Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	MICHAEL MANDAC
DEC Memo:	valve left open during service, c/u pending
Remarks:	6/26/18-Lin- PBS 2-190233. While doing excavation work at the bus depot, the construction crew discovered a buried hydraulic oil tank filled with water/oil. The tank is improperly abandoned. Piping was discovered that is suspected to be related to the hydraulic oil tank found. Close to a drum of water/oil mixture was pumped. The tank is estimated to be approximately 50 gallons. Plan to either remove tank and collect endpoint samples or installed soil borings. Pending investigation. Will send all documentations and plan to Demeo. 8/8/18 TJD File review. Email from NYCTA System Safety (Mandac) received detailing history of location and misreporting of spill. No discharge occurred as per below info received from NYCTA: Sorry for the late

NYCTA - JACKIE GLEASON DEPOT - NYCTA (Continued) **S122480165**

follow up. I have been grossly misinformed about this issue. First and foremost, there was never any sheen in either the remaining piston cylinder or the pumped out liquid sitting in a drum. The project engineer did not seem to understand what sheen meant, not did the Buses compliance group step in and intervene. The attached pictures show just water. No odor. No PID readings in the construction zone, in the drum, or in the in-ground piston cylinder. The hydraulic oil tank reservoir was an aboveground tank that was removed back in 2009. Photographic documentation includes removal of the tank, pump, and associated piping, as well as proof of removal of the other hydraulic piston. The PM of that project is still with Buses and stated that the contractor cleaned and removed all piping. It looks like the piston was left in place because it was just too costly to remove both pistons ten years ago. The hydraulic oil was not an unknown product. Since 1992 (and this applies to Jackie Gleason per the paperwork but probably is systemwide), stock number 69-12-1510 has been used as hydraulic oil for the bus chassis wash lifts. That stock number represents several products which are all similar in composition. Given that there was no initial contamination of water (misreported) and no source of contamination exists, OSS is requesting that DEC administratively close out the spill which should have been reported in the first place. Based upon the documentation provided - spill is administratively closed.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Update By:	SMQUANDT
Site Description:	Location: The site is located in Sunset Park, a mixed-use urban area of Brooklyn, New York, which includes residential, commercial, and industrial areas. The site consists of one lot (Lot 39) totaling approximately 19,605 square feet (sf). Site Features: The site is bounded to the north and northwest by Greenwood Cemetery maintenance facility; to the east and northeast by 5th Avenue followed by Greenwood Cemetery; to the south and southeast by 5th Avenue followed by the MTAs Jackie Gleason Bus Depot; to the south and southwest by 36th Street followed by a gasoline station, car wash and commercial offices; and to the west by a three-story residential building with a first floor church occupant. Surrounding property uses are commercial, residential, and institutional. Current Zoning and Land Use: According to the New York City Department of City Planning (NYCDCP) Zoning Map 16B, the site is zoned for manufacturing use (M1-2) and is improved with a two-story building. The site is currently vacant. Use of the Site as a community facility (i.e., a school facility) is permitted by a special permit in M1 districts. NYCSCA is seeking and anticipates issuance of a special permit for the proposed use of the Site as a public school facility. Past Use of the Site: The eastern portion of the site was first known to be developed in 1903 with elevated train tracks and an elevated train car repair shop. By 1926, the train car repair shop was demolished and the lot was vacant with the exception of the elevated train tracks (on a platform). The current site building was constructed in approximately 1953, and used for manufacturing purposes including jewelry fabrication. By 1997, the second floor was utilized as a garment assembly facility and by 1998, the first floor was used as a nightclub. Since at least 2004 through 2017, the building has been used as a church. The paved area is fenced-in and was used for automobile sales and automobile parts scrapping operations until the New York City School Construction Authority (NYCSCA) purchased the property. The western portion of the site was developed with a four-story residential building from at least 1903 until 1951, when it was razed. Since approximately 1999 to 2017, a trailer has been present on the western portion of the lot and the unpaved area has been utilized for storage of automobiles. The site is listed in the Department s Petroleum Bulk Storage (PBS) tank database for one 1,500 gallon underground storage tank with a status of closed prior to 03/1991 . The PBS records indicate the tank is vaulted with no access for inspection. Site Geology and Hydrogeology: Geological data obtained as part of the Remedial Investigation (RI) and from previous reports indicates the principal geological units, from top to bottom, are: 1) fill material consisting of reddish brown sand, silt, gravel, and miscellaneous debris (i.e., metal, glass, asphalt, slag, coal ash/ash, concrete, red brick, and wood) from the ground surface to depths ranging from 11.5 feet below ground surface (bgs) to 48 feet bgs and 2) reddish brown, dark brown, and light brown fine to medium sand, silt, and fine gravel beneath the fill to the terminal depths of the borings, which ranged up to 70 feet bgs. Bedrock is expected to be at greater than 200 feet bgs. Based on the two rounds of

NYC DEPT OF EDUCATION - PS 671K (Continued) **S123159079**

groundwater surface elevation measurements, the depth to groundwater ranges from 46 feet bgs to 53 feet bgs and the predominant direction of groundwater flow in the eastern portion of the site is towards the northeast. A site location map is attached as Figure 1.

Env Problem:

Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in soil, volatile organic compounds (VOCs), SVOCs, and metals (in filtered samples) in groundwater; and, chlorinated VOCs in sub slab vapor/soil vapor. Remedial actions have successfully achieved soil cleanup objectives for Restricted Residential use. Residual contamination in the soil, groundwater is being managed under a Site Management Plan. Prior to Completion of Remediation: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Soil: The primary contaminants found in subsurface soils are polycyclic aromatic hydrocarbons (PAHs) and metals typically found in historic fill, which is generally present in the top 12 feet of the site. Eleven PAHs were detected in soils down to 12 feet below ground surface (bgs) during the RI, included but not limited to, anthracene at 150 parts per million (ppm) (restricted residential soil cleanup objective (RRSCO) is 100 ppm), benzo(a)anthracene at 200 ppm (RRSCO is 1 ppm), benzo(a)pyrene at 180 ppm (RRSCO is 1 ppm), benzo(b)fluoranthene at 210 ppm (RRSCO is 1 ppm), benzo (k) fluoranthene at 85 ppm (RRSCO is 3.9 ppm), chrysene at 190 ppm (RRSCO is 3.9 ppm), dibenzo(a,h)anthracene at 98 ppm (RRSCO is 0.33 ppm), fluoranthene at 490 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene at 98 ppm (RRSCO is 0.5 ppm), phenanthrene at 560 ppm (RRSCO is 100 ppm) and pyrene at 590 ppm (RRSCO is 100 ppm). Metals, including arsenic, copper, lead and mercury were found in site soils down to 12 feet bgs. Arsenic at 21 ppm (RRSCO is 16 ppm), copper at 1,300 ppm (RRSCO is 270 ppm), lead at 1,200 ppm (RRSCO is 400 ppm) and mercury at 1.5 ppm (RRSCO is 0.81 ppm). Two soil samples collected from the northeast portion of the site were characterized as hazardous waste for lead, exceeding the regulatory limit of 5 milligrams per liter (mg/L). It is currently unknown if the elevated lead in soil extends off-site. There were no VOCs, PCBs, pesticides or herbicides detected at concentrations exceeding the RRSCOs. Three surface soil samples collected from the northern portion of the site contained PAHs and metals slightly above their respective RRSCOs. Groundwater: Six VOCs were detected in groundwater including 1,1,1-trichloroethane (TCA) at 7.9 parts per billion (ppb), (class GA standard of 5 ppb), chloroform at 25.9 ppb (class GA standard of 7 ppb), cis-1,2-DCE at 7.9 ppb (class GA standard of 5 ppb), MTBE at 2,200 ppb (class GA standard of 10 ppb), toluene at 9.1 ppb (class GA standard of 5 ppb) and formaldehyde at 2,700 ppb (class GA standard of 8 ppb). Three SVOCs were detected above standards as follows: benzo(a)anthracene at 3.7 ppb (class GA standard 0.002), bis(2-ehylhexyl)phthalate at 10 ppb (class GA standard 5 ppb) and chrysene at 3.4 ppb (class GA standard 0.002 ppb). No PCBs or metals of concern were detected in groundwater over standards. Soil Vapor: Several VOCs, including petroleum-related and chlorinated, were detected in soil vapor. Chlorinated VOC detections included TCA at 6,200 micrograms per cubic meter (ug/m^3), 1,1-dichloroethene at 28 ug/m^3 and vinyl chloride at 400 ug/m^3. Petroleum-related VOC detections included benzene at 4,000 ug/m^3, ethylbenzene at 500 ug/m^3, p/m-xylene at 330 ug/m^3, o-xylene at 370 ug/m^3 and toluene at 2,700 ug/m^3. The VOCs detected in soil vapor

NYC DEPT OF EDUCATION - PS 671K (Continued) **S123159079**

	are likely site-related from historical site activities or from the historic fill present beneath the site. Based on these results, more information is necessary to assess the potential for off-site soil vapor intrusion. Off-site soil vapor intrusion sampling will be performed during this coming heating season.
Health Problem:	Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Environmental Interest/Information System:
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

CON EDISON (Continued) **1019901346**

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GREENWOOD CEMETERY (Continued) **S102619671**

DER Facility ID: 127896
DEC Memo: November 16, 2005, Durnin: On about January 17, 1995, the Greenwood Cemetery removed 3 existing 550 gallon & 1 existing 4000 gallon motor fuel storage tanks & related pumps. They were replaced with 1 new 1000 gallon & 1 new 4000 gallon motor fuel storage tanks and 2 new BSA approved pumps on a concrete island with related piping and controls. Both tanks are Double-Walled Fiberglass. The 1000 gallon tank is for diesel. Nicholas Vislocky obtained a permit to do this work on July 25, 1994. Based on this information and that less than a liter of petroleum was apparently spilled, this spill is closed.
Remarks: CONTAMINATION FOUND WHEN REMOVING TANKS ABOVE TANKS. 3 550 GAL TANKS

Tank Info:

Tank Number:	0001
Tank Id:	229070
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
E00 - Piping Secondary Containment - None
K01 - Spill Prevention - Catch Basin
L09 - Piping Leak Detection - Exempt Suction Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
G10 - Tank Secondary Containment - Impervious Underlayment
J02 - Dispenser - Suction Dispenser
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported

DEC Region:	2
DER Facility ID:	147618
DEC Memo:	8/15/05 - Haggerty - spoke with Kathy from Soil Mechanics (516)-221-7500 on 7/15/05. She is trying to locate the file and will call back when and if she does. All other contact info is outdated. ----requires additional info, site visit 11/22/05, SA: No PBS record found. Can not find the property records in the property shark. Address found on google. Talked to Kathy, she told me that as far she remember this spill has been closed by DEC. She will fax me a copy if found. 12/19/2005: No record found in remediation database. Spill remains open. Need to find the owner. (Sadique) 01/04/2006: As per property shark present owner is Costco Wholesale Corp. The property have multiple alternate address. (Sadique) 02/15/06 - DEC lead changed to Grathwol. Performed site visit. Davidson Pipe Supply is no longer at this address. Tenant spoke to me on the phone and gave me permission to inspect the basement of his new business. No oil fumes, basement refinished. Business is on gas heat. New slab floor, no oil stains on walls or floor. Floor drain had water in it, no oil product or sheen. New business: K.C. Products, Ltd. (Kitchen counters, moulding, etc.)
Remarks:	COMPLAINANTS COMPANY WAS CONTRACTED TO REMOVED THREE TANKS OUT OF THE GROUND AND TWO TANKS WERE DISCOVERED TO HAVE BEEN LEAKING FOR AN UNDETERMINED AMOUNT OF TIME,BOTH TANKS HELD 4,000 GALS - TANKS HAVE BEEN REMOVED FROM THE GROUND AND CLEAN UP WILL BEGIN TOMORROW

DER Facility ID:	311708
DEC Memo:	3/24/06 - Raphael Ketani. I finally made contact with someone at the super's phone at (718) 851-1328. I had been trying since yesterday. Maria, a maintenance worker there, answered and said that Ms. Ohanna wasn't in, but would be back in the afternoon. I asked her if there were any odors in the building and she said she didn't smell

OHANNA APARTMENT BUILDING (Continued) **S107658846**

anything. I asked her about the oil spill and she said she wasn't aware of any oil spill or any problems with the heat. I asked Maria where I can send a letter that would reach Ms. Ohanna. She said to send it to P.O. Box 200289, Brooklyn, 11220. I told her that I will make a site visit at 2PM and that I wanted access to the basement. She said that she will let Ms. Ohanna know. I made the site visit. The odors were very strong (22 ppm) in the area of the twin 275 gallon tanks. However, there was only a slight indication that anything had ever spilled due to the absorbent sand on the floor below the front of the tanks. Ms. Ohana said that the service guy from Edward T. Miner Fuel Co. had stepped on a valve to one of the tanks and broke it. Later, I spoke to Mr. Chris Paulsen of the E.T. Miner Fuel Co. He said that there had been a leak from a broken cross over pipe and his crew had been over to repair it. He added that two days before, the tanks had held a large quantity of oil, but later they were dry. He suspected a 300 gal. loss. 4/24/06 - Raphael Ketani. I contacted Ms. Ohanna. I asked her what was the status of the cleanup. She said that her husband cleaned up all of the absorbent material and there is no odor. I told her I wanted to check and see for myself. She said that would be alright and she will call me with a date and time this week that would be good for her for a site visit. 5/17/06 - Raphael Ketani. I called Ms. Ohana and made an appointment for a site visit on 5/22 at 10:30AM. 5/22/06 - Raphael Ketani. I made a site visit at 10:15AM today. Ms. Ohana showed me that the oil company had come to her basement, cleaned up the spent Speedi Dri and had cemented over the floor under and around the tanks. I still detected 3900 ppb of volatiles with the PID. I told her that, to start, at least several soil borings and soil samplings have to be done around the tanks - and then maybe bioremediation. She said she has no money to do the work. I explained to her to contact either the oil company's or her own insurance to possibly get them to hire someone. She said she will try. 5/23/06 - Raphael Ketani. I received a call from Ms. Ohana. She said that she had all of the oil system piping replaced because her new oil company told her that E.T. Miner Fuel didn't do the job right and that the oil was still leaking out. She asked me to take a look at the pipes and close the case. She said she has no money to do the borings. I told her that the issue wasn't the pipes, but the estimated 300 gals. of oil that leaked into the ground below the tanks. I asked her for the phone number of E.T. Miner Fuel (718) 439-5066 and spoke to Karen at Miner Fuel. She passed me to Christopher of Miner Fuel. He explained that he tried to work with her, but she didn't want to pay for an investigation and remediation. 5/24/06 - Raphael Ketani. I called Ms. Ohana and talked to her about having one soil sample taken above the water table, instead of a series of borings and samples. I told her the sample needs to be taken to find out if her oil spill reached the water table. I gave her a list of contractors over the phone without prefering anyone. She said she was willing to do this and that she will get back to me when she finds a contractor. 5/25/06 - Raphael Ketani. I received a message from Ms. Ohana and returned her call. She said she contacted an environmental company from the list I had given her regarding doing one soil boring and taking one soil sample. She said they wanted $3000. She said she doesn't have that kind of money and that I am driving her out of business. She claimed she may have to take out a loan and she needs the money to fix up her building. She asked that I come to her building one more time with the PID. She said I will not find any odors now as she and her

OHANNA APARTMENT BUILDING (Continued) **S107658846**

husband have used ammonia and the deoderant powder and have cleaned everything up. I tried to explain to her, though she didn't seem to grasp the idea, that the issue is oil in the ground, not vapors. I told her I still needed one soil sample and to call Eastmond & Son who, I told her, were willing to give her a good price. I asked her whether she will call Eastmond, but she didn't respond to my question. She asked whether she can have her husband do the drilling and take the sample themselves to a laboratory. I told her that wouldn't be satisfactory as it has to be a sample taken with clean sampling equipment. I told her to call Eastmond, but she seemed to be more agitated. With that, she hung up the phone. 5/26/06 - Raphael Ketani. I sent a letter to Ms. Ohana explaining what she needs to do as the next step in the spill investigation and that the state will do the work if she doesn't and back bill her. 6/5/06 - Raphael Ketani. Received a call from Dennis Femia of NYC HPD (718) 802-4506. He asked what the situation in the building's basement was and what happened with the oil. I told him and he said Ms. Ohana takes his Section 8 clients so he will try to help her. I spoke to Mr. Mungra of Eastmond after this. He said he will do one boring tomorrow in her basement. He will go down 4 feet and take a sample. If it's clean he'll stop if it's dirty he'll try at 6 feet down and then maybe 8 feet. 7/5/06 - Raphael Ketani. I left a message for Isaac of Eastmond (718) 378-3000 to call me regarding the results of the soil boring. 7/18/06 - Raphael Ketani. I spoke to Isaac of Eastmond. He said that he has the soil sample analytical results. He said he will FAC them to me. 7/20/06 - Raphael Ketani. I tried calling Isaac, but could only leave a message on his cell phone (646) 879-6703. 7/26/06 - Raphael Ketani. I received a FAX today from Isaac of Eastmond with the analytical results for the one soil boring that was taken. There were no VOC hits, and the SVOC hits were either below TAGM or just slightly above it. Based upon this document and the documents in the record, I am closing this case. 8/17/06 - Raphael Ketani. Ms. Ohanna called up to inquire as to whether the spill case was closed. I told her it was. She asked for a DEC letter stating that the spill case is closed. I sent her one today.

Remarks: oil company deleivered fuel here two days ago and then customer called last night abnd said they were out of fuel: cross over split:

DEC Memo:	4/1/08 bf: Called Harry Gelb (718)788-2600. He is not sure of why tank failed. he believes it may have been caused when the driveway was repaved. I confirmed mailing contact and address. Mr. Damast is owner of the building. Told him he can register both tanks for 2-608583 and 2-608582 under one registration since they are on same property. Address for site location for 2-608582 is incorrect and is the mailing address. I told him this needs to be corrected. Sent ttf letter to: Abraham Damast 3913 2nd Ave. Realty LLC 4312 2nd Avenue Brooklyn, NY 11232 09/05/08-Hiralkumar Patel. received call from Isaac from Eastmond. he mentioned that they did isolation test and found tank, fill line and supply/return lines tight. they found problem in vent pipe. asked Isaac to submit isolation test result. 9/8/2008 Isaac submitted a writeup listing the work done and there was no contamination found. Tank was closed in place. See attached eDocs report.

Contact Name:	MIKE SHERWOOD
DEC Memo:	School under construction; underground tank was hit. Tank was emptied and removed, as well as contaminated soil. Area was backfilled and end point sample was taken from excavation.
Remarks:	03/12/07-Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC shcool authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals. 03/27/07-Hiralkumar Patel. received call from Amy Fonpana (845-492-3178). they are preaparing closure report and will send by 04/15/07. 04/24/07-Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon. 06/19/07-Hiralkumar Patel. left message for Ms. Fonpana. 06/26/07-Hiralkumar Patel. received message from Ms. Fonpana. they are still working on-site and waiting for some documents. will send report once they get all documents. 06/27/07-Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr. Sharma to send all analytical data (for all samples done on-site till date) and detailed scaled site map with all sampling locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports. 06/28/07-Hiralkumar Patel. meet Bob Kanaparthi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II

NABISCO CO - LIFESAVERS BROOKLYN (Continued) **1001113387**

reports from Mr. Sherwood. abstract of Phase I: - the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street - previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing. - large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737) - site is approx. 20 ft above mean sea level - BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the depth of groundwater is approx. 37 ft bg and groundwater flow direction is to the northeast. <---------- - major spill sites in neighbourhood: 1. Greenwood Cemetery (Spill #s: 8710384, 8710694, 8902953, 9413808). all spill closed 2. Jackie Gleason Bus Depot (Spill #s: 9106350, 9507015, 9705882, 9803068, 9902851, 9908589, 0211807, 0402205, 0413523, 0702197) 3. 971-975 4th ave (spill #: 9207015). groundwater contamination reported <------ 4. Mobile service station, 89-14 4th ave (Spill #s: 0430002, 0330037, 8302631) reported groundwater contamination <---------- 5. 987 4th AVe (spill #: 8706481). found groundwater contamination. abstract of Phase II report: - proposed design for school includes construction to a depth of approx. 18 ft bg - depth of groundwater was found to range from between 14 and 24 ft bg - total of 13 soil samples (LPB-1 to LPB-8, SPB-2,5,6,7 and 8) and 7 groundwater samples (LPB-1W, 5W and 8W, SPB-5,6,7 and 8)were collected for analysis - found heavy Tricholorethene (160,000 ppb) contamination in groundwater sample SPB-5 <------ - as found heavy TCE contamination in groundwater sample, did suplemental phase II - collected two soil sample from two borings (close to previous boring location SPB-5) and three groundwater sample from same two borings on-site and four groundwater sample from two off-site borings - also took 6 sub-slab soil-gas samples, because of heavy TCE contamination - found no contamination in any soil, groundwater or soil-gas samples during supplemental phase II investigation Michael Sherwood Shaw environemtal PH. (914) 633-9324 (O) (516) 650-5290 (C) Fax (845) 492-3101 email: michael.sherwood@shawgrp.com Bob Kanaparthi NYC SCA Ph. (718) 472-8620 Drew Pardus NYC SCA Ph. (718) 752-5036 (O) (646) 577-8280 (C) during meeting Mr. Kanaparthi mentioned following: - entire site has been excavated to depth of 16 ft and groundwater is about two more feet deeper than existing excavation bottom. - during excavation, they removed total of five USTs (one 2000 gal fuel oil/diesel tank, one 1000 gal sugary mix tank, one 5000 gal tank, one 100 gal tank and one 1000 gal tank). - found contaminated soil around some tanks and has been removed - endpoint samples taken from contaminated zones - currently footing work for proposed building is going on at site - during construction found sheen on groundwater and gasoline odor - took groundwater samples from two different locations - found minor benzene (58 ppb) contamination in groundwate sample GW-1, along 35th street <--- - there will be two elevator pits, partially merged in groundwater - to work on elevator pit, they need to dewater those areas - due to high concentration of TCE in groundwater sample during first set of sampling, they will put vapor barrier and active SSDS under BASEMENT floor asked Mr. Pardus to do following: - installation of atleast three monitoring wells to define site specific groundwater flow direction and sampling soil and groundwater during this monitoring well installation. - samples must be analyzed for STARS 8260 & 8270 methods & report must include chlorinated compounds - no dewatering events until site-specific groundwater flow direction has defined (to prevent spreading

NABISCO CO - LIFESAVERS BROOKLYN (Continued) **1001113387**

contamination if dewatering points are downgradient to source of contamination) - no concrete/foundation work till full investigation completed - installation of one more monitoring well upgradient (once groundwater flow direction defined) to check any off-site migration - submission of soft copy of vapor barrier & SSDS design - monitoring wells atleast 5 ft below groundwater table - samples from monitoring wells must be taken using Low Sress (low flow) Purging and Sampling procedure (EPA guidance)
--*-

NABISCO CO - LIFESAVERS BROOKLYN (Continued) **1001113387**

data). also asked Mr. Pardus to install a permanent monitoring well on sidewalk along 34th street (close to property line between subject site and park) as subject site is exactly downgradient from contamianted site at 129 34th street. this well will be used as monitoring point to see any oil from 129 34th street site hit construction site or not. Mr. Pardus mentioned that they will install vapor barrier and sub-slab system. Mr. Pardus will schedule installation of one well on sidewalk along 34th street. 03/20/08-Hiralkumar Patel. received tank closure report from Shaw environmental. abstract: - site groundwater was encountered between 16 to 18 ft bg - installed four wells (MW-1, MW-2, MW-4 and MW-5) - no tidal influence noticed in wells MW-1, MW-2 and MW-5, via automatic data logger - groundwater level data from MW-4 shows rise in the water level; cause o fthis water level rise is unknown (no preceipitation or on-site dewatering during or before water level measurement) - direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest) - removed four regulated (petroleum) USTs and one non-regulated (sugar) UST in Mar.-Apr. 2007 - four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100 gal - one 1000 gal sugar tank removed - 2000 gal tank was punctured during excvation and then spill reported - 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion - final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled - 100 gal UST was dicovered immeidately beneath the concrete slab of the former site building - 100 gal UST was found to be old and rusted with large openings - following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal - 5000 gal UST was abandoned-in-place with concrete - 5000 gal UST found to be slightly corroded but no holes were observed - final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled - no endpoint bottom samples collected after 5000 gal tank removal <---------- - 1000 gal UST was discovered about 5 ft bg and found to be rusted with a large hole where it appears that the weld seperated <------- - final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled - groundwater samples collected from one geoprobe GW-1 and four monitoring wells (MW-1, MW-2, MW-4 and MW-5) - found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples - school design includes a vapor barrier and an active SSDS 06/03/08-Hiralkumar Patel. spoke with Mr. Pardus. he doesn't know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such. 06/06/08-Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not. 06/17/08-Hiralkumar patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS. left message for Mr. Pardus for following: - submission of

NABISCO CO - LIFESAVERS BROOKLYN (Continued) **1001113387**

design specs of vapor barrier and SSDS - confirmation about installation of vapor barrier and SSDS - clarification for not taking endpoint bottom sample after 5000 gal tank removed 06/23/08-Hiralkumar Patel. left message for Mr. Pardus. 07/09/08-Hiralkuamr Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the southwest corner of the building foundation excavation, immediately below the former location of the 5,000 gallon UST. one sample was collected from a temporary geotechnical well (GW-2) already in place at the Site and the other was collected from standing water (SGW-1) that had pooled in that corner of the Site. no contamiantion found in groundwater samples. 5000 gal UST was removed in Apr. 2007 and groundwater samples were taken in June 2007 after contractor removed soil under water table as part of foundation work. based on submitted documents till date, case closed. **see Spill #: 0703584 & 0700836 also as reported to same site.**

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

NABISCO CO - LIFESAVERS BROOKLYN (Continued) **1001113387**

storers, and disposers of hazardous waste.

Update By:	HMDUDEK
Site Description:	Location: The 22-36 Second Avenue site is a one-acre site located in an urban area, in the Gowanus area of Brooklyn, New York (Kings County). The site is bounded by 5th Street to the North, Second Avenue to the east, and the Gowanus Canal to the south and west. Site Features: The site is flat and has four one-story buildings which cover most of the site. Current Zoning and Land Use(s): The site is located in an M2-1 manufacturing district. The site is currently occupied by a metal shop, a wood shop, a food distributer and a clothing distributer. Past Use of the Site: Past uses of the site

22-36 SECOND AVENUE (Continued) **S117936671**

include sulfur works; manure dump; operations and storage of various materials, including cement, asphalt, paint, cork materials, finishing and cutting; cork slab plant; iron oven; and a switch house. Five petroleum spills were reported on the site between 1994 and 2015. One spill, reporting gross soil contamination and free-phase petroleum-like material in soils, is currently open. Site Geology and Hydrogeology: Historic fill extends from the surface cover to depths ranging from 11 to 15 feet below ground surface. The fill generally consists of brown coarse- to fine-grained sand with variable amounts of wood and brick. Below the fill, a layer of native organic clay extends to a depth of 25 to 35 feet below ground surface. The clay is underlain by glacial till. Bedrock occurs at approximately 140 feet below ground surface. Groundwater was observed at about 7 feet below ground surface and is inferred to flow northwest towards the Gowanus Canal.

Env Problem: Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and pesticides. Based on investigations conducted to date, the primary contaminants of concern include polyaromatic hydrocarbons (PAHs), 4,4-DDT, acetone, trivalent chromium, copper, lead, mercury and zinc. Soils - Soil borings were advanced to a depth of 12 feet below ground surface at three on-site locations. Two samples were taken from each boring. Acetone was found at concentrations up to 1.6 mg/kg (the unrestricted use Soil Cleanup Objective (SCO) is 0.05 mg/kg). The SVOC found at the highest concentration was Benzo(b)fluoranthene at 44 mg/kg (the SCO is 1 mg/kg). Six additional SVOCs were found at maximum concentrations ranging from 4.9 mg/kg to 38 mg/kg. The SCOs for these SVOCs range from 0.33 mg/kg to 1 mg/kg. The pesticide 4,4-DDT was found at concentrations up to 0.018 mg/kg (the SCO is 0.0033 mg/kg). Trivalent Chromium was found at concentrations up to 34 mg/kg (the SCO is 30mg/kg). Copper was found at concentrations up to 2,200 mg/kg (the SCO is 50 mg/kg). Lead was found at concentrations up to 540 mg/kg (the SCO is 63 mg/kg). Mercury was found at concentrations up to 19 mg/kg (the SCO is 0.18 mg/kg). Zinc was found in concentrations up to 710 mg/kg (the SCO is 109 mg/kg).

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion on and off-site.

DEC Memo:	GROUNDWATER SHOWN TO BE EEFECTED BY RELEASE. CLEAN UP UNSURE.
Remarks:	Sangesland spoke to Wendy at Roux Assoc. She said they have been doing Phase 2 investigations at a number of Exxon-Mobil sites in the New York Area. They did soil borings and installed monitoring wells and found contamination. 08/6/10-Farrell-Report review requested by S. Rahman. Spill closure request for Spill #09-11335 by (Kleinfelder East, Inc.-Joel Adrian/Alex Wirth-(845)-567-6530) April 6, 2010 SAR prepared by (Roux Associates, Inc.-Scott Glash/Daren Moss-(800)-322-7689) February 12, 2010 for ExxonMobil Environmental Services Company, Fairfax, VA. Location of interest: ExxonMobil Station No.10019 875 4th Avenue Brooklyn, NY RAI (listed above) evaluated recognized environmental conditions (REC) conducted in 12/08 by Kleinfelder East, Inc. The property consists of an active retail petroleum filling station & convenience store. Residential use structures (east), 33rd Street and further residential and commercial use structures (south), 32nd Street and further residential and commercial use structures (north), & 4th Avenue followed by an automotive repair shop and a drycleaner (west). Ground surface elevation is about 23 above sea level, groundwater found at depths of 24.05-32.19 bgs, southward flow determined. One (1) tank field observation well is a monitoring point at the southwestern side of the tank field. KEI (above) reported no public water-supply wells within 1 mile of the property. REC s include (3) current 12,000 gal gasoline USTs with piping and dispensing units. No former USTs were noted. No previous spill cases associated with the property. RAI began Phase II ESA on 10/13/09 with site-wide GPR survey. One (1) soil boring was advanced & (7) monitoring wells were installed; soil & groundwater samples were taken and analyzed. Results of soil sample analysis included: No VOC or SVOC detect above NYSDEC RSCO. Heavy

875 4TH AVENUE (Continued) **S110139776**

metal detect only. On 12/23/2009 groundwater samples were collected and analyzed, no free-phase product was observed. Field tank observation well (TF-1) was gauged on 10/13/2009. The well was dry with no presence of LPH. Results of groundwater sample analysis included: MTBE detect above its NYSDEC groundwater standard in MW-2 at 876 ppb (12/09) 360 ppb in June 2010. Tetrachloroethene detect above NYSDEC groundwater standard in MW-6: (12.7 ppb) Trichloroethene detect above NYSDEC groundwater standard in MW-5,6 & 7: (22.1 ppb high in MW-6) SVOCs detect in MW-4 & MW-6: Acenaphthene(78ppb) & Bis(2-ethylhexyl) phthalate(10.8 ppb) 10/26/10 - This spill has been assigned to M. MacCabe. 1/25/11 - M. MacCabe - Bolla EM Realty has taken responsibility for site remediation. Arcacis is the new consultant. 4/29/11 - spill closed

DEC Memo:	3/4/2003: CLOSED DUE TO LACK OF ANY RECENT INFO - DOES NOT MEET ANY CLEANUP REQUIREMENTS. 5/18/06: Case reopened because high napthalene found in downgradient MW8 on Verizon property. Assessment required letter sent, due back 7/18/06. PBS # 2-603597 5/31/06: Spoke to Commodore Manufacturing. He will send documents regarding legal closure of tanks three years ago. 6/5/06: Received letter with documentation that Action Environmental closed in place a 35,000 gallon heating oil tank that was previously abandoned in place. The tank was noted to have been properly abandoned in the late 1940's. 8/11/06: Spoke with Kevin O'Connor. Two 35,000 gallon USTs were abandoned in place. A third tank was found to be formerly abandoned in place with sand. All three tanks were in parrallel. Soil testing may have been completed by a different company. Contact owner for additional information. Called Abraham Damast (718-788-2600), he was not in the office. 8/21/06: Called Abraham Damast, the line was busy. 8/25/06: Left message with Abraham Damast's secretary to see if he has additional information regarding the tank removal/abandonment. 9/27/06: Sent letter to Abraham Damast requiring sampling results

COMMODORE MANUFACTURING (Continued) **S106703419**

from the abandonment which occurred in September 2004. 10/11/06: Downgradient Verizon site Spill 9108899, located directly downgradient of Commodore manufacturing, was closed, although their upgradient well MW8 still shows high napthalene contamination from an unknown upgradient source. Include Verizon's well MW8 in possible future sampling of this plume. 9/16/14 - Raphael Ketani. The spill was opened on 2/6/90 as a result of an integrity test failure for a two tank system. According to the spill report, these were two 550 gal. gasoline USTs. However, there is no documentation indicating that gasoline USTs were ever at the site. The site is owned by 4312 2nd Avenue Realty, LLC (zip code for site address is 11232). The contact is Abraham Damast at 19 Mitchell Drive, Kings Point, NY, 11024. The township for his home is North Hempstead. The general area of Nassau County is Great Neck. The block and lot for the site are 726 and 1. The information above came from a deed dated 12/31/2000 which was found in ACRIS. The PBS registration is #2-603597. It shows three 35,000 gal. USTs. Two had #2 heating oil and one had #6 heating oil. The tanks were closed in place. An investigation and tank closure report was sent on 5/12/99 by Action Remediation Co. It was produced for Action by Advanced Cleanup Technologies and is dated 5/11/99. According to the report, 5 soil borings were performed. There were no PID detections. These borings were turned into wells TW-01 to TW-05. Groundwater samples were collected and analyzed (received by the lab on 4/19/99). All of the results were non-detect. The tanks were cleaned out and abandoned in place. 9/19/14 - Raphael Ketani. I presented the case for closure to Hassan Hussein, EE III and head of Unit C Remediation. He approved the closure. The closure was based on the lack of evidence of soil and groundwater contamination as the PID results were all 0 ppm and the groundwater results were all non-detect for VOCs and SVOCs. The closure was also based upon the letter from Action Remediation Co. indicating that they had abandoned the tanks by cleaning out the tanks and filling them with sand. Considering the information in the case file, it was determined that the spill was not a threat to the public or the environment. The spill case was closed today.

