on well installation or excavation. he will ask his consultant to call back.
04/18/13-Hiralkumar Patel. 10:44 AM:- received email from Mr. Talmud including response from Peak Environmental. Joseph Rizzo from Peak Environmental mentioned that groundwater was not found to 20 ft depth. 04/19/13-Hiralkumar Patel. 4:13 PM:- left message for Mr. Rizzo. Joseph Rizzo Peak Environmental Inc. PH. (732) 326-1010 (O) (347) 886-1319 (C) email: jrizzo@peak-environmental.com
04/22/13-Hiralkumar Patel. 9:45 AM:- received message from Mr. Rizzo. 10:44 AM:- left message for Mr. Rizzo. 10:54 AM:- received call from Mr. Rizzo. discussed regarding groundwater depth in area. he will review maps and use any well, in area close to the site, to find out groundwater depth. 11:34 AM:- received email from Mr. Rizzo. he mentioned that the site is approx. 48 ft above mean sea level. he assumed groundwater at 46-50 ft bg. 05/06/13-Hiralkumar Patel. 9:15 AM:- received message from Mr. Rizzo. 05/08/13-Hiralkumar Patel. 1:52

4202 18TH AVENUE (Continued) **S113405137**

PM:- left message for Mr. Rizzo. 1:54 PM:- left message for Mr. Talmud. 2:46 PM:- received call from Mr. Talmud. he mentioned that the current tenant has lease for another five years and excavation may not be be possible for that time. 05/13/13-Hiralkumar Patel. 3:00 PM:- sent letter to Mr. Talmud requiring submission of phase I, scaled site map and investigation work plan. asked Mr. Talmud to submit phase I and scaled site map by the end of 07/12/13. investigation work plan is due within 30 days from acceptance of the phase I report and scaled site map. letter emailed to Mr. Talmud. discussed with DEC Jane about PCE above detection limit during earlier investigation. she asked for full list VOCs for soil and groundwater samples. 3:32 PM:- sent revised letter to Mr. Talmud requiring full list VOC analysis for soil and groundwater samples. revised letter emailed to Mr. Talmud. 4:11 PM:- received email from Mr. Talmud confirming receipt of letter. 06/13/13-Hiralkumar Patel. 11:40 AM:- received call from Mr. Talmud. he mentioned that current tenant has signed agreement to leave the site next week and currently, Mr. Talmud is negotiating property sale with potential buyer. he believes sale contract will be signed in couple of weeks. under proposed contract, Mr. Talmud will remove tank systems and oil/water systems. he has Phase I report and will email that. 12:05 PM:- received email from Mr. Talmud including geophysical investigation report, which was submitted previously. 4:08 PM:- sent email to Mr. Talmud and informed him that geophysical report was submitted earlier and the department requires submission of Phase I report, as stated in letter dated 05/13/13. 06/17/13-Hiralkumar Patel. received message from Mr. Rizzo (at 9:24 AM on 06/14/13). 11:40 AM:- spoke with Mr. Rizzo. he mentioned about preparing work plan for well installation for delineation requirements. informed him about discussion with Mr. Talmud last week. as Mr. Talmud is planning for removal of UST systems and oil/water separator systems, informed Mr. Rizzo that there is no need for well installation at this time. informed him that scope for groundwater investigation can be finalized based on observations during removal of underground structures and results of endpoint samples. asked him to submit a work plan, with schedule, for removal of UST systems and oil/water separator systems. 07/08/13-Hiralkumar Patel. 12:27 PM:- received call from Mr. Talmud. he received work proposals from contractors and wanted to make sure that proposed work satisfy the requirements. he will send proposals for review. 12:36 PM:- received email from Mr. Talmud including cost estimates from two contractors. they both discussed about excavation work and sampling work as per DER-10. one of the contractor also included cost for Phase I investigation. 1:14 PM:- spoke with Mr. Talmud. discussed about proposed plans. informed him that the department requires Phase I investigation (to know historical use of the site, potential off-site sources and possible unknown tank systems in ground) regardless of results of excavation. 07/15/13-Hiralkumar Patel. 2:26 PM:- received call from Mr. Vel from Prime Environmental. he mentioned that excavation work will begin in 2-3 weeks. he will submit Phase I and site map. Keith Vel Prime Environmental Ph. (973) 326-8800 email: 09/09/13-Hiralkumar Patel. 2:51 PM:- received email from Mr. Rizzo including Phase I report. abstract: - total nine (9) possible tanks at site - one (1) 275 gal waste oil AST, in-service --- registered - one (1) 2,000 gal gasoline UST, closed-in-place in Mar. 1996 -- registered - two (2) 550 gal gasoline USTs, closed-in-place in Mar. 1996 -- registered - four (4) out-of-service gasoline USTs ---- unregistered - one (1)

4202 18TH AVENUE (Continued) **S113405137**

out-of-service waste oil UST --- unregistered - suspected oil-water separator fed by floor drains observed near the interior of the souther-most garage door - subject site was initially improved with a 1-story structure identified as a filling station sometime between 1905 and 1929 - a 1950 sanborn map depicts the property developed with a larger 1-story building divided into a office, greasing room, auto laundry and auto garage sections - since 1994, the subject site is not identified as a filling station and has remained with commercial tenants identified as auto repair - waste oil AST was observed to be on metal legs over paved concrete floors. concrete floor was observed to be in good condition with no cracks - no spills, stains or olfactory evidence of petroleum odors were noted in the vicinity of the waste oil AST - site is situated at an elevation of 48 ft above mean sea level on land that generally slopes towards the east - as per affidavit dated 11/10/1983, three (3) 550 gal tanks were closed-in-place by filling with water - as per affidavit dated 03/07/1996, one (1) 2,000 gal and two (2) 550 gal gasoline USTs were closed-in-place by filling with concrete. remote fill pipes were sealed and cemented - Hazmat E designation noted for the subject site ---------- 09/19/13-Hiralkumar Patel. 11:44 AM:- sent email to Mr. Talmud. informed him that the department accepts the Phase I report. asked him to submit investigation work plan by the end of 10/18/13. email copied to Mr. Rizzo. 09/25/13-Hiralkumar Patel. 11:02 AM:- received email from Mr. Rizzo including work plan. Mr. Rizzo proposed to remove seven (7) gasoline USTs, one (1) waste oil UST and oil/water separator. he proposes to collect endpoint samples for VOC analysis from gasoline tank area and for SVOCs/PCBs/TAL Metals analyses from waste oil tank area. the proposed plan is not acceptable for following reasons: - endpoint samples needed from excavation of oil/water separator also - all samples must be analyzed for VOCs (full list) and SVOCs (STARs list) 3:18 PM:- spoke with Mr. Rizzo and asked him to submit revised work plan. 09/26/13-Hiralkumar Patel. 2:48 PM:- received revised work plan from Mr. Rizzo. the revised work plan is not acceptable as it either proposes to analyze soil samples for VOCs for fuel oil contaminated soils (which does not include MTBE) or no VOC analysis for soil samples from waste oil and oil/water separator excavation. 10/01/13-Hiralkumar Patel. 2:14 PM:- spoke with Mr. Rizzo. informed him that all soil and groundwater (if encountered) samples must be analyzed for full list VOCs and STARs lis SVOCs. asked him to submit revised work plan. 2:50 PM:- received revised work plan from Mr. Rizzo. he included analysis of all soil samples for Full List VOCs and SVOCs listed in table 2 of CP-51. he also mentioned that additional sampling will be done based on field observations and/or required by DEC. Mr. Rizzo proposed to submit tank closure report by 11/25/13. 10/02/13-Hiralkumar Patel. 10:20 AM:- sent work plan approval letter to Mr. Talmud. letter emailed to Mr. Talmud and Mr. Rizzo. 01/02/14-Hiralkumar Patel. 11:21 AM:- spoke with Mr. Rizzo and inquired about field work. he mentioned that as site has e designation, they need work plan approval from NYC OER also. OER is currently reviewing the plan. Samantha Morris NYC OER Ph. (212) 341-2082 email: SMorris@dep.nyc.gov 03/21/14-Hiralkumar Patel. 10:28 AM:- received message from Mr. Rizzo. he mentioned that work will begin next week. 03/25/14-Hiralkumar Patel. 8:34 AM:- left message for Mr. Rizzo. 8:47 AM:- received call from Mr. Rizzo. he mentioned that crew is installing safety fence today and will start breking concrete today. he believes that tanks will be out of ground by 03/27/14. 03/27/14-Hiralkumar Patel. 1:10 PM:- visited site. met

4202 18TH AVENUE (Continued) **S113405137**

Paul from Peak Env. until now, they have exposed total of seven tanks, including one 2,000 gal. some of the tanks were wrapped in concrete. most of the tanks were filled with sludge and water. Riteway Tank was on-site pumping tank's material. petroleum odors were noted in the work zone. Paul mentioned that tanks and concrete will be removed tomorrow and soil excavation will begin on 03/31/14. oil/water separator and another UST in repair shop area will be removed, once existing tank field including piping, is cleaned. 03/31/14-Hiralkumar Patel. 12:11 PM:- received message from Mr. Rizzo. 12:46 PM:- spoke with Mr. Rizzo. they finished excavating in tank field area. due to structural safety of nearby building and sidewalks, no further excavation is possible. endpoint samples have been collected for analysis. 04/28/14-Hiralkumar Patel. received email from Mr. Rizzo (at 4:52 PM on 04/25/14) including memo including summary of tank removal work. abstract: - total eight (8) USTs removed: seven (7) from the southern section (three 275 gal, three 550 gal and one 2,000 gal) and one (1) from the northern section (one 550 gal) - each of the tanks in southern section were filled with water - found contamination in eastern and southern extents of the 7 UST excavation - excavation in southern section was measured 33 ft by 20 ft with a maximum depth of 13 ft bg - no groundwater was encountered - total of six (6) endpoint samples were collected - endpoint samples from southern excavation were collected from depths between 8 and 13 ft bg - piping associated with the 7 USTs was removed from the excavation and cut/crimped at the location where it entered below the sidewalk at E 3rd Street - a soil sample was collected at 2-2.5 ft bg below the piping - no petroleum contamination noted during removal of UST from nothern section - excavation in northern section was measured 8 ft by 5 ft with a depth of 6.5 ft bg - three endpoint soil samples were collected from northern excavation, at a depth of 6.5-7 ft bg - no contamination noted in endpoint samples, except one sidewall sample from southern excavation soil analyticals: ----------EX-2F (9.5-10 ft) Toluene----------3,760 Ethylbenzene-----3,450 Xylene----------28,800 discussed with DEC Vought. based on following, no further investigation/remediation needed in tank field: - as per affidavits, the tanks were closed in 1983 and 1996 - during removal, tanks were found filled with water - only 1.6 ppb PCE was detected in shallow soil sample from boring near the oil/water separator - no contamiantion noted in endpoint bottom sample at 13 ft bg in southern excavation - no groundwater encountered - no further excavation possible in area of EX-2F due to adjacent sidewalks 11:17 AM:- spoke with Mr. Rizzo. informed him that based on available information, no further remediation needed in the tank fields, but either subsurface investigation or excavation is needed along the remote fill lines. Mr. Rizzo will apply for sidewalk permit and will remove the remote fill lines and fill ports, once permit received. asked him to submit a complete report once sample results received from the remote fill line area. 11:38 AM:- left message for Mr. Talmud and informed him about discussion with Mr. Rizzo. 06/25/14-Hiralkumar Patel. received email from Mr. Rizzo (at 2:41 PM on 06/24/14). he mentioned that contractor has removed remote fill ports and piping. he expects to get fill line sampling results on 07/08/14. 08/19/14-Hiralkumar Patel. received email from Mr. Rizzo (at 11:57 AM on 07/18/14) including memo regarding fill line removal work. after removing remote fill line, two endpoint bottom samples (one at 1/1.5 ft and another at 3/3.5 ft depth) were collected. found some contamination

4202 18TH AVENUE (Continued) **S113405137**

in endpoint sample from 1/1.5 ft depth. ----------SS-2 (1/1.5 ft) Benzene----------491 Toluene----------3,510 Xylene----------3,250 no contamination found in endpoint sample from 3/3.5 ft depth. 4:06 PM:- sent email to Mr. Rizzo. asked him to submit UST closure report. email copied to Mr. Talmud. 08/22/14-Hiralkumar Patel. 10:05 AM:- received email from Mr. Rizzo including tank closure report. based on available information, case is closed. 1:33 PM:- sent spill closure letter to Mr. Talmud. letter emailed to Mr. Talmud and Mr. Rizzo. 12/29/14-Hiralkumar Patel. received call from Charles Sosik from EBC. EBC collected three groundwater samples for potential purchaser. Mr. Sosik mentioned that some minor contamination has noted in the samples and he asked about either reopening this case or reporting a new case. informed him that this case will remain closed, unless previously unknown environmental conditions found at the site. asked him to submit sample results. 2:08 PM:- received email from Mr. Sosik including site map and sample results. three borings were installed and collected groundwater samples from each boring. minor VOC contamination noted in samples. based on site history and available sample results, case will remain closed. 01/07/15-Hiralkumar Patel. 1:29 PM:- sent email to Mr. Sosik and informed him that the case will remain closed based on available information. **e-designation**

Spiller Name: LT.GENTILE
Spiller Company: IN THE REAR OF
Spiller Address: 1353 FLATBUSH AVE
Spiller Company: 001
Contact Name: LT.GENTILE
DEC Memo: THE LT. STATTED THAT AT THIS ADDRESS THEY WERE REMOVING THE OIL TANKS AT NITE AND THEY WERE A
LITTLE SHADY ABOUT THE WHOLE THING AND THOUGHT MAYBE SOMEONE SHOULD CHECK IT OUT, THEY HAVE ALREADY
COVERED THE HOLES ALL UP: THE LT. THOUGHT IT WAS DONE TRICKY:
Remarks: Sangesland spoke to Lt. Gentile of NYC Fire Dept. He said he was called to the site and saw the hole with buried 550 gal tanks from an old gas station. Lt. Gentile says he saw & smelled petroleum contaminated soil in the hole. There was a large pile of contaminated soil on the east edge of the property along East 26th St, directly in front of the rear/side door of the corner building (apt building Foster & E 26th) Work on the site was done at night when the FD could not find the contractor. The area has now been back filled. Owner has tried to get away without reporting the tanks to PBS and without testing the soil or properly remediating the site.
04/24/06-Hiralkumar Patel. Visited site. Mat Lt. Gentile, from Fire Department, on scene. as per FD, they have complaints about tank removal activities on Tuesday Apr. 18. they visited site and found excavation pit, which was about 10 ft deep. they found oil into pit and oil on contaminated soil on side of excavation pit. they notified by a Joseph Stanislaus (718-462-2689), who is owner of the property (Property B) in back of property (Property A), where spill happened. as per FD, when Property A start doing excavation, they were stockpilling contaminated soil on side of that pit. Property B has about 16 ft wide open area from the wall of building towards the property A. and during excavation, they were pilling this contaminated soil on property B's area and on the cars parked in that area. Spoke with Mr. Mike (718-703-1300), owner of the Extreme Auto Sales. he is running his business as a tenant on part of property A. he doesn't told me how long he has been here. he gave me owner's name and number. owner: Shalon Isreali PH. (917) 731-2207 (C) (718) 253-8300 (O) FAX (718) 253-8330 from reverse phone directory, address for (718) 253-8300 is: Eighteen Investment Group 3032 Nostrand Ave Brooklyn, NY 11229 Spoke to Mr. Isreali. as per him, they have done PHase-I and PHase-II investigation. they have reported this spill previously to DEC. spill # is 0600423. Mr. Isreali has planning to cover his property after he done with tank removal work. he is not planning any kind of construction on site.
****
********* Caller REmarks: IN THE PROCESS OF PULLING 4 USTS, FOUND CONTAMINATED SOIL, HAS NOT BEEN CLEANED UP, EXCAVATION AND STOCKPILLING WITHH BE DONE DEC note: Sangesland will send a CSL.
04/24/06-Hiralkumar Patel. spill reported again by FD. new Spill # 0600910. Refer new spill #. case closed.
****
********* as per Mr. Isreali, the owner of property B (2528 Foster Ave) is running illigal repair shop and used to dump used oil and tires in property A. as per Mr. Isreali, Mr. John (917-498-2958) from Amos Cleanup is handling this tank removal process. spoke with John, but he doesn't have correct information. he will call back. spoke with John. he told me that they did cleanup work about two months ago and the only cleanup he did was removing wood and other debris from

1353 FLATBUSH AVENUE (Continued) **S107787618**

site. he never removed any oil related material as he is not experienced and not doing this kind of work. spoke to Ms. Susan at Mr. Isreali's office. she made mistake giving number first time. the person who did tank removal work is: John Associated Environmental PH. (631) 744-8900 (O) (516) 658-5304 (C) Left message for John at Associated Environmental. Left message for Joseph, owner of Property B. 04/25/06-Hiralkumar Patel. Received call from Matt (FAX: 631-234-4297) from Associated Environmental. as per Matt, they have taken out 3705 gal of oil/water mix from five 550 gal USTs from location. during excavation they have noticed contamination. they have taken end point samples and will get lab results soon. they have also taken soil samples from the stockpiled soil for waste characterization. once they get results, they will dispose this material. asked him to send me copy of lab results immediately as he gets it. they will submit final closure report with all required documents. Received call from Susan, who is working in Mr. Isreali's office. she was asking about what to do regarding odor complaints that neighbour have. suggest her to contact their environmental consultant to cover this contaminated soil on site if neighbour has problem. Received call from Joseph, owner of the Property B. who is running garage in back of subject site. he doesn't have any odor complaints. but he can't open his garage as soil is stockpilled on his property in front of garage. adviced him to contact police department about contaminated soil on his property. Left message for Matt about Phase-I and Phase-II reports. Received call from Matt. he is not sure about the lab results in PHase-II investigation. he will forward me copy of these reports. general CSL sent out to Mr. Isreali. faxed copy to Mr. Isreali and to Matt at Associated Environmetnal requesting site plan, sample analyticals and disposal manifest. 04/26/06-Hiralkumar Patel. REceived call from Susan. she has phase-I and II reports and will mail those reports to the Department today. 05/03/06-Hiralkumar Patel. Received Phase-I and Limited Subsurface investigation reports. abstract of Limited Subsurface Investigation: - from the 1930's to the 1950's the property was used as Filling Station. - prior to sampling activities, a magnetometer survey was conducted to determine the presence of USTs at the site - gasoline vents were noted on the side of 1357 Flatbush ave. three vents were noted with a fourth vent broken half-way up the building. - four anomalies were detected near the rear of the building. the anomalies were approx. four ft by six ft. the size of these anomalies is consistent with a 555 gal. UST. - in addition to the four anomalies, two larger anomalies measuring approx. six ft by tweleve gt were located adjacent to the four smaller anomalies. the size of these two naomalies is consistent with a 2000 gal UST. - continuous soil samples were collected from surface grade to an approx. depth of 25 ft bg. - soil consisted of mainly fill material from 0-3 ft bg grading to medium sands. - location of soil borings B-1 to B-4 were collected throughout the property and in the vicinity of the USTs. - samples collected and screened in the field did not exhibit any PID readings, staining or petroleum odor. soil samples were collected to the groundwater interface - groundwater was encountered approx. 22 ft bg. - no evidence of staining or odor was evident in the groundwater. - composite soil sample (20'-22') was collected from each boring location at the groundwater interface. - no contamination found in any samples. no samples taken from tank area. Left message at Assoicate Environmental. 05/10/06-Hiralkumar Patel. Left message for Matt at Assoicate Environmental.

1353 FLATBUSH AVENUE (Continued) **S107787618**

05/11/06-Hiralkumar Patel. Left message for Matt at Assoicate Environmental. Spoke to Matt. he is working and once he get approval for waste disposal, he will put everything in final tank closure report and will send by end of May. 05/24/06-Hiralkumar Patel. Received call from Matt. he is planning to remove contaminated soil from site tomorrow. he got lab results and will fax with site plan including sampling locations. once he get paid, he will forward final report. 06/02/06-Hiralkumar Patel. Visited site on 06/01/06. found some heavily contaminated soil behind cinderblock wall. will going on site again on 06/05/06. Matt and Mr. Isreali will be at site on Monday 06/05/06 at 9:30 AM. 06/05/06-Hiralkumar Patel. Visited site. spoke to Mr. Isreali and Matt at site. they were removing 275 gal fuel oil UST. asked Mat to send endpoint sample results with site plan and also previously done Phase-I investigation report which includes soil borings at different locations on site.
06/30/06-Hiralkumar Patel. received letter with endpoint sample result from Matt. abstract: - there was five 550 gal gasoline USTs and one 300 gal fuel oil UST present at site - gasoline USTs were noted to be encased in concrete - total of approx. 3,705 gal of gasoline/water mix removed from tanks and tank vault - no evidence of deterioration such as holes or pitting noted in any of the USTs. - there was evidence of contamination such as petroleum odors and staining noted in the soil surrounding the gasoline USTs. - approx. 88 cubic yard of contaminated soil had been excavated - eight soil samples taken from soil where gasoline USTs were located - two soil samples taken from area of previous fuel oil UST - no VOCs found in any sample - some SVOCs found in North-East wall sample Matt will send hard copy in mail. 07/10/06-Hiralkumar Patel. received hard copy of report. due to little exceedance of some SVOCs in few samples, based on available information, case is closed. NFA sent out to owner. faxed to owner and Matt. 05/16/16-Hiralkumar Patel. received email from OER Sarah (at 1:08 PM on 05/13/16) including link to RIR and RAWP. OER received a proposal for constructing a residential building at the site. Sarah inquired if DEC requires anything in this case. 05/19/16-Hiralkumar Patel. reviewed RIR and RAWP. based on historical use of the property (as gas station and repair shop), Hydro Tech conducted GPR survey and subsurface soil, groundwater and soil-vapor investigations. no subsurface anomalies indicative of USTs were observed during GPR survey. total of six (6) soil probes, three (3) groundwater monitoring wells and four (4) soil-vapor probes were installed. three soil probes (SP-3, SP-4 and SP-6) were installed to a depth of 10 ft bg, two soil probes (SP-2 and SP-5) were installed to a depth of 20 ft bg and one soil probe (SP-1) was installed to a depth of 25 ft bg. stratigraphy of the site consists of 2 ft of brown silty sand, underlain by approx. 2 to 4 ft of light brown sandy clay, underlain by approx. 30 ft of tan coarse-grained sand. no PID readings above background concentrations were detected; however, slight visual and olfactory evidence of soil contamination was observed from 12 to 16 ft bg in soil probe SP-5. twelve (12) soil samples were collected for analysis: six samples from 0-2 ft bg, three samples from 4-6 ft bg and three samples from 14.5-16.5 ft bg. no VOC contamination noted in soil samples except SP-5 (only 1,2,4 Trimethylbenzene was detected slightly above SCOs) at 14.5-16.5 ft bg. SVOC contamination noted in surface soil (0-2 ft bg) in soil probes SP-1, SP-4 and SP-6. three (3) 1-inch wells were installed to a total depth of 35 ft bg, with 15 ft of screen. groundwater was found between 24.20 ft to 24.81 ft bg. LNAPL was not identified in

1353 FLATBUSH AVENUE (Continued) **S107787618**

the wells. groundwater samples were collected using low flow purging and sampling procedure. no contamination noted in groundwater samples. four soil-vapor probes were installed to a depth of 20 ft bg. no contamination noted in soil-vapor samples. proposed future use of the site will consist of a new 7-story mixed-use building with a full basement. the basement and first floor will contain retail space with 2nd through 7th floors containing 35 residential units. the building footprint will cover 80% of the site. the remaining portion of the site will be used for a rear yard and paved walkways. the proposed development will involve the excavation of the building footprint to a maximum depth of 14.5 ft bg. groundwater is expected at 20 ft bg; therefore dewatering is not anticipated during excavation. RAWP proposes excavation and removal of soil/fill exceeding Track 1 Unrestricted Use SCOs. six endpoint samples will be collected. if Track 1 SCOs are not achieved, a 20-mil vapor barrier will be installed beneath the building slab and outside of sub-grade foundation sidewalls. based on review of available information (reports in 2006 and 2016), there is no need for further investigation/remediation. 2:32 PM:- sent email to OER Sarah and informed her that no further petroleum related investigation/remediation is needed at the site. asked her to report any contamination found during site redevelopment. email copied to DEC Vought and OER Shaminder.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

UTM Y (Meters):	4499575.5
Elevation:	45 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

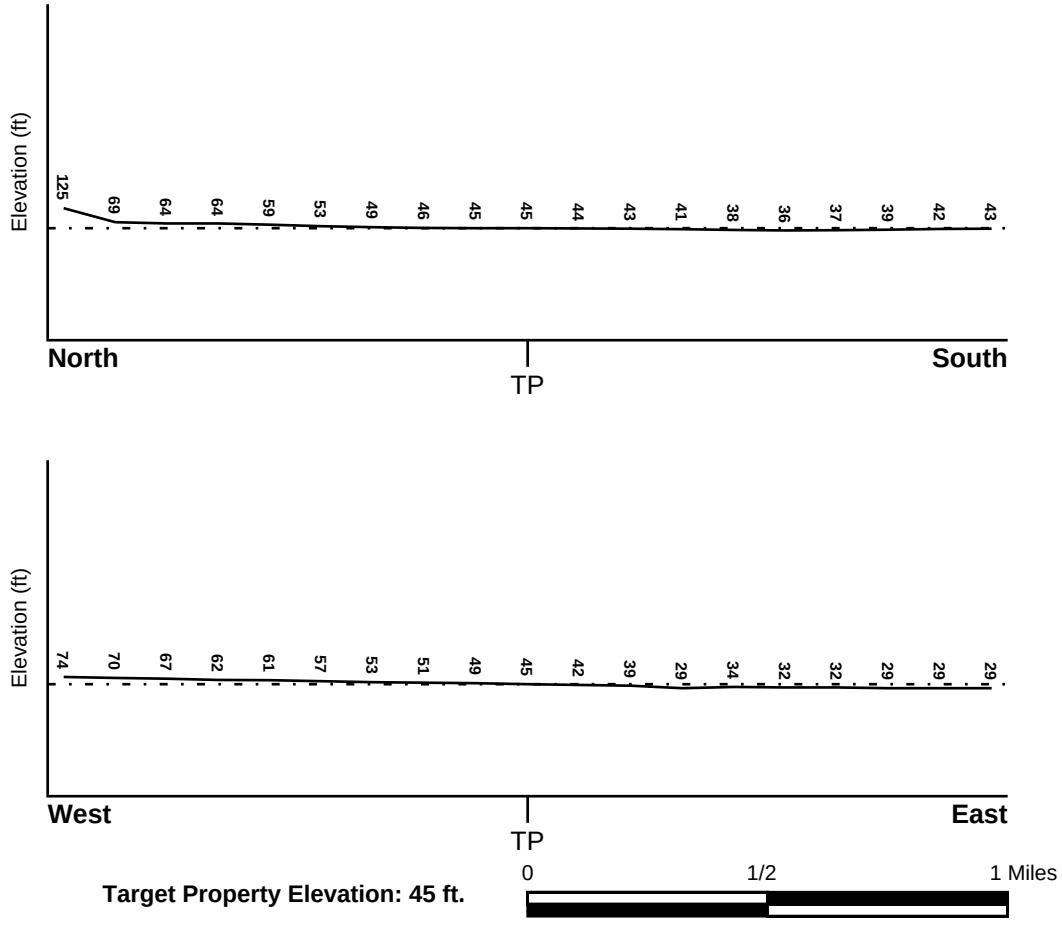
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970085B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type

3604970086B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Attn: Gene Sullivan

Re: Spill #91-10564
534 Coney Island Avenue
Brooklyn, New York

Dear Mr. Sullivan:

As per our telephone conversation, the above-referenced spill was reported on January 8, 1992 when gasoline contaminated soil was excavated and stockpiled on site by Tyree Brothers Environmental Services, Inc. (TBES). Since that time, the contaminated soil has been removed, and end samples of the excavation have been analyzed (see enclosed letter). Therefore, TBES respectfully requests closure of the above-mentioned spill on behalf of the property owner.

I am looking forward to hearing from you at your earliest convenience.

Sincerely,

Dawn M. Medaglia

Re: 534 Coney Island Avenue
Brooklyn, New York

Dear Mr. Alpert:

This is to inform you of the progress at the above-referenced site.

Excavation was started on 12-27-92. The contaminated area was removed to an average depth of five (5) feet. This is the depth the clay lense was encountered.

Approximately 190 yards of soil were removed from the site and disposed of at an NYSDEC approved disposal sites.

Two samples taken from the excavation bottom were analyzed for Total Recoverable Petroleum Hydrocarbons. They were taken from the west and east sides of the excavated area. The results indicate TPH levels of non-detectable (ND) and 32 ppm, respectively. As set forth in earlier conversations with your personnel, the desired goal in the contract was <100 ppm TPH. As indicted by these results, we are well below the goals of remediation.

Bill Dean from Midas was notified verbally of our finds on 1-7-92. We discussed the levels found in the bottom of the excavation and offered to leave the area open until his personnel could inspect the site.

Member
Tyree
Environmental
Technologies

We were informed that Ben Richie would contact us as to the status of the excavation. Mr. Richie said he would inspect the site and we could backfill the site the following day. Backfilling occurred after inspection on 1-8-92.

If you have any questions, please do not hesitate to contact me at (516) 249-3150, extension 237.

Sincerely,

Patrick O Vargo

Long Island City, New York

Re: NYSDEC Spill # 9110564
534 Coney Island Avenue
Brooklyn, New York

Dear Mr. Tibbe:

Impact Environmental Consulting, Inc. performed a subsurface investigation on the above referenced property to determine the need for corrective action with respect to NYSDEC spill #9110564.

The results of the investigation failed to detect any soil or groundwater contamination on the subject property. These results demonstrate that the remedial activities performed to address the historic product release associated with NYSDEC spill # 9110564 properly remediated the previously detected contamination on the subject property. Accordingly, it is requested that NYSDEC spill number #9110564 be closed.

Please call with any question or comments.

Sincerely,
Impact Environmental
Consulting, Inc.

