Monthly Progress Report No. 12
4001 4th Avenue Redevelopment Site
4001 4th Avenue, Brooklyn, NY
Brownfield Cleanup Program Site #: **C224412**
Reporting Period: June 1, 2026 – June 30, 2026

1. Introduction

In accordance with the reporting requirements of the October 2024 Brownfield Site Cleanup Agreement (BCA) for the 4001 4th Avenue Redevelopment Site, located at 4001 4th Avenue in Brooklyn, New York (Site), H & A of New York Engineering & Geology, LLP (Haley & Aldrich of New York), has prepared this monthly progress report, on behalf of 4 Ave Property LLC (the Volunteer), to summarize the work performed at the Site from June 1, 2026, through June 30, 2026.

The Site, identified as Block 714, Lot 6 on the New York City tax map, is a 10,017 square foot (sq ft) lot located in the Sunset Park neighborhood of Brooklyn, New York. The Site is currently a vacant partially asphalt and concrete-paved lot and was most recently developed as a retail petroleum station with a one-story convenience store and associated parking lot. The Site is bounded by 40th Street followed by mixed-use commercial and residential buildings to the north, a commercial car wash and auto repair shop to the south, residential apartment buildings to the east, and 4th Avenue followed by Intermediate School (I.S.) 136 to the west. The Site location is shown on Figure 1.

We understand that the Volunteer plans to redevelop the Site as a school with a cellar level, which is consistent with the current zoning. The current zoning designation is residential with a commercial overlay (R7-A/C2-4).

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Eastern cleaned and removed two 550-gallon steel tanks from the site.
- Haley & Aldrich of New York collected fifteen documentation samples from the base of the UST excavations at approximately 10 feet below sidewalk grade.
- Contractor continued support-of-excavation (SOE) work.

Samples Collected:

- The following tank documentation samples were collected: UST-01_10, UST-02_10, UST-03_10, UST-04_10, UST-07_10, UST-08_10, UST-11_10, UST-14_10, UST-15_10, UST-16_10, UST-17_10, UST-19_10, UST-20_10, UST-21_10, and UST-22_10.
- The soil samples were relinquished to Pace Analytical Services of Westborough, MA (a NYSDOH ELAP-certified laboratory) under standard chain of custody procedures.

CAMP Activities:

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 9:45 am to 4:15 pm.
- No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period. Elevated dust particulate was measured at 11:04 AM and 3:49 PM due to the contractor using the excavator to break down concrete in close proximity to the downwind station. Work was paused and water was applied to the work area. Dust particulate levels returned under the threshold for action within 15 minutes. No visible dust or odors were observed leaving the site perimeter.

Activities Planned for Coming Week:

- Contractor will continue tank removal activities.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.
- Contractor will continue SOE work.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Eastern cleaned and removed four 550-gallon steel tanks from the site.
- Contractor staged and loaded 53 tri-axle trucks with non-hazardous soil/fill from Grid WCA for off-site transport and disposal at Bayshore Soil Management, LLC, located in Keasbey, New Jersey.
- Contractor loaded 2 tri-axle trucks with concrete and debris (C&D) for off-Site transportation and disposal.
- Contractor imported one (1) load of approved ASTM #3 Stone from Mount Hope Quarry in Rockaway, New Jersey.
- The New York City Fire Department (FDNY) and National Grid personnel were on-site for inspections.

Waste Disposal/Backfill Import Tracking

Material Export (Soil):

- Fifty-three (53) loads of non-hazardous soil/fill material were transported off-site to Bayshore Soil Management LLC, located in Keasbey, NJ.
- Soil disposal is summarized below:

Disposal Facility	*Bayshore Soil Management, LLC Keasbey, NJ (Non-Haz Soil)*		*P Park NJ, LLC Prospect Park, NJ (Non-Haz Soil)*		*Salem County Improvement Authority Landfill Alloway Township, NJ (Non-Haz Soil)*		*Totals:*

* Note, 1 truck estimated at 20 cubic yards. Final tonnages will be presented in the Construction Completion Report (CCR).

Material Export (C&D):

- Two (2) loads of concrete & debris (C&D) were exported for off-Site transportation and disposal to Morrisville Materials located in Morrisville, PA.
- C&D Disposal is summarized below:

Total:	2 Loads	40 CY	1 Load	20 CY	3 Loads	60 CY

*Note, 1 truckload estimated at 20 cubic yards. Final tonnages will be presented in the FER.

Samples Collected:

- None.

CAMP Activities:

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 10:45 am to 4:45 pm. Air monitoring was performed at the upwind location during ground-intrusive activities from 7:15 am to 10:45 am. Due to battery issues at the downwind and sensitive receptor locations, air monitoring was unable to be conducted between 7:15 am and 10:45 am. Visual and olfactory monitoring was conducted by field personnel within the vicinity of both stations until air monitoring resumed at the downwind and sensitive receptor locations.
- No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period. Elevated dust particulate was measured at 2:06 PM due to trucks entering and exiting the Site in close proximity to the downwind station. Work was paused and water was applied to the work area. Intermittent elevated VOCs were measured between 1:00 PM and 4:56 PM due to trucking activities releasing exhaust in close proximity to the downwind station. When exceedances were observed, work was paused and the trucks were directed away from the downwind station. VOC levels returned under the threshold for action within 15 minutes. No visible dust or odors were observed leaving the site perimeter.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Contractor staged and loaded 53 tri-axle trucks with non-hazardous soil/fill from Grid WCA for off-site transport and disposal at Bayshore Soil Management, LLC, located in Keasbey, New Jersey.
- New York State Department of Environmental Conservation (NYSDEC)'s Jennifer Gonzalez conducted a site visit and met with Haley & Aldrich of New York personnel.

Waste Disposal/Backfill Import Tracking

Material Export (Soil):

- Fifty-three (53) loads of non-hazardous soil/fill material were transported off-site to Bayshore Soil Management LLC, located in Keasbey, NJ.
- Soil disposal is summarized below:

Disposal Facility	*Bayshore Soil Management, LLC Keasbey, NJ (Non-Haz Soil)*		*P Park NJ, LLC Prospect Park, NJ (Non-Haz Soil)*		*Salem County Improvement Authority Landfill Alloway Township, NJ (Non-Haz Soil)*		*Totals:*

Total:	2 Loads	40 CY	1 Load	20 CY	3 Loads	60 CY

*Note, 1 truckload estimated at 20 cubic yards. Final tonnages will be presented in the FER.

Samples Collected:

- None.

CAMP Activities:

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 am to 5:45 pm.
- No 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period. Elevated dust particulate was measured at 3:21 PM due to machinery generating dust in close proximity to the downwind station. Elevated VOCs were measured at 1:08 PM, 3:17 PM, and 4:05 PM due to machinery exhaust in close proximity to the downwind station. When exceedances were observed, work was paused and machinery was moved away from the downwind station. VOC levels returned under the threshold for action within 15 minutes. No visible dust or odors were observed leaving the site perimeter.

