EXECUTIVE SUMMARY

Gannett Fleming Engineers, P.C. (GF), on behalf of Cooper Tank and Welding Corporation (Cooper), has prepared this Field Investigation Report to detail findings from the subsurface site investigation conducted on Block 3100, Lot 47 at 215 Moore Street, Brooklyn New York, and the adjacent sidewalk area on White Street (the Site or the Study Area). The purpose of this investigation was to assess soil and groundwater quality in close proximity to a suspected former UST area at 215 Moore Street identified on historic Sanborn Maps, and the adjacent sidewalk area on the west side of White Street. The New York State Department of Environmental Conservation (NYSDEC) has assigned Spill Case #1100020 to this location. GF completed the investigation in accordance with the May 2011 Investigation Work Plan (Revised June 2011) prepared by GF and approved by NYSDEC.

During this investigation, GF completed the following site-specific objectives that were outlined in the Investigation Work Plan:

1. Determine if there is physical evidence of a current or former UST at 215 Moore Street, as identified on historic Sanborn Maps;
2. Evaluate soil and groundwater quality in close proximity to the former suspected UST area at 215 Moore Street;
3. Evaluate and delineate the extent of the contaminant-impacted soil and groundwater north of the northwestern corner of Moore Street and White Street to determine the extent of petroleum-and chlorinated solvent-related constituents of concern (COCs).

On site activities included:

- A geophysical investigation to determine whether a gasoline UST that was identified on historical Sanborn Maps is present, and identify the location of subsurface utilities and other potential subsurface obstructions or hazards in the study area;

- Advancement of three soil borings inside 215 Moore Street in the exact location and in close proximity to the suspected former UST location, and two soil borings on the sidewalk adjacent to 215 Moore Street on the west side of White Street to depths ranging from 20 feet to 24 feet BGS
- Continuous field screening through the soil column, and collection of two discrete soil samples for laboratory analysis from each soil boring location;
- Conversion of all five borings to groundwater monitoring wells;
- Monitoring well location and elevation survey and collection of groundwater level gauging data from all groundwater monitoring wells; and
- Collection of groundwater samples from all five groundwater monitoring wells for laboratory analysis.

On April 27, 2011 a geophysical survey was conducted to determine whether a gasoline UST identified on historic Sanborn Maps was present at the site.

On July 19, 2011 through July 25, 2011, five soil borings were advanced in the proposed study area. Soil was continuously field screened and lithologically logged from surface grade to terminal depths which ranged from approximately 20 feet to 24 feet BGS.

Two soil samples from each boring were submitted for laboratory analyses, as determined by the sample exhibiting the highest organic vapor concentration reading on a photoionization detector (PID), and the deepest sample exhibiting the lowest PID reading. All soil samples were analyzed for all volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) listed in the NYSDEC CP-51 Soil Cleanup Guidance (CP-51 SCG).

On August 8, 2011, groundwater levels were gauged and groundwater samples collected at all five groundwater monitoring wells. All groundwater samples were analyzed for all VOCs and SVOCs compounds listed in the NYSDEC CP-51 SCG. Groundwater sample results were compared to NYSDEC Class GA Ambient Water Quality Standards.

Findings and Conclusions

- Physical evidence of a current or former UST was not substantiated from the geophysical investigation or the subsurface investigation that was conducted at 215 Moore Street in the location of and in close proximity to the suspected former UST area.
- Chlorinated VOCs (CVOCs) were not detected in any of the soil samples collected during this investigation.
- The highest concentration of total VOCs was detected at the southernmost sidewalk location adjacent to White Street, in soils significantly above the water table (SB-SE-8S (4'-5')), approximately 45-50 feet east of the suspected UST location identified on historic Sanborn Maps. This sample was collected from a higher elevation than soils exhibiting evidence of contamination inside 215 Moore Street. This sample location, which is significantly above the water table, exhibited elevated PID readings, staining, and strong petroleum odors. Seven VOCs exceeded the Unrestricted Use SCOs.
- Inside 215 Moore Street, VOCs exceeding the Unrestricted Use SCOs were detected below the water table at SB-SE-7S (5'-7.5'), SB-SE-7D (20'-21.5'), and SB-SE-9D (18.5'-20'), at a lower elevation than the highest soil sample concentrations that were collected at the southeastern sidewalk location. Eight VOCs exceeded the Unrestricted Use SCOs but were significantly below the Restricted Use Industrial SCOs for which the Site is zoned and currently used.
- VOCs were not detected above Unrestricted Use SCOs in the northernmost sidewalk boring SB-SE-10 or the westernmost boring inside 215 Moore Street.
- Concentrations of six SVOCs, commonly associated with urban fill, slightly exceeded the Unrestricted Use SCOs at locations SB-SE-7S (5'-7.5'), and SB-SE-11S (2.5'-3.5') inside 215 Moore Street, but were significantly below the Restricted Use Industrial SCOs for which the Site is zoned and currently used.
- Only one SVOC, which also is commonly associated with urban fill, slightly exceeds both the Unrestricted and Restricted Industrial SCOs at locations SB-SE-7S (5'-7.5'), and SB-SE-11S (2.5'-3.5') inside 215 Moore Street.

- The groundwater samples collected from MW-SE-8 (south-easternmost sidewalk location), MW-SE-7 (southernmost location at 215 Moore Street), and MW-SE-9 (northernmost at 215 Moore Street), exhibited concentrations of VOCs that exceeded NYSDEC Class GA Ambient Water Quality Standards. Fourteen compounds were reported above NYSDEC Class GA Ambient Water Quality Standards.
- Chlorinated VOCs were not detected in any of the groundwater samples collected during this investigation.
- Predominant on-site groundwater flow direction was confirmed to be towards the north and north-northeast.

Based on data compiled from this investigation that provides multiple lines of evidence, GF concludes from this investigation that the soil and groundwater condition in the southeastern corner of 215 Moore Street and on the western side of White Street is related to an offsite soil and groundwater condition and not from an on-site source, and no further investigation or remedial action for these soils or groundwater is warranted of the owner of 215 Moore Street by NYSDEC. GF is requesting that no further action is required of the owner of 215 Moore Street for conditions associated with Spill # 1100020 and that the Spill case be closed.

1.0 INTRODUCTION

Gannett Fleming Engineers, P.C. (GF), on behalf of Cooper Tank and Welding Corporation (Cooper), has prepared this Field Investigation Report to detail findings from the subsurface site investigation conducted on Block 3100, Lot 47 at 215 Moore Street, Brooklyn New York, and the adjacent sidewalk area on White Street (the Site or the Study Area). The purpose of this investigation was to assess soil and groundwater quality in close proximity to a suspected former UST area at 215 Moore Street and the adjacent sidewalk area on the west side of White Street. NYSDEC has assigned Spill Case #1100020 to this location. GF completed the investigation in accordance with the May 2011 Investigation Work Plan (Revised June 2011) prepared by GF and approved by the New York State Department of Environmental Conservation (NYSDEC).

This report describes the site historical background, on-site investigation activities, analytical results, findings, and conclusions.

2.0 SITE HISTORY AND DESCRIPTION

2.1 Subject Property

The Site is located in a residential/commercial/industrial area at 215 Moore Street in Brooklyn, New York, at approximately latitude 40º 42' 16" North and longitude 73º 56' 09" West (Figure 1). The Site is currently an approximately 2.35-acre property zoned for industrial use, improved with a 44,000-square foot building and associated driveway and parking lot owned and operated by Cooper Tank and Welding Corporation (Cooper), which manufactures solid waste containers.