DEC Memo:	4/27/2016: Rashad 514 49th Street does not have an alternate address. Previous spill#1305012 found for site, tank test failure on 5000 gallon tank, dry leak, case closed after passing tank test. PBS#2-218979 found for site, there is a 5000 gallon #2 fuel oil UST with no access to inspection. Talked to Victoria she said tank test failed, and it is hard to tell if it is wet leak due to manway top accumulating groundwater. Water ontop of manway is being pumped out and protest will be retesting next week. 4/28/2016: Rashad TTF letter emailed to Victoria from Protest and mailed to site owner as per PBS registration, letter was also uploaded to D2. Spill will be reassigned to DEC Piper as he was day time runner on 4/27/16. 7/11/16- DEC Piper received email from Victoria from Protest. they were investigating the source the failure, but they are exploring the possibility of decommissioning this tank rather than repairing. This tank is located in a courtyard with no access for a machine for removal. Ultimately DEC would like to see three samples through the bottom of the tank, once it s cleaned, or four samples on each side adjacent to the tank. Samples must be collected at least 2 below the bottom of the tank if taken through, and at least 4 below the bottom if taken adjacent to. If contamination is found, it may be necessary to install monitoring/ recovery wells and/ or perform an ORC type injection to enhance bioremediation. 2/27/17- DEC Piper spoke with Gerry Nichols at Langan. Bldg is looking to replace tank in summer. Samples will be taken through bottom. Gerry will provide update when closer to start of project. 10/1/19- DEC Piper emailed Gerry Nicols for update. 12/10/19- DEC Piper received and reviewed tank closure report. Based on work to date, this spill is closed. See report in DEC Docs if warranted.

DEC Memo:	08/8/12-Zhune called Bob Urban from Protest but could not get him. Bob will call me back. 08/21/13- Zhune spoke to Bob. Bob said the tank system was tested and failed the test with a dry leak. The proposal for the isolation test was sent to the owner to be signed. As per Bob the fill line caused the test to fail. 10/30/13- Pro Test Environmental sent the closure letter report, including the tightness test results. As per Report on August 8th 2013 Pro Test performed a tightness test on 514 49th Street the tank system failed the test with a dry leak. On September 9th Pro Test returned to isolate the tank from its associated lines. Isolation was first attempted from

LUTHERAN MEDICAL CTR (Continued) **S104510039**

inside the tank, but it was discovered that several lines could not be isolated. Protest returned the next day to excavate, isolate and retest. The tank with only the supply, return and remote fill line attached passed a tightness test. Both the vent line and direct fill line were isolated at the time of the test. Technichians returned on September 11th, 2013 to make repairs. Technicians installed new vemt line and vent riser as well as new direct fill line with spill container. The tank system passed a restest. There was mo evidence of visible contamination within the escavation. Report added to E-docs. Spill closed.

Remarks: 5000 gal ust - dry leak - repair/retest pending

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO Sangesland spoke with Ray Lara. He said there was a spill in a basement of the house. He says they switched to gas heat and forgot to cancel the automatic delivery. Spill was minor. Stained an area approx 8' x 10' on the cement floor. PTC is laying speedie dry and will cleanup when absorbed. 3/26/2004 Sangesland spoke with Ray Lara of PTC. PTC did a basement digout, clean fill and repoured a cement floor. The homeowner said there was still an oil problem. PTC has reopened the floor and drilled several borings throughout the basement. When results come back PTC will forward them on to the DEC for closure. 3/31/2004 DeMeo spoke to Linda Vidinha (homeowner) who says there is still an oil problem at the house. She says PTC did an initial digout and then poured a new cement floor over a contaminated area. PTC came back and did some additional work, but she says there is still an oil smell. She would like the area properly excavated and cleaned. 3/31/2004 Sangesland spoke with Ray Lara at PTC. He said he over excavated the basement and pulled out clean soil. He took two soil samples that came back clean. He says the excavation is still open and he's waiting for word from DEC before he closes it up. Sangesland suggested that Ray speak with DeMeo to set up a time to visit the house to discuss what would be required to close the case out. 4/7/04 TJD Site inspection. Basement excavation complete. No contaminated soils identified via olfactory or visual inspection. Strong residual vapors still present inside residence, vapors are attributable to the use of sweet air by oil company/contractor. Endpoint sample analysis all below TAGM. Oil company & contractor have been directed to backfill excavation and restore concrete floor in basement. Upon completion the new floor must be coated with 2-part epoxy. 7/12/04 TJD Homeowner contacted DeMeo, All work has been completed to her satisfaction and she has requested a NFA letter for her files. Spill closed. Letter mailed.
Remarks:	Tank Overfill. Approx 10 gal. was spilled on land. Working on cleaning it up.

Updated By:	JHOCONNE
Site Description:	The site is located along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 45th and 50th Street. The land

REAR OF BUSH TERMINAL BUILDING (Continued) **S101008336**

immediately adjacent to the site is used for commercial and industrial purposes, although residential housing areas are present within approximately 1,500 to 2,000 feet of the site. The 17.3-acre site includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. The remaining pier structures are dilapidated and extend 600 to 800 feet into the Bay from the existing fill areas. The site is currently fenced to prevent public access. The total landfill area is approximately 14 acres in size. Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the existing wooded area). Debris piles are present in some areas, especially along the edge of the site bordering Marginal Road. The Site Investigation (SI)was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report. Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR). This site is being tracked under the Environmental Restoration Program (ERP) as site number B00031-2.

Env Problem: The primary contaminants of concern at the site (in groundwater, soils and sediments) that exceed their SCGs are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals. Sampling has revealed contravention of groundwater standards by 23 organic chemicals and 12 metals. It has been determined that no significant threat exists to the environment. While groundwater quality at the site has been impacted, it is unlikely that surface water quality criteria will be exceeded when groundwater discharges to the Bay, due to the low rates of groundwater discharge and the relatively low concentrations of contaminants in groundwater. Therefore, groundwater is not expected to present a potential environmental impact.

Health Problem: The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct contact expsoure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure.

SHWS:
Name: EMPIRE ELECTRIC COMPANY
Address: 5200 1ST AVENUE
City,State,Zip: BROOKLYN, NY 11232
Program: HW
Site Code: 57687
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 0.500
HW Code: 224015
Record Add: 11/18/1999
Record Upd: 02/07/2023
Updated By: SMQUANDT
Site Description: Location: The 0.5-acre Empire Electric Company site is located at 5200 1st Avenue in Brooklyn, New York on the southwest corner of 52nd Street and 1st Avenue. Site Features: The site previously contained a deteriorated, vacant, red brick building that had covered the entire site. This building was razed by NYSDEC during an interim remedial measure (IRM) in 2017 in order to make the site safe to perform the Remedial Investigation and excavation of contaminated soil. Currently, the entire site has a gravel cover system and is presently used as a parking lot. Current Zoning and Land Use: The area is primarily industrial (zoned 3, heavy industries), with a potato chip manufacturing plant, a New York City Department of Sanitation vehicle maintenance and storage building, an DHL courier company, the former BUG Kings County Works manufactured gas plant site, and the waterfront (Bush Terminal docks) in the general vicinity of the site. Past Use of the Site: The building was constructed in 1892 by the Brooklyn City Railroad Company for use as a power plant for the municipally owned trolley system. The building was used for electrical generation until the 1930s when the trolley system was abandoned. The facility was conveyed to the city of New York in 1940. The City sold the property in 1951. The new owner subdivided the parcel into two lots (Lot 6 and Lot 9). Empire Electric operated on Lot 9 from 1951 to December 1986 when the property was sold. Empire Electric s operations consisted of reconditioning and salvaging electrical apparatus, including PCB-containing transformers. The site was sold again in 1986, but the building remained unused until it was demolished. Site Geology and Hydrogeology: The site is situated approximately 1,200 feet from the Upper New York Bay at the western end of Brooklyn. The site is approximately 16 feet above mean sea level (msl), sloping gradually toward the bay. Prior to the IRM, site soil directly beneath the building consisted primarily large granite slabs that had supported the generators and historic fill and debris materials, underlain by sand and gravel under the basement slab. The water table beneath the site occurs at approximately 17 to 21 feet below ground surface (bgs). Regional groundwater flow direction is to the west, toward the bay. The depth to bedrock is unknown but is likely greater than 100 feet bgs. Surface drainage generally follows the topography, and flow is northwest along 52nd Street toward the Upper New York Bay. Storm water drains are present along 52nd Street and First Avenue. Surface runoff collects in these drains and then

NYSDEC EMPIRE ELECTRIC SITE #2-24-075 (Continued) **1000261156**

	flows directly into the Upper New York Bay.
Env Problem:	Nature and Extent of Contamination: Based upon investigations conducted to date and findings observed during the 2017 interim remedial measure (IRM), the primary contaminant of concern are PCBs and trichlorobenzene. Post-excavation soil samples from beneath the former basement floor exceeded the 1 ppm surface and 10 ppm subsurface criteria historically used to assess PCB contamination in soil. Two soil samples also exceeded the TSCA definition of hazardous waste. The site presents a significant environmental threat due to the presence of high concentrations of PCBs at and below the water table.
Health Problem:	The site is completely fenced, and contaminated soil is at depth below clean backfill, stone and concrete. Therefore, contact with contaminated soil is unlikely. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil), may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, there is a potential for soil vapor intrusion in future on-site buildings and off-site buildings.

FUSRAP:

Site Name:	AMERICAN MACHINE AND FOUNDRY CO SITE
Site Id:	NY 26
Site Status:	Eliminated from consideration under FUSRAP
Designated Name:	Not Designated
Alternate Name:	American Machine and Foundry Co - NY 26; Lutheran Medical Center; AMF; AMF Atomics
Location Street Address:	SECOND AVENUE AND 56TH STREET
Location City:	BROOKLYN
Location State:	NY
Location County:	Not reported
Site Oprerations:	1951 - 1954 conducted metal fabrication operation on uranium and thorium metals.
Site Disposition:	Eliminated - Potential for contamination considered remote based on results of radiological monitoring and sampling and extensive renovation of the site
Radioactice Materials Handled:	Yes
Primary Radioactivce Materials Handled:	Uranium and Thorium metal
Radiological Survey(S):	Yes
LM Site:	Not reported
Considered Name:	American Machine and Foundry Co
Site Summary:	Not reported

Address: 55TH ST & 1ST AVE
City,State,Zip: BROOKLYN, NY 11220
Program: HW
Site Code: 378989
Classification: A
Region: 2
Acres: 7.500
HW Code: 224056
Record Add: 03/27/2007
Record Upd: 06/30/2023
Updated By: SXDEYETT
Site Description: Location - The Kings County Manufactured Gas Plant (MGP) site is comprised of two contiguous parcels of land located on the east bank of the Bay Ridge Channel of the Upper New York Bay in Brooklyn, Kings County. The parcels are identified as 5400 1st Avenue and 5600 1st Avenue. The site is on the west side of 1st Avenue, near 54th Street. Site Features - The site is currently used for commercial/industrial purposes with warehouse buildings, a fuel oil storage facility and a power-generating station. The area between the buildings and other infrastructure is paved. Current Zoning/Use - The site is currently active and is zoned for industrial use. The surrounding parcels are currently used for a combination of both commercial and industrial uses. Past Use of the Site - The former MGP operated from 1904 until 1951. By 1970 all former MGP structures had been removed except for four fuel oil tanks and one gas holder that was converted into a fuel oil tank. In 1976 three meat distribution buildings were added to the property, which still exist today. At this time the fuel oil tanks and a power generating station were being operated by Con Edison. There are numerous spills relating to this activity on the site. One of the results of these spills was the installation of recovery wells for the collection of light non-aqueous phase liquid (LNAPL). These wells are currently being sampled on an annual basis. Site Geology and Hydrogeology - Fill material was encountered up to approximately 18 feet below ground surface. Fill material consists of fine to

K - KINGS COUNTY WORKS (Continued) **S110748428**

coarse sand with some silt, brick, metal fragments, concrete, cobbles and some clay. Underlying the fill was glacial outwash, fine to coarse gravel. Bedrock in the area is expected to be approximately 225 feet below ground surface. Groundwater is found at depths of 8 to 25 feet below ground surface and is tidally influenced. The groundwater flow direction is to the west.

Env Problem:	Prior to Remediation- Based on previous investigations, there are both VOCs (BTEX) and SVOCs (PAHs) from numerous petroleum spills at the property, as well as from past MGP operations. These contaminants are present in both soil and groundwater. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) was reported at concentrations up to 155 parts per trillion (ppt), exceeding the 10 ppt screening level for groundwater. Individual PFAS exceeding the 100 ppt screening level included Perfluorobutanoic Acid (PFBA) at a concentration of 2,940 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations up to 3,521 ppt, which is above the 500 ppt screening level for total PFAS in groundwater.
Health Problem:	The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Region:	2
Acres:	0.700
HW Code:	224249
Record Add:	11/16/2016
Record Upd:	09/26/2017
Updated By:	JHOCONNE
Site Description:	Location: The subject property is located at 29 53rd Street in the Borough of Brooklyn, Kings County, NY in an urban area. The subject property consists of about 0.7 acres designated as tax block 803, Lot 41. Site Features: The site currently contains a one-story warehouse-style building which occupies the entire property. Current Zoning/Use(s): The site is currently zoned as M3-1 (industrial and manufacturing district) and is used as a storage and distribution facility for packaged dry snacks. Historical Use(s): Since 1977 the Site has been occupied by Clem Snacks. A mechanic shop containing hydraulic lifts was noted to be located in the southeastern portion of the building from 1977 to 2004. Historically the site was utilized mainly for industrial purposes, including the E.W. Bliss projectile Department, paper warehouse and metal product manufacture from 1906 to 1977. Two crude oil tanks were depicted adjoining the southwestern side of the subject building on the 1926 to 1942 Sanborn maps. Site Geology and Hydrogeology: Soil borings conducted in 2013 identified sand and silt beneath the one-foot thick concrete building slab. Some gravel, brick and concrete fragments were observed in the boring down to 20 feet below grade; this debris represents fill material. Groundwater is present at a depth of approximately 12 feet below grade. The groundwater beneath the subject property is expected to be tidally influenced, and generally flowing to the west towards Gowanus Bay, which is located approximately 400 feet west of the site.
Env Problem:	Nature and Extent of Contamination: The following information was obtained from two separate Phase II reports prepared for the site in 2012 and 2013. Soil Borings identified evidence of petroleum non-aqueous phase liquid (NAPL) at the water table in at least 6 on-site boring locations. Volatile organic compounds (VOCs) were found including tetrachloroethylene (PCE) at a maximum concentration of 7.7 parts per million (ppm), trichloroethylene (TCE) at a maximum concentration of 12 ppm, and cis-1,2-dichloroethene (cis-1,2-DCE) at a maximum concentration of 18.2 ppm. Groundwater VOCs were detected in temporary wells on-site, including: PCE at a maximum concentration of 62 parts per billion (ppb); TCE up to 78 ppb; and cis-1,2-DCE up to 33 ppb. Soil Vapor No soil vapor data has been collected to date.
Health Problem:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

DEC Memo:	Drill samples done as per refinacing company showed impacted soil at approx. 14 feet. Cleanup or further action is pending DEC requirements.
Remarks:	1/18/13: Jane O'Connell received email from Joe Crua (NYSDOH) transmitting a copy of the NRC notification (see eDocs). Contacted Edward Shea, attorney for property owner. He stated that Phase II was performed on behalf of TD Bank for loan refinance purposes. Found solvent contamination in soil at 14 feet below floor slab (above water table). Mr. Shea characterized the concentrations as slightly above standards , but did not know the actual concentrations or to which standards the results were compared. I requested that he send me a copy of the report. (JHO) 2/13/20 - Spill transferred to Bryan Wong - site is managed under Consent Order, site no. 224249 (JHO)

Record Upd: 11/12/2010
Updated By: MOBARRIE
Site Description: The Site is located in the Gowanus section of Brooklyn in a zoned manufacturing area. The site was formerly used by Moore McCormack Lines, a steamship company (dates of occupancy unknown). Subsequently, Continental Terminals used the pier shed to store and distribute cocoa beans into the late 1990s. The shed was removed and the pier was then used by American Warehousing for vehicle storage. The Site also contains a garage that was used for vehicle maintenance. The Site was recently paved. The northern portion of the Site is used for storage of sea containers by the New York City Police Department, and a small electric power generating station operated by the New York Power Authority occupies the south part of the Site. Immediately northwest of the Site is Upper New York Bay/Gowanus Canal, immediately northeast is industrial/manufacturing, and immediately southeast are commercial and office buildings. The Site is approximately 98,010 square feet (2.2 acres) in size and is occupied by the NY Power Authority as well as the storage area for sea containers for NYPD. The nearest residential units are 0.12 miles (approx. 650 feet) to the east-southeast. There are no records of Petroleum Bulk Storage or Chemical Bulk Storage on the site. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.
Env Problem: Based upon investigations conducted to date, the primary contaminants of concern at the site include mercury, lead and copper. In July 2009, following discovery of petroleum contaminated soil during excavation to support repairs to the Site?s bulkhead, three test pits were excavated to determine the extent of the petroleum impacts. A total of seven sidewall soil samples and one grab groundwater sample were collected from the test pits. One sample was also collected for waste classification from the stockpiled soil excavated from the initial excavation and the test pits. Sidewall samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, pesticides and Total Petroleum Hydrocarbons. The composite waste classification sample was analyzed for TCLP parameters as well. The following contaminants with maximum concentrations were observed in soil: 17 ppm mercury; 1,100 ppm lead; and 330 ppm copper. The Part 375 Industrial Use Soil Cleanup Objectives (SCOs) have been exceeded for mercury, and the Part 375 Commercial Use SCOs have been exceeded for lead and copper. Groundwater samples were all below applicable Groundwater Standards for VOCs and SVOCs, but were not analyzed for metals. Depth to groundwater is approximately 9-15' below grade and is likely influenced by tidal action due to the immediately adjacent Gowanus Bay. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/26/2023

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2023

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

PFAS 3: PFAS Environmental Site Remediation List

Per- and Polyfluoroalkyl Substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings are blends of resins and lubricants used in products such as water-repellent clothing, furniture, adhesives, paint and varnish, food packaging, heat-resistant non-stick cooking surfaces and insulation of electrical wires. Chemicals in this group include perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

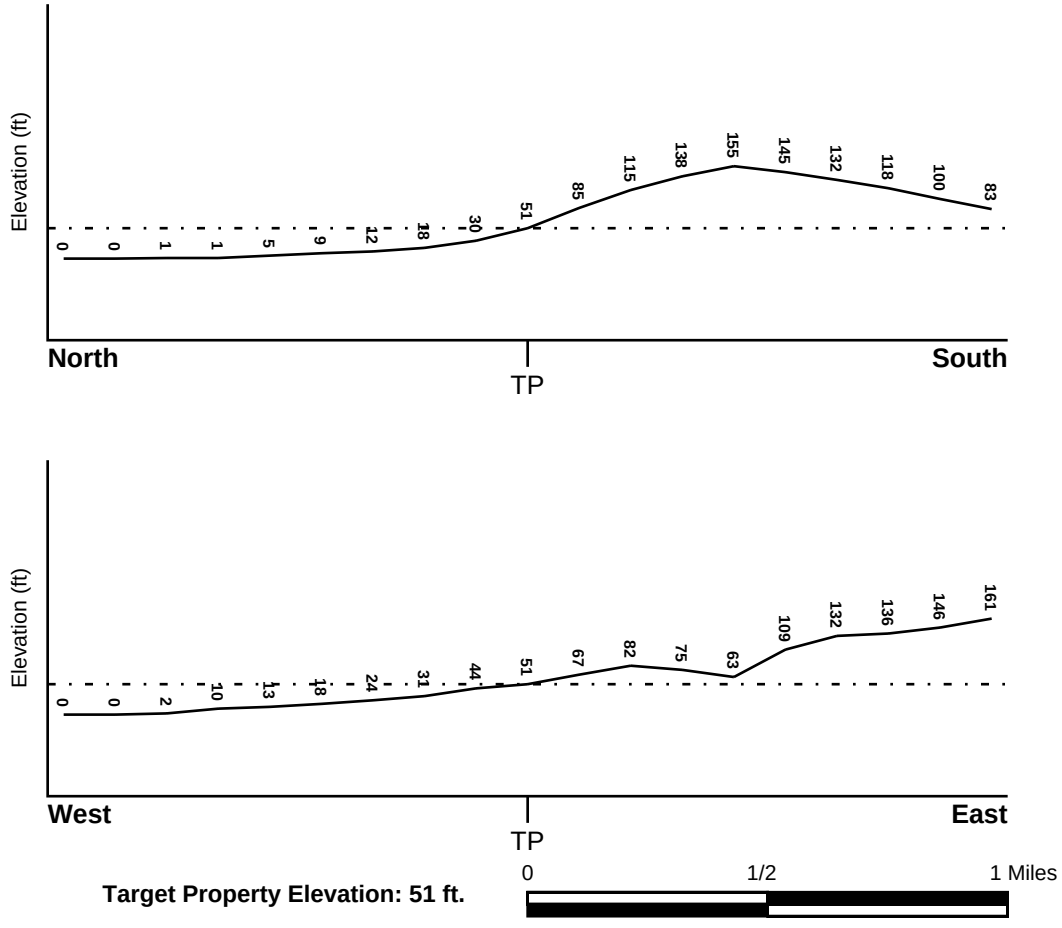
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 51 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970194F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

3604970085B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
JERSEY CITY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Lesova Environmental Group on Feb 16, 2024.

TARGET PROPERTY

4001 4th Avenue
Brooklyn, NY 11232

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use (s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Lesova Environmental Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Lesova Environmental Group were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

RE: Phase II Environmental Site Assessment
4001-4011 4th Avenue, Brooklyn, New York

Dear Mr. Middleton:

Please find the attached Phase II Environmental Site Assessment Report for the property located at 4001-4011 4th Avenue, Brooklyn New York.

Thank you for the opportunity. Please call with any questions or comments.

Very truly yours,
Castleton Environmental Geologic Services, DPC

1.0 INTRODUCTION

Castleton Environmental Geologic Services DPC (Castleton) has prepared the following Phase II Environmental Site Assessment (ESA) report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York (the site). The investigation was performed based upon review of the Phase I ESA by Merritt Environmental Consulting Corp. (MECC) dated January 7, 2019.

The objectives of this work were to determine if the sites historic and current usage as a gasoline station has impacted the subsurface. The objective was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples.

2.0 SITE BACKGROUND

The site is located at 4001-4011 4th Avenue, Brooklyn, New York (Figure 1). The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965.

Castleton reviewed the Phase I ESA prepared by MECC dated January 7, 2019. The MECC Phase I ESA identified that site has been a gasoline since its first developed use. According to the historical Sanborn Maps, a gasoline tank is present at the corner of 4th Avenue and 10th Street during the years 1926-1951.

MECC recommended further evaluation to determine if any documentation is available or if additional investigation (Phase II) is warranted. Subsequent documentation regarding the gasoline tank shown on the 1926-1951 Sanborn Maps was not provided.

3.0 PHASE II ESA FIELD INVESTIGATION

The objective of this Phase II ESA was to assess subsurface quality in relation to historic and current on-site filling station operations at the site.

The following scope of work was completed to assess subsurface conditions:

Task	Objective
Geophysical Survey	Determine if any subsurface anomalies indicative of underground storage tanks (USTs) and to clear underground utilities
Soil Sampling	Characterize site soil quality for impacts related to filling station operations

On-site work was completed on January 15, 2019. Sample collection locations are depicted on Figure 2.

3.1 Geophysical Survey

A geophysical survey was performed to identify evidence of subsurface anomalies and to mark on-site utilities in proposed subsurface work areas. The survey was performed using a variety of remote sensing equipment/methods including a magnetometer to identify ferrous metallic objects, ground penetrating radar (GPR) to identify changes in soil density and a pipe locating device to trace piping runs. The geophysical survey was performed by Delta Geophysics, Inc. of Catasauqua, Pennsylvania.

As described in the PBS records included in the Phase I ESA, 4 4,000-gallon USTs are currently in use at the site and were identified during the geophysical survey to clear boring locations.

Nine suspect (USTs) were identified that are currently not in use. Four suspect UST anomalies are centralized under the canopy between the active dispensers. Five suspect UST anomalies are located at the western portion of the site.

A metal anomaly not indicative of a UST was identified at northern portion of the site. A suspect UST was not identified at the northern portion of the site where the gas tank was shown on the historic Sanborn Maps.

All on site utilities were cleared before intrusive activities.

3.2 Soil Investigation

Soil borings were advanced to assess soil conditions at the site. Boring locations were selected based on potential areas identified during the geophysical survey. Soil borings were advanced with direct push technology (Geoprobe®) by Coastal Environmental Solutions, Inc. of Medford, New York.

Six soil borings were advanced. Soil samples were collected continuously from each boring location, logged and field screened with a PID for the presence of VOCs. Elevated field sensory (PID), olfactory or visible evidence of impacts to soil were observed in each of the borings ranging from 22.9 ppm in SB01 to 5,285 ppm in SB04. Soil was observed to consist of silty fine and medium sand. Groundwater was not encountered during this investigation. Soil boring logs are provided as Appendix A.

The following table describes the boring location, area of concern associated with each boring, and sample collected for laboratory analysis.

54 George Street, Babylon Village, NY 11702 I 206 West 23rd Street, 4th Floor, New York, NY 10011
631-482-1818 Office I 631-321-4349 Fax
www.castletonenv.com

Boring	Area of Concern	Highest Soil PID Readings (ppm)	Boring Depth (feet)	Soil Analytical Sample Interval(s)
SB01	Area of former UST (Sanborn Map) and metal anomaly	22.9	25	18-20 feet
SB02	Area of former UST (Sanborn Map) and metal anomaly	425.9	20	4-6 feet
SB03	Area of former UST (Sanborn Map) and metal anomaly	2,195	22	12-14 feet
SB04	West of the five suspect USTs	5,285	30	16-18 feet
SB05	West of the five suspect USTs	3,963	20	10-15 feet
SB06	South of the five suspect USTs and west of the currently in use USTs	4,955	24.5	18-20 feet

Soil retained for laboratory analysis was placed into laboratory supplied glassware and submitted under chain of custody to York Analytical Laboratories of Stratford, Connecticut, a New York State Department of Health (NYSDOH) ELAP certified laboratory. Soil samples were analyzed for:

- CP-51 VOCs via EPA Method 8260, and
- CP-51 SVOCs via EPA Method 8270

4.0 ANALYTICAL RESULTS AND DATA DISCUSSION

Soil analytical results were compared to NYSDEC CP-51 Soil Cleanup Levels (SCLs) for petroleum impacted soil and NYSDEC Part 375 Soil Cleanup Objectives (SCOs).

Soil analytical results reported concentrations SVOCs as non-detect or below SCLs and SCOs in the six soil sample analyzed.

VOCs above SCLs were reported in five of the six soil samples. VOCs above Commercial SCOs were reported in two of the six samples analyzed.

Analytical results and laboratory report are presented in Appendix B.

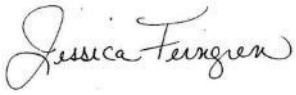
5.0 CONCLUSIONS AND RECOMMENDATIONS

Castleton has prepared the following Phase II ESA report to document the work performed at 4001-4011 4th Avenue, Brooklyn, New York. The investigation was performed based upon review of the Phase I ESA by MECC dated January 7, 2019.

The objectives of this work were to determine if the sites historic and current usage as a gasoline station has impacted the subsurface. The objective was met through the performance of a geophysical survey and the collection and laboratory analysis of soil samples.

The geophysical survey identified the presence of the 4 in use USTs, nine suspect USTs that are currently not in use, and one metal anomaly that is not indicative of a UST.



Six soil boring were advanced, and six soil samples collected for laboratory analysis. Analytical results reported concentrations of VOCs above applicable standards in five of the six soil samples analyzed.

Castleton recommends the following:

- Notification of these findings be made to NYSDEC
- The suspect USTs be assessed and, if are present, properly removed as per NYSDEC protocols
- Petroleum impacts to soil be delineated and remediated under the NYSDEC Spills Program

Any Regulatory Exceedences are color coded by Regulation

Q is the Qualifier Column with definitions as follows:

D=result is from an analysis that required a dilution

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

U=analyte not detected at or above the level indicated

B=analyte found in the analysis batch blank

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

P=this flag is used for pesticide and PCB (Aroclor) target compounds when there is a % difference for detected concentrations that exceed method dictated limits between the two GC columns used for analysis

NT=this indicates the analyte was not a target for this sample

~=this indicates that no regulatory limit has been established for this analyte

Technical Report

prepared for:

Castleton Environmental
54 George Street
Babylon NY, 11702
Attention: Jessica Ferngren

Report Date: 01/23/2019
Client Project ID: MEIN1901
York Project (SDG) No.: 19A0642

Report Date: 01/23/2019
Client Project ID: MEIN1901
York Project (SDG) No.: 19A0642

Castleton Environmental
54 George Street
Babylon NY, 11702
Attention: Jessica Ferngren

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 16, 2019 with a temperature of 1.5 C. The project was identified as your project: **MEIN1901**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 19A0642

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By: 

Date: 01/23/2019

Sample and Data Qualifiers Relating to This Work Order

VOA-E	The concentration reported for this analyte is an estimated value above the linear range of the instrument for EPA SW846-5035/8260 (>200ppb). Re-analysis using 5035/8260 medium level prep. resulted in a detection below the reporting limit (<500ppb).
S-03	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. This effect was confirmed by reanalysis.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-HI	The internal std associated with this target compound did not meet acceptance criteria (area >200% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Remedial Investigation Work Plan
NYSDEC Spill #18-11146
(RIWP)

Dear Ms. Zhune,

1.0 INTRODUCTION

The following document is a Remedial Investigation Report (RIR) developed for the subject site based upon the approved Remedial Investigation Work Plan (RIWP), which supplemented previous Phase I and Phase II Environmental Site Assessments (ESAs) performed at the site. The previously conducted Phase II ESA identified environmental conditions above standards and warranted further supplemental investigation to further the extent of contamination. This supplemental RIR will discuss the findings from the supplemental investigation and propose remedial alternatives to address the contamination discovered within soils at the site. Included within this Report is a discussion on the following: site background, site history, summary of supplemental findings, remedial alternatives, and a conclusion on the results.

2.0 SITE BACKGROUND

The site is located at 4001-4011 4th Avenue, Brooklyn, New York- Figure 1. The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965. Castleton reviewed the Phase I ESA prepared by Merritt Environmental Consulting Corporation (MECC) dated January 7, 2019. The MECC Phase I ESA identified that the site has been a gasoline station since its first developed use. According to the historical Sanborn Maps, a gasoline tank was present at the corner of 4th Avenue and 10th Street during the years 1926-1951. MECC recommended further evaluation to

determine if any documentation is available or if additional investigation (Phase II) is warranted. Subsequent documentation regarding the gasoline tank shown on the 1926-1951 Sanborn Maps was not provided. A Phase II was subsequently performed based on the recommendations outlined in the Phase I ESA. Please refer to Attachment-A for a survey of the current layout of the station.