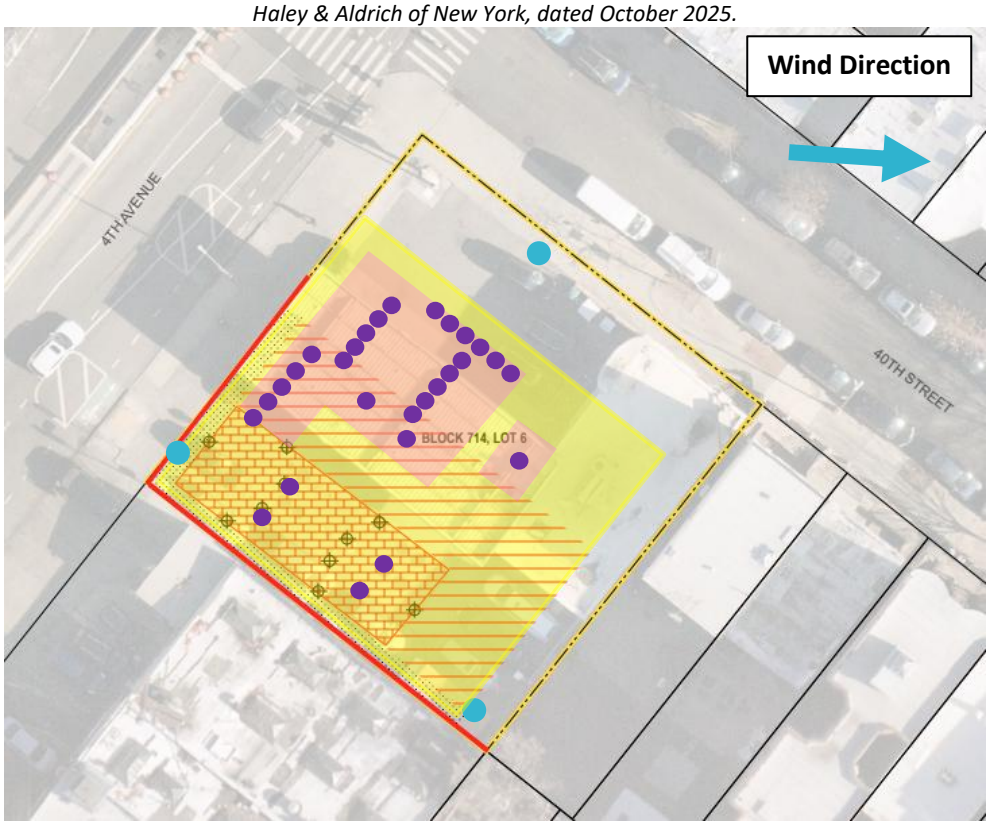

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Contractor staged and loaded 12 tri-axle trucks with non-hazardous soil/fill from Grid WCA for off-site transport and disposal at Salem County Improvement Authority Landfill, located in Alloway Township, NJ.
- A total of 2 Mendez Trucking LLC trucks were rejected for loading at the Site due to inadequate cover (i.e. mesh, non-opaque, or damaged cover material).
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the day. Trucks were also foamed during loading and prior to exiting the Site.
- Application of water suppressant for dust particulates applied as needed
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly

Waste Disposal/Backfill Import Tracking

Material Export (Soil):

- Twelve (12) loads of non-hazardous soil/fill material were transported off-site to Salem County Improvement Authority Landfill, located in Alloway Township, NJ.
- Soil disposal is summarized below:

Samples Collected:

- None.

CAMP Activities:

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:15 am to 7:15 pm.
- Elevated VOCs were measured at 11:30 AM to 12:00 PM at the upwind station. When exceedances were observed, work (which included excavation and stockpiling) was stopped and foam was applied to the excavation until VOCs came back within the threshold. No visible dust or odors were observed leaving the site perimeter. Work was resumed at 12:15 PM with additional foaming measures conducted throughout the remainder of the day.
- Elevated dust particulate matter was measured from 9:30 to 9:45 AM at the sensitive receptor station. When exceedances were observed, work (which included shaving secants) was stopped and water was applied. Work was resumed at 10:00 AM with additional water suppressant measures conducted throughout the remainder of the day.

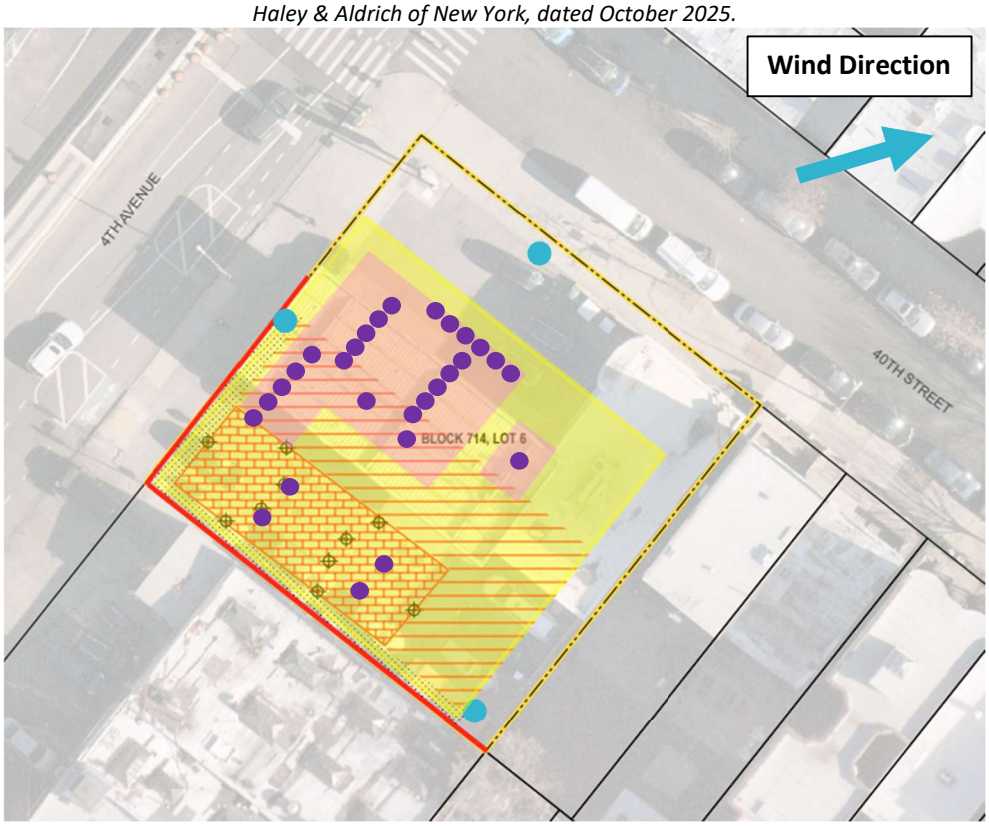

- No other 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Sporadic elevated dust particulate was measured at 9:45 AM, 12:21 PM, 2:38 PM, 2:44 PM, 2:50 PM and 3:24 PM at the upwind station due to machinery generating dust in close proximity to the station. No PM10 exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day and while loading trucks and the loaded material prior to trucks exiting the Site.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. A slight petroleum-like odor was observed in front of 409 40 St at 11:00 AM. Trucking activities were stopped and a second layer odor suppressant foam was applied to the soil within the excavation and the truck while loading. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.
- Additional import of approved stone for trucking pad refresh.
- Daily tailgate meetings to reinforce odor and dust suppression requirements.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly
- Con Edison installed temporary power at the site.

Samples Collected:

- None.