The Site is bordered to the north by Seigel Avenue, across which are industrial, commercial, and a few residential properties; White Street to the east, across which is an auto storage yard; to the south by Moore Street, across which are industrial and commercial properties; and to the west by industrial and commercial properties.

2.2 Historical Information and Previous Environmental Studies

July 15, 2010 Letter from NYSDEC Case Manager

A letter dated July 15, 2010 from the NYSDEC case manager stated that on January 3, 2000, NYSDEC was notified by the New York City Department of Design and Construction (NYC DDC) that petroleum contaminated soil was discovered during a water main installation at the intersection of Moore and White Streets, and heavy contamination was discovered near 236 Moore Street. A soil and groundwater investigation by Hydro Tech Environmental, Corp. on behalf of the owner of 236 Moore Street was conducted at 236 Moore Street and the adjacent sidewalk areas and, based on the associated groundwater flow data, NYSDEC suggested that the contamination found may be originating from Cooper Tank. NYSDEC required that Cooper perform a Phase I Environmental Site Assessment (ESA), delineate soil and groundwater contamination via the installation of monitoring wells in the area of the reported UST, and

delineate possible soil and groundwater contamination in the southeast corner of the subject property.

Phase I Environmental Site Assessment

Cooper Tank retained GF to perform a Phase I ESA of 215 Moore Street to satisfy Task 1 set forth by the NYSDEC in the above referenced letter. The Phase I ESA concluded that the subject property had an open NYSDEC Spill Number (Spill # 0312904) associated with a former diesel leaking underground storage tank (UST) which impacted soil and groundwater at the Site, and that a spill (Spill # 0751350) was discovered to the southeast of the subject property at the intersection of Moore and White Streets that the NYSDEC suspects may have been caused by a spill originating at the Site.

The area that may have formerly housed a UST as depicted in historical Sanborn maps from 1933-1979, is located inside Lot 47 towards the southeast corner of the building. According to Sanborn maps, the UST was located approximately ten feet north of the southern wall of the building adjacent to the Moore Street sidewalk, and approximately thirty feet west of the eastern building wall adjacent to the White Street sidewalk (Figure 2). Based on these conclusions, GF recommended the installation of soil borings and groundwater monitoring wells at the Site.

Field Investigation Report

GF submitted the revised *February 2011 Field Investigation Report* to the NYSDEC to document and detail the findings of a soil and groundwater investigation that was conducted at the Site from November 8, 2010 through January 19, 2011. The investigation included three soil borings at the northwest corner of the intersection of Moore Street and White Street. One boring (SB-SE-6) was converted to a permanent monitoring well. GF concluded that the specific contaminants of concern (COCs) and their concentration trends detected within the footprint of the Site did not correlate with the specific COCs and COC concentrations that were reported at the southeast corner, or in historical data associated with 236 Moore Street reported by NYSDEC in the spills database. As determined by groundwater level gauging data and a review of regional groundwater maps produced by the USGS, GF concluded that the predominant site-

specific groundwater flow direction is north-northeasterly and that the southeast corner is hydraulically crossgradient to the Site.

GF concluded from the investigation that the soil and groundwater condition in the southeastern corner is unrelated to Cooper, and no further investigation or remedial action for these soils or groundwater should be required by the owner of 215 Moore Street. GF requested that no further action be required of the owner of 215 Moore Street for conditions associated with Spill #0751350.

April 15, 2011 Letter from NYSDEC Case Manager

On April 15, 2011, a letter from the NYSDEC was sent to Cooper Tank stating that "on November 11, 1999, NYSDEC was notified that contaminated soil was discovered under the street along the west side of White Street adjacent to Block 3100, Lot 47, which is owned by 215 Moore Street". NYSDEC suggested that, based on a gasoline tank reported in historical Sanborn maps from 1933-1979, as referenced in the Phase I ESA prepared by GF dated September 2010, the contamination found may be originating from the Site (Appendix A). NYSDEC required a soil and groundwater investigation in the suspected area of the former gasoline tank via the installation of soil borings and monitoring wells.

2.3 Historical Survey Data

June, 1984 Architectural and Subsurface Utility Survey

An architectural survey was conducted in June 1984 for Cooper by Montrose Surveying Company, Inc. (Montrose), a licensed land surveyor in the State of New York. As demonstrated on a figure prepared by Montrose (Appendix B), a sewer line runs under the west-central area of White Street. This sewer line, according to the Borough of Brooklyn Sewer Department Records, slopes downward from south to north, along the eastern side of 215 Moore Street.

October 26, 1999 NYCDDC Survey

Observed historical groundwater elevations along White Street were presented on a figure dated 10/26/99, prepared by the City of New York Department of Design and Construction Division of Technical Support, Bureau of Site Engineering Subsurface Exploration (Appendix C). The groundwater elevation data shows a generally northward hydraulic gradient along White Street.

3.0 PHYSICAL CONDITIONS

3.1 Site Geology and Topography

Immediately underlying the study area is a continuous layer of historic urban fill material ranging from approximately 5 to 10 feet in thickness (consisting of varying fractions of bricks, historic concrete slabs, brick fragments, wood fragments, slag, coal ash, sand, silt, and gravel), consistent with fill components commonly associated with the uppermost layer of subsurface material of New York City.

According to regional maps and reports published by the USGS and others, the Site is underlain by native unconsolidated Cretaceous to Quaternary age sand and gravel deposits that comprise Long Island's groundwater system. These hydrogeologic units consist of alternating interbedded lenses of gravel, sand, silt, and clay, which form a layered sequence of aquifers and confining units. The Upper Glacial Aquifer in the region generally consists of approximately 150 feet of glacial deposits composed of clay, sand, gravel and boulders.

Underlying the historic urban fill layer, the native geological components that were documented in the study area include varying fractions of fine to coarse sand, fine silt, and fine to medium gravel interbedded with lenses of clay exhibiting varying degrees of saturation and hardness.

According to regional maps, the Site lies approximately 18 feet above mean sea level and depth to groundwater is approximately 10 to 15 feet below ground surface (BGS). During GF investigations, documented groundwater levels ranged from approximately 4.63 to 9.5 feet BGS (7.95 to 13.22 feet above mean sea level). Topographically, the surface elevation of White Street slopes from an elevation of approximately 21 feet above mean sea level south of Moore Street to a lower elevation of approximately 17 feet above mean sea level north of Moore Street and adjacent to the Site. The closest water bodies are English Kills located 0.39 miles to the northeast and the East River located approximately 1.5 miles to the west and northwest.

3.2 Hydrogeology

A predominant northern and north-northeastern groundwater flow direction is well-documented from previous GF investigations, and was confirmed with data collected during the most recent groundwater sampling event on August 8, 2011 (Figure 4). The determination of groundwater flow direction at this location by GF is supported by regional groundwater maps produced by the U.S. Geological Survey (USGS), data collected and documented by others, and the presence of the closest water body (English Kills) located approximately 0.39 miles to the north-northeast.

Site specific hydrogeological considerations that will influence preferential pathways in the shallow aquifer setting around the Site include the compressive forces of large building structures on the shallow aquifer, subsurface utility conduits present in the smear zone, the likely presence of perched groundwater, and clay layers of low hydraulic conductivity and specific yield that immediately underlie non-native fill that exhibits physical properties of higher hydraulic conductivity and specific yield. Other considerations include the heterogeneity of surface and subsurface water drainage and infiltration influenced by varying degrees of impervious and semi-pervious surface conditions.