Kevin Kleaka
Environmental Scientist

1.0 Purpose & Scope

This subsurface investigation was conducted to define the nature and extent of any chemical contaminants that have impacted the environmental quality of the property located at 534 Coney Island Avenue, Brooklyn, New York, herein identified as the subject property. The scope of this investigation was based upon the need for corrective action resulting from NYSDEC spill incident 9110564. This Investigation Report (IR) is intended to provide the basis for determining if interim and comprehensive remedial activities are warranted on the subject property.

The investigative protocols used for this IR were based upon the following documents: 1) the New York State Department of Environmental Conservation, Spill Guidance Manual, Volumes I & II, March 1992; 2) the New York State Department of Environmental Conservation, Guidance for Petroleum Spill Corrective Action, dated September 1994; 3) the New York State Department of Environmental Conservation Spill Technology and Remediation Series (STARS) Memo 1, Petroleum Contaminated Soil Guidance Policy; 4) the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) #4046, Determination of Soil Cleanup Objectives; 5) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; and 6) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

- **Site Description**
- **Sampling and Analysis Investigation Plan**
- **Laboratory Analysis**
- **Evaluation of Results**
- **Conclusions**

Presented herein are the results of the Investigation Report, Subsurface Investigation conducted by Impact Environmental Consulting, Inc. on the subject property [see **Plate 1:** Project Location Map, *Brooklyn, New York*].

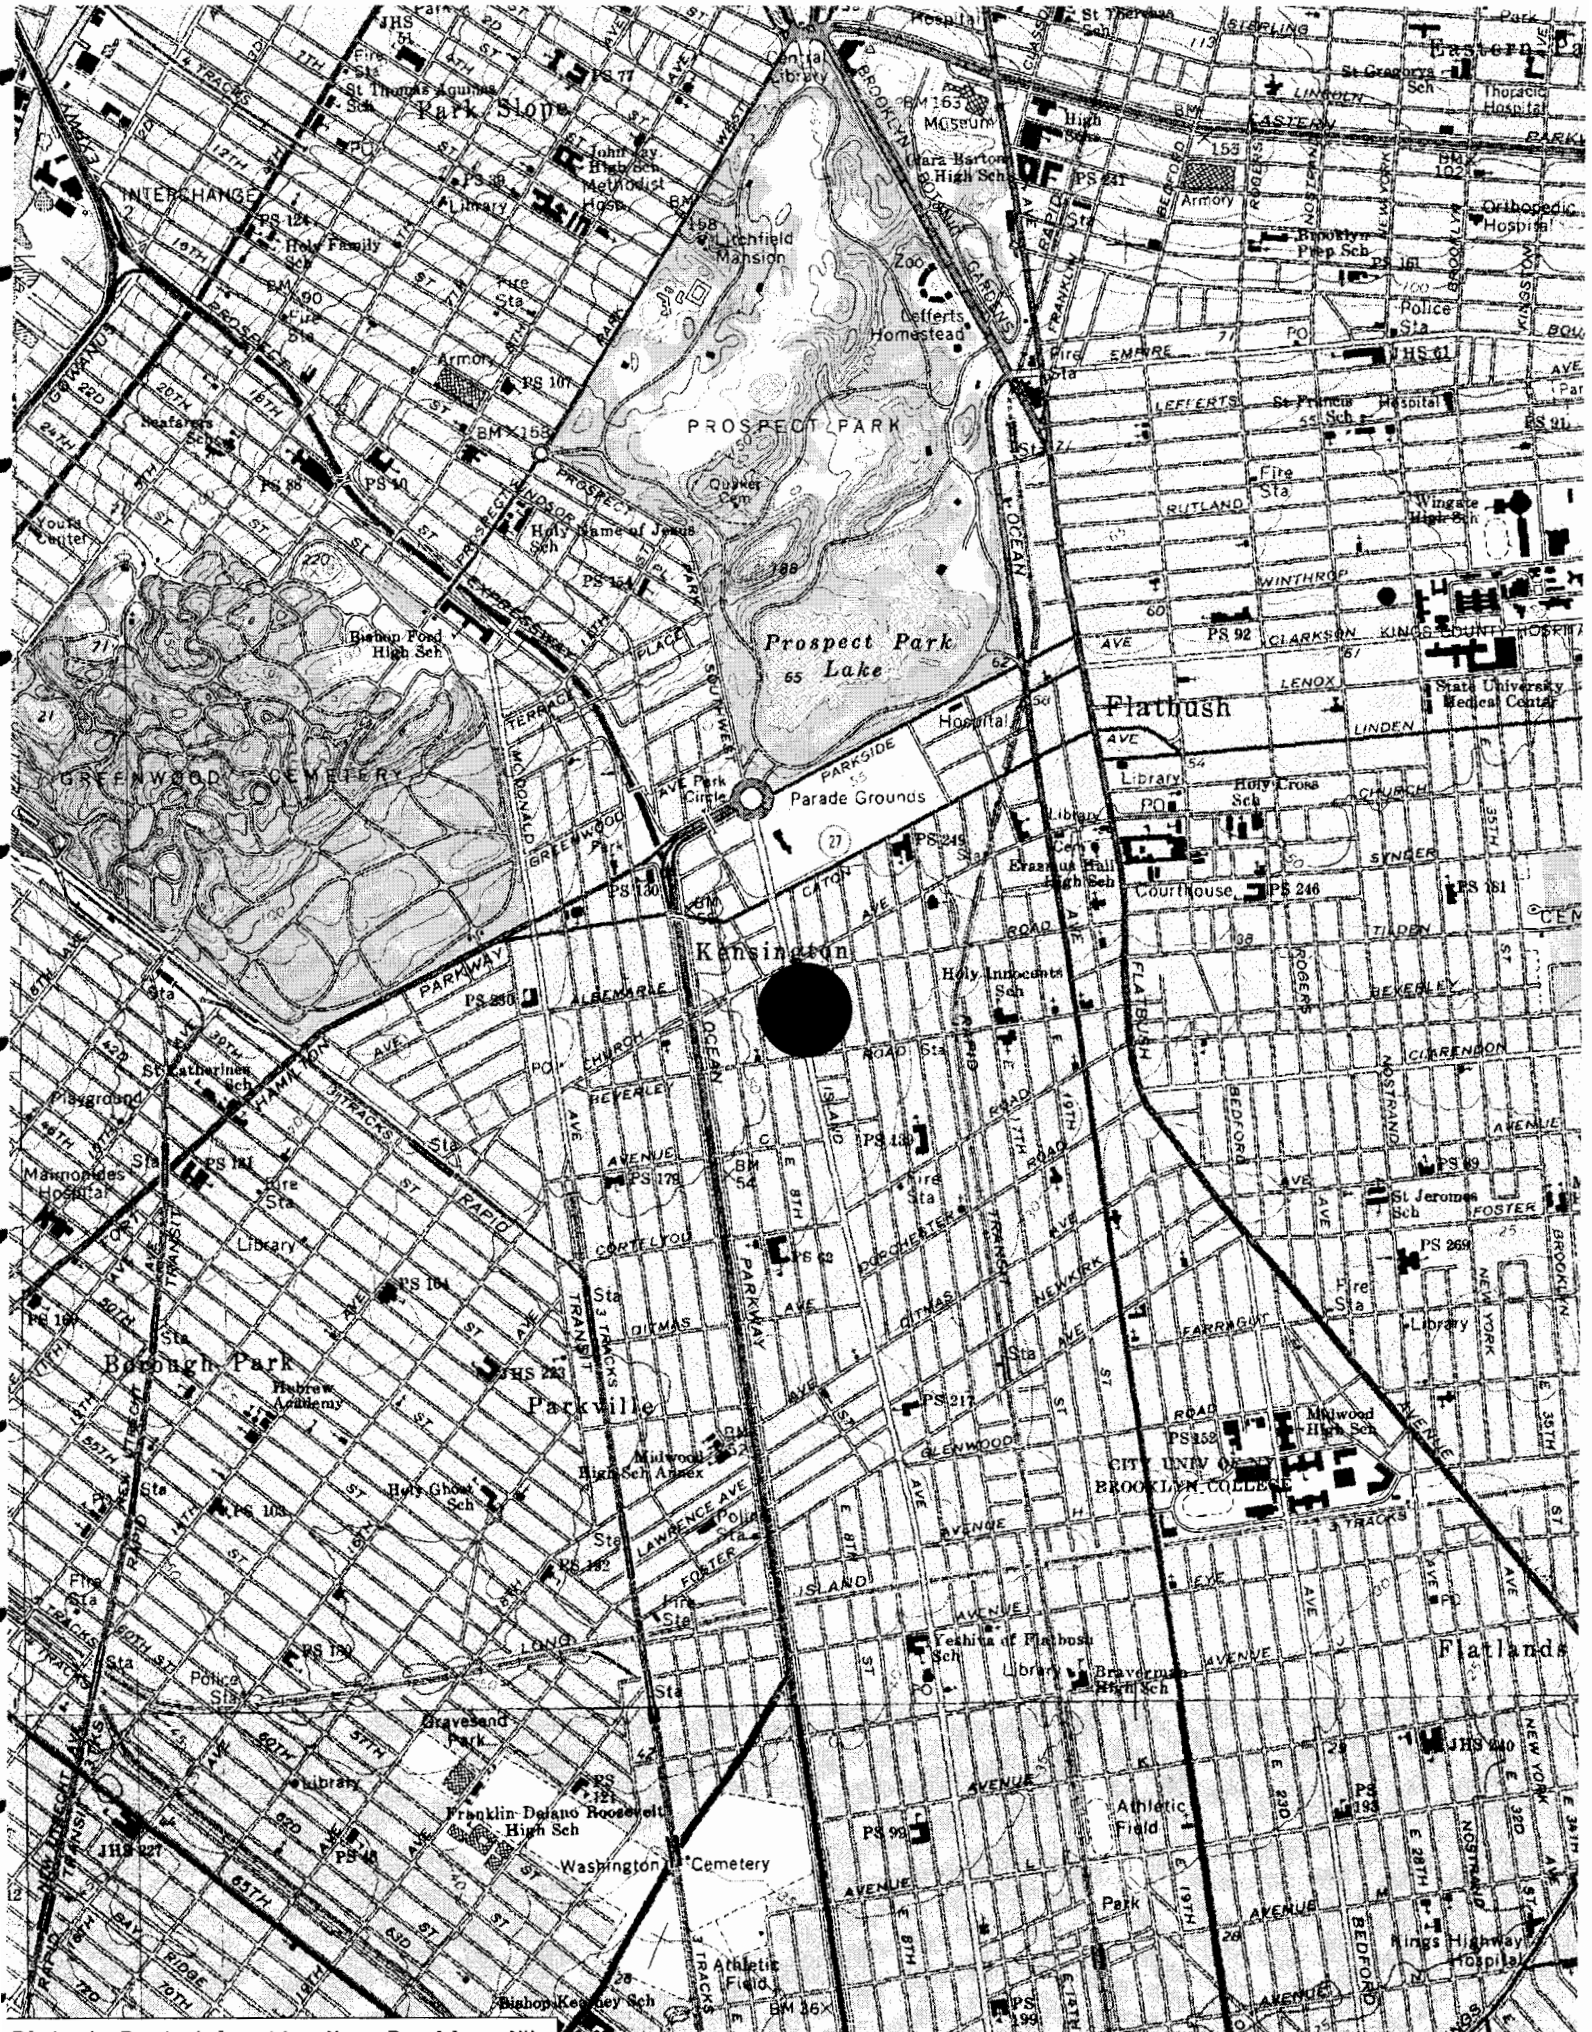

Plate 1: Project Location Map, Brooklyn, NY,

2.0 Site Description

2.1 Topography

The areal extent of the subject property was approximately 10,150 square feet. The subject property contained one single-story masonry building that was approximately 3,520 square feet. The surface area of the subject property consisted of asphalt parking areas. The subject property exhibited low topographic relief (one to three percent slopes). The elevation of the subject property, as presented on the United States Geologic Survey (USGS), Brooklyn Quadrangle Map, approximates forty-five (45) feet above mean sea level.

2.2 Land Use

The subject property lies within New York City commercial district C8-2. The subject property was utilized as an automotive service station. The interior space was divided into office and operational space. The office space was utilized for general administrative purposes. The operational space facilitated six service bays utilized for general automotive repair. The subject property formerly operated as a gasoline filling station for approximately thirty-two (32) years prior to 1988.

2.3 Site History

In December 1988, Tyree Brothers Environmental Services, Inc. (TBES) removed fifteen (15) USTs on the subject property (thirteen 550-gallon gasoline USTs, one 5000-gallon gasoline UST, and one 275-gallon fuel oil UST). In September 1991, a subsurface investigation was performed by TBES that identified concentrations of gasoline related contaminants in subsurface soil samples secured on the subject property. Said samples, identified as B-1 (39'-41'), B-2 (4'-6'), W-1 (4'-6'), were secured in the vicinity of the former gasoline USTs. The laboratory analysis of said samples detected moderate concentrations of total petroleum hydrocarbons (TPH) and aromatic hydrocarbons. Headspace analysis results of samples secured from the three boring locations failed to detect any concentrations of hydrocarbons above 100 ppm. It should be noted that NYSDEC soil guidance values had not been established at the time of this 1991 investigation. **Table 1:** Historic Data, *Brooklyn, New York* presents a summary of the detected concentrations.

Table 1: Historic Data, *Brooklyn, New York*

Sample ID	B-1	B-2	W-1
Unit	*mg/Kg*	*mg/Kg*	*mg/Kg*
EPA Method 8020			
Benzene	68	342	ND
Toluene	87	232	173
Ethylbenzene	20	361	33
Xylenes (Total)	68	671	323
Dichlorobenzene	ND	323	42
Total Petroleum Hydrocarbons	ND	391	738

One monitoring well, identified as W-1, was installed on the subject property at a down-gradient location relative to the former gasoline USTs. Well gauging activities failed to detect the presence of free phase product within W-1.

It was reported by TBES that the contamination was confined by a clay layer identified at approximately five feet below existing grade (BEG). TBES subsequently reported the spill to the NYSDEC on January 8, 1992. Approximately 190 cubic yards of contaminated soil was removed from the subject property and disposed of at a proper disposal facility. End-point samples secured form the excavation were analyzed for TPH. Said analysis detected concentrations of TPH ranging from 0-32 parts per million (ppm). In June of 1992, additional soil was excavated and removed from the property during redevelopment activities that included a building and drywells. The excavation for the new 3,520 square foot building was approximately four (4) feet BEG and comprised of five hundred and thirty-five (535) cubic yards of soil. The excavation for the drywells was approximately sixteen (16) feet BEG and comprised of sixty (60) cubic yards of soil. According to TBES, the excavated soil was free of any contamination. A spill closure was requested by TBES on November 3, 1992, however, the spill file associated with the subject property is presently active.

3.0 Sampling and Analysis Investigation Plan

A sampling and analysis investigation plan was developed to execute the sampling and analysis requirements of the NYSDEC. The plan included: 1) an investigation to define the nature and extent of any residual gasoline related contaminants in the unsaturated zone and capillary zone on the subject property; and 2) an investigation to define what, if any, dissolved gasoline related contaminants exist in the groundwater on the subject property. All locations can be referenced with **Plate 2:** Sample Acquisition Plan, *Brooklyn, New York*. Refer to **Appendix A** for a discussion of quality assurance and quality control procedures.

3.1 Subsurface Soil Sampling

Seven (7) soil probe nodes, identified as SP-1 through SP-7, were sited by Impact Environmental Consulting, Inc. at strategic locations on the subject property corresponding to the former location of USTs. Subsurface soil samples were secured from depth intervals ranging from grade to forty (40) feet BEG. Said probe nodes were sited to define the vertical and horizontal extent of any residual gasoline related contamination in the unsaturated zone and capillary zone on the subject property with regards to NYSDEC spill incident 9110564.

3.1.1 Subsurface Probe Installation

Subsurface probes were installed using a *Geoprobe* hydraulically powered probing tool (see **Diagram 1**: Geoprobe Operating System). Mechanized, vehicle mounted probe systems apply both static force and hydraulically powered percussion hammers for tool placement (static down forces up to 3,000 pounds combined with percussion hammers of eight horsepower continuous output). Recovery of large sample volumes was facilitated with a probe-driven sampler. The probe-driven sampler consisted of a hollow probe that opens via a remote control mechanism at the selected sampling depth in the soil profile to allow soil to enter as it was advanced. Discrete media samples were secured at the desired depths and were contained within a non-reactive transparent plastic sleeve that lined the hollow probe. The plastic sleeves were removed for subsequent inspection and sample aliquot acquisition.

3.2 Headspace Analysis

Headspace analysis was performed on each soil sample acquired from probe nodes SP-1 through SP-7 to provide precursory data regarding contamination. Results of the analysis were used to adjust the sample and analysis plan to yield the most accurate and representative results. The results of the field headspace analysis failed to detect any

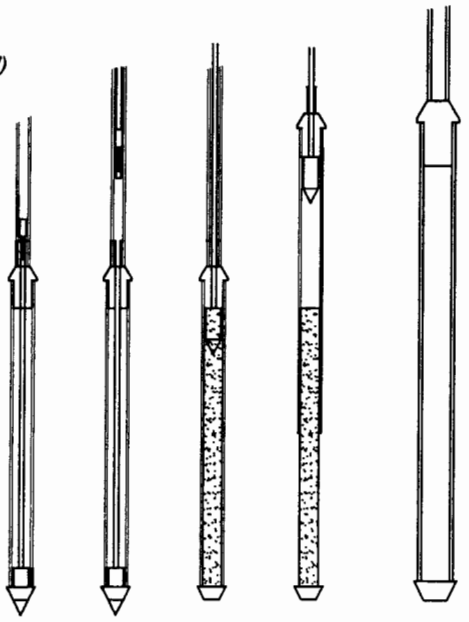
Basics

- Hydraulic powered probe unit isoperated from a engine driven pump.
- Remote vehicle ignition allows operator to start engine from probe unit.
- Belt driven hydraulic pump supplies 10 gpm @ 2000 rpm, 3000 psi operating pressure
- Probe unit folds for transport
- Unit utilizes static weight of vehicle and pecussion hammer to advance probing tools.
- Hydraulic hammer delivers pecussion rate of 30 Hz.
- Probes have greater than 18,000 lbs of down force and 25,000 lbs of retraction force.
- Drives multiple diameter probes (1", 1.25" and 2.25") to depths over 100 feet.

Soil Probing Tool

The tools are advanced and a sample is acquired in a non-reactive plastic sheathing. The system offers two sizes of sample retrieval:

Large bore - 1.5" x 2'
Macro - 2.25" x (2', 3' & 4')



Groundwater SP-15 Sampler

The tool allows a stainless steel, 4' screen to be delivered to the underlying groundwater. At the desired depth, the screen is retracted and samples are obtained via a check valve assembly.

concentrations of hydrocarbons above ambient levels (>1ppm). The results of the field analysis are presented in **Table 2**: Field Headspace Analysis Results, *Brooklyn, New York.*

3.2.1 Headspace Analysis Procedure

Headspace analysis was performed on each of the acquired samples utilizing a portable photo ionization detection meter to measure what, if any, hydrocarbon concentrations were present in isolated portions of the secured samples. Headspace analysis was conducted by partially filling a wide-mouth glass container with sample aliquot and sealing the top with aluminum foil, thereby creating a void. This void is referred to as the sample headspace.

To facilitate the detection of any hydrocarbons contained within the headspace, the container was agitated for a period of thirty (30) seconds. The probe of the vapor analyzer was then injected through the foil into the headspace to measure the hydrocarbon concentrations present. A Photovac Micro-Tip, photo ionization detection meter (PID) was the organic vapor analyzer selected for the head space analysis. A PID utilizes the principle of photo ionization for detection and measurement of hydrocarbon compounds. A PID does not respond to all compounds similarly; rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to isobutylene. Hydrocarbon relative response factors for a PID calibrated to isobutylene are published by the manufacturer.

3.3 Sample Characterization

A visual inspection of all subsurface soil samples recovered during the investigation was conducted to identify any gross signs of chemical contamination and to classify the sample media. Color classifications were made in accordance with the Munsell Classification System. Gradation classifications were made in accordance with the Unified Soil Classification System.

In general, the subsurface soil samples obtained from probe nodes SP-1 through SP-7 were found to consist of a dark brown medium sand with fine gravel. Subsurface soil samples secured from probe nodes SP-1 through SP-7 failed to exhibit any indications of petrochemical contamination. Refer to **Appendix B:** Soil Probe Logs, *Brooklyn, New York* for a detailed description of each subsurface soil sample secured from the investigation.

3.4 Groundwater Sampling

Five (5) groundwater probe nodes (temporary well points), identified as GWP-1 through GWP-5 were sited by Impact Environmental Consulting, Inc. at strategic locations on the subject property relative to potential sources of contamination (former UST locations) and regional groundwater flow direction. Groundwater was encountered at approximately thirty-nine (39) feet BEG. Regional groundwater flow direction was predicted to be toward the south with a slight western component. One groundwater sample was secured from each probe node. These samples were secured to provide data that would determine what, if any, dissolved phase gasoline related contamination had impacted the groundwater quality of the subject property with regards to NYSDEC spill incident 9110564.

Probe node GWP-1 was sited on the northern portion of the subject property to be representative of groundwater quality hydraulically up-gradient (entering) of the subject property.

Probe node GWP-2 was sited on the southern portion of the subject property to be representative of groundwater quality beneath the former gasoline USTs.

Probe nodes GWP-3 through GWP-5 were sited on the southern portion of the subject property to be representative of groundwater quality hydraulically down-gradient (exiting) of the former USTs on subject property. In addition, probe node GWP-3 was sited in the approximate location of historic monitoring well W-1.

3.4.1 Temporary Well Point Sampling Procedure

The groundwater sampling system used was the *Geoprobe* Screen Point 15. This system is designed to accurately collect grab samples of groundwater. The Screen Point 15 uses a screen with a standard slot size of 0.004 inches that is sealed inside a 1.5-inch ID alloy steel sheath as it is driven to depth. The screen is sealed inside the sheath with Neoprene O-rings that prevent infiltration of formation fluids until the desired depth is attained. When the screen has been driven to the depth of interest in the formation, extension rods are used to hold the screen in position as the driving rods are retracted approximately 4 feet. The 4-foot long sampler sheath forms a seal above the screen as it is retracted. A total of 41.5 inches of slotted screen is placed into contact with the formation. The Screen Point 15 groundwater sampler has a total boring diameter of 1.5 inches, the outside diameter of the screen is 1.0 inch. This provides for a maximum of 0.25 inches between the screen and the natural formation as the sampler sheath is retracted. These conditions approach the ideal for natural formation development that can be conducted when lower turbidity samples are required.

Each groundwater sample was collected from the sampler utilizing 3/8 inch diameter disposable tubing equipped with a bottom check valve. The tubing extended from the surface down to the sampler. The tubing was oscillated until the process had achieved proper development. The groundwater was then containerized into the appropriate sample vessels for subsequent laboratory analysis.

3.5 Laboratory Sample Location and Frequency

The subsurface soil samples secured for the investigation were subjected to field headspace analysis. The results of the field headspace analysis failed to detect any concentrations of hydrocarbons above ambient levels (>1ppm). Accordingly, two subsurface soil samples were selected for laboratory analysis from each soil probe node. Said samples were secured at depth intervals ranging from ten (10) to twelve (12) feet BEG and thirty-six (36) to forty (40) feet BEG to be representative of soil quality at the invert of the former USTs and the capillary zone, respectively. The subsurface soil samples secured for the investigation were containerized and labeled for identification purposes as follows.

SP-1 (10'-12')	SP-1 (36'-38')
SP-2 (10'-12')	SP-2 (36'-38')
SP-3 (10'-12')	SP-3 (36'-38')
SP-4 (10'-12')	SP-4 (38'-40')
SP-5 (10'-12')	SP-5 (38'-40')
SP-6 (10'-12')	SP-6 (38'-40')
SP-7 (10'-12')	SP-7 (38'-40')

The groundwater samples secured for the investigation were containerized labeled for identification purposes as follows.

GWP-1
GWP-2
GWP-3
GWP-4
GWP-5

The soil and groundwater samples acquired for this investigation were containerized in the appropriate vessels, preserved at 4°C in a cooler and transported under proper chain-of-custody procedures to a NYS-DOH certified commercial laboratory for analysis.

4.0 Laboratory Analysis

4.1 Analytical Test Methods

The samples were transported to a New York State Certified Commercial Laboratory for analysis. Selection of the analytical test methods was based on the New York State Department of Environmental Conservation, Spill Technology and Remediation Series (STARS) Memo 1, Section V, Laboratory Methods and the New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations.

The analysis performed on the subsurface soil samples secured from probe nodes SP-1 through and SP-7 consisted of United States Environmental Protection Agency (USEPA) Test Method 8021 (STARS) for target volatile organic analytes and USEPA Test Method 8270 (STARS) for target semi-volatile organic analytes.

The analysis performed on the groundwater samples secured from probe nodes GWP-1 through GWP-5 consisted of USEPA Test Method 624 (8021 STARS) for target volatile organic analytes and USEPA Test Method 625 (8270 STARS) for target semi-volatile organic analytes.

4.2 Analytical Results

The laboratory analysis of the subsurface soil samples secured from probe nodes SP-1 through SP-7 failed to detect any concentrations of target volatile or semi-volatile organic analytes.

The laboratory analysis of the groundwater samples secured from probe nodes GWP-1 through GWP-5 failed to detect any concentrations of target volatile or semi-volatile organic analytes.

Table 3: Detected Analytes in Subsurface Soil, *Brooklyn, New York* and **Table 4:** Detected Analytes in Groundwater, *Brooklyn, New York* present a summary of the analytical results and the relevant guidance values that apply in New York State. The original laboratory analysis report as prepared by Long Island Analytical Laboratories, Inc. is presented in **Appendix C** of this document.

5.0 Evaluation of Results

The field headspace analysis performed on the subsurface soil samples secured from probe nodes SP-1 through SP-7 at depth intervals ranging from grade to forty (40) feet BEG failed to detect any concentrations of hydrocarbons above ambient levels (>1ppm).

The laboratory analysis of the subsurface soil samples secured from probe nodes SP-1 through SP-7 failed to detect any concentrations of target volatile or semi-volatile organic analytes above minimum detection limits.

The laboratory analysis of the groundwater samples secured from probe nodes GWP-1 through GWP-5 failed to detect any concentrations of target volatile or semi-volatile organic analytes above minimum detection limits.

6.0 Conclusions

Impact Environmental Consulting, Inc. has performed a subsurface investigation on the subject property in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry. The investigation consisted of the sampling and analysis of subsurface soil and groundwater to further define the environmental quality of the subject property with respect to NYSDEC spill #9110564.

Under the scope of this investigation, the soil probe data secured at depths ranging from grade to the groundwater table failed to detect any soil contamination on the subject property. The distribution of soil probe nodes within the location of the former USTs demonstrated that the remedial activities effectively removed the horizontal extent of the previously detected soil contamination. This data further demonstrated that the vertical extent of the previously detected soil contamination was limited by the confining clay unit that exists at approximately six feet BEG. The previous remedial activities were completed to the depth of this confining unit.

The data obtained under the scope of this investigation failed to detect any groundwater contamination on the subject property relative to the former USTs and groundwater flow direction. This data demonstrated that the groundwater quality of the subject property and down-gradient properties have not been impacted from the historic product release associated with NYSDEC spill #9110564.

Based upon the results of this investigation, dated April 30, 2001, Impact Environmental Consulting Inc. concludes that the remedial activities performed to address the historic product release associated with NYSDEC spill # 9110564 properly remediated the previously detected contamination on the subject property. Accordingly, it is requested that NYSDEC spill number #9110564 be closed.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the subject property or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the subject property with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the subject property with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the subject property.

APPENDICES

Brooklyn, New York

APPENDIX A:

Quality Assurance and Quality Control Procedures (QA/QC)

Brooklyn, New York

00-399

Appendix A

Quality Assurance / Quality Control (QA/QC) Procedures

Brooklyn, New York

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

A.1 Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

A.2 Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

A.2.1 Geoprobe

Prior to arrival on the subject property and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

A.2.2 Photo-ionization Detector(PID)

Prior to sampling, the PID was calibrated to a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

A.2.3 Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

A.3 Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

A.3.1 Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

A.3.2 Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

A.3.3 Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

Re: 534 ~~Long~~ Coney Island Avenue, Brooklyn KK

Dear Mr. Kleaka:

Enclosed please find the Laboratory Analysis Report(s) for sample(s) received on January 29, 2001. Long Island Analytical Laboratories analyzed the samples on February 2, 2001 for the following:

CLIENT ID	ANALYSIS
00-399-GWP-1	Stars 8021, Stars 8270
00-399-GWP-2	Stars 8021, Stars 8270
00-399-GWP-3	Stars 8021, Stars 8270

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.

Re: Coney Island Avenue, 00-399

Dear Mr. Kleaka:

Enclosed please find the Laboratory Analysis Report(s) for sample(s) received on March 21, 2001. Long Island Analytical Laboratories analyzed the samples on March 29, 2001 for the following:

CLIENT ID	ANALYSIS
SP-4 10-12' 00-399	Stars 8021, Stars 8270
SP-4 38-40' 00-399	Stars 8021, Stars 8270

Subject: Limited Phase II Environmental Site Investigation Report
545 Coney Island Avenue & 50 Hinckley Place
Brooklyn, New York

Ladies and Gentlemen:

As requested, Haley & Aldrich of New York (Haley & Aldrich), is providing this letter to Riverside Developers USA, Inc., summarizing the results of the Limited Phase II Environmental Site Investigation (ESI) completed at the property located at 545 Coney Island Avenue & 50 Hinckley Place, Brooklyn, New York (the Site) between 15 and 16 December 2021. The purpose of the Phase II ESI was to investigate the potential presence of subsurface contamination at the Site following the findings of the Phase I Environmental Site Assessment (ESA) dated 12 January 2022, prepared by Haley & Aldrich.