CAMP Activities:

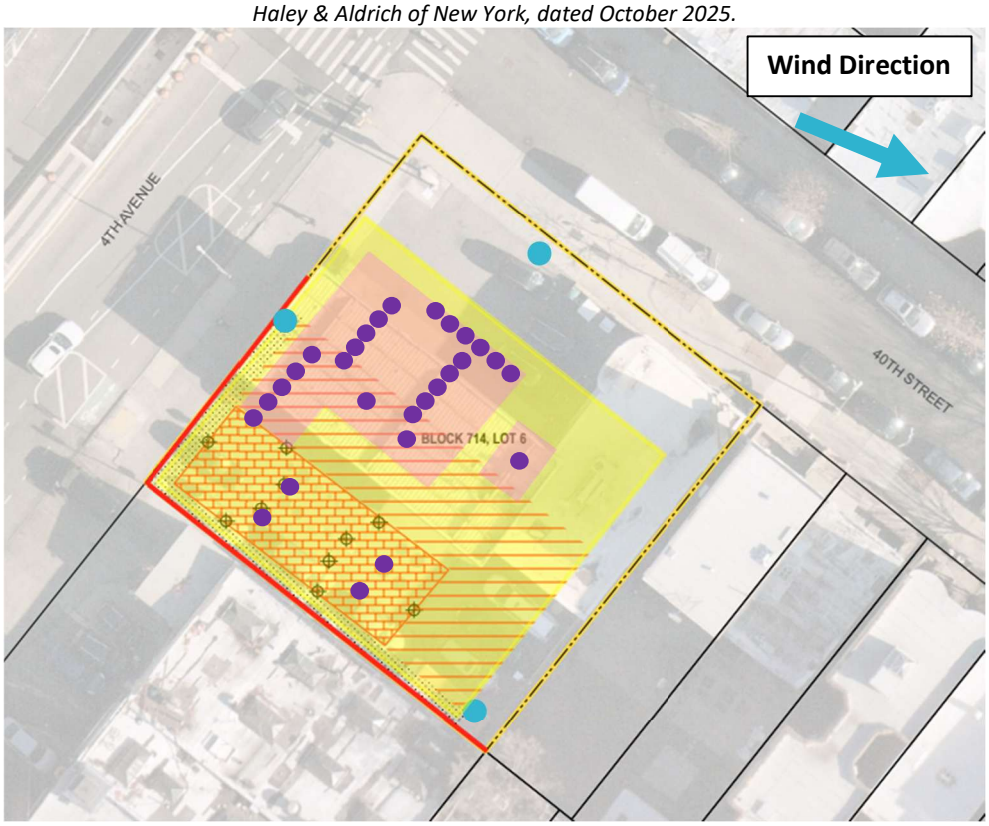

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 1:45 PM.
- Elevated dust particulate matter was measured from 7:15 AM to 7:30 AM at the sensitive receptor and south stations and from 11:00 AM to 11:15 AM at the north, south, and sensitive receptor stations. When exceedances were observed, work (which included shaving secants) was stopped and water was applied. Work resumed at 7:45 AM and 11:30 AM respectively, with additional water suppressant measures conducted throughout the remainder of the day.
- North CAMP station experienced a lapse in connection with cloud reporting software and did not record data from 12:00 PM to 12:15 PM. During this time visual and olfactory observations in tandem with roving PID were used. No visible dust or odors were observed leaving the site perimeter. North CAMP station reconnected to reporting software at 12:15 AM and did not have further lapses in reporting.
- No other 15-minute average concentrations of volatile organic compounds (VOCs) or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- To be determined pending approval of Corrective Action Memorandum prepared by Haley & Aldrich of New York, submitted to NYSDEC on June 12, 2026.

Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly
- Contractor imported one (1) load of approved ASTM #3 Stone from Mount Hope Quarry in Rockaway, New Jersey.
- New York State Department of Environmental Conservation (NYSDEC)'s Aaron Fisher conducted a site visit and met with Haley & Aldrich of New York personnel.

CAMP Activities:

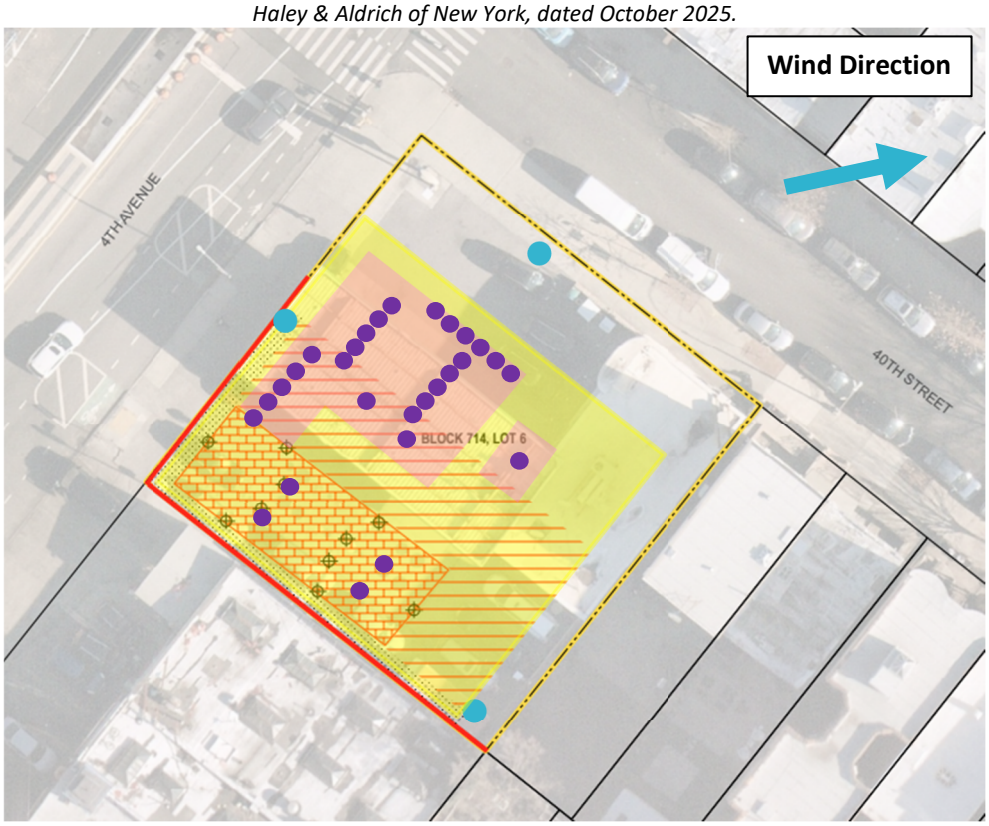

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 5:30 PM.
- Elevated dust particulate matter was measured from 1:19 PM to 1:36 PM at the sensitive receptor station. When exceedances were observed, work (which included shaving secants) was stopped and water was applied. Work remained halted to confirm levels were below the threshold and the station was re-zeroed. Work resumed at 1:53 PM, with the use of hand chippers and additional water suppressant measures conducted throughout the remainder
- of the day. NYSDEC and NYSDOH were notified via email in real time and additional sustained exceedances of dust particulate were not observed.
- No 15-minute average concentrations of volatile organic compounds (VOCs) the action levels for a sustained 15-minute period.
- No other 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.
- During the 7:00 AM perimeter walk with a PID field personnel observed dust generation from a construction crew conducting road work at 4th Avenue and 37th Street. Dust did not migrate to the Site.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

CAMP Activities:

