Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department

BEST YOUNG CLEANERS (Continued) **1000394407**

of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

This spill site also represents Spill Nos. 9414370, 9413602 and 9615013. 2/5/04 Current PBS owner Cumberland Farms. Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned. 12/7/05 JAA: Transferred file back to R2, Jon Kolleeny, as it a Cumberland Farm site. Note: Sadique Ahmed did a quick file review on 10/6/05- found PBS # 2-346497. 04/03/06: Transferred spill case from Sadique Ahmed to J. Kolleeny. - JK 04/12/06: Based on available information, this spill does not appear likely to pose a significant threat to the environment or public. In consultation with my supervisor Koon Tang, it was decided to close the spill case. - J. Kolleeny"

DEC Memo:	"proposal is out for repairs and retest. PTC will notify dept if they are not contracted . TTF letter on hold. 05/12/14-Hiralkumar Patel. alternate address: none. other spill # 0811357 was reported on 01/14/09 as 10 gal #2 oil spilled onto pavement due to overfill. case closed. PBS #: 2-374253. as per PBS record, the site has following active tanks: - one (1) 20,000 gal #2 oil UST, installed in Sep. 1970 - one (1) 275 gal diesel AST in contact with soil, installed in Sep. 1970 PBS registration expired on 10/06/12. a NYC DOB permit was approved on 04/22/02, for installation of an emergency generator and fuel storage tank. 11:11 AM:- spoke with Ray at PTC. during system test, they found dry leak. an isolation test has been scheduled for 05/14/14. 11:14 AM:- spoke with Mr. Scherman, property manager. he mentioned that they rarely use oil tank and last oil delivery was for about 1,000 gal in Jan. 2014. currently, the tank has about 500 gal oil in it. informed him about expired PBS registration. Israel Lefkowitz **property owner** Palm Garden Nursing Home 1689 48th Street Brooklyn, NY 11204 Palm Gardens Center for Nursing & Rehabilitation 615 Avenue C Brooklyn, NY 11218 Attn.: Avi Scherman

PALM GARDENS NURSING HOME (Continued) **S109414421**

on-site rep Ph. (718) 633-3300 Ext. 273 email: avi1@mail.com 11:38 AM:- sent email to Mr. Scherman including PBS application. informed him that the registration must be renewed immediately. 09/02/14-Hiralkumar Patel. 12:14 PM:- spoke with Mr. Scherman. he has sent PBS application 3 times and got rejected due to missing/improper paperwork. he has sent it again. he has spoken with Mark at PTC this morning and waiting for cost estimate to conduct further investigation/cleanup, as leak found in remote fill line during isolation test. Mr. Scherman mentioned that they are planning to close this tank in-place, after required investigation/cleanup. 12:38 PM:- sent TTF to Mr. Scherman and property owner requiring report submission by the end of 10/31/14. letter emailed to Mr. Scherman. 11/12/14-Hiralkumar Patel. reviewed PBS record. registration has not been renewed yet. the PBS application was returned on 08/14/14 as UST is overdue for tightness test. 9:21 AM:- left message for Mr. Scherman. 9:26 AM:- left message for Jimmy Martinez (917-681-5947), who is point-of-contact as per recently submitted PBS application. 11:27 AM:- received message from Mr. Scherman. he mentioned that they are waiting for cost estimate from contractor and will start work soon. 01/08/15-Hiralkumar Patel. reviewed PBS record. PBS registration has not been renewed yet. 10:17 AM:- left message for Mr. Scherman (who is out of office till 01/13/15) stating that required documents must be submitted by the end of 01/16/15 to avoid enforcement. 10:26 AM:- left message for maintenance department at the site. 01/09/15-Hiralkumar Patel. 10:00 AM:- visited site. met with Jimmy Martinez, director of maintenance. he provided copy of tank only test dated 06/30/2014. the tank only was found tight. the 20,000 gal tank is located under the driveway. the fill box is locked and the tank is currently out of service. the tank is located along the side of the building and supply/return lines cross the foundation wall. fill box is about 15-18 ft from the tank. site has dual phase burner. Mr. Martinez mentioned that site owner has decided to close the tank in-place. based on available information, asked Mr. Martinez to investigate the fill and vent lines. as tank will not be used again, strongly suggested him to collect and analyze soil samples from underneath the tank to confirm no petroleum release from the tank anytime in past. 01/13/15-Hiralkumar Patel. 3:53 PM:- received message from Mr. Scherman. he mentioned that the tank will be closed-in-place using cement on 01/15/15. they will also collect samples along underground lines. 01/15/15-Hiralkumar Patel. 11:41 AM:- received message from Goldie from NYC Tank Testing. Goldie NYC Tank Testing Ph. (718) 731-7011 email: goldie@nyctanktestinginc.com 11:43 AM:- spoke with Goldie. she inquired about number of samples required through tank's bottom which is 34 ft long. informed her that based on tank only test result dated 06/30/14, the department does not require any sampling through tank's bottom. but as the tank will not be used again, the department strongly recommends collection of soil samples from beneath the tank to confirm no release from the tank in past. if owner decides to collect samples, asked her to collect one soil sample from each end and one from middle of the tank. informed her that the department requires investigation of the underground portion of the lines connected to the tank. recommended her to expose and remove underground lines and any associated contamination. asked her to provide work schedule for possible site inspection during field work. 12:00 PM:- spoke with Mr. Scherman about discussion with Goldie. he has some documents from PTC and will send it for review. 12:21 PM:- received email from Mr. Scherman

PALM GARDENS NURSING HOME (Continued) **S109414421**

including work tickets and invoices from PTC. on 05/15/14, PTC pumped out and cleaned the tank. during tank cleaning, crew found an old cut on tank. on 06/30/14, PTC did isolation test. tank, supply and return lines passed the isolation test. leak was found in fill and vent lines. 12:31 PM:- spoke with Mark at PTC. he confirmed that tank only, supply and return lines passed an isolation test. he also confirmed that there was no repair work done on tank prior to isolation test. during isolation test, fill and vent lines failed the test. 12:36 PM:- received call from Abby from NYC Tank Testing. he mentioned that DEC Falvey has rejected the tank system test report. asked him to discuss with DEC Falvey to resolve PBS issues, prior to tank closure. informed him that investigation is required along fill and vent lines, based on available information. 12:49 PM:- spoke with Mr. Scherman. informed him that prior to tank closure, they have to resolve any pending PBS issues. recommended him to collect samples through tank's bottom and remove all underground piping and any associated contamination. he agreed with recommendations. he will call back with work schedule, once PBS issues are resolved and mark out done. 07/14/15-Hiralkumar Patel. received email from Goldie (at 1:28 PM on 07/13/15) including results of soil samples along remote fill line. three soil borings (# 1, 2 and 6) were installed around fill port and three borings (# 3, 4 and 5) were installed along the fill line. soil samples were collected between a depth of 39 to 67 inches. minimal oil and odors were detected in three borings around the fill port. three composite samples were analyzed: sample #1 was composite of soil samples from borings 3, 4 and 5; sample #2 was composite of shallow soil samples from borings 1, 2 and 6; sample #3 was composite of deeper soil samples from borings 1, 2 and 6. no contamination noted in soil samples. 07/20/15-Hiralkumar Patel. based on result of isolation test and soil samples along fill line, case closed. 2:41 PM:- sent SCL to Mr. Scherman. letter emailed to Mr. Scherman and Goldie."

Remarks: "20,000gal tank"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"9/5/07 Called Peter Mirsakov (718)645-1196. Reason for tank failure is unknown. Told Mr. Mirsakov that tank must be emptied immediately. he has proposal to excavate, isolate and repair. Building uses gas heat and oil is used when temperature drops below 15 degrees F. I faxed him the letter, fax: 718-645-9529. Sent ttf letter to him at: Yeshiva Shaare Torah 1680 Coney Island Avenue Brooklyn, NY 11230 bf 9/19/07 Received message from Bob Urban of Pro Test 631-321-4670. The system was isolated, excavated and repaired. Tank and piping passed test yesterday. He will forward a letter to me soon. bf 10/9/07 Received call from Peter Mirsakov of Yeshivat Shaare Torah. He wanted to know status of spill and of tank test. I did not receive anything, so he will fax the report to me. He faxed letter from Bob Urban of Pro Test and a passing tank tightness test. The ventline and stickline failed. The lines were replaced. No visible evidence of contamination. NFA. bf 10/11/07 Received phone call from P. Mirsakov. He requested NFA letter. I sent it to him by fax and mail. bf"

DEC Memo:	"01/I spoke with Pal Pingile, station owner. He will have his environmental consultant call me regarding the spill case.(sr) 01/17/13-Consultant: Impact Environmental, Kristin 631-269-8800, 631-664-6616. Spoke with Kristin Camardella. Shallow soil contamination discovered while installing well as part of SVE system installation for existing long term case 0909627. Soil samples taken for analysis.(sr) 03/07/13 Performed site visit, spoke with Paul Pingle over the phone as he was not present at the site. He told me that he will have his consultant send me the soil delineation plan by tomorrow, 03/08/13.(sr) 05/06/2013 Status report from ARCADIS in edocs. During pre-clearing activities associated with the site, air sparge/soil vapor extraction (AS/SVE)system well installation grey stained soil with strong odor at 24 inches below surface was encountered.PID reading was around 840 ppm. The soil exhibited grey staining.Lab results indicated that four total BTEX constituents exceed CP-51 guidance value. A soil delineation work plan is in preparation as per ARCADIS,in order to determine the extent of the shallow soil contamination at this newly discovered area of impact.(sr) 07/23/13 Soil delineation work plan in edocs, approved.(sr) case assigned from DEC Rahman to DEC Patel. 09/19/13-Hiralkumar Patel. alternate adddresses: 378-394 Coney Island Ave, 843-849 Caton Ave PBS #: 2-157589. as per PBS record, the site has/had following tanks: - five (5) 4,000 gal gasoline USTs, in-service, installed in Aug. 1987 - one (1) 250 gal waste oil AST on saddles, in-service, installed in Mar. 2006 - fourteen (14) 550 gal gasoline USTs, removed in Aug. 1987 - one (1) 550 gal #2 oil UST, removed in Aug. 1987 - one (1) 1,000 gal #2 oil UST, removed in Dec.

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

1992 - one (1) 550 gal waste oil UST, removed in Mar. 2006 - one (1) 550 gal other product UST, removed in Aug. 1987 other spills: 9108598, 0513868, 0909627 spill # 9108598 was reported on 11/12/1991 due to tank test failure of #2 oil tank. case closed. spill # 0513868 was reported on 03/03/2006 due to findings of soil contamination during removal of 550 gal waste oil UST. no contamination noted in endpoint samples. case closed. spill # 0909627 was reported on 11/30/2009 due to findings of contamination during well installation. case still open and under remediation. DEC Ralph Keating is managing the case. 09/20/13-Hiralkumar Patel. 11:55 AM:- spoke with DEC Ralph Keating, project manager for remediation case # 0909627. as soil delineation is not completed, both cases are handled separately. Ralph mentioned that if contamination noted around SVE point requires long term remediation, then the subject spill should be closed and merged with remediation case. 12:08 AM:- spoke with Dave at Arcadis. they did subsurface investigation in Aug. and found soil contamination extending to a depth of approx. 56 inches below grade. contamination extended to the area where dispenser island are located. due to subsurface utilities and existing tank system, they could not finish horizontal delineation. Dave mentioned that there is rebar concrete slab at the depth of 24 inches bg. Arcadis is working for both current owner/operator (Bolla) and previous operator (Exxon). Dave is preparing delineation report and proposing soil excavation. he will submit report by the end of 09/30/13. asked Dave to submit contact information for current owner, operator and previous operator. as contamination extended to the dispenser island, current operator tested five gasoline tank systems on 08/17/13 and found all system tight. 1:17 PM:- received email from Dave. he mentioned that Exxon Mobil was the former property owner and as part of property transfer, Bolla took on all responsibility for any and all site wide impacts, old or new. Bolla EM Realty, LLC. **property owner** 809 Stewart Avenue Garden City, NY 11530 Attn.: Paul Pingle Ph. (516) 240-8657 Fax (516) 512-6556 email: paul@bollaoil.com Dave Tracy **consultant for property owner and Exxon** ARCADIS U.S., Inc. PH. (860) 533-9955 Fax (860) 645-1090 email: david.tracy@arcadis-us.com 11/06/13-Hiralkumar Patel. received email from Dave (at 11:59 AM on 11/05/13) including investigation report. abstract of report dated 03/08/13: - during pre-clearing activities associated with air sparge/soil vapor extraction system well (SVE-3) installation, the fiel staff encountered grey stained soil with a strong hydrocarbon odor approx. 24 inches bg - depth to groundwater at the site is approx. 40 ft bg - PID reading of soil at 24 inches bg was 840 ppm - installed two hand auger soil borings in the area immediately adjacent to the SVE-3 pre-clear location for soil sampling - refusal encountered at both boring locations at approx. 20-22 inches bg - at one of the boring location, field staff vacum-cleared the hole and observed a subsurface concrete slab with a visible sheen present on top of the concrete slab - soil above the concrete slab was visibly stained and exhibited a strong hydrocarbon odor - soil sample from just above the concrete slab was submitted for BTEX + MTBE + ethanol - found 1,350 ppm on PID in soil sample soil analyticals: ----------SVE-3------Duplicate
Benzene----------18,000---------28,000
Toluene----------790,000------1,200,000
Ethylbenzene-----310,000--------430,000

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

borings throughout the south and south central portion of the site - deepest boring (A-16) was advanced to 56 inches bg, where refusal was encountered - due to presence of subsurface concrete slab, the numerous different utilities encountered, as well as health and safety concerns associated with utilizing a direch-push rig in close proximity to the dispensers and dispenser lines, borings were not advanced using direct-push technology - subsurface concrete slab was encountered at borings A-2, A-8, A-10, A-20 and A-25 - extent of the subsurface slab may occupy larger area; however, copper/steel pipe was encountered in several borings (A-3, A-5, A-12, A-17, A-22 and A-23) at approx. 13 inches bg - subsurface copper/steel piping only appeared to exist in short lengths with no apparent continuity - PID field readings indicates that the soil impact increase from south to north - maximum PID reading of 3,954 ppm was observed at boring A-21 at a depth range of 18-25 inches bg - boring A-21 was located immediately south and west of the station fuel conveyance lines and dispensers, respectfully - due to logistical and health and safety concerns, boring was not advanced to the north of A-21 location - total of 29 soil samples were analyzed for BTEX + MTBE soil analyticals:

Mr. Pingle mentioned that soil contamination noted near dispensers is probably occurred when ExxonMobil was on-site. currently they are discussing with ExxonMobil and insurance companies to resolve dispute about responsibility, which can be done by 12/09/13. Mr. Pingle mentioned that Bolla purchased this property in 2011. Kevin Kleaka Impact Environmental Ph. (631) 269-8800 email: KKleaka@impactenvironmental.com 11/26/13-Hiralkumar Patel. as approved by DEC Austin and DEC Janet Brown, case assigned to DEC Keating. July 22, 2014 - V. Brevdo. Spill Case reassigned to Remedial Section B Region 2 as per discussion between R. Cozzy and V. Brevdo (discussion was both verbally and via e-mails). VB 07/25/2014 - e-mailed Arcadis, Mr. David Tracy, informed I am a new project manager for this spill case. VB **also refer spill #: 0909627.** 08/06/2014 - V. Brevdo Project Status Summary: Mobil Service Station, 378 Coney Island Avenue, Brooklyn (Spill Nos. 0909627 & 1214643) There are currently two open spill cases at this site. The Spill No.

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

0909627 is related to the groundwater impacts with ethylbenzene and xylenes present along the east and southeast portions of the site. A RAWP was prepared by Arcadis (an environmental engineering consultant for the Bolla EM Realty, LLC current site owner) and approved by the Department on October 4, 2012. RAWP provided for installation of an AS/SVE system that will target groundwater impacts in the aforementioned portion of the site. The installation of the system began in January 2013. During system installation activities shallow highly impacted soil was encountered along the southern portion of the site that halted the system installation activities and resulted in opening of the second Spill Case No. 1214643. Since the discovery of the shallow soil impacts, Arcadis has continued quarterly groundwater monitoring with the system installation subcontractors on standby. As outlined in November 2013 Soil Investigation Report, there are a number of unknown utilities in the area of shallow soil impacts, including a large concrete pad present at 2.5 feet below grade. Currently, Bolla EM realty is working to address the new shallow soil impacts. As the shallow soil impacts are directly in the area of the planned AS/SVE system conveyance pipe installation location as well as the system well installation location, Arcadis cannot move forward with the remediation system installation until the shallow soil impacts are addressed. Arcadis advised the Department on July 31, 2014 that they expect that the shallow soil impacts will be addressed within reasonable period of time, and they will continue to work with the Department to implement the remediation of the site and accomplish closure of these two spill cases. 08/26/2014 - V. Brevdo Arcadis (David Tracy) submitted The August 2014 Site Status Update Report. System installation activities remain on hold as the shallow soil impacts reported under NYSDEC Case No. Number 12-14643 have yet to be addressed. ARCADIS will continue to work with Bolla on this matter until it is resolved. VB 12/09/2014 - V. Brevdo e-mail from Arcadis: Mr. Brevdo, The November 2014 Site Status Update Report for Service Station #12666, located at 378 Coney Island Avenue, Brooklyn, New York is attached for your use. Please don t hesitate to contact me should you have any questions or need additional information. Best regards, Dave Tracy - Staff Environmental Scientist - david.tracy@arcadis-us.com ARCADIS U.S., Inc. - 160 Chapel Rd Suite 201 - Manchester, CT, 06042 O. 860.533.9955 - F. 860-645-1090 www.arcadis-us.com Professional Affiliate/ ARCADIS of New York, Inc. ARCADIS, Imagine the result 12/09/2014 - V. Brevdo e-mail to Arcadis: December 9, 2014 Dear Mr. Tracy: I completed a cursory review of the November 2014 Site Status Update Report for Service Station #12666, located at 378 Coney Island Avenue, Brooklyn, New York. It is my understanding that the BTEX concentrations in 5 (five) on site groundwater monitoring wells showed a significant increase in September 2014 sampling event as compared with the concentrations detected in June 2014 sampling event. It was on July 31, 2014 when we discussed the status of Bolla resolving the matter of financing the shallow impacted soil remediation and/or other matters that may be holding the launch of AS/SVE system. The November 2014 Site Status Update Report, section Upcoming Activities states that System installation activities remain on hold as the shallow soil impacts reported under NYSDEC Case No. 12-14643 have yet to be addressed. ARCADIS will continue to work with Bolla on this matter until it is resolved. Please be advised that the New York State Department of Environmental Conservation (Department) is concerned about the amount of time that it takes to resolve the

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

aforementioned matter and the fact that installation of the AS/SVE system is still on hold. Four (4) months delay in resolving shallow impacted soil remediation combined with the fact that the Department was not informed of any substantial progress accomplished on this matter, and the fact that BTEX concentrations in groundwater on site have increased in September of 2014 only further exacerbates Department s concern. I am hereby respectfully requesting that you forward this e-mail correspondence to appropriate Bolla representatives for their information and, hopefully, action to resolve this matter and commence site remediation. If remediation does not commence on site within the 90 days of this date, the Division of Environmental Remediation may select to refer this case to the Department s Office Of General Counsel for legal enforcement action. Contact me if you have questions. Respectfully, Vadim Brevdo, P.E. Environmental Engineer 3 New York State Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 718.482-4928 Vadim.Brevdo@dec.ny.gov 12/10/2014 - V. Brevdo Received a telephone call from David Tracy (860-533-of Arcadis and had a conversation about my e-mail of 12/09/2014. I reiterated to Mr. Tracy that I want Arcadis to convey Department's position and forward my 12/09/2014 e-mail to Bolla, or if Arcadis can not forward my e-mail, give me contacts for Bolla and I will contact Bolla myself. I asked that Mr. Tracy let me know within reasonable time of their communicatins with Bolla on this matter - lack of progress on installation of AS/SVE or remediation of surface soils (Spill 12-14643). Mr. Tracy explained that Arcadis was not retained to address surface soils. I responded that it would be quite uncommon situation if two different consultants are retained to work on two spill cases on the same property, but that is Bolla's decision. I retiretated I am looking for good faith efforts from Bolla to move this project forward. If there is no good will on part of Bolla and no progress is shown within next 90 days, the DER may have to refer this case to OGC for legal enforcement. Irequested Mr. Tracy to convey the Department's position and concern to Bolla, forward my 12/09/2014 e-mail to Bolla, and let me know of the outcome in a timely manner. Mr. Tracy expressed commitment to convey my 12/09/2014 e-mail to Bolla and inform me in a timely manner of the outcome. V.B. 03/16/2015 - V. Brevdo Current Project Status: On March 13, 2015, Arcadis submitted Soil Excavation Work Plan for the Department s review and approval. Bolla will complete a limited and shallow soil excavation along the south-central portion of the site. This process will be completed by initially excavating an area with the approximate dimensions of 11 by 32 feet with a total depth of approximately 5 feet. Excavation activities will be performed by Bolla, with environmental oversight provided by Impact Environmental. Based on field observations, Impact Environmental will direct the size of the excavation area as needed in order to address the soil impacts to the extent feasible. Subsurface concrete slab will be penetrated and, if deemed necessary, removed to facilitate the investigation of the potential presence of USTs located beneath the slab. Should improperly abandoned USTs be encountered, they will be either removed and disposed of, or properly closed in place. In addition, Impact will evaluate the soils under the southern portion of the existing dispenser for the presence of petroleum contamination and, if deemed necessary, the soil will be removed. If required, the existing dispensers and associated product lines will be locked out and temporarily removed to allow sufficient excess to the subsurface.