3.0 SITE HISTORY

A Phase II ESA was performed by Castleton Environmental during January of 2019, which included a series of borings conducted at key locations throughout the property and a ground penetrating radar (GPR) survey to identify any potential former UST's. Six (6) soil borings were advanced on the Subject Property in the vicinity of the UST's. Soil samples were collected continuously from each boring location, logged and field screened with a PID for the presence of VOCs. Elevated field sensory (PID), olfactory or visible evidence of impacts to soil were observed in each of the borings ranging from 22.9 ppm in SB01 to 5,285 ppm in SB04. Soil analytical results were compared to NYSDEC CP-51 Soil Cleanup Levels (SCLs) for petroleum impacted soil and NYSDEC Part 375 Soil Cleanup Objectives (SCOs). Soil analytical results reported concentrations of SVOCs as non-detect or below SCLs and SCOs in all of the six (6) soil samples analyzed. VOCs above SCLs were reported in five (5) of the six (6) soil samples. VOCs above commercial-use SCOs were reported in two (2) of the six (6) samples analyzed. Based upon these findings a spill was reported and spill number # 18-11146 was assigned to the site. Please refer to Attachment-B for the previously conducted Phase II by another contractor.

4.0 SCOPE OF WORK

The previously conducted Phase II ESA concluded that the need for further investigation was necessary in order to further define the nature and extent of contamination discovered in soil. The focus was to vertically delineate the contamination discovered at previous sample locations and attempt to locate groundwater. The results of the GPR survey were also recommended to be confirmed through the performance of test pits in the former UST areas. The following summary of findings section details the results from the supplemental investigation compared to the applicable standards.

5.0 SUMMARY OF FINDINGS

The following summary of findings discusses the results from the supplemental RIR conducted on April 29, 2020. The supplemental borings conducted included: three (3) test pit borings(B-1-3) in areas of the previously identified former USTs were performed in order to confirm the results of the GPR survey. Borings B-4 and B-5 were conducted at former locations were soil contamination was discovered at depth, but never delineated. B-6 and B-7 were test pits in an additional area where the

previous GPR survey found suspected former USTs. Finally, B-8 was conducted down gradient of the suspected former USTs and B-4 and B-5. All borings were advanced until refusal was encountered preventing further vertical advancement of sample tooling.

5.1 Former UST Identification

A total of (9) suspected former UST's were identified in a GPR survey conducted during the Phase II ESA. In order to confirm this data and the existence of former USTs from past operations, a series of test pits were conducted in order to confirm the results of the GPR. Three (3) borings (B-1-3) and (B-6-7) were conducted along the string of suspected USTs discovered during the GPR as depicted on Figure-2. A rotary mason bit affixed to the boring rig was used to advance through the upper layer of concrete approximately twelve inches (12") in depth. A void of about one (1') was observed from one (1') to two and a half (2.5') feet were refusal was encountered at all three (3) test pit locations. The consistent refusal at precisely the same depth in all three (3) test pits is an indication that the previous GPR survey was accurate and most likely attributed to previous abandonment of the UST's in place. Based on the field observations at all three (3) borings, B-1-3, the tanks when abandoned were filled with concrete and left in place.

5.2 Supplemental Soil Sampling Locations and Results

A series of borings were conducted at previous sampling locations in an effort to vertically delineate contamination documented in soil. Borings B-4(former SB06) and B-5(between SB04 and former SB05) were collected at the previous Phase II locations. Boring B-8 was collected down gradient of B-4 and B-5 near the southwest corner of the property in an attempt to laterally delineate contamination discovered in the vicinity of the former USTs. Borings were collected utilizing the duel tube sampling system and continuous grab samples were extracted in five foot (5') intervals and screened in 2.5' intervals with a PID meter for the presence of VOCs. B-4 was the first delineation boring performed from 0-30' until refusal was encountered at 30' bgs. PID readings from 15-25' bgs were averaging approximately 4,500 ppm on the PID meter and subsided significantly from 25'-30' in the 500-190 ppm range with the bottom sample (B-4@ 27.5'-30'). A sample from 27.5'-30' was submitted to the lab for testing for VOCs via EPA 8260D. The results still indicated multiple BTEX petroleum constituents above unrestricted Part-375 SCOs. As mentioned above advancement beyond thirty feet (30') bgs was not feasible and most likely attributed to bedrock as rock fragments were discovered at the bottom of the last soil liner. B-5 was collected between the previous borings (SB04 and SB05) were vertical delineation was not achieved. Continuous samples were collected from grade surface to approximately 32.5' bgs. Refusal was again encountered and rock fragments were observed in the bottom sample tube at 32.5'. Again, this refusal was likely attributed to contact with bedrock. A sample at the bottom of the boring from 30-32.5' was submitted for lab analysis via VOC analysis. The lab results

indicated only minor VOC detections all significantly below the Part-375 unrestricted SCOs. B-8 was collected down gradient from the hot spot areas B-4 and B-5 and was sampled from the surface to a depth of thirty four (34') feet below grade surface. Marginal PID readings (1,500-2,500 ppm) were documented from 10'-20' bgs and subsided steadily to only 25 ppm at 34' bgs. Bedrock refusal was again encountered at 34' bgs and rock fragments were observed at the bottom of the soil sampling liner at 34' bgs. Please refer to Figure-3a-h for boring logs. Please see Table-1 for tabulated lab results compared to SCOs. The lab data package is included as Attachment-C.

6.0 REMEDIAL ALTERNATIVES

The results of the supplemental soil samples have indicated the need for remedial actions in soils with the main focus on the interval from 10'- 25' bgs. The goal is to provide in-situ remediation at areas where impacted soils have exceeded the Part-375 unrestricted-use SCOs. Please read below for remedial alternatives to treating the impacted soil discovered at the site.

5.1 Soil Vapor Extraction (SVE)

Soil Vapor Extraction (SVE) is a technology used to remove volatile organic vapors from the un-saturated zone often referred to as the vadose zone. Off-gassing of petroleum contamination emanating from the soil is extracted through a series of vertical screened pipes and exhausted to the atmosphere. This technology allows for mass removal of petroleum related contamination including sorbed contamination in the soil matrix. Soil Vapor Extraction is a reasonable in-situ alternative to remedy soil contamination at this site, especially where contamination extends beyond the capabilities of excavation. This technology would also prevent having to excavate former USTs and contaminated soil in areas where multiple underground utilities exist along with utilities associated with the operation of the active gas station. Based upon the location of the contaminated soil and the on-going operations of the current business, the SVE technology is deemed the most reasonable alternative to remediating soils to applicable levels.

5.2 Enhanced Biological Degradation

Enhance bio injections are another alternative to treating soil contamination in the vadose zone. A series of injection wells are used to deliver an oxidant solution or a microbial mixture to the contaminated vadose zone in order to promote biological degradation. This technology although practical and efficient, may not be conducive to achieve a timely clean-up based on the significant levels of contamination discovered in soil.

7.0 PROJECT SCHEDULE

Upon approval of this supplemental RIR, BEI will begin to draft a Remedial Action Plan (RAP) to address contaminated soils. The RAP will be submitted 45 days from the approval of this Report and issued to the Department for approval. The RAP will include: a remedial plan for addressing contaminated soil in the vadose zone, remedial action objectives (RAOs), operation monitoring and maintenance (OMM) and system termination.

8.0 CONCLUSION

In conclusion, the supplemental sampling data will be used to develop a Remedial Action Plan (RAP) in order to address soil contamination. No groundwater was encountered during any of the investigations conducted and is expected to be approximately 50 feet or more below grade surface. The supplemental sampling results indicated that vertical delineation was achieved at the B-5 and B-8 locations. At the B-4 location delineation was not feasible due to bedrock refusal at a depth of thirty feet (30') bgs. The majority of contamination at this boring was detected in the fifteen (15') feet to twenty five (25') horizon with PID readings as high as 4,500 ppm. Beyond this depth from 25'-30' PID readings drastically waned to levels in the 500 ppm range. Based upon the successful vertical delineation at two (2) locations B-5 and B-8, and the inability to advance beyond the refusals encountered at the surface of the bedrock at the B-6 location, a Remedial Action Plan (RAP) to address contaminated soils will be issue to the Department. Any questions or comments regarding this Report can be directed to BEI.

Sincerely,

Justin Halpin
Project Manager/Scientist

Alicia Patti
Geologist

NOTES:

(1) REMOVE ALL EXISTING CONCRETE PUMP ISLAND, DISPENSERS, TANK STP SUMPS, FILLS, VAPOR RECOVERY MANHOLES, TOP SLAB, AND RELATED PIPING AND REPLACE WITH AMERON DUALOY 3000/L NONMETALLIC PIPING UNLESS OTHERWISE NOTED. DISPENSERS TO BE REFURBISHED AND REUSED.

(2) PIPING SHOWN IS DIAGRAMMATIC ONLY. REFER TO MANUFACTURER'S INSTALLATION MANUAL FOR PROPER INSTALLATION.

(3) GENERAL CONTRACTOR TO VERIFY IN FIELD THE EXACT NUMBER OF TANK OPENINGS AND FITTING LOCATIONS AND NOTIFY ARCHITECT OF ANY DISCREPANCIES.

(4) AT THE TIME OF COMPLETION THE CONTRACTOR SHALL FILE AN AFFIDAVIT WITH THE NEW YORK CITY FIRE DEPARTMENT STATING WORK AND REQUIRED TESTS PERFORMED ON ANY TANKS/PIPING, TESTS RESULTS SHALL BE NOTED AND A COPY SHALL BE SENT TO THE OWNER AND THE ARCHITECT.

(5) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL APPLICABLE TESTING/INSPECTIONS OF TANKS AND PIPING SYSTEM UPON COMPLETION OF PROJECT AS REQUIRED BY THE NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR TO CONTACT THE NEW YORK CITY FIRE DEPARTMENT AT (718) 644.2462 FOR THIS INFORMATION.

(6) CONTRACTOR MUST CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY ELECTRICAL CODE AND FILE A CERTIFICATE OF ELECTRICAL INSPECTION UPON COMPLETION OF THE WORK WITH THE NEW YORK CITY FIRE DEPARTMENT.

(7) LOCATION AND NUMBER OF EXISTING PUMPS AND TANKS TO BE VERIFIED BY THE NEW YORK CITY FIRE DEPARTMENT.

(8) THE BIDDING CONTRACTOR SHALL VISIT THE SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS AND PROPOSED WORK ITEMS TO BE COMPLETED AS NOTED ON THE DRAWINGS PRIOR TO BIDDING.

(9) THE CONTRACTOR SHALL VERIFY THE TYPE AND EXACT LOCATION OF ALL EXISTING TANK PIPING, MPD'S PANS, AND FITTING PENETRATIONS INTO THE TANK. NOTIFY ARCHITECT OF RECORD IN WRITING OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

(10) ANY UNDERGROUND DRAINAGE LINES, WATER LINES, SEWER LINES, ELECTRICAL LINES, ETC. THAT MAY BE ENCOUNTERED DURING THE COURSE OF CONSTRUCTION SHALL BE REMOVED AND REROUTED AS REQUIRED. GENERAL CONTRACTOR TO NOTIFY ARCHITECT AND OWNER IMMEDIATELY.

(11) PROVIDE COLOR AND SYMBOL CODES ON ALL FILLS AND GAUGE PORTS AS PER A.P.I., N.Y.S.D.E.C. AND OWNER'S STANDARDS. PRODUCT I.D. MARKERS SHALL BE INSTALLED ON ALL FILL PORTS PER N.Y.S.D.E.C. REQUIREMENTS.

(12) GENERAL CONTRACTOR TO PRECISION TEST TANKS, PIPING SYSTEM, ETC. PRIOR TO CONSTRUCTION OF PROJECT AS PER NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR SHALL SECURE THE SERVICES OF THE NEW YORK CITY FIRE DEPARTMENT FOR TESTING PURPOSES. AFTER INSTALLATION GENERAL CONTRACTOR SHALL SCHEDULE A TEST TO BE DONE BY OWNER ON TANKS, PIPING, ETC. GENERAL CONTRACTOR SHALL NOT BACK FILL UNTIL ALL TESTING HAS BEEN DONE.

(13) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING A "SPARK TEST" OF THE CATHODICALLY PROTECTED PIPE WITNESSED BY A NEW YORK CITY FIRE DEPARTMENT INSPECTOR BEFORE BACK FILL INSPECTION IS SCHEDULED. (IF APPLICABLE)

(14) GENERAL CONTRACTOR TO ASSURE THAT ELECTRICAL EXPLOSION PROOF CONNECTIONS ARE PROVIDED AND IN GOOD CONDITION AT EACH TANK SUMP AS REQUIRED PER N.F.P.A. AND N.E.C. CODES.

(15) GENERAL CONTRACTOR SHALL PATCH AND REPAIR AREAS OF THE CONCRETE DRIVE MAT, SURROUNDING THE ISLANDS, DISTURBED BY CONSTRUCTION WITH A MINIMUM OF 0'-8" THICK CONCRETE, 0'-4" CRUSHED STONE AND (1) LAYER OF #5 REBARS EACH WAY.

RE: BP Gas; 4001-4010 4th Avenue, Brooklyn, Order No.: 2005010

Dear Justin Halpin:

American Analytical Laboratories, LLC. received 2 sample(s) on 5/1/2020 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer

Lori Beyer
Lab Director

Case Narrative

WO#: **2005010**
Date: **5/13/2020**

CLIENT: WRS d.b.a Berninger Environmental
Project: BP Gas; 4001-4010 4th Avenue, Brooklyn, NY

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions notated in this Narrative discussion.

Soil sample results analyzed for Volatile Organics via preparation method SW846 Method 5035A by the Low Level procedures potentially may be estimated, "J" (biased low) since the samples for this test were not collected according to the 5035A Method. Analysis was performed from intact soil jar. Volatile LCS are analyzed with preservatives - HCL/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Sample B-4 @ 27.5-30' required reanalysis at high level due to heavy matrix interferences.

The following parameters (if included in this report) are not offered by NY ELAP: VOA 8260 Soil; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Diisopropyl ether, Ethanol, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Limonene. VOA 8260 Liquid; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Limonene. Pesticides 8081 Soil; DBCP. Herbicides 8151 Soil; 3,5-Dichlorobenzoic Acid, 4-Nitrophenol, Acifluorfen, Bentazon, Chloramben, DCPA, Picloram, SM 2540G Total Volatile Solids, Soil TKN, Soil Organic Nitrogen, Total Phosphorus in soil, Percent Moisture, pH in non-potable water and temperature at which pH is measured, SM 4500-SO3 B Sulfite in Liquid, Total Sulfur in Soil, Acid Soluble Chloride by ASTMC1152, Water Soluble Chloride by ASTMC1218, Chlorine Demand by SM 2350 B, Total Residual Chlorine in Liquid and Reactivity to Sulfide and Reactivity to Cyanide.

The test results meet the requirements of the NYSDOH and NELAC standards, except where noted. The information contained in this analytical report is the sole property of American Analytical Laboratories, LLC. or the client for which this report was issued. The results contained in this report are only representative of the samples received. The sample receipt checklist is included as part of this lab report. Conditions can vary at different times and at different sampling conditions. American Analytical is not responsible for the use or interpretation of the data included herein.

Definition Only

WO#: **2005010**
Date: **5/13/2020**

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports
ND - Not detected at the reporting limit/Limit of Quantitation

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <5x the blank value as artifact.

E - The value is above the quantitation range

D - Analyte concentration was obtained from diluted analysis or from analysis using reduced sample volume.

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.
LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.
LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accuracy.
PQL - Practical Quantitation Limit; the lowest level that can be reliably achieved within the specific limits of Precision and accuracy. Listed on the QC Summary Forms.
m - Analyte was manually integrated for GC/MS.
+ - Concentration exceeds regulatory level for TCLP

Remedial Action Plan
NYSDEC Spill #18-11146
(RAP)

Dear Ms. Zhune,

Introduction

Berninger Environmental (BEI), has prepared this Remedial Action Plan (RAP) for the subject site based upon the data generated from the Remedial Investigation (RI). The RI identified contamination in soil which exceeded the New York State Part-375 soil clean-up objectives (SCOs) at select areas near the former USTs. The following plan has been developed to address areas where contamination exceeds standards in soil in order to meet the Remedial Action Objectives (RAOs) established for the site. Please read below for further information regarding the remedial action selected to address the contamination discovered during the RI. Please see Figure-1 for the site location.

Site Background

The site is located at 4001-4010 4th Avenue, Brooklyn, New York- Figure 1. The site is situated on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965. Castleton reviewed the Phase I ESA prepared by Merritt Environmental Consulting Corporation (MECC) dated January 7, 2019. The MECC Phase I ESA identified that the site has been a gasoline station since its first developed use. According to the historical Sanborn Maps, a gasoline tank was present at the corner of 4th Avenue and 10th Street during the years 1926-1951. MECC recommended further evaluation to determine if any documentation is available or if additional investigation (Phase II) is warranted. Subsequent documentation regarding the gasoline tank shown on the 1926-1951 Sanborn Maps was not provided. A Phase II was subsequently performed based on the recommendations outlined in the Phase I ESA. Please refer to Attachment-A for a survey of the current layout of the station.

Site History

A Phase II ESA was performed by Castleton Environmental during January of 2019, which included a series of borings conducted at key locations throughout the property and a ground penetrating radar (GPR) survey to identify any potential former UST's. Six (6) soil borings were advanced on the Subject Property in the vicinity of the UST's. Soil samples were collected continuously from each boring location, logged and field screened with a PID for the presence of VOCs. Elevated field sensory (PID), olfactory or visible evidence of impacts to soil were observed in each of the borings ranging from 22.9 ppm in SB01 to 5,285 ppm in SB04. Soil analytical results were compared to NYSDEC CP-51 Soil Cleanup Levels (SCLs) for petroleum impacted soil and NYSDEC Part 375 Soil Cleanup Objectives (SCOs). Soil analytical results reported concentrations of SVOCs as non-detect or below SCLs and SCOs in all of the six (6) soil samples analyzed. VOCs above SCLs were reported in five (5) of the six (6) soil samples. VOCs above commercial-use SCOs were reported in two (2) of the six (6) samples analyzed. Based upon these findings a spill was reported and spill number # 18-11146 was assigned to the site.

Based on the findings from the Phase II ESA conducted during January 2019, a supplemental sub-surface investigation was conducted in an attempt to confirm the presence of former USTs , delineate the vertical extent of contamination and also attempt to reach groundwater. A total of eight (8) borings were conducted to supplement the Phase II data. Borings B-1, B-2 and B-3 were conducted in the areas where the GPR documented possible former USTs. Refusal was encountered at each of these boring locations at exactly 2.5' below grade surface (bgs) indicating that the old USTs are still present in the ground and were abandoned in place with concrete. B-6 and B-7 were conducted in the second area of suspect former USTs and refusal was encountered at three feet (3') bgs indicating again, that the former USTs were abandoned with concrete. Borings B-4, B-5 and B-8 were conducted in order to delineate vertical contamination previously discovered at these locations. All of these samples had elevated PID detections from approximately 5'-25' below grade. Vertical delineation at B-5 and B-8 was achieved based on lab data and low PID readings at B-8, but B-4 still had detections above the SCOs at thirty (30') bgs. BEI was unable to advance deeper beyond 30' bgs at B-4 due to bedrock refusal. Bedrock was also encountered at B-5 and B-8 causing refusal at 32.5' and 34' respectively. The elevated concentrations in soil detected at the B-4, B-5 and B-8 locations prompted the development of this RAP. Please refer to Figure-5 for the previous sample locations. Please read below for the remedial strategy selected to remedy vadose zone soil contamination.

Remedial Action Objectives (RAO's)

Remedial Action Objectives (RAO's) have been established for soil as per the following documents: 6 NYCRR Part-375 for soil (Part 375) unrestricted-commercial-use soil clean-up objectives established in Part-375 shall follow the clean-up levels listed as Unrestricted Use Soil Cleanup Objectives as per Table 375-6.8a, to the extent feasible.

Remedial Action Plan (RAP)

The proposed remedy for the site includes a clean-up technology widely used to treat petroleum impacted soil. Soil Vapor Extraction (SVE) is a technology used to remove volatile organic vapors from the un-saturated zone often referred to as the vadose zone. Off-gassing of petroleum contamination within the vadose zone is extracted through a series of vertical screened pipes (SVE well points) and exhausted to the atmosphere. This allows for mass removal of petroleum related sorbed contamination in the soil matrix.

A total of four (4) SVE wells are proposed to be installed at the subject site as depicted on Figure-2. Well construction details include: five(5') feet of schedule 40 PVC riser pipe with twenty five feet (5') of schedule 40 PVC 0.02" slot screen from 5'-30' below grade surface (bgs). SVE well construction details are illustrated in Figure-3. The piping will be trenched below grade in line and brought to grade at the south end of the property where it will continue to the remediation shed as separate lines routed and manifolded in the equipment room for control over individual zones. This will allow for future optimization of the system in order to balance effectiveness based on contaminant removal. SVE piping from each well will enter into the equipment room where separate ball valves and sampling ports will be installed on the manifold. Vacuum gauges will also be installed on each leg in order to monitor adequate effectiveness and air flow. Post manifold piping will continue on one (1) line and affixed to the engineering control (EC) EN-523 (or similar series) vacuum inlet. Please refer to Attachment-B for the spec sheet on the EN-523. A water knockout drum will be installed between the influent piping and the blower unit to prevent any unwanted moisture from entering the blower intake. The installation of this moisture separator will help to extend the life of the blower and prevent catastrophic failure due to moisture intake. A fresh air inlet will be introduced prior to the blower inlet and connected to the main influent piping leg, which will help to reduce exhaust stack emissions via dilution by fresh air. The post run effluent piping will consist of 2" galvanized pipe with the ability to withstand excessive heat generated by the blower exhaust. In-line air emission control equipment (GPC-3 Carbon Drum unit) will be installed, if necessary based on the first sampling event, in order to eliminate volatile concentrations prior to exiting the exhaust stack. Please see emission control specs as Attachment-C. Galvanized pipe will exit the equipment shed and change over to schedule 40, 2" PVC and extend to five feet (5') above the roof line of the remediation housing shed.(*total stack height from grade 15'). The equipment room piping scheme and blower connection is depicted in Figure- 4. A system shutdown warning light will be wired into the electrical configuration to allow for visual confirmation that the system is operational. If at anytime the system shutdown warning light is observed to be in the off position, this would indicate possible mechanical or electrical failure. This would prompt the property manager to contact BEI in order to diagnose the reason for failure.

Operation, Monitoring and Maintenance (OMM)

During the first month of operation weekly inspections will be conducted in order to inspect various components of the system and gauge airflow. During this time influent screening and lab testing should be conducted in order to establish a baseline for future calculation of mass contaminant

removal. An OMM checklist will be provided to the technician assigned to perform these preventative tasks, which includes: inspection of all electrical wiring and SVE blower components, visual inspection of all above grade piping to ensure there are no cracks or leaks, inspection of system shutdown warning device and inspection of the exhaust or discharge point to verify no air intakes have been located nearby. Effluent emission sampling will be conducted on a quarterly basis with a six liter (6L) summa canister and submitted to a New York State certified laboratory for testing by EPA method 8260 (VOCs). In addition to the routine OMM activities described here, the building's owner and tenants will be provided information that explains the systems operation, maintenance and monitoring. Therefore, at any time during the systems operation, the building's owner or tenants may check that the system is operating properly. BEI will establish a point of contact with the property manager in the event that the system becomes inoperable ("system fault condition"). If a major repair requires the system to be offline for longer than a 24-hour period, the representative of the owner will contact the NYSDEC to discuss the problem and offer a schedule for repair.

A OMM report will be issued to the NYSDEC on a quarterly basis documenting all routine inspection activities and effluent emission results. The report will include: a brief report describing inspection and maintenance activities, tabulated effluent lab data, and air flow/vacuum readings for the engineering control.

Health and Safety

It is anticipated that level D personal protective equipment (PPE) will be used during the performance of the borings and well installations. All personnel on-site will be properly trained and certified by the Occupational Safety and Health Act (OSHA) according to the regulations set forth in the Code of Federal Regulations 29 (CFR) 1910.

Level D PPE includes the following:

- Eye protection- Wear goggles or face shield (splash prevention)
- Head- Hard hat when required
- Hands- Wear neoprene gloves
- Feet- Wear steel-toe boots with chemical resistant soles or neoprene covers
- Clothing- Long sleeve shirts and long pant legs.

Project Schedule

BEI will be prepared to mobilize within sixty (60) days of approval of this Work Plan. It is anticipated that the duration of the job will take approximately 7-10 working days to complete. Upon completion all work will be documented as per below.

Conclusion:

A Construction Completion Report (CCR) will be drafted to document the construction layout of the proposed system. The CCR will include as built drawings detailing the system construction, baseline effluent concentrations and also document the EC associated with the system. The extraction well specifications and proposed monitoring and maintenance procedures, along with post mitigation testing results will also be discussed, as well as the protocol for system termination procedures. Any questions or comments regarding this RAP can be directed to BEI.

Sincerely,
Berninger Environmental

Justin Halpin
Scientist/Project Manager

(1) REMOVE ALL EXISTING CONCRETE PUMP ISLAND, DISPENSERS, TANK STP SUMPS, FILLS, VAPOR RECOVERY MANHOLES, TOP SLAB, AND RELATED PIPING AND REPLACE WITH AMERON DUALOY 3000/L NONMETALLIC PIPING UNLESS OTHERWISE NOTED. DISPENSERS TO BE REFURBISHED AND REUSED.

(2) PIPING SHOWN IS DIAGRAMMATIC ONLY. REFER TO MANUFACTURER'S INSTALLATION MANUAL FOR PROPER INSTALLATION.

(3) GENERAL CONTRACTOR TO VERIFY IN FIELD THE EXACT NUMBER OF TANK OPENINGS AND FITTING LOCATIONS AND NOTIFY ARCHITECT OF ANY DISCREPANCIES.

(4) AT THE TIME OF COMPLETION THE CONTRACTOR SHALL FILE AN AFFIDAVIT WITH THE NEW YORK CITY FIRE DEPARTMENT STATING WORK AND REQUIRED TESTS PERFORMED ON ANY TANKS/PIPING, TESTS RESULTS SHALL BE NOTED AND A COPY SHALL BE SENT TO THE OWNER AND THE ARCHITECT.

(5) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL APPLICABLE TESTING/INSPECTIONS OF TANKS AND PIPING SYSTEM UPON COMPLETION OF PROJECT AS REQUIRED BY THE NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR TO CONTACT THE NEW YORK CITY FIRE DEPARTMENT AT (718) 644.2462 FOR THIS INFORMATION.

(6) CONTRACTOR MUST CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY ELECTRICAL CODE AND FILE A CERTIFICATE OF ELECTRICAL INSPECTION UPON COMPLETION OF THE WORK WITH THE NEW YORK CITY FIRE DEPARTMENT.

(7) LOCATION AND NUMBER OF EXISTING PUMPS AND TANKS TO BE VERIFIED BY THE NEW YORK CITY FIRE DEPARTMENT.

(8) THE BIDDING CONTRACTOR SHALL VISIT THE SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS AND PROPOSED WORK ITEMS TO BE COMPLETED AS NOTED ON THE DRAWINGS PRIOR TO BIDDING.

(9) THE CONTRACTOR SHALL VERIFY THE TYPE AND EXACT LOCATION OF ALL EXISTING TANK PIPING, MPD'S PANS, AND FITTING PENETRATIONS INTO THE TANK. NOTIFY ARCHITECT OF RECORD IN WRITING OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

(10) ANY UNDERGROUND DRAINAGE LINES, WATER LINES, SEWER LINES, ELECTRICAL LINES, ETC. THAT MAY BE ENCOUNTERED DURING THE COURSE OF CONSTRUCTION SHALL BE REMOVED AND REROUTED AS REQUIRED. GENERAL CONTRACTOR TO NOTIFY ARCHITECT AND OWNER IMMEDIATELY.

(11) PROVIDE COLOR AND SYMBOL CODES ON ALL FILLS AND GAUGE PORTS AS PER A.P.I., N.Y.S.D.E.C. AND OWNER'S STANDARDS. PRODUCT I.D. MARKERS SHALL BE INSTALLED ON ALL FILL PORTS PER N.Y.S.D.E.C. REQUIREMENTS.

(12) GENERAL CONTRACTOR TO PRECISION TEST TANKS, PIPING SYSTEM, ETC. PRIOR TO CONSTRUCTION OF PROJECT AS PER NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR SHALL SECURE THE SERVICES OF THE NEW YORK CITY FIRE DEPARTMENT FOR TESTING PURPOSES. AFTER INSTALLATION GENERAL CONTRACTOR SHALL SCHEDULE A TEST TO BE DONE BY OWNER ON TANKS, PIPING, ETC. GENERAL CONTRACTOR SHALL NOT BACK FILL UNTIL ALL TESTING HAS BEEN DONE.

(13) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING A "SPARK TEST" OF THE CATHODICALLY PROTECTED PIPE WITNESSED BY A NEW YORK CITY FIRE DEPARTMENT INSPECTOR BEFORE BACK FILL INSPECTION IS SCHEDULED. (IF APPLICABLE)

(14) GENERAL CONTRACTOR TO ASSURE THAT ELECTRICAL EXPLOSION PROOF CONNECTIONS ARE PROVIDED AND IN GOOD CONDITION AT EACH TANK SUMP AS REQUIRED PER N.F.P.A. AND N.E.C. CODES.

(15) GENERAL CONTRACTOR SHALL PATCH AND REPAIR AREAS OF THE CONCRETE DRIVE MAT, SURROUNDING THE ISLANDS, DISTURBED BY CONSTRUCTION WITH A MINIMUM OF 0'-8" THICK CONCRETE, 0'-4" CRUSHED STONE AND (1) LAYER OF #5 REBARS EACH WAY.