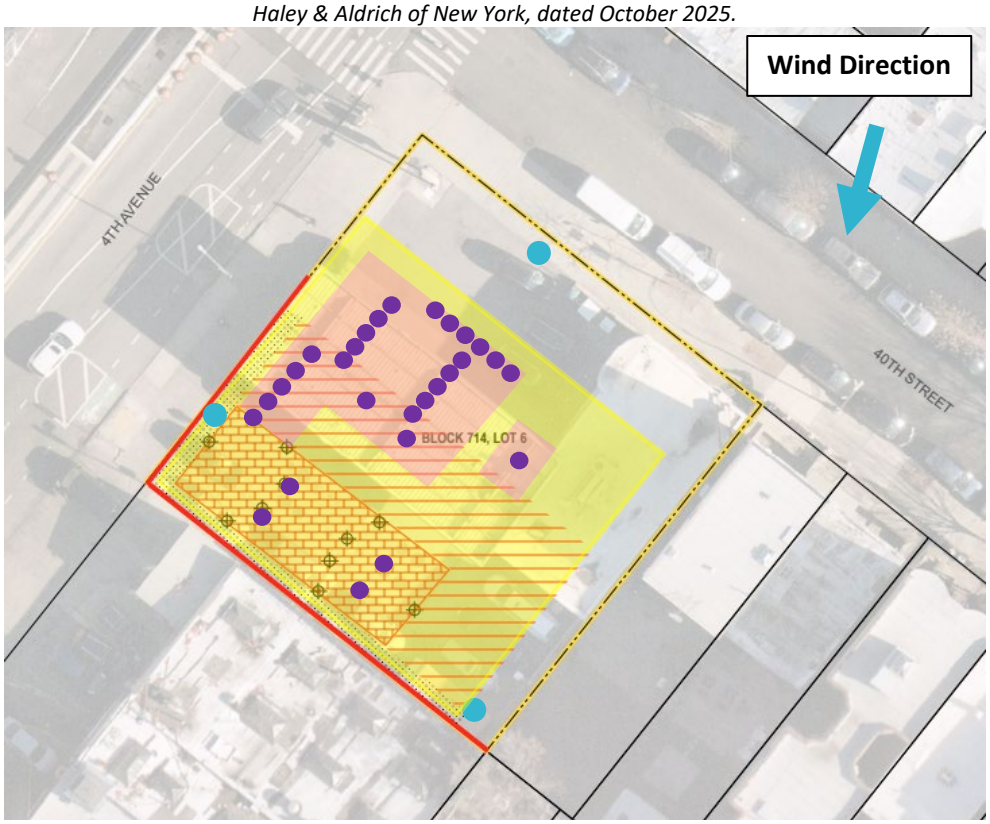

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:15 AM to 6:45 PM.
- The sensitive receptor station was offline from 11:45 AM to 2:15 PM due to equipment servicing. Work activities were stopped until the unit could be put back online. Crew took their lunch and used this time to do housekeeping activities and apply odor suppressant across the excavation.
- No 15-minute average concentrations of volatile organic compounds (VOCs) exceeded the action levels for a sustained 15-minute period.
- No 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly
- Of note, drilling work appeared to have been being performed at the southern adjacent car wash property. Water and sheen were observed in the street originating from the south-adjacent property during the neighborhood walks.

Samples Collected:

- None.

CAMP Activities:

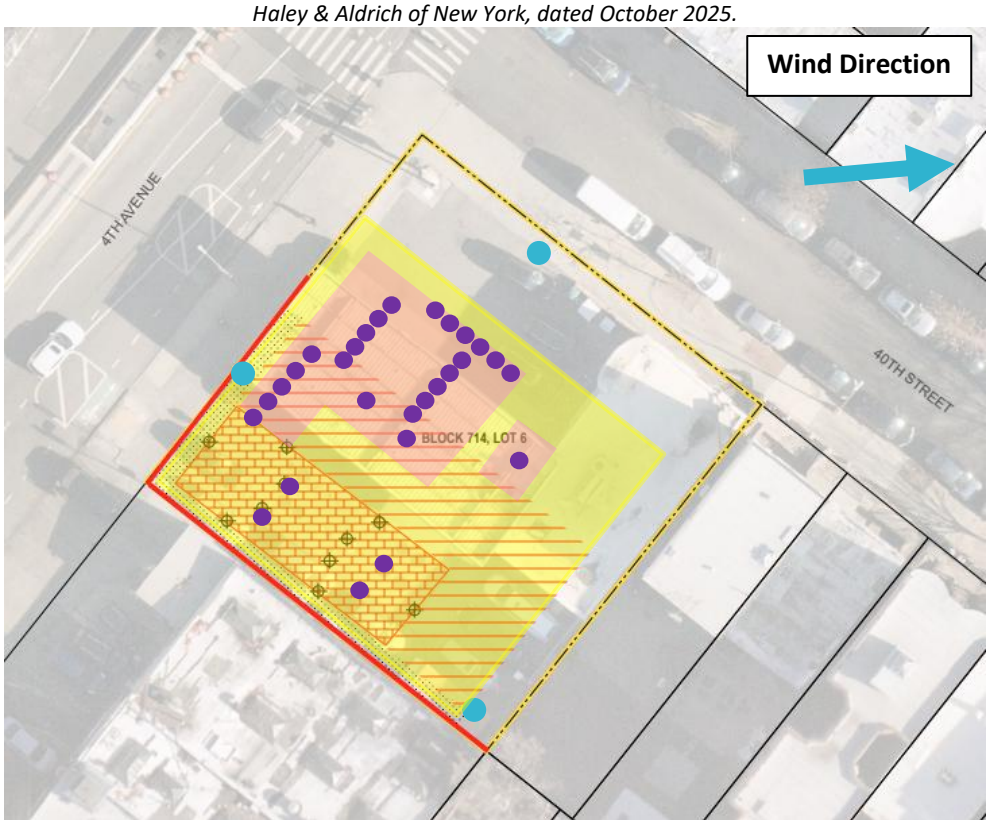

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 6:45 PM.
- Due to high winds and drilling work being performed at the adjoining property to the south, a period of elevated dust particulate matter was measured at the Sensitive Receptor Station between 12:15 PM to 12:30 PM. The elevated readings were not sustained for 15 minutes, however work (which included welding) was stopped and additional dust suppression was applied prior to resuming work at 12:38 PM. In addition, there were isolated elevated dust particulate matter readings also observed at 3:40 PM, 3:57 PM, 4:19 PM, 4:30 PM, 4:51 PM and 5:15 PM at the Sensitive Receptor Station due to high gusts of wind. Elevated readings were instantaneous and reduced within a few minutes in each case.
- No 15-minute average concentrations of VOCs or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed.
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly.

CAMP Activities:

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 3:30 PM.
- Elevated dust particulate matter was measured at the Sensitive Receptor Station from 7:17 AM to 7:21 AM and at 7:24 AM, 7:27 AM, 7:31, and 7:34 AM due to sediment buildup in the particulate intake over the weekend. Elevated readings were instantaneous and reduced within a few minutes in each case.
- Elevated dust particulate matter was measured at the South Station from 10:44 AM to 10:55 AM, 3:07 PM to 3:13 PM, and 3:24 PM to 3:31 PM due to precipitation. The elevated readings were not sustained for 15 minutes. Additionally, isolated elevated dust particulate matter was measured at the South Station at 9:55 AM, 9:56 AM, from 10:34 AM to 10:36 AM, at 12:13 PM, 12:14 PM, from 12:29 PM to 12:31 PM, and from 3:35 PM to 3:37 PM due to precipitation. Elevated readings were instantaneous and reduced within a few minutes in each case.
- No 15-minute average concentrations of VOCs or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. Water and sheen originating from the south-adjacent property were observed in the street during multiple perimeter walks. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

CAMP Activities:

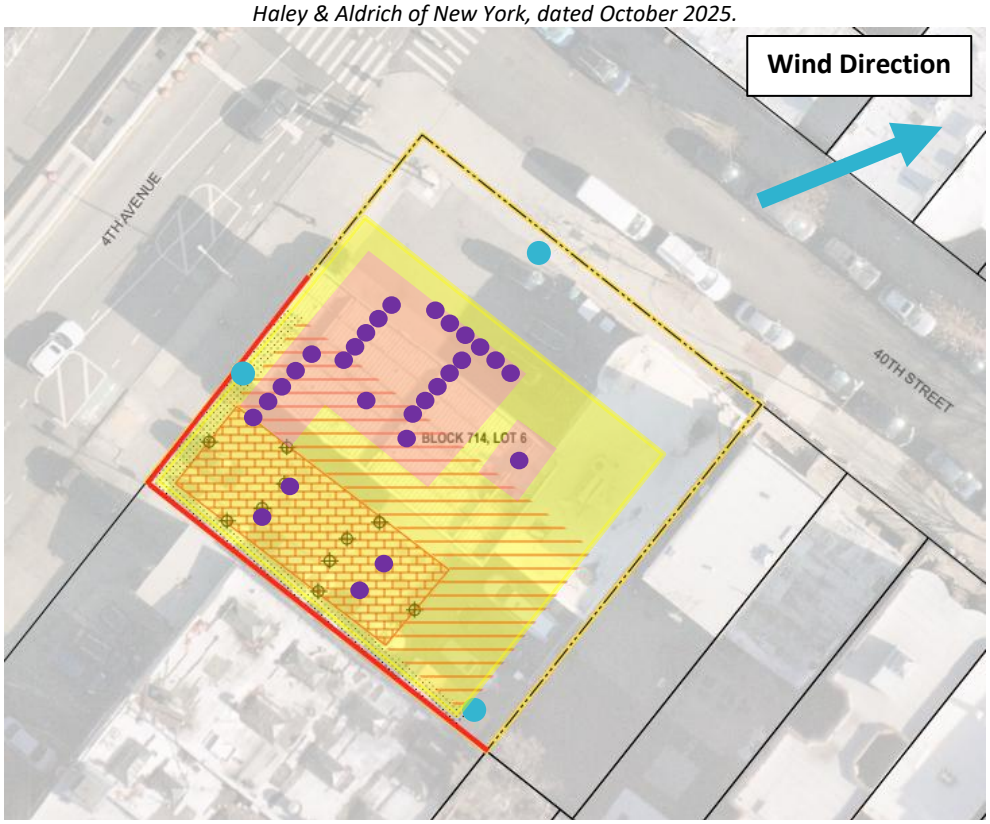

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 4:00 PM.
- Elevated dust particulate matter was measured at the sensitive receptor station at 7:00 AM and 7:01 AM due to residual dampness accumulated in the particulate intake during yesterday's rain event. After the initial spike, concentrations returned to background levels. Additionally, isolated elevated dust particulate matter was measured at the sensitive receptor station at 7:37 AM, 7:42 AM, 8:15 AM, and 12:30 PM due to precipitation. Elevated readings were instantaneous and reduced within a few minutes in each case.
- No 15-minute average concentrations of VOCs or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed.
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly.

CAMP Activities:

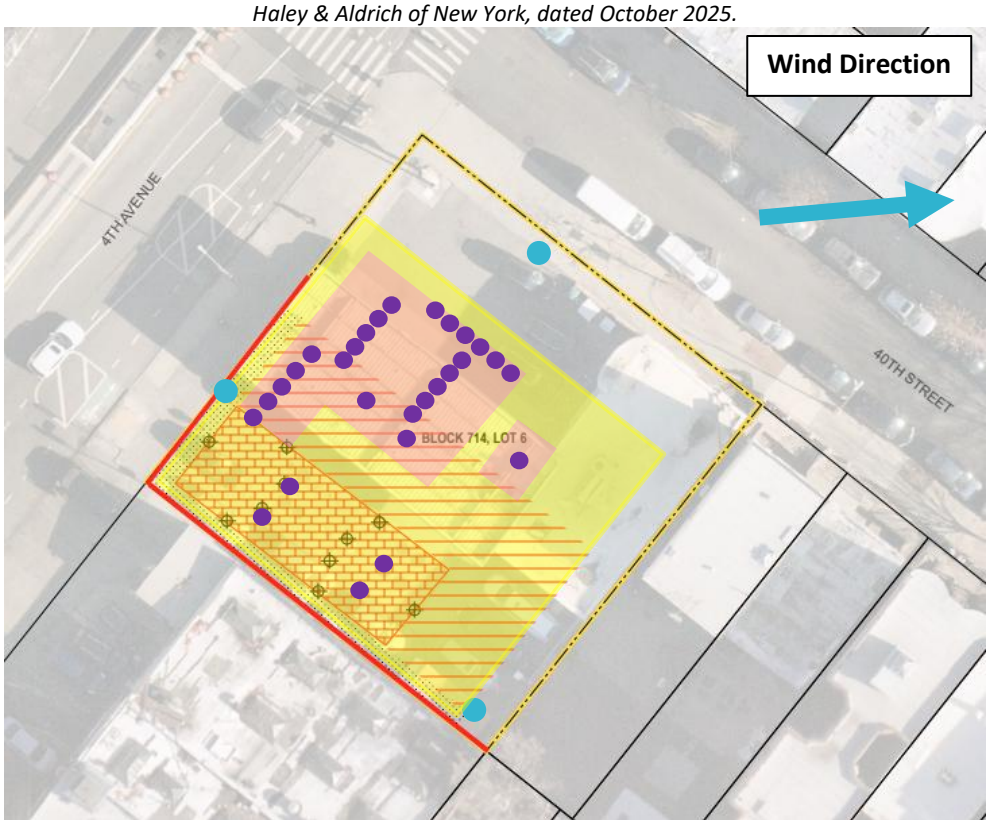

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 4:00 PM.
- The north station was offline from 1:11 PM to 2:00 PM due to equipment calibration. Visual and olfactory monitoring were conducted downwind until the north station was put back online.
- The south station was offline from 2:02 PM to 2:47 PM due to equipment calibration. Visual and olfactory monitoring were conducted downwind until the south station was put back online.
- The sensitive receptor station was offline from 12:01 PM to 1:09 PM due to equipment calibration. Work activities were stopped until the sensitive receptor unit could be put back online and the crew used this time to do housekeeping activities and apply odor suppressant across the excavation. Additionally, the sensitive receptor station was offline from 9:49 AM to 10:00 AM and from 11:00 AM to 11:07 AM while the station was moved away from the immediate vicinity of active site work. Work was stopped until the unit was put back online.
- Isolated elevated dust particulate matter was measured at the north station at 7:28 AM and 7:29 AM due to overnight sediment buildup in the particulate intake. After the initial spike, concentrations returned to background levels.
- Isolated elevated dust particulate matter was measured at the sensitive receptor station at 10:43 AM due to a gust of wind. Additional water was applied to the trucking pad.
- No 15-minute average concentrations of VOCs or particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed.
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly.

CAMP Activities:

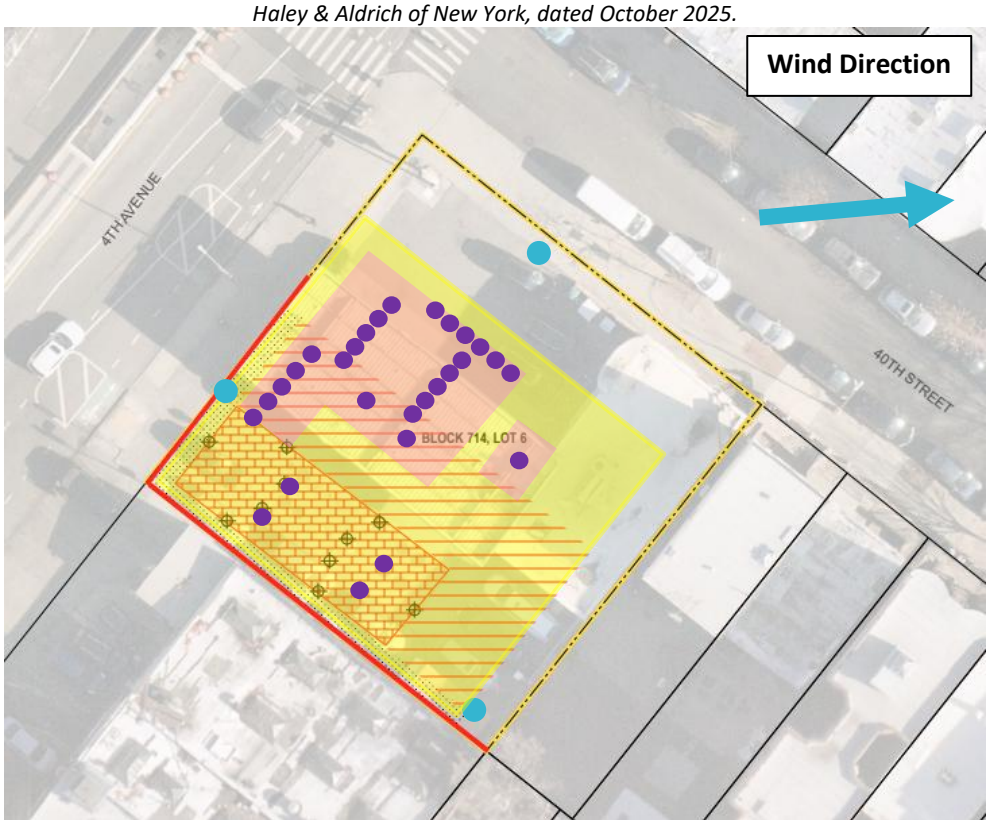

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 7:00 PM.
- Elevated dust particulate matter was measured from 10:38 AM to 10:53 AM at the south station. When exceedances were observed, work (which included welding, housekeeping, and staging SOE supplies) was stopped and water was applied. Work remained halted to confirm levels were below the threshold. Work resumed at 11:00 AM. NYSDEC and NYSDOH were notified via email in real time and additional sustained exceedances of dust particulate were not observed. Additionally, isolated elevated dust particulate matter was measured at the south station at 9:04 AM, from 9:15 AM to 9:21 AM, 9:23 AM to 9:28 AM, 12:48 PM to 12:56 PM, 12:58 PM to 12:59 PM, 2:09 PM to 2:11 PM, 2:13 PM to 2:14 PM, 2:16 PM to 2:18 PM, 3:41 PM to 3:43 PM, 3:45 PM to 3:46 PM, 5:51 PM to 5:54 PM, and from 6:01 PM to 6:08 PM. When exceedances were observed, work (which included welding and housekeeping activities) was stopped and additional dust suppression was applied. Elevated readings were instantaneous and reduced within a few minutes in each case.
- Elevated dust particulate matter was measured at the north station from 7:31 AM to 7:35 AM due to overnight sediment buildup in the particulate intake. After the initial spike, concentrations returned to background levels.
- Isolated elevated dust particulate matter was measured at the sensitive receptor station at 6:51 AM, 7:09 AM, 7:14 AM, 7:15 AM, 7:32 AM, 8:27 AM, 8:38 AM, 8:39 AM, 8:52 AM, 11:13 AM, 3:07 PM, 4:53 PM, and 5:21 PM due to the contractor welding near the sensitive receptor station and high gusts of wind. Elevated readings were instantaneous and reduced within a few minutes in each case.
- No 15-minute average concentrations of VOCs exceeded the action levels for a sustained 15-minute period.
- No other 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

CAMP Activities:

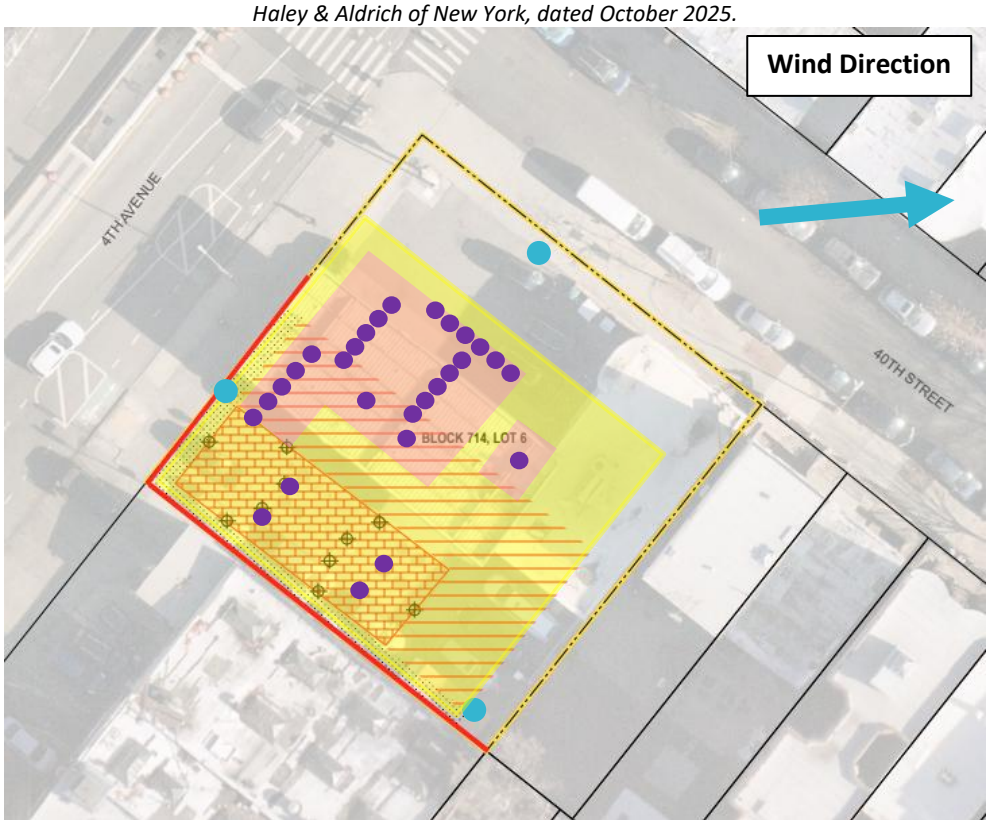

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 6:00 PM.
- Elevated dust particulate matter was measured at the north station from 12:33 PM to 12:42 PM and from 2:23 PM to 2:28 PM. The elevated readings were not sustained for 15 minutes, however work (which included welding) was stopped and additional dust suppression was applied prior to resuming work.
- Isolated elevated dust particulate matter was measured at the sensitive receptor station at 8:25 AM, 8:47 AM, 9:01 AM, 9:02 AM, 9:27 AM, 9:28 AM, 9:55 AM, 12:25 PM, 12:26 PM, from 12:32 PM to 12:35 PM, at 2:39 PM, 2:48 PM, 2:49 PM, 3:09 PM, 3:10 PM, 3:21 PM, and 3:42 PM. When exceedances were observed, work (which included welding and housekeeping activities) was stopped and additional dust suppression was applied. Elevated readings were instantaneous and reduced within a few minutes in each case.
- Elevated dust particulate matter was measured at the south station from 7:27 AM to 7:29 AM due to overnight sediment buildup in the particulate intake. After the initial spike, concentrations returned to background levels. Additionally, isolated elevated dust particulate matter was measured from 3:32 PM to 3:35 PM due to welding activities. Additional dust suppression was applied. Elevated readings were instantaneous and reduced within a few minutes.
- No 15-minute average concentrations of VOCs exceeded the action levels for a sustained 15-minute period.
- No 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed.
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly.