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

Appropriate delineation and post excavation verification soil sampling will be conducted. Soil Management plan is included as part of the Soil Excavation Plan. Community Air Monitoring Plan is also included to protect workers and nearby communities from potential exposure to soil particulates and contaminants. Soil excavation activities are tentatively scheduled to commence during the last week of March 2015. A post-excavation report will be submitted to the Department within 90 days of the work completion. The Department approved Soil Excavation Work Plan on March 16, 2015. VB 04-13-2015 - V. Brevdo Christine Camardella of Impact Environmental called and stated that the excavation of surface soils was scheduld to commence today, however, due to some problems with obtaining DOB permit, the work is delayed. According to Ms. Camardella, the nature of delay is that more paperwork needs to be submitted to DOB to obtain permit. Ms. Camardella agreed to keep the Department updated on the status of DOB permit and excavation. V.B. 05-12-2015 - V. Brevdo Impact Environmental submitted well decommissioning letter for MW-6, as it is located within excavation area. After excavation is completed, a replacement well will be installed. VB 05-14-2015 - V. Brevdo Arcadis submitted May 14, 2015 Site Status Update Report. Arcadis submitted May 2015 Site Status Update Report to the Department on May 14, 2015. Groundwater monitoring was conducted at the site on March 9, 2015. No free product was detected in any of the wells during this monitoring event. All monitoring results remained within historic ranges. MTBE was not detected and BTEX was detected below standards in some wells but higher than standards in other wells. The next quarterly groundwater sampling event is scheduled for June 2015. VB 08-07-2015 - V. Brevdo Arcadis submitted Site Status Update Report (SSUR) to the Department on August 6, 2015. SSUR summarized the activities completed from April through June 2015. On June 19, 2015, eight (8) monitoring wells were gauged and sampled. No free product was detected in any of the wells during this monitoring event. MTBE was not detected during this and previous sampling events. The total BTEX concentration in one well (MW-1) displayed a significant increase from previous data. Arcadis will continue to closely monitor the trends at this well location. The next quarterly groundwater sampling event is scheduled for September 2015. On July 17, 2015, Impact Environmental, (second environmental engineering consultant for Bolla retained to address surface soil contamination) informed the Department that the DOB permits required for the excavation activities on site are still pending. Bolla/Impact are expecting permit approval in August 2015. The remediation system installation is scheduled to begin once the soil remediation is complete. VB 01-06-2016 - V. Brevdo On January 5, 2016, the Department has requested Bolla to inform the Department on the status of DOB permit and status of soil excavation work. On January 6, 2016 Bolla informed the Department that the DOB permit needed for surface soil excavation work has been obtained, and Bolla is working with consultant(s) on scheduling a work plan preconstruction meeting/conference call which will include developing a field work mobilization schedule. Arcadis submitted Site Status Update Report (SSUR) to the Department on January 5, 2015. SSUR summarized the activities completed from July through September 2015. On September 21, 2015, ten (10) monitoring wells were gauged and sampled. No free product was detected in any of the wells during this and previous monitoring events. MTBE was not detected during this and previous sampling events. The total BTEX concentrations were below standards in five (5) monitoring wells and

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

above standards in other five (5) wells. The total BTEX concentration in two wells (MW-1 and MW-7) displayed a significant increase from previous data. Arcadis will continue to closely monitor the trends at these well locations. The next quarterly groundwater sampling event was scheduled for December 2015. VB 01-12-2016 - V. Brevdo On January 7, 2016, Impact Environmental confirmed that the work outlined in the Soil Excavation Work Plan dated March 2015 is expected to commence by March 15, 2016. A pre-construction meeting is scheduled for March 1, 2016. VB 02-29-2016 - V. Brevdo E-mail notification from Impact Environmental: Mr. Brevdo, I just wanted to let you know that we are still meeting tomorrow for the pre-construction meeting at the above-referenced Site. Your presence is not warranted, it really is just to discuss logistics, schedule and soil disposal. As of right now the start date is still March 15th, I will let you know if anything changes. Thank you. Christine Camardella Project Manager IMPACT ENVIRONMENTAL welcome to solid ground& www.impactenvironmental.com Corporate Headquarters 170 Keyland Court - Bohemia - NY - 11716 T - 631.269.8800 F - 631-269-1599 VB 03-14-2016 - V. Brevdo Received an e-mail from Impact Environmental: Mr. Brevdo, Just wanted to let you know that we are still on schedule to start the work at the above-referenced Site tomorrow at 8:00 am. I will let you know what we find once we have removed all the concrete and can determine if there are USTs. Let me know if you have any questions. Thank you. Christine Camardella Project Manager IMPACT ENVIRONMENTAL welcome to solid ground& www.impactenvironmental.com Corporate Headquarters 170 Keyland Court - Bohemia - NY - 11716 T - 631.269.8800 F - 631-269-1599 03-14-2015 - V. Brevdo Replied to Ms. Camardella of Impact Environmental: Ms. Camardella: Thank you for providing a notice of the upcoming work. I will make a note of it in the project records. I will be awaiting for an information / report from you on the findings. Contact me if you have questions. Thank you, Vadim Brevdo Vadim Brevdo, P.E. Environmental Engineer 3, Division of Environmental Remediation New York State Department of Environmental Conservation 47-40 21st Street, Long Island City, NY 11101 P: (718) 482-4928 - F: (718) 482-6390 - vadim.brevdo@dec.ny.gov www.dec.ny.gov - - 03-16-2016 - V. Brevdo Inspected the site at 11:30 a.m. Met on site with Christine Camardella of Impact Environmental and Mr. Singh of Bolla. Bolla and Impact are conducting implementation of an approved work plan for remediation of the surface soil. Eight USTs were excavated and are on-site. Contaminated soil is being removed. Visual inspection of excavation does not appear to show free product but almost a normal looking soil with some spots of minor-to-medium soil contamination. VB 03-22-2016 - V. Brevdo Soil remediation activities at the Site commenced on March 15, 2016 as outlined in the March 2015 Soil Excavation Work Plan and approved by the Department on March 16, 2015. Bolla Construction is conducting the Site work which is being overseen by Impact. The soil remediation activities conducted from March 15 to March 22, 2016 include the following: Removal of concrete in the southern portion of the site, along Caton Avenue to investigate contaminated soil and concrete encountered in this area; Removal of impacted soil and stockpiling; Discovery and Removal of eight (8) 550-gal USTs encased in concrete; Removal of Liquids and Water-Petroleum Sludge from said USTs via vacuum-truck by Lorco Petroleum as stand-by contractor; Transport of excavated contaminated soil to an approved disposal facility in Cartaret, New Jersey; Screening of soil and collection of sidewall/bottom endpoint samples in the excavation area; Cleaning out

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

and rinsing of the USTs for removal by Adler Environmental; Removal of concrete on the sidewalk of the Caton Avenue and removal of additional contaminated soil from sidewalk excavation; Backfilling of the excavated areas with clean gravel; Repair and Restoration of the sidewalk along Caton Avenue; Implementation of the Community Air Monitoring Plan; Implementation of the Dust Control Measures to prevent soil particle from leaving the site. Soil remediation work continues and the report will be submitted to the Department upon completion. Arcadis continues implementation of the groundwater sampling at the site and submitted Site Status Update Report on March 22, 2016. Arcadis is currently reviewing NYSDEC-approved AS/SVE Remedial Action Plan to determine if design modifications are warranted given the time that has elapsed since RAP approval. Should Arcadis determine that design modifications are warranted, a RAP addendum will be provided to the Department outlining proposed modifications. Arcadis intends to resume remedial activities immediately following completion of the shallow soil excavation by Bolla and Impact. VB 05-31-2016 - V. Brevdo On March 21, 2016, eight monitoring wells were gauged and sampled. From March 15 through 21, 2016, Impact Environmental, on behalf of Bolla, completed the on-site shallow soil excavation activities as outlined in the March 16, 2015, Department-approved Soil Excavation Work Plan. During the soil excavation activities eight improperly abandoned USTs were encountered and subsequently removed. Following their removal, the USTs were cleaned and removed from the site for proper disposal. The Soil Excavation Report is in preparation for submittal to the Department in June 2016. As a result of the remediation activities, the AS/SVE system design is under review with a Remedial Action Plan Amendment scheduled for submittal to the Department in June 2016. The next quarterly groundwater sampling event is scheduled for June 2016. VB 09-05-2016 - V. Brevdo On August 5, 2016, on behalf of Bolla, Arcadis submitted a Soil Excavation Report. The Report summarized the excavation activities associated with Spill Case No. 1214643 which took place from March 15, 2016 through March 18, 2016, and from March 21, 2016 through March 22, 2016. Arcadis recommended closure of Spill Case No. 1214643 based on the following information: lack of olfactory observations when the extent of the excavation was reached; lack of visual staining at the extent of the excavation; low to non-detect PID readings on the excavation sidewalls and floor; depth to groundwater being approximately 39-47 feet bgs.; maintained asphalt and/or concrete cap at the site to prevent infiltration; excavated to the extent possible due to existing structures, utilities, dispenser islands, and adjacent roadways; physical tank removal of eight 550-gal USTs; and 354.61 tons of petroleum impacted soil and 2,745 gallons of petroleum-impacted liquid removed. The Department reviewed the Soil Excavation Report and Spill Case Closure Request and closed spill case (soil remediation) effective May 8, 2016. Groundwater remediation continues under the Spill No. 0909627. 08-05-2016 - V. Brevdo e-mail to Arcadis regarding closure of spill 1214643: Mr. Tracy: As I am reviewing the August 2016 Soil Excavation Report I am inclined to proceed in the following manner: upon completion of the report review tentatively on Monday, August 8, 2016, I will proceed (pending unexpected discoveries) with the closure of the spill case no. 1214643. As this closure pertains to remediation of the soil only, the spill case no. 0909627 will remain open. Furthermore, as spill closure letter contains language regarding abandonment of groundwater monitoring wells on site, which

MOBIL OIL CORP SS #EWT (Continued) **1000553831**

Remarks:	is not applicable in this case as we need to continue remediation of the groundwater and need wells, I will not issue a spill case closure letter for closing spill 1214643. I will only close spill in the database with relevant explanations reflective of this e-mail. Spill Closure letter will be issued when closure of spill 0909627 is accomplished. Let me know if the above course of action is acceptable to you and if we are on the same page on this matter. Thank you. Vadim Brevdo Mon 8/8/2016 8:41 AM e-mail from Arcadis: Hello Vadim, Thank you for your review of the soil excavation soil. I agree with your logic and, as such, agree with the proposed course of action. Thank you, Dave 08-08-2016 V. Brevdo e-mail to Arcadis: Mr. Tracy, thank you. Spill Case No. 12-14643 (soil remediation) is closed effective today. Groundwater remediation continues under the spill no. 0909627. Contact me if you have questions. Vadim Brevdo" "cleanup pending - open spill number that is being used for remediation"

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DER Facility ID:	329293
DEC Memo:	"Sangesland spoke to FD rep. NYC Fire Dept called to a home by homeowner. Oil Company: TTT Transport - (Office address: 4416 18th Ave, Brooklyn NY 11204) Oil company made a miss Delivery to a wrong address. They pumped several hundred gallons of heating oil into a buried/abandoned tank associated with the home at 431 East 4th St, Brooklyn. Unsure if tank is leaking or what the condition is of the soil around the tank. 4/13/07 - Raphael Ketani. I made a site visit and met Bill Vasquez, owner of the home (718) 853-5569. He said that some truck from TTT Transport came to his home and pumped oil into a tank under his driveway. He said that his neighbor tried to get the driver to stop, but the driver kept on pumping. Then the guy left. He said that when he called 311 , the fire department showed up and issued him a fine for having an unfilled abandoned tank with a usuable fill port. Mr. Vasquez showed me the summons. He also showed me a number of photostatic copies of documents from the delivery driver. These included the truck registration and various permits to haul oil and operate in NYC. The documents had many addresses for TTT Transport/Leasing. They were: 1) Roger Gross, TTT Leasing, 1274 49 St., Brklyn., 11219/NMFTA, Inc., 2220 Mill Rd., Alexandria, VA, 22314 (703) 838-1810 2) Roger Gross, TTT Trans Petro Inc., 4416 18 Ave., Brklyn., 11204 FAX (718) 377-4118 3) TTT Transport/Leasing, 160 Sullivan St., Brklyn., 11231 4) TTT Leasing, 261 Central Ave., Jersey City, NJ, 07307 5) TTT Transportation, 290 Larkin Drive, Monroe, NY, 10950 I inspected the basement with a ppb PID meter. There were no detectable vapors in the basement and no signs of staining or oil on the wall adjacent to the tank. While I was inspecting the basement, Mr. Vasquez heard someone drop a heavy piece of metal in his driveway. He said that the company to remove the oil had arrived. I asked him whether he had called them or whether they had been called by the oil company. Initially, he said he had called them, but later he said that he hadn't. Mr. Vasquez showed me a piece of paper with the name Anthony written on it and the name of his company, Best Tank, 150 Sullivan St., Brklyn., (718) 522-5100. We went upstairs and to the driveway and met Ivan, a worker from Best Tank. I asked him whether Best Tank and TTT were related, as they are very near each other (150 and 160 Sullivan St., respectively). He said No. Ivan pointed out to me that there were two ports for the tank, one for filling and one at the other end for sticking the tank. He said the tank is 1,080 gal. He measured the volume of the liquids and detected 26 1/2 total with 14 1/4 of water. He sent his drive and tanker truck away because he needed a truck with two compartments so that the oil and water can be held separately (he said they were going to sell the oil back to TTT Transport). Ivan said that Best Tank will clean the tank, fill it, and plug the fill port. Mr. Vasquez got ahold of Anthony of Best Tank and asked him who hired his company. He said

BILL VASQUEZ HOME (Continued) **S108639387**

Andrew Lipton had. He gave Mr. Vasquez the phone number for Mr. Lipton (845) 267-2400. Mr. Vasquez called Mr. Andrew Lipton and got clarification as regards what will happen today (removal of the oil). I spoke to Mr. Lipton and asked him whether he was the owner of TTT Transport. He said he was. I asked him what was the main address of his company. He said 290 Larkin Drive, Monroe, NY, 10950. I told him that I will send a CSL. 4/18/07 - Raphael Ketani. I drafted a CSL for the review of Randall Austin, Chief Spills Engineer Region 2. 4/20/07 - Raphael Ketani. I spoke to Mr. Vasquez regarding progress on the misdelivery to his tank. He sounded very excited and a bit confused. He complained that DEC was the only one that told him what he needs to do. He said that he is still trying to get a good price for the work. I told him that the work should include tank tightness testing and that this should happen before the tank is abandoned in place. He said he understood. I gave him the name and number of several companies and told him that these places do testing and abandonment, but DEC doesn't make recommendations. He said he will call them all. Mr. Vasquez called me back. He said he hired ABC Tank to do the tightness testing and the abandonment. I spoke to Donna at ABC and she confirmed that they will do the work. 4/23/07 - Raphael Ketani. Mr. Vasquez called and told me that the work will start tomorrow to test the tank and abandon it. 4/27/07 - Raphael Ketani. I received a FAX of the passing tank system test from Donna of ABC Tank. 5/2/07 - Raphael Ketani. I called up ABC Tank and spoke to Patricia. She looked up the work record for the site on her computer. She told me the following work had been done: pump out 230 gallons of water and oil, cleaned the tank, tested it successfully, and filled it with sand. Based upon the passing tank test report and my conversation with Patricia, I am closing the spill case."

Remarks: "OIL WENT INTO AN UNDERGROUND TANK AND UNSURE HOW MUCH LEAKED IN GROUND"

DEC Memo:	"9/14/2010 - Spoke to Bob at ProTest. He said system failed, any further info DEC should contact Property Manager. 9/14/2010 -Voicemail message at Bob Jalen Mgt asking for callback on this site. Spill/Site Background: 1)Prior TTF (Spill #8807797)was never dealt with and DEC eventually Administratively Closed the case in 2003 due to lack of information. 2) PBS required a tank test by 4/16/2009 - Tank was not tested until 8/26/2010 3) Tank Test on 8/26/2010 Failed - Unknown current status. Still in service? Repairs? Retest? 11/9/2010 Voicemail with Prop. Mgt asking for callback. 2/22/2011 Finally spoke to Bob at Prop Mgt. No repair/investigation/isolate work has been performed yet. He will hire someone within the next 1-2 days. ***Due to lack of response and problems with PBS, case forwarded to DEC Legal** 2/23/2011 Bob Prop Mgr at Bob Jalen Mgt hired ABC Tank (Chris) 718-272-2800 to dig down, expose lines and tank top. Isolate tank & retest. Determine problem and make repairs. 3/21/2011 Chris at ABC said they isolated the 5,000 gal tank and it failed. On 3/7/2011 3 hours of welding, manways repaired, retested the tank and it past. All lines were isolated retested and past. Only problem was around the manway on the top of the tank. ABC Tank will perform an Official EZ Test on the system to confirm passing. Photos will be taken. Chris said there was no contamination found at/near the leak area. 10/26/2011 Sangesland left a voice message with Chris at ABC Tank asking for the closure report. 11/2/2011 Sangesland received a letter/retest from ABC Tank saying repairs were made to the fill and vent lines, system retested and passed. No contamination was found. Spill Case Closed 5-6-14 - Dupigny - Notes from Sangesland Chris at abc tank did work at site March 2011 but DID NOT sibmit documents 2-10-11- steave left voice message with prop. mgr. asking for call back 2/15 - 2nd message with prop. Mgr."