Environmental / Chemical Processing Blowers

ROTRON®

EN 523 & CP 523

3.0 HP High Pressure Sealed Regenerative w/Explosion-Proof Motor

FEATURES

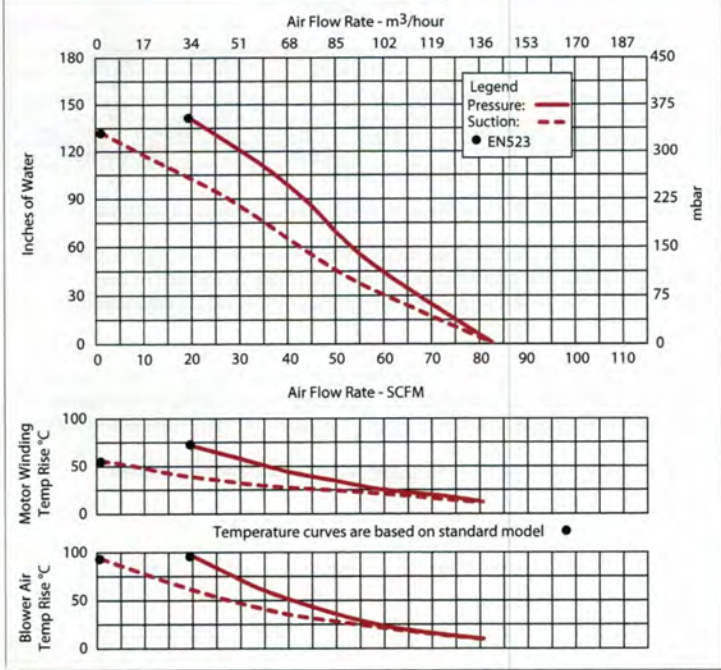
- Manufactured in the USA - ISO 9001 and NAFTA compliant
- Maximum flow: 84 SCFM
- Maximum pressure: 140 IWG
- Maximum vacuum: 135 IWG
- Standard motor: 3.0 HP, explosion-proof
- Cast aluminum blower housing, impeller , cover & manifold; cast iron flanges (threaded); teflon® lip seal
- UL & CSA approved motor with permanently sealed ball bearings for explosive gas atmospheres Class I Group D minimum
- Sealed blower assembly
- Quiet operation within OSHA standards

MOTOR OPTIONS

- International voltage & frequency (Hz)
- Chemical duty, high efficiency, inverter duty or industry-specific designs
- Various horsepowers for application-specific needs

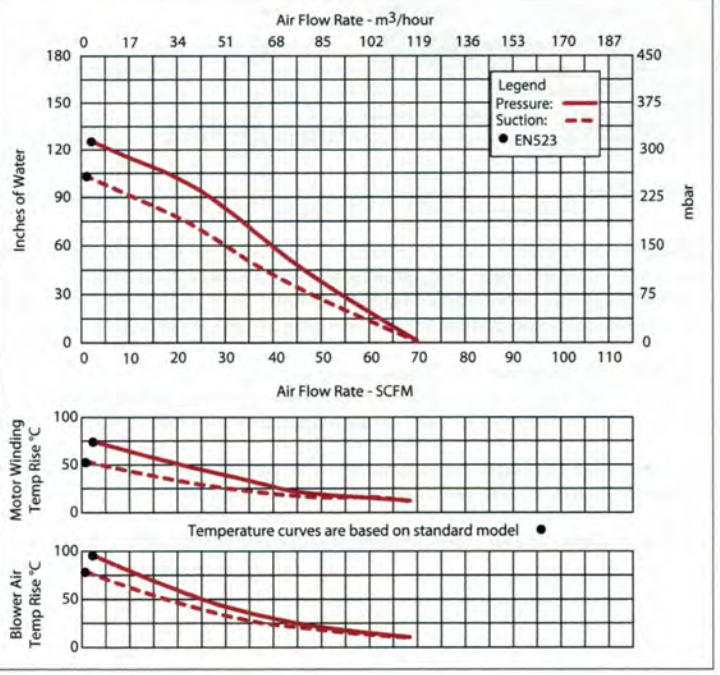
BLOWER OPTIONS

- Corrosion resistant surface treatments & sealing options
- Remote drive (motorless) models
- Slip-on or face flanges for application-specific needs



ACCESSORIES

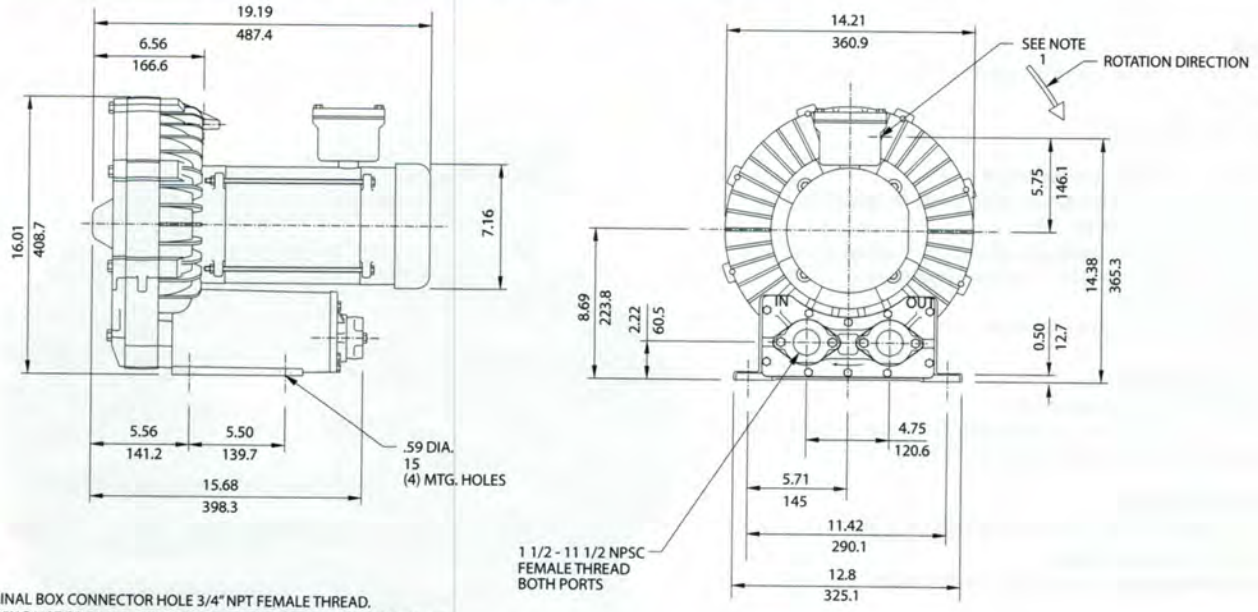
- Flowmeters reading in SCFM
- Filters & moisture separators
- Pressure gauges, vacuum gauges, & relief valves
- Switches - air flow, pressure, vacuum, or temperature
- External mufflers for additional silencing
- Air knives (used on blow-off applications)
- Variable frequency drive package



Blower Performance at Standard Conditions

60 Hz

50 Hz



This document is for informational purposes only and should not be considered as a binding description of the products or their performance in all applications. The performance data on this page depicts typical performance under controlled laboratory conditions. AMETEK is not responsible for blowers driven beyond factory specified speed, temperature, pressure, flow or without proper alignment. Actual performance will vary depending on the operating environment and application. AMETEK products are not designed for and should not be used in medical life support applications. AMETEK reserves the right to revise its products without notification. The above characteristics represent standard products. For product designed to meet specific applications, contact AMETEK Technical & Industrial Products Sales department.

Voltage - ROTRON motors are designed to handle a broad range of world voltages and power supply variations. Our dual voltage 3 phase motors are factory tested and certified to operate on both: **208-230/415-460 VAC-3 ph-60 Hz** and **190-208/380-415 VAC-3 ph-50 Hz**. Our dual voltage 1 phase motors are factory tested and certified to operate on both: **104-115/208-230 VAC-1 ph-60 Hz** and **100-110/200-220 VAC-1 ph-50 Hz**. All voltages above can handle a ±10% voltage fluctuation. Special wound motors can be ordered for voltages outside our certified range.

Operating Temperatures - Maximum operating temperature: Motor winding temperature (winding rise plus ambient) should not exceed 140°C for Class F rated motors or 120°C for Class B rated motors. Blower outlet air temperature should not exceed 140°C (air temperature rise plus inlet temperature). Performance curve maximum pressure and suction points are based on a 40°C inlet and ambient temperature. Consult factory for inlet or ambient temperatures above 40°C.

Maximum Blower Amps - Corresponds to the performance point at which the motor or blower temperature rise with a 40°C inlet and/or ambient temperature reaches the maximum operating temperature.

XP Motor Class - Group - See Explosive Atmosphere Classification Chart in Section I

Supplemental Investigation
Groundwater Sampling/ Pilot Study
Spill # 1811146

Dear Mr. Kolleeny,

1.0 INTRODUCTION

The following is a Supplemental Investigation Work Plan, that addresses the comments in the DEC letter dated November 5th, 2021. The letter provides comments on the *Supplemental Investigation Soil and Groundwater Report dated October 8th, 2021.* In brief, the letter discusses the need for further investigation with the performance of a pilot test in order to evaluate a remedy for impacted site media. Please read below for the proposed supplemental groundwater sampling locations and the proposed pilot remedy.

2.0 SITE BACKGROUND

The site is located at 4001-4010 4th Avenue, Brooklyn, New York- Figure 1. The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965 and has been a gasoline station since its first developed use. A Phase II was performed based on the recommendations outlined in the Phase I ESA and supplemental investigations were performed thereafter. Please refer to Attachment-A for a survey of the current layout of the station.

3.0 SITE HISTORY

A supplemental investigation was conducted subsequent to the Phase II investigation that identified impacted soils above State soil clean-up objectives (SCOs) and the presence of underground storage

tanks (USTs) from the old gas station. The supplemental investigation concluded that soil contamination was vertically delineated, but groundwater impacts (perched water at ~30 feet bgs) discovered required additional investigation in order to determine the lateral extent of the contamination.

4.0 SCOPE OF WORK

The proposed scope of work involves the collection of groundwater samples via the installation of monitoring wells down gradient of the previous water sample collected at the newly installed MW-1. Please see Figure-2 for the previous groundwater sample (MW-1) location and the two (2) proposed locations (MW-2 and MW-3). Samples are located near the 4th Avenue subway line in order to determine the potential impacts to sensitive receptors. The depth of the subway tunnel will also be evaluated in order to determine these potential impacts. Please see Attachment-C for estimated subway line. The depth to the perched water layer in this region is approximately thirty feet (30') below grade surface, as discovered during the previous investigation. Two (2) one inch (1") monitoring wells will be installed at the locations proposed on Figure-2. Well specifications are anticipated to consist of: ten feet (10') of schedule 40 PVC well 0.20" slot screen (15'-25') with schedule 40 PVC riser pipe finishing to grade surface (0-15'). Please see Figure-3 well specs log.

Clean poly-tubing affixed with a check valve sampling device will be used to purge 3-5 well volumes of water prior to sample procurement. All soil and groundwater samples will be placed in laboratory approved glassware and transported on at 36 °F under strict chain of custody to a New York State ELAP certified laboratory for testing via EPA 8260C for VOCs.

5.0 REMEDIAL PILOT STUDY

5.0 Pilot Testing

In order to determine the radius of influence and determine the number of recovery wells that will be needed to successfully treat the plume area, a pilot test will be conducted at one (1) proposed location. The overall goal is to confirm the mass transfer of contaminants from the dissolved phase to the vapor phase and the extent at which effectiveness is achieved. The test is proposed to take place at one (1) location (SVE-PW) within the plume as depicted on Figure-2. The wells will be installed in five foot (5') increments stepping away from the pilot well.

5.1 SVE Pilot Test

It is anticipated that based on the geology in this area, an approximate ROI of 5'-10' is estimated. A vacuum cut off point of approximately 0.1 inches/H2O will be used as the minimum influence required based on distance. SVE effluent exhaust emissions will also be charted vs. time to confirm the SVE is operating effectively and removing volatile contamination. Effluent exhaust emissions will be gauged with a photo ionization detector (PID) meter and also analyzed via six liter (6) summa canister for testing by EPA method TO-15, VOCs.

The pilot results will also be graphed to document effluent VOC concentrations vs. time and measure vacuum influence versus distance. An example of the data charted is depicted as Figure-4 (VOC Concentrations vs. time) and Figure-5 (Vac vs. distance). The data generated from the pilot test will also be tabulated to include: elapsed time, vacuum readings, flow rates and PID concentrations.

Well head vacuum at the wells will be gauged for influence utilizing a magnahelic gauge. The monitoring wells are situated so that testing can be conducted in five foot (5') increments away from the pilot well. The first measurements will be conducted approximately five (5') from the pilot well with the remaining wells being tested from a 10' and 15' radius from the pilot location. The well locations and the anticipated radius of influence (ROI) is depicted on Figure-2.

The SVE pilot well (SVE-PW) will be installed within the plume area in the vicinity of the new wells. The actual location will be determined on the installation date based upon the pre-clearing of underground utilities. The proposed location of the SVE pilot well is depicted on Figure-2.

The well will be installed with a track mounted Geoprobe via direct push method using 3.25" hollow stem casing rods. Well construction details for SVE-PW are as follows: 10 feet (10') of 2" diameter, schedule 40 PVC slotted screen; fifteen feet (15') of 2", schedule 40 PVC solid riser pipe will finish the well to grade. The annular space surrounding the well screen will be filled with clean gravel pack. The pilot well will be connected to a 110 volt 1hp explosion proof Rotron® blower motor with flow rates during operation of 25-30 CFM and vacuum at the wellhead of approximately 5-10 inches/H2O. See Attachment-B for blower specifications. Please refer to Figure-6 for SVE well specs.

6.0 REPORTING

A Report of Findings will be issued upon receipt of the lab results. The Report will include a summary of the results compared to standards and a pilot test report with the measurements recorded from the testing.

7.0 HEALTH AND SAFETY

It is anticipated that level D personal protective equipment (PPE) will be used during the installation of the SVE/AS points and all associated piping. All personnel on-site will be will be properly trained and certified by the Occupational Safety and Health Act (OSHA) according to the regulations set forth in the Code of Federal Regulations 29 (CFR) 1910.

Level D PPE includes the following:

- Eye protection- Wear goggles or face shield (splash prevention)
- Head- Hard hat when required

- Hands- Wear neoprene gloves
- Feet- Wear steel-toe boots with chemical resistant soles or neoprene covers
- Clothing- Long sleeve shirts and long pant legs.

8.0 CONCLUSION

Based on the results from the investigation results a remedial plan will be developed in order to treat contaminated media at the site. The plan will be proposed based on the pilot study test results and the radius of influence established from the data collected. A Report of Findings will also be drafted with results of the subway terminal investigation and also the groundwater sampling results from the monitoring wells. Any questions or comments regarding this Work Plan can be directed to BEI.

Sincerely,
Berninger Environmental

Justin Halpin
Scientist/Project Manager

(3) NEW TOTAL SUBMERSIBLE PUMP IN A STP SUMP, PROVIDE (4) NEW 42" DIA. MANHOLE (1) REQUIRED IN EA. TANK) (4)

STICK LINE IN MANHOLE (1 REQUIRED IN EA. TANK) WHERE INDICATED

REPLACE CONC. MAT & INSTALL NEW PIPING, ETC. AS NOTED, SEE DWGS. P&T-004, P&T-005, P&T-006 FOR MORE INFO.

EXISTING 2-4,000 GAL. UG DOUBLE WALLED MOTOR FUEL TANKS TO BE LINED. REPLACE CONC. MAT, FOR MORE INFO. SEE DWG P&T-004. REPLACE MANHOLE ON EA. TANK. REMOVE ALL STP & INSTALL NEW STP AS INDICATED. REMOVE ALL PIPING, VALVES, ETC. AND INSTALL NEW AS INDICATED. (C)

NOTE: WHERE INDICATED EXISTING, DOUBLE WALLED UG GASO. TANK TO BE LINED (2-TOTAL), EACH TANK MUST BE LINED AS TO COMPLY WITH ALL TESTING AND REGULATIONS THAT GOVERN INCLUDING USA FEDERAL REGULATIONS (CFR), NEW YORK STATE DEPT. OF ENVIROMENT CONSERVATION, NEW YORK CODE RULES AND REGULATIONS (NYCRR) AND NEW YORK CITY FIRE DEPARTMENT. SEE NPTES "C" & "D" ON DWG. P&T-002 FO RMORE INFORMATION.

NOTES:

(1) REMOVE ALL EXISTING CONCRETE PUMP ISLAND, DISPENSERS, TANK STP SUMPS, FILLS, VAPOR RECOVERY MANHOLES, TOP SLAB, AND RELATED PIPING AND REPLACE WITH AMERON DUALOY 3000/L NONMETALLIC PIPING UNLESS OTHERWISE NOTED. DISPENSERS TO BE REFURBISHED AND REUSED.

(2) PIPING SHOWN IS DIAGRAMMATIC ONLY. REFER TO MANUFACTURER'S INSTALLATION MANUAL FOR PROPER INSTALLATION.

(3) GENERAL CONTRACTOR TO VERIFY IN FIELD THE EXACT NUMBER OF TANK OPENINGS AND FITTING LOCATIONS AND NOTIFY ARCHITECT OF ANY DISCREPANCIES.

(4) AT THE TIME OF COMPLETION THE CONTRACTOR SHALL FILE AN AFFIDAVIT WITH THE NEW YORK CITY FIRE DEPARTMENT STATING WORK AND REQUIRED TESTS PERFORMED ON ANY TANKS/PIPING. TESTS RESULTS SHALL BE NOTED AND A COPY SHALL BE SENT TO THE OWNER AND THE ARCHITECT.

(5) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL APPLICABLE TESTING/INSPECTIONS OF TANKS AND PIPING SYSTEM UPON COMPLETION OF PROJECT AS REQUIRED BY THE NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR TO CONTACT THE NEW YORK CITY FIRE DEPARTMENT AT (718) 644.2462 FOR THIS INFORMATION.

(6) CONTRACTOR MUST CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY ELECTRICAL CODE AND FILE A CERTIFICATE OF ELECTRICAL INSPECTION UPON COMPLETION OF THE WORK WITH THE NEW YORK CITY FIRE DEPARTMENT.

(7) LOCATION AND NUMBER OF EXISTING PUMPS AND TANKS TO BE VERIFIED BY THE NEW YORK CITY FIRE DEPARTMENT.

(8) THE BIDDING CONTRACTOR SHALL VISIT THE SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS AND PROPOSED WORK ITEMS TO BE COMPLETED AS NOTED ON THE DRAWINGS PRIOR TO BIDDING.

(9) THE CONTRACTOR SHALL VERIFY THE TYPE AND EXACT LOCATION OF ALL EXISTING TANK PIPING, MPD'S PANS, AND FITTING PENETRATIONS INTO THE TANK. NOTIFY ARCHITECT OF RECORD IN WRITING OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

(10) ANY UNDERGROUND DRAINAGE LINES, WATER LINES, SEWER LINES, ELECTRICAL LINES, ETC. THAT MAY BE ENCOUNTERED DURING THE COURSE OF CONSTRUCTION SHALL BE REMOVED AND REROUTED AS REQUIRED. GENERAL CONTRACTOR TO NOTIFY ARCHITECT AND OWNER IMMEDIATELY.

(11) PROVIDE COLOR AND SYMBOL CODES ON ALL FILLS AND GAUGE PORTS AS PER A.P.I., N.Y.S.D.E.C. AND OWNER'S STANDARDS. PRODUCT I.D. MARKERS SHALL BE INSTALLED ON ALL FILL PORTS PER N.Y.S.D.E.C. REQUIREMENTS.

(12) GENERAL CONTRACTOR TO PRECISION TEST TANKS, PIPING SYSTEM, ETC. PRIOR TO CONSTRUCTION OF PROJECT AS PER NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR SHALL SECURE THE SERVICES OF THE NEW YORK CITY FIRE DEPARTMENT FOR TESTING PURPOSES. AFTER INSTALLATION GENERAL CONTRACTOR SHALL SCHEDULE A TEST TO BE DONE BY OWNER ON TANKS, PIPING, ETC. GENERAL CONTRACTOR SHALL NOT BACK FILL UNTIL ALL TESTING HAS BEEN DONE.

(13) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING A "SPARK TEST" OF THE CATHODICALLY PROTECTED PIPE WITNESSED BY A NEW YORK CITY FIRE DEPARTMENT INSPECTOR BEFORE BACK FILL INSPECTION IS SCHEDULED. (IF APPLICABLE)

(14) GENERAL CONTRACTOR TO ASSURE THAT ELECTRICAL EXPLOSION PROOF CONNECTIONS ARE PROVIDED AND IN GOOD CONDITION AT EACH TANK SUMP AS REQUIRED PER N.F.P.A. AND N.E.C. CODES.

(15) GENERAL CONTRACTOR SHALL PATCH AND REPAIR AREAS OF THE CONCRETE DRIVE MAT, SURROUNDING THE ISLANDS, DISTURBED BY CONSTRUCTION WITH A MINIMUM OF 0'-8" THICK CONCRETE, 0'-4" CRUSHED STONE AND (1) LAYER OF #3 REBARS EACH WAY.

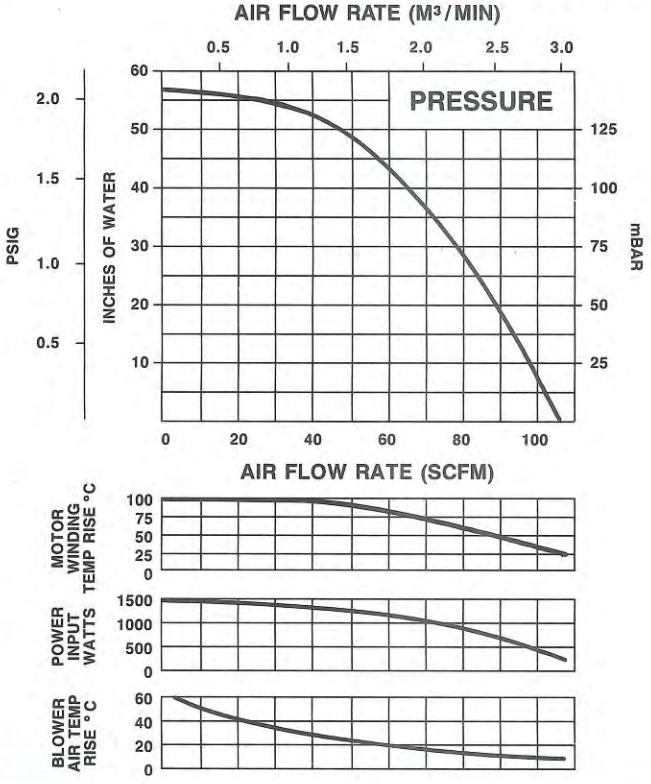
EN 404
Explosion-Proof Regenerative Blower

Attachment-B

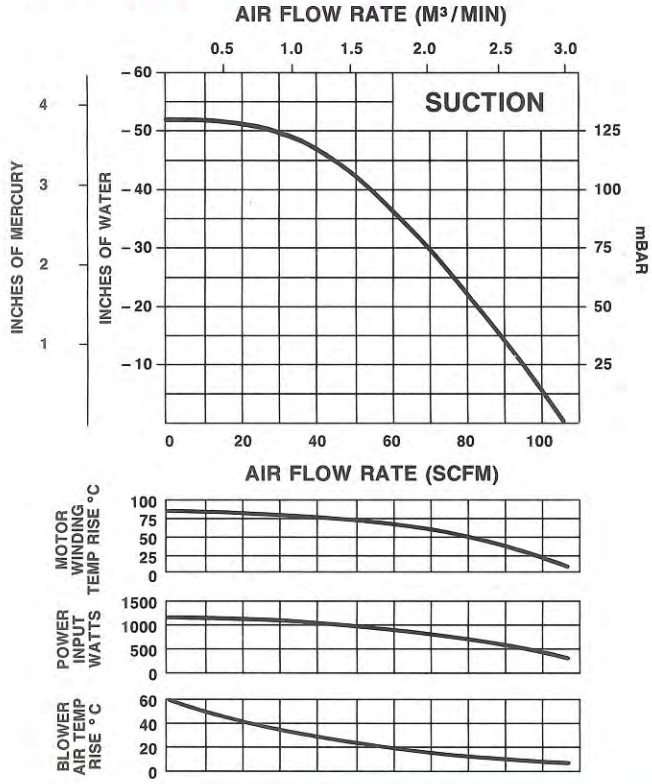
FEATURES

- Manufactured in the USA
- Maximum flow: 107 SCFM
- Maximum pressure: 57″ WG
- Maximum vacuum: 52″ WG
- Standard motor: 1.0 HP
- Blower construction — cast aluminum housing, cover, impeller & manifold; cast iron flanges
- UL & CSA approved motors for Class I, Group D atmospheres
- Sealed blower assembly
- Quiet operation within OSHA standards

OPTIONS



- TEFC motors
- 50 Hz motors
- International voltages
- Other HP motors
- Corrosion resistant surface treatments
- Remote drive (motorless) models



ACCESSORIES

- Moisture separators
- Explosion-proof motor starters
- Inline & inlet filters
- Vacuum & pressure gauges
- Relief valves
- External mufflers

Supplemental Investigation (revised)
Groundwater Sampling/ Pilot Study
Spill # 1811146

Dear Mr. Kolleeny,

1.0 INTRODUCTION

The following is a Supplemental Investigation Work Plan, that addresses the comments in the DEC letter dated November 5th, 2021. The letter provides comments on the *Supplemental Investigation Soil and Groundwater Report dated October 8th, 2021.* In brief, the letter discusses the need for further investigation with the performance of a pilot test in order to evaluate a remedy for impacted site media. Please read below for the proposed supplemental groundwater sampling locations and the proposed Pilot Study Work Plan to be developed based on supplemental data collected.

2.0 SITE BACKGROUND

The site is located at 4001-4010 4th Avenue, Brooklyn, New York- Figure 1. The site is located on a plot size approximately 10,017 square feet. The site is currently used as a gas station with a convenience store and parking. The building was constructed in 1965 and has been a gasoline station since its first developed use. A Phase II was performed based on the recommendations outlined in the Phase I ESA and supplemental investigations were performed thereafter. Please refer to Attachment-A for a survey of the current layout of the station.

3.0 SITE HISTORY

A supplemental investigation was conducted subsequent to the Phase II investigation that identified impacted soils above State soil clean-up objectives (SCOs) and the presence of underground storage

tanks (USTs) from the old gas station. The supplemental investigation concluded that soil contamination was vertically delineated, but groundwater impacts (perched water at ~30 feet bgs) discovered required additional investigation in order to determine the lateral extent of the contamination.

4.0 SCOPE OF WORK

The proposed scope of work involves the collection of groundwater samples via the installation of monitoring wells down gradient of the previous water sample collected at the newly installed MW-1. Please see Figure-2 for the previous groundwater sample (MW-1) location and the two (2) proposed locations (MW-2 and MW-3). The MW-2 and MW-3 locations were formerly sample locations B-5 and B-8 and previously screened/sampled, therefore no soil will be sampled during the well installations. Significant VOC impacts were documented at each of these locations. Please see Figure-4 for the previous sampling locations from the remedial investigation. Samples are located near the 4th Avenue subway line in order to determine the potential impacts to sensitive receptors. The depth of the subway tunnel will also be evaluated in order to determine these potential impacts. Please see Attachment-B for estimated sub-way line. The depth to the perched water layer in this region is approximately thirty feet (30') below grade surface, as discovered during the previous investigation. Two (2) two inch (2") monitoring wells will be installed at the locations proposed on Figure-2. Well specifications are anticipated to consist of: ten feet (10') of schedule 40 PVC well 0.20" slot screen (25'-35') with schedule 40 PVC riser pipe finishing to grade surface (0-25'). Please see Figure-3 well specs log.

Clean poly-tubing affixed with a check valve sampling device will be used to purge 3-5 well volumes of water prior to sample procurement. All groundwater samples will be placed in laboratory approved glassware and transported on at 36 °F under strict chain of custody to a New York State ELAP certified laboratory for testing via EPA 8260C for VOCs.

5.0 REMEDIAL PILOT STUDY

A Pilot Study Work Plan (PSWP) will be developed based on the sampling results from the newly installed monitoring wells (MW-2 and MW-3). Upon receipt of this data and remedial strategy can be developed in order to propose treatment of both soil and groundwater. Initially, soil vapor extraction (SVE) is the intended remedy to treat soil contamination and will operate in conjunction with either air sparging or in-situ chemical oxidation. The groundwater sampling data will be used to determine the correct pathway toward remediation of groundwater and the PSWP will be developed subsequent to the evaluation of all contaminated site media.

6.0 REPORTING

A Report of Findings will be issued upon receipt of the lab results. The Report will include a summary of the results compared to standards and a pilot test report with the measurements recorded from the testing.

7.0 HEALTH AND SAFETY

It is anticipated that level D personal protective equipment (PPE) will be used during the installation of the SVE/AS points and all associated piping. All personnel on-site will be will be properly trained and certified by the Occupational Safety and Health Act (OSHA) according to the regulations set forth in the Code of Federal Regulations 29 (CFR) 1910.

Level D PPE includes the following:

- Eye protection- Wear goggles or face shield (splash prevention)
- Head- Hard hat when required
- Hands- Wear neoprene gloves
- Feet- Wear steel-toe boots with chemical resistant soles or neoprene covers
- Clothing- Long sleeve shirts and long pant legs.

8.0 CONCLUSION

Based on the results from the investigation a remedial plan will be developed in order to treat contaminated media (soil and groundwater) at the site. A PSWP will be developed utilizing soil and groundwater data from the new wells installed. A Report of Findings will also be drafted with results of the subway terminal investigation and also the groundwater sampling results from the monitoring wells. Any questions or comments regarding this Work Plan can be directed to BEI.

Sincerely,
Berninger Environmental

Justin Halpin
Scientist/Project Manager

(3) NEW TOTAL SUBMERSIBLE PUMP IN A STP SUMP, PROVIDE (4) NEW 42" DIA. MANHOLE (1) REQUIRED IN EA. TANK) (4)

STICK LINE IN MANHOLE (1 REQUIRED IN EA. TANK) WHERE INDICATED

REPLACE CONC. MAT & INSTALL NEW PIPING, ETC. AS NOTED, SEE DWGS. P&T-004, P&T-005, P&T-006 FOR MORE INFO.

EXISTING 2-4,000 GAL. UG DOUBLE WALLED MOTOR FUEL TANKS TO BE LINED. REPLACE CONC. MAT, FOR MORE INFO. SEE DWG P&T-004. REPLACE MANHOLE ON EA. TANK. REMOVE ALL STP & INSTALL NEW STP AS INDICATED. REMOVE ALL PIPING, VALVES, ETC. AND INSTALL NEW (C) AS INDICATED.
NOTE: WHERE INDICATED EXISTING, DOUBLE WALLED UG GASO. TANK TO BE LINED (2-TOTAL), EACH TANK MUST BE LINED AS TO COMPLY WITH ALL TESTING AND REGULATIONS THAT GOVERN INCLUDING USA FEDERAL REGULATIONS (CFR), NEW YORK STATE DEPT. OF ENVIROMENT CONSERVATION, NEW YORK CODE RULES AND REGULATIONS (NYCRR) AND NEW YORK CITY FIRE DEPARTMENT. SEE NPTES "C" & "D" ON DWG. P&T-002 FO RMORE INFORMATION.

NOTES:

(1) REMOVE ALL EXISTING CONCRETE PUMP ISLAND, DISPENSERS, TANK STP SUMPS, FILLS, VAPOR RECOVERY MANHOLES, TOP SLAB, AND RELATED PIPING AND REPLACE WITH AMERON DUALOY 3000/L NONMETALLIC PIPING UNLESS OTHERWISE NOTED. DISPENSERS TO BE REFURBISHED AND REUSED.

(2) PIPING SHOWN IS DIAGRAMMATIC ONLY. REFER TO MANUFACTURER'S INSTALLATION MANUAL FOR PROPER INSTALLATION.

(3) GENERAL CONTRACTOR TO VERIFY IN FIELD THE EXACT NUMBER OF TANK OPENINGS AND FITTING LOCATIONS AND NOTIFY ARCHITECT OF ANY DISCREPANCIES.

(4) AT THE TIME OF COMPLETION THE CONTRACTOR SHALL FILE AN AFFIDAVIT WITH THE NEW YORK CITY FIRE DEPARTMENT STATING WORK AND REQUIRED TESTS PERFORMED ON ANY TANKS/PIPING. TESTS RESULTS SHALL BE NOTED AND A COPY SHALL BE SENT TO THE OWNER AND THE ARCHITECT.

(5) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL APPLICABLE TESTING/INSPECTIONS OF TANKS AND PIPING SYSTEM UPON COMPLETION OF PROJECT AS REQUIRED BY THE NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR TO CONTACT THE NEW YORK CITY FIRE DEPARTMENT AT (718) 644.2462 FOR THIS INFORMATION.

(6) CONTRACTOR MUST CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY ELECTRICAL CODE AND FILE A CERTIFICATE OF ELECTRICAL INSPECTION UPON COMPLETION OF THE WORK WITH THE NEW YORK CITY FIRE DEPARTMENT.

(7) LOCATION AND NUMBER OF EXISTING PUMPS AND TANKS TO BE VERIFIED BY THE NEW YORK CITY FIRE DEPARTMENT.

(8) THE BIDDING CONTRACTOR SHALL VISIT THE SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS AND PROPOSED WORK ITEMS TO BE COMPLETED AS NOTED ON THE DRAWINGS PRIOR TO BIDDING.

(9) THE CONTRACTOR SHALL VERIFY THE TYPE AND EXACT LOCATION OF ALL EXISTING TANK PIPING, MPD'S PANS, AND FITTING PENETRATIONS INTO THE TANK. NOTIFY ARCHITECT OF RECORD IN WRITING OF ANY DISCREPANCIES PRIOR TO CONSTRUCTION.

(10) ANY UNDERGROUND DRAINAGE LINES, WATER LINES, SEWER LINES, ELECTRICAL LINES, ETC. THAT MAY BE ENCOUNTERED DURING THE COURSE OF CONSTRUCTION SHALL BE REMOVED AND REROUTED AS REQUIRED. GENERAL CONTRACTOR TO NOTIFY ARCHITECT AND OWNER IMMEDIATELY.

(11) PROVIDE COLOR AND SYMBOL CODES ON ALL FILLS AND GAUGE PORTS AS PER A.P.I., N.Y.S.D.E.C. AND OWNER'S STANDARDS. PRODUCT I.D. MARKERS SHALL BE INSTALLED ON ALL FILL PORTS PER N.Y.S.D.E.C. REQUIREMENTS.

(12) GENERAL CONTRACTOR TO PRECISION TEST TANKS, PIPING SYSTEM, ETC. PRIOR TO CONSTRUCTION OF PROJECT AS PER NEW YORK CITY FIRE DEPARTMENT RULES AND REGULATIONS. GENERAL CONTRACTOR SHALL SECURE THE SERVICES OF THE NEW YORK CITY FIRE DEPARTMENT FOR TESTING PURPOSES. AFTER INSTALLATION GENERAL CONTRACTOR SHALL SCHEDULE A TEST TO BE DONE BY OWNER ON TANKS, PIPING, ETC. GENERAL CONTRACTOR SHALL NOT BACK FILL UNTIL ALL TESTING HAS BEEN DONE.