CAMP Activities:

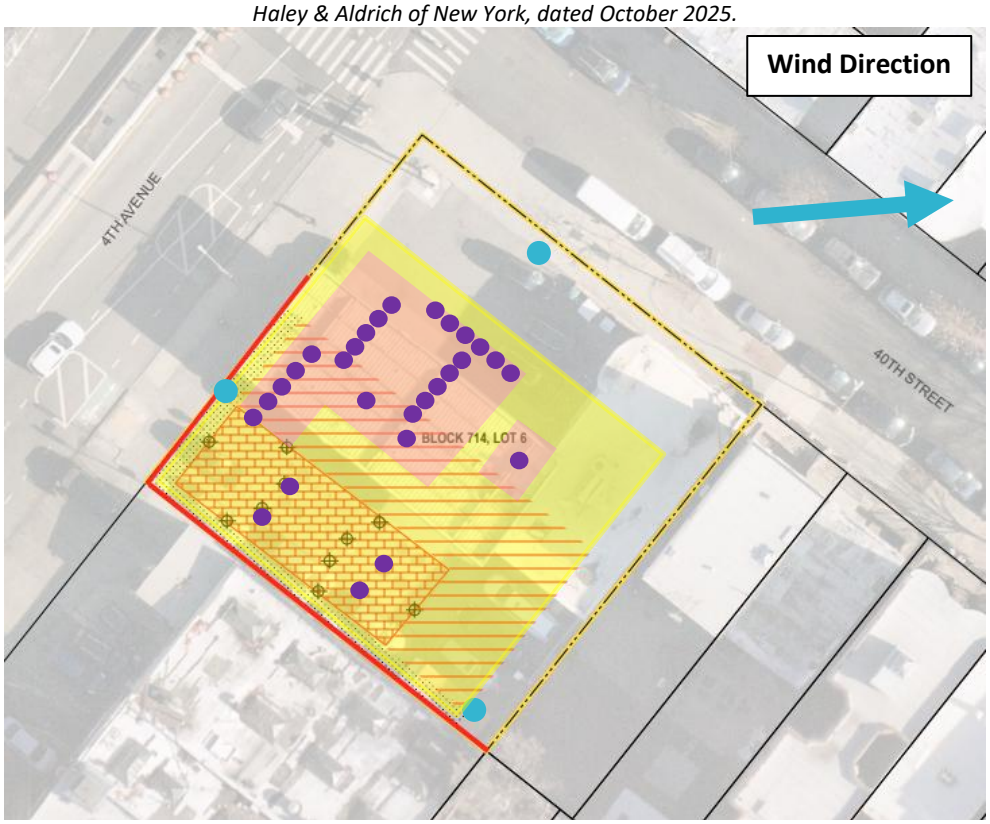

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 9:00 AM to 4:30 PM.
- Elevated dust particulate matter was measured from 9:07 AM to 9:23 AM at the north station. When exceedances were observed, work (which included welding and housekeeping) was stopped and water was applied. Work remained halted to confirm levels were below the threshold. Work resumed at 9:30 AM. NYSDEC and NYSDOH were notified via email and additional sustained exceedances of dust particulate were not observed. Additionally, elevated dust particulate matter was measured at the north station from 9:36 PM to 9:42 PM. The elevated readings were not sustained for 15 minutes, however work (which included welding) was stopped and additional dust suppression was applied prior to resuming work.
- Isolated elevated dust particulate matter was measured at the sensitive receptor station at 9:09 AM, 9:30 AM, from 9:38 AM to 9:41 AM, at 9:50 AM, 10:29 AM, 11:22 AM, 11:27 AM, 11:28 AM, 11:50 AM, from 11:52 AM to 11:57 AM, at 11:58 AM, and at 4:13 PM. When exceedances were observed, work (which included welding and housekeeping activities) was stopped and additional dust suppression was applied. Elevated readings were instantaneous and reduced within a few minutes in each case.
- Isolated elevated dust particulate matter was measured at the south station at 12:43 PM, 12:44 PM, 12:46 PM, 12:47 PM, and from 2:18 PM to 2:24 PM. When exceedances were observed, work (which included welding and housekeeping activities) was stopped and additional dust suppression was applied. Elevated readings were instantaneous and reduced within a few minutes in each case.
- No 15-minute average concentrations of VOCs exceeded the action levels for a sustained 15-minute period.
- No other 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work and began preparing for trucking activities.
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the work day.
- Application of water suppressant for dust particulates applied as needed.
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly.

CAMP Activities:

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 7:30 PM.
- Elevated VOCs were measured at the south station from 3:31 PM to 3:48 PM, 6:16 PM to 6:31 PM, and from 6:51 PM to 7:12 PM. NYSDEC and NYSDOH were notified via email in real time. When exceedances were observed, work (which included excavation) was stopped and foam was applied to the excavation until VOCs came back within the threshold. No visible dust or odors were observed leaving the site perimeter. Work was resumed after VOCs returned below the threshold, with additional foaming measures conducted throughout the remainder of the day. Work was stopped for the day at 7:30 PM.
- Additionally, elevated VOCs were measured at the south station from 4:44 PM to 4:49 PM, 4:55 PM to 5:03 PM, 5:40 PM to 5:47 PM, 5:53 PM to 6:01 PM, 6:04 PM to 6:11 PM, 6:42 PM to 6:49 PM, and from 7:17 PM to 7:23 PM. The elevated readings were not sustained for 15 minutes. Isolated elevated VOCs were measured at the south station from 4:25 PM to 4:26 PM, 4:36 PM to 4:38 PM, 5:22 PM to 5:25 PM, 5:33 PM, and 7:26 PM to 7:29 PM. These isolated readings were instantaneous and reduced within a few minutes in each case. When exceedances were observed, work (which included excavation) was stopped and foam was applied to the excavation until VOCs came back within the threshold.
- Isolated elevated VOCs were measured at the sensitive receptor station from 3:33 PM to 3:36 PM, from 4:25 PM to 4:26 PM, at 6:14 PM, from 6:16 PM to 6:17 PM, from 6:25 PM to 6:26 PM, from 6:46 PM to 6:47 PM, and from 6:57 PM to 7:00 PM. The elevated readings were not sustained for 15 minutes. When exceedances were observed, work (which included excavation) was stopped and additional odor suppression was applied prior to resuming work.
- Isolated elevated VOCs were measured at the north station at 6:25 PM, 6:26 PM, and 6:46 PM. When exceedances were observed, work (which included excavation) was stopped and additional odor suppression was applied prior to resuming work. Elevated readings were instantaneous and reduced within a few minutes in each case.
- Elevated dust particulate matter was measured at the north station at 8:21 AM, 8:22 AM, and from 8:29 AM to 8:36 AM due to the contractor conducting housekeeping work (which included sweeping) within the vicinity of the north station. The elevated readings were not sustained for 15 minutes. When exceedances were observed, work was stopped and additional dust suppression was applied prior to resuming work at 8:45 AM.
- The north station was offline between 8:00 AM and 8:18 AM during the installation of a temporary power source near the north station. Site work during this period included the contractor visually inspecting steel beams. During this time, visual and olfactory observations in tandem with roving PID were used. No visible dust or odors were observed leaving the site perimeter.