4.0 SCOPE OF WORK

GF completed this investigation in accordance with the NYSDEC-approved May 2011 Investigation Work Plan (Revised June 2011) prepared by GF and in accordance with discussions and correspondence with the NYSDEC.

On-site activities included the following:

- A geophysical investigation to determine whether a gasoline UST that was identified on historical Sanborn Maps is present, and identify the location of subsurface utilities and other potential subsurface obstructions or hazards in the study area;
- Physical hand clearing and continuous field screening of five sampling locations to 5 feet below ground surface (BGS);
- Advancement of three soil borings inside 215 Moore Street at and in close proximity to the suspected former UST location, and two soil borings on the sidewalk adjacent to 215 Moore Street on the west side of White Street to depths ranging from 20 feet to 24 feet BGS
- Continuous field screening through the soil column, and collection of two discrete soil samples for laboratory analysis from each soil boring location;
- Conversion of all five borings to groundwater monitoring wells;
- Development of the five newly installed groundwater monitoring wells;
- Monitoring well location and elevation survey and collection of groundwater level gauging data from all groundwater monitoring wells; and
- Collection of groundwater samples from all five groundwater monitoring wells for laboratory analysis.

A photo log of Site activities is included in Appendix D.

4.1 Geophysical Investigation and Utilities Clearance

Naeva Geophysics Inc., under contract to GF, conducted a geophysical investigation in the southeast area of 215 Moore Street on April 27, 2011 to determine whether the gasoline UST that was identified on historical Sanborn Maps was present and to identify any subsurface obstructions or hazards in the study area. The geophysical investigation spanned an extended area including the suspected UST location identified on historical Sanborn Maps. The survey area was approximately 50 feet from north to south by 75 feet from east to west in the southeast corner of the building. Geophysical methods used during the investigation successfully located electrical and sanitary system utility conduits, a steel foundation plate for former machinery, and identified a 4-inch diameter steel pipe as a former roof-drain cleanout (Appendix E). The geophysical investigation did not identify any evidence of a current or former UST in the study area.

The drilling contractor, Fenley & Nicol Environmental, Inc. (F&N) contacted the New York One-Call Center to perform public property utility mark-outs prior to the initiation of drilling activities. All boring locations were hand-cleared to 5 feet BGS prior to drilling activities.

4.2 Drilling Activities

4.2.1 Soil Boring Activities

Soil boring activities were conducted from July 19, through July 25, 2011. The investigation included the advancement of five borings as presented on Figure 3. Three borings were advanced inside 215 Moore Street at the location of and in close proximity to the area of the suspected former UST as presented on historical Sanborn maps, and two were advanced on the western side of White Street, adjacent to 215 Moore Street. All five borings were developed and converted to groundwater monitoring wells and developed. Each soil boring was advanced using Geoprobe® direct-push methods. Each boring was advanced below the groundwater interface to terminal depths that ranged from approximately 20 feet to 24 feet BGS. The drilling contractor obtained all required NYC permits for sidewalk drilling and sidewalk restoration activities.

Soil was continuously collected and field screened at each boring location. GF documented soil lithology, visual and olfactory characteristics of the collected soil (staining, discoloration, odors, etc.), and field screened soil for evidence of VOCs by measuring organic vapor concentrations using a photoionization detector (PID) calibrated to a 100 parts per million (ppm) isobutylene standard. Boring Logs are included in Appendix F.

Two soil samples were collected for laboratory analysis from each boring. In accordance with the NYSDEC-approved Work Plan, one sample was collected from the boring depth that exhibited the highest PID reading and one sample was collected from the deepest clean depth as determined by PID readings below 10 ppm. The following table describes the sample collection:

BORING IDENTIFICATION	BORING LOCATION	SAMPLE ID	SAMPLE DESCRIPTION AND DEPTH OF SAMPLE INTERVAL
SB-SE-7	Location of suspected former UST inside building, as presented on historic Sanborn maps.	SB-SE-7S SB- SE-7S	(5-7.5') PID = 1361 ppm-highest PID reading (20-21.5') PID = 7.5 ppm-deepest clean sample as determined by PID reading
SB-SE-9	Approximately 30 feet North-northeast of suspected former UST area inside building	SB-SE-9S SB-SE-9D	(13-15') PID = 1055 ppm- highest PID reading (18.5-20') PID = 5.4 ppm- deepest clean sample as determined by PID reading
SB-SE-11	Approximately 35 feet West of suspected former UST area inside building	SB-SE-11S SB-SE-11D	(2.5-3.5') PID = 22.7 ppm-highest PID reading (22.5-25') PID = 0.3 ppm- deepest clean sample as determined by PID reading
SB-SE-8	Approximately 35 feet North of the Northwest corner of Moore St and White St intersection and 45 feet East of suspected former UST area inside building	SB-SE-8S SB-SE-8D	(4-5') PID = 1820 ppm- highest PID reading (22-24') PID = 0.4 ppm- deepest clean sample as determined by PID reading
SB-SE-10	Approximately 80 feet North of the Northwest corner of Moore St and White St intersection and 90 feet East-Northeast of suspected former UST area inside building	SB-SE-10S SB-SE-10D	(7-8.75') PID = 743 ppm-highest PID reading (22-24') PID = 0.4 ppm- deepest clean sample as determined by PID reading

Soil samples were placed into laboratory-supplied glassware and immediately placed in a cooler and packed with ice to maintain a temperature of approximately 4° Celsius. Each soil sample was sent by courier to Test America Laboratories (Test America), a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-accredited laboratory and analyzed for all volatile organic compounds (VOCs) listed in New York Codes, Rules and Regulations (6NYCRR) Table 375-6.8(a), including those in NYSDEC CP-51 Soil Cleanup Guidance (CP-51 SCG), and semi-volatile organic compounds (SVOCs) listed in the CP-51 SCG, by United States Environmental Protection Agency (USEPA) Methods 8260 and 8270 respectively. Laboratory data reports were provided in the NYSDEC Full ASP Category B Deliverables reporting format. The laboratory data reports are provided in Appendix G in CD format.

4.2.2 Monitoring Well Installations

GF's drilling subcontractor, F&N, completed five soil borings as groundwater monitoring wells: MW-SE-7, MW-SE-8, MW-SE-9, MW-SE-10, and MW-SE-11 (Figure 3). MW-SE-7, MW-SE-9, and MW-SE-11 were installed inside the building in close proximity to the location of the suspected former UST as presented on historical Sanborn maps. MW-SE-8 and MW-SE-10 were advanced on the western side of White Street, adjacent to 215 Moore Street.

All wells were constructed of 2-inch diameter schedule 40 PVC pipe fitted with 2-inch diameter, 0.020-inch (20 slot) PVC well screen. In accordance with protocols required by NYSDEC for this investigation, the screen was placed so that it intersected the water table in each well and extended approximately five feet below any zone that exhibited the highest potential contamination below the water table, as determined by PID readings. Solvent glue was not used in assembling the well screen or riser casing. Number 2 Morie sand pack was placed around each well screen from the bottom of each well to two feet above the well screen. A bentonite seal was placed on top of the sand pack and the remainder of the annulus was filled with a cement grout-slurry to grade. A flush mounted manhole cover and locking "J" type cap finished each well. Well Construction Logs are included in Appendix H.