(13) GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING A "SPARK TEST" OF THE CATHODICALLY PROTECTED PIPE WITNESSED BY A NEW YORK CITY FIRE DEPARTMENT INSPECTOR BEFORE BACK FILL INSPECTION IS SCHEDULED. (IF APPLICABLE)

(14) GENERAL CONTRACTOR TO ASSURE THAT ELECTRICAL EXPLOSION PROOF CONNECTIONS ARE PROVIDED AND IN GOOD CONDITION AT EACH TANK SUMP AS REQUIRED PER N.F.P.A. AND N.E.C. CODES.

(15) GENERAL CONTRACTOR SHALL PATCH AND REPAIR AREAS OF THE CONCRETE DRIVE MAT, SURROUNDING THE ISLANDS, DISTURBED BY CONSTRUCTION WITH A MINIMUM OF 0'-8" THICK CONCRETE, 0'-4" CRUSHED STONE AND (1) LAYER OF #3 REBARS EACH WAY.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

BARGAIN AND SALE DEED WITH COVENANT AGAINST GRANTOR'S ACTS (INDIVIDUAL OR CORPORATION)

THIS INDENTURE, made the 9th September 2008

between ESTRON OIL CORP., a domestic corporation with principal offices located at 242 Drexel Avenue, Westbury, N.Y. 11590, party of the first part, and

4001 4th LLC, with principal offices located at 556 Central Avenue, Bethpage, NY 11714, party of the second part,

WITNESSETH, that the party of the first part, in consideration of Ten Dollars, lawful money of the United States, paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second party forever,

County: Kings
Section: 3
Block: 714
Lot: 6

All, that certain plot, or piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the County of Kings, City and State of New York, bounded and described as follows:

SEE DESCRIPTION ATTACHED

Premises known as and by the street number 4001 4th Avenue, Brooklyn, N.Y.

Grantor(s) herein being the same as the grantee(s) in deed dated March 31, 1965 and recorded in the Office of the Clerk of the County of Kings on June 7, 1965 in Liber 9393, page 20.

TOGETHER with all right, title and interest, in any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances and all the estate and rights of the party of the first part in and to said premises; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in an way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of improvement and will apply the same first to the payment of the cost of improvement before using any part of the total of the same for any other purpose.

First American Title Insurance Company of New York

Title No. 3001-246037

SCHEDULE "A"

ALL THAT CERTAIN PLOT, PIECE OR PARCEL OF LAND, SITUATE, LYING AND BEING IN THE BOROUGH OF BROOKLYN, COUNTY OF KINGS, CITY AND STATE OF NEW YORK, BOUNDED AND DESCRIBED AS FOLLOWS, TO WIT:

BEGINNING AT THE CORNER FORMED BY THE INTERSECTION OF THE EASTERLY SIDE OF FOURTH AVENUE WITH THE SOUTHERLY SIDE OF FORTIETH STREET;

RUNNING THENCE EASTERLY ALONG THE SOUTHERLY SIDE OF FORTIETH STREET ONE HUNDRED (100) FEET;

THENCE SOUTHERLY PARALLEL WITH FOURTH AVENUE ONE HUNDRED (100) FEET TWO (2) INCHES TO THE CENTRE LINE OF THE BLOCK BETWEEN FORTIETH AND FORTY-FIRST STREETS;

THENCE WESTERLY ALONG SAID CENTRE LINE OF THE BLOCK AND PARALLEL WITH FORTIETH STREET, ONE HUNDRED (100) FEET TO THE EASTERLY SIDE OF FOURTH AVENUE AND

THENCE NORTHERLY ALONG THE EASTERLY SIDE OF FOURTH AVENUE, ONE HUNDRED (100) FEET TWO (2) INCHES TO THE CORNER, THE POINT OR PLACE OF BEGINNING.

THE policy to be issued under this report will insure the title to such buildings and improvements erected on the premises, which by law constitute real property.

FOR CONVEYANCING ONLY: TOGETHER with all the right, title and interest of the party of the first part, of in and to the land lying in the street in front of and adjoining said premises.

the cost of improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it reads "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

ESTRON OIL CORP.,

BY: Harvey Nager,
Vice President

Street **4001 4 AVENUE** City **NY** State **NY** Zip **11232**

(4) Full name, mailing address, home phone and business phone numbers of owner of property receiving service: (please provide information on owner ONLY; do NOT give information on property manager or tenant):
Owner's Name Business: **4001 4TH LLC**
or Individual:
(Last Name) (First Name) (MI)
Street **556 CENTRAL AVENUE** City **BETHPAGE** State **NY** Zip **11714**
Home Phone(Numbers only): Business Phone(Numbers only):

Customer Billing Information:

PLEASE NOTE:

A. Water and sewer charges are the legal responsibility of the owner of a property receiving water and/or sewer service. The owner's responsibility to pay such charges is not affected by any lease, license or other arrangement, or any assignment of responsibility for payment of such charges.

B. Water and sewer charges constitute a lien on the property until paid. In addition to legal action against the owner, a failure to pay such charges when due may result in foreclosure of the lien by the City of New York, or the property being placed in a lien sale by the City.

C. Original bills for water and/or sewer service will be mailed to the owner, at the owner's address specified on this form. DEP will provide a duplicate copy of bills to one other party (such as a managing agent) if so requested below, provided, however, that any failure or delay by DEP in providing duplicate copies of bills shall in no way relieve the owner from his/her/its liability to pay all outstanding water and sewer charges.

(5) If you would like a duplicate copy of bills sent to another party, please check here ☐ and fill out the following information:
Name of Party to Receive Duplicate Copies of Bills:

(6) Mailing Address: Street City State Zip

(7) Relationship to Owner (check one): Managing Agent ☐ Mortgagee ☐
Tenant ☐ Other (please explain):

Owner's Approval

The undersigned certifies that he/she/it is the owner of the property receiving service referenced above; that he/she/it has read and understands Paragraphs A, B, C under the section captioned "Customer Billing Information"; and that the information supplied by the undersigned on this form is true and complete to the best of his/her/its knowledge.

APPENDIX H - User Questionnaire

Lesova
ENVIRONMENTAL GROUP

Phase I Environmental Site Assessment User Questionnaire

(To be completed by the user of the Phase I ESA)

Completed By: Shie Lefkowitz

Relationship to Subject Property: Tenant

Subject Property Address: 4001 4th Avenue, Brooklyn NY 11232 **Date:** 02/26/2024

Please answer the following questions to the best of your knowledge:

1) Are there any environmental liens filed or recorded against the property? No

2) Are there activity and use limitations that are in place on the property or that have been filed or recorded against the property?

3) Do you have any specialized knowledge or experience related to the property or nearby properties? No

4) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? Yes or No

   If NO, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

5) Property Information:
   a. Do you know the past uses of the property? Yes or No

      If yes, describe: BP Gas Station
   b. Do you know of specific chemicals present or previously used at the property? Yes or No

If yes, describe:_____

c. Do you know of spills or other releases that have taken place at the property? Yes or No

If yes, describe:_____

d. Do you know of any environmental cleanups that have occurred at the property? Yes or No

If yes, describe:

6) Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property? Yes or No

If yes, describe:_____

Optional Questions (not required for landowner liability protections):

7) Why is the Phase I ESA being performed?

_____

_____

8) What is the proposed usage of the subject property?

_____

9) What type of property transaction is occurring?

_____

Attachments

Attachment A	HASP Amendment Form
Attachment B	Training Requirements
Attachment C	Roles and Responsibilities
Attachment D	Job Safety Analyses
Attachment E	Project Site Forms
Attachment F	Site-Specific Operating Procedures

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

STOP WORK AUTHORITY

In accordance with Haley & Aldrich (Haley & Aldrich) Stop Work Authority Operating Procedure (OP1035), any individual has the right to refuse to perform work that he or she believes to be unsafe without fear of retaliation. He or she also has the authority, obligation, and responsibility to stop others from working in an unsafe manner.

STOP Work Authority is the stop work policy for all personnel and subcontractors on the Site. When work has been stopped due to an unsafe condition, Haley & Aldrich site management (e.g., Project Manager [PM], Site Health & Safety Officer [SHSO], etc.) and the Haley & Aldrich Senior Project Manager (SPM) will be notified immediately.

Reasons for issuing a stop work order include, but are not limited to:

- The belief/perception that injury to personnel or accident causing significant damage to property or equipment is imminent.
- A Haley & Aldrich subcontractor is in breach of site safety requirements and/or their own site HASP.
- Identifying a substandard condition (e.g., severe weather) or activity that creates an unacceptable safety risk as determined by a qualified person.

Work will not resume until the unsafe act has been stopped OR sufficient safety precautions have been taken to remove or mitigate the risk to an acceptable degree. Stop work orders will be documented as part of an on-site stop work log, on daily field reports to include the activity/activities stopped, the duration, person stopping work, person in-charge of stopped activity/activities, and the corrective action agreed to and/or taken. Once work has been stopped, only the Haley & Aldrich SPM or SHSO can give the order to resume work. Haley & Aldrich senior management is committed to support anyone who exercises his or her “Stop Work” authority.

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

ISSUANCE AND COMPLIANCE

This HASP has been prepared in accordance with Occupational Safety and Health Administration (OSHA) regulations (CFR 29, Parts 1904, 1910, and 1926) if such are applicable.

The specific requirements of this HASP include precautions for hazards that exist during this project and may be revised as new information is received or as site conditions change.

- This HASP must be signed by all Haley & Aldrich personnel involved in implementation of the SOW (Section 2 of this HASP).
- This HASP, or a current signed copy, must be retained at all times when Haley & Aldrich staff are present.
- Revisions to this HASP must be outlined within the contents of the HASP. If immediate or minor changes are necessary, the Field Safety Manager (FSM), Haley & Aldrich, SSO and/or Project Manager (PM) may use Attachment 1 (HASP Amendment Form), presented at the end of this HASP. Any revision to the HASP requires employees and subcontractors to be informed of the changes so that they understand the requirements of the change.
- Deviations from this HASP are permitted with approval from the Haley & Aldrich FSM, PM, or Senior Health & Safety Manager (SHSM). Unauthorized deviations may constitute a violation of Haley & Aldrich company procedures/policies and may result in disciplinary action.
- This HASP will be relied upon by Haley & Aldrich's subcontractors and visitors to the site. Haley & Aldrich's subcontractors must have their own HASP which will address hazards specific to their trade that is not included in this HASP. This HASP will be made available for review to Haley & Aldrich's subcontractors and other interested parties (e.g. Facility personnel and regulatory agencies) to ensure that Haley & Aldrich has properly informed our subcontractors and others of the potential hazards associated with the implementation of the SOW to the extent that Haley &Aldrich is aware.

This site-specific HASP provides only site-specific descriptions and work procedures. General safety and health compliance programs in support of this HASP (e.g., injury reporting, medical surveillance, personal protective equipment (PPE) selection, etc.) are described in detail in the Haley &Aldrich Corporate Health and Safety Program Manual and within Haley & Aldrich's Standard Operating Procedures Both the manual and SOPs can be located on the Haley & Aldrich's Company Intranet. When appropriate, users of this HASP should always refer to these resources and incorporate to the extent possible. The manual and SOPs are available to clients and regulators upon request.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

EMERGENCY EVENT PROCEDURES

1 - ASSESS THE SCENE

- **STOP WORK**
- Review the situation and ascertain if it's safe to enter the area.
- Evacuate the site if the conditions are unsafe.

2 - EVALUATE THE EMERGENCY

- **Call 911, or designated emergency number, if required.**
- **Provide first aid for the victim if qualified and safe to do so.**
  - First aid will be addressed using the onsite first aid kit. *
    - If providing first aid, remember to use proper first aid universal precautions if blood or bodily fluids are present.
- **If exposure to hazardous substance is suspected, immediately vacate the contaminated area.**
  - Remove any contaminated clothing and/or equipment.
  - Wash any affected dermal/ocular area(s) with water for at least 15 minutes.
  - Seek immediate medical assistance if any exposure symptoms are present.

** Note: Haley & Aldrich employees are not required or expected to administer first aid / CPR to any Haley & Aldrich staff member, Contractor, or Civilian personnel at any time; it is Haley & Aldrich´s position that those who do are doing so on their own behalf and not as a function of their job.*

3 - SECURE THE AREA

- **Cordon off the incident area, if possible.**
  - Notify any security personnel, if required.
  - Escort all non-essential personnel out of the area, if able.

4 - REPORT ON-SITE ACCIDENTS / INCIDENTS TO PM / SSO

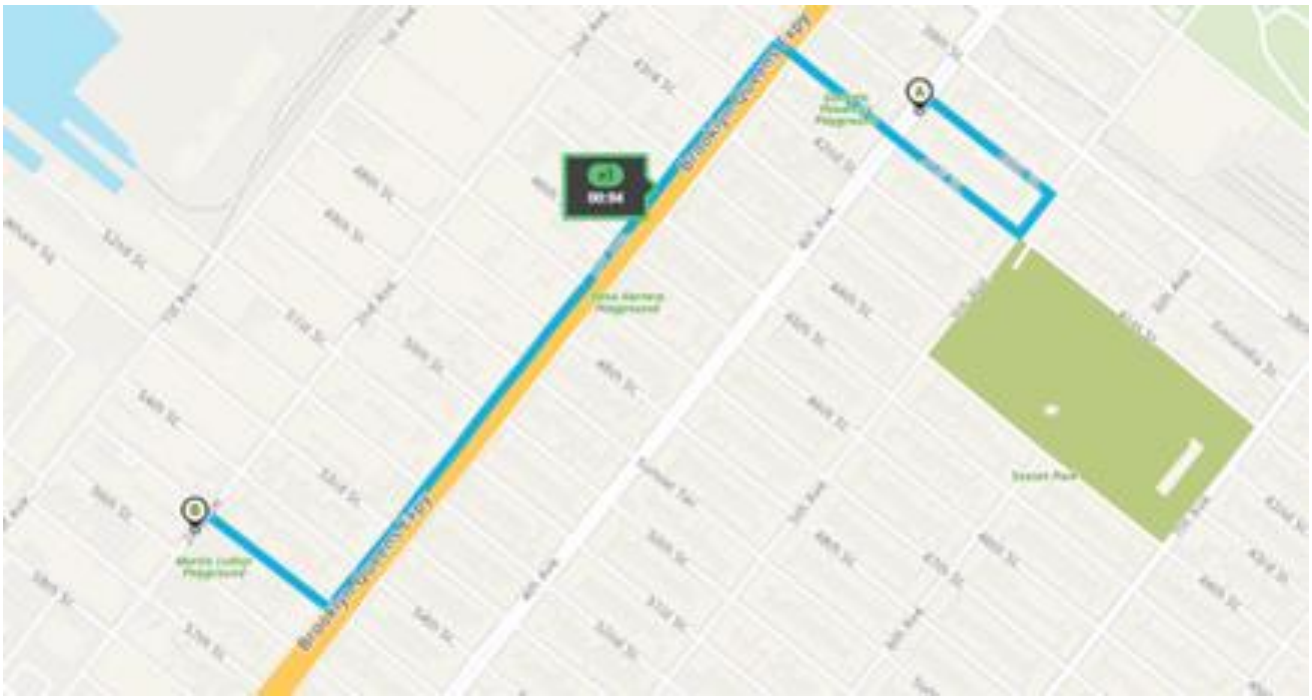
- **Notify the PM and SSO as soon as it is safe to do so.**
  - Assist PM and SSO in completing any additional tasks, as required.

5 - INVESTIGATE / REPORT THE INCIDENT

- **Record details of the incident for input to the Haley and Aldrich H&S Reporting Tool.**
  - Complete any additional forms as requested by the PM and SSO.

6 - TAKE CORRECTIVE ACTION

- **Implement corrective actions per the PM following root cause analysis.**
  - Complete Lessons Learned form.



Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

1. WORK SCOPE

This Site-Specific Health and Safety Plan addresses the health and safety practices and procedures that will be exercised by all Haley & Aldrich employees participating in all work on the Project Site. This plan is based on an assessment of the site-specific health and safety risks available to Haley & Aldrich and Haley & Aldrich's experience with other similar project sites. The scope of work includes the following:

Remedial Oversight (including excavation, UST removal, sub-slab depressurization system [SSDS] installation, soil vapor extraction [SVE] system installation, cutoff wall installation), Soil Sampling, and Soil Vapor/Groundwater Sampling (if needed)

Project Task Breakdown

Task No.	Task Description	Employee(s) Assigned	Work Date(s) or Duration
1	Remedial Oversight – Excavation, UST Removal, SSDS Installation, SVE System Installation, Cutoff Wall Installation	Zavier Richards	5 months
2	Soil Sampling	Zavier Richards	5 months
3	Soil Vapor / Groundwater Sampling (if needed)	Zavier Richards	5 months (if needed)

Subcontractor(s) Tasks

Firm Name	Work Activity	Work Date(s) or Duration
N/A	N/A	N/A

Projected Start Date: 10/1/2025

Projected Completion Date: 3/1/2026

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

2. SITE OVERVIEW / DESCRIPTION

Site Classification

Commercial

Site Description

The Site is located in the Sunset Park neighborhood of Brooklyn and is identified as Block 714, Lot 6 on the New York City tax map. The Site is approximately 10,017 square feet (sq ft) (0.23 acres) and was previously improved with a one-story structure formerly utilized as a convenience store, located in the eastern portion of the Site; an overhead canopy from the former gasoline filling station operations in the central portion of the Site; four 4,000-gal USTs, containing gasoline/ethanol or diesel and associated fill ports, located to the southwest of the overhead canopy; and paved parking areas. The previous Site features have been demolished and the former retail petroleum station operations ceased in December 2024. The Site is bound by 40th Street followed by mixed-use commercial and residential buildings to the north, a commercial car wash and auto repair to the south, residential apartment buildings to the east, and 4th Avenue followed by Intermediate School (I.S.) 136 to the west.

Background and Historic Site Usage

Based on the findings of the March 2024 Phase I ESA prepared by Lesova Environmental Group (LEG), the Site was comprised of one tax lot developed with a one-story concrete structure and a gasoline filling/auto service station with one (1) UST circa 1926 and a second lot which was vacant. The 1942 Sanborn map depicted the Site merged as one (1) lot with previous use similar to the 1926 map with a garage to the south of the lot. The Site was operated as an automotive service station, lubrication, minor repair, and office use with parking area until at least August 1965. The configuration of Site changed and was identified with a cement brick one-story construction with a gasoline filling station circa 1970. A historical City Directory search indicated that the Site was previously operated as a gasoline filling station and auto service station.

Site Status

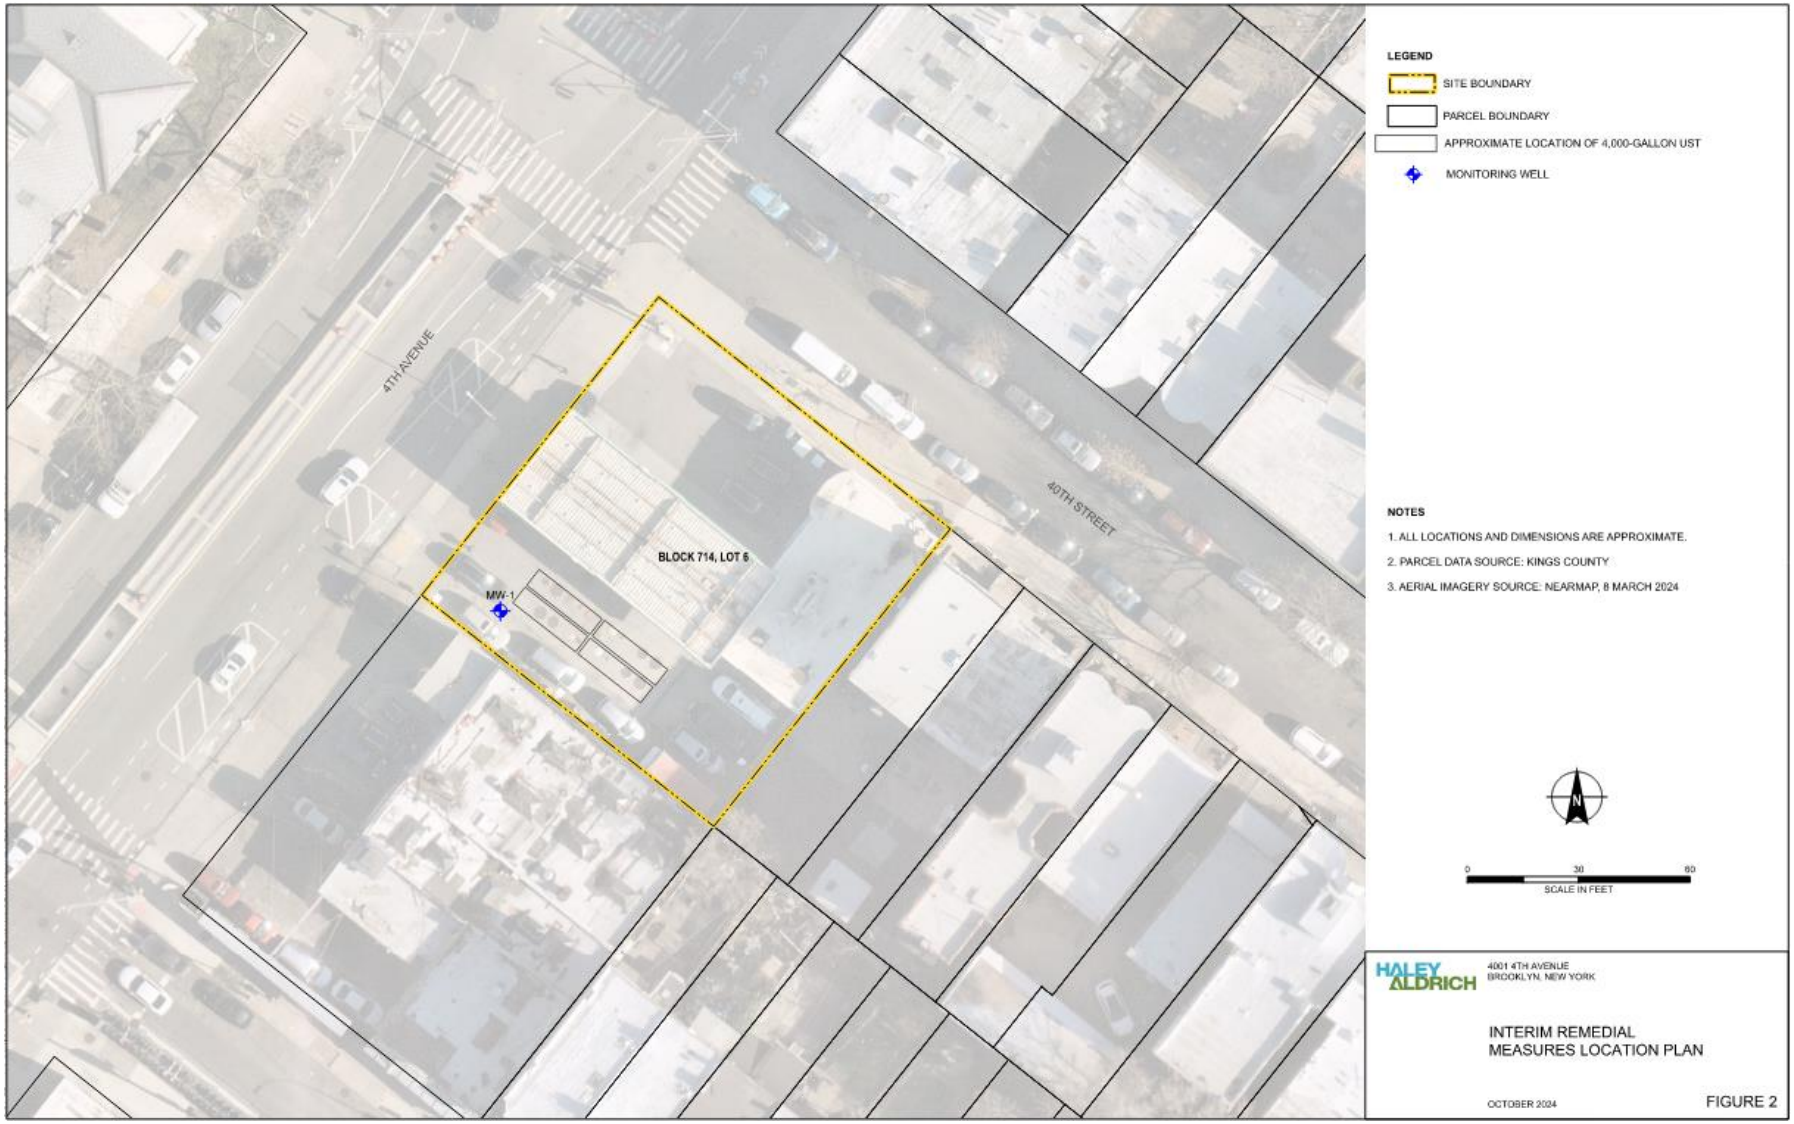
Indicate current activity status and describe operations at the site:

Inactive

The Site is currently vacant.

Site Plan

Is a site plan or sketch available? Yes



Work Areas

List and identify each specific work areas(s) on the job site and indicate its location(s) on the site plan:

Entire site

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Site Plan

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

3. HAZARD ASSESSMENT

Indicate all hazards that may be present at the site and for each task. If any of these potential hazards are checked, it is the Project Manager's responsibility to determine how to eliminate / minimize the hazard to protect onsite personnel.

Site Chemical Hazards

Is this Site impacted with chemical contamination? Yes

Source of information about contaminants: Previous Investigation

Contaminant of Concern	Location/Media	Concentration	Units
1,2,4-Trimethylbenzene	**Soil**	**1,200**	**mg/kg**
Benzene	**Soil**	**20**	**mg/kg**
Ethylbenzene	**Soil**	**1,100**	**mg/kg**
Naphthalene	**Soil**	**89**	**mg/kg**
Xylenes	**Soil**	**2,300**	**mg/kg**
Toluene	**Soil**	**1,500**	**mg/kg**
BTEX/VOCs	**Groundwater**	**40,200**	**ug/L**
1,2,4-Trimethylbenzene	**Groundwater**	**790**	**ug/L**
Naphthalene	**Groundwater**	**160**	**ug/L**

VOCs: include all organic compounds (substances made up of predominantly carbon and hydrogen) with boiling temperatures in the range of 50-260 degrees C, excluding pesticides. This means that they are likely to be present as a vapor or gas in normal ambient temperatures. Substances which are included in the VOC category include aliphatic hydrocarbons (such as hexane), aldehydes, aromatic hydrocarbons (such as benzene, toluene, and the xylenes or BTEX), and oxygenated compounds (such as acetone and similar ketones). The term VOC often is used in a legal or regulatory context and in such cases the precise definition is a matter of law.

VOCs are released from oil and gasoline refining, storage and combustion as well as from a wide range of industrial processes. Processes involving fuels, solvents, paints or the use of chemicals are the most significant sources. VOCs may also be emitted from cleaning products, degreasing products, fabrics, carpets, plastic products, glues, printed material, varnishes, wax, disinfectants, and cosmetics.

Typically, VOCs are present in gas or vapor and will enter the body by breathing contaminated air. Higher concentrations of VOCs may occur in areas of poor ventilation.

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

1,2,4-Trimethylbenzene: is a colorless liquid chemical with a strong, pleasant scent. 1,2,4-trimethylbenzene is a major part of what is known in the petroleum industry as the 'C9 fraction.' Oil refineries produce large amounts of C9 fraction each year for use as a gasoline additive.

BTEX/VOCs: BTEX is an acronym for benzene, toluene, ethylbenzene and xylenes. These compounds are VOCs, are common in petroleum-related products (e.g., oil, gasoline, coal-tar DNAPL, etc.), and frequently co-occur at hazardous waste sites. Benzene, toluene, ethylbenzene, and xylenes have acute and chronic harmful effects on the central nervous system. Benzene is classified as a carcinogen. Short-term health effects of low-level BTEX exposure include drowsiness, dizziness, accelerated heart rate, headaches, tremors, confusion, and unconsciousness.

Naphthalene: is a colorless or white/brown solid in flake or cake form, with mothball odor. Commonly found in coal tar, gasoline, or diesel fuels. Used to make mothballs and lubricants. This is a carcinogen and should be handled with extreme caution. Is a combustible solid and when heated is a dangerous fire hazard. Finely dispersed particles can form explosive mixtures. Absorption will cause irritation or burning to skin or eyes. Inhalation will cause irritation to nose and throat. High exposures will lead to headache, fatigue, tremors, and nausea. May also cause damage to liver and kidneys. The PEL 10 ppm averaged over an 8 hour shift.

Xylenes: are colorless liquids with a faint, sweet odor. There are three forms of xylene (meta-, ortho-, and para-), which are referred to as isomers. They are chemically classified as hydrocarbons, meaning they contain hydrogen and carbon atoms. These are chemicals of serious flammability and will easily ignite with heat, sparks or flames. Their flash point range is between 85-115 degrees F. The PEL is 10 ppm averaged over an 8 hour shift.

Typically, these are solvents in making paint, adhesives, and other chemicals. Their odor threshold varies greatly, and this should not be the sole indicator in exposures. Their vapors are heavier than air, but less dense than water, therefore they float. Can be inhaled or absorbed through the skin. Inhalation can irritate throat and nose and cause coughing, headache or dizziness. Absorption can cause skin rash, dryness or redness. Repeated exposures may affect concentration, memory, vision, and muscle coordination.

Site Hazards Checklist			
Weather			
Hot Temperatures	Cold Temperatures	High Winds	Lightning Storms

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Hot Temperatures

Heat stress may occur at any time work is being performed at elevated ambient temperatures. Because heat stress is one of the most common and potentially serious illnesses associated with outdoor work during hot seasons, regular monitoring and other preventative measures are vital. Site workers must learn to recognize and treat the various forms of heat stress. The best approach is preventative heat stress management.

H&A employees and their subcontractors should be aware of potential health effects and/or physical hazards of working when there are hot temperatures or a high heat index. Refer OP1015-Heat Stress for a discussion on hot weather hazards.

Cold Temperatures

Cold stress may occur at any time work is being performed at low ambient temperatures and high velocity winds. Because cold stress is common and has potentially serious illnesses associated with outdoor work during cold seasons, regular monitoring and other preventative measures are vital.

Refer to OP1003-Cold Stress for additional information and mitigation controls.

High Winds

While high winds are commonly associated with severe thunderstorms and hurricanes they may also occur as a result of differences in air pressures, such as when a cold front passes across the area. They can cause downed trees and power lines, and flying debris (such as dust or larger debris), which adds additional risks and could lead to power outages, transportation disruptions, damage to buildings and vehicles, and serious injury.

Wind Advisory are issued for sustained winds 25 to 39 mph and/or gusts to 57 mph. High Wind warnings are issued by the National Weather Service when high wind speeds may pose a hazard or is life threatening. The criteria for this warning will varies by state. The Beaufort Wind Scale is a helpful tool to when dealing with high winds.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Lightning Storms

Where the threat of electrical storms and the hazard of lightning exist staff shall ensure site procedures exist to: (1) detect when lightning is in the near vicinity and when there is a potential for lightning and (2) to notify appropriate site personnel of these conditions and (3) implement protocols to stop work and seek shelter.

The 30-30 Rule states that if time between seeing the lightning and hearing the thunder is less than 30 seconds, you are in danger and must seek shelter. You must also stay indoors for more than 30 minutes after hearing the last clap of thunder.

Biological			
Mosquitoes	Stinging Insects	Large/Small Mammals	Wildlife Droppings

Mosquitos

Work outdoors with temperatures above freezing will likely bring staff into contact with mosquitos. There are a variety of mosquito species that can transmit a range of diseases. Birds act as reservoirs for the viruses that can be collected by the mosquito and transmitted to a person. Majority of mosquitos are mainly a nuisance but staff need to take appropriate precautions to minimize the potential transmission of a virus that can result in one of the following diseases: West Nile, Eastern Equine Encephalitides and Western Encephalitides. Knowing some key steps that can minimize the risk of mosquito bites is, therefore, important in reducing the risks. Workers working outdoors should be aware that the use of PPE techniques is essential to preventing mosquito bites especially when working at sites where mosquitoes may be active and biting.

Use repellents containing DEET, picaridin, IR3535, and some oil of lemon eucalyptus and para-menthane-diol products provide longer-lasting protection. To optimize safety and effectiveness, repellents should be used according to the label instructions. Cover as much of your skin as possible by wearing shirts with long-sleeves, long pants, and socks whenever possible. Avoid use of perfumes and colognes when working outdoors during peak times when mosquitoes may be active; mosquitoes may be more attracted to individuals wearing perfumes and colognes.