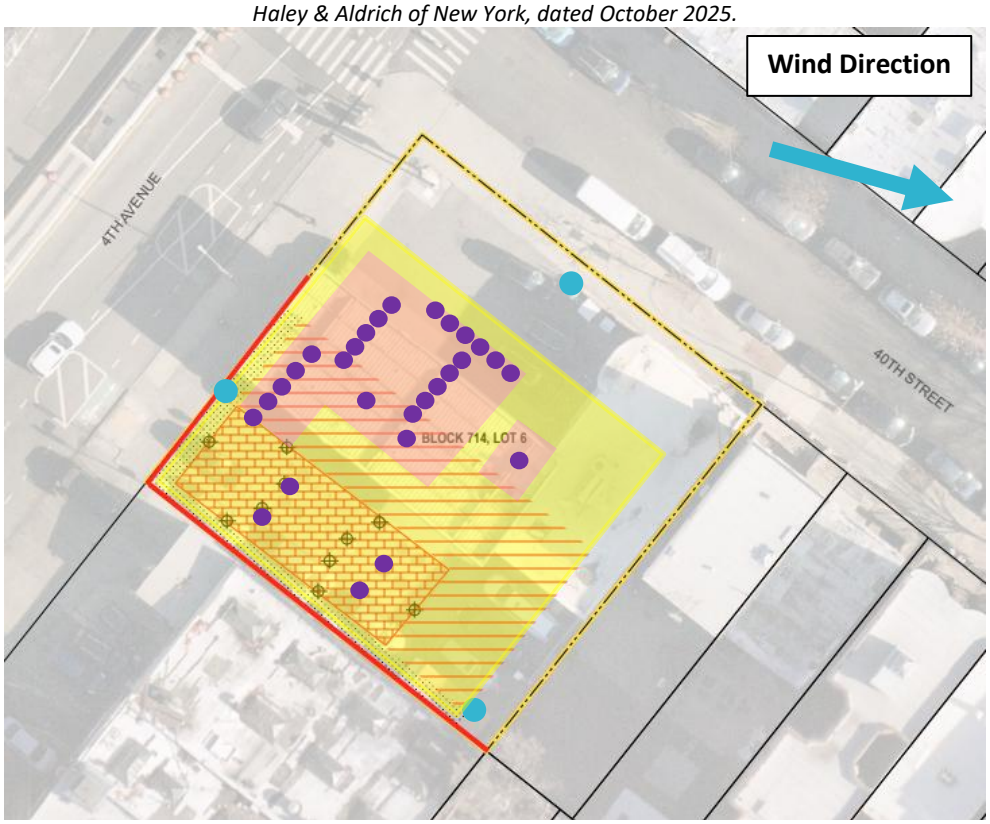

- No other 15-minute average concentrations of VOCs exceeded the action levels for a sustained 15-minute period.
- No other 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) was present to document the implementation of the November 2025 NYSDEC-approved Interim Remedial Measure Work Plan 2 – Underground Storage Tank Removal and Soil Excavation (IRMWP 2) prepared by Haley & Aldrich of New York for the 4001 4th Avenue Redevelopment Site, BCP Site No. C224412, located at 4001-4011 4th Avenue, Brooklyn, NY. Site Observations are summarized below.

Daily Observations:

- Haley & Aldrich of New York field personnel performed community air monitoring during implementation of the activities in the approved Interim Remedial Measure Work Plan 2.
- Contractor continued support-of-excavation (SOE) work and began preparing for trucking activities.
- Contractor staged and loaded 8 tri-axle trucks with non-hazardous soil/fill from Grid WCA for off-site transport and disposal at Salem County Improvement Authority Landfill, located in Alloway Township, NJ.
- A total of 1 Magnolia Trucking LLC trucks was rejected for loading at the Site due to inadequate cover (i.e. mesh, non-opaque, or damaged cover material).
- Application of odor suppressant foam in the excavation area at the beginning of the day, continually throughout the day and at the end of the day. Trucks were also foamed during loading and prior to exiting the Site.
- Application of water suppressant for dust particulates applied as needed.
- Applied Blanket 510 Wintergreen spray around perimeter of Site hourly.

Waste Disposal/Backfill Import Tracking

Material Export (Soil):

- Eight (8) loads of non-hazardous soil/fill material were transported off-site to Salem County Improvement Authority Landfill, located in Alloway Township, NJ.

Samples Collected:

- None.

CAMP Activities:

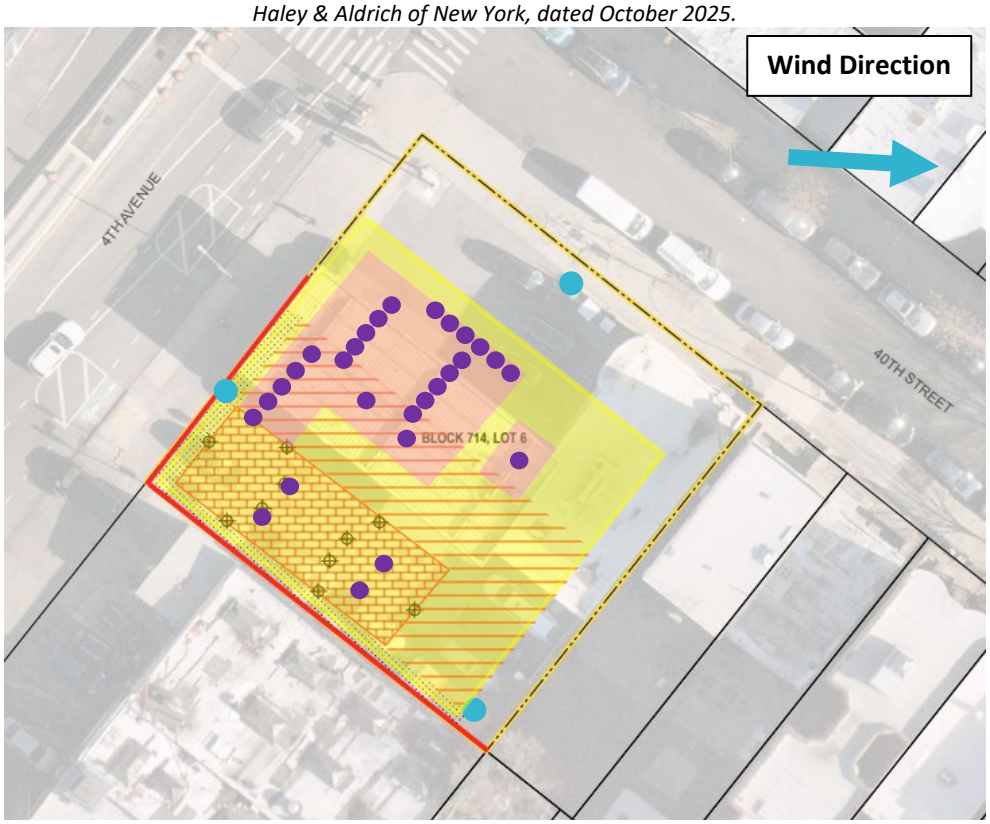

- Air monitoring was performed at one upwind, one downwind, and one sensitive receptor location during ground-intrusive activities from 7:00 AM to 5:15 PM.
- Elevated VOCs were measured at the sensitive receptor station from 7:25 AM to 7:26 AM, 8:54 AM to 9:00 AM, 9:52 AM to 955 AM, and 10:46 AM to 10:50 AM. The elevated readings were not sustained for 15 minutes. When exceedances were observed, work (which included excavation) was stopped and foam was applied to the excavation until VOCs came back within the threshold.
- Isolated elevated VOCs were measured at the south station from 4:57 PM to 4:58 PM. These isolated readings were instantaneous and reduced within two minutes.
- No other 15-minute average concentrations of VOCs exceeded the action levels for a sustained 15-minute period.
- No 15-minute average concentrations of particulate matter smaller than 10 microns in diameter (PM10) exceeded the action levels for a sustained 15-minute period.
- Foam was continually sprayed in the excavation area throughout the day.
- Field personnel walked the neighboring perimeter of the Site with a photoionization detector (PID) hourly throughout the day. No PID readings above 0.0 ppm were recorded offsite during the perimeter walks and data is attached to this DFR.

Activities Planned for Coming Week:

- Contractor will continue SOE work.
- Contractor will continue transportation and disposal of soil/fill to approved facilities.