DEC Memo:	"9/26/2005 Sangesland spoke with Edith Bedelle about the spill in her basement. Petro replaced the oil line, but did not clean up the subsurface spill. Mrs. Bedelle needs guidance on insurance company and clean up contractors. 09.29.05 SR// Sharif inspected the basement on 09.27.05. PETRO installed a new Burner for the boiler and a new oil line from the boiler to the tank. The old , rusted oil line is still there. Both line run aboveground. Oil soaked debrises piled up in different spots in the room which need to be removed and cleaned so that no more oil smell/contamination exist there. Sharif advised the homeowner to hire a contracter to clean and wash the boiler room.This does n't seems like extensive clean up job but cement carpeting on the floor might be needed to be replaced where the floor is badly impacted. 10/05/2005 Sangesland spoke with Kenneth at Petro concerning the clean up at the site. He says all work was completed, spill can be closed out. 10/17/2005 Issac from Eastmond called to say he finished the cleanup of this basement spill. All contamination removed, basement floor is now clean. Spill Closed"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER DEC Sigona sent a tank test notification letter on 10/15/2002. File on letter at Spills duty officer desk. 11/12/2003-Vought-Called ProTest and left message to return call to DEC with detailed work description. 1/7/04-Vought-Spill transferred from Vought to Austin. 01/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 07/19/2005- Gupta- Spill transfered from Sawer to Gupta 11/3/05- Gupta called Holy Innocence church and talked to Ms. Sandra. Ms Sandra asked a Spill Report and provided FAX number 718-941-4931 to mail. Gupta Faxed the Foil Report. Expecting call from Mr. Msger Rollin Darbouze phone 718-941 9500. 09/1/2006 This case was transfer from Albany to Region #2. 09/5/06-Zhune called Monsenor Ollaih Dabouce (Ph: 718-469-9500). He will find out information and call me back. 12/4/06-Zhune called Monsenor O. Dabouce this # (718)469-9500 is not in service no further information has been reported. 12/4/06 Bob Urban from Pro Test sent tightness test results of both tanks and a letter saying The 5000 gallon wrapped #4 fuel oil tank in basement of tank had the manhole regasketed, the vent line replaced, and the remote fill replaced. The 5000 gallon fuel oil UST had vent line replaced, the stick line replaced, and the supply and return lines replaced. After these repairs were made booth tank systems passed the final tightness test. The notes in the file did not indicate that any contamination was present, If there has been contamination it would have been duly noted and properly reproted. This case was closed for V. Zhune "
Remarks:	"TANK FAILURE (2) AT ABOVE LOCATION. CHURCH HAS BEEN ADVISED OF RESULTS."

Site Description: "Location: The 20,625 square foot (0.47 acre) site is located at 22 Caton Place in the Borough of Brooklyn, Kings County, NY in an urban area. Site Features: The Site currently consists of a vacant lot from which the previous building was reported to have been razed in 2007. Current Zoning/Use(s): The site is currently zoned as R7B R5B (residential) within the Ocean Parkway Special Zoning District, and is surrounded by residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for hazardous materials. Historic Use(s): The following information was obtained from a June 8, 2005 letter from NYCDEP to the NYC Department of City Planning. The Site was most recently occupied by a one story brick structure with a cellar which operated as a chalkboard/blackboard manufacturer. The historical on-site uses include a wire and metal forming company and a food warehousing company. Site reconnaissance during September 2003 observed one fill port in the front of the building and two vent pipes connected underground storage tanks (reported to be storing gasoline). An oil/water separator was also observed on site. In addition, a 2,000 gallon fuel oil UST was located adjacent to the gasoline USTs. Site Geology and Hydrogeology: Soil borings conducted in 2011 identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 42 feet below grade. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites. "

Env Problem: "Nature and Extent of Contamination: Soil: The Site Characterization (SC) was performed in October of 2012 by Ten-En on behalf of Hudson Caton LLC. It consisted of advancement of eighteen soil borings and three test pits, installation of four groundwater monitoring well points and seven soil vapor points on-site, collection and laboratory analysis of eighteen soil, and nine groundwater samples for TCL VOCs

LOT 55,TAXBLOCK 5320 (Continued) **S111738320**

and seven soil vapor samples for TO-15 VOCs. In prior investigations to the SC, some 45 soil, 5 groundwater and 4 soil vapor samples had been taken. There was only one reported exceedance of a CVOC, TCE, in soil and all groundwater samples had exceedances of groundwater standards for TCE. There were no VOCs detected in soil samples (taken during the SC) at levels above UUSCOs or PGSCOs. The three test pits revealed the presence of three (3) USTs, including one (1) 2,000-gallon capacity fuel oil UST and two (2) concrete-encased 550-gallon capacity process USTs. Groundwater: Two (2) compounds, TCE and cis-1,2-dichloroethene (cis-1,2-DCE), were detected above the Class GA Standards in groundwater samples. Three (3) other VOCs, tetrachloroethene (PCE), acetone and chloroform, were also detected but at concentrations below the Class GA Standards. Acetone and chloroform were detected at estimated values. TCE was detected above the Class GA Standard of 5 ppb in all monitoring wells except well GW-2, which is located near the known USTs. Concentrations above the Class GA Standard during this sampling round ranged from 440 ppb in well GW-7, at the upgradient border, to 6.5 ppb in well GW1, located in the northeastern portion of the Site. Concentrations in wells GW-3, GW-5 and GW-8, all of which are immediately downgradient or cross-gradient to well GW-7, have concentrations between 110 and 220 ppb. Cis-1,2-DCE was detected above the Class GA Standard of 5 ppb in only one (1) monitoring well, GW-6,at 9.9 ppb, located in the southwest corner of the Site, downgradient from well GW-7. No SVOCs, pesticides, PCBs or metals were detected above the Class GA Standards. Soil Vapor: TCE was detected above the NYSDOH AGV of 5 ug/m3 in four (4) soil vapor samples, SG-5 through SG-8, at concentrations ranging from 14.8 to 315 ug/m3. These samples are located along the eastern upgradient border, the western downgradient border and the southwestern corner of the Site. The highest detected PCE concentration of 21.6 ug/m3 was located in sample SG-8 along the western border of the Site; this concentration is above the highest background level but below the NYSDOH AGV of 100 ug/m3. Several other VOCs, including 1,2,4-trimethylbenzene, 1,2-dichloroethane, acetone, carbon disulfide, cyclohexane, ethanol, hexane, MEK and methylene chloride were detected above the highest background levels; however, these concentrations do not appear to be indicative of source material. One (1) ambient air sample was collected. No evidence of chlorinated solvents was detected in the sample. Significant Threat: Based on review of the Site Characterization Report, NYSDEC has concluded that the site does not present a significant threat to human health or the environment."

DEC Memo:	"03/08/12-Hiralkumar Patel. 2:29 PM:- left message for Matt. 2:58 PM:- received call from Matt. site is currently vacant, but will be developed as residential building with basement. they did Phase II investigation as part of e-designation. during investigation, found PID readings and staining in soil in boring closer to on-site tank. they have collected samples for analysis. he also mentioned that there was previous limited investigation done at the site. asked him to submit copy of all available environmental reports. also asked him to submit property owner's contact info. he mentioned that owner has filed application for city's brownfield program. informed him that the investigation report must be submitted to the department for review and approval. Matthew Carroll Tenen Environmental Ph. (646) 606-2332 email: mcarroll@tenen-env.com alternate addresses: 22-36 Canon Place no other spills found. PBS #: 2-608287. as per PBS record, the site has one 2,000 gal #2 oil UST, currently in-service. PBS registration expired on 02/18/08. less than ---------- Hudson Caton LLC. **property owner** 826 Broadway, 11th Floor New York, NY 10003 Attn.: David Kramer email: dkramer@hudsoninc.com **email got from DOB permit application** 3:53 PM:- sent email to Matt and asked to submit reports for review. asked him to submit documents/information to DEC Rahman. email copied to Mr. Kramer and DEC Rahman. case assigned to DEC Rahman. 01/23/13- Site characterization report in edocs.The site is located at 22-36 Caton Place(Block 5320, Lot 55).Testing includes 63 soil samples at multiple depths from 31 soil borings, 14 ground water samples from 9 monitoring wells, 11 soil vapor samples from 11 locations.Testing does not indicate any significant source of chlorinated solvent contamination from the site.Chlorinated solvent in soil vapor measured. Petroleum contamination recorded in soil/ground water near the leaking UST.GW has been measured at approx. 42 ft bgs. Petroleum impacts were detected at the northwest corner of the UST locations.Test pits revealed presence of two 550 gallon non fuel USTs and one 2,000 gallon fuel oil UST.No evidence of free product or grossly contaminated soil was encountered. In the most recent ground water sampling, no petroleum impacts were detected in ground water above the Class GA Standards.Elevated levels of chlorinated solvents, predominantly TCE, are present at the site, showing highest concentration along the upgradient boundary. 08/09/13 Submitted PBS application for tank removal.(sr) 5/30/14 - Austin - Spill transferred from Rahman to Mahat for followup - end 4/12/16: Mahat DEC Mahat uploaded the Closure report submitted on 3/16/16 to D2. Based on the provided closure report, the Department does not warrant any further remedial work on the site. Please refer to the uploaded report for reference. Spill case is closed on NYSDEC Spill Database. "

DEC Memo:	"assigned to C. Whitfield in backlog initiative. No file was received from the region. The property is a 6 or 7 story co-op (Property Shark indicates a 7th story was proposed to be added by 7/30/03) that appears to have been formed between 1985 - 1987; the structure was built in 1960. 11/28/05: PBS # 2-348848 indicates this 10,000 gallon tank for #6 fuel oil is registered through 4/19/08, and the certification was printed 7/18/03. Installation date is not given. Property Shark indicates (and the site management company confirmed)that a building permit was issued 11/10/2003 to abandon the existing buried fuel oil tank in favor of an above ground tank and switch to #2 fuel oil; this is not reflected in the PBS database. Waiting on call back from Better Mechanical, who actually did the work. Received the call back from Petroleum Tank Cleaners / Better Mechanical (Mark, who had been out with a heart bypass). The buried oil tank was filled with concrete. There is no surviving paperwork about the job; he indicated there was no contaminated soil. Closed per guidance issued with inititive. File material being sent back to the region was compiled from info on the UIS and publicly available

DER Facility ID: 445628
DEC Memo: "DE CPiper spoke with Phil Fazin. ABC to perform repairs. Restest to follow. 03-18-2015 - V. Brevdo This TTF Spill Case is re-assigned to Remediation Section B as per discussion with Chief of Spill Response on 03/17/2015. Case is further assigned to Mr. Jonathan Kolleeny as Project Manager. - VB 05/21/15: I contacted Phil Fazin (A1 Crown Corp, 516-375-5890), who performed tank test on 1/8/14, to ask why tank failed and what repairs were done to bring about passing test on 1/20/14. I sent email to Phil with attached spill rpt & passing tank test rpt (in DecDocs), writing: Phil, Nice speaking with you today. I ve attached spill rpt for a Tank Test Failure spill, case number 1309770, reported for property at 400 Marlborough Rd in Brooklyn. Spill rpt, dated Jan. 8, 2014, states that a leaking vent pipe was suspected as cause of tank test failure. I ve also attached a passing tank test rpt dated Jan. 20, 2014 (presumably a re-test after repairs were made). If you re able to locate any records indicating what cause of original test failure was, and/or indicating what repairs were made to enable tank system to pass re-test, that would help me close out this spill case. Your help is much appreciated. After checking his records, Phil wrote back: Hi Jon, I tested it but another company retested it. When I tested it I could not find a vent. I think it was rotted off. I did job for ABC tank. They probably repaired it and maybe I was too busy and they hired a new company or owner... Call ABC and ask 718 272-2800. Thanks, Phil Fazin. I contacted ABC tank, but they only had record of testing tank on 1/8/14, when it failed. They pointed out that re-test was done by another company, presumably hired directly by property owner. - J. Kolleeny 06/02/15: On 5/29/15, I attempted to contact Abraham Wachsler of N.Y.C. Tank Testing Inc. (718-731-7011), who did tank re-test on 1/20/14 which passed, to ask what repairs, if any, were made to tank system to enable it to pass re-test. Left mssg. for Mr. Wachsler. On 6/2/15, Mr. Wachsler contacted me, saying that he did not make any repairs, just tested tank and it passed. I mentioned that previous tester was unable to find vent pipe and speculated that it may have rotted off, but Mr. Wachsler pointed out that 3rd page of passing tank test rpt (in DecDocs) shows site plan with vent pipe indicated in bldg alcove outside of boiler room. He also indicated he had no reason to believe tank released any oil to environment, and that if previous tester couldn't find vent, that would've cause tank to fail test (i.e., without implying any release occurred). Based on this information, it appears failure of first tightness test on 1/8/14 was related to tester's not finding vent pipe, and since tank then passed re-test on 1/20/14 without any repairs, it seems likely that TTF did not involve any release of petroleum to environment. Therefore, this spill case is closed. - J. Kolleeny"
Remarks: "Test failure believed to be leaking vent line. Repair and retest."

DEC Memo:	"Sangesland spoke to Abraham at NY City Tank Testing -office 718-731-7011 cell 646-321-2876 He said there was a tank test failure. They dug down to the top of the tank and had several barrels of contaminated soil. They took sidewall samples. There were NO samples taken under the tank or down the side of the tank (below tank depth level). When Sangesland asked for sammple through the bottom of the tank or down the side of the tank, Abraham said the owner would be taking the tank out of service in the summer and this case would need to wait until then to get the final samples. 3/14/2012 Sangesland reviewed a Soil Sample report which was submitted. - See eDocs All values were below DEC State limits. Spill Case has been closed out. "

Tank Info:

Tank Number:	001
Tank Id:	8727
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F06 - Pipe External Protection - Wrapped
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
H00 - Tank Leak Detection - None
I00 - Overfill - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER 4/22/2004 Sangesland spoke to Isaac at Eastmond. He said the tank is #6 oil/ 10,000 gal buried and has a longterm leaking problem.

Actual:
33 ft.

APT BUILDING (Continued) **S106000870**

Temp tanks will go in tomorrow. Eastmond will contact Sawyer to discuss cleanup. 11/18/04 - Sawyer - Received closure information in the form of end-point analysis and waste disposal manifest. However, some semi-volatiles were slightly above RSCO, but because of the location of the grave and permanent abandonment of the tank there should be no further impact. No further action needed. Closed."

Remarks: "Caller is looking to see what is causing the failure to fix the situation, they are working on setting up temporary tanks."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 3/14/2002-VOUGHT-Site visit by Vought on 2/3/2002. Building super is Charles Pulliam (718-941-5782). Building manager is Noel Debatista (Triboro Management-718-476-8377). Spill caused by pump failure. Spill entered sump pump in basement and was ejected out into the street via a curb pipe. Spill contained with Speedy Dry. Spill cleaned by Petroleum Tank Cleaners (718-624-4842) on Feb 6 who washed and cleaned the boiler room with biodegradable chemical degreaser and pumped out and cleaned sump pit. PTC disposed of 2 55gal drums. (Recieved letter from PTC). Received letter of repair from Effecient Combustion and Cooling Corporation (516-795-5828) who installed new pump and disposed of old pump. No sewers or drains affected and spill was on concrete floor in basement and asphalt parking lot. Spill closed."
Remarks:	"seal on a pump let go causing sump pump to pump it into the street cleaning up with speedy dry"

DEC Memo:	"PTC will notify DEC in 3 days if repairs and retest proposal is not accepted. TTF letter on hold. assigned to DEC Demeo for followup. 5/20/16 TJD File review. Closure report submitted by Petroleum Tank Cleaners. As per report, 5K #4 FO AST failed tightness test on May 7th, 2014. On May 29th, 2014, the contractor isolated the tank and lines and retested separately - the tank, fill, suction and return lines all passed isolation tests. The vent line failed. The vent piping on AST was subsequently replaced by unidentified contractor. On June 14th, 2014, PTC returned to the location and performed a full system test with passing test results. Based upon the documentation provided the dry leak associated with the failed vent piping has been repaired. No further action is required. All documentation has been uploaded to DECDOCS. Spill closed."

Updated By: KALEWAND
Site Description: "The site is an empty lot located behind the Silver Rod Drugstore. The previous owner operated a furniture refinishing factory at the

SILVER ROD DRUG CO. (Continued) **S105973020**

site for approximately 30 years. The NYC Dept. of Environmental Protection received a statement from several area residents indicating that they had witnessed employees of the furniture company bury drums on the site. Residents, according to a signed statement, were also informed by former employees, that drums were buried on site. A Phase I investigation was completed during 1985 and recommended further investigation. A consent order between the Department and Silver Rod Drugstore has been signed and the Phase II field investigation has been completed. The work plan for remediation was approved by NYSDEC in December, 1991. Contaminated soil at the site was removed in February, 1992. Final soils test results indicate that hazardous waste has been satisfactorily removed."

Env Problem:	"There are no environmental problems remaining associated with the disposal of hazardous waste at this site. The site was delisted from the Registry as removal action conducted at the site has removed all hazardous waste."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NYC LEAD 2: Recent Lead Paint Violations
Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

UTM Y (Meters):	4499575.5
Elevation:	45 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

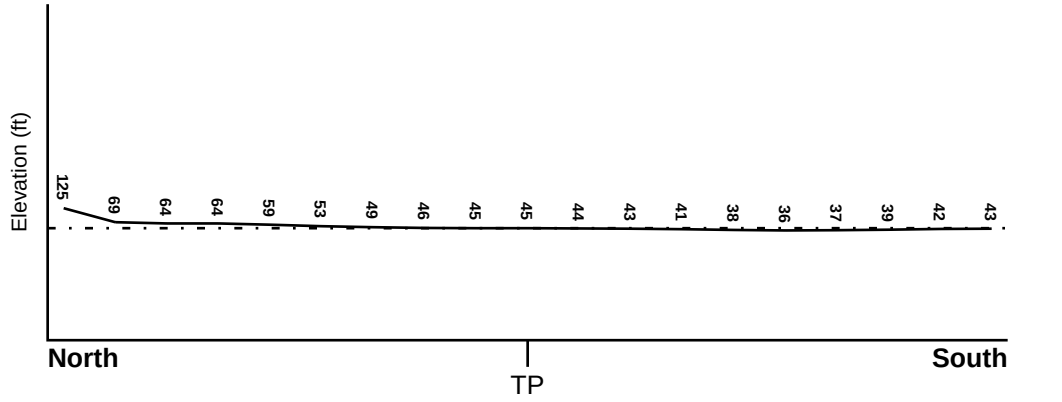
TOPOGRAPHIC INFORMATION

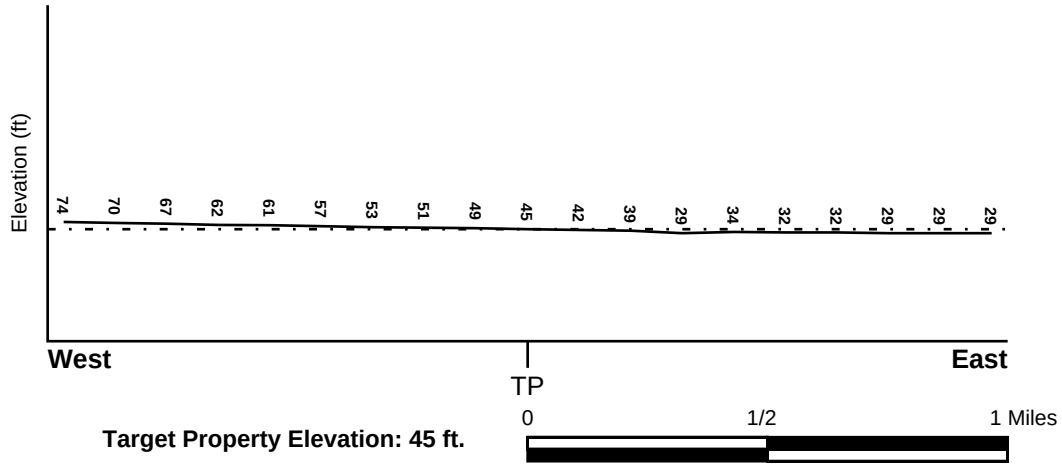
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 45 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970085B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
3604970211F	FEMA FIRM Flood data
3604970073B	FEMA Q3 Flood data

3604970086B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Source: Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

DECEMBER 10, 2021

Re: GPRS FINDINGS REPORT

50 HINCKLEY PL, BROOKKYN, NY

Thank you for the opportunity to serve you on your project. Please refer to the job summary report that is sent separately from this document for additional notes related to our site visit. Included with this submittal email, please find the document list below which includes a link to download your files from our database:

Document List:

COPIES	DATE	DESCRIPTION	LINK
1	12/10/2021	PDF Aerial Overlay - Open with PDF reader	PDF
1	12/10/2021	PDF Aerial Overlay with Icons - Open with PDF reader	PDF
1	12/10/2021	KMZ file - Open with Google Earth	KMZ
1	12/10/2021	SHP files - For use in CAD or GIS software	SHP

As an additional service, we also provide CAD drawings and can even use your existing drawings as background linework for our files. If you have already ordered CAD as a deliverable option, the CAD will be delivered as a separate submittal, typically in the next few days. If you would like CAD as a deliverable and have not yet requested it, please reach out to us to get a quote to have the service added to your job by replying to this email or giving me a call.

