Certification

I, Suzanne M. Bell, certify that I am currently a New York State (NYS)-registered Professional Engineer as defined in 6NYCRR Part 375 and that this Interim Remedial Measures Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

I certify that all information and statements in this certification are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law.

November 4, 2025

1. Introduction

1.1 OVERVIEW

On behalf of 4 Ave Property LLC (the Volunteer), H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) has prepared this Interim Remedial Measures (IRM) Work Plan (IRMWP) for the 4001 4th Avenue Redevelopment Site (New York State Department of Environmental Conservation [NYSDEC] Site No. C224412), located at 4001-4011 4th Avenue, Brooklyn, New York (Site, **Figure 1**). 4 Ave Property LLC applied to and was accepted into the NYSDEC Brownfield Cleanup Program (BCP), and a Brownfield Cleanup Agreement (BCA) was executed by the NYSDEC on October 30, 2024, with 4 Ave Property LLC. This IRMWP was prepared in accordance with applicable NYSDEC regulations and guidance, including Division of Environmental Remediation (DER)-10, which is entitled "Technical Guidance for Site Investigation and Remediation" and dated May 2010 (DER-10).

The Site, identified as Block 714, Lot 6 on the New York City Tax Map, is approximately 0.23 acres (10,018 square feet [sq ft]) and is located in the Sunset Park neighborhood of Brooklyn, New York. The Site is currently vacant and was most recently improved with a one-story structure formerly utilized as a convenience store, located in the eastern portion of the Site; an overhead canopy from the former gasoline filling station operations in the central portion of the Site; four 4,000-gallon (gal) underground storage tanks (USTs), containing gasoline/ethanol or diesel and associated fill ports, located to the southwest of the overhead canopy; and paved parking areas. The previous Site features have been demolished. The Site is bounded by 40th Street, followed by mixed-use commercial and residential buildings to the north; a commercial car wash and auto repair shop to the south, identified as the Sunset Car Care Site and site code 224244 in the State Superfund Program; residential apartment buildings to the east; and 4th Avenue, followed by the New York City Public Intermediate School (I.S.) 136 to the west. The Site location is shown on **Figure 1**.

The NYSDEC and New York State Department of Health (NYSDOH) have not yet made a significant threat determination for this Site with regard to human health and the environment.

1.2 PURPOSE

Storage and disposal of petroleum products have occurred at the Site as part of historical operations as a gasoline filling station and auto service station since at least the 1920s. The Site is registered in the NYSDEC Petroleum Bulk Storage (PBS) database with three 4,000-gal active USTs containing gasoline/ethanol, one active 4,000-gal UST containing diesel, and one closed 280-gal waste oil UST. The USTs are all listed as being installed in the mid- to late 1980s. Based on a geophysical survey and subsurface investigation field observations, an additional five USTs on the western portion of the Site appear to be abandoned-in-place. The remaining 4,000-gal USTs were to be closed-in-place under a separate IRMWP, pending site logistics, approved by NYSDEC on February 11, 2025.

Currently, one active spill case, assigned Spill No. 1811146, is associated with the Site. This spill was reported to the NYSDEC in 2019 after Castleton Environment Geologic Services DPC's (Castleton's) Phase II Environmental Site Assessment (ESA) identified several petroleum-related volatile organic compounds (VOCs) in soil above NYSDEC New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs), Restricted Residential Soil Cleanup Objectives (RRSCOs), and/or Commercial Use Soil Cleanup Objectives (CUSCOs). Subsequent environmental

investigations have identified petroleum-related VOCs in soil above regulatory standards up to approximately 25 feet (ft) below ground surface (bgs).

Previous investigations conducted at the Site indicated elevated concentrations of VOCs, specifically petroleum-related VOCs, in soil and soil vapor. To date, activities completed for the Remedial Investigation (RI), completed between April 14, 2025 and July 31, 2025, include installation and sample collection from approximately 75 percent of the proposed soil borings, installation and sample collection from approximately 25 percent of the proposed groundwater monitoring wells, and 100 percent installation and sample collection of the soil vapor samples. Soil concentrations of petroleum-related VOCs, including benzene, toluene, ethylbenzene, and total xylenes (BTEX), methyl tert butyl ether (MTBE), naphthalene, n-propylbenzene, 1,3,5-trimethylbenzene, and 1,2,4-trimethylbenzene, exceed the NYSDEC NYCRR Part 375 RRSCOs. Groundwater samples were collected from two wells as part of the RI to date, which also identified elevated petroleum-related VOCs 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, ethylbenzene, MTBE, total xylenes, n-propylbenzene, and toluene above Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS).

Additionally, elevated total VOCs were identified in all soil vapor samples collected as part of the RI. Preliminary soil and soil vapor analytical results were provided to the NYSDEC Project Manager for review in the Proposed Interim Remedial Measures and Remedy Rationale Technical Memorandum prepared by Haley & Aldrich of New York, dated August 4, 2025. Groundwater results were received after submitting the technical memorandum. Available analytical results are presented in **Tables 2 through 4** and summarized in **Figures 2 through 4**. Final soil, groundwater, and soil vapor analytical results will be provided in the forthcoming Remedial Investigation Report (RIR) to be submitted after RI activities are completed.

The objectives of the IRM are to remove the four USTs and associated petroleum-impacted material (i.e., visually impacted soils, elevated photoionization detector [PID] responses). Upon removal of all accessible petroleum-impacted material, confirmation (endpoint) soil samples will be collected from the excavation to confirm that the remaining soil meets the Soil Cleanup Levels (SCLs) for Gasoline Contaminated Soils as per NYSDEC Commissioner Policy (CP)-51 Soil Cleanup Guidance. If the analytical data for soil samples collected exceed the SCLs, additional soil samples will be collected to delineate these impacts, and over-excavation may be performed to ensure that all impacted material has been removed from the Site. If over-excavation occurs, any impacted soil will be removed to the extent practical, or until the bedrock surface is encountered. Due to the location of the USTs in the southwest corner of the Site, support-of-excavation (SOE) will be installed along the western and southern boundaries abutting 4th Avenue and adjacent property building to the south.

The remaining portions of the Site and aspects of the overall Site remedy not included in this IRMWP, including additional excavation of in remainder of the Site, an in-situ groundwater remedial component (such as in-situ chemical injections), and treatment and/or containment of residual source material impacts (such as groundwater cutoff walls, soil vapor extraction [SVE], or sub-slab depressurization systems [SSDS]). These will be addressed under a forthcoming Remedial Action Work Plan (RAWP) to be submitted to NYSDEC and NYSDOH for review and approval prior to implementation of the RAWP activities.

2. Background

2.1 SITE LOCATION AND DESCRIPTION

The Site, identified as Block 714, Lot 6 on the New York City Tax Map, is approximately 0.23 acres and is located in the Sunset Park neighborhood of Brooklyn, New York. The Site is currently vacant and was most recently used as a gasoline filling station. The Project Locus is shown on **Figure 1**.

The Site is in a residential R7A zoning district with a commercial C2-4 overlay. Properties immediately surrounding the Site are zoned as the following: R7A residential with C2-4 commercial overlays for the north- and south-adjacent properties; R1-2 residential for the east-adjacent property; and C8-2 commercial/OP special purpose district (Ocean Parkway) for the west-adjacent property, across Coney Island Avenue. The Site is located within an urban area characterized by low-/mid-rising commercial and multi-family residential buildings. The proposed development is a school, which is consistent with current zoning.

2.2 CURRENT LAND USE

The Site is currently vacant and was most recently improved with a one-story structure formerly utilized as a convenience store, located in the eastern portion of the Site; an overhead canopy from the former gasoline filling station operations in the central portion of the Site; four 4,000-gal USTs, containing gasoline/ethanol or diesel and associated fill ports, located to the southwest of the overhead canopy; and paved parking areas. The previous Site features have been demolished, and the former retail petroleum station operations ceased in December 2024.

2.3 SITE HISTORY

Based on the findings of the March 2024 Phase I ESA prepared by Lesova Environmental Group (LEG), the Site was comprised of one tax lot developed with a one-story concrete structure and a gasoline filling/auto service station with one UST circa 1926 and a second lot which was vacant. The 1942 Sanborn map depicted the Site merged as one lot with previous use similar to the 1926 map, with a garage to the south of the lot. The Site was operated as an automotive service station, including lubrication and minor repair services, with office use and a parking area until at least August 1965. The configuration of the Site changed and was identified with a cement brick one-story structure with a gasoline filling station circa 1970. A historical City Directory search indicated that the Site was operated as a gasoline filling station circa 1928, as an auto service station circa 1940 to 2000, and as a gasoline filling station again circa 2010 to 2024.

2.4 PROPOSED REDEVELOPMENT PLAN

Redevelopment design is still in preliminary stages; however, the Site is proposed to be redeveloped as a school with a partial cellar extending to approximately 25 ft bgs.

2.5 SURROUNDING LAND USE

The Site is located within an urban area of the Sunset Park neighborhood of Brooklyn, New York, characterized by low-rise commercial buildings, multi-story mixed-use commercial and residential buildings, and one- and two-family homes. The Site is bounded by 40th Street, followed by mixed-use

commercial and residential buildings to the north; a commercial car wash and auto repair shop to the south, identified as the Sunset Car Care Site and site code 224244 in the State Superfund Program; residential apartment buildings to the east; and 4th Avenue, followed by the New York City Public I.S. 136 to the west. The Metropolitan Transportation Authority (MTA) underground "N, R" train line runs underneath 4th Avenue to the west of the Site.

Sensitive receptors within a 500-ft radius of the Site include New York City Public I.S. 136, located west of the Site beyond 4th Avenue; Family Day Care Graciela's Little Angels, located approximately 250 ft to the south of the Site; and Sunset Park Group Family Daycare, located approximately 475 ft to the west of the Site. A proposed notification to I.S. 136 is included as **Appendix I.**

Properties immediately surrounding the Site are zoned as the following: R7A residential with C2-4 commercial overlays for the north- and southwest-adjacent properties; R6B residential for the east, south, and southeast-adjacent properties; and R6B/R7A residential with a C2-4 commercial overlay for the northwest-adjacent property, across 4th Avenue.

2.6 PREVIOUS ENVIRONMENTAL REPORTS

To date, the following previous investigations and reports have been prepared for the Site:

- January 25, 2019, Phase II ESA, prepared by Castleton;
- June 17, 2020, Supplemental Remedial Investigation Report (SRIR), prepared by Berninger Environmental (Berninger);
- October 8, 2021, Supplemental Investigation Soil and Groundwater Report (SISGR), prepared by Berninger;
- February 27, 2024, Monitoring Report, prepared by Berninger;
- March 12, 2024, Phase I ESA, prepared by LEG; and
- April 3, 2024, Phase II Work Plan, prepared by RSK Environmental Group, LLC (RSK).

Investigation findings are included in **Appendix A**. A summary of the environmental findings of these investigations is provided below.

January 2019 Phase II ESA Prepared by Castleton

A Phase II ESA report dated January 25, 2019, prepared by Castleton, was available for review. Castleton conducted the Phase II ESA to evaluate the findings of a Phase I ESA dated January 7, 2019, prepared by Merritt Environmental Consulting Corp. (unavailable for review), with the goal of evaluating the impact of historical and current use of the Site as a gasoline filling station on subsurface conditions. The scope of work included a geophysical investigation using ground-penetrating radar (GPR) to search for subsurface anomalies indicative of USTs and to clear underground utilities and conduct soil sampling to characterize the Site soil and evaluate impacts pertaining to gasoline filling station operations.

The GPR survey indicated there were a total of nine suspected former USTs at the Site; four of which were located beneath the canopy between the dispensers and five were noted in the western portion of the Site. Currently, there are four 4,000-gal active USTs, which consist of three gasoline USTs and one

diesel UST on the Site registered under PBS ID No. 2-349399 with a registration expiration date of September 8, 2028.

Six soil borings were advanced in the potential areas of USTs identified during the GPR survey. Petroleum-related VOCs exceeding the RRSCOs were identified in three of six soil samples, all located in the southwestern portion of the Site. Elevated VOCs included:

- 1,2,4-trimethylbenzene (maximum concentration 1,200 milligrams per kilogram [mg/kg]);
- 1,3,5-trimethylbenzene (maximum concentration 860 mg/kg);
- benzene (maximum concentration 20 mg/kg);
- ethyl benzene (maximum concentration 1,100 mg/kg);
- n-propylbenzene (maximum concentration 170 mg/kg);
- toluene (maximum concentration 1,500 mg/kg); and
- total xylenes (maximum concentration 2,300 mg/kg).

Based on these findings, a spill was reported on February 5, 2019, and Spill No. 1811146 was assigned to the Site.

June 2020 SRIR Prepared by Berninger

An SRIR, dated June 25, 2020, and prepared by Berninger, was available for review. Berninger performed supplemental investigation work in April 2020 to vertically delineate the contamination discovered at previous sample locations advanced by Castleton and to attempt to locate the groundwater interface. In addition, Berninger installed test pits in the suspected UST areas to confirm the results of the 2019 GPR survey.

Berninger installed five test pits in the areas of the suspected USTs (B-1, B-2, B-3, B-6, and B-7), two soil borings at former locations from Phase II ESA (B-4, at former location SB-06, and B-5, between former locations SB-04 and SB-05), and one downgradient soil boring (B-8). While advancing the borings in the suspected UST area, consistent refusal was encountered at 2.5 ft at all the test pit locations, potentially indicating the tanks were abandoned-in-place.

Boring B-4 was installed to 30 ft bgs until refusal was encountered. PID readings from 15 to 25 ft bgs averaged approximately 4,500 parts per million (ppm) and decreased at 30 ft bgs to 190 ppm. A soil sample was collected at 27.5 to 30 ft bgs and analyzed for VOCs. BTEX were identified above the UUSCOs, but not exceeding the RRSCOs. B-5 was installed to 32.5 ft bgs until refusal was encountered. A soil sample was collected at 30 to 32.5 ft bgs and analyzed for VOCs; VOCs were not detected above the UUSCOs.

Boring B-8 was installed downgradient of B-4 and B-5 to 34 ft bgs until refusal was encountered. PID readings from 10 to 20 ft bgs ranged from 1,500 to 2,500 ppm and decreased to 25 ppm at 34 ft bgs.

Groundwater was not encountered during this investigation, and Berninger assumed the groundwater interface to be approximately 50 ft bgs or more.

Berninger concluded that the results of the supplemental investigation indicated the need for remedial actions in soils, specifically in the 10- to 25-ft bgs interval.

October 2021 SISGR Prepared by Berninger

An SISGR, prepared by Berninger and dated October 2021, was available for review. The supplemental investigation aimed to analyze groundwater conditions in the area of highest soil contamination levels at boring location B-4, in the western portion of the Site, as reported in the June 2020 SRIR. On June 10, 2021, a monitoring well (MW-1) was installed near B-4 to 50 ft bgs using an air-rotary drill rig. MW-1 was constructed with a 2-inch-diameter polyvinyl chloride (PVC) riser and screened from 25 to 50 ft bgs with a 0.02-inch slotted screen. Saturated soil from the borehole was reportedly observed from 30 to 40 ft bgs, but was dry from 40 to 65 ft bgs.

MW-1 was developed after installation and sampled for the analysis of VOCs. Multiple VOCs were detected above the TOGS 1.1.1 AWQS, including:

- 1,2,4,5-trimethylbenzene (39 micrograms per liter [µg/L]);
- 1,2,4-trimethylbenzene (790 µg/L);
- 1,2, dibromoethane (7 µg/L);
- 1,2-dichloroethane (2 µg/L);
- 1,2-dichloropropane (3 µg/L);
- 1,3,5-trimethylbenzene (240 µg/L);
- acetone (110 µg/L);
- benzene (12,000 µg/L);
- chloroform (34 µg/L);
- ethylbenzene (1,100 µg/L);
- isopropylbenzene (58 µg/L);
- m,p-xylene (4,100 µg/L);
- methyl tert-butyl ether (170 µg/L);
- methylene chloride (11 µg/L);
- n-propylbenzene (120 µg/L);
- naphthalene (160 µg/L);
- o-xylene (12,000 µg/L);
- sec-butylbenzene (11 µg/L);
- toluene (21,000 µg/L); and
- trans-1,3-dichloropropene (1 µg/L).

At this location, soil was logged to 65 ft bgs. Berninger reported that soil mainly consisted of semi-tight, brown, silty sand, with a perched water layer observed at approximately 30 ft bgs, followed by clayey soils at 30 to 35 ft bgs, silty sands from 35 to 50 ft bgs, and silty loam at 50 to 65 ft bgs. The highest PID

readings were reported from 30 to 32.5 ft bgs, reaching 1,000 ppm, and steadily decreasing until reaching 0.0 ppm from 50 to 65 ft bgs. A soil sample was collected from 45 to 50 ft bgs and analyzed for VOCs. Analytical results did not indicate VOCs detected above the UUSCOs.

February 2024 Monitoring Report Prepared by Berninger

A spill monitoring report prepared by Berninger dated February 27, 2024, was available for review. Berninger performed monthly monitoring activities of MW-1 between December 2023 and February 2024 associated with Spill No. 1811146. This consisted of measuring depth to groundwater and monitoring the presence of free-phase product. As part of the scope of work, Berninger bailed product as necessary and checked the Site for any spills from the pump island, tanks, or drains.

Product was recovered via vacuum-enhanced fluid recovery (VEFR) using a pump truck in December 2023 and using bailers in January and February 2024. Berninger reported a recharge rate of 1 to 1.5 gal per 30 minutes, but noted that the recharge rates varied between events, which impacted the volume of product/water mixture recovered each month.

For the three months included in this monitoring report (December 2023 through February 2024), Berninger reported the following measurements:

Date	Depth To Water (ft bgs)	Depth To Product (ft bgs)	Product Thickness (ft)	VEFR Total Volume Purged (gallons)
December 28, 2023	21.37	20.87	0.5	23
January 15, 2024	24.10	22.80	1.3	15
February 27, 2024	33.4	21.08	12	5

March 2024 Phase I ESA Prepared by LEG

A Phase I ESA report dated March 12, 2024, was prepared by LEG in accordance with ASTM International (ASTM) E1527-13 and E1527-21 Standards and was available for review. This Phase I ESA was completed to identify and evaluate the presence of Recognized Environmental Conditions (RECs), Historically Recognized Environmental Conditions (HRECs), Controlled Recognized Environmental Conditions (CRECs), Business Environmental Risks (BERs), and *de minimis* conditions associated with the Site.

According to Sanborn maps reviewed during the Phase I ESA, the Site was developed with a one-story concrete structure and a gasoline filling/auto service station with one gasoline tank circa 1926, and the configuration of the Site had changed and was identified with a cement-brick one-story structure with a gasoline filling station circa 1970. A historical City Directory search indicated that circa 1928, the Site was used as a gasoline filling station, circa 1940 to 2000 as an auto service station, and circa 2010 to 2024 again as a gasoline filling station. LEG identified four 4,000-gal active USTs on the lot consistent with PBS records (PBS No. 2-349399). During the Phase I ESA reconnaissance, the Site was operating as an active BP gasoline filling station with a convenience store. LEG identified the following RECs, BERs, and *de minimis* conditions for the Site:

RECs

- Information obtained from multiple historical sources revealed that the Site and multiple adjacent/surrounding properties were historically utilized as gasoline filling stations, auto repair

centers, or car washes. Previous environmental subsurface investigations have also indicated impacted subsurface conditions due to the historical uses of the Site, as well as the adjacent/surrounding properties. Thus, LEG considers the historical use of the subject property and adjacent properties to be a REC.

- During the review of the 1926 Sanborn maps, a gasoline UST was identified in the northern portion of the Site. Since the status of the UST is unknown due to the lack of documentation, LEG considers this a REC.
- A geophysical investigation conducted by Castleton identified nine suspected USTs in the western section of the Site. This study is supported by previous environmental investigations that indicated impacts to soil, soil vapor, and groundwater. As no documentation regarding the status of these suspected tanks and/or soil conditions in their vicinity was available for review, there is a potential for spills or releases from these tanks to have impacted the subsurface. Therefore, LEG considers the suspected USTs a REC.
- One open spill (Spill No. 18-11146) is recorded on the Site. This spill was recorded as a result of VOCs being detected above Soil Cleanup Objectives (SCOs) in soil during the Phase II ESA conducted by Castleton. Since the subject property was not remediated and the spill is not closed, LEG considers this a REC.
- A spill was recorded on the adjacent property identified to the southwest as Sunset Car Care along 4th Avenue, and an NYSDEC Memo suggests that no delineation or remediation was conducted; however, the spill was closed due to a lack of response from the owner. This indicated that the contamination is left in-place and LEG considers this a REC.

BERs

- A metallic anomaly non-indicative of a UST was identified in the northern portion of the Site during Castleton's geophysical investigation. Given the historical use of the Site as an auto service station with a loading area, the anomaly can possibly be a buried hydraulic lift, and LEG considers this a BER.
- The central and northwestern portions of the Site were previously developed with a service station; therefore, there is a potential for fill materials to be present. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present beneath the subject property. LEG considers the potential presence of fill materials as a BER.
- Minor water staining was observed on the ceiling of the one-story building. No active water leaks or visible mold growth were observed within the convenience store. The water-damaged areas identified should be removed from the building and properly disposed. LEG considers this a BER.

De Minimis Condition

- Solid wastes and recyclables generated on the property are stored in three dumpsters identified on the southwest of the Site. The garbage disposal service was provided by Mr. T Carting (Business Identifier Code [BIC] No. 173). No evidence of staining or liquid waste was observed around the dumpsters. Two drums were also identified near these dumpsters, one of which was damaged and needs to be disposed of legally from the Site.

April 2024 Phase II Work Plan Prepared by RSK

A Phase II Work Plan dated April 3, 2024, was prepared for the Site by RSK and was available for review. The Phase II Work Plan was drafted in response to the findings of the March 2024 Phase I ESA performed by LEG and was designed to conform with New York City Office of Environmental Remediation (NYCOER) requirements, but was never enacted at the Site. Soil, groundwater, and soil vapor sampling locations were proposed throughout the Site to provide a characterization of Site-wide conditions. The Phase II Work Plan also included summaries of previous environmental reports that included monthly groundwater monitoring reports prepared by Berninger from February 2023 through February 2024. A table was included in the summary of the monthly groundwater monitoring reports listing the observed depth to water, depth to product, product thickness, and amount of product recovered via VEFR or bailers.

2.7 PREVIOUS REMEDIAL ACTIONS

A previous IRM, overseen by Haley & Aldrich of New York, is currently partially complete at the Site in accordance with an NYSDEC-approved IRMWP, dated February 6, 2025. Site work was implemented from February to March 2025 and is planned to be continued at a future date. The IRM activities completed to date included:

- Demolition of structures associated with the former retail petroleum operations located within the IRM work area, including, but not limited to, piping, canopies, and service shop/storage areas. Demolition was limited to above-grade structures being removed to grade level;
- Well gauging and light non-aqueous phase liquid (LNAPL) recovery from on-Site groundwater monitoring well MW-1; and,
- Submission of daily reports during the IRM Site activities to document the progress of the IRM to the NYSDEC.

LNAPL recovery was completed via manual bailing, as opposed to VEFR of LNAPL as proposed in the February 2025 IRMWP, due to minimal LNAPL observed in MW-1. Measurable product was not recovered from the MW-1 during this effort. As well construction details were not known for MW-1, a recovery well (RW-1) was installed approximately 5 ft to the north. RW-1 was installed on March 24, 2025, to 45 ft and screened from 20 to 45 ft bgs as per approval from NYSDEC provided on March 18, 2025. Gauging continued at MW-1 and RW-1 on a weekly basis. Due to the lack of measurable product at the Site and minimal product recovery to date, well gauging and product recovery were discontinued with approval from NYSDEC on April 1, 2025.

Incomplete activities from this IRM include decommissioning and closure in-place of the four 4,000-gal USTs associated with the former gasoline filling station and/or associated appurtenances (e.g., fill lines, vent line, and electrical conduit); decommissioning of MW-1 in accordance with NYSDEC CP-43 policy at the completion of the IRM; and submission of a Construction Completion Report (CCR) at the completion of the IRM.

The incomplete activities, as noted above, will be completed in this IRMWP. Of note, the USTs will be closed and removed as part of the proposed work in this IRMWP instead of being closed-in-place. All work associated with the initial IRM and this subsequent IRM will be documented in one forthcoming CCR.

3. Interim Remedial Measure Program

3.1 INTERIM REMEDIAL MEASURE OBJECTIVES AND RATIONALE

The objective of this IRM is to facilitate the removal of four 4,000-gal USTs and associated impacted soils.

IRM activities will require equipment mobilization, cleaning, and removal of residual UST contents, removal of USTs and/or associated appurtenances, concrete pavement removal in the area of excavation, SOE installation to the west and south of the tank area, excavation and off-Site disposal of historic fill and hydrocarbon contaminated soil, and collection of confirmation samples. After removal of the USTs, the area will be backfilled with a 6-inch-thick temporary cover of NYSDEC-approved certified clean fill and/or gravel. The temporary cover may potentially be replaced with a DER-10-compliant final cover as part of the forthcoming final remedy. The Site will be locked and inaccessible to the public during IRM implementation and will remain locked and inaccessible until RAWP implementation is complete, and a DER-10 compliant final cover is installed. The forthcoming RAWP will be submitted to and approved by the NYSDEC prior to implementation.

3.2 GENERAL PROJECT INFORMATION

3.2.1 Remedial Engineer

The Remedial Engineer (RE) will review plans and submittals for this IRM, including contractor and subcontractor document submittals, and will confirm that plans and submittals are in compliance with this IRMWP. Remedial documents, including contractor and subcontractor document submittals, will be submitted to the NYSDEC and NYSDOH in a timely manner and prior to the start of work associated with the IRM.

The RE for this project will be Suzanne M. Bell. The RE is a registered professional engineer (P.E.) licensed by the State of New York. The RE will have primary direct responsibility for the implementation of the IRM at the Site. The RE will certify in the CCR that the IRM activities were observed by qualified environmental professionals under her supervision and that the remediation requirements set forth in this IRMWP and other relevant provisions of Environmental Conservation Law (ECL) 27-1419 have been achieved in substantial conformance with this IRMWP. Any deviations from this IRMWP will be discussed with the NYSDEC and described in monthly reporting and the CCR.

Under the direction of the RE, the work of other contractors and subcontractors involved in aspects of the IRM will be documented, including soil excavation, stockpiling, confirmation sample collection, air monitoring, emergency spill response services, import of backfill, closure and removal of the USTs, well decommissioning, and management of waste transport and disposal.

The RE will review the pre-remedial plans submitted by contractors and subcontractors for substantial conformance with this IRMWP and will certify that the work was performed in accordance with this IRMWP.

3.2.2 Fish & Wildlife Remedial Impact Analysis

NYSDEC DER-10 requires an on-Site and off-Site Fish and Wildlife Resource Impact Analysis if the stipulated criteria are met. Based on the requirements stipulated in Section 3.10 and the decision key in Appendix 3C of DER-10, there was no need to prepare a Fish and Wildlife Resource Impact Analysis for the Site. This is due to the fact that while the site is a concern for a discharge event (item 1 of the Decision Key), the contamination at the Site is not a threat to the fish and wildlife resources (item 13 of the Decision Key) as listed in Appendix 3C. Therefore as per Item 14 of the Decision Key, no FWRIA is required.

The Site, which was developed by the 1920s and most recently operated as a gasoline filling station with an associated convenience store and parking, is located in the Sunset Park neighborhood of Brooklyn, New York. The Site provides little or no wildlife habitat or food value and/or access to the detected subsurface contamination. No natural waterways are present on or directly adjacent to the Site. The proposed future use of the Site is as a school.

3.3 SUMMARY OF PROPOSED INTERIM REMEDIAL MEASURES

The proposed IRM activities are as follows:

1. Implementation of soil erosion, pollution, and sediment control measures in compliance with applicable laws and regulations.
2. Remediation/disposal of petroleum-impacted pavement and footings and removal of concrete pavement within the IRM work area.
3. Design and installation of SOE consisting of, at a minimum, sloping and/or benching as per the New York City Department of Buildings' (NYCDOB) Code along the northern and eastern UST area perimeter. Sloping of the excavation sides will be at a slope of approximately 2 horizontal to 1 vertical. If necessary, additional SOE elements may be used to reach the desired depth to the west and south of the UST area due to the proximity of the tank field to 4th Avenue and the southern adjacent property building.
4. Excavation, stockpiling, off-Site transport, and disposal of approximately 1,600 cubic yards (cu yd) of historic fill, petroleum-impacted soil, and native soil that exceeds CP-51 SCLs for Gasoline Contaminated Soil from the area of removed USTs and related equipment. Excavation is anticipated to extend to 12 ft bgs in the IRM area.
5. Screening for indications of contamination (by visual means, odor, and monitoring with PIDs) and collection of confirmation samples.
6. Although not anticipated, localized dewatering (as needed), characterization, and treatment of water accumulated in excavations prior to discharge to an NYSDEC-approved sewer/sanitary line (pending permits), or localized dewatering with containerization, classification, and disposal at an approved receiving facility.
7. Removal of residual contents of USTs and cleaning of the interior of USTs, completed by a qualified contractor. Removal of USTs and/or associated appurtenances (e.g., fill lines, vent line, and electrical conduit) and decommissioning and off-Site disposal during redevelopment in accordance with DER-10, 6 NYCRR Part 613.9, NYSDEC CP-51, and other applicable NYSDEC UST closure requirements. Removal of any petroleum-impacted soils associated with the USTs.

8. Installation of a demarcation barrier, such as orange snow fencing, along the excavation sidewalls and excavation bottom prior to backfilling. The excavation area will be backfilled with imported material that will be sampled at a frequency consistent with the recommendations of Table 5.4(e)10 in DER-10 in order to confirm CP-51 SCLs are achieved prior to placing backfill. Backfill source material will be proposed to NYSDEC prior to import to the Site.
9. Submission of daily reports to document the progress of the IRM to NYSDEC.
10. Submission of a CCR at the completion of the IRM.

3.3.1 Site Preparation

3.3.1.1 Mobilization

Prior to commencing remedial construction, the Remediation Contractor will mobilize necessary remediation personnel, equipment, and materials to the Site and prepare for remedial activities. Mobilization and Site preparation activities may include identifying the location of aboveground and underground utilities (e.g., power, gas, water, sewer, and telephone), equipment, and structures as necessary to implement the remediation work.

3.3.1.2 Site Fencing

The Site will be secured by locked entrances and inaccessible to the public during IRMWP implementation and will remain locked and inaccessible to the public until the IRMWP implementation is complete. All work conducted in accordance with this IRMWP will be conducted in compliance with the Site-specific Health and Safety Plan (HASP), included as **Appendix B**, and the Quality Assurance Project Plan (QAPP), included as **Appendix C**.

The Site will be secured with a construction fence along the northern, eastern, southern, and western Site perimeter. The gates located on 4th Avenue and/or 40th Street will be barricaded during work hours, with securely locked doors during off-hours, with appropriate signage maintained by the Contractor. No unauthorized personnel will be able to access the Site.

3.3.1.3 Monitoring Well Decommissioning

Monitoring wells within the IRM area will be decommissioned in accordance with NYSDEC CP-43 by an experienced driller with oversight from Haley & Aldrich of New York. Decommissioning documentation will be provided in the CCR.

3.3.1.4 Temporary Stabilized Construction Entrances

Temporary stabilized construction entrances will be installed at the existing curb cuts along 4th Avenue and/or 40th Street. The entrances will be covered with NYSDEC-approved gravel or recycled concrete aggregate (RCA) and graded so that runoff water will be directed on the Site. Vehicles exiting construction areas will be cleaned using clean water or dry brushing, as needed, to remove Site soil from the tires and undercarriages. The Contractor will protect and maintain the existing sidewalks and roadways at all Site access points.

3.3.1.5 Utility Mark-out and Easements Layout

4 Ave Property LLC and its contractors are solely responsible for the identification of utilities and/or easements that might be affected by work under this IRMWP and implementation of the required, appropriate, or necessary health and safety measures during performance of the work under this IRMWP. 4 Ave Property LLC and its contractors are solely responsible for the safe execution of the work performed under this IRMWP. 4 Ave Property LLC and its contractors must obtain the necessary local, state, and/or federal permits or approvals that may be required to perform the work detailed in this IRMWP. Approval of this IRMWP by the NYSDEC does not constitute satisfaction of these requirements.

3.3.1.6 Erosion and Sediment Controls

Since the planned earthwork activities will be below the adjacent sidewalk grade, full-time erosion and sedimentation measures are not anticipated. Best management practices for soil erosion will be implemented to minimize erosion and sedimentation off the Site.

3.3.1.7 Excavation Support

To accommodate the removal of soil to a depth of approximately 12 ft bgs within the IRM area, an SOE system beyond sloping will be required along the western and southern Site boundary. The SOE elements will be designed and installed as per the NYCDOB Code. Excavations are anticipated to be completed above the water table throughout the IRM area.

Appropriate management of the structural stability of on-Site or off-Site structures during Site activities is the sole responsibility of 4 Ave Property LLC and its Contractors. 4 Ave Property LLC and its Contractors are solely responsible for the safe execution of the work performed under this IRMWP. 4 Ave Property LLC and its Contractors must obtain the necessary local, state, and/or federal permits or approvals that may be required to perform the work detailed in this IRMWP. Additionally, 4 Ave Property LLC and its Contractors are solely responsible for the implementation of the required, appropriate, or necessary health and safety measures during the performance of work conducted under this IRMWP.

3.3.2 Soil Excavation and Removal

To facilitate the UST removal, soil excavation and disposal of historic fill, petroleum-impacted soil, and native soil that exceeds CP-51 SCLs for Gasoline Contaminated Soil will be required. The excavation plan is shown on **Figure 5**. The estimated volume of material requiring removal and off-site disposal during the IRM is approximately 1,600 cu yd. The soil will be screened for visual, olfactory, and instrumental evidence of environmental impacts. Due to depth to groundwater at approximately 44 ft bgs, dewatering is not anticipated. Excavation will be performed in accordance with the Excavation Work Plan included in **Appendix D**.

3.3.2.1 Waste Characterization

Waste characterization will be performed for off-Site disposal in a manner suitable to the receiving facility and in conformance with applicable permits. Sampling and analytical methods, sampling frequency, analytical results, and Quality Assurance/Quality Control (QA/QC) results will be reported. Data available for excavated material to be disposed of at a given facility will be submitted to the disposal facility with a suitable explanation prior to shipment and receipt.