Stinging Insects

Stinging Insects fall into two major groups: Apidae (honeybees and bumblebees) and vespids (wasps, yellow jackets, and hornets). Apidae are docile and usually do not sting unless provoked. The stinger of the honeybee has multiple barbs, which usually detach after a sting. Vespids have few barbs and can inflict multiple stings.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

There are several kinds of stinging insects that might be encountered on the project site. Most stings will only result in a temporary injury. However, sometimes the effects can be more severe, even life-threatening depending on where you are stung and what allergies you have. Being stung in the throat area of the neck may cause edema (swelling caused by fluid build-up in the tissues) around the throat and may make breathing difficult.

In rare cases, a severe allergic reaction can occur. This can cause "anaphylaxis" or anaphylactic shock with symptoms appearing immediately or up to 30 minutes later. Symptoms include; Hives, itching and swelling in areas other than the sting site, swollen eyes/eyelids, wheezing, chest tightness, difficulty breathing, hoarse voice, swelling of the tongue, dizziness or sharp drop in blood pressure, shock, unconsciousness or cardiac arrest. Reactions can occur the first time you are stung or with subsequent stings. If you see any signs of reaction, or are unsure, call or have a co-worker call emergency medical services (e.g., 911) right away. Get medical help for stings near the eyes, nose or throat. Stay with the person who has been stung to monitor their reaction.

Staff who are allergic to bee stings are encouraged to inform their staff/project manager. If staff member carries an Epi-pen (i.e., epinephrine autoinjector) they are encouraged to inform their colleagues in case they are stung and are incapable of administering the injection. Examine site for any signs of activity or a hive/nest. If you see several insects flying around, see if they are entering/exiting from the same place. Most will not sting unless startled or attacked. Do not swat, let insects fly away on their own. If you must, walk away slowly or gently "blow" them away. If a nest is disturbed and you hear "wild" buzzing, protect your face with your hands and run from the area immediately. Wear long sleeves, long pants, and closed-toed boots. Wear light colored clothes such as khakis. Avoid brightly colored, patterned, or black clothing. Tie back long hair to avoid bees or wasps from entanglement. Do not wear perfumes, colognes or scented soaps as they contain fragrances that are attractive. If bee or wasp is found in your car, stop and leave windows open.

Small Mammals

Rodents, are the most abundant order of mammals. There are hundreds of species of rats; the most common are the black and brown rat. Other rodents you may encounter are mice, beavers, squirrels, guinea pigs, capybaras and coypu.

The Brown Rat has small ears, blunt nose, and short hair. It is approximately 14-18” long (with tail). They frequently infest garbage/rubbish, slaughterhouses, domestic dwellings, warehouses, and supermarkets. They also frequent any space with an easy meal and potential nesting sites. The Black Rat is identified by its tail, that is always longer than the length from the head to the body. It is also slimmer and more agile than the Brown rat. Its size varies according to its environment and food supply.

The House Mouse has the amazing ability to adapt and can frequently be found in human dwellings. In buildings, mice will live anywhere and difficult to keep out. Mice are omnivorous, they will eat anything. Rats and mice often become a serious problem in cold winter months when they seek food and warmth inside buildings. They may suddenly appear in large numbers when excavation work disturbs their in-ground nesting locations or their food source is changed.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Some major problems caused by rats and mice are contaminating the food they eat with urine and excrement. Gnawing into materials such as paper, wood, or upholstery, to use as nest material. Also gnawing plastic, cement, soft metals such as lead and aluminum, and wiring, which may cause a fire hazard. Occasionally biting people and may kill small animals. They, or the parasites they carry, like fleas, mites and worms, spread many diseases such as salmonella, trichinosis, rat bite fever, hantavirus, Weil's disease, and bubonic plague. They damage ornamental plants by burrowing among the roots or feeding on new growth. They also eat garden vegetables, such as corn and squash. These rodents have been a problem for centuries, because of their incredible ability to survive and are so difficult to eliminate. In addition, they are extremely compatible with human behavior and needs.

Avoid contact with rodents, if possible. Avoid contact with rodent excrement. Do not eat food or water that may have encountered rodent excrement. If exposed, wash hands and avoid touching your face with your hands.

Large Mammals

When working in remote locations staff may come near wild or stray dogs, coyotes, foxes or other large animals. It is important that staff avoid contact with these animals.

There are increasing reports of wild dog attacks on household pets, attacks on human are uncommon and rare or infrequent at best. However, attacks by individual or small groups of domestic dogs occur frequently resulting in injury or a fatality on rare occasion. Wild dogs may become skilled at hunting in groups for small game and large game from rabbits and hares to deer and moose. The impact of wild dogs, on livestock and wildlife, varies by location and is influenced by factors such as availability of other food, number of dogs, and competition by other predators. Wild dogs kill house cats and may injure or kill domestic dogs. Areas where people have not hunted and trapped wild dogs, a fear of humans may not have developed and in such dogs may attack people and children. This can be a serious problem in areas where feral dogs feed at and live around garbage dumps near human dwellings. Such situations occur most frequently around small remote towns. In urban settings domestic dogs can be territorial and exhibit aggressive behavior such as barking and snarling when their area is encroached. It is not uncommon for domestic dogs to travel in small packs.

If the pack displays aggressive behavior and charges do not run or turn your back. When confronted by one or more dog it is important not to run or exhibit any behavior that may be construed as a challenge (e.g., looking the dog in the eyes, showing your teeth, or attempting to pet the dog).Stand still and place your work bag between you and the dog and then begin to move slowly away from the dog(s) while not turning your back. If you see a stray dog approaching from a distance, look for a place that's secure. Step inside a fenced area, enter a place of business, or knock on a neighbor's door. It is always better to be safe than risk a potentially dangerous situation.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Wildlife Droppings

Project sites involving abandoned buildings may bring staff into contact with animal droppings. There are many diseases that one can be exposed to from a variety of animals.

Mice and Rats
Hantavirus is transmitted to humans from dried droppings, urine, or saliva of mice and rats. The disease begins as a flu-like illness with fever, chills, and muscle aches, but can rapidly progress to a life-threatening condition marked by respiratory failure as fluids fill the lungs. Persons working in infested buildings are at increased risk to this disease, particularly during dusty clean-up activities.

Birds and Bats
Large populations of roosting birds may present a disease risk. The most serious health risks arise from disease organisms that grow in the nutrient-rich accumulations of bird droppings, feathers and debris under a roost, particularly if roosts have been active for years.

Histoplasmosis and Cryptococcosis are the most common fungal diseases associated with bird and bat dropping. Infection occurs when spores, carried by the air, are inhaled, especially after a roost has been disturbed. The active and inactive roosts of blackbirds, starlings and cowbirds have also been found to be heavily contaminated with fungus spores. Most infections are mild and produce either no symptoms or a minor influenza-like illness. Occasionally the disease can cause high fever, blood abnormalities, pneumonia and even death.

Do not touch droppings with unprotected hands. Avoid disturbing the droppings and generating dust. Employee work practices and dust control measures that eliminate or reduce dust generation during removal of manure from a building will also reduce risks of infection and development of disease. Use an industrial vacuum cleaner with a high-efficiency (HEPA) filter to bag contaminated material.

Location/Terrain			
Slip/Trip/Falls	SIMOPS	Economically Depressed	Choose an item.

Slips, Trips & Falls

Slip and trip injuries are the most frequent injuries to workers. Statistics show most falls happen on the same level resulting from slips and trips. Both slips and trips result from unintended or unexpected change in the contact between the feet and the ground or walking surface. Good housekeeping, quality of walking surfaces (flooring), awareness of surroundings, selection of proper footwear, and appropriate pace of walking are critical for preventing fall accidents.

Site workers will be walking on a variety of irregular surfaces, that may affect their balance. Extra care

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

must be taken to walk cautiously near rivers because the bottom of the riverbed maybe slick and may not be visible. Rocks, gradient changes, sandy bottoms, and debris may be present but not observable.

Take your time and pay attention to where you are going. Adjust your stride to a pace that is suitable for the walking surface and the tasks you are doing. Check the work area to identify hazards - beware of trip hazards such as wet floors, slippery floors, and uneven surfaces or terrain. Establish and utilize a pathway free of slip and trip hazards. Choose a safer walking route. Carry loads you can see over. Keep work areas clean and free of clutter. Communicate hazards to on-site personnel and remove hazards as appropriate.

SIMOPS

SIMOPS are described as the potential class of activities which could bring about an undesired event or set of circumstances, e.g., safety, environment, damage to assets, schedule, commercial, financial, etc. SIMOPS are defined as performing two or more operations concurrently.

SIMOPS should be identified at an early stage before operations commence to understand issues such as schedule and physical clashes, maintenance activities, failure impacts, interferences between vessels, contracts and third part interfaces and environmental impacts.

Coordinate project with site activities. Identify and understand the hazards associated with the host and client's activities. Integrate site emergency response protocols where appropriate and communicate to all project staff. Integrate site communication protocols and communicate to all project staff.

Economically Depressed Areas

Economically depressed areas may have high crime rates. Projects involving work in and around inactive industrial sites may bring staff into contact with indigent and homeless persons. Staff could be subjected to crime that includes but may not be limited to thievery, vandalism, and violence. Prior to the start of work staff need to understand the work locations and the potential for exposure to low level crime.

Staff members should never work alone in these areas. A buddy system is required. Conduct during daylight hours. Secure equipment and vehicles. If warranted, contact the local police department for a security detail. Leave the work area immediately and contact the local authorities if staff members feel threatened or are threatened.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Miscellaneous			
Extended Shift	Night Work	Choose an item.	Choose an item.

Extended Shift

An extended shift can include extending a workday beyond eight hours. Extended or unusual work shifts may be more stressful physically, mentally, and emotionally. Non-traditional shifts and extended work hours may disrupt the body's regular schedule, leading to increased fatigue, stress, and lack of concentration. This leads to an increased risk of operator error, injuries and/or accidents. The degree to which an individual is exposed to fatigue risk factors depends upon the work schedule. As both the duration of the workday and the number of days worked increase so does the fatigue risk factors. Staff Managers need to be aware of the fatigue risk factors and ensure projects are structured to mitigate these factors. Staff Members also have a responsibility to manage the personal fatigue risk factors that they can control outside of work (e.g, duration and quality of sleep, diet, drugs, and alcohol)

Fatigue is a message to the body to rest and can be eliminated with proper rest. However, if rest is not possible, fatigue can increase and becomes distressing and eventually debilitating. Fatigue symptoms, both mental and physical, vary and depend on the person and degree of overexertion. Examples include: weariness, sleepiness, irritability, reduced alertness, lack of memory, concentration and motivation, increased susceptibility to illness, depression, headache, loss of appetite, and digestive problems.

When possible, managers should limit use of extended shifts and increase the number of days worked. Working shifts longer than 8 hours generally result in reduced productivity and alertness. Additional breaks and meals should be provided when working extended shift periods. Tasks requiring heavy physical labor or intense concentration should be performed at the beginning of the shift if possible. This is an important consideration for pre-emergency planning.

Make efforts, when feasible, to ensure that unavoidable extended work shifts and shift changes allow affected employees time for adequate rest and recovery. Project Managers need to plan to have an adequate number of personnel available to enable workers to take breaks, eat meals, relax, and sleep.

Plan for regular and frequent breaks throughout the work shift. If at remote sites, ensure if possible, that there is a quiet, secluded area designated for rest and recuperation. In addition to formal breaks such as lunch or dinner, encourage use of micro breaks to change positions, move about, and shift concentration. Personnel should look to obtain an adequate quantity and quality of sleep.

Night Work

The way work is planned and scheduled can increase the risk of fatigue. Scheduling work in a way that fails to allow staff members enough time for travel to and from work and/or allow for sufficient time for sleep can cause fatigue. Working at times when staff members are biologically programmed to

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

sleep and working for long periods of time can also produce fatigue. Working night shift, including the number of consecutive nights can be a significant fatigue risk factor if not managed properly.

Night shifts may be more stressful physically, mentally, and emotionally. They can disrupt the body's regular schedule, leading to increased fatigue, stress, and lack of concentration. These effects lead to an increased risk of operator error, injuries and/or accidents. The degree which an individual is exposed to fatigue risk factors depends upon the work schedule. As both the duration of the workday and number of days worked increase so does the exposure to fatigue risk factors. Staff Managers need to be aware of the fatigue risk factors and ensure projects are structured to mitigate these risk factors.

Employers must ensure that employees are not exposed to hazardous chemicals or other agents in excess of health standards. Working extended shifts may involve prolonged exposures to hazards which exceed established standards. Employers should implement measures to monitor and limit exposures. Controls may include limiting time employees may remain at the project site; having clean locations for employee rest areas; or rest areas located sufficiently up wind of contaminated sites.

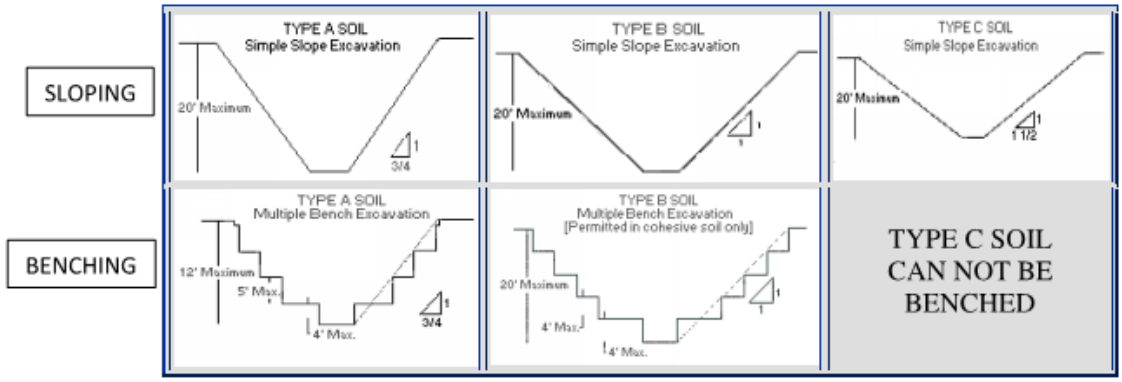
Minimize or redesign routine administrative tasks to ensure staff members can focus on core duties during their night work. Limit consecutive night shifts worked. If a project requiring staff to work beyond four nights requires a fatigue management plan. Ensure that rosters allow for at least two full night's sleep after the last night shift before returning to day shift. Regular and frequent breaks are needed. Comprehensive training on fatigue risk factors for the staff members assigned to the project. Optimal sleeping conditions during the day (e.g., dark/quiet rooms, minimize distractions, light meal prior to sleep).

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Task Hazard Summary

Task 1 – Excavation/Trenching (Remedial Oversight)

There are multiple hazards associated with working in and around excavations and trenches including cave-ins, potential running soils, dislodged excavated soils, lack of proper access and egress. Nonfatal, and even fatal, injuries may occur in association with excavation and trenching activities with a greater frequency than one might expect. Causes of bodily injury, illness, or death include asphyxiation, internal injuries due to physical crushing, falling objects and toxic exposures.



Excavations five (5) feet deep or greater require a protective system unless the excavation is made entirely in stable rock. If the depth is less than five (5) feet deep, a competent person may determine that a protective system is not required. Trenches 20 feet deep or greater require that the protective system be designed by a registered professional engineer or be based on tabulated data prepared and/or approved by a registered professional.

H&A Staff Members shall not enter a trench that is five feet deep or greater unless a protective system is used or the soil(s) have been characterized and benched and/or sloped appropriately.

The following are list identifies the types of protective measures that can be used in the event a staff member is required to enter an excavation or trench.

- **Sloping** involves cutting back the trench wall at an angle inclined away from the excavation.

- **Benching** means a method of protecting workers from cave-ins by excavating the sides of an excavation to form one or a series of horizontal levels or steps, usually with vertical or near vertical surfaces between levels. Benching cannot be done in Type C soil. Below is a diagram indicating the appropriate slope angle for both sloping and benching.

- **Shoring** requires installing aluminum hydraulic or other types of supports to prevent soil movement and cave-ins.
- **Shielding** protects workers by using trench boxes or other types of supports to prevent soil cave-ins.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Designing a protective system can be complex because you must consider many factors: soil classification, depth of cut, water content of soil, changes caused by weather or climate, surcharge loads (e.g., spoil, other materials to be used in the trench) and other operations in the vicinity.

See OP 1001 Excavation and Trenching Safety for more information.

Task 1 – Stockpiling (Remedial Oversight)

Stockpiling of soils is conducted for a range of services that can include but are not limited to: building, foundation, utility excavation, drilling spoils containment and environmental cleanup. Familiarity with basic heavy construction safety is an essential component of all hauling projects. Potential hazards related to stockpiling operations include, but are not limited to encountering underground or overhead utilities, traffic and heavy equipment, and the use or unexpected encountering of toxic or hazardous substances. While staff members do not operate heavy equipment, they may work in close proximity to the equipment and may be exposed to many of the same hazards as the Contractor. Care should be taken during material stockpiling that the staff is not in the line of fire of the loading equipment (swing radius/traffic pattern). The staff should be aware of any setback requirements of stockpile surcharges near trenches and excavations.

Task 1 - Hauling Soils Off-site (Remedial Oversight)

Hauling Soils Off-site is conducted for a range of services that can include but are not limited to: building, foundation, utility excavation and environmental cleanup. Familiarity with basic heavy construction safety is an essential component of all hauling projects. Potential hazards related to hauling soils off-site operations include, but are not limited to encountering underground or overhead utilities, traffic and heavy equipment, generated waste, and the use or unexpected encountering of toxic or hazardous substances. While staff members do not operate heavy equipment, they may work in close proximity to the equipment and may be exposed to many of the same hazards as the Contractor. Care should be taken during loading of truck/container that the staff is not in the line of fire of the loading equipment (swing radius/traffic pattern) or of the falling spoils/soil from the loading bucket or truck bed. The staff should be aware at all times of subsurface stability as a truck may tip during truck loading and unloading due items such as but not limited to uneven surface, poorly or uncompacted subsurface, thawing soils, saturated soils and proximity to excavation. It is imperative that staff are aware of emergency / communication protocols with the Contractor prior to the start of work.

Task 1 – SSDS/SVE Installation (Remedial Oversight)

An active SSDS will be installed beneath the building slab and connected to the SVE system.
The SSDS will consist of a horizontal perforated piping installed in a permeable layer under the vapor barrier. The permeable layer will consist of washed aggregate, or similar permeable material. The

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

horizontal piping will consist of perforated schedule 40 PVC pipes with leader pipes connecting to the vertical risers. The vertical risers will be constructed of solid steep pipe risers and exit through the cover systems with sealed penetrations. Each riser will have a sample port assembly installed in the cellar. Potential hazards related to SSDS installation oversight include, but are not limited to: potential running soils, dislodged excavated soils, and lack of proper access and egress.

The SVE system will consist of vapor extraction points (VEP) installed in the excavated area. The VEPs will be constructed of schedule 40 PVC with 0.010-inch slot screens. Each VEP well will have a 2-inch diameter, schedule 40 PVC installed under the concrete slab. Each VEP well piping will enter the basement area through sealed penetrations in the basement concrete wall. The 2-inch diameter pipes will each have a dedicated sample port and valve prior to being plumed to a four-inch header pipe that will be connected to the SVE system. The potential hazards from SSDS installation oversight also apply to the installation of the SVE system, in addition to potential hazards from drilling operations such as encountering underground or overhead utilities, traffic and heavy equipment, hoisting heavy tools, steel impacts, open rotation entanglement, and the planned or unexpected encountering of toxic or hazardous substances. Care should be taken while entering and exiting excavations or trenches, and when assessing the SSDS/SVE installation.

Task 1 - Steel Sheeting (Remedial Oversight)

Installation of Steel sheeting is typically conducted for foundations and utility trenches. Familiarity with basic heavy construction safety is an essential component of all piles installation. Potential hazards related to steel sheeting installation include, but are not limited to encountering line of fire, underground or overhead utilities, noise, traffic and heavy equipment, and overhead work, Cranes or Lifting Equipment. While staff members do not operate heavy equipment, they will work in close proximity to the equipment and may be exposed to many of the same hazards as the Contractor. Care should be taken during unloading of piles from delivery trucks or hoisting of piles onto the rig as staff may often be in the line of fire or swing radius of the cranes. Staff should be aware at all times of all overhead hoisting operations even during pile installation. Staff should always maintain a safe distance to the pile driving rig during installation as the pile/hammer/accessories may break free of the rig due to vibration/impact. Always have an “exit strategy” in mind when working near the pile driving hammer. It is imperative that staff are aware of emergency / communication protocols with the Contractor prior to the start of work.

Task 2 – Soil Sampling

Soil sampling by H&A staff on active construction sites can be conducted in conjunction with a wide range activities such as building construction, earthwork and soil management related activities. These activities can include, but are not limited to: drill spoil characterization and management during building foundation element installation, characterization of excavated soils for management/disposal/reuse during earthwork activities, and as part of environmental remedial activities such as delineation and confirmation sampling. Familiarity with basic heavy construction safety, site conditions (geotechnical

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

and environmental), and potential soil contaminants are essential components of soil sampling performed on active sites. Potential hazards related to soil sampling at construction sites include, but are not limited to: encountering site vehicle traffic and heavy equipment operations, manual lifting, generated waste, contact or exposure to impacted soil, and encountering unknown toxic or hazardous substances. Although soil sampling is commonly performed within active excavations, from stockpiles, or within trench excavations, sampling locations and situations will vary depending on site conditions. Care should be taken while entering and exiting excavations or trenches, and when accessing (climbing up or down) soil stockpiles, ensuring that the sampling area is not being actively accessed by construction equipment. Care should also be taken with handling of potentially environmentally impacted soil during sampling, with appropriate PPE identified and used. At no time during classification activities are personnel to reach for debris near machinery that is in operation, place any samples in their mouth, or come in contact with the soils without the use of gloves. Staff will have to carry and use a variety of sampling tools, equipment, containers, and potentially heavy sample bags. It is imperative that staff are aware of emergency / communication protocols with the Contractor prior to the start of work.

Task 3 – Soil Vapor

Soil gas sampling is employed as an indirect indicator of contamination in soil or groundwater particularly over and around landfill waste sites, or groundwater plumes. Soil gas sampling points can be installed manually using a slam bar or power driven mechanical devices (e.g., demolition hammer or Geoprobe) may be used based on site conditions (i.e., pavement, frozen ground, very dense clays, etc.). Soil gas samples can be drawn through the probe itself, or through Teflon tubing inserted through the probe and attached to the probe point. Samples are collected and analyzed as described below. Other field air monitoring devices, such as the Combustible Gas Indicator (CGI) and the Organic Vapor Analyzer (OVA), can also be used, depending on specific site conditions.

Because the sample is being drawn from underground, and no contamination is introduced into the breathing zone, soil gas sampling usually occurs in Level D. Nevertheless, ambient air should be constantly monitored to obtain background and breathing zone readings during the sampling procedure in the event the seal around the sampling point is breached. As long as the levels in ambient air do not rise above background, no upgrade of the level of protection is needed. Also, an underground utility search must be performed prior to sampling.

Task 3 – Groundwater Sampling

Environmental water sampling could include activities such as groundwater sampling from permanent or temporary wells, or surface water sampling from streams, rivers, lakes, ponds, lagoons, and surface impoundments.

Sampling tasks could involve uncapping, purging (pumping water out of the well), and sampling, and/or monitoring, new or existing monitoring wells. A mechanical pump may be used to purge the wells and

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

can be hand-, gas-, or electric-operated. Water samples taken from the wells are then placed in containers and shipped to an analytical laboratory for analysis. The physical hazards of these operations are primarily associated with the collection methods and procedures used.

When sampling bodies of water containing known or suspected hazardous substances, adequate precautions must be taken to ensure the safety of sampling personnel. The sampling team member collecting the sample should not get too close to the edge, where ground failure or slips, trips or falls may cause him/her to lose his/her balance. The person performing the sampling should have fall restraint or protection for the task. When conducting sampling from a boat in an impoundment or flowing waters, appropriate vessel safety procedures should be followed. Avoid lifting heavy coolers with back muscles; instead, use ergonomic lifting techniques, team lift or mechanical lifts. Wear proper gloves, such as when handling sample containers to avoid contacting any materials that may have spilled out of the sample containers.

Inhalation and absorption of COCs are the primary routes of entry associated with water sampling, due to the manipulation of sample media and equipment, manual transfer of media into sample containers, and proximity of operations to the breathing zone. During this project, several different groundwater sampling methodologies may be used based on equipment accessibility and the types of materials to be sampled. These sampling methods may include hand or mechanical bailing. The primary hazards associated with these specific sampling procedures are not potentially serious; however, other operations in the area or the conditions under which samples must be collected may present chemical and physical hazards. The hazards directly associated with groundwater sampling procedures are generally limited to strains or sprains from hand bailing, and potential eye hazards. Exposure to water containing COCs is also possible. All tools and equipment that will be used at the site must be intrinsically safe (electronics and electrical equipment) and non-sparking or explosion-proof (hand tools).

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Summary of Physical Hazards & Controls

Heavy Equipment

Staff must be careful and alert when working around heavy equipment, failure or breakage and limited visibility can lead to accidents and worker injury. Heavy equipment such as cranes, drills, haul trucks, or other can fail during operation increasing chances of worker injury. Equipment of this nature shall be visually inspected and checked for proper working order prior to commencement of field work. Those

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

operating heavy equipment must meet all requirements to operate the equipment. Haley & Aldrich, Inc. staff that supervise projects or are associated with high risk projects that involve digging or drilling should use due diligence when working with a construction firm.

See OP1052 Heavy Equipment for additional information.

Controls

- Only approach equipment once you have confirmed contact with the operator (e.g., operator places the bucket on the ground).
- Always maintain visual contact with operators and keep out of the strike zone whenever possible.
- Always be alert to the position of the equipment around you.
- Always approach heavy equipment with an awareness of the swing radius and traffic routes of all equipment and never go beneath a hoisted load.
- Avoid fumes created by heavy equipment exhaust.

Noise

Working around heavy equipment (drill rigs, excavators, etc.) often creates excessive noise. The effects of noise include physical damage to the ear, pain, and temporary and/or permanent hearing loss. Workers can also be startled, annoyed, or distracted by noise during critical activities. Noise monitoring data that indicates that working within 25 feet of operating heavy equipment result in exposure to hazardous levels of noise (levels greater than 85 dBA).

See OP 1031 Hearing Conservation for additional information.

Controls

- Personnel are required to use hearing protection (earplugs or earmuffs) within 25 feet of any operating piece of heavy equipment.
- Limit the amount of time spent at a noise source.
- Move to a quiet area to gain relief from hazardous noise sources.
- Increase the distance from the noise source to reduce exposure.

Slippery Surfaces

Both slips and trips result from unintended or unexpected change in the contact between the feet and ground or walking surface. Good housekeeping, quality of walking surfaces, selection of proper footwear, and appropriate pace of walking are critical for preventing fall accidents. Slips happen where there is too little friction or traction between the footwear and walking surface.

Common causes of slips are wet or oily surfaces, spills, weather hazards, loose unanchored rugs or mats and flooring or other walking surfaces that do not have same degree of traction in all areas.

Weather-related slips and falls become a serious hazard as winter conditions often make for wet or icy surfaces outdoors. Even wet organic material or mud can create hazardous walking conditions. Spills and leaks can also lead to slips and falls.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Controls

- Evaluate the work area to identify any conditions that may pose a slip hazard.
- Address any spills, drips or leaks immediately.
- Mark areas where slippery conditions exist.
- Select proper footwear or enhance traction with additional PPE.
- Where conditions are uncertain or environmental conditions result in slippery surfaces walk slowly, take small steps, and slide feet on wet or slippery surfaces.

Congested Areas

Working in congested areas can expose both workers and the public to a wide range of hazards depending upon the specific activities taking place. Staff Members need to understand the work scope, work areas, equipment on-site, and internal traffic patterns to minimize or eliminate exposure potential.

Controls

- Provide barricades, fencing, warning signs/signals and adequate lighting to protect people while working in or around congested areas.
- Vehicles and heavy equipment with restricted views to the rear should have functioning back-up alarms that are audible above the surrounding noise levels. Whenever possible, use a signaler to assist heavy equipment operators and/or drivers in backing up or maneuvering in congested areas.
- Lay out traffic control patterns to eliminate excessive congestion.
- Workers in congested areas should always wear high visibility clothing.
- Be aware of Line of Fire hazards when performing work activities in congested areas.
- Hazards associated with SIMOPs should be discussed daily at Tailgate Safety Meetings.

Ergonomics

Most Work-related Musculoskeletal Disorders (WMSDs) are caused by Ergonomic Stressors. Ergonomic Stressors are caused by poor workplace practices and/or insufficient design, which may present ergonomic risk factors. These stressors include, but not limited to, repetition, force, extreme postures, static postures, quick motions, contact pressure, vibration, and cold temperatures.

WMSDs are injuries to the musculoskeletal system, which involves bones, muscles, tendons, ligaments, and other tissues in the system. Symptoms may include numbness, tightness, tingling, swelling, pain, stiffness, fatigue, and/or redness. WMSD are usually caused by one or more Ergonomic Stressors. There may be individual differences in susceptibility and symptoms among employees performing similar tasks. Any symptoms are to be taken seriously and reported immediately.

See OP1053 Ergonomics for more information.

Controls

- Ensure workstations are ergonomically correct so bad posture is not required to complete tasks.
- Take periodic breaks over the course of the day.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Stretch during break times.
- Break up tasks that require repetitive motion.
- Contact Corporate H&S with any ergonomic concerns

Excavation & Trenches

There are multiple hazards associated with working in and around excavations and trenches including cave-ins, potential running soils, dislodged excavated soils, lack of proper access and egress. Nonfatal, and even fatal, injuries may occur in association with excavation and trenching activities with a greater frequency than one might expect. Causes of bodily injury, illness, or death include asphyxiation, internal injuries due to physical crushing, falling objects and toxic exposures.

See OP1001 Excavation and Trenching Safety for more information.

Controls

- Do not enter an exaction unless it has been inspected and has appropriate protective measures in place: shoring, benching, or sloping.
    - Protective measures are required for excavations that are 5 feet or deeper.
- If entry is required verify with the on-site competent person that:
    - no atmospheric hazards exist or have the potential to exist
    - there is no standing water or water removal operations are in place
    - the daily inspection has occurred
    - spoil piles, equipment or other is at least 2 feet from the edge
    - There is safe access and egress to the excavation which can include ladders, steps, ramps or other safe means. The means of access and egress shall be no more than 25’ away.
- If there is any doubt about the safety of the excavation personnel will not enter the excavation or trench and will contact the PM and the Regional Safety Manager.
- Do not stand on the long side of the cut. If required ensure there are no tension cracks.

Ground Disturbance

Ground disturbance is defined as any activity disturbing the ground. Ground disturbance activities include, but are not limited to, excavating, trenching, drilling (either mechanically or by hand), digging, plowing, grading, tunneling and pounding posts or stakes.

Because of the potential hazards associated with striking an underground utility or structure, the operating procedure for underground utility clearance shall be followed prior to performing any ground disturbance activities.

See OP1020 Working Near Utilities

Controls

Prior to performing ground disturbance activities, the following requirements should be applied:

- Confirm all approvals and agreements (as applicable) either verbal or written have been obtained.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Request for line location has been registered with the applicable One-Call or Dial Before You Dig organization, when applicable.
    - Whenever possible, ground disturbance areas should be adequately marked or staked prior to the utility locators site visit.
- Notification to underground facility operator/owner(s) that may not be associated with any known public notification systems such as the One-Call Program regarding the intent to cause ground disturbance within the search zone.
- Notifications to landowners and/or tenant, where deemed reasonable and practicable.
- Proximity and Common Right of Way Agreements shall be checked if the line locator information is inconclusive.

Choose a building block.

Line of Fire

Line of fire refers to the path an object will travel. Examples of line of fire situations typically observed on project sites include lifting/hoisting, lines under tension, objects that can fall or roll, pressurized objects or lines, springs or stored energy, work overhead, vehicles and heavy equipment.

Controls

- Never walk under a suspended load.
- Be aware and stay clear of tensioned lines such as cable, chain and rope.
- Be cautious of torque stresses that drilling equipment and truck augers can generate. Equipment can rotate unexpectedly long after applied torque force has been stopped.
- Springs and other items can release tremendous energy if compressed and suddenly released
- Items under tension and pressure can release tremendous energy if it is suddenly released.
- Not all objects may be overhead; be especially mindful of top-heavy items and items being transported by forklift or flatbed.
- Secure objects that can roll such as tools, cylinders, and pipes.
- Stay clear of soil cuttings or soil stockpiles generated during drilling operations and excavations, be aware that chunks of soil, rocks, and debris can fall or roll.

Overhead Utilities

When work is undertaken near overhead electrical lines, the distance maintained from those lines shall also meet the minimum distances for electrical hazards as defined in Table 1 below. Note: utilities other than overhead electrical utilities need to be considered when performing work.