BACKGROUND

The Site, identified as Block 5114, Lots 1 & 3 on the New York City tax map is located in a R6-A residential zoning district with a C2-4 commercial overlay, and is approximately 11,710-square-feet in size. The Site is developed with a two-story warehouse encompassing all of Lot 3 operated by "Delt Hardware", a construction and plumbing goods supplier. A one-story garage is present on the southern half of Lot 1 operated by "New City Link Auto Repair Inc.," an auto body and repair shop and the northern portion of Lot 1 is utilized as a vehicle loading and parking area for the warehouse. A partial cellar level is located below the northern portion of the auto body and repair shop. Access to the garage is provided via three roll-up doors along Coney Island Avenue and access to the warehouse is provided via an entrance along Hinckley Place and a roll-up door on the western side of the building.

The Site is bound by Hinckley Place followed by a mixed-use multi-story commercial and residential building to the north, a one-story commercial-use building operating as a "7-Eleven" to the south, a "Shell" gasoline service station across Coney Island Avenue to the southwest, one-and two-family residential homes to the east, Public School 889 to the northwest and a commercial-use building operating as a "KFC" to the west beyond Coney Island Avenue.

Although the future development plans are in preliminary design phases, the proposed development will consist of constructing up to one new mixed-use (residential and commercial), mixed-income building that will include one cellar level and provide new affordable residential rental units pursuant to 421-a. The building will be accessible via Coney Island Avenue and Hinckley Place.

Based on a Phase I Environmental Site Assessment (ESA) completed by Haley & Aldrich for the Site on 12 January 2022, as early as 1905, the Site included one tax lot developed with a two-story residential dwelling along Hinckley Place. Sometime between 1905 and 1929, a filling station was constructed in the western region of the Site along Coney Island Avenue and included a one-story storefront, a one-story auto-related development, and three gasoline tanks in the northwest corner of the Site. In addition to the continued operation as a gasoline filling station, by 1935 the auto repair facility in the southern region of the Site expanded to include auto laundry, auto greasing, battery service, and tire repairs. In the early 1960's the existing one-story building on Lot 1 was constructed, and a Certificate of Occupancy dated 20 February 1962 indicates NYFD approval for gasoline tank installation on 15 February 1962. The Site remained relatively unchanged until the late 1970's. Between 1977 and 1978, the former residential dwelling was razed, and a two-story warehouse was constructed in Lot 3 and utilized for auto parts storage and repair. The gasoline tanks were no longer indicated on Sanborn Maps after 1977, and parking in the northwest corner is depicted in its place. The Site remained relatively unchanged post-1979 through the present and is currently operating as a construction and plumbing goods supplier warehouse with associated parking, and an auto body and auto repair shop. In addition, the northern part of the auto-repair shop is used for auto painting.

Upgradient adjoining properties surrounding the Site to the north, northwest, west, and southwest, have historically operated as filling stations or auto-related facilities from as early as the late 1920s until the early 2000s. The property adjoining the Site to the southwest currently operates as a gasoline service station. Additionally, the south adjacent property historically operated as a dry-cleaning facility from the late 1960s to the late 1970s.

GEOPHYSICAL SURVEY

Prior to commencement of ground-intrusive activities, Haley & Aldrich oversaw a geophysical survey performed by GPRS Inc. (GPRS) at the Site on 10 December 2021. The purpose of the geophysical survey was to determine the presence of any utilities, underground storage tanks (USTs), or anomalies beneath the Site surface. An underground scanning ground penetrating radar (GPR) antenna capable of detecting subsurface objects present at depths up to 8 feet (ft) below ground surface (bgs, in ideal conditions); and, an electromagnetic pipe and cable locator used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities, were used during this investigation. Due to subsurface conditions at the Site, the maximum effective depth scanned by the GPR was approximately 3 ft bgs.

The following subsurface features were detected during the geophysical survey: a gas line was detected in the sidewalk along Hinckley Place, an electrical utility line enters the building from Hinckley Place, and an unknown line was detected running from Coney Island Avenue to the auto repair garage. A copy of the geophysical survey report is included as Appendix A.

SUBSURFACE INVESTIGATION

Between 15 and 16 December 2021, Haley & Aldrich mobilized to the Site with AARCO Environmental Services, Corp. (AARCO) to perform the Limited Phase II ESI which included installation of five soil borings, one permanent groundwater monitoring well, and two soil vapor points, and three sub-slab soil vapor points using a direct-push Geoprobe® drill rig. A sample location plan is provided as Figure 1.

A Haley & Aldrich field person was on-site to document field observations and to collect soil and soil vapor samples. Boring locations were chosen based on the findings of the January 2022 Phase I ESA to assess the impacts from potential on- and off-site sources of contamination and to characterize subsurface conditions at the Site. Five soil borings were installed throughout the Site to depths of between 15 and 20 ft bgs. One permanent groundwater monitoring well, MW-1, was installed adjacent to SB-4 in the northwest region of the Site to a depth of 25 ft bgs. Three sub-slab soil vapor points were (SS-2, SS-3, and SS-5) were installed immediately beneath foundation slabs and two soil vapor points (SV-1 and SV-4) were installed to about 10 ft bgs. In concurrence with the sub-slab/soil vapor sampling, one ambient air sample (AA-1) was collected from the breathing zone (approximately 4 ft above ground surface) as a quality assurance/quality control (QA/QC) measure.

During soil boring advancement, moist/wet soil potentially indicative of the groundwater table was observed at approximately 8 ft bgs in soil boring SB-4, within the vicinity of the former gasoline USTs in the northwest region of the Site. Soil boring SB-4 was therefore converted into a 2-inch diameter PVC monitoring well, MW-1, which was installed to a depth of 25 ft bgs. Following installation, Haley & Aldrich gauged MW-1 using an oil/ water interface probe on 16 December 2021, however groundwater was not observed, and the saturated soil previously identified during the soil investigation may have been indicative of a perched water table condition. The monitoring well installation log for MW-1 is provided as Appendix B.

Urban fill generally consisting of brown silty sand with varying amounts of gravel, brick, concrete and asphalt was observed from surface grade to depths of between 2 and 5 ft bgs in each soil boring. The urban fill layer was underlain by a potential native layer consisting of brown to light brown sand with varying amounts of gravel and intermittent light brown clay lenses. Soil samples were collected continuously, characterized, and screened for visual and olfactory evidence of contamination such as staining and odors. Instrumental screening for the presence of organic vapors was performed using a photoionization detector (PID). In soil boring SB-4, located in the vicinity of the former gasoline USTs, petroleum-like odors in soil between 5 to 10 ft bgs and a maximum PID reading of 20 parts per million (ppm) volatile organic compounds (VOC) in the 6-8 ft bgs interval were observed. No additional elevated PID readings above background levels or odors were observed in the remaining soil borings. Soil boring logs are included in Appendix C.

Drilling refusal was encountered at approximately 3 ft bgs during several drilling attempts in the northwest region of the Site, specifically at the originally proposed SB-1 sample location. Soil boring SB-1 was shifted approximately 15 ft further east to avoid encountering the subsurface obstruction. Historical Sanborn Fire Insurance Maps indicate the presence of three gasoline tanks in the northwest region of the Site from the late 1920s through the late 1970s. Based on the depth of refusal (i.e., 3 ft bgs), and the

former presence of underground gasoline tanks in this region of the Site, a concrete encasement for USTs may be present.

SAMPLE COLLECTION

Up to two or three soil samples were collected from each of the five soil borings, in addition to one surface soil sample collected in the northwest region of the Site where an area of compromised cover and staining was observed during the December 2021 Phase I ESA site reconnaissance. Soil samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), total metals, polychlorinated biphenyls (PCBs), pesticides, herbicides, per- and poly-fluoroalkyl substances (PFAS) and 1,4-dioxane. Three sub-slab and two soil vapor samples and one ambient air sample were collected over a 2-hour period and analyzed for VOCs via TO-15 analysis. Sample locations are provided in Figure 1. A summary of samples collected during the Phase II ESI is provided as Table 1.

Soil samples were collected into laboratory provided containers, placed on ice in coolers, and shipped by courier to Alpha Analytical, Inc. of Westborough, Massachusetts (Alpha) for analysis. Sub-slab, soil vapor, and ambient air samples were collected into 2.7-liter (L) stainless-steel summa canisters supplied by the laboratory and shipped by courier to Phoenix Environmental Laboratories Inc., of Manchester, Connecticut (Phoenix) for analysis. Both Alpha and Phoenix are New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratories.

RESULTS

Full analytical results for soil and sub-slab/soil vapor/ambient air samples are provided in Tables 2 and 3, detections above regulatory criteria and/or guidance values are summarized in Figures 2 & 3 and laboratory analytical reports are provided in Appendix D.

Soil

Soil analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted-Residential Use Soil Cleanup Objectives (RRSCOs).

The following five VOCs were detected above UUSCOs but below RRSCOs in one soil sample, SB-4_6-8': 1,2-dichloroethane (0.024 milligrams per kilogram [mg/kg]); benzene (0.081 mg/kg); ethylbenzene (1.7 mg/kg); total xylenes (4.9 mg/kg); and, 1,2,4-Trimethylbenzene (22 mg/kg). In addition, the concentration of total xylenes was detected above the UUSCO soil sample SB-4_0-2’ at a concentration of 0.3 mg/kg. Tetrachloroethene (PCE) was detected above laboratory detection limits, but below UUSCOs in seven shallow soil samples collected from surface grade to 6 ft bgs throughout the Site and trichloroethene (TCE) was detected above laboratory detection limits in two soil samples collected from 0.5 to 4 ft bgs in one soil boring, SB-2. No additional VOCs were detected above UUSCOs in remaining soil samples analyzed.

The following six metals were detected at concentrations above UUSCOs, but below RRSCOs in at least one shallow soil sample analyzed from historical fill: lead, in four soil samples, at a maximum concentration of 359 mg/kg in SB-3_0-1'; zinc, in three soil samples, at a maximum concentration of 312 mg/kg in SB-3_0-1'; nickel, in three soil samples, at a maximum concentration of 37.9 mg/kg in a duplicate sample of SB-4_12-14'; cadmium, in one soil sample (surface sample SS-01) at a concentration of 2.76 mg/kg; copper, in one soil sample (SB-3_0-1') at a concentration of 67.8 mg/kg; and, mercury, in one soil sample (SB-3_0-1') at a concentration of 0.215 mg/kg. No additional metals were detected above UUSCOs in remaining soil samples analyzed.

Three pesticides were detected in one shallow soil sample, SB-2_2-4', at concentrations above UUSCOs but below RRSCOs, including 4,4'-DDE (0.0096 mg/kg), 4,4'-DDD (0.00925 mg/kg), and 4,4'-DDT (0.00398 mg/kg). No additional pesticides were detected above UUSCOs in remaining soil samples analyzed.

One PCB, Aroclor 1260, was detected above the UUSCO but below the RRSCO in one shallow soil sample, SB-2_0.5-1.5', at a concentration of 0.454 mg/kg. No additional PCBs not detected above UUSCOs in the remaining soil samples analyzed.

SVOCs were not detected above UUSCOs or RRSCOs in soil samples analyzed.

Concentrations of Perfluorooctanesulfonic Acid (PFOS) or Perfluorooctanoic Acid (PFOA) did not exceed the UU or RRU soil guidance values in any soil samples analyzed. PFOS was detected in four soil samples, collected from the surface to a maximum depth of 4 ft bgs, at a maximum concentration of 0.835 nanograms per gram (ng/g) in SB-1_0-1'. PFOA was detected in seven soil samples, collected from the surface to a maximum depth of 6 ft bgs, at a maximum concentration of 0.2 ng/g in SB-2_2-4' and SB-4_0-2'. One or more of the following PFAS compounds were detected in soil samples analyzed:

- Perfluorobutanesulfonic Acid (PFBS)
- Perfluorodecanoic Acid (PFDA)
- Perfluorododecanoic Acid (PFDoA)
- Perfluoropentanoic Acid (PFPeA)
- Perfluorotetradecanoic Acid (PFTA)
- Perfluoroundecanoic Acid (PFUnA)

Total PFOA/PFAS compounds were detected seven soil samples from the surface to a maximum depth of 14 ft bgs and ranged from 0.048 ng/g in SB-2_0.5-1.5' to 0.893 ng/g in SB-1_0-1'.

Full soil analytical results are provided in Table 2 and laboratory reports are included in Appendix D.

Sub-Slab/Soil Vapor

Total VOC concentrations in sub-slab/soil vapor samples ranged from 470.85 micrograms per cubic meter (µg/m^3) in soil vapor sample SV-1 to 8,243.30 µg/m^3 in sub-slab soil vapor sample SV-3. Total benzene, toluene, ethylbenzene, and xylenes (BTEX) concentrations ranged between 84.89 µg/m^3 in soil vapor sample SV-4 to 192.00 µg/m^3 in sub-slab vapor sample SV-3. By comparison, the total VOC

concentration in the ambient air sample was 49.96 µg/m^3 and the total BTEX concentration was 7.41 µg/m^3.

Sub-slab/soil vapor analytical results were compared to the NYSDOH Air Guideline Values (AGV) specified in the NYSDOH guidance document. PCE was detected above the AGV of 30 µg/m^3 in all five sub-slab/soil vapor samples at a maximum concentration of 4,410 µg/m^3 in sub-slab soil vapor sample SV-3. TCE was detected above the AGV of 2 µg/m^3 in three sub-slab/soil vapor samples (SV-3, SV-5, and SV-4), at a maximum concentration of 405 µg/m^3 in sub-slab vapor sample SV-3. No other VOCs exceeded NYSDOH AGVs.

The sub-slab/soil vapor sample results were also evaluated using the NYSDOH Decision Matrices A, B, and C (updated May 2017) as referenced in the 2006 NYSDOH Soil Vapor Intrusion Guidance document. The Decision Matrices present recommended actions based on the concentrations of 1,1-dichloroethene, 1,1,1-trichloroethane, cis-1,2-dichloroethene, carbon tetrachloride, methylene chloride, TCE, PCE, and vinyl chloride in soil vapor and indoor air. While indoor air was not sampled, the sub-slab/soil vapor concentrations were compared to the ambient air sample results to provide a range of recommended potential response measures. Chlorinated VOCs (CVOCs) including, PCE, TCE, cis-1,2-dichloroethene, 1,1,1-trichloroethane, and carbon tetrachloride were detected in sub-slab/soil vapor samples analyzed. A comparison summary to the NYSDOH Decision Matrices A, B, and C for the CVOCs detected in sub-slab/ soil vapor samples is provided below:

- PCE was detected in three sub-slab and two soil vapor samples at concentrations ranging from 92.9 µg/m^3 in sub-slab soil vapor sample SV-2 to 4,410 µg/m^3 in sub-slab vapor sample SV-3. Compared to the ambient air concentration of 1.86 µg/m^3, the NYSDOH Decision Matrix B recommends “No Further Action” to “Mitigate” for PCE.
- TCE was detected in two sub-slab and one soil vapor samples at concentrations ranging from 3.32 µg/m^3 in soil vapor sample SV-4 to 405 µg/m^3 in sub-slab vapor sample SV-3. Compared to the ambient air concentration (non-detect for TCE), the NYSDOH Decision Matrix A recommends “No Further Action” to “Mitigate” for TCE.
- Cis-1,2-dichloroethene was detected in one sub-slab soil vapor sample SV-3 at a concentration of 2,590 µg/m^3. Compared to the ambient air concentration (non-detect for cis-1,2-dichloroethene), the NYSDOH Decision Matrix A recommends “Mitigate” for cis-1,2-dichloroethene.
- 1,1,1-Trichloroethane was detected in one sub-slab soil vapor sample SV-5 at a concentration of 13.7 µg/m^3. Compared to the ambient air concentration (non-detect for 1,1,1-trichloroethane), the NYSDOH Decision Matrix B recommends “No Further Action” for 1,1,1-trichloroethane.
- Carbon tetrachloride was detected in two sub-slab and two soil vapor samples at concentrations ranging from 0.31 µg/m^3 in soil vapor sample SV-4 to 1.25 µg/m^3 in sub-slab vapor sample SV-5. Compared to the ambient air concentration (0.052 µg/m^3), the NYSDOH Decision Matrix A recommends “No Further Action” for carbon tetrachloride.

Full sub-slab/soil vapor analytical results are provided in Table 3, are presented in Figure 3 and the laboratory report in Appendix D.

CONCLUSIONS AND RECOMMENDATIONS

Based on the findings described above, the following are conclusions and recommendations:

- Geophysical Survey:

  The geophysical survey performed on 10 December 2021 identified a gas line in the sidewalk along Hinckley Place, an electrical utility line entering the building from Hinckley Place, and an unknown line running from Coney Island Avenue to the auto repair garage. Although subsurface anomalies indicative of a UST were not identified, the maximum effective depth scanned by the GPR was approximately 3 ft bgs due to high subsurface interference.

- Soil:

  An about 2- to 5-foot-thick layer of historical fill generally consisting of brown silty sand with varying amounts of gravel, brick, concrete and asphalt was identified beneath the asphalt/concrete site cover. The fill was underlain by potential native layer consisting of brown to light brown sand with varying amounts of gravel and intermittent light brown clay lenses. Bedrock was not encountered during the Phase II ESI; however, is anticipated to be encountered approximately 250- 300 ft bgs.

  Historical fill impacts: Metals, which are typically found in historical fill material in New York City, were identified at concentrations above the UUSCOs in the soil samples collected from the historic fill interval. The PCBs identified above UUSCOs in soil boring SB-2 from 0.5 to 1.5 ft bgs may be attributed to historical Site usage as an auto body and auto-repair facility, prior to construction of the warehouse in Lot 3. The pesticides identified above UUSCOs in soil boring SB-2 from 2 to 4 ft bgs may also be attributed to prior pesticide application to vegetated areas prior to construction of the warehouse in Lot 3. Chlorinated VOCs were identified in shallow soil samples collected throughout the Site below UUSCOs and may be indicative of an on-site (auto-repair) or off-site (former dry-cleaning operation to the south) source.

  Petroleum impacts: Petroleum-like impacts, evidenced by odors and/or PID readings above background levels were observed in soil boring SB-4, located in the vicinity of former gasoline USTs. The maximum PID reading observed was 20 ppm VOCs from 6 to 8 ft bgs. Soil samples collected from soil boring SB-4 identified BTEX compounds above UUSCOs. In addition, drilling refusal was encountered at approximately 3 ft bgs during several drilling attempts in the northwest region of the Site, specifically in the area where former gasoline USTs were depicted in Sanborn Fire Insurance Maps from the late 1920s through the late 1970s. Based on the depth of refusal (i.e., 3 ft bgs), presence of BTEX impacts in soil near this region (SB-4) and the former presence of underground gasoline tanks in this region of the Site, a concrete encasement for USTs may be present.

- Groundwater:

  Although moist/wet soil potentially indicative of the groundwater table was observed at approximately 8 ft bgs in soil boring SB-4, groundwater was not identified in monitoring well MW-1 (installed at SB-4 to 25 ft bgs) following installation. Based on records reviewed from surrounding properties, groundwater may be present at depths as deep as 35 to 40 ft bgs.

- Soil Vapor:

  Total VOC concentrations in sub-slab/soil vapor samples ranged from 470.85 µg/m^3 in soil vapor sample SV-1 to 8,243.30 µg/m^3 in sub-slab soil vapor sample SV-3. Total BTEX concentrations ranged between 84.89 µg/m^3 in soil vapor sample SV-4 to 192.00 µg/m^3 in sub-slab vapor sample SV-3. PCE, TCE, and cis-1,2-dichloroethene were detected in soil vapor samples at concentrations above ambient air, and at concentrations which "Mitigation" is recommended in the NYSDOH Guidance. The highest CVOC concentrations were identified in the southwest region of the site within the footprint of the on-site auto-repair garage, and adjacent to the former dry cleaning operation south of the Site. However elevated concentrations of PCE above NYSDOH guidance values were identified throughout the Site, which may be indicative of an on-site source (i.e., auto repair and auto painting operations).

As part of future Site development, Haley & Aldrich recommends the following:

- Additional sampling may be required to determine the extent and nature of contamination present at the Site in soil, soil vapor and groundwater.
- Additional waste characterization sampling will be necessary for material disposal based on the disposal facility selected. Different disposal facilities have different sampling and analytical testing requirements.
- Excavated soil/fill should be managed in accordance with applicable federal, state and local regulations, including adherence to any applicable health and safety measures pertinent to the contaminants identified.
- USTs identified during future site redevelopment must be registered with NYSDEC (considering volume thresholds are exceeded), closed and removed from the site in accordance with applicable federal, state and local regulations.
- If dewatering and sewer discharge is required during construction, groundwater should be sampled and analyzed for New York City Department of Environmental Protection (NYCDEP) sewer discharge parameters, and a sewer discharge permit should be obtained prior to dewatering. Treatment of dewatered groundwater prior to discharge may be required.

Should you have any questions regarding the findings or recommendations please do not hesitate to contact us.

Sincerely,
HALEY & ALDRICH OF NEW YORK

SOIL SAMPLES						
SS-01	SS-01	Surface soil sample near SB-1	Grab	0-1'	12/16/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
SB-1	SB-1_0-1	Shallow Urban Fill (0-1')	Grab	0-1'	12/16/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
	SB-1_3-5	Urban fill layer or greatest degree of impacts	Grab	3-5'	12/16/21	
SB-2	SB-2_0.5-1.5	Shallow Urban Fill (0-1')	Grab	0.5-1.5'	12/16/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
	SB-2_2-4	Urban fill layer or greatest degree of impacts	Grab	2-4'	12/16/21	
SB-3	SB-3_0-1	Shallow Urban Fill (0-1')	Grab	0-1'	12/15/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
	SB-3_5-6	Urban fill layer or greatest degree of impacts	Grab	5-6'	12/15/21	
SB-4	SB-4_0-2	Shallow Urban Fill (0-1')	Grab	0-2'	12/15/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
	SB-4_6-8	Urban fill layer or greatest degree of impacts	Grab	6-8'	12/15/21	
	SB-4_12-14	Below impacts, native material right below historic fill, or at development depth (12-14 ft bgs)	Grab	12-14'	12/15/21	
SB-5	SB-5_0-1	Shallow Urban Fill (0-1')	Grab	0-1'	12/15/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
	SB-5_5-6	Native material right below historic fill	Grab	5-6'	12/15/21	
SOIL QA/QC SAMPLES						
DUP01	DUP01_SB-4_12-14	Duplicate Soil	QA/QC	12-14'	12/15/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
MS/MSD01	MS/MSD01_12-14 (Parent sample: SB-2_12-14)	MS/MSD Soil	QA/QC	12-14'	12/16/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
FB01	FB01_121621	Field Blank for MacroCore	QA/QC	-	12/16/21	TCL/NYSDEC Part 375 VOCs, SVOCs, Total Metals (inc. cyanide, hex/trivalent chromium), PCBs, Pesticides, Herbicides, PFAS (537 SIM), 1,4-dioxane (8081)
TB01	TB01_	Trip Blank (1 per day of sampling with VOCs)	QA/QC	-	12/15/21	TCL/NYSDEC Part 375 VOCs
TB02	TB02_		QA/QC	-	12/16/21	TCL/NYSDEC Part 375 VOCs
SOIL VAPOR AND AMBIENT AIR SAMPLES						
SV-1	SV-1_12162021	Soil Vapor (2 ft above water table or 10 ft)	Soil Vapor	10	12/16/21	TO-15 VOCs
SV-2	SV-2_12162021	Sub-Slab Soil Vapor	Soil Vapor	1-2'	12/16/21	TO-15 VOCs
SV-3	SV-3_12162021	Sub-Slab Soil Vapor	Soil Vapor	1-2'	12/16/21	TO-15 VOCs
SV-4	SV-4_12162021	Soil Vapor (2 ft above water table or 10 ft)	Soil Vapor	10	12/16/21	TO-15 VOCs
SV-5	SV-5_12162021	Sub-Slab Soil Vapor	Soil Vapor	1-2'	12/16/21	TO-15 VOCs
AA-01	AA-01_12162021	Ambient Air	QA/QC		12/16/21	TO-15 VOCs

Notes:
1. NYSDEC Part 375 - New York State Department of Environmental Conservation (NYSDEC) Title 6 of the New York Codes, Rules, and Regulations (6 NYCRR) Part 375 analyze list
3. VOC - Volatile Organic Compound
4. SVOC - Semivolatile Organic Compound
5. PCB - Polychlorinated Biphenyl
6. TCL - Target Compound List
7. TAL - Target Analyze List
8. TCLP - Toxicity Characterist ic Leaching Procedure
9. EPH - Extractable Petroleum Hydrocarbons
10. RCRA - Resource Cons ervation and Recovery Act
11. QA/QC - Quality Assurance/Quality Control
12. bgs - below grade surface; approximate depth below the concrete slab
13. N/A - Not Applicable

Table 2: Soil Analytical Results

545 Coney Island Avenue/50 Hinckley Place, Brooklyn, NY

Limited Phase II Environmental Site Investigation

APPENDIX A
GPRS Findings Report

SUBMITTAL LETTER

To: UNKNOWN DECEMBER 10, 2021

Re: GPRS FINDINGS REPORT

50 HINCKLEY PL, BROOKKYN, NY

Thank you for the opportunity to serve you on your project. Please refer to the job summary report that is sent separately from this document for additional notes related to our site visit. Included with this submittal email, please find the document list below which includes a link to download your files from our database:

Document List:

COPIES	DATE	DESCRIPTION	LINK
1	12/10/2021	PDF Aerial Overlay - Open with PDF reader	PDF
1	12/10/2021	PDF Aerial Overlay with Icons - Open with PDF reader	PDF
1	12/10/2021	KMZ file - Open with Google Earth	KMZ
1	12/10/2021	SHP files - For use in CAD or GIS software	SHP

As an additional service, we also provide CAD drawings and can even use your existing drawings as background linework for our files. If you have already ordered CAD as a deliverable option, the CAD will be delivered as a separate submittal, typically in the next few days. If you would like CAD as a deliverable and have not yet requested it, please reach out to us to get a quote to have the service added to your job by replying to this email or giving me a call.

As a reminder, we do not provide surveying or engineering services at GPRS. The data provided is at mapping quality for general reference only. The GNSS/GPS locators that we utilize are certified for sub-meter accuracy and locations were attained by our project managers that are not surveying professionals. Some of the documents we provide with our deliverable have embedded location and elevation data that should be used at your own risk due to accuracy limitations listed above. If survey and design level accuracy is needed, you will need to hire a licensed surveyor in that state to pick up field markings to provide you with the desired data separate from GPRS. This letter is subject to our Terms and Conditions which are listed and incorporated by reference here: https://gp-radar.com/terms-conditions.

Please let me know if you have any questions, concerns, or additional requests. I look forward to working with you again soon.

Thank you!
Raymond Williams

PO Num	0200894

Lead Technician LAMANNO, TYLER **Phone** 732-672-9340 **Email** tyler.lamanno@gprsinc.com

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS technician on this project.

EQUIPMENT USED

The following equipment was used on this project:

- Underground Scanning GPR antenna. Typically capable of detecting objects up to 8' deep or more in ideal conditions but maximum effective depth can vary widely and depends on site and soil conditions. Depth penetration is most commonly limited by moisture and clay/conductive soils. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.
- Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.

Work Performed

Ground Penetrating Radar Systems performed the following work on this project:

Underground Utility

The scope of work included scanning the specified area to locate underground utilities. A tracer signal was sent along any accessible metallic utility or tracer wire, and the area was scanned with GPR to locate any additional targets. The locations of any detected utilities and anomalies were marked directly at the site with paint, flags, stakes, or other appropriate means, and results were reviewed with onsite personnel unless otherwise noted.

- The total area scanned was approximately 35000 square feet.
- 35,000 sf open-air vacant lot (former parking lot)
- The effective depth of GPR will vary throughout a site depending on surface and soil conditions. In this area, the maximum effective GPR depth was approximately 3 feet.

Job Summary

Job Date : 12/3/2021

- GPR and EM wand use to locate potentially utilities on site.

  GPR struggled to see anything past 3 feet. Terrain is different in some areas.

  GPR Data revealed debris in the ground in a few different location. It's not consistent enough for me to believe that it's pipe of any sort. Since I was unable to determine what it could be it is marked in pink.

  EM wand who is used to passively scan the area in search of any electrical lines underground. I was unable to pick up any potential lines within the scope.

  I recommend staying at least 3 feet away from all marks on site. I also recommend handshaking the first 2 feet if possible.

  Detailed info to follow in the formal report.

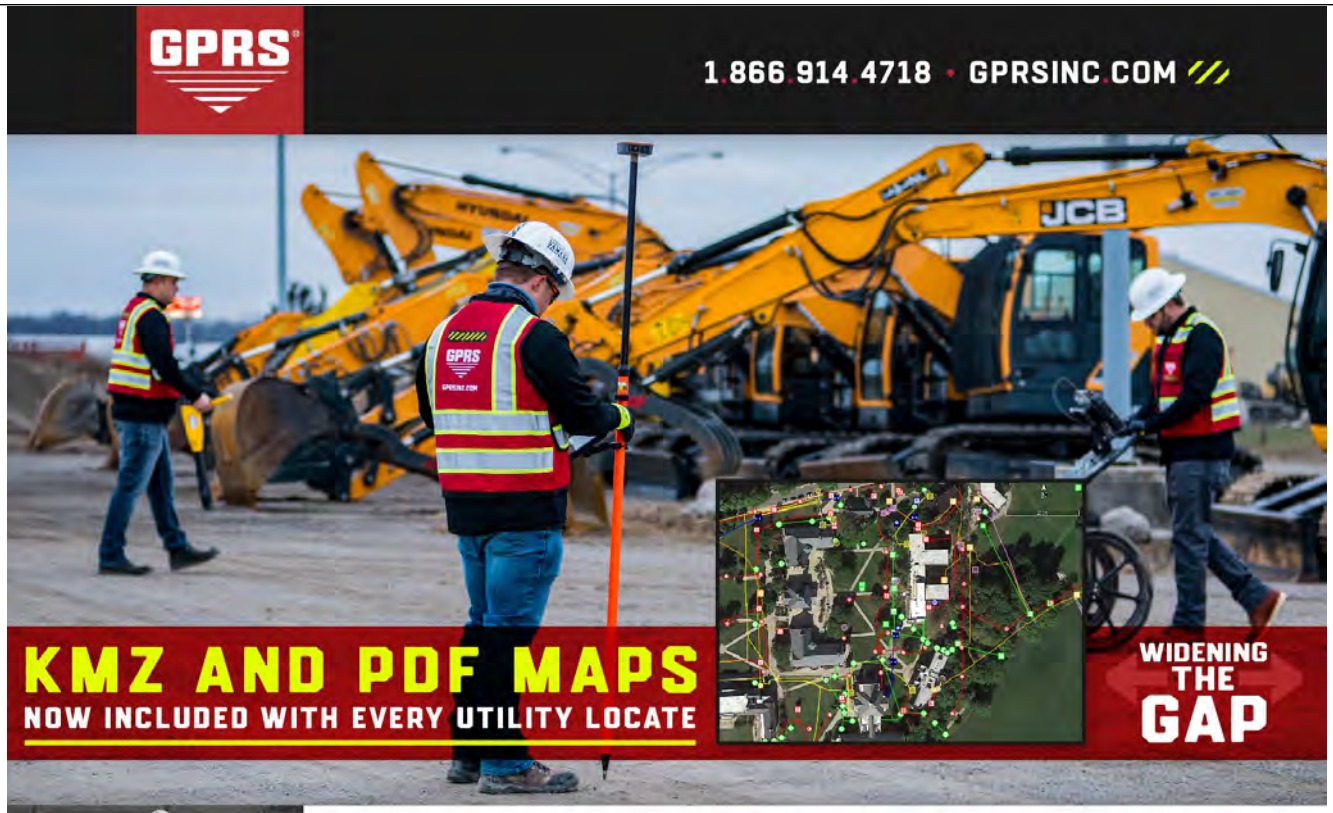
Job Summary

Job Date : 12/3/2021



UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply and your schedule can be delayed.