Hazardous soil, if present, will be managed in accordance with applicable federal, state, and local regulations. As such, the handling, transport, and disposal of hazardous fill material is subject to United States Environmental Protection Agency (USEPA) and Occupational Safety and Health Administration (OSHA) Hazardous Waste Operations and Emergency Response (HAZWOPER) regulations. The excavated material will be segregated in the field and temporarily placed in stockpiles or direct-loaded and transported by Part 364-permitted trucks to a facility permitted by the Resource Conservation and Recovery Act (RCRA) to accept hazardous waste.

3.3.2.2 Soil Screening Methods

Visual, olfactory, and instrumental soil screening and assessment will be performed during remediation and development-related ground-intrusive activities into known or potentially contaminated material. Soil screening will be performed regardless of when the invasive work is done and will include excavation and invasive work performed during the IRM and development, such as excavations for foundations and utility work.

All primary contaminant sources (including but not limited to tanks and hot spots) identified during Site Characterization and the RI sampling completed to date will be surveyed by a surveyor licensed to practice in the state of New York. This information will be provided on maps in the CCR. Screening will be performed by qualified environmental professionals or personnel under the supervision of the RE. Resumes are provided in **Appendix E** for personnel responsible for field screening (i.e., those representing the RE) of invasive work for unknown contaminant sources during remediation and development work.

3.3.2.3 Stockpiles

While direct loading of petroleum contaminated soils will be prioritized over staging on-Site, stockpiles will be used as necessary to separate and stage excavated material pending loading or characterization sampling. Separate stockpile areas will be constructed to avoid commingling materials. Stockpile areas will meet the following minimum requirements:

- Excavated soil will be placed onto a minimum thickness of 6-mil low-permeability liner of sufficient strength and thickness to prevent puncture during use; separate stockpiles will be created where material types are different. The use of multiple layers of thinner liners is permissible.
- Efforts will be made to place and remove the soil to minimize the potential to jeopardize the integrity of the liner.
- Stockpiles will be covered at the designated times (see below) with a minimum 6-mil plastic sheeting or tarps, which will be securely anchored to the ground. Stockpiles will be routinely inspected, and broken sheeting covers will be promptly replaced.
- Stockpiles will be covered upon reaching their capacity (approximately 1,000 cu yd) until ready for loading. Stockpiles that have not reached their capacity will be covered at the end of each workday.
- Each stockpile will be encircled with silt fences and hay bales, as needed, to contain and filter particulates from rainwater that has drained off the soils and to mitigate the potential for surface water run-off.

- Stockpiles will be inspected at a minimum of once daily and after every storm event.
- If hazardous material is encountered, stockpiling on the Site will be avoided to the extent possible, in favor of live-loading into trucks permitted to transport hazardous waste.
- Stockpiled material will be appropriately graded to control run-off and will be located at least 50 feet from the property boundaries where possible.

3.3.2.4 Materials Excavation and Load Out

The RE or a qualified environmental professional under their supervision will monitor all ground-intrusive work and the excavation and load-out of excavated material. Odor suppressant will be applied during excavation and is further detailed in Section 5.3.1.

Loaded vehicles leaving the Site will be appropriately lined, securely covered, manifested, and placarded in accordance with the appropriate federal, state, and local requirements, including applicable transportation requirements (i.e., New York State Department of Transportation [NYSDOT] and New York City Department of Transportation [NYCDOT] requirements). Trucks hauling historical fill material will not be lined unless free liquids are present or the material is grossly impacted. Hazardous wastes derived from the Site will be stored, transported, and disposed of in compliance with applicable local, state, and federal regulations.

An outbound-truck inspection and wash station will be operated on the Site. Trucks will be washed, as necessary, before leaving the Site, and Site ingress and egress points will be cleaned of dirt and other materials to prevent material generated during remediation and development from being tracked off the Site. The truck inspection and wash station will be graded toward the interior of the site as detailed in Section 3.3.1.4.

The Volunteer and its contractors are solely responsible for the safe performance of all invasive and other work performed under this IRMWP and for the structural integrity of excavations and structures that may be affected by excavations (such as building foundations and bridge footings).

The Volunteers and associated parties will ensure that Site development activities will not interfere with, or otherwise impair or compromise, remedial activities proposed in this IRMWP. Development-related grading cuts and fills will not be performed without NYSDEC approval and will not interfere with, or otherwise impair or compromise, the performance of remediation required by this IRMWP. Mechanical processing of historical fill and contaminated soil on the Site is prohibited unless otherwise approved by NYSDEC.

Primary contaminant sources (including, but not limited to, tanks and hot spots) identified during Site characterization, the RI, and implementation of the IRM will be surveyed by a surveyor licensed to practice in the state of New York. The excavation will be surveyed, and survey information will be shown on maps to be included with the CCR.

3.3.2.5 Materials Transport Off-Site

Transport of materials will be performed by licensed haulers in accordance with appropriate local, state, and federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed, and trucks

properly placarded. Trucks heading to disposal facilities will travel northeast on 4th Avenue, southeast on 40th Street, southwest on 5th Avenue, northwest on 41st Street, southwest on 3rd Avenue, then south on the I-278/3rd Avenue ramp to 4th Avenue/Brooklyn Queens Expressway/Verrazzano Bridge, and then south onto I-278 West (or other NYSDEC-approved routes). Truck routes are shown on **Figure 7**.

Loaded trucks will exit in the vicinity of the Site using approved truck routes. These routes are the most appropriate routes to and from the Site and take into account the following:

- Limiting transport through residential areas and past sensitive Sites;
- Use of city-mapped truck routes;
- Prohibiting off-Site queuing of trucks entering the facility;
- Limiting total distance to major highways;
- Promoting safety in access to highways;
- Overall safety in transport; and,
- Community input (where necessary).

Trucks will be prohibited from excessive stopping and idling in the neighborhood outside of the Site. Egress points for truck and equipment transport from the Site will be kept clean of dirt and other materials during Site remediation and development. Queuing of trucks will be performed on the Site in order to minimize off-Site disturbance. Off-Site queuing will be prohibited. Material transported by trucks exiting the Site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid or hazardous metals-impacted material, truck liners will be used. Trucks will be washed as necessary prior to leaving the Site. Truck wash waters will be collected and disposed of off the Site in an appropriate manner. The truck inspection and wash station will be graded toward the interior of the site as detailed in Section 3.3.1.4.

3.3.2.6 Materials Disposal Off-Site

Disposal location(s) will be established at a later date and will be reported to the NYSDEC Project Manager. The total quantity of material expected to be disposed of off the Site is up to approximately 1,600 cu yd.

All soil/fill/solid waste excavated and removed from the Site will be treated as contaminated and regulated material and will be disposed of in accordance with all local, state (including 6 NYCRR Part 360), and federal regulations. If disposal of soil/fill from this Site is proposed for unregulated disposal (i.e., clean soil removed for development purposes), a formal request with an associated plan will be made to NYSDEC's Project Manager. Unregulated off-Site management of materials from this Site is prohibited without formal NYSDEC approval.

Excavated material that does not meet CP-51 SCLs for Gasoline Contaminated Soil, such as non-hazardous historical fill material, contaminated soil, and hazardous lead-impacted material, is prohibited from being taken to a New York State recycling facility (6 NYCRR Part 360.15 Registration Facility).

If hazardous soil is identified, it will be managed in accordance with applicable federal, state, and local regulations. As such, the handling, transport, and disposal of hazardous fill material is subject to USEPA

and OSHA HAZWOPER regulations. The presence of hazardous waste requires compliance with both federal and state regulations and the following requirements:

1. Hazardous waste disposal requires obtaining a USEPA RCRA generator ID number;
2. Hazardous waste must be transported to a facility permitted by the RCRA to accept hazardous waste;
3. Hazardous waste must be segregated and cannot be commingled with other Site material; and,
4. Hazardous waste must be transported and disposed of by properly permitted (Part 364) transporters and facilities.

The following documentation will be obtained and reported by the RE for each disposal location used in this project to fully demonstrate and document that the disposal of material derived from the Site conforms with all applicable laws.

- A letter from the RE or 4 Ave Property LLC to the receiving facility describing the material to be disposed of and requesting formal written acceptance of the material. This letter will state that the material to be disposed of is contaminated material generated at an environmental remediation Site in New York State. The letter will provide the project identity and the name and phone number of the RE. The letter will include, as an attachment, a summary of all chemical data for the material being transported (including Site Characterization data).
- A letter from each receiving facility stating it is in receipt of the correspondence (above) and is approved to accept the material.

These documents will be included in the CCR.

Non-hazardous historic fill and contaminated soils taken off the Site will be handled, at a minimum, as a Municipal Solid Waste per 6 NYCRR Part 360.2. The RE is responsible for assuring material is properly characterized and determining the appropriate disposal methods based on the characterization results.

Historical fill and contaminated soils from the Site are prohibited from being disposed of at Part 360.15 Registration Facilities (also known as Soil Recycling Facilities).

Soils that are contaminated but non-hazardous and are being removed from the Site are considered by the Division of Materials Management (DMM) in NYSDEC to be Construction and Demolition (C&D) materials with contamination not typical of virgin soils. These soils may be sent to a permitted Part 360 landfill. They may be sent to a permitted C&D processing facility without permit modifications only upon prior notification of NYSDEC Region 2 DMM. This material is prohibited from being sent or redirected to a Part 360-15 Registration Facility. In this case, as dictated by DMM, special procedures will include, at a minimum, a letter to the C&D facility that provides a detailed explanation that the material is derived from a DER remediation Site, that the soil material is contaminated, and that it must not be redirected to an off-Site Soil Recycling Facility. The letter will provide the project identity and the name and phone number of the RE. The letter will include, as an attachment, a summary of all chemical data for the material being transported.

The CCR will include an accounting of the destination of all material removed from the Site during this IRM, including excavated soil, contaminated soil, historic fill, solid waste, hazardous waste, non-regulated material, and fluids. Documentation associated with the disposal of all material must also

include records and approvals for receipt of the material. This information will also be presented in a tabular form in the CCR.

A bill of lading system or equivalent will be used for off-Site movement of non-hazardous wastes and contaminated soils. This information will be reported in the CCR. Hazardous wastes derived from the Site will be stored, transported, and disposed of in full compliance with applicable local, state, and federal regulations. Appropriately licensed haulers will be used for material removed from this Site and will be in full compliance with all applicable local, state, and federal regulations.

Waste characterization sampling will be performed exclusively for the purposes of off-Site soil disposal in a manner suitable to receiving facilities and in conformance with applicable federal, state, and local laws, rules, regulations, and facility-specific permits. Sampling and analytical methods, sampling frequency, analytical results, and QA/QC associated with waste characterization activities will be reported in the CCR. All data available for soil/material to be disposed of at a given facility must be submitted to the disposal facility with a suitable explanation prior to shipment and receipt. Waste characterization data will be used solely for complying with requirements for off-Site disposal. Waste characterization sampling cannot be utilized for:

- Delineating the extent of contamination required for remediation at a Site;
- Replacing or substituting data collected as part of Site Characterization and/or RI.
- Replacing or substituting confirmation or documentation sampling as described in NYSDEC DER-10, Section 5.4.
- Modifying remedial decisions as formalized in a NYSDEC-approved Decision Document or Record of Decision, as applicable.

3.3.2.7 Demarcation

After the completion of soil removal and any other invasive remedial activities and prior to backfilling, a land survey will be performed by a New York State-licensed surveyor. The survey will define the top elevation of residual contaminated soils before six inches of approved backfill material is placed on top. A physical demarcation layer, consisting of orange snow fencing material or equivalent material, will be placed on this surface to provide a visual reference. This demarcation layer will constitute the top of the "Residuals Management Zone," the zone that requires adherence to special conditions for the disturbance of contaminated residual soils defined in the forthcoming Site Management Plan (SMP). The survey will measure the grade covered by the demarcation layer before the placement of cover soils, pavement and sub-soils, structures, or other materials. This survey and the demarcation layer placed on this grade surface will constitute the physical and written record of the upper surface of the "Residuals Management Zone" in the forthcoming SMP. A map showing the survey results will be included in the CCR and the forthcoming SMP.

3.3.2.8 Import of Backfill

Materials proposed for import onto the Site are not anticipated as part of the IRM. However, if imported materials are proposed, documentation of the material will be provided to NYSDEC for approval prior to its use on the Site. Imported soil for backfill must meet the requirements of 6 NYCRR Part 375-6.7(d) and NYSDEC DER-10 Section 5.4(e), Table 5.4(e)10. Material from industrial sites, spill sites, other environmental remediation sites, or other potentially contaminated sites will not be imported to the Site. Solid waste will not be imported onto the Site.

Backfill material will consist of clean fill (as described in the following paragraph) or other acceptable fill material such as virgin stone from a quarry or RCA. If RCA is imported to the Site, it will be from a NYSDEC-registered facility in compliance with 6 NYCRR Part 360 registration and permitting requirements for the period of acquisition of RCA. RCA imported from compliant facilities will not require chemical testing unless required by the NYSDEC under the terms for operation of the facility. RCA imported to the Site must be derived from recognizable and uncontaminated concrete, with no more than 10 percent by weight passing through a No. 100 sieve. RCA is not acceptable for and will not be used as cover or drainage material.

Imported soil (i.e., clean fill) will meet the Allowable Constituent Levels of Imported Fill or Soil defined in DER-10 Appendix 5. Non-compliant soils will not be imported to the Site. Clean fill will be segregated at a source/facility that is free of environmental contaminants. Qualified environmental personnel will collect representative samples at a frequency consistent with NYSDEC CP-51. The samples will be analyzed for the Part 375 list of VOCs, SVOCs, pesticides, metals, polychlorinated biphenyls (PCBs), per- and poly-fluoroalkyl substances (PFAS), and 1,4-dioxane by an NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Upon meeting these criteria, the certified-clean fill will be transported to the Site and segregated from impacted material, as necessary, on plastic sheeting until used as backfill. Trucks entering the Site with imported soils will be secured with tight-fitting covers.

Soils that meet "general fill" requirements under 6 NYCRR Part 360.13, but do not meet backfill or cover soil objectives for this Site, will not be imported onto the Site without prior approval by NYSDEC. Nothing in this IRMWP should be construed as an approval for this purpose.

A "Request to Import/Reuse Fill Material" form will be filed with the NYSDEC Project Manager for review and approval prior to import to the Site. A copy of the form is presented in **Appendix F**. All materials proposed for import onto the Site will be approved by the RE and will be in compliance with provisions in this IRMWP prior to receipt at the Site. Material from industrial sites, spill sites, other environmental remediation sites, or other potentially contaminated sites will not be imported to the Site.

The CCR will include the following certification by the RE: "I certify that all import of soils from off-Site, including source evaluation, approval, and sampling, has been performed in a manner that is consistent with the methodology defined in the Interim Remedial Measures Work Plan."

3.3.2.9 Confirmation Sampling

Confirmation soil samples will be collected at the locations shown on **Figure 6** in accordance with the protocols outlined in Section 4, Remedial Performance Evaluation.

3.3.2.10 Fluids Management

Liquids removed from the Site, though not anticipated, including dewatering fluids, if necessary, will be handled, transported, and disposed of in accordance with applicable local, state, and federal regulations. Liquids discharged into the New York City sewer system will be addressed through approval by the New York City Department of Environmental Protection (NYCDEP).

3.3.2.11 Stormwater Pollution Prevention

A silt fence or hay bales will be installed around the perimeter of the remedial construction area, if needed. Barriers and hay bale checks will be installed and inspected once a week and after every storm event. Results of inspections will be recorded in a logbook maintained at the Site and available for inspection by the NYSDEC. Necessary repairs to the silt fence and/or hay bales will be made immediately. Accumulated sediments will be removed as required to keep the barriers and hay bale checks functional. The manufacturer's recommendations will be followed for replacing the silt fence damaged due to weathering. Erosion and sediment control measures identified in the IRMWP will be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they will be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to the sewer system.

3.3.3 UST Closure and Removal

Based on the NYSDEC PBS database, there are four remaining USTs at the Site that were installed in the mid- to late 1980s, including three 4,000-gal USTs containing gasoline/ethanol and one 4,000-gal UST containing diesel. The locations of the USTs are shown on **Figure 2**.

The Remediation Contractor will provide an individual who is a Certificate of License Holder from the Fire Department of the City of New York (FDNY). The tanks and/or associated appurtenances (e.g., fill lines, vent line, and electrical conduit) will be permanently closed and removed in accordance with applicable NYSDEC tank closure requirements, including DER-10 Section 5.5, 6 NYCRR Part 613-2.6b, and NYSDEC CP-51, by submitting a modified Application for PBS Registration identifying the tanks and the date of permanent closure and removal. Petroleum-impacted soil will be excavated and disposed of off-Site at a permitted disposal facility in accordance with applicable regulations. Closure documentation, such as Contractor affidavits, bills of lading for sludge disposal, and tank disposal receipts, will be provided as appendices in the CCR.

If encountered, additional USTs and/or associated appurtenances will be decommissioned in accordance with the above procedures. USTs and/or associated appurtenances will be registered and administratively closed with the NYSDEC PBS unit.

3.3.3.1 UST Removal Methods

USTs will be removed in accordance with the procedures described under the NYSDEC Memorandum for the Permanent Abandonment of Petroleum Storage Tanks and Section 5.5 of DER-10 as follows:

- Remove all product to its lowest draw-off point.
- Drain and flush piping into the tank.
- Vacuum out the tank bottom, consisting of water product and sludge.
- Dig down to the top of the tank and expose the upper half of the tank.
- Remove the fill tube and disconnect the fill, gauge, product, and vent lines and pumps. Cap and plug open ends of lines.
- Temporarily plug all tank openings, complete the excavation, remove the tank, and place it in a secure location.

- Render the tank safe and check the tank atmosphere to ensure that petroleum vapors have been satisfactorily purged from the tank.
- Clean tank or remove to a storage yard for cleaning.
- If the tank is to be moved, it must be transported by a licensed waste transporter. Plug and cap all holes prior to transport, leaving a 1/8-inch vent hole located at the top of the tank during transport.
- After cleaning, the tank must be made acceptable for disposal at a scrap yard by cleaning the tank interior with a high-pressure rinse and cutting the tank into several pieces.

During the tank and pipeline removal, the following field observations will be made and recorded:

- A description and photographic documentation of the tank and pipeline condition (pitting, holes, staining, leak points, evidence of repairs, etc.);
- Examination of the excavation floor and sidewalls for physical evidence of contamination (odor, staining, sheen, etc.); and,
- Periodic field screening (through bucket return) of the floor and sidewalls of the excavation with a properly calibrated PID.

3.3.4 Waste Management

Waste generated during IRM activities is anticipated to include spoils generated from the installation of the cut-off wall, spent decontamination fluids, and disposable sampling equipment. The spoils will be disposed of appropriately at an approved facility. Spent decontamination fluids will be containerized on Site in NYSDOT-approved 55-gallon drums pending characterization and off-Site disposal. Incidental project wastes, such as personal protective equipment (PPE), will be disposed of as general waste unless visually impacted with contaminants, in which case the waste will be disposed of at an approved facility. Proposed facilities will be forwarded to the NYSDEC prior to off-Site disposal.

Remediation equipment may require decontamination at certain points in the project. Decontamination will take place using brushes, steam cleaners, and/or pressure washers. Residues from decontamination operations will be collected and managed with other remedial-derived waste. Decontamination water will be collected for off-Site disposal or treatment.

3.3.5 Green and Sustainable Remediation

Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and Site management of the IRM as per DER-31. The major green remediation components are as follows:

- Considering the environmental impacts of treatment technologies and remedy stewardship over the long term;
- Reducing direct and indirect greenhouse gases and other emissions;
- Increasing energy efficiency and minimizing the use of non-renewable energy;
- Conserving and efficiently managing resources and materials;
- Reducing waste, increasing recycling, and increasing reuse of materials that would otherwise be considered waste;

- Maximizing habitat value and creating habitat when possible;
- Fostering green and healthy communities and working landscapes that balance ecological, economic, and social goals; and,
- Integrating the remedy with the end use, where possible, and encouraging green and sustainable renovation and/or redevelopment.

As part of the IRM remedial design program, to evaluate the IRM with respect to green and sustainable remediation principles, an environmental footprint analysis was completed and is included in **Appendix G**. The environmental footprint analysis was completed using the USEPA's Spreadsheets for Environmental Footprint Analysis, which is a NYSDEC-accepted tool. Water consumption, greenhouse gas emissions, renewable and non-renewable energy use, waste reduction, and material use were estimated for the IRM. Goals for the project related to these green and sustainable remediation metrics, as well as for minimizing community impacts, protecting habitats and natural and cultural resources, and promoting environmental justice, are incorporated into the IRM remedial program, as appropriate. Progress with respect to green and sustainable remediation metrics will be tracked during the implementation of the IRM and reported in the CCR, including a comparison to the goals established during the IRM remedial design program.

Additionally, the remedial design program includes a climate change vulnerability assessment to evaluate the impact of climate change on the project Site and the proposed remedy. Potential vulnerabilities associated with extreme weather events (e.g., hurricanes, lightning, heat stress, and drought), flooding, and sea level rise will be identified, and the remedial design program will incorporate measures to minimize the impact of climate change on potential identified vulnerabilities. Climate change is not expected to have a significant impact on the remedial system. The climate screening process and results will be documented in the form of a completed checklist and brief letter report. A completed climate screening checklist for the remediation phase is provided in **Appendix G**. An updated checklist will be included in the CCR to document the post-remediation status of the Site.

4. Interim Remedial Performance Evaluation

4.1 SOIL CLEANUP OBJECTIVES

SCOs for the IRM will be the CP-51 SCLs for Gasoline Contaminated Soils as listed in **Table 1**. UST closures will, at a minimum, conform to criteria defined in DER-10.

4.2 SOIL SAMPLING FREQUENCY

Confirmation samples will be collected to confirm that CP-51 SCLs have been achieved. One confirmation soil sample will be collected at the base of each tank and one from each sidewall.

Confirmation sampling locations are shown in **Figure 6**. If the analytical data for soil samples collected exceed the SCLs, additional soil samples will be collected to delineate these impacts, and over-excavation may be required to ensure that all impacted material has been removed from the Site. Impacted soil will be removed to the extent practical, or until the bedrock surface is encountered.

4.3 METHODOLOGY

Confirmation soil samples will be collected in accordance with NYSDEC DER-10 to document remedial performance and will be analyzed for the CP-51 SCLs for Gasoline Contaminated Soils. Samples will be collected into laboratory-provided bottle ware. VOCs will be collected into Terra Cores® or Encores®. Samples will be transported under chain-of-custody protocol to an ELAP-certified laboratory.

4.4 REPORTING OF RESULTS

Chemical labs used for all end-point sample results and contingency sampling will be NYSDOH ELAP-certified. Analytical Services Protocol (ASP) Category B deliverables will be prepared for remedial performance samples collected during the implementation of this IRMWP. The CCR will provide a tabular and map summary of all endpoint sample results and exceedances of SCOs.

4.5 QA/QC

QC procedures for confirmation soil sampling are included in the QAPP (refer to **Appendix C**). Confirmation analytical results will be provided in the NYSDEC's electronic data deliverable (EDD) format for EQuIS™. Guidance on the sampling frequency is presented in NYSDEC DER-10 Section 5.4.

The QA/QC procedures required by the NYSDEC ASP and SW-846 methods will be followed. This will include instrument calibration, standard compound spikes, surrogate compound spikes, and analysis of QC samples. The laboratory will provide sample bottles, which will be pre-cleaned and preserved. Where there are differences in the SW-846 and NYSDEC ASP requirements, the NYSDEC ASP will take precedence.

4.6 DATA VALIDATION

Data Usability Summary Reports (DUSRs) will be prepared by a qualified data validator, and the findings will be reported in the CCR.

5. Health and Safety

5.1 HEALTH AND SAFETY PLAN

A Site-specific HASP has been prepared in accordance with NYSDEC and NYSDOH guidelines and is provided as **Appendix B** of this work plan. The HASP includes a description of health and safety protocols to be followed by Haley & Aldrich of New York field staff during implementation of the IRM, including monitoring within the work area, along with response actions should impacts be observed. The HASP has been developed in accordance with OSHA 40 Code of Federal Regulations (CFR) Part 1910.120 regulatory requirements for use by Haley & Aldrich of New York field staff who will work at the Site during planned activities. Contractors or other personnel who perform work at the Site are required to develop their own HASP and procedures of comparable or higher content for their respective personnel in accordance with relevant OSHA regulatory requirements for work at hazardous waste sites, as well as general industry practice, as applicable, based on the nature of work being performed.

5.2 COMMUNITY AIR MONITORING PROGRAM

The Community Air Monitoring Plan (CAMP) details the monitoring for the potential presence of VOCs and particulates (i.e., dust) at the upwind and downwind perimeters of the designated work area when ground-intrusive activities are in progress outdoors at the Site during implementation of the IRMWP. The CAMP aims to provide protection for residents in the designated work area and residents of the downwind community from potential airborne releases that directly result from the invasive IRM activities conducted at the Site. Adherence to the monitoring action levels specified in the CAMP requires monitoring, and when necessary, corrective actions to abate emissions, and/or shutdown work. The CAMP also helps to confirm that work activities do not spread contamination off Site through the air. In addition, visual and olfactory observations will be made to keep dust and odors to a minimum around the work areas. VOCs will be monitored using Aeroqual® AQS1 Air Quality Monitors or other equivalent equipment. Readings will be recorded every 15 minutes at the Site by field personnel.

A public school is located west-adjacent to the Site beyond 4th Avenue with residential dwellings east of the Site and north of the Site beyond 40th Street. In accordance with the Special Requirements CAMP, when work areas are within 20 ft of potentially exposed populations or occupied structures, the continuous monitoring locations for VOCs and particulates will reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. A total of three CAMP units will be deployed (one upwind, one downwind, and one biased towards nearby sensitive receptors and occupied structures within 20 ft) during IRM activities. Copies of the CAMP and Special Requirements CAMP have been included as **Appendix H**.

In addition, the CAMP also addresses nuisance odors. Nuisance odors would be detected by on-Site personnel who are either present at the Site perimeter or working within the active investigation and remediation areas. If nuisance odors are identified, work will be halted, and the source of odors will be identified (with a PID and olfactory observation) and corrected. The remedial contractor shall procure an odor suppressant prior to work, store it at the Site, and utilize it as needed during the IRM. BioSolve™, Rusmar Foam AC645/ac-667SE, or an industry equivalent will be procured for the IRM work. The BioSolve™ and Rusmar Foam safety data sheets are provided in **Appendix H**. Should an alternative odor suppressant be proposed, the safety data sheet will be provided to NYSDEC prior to implementation for review.

Exceedances observed in the CAMP will be reported to NYSDEC and NYSDOH Project Managers within 24 hours of the exceedance and will include the reason(s) for the exceedance and steps taken to address the exceedance. CAMP exceedances will be included in the Daily Report.

5.3 ODOR, DUST, AND NUISANCE CONTROL PLAN

Dust, odor, and nuisance controls will be accomplished by the Remediation Contractor as described in this section.

The CCR will include the following certification by the RE: "I certify that all invasive work during the remediation and all invasive development work were conducted in accordance with dust and odor suppression methodology defined in the Interim Remedial Measures Work Plan."

5.3.1 Odor Control Plan

This odor control plan is capable of controlling emissions of nuisance odors off the Site. Specific odor control methods to be used, if needed, will include the application of foam suppressants or tarps over the odor or VOC source areas. If nuisance odors are identified, work will be halted, and the source of the odors will be identified and corrected. Work will not resume until nuisance odors have been abated. The NYSDEC and NYSDOH will be notified of odor events and other complaints about the project. Implementation of odor controls is the responsibility of the Contractor. Monitoring odor emission, including the halt of work, will be the responsibility of the RE or his/her designated representative.

Necessary means will be employed to prevent on- and off-Site nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soils. If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (a) direct load-out of soils to trucks for off-Site disposal; (b) use of chemical odorants in spray, foam, or misting systems; and (c) use of staff to monitor odors in surrounding neighborhoods. Odor control suppressant will be available on the Site during implementation of the IRMWP and will be accessible to workers who will have the knowledge and ability to operate the odor control equipment. The SDS for an odor control suppressant is provided in **Appendix H**.

Where odor nuisances have developed during remedial work and cannot be corrected, or where the release of nuisance odors cannot otherwise be avoided due to on-Site conditions or close proximity to sensitive receptors, odor control will be achieved by sheltering excavation and handling areas under tented containment structures equipped with appropriate air venting/filtering systems.

5.3.2 Dust Control Plan

A dust suppression plan that addresses dust management during ground-intrusive on-Site work will include, at a minimum: (a) the use of a dedicated water distribution system, an on-Site water truck for road wetting, or an alternate water source with suitable supply and pressure for use in dust control; (b) the use of gravel for on-Site roads to provide a clean and dust-free road surface; and (c) the limiting of the total area of on-Site roads to minimize the area required for water spraying. Dust suppression equipment will be available on-Site during implementation of the IRMWP and will be accessible to workers who will have the knowledge and ability to operate the dust suppression equipment.

5.3.3 Other Nuisances

A plan for rodent control will be developed and used by the Remediation Contractor during Site preparation (including clearing and grubbing) and during remedial work. A plan for noise control will be developed and used by the Remediation Contractor during Site preparation and remedial work and will conform, at a minimum, to the NYCDEP noise control standards.

6. Residual Contamination to Remain On-Site

Excavation associated with the IRM will remove the majority of source material at the Site, but some residual contaminated soil and groundwater will exist below 12 ft bgs and beneath the development footprint; therefore, engineering controls (ECs) and institutional controls (ICs) will be required to protect human health and the environment. Residual contamination will include petroleum-related VOC-impacted soil and groundwater with impacts to soil vapor. Residual VOC-impacted soil will likely be treated with an SVE system, to be conducted and designed as part of a forthcoming RAWP, and residual VOC-impacted groundwater will be prevented from migrating outside of the IRM area by a groundwater cutoff wall, also to be designed under a forthcoming RAWP. Residual VOC-impacted groundwater will also potentially be addressed by an in-situ remedy under a forthcoming RAWP. The potential for soil vapor intrusion (SVI) into the new building will be mitigated with an active SSDS. Upon completion of the remedial action as per this IRMWP and the forthcoming RAWP, an SVI evaluation will need to be performed prior to occupancy.

7. Reporting

7.1 DAILY REPORTING

Reports providing a summary of activities for each day of active remedial work will be emailed to the NYSDEC and NYSDOH Project Managers on a daily basis. These reports will include:

- The project number, statement of activities, an update of the progress made, locations of excavation, and other remedial work performed;
- Quantities of material imported and exported from the Site;
- Status of on-Site soil/fill stockpiles;
- A summary of citizen complaints, including relevant details (i.e., name, phone number, basis of complaint, actions taken);
- A summary of CAMP results noting exceedances; and,
- Photographs of notable Site conditions and activities.

Reports are not intended to be the primary mode of communication for notifying NYSDEC of emergencies, requests for changes to the IRMWP, or time-critical information. However, these conditions, if to occur, will be included in the daily reports. Emergency conditions and changes to the IRMWP will be directly communicated to the NYSDEC Project Manager.

Daily Reports will include a description of daily activities with a Site Map that identifies work areas. These reports will include a summary of air sampling results, odor and dust problems and corrective actions, and all complaints received from the public. The NYSDEC-assigned project number will appear on all reports.

7.2 MONTHLY REPORTS

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th of the following month of the reporting period and will include:

- Activities relative to the Site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (i.e., tons of material exported and imported, etc.);
- Description of approved activity modifications, including changes in work scope and/or schedule;
- Sampling results received following internal data review and validation, as applicable; and,
- An update of the remedial schedule, including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.

7.3 CONSTRUCTION COMPLETION REPORT

A CCR will be prepared in accordance with DER-10 guidelines to document all aspects of the IRM activities and will include:

- A summary of the removal action, including a detailed description of the extent and volume of soil excavated;
- All fully executed manifests documenting any off-Site transport of waste material;
- Well decommissioning documentation, as necessary;
- Scaled Site plan showing the location of IRM activities and confirmation samples;
- Results of all analyses, including summary tables, laboratory data sheets, and the required laboratory data deliverables;
- Information on backfill imported onto the Site, including amount, type, and origin, and copies of transport tickets from the supplier, as necessary;
- Photographic documentation; and
- Certification of the CCR by a New York State-certified P.E.

8. Schedule

The Respondent plans to implement the IRM promptly after the approval of this IRMWP.

Anticipated IRM Schedule	
IRMWP Drafting	October 2025
NYSDEC IRMWP Review, 30-Day Public Comment, and Completion of the RI	October to November 2025
NYSDEC Approval of the IRMWP	November 2025
Implementation of IRMWP	November 2025 to December 2026
RAWP Drafting	October to November 2025
NYSDEC RAWP Review and 45-Day Public Comment	November to December 2025
NYSDEC Approval of RAWP	January 2026
Implementation of RAWP	January to April 2026
Drafting CCR	January to February 2026
Drafting Final Engineering Report (FER) and SMP	March to April 2026
NYSDEC & NYSDOH Review and Approval of CCR, FER, SMP	April to May 2026
First Operations, Maintenance & Monitoring (OM&M) Report	June to July 2027

ABBREVIATIONS AND NOTES:

mg/kg: milligram per kilogram

**: LCS or LCSD is outside acceptance limits.*
-: Not Analyzed
bgs: below ground surface
F: Results are considered to be an estimated maximum concentration
ft: feet
I: The lower value for the two columns has been reported due to obvious interference.
J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
P: The RPD between the results for the two columns exceeds the method-specified criteria.

- For test methods used, see the laboratory data sheets.
- Soil analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCO), Restricted-Use Residential SCOs, and Protection of Groundwater SCO's.
*- **Bold italic** values indicate an exceedance of the Protection of Groundwater Criteria.*
- Grey shading indicates an exceedance of the Unrestricted Use Soil Cleanup Objectives.
- Yellow shading indicates an exceedance of the Restricted Use Residential Soil Cleanup Objectives.