4.2.3 Monitoring Well Development

The newly installed monitoring wells were developed using a whale pump to ensure the removal of any fines and to restore the hydraulic properties of the surrounding water bearing material. The flow rate of the pump was controlled to create draw-down in the well but not dry the well. The monitoring wells were developed until ten well volumes were removed and/or the water was visibly clear, to provide sediment-free water for sampling.

Well development logs are provided in Appendix I.

4.3 Monitoring Well Survey

On August 8, 2011, the locations of all borings and monitoring wells and the elevations (top of manway and top of casing) of all monitoring wells were surveyed by Naik Consulting Group, P.C. of New York, New York, a New York State licensed surveyor. The top of manhole and top of casing elevations were surveyed and referenced to North American Vertical Datum 1988 (NAVD88).

Monitoring well survey data is provided in Appendix J. Groundwater elevation data is presented in Table 1. A groundwater contour map is provided as Figure 4.

4.4 Groundwater Sampling

The five newly installed monitoring wells were sampled on August 8, 2011, approximately two weeks after monitoring well development. The depth to water in each well was measured to the nearest hundredth of a foot using an electronic water-level indicator and recorded on the sampling log. Monitoring wells were sampled in accordance with USEPA SOP # SST-7 Groundwater Sampling Procedure: Low Stress (Low Flow) Purging and Sampling. To minimize sample turbidity, the peristaltic pump was set to purge rates ranging from approximately 0.1 to 0.5 liters per minute, consistent with low flow sampling procedures. Measurements of pH, conductivity, dissolved oxygen (DO) content, oxidation reduction potential (ORP), and turbidity

were recorded throughout the purging process. Groundwater was drawn from the wells until acceptable parameter stabilization was observed, followed by sample collection in laboratory-supplied glassware.

All discrete groundwater samples were visibly clear, and turbidity measurements ranged from approximately 0 to 43 nephelometric turbidity units (NTU). Groundwater samples did not exhibit sheen. Disposable gloves were worn during sample collection and replaced between sampling locations. The VOC containers were filled first, followed by SVOC containers. Special care was taken in filling and capping the VOC vials to prevent headspace or air bubble accumulation in sample vials. Overflowing of sample bottles was avoided to prevent the loss of floating substances or preservatives which may have already been added to the bottle. Sample bottles were placed in a cooler and packed with ice to maintain a temperature of approximately 4^{o} Celsius. One trip blank (for VOCs only) and one field blank (for VOCs and SVOCs) were collected for quality assurance/quality control (QA/QC) purposes.

Five groundwater samples and two QA/QC samples were sent by courier during the sampling event to Test America, and analyzed for all VOCs listed in 6NYCRR Table 375-6.8(a), including those in CP-51 SCG, and SVOCs listed in the CP-51 SCG, by USEPA Methods 8260 and 8270 respectively. Laboratory data reports were provided in the NYSDEC Full ASP Category B Deliverables reporting format. The laboratory data reports are provided in Appendix F in CD format.

Groundwater sampling logs are presented in Appendix K.

4.5 Waste Disposal

Drill cuttings from soil boring and monitoring well drilling activities and groundwater generated from development and sampling of monitoring wells were placed into the appropriate U.S. Department of Transportation (DOT) approved 55-gallon drums, labeled, and stored in a staging area designated by Cooper. Each drum was identified by the Site location and date filled. Based on soil and groundwater analytical results, all waste drums were transported offsite by F&N on

8/22/11 to Fenley & Nicol Environmental Inc., 445 Brook Avenue, Deer Park, NY 11729 (USEPA ID#NYD980592570) for proper disposal.

The waste disposal manifest is provided as Appendix L.

5.0 ANALYTICAL RESULTS

Soil sample results were evaluated in accordance with CP-51 SCG dated 10/21/2010, as it applies to the Petroleum Spill Response Program. Accordingly, soil analytical results were compared to Soil Cleanup Objectives (SCOs) listed in Table 1 (Supplemental Soil Cleanup Objectives), Table 2 (Soil Cleanup Levels for Gasoline Contaminated Soils), and Table 3 (Soil Cleanup Levels for Fuel Oil Contaminated Soils) described in CP-51 SCG; and 6NYCRR Table 375-6.8(a) Unrestricted Use SCOs (USCOs)) and 6NYCRR Table 375-6.8(b) Restricted Use Industrial SCOs (RUISCOs), as referenced in CP-51 SCG and as applicable to the Site. The current and future intended use of the Site is industrial in nature.

Groundwater sample analytical results were compared to NYSDEC Class GA Ambient Water Quality Standards as set forth in Technical & Operational Guidance Series 1.1.1, Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations.

A summary of the laboratory results for each soil sample are included in Table 2. A summary of laboratory results for each groundwater sample are included on Table 3. Laboratory analytical data sheets are included on CD in Appendix E.

5.1 Soil Sample Results

5.1.1 VOCs

The following table details the specific VOCs in the soil boring samples that were reported above applicable SCOs.

SAMPLE ID:	NYSDEC SOIL CLEANUP OBJECTIVES(CP-51 SCG and Part 375-6.8(a) UNRESTRICTED USE)	NYSDEC SOIL CLEANUP OBJECTIVES(Part 375-6.8(b) INDUSTRIAL USE)	SB-SE-8S 4'-5'		SB-SE 7D 20'-21.5'		SB-SE 7S 5'-7.5'		SB SE-9-D 18.5'-20'

5.3 QA/QC Results

The field blank laboratory results related to the soil sampling effort reported detections of acetone, a common laboratory contaminant. The trip blank laboratory results related to the soil sampling effort reported detections of methylene chloride, a common laboratory contaminant. Both analytes were reported in soil samples collected during this investigation. Based on these results, the detections of methylene chloride and acetone in groundwater samples during this sampling event and in QA/QC samples can be attributed to laboratory cross-contamination. No qualification of the soil laboratory results based on this QA/QC sample is warranted.

The field blank laboratory results related to this groundwater sampling effort reported non-detect concentrations of analytes. The trip blank laboratory results related this groundwater sampling effort reported detections of methylene chloride, a common laboratory contaminant. This analyte was not detected in groundwater samples collected during this investigation. No qualification of the groundwater laboratory results based on this QA/QC sample is warranted.

6.0 FINDINGS

The objectives of this investigation were to:

1. Determine if there is physical evidence of a current or former UST at 215 Moore Street, as identified on historic Sanborn Maps;
2. Evaluate soil and groundwater quality in close proximity to the suspected UST area, and;
3. Evaluate and delineate the extent of the impacted soil and groundwater North of the northwestern corner of Moore Street and White Street to determine the extent of petroleum-and chlorinated solvent-related COCs.

6.1 Soil

Soil data collected during this investigation indicates the following:

- Physical evidence of a current or former UST was not substantiated from the geophysical investigation or the subsurface investigation that was conducted at 215 Moore Street in the location of and in close proximity to the suspected former UST area.
- Chlorinated VOCs (CVOCs) were not detected in any of the soil samples collected during this investigation.
- The highest concentration of total VOCs was detected at the southernmost sidewalk location adjacent to White Street offsite, in soils significantly above the water table (SB-SE-8S (4'-5')), approximately 45-50 feet east of the suspected UST location identified on historic Sanborn Maps. This sample was collected from a higher elevation than soils exhibiting evidence of contamination inside 215 Moore Street. This sample location which is significantly above the water table exhibited elevated PID readings, staining, and strong petroleum odors. Seven VOCs exceeded the Unrestricted Use SCOs.
- Inside 215 Moore Street, VOCs exceeding the Unrestricted Use SCOs were detected below the water table at SB-SE-7S (5'-7.5'), SB-SE-7D (20'-21.5'), and SB-SE-9D

(18.5'-20'), at a lower elevation than the highest soil sample concentrations that were collected at the southeastern sidewalk location offsite. Eight VOCs exceeded the Unrestricted Use SCOs but were significantly below the Restricted Use Industrial SCOs for which the Site is zoned and currently used.