As a reminder, we do not provide surveying or engineering services at GPRS. The data provided is at mapping quality for general reference only. The GNSS/GPS locators that we utilize are certified for sub-meter accuracy and locations were attained by our project managers that are not surveying professionals. Some of the documents we provide with our deliverable have embedded location and elevation data that should be used at your own risk due to accuracy limitations listed above. If survey and design level accuracy is needed, you will need to hire a licensed surveyor in that state to pick up field markings to provide you with the desired data separate from GPRS. This letter is subject to our Terms and Conditions which are listed and incorporated by reference here: https://gp-radar.com/terms-conditions.

Please let me know if you have any questions, concerns, or additional requests. I look forward to working with you again soon.

Thank you!
Raymond Williams

PO Num	0200894

Lead Technician LAMANNO, TYLER **Phone** 732-672-9340 **Email** tyler.lamanno@gprsinc.com

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS technician on this project.

EQUIPMENT USED

The following equipment was used on this project:

- Underground Scanning GPR antenna. Typically capable of detecting objects up to 8' deep or more in ideal conditions but maximum effective depth can vary widely and depends on site and soil conditions. Depth penetration is most commonly limited by moisture and clay/conductive soils. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.
- Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.

Work Performed

Ground Penetrating Radar Systems performed the following work on this project:

Underground Utility

The scope of work included scanning the specified area to locate underground utilities. A tracer signal was sent along any accessible metallic utility or tracer wire, and the area was scanned with GPR to locate any additional targets. The locations of any detected utilities and anomalies were marked directly at the site with paint, flags, stakes, or other appropriate means, and results were reviewed with onsite personnel unless otherwise noted.

- The total area scanned was approximately 35000 square feet.
- 35,000 sf open-air vacant lot (former parking lot)
- The effective depth of GPR will vary throughout a site depending on surface and soil conditions. In this area, the maximum effective GPR depth was approximately 3 feet.

Job Summary

Job Date : 12/3/2021

- GPR and EM wand use to locate potentially utilities on site.

  GPR struggled to see anything past 3 feet. Terrain is different in some areas.

  GPR Data revealed debris in the ground in a few different location. It's not consistent enough for me to believe that it's pipe of any sort. Since I was unable to determine what it could be it is marked in pink.

  EM wand who is used to passively scan the area in search of any electrical lines underground. I was unable to pick up any potential lines within the scope.

  I recommend staying at least 3 feet away from all marks on site. I also recommend handshaking the first 2 feet if possible.

  Detailed info to follow in the formal report.

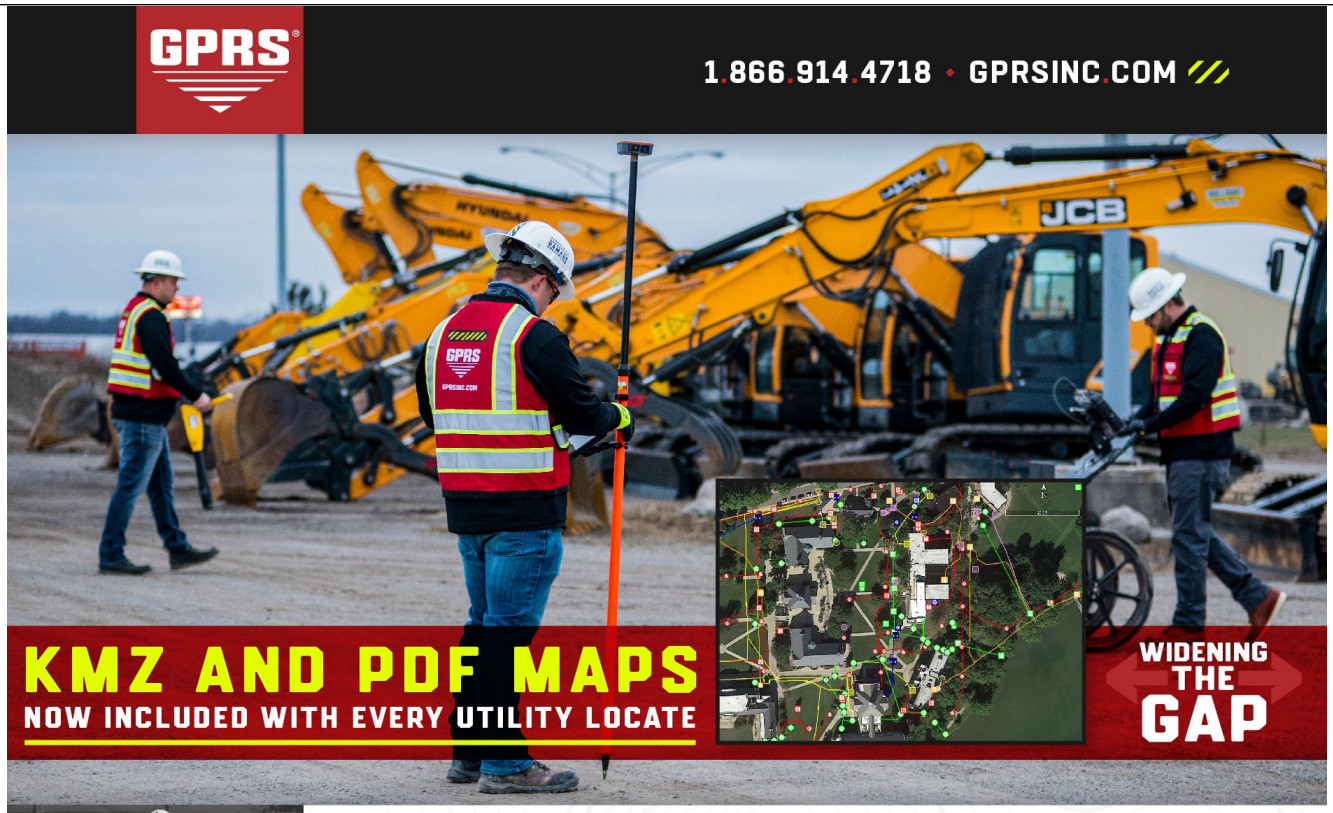
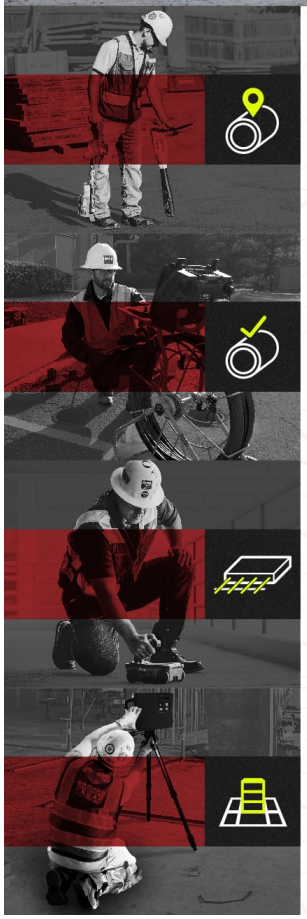
Job Summary

Job Date : 12/3/2021





UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply and your schedule can be delayed.

VIDEO PIPE INSPECTION

Video Pipe Inspection (CCTV) is a service used to inspect underground water, sewer and lateral pipelines. VPI is a great tool for investigating cross-bores, structural faults and damages, and lateral line inspection.

CONCRETE IMAGING

With new build construction and renovation projects, the likelihood of needing to cut or core concrete is high. There is an inherent risk of striking rebar, conduits, and post tension cables during the cutting or coring process. Our industry-leading concrete scanning services can mitigate the risks associated with saw cutting and core drilling concrete slabs.

MAPPING & MODELING

As-built utility maps, structural as-built drawings, and facility maps are actually meant to be “as-intended” drawings as the construction process or renovations can cause deviations to the original plan. GPRS can create a comprehensive facility map that contains precise as-built conditions – giving you peace of mind by knowing exactly what exists on your property.

Re: Geophysical Engineering Survey (GES) Report
7-Eleven
547 Coney Island Avenue,
Brooklyn, New York 11218

Dear Ms. Commisso;

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 547 Coney Island Avenue, Brooklyn, New York (the "Site")

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks (USTs) and other substructures as well as clear and mark proposed boring locations on March 21st, 2024.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter

electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

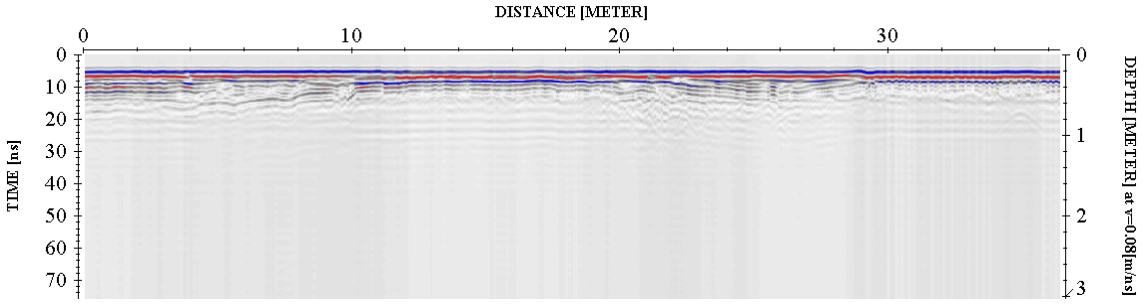
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

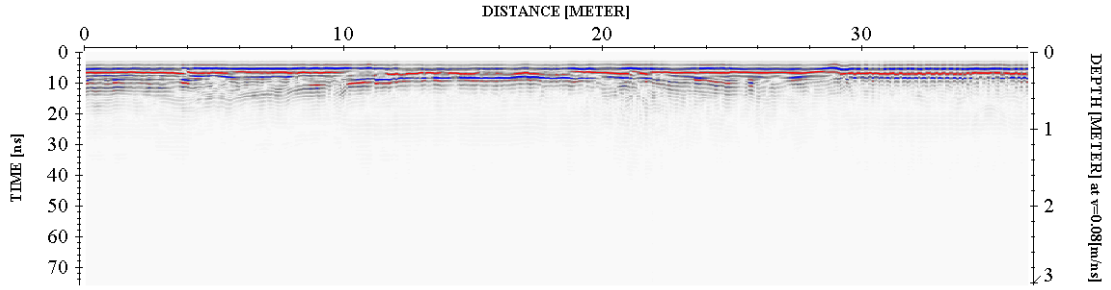
DATA PROCESSING

To improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing workflow is briefly described in this section.

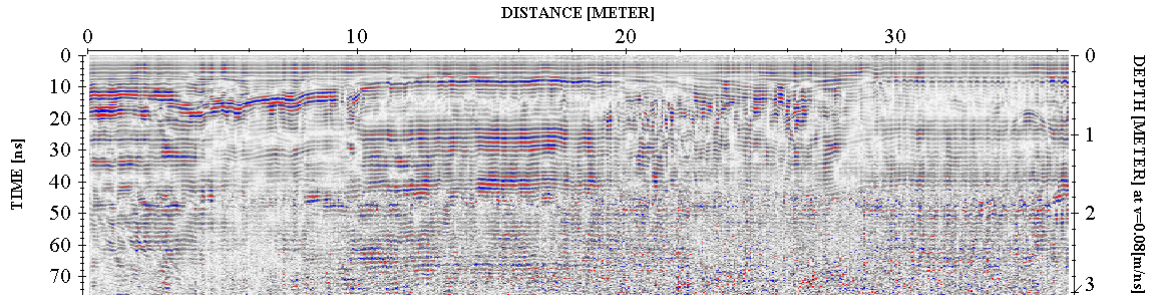
Step 1. Import Raw RAMAC data to standard processing format



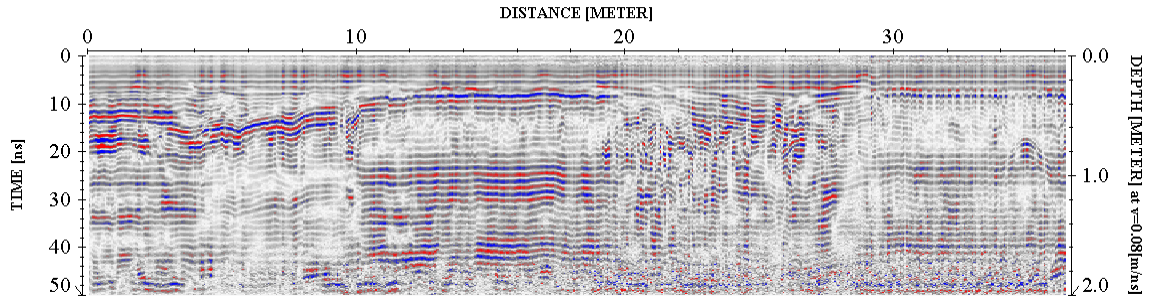
Step 2. Remove instrument noise *(dewow)*



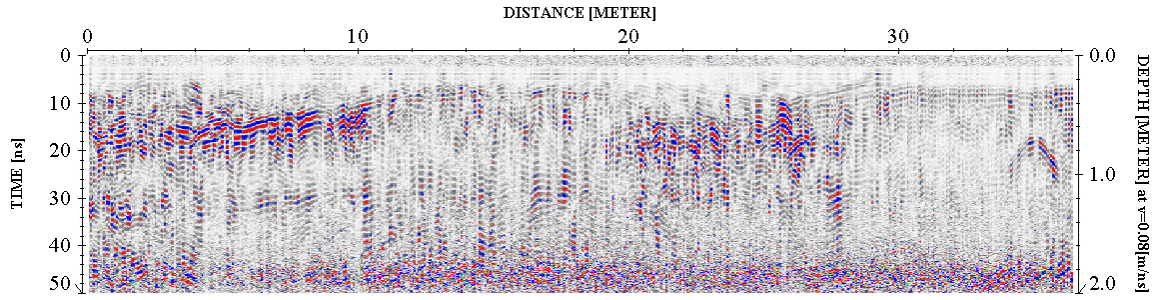
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Overcast

Temperature: 32° F

Surface: Concrete, Asphalt

Survey Parameters: A GPR grid scan was conducted within the survey areas as shown on the survey plan. The approximate line spacing of the grid survey was approximately 2'. Additional GPR data was collected over features of interest. An EM utility locator was used in conjunction with GPR throughout the survey area.

Limitations: The geophysical noise level (GNL) at the site was **high** due to being in an urban environment, and other unknown anthropogenic noise sources. The site was surrounded by excessive subsurface utilities and on-going traffic at the time of the survey.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as electric, sewer, water, and telecom) were identified within the surveyed areas. Anomalies resembling potential subsurface utilities were identified but could not be connected to known utilities. The approximate locations are shown in the survey plan.
- The GES did not identify any large geophysical anomalies resembling a potential underground storage tank (UST) at the surveyed areas.
- NOVA cleared and marked all proposed boring locations during the onsite mark out.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Manager

Work Order Number	Work Order #733430
Job Number	
PO Number	

GPRS Project Manager: Alexander Seodat

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS project manager on this project.

EQUIPMENT USED

The following equipment was used on this project:

- **Underground GPR Antenna:** This GPR Antenna uses frequencies ranging from 250 MHz to 450 MHz and is mounted in a stroller frame that rolls over the surface. Data is displayed on a screen and marked in the field in real time. The surface needs to be reasonably smooth and unobstructed to obtain readable scans. Obstructions such as curbs, landscaping, and vegetation will limit the efficacy of GPR. The total effective scan depth can be as much as 8’ or more with this antenna but can vary widely depending on the soil conditions and composition. Some soil types, such as clay, may limit maximum depths to 3’ or less. As depth increases, targets must be larger to be detected, and non-metallic targets can be challenging to locate. The depths provided should always be treated as estimates as their accuracy can be affected by multiple factors. For more information, please visit: Link
- **EM Pipe Locator:** Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. For more information, please visit: Link

JOB SUMMARY REPORT

WORK PERFORMED

UNDERGROUND UTILITY	
Client Provided Drawings	No
Client completed 811 locate request	No
Scope of Work	GPRS was tasked to scan approximately 11,000sf for soil borings.
Approximate GPR Effective Depth (ft)	2
Marking Medium	- Spray Paint
Results Notes	GPRS was tasked to scan approximately 11,000sf for soil borings. GPRS located utilities within the scope of work by using an EM Pipe Locator and GPR. The EM Pipe Locator was used in several different modes such as passive mode. GPR max depth penetration was approximately 2'. GPR faced limitations to complete a full grid scan in areas that were demo and compacted with broken up concrete and other surface obstructions. Wet soil also contributed as a limitation for the GPR. GPRS observed manholes in the street of heavy traffic area and seen old mark outs going into the scope from the manholes in the street, but GPRS was unable to confirm marks due to the utility manholes being in the street. Gas was identified in the scope and marked by 811, GPRS was unable to confirm gas line due to no tracer wire in the gas valve. GPRS dropped the transmitter box in areas around the perimeter of the scope and found two unknown lines, that were marked in pink. GPRS was unable to open a storm manhole that was within the scope of work, due to it being cemented into the concrete. GPRS tried using a hammer to loosen the storm cover and use a hook to open, but was not able to gain access to look inside. GPRS could not scan 2ft off of any surface obstruction present. GPRS recommends staying at least 2ft off all markings when excavating or digging.

JOB SUMMARY REPORT

SUPPLEMENTAL INFORMATION

COMMON UTILITY LOCATING LIMITATIONS

There are many limitations to locating utilities, due to a variety of factors, with several more common examples illustrated here.