ABBREVIATIONS AND NOTES:

mg/kg: milligram per kilogram

**: LCS or LCSD is outside acceptance limits.*
-: Not Analyzed
bgs: below ground surface
F: Results are considered to be an estimated maximum concentration
ft: feet
I: The lower value for the two columns has been reported due to obvious interference.
J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
P: The RPD between the results for the two columns exceeds the method-specified criteria.

- For test methods used, see the laboratory data sheets.
- Soil analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCO), Restricted-Use Residential SCOs, and Protection of Groundwater SCO's.
*- **Bold italic** values indicate an exceedance of the Protection of Groundwater Criteria.*
- Grey shading indicates an exceedance of the Unrestricted Use Soil Cleanup Objectives.
- Yellow shading indicates an exceedance of the Restricted Use Residential Soil Cleanup Objectives.

ABBREVIATIONS AND NOTES:

mg/kg: milligram per kilogram

**: LCS or LCSD is outside acceptance limits.*
-: Not Analyzed
bgs: below ground surface
F: Results are considered to be an estimated maximum concentration
ft: feet
I: The lower value for the two columns has been reported due to obvious interference.
J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit
P: The RPD between the results for the two columns exceeds the method-specified criteria.

- For test methods used, see the laboratory data sheets.
- Soil analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use Soil Cleanup Objectives (SCO), Restricted-Use Residential SCOs, and Protection of Groundwater SCO's.
*- **Bold italic** values indicate an exceedance of the Protection of Groundwater Criteria.*
- Grey shading indicates an exceedance of the Unrestricted Use Soil Cleanup Objectives.
- Yellow shading indicates an exceedance of the Restricted Use Residential Soil Cleanup Objectives.

ABBREVIATIONS AND NOTES:

ug/L: micrograms per liter

-: Not Analyzed
**: LCS or LCSD is outside acceptance limits.*
J: Value is estimated.
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- Groundwater analytical results are compared to NY-AWQS: NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (SGVs) for Class GA Water.
- Grey shading indicates an exceedance of the AWQS criteria.

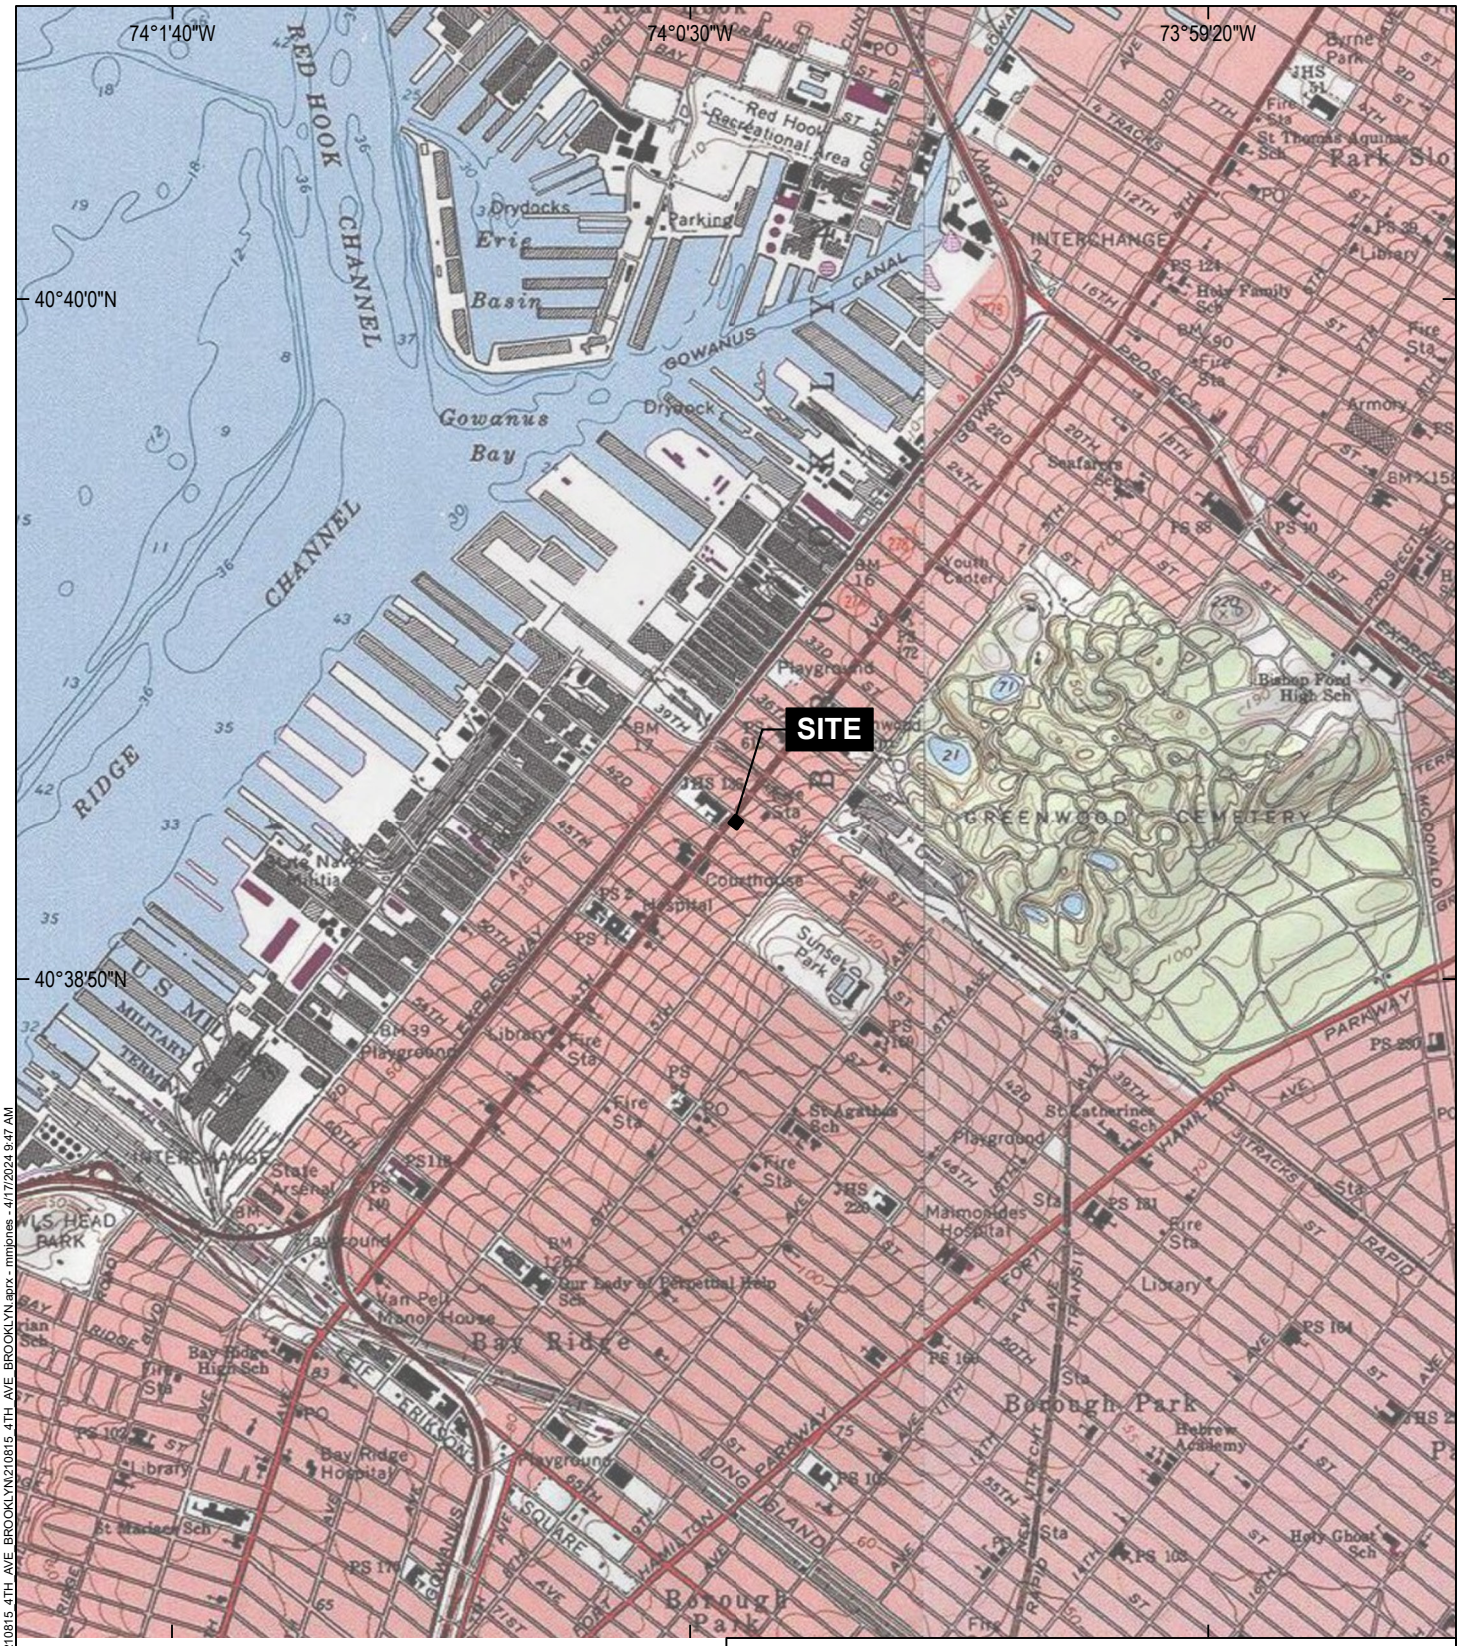
SUM of VOCs	7586540	4399600	4368.2	32357.5	19259150	9268000	4875340
SUM of CVOCs	ND	ND	591.7	ND	ND	ND	ND
SUM of BTEX	88440	ND	602.3	2571	12650	939000	4340



ABBREVIATIONS AND NOTES:

$\mu g/m^3$: micrograms per cubic meter

-: Not Analyzed
NA: Not Applicable
ND (2.5): Not detected, number in parentheses is the laboratory reporting limit

- For test methods used, see the laboratory data sheets.
- SUM of CVOCs includes the following compounds: carbon tetrachloride, 1,1-dichloroethene, cis-1,2-dichloroethene, trichloroethene, methylene chloride, tetrachloroethene, 1,1,1-trichloroethane, vinyl chloride

RE: Phase II Environmental Site Assessment
4001-4011 4th Avenue, Brooklyn, New York

Dear Mr. Middleton:

Please find the attached Phase II Environmental Site Assessment Report for the property located at 4001-4011 4th Avenue, Brooklyn New York.

Thank you for the opportunity. Please call with any questions or comments.

Very truly yours,
Castleton Environmental Geologic Services, DPC

1.0 INTRODUCTION

Castleton Environmental Geologic Services DPC (Castleton) has prepared the following Phase II Environmental Site Assessment (ESA) report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York (the site). The investigation was performed based upon review of the Phase I ESA by Merritt Environmental Consulting Corp. (MECC) dated January 7, 2019.

The objectives of this work were to determine if the sites historic and current usage as a gasoline station has impacted the subsurface. The objective was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples.

2.0 SITE BACKGROUND

The site is located at 4001-4011 4th Avenue, Brooklyn, New York (Figure 1). The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965.

Castleton reviewed the Phase I ESA prepared by MECC dated January 7, 2019. The MECC Phase I ESA identified that site has been a gasoline since its first developed use. According to the historical Sanborn Maps, a gasoline tank is present at the corner of 4th Avenue and 10th Street during the years 1926-1951.

MECC recommended further evaluation to determine if any documentation is available or if additional investigation (Phase II) is warranted. Subsequent documentation regarding the gasoline tank shown on the 1926-1951 Sanborn Maps was not provided.

3.0 PHASE II ESA FIELD INVESTIGATION

The objective of this Phase II ESA was to assess subsurface quality in relation to historic and current on-site filling station operations at the site.

The following scope of work was completed to assess subsurface conditions:

Task	Objective
Geophysical Survey	Determine if any subsurface anomalies indicative of underground storage tanks (USTs) and to clear underground utilities
Soil Sampling	Characterize site soil quality for impacts related to filling station operations

On-site work was completed on January 15, 2019. Sample collection locations are depicted on Figure 2.

54 George Street, Babylon Village, NY 11702 I 206 West 23rd Street, 4th Floor, New York, NY 10011
631-482-1818 Office I 631-321-4349 Fax
www.castletonenv.com

3.1 Geophysical Survey

A geophysical survey was performed to identify evidence of subsurface anomalies and to mark on-site utilities in proposed subsurface work areas. The survey was performed using a variety of remote sensing equipment/methods including a magnetometer to identify ferrous metallic objects, ground penetrating radar (GPR) to identify changes in soil density and a pipe locating device to trace piping runs. The geophysical survey was performed by Delta Geophysics, Inc. of Catasauqua, Pennsylvania.

As described in the PBS records included in the Phase I ESA, 4 4,000-gallon USTs are currently in use at the site and were identified during the geophysical survey to clear boring locations.

Nine suspect (USTs) were identified that are currently not in use. Four suspect UST anomalies are centralized under the canopy between the active dispensers. Five suspect UST anomalies are located at the western portion of the site.

A metal anomaly not indicative of a UST was identified at northern portion of the site. A suspect UST was not identified at the northern portion of the site where the gas tank was shown on the historic Sanborn Maps.

All on site utilities were cleared before intrusive activities.

3.2 Soil Investigation

Soil borings were advanced to assess soil conditions at the site. Boring locations were selected based on potential areas identified during the geophysical survey. Soil borings were advanced with direct push technology (Geoprobe®) by Coastal Environmental Solutions, Inc. of Medford, New York.

Six soil borings were advanced. Soil samples were collected continuously from each boring location, logged and field screened with a PID for the presence of VOCs. Elevated field sensory (PID), olfactory or visible evidence of impacts to soil were observed in each of the borings ranging from 22.9 ppm in SB01 to 5,285 ppm in SB04. Soil was observed to consist of silty fine and medium sand. Groundwater was not encountered during this investigation. Soil boring logs are provided as Appendix A.

The following table describes the boring location, area of concern associated with each boring, and sample collected for laboratory analysis.

54 George Street, Babylon Village, NY 11702 I 206 West 23rd Street, 4th Floor, New York, NY 10011

www.castletonenv.com

Boring	Area of Concern	Highest Soil PID Readings (ppm)	Boring Depth (feet)	Soil Analytical Sample Interval(s)
SB01	Area of former UST (Sanborn Map) and metal anomaly	22.9	25	18-20 feet
SB02	Area of former UST (Sanborn Map) and metal anomaly	425.9	20	4-6 feet
SB03	Area of former UST (Sanborn Map) and metal anomaly	2,195	22	12-14 feet
SB04	West of the five suspect USTs	5,285	30	16-18 feet
SB05	West of the five suspect USTs	3,963	20	10-15 feet
SB06	South of the five suspect USTs and west of the currently in use USTs	4,955	24.5	18-20 feet

Soil retained for laboratory analysis was placed into laboratory supplied glassware and submitted under chain of custody to York Analytical Laboratories of Stratford, Connecticut, a New York State Department of Health (NYSDOH) ELAP certified laboratory. Soil samples were analyzed for:

- CP-51 VOCs via EPA Method 8260, and
- CP-51 SVOCs via EPA Method 8270

4.0 ANALYTICAL RESULTS AND DATA DISCUSSION

Soil analytical results were compared to NYSDEC CP-51 Soil Cleanup Levels (SCLs) for petroleum impacted soil and NYSDEC Part 375 Soil Cleanup Objectives (SCOs).

Soil analytical results reported concentrations SVOCs as non-detect or below SCLs and SCOs in the six soil sample analyzed.

VOCs above SCLs were reported in five of the six soil samples. VOCs above Commercial SCOs were reported in two of the six samples analyzed.

Analytical results and laboratory report are presented in Appendix B.

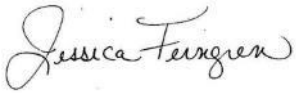
5.0 CONCLUSIONS AND RECOMMENDATIONS

Castleton has prepared the following Phase II ESA report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York. The investigation was performed based upon review of the Phase I ESA by MECC dated January 7, 2019.

The objectives of this work were to determine if the sites historic and current usage as a gasoline station has impacted the subsurface. The objective was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples.

The geophysical survey identified the presence of the 4 in use USTs, nine suspect USTs that are currently not in use, and one metal anomaly that is not indicative of a UST.



Six soil boring were advanced, and six soil samples collected for laboratory analysis. Analytical results reported concentrations of VOCs above applicable standards in five of the six soil samples analyzed.

Castleton recommends the following:

- Notification of these findings be made to NYSDEC
- The suspect USTs be assessed and, if are present, properly removed as per NYSDEC protocols
- Petroleum impacts to soil be delineated and remediated under the NYSDEC Spills Program

NOTES:

Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~=this indicates that no regulatory limit has been established for this analyte

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 16, 2019 with a temperature of 1.5 C. The project was identified as your project: **MEIN1901**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 19A0642

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: 

Date: 01/23/2019

Benjamin Gulizia
Laboratory Director

Sample and Data Qualifiers Relating to This Work Order

VOA-E	The concentration reported for this analyte is an estimated value above the linear range of the instrument for EPA SW846-5035/8260 (>200ppb). Re-analysis using 5035/8260 medium level prep. resulted in a detection below the reporting limit (<500ppb).
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-HI	The internal std associated with this target compound did not meet acceptance criteria (area >200% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Remedial Investigation Work Plan
NYSDEC Spill #18-11146
(RIWP)

Dear Ms. Zhune,

1.0 INTRODUCTION

The following document is a Remedial Investigation Report (RIR) developed for the subject site based upon the approved Remedial Investigation Work Plan (RIWP), which supplemented previous Phase I and Phase II Environmental Site Assessments (ESAs) performed at the site. The previously conducted Phase II ESA identified environmental conditions above standards and warranted further supplemental investigation to further the extent of contamination. This supplemental RIR will discuss the findings from the supplemental investigation and propose remedial alternatives to address the contamination discovered within soils at the site. Included within this Report is a discussion on the following: site background, site history, summary of supplemental findings, remedial alternatives, and a conclusion on the results.

2.0 SITE BACKGROUND

The site is located at 4001-4011 4th Avenue, Brooklyn, New York- Figure 1. The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965. Castleton reviewed the Phase I ESA prepared by Merritt Environmental Consulting Corporation (MECC) dated January 7, 2019. The MECC Phase I ESA identified that the site has been a gasoline station since its first developed use. According to the historical Sanborn Maps, a gasoline tank was present at the corner of 4th Avenue and 10th Street during the years 1926-1951. MECC recommended further evaluation to

determine if any documentation is available or if additional investigation (Phase II) is warranted. Subsequent documentation regarding the gasoline tank shown on the 1926-1951 Sanborn Maps was not provided. A Phase II was subsequently performed based on the recommendations outlined in the Phase I ESA. Please refer to Attachment-A for a survey of the current layout of the station.

3.0 SITE HISTORY

A Phase II ESA was performed by Castleton Environmental during January of 2019, which included a series of borings conducted at key locations throughout the property and a ground penetrating radar (GPR) survey to identify any potential former UST's. Six (6) soil borings were advanced on the Subject Property in the vicinity of the UST's. Soil samples were collected continuously from each boring location, logged and field screened with a PID for the presence of VOCs. Elevated field sensory (PID), olfactory or visible evidence of impacts to soil were observed in each of the borings ranging from 22.9 ppm in SB01 to 5,285 ppm in SB04. Soil analytical results were compared to NYSDEC CP-51 Soil Cleanup Levels (SCLs) for petroleum impacted soil and NYSDEC Part 375 Soil Cleanup Objectives (SCOs). Soil analytical results reported concentrations of SVOCs as non-detect or below SCLs and SCOs in all of the six (6) soil samples analyzed. VOCs above SCLs were reported in five (5) of the six (6) soil samples. VOCs above commercial-use SCOs were reported in two (2) of the six (6) samples analyzed. Based upon these findings a spill was reported and spill number # 18-11146 was assigned to the site. Please refer to Attachment-B for the previously conducted Phase II by another contractor.

4.0 SCOPE OF WORK

The previously conducted Phase II ESA concluded that the need for further investigation was necessary in order to further define the nature and extent of contamination discovered in soil. The focus was to vertically delineate the contamination discovered at previous sample locations and attempt to locate groundwater. The results of the GPR survey were also recommended to be confirmed through the performance of test pits in the former UST areas. The following summary of findings section details the results from the supplemental investigation compared to the applicable standards.

5.0 SUMMARY OF FINDINGS

The following summary of findings discusses the results from the supplemental RIR conducted on April 29, 2020. The supplemental borings conducted included: three (3) test pit borings(B-1-3) in areas of the previously identified former USTs were performed in order to confirm the results of the GPR survey. Borings B-4 and B-5 were conducted at former locations were soil contamination was discovered at depth, but never delineated. B-6 and B-7 were test pits in an additional area where the

previous GPR survey found suspected former USTs. Finally, B-8 was conducted down gradient of the suspected former USTs and B-4 and B-5. All borings were advanced until refusal was encountered preventing further vertical advancement of sample tooling.

5.1 Former UST Identification

A total of (9) suspected former UST's were identified in a GPR survey conducted during the Phase II ESA. In order to confirm this data and the existence of former USTs from past operations, a series of test pits were conducted in order to confirm the results of the GPR. Three (3) borings (B-1-3) and (B-6-7) were conducted along the string of suspected USTs discovered during the GPR as depicted on Figure-2. A rotary mason bit affixed to the boring rig was used to advance through the upper layer of concrete approximately twelve inches (12") in depth. A void of about one (1') was observed from one (1') to two and a half (2.5') feet were refusal was encountered at all three (3) test pit locations. The consistent refusal at precisely the same depth in all three (3) test pits is an indication that the previous GPR survey was accurate and most likely attributed to previous abandonment of the UST's in place. Based on the field observations at all three (3) borings, B-1-3, the tanks when abandoned were filled with concrete and left in place.

5.2 Supplemental Soil Sampling Locations and Results

A series of borings were conducted at previous sampling locations in an effort to vertically delineate contamination documented in soil. Borings B-4(former SB06) and B-5(between SB04 and former SB05) were collected at the previous Phase II locations. Boring B-8 was collected down gradient of B-4 and B-5 near the southwest corner of the property in an attempt to laterally delineate contamination discovered in the vicinity of the former USTs. Borings were collected utilizing the duel tube sampling system and continuous grab samples were extracted in five foot (5') intervals and screened in 2.5' intervals with a PID meter for the presence of VOCs. B-4 was the first delineation boring performed from 0-30' until refusal was encountered at 30' bgs. PID readings from 15-25' bgs were averaging approximately 4,500 ppm on the PID meter and subsided significantly from 25'-30' in the 500-190 ppm range with the bottom sample (B-4@ 27.5'-30'). A sample from 27.5'-30' was submitted to the lab for testing for VOCs via EPA 8260D. The results still indicated multiple BTEX petroleum constituents above unrestricted Part-375 SCOs. As mentioned above advancement beyond thirty feet (30') bgs was not feasible and most likely attributed to bedrock as rock fragments were discovered at the bottom of the last soil liner. B-5 was collected between the previous borings (SB04 and SB05) were vertical delineation was not achieved. Continuous samples were collected from grade surface to approximately 32.5' bgs. Refusal was again encountered and rock fragments were observed in the bottom sample tube at 32.5'. Again, this refusal was likely attributed to contact with bedrock. A sample at the bottom of the boring from 30-32.5' was submitted for lab analysis via VOC analysis. The lab results

indicated only minor VOC detections all significantly below the Part-375 unrestricted SCOs. B-8 was collected down gradient from the hot spot areas B-4 and B-5 and was sampled from the surface to a depth of thirty four (34') feet below grade surface. Marginal PID readings (1,500-2,500 ppm) were documented from 10'-20' bgs and subsided steadily to only 25 ppm at 34' bgs. Bedrock refusal was again encountered at 34' bgs and rock fragments were observed at the bottom of the soil sampling liner at 34' bgs. Please refer to Figure-3a-h for boring logs. Please see Table-1 for tabulated lab results compared to SCOs. The lab data package is included as Attachment-C.

6.0 REMEDIAL ALTERNATIVES

The results of the supplemental soil samples have indicated the need for remedial actions in soils with the main focus on the interval from 10'- 25' bgs. The goal is to provide in-situ remediation at areas where impacted soils have exceeded the Part-375 unrestricted-use SCOs. Please read below for remedial alternatives to treating the impacted soil discovered at the site.

5.1 Soil Vapor Extraction (SVE)

Soil Vapor Extraction (SVE) is a technology used to remove volatile organic vapors from the un-saturated zone often referred to as the vadose zone. Off-gassing of petroleum contamination emanating from the soil is extracted through a series of vertical screened pipes and exhausted to the atmosphere. This technology allows for mass removal of petroleum related contamination including sorbed contamination in the soil matrix. Soil Vapor Extraction is a reasonable in-situ alternative to remedy soil contamination at this site, especially where contamination extends beyond the capabilities of excavation. This technology would also prevent having to excavate former USTs and contaminated soil in areas where multiple underground utilities exist along with utilities associated with the operation of the active gas station. Based upon the location of the contaminated soil and the on-going operations of the current business, the SVE technology is deemed the most reasonable alternative to remediating soils to applicable levels.

5.2 Enhanced Biological Degradation

Enhance bio injections are another alternative to treating soil contamination in the vadose zone. A series of injection wells are used to deliver an oxidant solution or a microbial mixture to the contaminated vadose zone in order to promote biological degradation. This technology although practical and efficient, may not be conducive to achieve a timely clean-up based on the significant levels of contamination discovered in soil.

7.0 PROJECT SCHEDULE

Upon approval of this supplemental RIR, BEI will begin to draft a Remedial Action Plan (RAP) to address contaminated soils. The RAP will be submitted 45 days from the approval of this Report and issued to the Department for approval. The RAP will include: a remedial plan for addressing contaminated soil in the vadose zone, remedial action objectives (RAOs), operation monitoring and maintenance (OMM) and system termination.

8.0 CONCLUSION

In conclusion, the supplemental sampling data will be used to develop a Remedial Action Plan (RAP) in order to address soil contamination. No groundwater was encountered during any of the investigations conducted and is expected to be approximately 50 feet or more below grade surface. The supplemental sampling results indicated that vertical delineation was achieved at the B-5 and B-8 locations. At the B-4 location delineation was not feasible due to bedrock refusal at a depth of thirty feet (30') bgs. The majority of contamination at this boring was detected in the fifteen (15') feet to twenty five (25') horizon with PID readings as high as 4,500 ppm. Beyond this depth from 25'-30' PID readings drastically waned to levels in the 500 ppm range. Based upon the successful vertical delineation at two (2) locations B-5 and B-8, and the inability to advance beyond the refusals encountered at the surface of the bedrock at the B-6 location, a Remedial Action Plan (RAP) to address contaminated soils will be issue to the Department. Any questions or comments regarding this Report can be directed to BEI.

Sincerely,

Justin Halpin
Project Manager/Scientist

Alicia Patti
Geologist

NOTES:

(1) REMOVE ALL EXISTING CONCRETE PUMP ISLAND, DISPENSERS, TANK STP SUMPS, FILLS, VAPOR RECOVERY MANHOLES, TOP SLAB, AND RELATED PIPING AND REPLACE WITH AMERON DUALOY 3000/L NONMETALLIC PIPING UNLESS OTHERWISE NOTED. DISPENSERS TO BE REFURBISHED AND REUSED.

(2) PIPING SHOWN IS DIAGRAMMATIC ONLY. REFER TO MANUFACTURER'S INSTALLATION MANUAL FOR PROPER INSTALLATION.

(3) GENERAL CONTRACTOR TO VERIFY IN FIELD THE EXACT NUMBER OF TANK OPENINGS AND FITTING LOCATIONS AND NOTIFY ARCHITECT OF ANY DISCREPANCIES.

(4) AT THE TIME OF COMPLETION THE CONTRACTOR SHALL FILE AN AFFIDAVIT WITH THE NEW YORK CITY FIRE DEPARTMENT STATING WORK AND REQUIRED TESTS PERFORMED ON ANY TANKS/PIPING, TESTS RESULTS SHALL BE NOTED AND A COPY SHALL BE SENT TO THE OWNER AND THE ARCHITECT.

(5) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL APPLICABLE TESTING/INSPECTIONS OF TANKS AND PIPING SYSTEM UPON COMPLETION OF PROJECT AS REQUIRED BY THE NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR TO CONTACT THE NEW YORK CITY FIRE DEPARTMENT AT (718) 644.2462 FOR THIS INFORMATION.

(6) CONTRACTOR MUST CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY ELECTRICAL CODE AND FILE A CERTIFICATE OF ELECTRICAL INSPECTION UPON COMPLETION OF THE WORK WITH THE NEW YORK CITY FIRE DEPARTMENT.

(7) LOCATION AND NUMBER OF EXISTING PUMPS AND TANKS TO BE VERIFIED BY THE NEW YORK CITY FIRE DEPARTMENT.

(8) THE BIDDING CONTRACTOR SHALL VISIT THE SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS AND PROPOSED WORK ITEMS TO BE COMPLETED AS NOTED ON THE DRAWINGS PRIOR TO BIDDING.

(9) THE CONTRACTOR SHALL VERIFY THE TYPE AND EXACT LOCATION OF ALL EXISTING TANK PIPING, MPD'S PANS, AND FITTING PENETRATIONS INTO THE TANK. NOTIFY ARCHITECT OF RECORD IN WRITING OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

(10) ANY UNDERGROUND DRAINAGE LINES, WATER LINES, SEWER LINES, ELECTRICAL LINES, ETC. THAT MAY BE ENCOUNTERED DURING THE COURSE OF CONSTRUCTION SHALL BE REMOVED AND REROUTED AS REQUIRED. GENERAL CONTRACTOR TO NOTIFY ARCHITECT AND OWNER IMMEDIATELY.

(11) PROVIDE COLOR AND SYMBOL CODES ON ALL FILLS AND GAUGE PORTS AS PER A.P.I., N.Y.S.D.E.C. AND OWNER'S STANDARDS. PRODUCT I.D. MARKERS SHALL BE INSTALLED ON ALL FILL PORTS PER N.Y.S.D.E.C. REQUIREMENTS.

(12) GENERAL CONTRACTOR TO PRECISION TEST TANKS, PIPING SYSTEM, ETC. PRIOR TO CONSTRUCTION OF PROJECT AS PER NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR SHALL SECURE THE SERVICES OF THE NEW YORK CITY FIRE DEPARTMENT FOR TESTING PURPOSES. AFTER INSTALLATION GENERAL CONTRACTOR SHALL SCHEDULE A TEST TO BE DONE BY OWNER ON TANKS, PIPING, ETC. GENERAL CONTRACTOR SHALL NOT BACK FILL UNTIL ALL TESTING HAS BEEN DONE.

(13) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING A "SPARK TEST" OF THE CATHODICALLY PROTECTED PIPE WITNESSED BY A NEW YORK CITY FIRE DEPARTMENT INSPECTOR BEFORE BACK FILL INSPECTION IS SCHEDULED. (IF APPLICABLE)

(14) GENERAL CONTRACTOR TO ASSURE THAT ELECTRICAL EXPLOSION PROOF CONNECTIONS ARE PROVIDED AND IN GOOD CONDITION AT EACH TANK SUMP AS REQUIRED PER N.F.P.A. AND N.E.C. CODES.

(15) GENERAL CONTRACTOR SHALL PATCH AND REPAIR AREAS OF THE CONCRETE DRIVE MAT, SURROUNDING THE ISLANDS, DISTURBED BY CONSTRUCTION WITH A MINIMUM OF 0'-8" THICK CONCRETE, 0'-4" CRUSHED STONE AND (1) LAYER OF #5 REBARS EACH WAY.

RE: Phase II Environmental Site Assessment
4001-4011 4th Avenue, Brooklyn, New York

Dear Mr. Middleton:

Please find the attached Phase II Environmental Site Assessment Report for the property located at 4001-4011 4th Avenue, Brooklyn New York.

Thank you for the opportunity. Please call with any questions or comments.

Very truly yours,
Castleton Environmental Geologic Services, DPC

Frank P. Castellano, PG

1.0 INTRODUCTION

Castleton Environmental Geologic Services DPC (Castleton) has prepared the following Phase II Environmental Site Assessment (ESA) report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York (the site). The investigation was performed based upon review of the Phase I ESA by Merritt Environmental Consulting Corp. (MECC) dated January 7, 2019.

The objectives of this work were to determine if the sites historic and current usage as a gasoline station has impacted the subsurface. The objective was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples.

2.0 SITE BACKGROUND

The site is located at 4001-4011 4th Avenue, Brooklyn, New York (Figure 1). The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965.

Castleton reviewed the Phase I ESA prepared by MECC dated January 7, 2019. The MECC Phase I ESA identified that site has been a gasoline since its first developed use. According to the historical Sanborn Maps, a gasoline tank is present at the corner of 4th Avenue and 10th Street during the years 1926-1951.

MECC recommended further evaluation to determine if any documentation is available or if additional investigation (Phase II) is warranted. Subsequent documentation regarding the gasoline tank shown on the 1926-1951 Sanborn Maps was not provided.

3.0 PHASE II ESA FIELD INVESTIGATION

The objective of this Phase II ESA was to assess subsurface quality in relation to historic and current on-site filling station operations at the site.

The following scope of work was completed to assess subsurface conditions:

Task	Objective
Geophysical Survey	Determine if any subsurface anomalies indicative of underground storage tanks (USTs) and to clear underground utilities
Soil Sampling	Characterize site soil quality for impacts related to filling station operations

On-site work was completed on January 15, 2019. Sample collection locations are depicted on Figure 2.

www.castletonenv.com

3.1 Geophysical Survey

A geophysical survey was performed to identify evidence of subsurface anomalies and to mark on-site utilities in proposed subsurface work areas. The survey was performed using a variety of remote sensing equipment/methods including a magnetometer to identify ferrous metallic objects, ground penetrating radar (GPR) to identify changes in soil density and a pipe locating device to trace piping runs. The geophysical survey was performed by Delta Geophysics, Inc. of Catasauqua, Pennsylvania.

As described in the PBS records included in the Phase I ESA, 4 4,000-gallon USTs are currently in use at the site and were identified during the geophysical survey to clear boring locations.