Table 1 Minimal Radial Clearance Distances *

Normal System Voltage Kilovolts (kV)	Required Minimal Radial Clearance Distance (feet/meters)
0 – 50	**10/3.05**

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

51 – 100	**12/3.66**
101 – 200	**15/4.57**
201 – 300	**10/6.1**
301 – 500	**25/7.62**
501 – 750	**35/10.67**
750 - 1000	**45/13.72**

* For those locations where the utility has specified more stringent safe distances, those distances shall be observed.

Controls

- To prevent damage, guy wires shall be visibly marked and work barriers or spotters provided in those areas where work is being conducted.
    - When working around guy wires, the minimum radial clearance distances for electrical power shall be observed.
- The PM shall research and determine if the local, responsible utility or client has more restrictive requirements than those stated in Table 1.
- If equipment cannot be positioned in accordance with the requirements established in Table 1 the lines need to be de-energized.

Underground Utilities

Various forms of underground/overhead utility lines or conveyance pipes may be encountered during site activities. Prior to the start of intrusive operations, utility clearance is mandated, as well as obtaining authorization from all concerned public utility department offices. Should intrusive operations cause equipment to come into contact with utility lines, the SHSO, Project Manager, and Regional H&S Manager shall be notified immediately. Work will be suspended until the client and applicable utility agency is contacted and the appropriate actions for the situation can be addressed.

See OP1020 Work Near Utilities for complete information.

Controls

- Obtain as-built drawings for the areas being investigated from the property owner;
- Visually review each proposed soil boring locations with the property owner or knowledgeable site representative;
- Perform a geophysical survey to locate utilities;
- Hire a private line locating firm to determine location of utility lines that are present at the property;
- Identifying a no-drill or dig zone;
- Hand dig or use vacuum excavation in the proposed ground disturbance locations if insufficient data is unavailable to accurately determine the location of the utility lines.

Sharp Objects

Workers who handle sharp edged objects like sheets of steel or glass are at risk of cuts. Workers who handle sharp edged objects are also at risk of cuts. Injuries may occur to hands, fingers, or legs when

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

they are in the way of the blade, when the blade slips, or if an open blade is handled unexpectedly. Other hazards at job sites include stepping on sharp objects (e.g. wooden boards with protruding nails, sharp work-tools, chisels, etc.) and colliding with sharp and/or protruding objects.

Controls
Always be alert when handling sharps. Never look away or become distracted while handling sharp objects. Use caution when working with tools; use right tool for the job. Keep tools sharp, dull blades are a safety hazard, requiring more force to make cuts which can lead to tool slippage. Wear appropriate PPE and do not handle sharp objects (i.e., broken glass) with bare hands. Use mechanical devices, when possible. Stay away from building debris; avoid handling site debris or placing your hand where you cannot see. Watch out for barbed wire and electrical fences; cover with a car mat or equivalent to cross or walk around; use the buddy system to avoid entanglement; wear gloves. Do not leave unprotected sharps unattended. Use protective shields, cases, styrofoam blocks, etc. Pass a sharp by handing it over carefully by the handle with the blade down or retracted. Fixed open blades are prohibited. Always cut away from the body, making several passes when cutting thicker materials. Make sure blades are fitted properly into the knife. Never cut items with a blade or other sharp object on your lap. Never try to catch a blade or cutting tool that is falling.

Cranes/ Lifting Equipment

Lifting operations is considered a high-risk activity and a permit to work may be required in certain situations. When performing work activities requiring cranes or lifting equipment, a hazard analysis of the lift shall be completed in line with the Lift Plan Analysis Form during the project and job phases. The two types of lifts common on projects include:

Incidental Lift
The use of equipment such as backhoes, track hoes, front-end loaders, side loaders and similar earth-moving equipment for lifting per its design. These types of lifts present many, if not more hazards than traditional critical lifts because they often do not get the same level of attention.

Critical Lift
A lift in which the dropping, upset or collision of parts, components or assemblies could present a significant risk of personal injury or property damage. A lift can also be designated as critical by the Project Manager, Lifting Subcontractor, or Client because of special circumstances or hazards. No critical lift may proceed without a *Lifting Operations Permit* signed and accepted by the Lift Leader and reviewed with the Project Manager.

See OP1049 Lifting Operations and OP 1070 Rigging Safety for additional information.

Controls
- Complete the Lift Plan Analysis Form and if required Critical Lift Permit
- Only competent operators, Lift Leaders and Riggers shall perform lifting operations.
- All personnel not involved with the lift shall be kept at no less than 3 times the length of the boom.
- Employees shall not work or walk under a suspended load.
- The Lift Leader shall consider the stability of the ground prior to each lift.
- All lifting equipment, slinging, and rigging shall be inspected and the inspection documented.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Suspended loads shall be attended unless physically secured to prevent unintended movement.

Lifting shall not commence:

- If the load exceeds the dynamic or static capacities of the lifting equipment.
- Unless all safety devices installed on the lifting equipment are operational.
- Unless the Lift Leader has visually examined all lifting devices and equipment prior to use.
- Unless a visual assessment of the lift has been completed, and the Lift Leader has determined the lift method and equipment are safe and ready for use.

Hand and Power Tools

Hand and power tools can expose staff to a wide range of hazards depending upon the tool used. Hazards can include but are not limited to: falling, flying, abrasive, and splashing objects, or harmful dusts, fumes, mists, vapors, or gases.

Serious accidents often occur before steps are taken to evaluate and avoid or eliminate tool-related hazards. Staff must recognize the hazards associated with the different types of tools and the safety precautions necessary to prevent those hazards.

See OP 1026 Hand and Power Tools for more information.

Controls

- Keep all tools in good condition with regular maintenance.
- Use the right tool for the job. Do not use a tool for a task which it was not designed for.
- Examine each tool for damage before use and do not use damaged tools.
- For tools that are damaged or defective, red tag the tool and take out of service.
- Operate tools per the manufacturers' instructions.
- Use the appropriate personal protective equipment.
- All electrically powered tools will be connected through a ground fault circuit interrupter (GFCI).
- All personnel must be trained on the use of the tool they are utilizing.

Inadequate Lighting

Work may be conducted during off-hours when natural light is limited or nonexistent. Reduced or inadequate lighting limits one's ability to see which may increase the risk of an accident or injury. Regulations require work that is conducted at night meet specific requirements regarding project site illumination. Staff may also find themselves working in buildings or locations where the power has been cutoff or where only emergency lighting is operational. It is important that staff have appropriate means of lighting to ensure work and access to the site is done safely.

Controls

- Nighttime project sites conducted on a roadway must have appropriate lighting consistent with the MUTCD. Contact the PM if lighting is not sufficient and poses a hazard.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

- Non roadway projects must have an appropriate level of lighting that allows work to be completed safely and effectively. Staff should bring additional means of lighting (e.g., flashlight) as a precaution when working at night or areas that require illumination for the work to be conducted safely.

Manual Lifting/Moving

Most materials associated with investigation, remedial, or construction-related activities are moved by hand. The human body is subject to damage in the forms of back injury, muscle strains, and hernia if caution is not observed in the handling process.

Controls

- Under no circumstances should any one person lift more than 49 pounds unassisted.
- Always push, not pull, the object when possible.
- Size up the load before lifting. If it is heavy or clumsy, get a mechanical aid or help from a worker.
- Bend the knees; it is the single most important aspect of lifting.
- When performing the lift:
    - Place your feet close to the object and center yourself over the load.
    - Get a good handhold.
    - Lift straight up, smoothly and let your legs do the work, not your back!
    - Avoid overreaching or stretching to pick up or set down a load.
    - Do not twist or turn your body once you have made the lift.
    - Make sure beforehand that you have a clear path to carry the load.
    - Set the load down properly.

Repetitive Motion

Repetitive Motion or Strain Injuries are injuries effecting muscles, nerves, and tendons by repetitive movement and overuse. Almost any kind of awkward or repetitive motion you make could lead to an injury over time. Actions like bending or twisting of the wrists, reaching for materials, working with your hands above shoulder level, or grasping objects can increase wear and tear on the body. The condition mostly effects the upper body.

Controls

- Arrange your work zone, supplies and tools as much as possible to avoid reaching, leaning, bending and twisting your waist or wrists.
- During rest breaks, use stretches to loosen up your body.
- Vary tasks if you can so that you are not making the same movement repeatedly over for a long period.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

4. PROTECTIVE MEASURES

The personal protective equipment and safety equipment (if listed) is specific to the associated task. The required PPE and equipment listed must be onsite during the task being performed. Work shall not commence unless the required PPE or Safety Equipment is present.

Required Safety & Personal Protective Equipment

Required Personal Protective Equipment (PPE)	**Task 1**	**Task 2**	**Task 3**	
	Remedial Oversight – Excavation, UST Removal, SSDS Installation, SVE System Installation, Steel Sheeting Installation	Soil Sampling	Soil Vapor/ Groundwater Sampling (if needed)	Enter task description.

HAZWOPER – 40 Hour (Initial); HAZWOPER – 8 Hour (Annual Refresher); Site-Specific Orientation; and, SST Card	☒	☒	☒	☐

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

6. AIR MONITORING PLAN AND EQUIPMENT

Exposures to airborne substances shall be fully characterized throughout project operations to ensure that exposure controls are effectively selected and modified as needed.

Is air/exposure monitoring required at this work site for personal protection? Yes

Is perimeter monitoring required for community protection? Yes

Air monitoring plan not applicable No

Air Monitoring/Screening Equipment Requirements

TSI Dusttrak II Desktop 8530 Dust/Aerosol Monitor

Photo-Ionization Detector (PID) 10.6eV

The required equipment listed above must be on site. Work shall not commence unless the equipment is present and in working order.

Dust Suppression Techniques

Preventative measures for dust generation may include wetting site fill and soil, construction of an engineered construction entrance with gravel pad, a truck wash area, covering soils with tarps, and limiting vehicle speeds to five miles per hour.

Personal Exposure Monitoring

No asbestos, lead-based paint, or radiological hazards have been identified within the vicinity of the proposed excavation area at the Site (see Section 2.0). Therefore, personal exposure monitoring is not required during excavation.

Monitoring Plans

Parameter/ Contaminant	Equipment	Action Level	Response Activity
Benzene	Benzene-Specific PID and/or Draeger Tubes	0.5 ppm	• Continue work and monitoring.
		> 0.5 ppm	• Implement engineering controls • Test for benzene with PID or colorimetric tubes. • If results are non-detect, continue monitoring every 15 minutes until concentrations return to background levels.
		≥ 1 ppm	• Contact FSM to implement PPE upgrades.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

	5 ppm for 5 minutes	• Cease work. • Contact FSM.

Zone Location and Monitoring Interval
Breathing zone and edge of Exclusion Zone.

This monitoring plan is based on Federal OSHA PELs for Benzene.

Parameter/ Contaminant	Equipment	Action Level	Response Activity
VOCs	PID 10.6 eV	< 10 ppm	Continue work and monitoring.
		>10 ppm for 5 minutes	Clear Instrument and Re-Monitor the Area. Implement PPE upgrades
		>10 ppm for >5 minutes	Evacuate the area and call the RHSM and/or PM for further guidance. Implement engineering controls.

Zone Location and Monitoring Interval
Upwind and Downwind of the Work Zone. Recorded every 15 minutes

***If chemical does not have an action level use TLV or REL, whichever is lowest, to be used as an action level. If TLV or REL are the same as PEL, cut the PEL in half for an action level.**

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

7. DECONTAMINATION & DISPOSAL METHODS

All possible and necessary steps shall be taken to reduce or minimize contact with chemicals and contaminated/impacted materials while performing field activities (e.g., avoid sitting or leaning on, walking through, dragging equipment through or over, tracking, or splashing potential or known contaminated/impacted materials.)

Personal Hygiene Safeguards

The following minimum personal hygiene safeguards shall be adhered to:

1. No smoking or tobacco products in any project work areas.
2. No eating or drinking in the exclusion zone.
3. It is required that personnel present on site wash hands before eating, smoking, taking medication, chewing gum/tobacco, using the restroom, or applying cosmetics and before leaving the site for the day.

It is recommended that personnel present on site shower or bathe at home at the end of each day of working on the site.

Decontamination Supplies

All decontamination should be conducted at the project site in designated zones or as dictated by Client requirements. Decontamination should not be performed on Haley & Aldrich owned or leased premises.

☐ Acetone	☒ Distilled Water	☐ Polyethylene Sheeting
☒ Alconox Soap	☒ Drums	☐ Pressure/Steam Cleaner
☒ Brushes	☐ Hexane	☒ Tap Water

☒ 5 Gallon Buckets	☒ Paper Towels	☐ Other: Specify

Location of Decontamination Station

N/A

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Standard Personal Decontamination Procedures

Outer gloves and boots should be decontaminated periodically as necessary and at the end of the day. Brush off solids with a hard brush and clean with soap and water or other appropriate cleaner whenever possible. Remove inner gloves carefully by turning them inside out during removal. Wash hands and forearms frequently. It is good practice to wear work-designated clothing while on-site which can be removed as soon as possible. Non-disposable overalls and outer work clothing should be bagged onsite prior to laundering. If gross contamination is encountered on-site contact the Project Manager and Field Safety Manager to discuss proper decontamination procedures.

The steps required for decontamination will depend upon the degree and type of contamination but will generally follow the sequence below.

1. Remove and wipe clean hard hat
2. Rinse boots and gloves of gross contamination
3. Scrub boots and gloves clean
4. Rinse boots and gloves
5. Remove outer boots (if applicable)
6. Remove outer gloves (if applicable)
7. Remove Tyvek coverall (if applicable)
8. Remove respirator, wipe clean and store (if applicable)
9. Remove inner gloves (if outer gloves were used)

PPE that is not grossly contaminated can be bagged and disposed in regular trash receptacles.

Small Equipment Decontamination

Pretreatment of heavily contaminated equipment may be conducted as necessary:

1. Remove gross contamination using a brush or wiping with a paper towel
2. Soak in a solution of Alconox and water (if possible)
3. Wipe off excess contamination with a paper towel

Standard decontamination procedure:

4. Wash using a solution of Alconox and water
5. Rinse with potable water
6. Rinse with distilled/deionized water

Inspect the equipment for any remaining contamination and repeat as necessary.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Disposal Methods

Procedures for disposal of contaminated materials, decontamination waste, and single use personal protective equipment shall meet applicable client, locate, State, and Federal requirements.

Disposal of Single Use Personal Protective Equipment

PPE that is not grossly contaminated can be bagged and disposed in regular trash receptacles. PPE that is grossly contaminated must be bagged (sealed and field personnel should communicate with the Project Manager to determine proper disposal.

Disposal Method for Contaminated Soil

- Contaminated soil cuttings and spoils must be containerized for disposal off-site unless otherwise specifically directed.
- Soil cuttings and spoils determined to be free of contamination through field screening can usually be returned to the boreholes or excavations from which they came.

Any additional requirements that are designated by the workplan or by client specifications should be entered here.

Disposal Method for Contaminated Groundwater

- Contaminated groundwater must be containerized in a drum for disposal off-site unless otherwise specifically directed.

Any additional requirements that are designated by the workplan or by client specifications should be entered here.

Standard Disposal Methods for Contaminated Materials

- Excess sample solids, decontamination materials, rags, brushes, poly-sheeting, etc. that are determined to be free of contamination through field screening can usually be disposed into client-approved, on-site trash receptacles.
- Uncontaminated wash water may be discarded onto the ground surface away from surface water bodies in areas where infiltration can occur.
- Contaminated materials must be segregated into liquids or solids and containerized separately for offsite disposal.

Any additional requirements that are designated by the workplan or by client specifications should be entered here.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

8. SITE CONTROL

The overall purpose of site control is to minimize potential contamination of workers, protect the public from the site's hazards, and prevent vandalism. Site control is especially important in emergency situations. The degree of site control necessary depends on site characteristics, site size, and the surrounding community. The following information identifies the elements used to control the activities and movements of people and equipment at the project site.

Communication
Internal Haley & Aldrich site personnel will communicate with other Haley & Aldrich staff member and/or subcontractors or contractors with: Face to Face Communication Cellular Phones
External H&S site personnel will use the following means to communicate with off-site personnel or emergency services. Cellular Phones
Visitors
Project Site Will visitors be required to check-in prior to accessing the project site? Yes
Visitor Access Authorized visitors that require access to the project site need to be provided with known information with respect to the site operations and hazards as applicable to the purpose of their site visit. Authorized visitors must have the required PPE and appropriate training to access the project site.
Zoning
Work Zone The work zone will be clearly delineated to ensure that the general public or unauthorized worker access is prevented. The following will be used: Temporary Fencing Cones Flagging Tape Barricades

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

9. SITE SPECIFIC EMERGENCY RESPONSE PLAN

The Emergency Response Plan addresses potential emergencies at this site, procedures for responding to these emergencies, roles, responsibilities during emergency response, and training. This section also describes the provisions this project has made to coordinate its emergency response with other contractors onsite and with offsite emergency response organizations (as applicable).

During the development of this emergency response plan, local, state, and federal agency disaster, fire, and emergency response organizations were consulted (if required) to ensure that this plan is compatible and integrated with plans of those organizations. Documentation of the dates of these consultations are the names of individuals contacted is kept on file and available upon request.

The site has been evaluated for potential emergency occurrences, based on site hazards, and the major categories of emergencies that could occur during project work are:

- Fire(s)/Combustion
- Hazardous Material Event
- Medical Emergency
- Natural Disaster

A detailed list of emergency types and response actions are summarized in Table X below. Prior to the start of work, the SSO will update the table with any additional site-specific information regarding evacuations, muster points, or additional emergency procedures. The SSO will establish evacuation routes and assembly areas for the Site. All personnel entering the Site will be informed of these routes and assembly areas.

Pre-Emergency Planning

Before the start of field activities, the Project Manager will ensure preparation has been made in anticipation of emergencies. Preparatory actions include the following:

Meeting with the subcontractor/and or client concerning the emergency procedures in the event a person is injured. Appropriate actions for specific scenarios will be reviewed. These scenarios will be discussed, and responses determined before the sampling event commences. A form of emergency communication (i.e.; Cell phone, Air horn, etc.) between the Project Manager and subcontractor and/or client will be agreed on before the work commences.

A training session (i.e., “safety meeting”) given by the Project Manager or their designee informing all field personnel of emergency procedures, locations of emergency equipment and their use, and proper evacuation procedures.

Ensuring field personnel are aware of the existence of the emergency response HASP and ensuring a copy of the HASP accompanies the field team(s).

Onsite Emergency Response Equipment

Emergency procedures may require specialized equipment to facilitate work rescue, contamination control and reduction or post-emergency cleanup. Emergency response equipment stocked

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Table 9.1 Emergency Equipment and Emergency PPE			
Emergency Equipment	**Specific Type**	**Quantity Stocked**	**Location Stored**
First Aid Kit	H&A Provided	1	Per field person
Decontamination Solution	Alconox Spray Bottole	1	With field team/storage box or other
Spill Kit	Spill Pads or Spill Kit	1	With field team/storage box or other
Emergency PPE	**Specific Type**	**Quantity Stocked**	**Location Stored**
Select	Enter text	Enter text	Enter text

EVACUATION ALARM
Will be communicated during the Onsite Kickoff Meeting
EVACUATION ROUTES
Will be given a map after site specific training
EVACUATION MUSTER POINT(S)/ SHELTER AREA(S)
Will be given a locations after site specific training
EVACUTION RESPONSE DRILLS
The Site relies on outside emergency responders and a drill is not required.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Table 9-2 – Emergency Planning

Emergency Type	Notification	Response Action	Evacuation Plan/Route
Chemical Exposure	Report event to SSO immediately	Refer to Safety Data Sheet for required actions	Remove personnel from work zone
Fire - Small	Notify SSO and contact 911	Use fire extinguisher if safe and qualified to do so	Mobilize to *Muster Point*
Fire – Large/Explosion	Notify SSO and contact 911	Evacuate immediately	Mobilize to *Muster Point*
Hazardous Material – Spill/Release	Notify SSO; SSO will contact PM to determine if additional agency notification is	If practicable don PPE and use spill kit and applicable procedures to contain the release	See Evacuation Map for route, move at least 100 ft upwind of spill location
Medical – Bloodborne Pathogen	Notify SSO	If qualified dispose in container or call client or city to notify for further instruction.	None Anticipated
Medical – First Aid	Notify SSO	If qualified perform first aid duties	None Anticipated
Medical – Trauma	If life threatening or transport is required call 911, immediately	Wait at site entrance for ambulance	Noe Anticipated
Security Threat	Notify SSO who will call 911 as warranted	Keep all valuables out of site and work zones delineated.	None Anticipated
Weather – Earthquake/Tsunami's	STOP WORK and evacuate Site upon any earthquake	Turn off equipment and evacuate as soon as is safe to do so	Mobilize to *Shelter Location*
Weather – Lightning Storm	STOP WORK	Work may resume 30 minutes after the last observed lightning.	None Anticipated
Weather – Tornadoes/Hurricanes	Monitor weather conditions STOP WORK and evacuate the site	Evacuate to shelter location or shelter in place immediately	Mobilize to *Shelter Location*
MUSTER POINT Will be communicated during the Onsite Kickoff Meeting		*SHELTER LOCATION* Will be communicated during the Onsite Kickoff Meeting	
In case of site emergencies, site personnel shall be evacuated per this table and will not participate in emergency response activities. Site emergencies shall be reported to local, state, and federal governmental agencies as required.			

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

10. HASP ACKNOWLEDGEMENT FORM

All Haley & Aldrich employees onsite must sign this form prior to entering the site.

I hereby acknowledge receipt of, and briefing on, this HASP prior to the start of on-site work. I declare that I understand and agree to follow the provisions, processes, and procedures set forth herein at all times while working on this site.

Printed Name	Signature	Date

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

ATTACHMENT A
HASP AMENDMENT FORM

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

HASP AMENDMENT FORM

This form is to be used whenever there is an immediate change in the project scope that will require an amendment to the HASP. For project scope changes associated with "add-on" tasks, the changes must be made in the body of the HASP. Before changes can be made, a review of the potential hazards must be initiated by the Haley & Aldrich Project Manager.

This original form must remain on site with the original HASP. If additional copies of this HASP have been distributed, it is the Project Manager's responsibility to forward a signed copy of this amendment to those who have copies.

ATTACHMENT B
TRAINING REQUIREMENTS

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

TRAINING REQUIREMENTS

Health and Safety Training Requirements

Personnel will not be permitted to supervise or participate in field activities until they have been trained to a level required by their job function and responsibility. Haley & Aldrich staff members, contractors, subcontractors, and consultants who have the potential to be exposed to contaminated materials or physical hazards must complete the training described in the following sections.

The Haley & Aldrich Project Manager/FSM will be responsible for maintaining and providing to the client/site manager documentation of Haley & Aldrich staff members' compliance with required training as requested. Records shall be maintained per OSHA requirements.

40-Hour Health and Safety Training

The 40-Hour Health and Safety Training course provides instruction on the nature of hazardous waste work, protective measures, proper use of personal protective equipment, recognition of signs and symptoms which might indicate exposure to hazardous substances, and decontamination procedures. It is required for all personnel working on-site, such as equipment operators, general laborers, and supervisors, who may be potentially exposed to hazardous substances, health hazards, or safety hazards consistent with 29 CFR 1910.120.

8-hour Annual Refresher Training

Personnel who complete the 40-hour health and safety training are subsequently required to attend an annual 8-hour refresher course to remain current in their training. When required, site personnel must be able to show proof of completion (i.e., certification) at an 8-hour refresher training course within the past 12 months.

8-Hour Supervisor Training

On-site managers and supervisors directly responsible for, or who supervise staff members engaged in hazardous waste operations, should have eight additional hours of Supervisor training in accordance with 29 CFR 1910.120. Supervisor Training includes, but is not limited to, accident reporting/investigation, regulatory compliance, work practice observations, auditing, and emergency response procedures.

Additional Training for Specific Projects

Haley & Aldrich personnel will ensure their personnel have received additional training on specific instrumentation, equipment, confined space entry, construction hazards, etc., as necessary to perform their duties. This specialized training will be provided to personnel before engaging in the specific work activities including:

- Client specific training or orientation
- Competent person excavations
- Confined space entry (entrant, supervisor, and attendant)
- Heavy equipment including aerial lifts and forklifts
- First aid/ CPR
- Use of fall protection
- Use of nuclear density gauges
- Asbestos awareness

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

ATTACHMENT C
ROLES AND RESPONSIBILITIES

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

SITE ROLES AND RESPONSIBILITIES

Haley & Aldrich Personnel

Field Safety Manager (FSM)

The Haley & Aldrich FSM is a full-time Haley & Aldrich staff member, trained as a safety and health professional, who is responsible for the interpretation and approval of this Safety Plan. Modifications to this Safety Plan cannot be undertaken by the PM or the SSO without the approval of the FSM.

Specific duties of the FSM include:

- Approving and amending the Safety Plan for this project
- Advising the PM and SHSOs on matter relating to health and safety
- Recommending appropriate personal protective equipment (PPE) and air monitoring instrumentation
- Maintaining regular contact with the PM and SSO to evaluate the conditions at the property and new information which might require modifications to the HASP and
- Reviewing and approving JSAs developed for the site-specific hazards.

Project Manager (PM)

The Haley & Aldrich PM is responsible for ensuring that the requirements of this HASP are implemented at that project location. Some of the PM´s specific responsibilities include:

- Assuring that all personnel to whom this HASP applies have received a copy of it;
- Providing the FSM with updated information regarding environmental conditions at the site and the scope of site work;
- Providing adequate authority and resources to the on-site SHSO to allow for the successful implementation of all necessary safety procedures;
- Supporting the decisions made by the SHSO;
- Maintaining regular communications with the SHSO and, if necessary, the FSM;
- Coordinating the activities of all subcontractors and ensuring that they are aware of the pertinent health and safety requirements for this project;
- Providing project scheduling and planning activities; and
- Providing guidance to field personnel in the development of appropriate Job Safety Analysis (JSA) relative to the site conditions and hazard assessment.

Site Health & Safety Officer (SHSO)

The SHSO is responsible for field implementation of this HASP and enforcement of safety rules and regulations. SHSO functions may include some or all of the following:

- Act as Haley & Aldrich´s liaison for health and safety issues with client, staff, subcontractors, and agencies.
- Verify that utility clearance has been performed by Haley & Aldrich subcontractors.
- Oversee day-to-day implementation of the Safety Plan by Haley & Aldrich personnel on site.

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

- Interact with subcontractor project personnel on health and safety matters.
- Verify use of required PPE as outlined in the safety plan.
- Inspect and maintain Haley & Aldrich safety equipment, including calibration of air monitoring instrumentation used by Haley & Aldrich.
- Perform changes to HASP and document in Appendix A of the HASP as needed and notify appropriate persons of changes.
- Investigate and report on-site accidents and incidents involving Haley & Aldrich and its subcontractors.
- Verify that site personnel are familiar with site safety requirements (e.g., the hospital route and emergency contact numbers).
- Report accidents, injuries, and near misses to the Haley & Aldrich PM and FSM as needed.

The SHSO will conduct initial site safety orientations with site personnel (including subcontractors) and conduct toolbox and safety meetings thereafter with Haley & Aldrich employees and Haley & Aldrich subcontractors at regular intervals and in accordance with Haley & Aldrich policy and contractual obligations. The SHSO will track the attendance of site personnel at Haley & Aldrich orientations, toolbox talks, and safety meetings.

Field Personnel

Haley & Aldrich personnel are responsible for following the health and safety procedures specified in this HASP and for performing their work in a safe and responsible manner. Some of the specific responsibilities of the field personnel are as follows:

- Reading the HASP in its entirety prior to the start of on-site work;
- Submitting a completed Safety Plan Acceptance Form and documentation of medical surveillance and training to the SHSO prior to the start of work;
- Attending the pre-entry briefing prior to beginning on-site work;
- Bringing forth any questions or concerns regarding the content of the Safety Plan to the PM or the SHSO prior to the start of work;
- Stopping work when it is not believed it can be performed safely;
- Reporting all accidents, injuries and illnesses, regardless of their severity, to the SHSO;
- Complying with the requirements of this safety plan and the requests of the SHSO; and
- Reviewing the established JSAs for the site-specific hazards on a daily basis and prior to each shift change, if applicable.

Visitors

Authorized visitors (e.g., Client Representatives, Regulators, Haley & Aldrich management staff, etc.) requiring entry to any work location on the site will be briefed by the Site Supervisor on the hazards present at that location. Visitors will be escorted at all times at the work location and will be responsible for compliance with their employer´s health and safety policies. In addition, this safety plan specifies the minimum acceptable qualifications, training and personal protective equipment which are required for entry to any controlled work area; visitors must comply with these

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

requirements at all times. Unauthorized visitors, and visitors not meeting the specified qualifications, will not be permitted within established controlled work areas.

SUBCONTRACTOR PERSONNEL

Subcontractor Site Representative

Each contractor and subcontractor shall designate a Contractor Site Representative. The Contractor Site Representative will interface directly with Insert Staff Name Here, the Subcontractor Site Safety Manager, with regards to all areas that relate to this safety plan and safety performance of work conducted by the contractor and/or subcontractor workforce. Contractor Site Representatives for this site are listed in the Contact Summary Table at the beginning of the Safety Plan.

Subcontractor Site Safety Manager

Each contractor / subcontractor will provide a qualified representative who will act as their Site Safety Manager (Sub-SSM). This person will be responsible for the planning, coordination, and safe execution of subcontractor tasks, including preparation of job hazard analyses (JHA), performing daily safety planning, and coordinating directly with the Haley & Aldrich SHSO for other site safety activities. This person will play a lead role in safety planning for Subcontractor tasks, and in ensuring that all their employees and lower tier subcontractors are in adherence with applicable local, state, and/or federal regulations, and/or industry and project specific safety standards or best management practices.

General contractors / subcontractors are responsible for preparing a site-specific HASP and/or other task specific safety documents (e.g., JHAs), which are, at a minimum, in compliance with local, state, and/or federal other regulations, and/or industry and project specific safety standards or best management practices. The contractor(s)/subcontractor(s) safety documentation will be at least as stringent as the health and safety requirements of the Haley & Aldrich Project specific HASP.

Safety requirements include, but are not limited to: legal requirements, contractual obligations and industry best practices. Contractors/subcontractors will identify a site safety representative during times when contractor/subcontractor personnel are on the Site. All contractor/subcontractor personnel will undergo a field safety orientation conducted by the Haley & Aldrich SHSO and/or PM prior to commencing site work activities. All contractors / subcontractors will participate in Haley & Aldrich site safety meetings and their personnel will be subject to training and monitoring requirements identified in this Safety Plan. If the contractors / subcontractors means and methods deviate from the scope of work described in Section 1 of this Safety Plan, the alternate means and methods must be submitted, reviewed and approved by the Haley & Aldrich SHSO and/or PM prior to the commencement of the work task. Once approved by the Haley & Aldrich SHSO and/or PM, the alternate means and methods submittal will be attached to this Safety Plan as an Addendum.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

ATTACHMENT D
JOB SAFETY ANALYSES

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

4001 4TH AVENUE REDEVELOPMENT SITE

KEY TASK 1: Remedial Oversight – Excavation, UST Removal, SSDS Installation, SVE System Installation, Cutoff Wall Installation

Subtask Category	Potential Hazards	Controls
Oversight	Slips, Trips, and Falls	• Take your time and pay attention to where you are going • Adjust your stride to a pace that is suitable for the walking surface and tasks you are doing • Check the work area to identify hazards – beware of trip hazards such as wet floors, slippery floors, and uneven surfaces or terrain • Establish and utilize a pathway free of slip and trip hazards • Choose a safer walker route • Carry loads you can see over • Keep work areas clean and free of clutter • Communicate hazards to on-site personnel – remove hazards as appropriate
Oversight	Weather-related hazards	• Avoid slippery surfaces as a result of cold weather • Seek shelter in the event of a lightning storm and stay clear of potential
Oversight	Cold stress	• Take breaks indoors, hand warmers
Oversight	Heat stress	• Taking cooling breaks, maintain hydration (if work occurs in warmer months)
Oversight	Heavy equipment	• Personal protective equipment, licensed excavator/machine operators • Maintain a safe distance from moving equipment and observe equipment swing radii • Make eye contact with operators and get their acknowledgement before moving around heavy equipment

Note: This HASP has been developed for Haley & Aldrich purposes only and is not for use by others.