VIDEO PIPE INSPECTION

Video Pipe Inspection (CCTV) is a service used to inspect underground water, sewer and lateral pipelines. VPI is a great tool for investigating cross-bores, structural faults and damages, and lateral line inspection.

CONCRETE IMAGING

With new build construction and renovation projects, the likelihood of needing to cut or core concrete is high. There is an inherent risk of striking rebar, conduits, and post tension cables during the cutting or coring process. Our industry-leading concrete scanning services can mitigate the risks associated with saw cutting and core drilling concrete slabs.

MAPPING & MODELING

As-built utility maps, structural as-built drawings, and facility maps are actually meant to be “as-intended” drawings as the construction process or renovations can cause deviations to the original plan. GPRS can create a comprehensive facility map that contains precise as-built conditions – giving you peace of mind by knowing exactly what exists on your property.

Parameter	ppbv Result	ppbv RL	ug/m3 Result	ug/m3 RL	Date/Time	By	Dilution

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Elevated reporting limits have been reported due to the presence of reported target compounds in the TO15 list above the calibration. Sample was run at an initial dilution.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sample Criteria Exceedances Report

GCK00871 - HALEY-NY

Criteria: None

State: NY

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: 545 CONEY ISLAND AVE **Lab Number:** L2169121
Project Number: 0204391 **Report Date:** 01/05/22

Case Narrative (continued)

Report Submission

January 05, 2022: This final report includes the results of all requested analyses.

December 21, 2021: This is a preliminary report.

December 20, 2021: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by Isotope Dilution

L2169121-01, -03, -04, and WG1584565-3: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

L2169121-02 and -05: The MeOH fraction of the extraction is reported for perfluorooctanesulfonamide (fosa) due to better extraction efficiency of the perfluoro[13c8]octanesulfonamide (m8fosa) Extracted Internal Standard.

The Extracted Internal Standard recovery for the WG1584565-1 Method Blank, associated with L2169121-01 through -08, is below the acceptance criteria for perfluoro[13c8]octanesulfonamide (m8fosa) (less than 10%); however, the method blank is non-detect for all associated target analytes; therefore, no further action was taken.

WG1584565-2: The Extracted Internal Standard recovery is below the acceptance criteria for perfluoro[13c8]octanesulfonamide (m8fosa) (less than 10%); however, all associated target analytes are within criteria; therefore, no further action was taken.

Total Metals

L2169121-01 through -08: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

Project Number:	0204391	**Report Date:**	01/05/22

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	545 CONEY ISLAND AVE	**Lab Number:**	L2169121
Project Number:	0204391	**Report Date:**	01/05/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	545 CONEY ISLAND AVE	**Lab Number:**	L2169121
Project Number:	0204391	**Report Date:**	01/05/22

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

Project Name:	545 CONEY ISLAND AVE	**Lab Number:**	L2169121
Project Number:	0204391	**Report Date:**	01/05/22

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

January 12, 2022: The Client IDs were amended on L2169533-05, -06 and -07.

Report Submission

January 06, 2022: This final report includes the results of all requested analyses.

December 22, 2021: This is a preliminary report.

December 21, 2021: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L2169533-01: The sample has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

Perfluorinated Alkyl Acids by Isotope Dilution

L2169533-01, -04RE, -06, WG1589319-1 and WG1589319-2: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

L2169533-02 and -05: The MeOH fraction of the extraction is reported for perfluorooctanesulfonamide (fosa) due to better extraction efficiency of the perfluoro[13c8]octanesulfonamide (m8fosa) Extracted Internal Standard.

L2169533-04: The Extracted Internal Standard recoveries are less than 10% for n-deuteriomethylperfluoro-1-octanesulfonamidoacetic acid (d3-nmefosaa) (7%) and n-deuterioethylperfluoro-1-octanesulfonamidoacetic acid (d5-netfosaa) (8%); however, re-extraction on dilution achieved a similar result. The results of the re-extraction are reported for the associated target compounds.

L2169533-04RE: The sample has elevated detection limits due to the limited sample volume utilized during

Project Name: 545 CONEY ISLAND AVE. **Lab Number:** L2169533
Project Number: 0204391 **Report Date:** 01/12/22

Case Narrative (continued)

extraction, as required by the sample matrix.
The Extracted Internal Standard recovery for the WG1584565-1 Method Blank, associated with L2169533-01, -02, -04, -05, and -06, is below the acceptance criteria for perfluoro[13c8]octanesulfonamide (m8fosa) (less than 10%); however, the method blank is non-detect for all associated target analytes; therefore, no further action was taken.
WG1584565-2: The Extracted Internal Standard recovery is below the acceptance criteria for perfluoro[13c8]octanesulfonamide (m8fosa) (less than 10%); however, all associated target analytes are within criteria; therefore, no further action was taken.

Pesticides
L2169533-01D: The sample has elevated detection limits due to the dilution required by the sample matrix.

Total Metals
L2169533-01, -02, -04, -05 and -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Cyanide, Total
The WG1585927-4/-5 MS/MSD recoveries, performed on L2169533-09, are outside the acceptance criteria for cyanide, total (214%/135%); however, the associated LCS recovery is within criteria. No further action was taken.
The WG1585927-4/-5 MS/MSD RPD, performed on L2169533-09, is above the acceptance criteria for cyanide, total (44%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
PERFLUOROALKYL CARBOXYLIC ACIDS (PFCAs)		
Perfluorooctadecanoic Acid	PFODA	16517-11-6
Perfluorohexadecanoic Acid	PFHxDA	67905-19-5
Perfluorotetradecanoic Acid	PFTA	376-06-7
Perfluorotridecanoic Acid	PFTrDA	72629-94-8
Perfluorododecanoic Acid	PFDoA	307-55-1
Perfluoroundecanoic Acid	PFUnA	2058-94-8
Perfluorodecanoic Acid	PFDA	335-76-2
Perfluorononanoic Acid	PFNA	375-95-1
Perfluorooctanoic Acid	PFOA	335-67-1
Perfluoroheptanoic Acid	PFHpA	375-85-9
Perfluorohexanoic Acid	PFHxA	307-24-4
Perfluoropentanoic Acid	PFPeA	2706-90-3
Perfluorobutanoic Acid	PFBA	375-22-4
PERFLUOROALKYL SULFONIC ACIDS (PFSAs)		
Perfluorododecanesulfonic Acid	PFDoDS	79780-39-5
Perfluorodecanesulfonic Acid	PFDS	335-77-3
Perfluorononanesulfonic Acid	PFNS	68259-12-1
Perfluorooctanesulfonic Acid	PFOS	1763-23-1
Perfluoroheptanesulfonic Acid	PFHpS	375-92-8
Perfluorohexanesulfonic Acid	PFHxS	355-46-4
Perfluoropentanesulfonic Acid	PFPeS	2706-91-4
Perfluorobutanesulfonic Acid	PFBS	375-73-5
FLUOROTELOMERS		
1H,1H,2H,2H-Perfluorododecanesulfonic Acid	10:2FTS	120226-60-0
1H,1H,2H,2H-Perfluorodecanesulfonic Acid	8:2FTS	39108-34-4
1H,1H,2H,2H-Perfluorooctanesulfonic Acid	6:2FTS	27619-97-2
1H,1H,2H,2H-Perfluorohexanesulfonic Acid	4:2FTS	757124-72-4
PERFLUOROALKANE SULFONAMIDES (FASAs)		
Perfluorooctanesulfonamide	FOSA	754-91-6
N-Ethyl Perfluorooctane Sulfonamide	NEtFOSA	4151-50-2
N-Methyl Perfluorooctane Sulfonamide	NMeFOSA	31506-32-8
PERFLUOROALKANE SULFONYL SUBSTANCES		
N-Ethyl Perfluorooctanesulfonamido Ethanol	NEtFOSE	1691-99-2
N-Methyl Perfluorooctanesulfonamido Ethanol	NMeFOSE	24448-09-7
N-Ethyl Perfluorooctanesulfonamidoacetic Acid	NEtFOSAA	2991-50-6
N-Methyl Perfluorooctanesulfonamidoacetic Acid	NMeFOSAA	2355-31-9
PER- and POLYFLUOROALKYL ETHER CARBOXYLIC ACIDS		
2,3,3,3-Tetrafluoro-2-[1,1,2,2,3,3,3-Heptafluoropropoxy]-Propanoic Acid	HFPO-DA	13252-13-6
4,8-Dioxa-3h-Perfluorononanoic Acid	ADONA	919005-14-4
CHLORO-PERFLUOROALKYL SULFONIC ACIDS		
11-Chloroeicosafluoro-3-Oxaundecane-1-Sulfonic Acid	11Cl-PF3OUdS	763051-92-9
9-Chlorohexadecafluoro-3-Oxanone-1-Sulfonic Acid	9Cl-PF3ONS	756426-58-1
PERFLUOROETHER SULFONIC ACIDS (PFESAs)		
Perfluoro(2-Ethoxyethane)Sulfonic Acid	PFEESA	113507-82-7
PERFLUOROETHER/POLYETHER CARBOXYLIC ACIDS (PFPCAs)		
Perfluoro-3-Methoxypropanoic Acid	PFMPA	377-73-1
Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

Project Number:	0204391	**Report Date:**	01/12/22

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	545 CONEY ISLAND AVE.	**Lab Number:**	L2169533
Project Number:	0204391	**Report Date:**	01/12/22

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	545 CONEY ISLAND AVE.	**Lab Number:**	L2169533
Project Number:	0204391	**Report Date:**	01/12/22

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

Project Name:	545 CONEY ISLAND AVE.	**Lab Number:**	L2169533
Project Number:	0204391	**Report Date:**	01/12/22

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Subject: ASTM Phase I Environmental Site Assessment
545 Coney Island Avenue & 50 Hinckley Place
Brooklyn, New York

Ladies and Gentlemen:

The enclosed report presents the results of a Phase I Environmental Site Assessment (Phase I) conducted at the above-referenced property, located at 545 Coney Island Avenue & 50 Hinckley Place, in Brooklyn, New York (herein referred to as the "subject site"). This work was performed by Haley & Aldrich of New York (Haley & Aldrich), in accordance with our proposal to Riverside Developers USA, Inc. dated 30 November 2021 ("Agreement") and authorized on 4 December 2021. This Phase I was conducted in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule).

The objective of a Phase I is to assess whether known and suspect "recognized environmental conditions" (RECs), historical RECs (HRECs), or controlled RECs (CRECs) are associated with the subject site, as defined in the ASTM E 1527-13 Standard.

Thank you for the opportunity to perform these services for you. Please do not hesitate to contact us if you have any questions or comments.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Sarah Commisso
Staff Geologist

Suzanne M. Bell, P.E.
Project Manager

James M. Bellew
Principal

\\haleyaldrich.com\share\CF\Projects\0204391\Deliverables\1. Phase I ESA\2022-0112-545 Coney Island Ave-Phase I ESA-F.docx

Executive Summary

Haley & Aldrich of New York (Haley & Aldrich) has performed a Phase I Environmental Site Assessment (Phase I) of the 545 Coney Island Avenue & 50 Hinckley Place property in Brooklyn, New York (herein referred to as the "subject site"). The scope of work is described and conditioned by our proposal dated 30 November 2021. This Phase I was performed for Riverside Developers USA, Inc. who seeks to purchase the property. This Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All Appropriate Inquiries (AAI) Rule[1].

SUBJECT SITE DESCRIPTION

The subject site is identified as Block 5114 Lots 1 & 3 on the New York City tax map and is approximately 11,710 square feet (sq ft) in area. The subject site is improved with a two-story warehouse that encompasses all of Lot 3 and a one-story garage on the southern portion of Lot 1. The northern portion of Lot 1 is utilized as a vehicle loading and parking area. The warehouse in Lot 3 is currently occupied by "Delt Hardware", a construction and plumbing goods supplier, and the garage in Lot 1 is occupied by "New City Link Auto Repair Inc.", an auto body and repair shop. A partial cellar level is located below the northern portion of the auto body and repair shop. Based on visual observations of the surrounding area during the site reconnaissance, the subject site is located within a mixed-use commercial and residential area characterized by single to multiple-story commercial and residential buildings, and one- and two-family houses.

OBJECTIVE

The objective of a Phase I is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the subject site. Our opinion regarding a REC's potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

The following RECs listed below were identified in connection with the subject site.

[1] American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) ("ASTM E 1527-13 Standard"). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

REC #1: Historical and Current Use of the Subject Site as an Auto Repair Facility

Historical records indicate that the subject site formerly operated as a filling station from the 1920s until the late 1970s and three gasoline tanks were present on historical Sanborn Fire Insurance Maps. There are no records that these tanks were registered with the New York State Department of Environmental Conservation (NYSDEC) and no documentation of tank removal/closure was available. In addition, auto repair and auto-related operations were located in the southern portion of the subject site as early as 1929, and the subject site currently operates as an auto-repair shop, including auto painting. Certificates of Occupancy dated 1935 and 1962 indicate that former auto-related operations also included on-site greasing, automobile laundry, tire service, and battery services. During the site reconnaissance, the use and storage of hazardous chemicals and petroleum products were observed including an above-ground storage tank (AST) present in the central-west region of Lot 1, auto-related painting chemicals stored in the partial cellar of the auto-repair shop in Lot 1, and evidence of former bulk petroleum storage below the concrete foundation within the auto-repair shop in Lot 1. Staining was visible surrounding the AST, as well as throughout the garage. In addition, chemical odors were present throughout the partial cellar below the auto-repair shop where auto painting chemicals were stored.

Filling stations and auto repair facilities utilize hazardous materials including petroleum products and solvents. The historical and current use of the subject site is considered a REC as potential or undocumented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

REC #2: Poor Condition of Concrete Cover in Lot 1

Damaged concrete cover exposing subsurface soils was observed in the loading/parking area of Lot 1 outside the warehouse in Lot 3, and adjacent to the auto repair shop. The poor condition of concrete cover in this area of the subject site is considered a REC as potential or undocumented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

REC #3: Historical and Current Uses of Adjoining Properties

Upgradient adjoining properties surrounding the subject site to the north, northwest, west, and southwest, have historically operated as filling stations and/or auto-related facilities from as early as the late 1920s until the early 2000s. The property adjoining the subject site to the southwest currently operates as a gasoline service station. Many of these properties are listed in the Leaking Storage Tank and Spills databases for past releases of petroleum and/or hazardous materials. Additionally, the south adjacent property historically operated as a dry-cleaning facility from the late 1960s to the late 1970s.

Filling stations, auto-related facilities, and dry cleaners utilize hazardous materials including petroleum products and solvents. The historical and current site use of upgradient adjoining properties as filling stations, auto-related facilities, and dry cleaners, some with documented releases, is considered a REC as potential or documented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject site.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

HRECs were not identified in connection with the subject site.

DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which "do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The ASTM E 1527-13 Standard notes that "conditions determined to be *de minimis* are not recognized environmental conditions."

The following *de minimis* conditions listed below were identified in connection with the subject site.

De Minimis Condition #1: Poor Housekeeping, Staining and Odors

During the site reconnaissance, poor housekeeping including open containers and poor storage of petroleum/hazardous chemicals with no spill prevention or cleanup kits present was observed in the auto repair garage in Lot 1. Petroleum-like staining and chemical odors were observed on the concrete floor throughout areas of the auto repair garage indicating improper handling of petroleum products. Floor drains were observed in the auto repair garage and are likely tied to the NYCDEP sewer system. Poor housekeeping was also observed in the partial cellar where storage of auto-related tools, supplies, chemicals (including auto painting), and auto parts were observed. In addition, strong chemical-like odors were observed in the partial cellar located below the auto-painting operation. *De Minimis* staining was observed throughout the concrete floors of the auto repair garage, on the concrete surface near the dumpster in front of the auto repair garage, and on the concrete surface in the loading/parking area in front of the two-story warehouse. The staining in the garage and near the dumpster appeared to be from petroleum products for auto repair uses.

A used bailer for hydraulic fluid removals was also present in the warehouse in Lot 3; staining and petroleum product were observed on the surface of the bailer. The concrete surface cover in the vicinity of areas with staining was observed in good condition with little to no damage.

OTHER FINDINGS

ASTM does not define the term “other finding”; however, Haley & Aldrich utilizes the category to indicate conditions of potential risk that are not clearly defined in the ASTM Standard. While not considered RECs, Haley & Aldrich identified the following other findings:

Other Finding #1: Active NYCDOB Violation for the Subject Site

An active New York City Department of Buildings (NYCDOB) Class 1 Violation exists on Block 5114, Lot 1 (auto garage), specifically for a construction violation. Records dated 5 April 2017 indicate work without a permit on a gas line being used for two gas-fired heaters was cited by the Brooklyn Plumbing Inspection Unit. Civil penalties are due to the NYCDOB.

SUMMARY AND RECOMMENDATIONS

In summary, we identified two RECs and during this Phase I. To address the RECs listed above, we recommend the following:

- Perform a Limited Phase II Subsurface Investigation to determine the nature and extent of contamination at the subject site, if present.

The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

1. Introduction

This report presents the results of an ASTM Phase I (Phase I) conducted at 545 Coney Island Avenue & 50 Hinckley Place in Brooklyn, New York (herein referred to as the "subject site"). The approximately 11,710 square foot (sq ft) subject site contains a two-story warehouse operated by "Delt Hardware", a construction and plumbing goods supplier, and a one-story garage operated by "New City Link Auto Repair Inc.", an auto body and repair shop, as shown on the Project Locus, Figure 1. This Phase I was conducted in consideration of Riverside Developers USA, Inc. intention to purchase the property.

1.1 OBJECTIVE

The objective of a Phase I is to assess whether "recognized environmental conditions" (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site by evaluating site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties as well as potential releases at surrounding properties that may impact the subject site. Our conclusions are intended to help the user evaluate the "business environmental risk" associated with the subject site.

RECs are defined in the ASTM E 1527-13 Standard as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment." The definitions of RECs, HRECs, and CRECs are included in the Glossary section of this report.

1.2 SCOPE OF SERVICES

This work was performed by (Haley & Aldrich) and this Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All Appropriate Inquiries (AAI) Rule[2] and in accordance with our proposal to Riverside Developers USA, Inc. dated 30 November 2021 ("Agreement") as authorized on 4 December 2021. The Phase I limitations and Agreement are attached hereto as Appendix A.

As part of this Phase I, Haley & Aldrich conducted visual observations of site conditions and of abutting property use and interviewed a key site manager and applicable tenant representatives (site reconnaissance); reviewed federal, state, tribal, and local environmental database information, federal and state environmental files, previous reports (if identified and provided), and site historical use records; and formulated conclusions regarding the potential presence and impact of RECs.

1.3 NON-SCOPE CONSIDERATIONS

The ASTM E 1527-13 Standard includes the following list of "additional issues" that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing materials, biological agents, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered

[2] American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) ("ASTM E 1527-13 Standard"). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, and mold. These items were not included in this Phase I of the subject site.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, our assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as "electrical or hydraulic equipment known or likely to contain PCBs…to the extent visually and or physically observed or identified from the interview or records review."

Note that PCBs may be present in miscellaneous building materials such as caulking, sealants, insulation and sound dampening materials, paint, gaskets, roofing and siding materials, waterproofing compounds, enamel coatings, and other chemical products manufactured prior to 1979. Evaluating the subject site building for potential PCB-containing building materials and possible PCB-containing materials other than "electrical or hydraulic equipment known or likely to contain PCBs" was outside the scope of this Phase I.

1.4 LIMITING CONDITIONS/DEVIATIONS

Haley & Aldrich completed this Phase I in substantial conformance with the ASTM E 1527-13 Standard. In our opinion, no additions were made to or deviations and deletions made from the ASTM work scope in completing this Phase I.

1.5 USER RESPONSIBILITIES

The completion of this Phase I is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E 1527-13 Standard and the AAI Rule. User responsibilities are discussed in section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix XI of the ASTM E 1527-13 Standard.

Haley & Aldrich provided the user with a responsibilities questionnaire; however, a completed questionnaire was not received. The absence of such information is not considered significant to our conclusions.

2. Site Description

A description of the subject site is detailed in the sections below. Refer to Figure 1 for a project locus and Figure 2 for a site plan showing relevant site features and adjacent properties.

2.1 SITE OWNERSHIP, LOCATION, AND VICINITY DESCRIPTION

Site Description		
Owner	V D Vilst Inc. 1532 Coney Island Avenue Brooklyn, New York	
Operator/Occupant	Delt Hardware occupies the two-story warehouse on Lot 3 and operates as a construction and plumbing goods supplier. Delt Hardware utilizes the northern half of Lot 1 as a loading/parking area. New City Link Auto Repair Inc. occupies the one-story garage located on the southern half of Lot 1.	
Current Site Use	Construction/plumbing goods warehouse with a loading/parking area, and an autobody and auto-repair facility. The northern section of the auto-repair shop is used for auto painting. Partial cellar level located in the northern part of Lot 1, used for auto-repair chemical storage and auto paint storage.	
Size	11,710 square feet (sq ft)	
Building Square Footage	Two-story warehouse (Lot 3): 5,800 sq ft One-story garage (Lot 1): Approximately 3,000 sq ft	
USGS 7.5 Minute Topographic Map	Brooklyn, 2019	
Site County	Kings County	
Zoning	R6-A Residential with Commercial C2-4 overlay	
Parcel Information	Block 5114, Lot 1 and Lot 3	
Utilities	Water:	City of New York
	Sewerage:	New York City Department of Environmental Protection
	Electricity:	Consolidated Edison
	Gas/Oil/LPG:	N/A – buildings are not heated by natural gas
Heating/Cooling System	Heating: Electric heating units are present in the office space of the warehouse (Lot 3) and the garage (Lot 1). Cooling: Electric cooling units are present in the office space of the warehouse (Lot 3).	

Site Vicinity Description		
General Area Description	The area surrounding the subject site consists of residential and commercial-use properties.	
Adjoining Property Description	North:	Hinckley Place followed by a 6-story mixed-use commercial and residential building (527 Coney Island Avenue).
	Northwest:	Coney Island Avenue followed by Public School 889 (12 Hinckley Place).
	East:	One- & two-family houses (52-56 Hinckley Place).
	South:	Commercial building operating as a "7-Eleven" (555 Coney Island Avenue).
	Southwest:	Coney Island Avenue followed by a gas station operated by "Shell" and Khizer II Auto Repair (548 Coney Island Avenue).
	West:	Coney Island Avenue followed by a commercial building operating as a "KFC" restaurant (534 Coney Island Avenue).

2.2 PHYSICAL SETTING

Subsurface explorations and/or hydrogeologic investigations were not performed for this Phase I. Subject site geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the vicinity of the subject site. It is unknown to what extent localized variations in groundwater depth and flow occur on the subject site.

Physical Setting		Source
Topography Summary	The subject site is generally flat.	1, 3
Site Elevation	The elevation of the property is 91 feet above sea level	2
Overburden Soils	Subsurface soils consist of historic urban fill underlain by unconsolidated glacial deposits containing sands and gravel.	4
Bedrock Formation	Bedrock geology is unknown and is overlain by glacial and alluvial deposits.	4
Depth to Bedrock	Greater than 100 ft bgs.	4
Depth to Groundwater	Groundwater is anticipated to be encountered between 35-40 ft bgs.	5
Surface Water Flow Direction	Surface water appears to flow towards the east-southeast based on observed surface topography.	1, 3
Regional Groundwater Flow Direction	Regional groundwater flow appears to flow to the east.	1

Physical Setting		Source
Nearest Surface Water Body	Prospect Park Lake is located approximately 0.47 miles north of the subject site. The Paerdegat Basin is located about 2.8 miles southeast of the subject site. The Gowanus Bay is located approximately 2.30 miles west-northwest of the subject site.	1

3. Previous Reports

The following report was previously prepared for the subject site and was provided and reviewed as part of this Phase I:

GPRS Geophysical Survey Findings Report (GPRS Inc., 10 December 2021)

Haley & Aldrich oversaw a geophysical survey performed by GPRS Inc. (GPRS) at the subject site during the site reconnaissance on 10 December 2021 to determine the presence of any utilities, underground storage tanks (USTs), or anomalies beneath the site surface. An underground scanning GPR antenna capable of detecting objects up to 8 feet deep in ideal conditions and an electromagnetic pipe and cable locator used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities were used during this investigation. Due to site conditions and subsurface interference, the maximum effective depth scanned by the GPR was approximately 3 feet bgs.

A gas line was detected in the sidewalk along Hinckley Place, an electrical utility line enters the building from Hinckley Place, and an unknown line was detected running from Coney Island Avenue to the auto repair garage. A copy of the geophysical survey report is included as an attachment.

4. Site History

Haley & Aldrich assessed past usage of the subject site and adjoining properties through a review of the following historical database records:

- Sanborn Fire Insurance Maps dated 1893, 1905, 1929, 1950, 1969, 1977, 1979, 1981, 1983, 1986, 1987, 1988, 1989, 1992, 1993, 1994, 1995, 2001, 2002, 2003, 2004, 2005, 2006, 2007.
- Topographic Maps dated 1897, 1898, 1900, 1947, 1955, 1966, 1979, 1995, 2013, 2016, 2019.
- Aerial Photographs dated 1924, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1994, 2006, 2009, 2013, 2017.
- City Directories dated 1928, 1934, 1940, 1945, 1949, 1960, 1965, 1970, 1973, 1976, 1980, 1985, 1992, 1994, 1997, 1999, 2000, 2004, 2005, 2009, 2014, 2017.
- Municipal records
- Previous reports
- Interviews with subject site personnel

Copies of information obtained from historical references reviewed are included in Appendix C. Unless otherwise noted below, per the ASTM standard, sources were reviewed dating back to 1905 or first developed use, whichever is earlier, and at 5-year intervals if the use of the property has changed within the time period.

4.1 SUBJECT SITE

As early as 1905, the subject site included one tax lot developed with a two-story residential dwelling along Hinckley Place, in the eastern region of the subject site. Sometime between 1905 and 1929, a filling station was constructed in the western region of the subject site along Coney Island Avenue and included a one-story storefront, a one-story auto-related development, and three gasoline tanks in the northwest corner of the site. In addition to the continued operation as a gasoline filling station, by 1935 the auto repair facility in the southern region of the subject site expanded to include auto laundry, auto greasing, battery service, and tire repairs. In the early 1960's the existing one-story building in Lot 1 was constructed, and a Certificate of Occupancy dated 20 February 1962 indicates NYFD approval for gasoline tank installation on 15 February 1962. The subject site remained relatively unchanged until the late 1970's. Between 1977 and 1978, the former residential dwelling was razed, and a two-story warehouse was constructed in Lot 3 and utilized for auto parts storage and repair. The gasoline tanks were no longer indicated on Sanborn Maps after 1977, and parking in the northwest corner is depicted in its place. The subject site remained relatively unchanged post-1979 through the present and is currently operating as a construction and plumbing goods supplier warehouse with associated parking, and an auto body and auto-repair shop. In addition, the northern part of the auto-repair shop is used for auto painting.