Nine suspect (USTs) were identified that are currently not in use. Four suspect UST anomalies are centralized under the canopy between the active dispensers. Five suspect UST anomalies are located at the western portion of the site.

A metal anomaly not indicative of a UST was identified at northern portion of the site. A suspect UST was not identified at the northern portion of the site where the gas tank was shown on the historic Sanborn Maps.

All on site utilities were cleared before intrusive activities.

3.2 Soil Investigation

Soil borings were advanced to assess soil conditions at the site. Boring locations were selected based on potential areas identified during the geophysical survey. Soil borings were advanced with direct push technology (Geoprobe®) by Coastal Environmental Solutions, Inc. of Medford, New York.

Six soil borings were advanced. Soil samples were collected continuously from each boring location, logged and field screened with a PID for the presence of VOCs. Elevated field sensory (PID), olfactory or visible evidence of impacts to soil were observed in each of the borings ranging from 22.9 ppm in SB01 to 5,285 ppm in SB04. Soil was observed to consist of silty fine and medium sand. Groundwater was not encountered during this investigation. Soil boring logs are provided as Appendix A.

The following table describes the boring location, area of concern associated with each boring, and sample collected for laboratory analysis.

54 George Street, Babylon Village, NY 11702 I 206 West 23rd Street, 4th Floor, New York, NY 10011
631-482-1818 Office I 631-321-4349 Fax
www.castletonenv.com

Boring	Area of Concern	Highest Soil PID Readings (ppm)	Boring Depth (feet)	Soil Analytical Sample Interval(s)
SB01	Area of former UST (Sanborn Map) and metal anomaly	22.9	25	18-20 feet
SB02	Area of former UST (Sanborn Map) and metal anomaly	425.9	20	4-6 feet
SB03	Area of former UST (Sanborn Map) and metal anomaly	2,195	22	12-14 feet
SB04	West of the five suspect USTs	5,285	30	16-18 feet
SB05	West of the five suspect USTs	3,963	20	10-15 feet
SB06	South of the five suspect USTs and west of the currently in use USTs	4,955	24.5	18-20 feet

Soil retained for laboratory analysis was placed into laboratory supplied glassware and submitted under chain of custody to York Analytical Laboratories of Stratford, Connecticut, a New York State Department of Health (NYSDOH) ELAP certified laboratory. Soil samples were analyzed for:

- CP-51 VOCs via EPA Method 8260, and
- CP-51 SVOCs via EPA Method 8270

4.0 ANALYTICAL RESULTS AND DATA DISCUSSION

Soil analytical results were compared to NYSDEC CP-51 Soil Cleanup Levels (SCLs) for petroleum impacted soil and NYSDEC Part 375 Soil Cleanup Objectives (SCOs).

Soil analytical results reported concentrations SVOCs as non-detect or below SCLs and SCOs in the six soil sample analyzed.

VOCs above SCLs were reported in five of the six soil samples. VOCs above Commercial SCOs were reported in two of the six samples analyzed.

Analytical results and laboratory report are presented in Appendix B.

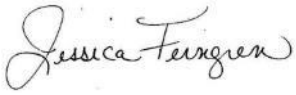
5.0 CONCLUSIONS AND RECOMMENDATIONS

Castleton has prepared the following Phase II ESA report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York. The investigation was performed based upon review of the Phase I ESA by MECC dated January 7, 2019.

The objectives of this work were to determine if the sites historic and current usage as a gasoline station has impacted the subsurface. The objective was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples.

The geophysical survey identified the presence of the 4 in use USTs, nine suspect USTs that are currently not in use, and one metal anomaly that is not indicative of a UST.



Six soil boring were advanced, and six soil samples collected for laboratory analysis. Analytical results reported concentrations of VOCs above applicable standards in five of the six soil samples analyzed.

Castleton recommends the following:

- Notification of these findings be made to NYSDEC
- The suspect USTs be assessed and, if are present, properly removed as per NYSDEC protocols
- Petroleum impacts to soil be delineated and remediated under the NYSDEC Spills Program

NOTES:

Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~=this indicates that no regulatory limit has been established for this analyte

Technical Report

Babylon NY, 11702
Attention: Jessica Ferngren

Report Date: 01/23/2019
Client Project ID: MEIN1901
York Project (SDG) No.: 19A0642

Report Date: 01/23/2019
Client Project ID: MEIN1901
York Project (SDG) No.: 19A0642

Castleton Environmental
54 George Street
Babylon NY, 11702
Attention: Jessica Ferngren

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 16, 2019 with a temperature of 1.5 C. The project was identified as your project: **MEIN1901**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 19A0642

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

VOA-E	The concentration reported for this analyte is an estimated value above the linear range of the instrument for EPA SW846-5035/8260 (>200ppb). Re-analysis using 5035/8260 medium level prep. resulted in a detection below the reporting limit (<500ppb).
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-HI	The internal std associated with this target compound did not meet acceptance criteria (area >200% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

RE: BP Gas; 4001-4010 4th Avenue, Brooklyn, Order No.: 2005010

Dear Justin Halpin:

American Analytical Laboratories, LLC. received 2 sample(s) on 5/1/2020 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer

Case Narrative

WO#: **2005010**
Date: **5/13/2020**

CLIENT: WRS d.b.a Berninger Environmental
Project: BP Gas; 4001-4010 4th Avenue, Brooklyn, NY

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions notated in this Narrative discussion.

Soil sample results analyzed for Volatile Organics via preparation method SW846 Method 5035A by the Low Level procedures potentially may be estimated, "J" (biased low) since the samples for this test were not collected according to the 5035A Method. Analysis was performed from intact soil jar. Volatile LCS are analyzed with preservatives - HCL/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Sample B-4 @ 27.5-30' required reanalysis at high level due to heavy matrix interferences.

The following parameters (if included in this report) are not offered by NY ELAP: VOA 8260 Soil; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Diisopropyl ether, Ethanol, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Limonene. VOA 8260 Liquid; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Limonene. Pesticides 8081 Soil; DBCP. Herbicides 8151 Soil; 3,5-Dichlorobenzoic Acid, 4-Nitrophenol, Acifluorfen, Bentazon, Chloramben, DCPA, Picloram, SM 2540G Total Volatile Solids, Soil TKN, Soil Organic Nitrogen, Total Phosphorus in soil, Percent Moisture, pH in non-potable water and temperature at which pH is measured, SM 4500-SO3 B Sulfite in Liquid, Total Sulfur in Soil, Acid Soluble Chloride by ASTMC1152, Water Soluble Chloride by ASTMC1218, Chlorine Demand by SM 2350 B, Total Residual Chlorine in Liquid and Reactivity to Sulfide and Reactivity to Cyanide.

The test results meet the requirements of the NYSDOH and NELAC standards, except where noted. The information contained in this analytical report is the sole property of American Analytical Laboratories, LLC. or the client for which this report was issued. The results contained in this report are only representative of the samples received. The sample receipt checklist is included as part of this lab report. Conditions can vary at different times and at different sampling conditions. American Analytical is not responsible for the use or interpretation of the data included herein.

Definition Only

WO#: **2005010**
Date: **5/13/2020**

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports
ND - Not detected at the reporting limit/Limit of Quantitation

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <5x the blank value as artifact.

E - The value is above the quantitation range

D - Analyte concentration was obtained from diluted analysis or from analysis using reduced sample volume.

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.
LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.
LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accuracy.
PQL - Practical Quantitation Limit; the lowest level that can be reliably achieved within the specific limits of Precision and accuracy. Listed on the QC Summary Forms.
m - Analyte was manually integrated for GC/MS.
+ - Concentration exceeds regulatory level for TCLP

Groundwater Investigation
Soil Profiling Report
Spill # 1811146

Dear Mr. Kolleeny,

Introduction

The following is an Investigation Report for the subject site based on the approved Work Plan, which proposed soil and groundwater sampling. The purpose of the investigation was to vertically delineate soil contamination, analyze groundwater and install a monitoring well. Please read below for the results of the investigation work and monitoring well construction details. Please see Figure-1 for the site location.

Scope of Work

The proposed scope of work involved analyzing groundwater conditions in the area of the highest soil contamination based on our June 2020 Report. The Report indicated that elevated levels of VOC contamination was present at the highest concentrations at the B-4 location, which is located down gradient from the pump islands and USTs. Prior collection of groundwater was not feasible based on the multiple refusals encountered at the 30' depth with the Geoprobe direct push rig (note a possible rock strata located at this depth preventing advancement of direct push equipment). The depth to water in this area is depicted on the USGS "Depth to Water Viewer" 2013 as being in the 50' below grade surface range (bgs). The multiple refusals encountered at the 30' mark and failure to reach the target depth of 50' bgs prompted the use of an air rotary drill rig to reach the target depth. Soil profiling (vertical delineation), screening and sampling of the groundwater via a permanent monitoring well installation was the main objective of the investigation work. The investigation work was conducted on June 10, 2021. Figure-2 depicts the sampling and well location. A photo log is included as Attachment-A.

Soil Profiling and Results

Soil was collected using the duel tube sampling method and soil was screened in 2.5' intervals with a photo ionization detector (PID meter) in order to field screen for the presence of gasoline range volatile organic compounds (VOCs). Soil profiling was conducted from approximately twenty (20') bgs to sixty-five (65') as soil was never previously delineated beyond a depth of thirty (30') feet bgs. Soil mainly consisted of brown silty sand, semi tight with a perched water layer observed at approximately thirty feet (30') below grade. Clayey soils were observed at the 30-35' depth followed by silty sands past 35' with silty loam extending from 50'- 65'. PID readings were highest at the 30'-32.5' mark (1,000 ppm); steadily decreasing with depth before reaching 0.0 from 50'-65'. Soil conditions were logged for various characteristics based on the American Geologist Institute for soil classification.

A soil sample (B-6) from selected interval 45'-50' was submitted for lab analysis in an ice filled cooler to a New York State ELAP certified laboratory for testing via EPA method 8260 (VOCs). The PID reading at this location was approximately 9.0 ppm. Lab results did not indicate any levels of contamination above the New York State Part-375 SOC's. Mostly all constituents analyzed for had non-detect readings. Please see Figure-3a (initial boring conducted to 30') and Figure-3b for the soil lithology log from 30'-65'. Please refer to Table-1 for tabulated soil data and Attachment-B for the lab data package. All soil cutting and liquid was properly drummed and disposed of by Clean Earth. The waste manifest for the investigation derived waste is included as Attachment-C.

Monitoring Well Installation

In order to obtain groundwater samples from this area a permanent groundwater monitoring well (MW-1) was installed. Groundwater was originally anticipated to be in the 50' range but was encountered at approximately 35' bgs. The soil was only in fact saturated from a depth of 35'-40' and observed to be dry from 40'-65'. A permanent monitoring well was installed and includes the following specifications: twenty feet (20') of schedule 40, 2" PVC slot screen (0.02" slot) with thirty feet (30') of schedule 40, 2" PVC riser to grade surface. The total depth of the well is approximately fifty feet (50') to the bottom. The area surrounding the well screen was gravel packed extending to two feet (2') above the well screen and a bentonite grout mix was installed to seal the casing at the top of the gravel pack to one foot (1') below the top of the riser pipe. The top of the well is secured with a j-plug and finished at grade with a flush mounted, five inch (5") cast iron bolt down manhole, cement sealed at the surface. Please refer to Figure-3a and b for well construction details.

Groundwater Sampling Results

The newly installed monitoring well (MW-1) was developed days after its installation and adequately purged of 3-5 well volumes and containerized in laboratory approved glassware. The sample was procured by using the manual oscillation method with clean 3/8" poly-tubing affixed with a check valve sampling device. The samples were transported under a chain of custody to a New York State

ELAP certified laboratory for testing of Volatile Organic Compounds (VOCs) via EPA method 8260. Please see Table-2 for groundwater results compared to NYS TOGS standards.

Conclusion

The results of the soil investigation indicate that elevated contamination exists to a depth of approximately thirty five feet (35') below grade with PID readings of 700 ppm at this depth. Beyond 35' PID readings drastically decreased to 200 ppm to 0.0 from 50'-65'. No evidence of groundwater from 40'-65' with only a 10' zone of perched water from 30'-40'. Soil was delineated at a depth of 40'-45' with no constituents detected above the Part-375 SCOs'. The site has plans to be re-developed at which any suspect tanks and soil contamination can be easily excavated and transported for proper disposal. Any questions or comments regarding this Report can be directed to BEI.

Sincerely,
Berninger Environmental

RE: BP Gas Station, 4001-4010 4th Ave, Brookl Order No.: 2106083

Dear Justin Halpin:

American Analytical Laboratories, LLC. received 2 sample(s) on 6/14/2021 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer

Case Narrative

WO#: **2106083**
Date: **6/21/2021**

CLIENT: WRS d.b.a Berninger Environmental
Project: BP Gas Station, 4001-4010 4th Ave, Brooklyn,

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions notated in this Narrative discussion.

Soil sample results analyzed for Volatile Organics via preparation method SW846 Method 5035A by the Low Level procedures potentially may be estimated, "J" (biased low) since the samples for this test were not collected according to the 5035A Method. Analysis was performed from intact soil jar. Volatile LCS are analyzed with preservatives - HCL/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Samples were analyzed at the dilutions notated on the reporting forms. MW-1 was analyzed three times. Initial undiluted analysis yielded target analytes over calibration range with peak saturation. Secondary diluted reanalysis was performed at 1:20 dilution. A tertiary analysis was peformed for Benzene and Toluene. Toluene raw concentration was still slightly over range but yielded acceptable peak shape. Toluene has een qualified, "E" for tertiary analysis. Acetone detection was confirmed by reanalysis in soil sample B-6 @ 45'-50'.

The following parameters (if included in this report) are not offered by NY ELAP: VOA 8260 Soil; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Diisopropyl ether, Ethanol, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Limonene. VOA 8260 Liquid; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Limonene. Pesticides 8081 Soil; DBCP. Herbicides 8151 Soil; 3,5-Dichlorobenzoic Acid, 4-Nitrophenol, Acifluorfen, Bentazon, Chloramben, DCPA, Picloram, SM 2540G Total Volatile Solids, Soil TKN, Soil Organic Nitrogen, Total Phosphorus in soil, Percent Moisture, pH in non-potable water and temperature at which pH is measured, SM 4500-SO3 B Sulfite in Liquid, Total Sulfur in Soil, Acid Soluble Chloride by ASTMC1152, Water Soluble Chloride by ASTMC1218, Chlorine Demand by SM 2350 B, Total Residual Chlorine in Liquid and Reactivity to Sulfide and Reactivity to Cyanide.

The test results meet the requirements of the NYSDOH and NELAC standards, except where noted. The information contained in this analytical report is the sole property of American Analytical

WO#: **2106083**
Date: **6/21/2021**

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports
ND - Not detected at the reporting limit/Limit of Quantitation

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <5x the blank value as artifact.

E - The value is above the quantitation range

D - Analyte concentration was obtained from diluted analysis or from analysis using reduced sample volume.

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.
LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.
LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accuracy.
PQL - Practical Quantitation Limit; the lowest level that can be reliably achieved within the specific limits of Precision and accuracy. Listed on the QC Summary Forms.
m - Analyte was manually integrated for GC/MS.
+ - Concentration exceeds regulatory level for TCLP

NON-HAZARDOUS WASTE MANIFEST

1. Generator ID Number	2. Page 1 of	3. Emergency Response Phone	4. Waste Tracking Number
	1		445722207 MNC

GENERATOR

5. Generator's Name and Mailing Address

The Maccaia Group
558 Central Avenue
Blackstone MA 01504

Generator's Site Address (if different than mailing address)

Generator's Phone:

6. Transporter 1 Company Name — U.S. EPA ID Number

7. Transporter 2 Company Name — U.S. EPA ID Number

8. Designated Facility Name and Site Address — U.S. EPA ID Number

225 Wilcox Avenue
Providence, RI

Facility's Phone:

	9. Waste Shipping Name and Description	10. Containers No.	10. Containers Type	11. Total Quantity	12. Unit Wt./Vol.	
1.		XXX		1 320		
2.						
3.						
4.						

13. Special Handling Instructions and Additional Information

14. **GENERATOR'S CERTIFICATION:** I certify the materials described above on this manifest are not subject to federal regulations for reporting proper disposal of Hazardous Waste.

Generator's/Offeror's Printed/Typed Name: Toby Wolczynski — Signature — Month: 7 — Day: 22 — Year: 21

INT'L

15. International Shipments ☐ Import to U.S. ☐ Export from U.S. Port of entry/exit:

Transporter Signature (for exports only): Date leaving U.S.:

TRANSPORTER

16. Transporter Acknowledgment of Receipt of Materials

Transporter 1 Printed/Typed Name — Signature — Month: 7 — Day: 22 — Year: 21

Transporter 2 Printed/Typed Name — Signature — Month — Day — Year

DESIGNATED FACILITY

17. Discrepancy

17a. Discrepancy Indication Space ☐ Quantity ☐ Type ☐ Residue ☐ Partial Rejection ☐ Full Rejection

Manifest Reference Number:

17b. Alternate Facility (or Generator) — U.S. EPA ID Number

Facility's Phone:

17c. Signature of Alternate Facility (or Generator) — Month — Day — Year

18. Designated Facility Owner or Operator: Certification of receipt of materials covered by the manifest except as noted in Item 17a

Printed/Typed Name — Signature — Month — Day — Year

NHWM-5-11

MONITORING REPORT

February 27th, 2024

Site Location:	**Client:**
BP Service Station	The Macchia Group, Inc.
4001-4011 4th Avenue	Mr. Joseph Macchia
Brooklyn, New York	556 Central Avenue
Spill #1811146	Bethpage, NY 11714

Bailing Schedule:	**Monthly**	**Reporting Schedule**:	**Quarterly**
Last Performed:	01/15/2023	Last Performed:	11/20/2023

Objective:

Monitor site well for depth to groundwater and the presence of free phase product on a monthly basis . Bail product as necessary. Wells monitored from the north side of the well casing with a Sonic Interface Probe. Check regularly for any spills by pump islands, tanks and drains.

Recovery System:

Bailing of product until well is dry. On average recharge rate approximately 1.0-1.5 gallons every half hour, although recharge rate varies drastically per event. The varying recharge rate per event effects the amount of product/water mixture recovered.

Comments:

Floating product was detected during this monitoring period. Site monitored and product bailed on December 18th, 2023, January 15th, 2024 and February 27th, 2024. Next monitoring and bailing of product scheduled for **March 2024**.

EXECUTIVE SUMMARY

Lesova Environmental Group, LLC (LEG) prepared this Phase I Environmental Site Assessment (ESA) report for the commercial property known as 4001 4th Avenue, Brooklyn, NY 11232 which is situated east of 4th Avenue, west of 5th Avenue, between 40th Street to the north, and 41st Street to the south in the Sunset Park section of the borough of Brooklyn in the City of New York (hereinafter the "subject property"). The subject property is identified as Block 714 – Lot No. 6 on the New York City (NYC) tax maps.

The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions (RECs). Recognized environmental conditions (RECs) are defined as (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and LEG's proposal for services.

LEG was able to establish a history for the subject property dating back to 1888. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directory listings, and historic topographic maps, as well as personal interviews, the subject property was identified with an L-shaped one-story concrete store and service station constructed circa 1925, and the second lot was vacant. A gasoline Underground Storage Tank (UST) was also depicted on the northern section of the lot as depicted on the 1926 Sanborn map. The 1942 Sanborn map depicted the subject property merged as one (1) lot with previous use as 1926 map and a one (1) story car garage to the south of the lot. The subject property was used as an automotive service station, lubrication, minor repair and office use with parking area until at least August 1965. The subject property was redeveloped with a one-story cement brick construction in the northwest portion which was used as a store with a gasoline filling station since at least 1970. However, the gasoline tank north of the lot was not depicted in the 1970 map. The subject property has remained in a similar configuration till date, and it is currently operating as a BP Gas Station with a convenience store. Currently, there are four (4) 4,000-gallon active USTs which consist of three (3) gasoline USTs and one (1) diesel UST on the subject property, registered as PBS #2-349399 with registration expiration date of September 08, 2028. The tanks are registered as equipped with an automatic overfill monitoring system, secondary spill containment and interstitial leak detection system.

LEG reviewed previous environmental investigations/reports for the subject property where a Phase-II Environmental Site Assessment prepared by Castleton Environmental Geologic Services DPC (Castleton) dated January 25, 2019, indicated that the geophysical investigation suspected the presence of nine (9) out-of-service USTs, of which four (4) were centralized under the canopy between the active dispensers and five (5) were in the western portion of the subject property. Additionally, a metallic anomaly non-indicative of a UST was detected on the northern portion of the subject property. This was followed by assessment of soil conditions which suggested that Volatile Organic Compounds (VOCs) exceeding Soil Cleanup Objectives (SCOs) were detected in five (5) out of six (6) samples. Also, certain VOCs exceeded commercial SCOs in two (2) samples that were collected from the west and south of the five (5) suspected USTs. No Semi-Volatile Organic Compounds (SVOCs) were detected in the samples analyzed. Based on these findings, a spill was reported on February 05, 2019 and spill # 18-11146 was assigned to the subject property. A supplemental remedial investigation (RI) prepared by Berninger Environmental dated August 29, 2020, was reviewed, where three (3) supplemental test pit borings in the area of five (5) suspected USTs, two (2) borings at the location of previously reported soil contamination, which was not delineated, and two (2) borings in the area of four (4) suspected USTs in the central portion of the property were installed. While advancing the borings in the suspected USTs area, a consistent refusal was achieved at 2.5-feet at all the three (3) test pit locations. This precisely consistent refusal indicated that the results of geophysical investigation were accurate and attributed to the abandonment of USTs in place. Vertical delineation was successfully achieved in the two (2) samples collected from the location of previously reported soil contamination while refusal was achieved in all the other samples. The analytical results for the supplemental soil samples indicated that Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) was encountered in two (2) samples collected from the area of previously reported soil contamination. Furthermore, the Photo Ionization Detector (PID) readings as high as 4,500-ppm from the area near suspected USTs suggested majority contamination between 15-feet to 25-feet and drastic reduction (500 ppm) thereafter. No groundwater was encountered during this investigation, and it was assumed to be approximately 50-feet or more below grade surface (bgs). Based on the findings of these investigations, Berninger recommended Soil Vapor Extraction (SVE) and enhanced biological degradation as remedial alternatives and further proposed to prepare a Remedial Action Plan (RAP) to address soil contamination.

Based on the results of LEG's site inspection and records review, it was determined that the following RECs were identified for the subject property, which are summarized as follows:

- Information obtained from multiple historic sources revealed that the subject and multiple adjacent/surrounding properties were historically utilized as gasoline filling stations, auto repair and

car wash. The previous environmental subsurface investigations have also indicated impacted subsurface conditions due to the historic uses of the subject property as well as the adjacent/surrounding properties. Thus, LEG considers the historic use of the subject property and adjacent properties to be a REC.

- During the review of 1926 Sanborn maps, a gasoline UST was identified in the northern portion of the subject property. Since the status of the UST is unknown because of lack of documentation, LEG considers this as a REC.
- A geophysical investigation conducted by Castleton identified nine (9) suspected USTs in the western section of the subject property. This study is supported by previous environmental investigations that indicated impact on soil, soil vapor and groundwater. As no documentation regarding the status of these suspected tanks and/or soil conditions in its vicinity were available for review, there is a potential for spills or releases from these tanks to have impacted the subsurface. Therefore, the suspected USTs are considered a REC.
- One (1) open spill (Spill #18-11146) is recorded on the subject property. This spill was recorded as a result of VOCs being detected above SCOs in soil during Phase-II Environmental Site Assessment conducted by Castleton. Since the subject property was not remediated and the spill is not closed, LEG considers this a REC.
- A spill was recorded on the adjacent property identified to the southwest as Sunset Car Care along 4th Avenue and the DEC Memo suggests that no delineation or remediation was conducted, however, the spill was closed due to lack of response from the owner. This indicated that the contamination is left is place and LEG considers this a REC.

LEG identified the following environmental concerns/Business Environmental Risks (BER) and a De Minimis condition that are summarized as follows:

- A metallic anomaly non-indicative of a UST was identified in the northern portion of the subject property during Castleton's geophysical investigation. Given the historic use of the subject property as an auto service station with a loading area, the anomaly can possibly be a buried hydraulic lift and LEG considers this as a BER.
- The central and northwestern portions of the property were previously developed with a service station, so there is a potential for fill materials to be present. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present beneath the subject property. The potential presence of fill materials is considered a BER.

- Minor water staining was observed on the ceiling of the one-story building. No active water leaks or visible mold growth were observed within convenience store. The water-damaged areas identified should be removed from the building and properly disposed. LEG considers this a BER.
- Solid wastes and recyclables generated on the property are stored in three (3) dumpsters identified on the southwest of the subject property. The garbage disposal service was provided by Mr. T Carting (BIC #173). No evidence of staining or liquid waste was observed around the dumpsters. Two (2) drums were also identified near these dumpsters, of which one (1) was damaged and needs to be disposed of legally from the subject property. This damaged drum represents a De Minimis condition.

Based upon the above findings and conclusions, LEG recommends the following:

- The unregistered nine (9) USTs should be officially registered with New York State Department of Environmental Conservation (NYSDEC) Petroleum Bul Storage (PBS) Unit and closed with proper tank closure procedures as promulgated by the NYSDEC and New York City Fire Department (FDNY).
- To further evaluate the potential impacts related to the historic uses of the subject property and the spill on the subject property and from adjacent property, a subsurface investigation should be conducted by installation of soil borings and collection of representative soil, groundwater, and soil vapor samples. Further subsurface assessments are warranted to include laboratory analysis of the samples to determine the nature and extent of subsurface contamination.
- The contaminated areas should be further remediated to achieve acceptable Soil Cleanup Objectives.

The site reconnaissance, interviews and review of records have identified the presence or possible presence of hazardous substances or petroleum related products in, on, or at the Subject Property due to onsite and offsite release to the environment. Additionally, the subject property is identified as an E-Designation site requiring further evaluation of air quality and Hazardous Materials Phase I and Phase II Testing Protocol. LEG recommends that any future redevelopment of the subject property to be done must comply under the oversight of the NYC Office of Environmental Remediation (OER) to ensure that the E-Designation listing is properly addressed.

INTRODUCTION

1.1 Purpose

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine recognized environmental conditions (RECs) and/or potential environmental concerns (PECs) in connection with the commercial property located at 4001 4th Avenue, Brooklyn NY 11232 (**Figure 1**). Lesova Environmental Group, LLC (LEG) prepared this Phase I Environmental Site Assessment (ESA) report for the commercial property which is situated east of 4th Avenue, west of 5th Avenue, between 40th Street to the north, and 41st Street to the south in the Sunset Park section of the borough of Brooklyn in the City of New York (hereinafter the "subject property"). The subject property is identified as Block 714 – Lot No. 6 on the New York City (NYC) tax maps. Representative site photographs are included in the **PHOTOS** section of the report.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society of Testing and Materials (ASTM) Practice E1527-21, inclusive of the United States Environmental Protection Agency (USEPA) "all appropriate inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "all appropriate inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-21 is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 U.S.C. §9601 (35)(B).

As stated in ASTM Practice E1527-21, the purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the process established by ASTM Practice E1527-21, *"recognized environmental conditions in connection with the subject commercial parcel."*

The term *recognized environmental conditions*, as defined by ASTM Practice E1527-21 means *"...the (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

"The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to human health and the environment."

This Phase I Environmental Site Assessment, as required by ASTM Practice E1527-21, specifically consists of the following four components:

1. Records Review;
    a. Physical settings document review;
    b. Regulatory database records search;
    c. Local municipal agency records search; and
    d. Historic use records search.
2. Site Reconnaissance;
3. Interviews with Past and Present Owners and Occupants; and
4. Evaluation and Reporting.

As stated in Practice E1527-21, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the scope of ASTM Practice E1527-21. The issues are referred to as non-scope considerations. The following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-Based Paint;
- Asbestos-Containing Materials;

- Emerging Contaminants (PFOA and PFOS);
- Wetlands; and
- Mold and Water Damage.

1.3 Significant Assumptions

In preparation of the Phase I Environmental Site Assessment, it is assumed that information provided within the Environmental Database, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report;

2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-21. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client;

3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by LEG;

4. LEG's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. LEG does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document;

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions was not performed as part of this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation;

6. This report is based, in part, on information supplied to LEG by third-party sources. While efforts have been made to substantiate this third-party information, LEG cannot attest to the completeness or accuracy of information provided by others; and

7. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

1.5 User Reliance

This report was prepared in February 2024 by LEG at the request of Mr. Solomon Jacobs, representing JLH Holdings LLC, for use by JLH Holdings LLC, their legal and consulting representatives and other agents authorized to act on their behalf, in conjunction with the sale or lease of the subject property. LEG assumes no liability for use of this report by any person or entity other than those, for which it was prepared.

2.0 SITE DESCRIPTION

2.1 Property and Address Location

The subject property consists of a single tax parcel located with located east of 4th Avenue, west of 5th Avenue, between 40th Street to the north, and 41st Street to the south in the Sunset Park section of the borough of Brooklyn in the City of New York. The subject property is identified as Block 714 – Lot No. 6 on the New York City (NYC) tax maps. **(Figure 2)**.

2.1.1 Tax Map Number

The subject property is designated in the Brooklyn Borough as Block 714 – Lot No. 6 on the NYC tax maps.

2.1.2 Acreage and Building Size

According to the New York City Department of Finance, the subject property consists of a single 10,017-square feet tax parcel. The property is currently developed with a gasoline filling station with a one-story convenience store and parking. The gross floor area of the building is 1,860-square feet. The building occupies approximately 20% of the site footprint, and the remaining area is utilized as an asphalt-paved gasoline filling station and parking lot. The subject property is accessible from the western side of 4th Avenue and southern side of 40th Street. Street sidewalks are identified to the west along 4th Avenue and east along 40th Street of the property.

2.1.3 Ownership

According to information maintained by the New York City Department of Finance, the current property is owned by 4001 4th LLC.

2.1.4 Zoning

According to the City of New York Zoning Maps, the subject property is zoned for residential (R7A) with a commercial overlay (C4-2) (**Figure 3**).

2.2 Current Occupancy and Property Use

The building is currently operated by BP Gas Station and is developed with a gasoline filling station with a one-story convenience store (1,860 SF) and parking lot. The building was constructed circa 1928 with a concrete brick one-story convenience store, service station, auto garage and gasoline filling station, and was altered in at least 1970 with a one-story store and gasoline filling station with similar configuration till date. During the site inspection, the convenience store was identified to be constructed with a concrete masonry unit (c.m.u) with a cold storage room, a kitchen, storage racks and restrooms. The exhaust units for HVAC and compressor are located on the roof. All open areas on the lot were asphalt-paved and utilized for gas

filling and parking. Currently, there are four (4) 4,000-gallon active USTs which includes three (3) gasoline USTs and one (1) diesel UST on the subject property, registered as PBS #2-349399 with registration expiration date of September 08, 2028. The tanks are equipped with an automatic overfill monitoring system, secondary spill containment and interstitial leak detection system.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

As of the date of this report the Client did not engage LEG to perform a Chain of Title review nor was a Chain of Title provided for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. The user has not made LEG aware of any environmental liens against the subject property. According to Environmental data Resources, Inc. (EDR) data search, no environmental Lien and AUL were found for the subject property.

3.3 Specialized Knowledge

The user has not made LEG aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject or surrounding properties.

3.4 Commonly Known or Reasonably Ascertainable Information

The user has not made LEG aware of any commonly known or reasonably ascertainable information regarding the past uses of the subject property, specific chemicals in use at the subject property or any spills, chemical releases, or environmental cleanups at the subject property.

3.5 Valuation Reduction for Environmental Issues

The user has not made LEG aware of any valuation reduction regarding the sale price of the property.

3.6 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the subject property as part of the due diligence to support the acquisition of the property by 4001 4th LLC.

4.0 SITE GEOLOGY AND HYDROGEOLOGY

4.1 Topography and Site Characteristics

4.1.1 Elevation

The topography of the property and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, NY. The elevation of the subject property is approximately 51-feet above mean sea level (amsl). The subject property is relatively flat with the general topographic gradient sloping downward to the north-northwest direction.

4.1.2 Surface Water Bodies

There are no surface water bodies on or adjacent to the subject property. Surface water bodies near the subject property include Sylvan Water Lake located approximately 0.4-mile to the northeast and Gowanus Bay located approximately 0.6-mile to the north at their closest points.

4.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the subject property is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinate soil types may be present in the general vicinity of the subject property. These soil types are described as mainly silt loam and sandy loam. Deeper soil types consist of very gravelly, loamy sand, non-weathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the EDR Radius Map report which is attached as **Appendix A**.

4.1.4 Historic Fill Materials

Information obtained from the US Department of Agriculture’s Web Soil Survey indicates that the soil profile beneath the subject property consists of Urban Land Greenbelt substratum (cemented material up till 15-inches, followed by gravelly sandy loam.

As such, there is a potential for fill materials to be present, given the historical development of the on-site and surrounding properties. However, this is not a concern at this time as the subject property is maintained with a solid cap with no direct contact or exposure to affect human health. In the event the urban fill material is disturbed during any future construction/redevelopment project, sampling for proper disposal and handling is recommended.

4.2 Groundwater Characteristics

4.2.1 Depth to the Water and Groundwater Flow Direction

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Magothy Aquifer Beneath Long Island, March-April 2013, the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 51-feet amsl, the depth to groundwater in the vicinity of the subject property is approximately 51-feet to 75-feet below grade surface (bgs) (USGS Long Island Depth to Water, 2013). Groundwater is expected to flow to the north-northwest, towards Upper New York Bay, and consistent with the regional trend.

A review of USGS well data indicates that the nearest USGS monitoring well (USGS ID – USGS403841074005101) with available water level data is located approximately 1/8-1/4 mile east-southeast of the subject property at a lower elevation. The well is completed in the Northern Atlantic Coastal Plain aquifer at a depth of 236-feet bgs. Seventy-one (71) groundwater measurements were collected from this well and the latest collected on December 28, 1984 at a level of 1.35-feet to sea level.