Data Usability Summary Report

Project Name: 545 Coney Island Ave

Project Description: Soil and Soil Vapor Samples

Sample Date(s): 15 and 16 December 2021

Analytical Laboratory: Alpha Analytical Laboratories, INC. – Westborough, MA

PHOENIX Environmental Laboratories, Inc. – Manchester, CT

Validation Performed by: Kristina Ilina

Validation Reviewed by: Katherine Miller

Validation Date: 1 November 2023

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group(s) (SDG) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Groups (Soil)**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- Analysis of Volatile Organic Compounds (VOCs) in Air Contained in Canisters by Method TO-15.
- Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under New York State Department of Environmental Conservation's (NYSDEC's) Part 375 Remedial Programs.

Data reported in this sampling event were reported to the laboratory reporting limit (RL). Results found between the method detection limit (MDL) and RL are flagged J as estimated.

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages.

1. Sample Delivery Groups (Soil)

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDGs:

- L2169121, dated 5 January 2022;
- L2169533, dated 12 January 2022; and
- GCK00871, dated 10 January 2022.

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol.

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used on the sample cooler(s).
- L2169121: The Trip Blank collection time (0:00) does not match with COC (15:00).

Analyses were performed on the samples shown in Tables 1 and 2.

1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified. Dilution of the project samples were required to bring calibration of target analytes within calibration range, matrix interference, foaming at the time of purging, or abundance of non-target analytes.

1.4 REPORTING BASIS (WET/DRY)

Refer to Section E 1.1. Soil data in these SDGs were reported on a dry weight basis, except for the trip blanks which were reported on a wet weight basis. Where reported, percent solid results were reviewed and found to be within limits.

1.5 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits.

1.6 LABORATORY CONTROL SAMPLES

Refer to Section E 1.3. Compounds associated with the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits, with the exceptions listed in Table 3.

1.7 MATRIX SPIKE SAMPLES

Refer to Section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L2169533-09	FIELD BLANK-20211216	SW7196A, SW9012B
L2169533-05	SB-2_0.5-1.5	SW7196A
L2169121-06	SB-4_6-8	SW7196A
L2169121-01	SB-5_0-1	SW9012B, ALPHA23528

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits, with the following exceptions.

Sample Type	Method	Parent Sample	Analyte	%R/RPD	Qualifier	Affected Samples
MS/MSD	SW9012B	FIELD BLANK-20211216	Cyanide	214%, 135%, RPD=44	J+/None	FIELD BLANK-20211216

1.8 BLANK SAMPLE ANALYSIS

Refer to Section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred, with the exceptions listed in Table 4.

The analysis of the blank samples for field quality control was free of target compounds, with the exceptions listed in Table 5.

1.9 DUPLICATE SAMPLE ANALYSIS

Refer to Section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL).

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L2169533-09	FIELD BLANK-20211216	SW7196A
L2169533-05	SB-2_0.5-1.5	SW7196A
L2169121-02	SB-5_5-6	ALPHA23528
L2169121-06	SB-4_6-8	SW7196A

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 35 percent for water (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are listed in Table 6 and qualified.

Primary Sample ID	Duplicate Sample ID	Method(s)
SB-4_12-14	DUPLICATE-20211215	ALPHA23528, SM 2540G, EPA 6010D, EPA 7196A, EPA 7471B, EPA 8081B, EPA 8082A, EPA 8151A, EPA 8260C, EPA 8270D, EPA 9012B

1.10 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

1.11 CLEAN CANISTER CERTIFICATION

The canisters used for the TO-15 sample collection were certified clean by batch can analysis prior to sampling to ensure that no target analytes were present. These analysis sheets were reviewed, and no target analytes were detected in the laboratory-provided canisters.

1.12 CONFIRMATION COLUMN REVIEW

Refer to Section E 1.8. All RPDs were within control limits, with the following exceptions:

Method	Analyte	Sample	RPD	Action
SW8081B	gamma-Chlordane (trans)	L2169533-05	> 40%	Qualify data estimated J/UJ.
SW8081B	Chlordane	L2169533-05	> 40%	Qualify data estimated J/UJ.
SW8081B	4,4'-DDT	L2169533-06	> 40%	Qualify data estimated J/UJ.

1.13 PFAS SAMPLE PREPARATION

Refer to Section E 1.14. The laboratory's SOP was reviewed, and the reviewer confirmed it is the laboratory's procedure to use solid-phase extraction (SPE) for sample preparation. No data qualification required.

1.14 PFAS IDENTIFICATION

Refer to Section E 1.15. Ion ratios could not be reviewed because the laboratory did not provide an ion ratio summary.

The laboratory's SOP was reviewed, and the reviewer confirmed that, when applicable, the laboratory's procedure is to sum the branched and linear peaks.

1.15 EXTRACTION INTERNAL STANDARDS

Refer to Section E 1.16. Recoveries were reviewed and found to be within the limits of 50 to 150 percent (25 to 150 percent for perfluorobutanoic acid (PFBA), perfluoropentanoic acid (PFPeA), and fluorotelomer sulfonates), with the exceptions listed in Table 7.

Extraction Internal Standards were out of limits for Method Blanks, LCSs, MSs, and MSDs, but did not affect the data.

1.16 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable, except for rejected data noted below. A summary of qualifiers applied to this dataset is shown in Table 8.

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the %R of the compounds.
- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - MS/MSD data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Analysis of per- and polyfluoroalkyl substances (PFAS) compliant with QSM 5.3 Table B-15 requires instrument blanks that are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess contamination that could occur in the LC/MS/MS instrument.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.

- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the %R of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.
- E 1.8 Confirmation Column Review
  - When analyzing for pesticides and polychlorinated biphenyls (PCBs), compound identification based on single-column analysis should be confirmed on a second column or supported by at least one other qualitative technique. When confirmed on a second column, the RPD should not exceed 40 percent.
- E 1.14 PFAS Sample Preparation
  - Analysis of PFAS requires specific sample preparation. Aqueous samples must be prepared using SPE, unless samples are known to contain high PFAS concentrations or the samples are injected directly into the LC/MS/MS instrument. Samples with greater than 1 percent solids may require centrifugation prior to SPE. The entire sample plus bottle rinsate must be extracted using SPE. If high PFAS concentrations are known, the samples may alternately be prepared using serial dilution performed in duplicate. If prepared by serial dilution, there must be documented project approval for this deviation.
- E 1.15 PFAS Identification
  - Identification of PFAS requires dual confirmation. The chemical derivation of the ion transitions must be documented. A minimum of two ion transitions per analyte are required (except for PFBA and PFPeA). Ratios of the quantitation ion to the confirmation ion should be calculated for samples and be within 50 to 150 percent of the ratios of the quantitation ion to the confirmation ion for standards.
  - Identification of PFAS also requires the proper assessment of branched and linear peaks. Standards for both isomers are not currently available for every PFAS compound, resulting in the common error of quantifying the area of only the branched or the linear isomers, which results in erroneous concentrations.

- E 1.16 Extraction Internal Standards
  - Analysis of PFAS by isotope dilution includes the use of extracted internal standards, which are stable isotope analogs of the PFAS compounds of interest added to each sample prior to extraction of the sample matrix. Matrix interferences that affect the quantification of the internal standard will affect the calculated target compound concentrations.

3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg micrograms per kilogram
  - µg/L micrograms per liter
  - µg/m^3 micrograms per cubic meter
  - mg/kg milligrams per kilogram
  - mg/L milligrams per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

4. Abbreviations

%D	Percent Difference
%R	Percent Recovery
%RSD	Percent Relative Standard Deviation
%v/v	Percent volume by volume
µg/L	micrograms per liter
2s	2 sigma
4,4-DDT	4 4-dichlorodiphenyltrichloroethane
Abs Diff	Absolute Difference
amu	atomic mass unit
BPJ	Best Professional Judgement
BS	Blank Spike
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CCVL	Continuing Calibration Verification Low
COC	Chain of Custody
COM	Combined Isotope Calculation
Cr (VI)	Hexavalent Chromium
CRI	Collision Reaction Interface

TPH	Total Petroleum Hydrocarbon
TPU	Total Propagated Uncertainty
USEPA	U.S. Environmental Protection Agency
VOC	Volatile Organic Compound
WP	Work Plan

5. Qualifiers

The qualifiers below are from the USEPA NFG and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

  F The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Notes:
LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.
FDP = Field duplicate qualifier due to an exceedance of the specified limits.
MBK = Method blank contamination.
FBK = Field blank contamination.
IDL = Isotope dilution outside the specified limits.
MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.
CCR = Confirmation column review: no qualitative check for pesticides.
J+ = The result is an estimated quantity, but the result may be biased high.
J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.
R = The sample results were rejected as unusable; the compound may or may not be present in the sample.
UJ = The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.
U = The compound was analyzed for but not detected.

Data Usability Summary Report

Project Name: 545 Coney Island Ave

Project Description: Soil, Groundwater, and Gas Soil Samples

Sample Date(s): 21 and 22 March 2024 and 3 April 2024

Analytical Laboratory: Alpha Analytical Laboratories, INC. – Westborough, MA

York Analytical Laboratories , Inc - Stratford, CT

Validation Performed by: Kristina Ilina

Validation Reviewed by: Katherine Miller

Validation Date: 26 April 2024

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Group(s) (SDGs) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Groups Validation**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- National Functional Guidelines (NFG) for Organic Data Review.
- Analysis of Volatile Organic Compounds (VOCs) in Air Contained in Canisters by Method TO-15.
- Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under New York State Department of Environmental Conservation's (NYSDEC's) Part 375 Remedial Programs.

Data reported in this sampling event were reported to the laboratory reporting limit (RL). Results found between the method detection limit (MDL) and RL are flagged J as estimated. Soil Gas data was reported to the Limit of Quantitation (LOQ).

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages.

1. Sample Delivery Groups Validation

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDGs:

- 24C1497, dated 4 April 2024;
- L2411068, dated 27 March 2024;
- L2415481, dated 2 April 2024;
- L2415793, dated 4 April 2024; and
- L2418136, dated 15 April 2024.

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol.

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used on the sample cooler(s).
- SDG L2415481: Sample L2415481-06 (B-08_20-22) results were not reported per client request.
- L2411068-01D: The analysis was performed utilizing a compromised vial, with no effect on the analysis.

Analyses were performed on the samples shown in Tables 1 and 2.

1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified. Dilution of the project samples were required to bring calibration of target analytes within calibration range, matrix interference, foaming at the time of purging, or abundance of non-target analytes.

1.4 REPORTING BASIS (WET/DRY)

Refer to Section E 1.1. Soil data in these SDGs were reported on a dry weight basis. Where reported, percent solid results were reviewed and found to be within limits.

1.5 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified quality control (QC) limits, with the following exceptions:

SDG #	Method	Sample ID	Surrogate	Dilution	%R	Qualification
L2415793	SW8260D	B-07_2-4	1,2-Dichloroethane-d4	1x	132%	J+/None target compounds*

** Compounds targeted by 1,2-Dichloroethane-d4: None.*

1.6 LABORATORY CONTROL SAMPLES

Refer to Section E 1.3. Compounds associated with the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits, with the exceptions listed in Table 3.

1.7 MATRIX SPIKE SAMPLES

Refer to Section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L2415481-03	B-13_12-14	SW8081B, SW6010D, SW7471B, SW8260D, SW8082A, SW8270E, E1633
L2415793-01	B-07_0-2	SW6010D, SW7471B
L2418136-01	MW-07-20240403	SW7470A

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits, with the exceptions listed in Table 4.

1.8 BLANK SAMPLE ANALYSIS

Refer to Section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred, with the exceptions listed in Table 5.

The analysis of the blank samples for field quality control was free of target compounds, with the exceptions listed in Table 6.

1.9 DUPLICATE SAMPLE ANALYSIS

Refer to Section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L2415481-03	B-13_12-14	SW6010D, SW7471B
L2415793-01	B-07_0-2	SW6010D, SW7471B
L2418136-01	MW-07-20240403	SW7470A

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)/Analyte	% RPD	Qualification
L2415481-03	B-13_12-14	Magnesium, Total	22	J/UJ, RPD>20%
L2415793-01	B-07_0-2	Calcium, Total	22	J/UJ, RPD>20%

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 35 percent for water (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are listed in Table 7 and qualified.

Primary Sample ID	Duplicate Sample ID	Method(s)
B-13_0-2	DUP-01_20240321	E1633, SM 2540G, EPA 6010D, EPA 7471B, EPA 8081B, EPA 8082A, EPA 8260D, EPA 8270E
B-08_0-2	DUP-02_20240321	E1633, SM 2540G, EPA 6010D, EPA 7471B, EPA 8081B, EPA 8082A, EPA 8260D, EPA 8270E
B-07_0-2	DUP-01_20240322	E1633, SM 2540G, EPA 6010D, EPA 7471B, EPA 8081B, EPA 8082A, EPA 8260D, EPA 8270E

1.10 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

1.11 CLEAN CANISTER CERTIFICATION

The canisters used for the TO-15 sample collection were certified clean by individual can analysis prior to sampling to ensure that no target analytes were present. These analysis sheets were reviewed, and no target analytes were detected in the laboratory-provided canisters.

1.12 CONFIRMATION COLUMN REVIEW

Refer to Section E 1.8. All RPDs were within control limits, with the following exceptions:

Method	Analyte	Sample	RPD	Action
SW8081B	alpha-Chlordane (cis)	DUP-01_20240321	> 40%	Qualify data estimated J/UJ.
SW8081B	gamma-Chlordane (trans)	DUP-02_20240321	> 40%	Qualify data estimated J/UJ.
SW8081B	gamma-Chlordane (trans)	B-08_0-2	> 40%	Qualify data estimated J/UJ.
SW8081B	alpha-Chlordane (cis)	B-13_0-2	> 40%	Qualify data estimated J/UJ.
SW8081B	gamma-Chlordane (trans)	B-13_0-2	> 40%	Qualify data estimated J/UJ.
SW8081B	alpha-Chlordane (cis)	B-13_5-7	> 40%	Qualify data estimated J/UJ.
SW8081B	gamma-Chlordane (trans)	B-13_5-7	> 40%	Qualify data estimated J/UJ.
SW8081B	gamma-Chlordane (trans)	B-07_0-2	> 40%	Qualify data estimated J/UJ.

1.13 PFAS SAMPLE PREPARATION

Refer to Section E 1.14. The laboratory's SOP was reviewed, and the reviewer confirmed it is the laboratory's procedure to use solid-phase extraction (SPE) for sample preparation. No data qualification required.

1.14 PFAS IDENTIFICATION

Refer to Section E 1.15. Ion ratios could not be reviewed because the laboratory did not provide an ion ratio summary. However, the lab qualified the following samples with “F” flag
:

Sample ID	Analyte	Result
B-12_0-2	Perfluorooctanesulfonic acid (PFOS)	0.161 JF

The laboratory’s SOP was reviewed, and the reviewer confirmed that, when applicable, the laboratory’s procedure is to sum the branched and linear peaks.

1.15 EXTRACTION INTERNAL STANDARDS

Refer to Section E 1.16. Recoveries were reviewed and found to be within the limits of 50 to 150 percent (25 to 150 percent for perfluorobutanoic acid (PFBA), perfluoropentanoic acid (PFPeA), and fluorotelomer sulfonates), with the exceptions listed in Table 8.

Extraction Internal Standards were out of limits for Method Blanks, LCSs, MSs, and MSDs, but did not affect the data.

1.16 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable, except for rejected data noted below. A summary of qualifiers applied to this dataset is shown in Table 9.

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the %R of the compounds.
- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - MS/MSD data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Analysis of per- and polyfluoroalkyl substances (PFAS) compliant with QSM 5.3 Table B-15 requires instrument blanks that are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess contamination that could occur in the LC/MS/MS instrument.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.

- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the %R of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.
- E 1.8 Confirmation Column Review
  - When analyzing for pesticides and polychlorinated biphenyls (PCBs), compound identification based on single-column analysis should be confirmed on a second column or supported by at least one other qualitative technique. When confirmed on a second column, the RPD should not exceed 40 percent.
- E 1.14 PFAS Sample Preparation
  - Analysis of PFAS requires specific sample preparation. Aqueous samples must be prepared using SPE, unless samples are known to contain high PFAS concentrations or the samples are injected directly into the LC/MS/MS instrument. Samples with greater than 1 percent solids may require centrifugation prior to SPE. The entire sample plus bottle rinsate must be extracted using SPE. If high PFAS concentrations are known, the samples may alternately be prepared using serial dilution performed in duplicate. If prepared by serial dilution, there must be documented project approval for this deviation.
- E 1.15 PFAS Identification
  - Identification of PFAS requires dual confirmation. The chemical derivation of the ion transitions must be documented. A minimum of two ion transitions per analyte are required (except for PFBA and PFPeA). Ratios of the quantitation ion to the confirmation ion should be calculated for samples and be within 50 to 150 percent of the ratios of the quantitation ion to the confirmation ion for standards.
  - Identification of PFAS also requires the proper assessment of branched and linear peaks. Standards for both isomers are not currently available for every PFAS compound, resulting in the common error of quantifying the area of only the branched or the linear isomers, which results in erroneous concentrations.

- E 1.16 Extraction Internal Standards
  - Analysis of PFAS by isotope dilution includes the use of extracted internal standards, which are stable isotope analogs of the PFAS compounds of interest added to each sample prior to extraction of the sample matrix. Matrix interferences that affect the quantification of the internal standard will affect the calculated target compound concentrations.

3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg micrograms per kilogram
  - µg/L micrograms per liter
  - µg/m^3 micrograms per cubic meter
  - mg/kg milligrams per kilogram
  - mg/L milligrams per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

4. Abbreviations

%D	Percent Difference
%R	Percent Recovery
%RSD	Percent Relative Standard Deviation
%v/v	Percent volume by volume
µg/L	micrograms per liter
2s	2 sigma
4,4-DDT	4 4-dichlorodiphenyltrichloroethane
Abs Diff	Absolute Difference
amu	atomic mass unit
BPJ	Best Professional Judgement
BS	Blank Spike
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CCVL	Continuing Calibration Verification Low
COC	Chain of Custody
COM	Combined Isotope Calculation
Cr (VI)	Hexavalent Chromium
CRI	Collision Reaction Interface

TPH	Total Petroleum Hydrocarbon
TPU	Total Propagated Uncertainty
USEPA	U.S. Environmental Protection Agency
VOC	Volatile Organic Compound
WP	Work Plan

5. Qualifiers

The qualifiers below are from the USEPA NFG and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

  F The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Notes:
LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.
FDP = Field duplicate qualifier due to an exceedance of the specified limits.
MBK = Method blank contamination.
DUP = Laboratory duplicate relative percent difference exceeds the specified limits.
IDL = Isotope dilution outside the specified limits.
MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.
ION = Ion ratios were reviewed and were outside the limits of 50-150%; or the signal to noise ratios (S/N) were not ≥ 10 for all ions used for quantitation; or ≥ 3 for all ions used for confirmation.
RPD = Pesticides and PCB confirmation column RPD Exceeded; or MSD/LCS RPD exceedance.
J+ = The result is an estimated quantity, but the result may be biased high.
J- = The result is an estimated quantity, but the result may be biased low.
J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.
R = The sample results were rejected as unusable; the compound may or may not be present in the sample.
UJ = The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.
U = The compound was analyzed for but not detected.

Data Usability Summary Report

Project Name: 547 Coney Island Ave

Project Description: Soil Samples

Sample Date(s): December 2024

Analytical Laboratory: Pace Analytical Laboratory – Westborough, MA

Validation Performed by: Eric Hitchens

Validation Reviewed by: Katherine Miller

Validation Date: 15 January 2025

H & A of New York Engineering and Geology, LLP prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for the Sample Delivery Groups (SDGs) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Numbers**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- NFG for Organic Data Review.
- Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under New York State Department of Environmental Conservation's (NYSDEC's) Part 375 Remedial Programs.