The table below provides a detailed summary of pertinent information from the historical sources reviewed:

Dates	Description of Subject Site	Sources
1893 to late 1920s	The site was undeveloped land until 1905 when a 2-story residential dwelling was constructed along Hinckley Place.	Sanborn Fire Insurance Maps
Late 1920s to late 1970s	Between 1905 and 1929, a filling station was constructed in the western region of the subject site and included a one-story storefront, a one-story auto-related development, and three gasoline tanks. By 1935 the auto repair facility in the southern region of the subject site expanded to include auto laundry, auto greasing, battery service, and tire repairs. In the early 1960's the existing one-story building in Lot 1 was constructed. The subject site remained relatively unchanged until the late 1970's and continued operation as a gasoline filling station, auto repair shop, and included a residential dwelling.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories, Municipal Records (Certificates of Occupancy)
Late 1970s to present	Between 1977 and 1978, the residential dwelling was razed, and the 2-story warehouse was constructed in Lot 3 and utilized for auto parts storage and repair. The gasoline tanks were no longer indicated on Sanborn Maps after 1977, and parking in the northwest corner is depicted in its place. The subject site remained relatively unchanged post-1979 through the present and is currently operating as a construction and plumbing goods supplier warehouse with associated parking and an auto body and auto-repair shop. The northern part of the auto-repair shop is also used for auto painting.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories, site reconnaissance

4.2 ADJOINING PROPERTIES

The table below provides a summary of pertinent information from the historical sources reviewed regarding adjacent properties:

Dates	Description of Adjacent Properties	Sources
1893 to late 1920s	North: Undeveloped land in 1893, lots further subdivided by 1905, with sparsely developed two-story residential dwellings with carriage houses. By 1929, the lot adjoining the subject site to the north was developed with a filling station with two gasoline tanks. Other developments north of the subject site included residential dwellings along Hinckley Place and commercial storefronts along Coney Island Avenue. Northwest: In 1893 the lots to the northwest were sub-divided and sparsely developed with residential dwellings and stables. By 1905, more residential dwellings are present, and a storefront is depicted along Coney Island Avenue and Hinckley Place. In 1929, the northwest adjoining property is developed with a carpet cleaning and auto repair operation. South: Undeveloped land in 1893, lots further subdivided by 1905 with three storefronts present along Coney Island Avenue and one 2-story residential dwelling along Beverly Road. The storefronts and residential dwelling are still present in the 1929 Sanborn Map.	Sanborn Fire Insurance Maps

Dates	Description of Adjacent Properties	Sources
1893 to late 1920s (Continued)	Southwest: Undeveloped land in 1893, lots further subdivided in 1905, and further developed into several 3-story commercial storefronts along Coney Island Avenue and Beverley Road. East: Undeveloped land in 1893, lots further subdivided in 1905 when the two-story residential dwelling was first constructed at 56 Hinckley Place. West: Partially developed as early as 1893 with a residential dwelling and a stable. Developments are consistent through 1929.	Sanborn Fire Insurance Maps
Late 1920s to 1950	North: A gasoline filling station with two gasoline tanks is depicted at the north adjoining property across Hinckley Place in the 1929 and 1950 Sanborn Maps. Northwest: The auto repair facility is depicted in the 1929 and 1950 Sanborn Maps, in addition to a gasoline filling station at the corner of Coney Island Avenue and Hinckley Place in the 1950 Sanborn Map. Two gasoline tanks are depicted below the sidewalk adjacent to the filling station within Coney Island Avenue. South: The commercial storefronts depicted in historical maps dated 1929 are no longer present along Coney Island Avenue in the 1950 Sanborn Map; they were replaced by a one-story structure adjoining the subject site to the south. The Residential dwelling along Beverley Road is present in the 1929 and 1950 Sanborn Maps. Southwest: Commercial storefronts along Coney Island Avenue. The "Radiant Burner Supply Corp." is listed in a City Directory dated 1945. East: Residential dwellings along Hinckley Place. West: The residential dwelling and barn depicted in the 1929 historical map as razed and replaced with a used car sales lot and auto repair facility in 1950.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories
1950 to Late 1980s	North: The gasoline filling station remained in operation between about 1950 to about 1987. In 1988 and 1989, the property was occupied by a used auto repair facility. Northwest: The gasoline filling station remained in operation between about 1950 to 1989. Two gasoline tanks along Hinckley Place were present on Sanborn Fire Insurance Maps dated 1950 and 1969. By the late 1970s, some of the structures were demolished and the filling station and auto repair facility remained along Hinckley Place until 1989. South: The small one-story structure depicted in the 1950 Sanborn Map was demolished and replaced by a one-story dry cleaning facility. The dry-cleaning facility was depicted in Sanborn Maps dated 1969 and 1977. By 1979, the south-adjoining building was part of the Auto Parts Storage & Repair operation associated with the subject site. A parking lot is depicted south of the auto repair operation. The residential dwelling along Beverly Road remains present.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories

Dates	Description of Adjacent Properties	Sources
1950 to Late 1980s (Continued)	Southwest: Previous commercial storefront structures depicted in the 1950 historical map were demolished, and a filling station is present between 1969 to 1987. Historical City Directories dated 1960 and 1965 also identify an auto glass company present at the property, and a listing dated 1973 lists the "Castelli Battery & Ignition Service Inc." operation present. East: Residential dwellings along Hinckley Place. West: Following 1950, the former auto repair shop and used car sales lot were converted into an auto service center in Sanborn Maps dated 1969 to 1988. A service station is listed in historical City Directories in 1960, 1969, 1970, 1976, and 1980. By 1989, the auto repair center was demolished.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories
Late 1980s to 2010s	North: The used auto repair shop is depicted in Sanborn Maps dated 1989 to 1995 and also included used auto sales between 1992 and 1995. The property is also listed as an auto repair center in 1994 and 1997. Northwest: Filling station remained present until 1995. The 2001 Sanborn Map identifies an auto repair shop replacing the filling station formerly present. South: The south-adjoining building was part of the Auto Parts Storage & Repair operation associated with the subject site. A parking lot is depicted south of the auto repair operation. City Directories dated 2014 and 2017 identify "7-Eleven" as an occupant of the south-adjoining property. The residential dwelling along Beverley Road remains consistent during this timeframe. Southwest: Between 1989 and 1995, Sanborn Maps depict three commercial-use buildings at the southwest adjoining property. The 2001 Sanborn Map identifies a filling station at the same location in addition to the three commercial-use buildings present in the prior Sanborn Maps. City Directories dated 1985 through 2009 identify a Shell gasoline station present. More recent City Directories dated 2014 and 2017 identify the KHIZER II Auto Repair Inc. company present. East: Residential dwellings along Hinckley Place. West: Between 1989 and 1992, the west-adjoining lot was vacant, however a muffler and brake shop is listed in historical City Directories for the property between 1980 and 2000. Sanborn Maps dated 1993 to 2001 identify a 1-story auto repair shop. A 2009 City Directory listing identifies Brooklyn Muffler Corp. as a tenant at the property. The restaurant "KFC" is noted in City Directory listings dated 2009 and 2014.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories

Dates	Description of Adjacent Properties	Sources
Early 2000s to present	North: By the early 2000s, the auto repair facility and used auto sales were no longer present and by 2007, the lot became vacant. The property was redeveloped with a multi-story apartment building in 2015. Northwest: The 2001 Sanborn Map identifies an auto repair shop replacing the filling station formerly present in the late 1990's. The auto repair shop is depicted in Sanborn Maps dated 2002 to 2007. The property was redeveloped in 2015 and is currently a public school. South: The south-adjoining building was part of the Auto Parts Storage & Repair operation associated with the subject site through until at least 2007. A "7-Eleven" commercial convenience store occupied the building by 2014. A parking lot is depicted south of the auto repair operation. The residential dwelling along Beverley Road remains present. Southwest: A gasoline filling station East: Residential dwellings along Hinckley Place. West: By the early 2000s, the auto repair facility was no longer in use. Currently developed with a one-story commercial building operating as a "KFC" restaurant.	Sanborn Fire Insurance Maps, Aerial Photographs, City Directories

5. Environmental Records Review

5.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

Haley & Aldrich used the electronic database service, Environmental Data Resources (EDR) to complete the environmental records review. The database search was used to identify properties that may be listed in the referenced agency records, located within the ASTM-specified approximate minimum search distances as shown in the table below. A description of each database searched is in Section 11.2 of this report. The complete environmental database report is provided in Appendix D. Pertinent information obtained from the database is summarized in Section 5.3 below.

Database Searched	Approximate Minimum Search Distance	Subject Site Listed?	Number of Sites within Search Distance[1]
1. NPL Sites	1 mile	No	0
2. Delisted NPL Sites	0.5 mile	No	0
3. CERCLIS[2] Sites	0.5 mile	No	0
4. CERCLIS-NFRAP[2] Sites	0.5 mile	No	1
5. Federal ERNS	Site only	No	Not Applicable
6. RCRA non-CORRACTS TSD Facilities	0.5 mile	No	0
7. RCRA CORRACTS TSD Facilities	1 mile	No	0
8. RCRA Generators	Site & Adjoining	No	0
9. Federal Institutional/Engineering Controls	Site Only	No	Not Applicable
10. State/Tribal Equivalent NPL Sites	1 mile	No	0
11. State/Tribal Equivalent CERCLIS[2] Sites	0.5 mile	No	0
12. State/Tribal Registered Storage Tanks	Site & Adjoining	No	3
13. State/Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	2
14. State/Tribal Leaking Storage Tanks	0.5 mile	No	51
15. State/Tribal Institutional Controls/Engineering Controls	Site Only	No	Not Applicable
16. State/Tribal Voluntary Cleanup Sites	0.5 mile	No	0
17. State/Tribal Brownfield Sites	0.5 mile	No	0
18. Orphan Site List[3]	Site & Adjoining	No	0

Notes:

1. *Some sites may be included on multiple databases.*
2. *The US EPA retired the CERCLIS database in October 2013. In January 2016, the Superfund Enterprise Management System (SEMS), which replaces the CERCLIS database, became active. The CERCLIS database records search included as part of this assessment includes currently ascertainable data from the SEMS and SEMS-Archive databases as reported through the database vendor.*
3. *Haley & Aldrich also searched the Orphan Site List provided in the database report for the subject site and sites adjoining the subject site. Orphan sites are those that, due to incorrect or incomplete addresses, could not be mapped.*
4. *If applicable, other relevant databases, not specifically required by ASTM were included in the database review.*

5.2 ADDITIONAL ENVIRONMENTAL RECORDS OR FILE REVIEW

To supplement the environmental record search, we contacted the following state and local government agencies and searched applicable online databases. If copies of the documents reviewed were obtained, pertinent material is included in Appendix D. Relevant information obtained is included in the appropriate sections of the report and/or discussed in Section 5.3 below. Adjacent properties were also included in requests for additional information if a significant incident or release was identified. Those adjacent properties reviewed for this assessment include:

- 543 Coney Island Avenue (alternate address 547 Coney Island Avenue)
- 534 Coney Island Avenue (alternate address 532 Coney Island Avenue)

Agency	Request Sent or Files Searched		Files Exist and are Available for Review	Files Reviewed
	Subject Site	Adjoining Properties		
New York State Department of Environmental Conservation[2]	Yes	Yes	N/A	N/A
New York State Department of Finance City Registry[3]	Yes	No	Yes	Yes (online)
New York City Department of Buildings[4]	Yes	No	Yes	Yes (online, and included in Appendix D)
New York City Department of Health[5]	Yes	No	N/A	N/A
Fire Department of New York[6]	Yes	No	N/A	N/A
New York State Department of Environmental Protection[7]	Yes	No	N/A	N/A
New York City Office of Environmental Remediation[8]	Yes	Yes	No	N/A

***Notes**:*

1. *To date, no responses have been received from the Freedom of Information Act (FOIA) requests noted above. Based on the information obtained through our interviews with key site personnel, and our review of other records, it does not appear that responses to the FOIA requests should affect our conclusions regarding RECs on the site. However, when a response is received, it will be forwarded to Riverside Developers USA, Inc., and, if it affects our conclusions regarding the site, Riverside Developers USA Inc. will be informed.*
2. *The New York State Department of Environmental Conservation (NYSDEC) maintains information regarding spills, petroleum bulk storage (PBS), including underground storage tanks (USTs) and aboveground storage tanks (ASTs), and investigation/remediations overseen by New York State regulatory programs. Responsive records were only available for 534 Coney Island Avenue and include a spill report, letter of correspondence, and an investigation report.*
3. *The New York State Department of Finance City Registry maintains information regarding property transactions, including deeds, lease, and mortgage documents. Records were reviewed in the online database.*
4. *The New York City Department of Buildings (NYCDOB) maintains information regarding violations, complaints, certificates of occupancy, elevator records, asbestos assessments, and permits. Records were reviewed in the online database and indicate that a violation for failure to certify correction of Class 1 Violations currently exists on Lot 1. Details of this violation are listed in Section 5.3.1.*
5. *The New York City Department of Health (NYCDOH) maintains information regarding environmental concerns for public health. A response has not yet been received from the NYCDOH.*
6. *The Fire Department of New York (FDNY) maintains information regarding USTs and emergencies/fire episodes. A response has not yet been received from the FDNY.*
7. *The New York City Department of Environmental Protection (NYCDEP) maintains information regarding wastewater discharge and boilers. No records were available in the online database.*
8. *The NYCOER SPEED 2.0 database was accessed on 20 December 2021 for the subject site and adjoining properties listed above.*

5.3 DETAILED DESCRIPTION OF RELEVANT INFORMATION

The subject site was identified in three databases searched by EDR including the RCRA NonGen/NLR, NY Manifest, FINDS and ECHO databases. A summary of the listings and findings is provided in the table below:

5.3.1 Subject Site

Listing	Description	Potential Impact
RCRA NonGen/NLR Manifest	The subject site is listed in the RCRA Non-Generator/No Longer Regulated database for the Con Edison Service Box 78575 at 50 Hinckley Place in 2013. The listing also includes a record in 2013 and 2016 for the former generation of hazardous waste as a conditionally exempt small quantity generator (CESQG). No violations are associated with this listing. The Con Edison Service Box 78575 is also listed in the Manifest database for the transportation of hazardous materials (D008, lead) from the site in 2013. Another listing identified as Con Edison at 543 Coney Island Avenue (subject site) includes NJ Manifest records in 2015 and 2016.	Based on the lack of violations or spills associated with the RCRA NonGen/NLR listing, it is not anticipated to adversely affect the subject site.
FINDS & ECHO	The subject site is listed in the FINDS and ECHO databases for Con Edison Service Box 78575. No violations were identified with these listings, and the facility is listed as inactive.	Based on the lack of violations associated with these listings, it is not anticipated to adversely affect the subject site.
NYCDOB	An active New York City Department of Buildings (NYCDOB) Class 1 Violation exists on Block 5114, Lot 1 (auto garage), specifically for a construction violation. Records dated 5 April 2017 indicate work without a permit on a gas line being used for two gas-fired heaters was cited by the Brooklyn Plumbing Inspection Unit. Civil penalties are due to the NYCDOB. Certificates of Occupancy for the subject site indicate that auto-related operations were present by at least 1935. These operations included automobile laundry, battery service, auto-greasing, and tire repair. The 1962 Certificate of Occupancy indicates that a boiler was present, and the subject site was operating as a gasoline service station, including auto washing, an office, accessory sales, a repair shop, safety inspection, and parking/storage for more than five vehicles.	A violation in the NYCDOB does not necessarily indicate an environmental concern for the subject site; however, this is a notable Other Finding. Former operations at the subject site including the gasoline service station and auto-related operations potentially utilized hazardous materials including petroleum products and/or solvents. The historical site use is considered a REC as potential or undocumented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

5.3.2 Nearby Sites

Several sites were listed in the database report within the applicable search radii or identified in regulatory records reviews. Due to their location with respect to the subject site (on the opposite side of a hydrogeologic barrier, distance from the subject site, location of the site relative to inferred

groundwater flow, subsurface utilities and building levels, etc.), or their status (closed out release, etc.), several of the sites are not likely to adversely affect the subject site and are not discussed herein. Only those sites adjacent to the subject site and sites with a potential to have impacted the subject site are discussed below. The complete database report and relevant records review information is included in Appendix D.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Con Edison 543 Coney Island Avenue (0.001 miles southwest and upgradient)	RCRA NonGen/NLR Manifest	This property is listed in the RCRA Non-Generator/No Longer Regulated database as of 2015 for the former generation of hazardous materials by Con Edison. As of 2016 the listing is identified as "not a generator, verified". No violations are associated with this listing. This property is also listed multiple times in the Manifest database for the transportation of hazardous materials by Con Edison. Waste types were not identified.	Based on the lack of violations and releases associated with these listings, it is not anticipated to adversely affect the subject site.
Hagalil Service Station & Sunoco Service Station 534 Coney Island Avenue (0.024 miles west and upgradient)	UST LTANKS RCRA NonGen/NLR FINDS & ECHO	This property is listed in the UST database under PBS ID 2-272736 (Unregulated/Closed Status) for 15 USTs that were closed prior to 1991 and included the following: • One 4,000-gallon gasoline UST (installed 1974, closed 1991) • Twelve 550-gallon gasoline USTs (installed 1956, closed 1991) • One 550-gallon #2 Fuel UST (installed 1956, closed 1991) • One 275-gallon UST containing unknown materials (installed 1956, closed 1991) This property is listed in the Leaking Storage Tanks (LTANKS) database due to a tank overfill incident at the gasoline station resulting in the assignment of Spill #91-10564 on 8 January 1992. Residual petroleum was identified during soil excavation activities. About 100 cubic yards of contaminated soil was excavated. NYSDEC administratively closed the spill case on 8 May 2001 without further remediation or investigation required. This property is listed in the RCRA Non-Generator/No Longer Regulated database for the former generation of hazardous materials including ignitable waste. No violations are associated with this listing. This property is listed in the FINDS & ECHO databases. No violations are associated with these listings.	This property is located west adjacent and upgradient to the subject site with reported petroleum contamination in soil and remediation efforts to clean up the spill. A reported release of petroleum-related substances may have adversely impacted subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Shell Oil 548 Coney Island Avenue (0.016 miles west-southwest, and upgradient)	UST AST LTANKS NY SPILLS RCRA NonGen/NLR Manifest EDR Historical Auto ICIS US AIRS FINDS & ECHO	This property is listed in the UST database under PBS ID 2-190934 (Active status). The following USTs were previously located at the site: • Three 4,000-gallon gasoline USTs (installed between 1970-1975) were closed/removed on 1 July 1994 • One 550-gallon UST labeled as "other", and one 550-gallon #2 fuel oil UST (installed 1967) were closed/removed also on 1 July 1994 Currently there are five 4,000-gallon USTs containing gasoline/ethanol in use at the property and were installed on 1 July 1994. This property is also listed in the AST database under Facility ID 2-190934 for two 250-gallon waste oil ASTs currently in use at the property. The ASTs were installed in 1994 and 2016. This property is listed in the Leaking Storage Tanks (LTANKS) database due to a tank test failure at the gasoline station resulting in the assignment of Spill #87-07829 on 10 December 1987. The leaking tank resulted in a spill of petroleum. Also related to this incident, Spill # 93-08834 was assigned on 25 October 1993 adding waste oil as a spill material to the previous incident. A UST Closure Report prepared by EnviroTrac in February 1995 indicated minor exceedances of semi-volatile organic compounds (SVOCs) within the waste oil tank field. Quarterly groundwater sampling was conducted at the property in 2004 and benzene, toluene, ethylbenzene, and xylenes (BTEX) and methyl-tert butyl ether (MTBE) concentrations were not detected above Groundwater Quality Standards for four quarters. As a result, spill closure was proposed to NYSDEC and both spill cases achieved regulatory closure on 20 October 2004. Spill #04-08051 was assigned on 20 October 2004 when soil impacted by hydraulic fluid was encountered during the removal of an in-ground hydraulic lift. A 4x6 ft area of impacted soil was excavated to 10 ft bgs and post-excavation soil analytical results showed diesel range organics detected at 209 milligrams/kilograms (mg/kg) and total petroleum hydrocarbons (TPH) at 374 mg/kg. This case achieved regulatory closure on 24 November 2004.	This property is located to the southwest and upgradient to the subject site with reported petroleum contamination and remediation efforts to clean up spills. In addition, the facility operated as a gasoline filling station for several decades. The reported releases of petroleum-related substances and unreported releases of other petroleum or hazardous materials at this property may have adversely impacted subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Shell Oil 548 Coney Island Avenue (0.016 miles west-southwest, and upgradient) Continued	UST AST LTANKS NY SPILLS RCRA NonGen/NLR Manifest EDR Historic Auto ICIS US AIRS FINDS & ECHO	Spill #07-04187 was assigned on 13 July 2007 due to a leaking 275-gallon waste oil AST. The waste oil tank was placed on top of competent concrete, with no evidence of cracks or damage. Tank contents were removed, and the tank placed out of service by the gasoline station operator NYSDEC administratively closed the spill case on 16 July 2007 without further remediation or investigation. This property is listed in the RCRA Non-Generator/No Longer Regulated database for the former generation of hazardous materials at the property including ignitable waste, lead, and benzene in 2007. No violations are associated with this listing. This property also historically operated as a conditionally exempt small quantity generator in 1994. This property is listed multiple times in the Manifest database for the transportation of hazardous materials in 1995. This property is listed in the EDR Historical Auto database for the former use as a gasoline service station from 1973 to 1992. Former operators included “Eisenman Service Station” from 1973 to 1975 followed by “Korkut Service Station” from 1982 to 1992. This property is listed in the US AIRS database as part of the State Implementation Plan for National Primary and Secondary Ambient Air Quality Standards under Programmatic ID AIR NY0000002610300072 and Facility Registry ID 110001573057. The case is in the inspection/evaluation and compliance monitoring phase. This property is also listed in the ICIS database for the AIR program under FRS ID 110001573057. This property is listed in the FINDS & ECHO databases. No violations are associated with these listings.	This property is located to the southwest and upgradient to the subject site with reported petroleum contamination and remediation efforts to clean up spills. In addition, the facility operated as a gasoline filling station for several decades. The reported releases of petroleum-related substances and unreported releases of other petroleum or hazardous materials at this property may have adversely impacted subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
G&A Service Center Inc. Former Getty Station 532 Coney Island Avenue (0.024 miles west, and upgradient)	UST AST LTANKS EDR Historical Auto	This property is listed in the UST database under PBS Facility ID 2-146676 for the former presence of four 4,000-gallon gasoline USTs (installed on 1 August 1975) that were closed and removed on 1 June 1997. This property is listed in the AST database under Facility ID 2-146676 for the former presence of one 240-gallon waste oil AST that was installed on 1 November 1997 and closed/removed on 28 February 2008. This property is listed in the Leaking Storage Tanks database due to a tank test failure and subsequently Spill Case #97-03890 was assigned on 30 June 1997 due to a spill of an unknown amount of petroleum. NYSDEC administratively closed the spill case on 18 March 1999 without further remediation or investigation required. This property is listed in the EDR Historical Auto Database for the former use of a service station, "A&V Crown Inc." from 1969 to 1971 and as an automotive repair shop, "G&A Service Center Inc." from 1998 to 2007.	This property is located northwest adjacent and upgradient to the subject site with reported petroleum contamination. In addition, the facility operated as a gasoline filling station/auto repair station for several decades. The reported releases of petroleum-related substances and unreported releases of other petroleum or hazardous materials at this property may have adversely impacted subsurface conditions at the subject site.
A&C Power Test Inc. 530 Coney Island Avenue (0.037 miles west-northwest, and upgradient)	EDR Historical Auto	This property is listed in the EDR Historical Auto database for the former use as a gasoline service station, "A&C Power Test Inc. from 1980 to 1985.	This property is located northwest adjacent and upgradient to the subject site. Gasoline service stations utilize hazardous materials including petroleum products, that if not stored properly, have the potential to leak/spill and impact the subsurface. Potential impacts to groundwater and soil vapor from former operations could migrate and adversely impact subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Erdal Shell Inc. 546 Coney Island Avenue (0.026 miles southwest, and upgradient)	EDR Historical Auto	This property is listed in the EDR Historical Auto database for the former use as a gasoline service station, from 1996 to 2014. Former operators include, “Erdal Shell Inc.” and “Shell Inc.”	This property is located southwest and upgradient to the subject site. Gasoline service stations utilize hazardous materials including petroleum products, that if not stored properly, have the potential to leak/spill and impact the subsurface. Potential impacts to groundwater and soil vapor from former operations could migrate and adversely impact subsurface conditions at the subject site.
S&S Service Station 525 Coney Island Avenue (0.019 miles north, and cross-gradient)	EDR Historical Auto	This property is listed in the EDR Historical Auto database for the former use as a gasoline service station from 1969 to 1983. Operators include “S&S Service Station” from 1969 to 1975 and “S&S Pianelli Inc.” from 1975 to 1983. From 1996 to 1997 the property operated as a general automotive repair by “Marqees Auto Center Inc.”	This property is located north adjacent and upgradient to the subject site. Gasoline service stations and auto-related facilities utilize hazardous materials including petroleum products, that if not stored properly, have the potential to leak/spill and impact the subsurface. Potential impacts to groundwater and soil vapor from former operations could migrate and adversely impact subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Beverly Road & Coney Island Avenue (0.028 miles south, and cross-gradient)	NY SPILLS	Spill #90-13274 was reported on 29 March 1991 due to a spill of #2 fuel oil from a tank truck. The spill was contained on pavement and cleaned up immediately using a sorbent material. NYFD responded to the incident and approved of the cleanup. NYSDEC administratively closed the spill case on 29 March 1991 without further remediation or investigation required.	Since the spill case has achieved regulatory closure, it is not anticipated to adversely affect the subject site.
Coney Island Avenue Beverly Road (0.027 miles south, and upgradient)	NY SPILLS RCRA NonGen/NLR	Spill #99-06726 was reported at this location on 6 September 1999 due to a spill of 1 gallon of dielectric fluid onto 50 gallons of water from a joint in a Con Edison manhole. The joint was repaired, and cleanup was completed. A sample was collected which indicated less than 1 ppm of dielectric fluid present. This case achieved regulatory closure on 3 May 2007. Spill #89-03735 was reported at this location on 14 July 1989 due to a spill of 5 gallons of petroleum from a commercial vehicle. The spill was contained with rags and flushed down a sewer drain. NYSDEC administratively closed the spill case on 14 July 1989 without further remediation or investigation required. Con Edison is listed in the RCRA Non-Generator/No Longer Regulated database for the former generation of hazardous materials at this location. No violations are associated with this listing.	Since the spill cases have achieved regulatory closure and no violations are associated with the RCRA NonGen/ NLR listing, it is not anticipated to adversely affect the subject site.
524 Coney Island Avenue (0.037 miles northwest, and upgradient)	LTANKS NY SPILLS RCRA NonGen/NLR Manifest EDR Historical Auto US AIRS FINDS & ECHO	This property is listed in the Leaking Storage Tank database due to a tank test failure and subsequently Spill Case #86-06820 was assigned on 2 June 1987. A tank at a gasoline station failed a 10-pound pressure test. NYSDEC administratively closed the spill case on 18 March 1999 without further investigation or remediation. Spill #90-12044 was reported at the property on 11 February 1991 due to a complaint of a gasoline odor. It was reported that the gas station was closed, and tanks were not removed. Tanks were found to be tight in December 1992. NYSDEC administratively closed the spill case on 21 February 1995 without further investigation or remediation required.	This property is located to the northwest and upgradient to the subject site. Reported releases of petroleum products may have resulted in impacts to groundwater and soil vapor at the property that could migrate and adversely impact subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
524 Coney Island Avenue (0.037 miles northwest, and upgradient) Continued	LTANKS NY SPILLS RCRA NonGen/NLR Manifest EDR Historical Auto US AIRS FINDS & ECHO	Spill #14-11970 was reported at the property on 23 March 2015. During redevelopment of the property as a public school, two USTs were encountered during excavation and closed with no impacts. Additionally, another UST was encountered containing waste oil or hydraulic fluid and was found to be leaking. The tank area was over excavated to 10 ft bgs and approximately 20 tons of impacted soil surrounding the tank was excavated and removed from the property. Five endpoint samples were collected (four sidewall and one bottom sample) and the soil analytical results were non-detect for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) except for the sample collected on the east sidewall. All results were below CP-51 unrestricted residential standards. NYSDEC determined that any residual contamination would not be a threat to the public or the environment and the spill case was closed on 23 September 2016. A vapor barrier and an active sub-slab depressurization system (SSDS) was installed at the property. This property is listed in the RCRA Non-Generator/No Longer Regulated database for the former generation of hazardous materials including ignitable waste in 2007 and as a historical large quantity generator of hazardous materials in 1987. No violations are associated with this listing. This property is also listed multiple times in the Manifest database for the transportation of hazardous materials (non-listed ignitable waste) from the property in 1987 and 1988. This property is listed in the EDR Historical Auto database from 1982 to 1993 for the former use as a gasoline service station, “Malkas Service Station Inc.” This property is listed in the US AIRS database as part of the State Implementation Plan for National Primary and Secondary Ambient Air Quality Standards under Programmatic ID AIR NY0000002610300145 and Facility Registry ID 110001572879. This case is in the inspection/evaluation and compliance monitoring phase. This property is also listed in the FINDS and ECHO databases. No violations are associated with these listings.	This property is located to the northwest and upgradient to the subject site. Reported releases of petroleum products may have resulted in impacts to groundwater and soil vapor at the property that could migrate and adversely impact subsurface conditions at the subject site.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
520 Coney Island Avenue (0.044 miles northwest, and upgradient)	UST EDR Historical Auto	This property is listed in the UST database under PBS Facility ID 2-609352. One 250-gallon waste oil UST was installed at the property in 1979 and closed and removed on 8 April 2009. This property is listed in the EDR Historical Auto database from 1973 to 2010 for the former use as a general automotive repair shop and automotive transmission repair shop. Former operators include, “Daisy Internation Ltd Inc.”, “Trico Transmission Inc.”, “RO AM Repair Service”, and “Mohsan Auto Repair”.	This property is located northwest and upgradient to the subject site. Historical auto-related facilities utilize hazardous materials including petroleum products, that if not stored properly, have the potential to leak/spill and impact the subsurface. Potential impacts to groundwater and soil vapor from former operations could migrate and adversely impact subsurface conditions at the subject site.

5.4 VAPOR MIGRATION

The ASTM 1527-13 standard states that "for the purposes of this practice, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface". Thus, this section specifies whether or not we perceive a risk of vapor migration to the subject site.

To assess a vapor migration risk, we conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Based on our records review, we have identified and assessed the following potential sources for vapor migration:

The subject site and adjacent up-gradient properties to the north, northwest, west, and southwest have historically and/or currently operate as gasoline service stations or auto-related operations. The northern portion of the auto-repair garage in Lot 3 of the subject site also operates as an auto-painting facility and chemicals associated with this operation were observed in the partial cellar located below the auto-painting operation. Multiple spills and listings in the LTANKS database were also reported at properties upgradient and adjoining to the subject site. Reported or undocumented releases of petroleum products and/or solvents may have adversely impacted subsurface conditions at the subject site.

6. Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe subject site conditions was conducted by Sarah Commisso of Haley & Aldrich, on 10 December 2021. Access to the subject site was provided by Liz Alvarez of Delt Hardware.

Haley & Aldrich personnel observed accessible interior areas of the subject site building(s), including warehouse areas, office space, and garage space. Haley & Aldrich also observed the exterior portions of the subject site, including the property boundaries, and observed adjoining property conditions from the subject site boundaries and/or public thoroughfares. No weather-related conditions or other conditions that would limit our ability to observe the subject site or adjoining properties occurred during our site visit.

An interview with Liz Alvarez of Delt Hardware, the key site manager, was performed in conjunction with the site visit. No other interviews were conducted with tenants at the subject site. Per the ASTM Standard, past owners, operators, and occupants of the subject site who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Haley & Aldrich was not provided with contact information in order interview past owners and/or operators at the subject site. Based upon historical data collected from other sources, this potential data gap is not expected to adversely impact the results of this assessment.