4.3 Geology

According to the USGS Groundwater Atlas of the United States, New York region (1995) and USGS Hydrogeologic Framework of Long Island, New York, the property is located within the Atlantic Coastal Plain physiographic province. Overlaying the Atlantic Coastal Plain, the property is underlain by a small section of the Manhattan prong bedrock, exhibiting metamorphic rocks such as schist and gneiss. Additionally, the property features Cretaceous sediments, which contribute to the formation of specific soil types such as sandy and clayey soils. Moreover, the presence of Terminal Moraines provides evidence of past glaciation, marking the extent of glacial advance and retreat during the Quaternary period. These glacial

deposits overlay Cretaceous sediments, further shaping the property's soil composition. Within the terminal moraines, soils may exhibit a mixture of gravel, sand and till.

5.0 SITE HISTORY

5.1 Municipal Records Review

As the subject property is located in the Borough of Brooklyn, New York City, Kings County, on-line records searches were conducted or Freedom of Information Law (FOIL) requests were sent to the following agencies: New York City Department of Buildings (NYCDOB) and the New York City Department of Environmental Protection (NYCDEP), and NYSDEC requesting available regulatory information regarding the subject property. Regulatory agencies usually take six to eight (6-8) weeks to process FOIL requests. Any additional responses will be reviewed and forwarded upon receipt. As of the date of this report, the following information has been received:

New York City Department of Finance

The following is a summary of pertinent information obtained:

Tax Lot:	Block 714 – Lot No. 6
Address:	4001 4th Avenue, Brooklyn NY 11232
Owner:	4001 4th LLC
Lot Size:	10,017-square
Building Class:	G3-Gas Station with Retail Store
Zoning:	Residential (R7A) with Commercial overlay (C2-4)

New York City Department Buildings

Computerized Property Profile Overviews (PPOs) available from the NYCDOB Building Information System (BIS) website were reviewed for information regarding the subject property. Pertinent information regarding the subject property is summarized below:

BIN No. 3010582

Per the NYCDOB Building Information Search (NYCDOB BIS) conducted on February 26, 2024, the subject property was registered with BIN #3010582. The following Certificate of Occupancy (CO) were identified:

- CO # 34595 dated 1925, was identified and stated that the new building had been completed substantially on the subject property for the purpose of its use as an office.
- CO # 192481 dated August 10, 1965, was identified and stated the subject property was used as automotive service station, lubrication, minor repair and office use with parking area. According to the Fire Department, gasoline storage tanks were installed on July 23, 1965.

The profile was identified with one (1) complaint, no violations, and ten (10) jobs/filings. One (1) ARA/LAA Job was identified pertaining to the installation of a gas fired Modine heater. Additionally, a property profile overview including the CO is provided in the **Appendix B**.

New York City Department of Environmental Protection

A FOIL application was forwarded to the NYCDEP on February 23, 2024. A response from this agency is pending.

New York State Department of Environmental Conservation

A FOIL application was forwarded to the NYSDEC on February 26, 2024, for information regarding the open/active spill incident associated with the southern adjacent property.

5.1.1 EDR Building Department Permit Report

EDR conducted a search of available Building Department Permits for the subject and adjacent properties. The search was provided for the years 1974 through 2023. LEG identified seven (7) Alt 2 alteration/renovation work permits and eight (8) electrical permits. Selective permits are explained as follows:

- Permit #301864515-01-EW-OT, dated August 18, 2009, was filed and issued for the renovation of the existing store for installation of new aluminum doors and windows, no change in occupancy, use or egress.
- Permit #320041897-01-EW-OT, dated July 9, 2009, was filed and issued to line the existing motor fuel tanks, install new piping and dispensers, no change in occupancy, use or egress.
- Permit #310155667-01-EW-FP, dated July 30, 2008, was filed and issued for installation of fire suppression system over existing pump islands, no change in occupancy, use or egress.

A copy of the EDR Building Permit Search is included in **Appendix C.**

5.2 Historical Resources Review

5.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject property and immediate surrounding area. Fire Insurance Maps were provided for the years 1888, 1906, 1926, 1942, 1951, 1970, 1976, 1978, 1979, 1980, 1982, 1987, 1988, 1990, 1991, 1992, 1993, 1994, 1995, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. A copy of the EDR Sanborn Maps is attached as **Appendix D**. LEG's review of the Sanborn Maps is provided on the following table:

YEAR	OBSERVATIONS for *Subject property*	OBSERVATIONS for *Surrounding properties*
1888	*The subject property is identified as a vacant lot.*	*4th Avenue and 40th Street appear in their current approximate configurations. No significant development appears to the north, west, or south of the subject property. Limited, multistory residential development appears to the east of the subject property.*
1906	*The subject property is identified as a vacant lot.*	*The surrounding properties were further developed with multi-storied row of residential building to the south, a school at the northwest and multi-storied stores at the northeast. Identified 4th Avenue to the north, 40th Street to the northeast and 41st Street to the southeast of the subject property.*
1926	*The subject property appears to be developed with a one-story concrete store and service station with one (1) gasoline tank at the north of the property.*	*The surrounding properties were further developed with a row of residential flats to the southeast. A store with two (2) gasoline tanks is also identified at the southwest of the subject property.*
1942-1951	*The subject property was identified in the similar configuration as the 1926 map with the addition of an auto parking lot identified on the southern corner.*	*The surrounding properties were further developed with an auto parking to the north and an auto service station and auto laundry adjacent to the subject property to the south. Three (3) gasoline tanks at the front of the auto laundry to the south were identified.*
1970-1982	*The subject property has been reconfigured and is now improved with a one-story masonry building along the southeast portion of the property, identified as a filling station. The gasoline tank identified on the 1926-1951 Sanborn Maps is no longer present.*	*The surrounding properties were mostly identified in a similar configuration as the 1942-1951 maps. An auto repair shop was identified to the north of the subject property. An auto body shop was also identified at the northeast to the subject property. A filling station is also identified at the corner of 39th Street and 4th Avenue at the northeast of the subject property.*
1987-2007	*The subject property was identified in the similar configuration as the 1970-1982 maps with an addition of a canopy.*	*The surrounding properties were identified in a similar configuration as the 1970-1982 maps. In 1994, the filling station was not identified, instead a commercial building was developed.*

The Sanborn maps identified presence of a gasoline UST from 1926 to 1951 on the subject property, two (2) gasoline USTs on the property to southwest along 4th Avenue in 1926, and three (3) gasoline USTs on the property to southwest along 41st street from 1942 to 2007.

5.2.2 Historic Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Aerial photographs were provided for the years 1924, 1940, 1943, 1951, 1954, 1961, 1966, 1976, 1980, 1985, 1995, 2008, 2011, 2015, and 2019 (**Appendix D**).

YEAR	*OBSERVATIONS for Subject property*	*OBSERVATIONS for Surrounding property*
1924	*The subject property was identified as a vacant land.*	*The surrounding properties were identified as either developed lands or lands that were in the process of being cleared for development. Adjacent structure to the southwest was identified with a single structure. A multi-story structure was identified occupying the lot across the street on 4th Avenue.*
1940-1954	*The subject property was identified as developed with multiple structures in the center and towards the north of the property.*	*The surrounding properties were identified as densely developed with muti-storied residential buildings. The properties to the south and west were scarcely developed with structures.*
1961-1985	*The subject property was identified in a different configuration with only one structure on the southeast corner of the property.*	*The surrounding properties were identified in a similar configuration as the 1940-1954 maps.*
1995-2019	*The subject property was identified in the similar configuration as the 1961-1985 maps with an addition of a canopy.*	*The surrounding properties were identified in a similar configuration as the 1961-1985 maps.*

The photographs do not show any evidence of historic water bodies, significant re-grading, mining or historic dumping activities, which would indicate a potential environmental risk to the property.

5.2.3 Historic Topographic Map Review

LEG reviewed the 2019 Brooklyn, NY USGS topographic quadrangle map, as well as available historic topographic quadrangle maps provided by EDR (**Appendix D**).

LEG's review of the topographic maps is provided on the following table:

YEAR	*OBSERVATIONS for Subject property*	*OBSERVATIONS for Surrounding property*
1891	*The subject property is not depicted on the map.*	*Areas on north and northwest of the properties were depicted scarce development. The land around the subject property indicated higher elevation which gradually decreased moving towards Gowanus Bay, indicating sloping towards north-northwest.*
1897	*The subject property is not depicted on the map.*	*The surrounding properties are not depicted on the map.*
1898-1905	*The subject property is not depicted on the map.*	*The Greenwood Cemetery is depicted on the northwest of the subject property. Sparse development is identified around the subject property with development of rail road on the south and southeast.*
1925	*The subject property is identified on the map.*	*Areas around the property indicate development of more than one structure consistent to multi-storied buildings.*
1947	*The subject property does not depict any improvements.*	*Areas surrounding the property depict dense development. Landmarks and the avenues are also identified.*
1955-1981	*The subject property does not depict any improvements.*	*Areas surrounding the property showed no improvement. Express ways on west and east of the subject property were identified.*
1995	*The subject property is not depicted on the map.*	*The surrounding properties are not depicted on the map.*
2013-2019	*The 2013-2019 maps do not depict any buildings or other structures.*	*Surrounding roads are visible, consistent with their current configuration. Bay Ridge Channel on the West and Gowanus Bay on the north to the subject property are identified. Perennial lakes in the Greenwood Cemetery are also identified.*

LEG's historic topographic map review did not reveal evidence of recognized environmental conditions in connection with the site or adjoining properties.

5.2.4 Historical City Directory Search

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix E**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

The listings are summarized in the following table:

YEAR	**OBSERVATIONS FOR *Subject Property – 4001 4th Avenue***
1928-1934	*TYDOL CHAIN INC GAS STATION*
1940-1949	*LAMBNETS SERVICE STATION*
1960-1970	*ELWOOD SERVICE STATION*
1973	*TENANT* *STAGE AUTO SERVICE STATION*
1976	*ALLAN BROS SERVICE STATION*
1985-1997	*H&S SERVICE CENTER*
2000	*JOHNNYS AUTO REPAIR AND BODY WORK* *BROOKLYN SERVICE STATION INC* *NOR GLENN SERVICE STATION*
2010-2017	*B&L GAS STATION ENTERPRISES INC*
2020	*TENANTS*

The historical uses of the property as a service station and gas station represents REC to the subject property.

5.2.5 Previous Environmental Site Assessments

LEG was provided with the following previous investigations/reports for the subject property for review by the property owner:

- *Phase-II Environmental Site Assessment prepared by Castleton Environmental Geologic Services DPC dated January 25, 2019*

  Castleton conducted a Phase-II Environmental Site Assessment (ESA) based on the Phase-I ESA prepared by Merritt Environmental Consulting Corp. (MECC) dated January 7, 2019, to determine the impact of historic and current usages of the subject property as a gasoline filling station on subsurface. The scope of work included (a) geophysical investigation using Ground Penetrating Radar (GPR) to determine the presence/absence of any subsurface anomalies indicative of USTs and to clear underground utilities; and (b) soil sampling to characterize the site soil quality for impacts pertaining to gasoline filling station operations.

  During the geophysical investigation, Castleton identified four (4) 4,000-gallons active USTs on the subject property consistent with the Petroleum Bulk Storage (PBS) records. Additionally, nine (9) suspected USTs were identified, of which four (4) were centralized under the canopy between the active dispensers and five (5) were located in the western portion of the subject property. A metal anomaly non-

indicative of a UST was also identified on the northern portion of the subject property. The gasoline tank identified on the historic Sanborn Maps on the northern portion was also not identified.

To assess the soil conditions at the subject property, Castleton advanced six (6) soil borings in the potential areas identified during the geophysical investigation. Elevated Photo Ionization Detector (PID) readings (ranging from 22.9 ppm to 5,285 ppm) and visible olfactory or visible evidence of contamination were observed and recorded. The analytical results for soil samples reported VOCs above SCOs in five (5) out of six (6) samples. Also, certain VOCs exceeded commercial SCOs in two (2) samples that were collected from the west and south of the five (5) suspect USTs. No SVOCs were detected in the samples.

Based on these findings, a spill was reported on February 05, 2019 and spill # 18-11146 was assigned to the subject property. Furthermore, Castleton recommended notifying NYSDEC about the findings, assessment and legal removal of suspected USTs, and delineation and remediation of petroleum VOCs under NYSDEC Spills Program. A copy of this report is compiled and attached as **Appendix F**.

- *Supplemental Remedial Investigation report (RIR) prepared by Berninger Environmental dated June 2020*

  A supplemental remedial investigation (RI) was conducted by Berninger on August 29, 2020, to further define the nature and extent of contamination by vertically delineating the contamination discovered on previous sample locations identified by Castleton and confirm the results of geophysical investigation by Castleton by performing test pits in the suspected UST area.

  To do this, Berninger installed three (3) supplemental test pit borings in the area of suspected USTs and two (2) borings at the location of previously reported soil contamination which was not delineated. Two (2) borings were also installed in the suspected USTs area in the central portion of the property. While advancing the borings in the suspected UST area, a consistent refusal was achieved at 2.5-feet at all the three (3) test pit locations. This precisely consistent refusal indicated that the results of geophysical investigation were accurate and attributed to the abandonment of USTs in place.

  Vertical delineation was successfully achieved in the two (2) samples collected from the location of previously reported soil contamination while refusal was achieved in all the other samples. The analytical results for the supplemental soil samples indicated that Benzene, Toluene, Ethylbenzene, Xylenes (BTEX) was encountered in two (2) samples collected from the area of previously reported soil contamination. Furthermore, the PID readings as high as 4,500-ppm from the area near UST suggested majority contamination between 15-feet to 25-feet and drastic reduction (500 ppm) thereafter. No groundwater was encountered during this investigation, and it is assumed to be approximately 50-feet or more below grade surface (bgs). Based on these findings, Berninger recommended Soil Vapor Extraction (SVE) and enhanced biological degradation as remedial alternatives, and further proposed to prepare a

Remedial Action Plan (RAP) to address soil contamination. A copy of this report is compiled and attached as **Appendix F**.

- *Remedial Action Plan (RAP) prepared by Berninger Environmental dated August 2020*
  Following the conclusion and recommendations of the RIR, Berninger proposed SVE as a remedy for removal the VOCs from the soil by off gassing them into the atmosphere. For the same, four (4) SVE wells were proposed in the area of former USTs on the subject property. A copy of this report is compiled and attached as **Appendix F**.

- *Supplemental Remedial Investigation Pilot Study Work Plan prepared by Berninger Environmental dated December 2021*
  The findings of supplemental RIR by Berninger dated June 2020 concluded requirement of additional investigation to determine the lateral extent of contamination. To address this, installation of three (3) groundwater monitoring wells was proposed near the 4th Avenue Subway line to determine potential impacts to sensitive receptors. The study of depth of the subway tunnel was also proposed to evaluate potential impacts. Additionally, a SVE Pilot Test was also proposed to confirm the Radius of Influence (ROI) by installing one (1) pilot well (SVE-PW) within the plume. Berninger concluded by adding that a remedial plan will be developed to treat the contaminated media on site based on the pilot test results. A copy of this report is compiled and attached as **Appendix F**.

- *Supplemental Remedial Investigation Work Plan prepared by Berninger Environmental dated March 2022 (revised 1)*
  Consequent to the findings and conclusion of supplemental RIR, Berninger proposed installation of three (3) groundwater monitoring wells where two (2) are located at the location of two (2) soil borings that were installed in the area of previously reported soil contamination. A copy of this report is compiled and attached as **Appendix F**.

5.2.6 Environmental Liens or Activity and Use Limitations

No Title Reports were available for review from the Client of the Property Owner. However, at the request of the Client, LEG obtained an Environmental Lien and Activity Use Limitation Search from EDR. The search did not identify any environmental liens or AULs based upon a review of New York City, NYSDEC and USEPA records. However, ownership information was also provided with the lien and AUL search, which is summarized as follows:

An Environmental Liens and AUL search conducted by EDR and dated February 20, 2024, resulted as follows: A Deed (ID: 2008091800252001) was found for the subject property, dated September 22, 2008, that stated that the title was vested in 4001 4th LLC, from Estron Oil Corp, for Block 714 and Lot 6 in the Borough of Kings. A RP-5217 real property transfer report was also found. No Environmental Liens or AUL were identified. A copy of the Environmental Lien and Activity Use Limitation Search is included in **Appendix G**.

Additionally, a search was conducted for Activity and Use Limitations (AULs) associated with the subject property, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issues identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an "E" designation, as well as maintained within Chain of Title Records. For a site to be designated with an "E" restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a "Potential" or "Projected" re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an "E" designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an "E" designated site without approval from the New York City of Office of Environmental Remediation (NYCOER).

5.3 Summary of Site History

LEG was able to establish a history for the property dating back to 1925. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directory listings, and historic topographic maps, as well as personal interviews, the subject property was identified as a square shaped lot developed with an L-shaped one-story concrete store and service station constructed circa 1925 in the central and northern portion of the subject property. A gasoline UST was also depicted along 40th Street during this time. The subject property was used as an automotive service station, lubrication, minor repair and office use with parking area until at least August 1965. The subject property was redeveloped with a one-story cement brick construction in the northwest portion which was used as a store with a gasoline filling station since at least 1970. However, the tank along 40th Street was not identified on the subject property anymore. The subject property has

remained in a similar configuration till date, and it is currently operated as a BP Gas Station with a convenience store.

6.0 REGULATORY AGENCY DATABASE SEARCH

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched and the search radius is shown on the summary table below. LEG reviewed the database output to determine if the property appears on any of the regulatory agency lists.

6.1 Federal Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	0 NPL 0 Proposed 0 Delisted
Superfund Enterprise Management System (SEMS) and SEMS Archive Sites	SEMS and SEMS-ARCHIVE	0.5 mile	No	0 SEMS 1 SEMS-ARCHIVE
Corrective Action Reports	CORRACTS	1.0 mile	No	0
Federal Facility Site Information	FFSI	1.0 mile	No	0
Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSD	0.5 mile	No	0
Resource Conservation and Recovery Act – Active and Former Hazardous Waste Generators	RCRA LQG/SQG/VSQG/ NonGen	Site & Adjoining	Yes - NonGen	11 LQG 5 SQG 2 VSQG 79 NonGen
Land Use Control Information System	LUCIS	0.5 mile	No	0
Engineering Control Sites	USEC	Site	No	0
Institutional Control Sites	USIC	Site	No	0
Emergency Response Notification System	ERNS	Site	No	0
Federal Brownfields Sites	US Brownfields	0.5 mile	No	0

In addition to the federal databases included on the table above, over 30 additional federal databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional federal databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Superfund Enterprise Management System Archive (SEMS Archive): SEMS Archive (formally known as CERCLIS-NFRAP) listings are for properties removed from the SEMS list following an initial investigation because either no contamination was found, or contamination was not serious enough to warrant Superfund Action or NPL consideration. A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property:

- Blatchford Base Plan, Site ID: 0201944 (EPA ID: NYD980531644). The site was identified as 32 33rd Street, approximately 2,279-feet (0.432 mile) north of the subject property at a lower elevation. The USPEA conducted a Preliminary Assessment, a Site Inspection and Removal Assessment for this site, and the site was subsequently archived. Based on the information provided in the database, its distance and the presumed hydraulic gradient, this listing is unlikely to present a significant environmental concern to the subject property.

Based on the information in the database report, its distance, and the presumed hydraulic gradient, it is unlikely that this listing represents a significant environmental concern to the subject property.

RCRA NonGen/NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that the target property was listed as a RCRA NonGen / NLR site:

- H&S Amoco, 4001 4th Avenue, EPA ID NY0000017582: The subject property was historically identified as a large quantity generator on January 1, 2007, and before that it was identified as a conditionally exempt small quantity generator on October 10, 1993. Hazardous waste codes D001 (Ignitable Waste), D018 (Benzene) and D039 (Tetrachloroethylene) were also identified.

RCRA Generators: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and

Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, dated 12/04/2023 has revealed that there is one (1) RCRA-LQG site within approximately 100-ft. of the target property.

- Consolidated Edison Inc – Service Box, 415 40th Street, EPA ID NYP004404968: The site is located approximately 97-feet east-northeast of the subject property at a higher elevation. The site was historically identified as a large quantity generator on March 23, 2014. NAICS Code 221122 (Electric power distribution) was found. No violations or evaluations were found for the site.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there is one (1) RCRA-SQG sites within approximately 100-feet of the target property.

- NYC Department of Education, 4004 4th Avenue, EPA ID NYR000205674: The site is located approximately 46-feet north-northwest of the subject property at a lower elevation. The site was historically identified as a small quantity generator on November 26, 2013. NAICS Code 61111 (Elementary and Secondary Schools) was found. No violations or evaluations were found for the site.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are two (2) RCRA-VSQG sites within approximately 100-feet of the target property.

Based on the information in the database report, its distance, and the presumed hydraulic gradient, it is unlikely that this listing represents a significant environmental concern to the subject property.

6.2 State Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	7 SHWS 0 Delisted SHWS
Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	0
Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	2
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	1
Registered Recycling Facility	SWRCY	0.5 mile	No	0

List				
Registered Waste Tire Storage Facility List	SWTIRE	0.5 mile	No	0
Leaking Underground Storage Tanks	LTANKS	0.5 mile	No	28 LTANKS
Petroleum Bulk Storage - Underground and Aboveground Storage Tank Databases	PBS UST/AST	Site & Adjoining	No	11 UST 25 AST 0 TANKS

Registered Drycleaning Facilities	DRYCLEANERS	0.25 mile	No	0
EDR Historic Auto	Historic Auto repair Shop	0.125 mile	Yes	4

**LEG notes that according to ASTM E 1527-21, Section 8.1.2.1, the search distance may be reduced at the discretion of the environmental professional. The potential to impact the site, including LEG's decision to reduce the search distances, was based on several factors including, but not limited to: regulatory status by applicable agencies, medium impacted, distance from the site, historical use of the site and surrounding properties, estimated direction of groundwater flow, soil/geologic factors, urban setting, and other factors. In this case, there were no databases with reduced search distances.*

In addition to the New York State (NYS) databases included on the table above, over, ten additional NYS databases were searched to determine if the subject and/or surrounding properties were listed. The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

State Hazardous Waste Sites (SHWS): SHWS records are New York State's equivalent to the CERCLIS. These properties may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. These records come from the NYSDEC. One (1) SHWS listing was identified within a 100-feet radius:

- Sunset Car Care Site (ID No. 532551), 4013 4th Avenue, approximately 49-feet southwest and hydraulically cross-to upgradient of the subject property. This property has historically operated as an automobile garage, gas station, and car wash since 1926. Three (3) USTs were identified on the Sanborn maps and two (2) USTs (possibly removed) were identified on the 1926 Sanborn Map. A petroleum spill was recorded on August 9, 2015, during a Phase II Environmental Site Assessment through NYCOER Brownfield Program. VOCs were detected in both shallow and deep soil in the location of the two (2) former USTs identified on the 1926 Sanborn Map. The groundwater results indicated exceedances in petroleum constituents and metals, while tetrachloroethylene (PCE) was detected in soil vapor. A supplemental soil investigation was also conducted which did not identify any off-site impacts that would require monitoring or mitigation as per the NYSDOH guidance. The site designation was then changed from Class P (Potential) to Class N (No further action at this time).

Based on this information, its distance, the presumed hydraulic gradient, and the historical uses of this property, it is likely that this facility represents an environmental concern to the subject property and can be identified as a Recognized Environmental Condition (REC).

NY Hazardous Substance Waste Disposal Site (HSWDS): The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that

the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So, overtime will be added to the registry or not. A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are two (2) NY HSWDS site within approximately 0.25 miles of the target property:

- G&L Eyes Inc. (EPA ID: NYD042777128): the site was identified approximately 544-feet north of the subject property at a lower elevation, however, it stated that the site is not on the NYS Registry of Inactive Hazardous Waste Disposal Sites. No other details were reported.

Based on the information provided in the database report, their distance, and/or the presumed hydraulic gradient, this facility is unlikely to represent a significant environmental concern to the subject property.

Solid Waste Facilities/ Landfill Sites (SWF/LF): This database is an inventory of solid waste disposal facilities or landfills in New York State. One (1) SWF/LF listings was identified within a 0.5-mile radius of the subject property. These listing is summarized as follows:

- Big L Excavating & Demolition: This site is approximately 2,269-feet east-southeast and hydraulically upgradient of the target property. This facility is identified as a retired C&D (construction and demolition) processing facility with no violations.

Leaking Underground Storage Tanks (LTANKS): These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills A review of the NY LTANKS list, as provided by EDR, and dated 01/24/2024 has revealed that there are twenty (28) NY LTANKS sites within approximately 0.5 miles of the target property. Each of the twenty-eight (28) LTANKS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. In addition, none of the properties with a listed closed LTANKS incident is located adjacent to the target property.

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data comes from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database. A review of the NY UST list, as provided by EDR, has revealed that there are eleven (11) NY UST sites within approximately 0.25 miles of the target property. the target property is also listed as a NY UST Site and the listing is summarized as follows:

- B&L Gas Station Enterprises, Inc., Site # 2-349399: The target property is listed with active UST status and has included tank information for four (4) 4,000-gallon USTs, which includes three (3) gasoline USTs and one (1) diesel UST. Two (2) gasoline USTs were installed on April 01, 1985, and one (1) gasoline UST and one (1) diesel UST were installed on April 01, 1989. Additionally, one (1) 280-gallon Aboveground Storage Tank (AST) used to store waste oil/used oil is also listed which was installed on April 01, 1989, and closed on October 06, 2008.

NY AST: The Aboveground Storage Tank database contains registered ASTs. The data comes from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database. A review of the NY AST list, as provided by EDR, has revealed that there are twenty-five (25) NY AST sites within approximately 0.25 miles of the target property.

NY CBS UST: The Chemical Bulk Storage Database includes facilities that store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size A review of the NY CBS list, as provided by EDR, and dated 09/06/2023 has revealed that there is one (1) NY CBS site within approximately 0.25 miles of the target property.

NY CBS UST: The Chemical Bulk Storage Database includes registration data collected as required by 6 NYCRR Part 596. It includes facilities that store hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed. A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is one (1) NY CBS AST site within approximately 0.25 miles of the target property.

Voluntary Cleanup Program (VCP) Sites: VCP sites are those facilities where the property owner has to investigate and remediate the site. New York's VCP is a cooperative program for lenders, developers and prospective purchasers to investigate and/or remediate contaminated sites and return them to productive use. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans and agrees to remediate the site to a level that is protective of public health and the environment for the present or intended use of the property. Investigation and remediation are carried out under oversight of the NYSDEC, and the New York State Department of Health (NYSDOH) and the volunteer pays the State's oversight costs. Additionally, this database also includes NYCOER E-Designated sites that are investigated/remediated under the NYC VCP program. When the volunteer completes work, a release from liability from the NYSDEC/NYCOER is provided with standard reservations. A review of the NY VCP list, as provided by EDR, has revealed that there are two (2) NY VCP sites within approximately 0.5 miles of the

target property where one (1) site is in the Completed phase and one (1) site in the Closure Phase of the remediation program.

NYCDCP Environmental Designation Sites (E-DES): Environmental "E" designation sites are those sites identified by the NYC Department of City Planning (DCP), which need to be evaluated to address potential issues related to hazardous materials, air quality and/or noise. This designation is typically associated with areas NYC has designated for re-development and/or re-zoning, and ensure that sampling and remediation (if warranted) or other measures implemented at the property if demolition, excavation and construction are proposed to be conducted. A review of the NY E DESIGNATION list, as provided by EDR, and dated 07/26/2023 has revealed that there are three (3) NY E DESIGNATION sites within approximately 0.125 miles of the target property.

The adjoining property located at 4013 4th Avenue (Block 714 and Lot 1) at 49-feet southwest of the subject and hydraulically upgradient, has E-designation requirements for Hazardous Materials, Air Quality and Noise. The facility is currently used as a garage, gasoline filling station and carwash.

Based on the information in the database report, the distance of this property and the presumed hydraulic gradient, it is likely that this facility represents a significant environmental risk to the subject property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility. A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are one hundred ten (110) NY MANIFEST sites within approximately 0.25 miles of the target property.

NJ MANIFEST: Hazardous waste manifest information. A review of the NJ MANIFEST list, as provided by EDR, and dated 12/31/2018 has revealed that there are twenty-three (23) NJ MANIFEST sites within approximately 0.25 miles of the target property.

New York Spills Information Database (NYSPILLS): NY Spills: Data collected on spills reported to NYSDEC is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date. A review of the NY Spills list, as provided by EDR, and dated 08/07/2023 has revealed that there are two (2) spills recorded on the target property and one (1) NY Spills site within approximately 100-feet of the target property:

- BP Gas Station, Site ID: 645074, NYSDEC Spill #2206825: According to the DEC notes, a spill was recorded on the target property on November 09, 2022, where a car ran over the equipment while

making delivery and approximately 5-gallon of gasoline was cleaned by the driver and attendant from asphalt. The spill was closed on November 16, 2022.

- Commercial facility at 4001-4011 4th Ave, Site ID: 582069, NYSDEC Spill #1811146: A spill was recorded on site on February 05, 2019, when contaminated soil was observed between 5 and 25 feet below grade during Phase-II investigation conducted by Castleton. The spill is not closed.
- Sunset Car Care Site, Site ID: 513543, NYSDEC Spill #1506140. The site is located approximately 49-feet southwest and hydraulically upgradient of the subject property. A Phase-II investigation test results depicted impacted soil, soil vapor and groundwater. Per the DEC Memo, a contaminated soil letter was sent to the owner of this property, but upon no response, the site was redesignated from Class P to Class N and the spill was closed on May 27, 2021.

A review of the information provided regarding the NYSPILLS listing, including the nature of the release, its distance, the presumed hydraulic gradient, and impact to groundwater, this spill is likely to represent an environmental concern to the subject property.

New York Brownfields List: In New York State, a Brownfields site is any real property in the State, whose redevelopment or reuse may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant, except those properties which are listed as Class 1 or 2 in the Registry of Inactive Hazardous Waste Disposal Sites (Class 2 sites owned by a Volunteer are eligible until July, 1, 2005); sites on the USEPA NPL; hazardous waste treatment, storage, or disposal facilities (TSDFs) permitted under ECL §27-0901 ("interim status" facilities are eligible); sites subject to a cleanup order or Stipulation under Article 12 of the Navigation Law (oil spill prevention, control, and compensation) or under Title 10 of ECL Article 17 (control of the bulk storage of petroleum); or sites subject to any on-going state or federal enforcement actions regarding solid/hazardous waste or petroleum. One (1) BROWNFIELDS sites were identified within a 0.25-mile radius of the subject property. This site is summarized as follows:

- NYC Department of Education – Public School 671K, 840 5th Avenue (NY Brownfields ID: S123159079): The site is located 1,182-feet east-northeast and hydraulically upgradient from the subject property. The historic uses of the site suggest presence of elevated train tracks and a train car repair shop, and after reconstruction, the current facility was used as a jewelry fabrication, garment assembly facility, night club, church and automobile sales and automobiles parts scrapping operations. The property was then developed as a school. The property is also listed in the PBS database, and given its historic uses, it was remediated. Prior to remediation, the primary contaminants of concern were SVOCs, VOCs, and metals in soil and groundwater, and chlorinated VOCs in soil vapor. The remedial actions successfully achieved Soil Cleanup

Objectives (SCOs) for Restricted Residential Use and the residual contamination is now managed under a Site Management Plan.

A review of the information provided regarding the NY BROWNFIELDS listing, including its distance, the presumed hydraulic gradient, and the remedial actions taken, this site is unlikely to represent an environmental concern to the subject property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns but may not show up in current government records searches.

- A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are three (3) EDR Hist Auto sites within approximately 0.125 miles of the target property. According to EDR data search, the subject property was occupied by an auto repair shop and auto body shop from 1971 through 2014. No further information is available.

6.3 Orphan Site Summary

The database report also includes nine (9)"orphan" sites, which are properties where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject property. LEG reviewed additional information available from EDR regarding this site, as well as available USEPA and NYS data and maps to determine if the orphan sites present a significant environmental risk to the subject property. None of the listed Orphan sites appear to represent an environmental concern to the subject property.

7.0 SITE RECONNAISSANCE

7.1 Site Inspection

LEG representatives Dhanraj Singh, Katherine Espinoza and Dhruvi Patel inspected the subject property on February 21, 2024.

7.2 Methodology and Limiting Conditions

Site reconnaissance included a visual inspection of the building interior, exterior areas, cold storage room, the sidewalk area along 4th Avenue and 40th Street, and the exteriors of adjacent properties. However, the roof could not be accessed.

7.3 Site Description

The subject property consists of a single tax parcel located east of 4th Avenue, west of 5th Avenue, between 40th Street to the north, and 41st Street to the south in the Sunset Park section of the borough of Brooklyn in the City of New York. The subject property is identified as Block 714 – Lot No. 6 on the New York City (NYC) tax maps.

The subject property is a single 10,017-square feet tax parcel that is currently developed with a gasoline filling station with a 1-story convenience store and parking. The gross floor area of the building is 1,860-square feet. The building occupies approximately 20% of the site footprint, and the remaining area is utilized as an asphalt-paved gasoline filling station and parking lot. The subject property is accessible from the western side of 4th Avenue and southern side of 40th Street. Street sidewalks are identified to the west along 4th Avenue and east along 40th Street of the property.

The building is currently operated by BP Gas Station and is developed with a gasoline filling station with a one-story convenience store and parking lot. The building was constructed in at least 1970 with a concrete brick structure and was altered in 1985. The current building was found to be constructed with concrete masonry unit (c.m.u.) and concrete columns during site inspection. All the areas of the property were accessed; however, the roof could not be accessed. Currently, there are four (4) 4,000-gallon active USTs which includes three (3) gasoline USTs and one (1) diesel UST on the subject property, registered as PBS #2-349399 with registration expiration date of September 08, 2028. The tanks are equipped with an automatic overfill monitoring system, secondary spill containment and interstitial leak detection system.

Upon inspecting the property, an electric box was identified at the south of the property on the exterior wall and a Consolidated Edison Inc manhole was also found on the sidewalk near the entrance of the property along 40th Street. Three (3) pump islands were located in the center of the property, with two (2) of them

closer to 4th Avenue and one (1) closer to the convenience store. Access with manholes for four (4) active USTs, interstitial monitoring and monitoring wells were located on the southwest of the property between pump islands the adjacent property. Three (3) gasoline and one (1) diesel vent lines for these USTs were located adjacent to the USTs, fixated on the wall of the adjoining property. No signs of spills or stains were identified. Three (3) waste dumpsters and two (2) drums, of which one (1) was damaged were identified on the southwest of the property near vent lines. A 95-gallon secondary containment drum was identified in the parking lot closer to the wall of the convenience store. Three (3) used tires were also identified in the parking lot.