Data reported in this sampling event were reported to the laboratory method detection limit (MDL). Results found between the MDL and reporting limit (RL) are flagged J as estimated.

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages.

1. Sample Delivery Group Numbers

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG numbers listed in Table 1A. Samples were collected, preserved, and shipped following standard chain of custody (COC) protocols. Samples were also received appropriately, identified correctly, and analyzed according to the COC. Analyses were performed on the samples listed in Table 1B. Method holding times are listed in Table 1C. Issues noted with sample management are listed below:

- Custody seals were not used when samples were dropped off at the laboratory or service center by the field staff, submitted to a laboratory-provided courier, or when transported between subcontracted laboratories.
- Additional issues with sample management are listed in Table 2.

1.2 CASE NARRATIVE

The laboratory report case narratives included the issues listed in Table 2.

1.3 MULTIPLE SAMPLE RESULTS

The laboratory reported multiple results for multiple samples. The validator chose the results that best met the DQOs of the project.

1.4 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocols. Any exceptions are noted in Table 2.

1.5 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified. In cases where multiple dilutions were run due to exceedances of the calibration curve, the validator chose the dilution that best met the project DQOs.

1.6 REPORTING BASIS (WET/DRY)

Refer to Section E 1.1. Soil data in this SDG were reported on a dry-weight basis. Percent total solids results were reviewed and found to be within limits.

1.7 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory-specified quality control (QC) limits, with the following exceptions:

- In cases where sample dilution factor was ≥ 5x, data was not qualified.

- Any additional exceptions are listed in Table 3.

1.8 LABORATORY CONTROL SAMPLES

Refer to Section E 1.3. Compounds associated with the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits. Any exceptions are noted in Table 4.

1.9 MATRIX SPIKE SAMPLES

Refer to Section E 1.4. The samples listed in Table 5A were used for matrix spike/matrix spike duplicate (MS/MSD) analysis. The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits, with the following exceptions:

- In cases where the parent sample dilution factor was ≥ 5x, data was not qualified.
- In cases where the native sample results were ≥ 4x the spike added, data was not qualified.
- Any additional exceptions are listed in Table 5B.

1.10 BLANK SAMPLE ANALYSIS

Refer to Section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred. Any exceptions are listed in Table 6A. The analysis of the blank samples for field quality control was free of target compounds. Any exceptions are listed in Table 6B.

1.11 DUPLICATE SAMPLE ANALYSIS

Refer to Section E 1.6. The samples listed in Table 7A were used for laboratory duplicate analysis and the RPDs were all below 20 percent. Any exceptions are listed in Table 7B. The samples listed in Table 7C were used for field duplicate analysis. RPDs were all below 50 percent for soil (or the absolute difference rule was satisfied if detects were less than 5 times the RL. Any exceptions are noted in Table 7D

1.12 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

1.13 CONFIRMATION COLUMN REVIEW

Refer to Section E 1.8. RPDs were within control limits. Any exceptions were qualified J for detected compounds.

1.14 ESTIMATED MAXIMUM POSSIBLE CONCENTRATION (EMPC)

Refer to Section E 1.9. The laboratory reported the following EMPC flags, and associated data were qualified UJ at the sample result.

1.15 PFAS SAMPLE PREPARATION

Refer to Section E 1.14. The laboratory case narratives did not note any sample preparation abnormalities.

1.16 PFAS IDENTIFICATION

Refer to Section E 1.15. Ion ratios could not be reviewed because the laboratory did not provide an ion ratio summary. However, the laboratory qualified several results with an "F" flag, and these data were qualified UJ at the sample result as an EMPC.

1.17 EXTRACTION INTERNAL STANDARDS

Refer to Section E 1.16. Recoveries were reviewed and found to be within the limits, with the following exceptions:

- Data were not qualified in cases where extraction internal standards recovered high, but associated sample analytes were all non-detect (ND).
- Extraction internal standards recoveries were out of limits for MBs, LCS, MS, and MSD, but did not affect the data.

1.18 SERIAL DILUTIONS

Refer to Section E 1.23. The % Differences for the serial dilution were within the limits required by the USEPA.

1.19 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected, except for rejected data noted in Table 8. A summary of qualifiers applied to this dataset is shown in Table 8.

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
  - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
  - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have greater than or equal to 30 percent solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the %R of the compounds.
- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - MS/MSD data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Analysis of PFAS compliant with QSM 5.3 Table B-15 requires instrument blanks that are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess contamination that could occur in the LC/MS/MS instrument.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.

- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the %R of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.
- E 1.8 Confirmation Column Review
  - When analyzing for pesticides and polychlorinated biphenyls (PCBs), compound identification based on single-column analysis should be confirmed on a second column or supported by at least one other qualitative technique. When confirmed on a second column, the RPD should not exceed 40 percent.
- E 1.14 PFAS Sample Preparation
  - Analysis of PFAS requires specific sample preparation. Aqueous samples must be prepared using SPE, unless samples are known to contain high PFAS concentrations or the samples are injected directly into the LC/MS/MS instrument. Samples with greater than 1 percent solids may require centrifugation prior to SPE. The entire sample plus bottle rinsate must be extracted using SPE. If high PFAS concentrations are known, the samples may alternately be prepared using serial dilution performed in duplicate. If prepared by serial dilution, there must be documented project approval for this deviation.
- E 1.15 PFAS Identification
  - Identification of PFAS requires dual confirmation. The chemical derivation of the ion transitions must be documented. A minimum of two ion transitions per analyte are required (except for PFBA and PFPeA). Ratios of the quantitation ion to the confirmation ion should be calculated for samples and be within 50 to 150 percent of the ratios of the quantitation ion to the confirmation ion for standards.
  - Identification of PFAS also requires the proper assessment of branched and linear peaks. Standards for both isomers are not currently available for every PFAS compound, resulting in the common error of quantifying the area of only the branched or the linear isomers, which results in erroneous concentrations.

- E 1.16 Extraction Internal Standards
  - Analysis of PFAS by isotope dilution includes the use of extracted internal standards, which are stable isotope analogs of the PFAS compounds of interest added to each sample prior to extraction of the sample matrix. Matrix interferences that affect the quantification of the internal standard will affect the calculated target compound concentrations.
- E 1.23 Serial Dilutions
  - Inorganic analysis requires a serial dilution analysis, which determines whether significant physical or chemical interferences exists because of the sample matrix. If the analyte concentration is sufficiently high (concentration in the original sample is > 50x the MDL that is calculated for the sample) the %D between the original determination and the serial dilution analysis (a five-fold dilution) after correction for dilution should be low.

3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg micrograms per kilogram
  - µg/L micrograms per liter
  - µg/m^3 micrograms per cubic meter
  - mg/kg milligrams per kilogram
  - mg/L milligrams per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
  - pg/L picograms per liter
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - SSV Sub-slab Vapor
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

- Fractions:
  - N Normal (method cannot be filtered)
  - D Dissolved (filtered)
  - T Total (unfiltered)

4. Abbreviations

%D	Percent Difference
%R	Percent Recovery
%RSD	Percent Relative Standard Deviation
%v/v	Percent volume by volume
2s	2 sigma
4,4-DDT	4 4-dichlorodiphenyltrichloroethane
Abs Diff	Absolute Difference
amu	atomic mass unit
BPJ	Best Professional Judgement
BS	Blank Spike
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CCVL	Continuing Calibration Verification Low
COC	Chain of Custody
COM	Combined Isotope Calculation
Cr (VI)	Hexavalent Chromium

RL	Laboratory Reporting Limit
RPD	Relative Percent Difference
RRF	Relative Response Factor
RT	Retention Time
SAP	Sampling Analysis Plan
SDG	Sample Delivery Group
SIM	Selected ion monitoring
SOP	Standard Operating Procedure
SPE	Solid-Phase Extraction
SVOC	Semi-Volatile Organic Compound
TCLP	Toxicity Characteristic Leaching Procedure
TIC	Tentatively Identified Compound
TKN	Total Kjeldahl Nitrogen
TPH	Total Petroleum Hydrocarbon
TPU	Total Propagated Uncertainty
USEPA	U.S. Environmental Protection Agency
VOC	Volatile Organic Compound
WP	Work Plan

5. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected. The reported sample quantitation limit is approximate.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

TABLE 1C
METHOD HOLDING TIMES
547 CONEY ISLAND AVENUE
BROOKLYN, NEW YORK

Letter Code	Method	Description	Holding Time(s)
A	SW8260D	Volatile Organic Compounds (VOCs)	14 days for solid, preserved 14 days for solid unpreserved, 14 days for liquid, preserved 7 days for liquid unpreserved
B	SW8270E	Semivolatile Organic Compounds (SVOCs)	14 days extraction / 40 days analysis for solid, unpreserved, 7 days extraction / 40 days analysis for liquid, unpreserved
C	SW6010D	Metals (by Optical Emission Spectrometry)	180 days for solid unpreserved, 180 days for liquid, preserved
D	E1633	Per- and Polyfluoroalkyl Substances (PFAS)	14 days extraction / 40 days analysis
E	SM2540G	Total Solids	7 days for solid unpreserved
F	SW7471B	Mercury (in Solids)	28 days for solid unpreserved
G	SW8081B	Organochlorine Pesticides	14 days extraction / 40 days analysis for solid, unpreserved, 7 days extraction / 40 days analysis for liquid, unpreserved
H	SW8082A	Polychlorinated Biphenyls (PCBs)	1 year extraction / 40 days
I	SW7470A	Mercury (in Liquids)	28 days for liquid, preserved
J	SW8270ESIM	Semivolatile Organic Compounds (SVOCs) SIM	7 days extraction / 40 days analysis for liquid, unpreserved

TABLE 2
CASE NARRATIVES
547 CONEY ISLAND AVENUE
BROOKLYN, NEW YORK

SDG	Explanation
L2473278	L2473278-04: The sample identified as "B-20_8.5-9.5" on the chain of custody was identified as "B-20_8.5-9" on the container label. At the client's request, the sample is reported as "B-20_8.5-9.5". L2473278-09: The Client ID was specified by the client.
L2473278	L2473278-07D: The sample was received in appropriate container (vial) for Volatile Organics by EPA Method 5035/8260 High-Level; however, the vial was empty. With the client's authorization, a sample aliquot was taken from an unpreserved container (inappropriate plastic) and preserved appropriately. Since the sample was preserved at the laboratory, no qualifiers were applied.
L2473618	L2473618-01: The sample identified as "B-21_0-0.17" on the chain of custody was identified as "B-21_0-5" on the container label. At the client's request, the sample is reported as "B-21_0-0.17". L2473618-07: The sample identified as "B-22_0-0.17" on the chain of custody was identified as "B-22A_0-0.17" on the container label. At the client's request, the sample is reported as "B-22_0-0.17". No qualifiers were applied.
L2475441	L2475441-08: 8270E: The sample was extracted with the method required holding time exceeded. SVOCs extracted on 12/28/2024 were qualified J/UJ.
L2475098	Method 1633: Samples B-25_3-5 and B-26_3-5 were extracted out of hold time; data were qualified J/UJ.
L2475441	Method 1633: Sample FB-03_20241220 was extracted out of hold time; data were qualified J/UJ.

TABLE 8
SYSTEM PERFORMANCE SUMMARY
547 CONEY ISLAND AVENUE
BROOKLYN, NEW YORK

SDG	Method	Sample ID	Lab ID	Analyte	Reportable Result	Reported Result	Validated Result	Reason for Qualifier
L2473618	SW8260D	B-22_1-3	L2473618-08	trans-1,3-Dichloropropene	No	U	U	VCR
L2473618	SW8260D	B-22_1-3	L2473618-08	trans-1,4-Dichloro-2-butene	No	U	U	VCR

Notes:

DUP = Laboratory duplicate relative percent difference exceeds the specified limits.
EMC = Estimated maximum possible concentration results for PFAS.
FDP = Field duplicate qualifier due to an exceedance of the specified limits.
HTQ = Holding time exceedance.
LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.
MBK = Method blank contamination.
MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.
R = The sample results were rejected as unusable; the compound may or may not be present in the sample.
RPD = Pesticides/PCB confirmation column RPD Exceeded.
SUR = Surrogate percent recovery outside the specified limits.
TBK = Trip blank contamination.
VCD = Validator's choice of dilution.
VCR = Validator's choice of reanalysis.
J = Estimated concentration.
J- = The result is an estimated quantity, but the result may be biased low.
J+ = The result is an estimated quantity, but the result may be biased high.
U = The compound was analyzed for but not detected.
UJ = The compound was not detected. The reported sample quantitation limit is approximate.

ATTACHMENT A
Pace Analytical 8260B Analyte List, Characteristic Mass and Associated Internal Standards

Data Usability Summary Report

Project Name: 547 Coney Island Ave.

Project Description: Groundwater Samples

Sample Date(s): 27 and 30 December 2024 and 2 January 2025

Analytical Laboratory: Pace Analytical Laboratory – Westborough, MA

Validation Performed by: Kristina Ilina

Validation Reviewed by: Katherine Miller

Validation Date: 21 January 2025

H & A of New York Engineering and Geology, LLP prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for the Sample Delivery Groups (SDGs) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Numbers L2476251, L2476467, and L2500072**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Inorganic Data Review.
- NFG for Organic Data Review.
- Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under New York State Department of Environmental Conservation's (NYSDEC's) Part 375 Remedial Programs.

Data reported in this sampling event were reported to the laboratory reporting limit (RL). Results found between the method detection limit (MDL) and RL are flagged J as estimated.

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages.

1. Sample Delivery Group Numbers L2476251, L2476467, and L2500072

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG numbers:

- L2476251, dated 16 January 2025;
- L2476467, dated 14 January 2025; and
- L2500072, dated 16 January 2025.

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocols.

Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used on the sample cooler(s).
- L2476251-06: One of the containers for Semi-volatile Organics was received broken; however, there was adequate sample remaining to perform the requested analyses.
- L2476467-09: Date/time and analysis are missing on the COC. The sample ID (TB-02_20241230) and analysis were specified by the client.

Analyses were performed on the samples shown in Tables 1 and 2.

1.2 CASE NARRATIVE

The laboratory report case narratives included the following issues:

- L2476251-04 and -06: The sample was re-analyzed on dilution due to EIS failure in the original analysis. The results of the re-analysis are reported for the associated target compounds.
- L2500072-01 (E1633): The sample was centrifuged and decanted prior to extraction due to the sample matrix.
- L2500072-04 (SW8270ESIM): The sample was re-extracted within the holding time due to the sample matrix.
- L2500072-04 (SW6020B): The dissolved result is greater than the total result for copper. The sample containers were verified as being labeled correctly by the laboratory, and aliquots were analyzed from each bottle, confirming the original results.

1.3 MULTIPLE SAMPLE RESULTS

The laboratory reported multiple results for the samples listed below. The validator chose the results that best met the DQOs of the project.

Lab ID	Analysis Date/Time	Method	Analyte	Qualification
L2476467-03 L2500072-01 L2500072-04	12/30/2024 1/2/2025 1/2/2025	SW8270ESIM	Naphthalene	The laboratory reanalyzed the sample due to concentration exceeding range of the calibration curve and/or linear range of the instrument and required dilution. The original results are marked non-reportable and the reanalysis results are accepted.

1.4 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

1.5 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified. Dilution of the project samples were required to bring calibration of target analytes within calibration range, matrix interference, foaming at the time of purging, or abundance of non-target analytes.

1.6 SURROGATE RECOVERY COMPLIANCE

Refer to Section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory-specified quality control (QC) limits, with the following exceptions:

SDG #	Method	Sample ID	Surrogate	Dilution	%R	Qualification
L2476251	SW8081B	MW-10D_20241227	(PCB 209) Decachlorobiphenyl	1	158%	J+/None target compounds*
L2476251	SW8270E	MW-10D_20241227	Nitrobenzene-D5	1	121%	J+/None target compounds**
L2500072	SW8270E	MW-16S_20250102	2-Fluorophenol	1	11%	J-/UJ target compounds***
L2500072	SW8270E	MW-15_20250102	2-Fluorophenol	1	12%	J-/UJ target compounds***

** Compounds targeted by Decachlorobiphenyl: No target compounds analyzed in column B.*
*** Compounds targeted by Nitrobenzene-D5: None, target compounds are non-detect (ND).*
**** Compounds targeted by 2-Fluorophenol: 1,2,4,5-Tetrachlorobenzene, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, 2-Nitroaniline, 3,3'-Dichlorobenzidine, 3-Nitroaniline, 4-Chlorophenyl phenyl ether, 4-Nitroaniline, bis(2-Ethylhexyl)phthalate, Butyl benzylphthalate (BBP), Carbazole, Dibenzofuran, Diethyl phthalate, Dimethyl phthalate, Di-n-butylphthalate (DBP), Di-n-octyl phthalate (DnOP), Hexachlorocyclopentadiene, and N-Nitrosodiphenylamine.*

1.7 LABORATORY CONTROL SAMPLES

Refer to Section E 1.3. Compounds associated with the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits, with the exceptions listed in Table 3.

1.8 MATRIX SPIKE SAMPLES

Refer to Section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L2476251-06	MW-10D_20241227	SW7470A, SW8081B, SW8260D, SW8082A, SW8270E, SW8270ESIM, SW6020B
L2476251-02	MW-13D_20241227	SW6020B
L2500072-01	MW-16S_20250102	SW6020B
L2476251-01	MW-10I_20241227	SW7470A
L2476467-01	MW-11D_20241230	SW7470A
L2500072-02	MW-14_20250102	SW7470A

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits, with the exceptions listed in Table 4.

1.9 BLANK SAMPLE ANALYSIS

Refer to Section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred, with the exceptions listed in Table 5.

The analysis of the blank samples for field quality control was free of target compounds, with the exceptions listed in Table 6.

1.10 DUPLICATE SAMPLE ANALYSIS

Refer to Section E 1.6. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5 times the RL). Any exceptions are noted below and qualified.

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L2476467-01	MW-11D_20241230	SW7470A
L2500072-01	MW-16S_20250102	SW6020B
L2476251-02	MW-13D_20241227	SW6020B

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)/Analyte	% RPD	Qualification
L2500072-01	MW-16S_20250102	Iron, Dissolved	26	J/UJ, RPD > 20%

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 35 percent for water (or the absolute difference rule was satisfied if detects were less than 5 times the RL).

Primary Sample ID	Duplicate Sample ID	Method(s)
MW-13D_20241227	DUP-01_20241227	USEPA 6020B, USEPA 7470A, USEPA 8081B, USEPA 8082A, USEPA 8260D, USEPA 8270E, USEPA 8270ESIM

1.11 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples.

1.12 CONFIRMATION COLUMN REVIEW

Refer to Section E 1.8. All RPDs were within control limits.

1.13 PFAS SAMPLE PREPARATION

Refer to Section E 1.14. The laboratory's SOP was reviewed, and the reviewer confirmed it is the laboratory's procedure to use solid-phase extraction (SPE) for sample preparation. No data qualification is required.

1.14 PFAS IDENTIFICATION

Refer to Section E 1.15. Ion ratios could not be reviewed because the laboratory did not provide an ion ratio summary. However, the lab qualified the following samples with an "F" flag:

Sample ID	Analyte	Result
MW-13S_20241227	Perfluorodecanoic acid (PFDA)	0.774 J

The laboratory's SOP was reviewed, and the reviewer confirmed that, when applicable, the laboratory's procedure is to sum the branched and linear peaks.

1.15 EXTRACTION INTERNAL STANDARDS

Refer to Section E 1.16. Recoveries were reviewed and found to be within the limits of 50 to 150 percent (25 to 150 percent for perfluorobutanoic acid [PFBA], perfluoropentanoic acid [PFPeA], and fluorotelomer sulfonates), with the exceptions listed in Table 7.