The findings of the site visit and interviews are discussed below. Site photographs are included in Appendix E.

ASTM E 1527-13 Standard Section 10.8 requires that, prior to the site visit**,** the current subject site owner or key site manager and user, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review. Documents were not provided.

6.1 CURRENT USE OF THE PROPERTY

The two-story warehouse is currently occupied by “Delt Hardware”, a plumbing and construction goods supplier/retailer. The one-story garage is operating as an auto body and repair shop occupied by “New City Link Auto Repair Inc”. The vehicle loading and parking area is utilized by Delt Hardware for loading incoming and outgoing shipments of plumbing and construction supplies.

6.2 GENERAL DESCRIPTION OF STRUCTURES

50 Hinckley Place (Block 5114 Lot 3) is improved with a two-story masonry warehouse with no cellar level. Access to the building is provided by a rollup door on the western side of the building. A portion of the building in Lot 3 along Hinckley Place to the north is used as office space and can be accessed via an entrance on Hinckley Place. A second roll-up door is present along Hinckley Place, however is no longer in use and appeared inoperable. The office space within the warehouse is heated by electric units and also has an electric cooling system in place. No other heating or cooling system was present within the warehouse. A restroom was present in the office space. Access to the roof was not granted during the site reconnaissance. No cellar level was observed below Lot 3.

545 Coney Island Avenue (Block 5114 Lot 1) is partially improved on the southern half of the lot with a one-story brick garage with partial cellar level. The garage is accessible via three roll-up doors along Coney Island Avenue. The garage is used for auto-repair and an auto painting operation was observed in the northern portion of the garage. A partial cellar level was observed below the auto painting operation; storage of associated chemicals for auto painting and repair in addition to strong chemical-like odors were observed. The garage is heated by electric heating units. A restroom was present in the northeast corner of the building. The northern portion of the lot is used for parking and a truck loading area for the warehouse. The concrete cover of the parking and truck loading area was observed in poor condition with damage in some areas exposing subsurface soil. The poor condition of concrete cover in this area of the subject site is considered a REC as potential or undocumented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

6.3 USE, STORAGE, AND DISPOSAL OF PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS

Petroleum products and/or hazardous materials were observed or reported to be used, stored, and/or disposed of at the subject site as described below.

The following bulk storage tanks were observed or reported associated with the subject site during the site reconnaissance:

Tank #	AST/ UST	Contents/ Capacity	Location[1]	Use	Closure Status
1	AST	Approximately 250-gallons	Outside of garage along Coney Island Avenue	In Use	N/A
2	UST	Unknown	Potential UST located below slab in the central region of the auto-repair garage in Lot 1	Unknown	N/A

Notes:
1. *Approximate tank locations are shown on Figure 2.*
2. *A potential UST related to auto-repair activities may be present below the slab of the auto-repair shop located in Lot 1. A manhole was observed during the site reconnaissance*

Other petroleum/hazardous materials observed at the subject site included:

Petroleum Product or Hazardous Substances	Quantity Stored & Container	Storage Location	Use	Disposal	Observations/ Evidence of release
Calcium Chloride Pellets	50-lbs bags (amount not determined-more than 6 full pallets)	Parking area	Snow and Ice Melter	Unknown	No
Paraco Fuel	Four 15-lbs containers	Parking area	Fuel for forklift	Unknown	*De minimis* staining on concrete throughout the parking area of Lot 1.
Various Cleaning Agents	Amount not determined	Warehouse	Retail and maintenance	Unknown	No

Petroleum Product or Hazardous Substances	Quantity Stored & Container	Storage Location	Use	Disposal	Observations/ Evidence of release
Paint and Enamel	Amount not determined	Warehouse	Retail and maintenance	Unknown	No
Denatured Alcohol	Three 1-quart containers	Warehouse	Retail or maintenance	Unknown	No
Metro-Antifreeze/ Coolant	1-gallon containers (amount not determined)	Garage and near dumpster	Auto repair	Unknown	No
Synthetic Motor Oil	1-quart containers (amount not determined)	Garage and near dumpster	Auto repair	Unknown	*De minimis* staining throughout garage and near dumpster
Premium grade lacquer	One 5-gallon container	Near car outside garage	Auto-related uses	Unknown	No
Auto-related painting chemical storage	Amount not determined, multiple containers (less than 5 gal. each)	Partial cellar level below auto-painting operations in Lot 1	Auto-related and auto painting uses	Unknown	Strong chemical-like odors observed in partial cellar area in vicinity of chemical storage

Hazardous materials stored in the warehouse were observed in good condition and were not located near any floor drains or potential pathways to the subsurface, with the exception of a petroleum cleanup (i.e. spent absorbent pellets) that was present in the southwest corner of the warehouse. Poor housekeeping was observed in the garage and hazardous materials appeared to not be stored properly in certain areas due to observed staining on the concrete floor. In addition, strong chemical-like odors were observed in the partial cellar located below the auto-painting operation. The partial cellar included storage of auto-related tools, supplies, chemicals (including auto painting), and auto parts. Poor housekeeping was observed in the partial cellar.

An approximately 250-gallon, unregistered AST was observed in Lot 1 in front of the garage entrance. The AST was located in secondary containment consisting of concrete blocks. Staining was visible surrounding the tank and a slight petroleum-like odor was noticeable in the area. A funnel containing fuel oil was present on top of the AST.

6.4 OTHER SUBJECT SITE OBSERVATIONS

The table below summarizes items that were observed and/or reported at the subject site during the site visit other than those items related to use, storage, and disposal of petroleum or hazardous materials (described in Section 6.3 above). If items were observed or reported, they are further described either in the table or below.

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Potable Water Supply	Yes	Potable water provided by the New York City Department of Environmental Protection (NYCDEP)
Nearest Drinking Water Source	N/A	
Sewage Disposal System	Yes	NYCDEP Municipal System
Septic System	No	
Unidentified Storage Containers	No	
Wastewater Discharge	No	NYCDEP Municipal System
Stormwater Discharge	No	
Odors	Yes	Petroleum-like odor near AST and in garage. Paint-like odor in garage. Strong chemical-like odors were observed in the partial cellar located below the auto-painting operation
PCBs Associated with Electrical or Hydraulic Equipment	Yes	Two-above ground hydraulic lifts were located in the garage. A bailer was located in the southwest corner of the warehouse that appeared to be stained with hydraulic oil. Spent absorbent pellets were observed in the vicinity of the bailer.
Elevators (Traction or Hydraulic)	No	
Vehicle Maintenance Lifts	Yes	Two above-ground hydraulic lifts in the garage. Evidence of a third lift observed, appears to have been present in the past and was removed.
Emergency Generators	No	
Sprinkler System Pumps	No	
Heating System	Yes	Electric heating units in the office space within the warehouse and in the garage.
Cooling System	Yes	Electric cooling units in the office space within the warehouse.
Stains or Corrosion on Floors, Walls, or Ceilings	Yes	Yes, minor staining was visible throughout the parking area on Lot 1 and near the dumpster outside the garage. Apparent staining was present throughout the garage. Staining was present surrounding the AST.
Floor Drains	Yes	At least three floor drains are present in the garage. Several areas within the garage were obstructed by equipment and materials for inspection at the time of the site reconnaissance.
Sumps	No	
Catch Basins	No	
Pits, Ponds, Lagoons, and Pools of Liquid	No	
Stained Soil or Pavement	Yes	*De minimis staining* on the concrete floor of the garage likely from petroleum products. Cracks in the concrete were not observed in the vicinity. A petroleum-like odor and paint-like odor was present in the garage. *De minimis* staining present near the dumpster in front of the garage. *De minimis* staining present in the parking lot on Lot 1. Concrete was cracking and subsurface soils were exposed throughout the parking lot, but not visible near staining.
Stressed Vegetation	No	

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Solid Waste and Evidence of Waste Filling	No	
Dry Wells	No	
Monitoring Wells	No	
Water Supply Wells	No	
Irrigation Wells	No	
Injection Wells	No	
Abandoned Wells	No	

***Notes**:*

1. *N/A items are those that were not observed or reported and/or not anticipated to be present given the nature of the site (e.g. building features not present on an undeveloped property).*

6.5 ADJOINING PROPERTY OBSERVATIONS

Adjoining properties consist of the following: Hinckley Place followed by a mixed-use multi-story commercial and residential building to the north, a one-story commercial-use building operating as a "7-Eleven" to the south, a "Shell" gasoline service station to the southwest, one- and two-family residential developments to the east, a public school to the northwest, and Coney Island Avenue followed by a commercial-use building operating as a "KFC" restaurant to the west. During the site reconnaissance, no conditions were observed at adjacent properties that have the potential to adversely affect the subject site, except that a gasoline service station is present upgradient and southwest adjacent to the subject site

6.6 USER RESPONSIBILITIES

The AAI Rule requires that the User of the report consider the following:

- Whether the user has specialized knowledge about previous ownership or uses of the subject site that may be material to identifying RECs;
- whether the user has determined that the subject site's Title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;
- whether the user is aware of commonly known or reasonably ascertainable information about the subject site including whether or not the presence of contamination is likely on the subject site and to what degree it can be detected; and
- whether the user has prior knowledge that the price of the subject site has been reduced for environmentally related reasons.

While such information is not required to be provided by the environmental professional(s), the information can assist the environmental professional in identifying recognized environmental conditions. The "All Appropriate Inquiries" Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an LLP to CERCLA liability.

Haley & Aldrich provided the user with a responsibilities questionnaire; however, a completed questionnaire was not received. The absence of such information is not considered significant to our conclusions.

7. Findings and Opinions

7.1 DATA GAPS

Our ability to identify and evaluate RECs at the subject site is conditioned upon data gaps identified as part of this Phase I.

No significant data gaps were identified during the performance of this Phase I. Thus, it is our opinion that sufficient information was obtained to identify subject site conditions indicative of releases or threatened releases of hazardous substances and petroleum hydrocarbons. Our opinion is limited by the conditions prevailing at the time our work is performed and the applicable regulatory requirements in effect.

7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an REC in part as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

Our opinion regarding a REC's potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client's intended use for the subject site.

The following RECs listed below were identified in connection with the subject site.

REC #1: Historical and Current Use of the Subject Site as an Auto Repair Facility

Historical records indicate that the subject site formerly operated as a filling station from the 1920s until the late 1970s and three gasoline tanks were present on historical Sanborn Fire Insurance Maps. There are no records that these tanks were registered with the New York State Department of Environmental Conservation (NYSDEC) and no documentation of tank removal/closure was available. In addition, auto repair and auto-related operations were located in the southern portion of the subject site as early as 1929, and the subject site currently operates as an auto-repair shop, including auto painting. Certificates of Occupancy dated 1935 and 1962 indicate that former auto-related operations also included on-site greasing, automobile laundry, tire service, and battery services. During the site reconnaissance, the use and storage of hazardous chemicals and petroleum products were observed including an AST present in the central-west region of Lot 1, auto-related painting chemicals stored in the partial cellar of the auto-repair shop in Lot 1, and evidence of former bulk petroleum storage below the concrete foundation within the auto-repair shop in Lot 1. Staining was visible surrounding the AST, as well as throughout the garage. In addition, chemical odors were present throughout the partial cellar below the auto-repair shop where auto painting chemicals were stored.

Filling stations and auto repair facilities utilize hazardous materials including petroleum products and solvents. The historical and current use of the subject site is considered a REC as potential or undocumented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

REC #2: Poor Condition of Concrete Cover in Lot 1

Damaged concrete cover exposing subsurface soils was observed in the loading/parking area of Lot 1 outside the warehouse in Lot 3, and adjacent to the auto repair shop. The poor condition of concrete cover in this area of the subject site is considered a REC as potential or undocumented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

REC #3: Historical and Current Uses of Adjoining Properties

Upgradient adjoining properties surrounding the subject site to the north, northwest, west, and southwest, have historically operated as filling stations and/or auto-related facilities from as early as the late 1920s until the early 2000s. The property adjoining the subject site to the southwest currently operates as a gasoline service station. Many of these properties are listed in the Leaking Storage Tank and Spills databases for past releases of petroleum and/or hazardous materials. Additionally, the south adjacent property historically operated as a dry-cleaning facility from the late 1960s to the late 1970s.

Filling stations, auto-related facilities, and dry cleaners utilize hazardous materials including petroleum products and solvents. The historical and current site use of upgradient adjoining properties as filling stations, auto-related facilities, and dry cleaners, some with documented releases, is considered a REC as potential or documented releases of petroleum products, solvents, and/or other hazardous materials may have adversely affected groundwater, soil, and/or soil vapor at the subject site.

7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the subject site.

7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as an environmental condition “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

HRECs were not identified in connection with the subject site.

7.5 DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which "do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The ASTM E 1527-13 Standard notes that "conditions determined to be *de minimis* are not recognized environmental conditions."

The following *de minimis* conditions listed below were identified in connection with the subject site.

De Minimis Condition #1: Poor Housekeeping, Staining and Odors

During the site reconnaissance, poor housekeeping including open containers and poor storage of petroleum/hazardous chemicals with no spill prevention or cleanup kits present was observed in the auto repair garage in Lot 1. Petroleum-like staining and chemical odors were observed on the concrete floor throughout areas of the auto repair garage indicating improper handling of petroleum products. Floor drains were observed in the auto repair garage and are likely tied to the NYCDEP sewer system. Poor housekeeping was also observed in the partial cellar where storage of auto-related tools, supplies, chemicals (including auto painting), and auto parts were observed. In addition, strong chemical-like odors were observed in the partial cellar located below the auto-painting operation. *De Minimis* staining was observed throughout the concrete floors of the auto repair garage, on the concrete surface near the dumpster in front of the auto repair garage, and on the concrete surface in the loading/parking area in front of the two-story warehouse. The staining in the garage and near the dumpster appeared to be from petroleum products for auto repair uses.

A used bailer for hydraulic fluid removals was also present in the warehouse in Lot 3; staining and petroleum product were observed on the surface of the bailer. The concrete surface cover in the vicinity of areas with staining was observed in good condition with little to no damage.

7.6 OTHER FINDINGS

ASTM does not define the term "other finding"; however, Haley & Aldrich utilizes the category to indicate conditions of potential risk that are not clearly defined in the ASTM Standard. While not considered RECs, Haley & Aldrich identified the following other findings:

Other Finding #1: Active NYCDOB Violation for the Subject Site

An active New York City Department of Buildings (NYCDOB) Class 1 Violation exists on Block 5114, Lot 1 (auto garage), specifically for a construction violation. Records dated 5 April 2017 indicate work without a permit on a gas line being used for two gas-fired heaters was cited by the Brooklyn Plumbing Inspection Unit. Civil penalties are due to the NYCDOB.

8. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E 1527 of 545 Coney Island Avenue & 50 Hinckley Place, in Brooklyn, New York, the property. Any exceptions to or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- REC #1: Historical and Current Use of the Subject Site as an Auto Repair Facility
- REC #2: Poor Condition of Concrete Cover in Lot 1
- REC #3: Historical and Current Uses of Adjoining Properties

Refer to Section 7.2 above for our opinion regarding those RECs listed above. To further address the RECs listed above, we recommend the following:

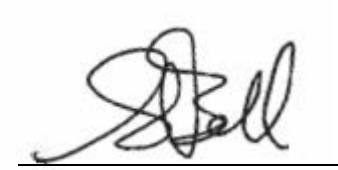
- Perform a Limited Phase II Subsurface Investigation to determine the nature and extent of contamination at the subject site, if present.

9. Environmental Professional Certification

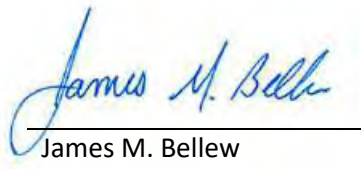
The undersigned declare the following:

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312 and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Suzanne M. Bell, P.E.
Project Manager



James M. Bellew
Principal

10. Credentials

This Phase I report was prepared by Sarah A. Commisso, under the direct supervision of Suzanne M. Bell, P.E. and James M. Bellew, who served as the Environmental Professional(s) for this project. Qualification information for the project personnel is provided below.

Suzanne M. Bell has over 14 years of professional experience in the environmental consulting industry. Ms. Bell's project work includes soil and groundwater environmental investigations, remediation, permitting and compliance, and Phase I ESAs throughout the United States for private, industrial, and government-based clients. She is a licensed Professional Engineer in the State of New York.

James M. Bellew is a Principal at Haley & Aldrich with a strong environmental background and fifteen years of experience in bedrock, soil, and groundwater investigations with a focus on remedial design and implementation.

11. Glossary and Other Descriptions

11.1 GLOSSARY

All Appropriate Inquiry (AAI) — that inquiry constituting "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in CERCLA, 42 U.S.C §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), assuming compliance with other elements of the defense.

Business Environmental Risk — a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

Controlled Recognized Environmental Condition (CREC) – a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Data Gap — a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De Minimis Conditions — conditions which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Environmental Professional — a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

Historical Recognized Environmental Condition (HREC) — a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Key Site Manager — the person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.

Material Threat —a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Orphan Site — (not ASTM E 1527-13 definition) — sites that could not be mapped due to poor or inadequate address information.

Recognized Environmental Condition (REC) — the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

11.2 DESCRIPTIONS OF DATABASES SEARCHED

Numerous regulatory databases were searched during this Phase I. Each database reviewed is described in the database report presented in Appendix D. Those databases required by the ASTM E 1527-13 Standard are identified below.

1. **NPL Sites:** The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for cleanup by the U.S. Environmental Protection Agency (USEPA).
2. **Delisted NPL Sites:** The Delisted National Priorities List (NPL) is a list of formal NPL sites formerly considered the highest priority for cleanup by the USEPA that met the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) for deletion from the NPL because a no further response was appropriate.
3. **CERCLIS Sites:** The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess whether they should be considered for inclusion on the NPL.
4. **CERCLIS-NFRAP Sites:** CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.
5. **Federal ERNS:** The Federal Emergency Response Notification System (ERNS) list tracks information on reported releases of oil and hazardous materials.
6. **RCRA non-CORRACTS TSD facilities:** The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.
7. **RCRA CORRACTS TSD facilities:** The RCRA CORRACTS TSD Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

8. **RCRA Generators:** The RCRA Generator list is maintained by the USEPA to track facilities that generate hazardous waste.

9. **Federal Institutional Controls/Engineering Controls:** The Federal Institutional Control list and Engineering Control list are maintained by the USEPA. Some Institutional Control and Engineering Control information may not be made publicly available and therefore will not be included on this registry.

10. **State and Tribal Equivalent NPL/CERCLIS Sites:** The (ASTM E 1527-13 Standard) requires searching "State and Tribal Equivalent NPL Sites." In New York, the equivalent NPL is the Inactive Hazardous Waste Disposal Sites, which is maintained by the NYSDEC.

11. **State and Tribal Registered Storage Tanks:** The NYSDEC maintains a list of aboveground and underground storage tanks registered with the NYSDEC Petroleum Bulk Storage Program.

12. **State and Tribal Landfills and Solid Waste Disposal Sites:** The NYSDEC maintains a list of regulated waste disposal sites.

13. **State and Tribal Leaking Storage Tanks:** The NYSDEC maintains a list of Leaking Storage Tanks (LUST/LAST). The LUST/LAST lists are a listing of release sites that have an Underground or Aboveground Storage Tank listed as the source.

14. **State and Tribal Institutional Controls/Engineering Controls:** The NYSDEC maintains a list of sites with Institutional controls or Engineering controls in place.

15. **State and Tribal Voluntary Cleanup Sites:** The NYSDEC maintains a list of Voluntary Cleanup sites.

16. **State and Tribal Brownfield Sites:** The NYSDEC maintains a list of Brownfield sites which includes properties where redevelopment or re-use may be compromised by the presence or presumed presence of hazardous materials or petroleum.

APPENDIX A
Limitations
Haley & Aldrich proposal dated 30 November 2021

APPENDIX A

Haley & Aldrich of New York Limitations

Environmental site assessment ("ESA") reports prepared by Haley & Aldrich, Inc. (Haley & Aldrich) are for the sole and exclusive use of its Client. Haley & Aldrich represents that the ESA was prepared in accordance with the ASTM International Standard E1527-13 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ("ASTM E 1527 13"). The findings, opinions, conclusions and information contained in the ASTM E 1527-13 ESA are limited to, and solely based upon, information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed.

All users of this ASTM E 1527-13 ESA are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms & Conditions, and Limitations for this ASTM E 1527-13 ESA. The findings, opinions, conclusions and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed. Haley & Aldrich has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Haley & Aldrich shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E 1527-13 ESA is prepared for the exclusive use of Haley & Aldrich's client in connection with the subject property for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property. There are no intended beneficiaries other than Haley & Aldrich's client. Haley & Aldrich shall owe no duty whatsoever to any other person or entity by issuing the ASTM E 1527-13 ESA. Use of this ASTM E 1527-13 ESA by any person or entity, including by Haley & Aldrich's client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the ASTM E 1527-13 ESA is adequate for such other use. Use of this ASTM E 1527-13 ESA by any person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entity's sole risk and shall be without legal exposure or liability to Haley & Aldrich.

Haley & Aldrich may authorize third-party reliance on the ASTM E 1527-13 ESA by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E 1527-13 ESA only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E 1527-13 ESA and the Proposal and its attachments, Terms & Conditions, and Limitations; (3) to accept the form and substance of Haley & Aldrich's reliance letter; and (4) to deliver to Haley & Aldrich a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party's acceptance of the aforementioned conditions. Upon Haley & Aldrich's receipt of the signed reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Haley & Aldrich's ASTM E 1527-13 ESA for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject property. The relying party(ies) agrees to bind each of its respective successors and assigns to the aforementioned terms and conditions.

This ASTM E 1527-13 ESA reflects site conditions observed and described by records available to Haley & Aldrich as of the date of ASTM E 1527-13 ESA preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E 1527-13 ESA. Accordingly, Haley & Aldrich's client and any other party to whom the ASTM E 1527-13 ESA is provided recognize and agree that Haley & Aldrich shall bear no liability for deviations from observed conditions or available records after the time of ASTM E 1527-13 ESA preparation. Haley & Aldrich makes no express or implied representation that the information contained in the ASTM E 1527-13 ESA has continued viability after 180 days of the ASTM E 1527-13 ESA's completion date, and any use or reliance on the ASTM E 1527-13 ESA after 180 days of the ASTM E 1527-13 ESA's completion date by Haley & Aldrich's client or any other authorized person or entity will be at that party's sole risk and without liability to Haley & Aldrich.

Notwithstanding anything contained herein, Haley & Aldrich shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject property after the effective date of the ASTM E 1527-13 ESA. Likewise, Haley & Aldrich shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

Attention: Mr. Zelig Weiss

Subject: Proposal for Environmental Consulting Services
Proposed Coney Island Avenue Development
545 Coney Island Avenue
Brooklyn, New York

Dear Mr. Weiss:

We are pleased to submit this proposal for environmental consulting services in connection with your proposed 545 Coney Island Avenue/50 Hinckley Place Development located in Brooklyn, New York (the "site"). Thank you for the opportunity to serve your team.

PROJECT BACKGROUND

The site, identified as Block 5114 Lots 1 and 3 on the New York City tax map in a residential R6A zoning area with C2-4 overlay, is 11,710 square feet (sf). The site is improved with a 1-story warehouse (Lot 1) and a 1-story auto body and repair facility with parking (lot 3). Further to this we understand that Block 5114, Lot 29 will be part of the development however it will not be part of the Brownfield boundary.

At this time, we understand the development will include a cellar level with a bottom excavation between 12 feet to 15 feet below current base plane. Groundwater in this area is estimated between 35-40 feet below grade.

SCOPE OF SERVICES

The scope of services proposed herein addresses satisfying the requirements to enter into the Brownfield Cleanup Program at the Remedial Action Phase.

Task 1: Phase I ESA: We will prepare a Phase I Environmental Site Assessment[1] (ESA) as detailed in Attachment I.

[1] The ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13 Standard) as referenced in 40 CFR Part 312 (the All Appropriate Inquiries [AAI] Rule).

Third Party Reliance

The Phase I ESA report prepared by Haley & Aldrich is for the sole and exclusive use V.D. Vilst Inc. c/o Riverside Developers USA Inc. In the event that additional parties or lenders and each of their respective successors and assigns ("Relying Parties") desire to rely on Haley & Aldrich's Phase I ESA report, such Relying Parties must obtain Haley & Aldrich's prior written authorization and execute Haley & Aldrich's Reliance Letter.

User Responsibilities

A user seeking protection from Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. These user responsibilities are further described in Attachment I and in the User Responsibilities Questionnaire in Attachment II.

We request that you provide the information in the questionnaire to us. Though it is not required by the AAI Rule or the ASTM E 1527-13 Standard that this information be provided to Haley & Aldrich, failure on the part of the user to obtain such information for their own records, should it be reasonably ascertainable, may invalidate the user's compliance with the AAI Rule for CERCLA liability protection in the future.

To meet the requirements of 40 CFR 312, a search for the existence of environmental liens, deed restrictions, engineering/institutional controls, activity and use limitations, etc. that are filed or recorded against the property must be conducted by the User. The scope of work included in Attachment I includes a search those records as part of the database search, with the exception of a lien search. We understand that as part of your due diligence you will either engage a title company, real estate attorney, or title professional to undertake a review of reasonably ascertainable recorded records for environmental liens deed restrictions, engineering/institutional controls, activity and use limitations, etc. currently recorded against or relating to the property. If you would instead like us to include a lien search as part of our assessment, this can be conducted at an additional cost.

Please note that if records must be requested from regulatory agencies, responses to agency records requests may not be received within the above timeframe and may influence our conclusions regarding RECs at the subject sites. We will supplement the report with the responses if they are received and contain information that would alter our conclusions.

[redacted]

[redacted]

ASSUMPTIONS

- CAD drawings that depict buildings, topography, utilities, and property are provided one week prior to subcontractor mobilization. We will estimate exploration locations and elevations based on tape measurements to existing site features and elevation contours on these drawings, respectively.

- Access/ right of entry into the site is provided by others. Permits, licenses, and/or agreements; site security; and police details are not required. Exploration equipment may remain parked on-site overnight. Private utility locating and vacuum extraction to clear utilities is not required.

- Explorations are performed using a limited access or track-mounted rig during regular weekday business hours in uninterrupted up to 8-hour shifts, and are not impacted by inclement weather, wet or soft ground, frozen ground, snow, obstructions, access issues, environmental conditions (PPE Level D assumed and no special handling of cuttings or fluids), or other unforeseen problems. Should impacts related to such arise, additional exploration time may be required at additional cost. We would inform you of progress issues and obtain your authorization prior to undertaking additional work beyond that indicated herein.

- Borings are backfilled with drill cuttings, and spoils, if any, will be left on-site. Surface restoration at test boring locations will consist of concrete patch in paved areas and surface smoothing in grassed areas. Subsidence of explorations may occur over time due to precipitation, freeze/thaw, backfill settlement, and other factors. Costs for repairs are not included.

TERMS, FEES, AND OTHER CONDITIONS

Services will be provided in accordance with the attached Standard Terms and Conditions (2020) for the lump sum fees summarized in the table below, which include the chemical testing laboratory and subsurface exploration subcontractor (non-union) as applicable.

Task	Scope Description	Units	Unit Type	Unit Price	Subtotals
1	Phase I ESA	1	Lump Sum	$3,250	$3,250
[redacted]					

SCHEDULE

We understand the critical nature of the project schedule and will expedite our work to meet your design milestones and provide interim recommendations as necessary and when possible.

AUTHORIZATION

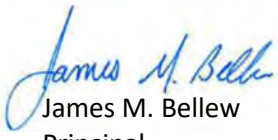
Consulting services will be provided in accordance with our enclosed Standard Terms And Conditions, dated 2020, and the Limitations in Attachment III, which are integral to this proposal. A retainer of [redacted] will be required to proceed.

If the arrangements herein are satisfactory to you, please indicate your acceptance by signing and returning one copy of this proposal along with the attachments and Standard Terms and Conditions. When accepted by you, this proposal together with the attached Terms and Conditions (2020) and Limitations (Attachment III) will constitute our Agreement.

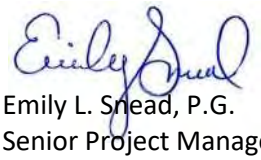
CLOSURE

Thank you for the opportunity to join your team on this exciting project. Please do not hesitate to contact the undersigned if you wish to discuss any aspect of this proposal or the project.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK



James M. Bellew
Principal



Emily L. Snead, P.G.

Standard Terms and Conditions, 2020

Attachment I

ASTM E 1527-13
Phase I Environmental Site Assessment Standard Scope of Services & User Responsibilities

Scope of Services

The scope of services below summarizes Haley & Aldrich of New York's proposed environmental professional services required to complete an environmental site assessment and "All Appropriate Inquiry" (AAI) for a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601), in accordance with 40 CFR Part 312.20 (All Appropriate Inquiries), to permit a user to satisfy one of the requirements to qualify for CERCLA's innocent landowner defense, contiguous property owner liability protection, or bona fide prospective purchaser liability protection (landowner liability protections or LLP).

Title 40, Part 312.11 of the Code of Federal Regulations provides that the procedures of ASTM International Standard E 1527-13 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM E 1527-13) may be used to comply with the requirements of 40 CFR 312, AAI.

The goal of ASTM E 1527-13 is to assess whether recognized environmental conditions (REC) exist at the subject site. REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Accordingly, the five core components of Haley & Aldrich's standard scope of services, performed in accordance with ASTM E 1527-13, shall include:

1. Records Review – In accordance with ASTM E 1527-13, Haley & Aldrich will obtain and review reasonably ascertainable records that will help identify RECs in connection with the subject site.

2. Site Reconnaissance - Haley & Aldrich will visit the subject site to obtain information indicating the likelihood of identifying RECs in connection with the subject site. On the visit to the subject site, Haley & Aldrich will visually observe and document the subject site and the periphery of any structure(s) located on the subject site to the extent our view of the same is not obstructed. Additionally, Haley & Aldrich shall visually observe and document accessible components of the interior of any building located on the subject site. Conditions of adjoining properties will also be observed and documented from the subject site boundaries and/or public thoroughfares.