Upon inspecting the convenience store, a cold storage room, a kitchen, racks and restrooms were identified. The exhaust units for HVAC and compressor were located on the roof.

7.4 Utilities

Based upon information provide to LEG and/or obtained during the site inspection, the following is a table of utilities supplied to the subject property and the names of the suppliers:

Utility	Provider
Domestic Water	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer	NYCDEP
Storm Sewer	NYCDEP
Electricity	Con Edison
Natural Gas	Natural Grid

7.5 Surrounding Land Use

The subject property is located in a densely developed, mixed-use urban area of Sunset Park, Brooklyn. The following surrounding land uses were observed during the Phase I ESA site inspection:

DIRECTION	ADJOINING USE(S)	VICINITY USE(S)
North	Attached commercial and residential buildings. • Along 4th Avenue	Residential
South	Attached commercial and residential buildings, and a School. • Along 41st Street	Mixed-use
East	Attached residential buildings. • Along 40th Street	Residential
West	Attached residential and commercial buildings. • Along 41st Street	Mixed-use

Surrounding properties are used for mainly commercial and residential purposes; industrial properties were identified within a one-mile radius.

7.6 Interviews

A User Questionnaire was sent and Shia Lefkowitz, the owner of the property filled it and provided with the information.

7.7 Summary of Environmental Site Features

7.7.1 Chemical Use and Storage

Typical household cleaning and maintenance chemicals were observed within the restroom in the convenience store. Unopened cleaning agents, anti-freeze, automobile oils and other typical products were identified on the racks within the convenience store which is normal for a store near a gas station. The on-site storage of these substances is not a REC. No evidence of oil spills/staining was observed.

7.7.2 Hazardous and Non-Hazardous Waste Storage and Disposal

No evidence that regulated hazardous materials and/or hazardous wastes are generated, treated, stored, or disposed of at the site was observed on the date of the survey.

- Solid wastes and recyclables generated on the property are stored in three (3) dumpsters identified on the southwest of the subject property. The garbage disposal service was provided by Mr. T Carting (BIC #173). No evidence of staining or liquid waste was observed around the dumpsters. Two (2) drums were also identified near these dumpsters, of which one (1) was damaged and needs to be disposed of legally from the subject property. This damaged drum represents a De Minimis condition.

No other environmental conditions, associated with solid waste generation, storage, and disposal were identified on the subject property during the reconnaissance.

7.7.3 Underground and Aboveground Storage Tanks

The site building was heated and supplied with electricity. Heating, ventilation, and air conditioning (HVAC) equipment was located atop the building roof.

Four (4) 4,000-gallon USTs including three (3) gasoline USTs and one (1) diesel UST were identified on the subject property. These tanks are registered as PBS #2-349399 with registration expiration date of September 08, 2028. The tanks were equipped with an automatic overfill monitoring system, secondary spill containment and interstitial leak detection system. No spills/leaks were identified in the vicinity of the UST. No RECs are associated with the on-site USTs due to proper condition and maintenance.

Additional information may be available in files maintained by the FDNY, NYCDEP and/or NYCOER, however, no responses to LEG's FOIL requests have been received to date. Any information received from these agencies will be reviewed upon receipt and pertinent information forwarded to the client.

7.7.4 Sanitary and Stormwater Disposal

The subject property is serviced by the NYC municipal sewer system. Storm drains and floor drains that discharge directly to subsurface soils pose a potential environmental concern because they provide a pathway for impacts to the subsurface and are classified as Class V injection wells under the USEPA's Underground Injection Control (UIC) program. These structures are required to be properly closed or permitted to stay open.

- One (1) floor drain leading to the storm drain was identified near the parking lot. Curbside drains reportedly discharge to the municipal sewer system and were identified along 40th Street. The floor drains reportedly discharge to the New York City municipal sewer system, which is consistent with the presence of subgrade piping observed during the site inspection. As such, the drains would be exempt from UIC Program regulations. No chemicals are stored near the floor/trench drains. No significant staining, corrosion, odors or other evidence of potential environmental impairment was observed around the floor/trench drains.

7.7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

No hydraulic automotive lifts, electrical transformers, hydraulic elevators, or other equipment suspected to contain PCBs were identified within the building on the subject property at the time of the site inspection.

7.7.6 Debris, Dumping and Surficial Staining

No evidence of chemical spills or stains was observed on the property at the time of the site inspection, except for de minimis strong odors associated with oil and asphalt burning were observed in the area, consistent with the traffic and road construction. Based on the review of historical and regulatory records, no evidence of landfills, and/or direct burial activities was observed on or proximate to the subject property. However, as the central and northwestern portions of the property were previously developed with a service station, there is a

potential for fill materials to be present. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on site. The potential presence of fill materials is considered a BER.

7.7.7 Stressed Vegetation

No stressed vegetation was present at the time of inspection.

7.7.8 Other Environmental Concerns

LEG also inspected the subject property for evidence of the following potential environmental concerns:

OTHER AREAS OF CONCERN		
Area of Concern	**Not Observed**	**Observed**
Chemical/Petroleum Odors		X
Pools of Liquid	X	
Stains or Corrosion	X	
Unidentified Containers	X	
Pits, Ponds, or Lagoons	X	
Monitoring or Other Wells		X
Stained Soil or Pavement	X	
Air Quality	X	
Stressed Vegetation	X	

Monitoring or Other Wells

The site inspection identified monitoring wells surrounding the USTs that are usually installed for monitoring of subsurface conditions around the USTs for presence of gasoline or diesel contamination. Two (2) monitoring wells, potentially from previous investigations were also found in the west and northwest of the property along 4th Avenue.

8.0 NON-SCOPE CONSIDERATIONS

8.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Queens area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 81 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.620 pCi/L (living area) and 0.970 pCi/L (basements). Data indicate that approximately 6% of basements tested showed results in excess of the 4.0 pCi/L USEPA action level.

The Federal EPA Radon Zone for Kings County is 3, which indicates that the indoor average level of Radon is likely to be less than 2 pCi/L. Based on the data, radon is not likely to represent an environmental concern for the subject property.

8.2 Lead-Based Paint

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces conducted during the site inspection indicated that interior paint within the building was in fair to good condition Paint within the office spaces were generally in good condition. The building exterior walls were finished with paint and appeared to be in good condition. The lead content of the paints is unknown, hence, possible presence of lead-based paint is not a business environmental risk (BER). The disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and State regulations.

8.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). Suspected asbestos-containing non-friable pipe insulation (approx. 5-feet in length) was identified in the basement hallway ceiling (near the electrical room) and within the emergency generator panel room. These materials were generally in good to fair condition and the materials were not sampled to avoid needlessly damaging them. Additionally, due to the age of the building, it is

possible that roofing, roof flashing, caulking putties, construction mastics, and other (inaccessible) building materials contain asbestos. No sampling of suspect ACMs was conducted in coordination with this Phase I ESA.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect ACMs. No friable asbestos-containing surfacing, spray-on or thermal system insulation materials were observed in the areas inspected on site. LEG observed non-friable vinyl floor tile and ceilings. These materials were in generally good to fair conditions, except for a few water-stained ceiling tiles. No sampling was conducted of any materials in coordination with this Phase-I ESA.

Thermal insulation, surfacing materials, and vinyl/asphalt floor materials installed before 1981 are presumed to contain asbestos. The Occupational Safety and Health Administration (OSHA) asbestos standards (effective October 1995) require owners of commercial or industrial buildings (constructed before 1981) to identify potential asbestos hazards, keep records about potential asbestos hazards, post signs to warn of asbestos hazards, and communicate information about the hazards.

8.4 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn, NY Quadrangle, indicated that there are no NYS freshwater wetlands located within a one-mile radius of the subject property.

Tidal wetlands line much of the saltwater shore, bays, inlets, canals, and estuaries of Long Island and New York City, and Westchester County. The tidal wetlands regulations apply anywhere tidal inundation occurs on a daily, monthly or intermittent basis, including but not exclusively within the salt wedge. Vegetation in intertidal areas beyond the range of the salt wedge is classified as coastal fresh marsh. In accordance with the New York State Tidal Wetlands Land Use Regulations (6 NYCRR Part 661), sixteen wetland categories are defined in the regulations. Coastal and tidal freshwater wetlands categories are identified by the presence of a tide and the types of vegetation present. The categories of wetlands and the restrictions placed on activities in and around them are defined in detail in 6 NYCRR Part 661.

LEG also reviewed NYSDEC Tidal Wetlands Maps available online via the NYS GIS website. The tidal wetlands map (No. 582-500) showing the subject and surrounding properties indicates that Upper New York Bay located approximately one-quarter mile west-northwest of the subject property is classified as Littoral Zone (LZ) tidal wetlands. LZ wetlands are defined as the tidal wetland zone that includes all lands under tidal waters which are not included in any other category. There shall be no LZ under waters deeper than six (6) feet at mean low water.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicates that the nearest potential federal wetlands are located approximately 0.5-mile to the northwest and 0.5-mile to the north of the subject property.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject properties are located within the 100-year or 500-year flood zones. The FIRM depicted the property on No. 3604970194F section and are not located within the 100-year flood zone.

8.5 Mold and Water Damage

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. Minor water stains were identified on the ceiling within the convenience store; and no active water leaks or visible mold growth were observed within the convenience store on the subject property.

8.6 Vapor Encroachment

As part of this assessment, LEG evaluated the potential for vapor encroachment into onsite structures following the general methodology outlined in ASTM E-2600-15 utilizing professional judgment. The Tier 1 screening assessment was employed to determine if a potential vapor encroachment condition (VEC) exists at the site. The site, adjoining properties and hydraulically upgradient properties were assessed for known or suspected contaminated facilities within approximate minimum search distances. A Tier 1 screening assessment generally consists of the following: a search distance test to identify if there are any known or suspected contaminated sites within the area of concern (AOC); a chemicals of concern (COC) test to determine if chemicals of concern exist at the known or suspected contaminated facilities and a plume test to determine whether or not COC in the contaminated plume may be within the critical distance (or AOC). The critical distance is defined as the linear distance in any direction from the nearest edge of the plume to the site. If the critical distance from the site to the nearest edge of a petroleum hydrocarbon plume is within 528 feet (1/10-mile) or within 1,760 feet (1/3-mile) for nonpetroleum COC (e.g., trichloroethylene, perchloroethylene, etc.), then it is assumed that COC are within the AOC and a potential VEC exists, and additional screening

may be necessary. The critical distance and AOC may be modified using professional judgment based on hydraulic gradient direction and contaminant plume width.

The decision to recommend additional screening, even if a potential VEC is determined by distance, is based on other criteria including existing and planned use of the property, type of structures potentially impacted, physical setting, hydraulic gradient, depth to groundwater, soil characteristics, activities in the surrounding area and the presence of natural or manmade conduits.

- Based on an evaluation of this collective criteria, the potential for a VEC from current and historic land use activities at the subject and surrounding properties is considered moderate to high due to long term use of the site and adjacent properties as gasoline filling station, auto repair and car wash. As well as the documented soil, groundwater and soil vapor impacts on the subject property and adjacent property (at southwest on 4th Avenue). Although the site building is utilized for commercial purposes, the subsurface conditions of the subject should be further evaluated.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA has been prepared in conformance with the scope and limitations of ASTM Practice E1527-21 (inclusive of the USEPA all appropriate inquiry requirements) for the commercial property located with 4th Avenue on the northwest and 5th Avenue on the southeast, between 40th Street to the northeast, and 41st Street to the southwest in the Sunset Park section of the Brooklyn borough, New York City, New York. The subject property is identified by the street address of 4001 4th Avenue, , and as Block 714 – Lot No. 6 on the New York City (NYC) tax maps. Any exceptions to, or deletions from, this practice are described in the section of the report entitled Limitations and Exceptions.

Based on the results of LEG's site inspection and records review, it was determined that the following RECs were identified for the subject property, which are summarized as follows:

- Information obtained from multiple historic sources revealed that the subject and multiple adjacent/surrounding properties were historically utilized as gasoline filling stations, auto repair and car wash. The previous environmental subsurface investigations have also indicated impacted subsurface conditions due to the historic uses of the subject property as well as the adjacent/surrounding properties. Thus, LEG considers the historic use of the subject property and adjacent properties to be a REC.
- During the review of 1926 Sanborn maps, a gasoline UST was identified in the northern portion of the subject property. Since the status of the UST is unknown because of lack of documentation, LEG considers this as a REC.
- A geophysical investigation conducted by Castleton identified nine (9) suspected USTs in the western section of the subject property. This study is supported by previous environmental investigations that indicated impact on soil, soil vapor and groundwater. As no documentation regarding the status of these suspected tanks and/or soil conditions in its vicinity were available for review, there is a potential for spills or releases from these tanks to have impacted the subsurface. Therefore, the suspected USTs are considered a REC.
- One (1) open spill (Spill #18-11146) is recorded on the subject property. This spill was recorded as a result of VOCs being detected above SCOs in soil during Phase-II Environmental Site Assessment conducted by Castleton. Since the subject property was not remediated and the spill is not closed, LEG considers this a REC.
- A spill was recorded on the adjacent property identified to the southwest as Sunset Car Care along 4th Avenue and the DEC Memo suggests that no delineation or remediation was conducted, however, the

spill was closed due to lack of response from the owner. This indicated that the contamination is left is place and LEG considers this a REC.

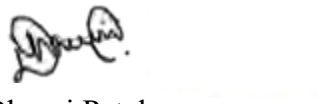
LEG identified the following environmental concerns/Business Environmental Risks (BER) and a De Minimis condition that are summarized as follows:

- A metallic anomaly non-indicative of a UST was identified in the northern portion of the subject property during Castleton's geophysical investigation. Given the historic use of the subject property as an auto service station with a loading area, the anomaly can possibly be a buried hydraulic lift and LEG considers this as a BER.
- The central and northwestern portions of the property were previously developed with a service station, so there is a potential for fill materials to be present. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present beneath the subject property. The potential presence of fill materials is considered a BER.
- Minor water staining was observed on the ceiling of the one-story building. No active water leaks or visible mold growth were observed within convenience store. The water-damaged areas identified should be removed from the building and properly disposed. LEG considers this a BER.
- Solid wastes and recyclables generated on the property are stored in three (3) dumpsters identified on the southwest of the subject property. The garbage disposal service was provided by Mr. T Carting (BIC #173). No evidence of staining or liquid waste was observed around the dumpsters. Two (2) drums were also identified near these dumpsters, of which one (1) was damaged and needs to be disposed of legally from the subject property. This damaged drum represents a De Minimis condition.

Based upon the above findings and conclusions, LEG recommends the following:

- The unregistered nine (9) USTs should be officially registered with New York State Department of Environmental Conservation (NYSDEC) Petroleum Bul Storage (PBS) Unit and closed with proper tank closure procedures as promulgated by the NYSDEC and New York City Fire Department (FDNY).
- To further evaluate the potential impacts related to the historic uses of the subject property and the spill on the subject property and from adjacent property, a subsurface investigation should be conducted by installation of soil borings and collection of representative soil, groundwater, and soil vapor samples. Further subsurface assessments are warranted to include laboratory analysis of the samples to determine the nature and extent of subsurface contamination.
- The contaminated areas should be further remediated to achieve acceptable Soil Cleanup Objectives.

The site reconnaissance, interviews and review of records have identified the presence or possible presence of hazardous substances or petroleum related products in, on, or at the Subject Property due to onsite and offsite release to the environment. Additionally, the subject property is identified as an E-Designation site requiring further evaluation of air quality and Hazardous Materials Phase I and Phase II Testing Protocol. LEG recommends that any future redevelopment of the subject property to be done must comply under the oversight of the NYC Office of Environmental Remediation (OER) to ensure that the E-Designation listing is properly addressed.



10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-21, inclusive of the USEPA "All Appropriate Inquiry" requirement published in the Federal Register on November 1, 2005. The USEPA "All Appropriate Inquiry" requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the site referenced above. LEG has developed and performed the "All Appropriate Inquiries" in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 11.0 contains the data gaps and deficiencies of the research data encountered during LEG's preparation of this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BLATCHFORD BASE PLAN Site ID: 0201944 EPA Id: NYD980531644	32 33RD ST	N 1/4 - 1/2 (0.432 mi.)	AT306	995

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/06/2023 has revealed that there are 7 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/27/2023 has revealed that there is 1 NY SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 01/24/2024 has revealed that there are 28 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 10 NY UST sites within approximately 0.25 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 01/24/2024 has revealed that there are 25 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 79 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 09/28/2023 has revealed that there are 3 FUDS sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PIER 6 BUSH TERMINAL		WNW 1/2 - 1 (0.501 mi.)	315	1009
MIL MED SUPPLY NO. 1		NNE 1/2 - 1 (0.543 mi.)	317	1010
US ARMED GUARD CENTE		W 1/2 - 1 (0.667 mi.)	319	1013

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 03/03/2023 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN MACHINE AND Site Status: Eliminated from consideration under FUSRAP Site ID: NY 26	SECOND AVENUE AND 56	WSW 1/2 - 1 (0.822 mi.)	321	1033

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 11/29/2023 has revealed that there is 1 NY DRYCLEANERS site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: 2-6102-00380

NY E DESIGNATION: Lots designation with an ?E? on the Zoning Maps of the City of New York for potential hazardous material contamination, air and/or noise quality impacts.

A review of the NY E DESIGNATION list, as provided by EDR, and dated 07/26/2023 has revealed that there are 4 NY E DESIGNATION sites within approximately 0.125 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.5 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 11/15/2021 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 9 UST FINDER sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

KINGS COUNTY WORKS	55TH ST. AND 1ST AVE	WSW 1/2 - 1 (0.827 mi.)	AV322	1034

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

DEC Memo: shallow in pack to soil clean up pending insurance
Remarks: DEC Piper spoke with Justin at WRS. While performing borings for a phase II, contaminated soil was observed between 5 and 25 feet below grade. A full Phase II report will be sent to DEC Zhune upon completion. Site is currently an active gas station. PBS 2-349399 1/25/19 Castleton Environmental prepared the phase II Environmental Site Assessment dated January 25, 2019. Catleston has prepared the following Phase II report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York. The investigation was performed based upon review of the phase I ESA by MECC dated January 7, 2019. The objectives of this work were to determine if the sites historic and current usages as a gasoline station has impacted the subsurface. The objectives was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples. The geophysical survey identified the presence of the 4 in-use USTs, nine suspect USTs that are currently not in use, and one metal anomaly that is not indicative of a UST. Six soil borings were advanced, and six soil samples collected for laboratory analysis. Analytical results reported concentrations of VOCs above applicable standards in five of the six soil samples analyzed. Castleton recommends the following: . Notification of these findings be made to NYSDEC . The suspected USTs be assessed and, if are present, properly removed as per NYSDEC protocols . Petroleum impacts to soil be delineated and remediated under the NYSDEC Spills Program 2/20/19-Justin, The DEC require the work plan from this site. 2/2/19-Thank you Veronica, as soon as we confirm if there any old USTs, we will prepare a Work Plan for further investigation and possible UST removal and soil disposal. 2/21/19-Please send the revise report with the following: 1. Correct boring logs. Log #2 and # 3 are duplicate. 2. Scale site plan including piping, active tanks, dispensers, remote fill port if any 3. Complete delineation of soil contamination and investigation for groundwater with site specific groundwater flow direction. 4/3/19-I received the corrected boring log from Castleton Environmental. As I mentioned we did not do the Phase II Report or the Phase I. Im working on getting scaled site plan, and as soon as we know the status of the suspected former USTs , I will be drafting a Work Plan. I asked Castleton why they did not go deeper on borings B-4, B-5 and 6 and they mentioned they hit refusal at 30 , 20 and 24.5 at 4, 5 and 6. If that s the case we will not reach groundwater at 60 feet. 2/24/20-Would you be able to issue a letter with the requirements of the work Plan? We are having a little trouble with the current tenant getting access to the site and I think a letter from DEC would help us explain to them that we need access to the site. 2/25/20-A CSL letter was sent to: LiIla LOmanov B&L Gas Station Enterprises Inc. 4001 4th AV Brooklyn NY 11232 3/23/20- Veronica may I request a 2 week extension on the RIWP due March 25th, given all that s going on with the COVID-19 crisis I need a little extra time. 3/23/20Justin, You can take the two week extension. 4/7/20-Hi Veronica, I hope you are safe and well. Just an update: Im currently working on the Remedial Investigation Work Plan for delineation of soil and excavation of former USTs (if present). I ll have the Work Plan to you by close of business on Friday April 10th. Is this ok? 4/8/20-Veronica I hope you are well. Are you available to breifly speak? Also wondering if you are ok with my request to submit work

COMMERICAL (Continued) **S123660794**

plan Friday?. Thank you Justin 631 774 6682 4/9/20-Veronica thank you for speaking with me before. Please see the attached RIWP for spill 18-11146- 4th Ave Brooklyn site. 4/9/20 Justin Halpin emailed the Remedial Investigation Work Plan dated April 9,20. The Remedial Investigation Work Plan includes: confirmation of the presence of suspect USTs identified during Phase II; supplemental vertical delineation of soil contamination; attempt to collect and analyze groundwater samples; provisions to remove the suspect USTs; excavation of contaminated soils if excavation of historic USTs is warranted; and reasonable altenatives to an in-situ approach for remediating contaminated soils. 4/17/20-The Remedial Investigation work plan was approves. An approval letter was sent to Joseph Machia dated April 17, 20. Justin Halpin emailed The supplemental Remedial Investigation Report dated April 17, 20. In Conclusion, the supplemental sampling data will be used to develop a Remedail ActionPlan (RAP) in Oreder to address soil contamination. No groundwater was encountered during any of the investigation conducted and is expected to be approximately 50 feet or more below grade surface. The supplemental sampling results indicated that vertical delineation was achieved at the B-5 and B-8 locations. At the B-4 location delineation was not feasible due to bedrock refusal at a depth of thirty feet (30'). The majority of contamination at this boring was detected in the fifteen (15') feet to twenty five (25') horizon with PID reading as high as 4,500ppm. Beyond this depth from 25'-30'PID readings drastically waned to levels in the 500 ppm range. Based upon the successful vertical delineation at two (2) locations B-5 and B-8 and the inability to advance beyond the refusals encountered at the surface of the bedrock at the B-6 location, a Remedial Action Plan (RAP)to to address contaminated soils will be issue to the Department. 8/31/20 - Obligado - As per Randall Austin, this long-term remediation Spill case is transferred to Jon Kolleeny. 03/30/21: I sent email to Justin Halpin of Berninger Envt'l: Justin, Going thru my open spills, I came across this case, which was assigned to me in August 2020. Comments in spills database indicate you were communicating with previous DEC case manager, Veronica Zhune, and that a RAP to address contaminated soil was to be prepared. Can you update me on this site? Is Berninger Envt'l still involved as consultant? Has a RAP been prepared? Is Joseph Macchia spill Responsible Party? Please let me know, and if any rpts have been submitted to DEC since last August, please forward them again to my attention. Received reply from Justin: Let me look into this with owner. I believe it is still owned by Macchia group. We did do an investigation and proposed a remedial plan and that s when I was informed case was being transferred. I'll get back to you ASAP. - JK 04/01/21: Found Remedial Action Plan by Berninger Envt'l, Inc. dated August 2020 in DecDocs. RAP proposes install'n of an SVE system to address contaminated soil at site. Proposed system would include four vapor extraction wells installed to a depth of 30 ft, with 5 ft of riser and 25 ft of screen. Below-grade piping will connect SVE wells to an equipment shed with a blower and moisture separator (water knock-out drum). A fresh-air inlet will be installed on main influent piping leg prior to blower to reduce exhaust stack emissions by dilution. Air emission control equipment (carbon drum) will be installed if necessary, based on results of first air discharge sampling event, to reduce or eliminate VOCs in system exhaust prior to exiting stack. Height of exhaust stack will be 15 ft, with 5 ft projecting above equipment shed. RAP states that during 1st month of

COMMERICAL (Continued) **S123660794**

operation, weekly O&M inspections will be conducted, with vapor influent screening and lab sampling to establish a baseline for future calculation of contaminant mass removal. Vapor effluent sampling will be performed quarterly with a summa canister. Quarterly rpts will be submitted to DEC documenting O&M activities and vapor effluent sampling results. RAP states that BEI will be prepared to mobilize within 60 days of RAP approval, and system install'n fieldwork is anticipated to take 7-10 days. A Construction Completion Rpt will be submitted to document layout of constructed system, with as-built drawings, baseline effluent levels, etc., plus discussion of post-mitigation testing results and protocol for system termination procedures. - J. Kolleeny 04/02/21: I sent email to Justin Halpin of BEI: Justin, I checked documents in our database related to this spill and found that Berninger Envt'l submitted a RAP in August 2020. However, RAP was not formally reviewed or approved. I looked over plan, which proposes install'n of an SVE system with 4 extraction wells to address soil contamination at site. Plan looks good, but I would like to request some revisions & additions to RAP. First, please complete attached SVE Data Sheets and add them to RAP. You should use existing soil data with highest benzene result to calculate benzene influent vapor concentration. One of Phase II soil samples had 20 mg/kg (PPM) of benzene, which is pretty high, so I believe system should incorporate vapor treatment. If you don t agree that vapor treatment is necessary, you can go with current system design without vapor-phase carbon treatment units, but I ll require that a system off-gas sample be collected shortly after system startup and submitted for lab analysis. System should be shut off while awaiting lab results to see if they confirm that benzene doesn t exceed DEC discharge standard. Even if system s air discharge meets benzene limit, system may need vapor treatment if there are any nuisance odor complaints from local residents. Also, I ve attached an example of an OM&M Table listing basic monitoring & maintenance requirements for an SVE system. Please modify this table as necessary to be site specific and include it in revised RAP. RAP does not discuss how SVE radius of influence (shown around extraction wells on Fig. 2) was determined; revised RAP should specify vapor extraction ROI and discuss how it was determined. Also, RAP should include a short section on physical setting of site, with geological & hydrogeological information. In other words, it should state elevation of site above sea level, and should include estimates of depth to bedrock and depth to GW at site based on documents by USGS, NYCDEP, and/or other sources. I know that both Phase II rpt by previous consultant and rpts by BEI state that borings met refusal on bedrock at about 30 ft below grade, but I am skeptical that it was truly bedrock, as it s my understanding that this area of Brooklyn is composed of glacial moraine deposits which may include large boulders that could give impression of hitting bedrock. If it turns out that your sources indicate bedrock at site is much deeper than 30 ft, so refusals were not on actual bedrock but on boulders in glacial till, then I may require an attempt to install a well at site to evaluate whether GW has been impacted by fuel release(s). Finally, Responsible Party (Joseph Macchia) will need to sign a Stipulation Agreement for this spill in order to run SVE system. Stipulation Agreement will authorize system s vapor discharges without having to obtain a permit from our Air Division. I am putting together Stipulation Agreement now and will be sending it to Mr. Macchia soon. Please let me know if you have any questions about any of this, and feel free to call to

COMMERICAL (Continued) **S123660794**

discuss. - JK 04/02/21: I sent Stipulation Agreement with Corrective Action Plan (CAP) to Mr. Joseph Macchia of The Macchia Group, plus cover letter (cc'ing DEC atty James Simpson). Due date for return of signed Stip is 4/30/21. CAP indicates that a revised RAP addressing comments in my 4/2/21 email to BEI must be submitted to DEC within 30 days of execution of Stip. - J. Kolleeny 05/06/21: In discussions with Justin Halpin of Berninger Envt'l, we agreed to temporarily put RAP on hold and suspend deadline for return of signed Stip by RP Joseph Macchia and to conduct a GW investigation to evaluate potential impacts to GW, which could affect remedial plan. - J. Kolleeny 05/17/21: Reviewed GW Investigation & Soil Profiling plan by Berninger Envt'l Inc., dated 5/17/21. Plan proposes to investigate whether soil contamination at site has impacted GW by installing a permanent 2-inch well at location of hottest soil sample during earlier site investigation by BEI (Boring B-4). Plan proposes to use air rotary drilling to penetrate later of rock(s) at which earlier borings met refusal. To characterize soil conditions below 30 ft bgs, soil profiling will be conducted from ~30 ft bgs down to GW interface, expected to be at ~50 ft bgs. Soil samples will be collected using dual-tube sampling method, screening soil at 2.5 ft intervals with a PID, and sending samples with highest PID readings and from just above water table to lab for analysis. Lab results will be compared to DEC Part 375 Unrestricted Use SCOs. I sent approval letter to RP Joseph Macchia, cc's to Justin Halpin & Alicia Patti of BEI. - J. Kolleeny 10/27/21: Reviewed Supplemental Investigation Soil & GW Rpt aka GW Investigation Soil Profiling Rpt by Berninger Envt'l dated 10/8/21. Rpt summarizes drilling of a boring and install'n of a well at location of former boring B-4, where highest levels of soil contamination were found in a previous site investigation. Using an air rotary drill rig, BEI was able to penetrate thru rocky stratum at ~30 ft bgs. Boring was drilled to depth of 65 ft; soil screening starting at 30 ft showed highest PID reading of 1,000 ppm in interval from 30-32.5 ft, PID readings decreased steadily from 32.5 to 50 ft, and no PID hits were detected from 50-65 ft. A soil sample was collect from 45-50 ft interval, with PID reading of 9 ppm; analytical results showed almost no detections of VOCs, and no compounds exceeding Part 375 cleanup objectives. A 2-inch well was set at 50 ft, with screen extending from 50 ft up to 25 ft (according to boring log; text says screen is 20 ft long, extending from 50 ft to 30 ft bgs). Rpt states that soil was only saturated from 35 to 40 ft bgs, with dry soil below 40 ft, indicating a perched groundwater condition. GW sample from well had highly elevated levels of BTEX compounds (~40 mg/L total BTEX). Rpt's Conclusion states that highly elevated levels of soil contamination extend to a depth of ~35 ft, with contamination ending at 50 ft bgs so soil impacts have been vertically delineated; soil was dry from 40' to 65', with a 10 ft zone of perched water from 30 to 40 ft (contradicts earlier statement in text). Rpt states that there are plans to redevelop property, at which time any suspect tanks and contaminated soil can be easily excavated. - J. Kolleeny 10/27/21: I sent email to Justin Halpin of Berninger Envt'l: Justin, I ve looked at October 2021 Soil and GW Rpt for this spill site, and have some thoughts and questions. First, fact that you found very contaminated perched GW (~40 ppm total BTEX!) concerns me because there is a nearby sensitive receptor subway lines that run along 4th Ave (D, N & R Trains). We have a number of spill sites where free product and/or contaminated GW migrated into subway stations, causing odor problems and other

COMMERICAL (Continued) **S123660794**

headaches. Can you try to find out depth of subway lines where they pass in front of this site, and maybe put together a cross-section diagram of subsurface showing subway tunnel in relation to soil stratigraphy and perched GW zone? Along these lines, I will probably be requesting install'n of another well to delineate perched water zone and see if it extends towards 4th Avenue and subway lines. Former borings B-8 & B-5 are potential locations for addt'l wells. I m also concerned about potential presence of free product on perched water, and I think it s possible that well already installed was constructed in so that it could ve missed floating product. Rpt describes saturated zone as extending from 30 to 40 ft bgs. Well was installed to a depth of 50 ft, and screened section extends from 50 ft up to 30 ft, i.e., just about to top of saturated zone. If I request one or more addt'l wells to delineate extent of perched water, they should probably be installed to 40-ft depth, with 15 ft of screen (i.e., from 40 to 25 ft bgs). Have you gone back to site and checked existing well (I m assuming it s still there?) for free product? Is it possible to determine if screen is submerged or if there is daylight above water level in well? I'm also considering whether to require another attempt to reach regional aquifer, to see if GW there has been impacted. Regarding request to put RAP on hold: fact that there are plans (tentative?) to decommission gas station in late 2024 means that if an SVE system is installed in next couple of months, it could operate for almost 3 years, which in my experience is enough time to recover most volatile contaminants. And decommissioning could easily be delayed. Even if it does occur in 2024, RAP hold request letter says that station will likely be excavated to a depth of ~15 ft, while contaminated soil extends to depths of ~35 ft at site, so a lot of contamination would be left behind by excavation. If soil remediation is required, it would be a good idea to conduct an SVE pilot test by installing a vapor extraction test well down to end of unsaturated zone (~30 ft bgs), with 20 ft of screen, and attaching a blower to extract soil vapors and collect a vapor sample(s) for PID screening and lab analysis. I will continue to think about rpt and these issues, but I d like to get your feedback before I issue a formal response to your client. Please feel free to call to discuss. - J. Kolleeny 11/02/21: Received email reply from Justin Halpin of BEI: Jon, Yes we can see what s going on out there and get depths on subways. We may be able to screen ambient air with a PID in subway to see if there are any significant volatile levels from spill, but I think subway stations are at 45th St & 36th St, quite a ways from our site and not in down-gradient of anticipated GW flow. We can investigate this when we gauge new MW-1 well. We will check well (still intact and secured with a manhole cover), but I believe we had a DTW at ~30 . I also made a typo in Rpt on screened interval stating 20 of screen when it's actually 25 . Well log depicts this interval so I will revise text to match log, Figures 3a & b. So we definitely have about 5 ft of daylight above water table. We will also gauge well for floating product. When we initially purged and sampled there was a sheen but no free phase product. As far as regional aquifer, we actually hit dry soil from 40-65 , and delineated to 0.0 on PID at 50 all way to 65 , so I would believe based on this that regional aquifer has not been impacted. Regarding RAP, we can excavate deeper if we had to, probably to 20-25 . We can also do a pilot test to see what kind of VOC concentrations we extract. I wouldn t be surprised if soil from 25 -45 was within unrestricted SCOs as a majority of contamination