- VOCs were not detected above Unrestricted Use SCOs in the northernmost sidewalk boring SB-SE-10 or the westernmost boring inside 215 Moore Street.
- Concentrations of six SVOCs, commonly associated with urban fill, slightly exceeded the Unrestricted Use SCOs at locations SB-SE-7S (5'-7.5'), and SB-SE-11S (2.5'-3.5') inside 215 Moore Street, but were significantly below the Restricted Use Industrial SCOs for which the Site is zoned and currently used.
- Only one SVOC, which also is commonly associated with urban fill, slightly exceeds both the Unrestricted and Restricted Industrial SCOs at locations SB-SE-7S (5'-7.5'), and SB-SE-11S (2.5'-3.5') inside 215 Moore Street.

6.2 Groundwater

Groundwater data collected during this investigation indicates the following.

- The groundwater samples collected from MW-SE-8 (south-easternmost sidewalk location), MW-SE-7 (southernmost location at 215 Moore Street), and MW-SE-9 (northernmost location on 215 Moore Street), exhibited concentrations of VOCs that exceeded NYSDEC Class GA Ambient Water Quality Standards. Fourteen compounds were reported above NYSDEC Class GA Ambient Water Quality Standards.
- Chlorinated VOCs were not detected in any of the groundwater samples collected during this investigation.
- Predominant on-site groundwater flow direction was confirmed to be towards the north and north-northeast.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the findings of this investigation, there is no evidence of a UST or a release of petroleum or chlorinated solvents from 215 Moore Street. The offsite soils adjacent to White Street above the water table that exhibited the highest concentration of VOCs, staining, and petroleum odor at a higher elevation than contaminant-impacted soils at 215 Moore Street below the groundwater table indicate that the soil and groundwater below the water table in the southeast corner of 215 Moore Street have been impacted by an offsite up-gradient condition.

The low concentrations of SVOC compounds exhibited in soil samples in the upper soil horizon are indicative of the historic urban fill. These results are consistent with the documented presence of a historic urban fill layer documented throughout the Site during this investigation and previous investigations. Soils at this location are effectively covered with an impervious layer of concrete and asphalt that greatly reduces the probability of human contact (dermal contact/inhalation/ingestion) with subsurface soils and groundwater. Groundwater is not used as potable water in Brooklyn (Kings County) and did not exhibit detections of the historic fill-related COCs that were detected in the historic urban fill layer.

Based on data compiled from this investigation that provides multiple lines of evidence, GF concludes from this investigation that the soil and groundwater condition in the southeastern corner of 215 Moore Street and on the western side of White Street is related to an offsite soil and groundwater condition and not from an on-site source, and no further investigation or remedial action for these soils or groundwater is warranted of the owner of 215 Moore Street by NYSDEC. GF is requesting that no further action is required of the owner of 215 Moore Street for conditions associated with Spill # 1100020 and that the Spill case be closed.

Joe Martens
Commissioner

April 15, 2011

215 Moore Street Inc.
215 Moore Street
Brooklyn, NY 11206
Attn.: David Hillcoat

Re.: Spill at 215 Moore Street, Brooklyn, NY
Spill Case #: 1100020

Dear Mr. Hillcoat,

On 11/11/1999, the New York State Department of Environmental Conservation (the Department) was notified that contaminated soil and groundwater was discovered under the street along the west side of White Street (Spill #: 9911504). This soil contamination was found adjacent to Block 3100, Lot 47 ('Lot 47') which is owned by 215 Moore Street, Inc. Also, as per the Phase I Environmental Site Assessment dated September 2010, submitted by Gannett Fleming Engineers, P.C., for the above referenced site, there was a gasoline tank located on the same lot from 1933-1979. Based on available information, the contamination found under the street could be result of a leak from the historical gasoline tank system. This is a violation of Article 12 of the New York State Navigation Law (NL) Section 173 and according to Section 176, the respondent is required to contain and "promptly clean up and remove the discharge."

As discussed during a meeting on 03/31/2011, the Department requires soil and groundwater investigation on and around Lot 47. Within 60 days of the date of this letter, the Respondent shall submit for Department approval an Investigation Work Plan detailing the scope of work proposed to investigate the full extent of the contamination, both on- and off-site (the "IWP"). The Department requires the following to be submitted in the IWP:

1. *Delineation of Soil and Groundwater Contamination on and around Lot 47:*
To determine the source of contamination, the Department requires soil and groundwater investigation in an area of the former gasoline tank(s) via installation of monitoring wells. As per DER-10 (Technical Guidance for Site Investigation and Remediation, available at http://www.dec.ny.gov/regulations/2393.html) 3.7.2 (b) 4.i: "A minimum of three groundwater monitoring wells or piezometers are required in each affected aquifer or water bearing zone to determine the groundwater flow direction in that zone. The monitoring wells or piezometers must be installed properly and surveyed relative to a permanent surface structure to provide for adequate triangulation." The Department also requires complete delineation of soil and groundwater contamination via installation of soil borings on sidewalks around the Lot 47. During installation of soil borings and monitoring wells, soil must be sampled continuously with a photoionization detector (PID) to a minimum depth of twenty (20) feet below grade. The deepest clean soil sample and the sample with the highest PID reading must be sent to a NYSDOH certified laboratory for

analyses. If no elevated PID readings are found then the two deepest dry soil samples must be submitted for analyses. A water sample from all soil borings and monitoring wells must be submitted for analyses. All soil and groundwater samples must be analyzed for Full List of VOCs via EPA Method 8260 and Spills Technology and Remediation Series (STARs) list of SVOCs via EPA Method 8270. Prior to installation, all utilities must be located and marked out.

The IWP must include an implementation schedule for performing the investigation and submitting a Remedial Investigation Report summarizing the information gathered during the investigation (the "RIR"). Additional borings/monitoring wells may be necessary based upon review of the RIR.

The Department holds the responsible party liable for addressing any on- or off-site contamination associated with this spill case. Under the New York State Environmental Conservation Law (ECL) and/or the New York State Navigation Law (NL), any person who discharges petroleum and fails to promptly clean up such prohibited discharge may be subject to a penalty of up to $37,500 per day per violation.

If you have any questions, please call me at (718) 482-6364.

Sincerely,

Hiralkumar Patel
Environmental Engineer 1

APPENDIX C

OCTOBER 26, 1999 NYCDDC SURVEY

IMPORTANT NOTE

The Boring Logs shown on this sheet are the result of inferences drawn by the Subsurface Exploration Section engineers or essential personnel during boring operations at the site, and from certain evidence, viz: (1) samples of subsurface materials recovered during boring operations; (2) the logs kept by the drill operator and the inspector, which contain, among other things, expression of their opinions as to the nature of subsurface materials encountered during boring operations; and (3) other records concerning the site deemed pertinent by the engineers. The driller's log, the inspector's log, the samples and the records , together with the engineer's reports, are made available for inspection and study by the bidders so that they may draw their own inferences from all of the available evidence.