3. Interviews with Owners and Occupants - ASTM E 1527-13 requires that interviews be performed with a "key site manager" (a person with good knowledge of uses and physical characteristics of the subject site), as well as, past and present owners, operators, and occupants of the subject

site to obtain information indicating RECs in connection with the subject site. Please provide contact information for the "key site manager" so Haley & Aldrich can arrange a mutually convenient appointment to interview the key site manager. We also ask that you advise all known past and present owners, operators, and occupants of our site visit so we may interview a number of them as required by ASTM E 1527-13. Lastly, in accordance with standard ASTM E 1527-13, we request that you arrange to have assembled and available to Haley & Aldrich, on the day of our subject site visit, or as soon as possible, copies of any previous environmental documents (user-provided information), including: environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for underground and above-ground storage tanks, registrations for injection systems, material data safety sheets, community right-to-know plan, safety plans, spill prevention plans, emergency preparedness plans, hydrogeologic reports for the subject site, any government notices concerning the subject site, hazardous waste records and reports, geotechnical studies, risk assessments, recorded Activity and Use Limitations (AUL), environmental land use restrictions (ELUR), or environmental liens.

4. Interviews with State and/or Local Government Officials – Haley & Aldrich shall reasonably attempt to interview applicable state and/or local government officials to obtain information indicating RECs in connection with the subject site.

5. Evaluation and Report - Haley & Aldrich will interpret the information and data assembled from work scope items No. 1 through No. 4 above, and will formulate conclusions regarding evidence of RECs at the subject site and their potential impact on the subject site. We will prepare a report in accordance with the format set forth in ASTM E 1527-13 unless otherwise directed. The report will generally include a summary, introduction, site description, records, site and interview documentation, supporting documents, findings, conclusions, recommendations, and appropriate professional statements as required by ASTM E 1527-13.

User Responsibilities

A user seeking protection from CERCLA liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix XI of the ASTM E 1527-13 Standard.

The AAI Rule requires that the user of the report consider the following:

- Whether the user has specialized knowledge about previous ownership or uses of the subject site that may be material to identifying RECs;

- whether the user has determined that the subject site's Title contains environmental liens or other information related to the environmental condition of the subject site, including engineering and institutional controls and AULs, as defined by ASTM;

- whether the user is aware of commonly known or reasonably ascertainable information about the subject site including whether or not the presence of contamination is likely on the subject site and to what degree it can be detected; and

- whether the user has prior knowledge that the price of the subject site has been reduced for environmentally related reasons.

We request that you provide this information to us. A copy of the User Responsibility Questionnaire is included in Attachment II. Though it is not required by the AAI Rule or the ASTM E 1527-13 Standard that this information be provided to Haley & Aldrich, failure on the part of the user to obtain such information for their own records, should it be reasonably ascertainable, may invalidate the user's compliance with the AAI Rule for CERCLA liability protection in the future.

Attachment II

User Responsibilities Questionnaire
All Appropriate Inquiries Under ASTM E1527-13

Date:
Subject Site Name:
Address:
Prepared By:

In order to qualify for one of the Landowner Liability Protections (LLP) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must conduct "All Appropriate Inquiry" (AAI), which includes consideration of the following information (if available). Though it is not required that this information be provided to the environmental professional for the completion of the ASTM E1527-13 Phase I Environmental Site Assessment, failure of the user to consider this information could result in a determination that AAI is not complete.

(1.) Environmental cleanup liens that are filed or recorded against the subject site (40 CFR 312.25).
Are you aware of any environmental cleanup laws against the subject site that are filed or recorded under federal, tribal, state, or local law? If yes, give a description and attach copies of the liens.

(2.) Activity and land use limitations that are in place on the subject site or that have been filed or recorded in a registry (40 CFR 312.26).
Are you aware of any Activity and Use Limitations (AUL), such as engineering controls, land use restrictions or institutional controls that are in place at the subject site or have been filed or recorded in a registry under federal, tribal, state, or local law?

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
As the user of this Phase I Environmental Site Assessment do you have any specialized knowledge or experience related to the subject site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(4.) Relationship of the purchase price to the fair market value of the subject site if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this subject site reasonably reflect the market value of the subject site? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject site?

(5.) Commonly known or reasonably ascertainable information about the subject site (40 CFR 312.30).
Are you aware of commonly known, or reasonably ascertainable information about the subject site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the subject site*?*

(b.) Do you know the specific chemicals that are present or once were present at the subject site?

(c.) Do you know of spills or other chemical releases that have taken place at the subject site?

(d.) Do you know of any environmental cleanups that have taken place at the subject site?

(6.) The degree of obviousness of the presence or likely presence of contamination at the subject site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
As the user of this Phase I Environmental Site Assessment, based on your knowledge and experience related to the subject site are there any obvious indicators that point to the presence or likely presence of contamination at the subject site?

Signature (User/Authorized Representative) Title Date

Attachment III

Haley & Aldrich of New York Limitations

Environmental site assessment (Phase I Environmental Site Assessment) reports prepared by Haley & Aldrich are for the sole and exclusive use of its Client. Haley & Aldrich represents that the Phase I Environmental Site Assessment was prepared in accordance with the ASTM International Standard E1527-13 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM E 1527-13). The findings, opinions, conclusions, and information contained in the ASTM E 1527-13 Phase I Environmental Site Assessment are limited to, and solely based upon, information reasonably ascertainable by Haley & Aldrich at the time the ASTM E1527-13 Phase I Environmental Site Assessment was completed.

All users of this ASTM E 1527-13 Phase I Environmental Site Assessment are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms and Conditions, and Limitations for this ASTM E 1527-13 Phase I Environmental Site Assessment. The findings, opinions, conclusions, and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 Phase I Environmental Site Assessment was completed. Haley & Aldrich has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Haley & Aldrich shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E 1527-13 Phase I Environmental Site Assessment is prepared for the exclusive use of Haley & Aldrich's client in connection with the subject site for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject site. There are no intended beneficiaries other than Haley & Aldrich's client. Haley & Aldrich shall owe no duty whatsoever to any other person or entity by issuing the ASTM E 1527-13 Phase I Environmental Site Assessment. Use of this ASTM E 1527-13 Phase I Environmental Site Assessment by any person or entity, including by Haley & Aldrich's client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject site is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the ASTM E 1527-13 Phase I Environmental Site Assessment is adequate for such other use. Use of this ASTM E 1527-13 Phase I Environmental Site Assessment by any person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entity's sole risk and shall be without legal exposure or liability to Haley & Aldrich.

Haley & Aldrich may authorize third-party reliance on the ASTM E 1527-13 Phase I Environmental Site Assessment by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E 1527-13 Phase I Environmental Site Assessment only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E1527-13 Phase I Environmental Site Assessment report and the proposal and its Attachments, Terms and Conditions, and Limitations; (3) to accept the form and substance of Haley & Aldrich's reliance letter; and (4) to deliver to Haley & Aldrich a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party's acceptance of the aforementioned conditions. Upon Haley & Aldrich's receipt of the signed

reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Haley & Aldrich's ASTM E1527-13 Phase I Environmental Site Assessment for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject site. The relying party(ies) agree(s) to bind each of its respective successors and assigns to the aforementioned Terms and Conditions.

This ASTM E 1527-13 Phase I Environmental Site Assessment reflects site conditions observed and described by records available to Haley & Aldrich as of the date of ASTM E 1527-13 Phase I Environmental Site Assessment preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E 1527-13 Phase I Environmental Site Assessment. Accordingly, Haley & Aldrich's client and any other party to whom the ASTM E 1527-13 Phase I Environmental Site Assessment is provided recognize and agree that Haley & Aldrich shall bear no liability for deviations from observed conditions or available records after the time of ASTM E 1527-13 Phase I Environmental Site Assessment preparation. Haley & Aldrich makes no express or implied representation that the information contained in the ASTM E 1527-13 Phase I Environmental Site Assessment has continued viability after 180 days of the ASTM E 1527-13 Phase I Environmental Site Assessment's completion date, and any use or reliance on the ASTM E 1527-13 Phase I Environmental Site Assessment after 180 days of the ASTM E 1527-13 Phase I Environmental Site Assessment's completion date by Haley & Aldrich's client or any other authorized person or entity will be at that party's sole risk and without liability to Haley & Aldrich.

Notwithstanding anything contained herein, Haley & Aldrich shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject site after the effective date of the ASTM E 1527-13 Phase I Environmental Site Assessment. Likewise, Haley & Aldrich shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

1. INTRODUCTION. These Standard Terms and Conditions, together with the accompanying proposal and any attachments thereto ("Proposal"), constitute the Agreement between Haley & Aldrich, Inc., including its affiliates and subsidiaries ("Haley & Aldrich"), and the entity or person to whom the proposal is addressed ("Client") for the project at the project site ("Site") as may be referenced in the Proposal. Both parties agree that no third-party beneficiaries are intended by this Agreement, which is defined to include these Terms and Conditions and Haley & Aldrich's Proposal.

2. HEADINGS. The headings used in these terms and conditions are inserted for the convenience of the parties and shall not define, limit, or describe the scope or the intent of the provisions set forth herein.

3. PERFORMANCE OF SERVICES. Client agrees that Haley & Aldrich has been engaged to provide professional services only, and that Haley & Aldrich does not owe a fiduciary responsibility to Client. Haley & Aldrich's services will be performed in accordance with generally accepted practices of engineers and/or scientists providing similar services at the same time, in the same locale, and under like circumstances ("Standard of Care"). No warranty, expressed or implied, is included or intended by this Agreement.

4. CLIENT RESPONSIBILITIES. Except as otherwise agreed, Client will secure the approvals, Site access, permits, licenses, and consents necessary for performance of Haley & Aldrich's services under this Agreement. Client shall provide Haley & Aldrich with a plan delineating the boundaries of the Site and all documents, reports, surveys, plans, drawings, information concerning known or suspected Site conditions, above and below ground, information related to hazardous materials or other environmental or geotechnical conditions at the Site, utility information and other information that is reasonably foreseeable to be pertinent to Haley & Aldrich's services under this Agreement. If Client is not the owner of the Site, Client will make all reasonable attempts to obtain these same documents and provide them to Haley & Aldrich. Unless otherwise agreed to in writing by Haley & Aldrich, Haley & Aldrich shall be entitled to rely on documents and information Client provides.

5. PAYMENT. Invoices will generally be submitted monthly. Payment will be due within thirty (30) days of invoice date. Interest will be added to accounts in arrears at the rate of one and one-half (1.5) percent per month on the outstanding balance. In the event Haley & Aldrich must engage counsel to enforce overdue payments, Client will reimburse Haley & Aldrich for all attorney's fees and court costs.

6. INSURANCE. Haley & Aldrich will maintain: workers' compensation insurance as required under the laws of the state in which the services will be performed; commercial general liability insurance with a combined single limit of $1,000,000 per occurrence and $2,000,000 in the aggregate for bodily injury, including death and property damage; automobile liability insurance with a combined single limit of $1,000,000 per occurrence; professional liability insurance in the amount of $1,000,000 per claim and in the aggregate; and contractor's pollution liability insurance in the amount of $1,000,000 per occurrence and in the aggregate.

7. OWNERSHIP OF DOCUMENTS AND AUTHORIZED USE. All documents and all processes created, prepared, or furnished under this Agreement by Haley & Aldrich are its instruments of service and all ownership and copyright rights of the same shall remain with Haley & Aldrich. Haley & Aldrich's instruments of service are prepared solely for Client and made available to Client only for the purpose set forth in the Proposal. Client may make and retain copies of Haley & Aldrich's instruments of service, opinions, or reports or otherwise related documents ("Instruments of Services") for the project at the Site. Any (1) reuse or modification of Haley & Aldrich's Instruments of Services without written verification or adaption by Haley & Aldrich for the specific purpose intended and/or (2) unauthorized use of, or reliance upon, Haley & Aldrich's Instruments of Services by any other party, or for any other project or purpose, except and unless Haley & Aldrich provides prior written authorization, shall be at Client's and/or any third party's sole risk and without any liability or legal exposure to Haley & Aldrich. Client shall indemnify, defend, and hold harmless Haley & Aldrich from all claims, damages, losses, and expenses, including attorney's fees, arising out of or resulting therefrom. Client agrees that any such verification or adaptation of Haley & Aldrich's documents and processes shall entitle Haley & Aldrich to just and proper compensation.

8. CONFIDENTIALITY. Haley & Aldrich will hold confidential all business and technical information obtained or generated in performing of services under this Agreement. Haley & Aldrich will not disclose such information without Client's consent except to the extent required for: (1) performance of services under this Agreement; (2) compliance with professional standards of conduct for preservation of the public safety, health, and welfare; (3) compliance with any court order, statute, law, or governmental directive; and/or (4) protection of Haley & Aldrich against claims or liabilities arising from the performance of services under this Agreement. Haley & Aldrich's obligations hereunder shall not apply to information in the public domain or lawfully obtained on a non-confidential basis from others.

9. SUSPENSION OF WORK AND TERMINATION. Client may, at any time, suspend further work by Haley & Aldrich or terminate this Agreement. Suspension or termination shall be by written notice effective three (3) business days after receipt by Haley & Aldrich. Client agrees to compensate Haley & Aldrich for all services performed and commitments made prior to the effective date of the suspension or termination, together with reimbursable expenses including those of subcontractors, subconsultants, and vendors. Client acknowledges that its failure to pay all invoices on time and in full, including accrued interest, may result in a suspension of services by Haley & Aldrich. In the event of a suspension of services due to Client's failure to pay all invoices on time and in full, Haley & Aldrich shall have no liability to Client for delay or damage to Client or others because of such suspension of services.

10. FORCE MAJEURE. Except for Client's obligation to pay for services rendered, no liability will attach to either party from delay in performance or nonperformance caused by circumstances or events beyond the reasonable control of the party affected, including, but not limited to, acts of God, fire, flood, unanticipated Site or subsurface conditions, pandemics, explosion, war, terrorism, request or intervention of a governmental authority (foreign or domestic), court order (whether at law or in equity), labor relations, accidents, delays or inability to obtain materials, equipment, fuel or transportation.

11. SUBSURFACE RISKS. Client shall disclose to Haley & Aldrich any known or suspected subsurface conditions, below ground structures, and information related to hazardous materials or other environmental or geotechnical conditions at the Site. Client recognizes that inherent risks occur in the exploration and evaluation of subsurface conditions. Even with the information the Client provides to Haley & Aldrich and a comprehensive sampling, testing and exploration program performed in accordance with the Standard of Care, certain underlying conditions and/or structures may not be identified, and Client agrees to accept this level of risk. Client agrees to indemnify and hold Haley & Aldrich, and each of their subcontractors, consultants, officers, directors, and employees (Haley & Aldrich) harmless against any and all claims, losses, liabilities or damages, direct or consequential, related to interference with subterranean structures, or other such subsurface conditions, substances, or features that are not called to Haley & Aldrich's attention in writing, shown on documents provided by Client, or could not be reasonably detected by exercising the Standard of Care.

12. HAZARDS AND HAZARDOUS MATERIALS.

12.1 Disclosure of Hazards (Right to Know). Haley & Aldrich will take reasonable precautions for the health and safety of Haley & Aldrich's employees while at the Site. Client will obtain from Site owner, and others as applicable, and furnish to Haley & Aldrich, prior to Haley & Aldrich beginning services under this Agreement, all available information concerning Site conditions, including, but not limited to: subsurface conditions, oil, hazardous material, toxic mold and biological conditions, radioactive or asbestos material in, on or near the Site. If such a material or condition is discovered that had not been disclosed to Haley & Aldrich, then, upon notification, Client and Haley & Aldrich shall seek an equitable adjustment to be made to this Agreement. By authorizing Haley & Aldrich to proceed with the services, Client confirms that Haley & Aldrich has not created nor contributed to the presence of any hazardous substances at or near the Site. Client agrees to assume all liability and shall indemnify, defend and hold Haley & Aldrich harmless from any claims, losses, liabilities or damages arising out of (1) personal injury or death resulting from such hazardous material or condition and/or (2) a release of hazardous substances except to the extent the release was caused by Haley & Aldrich's gross negligence or willful misconduct in the performance of the services.

12.2 Hazardous Materials. Before any hazardous or contaminated materials are removed from the Site, Client shall sign manifests naming Client as the Generator of the waste (or, if Client is not the Generator, Client will arrange for the Generator to sign the manifest). Client shall select the treatment or disposal facility to which any waste is taken. Haley & Aldrich shall not be the Generator, Owner, Arranger, Operator, nor will it possess, take title to, or assume any legal liability for any hazardous or contaminated materials at or removed from the Site. Haley & Aldrich shall not have responsibility for or control of the Site or of operations or activities at the Site other than its own. Haley & Aldrich shall not undertake, arrange for or control the handling, treatment, storage, disposal, removal, shipment, transportation or disposal of any hazardous or contaminated materials at or removed from the Site, other than laboratory samples it collects or tests (which shall be returned to Client for disposal). Client agrees to defend, indemnify and hold harmless Haley & Aldrich for any costs or liability incurred by Haley & Aldrich in defense of or in payment for any legal actions in which it is alleged that Haley & Aldrich is the Owner, Operator, Generator, Arranger, Treater, Storer or Disposer of hazardous waste. Capitalized terms used herein shall have the meanings assigned to them in RCRA and CERCLA.

13. DIFFERING SITE CONDITIONS. If, during the course of performance of this Agreement, conditions or circumstances are discovered, which were not contemplated or anticipated by Haley & Aldrich, or otherwise provided to Haley & Aldrich by the Client, at the commencement of this Agreement or which differ materially from those indicated in Haley & Aldrich's Proposal, Haley & Aldrich may notify Client in writing of the newly discovered conditions or circumstances, and Client and

Haley & Aldrich shall renegotiate, in good faith, the scope of work and terms and conditions of this Agreement. If amended terms and conditions cannot be agreed upon within thirty (30) days after notice, Haley & Aldrich may terminate this Agreement.

14. SAMPLES. Samples of soil, rock, water, waste, or other materials collected from the Site may be disposed of sixty (60) days from sampling date unless Client advises otherwise in writing or unless applicable law requires their retention. Haley & Aldrich will dispose of such samples with a qualified waste disposal contractor. Client shall pay all costs associated with the storage, transport, and disposal of samples, and agrees to indemnify, defend and hold Haley & Aldrich harmless for any liability arising therefrom. If samples must be stored by Haley & Aldrich for longer than sixty (60) days from sampling date, Client shall pay all associated storage costs. Client recognizes and agrees that Haley & Aldrich is a bailee and assumes neither title to said waste or samples nor any responsibility as generator of said waste orsamples.

15. ENGINEERING/CONSULTING SERVICES DURING CONSTRUCTION. Haley & Aldrich shall not, during construction Site visits, shop drawing review, or as a result of observations of construction work, supervise, direct, or have control over any contractors' means, methods, work sequences or procedures of construction selected by contractors. Haley & Aldrich shall not be liable for any of contractors' work, safety precautions or programs incident to contractors' work. Haley & Aldrich shall not have any liability whatsoever for any failure of contractors to comply with any laws, rules, regulations, ordinances, codes or orders. Haley & Aldrich neither guarantees nor warrants the performance of any contractors' work and does not assume responsibility for any contractors' failure to furnish any labor, materials, equipment or related work in accordance with any agreement or contract documents.

16. ADDITIONAL SERVICES. Haley & Aldrich's compensation hereunder shall be subject to adjustment to recognize any increase in costs due to additional services requested or authorized by Client. Such additional services shall include, but not be limited to, additions in the manner or method of Haley & Aldrich's performance of Services or due to changes in schedule or circumstances not solely caused by or under the control of Haley & Aldrich. These additional services shall be verified in writing by the parties and performed on the basis of mutually agreed rates, or other such basis agreed to by the parties.

17. WAIVER OF CONSEQUENTIAL DAMAGES. Neither party, nor their parent, affiliated or subsidiary companies, nor the officers, directors, agents, employees, or contractors of any of the foregoing, shall be liable to the other in any action or claim for incidental, indirect, special, collateral, punitive, exemplary or consequential damages arising out of or related to the services, whether the action in which recovery of damages is sought is based upon contract, tort (including, to the greatest extent permitted by law, the sole, concurrent or other negligence, whether active or passive, and strict liability of any protected individual or entity), statute or otherwise.

18. WAIVER OF PERSONAL LIABILITY. No officer, director, or employee of Haley & Aldrich shall bear any personal liability to Client for any injuries, claims, demands, losses, expenses or damages, of whatever kind or character, arising out of or in any way related to this Agreement or the performance of services hereunder.

19. LIMITATION OF REMEDIES. To the fullest extent permitted by law, the total aggregate liability of Haley & Aldrich, its officers, directors, and employees to Client, and anyone claiming by, through, or under Client, including all authorized Relying Parties, as applicable, for any and all injuries, claims, losses, expenses, or damages whatsoever arising out of or in any way related to Haley & Aldrich's services, from any cause or causes whatsoever, including, but not limited to, negligence, errors, omissions, strict liability or contract, shall be limited to an aggregate amount of $50,000 or Haley & Aldrich's fee, whichever is greater.

    If Client prefers not to limit Haley & Aldrich's liability to this sum, Haley & Aldrich may increase this limitation upon Client's written request, provided that Client agrees to pay an additional fee agreed to by the parties. The additional fee is for the additional risk assumed by Haley & Aldrich and is not a charge for additional liability insurance.

20. DISPUTE RESOLUTION. If a dispute arises out of or relates to this Agreement or the breach thereof, the parties will attempt in good faith to resolve the dispute through negotiation. Except for payment matters, if a dispute is not resolved by these negotiations, the matter will be submitted to non-binding mediation with a mutually agreed upon mediator. The parties agree that they will participate in the mediation in good faith and that they will share equally in its costs. Except for payment matters or to preserve mechanics' lien rights, neither party will commence a civil action until after the completion of an initial mediation session.

21. LEGAL ACTION. All legal actions by either party against the other for any cause or causes, including, but not limited to, breach of this Agreement, negligence, misrepresentations, breach of warranty or failure to perform in accordance with the

Standard of Care, however denominated, shall be barred two (2) years from the day after completion of Haley & Aldrich's Services. Client agrees to compensate Haley & Aldrich for services performed in response to any legal action, subpoena, or court order arising out of or related to Haley & Aldrich's services under this Agreement at Haley & Aldrich's Standard Fee Schedule then in effect.

22. TAXES. Unless otherwise provided for in the scope of services, Haley & Aldrich's fee is exclusive of sales, use, or similar tax imposed by taxing jurisdictions on the amount of fees or services. Should such taxes be imposed, Haley & Aldrich will collect and remit any applicable sales taxes. Client's documentation of exemption from sales or use taxes, if any, must be provided to Haley & Aldrich prior to services being performed.

23. SEVERABILITY. If any of these Terms and Conditions are finally determined to be invalid or unenforceable in whole or part, the remaining provisions shall remain in full force and effect and be binding upon the parties. The parties agree to reform these Terms and Conditions to replace any such invalid or unenforceable provision with a valid and enforceable provision that comes as close as possible to the intention of the stricken provision.

24. SURVIVAL. All Terms and Conditions contained herein shall survive the completion of Haley & Aldrich's services on this project or the termination of services for any cause.

25. GOVERNING LAW AND JURISDICTION. This Agreement shall be solely governed, and construed and enforced, in accordance with the laws of the State or Commonwealth where the services are performed, without regard to its conflict of laws rules. Client agrees to submit and consent to the jurisdiction of the courts in that State or Commonwealth in any action brought to enforce (or otherwise arising from or relating to) this Agreement.

26. ASSIGNMENT. This Agreement shall not be assigned by either party without the express written consent of the other.

27. PRECEDENCE. These Terms and Conditions shall take precedence over any inconsistent or contradictory provisions contained in any proposal, contract, purchase order, requisition, notice to proceed, right of entry, or like document.

28. ENTIRE AGREEMENT. **Client and Haley & Aldrich agree that all provisions of these Terms and Conditions were mutually negotiated and agreed upon, and that this Agreement represents the entire Agreement between the parties.** No modification or alteration of any provision of this Agreement shall be binding upon either Client or Haley & Aldrich, unless such modification or alteration is mutually agreed to, is in writing, and is signed by the party against whom such modification or alteration is sought to be enforced.

END OF TERMS AND CONDITIONS

Re: GPRS FINDINGS REPORT

50 HINCKLEY PL, BROOKKYN, NY

Thank you for the opportunity to serve you on your project. Please refer to the job summary report that is sent separately from this document for additional notes related to our site visit. Included with this submittal email, please find the document list below which includes a link to download your files from our database:

Document List:

COPIES	DATE	DESCRIPTION	LINK
1	12/10/2021	PDF Aerial Overlay - Open with PDF reader	PDF
1	12/10/2021	PDF Aerial Overlay with Icons - Open with PDF reader	PDF
1	12/10/2021	KMZ file - Open with Google Earth	KMZ
1	12/10/2021	SHP files - For use in CAD or GIS software	SHP

As an additional service, we also provide CAD drawings and can even use your existing drawings as background linework for our files. If you have already ordered CAD as a deliverable option, the CAD will be delivered as a separate submittal, typically in the next few days. If you would like CAD as a deliverable and have not yet requested it, please reach out to us to get a quote to have the service added to your job by replying to this email or giving me a call.

As a reminder, we do not provide surveying or engineering services at GPRS. The data provided is at mapping quality for general reference only. The GNSS/GPS locators that we utilize are certified for sub-meter accuracy and locations were attained by our project managers that are not surveying professionals. Some of the documents we provide with our deliverable have embedded location and elevation data that should be used at your own risk due to accuracy limitations listed above. If survey and design level accuracy is needed, you will need to hire a licensed surveyor in that state to pick up field markings to provide you with the desired data separate from GPRS. This letter is subject to our Terms and Conditions which are listed and incorporated by reference here: https://gp-radar.com/terms-conditions.

Please let me know if you have any questions, concerns, or additional requests. I look forward to working with you again soon.

Thank you!
Raymond Williams

Lead Technician LAMANNO, TYLER **Phone** 732-672-9340 **Email** tyler.lamanno@gprsinc.com

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS technician on this project.

EQUIPMENT USED

The following equipment was used on this project:

- Underground Scanning GPR antenna. Typically capable of detecting objects up to 8' deep or more in ideal conditions but maximum effective depth can vary widely and depends on site and soil conditions. Depth penetration is most commonly limited by moisture and clay/conductive soils. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.
- Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.

Work Performed

Ground Penetrating Radar Systems performed the following work on this project:

Underground Utility

The scope of work included scanning the specified area to locate underground utilities. A tracer signal was sent along any accessible metallic utility or tracer wire, and the area was scanned with GPR to locate any additional targets. The locations of any detected utilities and anomalies were marked directly at the site with paint, flags, stakes, or other appropriate means, and results were reviewed with onsite personnel unless otherwise noted.

- The total area scanned was approximately 35000 square feet.
- 35,000 sf open-air vacant lot (former parking lot)
- The effective depth of GPR will vary throughout a site depending on surface and soil conditions. In this area, the maximum effective GPR depth was approximately 3 feet.

Job Summary

Job Date : 12/3/2021

- GPR and EM wand use to locate potentially utilities on site.

  GPR struggled to see anything past 3 feet. Terrain is different in some areas.

  GPR Data revealed debris in the ground in a few different location. It's not consistent enough for me to believe that it's pipe of any sort. Since I was unable to determine what it could be it is marked in pink.

  EM wand who is used to passively scan the area in search of any electrical lines underground. I was unable to pick up any potential lines within the scope.

  I recommend staying at least 3 feet away from all marks on site. I also recommend handshaking the first 2 feet if possible.

  Detailed info to follow in the formal report.

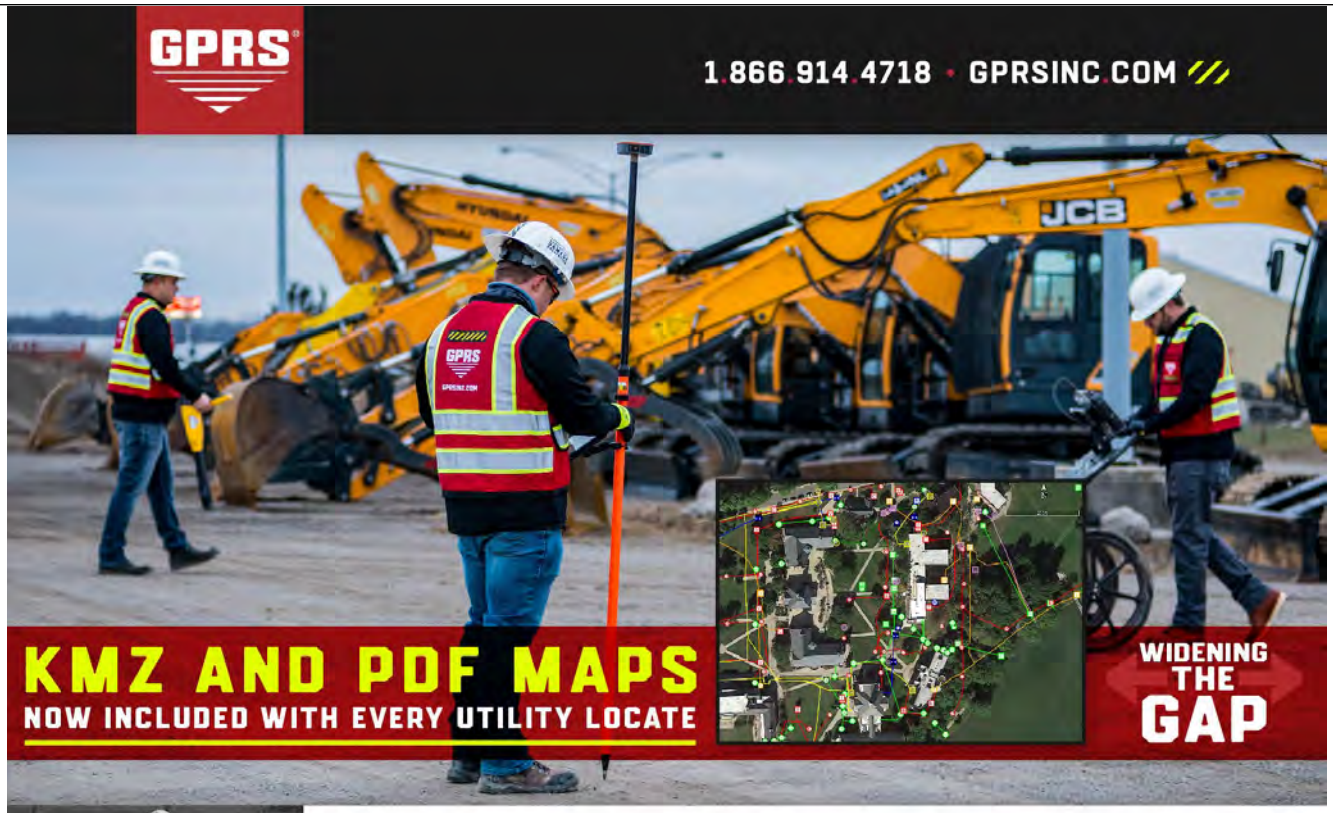
Job Summary

Job Date : 12/3/2021



UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply and your schedule can be delayed.