COMMERICAL (Continued) **S123660794**

looked like it was from 15-25 , after that PID readings significantly dropped. I will send a revised Rpt for record with revision of screened interval in text to match well log. - J. Kolleeny 11/04/21: I sent reply to Justin Halpin of BEI: Justin, I don t think there s a need to screen subway stations with a PID at this time, since we have not received any rpts of petroleum odors. I realize site is midway between two subway stations which are a few blocks away, but there s still a possibility that if perched water body extends far enough, contaminated GW could eventually impact subway tunnel and from there impact one or both stations, so I think it s worth installing another well in perched water body, down-gradient of first well, to see if perched water extends in that direction. Once addt'l well has been installed, both wells should be gauged and sampled (assuming you find sufficient water for sampling in newer well). I did notice that boring log for first well indicates that screen extends from a depth of 50 ft up to 25 ft, so if that s accurate and text is incorrect, then I agree there should be sufficient screen to extend above water level and allow any free product, if present, to enter well. Regarding need for a well drilled to regional aquifer, it s good that you had clean soil from 50 ft to 65 ft in that boring; however, petroleum and/or contaminated precipitation water may follow tortuous pathways as they travel downward thru soil, so I wouldn t say a single boring ending with 15 ft of clean soil conclusively proves that contamination has not traveled down to regional aquifer. I need to think about this a little more though. Can you let me know elevation of site above sea level? Finally, I appreciate that soil excavation during decommissioning of gas station and removal of all tanks & piping could be extended to 20-25 ft, but I discussed request to postpone remediation until station is decommissioned with my supervisor, and he was not receptive to idea of waiting 3 years (at a minimum, with potential delays) to remediate spill. And in fact, NYS envt'l regs require that petroleum releases be contained immediately, and that a cleanup should be performed to rapidly remove discharge. So I d still like you to install a dedicated SVE well screened entirely in unsaturated soil zone and perform an SVE pilot test to see if hydrocarbon vapors can be recovered and determine an ROI. In my experience, three years is enough time to design and install an SVE system and operate system to remove a major amount of recoverable volatile gasoline-related compounds from soil. But let s first see if SVE would be effective at this site. I will prepare a letter to your client requesting a work plan for install'n of a well to delineate perched water zone, install'n of an SVE test well, and performance of an SVE pilot test. Please let me know about site s elevation above sea level. - J. Kolleeny 11/04/21: Received email reply from Justin Halpin of BEI: Ok thank you Jon. Ground elevation above sea level is 55 where we conducted boring. I'm thinking we are in actual aquifer given this elevation, it was just perplexing how it went dry. It is possible there is just slow recharge at 50' + and we just didn t notice that it was only slightly saturated. Either way we can install an SVE pilot well and run a pilot test. I'll work on prepping an SVE Pilot Test Work Plan in order to determine VOC recovery and ROI. I sent reply: Justin, That s interesting that you say you may already have reached regional aquifer. If site is 55 ft above sea level and depth to water is about 30 ft, that would mean water table is at 25 ft above sea level, which seems a little high considering site is fairly close to bay. On other hand, if you haven t hit regional aquifer by 65 ft below grade, that would suggest regional water table

COMMERICAL (Continued) **S123660794**

is located far below sea level, which also doesn t seem right! But of course it s very odd that you only had saturated soil from 30 to 40 ft, and that soil from 40 to 65 ft seemed completely dry! If well is in fact installed into regional aquifer, it would mean regional GW (not just a perched water body) is very contaminated, in which case you'll have to devise a remedial plan to address both soil & GW contamination even if there is no threat to subway tunnel. Maybe you should develop a work plan for a pilot test of AS/SVE instead of just SVE? Or come up with other ideas to treat both soil & GW? In light of this, I will have to ask for more than one delineation well at site. 11/05/21: I sent letter to RP Joseph Macchia, cc's to Justin Halpin & Alicia Patti of BEI, responding to BEI's 10/8/21 Supplt'l Investigation Soil & GW Rpt, aka GW Investig Soil Profiling Rpt. Letter stated that GW at site, whether a perched GW zone or regional aquifer, constitutes waters of NY State, protected by envt'l regs and subject to spill cleanup requirements. Letter also noted that site is very close to 4th Ave subway line, a potential sensitive receptor, and that contaminated GW identified at site could pose a threat to subway line. Then stated that site redevelopment, which BEI rpt suggested as way to address contamination, is not scheduled until at least late 2024, and that delaying remediation until then is unacceptable. Letter said GW impacts at site must be delineated and characterized, and remedial strategies to address both soil & GW contamination must be evaluated. Therefore, DEC requires that at least two addt'l monitoring wells be installed at site to delineate GW contamination, esp in direction of subway line, and to accurately determine local GW flow direction. In addition, pilot testing of one or more remedial technologies appropriate to address site conditions should be conducted. Letter required that a work plan proposing install'n of addt'l monitoring wells and performance of remedial pilot testing at site be prepared & submitted by 12/3/21. Finally, letter noted that care should be taken to ensure proposed well borings are not located too close to 4th Avenue subway tunnel. - J. Kolleeny On 12/21/21: Reviewed Supplemental Remedial Investigation and Pilot Study Work Plan by BEI dated Dec. 2021, submitted by email on 12/3/21. Work plan proposes collection of GW samples via install'n of two new monitoring wells, down-gradient (i.e., NW) of existing well MW-1 in direction of 4th Ave. subway lines. Work plan states that depth of subway tunnel will be investigated to evaluate potential impacts to this sensitive receptor. Wells will be 1 internal diameter, with 10 ft of screen (25-35 ft bgs) and 25 ft of PVC riser. Work plan also proposes performing an SVE pilot test by installing a 2-inch diameter SVE well screened in vadose zone (10 ft of screen from 15' to 25', and 15 ft of riser). BEI anticipates SVE ROI to be 5-10 ft; new and existing monitoring wells will be used to measure vacuum influence. A rpt of findings will be issued after lab results for GW samples and SVE pilot test are received and evaluated. - J. Kolleeny 12/22/21: On 12/21/21, I sent email to Justin Halpin of BEI: Justin, I m reviewing Supplemental Remedial Investigation Pilot Study Work Plan, and have questions. Plan proposes two addt'l monitoring wells (MW-2 & MW-3) to delineate GW impacts found in first well, but text says new wells will be 1-inch internal diameter. To add further confusion, top section of Fig. 3, Proposed Monitoring Well Log, indicates that casing & screen for each new well will be 2-inch diameter, but Well Design Drawing further down page has arrows pointing at well drawing with labels, (25) of 1 PVC riser and (10) of 1 PVC 0.02 slot screen. I believe first well installed, MW-1, is a

COMMERICAL (Continued) **S123660794**

2-inch diameter well; why is BEI now proposing to install 1-inch wells? I understand site has difficult drilling conditions, but I think it makes more sense to put in 2-inch wells which, altho not as useful as 4-inch wells for remediation, have some ability to be used for remediation if significant petroleum impacts (e.g., free product) are found at proposed locations. I m also not sure I agree with proposed location of one of new wells, way to the NE closer to 40th Street. Can that well be installed in front of dispenser islands, closer to earlier soil borings done at site? Finally, it s not entirely clear if BEI is proposing to sample soil during install'n of new wells. In Section 4.0 Scope of Work, on page 2, second paragraph states, All soil & GW samples will be placed in laboratory approved glassware , but that s only mention of soil sampling. Will soil samples be collected & screened during well install'n? Unless new wells will be drilled at locations of earlier soil borings, soil sampling should be performed to further delineate lateral extent of soil impacts. Please let me know your thoughts, and feel free to call to discuss. On 12/22/21, Justin replied, Ok thank you, I will revise Work Plan based on comments. - J. Kolleeny 04/01/22: Reviewed Supplemental Remedial Investigation Work Plan by BEI, dated 3/28/22. Work plan proposes install'n of two addt;l monitoring wells (MW-2 & MW-3) at site down-gradient of existing well MW-1, to delineate and further characterize GW contamination identified in that well. New wells will be installed at approx locations of former soil borings B-5 & B-8. Rpt notes that soil screening & sampling were performed while advancing those borings (w/preparation of boring logs), so soil at these borings has been characterized and significant VOC levels were found at these locations. Therefore, no addt'l soil sampling is proposed for this investigation. New wells will be constructed of 2-inch internal diameter PVC casing & screen. Work plan states that based on results of GW samples from new wells, BEI will develop a pilot study work plan to evaluate remedial strategies to address subsurface petroleum impacts at site, including SVE, AS, and ISCO. BEI will also investigate location of nearby MTA subway lines in relation to site and wells and will issue a Rpt of Findings with results of this investigation. I sent letter to Joseph Macchia (RP), cc's to Justin Halpin & Alicia Patti of BEI, approving work plan but stating: (1) once new wells have been installed, new wells plus existing well MW-1 should be sampled to provide up-to-date data; and (2) fieldwork should be scheduled asap, and by no later than 4/29/22. - J. Kolleeny 12/19/22: Reviewed Supplemental Remedial Investigation Rpt and Pilot Study Work Plan by Berninger Envt'l, Inc. (BEI), dated Nov. 2022. Rpt states that altho two addt'l monitoring wells were proposed to delineate GW impacts, only one boring (B-9) was drilled, to a depth of ~50 ft, and no GW was encountered. Boring log shows PID detections beginning in 2.5 to 5 ft interval, with strong odor and 5 ppm on PID; readings increased to 190 ppm in 12.5-15 ft interval, then increased to 1,500 ppm in 15-17.5 ft interval and to highest reading of 1,800 ppm in 17.5 to 20 ft interval. PID readings gradually decreased to 50 ppm in 40-42.5 ft interval, then were ND from 42.5 to 50 ft. From 45 to 50 ft, log indicates soil was tight brown clay with mild odor and was moist/wet. Log also shows tight soils from 35 to 40 ft (brown silt/clay mix). Text notes that soil tightened up at ~35 ft bgs, and states that a 1-inch temporary well was set in boring, but no GW entered well after 2 hours. Text states that mainly clay was encountered at 45 ft, where moisture and minimal water were observed. Boring was discontinued at 50 ft due to

COMMERICAL (Continued) **S123660794**

difficulty advancing tool and risk of puncturing confining clay unit. Pilot test plan portion of rpt proposes install'n of one SVE test well, a short distance from existing GW well MW-1, which will be used to measure induced vacuum during pilot test to help calculate ROI (expected to be 5 to 10 ft). Recovered soil vapors will be screened with a PID during pilot test, and a sample of vapor will be collected with a summa canister for lab analysis (TO-15). Test well will be 2-inch diameter, installed to depth of 25 ft, with 10 ft of screen (15-25 ft bgs) and 15 ft of riser (0-15 ft bgs). Results will be presented in a Pilot Test Rpt. - J. Kolleeny 12/19/22: I sent email to Justin Halpin of BEI: Justin, I m reviewing Supplemental Remedial Investigation Rpt and Pilot Study Work Plan for this site, prepared by BEI and dated November 2022. Rpt mentions that only one of two proposed borings/wells were installed (well was dry), and rpt doesn t mention anything about status of earlier site well MW-1. My supplemental remedial investigation work plan approval letter dated 4/1/22 required that two new wells and one existing well be sampled as part of this investigation. I know you couldn t sample new well because it was dry, but has existing well been re-sampled, or gauged for presence of free product? Also, please let me know why second proposed boring/well wasn t drilled? Rpt indicates that a temporary 1-inch well was installed in new well borehole; according to my approval letter, investigation work plan proposed install'n of two 2-inch diameter permanent PVC wells. Why was work plan deviated from? I m assuming BEI was aware of difficult drilling conditions at this site, so a suitably heavy-duty drill rig should have been used. Please let me know. - J. Kolleeny 12/20/22: Justin Halpin of BEI sent email reply: Original well MW-1 still has product in well but when pumping it out we recovered about a gal and it takes 1 hour to re-charge. Second well we profiled and took PID readings then when installing well had a lot of trouble pushing 3.25 rods for 2 well, so we switched over to narrower rods for 1 well. We advanced well past product/water level at MW-1, and it was dry. I really believe that there is a confining aquifer somewhere at 50-65 and its basically clay at this depth. Also, I just got news that site is going to go under construction and gas station will no longer be in service (proposed plans to build a charter school). I think we should discuss this proposal and also remedial actions moving forward. I can talk tomorrow or Thursday if you're available. - J. Kolleeny 12/21/22: Spoke with Justin Halpin of BEI. He stated that it looks like gas station will be abandoned and site may be redeveloped with a charter school. I asked when this will take place, and Justin said possibly in 2024. I said that since this is not definite, we should proceed with further investigation and remediation of impacts at site, especially since impacts extend to significant depth that would not be addressed during site redevelopment. I mentioned that if a school is built on site, it must have not only a vapor barrier but also a SSDS. I asked about free product in well MW-1, stating that I have nothing in writing (emails, rpts) mentioning LNAPL in this well. Justin stated that LNAPL thickness is about 6 inches and when well is pumped it goes dry right away and takes at least an hour to recharge. I said that LNAPL should be addressed on a regular, at least monthly basis, and details provided in writing. I also stated that in light of presence of LNAPL, it is still necessary to install two wells to delineate GW impacts, and BEI must return to site with a heavier rig (sonic rig?) to reach greater depth. He noted that after reaching 60 ft with well MW-1, water came into well and rose to ~30 ft bgs,

COMMERICAL (Continued) **S123660794**

suggesting aquifer is confined by a clay layer and under pressure. I also said that SVE pilot test well should be drilled deeper than 25 ft, since soil impacts extend much deeper. Justin agreed to revise Supplemental Remedial Investigation Rpt and Pilot Test Work Plan to propose two new, deeper wells and make changes to SVE pilot test, and to include data on LNAPL and proposed interim remedial measures for well MW-1. - J. Kolleeny 03/16/23: Received email from Alicia Patti of Berninger Envt'l, with attached rpt. Email states: Jon, Justin finished this rpt today, please see attached. Also, would you like us to visit site monthly or quarterly? I looked quickly at rpt, Monitoring Rpt, February 2023. Rpt states Objective as Monitor site well for depth to GW and presence of free phase product on a monthly basis. Bail product as necessary. Under Recovery System, rpt states Bailing of product, approx 1.5 gals until well is dry. Recharge rate approx. 1.0 - 1.5 gals every half hour. Under Comments, rpt states that floating product was detected this monitoring period, site monitored and product bailed on 2/20/23, next monitoring and bailing of product scheduled for May 2023 (i.e., 3 months from Feb. 2023 event). Well gauging data table in rpt indicates that on 2/20/23, well MW-1 (only existing site well) had no water, but had 12.66 ft of product; 6.44 gals were bailed. I sent email response to Ms. Patti, cc to Justin Halpin of BEI: Alicia, am I reading table in rpt correctly, was Product Thickness in well on February 20th 12.66 feet?! If that is case, and product recharges into well at a rate of 1 to 1.5 gals every half hour as stated in rpt, then BEI should be visiting site to perform product recovery on a monthly basis at a minimum! Twice a month would be better, or even weekly until product thicknesses and recharge rate decrease significantly. Thanks for asking! I ll review rpt in more detail soon and will get back to you and Justin if I have any questions or addt'l comments. I later sent follow-up email: I noticed that rpt states project objective is to monitor site well on a monthly basis for depth to water and presence of free product (and bail well as necessary), but also states that next monitoring and bailing event (after February 2023 event) is scheduled for May 2023; this is an inconsistency. As mentioned before, monitoring & product recovery should be performed monthly at a minimum, with weekly or twice/month preferred. - J. Kolleeny 04/06/23: I sent email to Alicia Patti and Justin Halpin of Berninger Envt'l: Justin and Alicia, I wanted to follow up on this site, regarding free product monitoring & recovery events. Has site been visited since February 20, 2023 monitoring event? If so, can you let me know how often you are visiting site, product thickness measured during any visits, and amount of product bailed from on-site well? (Have you tried VEFR for product recovery, to increase recovery amounts?) If BEI has not been back to site since February, a site visit must be scheduled immediately for month of April 2023, and product monitoring & recovery events must continue on a monthly basis at a minimum. Please let me know status of product monitoring and recovery at this site. Received reply from Justin Halpin: We did another visit in March and just went yesterday to bail as much as possible, given slow recharge rate. VEFR would be difficult here and costly to mobilize, but once we get other viable wells in ground maybe at that time we can attempt VEFR. We will document all visits and data (DTP, DTW if present, product thickness, amount recovered) in next quarterly Rpt (unless you want monthly Rpts?) Also working with MTA to try and get subway permit for delineation borings it's going to take some time, it's quite a process but we definitely can't

COMMERICAL (Continued) **S123660794**

drill without it, being that we are within 200 ft of subway line. Will keep you posted. I sent reply: Justin, thanks for getting back to me about this site. I think quarterly rpts will be adequate, as long as you re doing monitoring & recovery events on at least a monthly basis. If recharge is slow, you can certainly hold off on VEFR for product recovery, for now. I was under impression recharge rate was pretty high, with 1 to 1.5 gals every 1/2 hour. Question: February 2023 rpt indicates that there was no GW in well, only product, so when you re talking about recharge, is it GW coming into well, or only pure free product? If it s all product, how many inches in well does that 1 to 1.5 gals per half-hour translate to? I understand that it s slow to get MTA permit to drill addt'l borings, and that you cannot drill without it. Can you let me know product thickness and recovery amounts for March visit and yesterday s visit? Thanks. - J. Kolleeny 04/12/23: Received email response from Justin Halpin of BEI: Jon, we recovered 5 gals on March 23rd with a product thickness (PT) of 6 inches (DTW =37.52 , DTP=37.02). April 6th first 2 bailers all gas DTW 40.57 and DTP = 37.27; PT = 3.3 ft - recovered 3 full bailers (~ 1 gal). - J. Kolleeny 06/21/23: Reviewed Monitoring Rpt for May 2023 by Berninger Envt'l. Rpt presents results of monthly gauging of one on-site well for March, April, and May 2023. On March 23rd, depth to water in well MW-1 was 37.52 ft, well had 6 inches of free product, 5 gals were bailed from well (table doesn't specify if this was pure product or mix of product and water). On April 5th, depth to water in well MW-1 was 40.57 ft, well had 3.30 ft of product; 5 gals were bailed from well. On May 11th, depth to water in well MW-1 was only 26.65 ft, no free product was detected (maybe buried beneath water table?), 7 gals of contaminated petroleum-impacted water were bailed. Rpt lists Recovery System as Bailing of product, approx 1.5 gals until well is dry, recharge rate approx 1.0 to 1.5 gals per half hour, total amount of product/water bailed on average per event is 5 to 10 gals. Next monitoring event and bailing of product is scheduled for June 2023. - J. Kolleeny 10/03/23: Reviewed Monitoring Rpt for August 2023 by Berninger Envt'l. Rpt presents results of monthly gauging and bailing of one on-site well (MW-1) in June, July and August 2023. On 6/27/23, well MW-1 had 13 ft (!) of free product; 2 gals were bailed. On 7/24/23, MW-1 had 16.9 ft (!) of free product; 5 gals were bailed. On 8/11/23, MW-1 had 4.14 ft of free product; 5 gals were bailed. Notes for 8/11/23 state that well showed good recharge during this event. Rpt lists Objective as monitoring for product monthly, bailing as necessary; lists Recovery System as bailing of product, approx. 1.5 gals until well is dry, recharge rate approx. 1.0 to 1.5 gals per half hour. Comments state that free product was detected this monitoring period, site was monitored and product bailed on 8/11/23; next monitoring & bailing of product scheduled for September 2023. - J. Kolleeny 01/02/24: Reviewed Monitoring Rpt for November 2023 by Berninger Envt'l, received on 12/14/23. Rpt presents results of monthly gauging & bailing of on-site well MW-1 in Sept., Oct., and Nov. 2023. On 9/13/23, well MW-1 had 0.65 ft of LNAPL, 5 gals of liquid (product + water) were bailed. On 10/12/23, MW-1 had 1/4 inch of LNAPL, 5 gals of liquid were bailed. On 11/20/23, MW-1 had 1.38 ft of LNAPL, 5 gals of liquid were bailed. Next monitoring & bailing scheduled for December 2023. - JK

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Updated By:	JCGRATHW
Site Description:	Location: The Site is located at the corner of 41st Street and 4th Avenue in the northwestern portion of Brooklyn. The site is bounded on the north by an active gasoline station, on the south by a fast food restaurant and on the east by a 3-story residential building. West of the site is 4th Avenue, the MTA Subway tunnel and the PS 136

SUNSET CAR CARE SITE (Continued) **S118261357**

Charles O'Dewey Elementary School. Site Features: The site is a vacant one-story building with no basement. The building covers approximately half of the 10,017 square-foot lot (0.23 acres) and was recently used as an auto repair business, a car wash and a small store. In addition to the existing building, there are tire racks, an oil change area, oil traps to a waste oil tank, car wash dry well, an office area, a car wash, hydraulic lifts, a 1,040 waste oil tank, a 1,040 gallon motor oil tank, an asphalt parking lot, and 6 potential underground storage tanks (USTs) identified on Sanborn Maps. Current Zoning/Use(s): The area is zoned C2-4. C2-4 districts serve the immediate needs of surrounding lower- and medium-density residential neighborhoods along streets that provide small local retail and service shops. Typical retail uses include neighborhood grocery stores, restaurants, beauty parlors, funeral homes and repair services. The Community Facility Use for C2-4 districts provides educational, health, recreational, religious or other essential services. Historical Use(s): The site has been an automobile garage, gas station, and car wash since 1926. From 1942-1995, three USTs were noted on Sanborn maps and two USTs (possibly removed) were identified on the 1926 Sanborn Map. Other uses are listed as an office/warehouse space for various tenants, taxi/limo parking and repair services. A Phase I Environmental Assessment was performed in July 2015 and a Phase II Environmental Assessment was performed in August 2015. Site Geology and Hydrogeology: The elevation of the property is approximately 55 feet above mean sea level. The general soil type consists of fine to coarse-grained sand and silty sand with gravel. Historic fill was encountered from grade to 15 feet below grade (deepest soil boring depth). The depth to water ranges from 18 feet (MW-3) to 44 feet (MW-1). The depth to water observed in MW-3 may be attributed to influence from the car washing operations (dry well), which may be contributing water to the aquifer. The groundwater flow direction is northwest towards the Upper Bay/Gowanus Bay three blocks away. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.

Env Problem: This spill was originally reported on August 9, 2015 during a Phase II Environmental Site Assessment (Phase II) through the New York City Office of Environmental Remediation Brownfield Program. The Phase II included the installation and sampling of a series of soil probes, monitoring wells and soil vapor sampling points that showed impacted soil and groundwater. Nature of Contamination: Petroleum spill with soil and groundwater impacts, and elevated tetrachloroethylene (PCE) in soil vapor. Volatile Organic Compounds (VOCs) associated with gasoline constituents and chlorinated compounds are present beneath the northern portions of the Site. VOCs indicative of petroleum were identified in both shallow and deep soil in the northwest portion of the property. This impacted soil is located at the former location of two (2) underground storage tanks (USTs) identified on the 1926 Sanborn Map. Results of the groundwater evaluation completed did not identify any exceedances of PCE in groundwater above the groundwater standard of 5 ppb. However, investigation results showed impacts of petroleum constituents and metals above their respective groundwater standards. A soil vapor evaluation was completed as part of the Phase II investigation and a supplemental soil vapor investigation did not identify any off-site impacts that would require monitoring or mitigation per the NYSDOH guidance values. Significant Threat Determination: Based on investigations performed to date, the site did not qualify for addition to the Registry of Inactive Hazardous

SUNSET CAR CARE SITE (Continued) **S118261357**

Waste Sites. The site was referred back for investigation and remediation under Spill No. 15-06140. Site designation was changed from P to N.

Contact Name:	CARLOS QUINONEZ
DEC Memo:	Phase II investigation test results showed impacted soil & ground water. Cleanup is pending.
Remarks:	9/11/15-Zhune called Carlos Quinonez from Hydro Tech (631) 462-5866. Mary said he is not available and he will call me back. 1/14/16-Vought-This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo. 1/15/2016: Rashad 4013 4th Avenue has an alternate address of 401 41st Street. No additional spills found for site. 4013 4th Avenue has PBS#2-611076 for a 1,000 gallon waste/used oil AST. No documents found in D2. 1/19/2016: Rashad Sent email to Carlos: I have been reassigned 2 spills that list you as a contact, they are as follows: Spill#1305487 822 4th Ave, Brooklyn 11232, date received was 8/21/2013, Spill#1506140 4013 4th Ave, Brooklyn 11232, date received was 9/9/2015. I would appreciate any documentation/information you have on either of these sites. 1/20/2016: Rashad Carlos responded on 1/19 saying he will call me and give me an update on both sites. 3/10/2016: Rashad Sent email to Carlos: Can you please send me the Phase 2 investigation as well as any other reports you have for this site. 3/11/2016: Rashad Carlos responded on 3/10: Please see attached the report for the Phase II we performed. Any questions pelase let me know. thanks Phase 2 report was attached and uploaded to D2. Review of Phase 2 report: Depth to groundwater has been identified to range from 18 feet to 45 feet and the groundwater flow direction was identified to be northwest. No free product was identified on the water table. Dissolved VOCs indicative of petroleum were identified in groundwater beneath the southern and northern portions of the site at concentrations exceeding standards. Dissolved metals were also detected in groundwater. VOCs associated with gasoline constituents and chlorinated compounds are both present beneath the southern and northern portions of the site. The site is occupied by a 1 story building that consists of an auto repair business, car wash and a small store. The building does not have a basement. Building is heated with natural gas. A GPR, 7 soil probes, 3 groundwater monitoring wells and 4 soil vapor probes were taken. The GPR detected one anomaly in the western portion of the Site and one anomaly was detected in the northwestern portion of the site. According to historic sanborn maps there are 3 gasoline tanks located in the northwestern portion of the site. Soil probes SP-1 and SP-2 were

SUNSET CAR CARE SITE (Continued) **S118261357**

installed in the approximate locations of 2 gasoline tanks in the northwestern portion of site. SP-3 and SP-6 were also installed near these tanks. SP-4 was installed in the approximate location of 3 gasoline tanks in the southwest portion of the site. SP-5 and SP-7 were installed in the easten portion of the site in the vicinity of the former auto repair shop and active car wash. SP-1, SP-4, and SP-7 were installed to a depth of 12 feet. SP-2, SP-3, and SP-5 were installed to a depth of 14feet, SP-6 was installed to depth of 16 feet. Three monitoring wells MW1-MW3 were installed in the same locations as SP-1, SP-4, and SP-7 respectively. They were installed to a depth of 55ft, 60 ft and 55 ft. None of the wells contained free product. Depth to water ranged from 18.4 feet in MW3 to 44.5ft in MW1. Soil sample SP-2 taken 4-6ft had contamination as follows: 1,2,4 Trimethylbenzene - 95ppm, 1,3,5 Trimethylbenzene - 42ppm, Ethylbenzene - 3.2ppm, Naphthalene - 19ppm, Xylene - 17ppm, At 12- 14 ft: 1,2,4 Trimethylbenzene - 180ppm, 1,3,5 Trimethylbenzene - 71ppm, Ethylbenzene - 42ppm, Naphthalene - 32ppm, n-Butylbenzene - 26ppm, n-Propylbenzene-33ppm, Xylene-180ppm, Toluene-5.90ppm. Other soil locations did not have elevated concentrations. MW1 has a groundwater elevation of 51ft, contamination found in MW1 is as follows: 1,2,4 Trimethylbenzene-1500ppb, 1,3,5 Trimethylbenzene-1300ppb, Acetone-57ppb, Benzene-1100ppb, Ethylbenzene-2700ppb, Isopropylbenzene-82ppb, Naphthalene-180ppb, xylene-13,000ppb, Toluene-1800ppb. MW2 had a groundwater elevation of 53ft, contaminates found in MW2 are as follows: 2-butanone-15ppb, acetone-32ppb, benzene-8ppb, xylene-4ppb. MW3 had a groundwater elevation of 78ft, the following contaminats were found in MW3: 1,2,4 Trimethylbenzene-510ppb, 1,3,5 Trimethylbenzene-100ppb, ethylbenzene-280ppb, isopropylbenzene-68ppb, Naphthalene-60ppb, xylene-1200ppb, toluene-96ppb. Soil Vapor samples were taken and are as follows for SV1: 1,2,4 Trimethylbenzene - 20ug/m3, 1,3 Butadiene-50, 2-butanoe-62, 2-hexanone-20, acetone-230, benzene-18, chloroform-16, cyclohexane-3, dichlorofluromethane-7.7, ethylbenzene-14, methylene chloride-1.5, n-heptane-30, n-hexane-49, xylene-46, p-ethlytoluene-70, tetrachlorethylene-70, toluene-54. SV2 has similar readings to SV1. SV3 had tetrachloroethylene-1400 and SV4 had tetrachloroethylene-3800. According to the Phase 2: Depth of water in MW3 may be attributed to influence from the car washing operations, which may be contributing water to the aquifer Soil sample SP5 (4-6ft) - Tetrachloroethylene - 0.047ppm. MW3 has Tetrachloroethylene-4ppb. Sent email to Carlos: Thank you for the report, is this site a BCP or OER site? Also has a Remedial Action Work Plan been made yet and are there any plans for redevelopment? Brief review of the Phase 1 has subject property of one story auto laundry located in southern portion since 1926 and auto repair shop which contains the discussed tanks. 8/10/2016: Rashad Sent email to Carlos: See below questions, also is any work occurring on this site currently? Carlos responded: Yes indeed this site is an OER site. no further work has taken place to our knowledge since our submittal of the report. We did provide the client with a cost estimate letter but he didn t want to proceed after that. I will reach out to him and will try to get more information for you. 8/12/2016: Rashad Spoke to DEC Vought and I sent email to Shaminder from OER to see if he has any further info on site. Report receipt review letter should include - delineation of soil and groundwater, development plans, RAP approval warning before redevelopment. Shaminder responded that site was previously discussed with DEC O'Connell to enter BCP, I will

SUNSET CAR CARE SITE (Continued) **S118261357**

email Jane to discuss case. 8/22/2016: Rashad Letter was prepared and will be sent to property owner as well as emailed to Carlos of Hydrotech to address petroleum contamination. Letter was uploaded to D2. 8/25/2016: Rashad Received call from Sam, who is property owners son. He wanted to discuss contaminated soil letter that was sent to him. At this time the car wash and lube center is still in service and they are planning to close the last day of this year and either redevelop or sell property. His email is samson414@gmail.com, phone number is 917-656-4676. DEC Potentially Requires: 1-BCP or OER 2-Future use - CAMP, depth of basement piping locations, vapor barrier, ssds with doh review 3-Possible delineation across 4th Ave and its affect with groundwater 4-RAP 5-BP station spills 6-Review Phase 1 for previous source of chlorinated solvent 7-Owner: Elsaun Inc, 125 42nd Street Brooklyn NY 11232 1/17/17 - Obligado - Spill assigned to Obligado from Omar as per Austin. 1/10/18 - Obligado - Spill transferred to from Obligado to Feng. 3/16/2018 - Durnin - DER mailed a P site Notification letter to the property owner on March 16, 2018. Environmental Assessment: Volatile organic compounds (VOCs) associated with gasoline constituents: Benzene (1,100 ppb), Ethyl Benzene (2,700 ppb), o?Xylene (5,800 ppb), p & m? Xylenes (13,000 ppb), and Toluene (1,800 ppb), were found in groundwater (groundwater standard of 5 ppb). Chlorinated compound tetrachloroethylene (PCE) was detected in on-site soil vapor throughout much of the site between 66 ug/m3 and 3,800 ug/m3. (Durnin 3/29/2018) March 2017 - March 2018: After over a year nothing was done and apparently the owner was trying to sell the site. DER mailed a second P Site notification letter to the owner on March 16, 2018 but it was returned as undeliverable. It was resent to the site address (not the owner address) later in March 2016. On August 2018, DEC staff visited the site and provide copy of contact information to the receptionist. The Owner was not available at the time. On August 2019, access request letters (English and Spanish version) were resent to property owner. As of today, we haven't received any verbal or written communication from the property owner. (Grathwol - 6/24/20) 5/27/21 - Site Characterization completed under site no. 224244. No further action needed. Spill closed. (JHO)

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	61221
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	K01 - Spill Prevention - Catch Basin
	E00 - Piping Secondary Containment - None
	H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	F01 - Pipe External Protection - Painted/Asphalt Coating
	A00 - Tank Internal Protection - None
	L00 - Piping Leak Detection - None
	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	J02 - Dispenser - Suction Dispenser
	C03 - Pipe Location - Aboveground/Underground Combination
	I04 - Overfill - Product Level Gauge (A/G)
	I05 - Overfill - Vent Whistle
	G02 - Tank Secondary Containment - Vault (w/access)
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	05/01/1992
Capacity Gallons:	7500
Tightness Test Method:	34
Date Test:	07/06/2023
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo:	1 QUART ON 100 GALLONS OF WATER: CANT FINISH CLEANUP DUE TO A CAR PARKED ON MANHOLE: NO TO 5 QUESTIONS; CONED # 159877
Remarks:	e2mis no 159877 J. DELAROSA #19655 MECH A ENV OPS REPORTS FINDING APPROX 1 QT OF UNKNOWN OIL ON APPROX 100 GALS OF WATER IN M49287. NO SEWERS, WATERWAYS, OR PRIVATE PROPERTY AFFECTED. THE SOURCE AND CAUSE OF THE SPILL IS UNKNOWN, HOWEVER THERE IS A BLOWN JOINT IN THE STRUCTURE. THERE WERE NO SUBSTANTIAL CRACKS IN THE STRUCTURE AND THE STANDING WATER HAD NO MOVEMENT. THE EXISTENCE OF ANY SEWER CONNECTIONS, SUMPS, OR DRAINS COULD NOT BE VERIFIED AT THIS TIME. ENV STOP TAG# 46866 WAS PLACED AND ONE LIQUID SAMPLE TAKEN CLEANUP WILL BEGIN USING THE VACTOR AND THEN WAITING FOR LAB RESULTS. UPDATE 7-20-05 14:15HRS AS PER A. WALKER, J. DELAROSA ENV OPS CONTAMINATED VACTOR TRUCK 60571, REMOVED BOTH SOLID DEBRIS. DOUBLE WASHED STRUCTURE, WILL CHECK DIRT SUMP AT ANOTHER TIME. ALSO ALL LIQUIDS WERE REMOVED. VACTOR WILL REMAIN ON LOCATION UNTIL RESULTS COME BACK. 7/20/05 2100HRS LAB RESULT RETURNED < 1.PPM LSN-05-07437-001 7/21/05 0200HRS Update for F/O 444 40 St. (Inc #159877): MH 49287 made water prior to UG working in the hole. 100 gals. of water were taken out of the structure by Astoria Tanker. Results of the structure came back as < 1 PPM PCB, and as a Water Grab. Because this result came back as a Water result, the directive was made to take another sample of the sludge in the vactor for PCB and a note was made on the sample request to sample as a solid, do not extract oil. Because this incident is pending sample results, MH 49287 and Vactor 60571 will be treated as 50-499 until results of this last sample is received. Vactor 60571 will remain on location until these final sample results are received. 7/21/2005 07:52 HRS. -- RECEIVED PCB RESULTS < 1.0 PPM,