Extraction Internal Standards were out of limits for Method Blanks, LCSs, MSs, and MSDs, but did not affect the data.

1.16 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable, except for rejected data noted in Table 8. A summary of qualifiers applied to this dataset is shown in Table 8.

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.2 Surrogate Recovery Compliance
  - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determining the efficiency of the extraction procedure by evaluating the %R of the compounds.
- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
  - MS/MSD data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
  - For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post-digestion spike (PDS) is performed.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
  - Analysis of PFAS compliant with QSM 5.3 Table B-15 requires instrument blanks that are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess contamination that could occur in the LC/MS/MS instrument.
  - Field blanks are prepared to identify contamination that may have been introduced during field activity. Equipment blanks are prepared to identify contamination that may have been introduced while decontaminating sampling equipment. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory

duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.

  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the %R of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

- E 1.8 Confirmation Column Review
  - When analyzing for pesticides and polychlorinated biphenyls (PCBs), compound identification based on single-column analysis should be confirmed on a second column or supported by at least one other qualitative technique. When confirmed on a second column, the RPD should not exceed 40 percent.
- E 1.14 PFAS Sample Preparation
  - Analysis of PFAS requires specific sample preparation. Aqueous samples must be prepared using SPE, unless samples are known to contain high PFAS concentrations or the samples are injected directly into the LC/MS/MS instrument. Samples with greater than 1 percent solids may require centrifugation prior to SPE. The entire sample plus bottle rinsate must be extracted using SPE. If high PFAS concentrations are known, the samples may alternately be prepared using serial dilution performed in duplicate. If prepared by serial dilution, there must be documented project approval for this deviation.
- E 1.15 PFAS Identification
  - Identification of PFAS requires dual confirmation. The chemical derivation of the ion transitions must be documented. A minimum of two ion transitions per analyte are required (except for PFBA and PFPeA). Ratios of the quantitation ion to the confirmation ion should be calculated for samples and be within 50 to 150 percent of the ratios of the quantitation ion to the confirmation ion for standards.
  - Identification of PFAS also requires the proper assessment of branched and linear peaks. Standards for both isomers are not currently available for every PFAS compound, resulting in the common error of quantifying the area of only the branched or the linear isomers, which results in erroneous concentrations.
- E 1.16 Extraction Internal Standards
  - Analysis of PFAS by isotope dilution includes the use of extracted internal standards, which are stable isotope analogs of the PFAS compounds of interest added to each sample prior to extraction of the sample matrix. Matrix interferences that affect the quantification of the internal standard will affect the calculated target compound concentrations.

3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg micrograms per kilogram
  - µg/L micrograms per liter
  - µg/m^3 micrograms per cubic meter
  - mg/kg milligrams per kilogram
  - mg/L milligrams per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

4. Abbreviations

%D	Percent Difference
%R	Percent Recovery
%RSD	Percent Relative Standard Deviation
%v/v	Percent volume by volume
µg/L	micrograms per liter
2s	2 sigma
4,4-DDT	4 4-dichlorodiphenyltrichloroethane
Abs Diff	Absolute Difference
amu	atomic mass unit
BPJ	Best Professional Judgement
BS	Blank Spike
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CCVL	Continuing Calibration Verification Low
COC	Chain of Custody
COM	Combined Isotope Calculation
Cr (VI)	Hexavalent Chromium
CRI	Collision Reaction Interface
DoD	Department of Defense
DQO	data quality objective

EMPC	Estimated Maximum Possible Concentration
FBK	Field Blank Contamination
FDP	Field Duplicate
GC	Gas Chromatograph
GC/MS	Gas Chromatography/Mass Spectrometry
GPC	Gel Permeation Chromatography
H2	Hydrogen gas
HCl	Hydrochloric Acid
ICAL	Initial Calibration
ICB	Initial Calibration Blank
ICP/MS	Inductively Coupled Plasma/ Mass Spectrometry
ICV	Initial Calibration Verification
ICVL	Initial Calibration Verification Low
IPA	Isopropyl Alcohol
LC	Laboratory Control
LCS/LCSD	Laboratory Control Sample/Laboratory Control Sample Duplicate
MBK	Method Blank Contamination
MDC	Minimum Detectable Concentration
MDL	Laboratory Method Detection Limit
mg/kg	milligrams per kilogram
MS/MSD	Matrix Spike/Matrix Spike Duplicate
NA	not applicable
ND	Non-Detect
NFG	National Functional Guidelines
NH_3	Ammonia
NYSDEC	New York State Department of Environmental Conservation
PAH	polycyclic aromatic hydrocarbon
PCB	Polychlorinated Biphenyl
PDS	Post-Digestion Spike
PEM	Performance Evaluation Mixture
QSM	Quality Systems Manual
R^2	R-squared value
Ra-226	Radium-226
Ra-228	Radium-228
RESC	Resolution Check Measure
RL	Laboratory Reporting Limit
RPD	Relative Percent Difference
RRF	Relative Response Factors
RT	Retention Time
SAP	sampling analysis plan
SDG	Sample Delivery Group
SIM	Selected ion monitoring
SOP	Standard Operating Procedure
SPE	Solid Phase Extraction
SVOC	Semi-Volatile Organic Compound
TIC	Tentatively Identified Compound
TKN	Total Kjeldahl Nitrogen
TPH	Total Petroleum Hydrocarbon
TPU	Total Propagated Uncertainty
USEPA	U.S. Environmental Protection Agency
VOC	Volatile Organic Compound
WP	Work Plan

5. Qualifiers

The qualifiers below are from the USEPA NFG and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

  F The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria

- Quantitation (Q) Qualifiers:

  E The compound was quantitated above the calibration range.

  D The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ The result is an estimated quantity, but the result may be biased high.

  J- The result is an estimated quantity, but the result may be biased low.

  J/UJ as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.

  NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S Result is suspect. See DUSR for details.

Notes:
IDL = Isotope dilution outside the specified limits.
TBK = Trip blank contamination.
MBK = Method blank contamination.
EXE = Result exceeds the calibration range.
LCS = Laboratory control/laboratory control spike duplicate percent recoveries or relative percent difference were outside the specified limits.
MSD = Matrix spike/matrix spike duplicate percent recoveries or relative percent difference were outside the specified limits.
SUR = Surrogate percent recovery outside the specified limits.
ION = Ion ratios were reviewed and were outside the limits of 50-150%; or the signal to noise ratios (S/N) were not ≥ 10 for all ions used for quantitation; or ≥ 3 for all ions used for confirmation.
DUP = Laboratory duplicate relative percent difference exceeds the specified limits.
R = The sample results were rejected as unusable; the compound may or may not be present in the sample.
J = Estimated concentration.
UJ = The compound was not detected. The reported sample quantitation limit is approximate.
U = The compound was analyzed for but not detected.
J+ = The result is an estimated quantity, but the result may be biased high.

Data Usability Summary Report

Project Name: 547 Coney Island Avenue

Project Description: Soil Vapor Samples

Sample Date(s): 19-20 December 2024

Analytical Laboratory: Pace Analytical Laboratory – Mansfield, MA

Validation Performed by: Eric Hitchens

Validation Reviewed by: Katherine Miller

Validation Date: 8 January 2025

H & A of New York Engineering and Geology, LLP prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the analytical results for Sample Delivery Groups (SDGs) listed. This DUSR is organized into the following sections:

1. **Sample Delivery Group Numbers**
2. **Explanations**
3. **Glossary**
4. **Abbreviations**
5. **Qualifiers**

References

This data validation and usability assessment was performed per the guidance and requirements established by the United States Environmental Protection Agency (USEPA) using the following reference materials:

- National Functional Guidelines (NFG) for Organic Data Review.
- Analysis of Volatile Organic Compounds (VOCs) in Air Contained in Canisters by Method TO-15.

Data reported in this sampling event were reported to the laboratory reporting limit (RL).

Sample data were qualified in accordance with the laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives (DQOs) for the project and are therefore usable; any exceptions are noted in the following pages.

1. Sample Delivery Group Numbers

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG numbers:

- L2475117; and
- L2475582.

Samples were collected, preserved, and shipped following standard chain of custody (COC) protocols. Samples were also received appropriately, identified correctly, and analyzed according to the COC.

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Date	Matrix	Methods	Holding Time
SP-06-20241219	N	L2475117-01	12/19/2024	GS	TO-15	30 days
SP-10-20241219	N	L2475117-02	12/19/2024	GS		
SP-13-20241219	N	L2475117-03	12/19/2024	GS		
SP-12-20241220	N	L2475582-01	12/20/2024	GS		
SP-05-20241220	N	L2475582-02	12/20/2024	GS		
SP-11-20241220	N	L2475582-03	12/20/2024	GS		

1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

All sample dilutions were reviewed and found to be justified.

- Samples collected in Summa canisters are pressurized by the laboratory, resulting in a range of dilutions.
- Some samples were diluted due to the high presence of target analytes.
- The laboratory reported tetrachloroethene (PCE) as exceeding the calibration curve at a 1x dilution for sample SP-11. The laboratory reran the analysis at a 10x dilution, where the PCE result was within the calibration curve. The validator chose the diluted result and rejected the alternative.

1.4 LABORATORY CONTROL SAMPLES

Refer to Section E 1.3. Compounds associated with the laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses associated with client samples exhibited recoveries and relative percent differences (RPDs) within the specified limits with the following exceptions:

SDG #	Sample Type	Analyte	%R/RPD	Qualifier	Affected Sample(s)
L2475582	LCS	Ethylbenzene	136	None	None, sample is non-detect (ND)
L2475582	LCS	Vinyl Chloride	66	UJ	03
L2475582	LCS	Chloroethane	68	UJ	03
L2475582	LCS	2-Hexanone	138	J	SP-11-20241220
L2475582	LCS	Bromoform	131	None	None, sample is ND
L2475582	LCS	Styrene	136	None	None, sample is ND
L2475582	LCS	4-Ethyltoluene	135	None	None, sample is ND
L2475582	LCS	1,2,4-Trimethylbenzene	132	J	SP-11-20241220
L2475582	LCS	1,3-Dichlorobenzene	134	None	None, sample is ND
L2475582	LCS	1,4-Dichlorobenzene	133	None	None, sample is ND

1.5 BLANK SAMPLE ANALYSIS

Refer to Section E 1.5. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

1.6 DUPLICATE SAMPLE ANALYSIS

Refer to Section E 1.6. No client samples were used for laboratory or field duplicate analysis.

1.7 PRECISION AND ACCURACY

Refer to Section E 1.7. Where required by the method, some measurement of analytical accuracy and precision was reported for each method with the site samples, with the following exceptions:

- No precision was reported for TO-15.

1.8 CLEAN CANISTER CERTIFICATION

The canisters used for the TO-15 sample collection were certified clean by individual can analysis prior to sampling to ensure that no target analytes were present. These analysis sheets were reviewed, and no target analytes were detected in the laboratory-provided canisters.

1.9 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the DQOs for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. The qualifiers applied to this dataset are summarized in the table below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
SP-11	2-Hexanone (Methyl Butyl Ketone)	7.38	7.38 J	LCS exceedance
SP-11	Chloroethane	U	UJ	
SP-11	Vinyl chloride	U	UJ	
SP-11	1,2,4-Trimethylbenzene	2.79	2.79 J	
SP-11	Tetrachloroethene	712	712 R	Validator's choice of dilution

2. Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.3 Laboratory Control Samples
  - The LCS/LCSD analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.5 Blank Sample Analysis
  - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
  - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
  - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
- E 1.7 Precision and Accuracy
  - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the RPD found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
  - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%R) of certain spiked compounds. This can be assessed using LCS, blank spike (BS), MS, and/or surrogate recoveries.

3. Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
  - EB Equipment Blank Sample
  - FB Field Blank Sample
  - FD Field Duplicate Sample
  - N Primary Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg micrograms per kilogram
  - µg/L micrograms per liter
  - µg/m^3 micrograms per cubic meter
  - mg/kg milligrams per kilogram
  - mg/L milligrams per liter
  - ppb v/v parts per billion volume/volume
  - pCi/L picocuries per liter
  - pg/g picograms per gram
  - pg/L picograms per liter
- Matrices:
  - AA Ambient Air
  - GS Soil Gas
  - GW/WG Groundwater
  - QW Water Quality
  - IA Indoor Air
  - SE Sediment
  - SO Soil
  - SSV Sub-slab Vapor
  - WQ Water Quality control matrix
  - WS Surface Water
- Table Footnotes:
  - NA Not applicable
  - ND Non-detect
  - NR Not reported
- Common Symbols:
  - % percent
  - < less than
  - ≤ less than or equal to
  - > greater than
  - ≥ greater than or equal to
  - = equal
  - °C degrees Celsius
  - ± plus or minus
  - ~ approximately
  - x times (multiplier)

- Fractions:
  - N Normal (method cannot be filtered)
  - D Dissolved (filtered)
  - T Total (unfiltered)

4. Abbreviations

%D	Percent Difference
%R	Percent Recovery

5. Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:

  U — The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or "ND".

  B — The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers:

  E — The compound was quantitated above the calibration range.

  D — The concentration is based on a diluted sample analysis.

- Validation Qualifiers:

  J — The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  J+ — The result is an estimated quantity, but the result may be biased high.

  J- — The result is an estimated quantity, but the result may be biased low.

  J/UJ — as listed in exception tables J applies to detected data and UJ applies to non-detected data as reported by the laboratory.

  UJ — The compound was not detected. The reported sample quantitation limit is approximate.

  NJ — The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.

  R — The sample results were rejected as unusable; the compound may or may not be present in the sample.

  S — Result is suspect. See DUSR for details.

KATHERINE R. MILLER

Senior Project Manager

EDUCATION

BS, Chemistry, University of Arizona

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120 and 40 CFR 265.16)
8-Hour OSHA Refresher Training (29 CFR 1910.120)
Level IV Data Validation Training

AWARDS

Pinnacle Award, 2009
Pathfinder Award, 2014

In her 10+ years at Haley & Aldrich, Katherine has worked on soil and groundwater environmental investigations and the preparation of environmental reports for private, industrial, and government-based project clients. She is a qualified Data Validator capable of performing various levels of validation on laboratory water quality data according to US Environmental Protection Agency (EPA) National Functional Guidelines and to U.S. Department of Energy radiochemical guidelines. She also has experience designing and maintaining databases for project-specific needs.

Project management responsibilities for a $1.5 million per year stormwater project include preparation of subcontractor bids and contracts; preparation of cost estimates, proposals, and reports; coordination of field testing programs; and interpretation of chemical testing results. She has interacted with local regulatory agencies.

RELEVANT PROJECT EXPERIENCE

Confidential Aerospace Manufacturer, Groundwater Monitoring, Western U.S. Katherine served as project manager for the comprehensive stormwater management program. Responsibilities included project finance management and data management including quality assurance/quality control (QA/QC) and interpretation of chemical testing results. Evaluated QA/QC of groundwater quality data, prepared reports and managed data for the site. Performed data validation of quarterly water quality data from over 300 locations according to EPA National Functional Guidelines and to DOE radiochemical guidelines over a six-year period. Also, responsible for updating and maintaining the integrity of over 200,000 records during that time period. Assisted with management of sampling, analysis, and reporting of constituents of concern, ensured compliance with post-closure permit monitoring and reporting requirements, Data Management Plan, QAPP, and Environmental Data Management System, and ensured and maintained 100% compliance with the QAPP and Data Management Plan. Additionally, prepared groundwater data summaries for proposed extraction wells including comparisons to site NPDES outfall limits in support of Groundwater Interim Measures planning.

Asarco Hayden Plant Site, Hayden, Arizona. Katherine assisted with field preparation, QA/QC of analytical data, and data validation as part of the Remedial Investigation/Feasibility Work Plan including soil, sediment, air, process water, surface water, and stormwater.

Former MGP Site, California. Katherine assisted with report preparation, QA/QC of soil and/or groundwater quality data, and data validation for the investigation of three large former MGP sites in an urban, residential setting; includes over 200 residential properties.

General Manufacturing, Leitchfield, Kentucky. Katherine assisted with report preparation, QA/QC of soil and/or groundwater quality data, and data validation for a soil and groundwater RCRA site. Groundwater monitoring is conducted annually at more than 50 locations for volatile organic compounds (VOCs), including 1,4-dioxane and semi-volatile organic compound (SVOCs).

Skyworks Solutions, Inc., Newbury Park, California. Katherine assisted with report preparation, QA/QC of soil and/or groundwater quality data, and data validation at groundwater remediation site. She monitored for VOCs, including 1,4-dioxane, and inorganic chemicals, including hexavalent chromium.

Teledyne Scientific Company, Thousand Oaks, California. Katherine assisted with report preparation for this groundwater assessment site. Monitored natural attenuation has been instituted as the long-term site remedy.

Port of Redwood City, Permitting and Sediment Characterization, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Kiewit Infrastructure West, Sediment Quality Study, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Aeolian Yacht Harbor, Permitting, Eel Grass Conservation and Sediment Characterization, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Marin County, Paradise Cay Permitting and Sediment Characterization, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Daily Field Reports

DAILY FIELD REPORT

Project	Former New City Link Auto Repair Site	**Report No.**	1
BCP Site	BCP Site No. C224407	**Date**	12/10/2024
Location	547 Coney Island Avenue and 50 Hinckley Place, Brooklyn NY	**File No.**	0204391
Client	545 Coney Island LLC	**Temperature**	43-53 °F
Contractor	Ground Penetrating Radar Systems, LLC (GPRS)	**Wind Direction**	ENE to WSW, 5 mph
Weather	Cloudy	**Personnel on Site**	C. Lorthioir, S. Greco
Humidity	95%	**Time on Site**	6:45 am to 11:15 am

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document implementation of the NYSDEC-approved December 2024 Supplemental Remedial Investigation Work Plan (SRIWP) prepared by Haley & Aldrich of New York. Site observations are summarized below.

Daily Observations:

- GPRS completed a Site-wide GPR survey and cleared soil boring locations.

Samples Collected:

- None

CAMP Activities:

- No air monitoring was performed as no ground-intrusive activities were conducted.

Activities Planned for Coming Week:

- AARCO Environmental Services Corp. (AARCO) will mobilize a drill rig to the Site.
- Haley & Aldrich of New York and AARCO will begin to implement the Supplemental Remedial Investigation, including installation of soil borings, monitoring wells, and soil vapor points.

Site Photographs:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document implementation of the NYSDEC-approved December 2024 Supplemental Remedial Investigation Work Plan (SRIWP) prepared by Haley & Aldrich of New York. Site observations are summarized below.

Daily Observations:

- AARCO mobilized a Geoprobe™ 8140LC drilling rig to the Site.
- AARCO completed installation of one soil borings (B-20) to a depth of 50 feet below ground surface (ft bgs) and collected soil samples in accordance with the SRIWP.

Samples Collected:

- Soil samples were collected from B-20 in accordance with the SRIWP.
- All samples were submitted on ice in a cooler via courier to Alpha Analytical Laboratories, Inc. in Westborough, MA for analyses in accordance with the SRIWP.

CAMP Activities:

- Air monitoring was performed at two locations during ground-intrusive work from 7:30 am to 4:45 pm. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate 15-minute average concentration of matter smaller than 10 microns in diameter (PM10) exceeded the action levels.
- No visible dust or odors were observed leaving the Site.

Activities Planned for Coming Week:

- Haley & Aldrich of New York and AARCO will continue to implement the Supplemental Remedial Investigation, including installation of soil borings, monitoring wells, and soil vapor points.