Bidders are warned that in the subsurface, other than that actually penetrated by the borings, obstructions, both natural and man-made, and which are not indicated on the Boring Logs, may be encountered, and that the Boring Logs make no representations or warranties either as to the presence or absence of such obstructions, or as to their nature and extent. Where possible, borings are located to avoid all obstructions and previous construction which can be found by inspection of the surface, and the bidder is required to estimate the influence of such features from his own inspection of the site.

In addition, bidders are warned that in the subsurface other than that actually penetrated by the borings, soil or rock may vary widely, with regard to elevation, composition, texture, structure, perviousness, soundness, and other characteristics, from the descriptions given on the Boring Logs and all reports.

The "water reading", shows the elevation of water in the boring holes at the times indicated. They may or may not indicate the elevations of perched water or true ground water table during boring operations or subsequently.

EXPLANATION OF TERMS

SOIL SIZES

Description Term	Pass Sieve No.	Retained Sieve No.	Size Range
Clay	200	Atterberg Limits, Hydrometer Analysis	0.005 mm.
Silt	200	200	.005 to .074 mm.
Fine Sand	40 (#60)	200	.074 to .420 mm.
Medium Sand	10	40	.420 to 2.00 mm.
Coarse Sand	4	10	2.00 to 4.76 mm.
Gravel (fine)	—	—	4.76 mm. to 3/4"
Gravel (coarse)	—	—	3/4" to 3"
Cobble	—	—	3" to 8"
Boulder	—	—	8"+

Note: "Special F-Sand (sp) designated in the N.Y. City Building Code.

UNIFIED SYSTEMS

Group Symbols	Typical Names
GW	Well-graded gravels, gravel - sand mixtures, little fines.
GP	Poorly-graded gravels, gravel - sand mixtures, little fines.
GM	Silty gravels, gravel - sand - silt mixtures, more than 12% fines.
GC	Clayey gravels, gravel-sand-clay mixtures, more than 12% fines.
SW	Well-graded sands, gravelly sands, little fines.
SP	Poorly-graded sands, gravelly sands, little fines.
SM	Silty sands, sand - silt mixtures, more than 12% fines.
SC	Clayey sands, sand - clay mixtures, more than 12% fines.
ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity.
CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays.
OL	Organic silts and organic silty clays of low plasticity.
MH	Inorganic silt, micaceous or diatomaceous fine sandy or silty soils, elastic silts.
CH	Inorganic clays of high plasticity. Fat clays.
OH	Organic clays of medium to high plasticity, organic silts.
Pt	Peat and other highly organic soils.

QUANTITATIVE ESTIMATE

Secondary Components	Percentage Range
AND	35 - 50
SOME	20 - 35
LITTLE	10 - 20
TRACE	< 10

GRAIN SIZE ABBREVIATIONS

F = FINE, U = NORMAL, C = COARSE
F + F = FREQUENCY (FRACTION) e.g. F of F

The descriptive size terms in the Boring Logs were arrived at by estimate only, using standard samples for visual comparison.

These tables have been used as an approximate guide, with latitude for interpretation and subjective judgement.

EQUIPMENT

Unless otherwise noted,
Weight of Casing Hammer ____ lbs.
Weight of Sprun Hammer 140 lbs.
Size of Casing ____ Inches
Size of Sample spoon 2 Inches
Size of Core Bit ____
Type of Core Barrel ____

BORING LEGEND

a = Elevation, top of sample.
b = Elevation, bottom of sample.
c = Surface elevation.
d = Primary strata boundary and elevation.
e = Approximate or secondary strata boundary and elevation.
f = Number of blows required to drive casing through one foot of strata with casing hammer falling 5ft.
g = Numerical Classification. Refer to the N.Y. City Building Code, Sect. C 26-1102.4, Table 11-2.

Unless otherwise specified, sample spoon was driven 1.5 feet.
b = Number of Blows required to drive sample spoon for each 6" increment of penetration, with spoon hammer falling 2'0"
s = Sample Number, or -S = Missed sample.
U = Undisturbed sample.
V = Vane Sample.
P = Pushed by weight of hammer.
I = Insufficient recovery of undisturbed sample, sample cut in jar.
= Spoon Blows and or Rock Recovery for this material are below minimum Load Rating. C 26-1105.5.

R = Run number
a = Elevation, at start of core drilling
y = Elevation, at completion of Run.
w = Percentage of rock core recovered.
x = Core bit used if other than that shown.

DATUM NOTE: All Elevations refer to the Borough of BROOKLYN HIGHWAY Datum, which is 2.560 Feet above Mean Sea Level at Sandy Hook as established by the U.S. Coast & Geodetic Survey.

APPENDIX D
PHOTO LOG

COOPER TANK AND WELDING CORPORATION
FIELD INVESTIGATION REPORT
215 MOORE STREET
BROOKLYN, NEW YORK

Photo 1- General investigation area- Northwest corner of Moore Street and White Street adjacent to Cooper Tank and Welding Corp.

Photo 2- Location of SB-SE-8. View facing South on the West side of White Street.

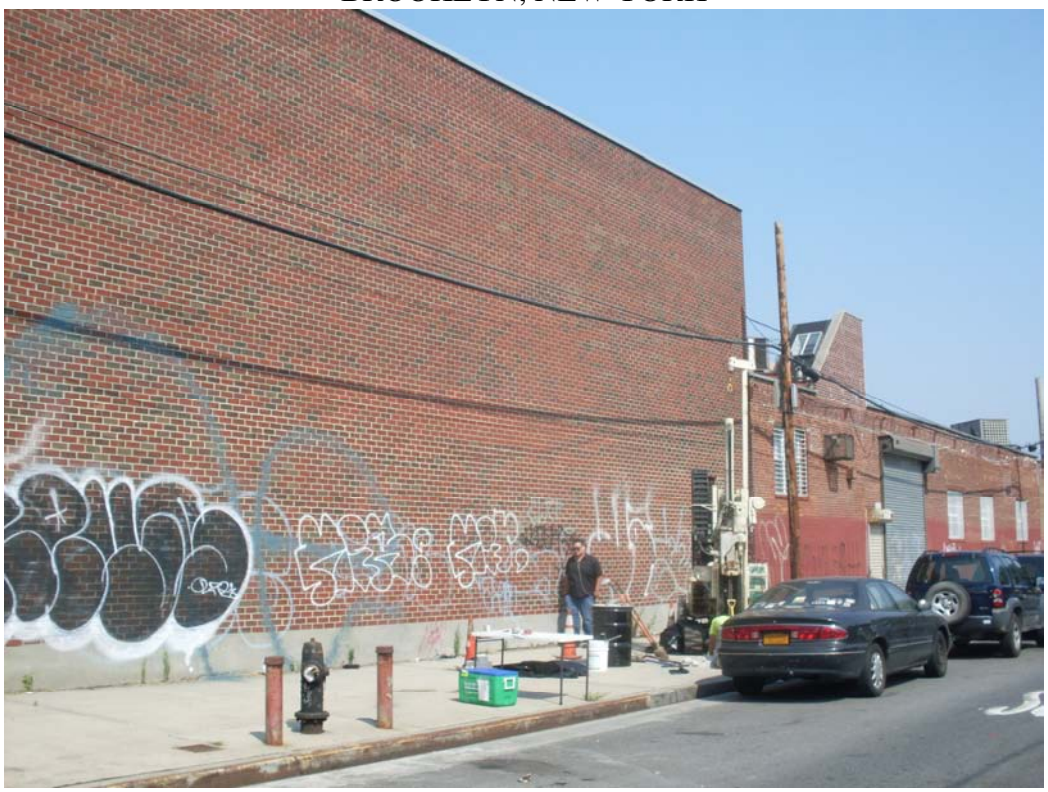

Photo 3- SB-SE-10 was the northernmost boring location on the West side of White Street.