VIDEO PIPE INSPECTION

Video Pipe Inspection (CCTV) is a service used to inspect underground water, sewer and lateral pipelines. VPI is a great tool for investigating cross-bores, structural faults and damages, and lateral line inspection.

CONCRETE IMAGING

With new build construction and renovation projects, the likelihood of needing to cut or core concrete is high. There is an inherent risk of striking rebar, conduits, and post tension cables during the cutting or coring process. Our industry-leading concrete scanning services can mitigate the risks associated with saw cutting and core drilling concrete slabs.

MAPPING & MODELING

As-built utility maps, structural as-built drawings, and facility maps are actually meant to be “as-intended” drawings as the construction process or renovations can cause deviations to the original plan. GPRS can create a comprehensive facility map that contains precise as-built conditions – giving you peace of mind by knowing exactly what exists on your property.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Haley & Aldrich, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 204391

Project: 545 C.I, Ave & 50 Hinckley Pl.

Coordinates:

Latitude:	40.64434 40° 38' 40" North

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Haley & Aldrich, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Borough Superintendent

CERTIFICATE WILL BE NULL AND VOID IF ALTERED IN ANY MANNER OR ADDITIONS ARE MADE THERETO.

NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

"§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/09/2021 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/09/2021 has revealed that there are 51 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 25 NY UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/09/2021 has revealed that there are 15 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 40 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

REPORTED AS 453 CONEY ISLAND AVE. 9/16/03 Two more quarters and will submit closure if levels stay low. 12/1/03 Reassigned from Sangesland to Foley. Reference spill #9308834. Added waste oil to material spilled due to address spill #9308834. 1/26/04 Received update report from Northeast Environmental Solutions(NES, 1/23/04). DTW is 37-38'bgs. Groundwater results do not contain BTEX/MTBE above GWQS. Additional sampling will be performed in March 2004. If March 2004 samples indicate consistent low conc of dissolved MTBE, site closure will be proposed. 7/12/04 Received update report (NES, 5/4/04) on 5/10/04. Groundwater monitoring of on-site wells has not shown any BTEX/MTBE over last four quarters. "

DEC Memo:	"7/13/07 - Raphael Ketani. A 275 gal. waste oil tank was discovered to be leaking at the seams today. I spoke to the station manager, Cuneynt Erdal (718) 435-0099. Mr. Erdal said that the station is owned by Shell. The bottom seam corroded. He believes it's from people urinating on the tank as the tank stinks badly and he knows people go there in the middle of the night. He has stopped putting oil in the tank and has spread absorbent around the tank. He said it's not a quick leak and is manageable. He said some seepage was noticed several days ago, but he called in the spill only today as Shell told him to do so. He said that the station was inspected by Veronica Zhune of DEC Region 2 Spills on March 2007 and everything was fine. I asked him about the concrete pavement the tank is sitting on. He said it is in good shape with no cracks or damage. He said he called 1-866-HIGH-SHELL, Evan at the Engineering Department of Shell. He said that Island Tank will replace the tank. Mr. Erdal added that

SHELL OIL (Continued) **S100781957**

J.B. Waste Oil will come on monday and drain the tank. 7/16/07 - Raphael Ketani. I called Mr. Erdal today. He said that the tank was completely drained and he isn't letting anyone put anything in it. I asked him whether the seepage became worse. He said it remained a slow seepage. Based up my conversations with Mr. Erdal, I am closing the spill case."

Remarks: "SEEPAGE IN SEEMS IN WASTE OIL TANK: ON CONCRETE ONLY AND WILL BE VACCED OUT AND HAVE STOPPED PUTTING OIL IN"

DEC Memo:	"10/21/04 Update from Matt Schneck, NES: NES was on-site to oversee

SHELL OIL (Continued) **S100781957**

the removal of an underground hydraulic lift. Upon removal, impacted soils were observed. It appeared the soil was impacted by hydraulic fluid from the lift. We expanded the hole in the floor of the building so that we could excavate as much soil as possible, but we were limited by the presence of the building, overhead restrictions, etc. We excavated as much as we could (approximately 10 yards of soil) and collected endpoints. We are waiting for the laboratory results for the endpoint samples we collected. After we receive the results, I will send a letter summarizing activities and provide recommendations. 11/23/04 Closure request submitted by NES during meeting with Rob Rule, Shell. Shell contracted Island Pump and Tank to excavate and remove one hydraulic lift cylinder. Excavation and removal was conducted 10/11-10/12-04. The lift was in poor condition, multiple areas were corroded and multiple perforations visible. Soils beneath the hydraulic lift were excavated (4'wideX6'longX10'deep) and screened by PID. The PID did not identify the presence of VOCs. Soils at 10' did not appear stained and did not exhibit a petroleum odor. An endpoint was collected at 10'bgs from beneath the lift. Analysis was done by 8270, 418.1 and 8015B. Post-ex sampling indicated concentrations of all targeted SVOCs below detection limits. Diesel Range Organics were detected at 209mg/kg. TPH was detected at 374mg/kg."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"3/23/15-Vought-Duty desk officer. Searched PBS and no listing for site. Searched spills database and noted that closed spill #9012044 (for gasoline odors at closed gas station) at same site was for Getty station and also closed spill #8606820 (for a tank tightness failure). Vought called TRC Guder (Ph:212-221-7822 email:CGuder@TRCSOLUTIONS.com) and site will be developed as school and they found two USTs during excavation and they were closed with no impacts. They also found another UST (hydraulic or waste oil) and they noted contaminated soil and excavated approximately 20 yards of soil and collected five endpoint soil samples. Depth of sampling was 7-8'bg and site will be excavated to a depth of 10'. They are installing a vapor barrier and an active SSDS. Groundwater at expected depth of 45'bg that was measured during Phase II.Site is not E-designated. Letter should be addressed to: Mr. Robert Kanaparthi New York School Construction Authority 30-30 Thomson Avenue Long Island City, NY 11101-3045 Ph:(718)472-8502 email: SKANAPARTHI@nycsca.org 3/25/15-Vought-Drafted letter dated 3/24/15 that required: complete delineation of contaminatin and collection of endpoint samples; submission of a site assessment including

FUTURE PUBLIC SCHOOL (Continued) **S117851412**

collection of a groundwater sample from the former tankfield, submission of vapor and moisture mitigation techniques to be used in site development and submission of a PBS application (if applicable). Letter signed by DEC Mahat after discussion of site and letter added to D2 by Vought. Sent email to TRC Guder and SCA Kanaparthi with cc to Mahat and email that noted Charlie, As we spoke about yesterday, attached below is the Department s requirement letter an original of which is in the mail to Bob Kanaparthi (copied above). Please send all reports and inquires to the spill Project Manager, Santosh Mahat, who is also copied above. You can also reach Santosh at 718-482-4038.Thanks. 6/2/15: Mahat DEC Mahat contacted Mr. Guder about the spill progress. He mentioned that the site was over excavated and end point samples are all clean. He verbally mentioned that samples were clean and he is working on a spill closure report. DEC is waiting for a spill closure report. 10/1/15: Mahat DEC Mahat talked to Kevin at TRC and he will provide a closure report on the spill case. 10/6/15: Mahat DEC Mahat received an email update from Kevin A. MaGuinness, PG : Email : Good morning Santosh. The Spill Report will be submitted to Mike Wagner at SCA by Friday of this week. Kevin Kevin A. McGuinness, PG Principal Environmental Scientist?Department Leader 1430 Broadway, 10th Floor, New York, NY 10018 T: 212.221.7822 Ext. 103 - F: 212.221.8396 - C: 914.318.2145 LinkedIn - Twitter - Blog - www.trcsolutions.com DEC is waiting for a closure report on the spill case. 8/31/16: Mahat e/c : DEC Mahat sent an email to Kevin asking for the report and the Email address for Mike Wagner. 9/12/2016 - V. Brevdo Spill Case is transferred from Spill Prevention and Response to Remediation Section B due to project manager Santosh Mahat departure to the other DEC Program, as per 9/9/16 discussion between Randall Austin and Vadim Brevdo. VB 9/12/16 - Raphael Ketani. Due to a caseload realignment, the spill case was assigned to me today. 9/19/16 - Raphael Ketani. I sent an email to Robert Kanaparthi, NYCSCA, 30-30 Thomson Avenue, LIC, 11101-3045, (718) 472-8502, SKANAPARTHI@nycsca.org. In the email, I asked for the remediation report for the site. 9/23/16 - Raphael Ketani. Kevin Boger, PE of TRC (1430 Broadway, 10th Floor, NY, 10018, (212) 221-7822 x116/cell (631) 617-0087/KBoger@trcsolutions.com) sent me the TRC Spill Closure Report dated 10/6/15. I reviewed the Spill Closure Report. The school is presently under construction and will designated Public School 338K. The site used to contain two 2 story buildings, a one story car repair shop and storage garage, a used car lot, vacant lots and two vacant residential buildings. A Langan Engineering Phase II dated 4/30/10 indicated the possibility of 5 USTs in the southeast corner of the site. However, a geophysical survey didn't find any anomalies. On 3/19/15, investigative excavating was taking place in the southeast corner of the site when a UST was struck, badly damaged and leaked oil. The UST measured 3 feet in diameter and 5 feet long. On 3/20/15, the tank was cleaned and removed. Also on this date, 4 soil sidewall samples and 1 bottom sample were taken after the pit which had contained the tank was over excavated. A total of 20 tons of contaminated soil was sent to Clean Earth of Carteret, NJ. The soil analytical results for VOCs and SVOCs were entirely non-detect, except for the sample from the east sidewall. This sample had many analyte hits, but they were all below the CP-51 unrestricted residential standards. As a result of my review of the Spill Closure Report, I determined that any residual contamination would not be a threat to the public or the environment. Therefore, I closed the spill case effective 9/23/16. A spill closure

FUTURE PUBLIC SCHOOL (Continued) **S117851412**

letter was sent to Mr. Kanaparthi. "
Remarks: "During excavation contaminated soil was discovered. Clean up is in progress."

DEC Memo: "06/13/13-Hiralkumar Patel. case assigned to DEC Zhune on 06/05/13 without any notes from duty desk officer on 06/05/13. 9:30 AM:- received message from Mr. Pandolfo on 718-482-4651. 12:58 PM:- left message for Mr. Pandolfo. gas station is located at 571 Coney Island Ave. alternate address: 571-581 Coney Island Ave, 1-7 Lewis Place PBS #: 2-146153. as per PBS record, the gas station has following tanks: - two (2) 4,000 gal gasoline USTs installed in Feb. 1973 - one (1) 4,000 gal diesel UST installed in Feb. 1973 - one (1) 550 gal waste oil UST installed in Jun. 1971 as per PBS inspection dated 06/05/2012, a 275 gal waste oil AST was noted on-site but not registered. as per NYC DOB record, a permit was approved on 12/14/1998 for : upgrade three existing 4,000 gal single-walled steel motor fuel storage tanks with new piping, controls and devices as indicated. recast pump island with new in same location with 3 dispensers. remove 4 existing dispensers. ---------- no other spills found for the gas station. K.G. Island Realty Corp. **owner of gas station property** 54 West 39th Street, 15th Floor New York, NY 10018 Attn.: Slavick Gufman Ph. (212) 768-7540 Mohammad Suleman **on-site operator** Ph. (646) 842-0250 based on google street view, vent pipes for gasoline tank system at is located in eastern side of property, close to property 9 Lewis Place. 3:26 PM:- spoke with Mr. Pandolfo. he lives at 214 Stratford road, other end of block towards east. he mentioned that petroleum odors noted during oil deliveries. he did not observed any spill on site. as there is no petroleum release, case closed. case referred to PBS unit due to possible leak in vapor recovery system. 3:37 PM:- sent email to DEC Leszek with copy of spill report. 07/29/13-Hiralkumar Patel. 9:09 AM:- received message from Mr. Pandolfo. 11:09 AM:- spoke with Mr. Pandolfo. he inquired about investigation. informed him that as there was no actual release noted, case was closed. discussed with DEC Leszek. he will schedule PBS inspection."

Remarks: "strong smell of fuel when station gets fuel delivery"

DEC Memo:	"pumped out 11/09/2012 by Miller. 100 gallons removed. pumped out 11/10/2012 by ECM. 50 gallons removed. pumped out 11/11/2012 by . 10 gallons removed. DECPiper visited site. Tank from neighboring property at 210 E 8th Rd. tipped over and spilled into crawlspce. Odors present inside home. PID reading with windows open all day was 2.0 ppm, however soils under residence in crawlspace where tank tipped was 117 ppm. Residents are staying with family members nearby. Edward and Megan Phillips - 718- 309-3841 and 40 respecively. They have hired Env lawyer to contact neighbors insurer to have remediation done. Lawyer will contact DEC Piper in coming days. 1-8-13- CSL sent. In edocs."
Remarks:	"Neighbor's tank is now leaning on Megan's house and poured oil on ground and under house. Tank still has product."

Called Advanced Tank Services (Jeff McKenzie Ph:800 440 8265 Fax:888-303-5323) for more information including whether wet or dry leak and confirm size of tank as 1000-gallons as per spill report (no PBS registration on file). Vought left message with answering service (Diane) to have Jeff return call to DEC with more information. Owner as per Property Tax Records is: Mr. Jacob Goodman 1203 Beverly Road Brooklyn, NY Vought received message from John (Operations Manager at ATS) that leak was below product line and that the cause of the failure was either a hole in the tank or a supply/return line issue. Vought called John and tank is UST he performed one soil sample to groundwater. No evidence of soil contamination or groundwater contamination. Depth of boring is about ten feet. ATS recommending isolate and retest. Tightness test is being performed as part of potential property purchase. 2/28/11-Vought-Called ATS McKenzie for confirmation of owner address. Vought drafted CSL and sent out to Goodman at above address with cc via fax to ATS McKenzie. 3/1/11-Vought-Received call from family friend Sigal Sharabi

TANK TEST FAILURE (Continued) **S110769600**

(Cell:646-644-2300) who noted that Jacob Goodman passed away years ago and that wife if elderly and sensitive to stress. Vought noted requirement of immediately emptying the tank and either soil investigation of tank and line removal. Vought provided her contact number for ATS McKenzie and faxed her spill contractor contact list. She will discuss issue with childrem of Goodmans and have them or she will return call to DEC. 3/2/11-Vought-Received call from Dennis Ross(Luzon Ph:845-434-7805) and he was called Sigal. He spoke with Gary Harris who noted that product was above product leak . He will provide estimate. Vought noted that either email or fax must be immediately submitted clarifying whether leak is above or below product level (as per 2/24) email. 3/3/11-Vought-Called and left message for ATS John to return call with status of tank empyting due to failure or conirfmation that leak was dry leak. Vought received callback from John who insisted that leak was below the product line. Vought called Dennis Ross and he noted that he had not received authorization to remove product from tank from Sigal and that he had placed a call to ATS Gary as well. Vought called Sigal and noted increased fustration and that tank must be emptied by COB today and to return call as soon as tank was emptied. Sigal returned call and notified Vought that she was going to notify attorney for Property owners and call Vought back with contact information. Vought received callback from Siegal who noted that she had spoken with owner attorney and owners sister is issuing money order to have ABC Tank remove product from UST. Seigal will update or have ABC Tank (Pete) update DEC when tank has been emptied. DEC requires: 1)TTF letter 2)possible PBS registration 4/7/11-Vought-Called Sigal for update and temp tank was set up and UST was emptied by ABC Tank (Chris cell:347-397-8298 office:718-927-0351 Fax:718-272-3147). Vought called ABC and left message for Chris to return call so that report can be submitted. Vought also faxed ABC (Chris) copy of TTF letter dated 2/28/11. 5/3/11-Vought-Received faxed report on 4/8 from ABC Tank (Donna) that included cover letter and tightness test report. As per report on 3/8 ABC dug up to expose the top of the tank and isolated tank from lines and tested each separately. Tank passed tightness test while vent line failed. ABC tank completed replacement of the vent line and retested the system and system tested tight as per EZ3 Locator test. As per report There was no evidence of contamination observed at the site during the digging of the tank and the replacement of the vent line . Spill closure requested. Spill closed by Vought and Spill Closure Letter sent to above address with cc to ABC Tank. Vought called Donna and informed her of faxed spill closure letter."

Remarks: "tank test failure"

DEC Memo:	"10/06/05-Vought-Called Steven Varber (212-251-9475) and another resident from the neighborhood and site has had reoccuring problems with houskeeping issues. Current issue is waste oil pan left in place overnight under truck that is filled with oil from oil change. Sand was placed around pan. Vought referred case to ECO's to perform site visit and issue possible citations for illegal discharge. Vought also needs site address so PBS and Spills database check can be performed. 10/13/05-Vought-Received call from ECO Fetterman and returned call. Vought spoke to Fetterman and he will be performing a site visit this weekend and will contact DEC Vought if soil contamination in found. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin. 7/7/06- DEC Piper performed site visit due to unknown status of site. Additionally site was a former gas station. There was evidence of staining on street and parking lot, however no pools of oil/ product were observed. Use is currently a hardware/variety store with a paved lot. Piper contacted previous owner and as per conversation, all tanks were removed accordingly. PBS Dept. had sufficient info to close tanks in database, no visible issues at site, no associated spills at hte site, this spill is closed."

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:	"7/27/2018 - Feng - Duty Desk. Randy is out. Talked to Andre Obligado and will give this to the ECO for site inspection. As per A. Obligado, the violation is involved with drain and DEP shall be notified. Notified to NYCDEP Janet (212-689-1520). Case No. 186616716. She will give it to the Industrial Waste team. Briefed ECO reception. They will send someone out for inspection. 7/27/2018 - Feng - received a call from ECO Connor Dodge. They inspected the site and found no violations. A little sheen was observed in the drain though. There is a waste oil tank in the basement, but did not observe any oil spill present. I told him that NYCDEP was notified about the drain and DEP might inspect the drain. No actual spill. The drain issue has been notified to the DEP. Spill is closed. "
Remarks:	"tank overflowing and employee was hosing spill down with hose, and pushing overflow into drain below"

DEC Memo:	"05/24/17-Hiralkumar Patel. 9:20 PM:- spoke with car wash operator who confirmed no discharge of any oil from the storage tank. 05/26/17-Hiralkumar Patel. 8:30 AM:- visited site. met Drew Hershowitz, car wash owner. inspected basement under a repair shop. basement has multiple square tanks for motor oil and used oil. noted signs of oil spill on basement floor as a results of overfill of one of the waste oil tank. noted oil on waste oil tank and on floor near the tank. also noted thin layer of oil on basement floor in area between the tank and basement sump. a power wash machine was found in the basement by the leaking tank and it looked like the basement floor was recently powerwashed. inspected basement sump and found no oil in it. asked Mr. Hershowitz to immediately stop using the possibly leaking tank, immediately pump out liquid from the tank and test all the tank systems. also asked him to cleanup and properly dispose off remaining contaminated materials. Drew Hershowitz Ph. (347) 783-8118 email: hollywoodcarwash@gmail.com 05/30/17-Hiralkumar Patel. reviewed NYC ACRIS, NYC DOB and NYC Property Tax records and noted that the oil change business is located on lots #: 15 and 16 on block #: 5341. these two lots owned by different entity. address for

HOLLYWOOD CAR WASH (Continued) **S121099088**

block #: 5341 / lot #: 15 - 482 Coney Island Ave address for block #: 5341 / lot #: 16 - 484 Coney Island Ave no records of any PBS or spills found for both properties: 482 & 484 10:59 AM:- left message for Drew. 12:40 PM:- spoke with Mr. Russell, owner's representative for both lots. informed him about oil spill, leaking tank and unregistered tank systems at the site. Church & Coney Corp. **owner of lot #: 15** 325 North Macquesten Parkway Corp. **owner of lot #: 16** c/o Arthur Russell, ESQ. 661 Franklin Avenue Nutley, NJ 07110 Ph. (973) 661-4545 email: arthur@attorneyrussell.com 1:32 PM:- sent letter, including PBS application and instructions, to Mr. Russell requiring spill cleanup, tank tightness test and PBS registration. asked him to immediately submit PBS registration application, and spill cleanup report by the end of 07/14/17. letter emailed to Mr. Russell and Drew. 06/08/17-Hiralkumar Patel. 12:31 PM:- received call from Rene Lewis from Alliance Mechanical. he is on-site for tank system test. he will submit report. 06/29/17-Hiralkumar Patel. 1:59 PM:- received email from Moran Hershowitz from Hollywood Car Wash including tightness test result for three (3) 750 gal waste oil tanks and copy of PBS application for three waste oil tanks. the test result indicates presence of underground tanks, but waste oil tanks are located aboveground. the PBS application includes three waste oil tanks, but does not include any information about motor/lube oil tanks. also no information submitted about cause of release, summary of cleanup activities and disposal manifests. 2:34 PM:- sent email to Mr. Hershowitz and asked him to submit a detailed report including scaled site map with location of all existing tank systems, cause of petroleum release, summary of cleanup activities, contaminated material disposal manifest (if applicable) and tank system tightness test result. also asked him to submit revised tank system test results as the one submitted indicates underground tanks and a revised PBS application as it does not include any information about motor/lube oil tanks. email copied to Mr. Russell and Rene. 07/17/17-Hiralkumar Patel. received email from Rene (at 6:54 PM on 07/14/17) including same incomplete report. - page # 1 of the report is incomplete - waste oil removal manifests are missing - tank tightness test reports are confusing: inside the parenthesis it indicates underground storage tank and piping passed, but outside the parenthesis, report states opposite - report is missing scaled site map including all tank systems - report is missing information about cause of petroleum release noted during site inspection and action taken to clean it - report is missing disposal manifest for any contaminated soil/sand/water removed during spill cleanup - PBS application does not include any information about motor/lube oil tanks at the site 10:54 AM:- sent email to Mr. Russell and asked him to submit a revised report. email copied to Rene and Mr. Hershowitz. 12:40 PM:- received email from Mr. Hershowitz including letter from Lorco Petroleum Services. Gene Blumetti from Lorco mentioned that they remove used oil from the site. 07/24/17-Hiralkumar Patel. 1:11 PM:- received call from Rene. explained him about incorrect/incomplete info in previously submitted report. Rene will send revised report soon. 07/25/17-Hiralkumar Patel. 7:30 AM:- received email from Rene including revised tank system test results. 09/26/17-Hiralkumar Patel. 3:42 PM:- received email from Eric Santos including a letter from Gasoline & Automotive Service Dealers Ass'n, Ltd (GASDA). Wayne Bombardiere of GASDA mentioned that Mr. Santos will be resolving issues raised in PBS application and TJO Tank Testing and Environmental will be handling all other issues. Eric

HOLLYWOOD CAR WASH (Continued) **S121099088**

Santos email: ericgasda@optimum.net Ph. (516) 371-6201 Ext. 102 (347) 424-7807 (C) Wayne Bombardiere Deputy Executive Direction Gasoline & Automotive Service Dealers Ass'n, Ltd. Ph. (516) 371-6201 Fax (516) 371-1579 09/27/17-Hiralkumar Patel. 1:23 PM:- sent email to Mr. Santos and asked him to submit work schedule. 1:58 PM:- spoke with Mr. Bombardiere. he mentioned that work is in progress at this time and he will ask Eric to call back. 09/28/17-Hiralkumar Patel. 1:48 PM:- received email from Eric including copy of PBS application. Eric mentioned that PBS application will be sent to Albany for processing. PBS application includes total of eight tanks: - two (2) 750 gal waste oil ASTs, in-service, installed in Dec. 2006 - one (1) 750 gal motor oil AST, in-service, installed in Dec. 2006 - three (3) 1,000 gal motor oil ASTs, in-service, installed in Dec. 2006 - one (1) 500 gal motor oil AST, in-service, installed in Dec. 2006 - one (1) 500 gal transmission fluid AST, in-service, installed in Dec. 2006 10/10/17-Hiralkumar Patel. received email from Mr. Hershowitz (at 3:17 PM on 10/09/17) including a letter. Mr. Hershowitz mentioned that spill was caused by the overfilling of spill bucket. he also mentioned that minor spills in future will be cleaned up using speedie dry and waste will be picked up by Lorco Petroleum Services. 10/11/17-Hiralkumar Patel. case closed based on review of all available information. 3:00 PM:- sent spill closure letter to Mr. Russell. letter emailed to Mr. Russell, Mr. Hershowitz and Mr. Santos."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	53197
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
B99 - Tank External Protection - Other
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
G03 - Tank Secondary Containment - Vault (w/o access)
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1987
Capacity Gallons:	2500

DEC Memo:	"Received groundwater monitoring report (Jan.-Mar.'05) on May 10, 2005. This spill case was reassigned from Park to Grathwol in April 2005. This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004. 12/07/04 Site managed in Central Office by Chun Park. Rommel This spill site cleanup has been consolidated under Spill No. 0013022. The DEC has determined that the revised proposal for two (2) off-site soil borings to be completed as monitoring wells by Groundwater & Environmental Service, Inc (GES), dated July 17, 2003 is acceptable. This revised proposal for two soil borings/monitoring wells addressed DEC's verbal comments on the proposed Site Investigation Work Plan (SIWP), dated December 17, 2002. The DEC provided verbal comments to GES at the site, during a PBS inspection on July 10, 2003. Based on the DEC's review of the revised site diagram for the SIWP, the DEC has determined that these proposed boring locations will be satisfactory, and should provide additional data necessary to properly define the vertical and horizontal extent of off-site contamination. ExxonMobil must submit the results of the borings and well installations proposed by Groundwater & Environmental Service, Inc (GES), in a Subsurface Investigation Report prepared in accordance with Section No. 3, paragraph 3.14 of the Division of Environmental Remediation's Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002. This Subsurface Investigation Report must be submitted to the DEC for review and approval by October 20, 2003. greater than greater than greater than Jennifer Rommel 08/23/04 11:13AM greater than greater than greater than Please delineate both on and off site. Thank you. greater than greater than greater than Tammy Michels 08/19/04 0:PM greater than greater than greater than Ms. Rommel, Attached is an electronic copy of the subject report. At the time the report was mailed to you we were having computer problems and I was not able to send an electronic copy. I apologize for any inconvenience. Tammy L. Michels Project Manager Assistant Geologic Services Corporation 20 Peachtree Court, Suite 0 Holbrook, New York 11741 Toll Free: 877 218 6956 Tel: 631 285 6684 Fax: 631 285 6692 tmichels@ny.gsc-global.com www.gsc-global.com See also 0401502. Rommel 10/15/09 - Haggerty: assumed Spill management April 2010 - The Soil Vapor Extraction/Air Sparging treatment system is operating without problems. Sent EM an email requiring further delineation to the southeast. 2 additional delineation wells installed in April. LPH deteceted in off-site well. EM collect sample for fingerprinting analysis. June 2010 - System was shut down briefly to retro-fit noise suppression. System again

MOBIL OIL CORP SS #FCB (Continued) **1000553842**

operational. LPH detected in off-site well classified as weathered gasoline. Delineation of off-site LPH may be necessary. August 2010 - QMR due by end of the month. EM will be running the SVE/AS system one month on, one month of to try to increase recovery. January 2011 - site divested to BOLLA EM REALTY March 2011- spoke with new owner's consultant, Arcadis (Peter Morris). Plan is to continue alternating SVE/AS system one month on, one month off to maximize recovery April 2011: sent email to consultant to prepare a work plan to delineate off-site product and develop a better off-site product recovery method. May 2011 - approved work plan for additional delineation of off-site LPH (greater than 100ft away from the property) and perform HIT events to collect gw/ vapor from the MW with off-site LPH August 2011 - additional delineation points installed but haven't received the report yet November 2011 -product no longer present in off-site well MW-20 but they are still going to utilize the VTE events quarterly on that well December 2011- SSUR under review. They propose injecting sulfate to the off-site contamination based on the anoxic conditions and sulfate demand in the gw January 2012 - approved sulfate injections. PM had conference call with Arcadis' Technical Innovation Group April 2012 - injections completed for off-site on Slocum December 2012 - SVE/AS system is running one month on, one off but has achieved ~90% reduction on-site. System permanently shutdown. A second round of sulfate injections was completed in September for off-site contamination. At this point, more contamination exists in off-site groundwater October 2013 - approved injection report. Little impact on dissolved concentrations which suggests the solution didn't reach there target intervals or the sulfate requires additional time, we will wait for 4 quarters to evaluate the injection results. December 2014 - sulfate injections from 2012 had little impacts. On-site remediated by the SVE/AS system. The Spill would be closed if not for the off-site dissolved impacts on Slocum. December 2015 - The recalcitrant dissolved impacts remaining on Slocum years after the on-site source was remediated appear related to NAPL trapped in pore space off-site acting as a residual source. The off-site properties between the station property and the dissolved impacts observed on Slocum are privately owned and treating it isn't feasible. The RP' consultant performed an exposure assessment demonstrating the plume demonstrates an overall decreasing trend and with the on-site source material remediated and no down-gradient receptors, they propose NFA. March 18, 2016 - Spill Closed"

Remarks: "UPON RENOVATION OF ABOVE SITE SOIL CONTAMINATION WAS DISCOVERED. SAMPLES WERE TAKEN WHICH SHOWED ELEVATION OF HYDROCARBONS. INVESTIGATION IS CONTINUING AND PLANS MADE FOR REMEDIATION ARE IN PROGRESS."

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