Site Photographs:

- AARCO completed installation of two permanent monitoring wells (MW-12I and MW-12D) to 56 and 66 ft bgs, respectively.

Samples Collected:

- None.

CAMP Activities:

- Air monitoring was performed at two locations during ground-intrusive work from 7:30 am to 5:00 pm. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate 15-minute average concentration of matter smaller than 10 microns in diameter (PM10) exceeded the action levels.
- No visible dust or odors were observed leaving the Site.

Activities Planned for Coming Week:

- Haley & Aldrich of New York and AARCO will continue to implement the Supplemental Remedial Investigation, including installation of soil borings, monitoring wells, and soil vapor points.

DAILY FIELD REPORT

Project	Former New City Link Auto Repair Site	**Report No.**	6
BCP Site	BCP Site No. C224407	**Date**	12/18/2024
Location	547 Coney Island Avenue and 50 Hinckley Place, Brooklyn NY	**File No.**	0204391
Client	545 Coney Island LLC	**Temperature**	39-53 °F
Contractor	AARCO Environmental Services Corp. (AARCO)	**Wind Direction**	SE to NW, 6 mph
Weather	Cloudy	**Personnel on Site**	C. Lorthioir, S. Greco
Humidity	89%	**Time on Site**	7:00 am to 3:45 pm

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document implementation of the NYSDEC-approved December 2024 Supplemental Remedial Investigation Work Plan (SRIWP) prepared by Haley & Aldrich of New York. Site observations are summarized below.

Daily Observations:

- AARCO completed installation of one soil boring (B-18) to a depth of 65 feet below ground surface (ft bgs), and collected soil samples in accordance with the SRIWP.
- AARCO completed installation of three permanent monitoring wells (MW-12S, MW-11D, and MW-11I) to 45, 65, and 55 ft bgs, respectively.

Samples Collected:

- Soil samples were collected from B-18 in accordance with the SRIWP.
- All samples were submitted on ice in a cooler via courier to Alpha Analytical Laboratories, Inc. in Westborough, MA for analyses in accordance with the SRIWP.

CAMP Activities:

- Air monitoring was performed at two locations during ground-intrusive work from 7:15 am to 3:30 pm. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate 15-minute average concentration of matter smaller than 10 microns in diameter (PM10) exceeded the action levels.
- No visible dust or odors were observed leaving the Site.

Activities Planned for Coming Week:

- Haley & Aldrich of New York and AARCO will continue to implement the Supplemental Remedial Investigation (SRI), including installation of soil borings, monitoring wells, and soil vapor points.
- Coastal Environmental Solutions, Inc. will mobilize a drill rig to the Site and implement the SRI, including installation of soil borings, monitoring wells, and soil vapor points.

Site Photographs:

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document implementation of the NYSDEC-approved December 2024 Supplemental Remedial Investigation Work Plan (SRIWP) prepared by Haley & Aldrich of New York. Site observations are summarized below.

Daily Observations:

- AARCO completed installation of two soil boring (B-23 and B-24) to a depth of 40 and 20 feet below ground surface (ft bgs), respectively, and collected soil samples in accordance with the SRIWP.
- AARCO completed installation of one permanent monitoring well (MW-11S) to 45 ft bgs.
- AARCO completed installation of three soil vapor points (SP-06, SP-10, SP-13) to 15 ft bgs, and soil vapor samples were collected in accordance with the SRIWP
- Coastal completed installation of three permanent monitoring wells (MW-13S, MW-13I, MW-13D to 45, 55 and 65 ft bgs, respectively. Soil samples were collected in accordance with SRIWP.
- AARCO developed monitoring wells MW-14, MW-16S, MW-16I, and MW-16D.

Samples Collected:

- Soil samples were collected from B-23, B-24, and B-16 in accordance with the SRIWP.
- Soil vapor samples were collected from SP-06, SP-10, and SP-13 in accordance with the SRIWP.
- All samples were submitted on ice in a cooler via courier to Alpha Analytical Laboratories, Inc. in Westborough, MA for analyses in accordance with the SRIWP.

CAMP Activities:

- Air monitoring was performed at two locations during ground-intrusive work from 7:15 am to 3:30 pm. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate 15-minute average concentration of matter smaller than 10 microns in diameter (PM10) exceeded the action levels.
- No visible dust or odors were observed leaving the Site.

Activities Planned for Coming Week:

- Haley & Aldrich of New York, AARCO and Coastal will continue to implement the Supplemental Remedial Investigation (SRI), including installation of soil borings, monitoring wells, and soil vapor points.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document implementation of the NYSDEC-approved December 2024 Supplemental Remedial Investigation Work Plan (SRIWP) prepared by Haley & Aldrich of New York. Site observations are summarized below.

Daily Observations:

- AARCO completed installation of two permanent monitoring wells (MW-05 and MW-06) to 45 ft bgs.
- AARCO completed installation of three soil vapor points (SP-05, SP-11, SP-12) to 15 ft bgs, and soil vapor samples were collected in accordance with the SRIWP
- Coastal completed installation of three permanent monitoring wells (MW-10S, MW-10I, MW-10D to 45, 55 and 65 ft bgs, respectively.
- Coastal completed installation of soil boring B-17 and AARCO completed installation of soil borings B-05 and B-06. Soil samples were collected in accordance with SRIWP.
- AARCO developed monitoring wells MW-15, MW-19S, MW-19I, MW-19D, MW-18S, MW-18I, MW-18D, and MW-06.
- Y. Palumbo of NYSDEC on-Site to observe implementation of the SRIWP.

Samples Collected:

- Soil samples were collected from B-05, B-06, and B-17 in accordance with the SRIWP.
- Soil vapor samples were collected from SP-05, SP-11, and SP-12 in accordance with the SRIWP.
- All samples were submitted on ice in a cooler via courier to Alpha Analytical Laboratories, Inc. in Westborough, MA for analyses in accordance with the SRIWP.

CAMP Activities:

- Air monitoring was performed at two locations during ground-intrusive work from 7:15 am to 3:00 pm. No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate 15-minute average concentration of matter smaller than 10 microns in diameter (PM10) exceeded the action levels.
- No visible dust or odors were observed leaving the Site.

Activities Planned for Coming Week:

- Haley & Aldrich of New York and Coastal will continue to implement the Supplemental Remedial Investigation (SRI), including the development of monitoring wells.

Site Photographs:

Photo 1: View of Coastal installing permanent monitoring well MW-17I, facing west.

Photo 2: View of AARCO installing SV-12, facing northeast.

DAILY FIELD REPORT

Project	Former New City Link Auto Repair Site	**Report No.**	9
BCP Site	BCP Site No. C224407	**Date**	12/23/2024
Location	547 Coney Island Avenue and 50 Hinckley Place, Brooklyn NY	**File No.**	0204391
Client	545 Coney Island LLC	**Temperature**	12-27 °F
Contractor	Coastal Environmental Services (Coastal)	**Wind Direction**	NW to SE, 2 mph
Weather	Sunny	**Personnel on Site**	A. Stewart
Humidity	53%	**Time on Site**	6:45 am to 3:00 pm

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document implementation of the NYSDEC-approved December 2024 Supplemental Remedial Investigation Work Plan (SRIWP) prepared by Haley & Aldrich of New York. Site observations are summarized below.

Daily Observations:

- Coastal completed installation of manhole covers on groundwater monitoring wells MW-13S, MW-13I, MW-13D, MW-10S, MW-10I, and MW-10D

Samples Collected:

- No samples collected

CAMP Activities:

- No ground intrusive work performed therefore CAMP not implemented.

Activities Planned for Coming Week:

- Haley & Aldrich of New York and Coastal will continue to implement the Supplemental Remedial Investigation (SRI), including the development and sampling of groundwater monitoring wells.

Site Photographs:

Photo 1: View of completed monitoring wells MW-13I, MW-13S, MW-13D, facing west.

Photo 2: View of completed monitoring well MW-10I, facing west.

APPENDIX L
Green and Sustainable Remediation Documentation

H & A OF NEW YORK ENGINEERING
AND GEOLOGY, LLP
213 W. 35th Street
7th Floor
New York, NY 10001
646.277.5685

September 10, 2025
File No. 0204391

New York State Department of Environmental Conservation
Region 2 – Division of Environmental Remediation
47-40 21st Street
Long Island City, New York 11101-5401

Attention: Yildiz Palumbo

Subject: Remedial Investigation Report
Former New City Link Auto Repair Site
547 Coney Island Avenue and 50 Hinckley Place
BCP Site C224407
Brooklyn, New York

Dear Yildiz Palumbo,

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) presents the following environmental footprint analysis in accordance with U.S. Environmental Protection Agency (EPA) 542-R-12-002 for the Remedial Investigation (RI) conducted from February through April 2024 and Supplemental Remedial Investigation (SRI) conducted from December 2024 through January 2025 at the above-referenced site located at 547 Coney Island Avenue and 50 Hinckley Place in Brooklyn, New York (Site).

FORMER NEW CITY LINK AUTO REPAIR SITE – INVESTIGATION

The RI and SRI resulted in the estimated totals of:

- 290.03 metric million British thermal units (MMBtus) of energy used;
- 20.15 tons of total greenhouse gas emissions (CO2e);
- 835.56 pounds (lbs) of NOx + SOx +PM emissions; and,
- 49.53 lbs of HAP emissions.

Energy

- 77.62 MMbtus used for on-site activities, such as well development and sampling.
- 0.24 MMbtus used for Grid Electricity Generation.
- 70.70 MMbtus used for transportation of personnel and investigation materials.
- 141.47 MMbtus used for off-site activities.

Greenhouse Gas Emissions (CO2e)

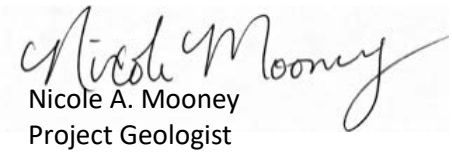
- 6.3 tons of CO2e produced from on-site activities, such as drilling.
- 0.006 tons of CO2e produced from Grid Electricity Generation.
- 5.7 tons of CO2e produced from transportation of contractors, personnel, and investigation materials.
- 8.18 tons of CO2e produced from off-site activities.

Water Usage

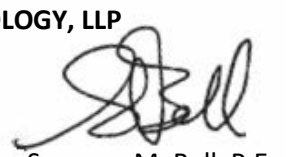
- 17,750 gallons of water were used for the operation of drill rigs during the investigation.

Overall, the main contributors to the environmental footprint of the combined RI and SRI in ascending order are transportation, on-site equipment use, and off-site activities (which include diesel fuel production). Off-site energy use is anticipated to comprise 48.78 percent of all energy use and off-site greenhouse gas emissions to comprise 40.63 percent of all emissions for the Remedy.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP



Nicole A. Mooney
Project Geologist



Suzanne M. Bell, P.E.

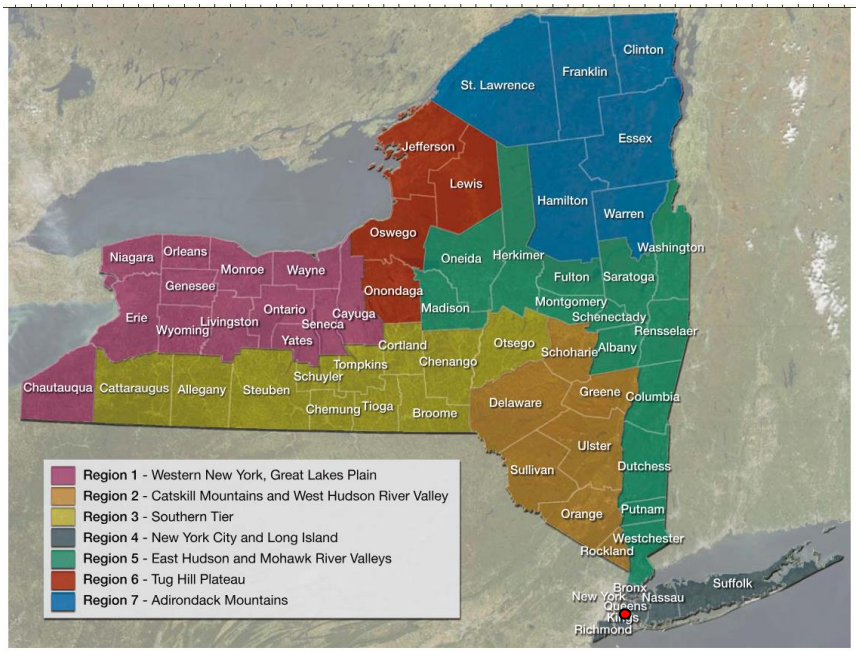
Climate Screening Checklist

Background Information

- Project Manager: Suzanne M. Bell
- Site Name: Former New City Link Auto Repair Site (the "Site")
- Site Number: C224407
- Site Location: 547 Coney Island Avenue and 50 Hinckley Place, Brooklyn, New York
- Site Elevation (average above sea level): Approximately 58 feet above sea level (Google Earth)

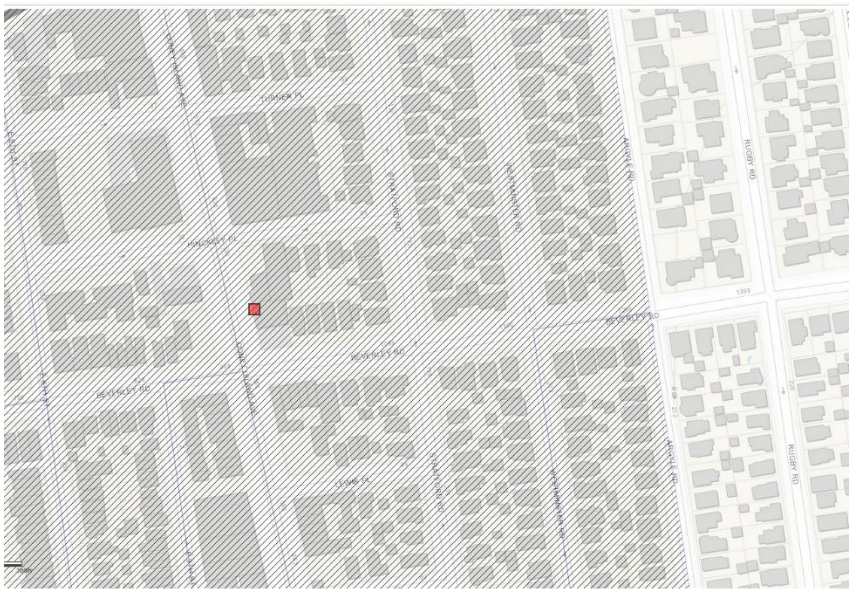
- ClimAID Region (Responding Climate Change in New York State (ClimAID) - NYSERDA): Region 4 – New York City and Long Island



- Remedial Stage/Site Classification: Pending
- Contamination – Media-Impacted/ Contaminants of Concern: Soil – metals and, in some areas, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs; specifically polycyclic aromatic hydrocarbons [PAHs]), pesticides, and polychlorinated biphenyls (PCBs); groundwater – VOCs (specifically petroleum-related VOCs, including benzene, toluene, ethylbenzene, and xylenes [BTEX], and the chlorinated VOC [CVOC] tetrachloroethene [PCE]), SVOCs, and total/dissolved metals; and, soil vapor – VOCs.
- Proposed/Current Remedy: Proposed Track 2 remedy – remedy will potentially consist of excavation, stockpiling, off-Site transport, and disposal of contaminated historical fill material and contaminated soil below the historic fill interval Site-wide up to 15 feet (ft) below ground surface (bgs); removal of underground storage tanks (USTs) and/or associated appurtenances, if encountered, and decommissioning and off-Site disposal; installation of a composite cover and sub-slab depressurization system (SSDS) beneath the Site building footprint; demarcation and backfilling with clean soil or hardscape material meeting Unrestricted Use Soil Cleanup Objectives (UUSCOs) outside of the building footprint; treatment of groundwater via *In-Situ* Chemical Oxidation (ISCO); and the establishment of an Environmental Easement (EE) and Site Management Plan (SMP).
- What is the predicted timeframe of the remedy? Will components of the remedy still be in place in 10+ years? The Track 2 remedy will take approximately four to five months to achieve. Components of the remedy, including the composite cover system and SSDS, will be present in 10+ years. Institutional Controls and Engineering Controls will be established in the EE and SMP, including restrictions on the use of groundwater from the Site and prohibitions on sensitive Site uses, such as farming or vegetable gardening in residual Site soil.
- Is the site in proximity to any sensitive receptors? (e.g. wetlands, waterbodies, residential properties, hospitals, schools, drinking water supplies, etc.). There are two sensitive receptors within a 500-ft radius of the Site: Public School (P.S.) 889 and Middle School (M.S.) 890 – 21 Hinckley Place, Brooklyn, New York 11218, and Uprising Stars Family WeeCare – 222 E 9th Street, Brooklyn, New York 11218, listed as a daycare.

Is the site in a disadvantaged community (DAC) or potential environmental justice area (PEJA) (Use DECinfolocator: DECinfo Locator (ny.gov))?

X Yes ☐ No



If the site is in a DAC or PEJA, will climate impacts be magnified? If yes, list how and why.

☐ Yes X No

Should thresholds of concern be lowered to account for magnification of impacts? If yes, indicate how lower thresholds will be used in the screening.

☐ Yes X No

Climate Screening Table*

Potential Climate Hazards	**Relevant to the Site Location** (Y/N/NA)[1]	**Projected Change** (Reference data source/Model)[3]	**Potential to Impact Remedy** (Y/N)	**Is remedy/site already resilient?** (Y/N)[4]
Precipitation	Y	N/A	N/A	Y
Temperature[2] (Extreme Heat or Cold Weather Impacts)	Y	N/A	N/A	Y
Sea Level Rise	N	N/A	N/A	N/A
Flooding	N	N/A	N/A	N/A
Storm Surge	N	N/A	N/A	N/A
Wildfire	N	N/A	N/A	N/A
Drought	N	N/A	N/A	N/A
Storm Severity	N	N/A	N/A	N/A
Landslides	N	N/A	N/A	N/A
Other Hazards:	N/A	N/A	N/A	N/A

* Links to potential data sources can be found on the following page

[1] If the first column is N --> The rest of the columns will be N/A, the hazard is not applicable to the site.

[2] Extreme Heat: periods of three or more days above 90°F- Extreme Cold: Individual days with minimum temperatures at or below 0 degrees F (NYSERDA ClimAID report)

[3] List the projected change in specific terms or units e.g. inches of rain fall, feet of sea level rise, etc.

[4] If final column is Y, provide reasoning, if the final column is N --> Climate Vulnerability Assessment (CVA) required.

Required Next Steps (If no further action is required, provide justification):

Design and implementation of the potential remedy.

	A-4	Total HAP emissions	Pounds	0.04	1.70	47.78	0.00	0.00	0.00	49.53
	A-5	Total greenhouse gas emissions	Tons CO2e*	0.06	12.17	7.91	0.00	0.00	0.00	20.15
Land & Ecosystems	Qualitative Description									

** Total greenhouse gases emissions (in CO2e) include consideration of CO2, CH4, and N2O (Nitrous oxide) emissions.*
"MMBtu" = millions of Btus
"MG" = millions of gallons
"CO2e" = carbon dioxide equivalents of global warming potential
"MWh" = megawatt hours (i.e., thousands of kilowatt-hours or millions of Watt-hours)
"Tons" = short tons (2,000 pounds)

The above metrics are consistent with EPA's Methodology for Understanding and Reducing a Project's Environmental Footprint (EPA 542-R-12-002), February 2012