Photo 4- Example of historic urban fill that was consistently documented directly under the sidewalk areas while hand clearing to five feet below ground surface (bgs).

Photo 5- Example of coal ash that was documented in the fill material associated with the sidewalk locations on White Street. Coal ash is a common component of historic urban fill.

Photo 6- Location of SB-SE-7 towards the southeastern corner inside Lot 47.

Photo 7- View of uppermost soil column at SB-SE-7 location. Note the reinforced concrete slab and the fraction of crushed red brick in the uppermost fill material.

Photo 8- Varying degrees of saturation were noted below the groundwater table due to the fractions of clay present in the soil column. Note the stiff clay present in the 15-20' soil core.

COOPER TANK AND WELDING CORPORATION
FIELD INVESTIGATION REPORT
215 MOORE STREET
BROOKLYN, NEW YORK

Photo 9- Hand clearing location of SB-SE-9- the northern-most location inside Lot 47.

Photo 10- Preparing to break ground at location of SB-SE-11- the western-most location inside Lot 47.

Photo 11- Example of equipment used for low flow groundwater sampling.

Photo 12- Drums of investigation derived waste (IDW) stored at the property and awaiting disposal, pending laboratory analytical results.

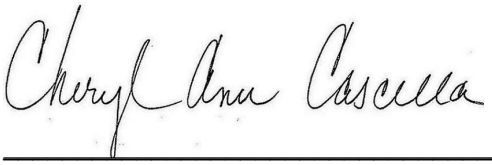
ACCREDITED IN ACCORDANCE WITH nelac

Job Number: 220-16087-1

Job Description: Cooper Tank

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.



Approved for release.
Cheryl Cascella
Project Manager I
8/8/2011 1:57 PM

Designee for
Jackie Trudell

Table of Contents

Table of Contents

Comments
No additional comments.

Receipt
8oz soil jar received without the sample ID listed on the container label. The sample ID was observed on the container lid. Client instructed the lab to proceed with analysis.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
No analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

(Ax)(IS)(DF)
(AIS)(RRF)(V)(% solids) = C

(AX)(IS)(VT)(1000)(DF)
(AIS)(RRF)(VA)(V)(% solids) = C (for medium level soils)

SemiVolatiles

(AX)(IS)(VE)(DF)(GPC factor is 2 if needed)
(AIS)(RRF)(volume injected)(V)(% solids) = C

Pesticides

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

PCBs for compound/retention time

(AX)(VE)(DF)
(RRF of compound at the stated retention time)(V)(% solids)(volume injected) = C

DRO/CTETPH

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils

DATA REPORTING QUALIFIERS

Client: Gannett Fleming Job Number: 220-16087-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	B	The analyte was found in an associated blank, as well as in the sample.
GC/MS Semi VOA		
	U	Analyzed for but not detected.
	J	Indicates an estimated value.
	*	LCS or LCSD exceeds the control limits

Client: Gannett Fleming

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

T - Target compound detected outside RT window.
A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

Integrator: HP RTE Compound Sublist: 8270.sub
Target Version: 4.14
Processing Host: CONMSA

Concentration Formula: Amt * DF * Uf * (1000*Vt)/(Vo*Vi) * CpndVariable

Name	Value	Description
DF	1.000	Dilution Factor
Uf	1.000	ng unit correction factor
Vt	1.000	Volume of final extract (mL)
Vo	1000.000	Volume of sample extracted (mL)
Vi	1.000	InjectionVol
Cpnd Variable		Local Compound Variable

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.8C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	False	SEE NARRATIVE
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Job Narrative
220-16095-1

Comments
No additional comments.

Receipt
The following Trip Blank sample was received with headspace in 3 of 3 vials: Trip Blank (220-16095-4). The expiration date for this Trip Blank is 07/22/11 and may be a contributing factor. The client was contacted on 7/26/11 and the laboratory was instructed to proceed with analysis.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

GC/MS Semi VOA
Method(s) 8270C: Internal standard (ISTD) response for the following sample was outside control limits: SB SE-11S 2.5'-3.5' (220-16095-1). The sample was re-analyzed with concurring results. The original set of data has been reported.

No other analytical or quality issues were noted.

Metals
No analytical or quality issues were noted.

Organic Prep
No analytical or quality issues were noted.

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

(Ax)(IS)(DF)
(AIS)(RRF)(V)(% solids) = C

(AX)(IS)(VT)(1000)(DF)
(AIS)(RRF)(VA)(V)(% solids) = C (for medium level soils)

SemiVolatiles

(AX)(IS)(VE)(DF)(GPC factor is 2 if needed)
(AIS)(RRF)(volume injected)(V)(% solids) = C

Pesticides

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

PCBs for compound/retention time

(AX)(VE)(DF)
(RRF of compound at the stated retention time)(V)(% solids)(volume injected) = C

DRO/CTETPH

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils

QC Flag Legend

A - Target compound detected but, quantitated amount
exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

T - Target compound detected outside RT window.
A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

T - Target compound detected outside RT window.
A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.3C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	False	See Narrative
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Table of Contents

Table of Contents

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

$$\frac{(Ax)(IS)(DF)}{(AIS)(RRF)(V)(\%\ solids)} = C$$

$$\frac{(AX)(IS)(VT)(1000)(DF)}{(AIS)(RRF)(VA)(V)(\%\ solids)} = C \quad \text{(for medium level soils)}$$

SemiVolatiles

$$\frac{(AX)(IS)(VE)(DF)(GPC\ factor\ is\ 2\ if\ needed)}{(AIS)(RRF)(volume\ injected)(V)(\%\ solids)} = C$$

Pesticides

$$\frac{(AX)(VE)(DF)}{(RRF)(V)(\%\ solids)(volume\ injected)} = C$$

PCBs for compound/retention time

$$\frac{(AX)(VE)(DF)}{(RRF\ of\ compound\ at\ the\ stated\ retention\ time)(V)(\%\ solids)(volume\ injected)} = C$$

DRO/CTETPH

$$\frac{(AX)(VE)(DF)}{(RRF)(V)(\%\ solids)(volume\ injected)} = C$$

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils

Als bottle: 3 Calibration Sample, Level: 5
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: all.sub
Target Version: 3.50
Processing Host: hpd1

Concentration Formula: Amt * DF * Uf*1000*Vt/(Ws*(100-M)/100) * CpndVariable

Name	Value	Description
DF	1.00000	Dilution Factor
Uf	1.00000	ng unit correction factor
Vt	1.00000	Volume of final extract (ml)
Ws	15.00000	Weight of sample extracted (g)
M	0.00000	% Moisture

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.3 / 4.6 ° C IR #50
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