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	25407
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Site is a 2 Family house in Brooklyn. DEC Sigona sent notice regarding the tank test failure on May 16, 2003. 4/23/2004 Sangesland -another TTF letter sent today 4/30/2004 Sangesland spoke to property owner Margie Alimonda. She said Bayside was hired to close out the buried 1500 gal tank and install a 550 in her garage. Sangesland spoke to Fred Caputo at Bayside (718-946-4000). He said the whole job was contracted out to AL Eastmond. Eastmond was to close out the tank, install the new tank and take care of the PBS paperwork. 11/8/05 Spoke to Margie Alimonda she said Bayside filled in the below ground tank and installed several above ground tanks. She said Bayside was to send in the paperwork. Spoke with a Margie at Bayside now Petco she had no record of work. Gave me name of Phil Tanella their installer in the area of the spill. I callled Tanella and left a message. J Lister 11/9/05 Spoke to employee of Al Eastmond (718-378-7000)who left a message for Renee. JL Open Issues: 1) Review of DEC database shows no PBS was ever filed (for a 1500 gal tank). - Question if this really was a 1500 gal tank on a 2 Family house in Brooklyn. 2) Apparently no soil boring samples were taken. Tank was just closed out and left. 09/6/06- Zhune sent TTF letter to: Fred Alimonda 357 40th Street Brooklyn, NY 11233 Margie Alimonda called to say that she will fax a copy of letter from Eastmond & Sons, Fuel Oil Tank Cleaning. Zhune got the fax but it was not visible. She will send it by mail. Zhune. Margie sent a visible job ticket from A.L.Eastmond. Eastmond close the underground tank. They filled it with sand. They installed 2(275) gallons AST in the basement. Petro tested the tank and failed. 09/02/09-Randy Austin and Zhune review the case and found no evidence that will indicate of petroleum release. Other than that tank test failure. Since tank fail test are no presumption not prove of spill. Therefore spil has been closed.
Remarks:	TANK TEST FAILURE ON 1,500 GALLON UST

DEC Memo:	UNKNOWN PETROL OOZING OUT OF THE GROUND AT ABOVE LOCATION
Remarks:	7/13/05 - Diaz - Site inspection conducted. Nothing unusual observed other than utility mark outs. It appears that the concrete from the sidewalk up to the residence has been replaced within the last 5 years. All listed phone numbers on spill report are no longer valid.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	160128
DEC Memo:	On June 29, 2000, DEC (Sigona) along with Handex (Hoashi, Tonn, and DeVoe) conducted a site visit at Former Mobil S/S, 987 4th Avenue, Brooklyn, which is currently occupied by a Taco Bell. According toe Handex (Tonn) Mobil delivered a shipment of gasoline to the USTs which were partially decommissioned in 1988. Fenely & Nicol performed an investigation in 1988, and prepared a report in December 1989. Fenely and Nicol recovered approximately 250 gallons using a pump and treatment system. GTI became involved in 1992, and installed a groundwater sparging system to treat the remaining dissolved phased at the site. There were however, sporadic signs of free product over the years. There were at least 10-12 wells at the site in the previous investigations. Currently, there are only four groundwater monitoring wells, and four sparging wells. There is also a vapor extraction system at the site. A Stipulation Agreement was issued by DEC on July 7, 1995. The site is directly adjacent to a Subway which runs underneath 4th Avenue. There was no indications from Handex that the subway lines have ever been impacted. The vapor from the SVES was shut down in 1998, and was teated with carbon. DEC (O'Dowd) requested a test of the vapor from the sparge wells. In September 1999, Handex found 11,000 ppb total BTEX in SP-2 and 2,900 ppb BTEX in SP-3 and nd in SP1 and SP4. MTBE was relatively low. In November 1999, Handex found 3 feet of floating product in MW21 and has monitored on semi-annual basis only. The wells were last sampled in June 2000. Since November 1999 performed 3 vacuum truck visits and recovered free product, gaged for free product before and after each visit. Handex is not sure what the source of the free product in Well No. 21. Handex will continue to submit a semi-annual report which will be due in August 2000. Handex plans to conduct a soil investigation in Sept 2000. Handex will send the plan to DEC for review and approval. Meanwhile, the system will be shut down until Handex can determine the proximity of the contamination. The depth of groundwater is 38 feet below grade. 4/27/10 - M. MacCabe - Reinstallation of AS/SVE system has been completed except for connection to the power grid. Soil and GW were sampled when AS/SVE wells were constructed. Soil and GW contamination remain on-site. 5/21/10 - no activities this month. 6/23/10 - No activities this month. 7/26/10 - The quarterly site

MOBIL S/S (Continued) **S106719530**

status update report was received. 9/29/10 - The quarterly site status update report showed no changes in groundwater concentrations. 10/27/10 - Electrical work was conducted on the AS/SVE system in preparation for hook up to the power grid. 11/24/10 - The quarterly site status update report was received. Groundwater concentrations generally remain constant. 3/01/11 - The SVE component of the on-site remedial system was placed on-line on 12/29/10 then back off line on 1/10/11. The quarterly site status update report was received. Groundwater concentrations generally remain constant. 3/28/11 - The AS/SVE system is expected to go back on line in early April. 4/25/11 - Maintenance of the AS/SVE system was conducted in late April. This included change out of the carbon filter for the SVE effluent stack. 6/28/11 - The quarterly site status update report was received. The consultant estimates that four pounds of total BTEX and 26 pounds of total volatile petroleum hydrocarbons were removed with the SVE/AS system by the end of 2010. 7/05/11 - Periodic O&M was conducted and carbon filter was changed. 8/29/11 - Periodic O&M was conducted and the carbon filter was changed in August. The August site status update report states that approximately 10.6 lbs of BTEX and 64.9 lbs of total volatile petroleum hydrocarbons have been removed from the subsurface since the rebuilt AS/SVE system went on line in December 2010. The AS/SVE system was temporarily shut down in anticipation of hurricane Irene. 9/12/11 - Periodic O&M was conducted and the carbon filter was changed in September. 12/20/11 - The quarterly report was received. The consultant states that approximately 18.72 pounds of total BTEX and approximately 93.77 pounds of total volatile petroleum hydrocarbons (TVPH) were recovered by the SVE/AS system during the entire operation period. However, the groundwater data are inconclusive. 12/27/11 - Effective January 1, 2012, the consultant working for ExxonMobil on this project will change from Kleinfelder to Groundwater and Environmental Services (GES). 2/29/12 - Staff met with representatives of ExxonMobil and GES on February 28 to discuss modifications to the AS/SVE system to improve its efficiency. Modifications of the system consist of installing a larger compressor and cycling the system to just two of the seven vapor extraction points at one time. 5/11/12 - The quarterly site status update report covering the last quarter of 2011 and the first quarter of 2012 saw received. Weekly O&M was conducted about once every two weeks. The AS and SVE points have been cycled to allow for larger flow rates in different areas. The data show continued decreases in BTEX concentration in on-site groundwater. 8/3/12 - The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. Based on the sampling results from the June 15, 2012 groundwater sampling event, extraction wells SVE-3 and SVE-5 are the only wells on-site with dissolved-phase BTEX concentrations over 1,000 ug/L. Therefore, during the third quarter of 2012, sparging efforts will be focused on these areas, specifically utilizing sparge wells AS-1 & AS-2. Quarterly groundwater sampling is scheduled for September 2012. Semi-monthly O&M will continue. 10/23/12 - The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. The data continue to show decreases in BTEX concentrations in groundwater. The SSUR also contained a request to to pulse the AS/SVE system (alternating one month of system operation and one month of system inactivity). The request was accepted. 01/28/13 - The quarterly site status update report was received. Periodic OM&M was conducted twice a month. The SVE system is now operated with periodic pulsing. The pulsing consists of extracting

MOBIL S/S (Continued) **S106719530**

from different points with others dormant and changing monthly. 4/12/13 - The quarterly site status update report was received. System O&M activities were conducted twice per month during system operation in the first quarter of 2013. The system was temporarily shut down between January 2 and February 6, 2013 as part of system pulsing activities and to observe any changes in hydrocarbon recovery. The data show continued decreases in contaminant concentrations in groundwater The consultant states the approximately 147 lbs of hydrocarbons were recovered during this monitoring period and approximately 2,010 lbs of hydrocarbons have been recovered since system startup in December 2010. 5/23/13 - The groundwater data presented in the May 20, 2013 Groundwater & Environmental Services (GES) quarterly report and proceeding quarterly reports have shown consistent and significant decreases in BTEX concentrations throughout the operation of the existing AS/SVE system. Current BTEX concentrations in groundwater range from non-detect to 46 ppb. SVE system effluent has shown limited recovery in the last three quarters; presumably due to the lower contaminant concentrations in groundwater. Based on the findings, discontinuation of the AS/SVE system was deemed acceptable and the spill was closed.

Remarks: (4) 550 GAL. TANKS WOULDNT HOLD PRESSURE, WILL EXCAVATE, ISOLATE, AND RETEST. CONTACT: STEVE TRIFFOLOTTI (516 371-0286.)

DEC Memo:	LOSS FROM COMPACTOR ON SITE. CONTAINED. MILLER ENVIRO ON SITE FOR CLEAN UP
Remarks:	4-17-18 - Obligado - I called Sal. Left a message to call back the NYSDEC. Last night one of the recyclying units went down. Control for recycler are in a pit. Called in a vendor and opened the pit. There is oil in the pit. Miller Environmental went in the pit. Estimated 30 gallons of oil. Broken high pressure hose. Miller did the remediation. Contained. Cleaned up, and doing a final steam clean.

USPS (Continued) **S121985097**

4/19/18 - Obligado - I received photo documentation of the clean up. Spill closed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name: ALAN WEINER
DEC Memo: LAWRENCE CARR AMUSEMENT COMPANY PH# 917-653-3168 LARRY CARR CALLER REPORTS ONLY A STAIN LEFT ON
PAVEMENT AT PUBLIC SCHOOL #24 UPON ARRIVAL TO SPILL.
Remarks: 7/7/2006 Sangeland spoke w/ Ray Lara of PTC. Ray stated that one 20' diameter and one 10' diameter stian that is sheening was present. PTC gave estimate though was not hired and was told by Alan Weiner that they were going to hire a guy with a power washer and wash it into the drain. Piper spoke w/ Don Iaccarino from the school. 917.440.7067 office- 718.832.8720. As per him approximately 50 gal of hydraulic oil was left on the asphalt when they left in one location. There are other areas also affected with up to 20 gal in that location. They didn't do much to clean it. DEC Piper called Alan 347.671.2482 who is director of amusement company. Owner, Larry Carr 917.653.3168. PO Box 83, Wintersville, GA 30683-0083 Piper asked what is being done. Al stated that PTC bid was very high and that he was going w/ AJ Pressure Washing. 718.256.1214. to clean it up. Piper called Anthony at AJ Press. He stated that he was asked to provide an estimate to provide pressure washing of area. Piper explained that the water generated would have to be vacced up and disposed of properly. Anthony stated that he will use a shop vac to collect the water and dispose of it properly. It might take a while for him to figure out how. Piper thanked him and ended conversation. Piper called Alan Weiner and stated that AJ PW is unacceptable for the cleanup requirements. Piper stated that he could fax a list of contractors to him for his use in finding a contractor who can do this other than PTC. Alan stated he will call me back with a fax number. 7/10/06- DEC Piper left message for Alan to call back. DEC Piper spoke w/ Don at school. There was nothing done over the weekend. DEC Piper responded to site. Upon arrival, Piper met w/ Robert (custodial)and its was observed that multiple large stains were present on basket ball court area. Tire marks smeared throughout court. Some staining observed entering storm drain on northwest side of property. Piper photodocumented site. Piper spoke w/ Principal of School Christina Fuentes in her office regarding spill. As per her, the canival lasted from June 212 to July 3. During their stay the carnival was very dirty, un responsive and un professional. (blocked fire exits, sidewalk and harrassed women.) Principal Fuentes #.718.832.9366. Alan Weiner has been uncooperative w/ School and has given them runaround since they left. Spill was called in by PTC 4 days after they had left. DEC Piper mailed letter to LAwrence Carr Amusements adn faxed copy to Alan Weiner at 718.642.2861 7/12/06- DEC Piper spoke w/ Al;an Weiner regarding cleanup. As per him, he will be receiving estimates today and will inform me as to whne work will commence. DECP iper phoned Joe gallager w/ NYS Dept of LAbor, Health and Safety Div. 518.457.2131, regarding Amusement CO. HE is well aware of the type of Operation and has discontinued permitting for this Company. Joe stated He is one of the worst operators on record . However since city is not state juristiction, he operates within city limits. Joe forwarded me to City Ride Inspector, Jim Waters, 212.566.5539. Piper left message requesting callback and info. 07/13/06-Vought-Called Weiner for udpate on contractor as per DEC Piper. Vought called Weiner and he contacted four companies and only one returned call with high price as per Weiner. Weiner told Vought that he would call back by the end of the day with a contractor. Vought explained that if call was not received and ECO would be sent to the Carnival's current location(Northern Blvd and Junction Blvd).

PS # 24 (Continued) **S108058233**

07/14/06-Vought-Received message from Weiner and returned call and left message to return call. Vought received call from Weiner and he nobody has called him back, he will call back this morning with name of contractor. 07/17/06-Vought-Received message from Weiner on 7/14 that he had received estimates from PTC, Eastmond and ABC and was awaiting estimate from Tradewinds. Weiner willing to fax DEC copy of estimates. Vought referred case back to DEC Piper. Piper spoke w/ Alan weiner, he will have Eastmond come and power wash affected area. Piper confirmed w. Eastmond that pwer washing was done. Piper spoke w. Principal Fuentes to confirm. As per her, work was done though it is still bad. Piper resonded to site to inspect. Heavy stains still existed. DEC Piper required Carr AMusemnets to deal affected area. DEC Piper made numerous attemts to caontact ALan to perform sealing. 9/13/06- DEC Piper spoke w. Don from school. aS per him, Don Merlo of Fuel Division inspercted and had PTC cleaners perform additional cleaning of area w/ more effective eqipment. As per son it is much better and school is more pleased. School may resurface in short while. Fuel spill is cleaned. Closed.

DEC Memo: CALLER STATES THAT THEY ARE STILL INVESTIGATING WHAT HAPPENED: ANTHONY IS TEH CONTACT ON THE SCENE,
FROM PERTOLUEM TANK : IT IS INSIDE AND OUTSIDE THE BUILDING:
Remarks: 03/22/05-Sharif// Sharif and Mr. Sawyer responded to the site.About 4000 gallons of #6 oil came out of vent line and top of the tank while the pump to the boiler was replaced and being tested.Oil had been contained in the secondary container(vault). Vent is located out of the building at the backside where about 20'by 20' open area adjacent to couple of abandoned railroad track line is impacted by the oil. Oil spreaded over one of the track of about 10 ft in length.Petrolium Tank Cleaners(PTC) has been called in to do the clean up. NYC Transit, Office of System Safety(Josephina Volyn/Richel Kron, 718-243-4581, Fax: 718-243-4309) has been notified of their property impact. 04/06/05-SR// PTC excavated the rail track, took sample, backfill soon with supervision from NYC Transit. Open lot between building and the track has been field screened.

G & L EYES INC. (Continued) **S108146492**

Contamination found.Property owner Mr. Merhige was contacted for revised work plan including tank vault and open lot. 9/8/05-Vought-File review as per DEC Austin due to inquiry by Rachel Kron (NYC Transit 646-252-5773). Spill out of vent pipe and also into tank room. Letter from DEC Rahman to Commercial Realty Co (11 East 26th Street, 11th Floor attn: Richard Merhige)-3/23/05. Letter sent requiring: 1)excavation of all oil impacted soil and debris including railroad track area 2)removal of oil from secondary containment vault 3)submission of soil sampling results. Scope of Work from Petroleum Tank Cleaners PTC(Anthony Lara 718-624-4842)-4/5/05. Scope of work includes: 1)product removal from vaults. Soil analyticals from PTC-5/24/05. Water analyticals show no TAGM Soil Cleanup Objective exceedences except for minor PAH's attributable to fill material. Letter from PTC (Lara) to DEC Rahman-6/27/05. PTC has removed all contaminated soil and debris from the vault, and as you agreed what was acceptable PTC has addressed any remaining contamination via the application of Biosolve biormediation accelerant to the soil beneath the existing vault floor . PTC plans to begin installing a new concrete floor as early as 7/6/05. 9/8/05-Vought-Called Rachel (646-252-5773) and left message with outstanding requirements: 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Vought called Commercial Realty (Richard Merhige 212-947-7500) and he tried to call Rachel who has not returned call. PTC still cleaning out second tank room. PTC collected soil samples from outside and two 20' foot containers were generated from soil excavation. Jerry Sobel will be contact for next seven weeks as Richard will be going on vacation. Vought left message for PTC to return call with status of soil excavation and endpoint sampling. 10.19.05 Sharif- I spoke with Anthony of PTC, 646-772-7180 who informed me they made formal request to NYCT's property to do geoprobe investigation. NYCT holding them regarding some insurance coverage issues which will possibly be simplified as they are working on it. NYCT is supposed to getback to PTC by this week. I'll call NYCT next week about their approval. 12/15/05 Sun reassigned from Rahman to Foley. 1/3/2005 - Feng - File reviewed by Feng and summarized: 1) some samples were collected the boiler room with site plan provided, but did not indicated out whether soil or groundwater samples. High SVOCs. 2) Track area inpacted, and removed the contaminated soil. DEC has been requested 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Nono were submitted on file. 3) DEC Rahman has assisted PTC to access the NYCT property and do the sampling. Wait for sampling result report. 05/09/06 - spoke to Mr. Bob Lamirata of PTC, 718-624-2185. He said he will take care of disposing the contaminated soil pile at the site in a few days. I will find out more of the subsurface contamination. - KST 6/15/06 - Bob Lamirata of PTC called and advised that contaminated soil pile has been removed. Will fax end-point sampling results. - KST 6/26/06 - PTC sent in the report which only has the lab results, no write-up. The results look clean. Called Bob Lamirta and told him that DEC needs a report summarizing the contamination and the actions taken by the RP OR PTC in cleaning up the spill. Liz Deluca called and will be at the site on June 27, assessing the spill. She will call me to report if additional work is needed. - KST 11/9/06 - NYCT has not call to request additional cleanup work. Spill closed. - KST

DEC Memo:	Contained to inside the building. All boroughs is cleaning up spill right now. Approved oil's electrician accidentally activated pump during a service call.
Remarks:	3/28/16: Mahat Response: On 3/26/16, DEC Spills staff responded to a reported 1,000 gallon #4 fuel oil. Field Report: Field update on the spill at 341 39th Ave., Brooklyn : The spill area is on the basement of the industrial/commercial building in Brooklyn. The building has two 5,000 gallon ASTs. The PBS registration of the tanks is 2 320617. The building use a transfer pump to transfer oil from tank #1 (4,850 gallons- 68) to tank # 2(1,465 gallons- 25) and vice versa. During the transfer, the tank #1 was overfilled causing the spill from the manhole gasket. Approximately 1,000 gallon of oil was spilled. The spill is contained within the secondary containment. Super of the building was advised to monitor the Petro meter level to insure the tank is not leaking other than from the man way gasket. All Boro (retained by Approved oil) is pumping out the oil from the secondary containment. Once the oil is pumped out, an inspection on the tank will be performed. The gasket on the tank will be replaced followed by the pressure test. No vapor and other resources were impacted. Spill is Contain within the secondary containment. PBS : 2-320617 [Crossed Referenced] Mail: THE HAMPSHIRE COMPANIES 906 MOUNT KEMBLE AVE MORRISTOWN, NJ 07960 Point Of Contact: Eric Supthen [Approved Oil] All Boro [Contractor] JANET MCANDRIS [Management] *** 973.224.6929 jmcandris@hampshireco.com 3/28/16: Mahat Total 500 gallons of oil and wash water was collected from the secondary containment. 3/29/16: Mahat A SCL was sent out. The letter is uploaded on D2 for reference. 4/11/16: Mahat e/c: DEC Mahat received an email update from the contractor: Email: Mr. Mahat, It was a pleasure speaking with you last week regarding 341 39th Street in Brooklyn. I am awaiting the report and disposal documentation from the response contractor (All Borough Testing), although I was provided photographs showing the tank vault was thoroughly steam cleaned. I am also waiting for some additional information from the current building owner, who is under contract to sell the property

COMMERCIAL BUILDING (Continued) **S118637127**

later this month. The owner is requesting information from the purchaser regarding their plans for the heating system and heating oil tanks at the site. Please feel free to contact me with any questions regarding this case. Adam Mickley DEC is waiting a report. 3/12/16: Mahat e/c: DEC Mahat received an email update on the spill case: Email: Mr. Mahat, It was a pleasure speaking with you last week regarding 341 39th Street in Brooklyn. I am awaiting the report and disposal documentation from the response contractor (All Borough Testing), although I was provided photographs showing the tank vault was thoroughly steam cleaned. I am also waiting for some additional information from the current building owner, who is under contract to sell the property later this month. The owner is requesting information from the purchaser regarding their plans for the heating system and heating oil tanks at the site. Please feel free to contact me with any questions regarding this case. Adam Mickley 4/20/16 : Mahat DEC Mahat received an closure report on the spill case. The report consist of Narrative description, manifest, pictures and PBS Application confirmation. A complete report has been uploaded on D2 for reference. Based on the report, site visit and email, the Department does not warrant any further investigation on the spill case.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 3/11/03 - SAMUEL- File available in active unassigned spill files. 04/12/04 TRANSFERRD FROM ODOWD TO ROMMEL. 1/10/2006 - Haggerty - Leigh Gutterman from NYC School Construction (718-472-8502) is locating necessary reports. She is requesting another week to find them 7/13/2006 - Haggerty - Leigh Gutterman from NYC School Construction mailed closure report on June 7, 2006. The report essentially is the original from 13 years ago. NYC School Construction included new groundwater samples (March 2006) to hopefully provide proof the site has been remediated. In 1993, 44 UST's were removed along with 15,000 cubic yards of petroleum contaminated soil which were properly disposed of. Due to the N,R subway running underneath 4th Avenue to the west of the property, excavation was restricted. All accessible soil was excavated. Post-excavation soil samples contain VOC's and SVOC's above TAGM mostly in the area adjacent to 4th Avenue. However, the time passed since the soil samples were taken as well as the fact that the recent groundwater samples are below TAGM, DEC has decided to close the spill.
Remarks:	SUSPECT ABOUT 35 YRS OLD GASOLINE TANKS AT SITE RANDY AUSTIN IS AWARE OF SITE.

DEC Memo: CLEANED UP FROM GAUGE MALFUNCTION
Remarks: Piper contacted blue diamond and spoke w/ Bob Sntder. Bob stated that 15 gallons spilled to due a broken gauge. He then stated that he has a crew there now. Piper asked for homowners #, 718-499-2203. Piper called though no one answered. Piper responded to the site due to major discrepancies in Bob's story. Upon arrival 3 Blue Diamond work vans outside residence and 12' diameter oil soaked speedy dry present in roadway. Piper entered basement residence to discover Diamond Oil personell removing carpeting in bedroom. Major spill across the basement level floor. The tech was sqeegeeing oil from carpet in 5 gallon pails. Tech stated that what was spilled outside as well and a representative will be arriving shortly. Piper entered though another room where carpet was removed though old tile and wood was present that was broken and soaked in oil. The floor may be a raised floor. Requirements to follow notes. Speedy dry covered the remainder of the room. Piper inspected tank area which was behind concrete block and sheet rock. Blue diamond had already opened hole with a sledge hammer in boiler room where it was cemented painted and unaffected. Spill was behind walls of basement apartment. Piper observed where gauge was blown off due to overfill. Tech stated the construction noise was high and could not hear whistle. Oil soaked speedy dry was dumped around tank and ample amounts of sweet air was spread as well. Bob Snyner arrived on site as rep for Blue diamond. He has not seen the spill scene though he had certified tech out her that said it was 15 gallons. Piper stated he was misinformed and that a professional contractor needs to be hired. Bob hired PTC to respond for demo of basement. Bob stated that he was not going to deal with 3rd party damages because it is an illegal apartment. Piper stated it is not my concern weather it is or not my concern is that the oil is cleaned and the owners house is restored. Requirements are to remove all contaminated debris, relocate tenants, restore property. PTC arrived on site and removed 17 drums by 400. They wil return tomorrow. 1/4/06- DEC Piper received call from Firemans Fund (Insurer)Ray Bootin 732-477-0084, they are taking full responsibilty for spill and will clean. Cooperation is expected. Piper agreed. Firemans fund hired action Env as consultant. Steve Bouton 518- 441-7130. He will meet Piper on site at 2pm. 6/20/07- DEC Piper spoke w. Steve Bouton and he will send closure report. SOils have been excavated, sampled, backfilled and a new slab has been poured and sealed. 6/27/07- DEC Piper recieved and reviewed closure request. Based on remedial efforts and analytical endpoint results to date, no further action is granted. This spill is closed. See e-docs if warranted/

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	002
Tank Id:	6689
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

	B00 - Tank External Protection - None
	D02 - Pipe Type - Galvanized Steel
	F00 - Pipe External Protection - None
	I00 - Overfill - None
	G03 - Tank Secondary Containment - Vault (w/o access)
	H00 - Tank Leak Detection - None
	A00 - Tank Internal Protection - None
	J02 - Dispenser - Suction Dispenser
	C02 - Pipe Location - Underground/On-ground
Tank Location:	Aboveground in subterranean vault with access for inspections.....
	Tank in subterranean vault but accessible for inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - In Place
Pipe Model:	Not reported
Install Date:	12/01/1984
Capacity Gallons:	4000
Tightness Test Method:	ZZ
Date Test:	09/01/1991
Next Test Date:	Not reported

JACKIE GLEASON BUS DEPOT (Continued) **U003080331**

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	tank was being filled - is a roof unit and 100 - 150 gals of oil were spilled in the filling process Not reported
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 06/13/05: A heating contractor, Roy Kay, Inc., was modifying the roof top heating units to operate on duel fuel. While bleeding the lines of air, the operation was left unattended and an unknown amount of heating oil was released to the roof and apparently impacted a roof drain leading to a NYCDEP sewer. It is unsure how much was lost because of an unexplained inventory descrepency. At the time of the spill, both boilers were turned off but the facilities Dravo unit (another type of heating unit) and water heater were still active. Also, in order to bleed the roof top lines, an unknown amount of product was pumped off and most likely removed by the contractor; yet there was a descrepency of 242 gallons. Also, the contractor did not inform NYCT or make notification to DEC of the spill at the time it happened. The contractor attempted to perform the cleanup without telling anyone. Once discovered, NYCT hired an emergency response contractor to remove all of the contaminated debris already generated by the heating contractor and to finish the remaining cleanup. This did not allow NYCT to accurately determine the extent of the spill, nor the possible amount lost. The tank is and was at that time, a double walled fiberglass tank with interstitial monitoring and double walled piping with leak monitoring sump sensors. There is no record of any alarms from the intersttial or sumps sensors and no report of a loss of product in any of the log books. It would appear that the tank was not leaking but that product was being with drawn from the tank for several reason and that the product was no accounted for.

DEC Memo:	product found in three sumps at location - product found while doing routine inspections - no further materal found unk where it came from
Remarks:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE Product discovered in sumps of diesel tanks. Check valve gaskets were leaking into sumps. Product contained in sumps as confirmed by testing. Check valve gaskets were replaced for all diesel tanks. Product was also discovered in fill spill buckets due to clogged valves. Spill buckets were cleaned and valves unclogged. Product was also found around the waste oil catch basin. Sloppy housekeeping. Area was cleaned by NYCT personnel.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	001
Tank Id:	34748
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	L00 - Piping Leak Detection - None
	J02 - Dispenser - Suction Dispenser
	C03 - Pipe Location - Aboveground/Underground Combination
	I05 - Overfill - Vent Whistle
	G02 - Tank Secondary Containment - Vault (w/access)
	I04 - Overfill - Product Level Gauge (A/G)
	E00 - Piping Secondary Containment - None
	K00 - Spill Prevention - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	F01 - Pipe External Protection - Painted/Asphalt Coating
	A00 - Tank Internal Protection - None
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1966

Tank Info:

Tank Number:	001
Tank Id:	41662
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	H00 - Tank Leak Detection - None
	I00 - Overfill - None
	B00 - Tank External Protection - None
	F00 - Pipe External Protection - None
	C01 - Pipe Location - Aboveground
	G01 - Tank Secondary Containment - Diking (Aboveground)
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	4000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	11/01/2000

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: 07/25/11-Hiralkumar Patel. 5:05 PM:- spoke with Chris. he mentioned that they tested tank system around 3 PM and found wet leak. he spoke with property owner and informed him about product removal from the

CLOSED-LACKOF RECENT INFO (Continued) **S104619963**

tank. as owner is working to get gas line, he refused to pump out tank. site has 2,000 gal UST in courtyard, on right side of the building. Chris mentioned that tank had about 600 gal in it during testing. 5:11 PM:- spoke with Mr. Schwimmer, property owner. informed him that the tank must be pumped out tonight. he will talk to ABC tank. 6:42 PM:- received call from Chris. he mentioned that tank has been pumped out. they will install temp tank tomorrow. 07/26/11-Hiralkumar Patel. 11:38 AM:- spoke with Chris. asked him about current status. he mentioned that fill port was plugged with red cloth. he mentioned that tank is located in courtyard on right side of the building and tank top is about 5-6 ft below courtyard surface. courtyard is about 12 ft wide. he will send proposal for tank cleanout and investigation. he mentioned that owner refused to install temp tank as he applied for emergency permit to install natural gas line. 1:30 PM:- spoke with Mr. Schwimmer. informed him that the department requires soil (and groundwater, if applicable) investigation around the tank system. asked him about status of temp tank. he mentioned that he got all permits and will have gas supply availabe tomorrow morning. suggest him to have temporary tank installed to provide hot water to buiding residents. he mentioned that he has informed his tenants about new gas line installation tomorrow morning and he doesn't want to spend money for temporary tank. asked him to seal the fill port to prevent misdelivery. informed him that the tank must not be abandoned until approved by the department. YMS Realty Corp. c/o Daniel Schwimmer 1312 44th Street, Suite 111 Brooklyn, NY 11219 Ph. (718) 951-2248 (O) (917) 622-3820 (C) email: yms2047@aol.com alternate addresses: none PBS #: 2-253006. as per PBS record, the site has 2,000 gal #2 oil UST. the PBS registration expired on 08/06/2007. other spill #: 9813577. spill was reported on 02/05/1999 due to tank test failure. case was closed in Mar. 2003 due to nature/extent of spill report. 3:50 PM:- sent CSL to Mr. Schwimmer requiring PBS renewal (form submitted by 08/10/11) and soil delineation around the tank system (report due on 08/31/11). letter emailed to Mr. Schwimmer and Donna (ABC Tank). 08/04/11-Hiralkumar Patel. 3:41 PM:- received call from Chris. they were hired for tank cleaning/inspection and investigation. ABC tank will clean the tank and will do visual inspection to find out leak area. he also mentioned that owner has decided to abandone the tank. as tank will be abandoned, asked him to drill through tank bottom and sidewalls to collect soil samples at least three feet beyond the tank surface. informed him that tank must not be abandoned until the department reviews the soil samples results. asked Chris to call to schedule a site inspection, once they expose the tank. 08/09/11-Hiralkumar Patel. 11:03 AM:- received call from Chris. they cleaned the tank. he requested a site visit. scheduled a site visit at 3:30 PM on 08/11/11. 08/11/11-Hiralkumar Patel. 3:35 PM:- visited site. met ABC crew at the site. inspected tank area. tank is located in 12 ft wide courtyard between the subject site and adjacent building at 536 40th street. fill port is located in 4 ft wide alleway and it is located behind the locked gate. found stockpile of contaminated soil in courtyard. this soil was removed from top of tank. found water in tank (half full). no sheen or oil droplets found on water. tank top is about 2 ft below grade. found old abandoned fill port on sidewalk. 3:51 PM:- spoke with Chris. he mentioned that tank is 12 ft long and 64 inch in diameter. based on observation during the site visit, asked him for following: - removal of stockpiled soil in courtyard - further excavation of soil from tank

CLOSED-LACKOF RECENT INFO (Continued) **S104619963**

top until expose the tank sides (as suspecting more contamination on tank top) - total of six soil samples via borings through tank: two borings through each side of tank and two borings through tank bottom - collection (and analysis) of soil samples at least two ft beyond tank wall and two ft below tank bottom 08/17/11-Hiralkumar Patel. 12:56 PM:- received call from Chris. they finished removing soil from tank top. he mentioned that entire tank is full of rain water and no oil sheen or droplets observed on water. he suspect that wet leak noticed during tank test could be water bubbles from pipe joints on tank top. he requested a site visit. scheduled a site visit at 3:30 PM today. 3:35 PM:- visited site. met Chris and Mr. Schwimmer. inspected tank area. entire tank and 6 inches above tank was filled with water. no sheen or product observed on water. tank was holding water. Chris mentioned that no holes were found during tank cleaning. based on available information and observations during site visits, case closed. **refer to spill # 9813577 also.**

Tank Info:

Tank Number:	001
Tank Id:	209976
Material Code:	0022
Common Name of Substance:	Waste Oil/Used Oil

Equipment Records:

H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J03 - Dispenser - Gravity
E07 - Piping Secondary Containment - Trench Liner
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
L02 - Piping Leak Detection - Interstitial - Manual Monitoring
K00 - Spill Prevention - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
G00 - Tank Secondary Containment - None

Tank Location:	Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type:	Steel Tank in Concrete
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	01/01/1989
Capacity Gallons:	250