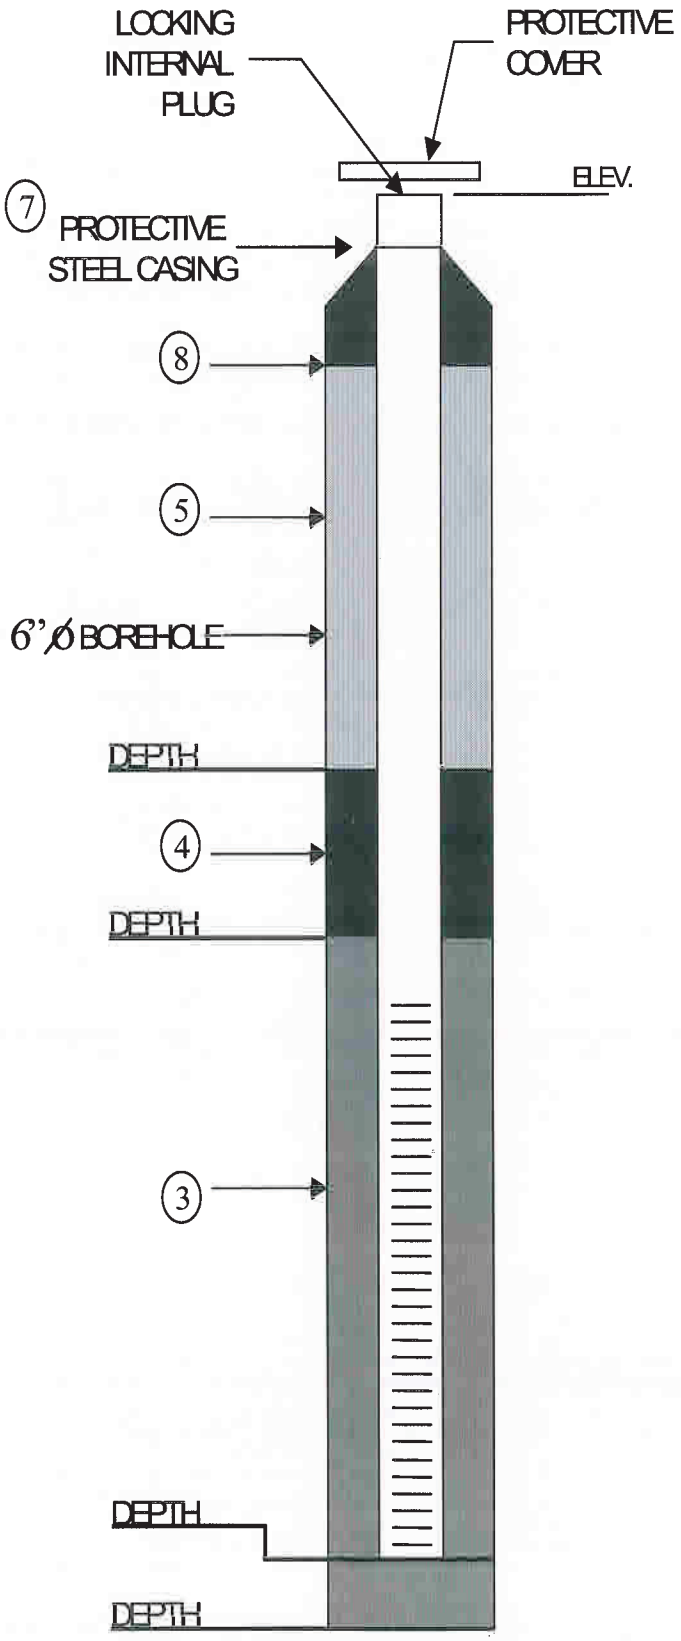
WELL CONSTRUCTION LOG



Gannett Fleming

MONITORING WELL CONSTRUCTION INFORMATION

JOB No. : 053319.006 CLIENT : Cooper Tank

LOCATION : 215 Moore Street, Brooklyn NY 11206

DATE : 07/21/11 WELL No.: MW-SE-7

HYDROGEOLOGIST : Scott Narod

DRILLING CONTRACTOR : Aquifer Drilling and Testing

1). SCREEN TYPE : 2" diameter, 20 slot, schedule 40 PVC

SLOTTED LENGTH : 16'

SLOT SIZE : 0.020"

2). SOLID PIPE TYPE : 2" diameter, Schedule 40

SOLID PIPE LENGTH : 3'

PIPE & SCREEN DIA. : 2"

JOINT TYPE-SLIP / GLUED : ☐ THREADED ☑

3). TYPE OF BACKFILL AROUND SCREEN : Number 2 Morie Sand

4). TYPE OF SEAL (IF INSTALLED) : Bentonite

5). TYPE OF BACKFILL: Cement grout

HOW INSTALLED: Hand

6). TYPE OF SURFACE SEAL (IF INSTALLED): Cement grout

7). PROTECTIVE CASING: YES ☑ NO ☐

LOCKING CAP: YES ☑ NO ☐

8). CONCRETE SEAL: YES ☑ NO ☐

9). DRILLING METHOD: Hollow Stem Auger

10). ADDITIVES USED (IF ANY): none

GROUNDWATER SAMPLING LOGS
AUGUST 2011 GROUNDWATER SAMPLING EVENT

WELL SAMPLING LOG	Gannett Fleming Engineers, P.C. 100 Crossways Park Drive West, Suite 300 Woodbury, NY 11797 (516) 364-4140 (516) 921-1565 Fax

I. General Information:
Client Name: Cooper Tank and Welding Corporation **Project No**.: 053319.006

Project Name: Cooper Tank **Sampled By**: Scott Narod

Well No.: MW-SE-07 **Well Use:** Monitoring

Sample ID: MW-SE-07 **Sample Date**: 08/08/11 **Sample Time**: 15:15

II. Well Information:
PID Reading: N/A **Well Diameter**: 2 inches

Static Depth to Water: 7.56 ft. below m.p. **Measuring Point (m.p.):** PVC Casing

Total Well Depth:19 ft. below m.p.

Δ h: 11.44 feet **Volume of Standing Water:** 1.866 gallons

Volume to be removed: N/A gallons **Actual Volume removed:** 4.75 gallons

III. Sampling Information:
Purging Method:
☒ Peristaltic Pump ☐ Submersible Pump

☐ Bailer ☐ Other _____

Well Drawdown/Recovery: ☒ Good ☐ Poor ☐ Other _____

Pump Flow Rate: 0.168 lpm **Purge Time**:43 min.

Purge Chemistry:

Time	Gallons	pH (Std. Units)	Sp. Cond. (mS/cm)	D. O. (mg/L)	Temp. (°F)	Turbidity (NTU)	DTW	ORP (mV)
---	---	±0.1	±3%	±10%		±10%	---	±10 mv
14:30	N/A	6.58	1.743	0.36	68.86	17.8	---	-96.7
14:35	N/A	6.53	1.731	0.36	66.97	13.1	---	-97.2
14:40	N/A	6.53	1.728	0.34	66.85	17.1	---	-98
14:55	N/A	6.51	1.704	0.48	66.27	43.2	---	-94.5
15:02	4.75	6.51	1.684	0.86	65.98	48.2	7.63	-92.3

Depth to water after purge: 7.63ft. below m.p. **Time**: 15:16

Depth to water prior to sampling: 7.63 ft. below m.p. **Time**: 15:15

Sample Appearance: ☐ Turbid ☐ Slightly Turbid ☒ Clear ☐ Other _____

Sample Odor: ☐ None ☒ Other _____

IV. Sample Analyses:
Sample Parameters: VOCs and SVOCs

Laboratory: Chemtech **Date Shipped**: Courier on 08/08/11