		• Stay out of line of fire • Avoid pinch points
Oversight	Lifting	• All personnel not involved with the lift shall be kept at no less than 3 times the length of the boom. • Employees shall not work or walk under a suspended load.
Oversight	Noise reduction	• Personnel protective equipment, ear plugs or earmuffs
Oversight	Work site access and controls	• Observe all work site access and controls before entering work area • Use only routes that are designated for personnel • Do not change or alter established work site access or controls
Oversight	Utility locators and underground hazards	• Observe work from a distance in case of utility strike • Immediately evacuate work area in the event of a utility strike
Oversight	Vehicle traffic/safety	• Watch out for vehicular traffic in and around work area • Access work area along routes that are least busy
KEY TASK 2: Soil Sampling		
Subtask Category	**Potential Hazards**	**Controls**
Soil Sampling	Slips, trips, and falls	• See above.
Soil Sampling	Weather-related hazards	• See above.
Soil Sampling	Heat stress	• See above.
Soil Sampling	Cold stress	• See above.
KEY TASK 3: Soil Vapor/ Groundwater Sampling		
Subtask Category	**Potential Hazards**	**Controls**
Soil vapor sampling / Groundwater sampling	Slips, trips, and falls	• See above.
Soil vapor sampling / Groundwater sampling	Weather-related hazards	• See above.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

Soil vapor sampling / Groundwater sampling	Heat stress	• See above.
Soil vapor sampling / Groundwater sampling	Cold stress	• See above.

Note: This HASP is developed for Haley & Aldrich purposes only and not for use by others.

1. Project Description

This Quality Assurance Project Plan (QAPP) has been prepared as a component of the Interim Remedial Measure Work Plan (IRMWP) for the 4001 4th Avenue Site in Brooklyn, New York (Site).

1.1 PROJECT OBJECTIVES

The primary objective for data collection activities is to collect sufficient data necessary to monitor the nature of any remaining soil impacts.

1.2 SITE DESCRIPTION AND SITE HISTORY

The general Site description and Site history are provided in the IRMWP incorporated herein by reference.

1.3 LABORATORY PARAMETERS

The laboratory parameters for soil include:

- Target Compound List (TCL) volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (EPA) Method 8260;
- TCL semi-volatile organic compounds (SVOCs) using EPA Method 8270;
- Total Analyte List (TAL) metals using EPA Method 6010;
- Polychlorinated biphenyls (PCBs) using EPA Method 8082;
- TCL pesticides using EPA Method 8081;
- Per- and polyfluoroalkyl substances (PFAS) using EPA Method 1633A; and,
- 1,4-dioxane using EPA Method 8270 SIM.

Note: PFAS will be collected in accordance with the New York State Department of Environmental Conservation (NYSDEC), Division of Environmental Remediation (DER), Sampling, Analysis and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) under NYSDEC Part 375 Remedial Program, April 2023.

Laboratory parameters for disposal samples will be determined by the disposal facility after an approved facility has been determined.

1.4 SAMPLING LOCATIONS

The IRMWP provides the locations of soil borings that will be sampled.

2. Project Organization and Responsibilities

This section defines the roles and responsibilities of the individuals who will perform the IRMWP monitoring activities. A New York State Department of Health (NYSDOH)-certified analytical laboratory will perform the analyses of environmental samples collected at the Site.

2.1 PROJECT TEAM

The following project personnel are anticipated for oversight of the IRMWP implementation. Applicable Project personnel resumes are provided in Appendix E of the IRMWP and in Attachment A.

NYSDEC Case Manager	Shawn Roberts
NYSDOH Case Manager	Christopher Budd
Remediation Engineer	Suzanne M. Bell, P.E.
Qualified Environmental Professional (QEP)	Mari Conlon, P.G.
Project Manager	Paul Probasco, P.G.
Haley & Aldrich of New York* Health & Safety Director	Brian Fitzpatrick, CHMM
Health & Safety Officer (HSO)	Brian Ferguson
Quality Assurance (QA) Officer	Nicole Mooney
Third Party Validator	Katherine Miller

**H & A of New York Engineering and Geology LLP (Haley & Aldrich of New York)*

2.2 MANAGEMENT RESPONSIBILITIES

The Project Manager is responsible for managing the implementation of the IRMWP and monitoring and coordinating the collection of data. The Project Manager is responsible for technical quality control (QC) and project oversight. The Project Manager's responsibilities include the following:

- Acquire and apply technical and corporate resources as needed to ensure performance within budget and schedule restraints;
- Review work performed to ensure quality, responsiveness, and timeliness;
- Communicate with the client point of contact concerning the progress of the monitoring activities;
- Assure corrective actions are taken for deficiencies cited during audits of IRMWP monitoring activities; and
- Assure compliance with the Site Health and Safety Plan (HASP).

2.3 QUALITY ASSURANCE RESPONSIBILITIES

The QA team will consist of a QA Officer and the Data Validation Staff. QA responsibilities are described as follows:

2.3.1 QA Officer

The QA Officer reports directly to the Project Manager and will be responsible for overseeing the review of field and laboratory data. Additional responsibilities include the following:

- Assure the application and effectiveness of the QAPP by the analytical laboratory and the project staff; and,
- Provide input to the Project Manager as to corrective actions that may be required as a result of the above-mentioned evaluations.

The QA Officer will be assisted by the Data Validation Staff in the evaluation and validation of field and laboratory-generated data.

2.3.2 Data Validation Staff

The Data Validation Staff will be independent of the laboratory and familiar with the analytical procedures performed. The validation will include a review of each validation criterion as prescribed by the guidelines presented in Section 9.2 of this document and will be presented in a Data Usability Summary Report (DUSR) for submittal to the QA Officer.

2.4 LABORATORY RESPONSIBILITIES

The Environmental Laboratory Approval Program (ELAP)-approved laboratory to be used will be Alpha Analytical, located in Westborough, Massachusetts. Laboratory services in support of the IRMWP monitoring include the following personnel:

2.4.1 Laboratory Project Manager

The Laboratory Project Manager will report directly to the QA Officer and Project Manager and will be responsible for ensuring all resources of the laboratory are available on an as-required basis. The Laboratory Project Manager will also be responsible for the approval of the final analytical reports.

2.4.2 Laboratory Operations Manager

The Laboratory Operations Manager will report to the Laboratory Project Manager and will be responsible for coordinating laboratory analysis, supervising in-house chain-of-custody reports, scheduling sample analyses, overseeing data review, and overseeing preparation of analytical reports.

2.4.3 Laboratory QA Officer

The Laboratory QA Officer will have sole responsibility for the review and validation of the analytical laboratory data. The Laboratory QA Officer will provide Case Narrative descriptions of any data quality issues encountered during the analyses conducted by the laboratory. The QA Officer will also define appropriate QA procedures, overseeing QA/QC documentation.

2.4.4 Laboratory Sample Custodian

The Laboratory Sample Custodian will report to the Laboratory Operations Manager and will be responsible for the following:

- Receive and inspect the incoming sample containers;
- Record the condition of the incoming sample containers;
- Sign appropriate documents;
- Verify chain-of-custody and its correctness;
- Notify the Project Manager and Operations Manager of sample receipt and inspection;
- Assign a unique identification number and enter each into the sample receiving log;
- Initiate transfer of samples to laboratory analytical sections; and
- Control and monitor access/storage of samples and extracts.

2.4.5 Laboratory Technical Personnel

The Laboratory Technical Staff will have the primary responsibility for the performance of sample analysis and the execution of the QA procedures developed to determine the data quality. These activities will include the proper preparation and analysis of the project samples in accordance with the laboratory's Quality Assurance Manual (QAM) and associated Standard Operating Procedures (SOPs).

2.5 FIELD RESPONSIBILITIES

2.5.1 Field Coordinator

The Field Coordinator is responsible for the overall operation of the field team and reports directly to the Project Manager. The Field Coordinator works with the project HSO to conduct operations in compliance with the project HASP. The Field Coordinator will facilitate communication and coordinate efforts between the Project Manager and the field team members.

Other responsibilities include the following:

- Develop and implement field-related work plans, ensuring schedule compliance, and adhering to management-developed project requirements;
- Coordinate and manage field staff;
- Perform field system audits;
- Oversee QC for technical data provided by the field staff;
- Prepare and approve text and graphics required for field team efforts;
- Coordinate and oversee technical efforts of subcontractors assisting the field team;
- Identify problems in the field; resolve difficulties in consultation with the Project QA Officer and Project Manager; implement and document corrective action procedures; and,
- Participate in preparation of the final reports.

2.5.2 Field Team Personnel

Field Team Personnel will be responsible for the following:

- Perform field activities as detailed in the IRMWP and in compliance with the Field Sampling Plan (FSP) and QAPP.
- Immediately report any accidents and/or unsafe conditions to the Site HSO and take reasonable precautions to prevent injury.

3. Sampling Procedures

The FSP in the NYSDEC-approved Remedial Investigation Work Plan (RIWP) provides the SOPs for sampling required by the IRMWP. Sampling will be conducted in general accordance with the NYSDEC Technical Guidance for Site Investigation and Remediation (DER-10) and the Sampling, Analysis and Assessment of PFAS under NYSDEC Part 375 Remedial Program (April 2023) when applicable.

3.1 SAMPLE CONTAINERS

Sample containers for each sampling task will be provided by the laboratory performing the analysis. The containers will be cleaned by the manufacturer to meet or exceed the analyte specifications established in the EPA's "Specifications and Guidance for Obtaining Contaminant-Free Sample Containers," April 1992, OSWER Directive #9240.0-0.5A. Certificates of analysis for each lot of sample containers used will be maintained by the laboratory.

The appropriate sample containers, preservation methods, maximum holding times, and handling requirements for each sampling task are provided in Table I.

3.2 SAMPLE LABELING

Each sample will be labeled with a unique sample identifier that will facilitate tracking and cross-referencing of sample information. Field blanks and field duplicate samples will also be numbered with a unique sample identifier to prevent analytical bias of field QC samples.

Refer to the FSP for the sample labeling procedures.

3.3 FIELD QC SAMPLE COLLECTION

3.3.1 Field Duplicate Sample Collection

3.3.1.1 Soil Samples

Soil field duplicates will be collected as specified in the following procedure:

1. Soil for VOC analysis will be removed from the sampling device as specified in the FSP.
2. Soil for non-VOC analysis will be removed from the sampling device and collected into clean laboratory-provided containers.

3.4 GENERAL DECONTAMINATION PROCEDURES

Care must be taken to minimize the potential for transfer of contaminated materials to the ground or onto other materials. Regardless of the size or nature of the equipment being decontaminated, the process will utilize a series of steps that involve removal of gross material (dirt, grease, oil, etc.), washing with a detergent, and multiple rinsing steps. In lieu of a series of washes and rinse steps, steam cleaning with low-volume, high-pressure equipment (i.e., steam cleaner) is acceptable.

Exploration equipment and all monitoring equipment in contact with the sampling media must be decontaminated prior to initiating site activities, in between exploration locations to minimize cross-contamination, and prior to mobilizing off the Site after completion of Site work.

The following specific decontamination procedure is recommended for sampling equipment and tools:

- Brush loose soil off equipment;
- Wash equipment with laboratory grade detergent (i.e., Alconox or equivalent);
- Rinse with tap water;
- Rinse equipment with distilled water;
- Allow water to evaporate before reusing equipment; and
- Wrap equipment in aluminum foil when not being used.

4. Custody Procedures

Sample custody is addressed in three parts: field sample collection, laboratory analysis, and final project files. Custody of a sample begins when it is collected by or transferred to an individual and ends when that individual relinquishes or disposes of the sample.

A sample is under custody if:

1. The item is in actual possession of a person;
2. The item is in the view of the person after being in actual possession of the person;
3. The item was in actual possession and subsequently stored to prevent tampering; or
4. The item is in a designated and identified secure area.

4.1 FIELD CUSTODY PROCEDURES

Field personnel will keep written records of field activities on applicable preprinted field forms or in a bound field notebook to record data collecting activities. These records will be written legibly in ink and will contain pertinent field data and observations. Entry errors or changes will be crossed out with a single line, dated, and initialed by the person making the correction. Field forms and notebooks will be periodically reviewed by the Field Coordinator.

The beginning of each entry in the logbook or preprinted field form will contain the following information:

- Date;
- Start time;
- Weather;
- Names of field personnel (including subcontractors);
- Level of personal protective equipment (PPE) used at the Site; and
- Names of all visitors and the purpose of their visit.

For each measurement and sample collected, the following information will be recorded:

- Detailed description of sample location;
- Equipment used to collect the sample or make the measurement and the date the equipment was calibrated;
- Time sample was collected;
- Description of the sample conditions;
- Depth sample was collected (if applicable);
- Volume and number of containers filled with the sample; and
- Sampler's identification.

4.1.1 Field Procedures

The following procedure describes the process to maintain the integrity of the samples:

- Upon collection samples are placed in the proper containers. In general, samples collected for organic analysis will be placed in pre-cleaned glass containers, and samples collected for inorganic analysis will be placed in pre-cleaned plastic (polyethylene) bottles. Refer to the FSP for sample packaging procedures.
- Samples will be assigned a unique sample number and will be affixed to a sample label. Refer to the FSP for sample labeling procedures.
- Samples will be properly and appropriately preserved by field personnel in order to minimize loss of the constituent(s) of interest due to physical, chemical, or biological mechanisms.
- Appropriate volumes will be collected to ensure that the appropriate reporting limits can be successfully achieved and that the required QC sample analyses can be performed.

4.1.2 Transfer of Custody and Shipment Procedures

- A chain-of-custody record will be completed at the time of sample collection and will accompany each shipment of project samples to the laboratory. The field personnel collecting the samples will be responsible for the custody of the samples until the samples are relinquished to the laboratory. Sample transfer will require the individuals relinquishing and receiving the samples to sign, date, and note the time of sample transfer on the chain-of-custody record.
- Samples will be shipped or delivered in a timely fashion to the laboratory so that holding times and/or analysis times as prescribed by the methodology can be met.
- Samples will be transported in containers (coolers) that will maintain the refrigeration temperature for those parameters for which refrigeration is required in the prescribed preservation protocols.
- Samples will be placed in an upright position and limited to one layer of samples per cooler. Additional bubble wrap or packaging material will be added to fill the cooler. Shipping containers will be secured with strapping tape and custody tape for shipment to the laboratory.
- When samples are split with the NYSDEC representatives, a separate chain-of-custody will be prepared and marked to indicate with whom the samples are shared. The person relinquishing the samples will require the representative's signature acknowledging sample receipt.
- If samples are sent by a commercial carrier, a bill of lading will be used. A copy of the bill of lading will be retained as part of the permanent record. Commercial carriers will not sign the custody record as long as the custody record is sealed inside the sample cooler and the custody tape remains intact.
- Samples will be picked up by a laboratory courier or transported to the laboratory the same day they are collected, unless collected on a weekend or holiday. In these cases, the samples will be stored in a secure location until delivery to the laboratory. Additional ice will be added to the cooler as needed to maintain proper preservation temperatures.

4.2 LABORATORY CHAIN-OF-CUSTODY PROCEDURES

A Sample Custodian will be designated by the laboratory and will have the responsibility to receive all incoming samples. Once received, the custodian will document if the sample is received in good condition (i.e., unbroken, cooled, etc.) and that the associated paperwork, such as chain-of-custody forms, has been completed. The custodian will sign the chain-of-custody forms.

The custodian will also document if sufficient sample volume has been received to complete the analytical program. The Sample Custodian will then place the samples into secure, limited-access storage (refrigerated storage, if required). The Sample Custodian will assign a unique number to each incoming sample for use in the laboratory. The unique number will then be entered into the sample-receiving log, with the verified time and date of receipt also noted.

Consistent with the analyses requested on the chain-of-custody form, analyses by the laboratory's analysts will begin in accordance with the appropriate methodologies. Samples will be removed from secure storage with internal chain-of-custody sign-out procedures followed.

4.3 STORAGE OF SAMPLES

Empty sample bottles will be returned to secure and limited-access storage after the available volume has been consumed by the analysis. Upon completion of the entire analytical work effort, samples will be disposed of by the Sample Custodian. The length of time that samples are held will be at least 30 days after reports have been submitted. Disposal of remaining samples will be completed in compliance with all federal, state, and local requirements.

4.4 FINAL PROJECT FILES CUSTODY PROCEDURES

The final project files will be the central repository for all documents with information relevant to sampling and analysis activities as described in this QAPP. The Haley & Aldrich of New York Project Manager will be the custodian of the project file. The project files, including all relevant records, reports, logs, field notebooks, pictures, subcontractor reports, and data reviews, will be maintained in a secured, limited-access area and under the custody of the Project Director or their designee.

The final project file will include the following:

- Project plans and drawings;
- Field data records;
- Sample identification documents and soil boring/monitoring well logs;
- All chain-of-custody documentation;
- Correspondence;
- References, literature;
- Laboratory data deliverables;
- Data validation and assessment reports;
- Progress reports, QA reports; and

- Final report.

The laboratory will be responsible for maintaining analytical logbooks, laboratory data, and sample chain-of-custody documents. Raw laboratory data files and copies of hard copy reports will be inventoried and maintained by the laboratory for a period of six years, at which time the laboratory will contact the Haley & Aldrich of New York Project Manager regarding the disposition of the project-related files.

5. Calibration Procedures and Frequency

5.1 FIELD INSTRUMENT CALIBRATION PROCEDURES

Several field instruments will be used for both on-site screening of samples and for health and safety monitoring, as described in the HASP. On-site air monitoring for health and safety purposes may be accomplished using a vapor detection device, such as a photoionization detector (PID).

Field instruments will be calibrated at the beginning of each day and checked during field activities to verify performance. Instrument-specific calibration procedures will be performed in accordance with the instrument manufacturer's requirements.

5.2 LABORATORY INSTRUMENT CALIBRATION PROCEDURES

Reference materials of known purity and quality will be utilized for the analysis of environmental samples. The laboratory will carefully monitor the preparation and use of reference materials, including solutions, standards, and reagents, through well-documented procedures.

All solid chemicals and acids/bases used by the laboratory will be rated as "reagent grade" or better. All gases will be "high" purity or better. All Standard Reference Materials (SRMs) or Performance Evaluation (PE) materials will be obtained from approved vendors of the National Institute of Standards and Technology (NIST; formerly National Bureau of Standards), the EPA Environmental Monitoring Support Laboratories (EMSL), or reliable Cooperative Research and Development Agreement (CRADA)-certified commercial sources.

6. Analytical Procedures

Analytical procedures to be utilized for analysis of environmental samples will be based on referenced EPA analytical protocols and/or project-specific SOPs.

6.1 FIELD ANALYTICAL PROCEDURES

Field analytical procedures include the measurement of pH, temperature, oxidation-reduction potential (ORP), dissolved oxygen (DO), and specific conductivity during sampling of groundwater, and the qualitative measurement of VOCs during the collection of soil samples.

6.2 LABORATORY ANALYTICAL PROCEDURES

Laboratory analyses will be based on the EPA methodology requirements promulgated in:

- "Test Methods for Evaluating Solid Waste," SW-846, EPA, Office of Solid Waste, and promulgated updates, 1986.

6.2.1 List of Project Target Compounds and Laboratory Detection Limits

The method detection limits (MDLs) studies are performed by the laboratories in accordance with the procedures established in the Code of Federal Regulations, Title 40, Part 136.

Laboratory parameters for soil samples are listed in the IRMWP. Laboratory parameters for disposal samples will be determined by the disposal facility after an approved facility has been determined.

6.2.2 List of Method-Specific Quality Control Criteria

The laboratory SOPs include a section that presents the minimum QC requirements for the project analyses. Section 7.0 references the frequency of the associated QC samples for each sampling effort and matrix.

7. Internal Quality Control Checks

This section presents the internal QC checks that will be employed for field and laboratory measurements.

7.1 FIELD QUALITY CONTROL

7.1.1 Field Blanks

Internal QC checks will include analysis of field blanks to validate equipment cleanliness. Whenever possible, dedicated equipment will be employed to reduce the possibility of cross-contamination of samples.

7.1.2 Trip Blanks

Trip blanks samples will be prepared by the project laboratory using ASTM International (ASTM) Type II or equivalent water placed within pre-cleaned 40-milliliter (mL) VOC vials equipped with Teflon septa. Trip blanks will accompany each sample delivery group (SDG) of environmental samples collected for analysis of VOCs.

Trip blank samples will be placed in each cooler that stores and transports project samples that are to be analyzed for VOCs.

7.2 LABORATORY PROCEDURES

Procedures which contribute to maintenance of overall laboratory QA/QC include appropriately cleaned sample containers, proper sample identification and logging, applicable sample preservation, storage, and analysis within prescribed holding times, and use of controlled materials.

7.2.1 Field Duplicate Samples

The precision or reproducibility of the data generated will be monitored through the use of field duplicate samples. Field duplicate analysis will be performed at a frequency of one in 20 project samples.

Precision will be measured in terms of the absolute value of the relative percent difference (RPD) as expressed by the following equation:

$$RPD = [|R1-R2|/[(R1+R2)/2]] \; X \; 100\%$$

Acceptance criteria for duplicate analyses performed on solid matrices will be 100 percent, air matrices will be 35 percent, and aqueous matrices will be 35 percent (or the absolute difference rule was satisfied if detects were less than five times the Reporting Limit [RL] for solid and aqueous matrices only). RPD values outside these limits will require an evaluation of the sampling and/or analysis procedures by the project QA Officer and/or laboratory QA Director. Corrective actions may include re-analysis of additional sample aliquots and/or qualification of the data for use.

7.2.2 Matrix Spike Samples

Ten percent of each project sample matrix for each analytical method performed will be spiked with known concentrations of the specific target compounds/analytes.

The amount of the compound recovered from the sample compared to the amount added will be expressed as a percent recovery. The percent recovery of an analyte is an indication of the accuracy of an analysis within the site-specific sample matrix. Percent recovery will be calculated for matrix spike and matrix spike duplicate (MS/MSD) samples using the following equation.

$$\%\ Recovery = \frac{Spiked\ Sample - Background}{Known\ Value\ of\ Spike} x100\%$$

If the QC value falls outside the control limits (Upper Control Limit [UCL] or Lower Control Limit [LCL]) due to sample matrix effects, the results will be reported with appropriate data qualifiers. To determine the effect a non-compliant MS recovery has on the reported results, the recovery data will be evaluated as part of the validation process.

7.2.3 Laboratory Control Sample Analyses

The laboratory will perform Laboratory Control Sample (LCS) analyses prepared from SRMs. The SRMs will be supplied from an independent manufacturer and traceable to NIST materials with known concentrations of each target analyte to be determined by the analytical methods performed. In cases where an independently supplied SRM is not available, the LCS may be prepared by the laboratory from a reagent lot other than that used for instrument calibration.

The laboratory will evaluate LCS analyses in terms of percent recovery using the most recent laboratory-generated control limits.

LCS recoveries that do not meet acceptance criteria will be deemed invalid. Analysis of project samples will cease until an acceptable LCS analysis has been performed. If sample analysis is performed in association with an out-of-control LCS sample analysis, the data will be deemed invalid.

Corrective actions will be initiated by the Haley & Aldrich of New York QA Officer and/or Laboratory QA Officer to investigate the problem. After the problem has been identified and corrected, the solution will be noted in the instrument run logbook, and re-analysis of project samples will be performed, if possible.

The analytical anomaly will be noted in the SDG Case Narrative and reviewed by the Data Validator. The Data Validator will confirm that appropriate corrective actions were implemented and recommend the applicable use of the affected data.

7.2.4 Surrogate Compound/Internal Standard Recoveries

For VOCs, surrogates will be added to each sample prior to analysis to establish purge and trap efficiency. Quantitation will be accomplished via internal standardization techniques.

The recovery of surrogate compounds and internal standards will be monitored by laboratory personnel to assess possible Site-specific matrix effects on instrument performance.

For SVOC analyses, surrogates will be added to the raw sample to assess extraction efficiency. Internal standards will be added to all sample extracts and instrument calibration standards immediately before analysis for quantitation via internal standardization techniques.

Method-specific QC limits are provided in the attached laboratory method SOPs. Surrogate compound/internal standard recoveries that do not fall within accepted QC limits for the analytical methodology performed will have the analytical results flagged with data qualifiers as appropriate by the laboratory and will not be noted in the laboratory report Case Narrative.

To ascertain the effect non-compliant surrogate compound/internal standard recoveries may have on the reported results, the recovery data will be evaluated as part of the validation process. The Data Validator will provide recommendations for corrective actions, including but not limited to additional data qualification.

7.2.5 Calibration Verification Standards

Calibration verification (CV) standards will be utilized to confirm instrument calibrations and performance throughout the analytical process. CV standards will be prepared as prescribed by the respective analytical protocols. Continuing calibration will be verified by compliance with method-specific criteria prior to additional analysis of project samples.

Non-compliant analysis of CV standards will require immediate corrective action by the project laboratory QA Officer and/or designated personnel. Corrective action may include re-analysis of each affected project sample, a detailed description of the problem, the corrective action undertaken, the person who performed the action, and the resolution of the problem.

7.2.6 Laboratory Method Blank Analyses

Method blank sample analysis will be performed as part of each analytical batch for each methodology performed. If target compounds are detected in the method blank samples, the reported results will be flagged by the laboratory in accordance with SOPs. The Data Validator will provide recommendations for corrective actions, including but not limited to additional data qualification.

8. Data Quality Objectives

Sampling that will be performed as described in the IRMWP is designed to produce data of the quality necessary to achieve the minimum standard requirements of the field and laboratory analytical objectives described below. These data are being obtained with the primary objective of assessing levels of contaminants of concern associated with the Site.

The overall project data quality objective (DQO) is to implement procedures for field data collection, sample collection, handling, and laboratory analysis and reporting that achieve the project objectives. The following section is a general discussion of the criteria that will be used to measure the achievement of the project DQO.

8.1 PRECISION

8.1.1 Definition

Precision is defined as a quantitative measure of the degree to which two or more measurements are in agreement. Precision will be determined by collecting and analyzing field duplicate samples and by creating and analyzing laboratory duplicates from one or more of the field samples. The overall precision of measurement data is a mixture of sampling and analytical factors. The analytical results from the field duplicate samples will provide data on sampling precision. The results from duplicate samples created by the laboratory will provide data on analytical precision. The measurement of precision will be stated in terms of RPD. RPD is defined as the absolute difference of duplicate measurements divided by the mean of these analyses, normalized to a percentage.

8.1.2 Field Precision Sample Objectives

Field precision will be assessed through collection and measurement of field duplicate samples at a rate of one duplicate per 20 investigative samples. The RPD criteria for the project field duplicate samples will be +/- 100 percent for soil, +/- 35 percent for groundwater for parameters of analysis detected at concentrations greater than five times the laboratory RL, and +/- 35 percent for air for parameters of analysis detected at any concentration.

8.1.3 Laboratory Precision Sample Objectives

Laboratory precision will be assessed through the analysis of LCS and laboratory control sample duplicate (LCSD) and MS/MSD samples for groundwater and soil samples, and the analysis of laboratory duplicate samples for air and soil vapor samples. Air and soil vapor laboratory duplicate sample analyses will be performed by analyzing the same Summa canister twice. The RPD criteria for the air/soil vapor laboratory duplicate samples will be +/- 35 percent for parameters of analysis detected at concentrations greater than five times the laboratory RL.

8.2 ACCURACY

8.2.1 Definition

Accuracy relates to the bias in a measurement system. Bias is the difference between the observed and the "true" value. Sources of error are the sampling process, field contamination, preservation techniques, sample handling, sample matrix, sample preparation, and analytical procedure limitations.

8.2.2 Field Accuracy Objectives

Sampling bias will be assessed by evaluating the results of the field equipment rinse and trip blanks. Equipment rinse and trip blanks will be collected as appropriate based on sampling and analytical methods for each sampling effort.

If non-dedicated sampling equipment is used, equipment rinse blanks will be collected by passing ASTM Type II water over and/or through the respective sampling equipment utilized during each sampling effort. One equipment rinse blank will be collected for each type of non-dedicated sampling equipment used for the sampling effort. Equipment rinse blanks will be analyzed for each target parameter for the respective sampling effort for which environmental media have been collected. (Note: If dedicated or disposable sampling equipment is used, equipment rinse samples will not be collected as part of that field effort.)

Trip blank samples will be prepared by the laboratory and provided with each shipping container, which includes containers for the collection of groundwater samples for the analysis of VOCs. Trip blank samples will be analyzed for each VOC for which groundwater samples have been collected for analysis.

8.3 LABORATORY ACCURACY OBJECTIVES

Analytical bias will be assessed through the use of LCS and Site-specific MS sample analyses. LCS analyses will be performed with each analytical batch of project samples to determine the accuracy of the analytical system.

One set of MS/MSD analyses will be performed with each batch of 20 project samples collected for analysis to assess the accuracy of the identification and quantification of analytes within the Site-specific sample matrices. Additional sample volume will be collected at sample locations selected for the preparation of MS/MSD samples so that the standard laboratory RLs are achieved.

The accuracy of analyses that include a sample extraction procedure will be evaluated through the use of system monitoring or surrogate compounds. Surrogate compounds will be added to each sample, standard, blank, and QC sample prior to sample preparation and analysis. Surrogate compound percent recoveries will provide information on the effect of the sample matrix on the accuracy of the analyses.

8.4 REPRESENTATIVENESS

8.4.1 Definition

Representativeness expresses the degree to which sample data represent a characteristic of a population, a parameter variation at a sampling point, or an environmental condition. Representativeness is a qualitative parameter that is dependent upon the design of the sampling program. The representativeness criterion is satisfied through the proper selection of sampling locations, the quantity of samples, and the use of appropriate procedures to collect and analyze the samples.

8.4.2 Measures to Ensure Representativeness of Field Data

Representativeness will be addressed by prescribing sampling techniques and the rationale used to select sampling locations. Sampling locations may be biased (based on existing data, instrument surveys, observations, etc.) or unbiased (completely random or stratified-random approaches).

8.5 COMPLETENESS

8.5.1 Definition

Completeness is a measure of the amount of valid (usable) data obtained from a measuring system compared to the total amount anticipated to be obtained. The completeness goal for all data uses is that a sufficient amount of valid data be generated so that determinations can be made related to the intended data use with a sufficient degree of confidence. Valid data are determined by independent confirmation of compliance with method-specific and project-specific DQOs. The calculation of data set completeness will be performed by the following equation.

$$\frac{Number\ of\ Valid\ Sample\ Results}{Total\ Number\ of\ Samples\ Planned}\ X\ 100 = \%\ Complete$$

8.5.2 Field Completeness Objectives

Completeness is a measure of the number of valid measurements obtained from measurements taken in this project versus the number planned. Field completeness objective for this project will be greater than 90 percent.

8.5.3 Laboratory Completeness Objectives

Laboratory data completeness objective is a measure of the amount of valid data obtained from laboratory measurements. The evaluation of the data completeness will be performed at the conclusion of each sampling and analysis effort.

The completeness of the data generated will be determined by comparing the amount of valid data, based on independent validation, with the total laboratory data set. The completeness goal will be greater than 90 percent.

8.6 COMPARABILITY

8.6.1 Definition

Comparability is a qualitative parameter expressing the confidence with which one data set can be compared to another.

8.6.2 Measures to Ensure Comparability of Laboratory Data

Comparability of laboratory data will be measured from the analysis of SRMs obtained from either EPA CRADA suppliers or the NIST. The reported analytical data will also be presented in standard units of mass of contaminant within a known volume of environmental media. The standard units for various sample matrices are as follows:

- Solid Matrices – micrograms per kilogram (µg/kg) for PFAS analyses, milligrams per kilogram (mg/kg) of media (Dry Weight).

8.7 LEVEL OF QUALITY CONTROL EFFORT

If non-dedicated sampling equipment is used, equipment rinse blanks will be prepared by field personnel and submitted for analysis of target parameters. Equipment rinse blank samples will be analyzed to check for potential cross-contamination between sampling locations that may be introduced during the investigation. One equipment rinse blank will be collected per sampling event to the extent that non-dedicated sampling equipment is used.

If necessary, a separate equipment rinse blank sample will be collected for PFAS to assess potential contamination introduced from utilized equipment. (Note: If dedicated or disposable sampling equipment is used, equipment rinse samples will not be collected as part of that field effort.)

Trip blanks will be used to assess the potential for contamination during sample storage and shipment. Trip blanks will be provided with the sample containers to be used for the collection of groundwater samples for the analysis of VOCs. Trip blanks will be preserved and handled in the same manner as the project samples. One trip blank will be included along with each shipping container containing project samples to be analyzed for VOCs.

Method blank samples will be prepared by the laboratory and analyzed concurrently with all project samples to assess potential contamination introduced during the analytical process.

Field duplicate samples will be collected and analyzed to determine sampling and analytical reproducibility. One field duplicate will be collected for every 20 or fewer investigative samples collected for off-Site laboratory analysis.

MS will provide information to assess the precision and accuracy of the analysis of the target parameters within the environmental media collected. One MS/MSD will be collected for every 20 or fewer investigative samples per sample matrix.

Note: Soil MS/MSD samples require triple sample volume for VOCs only.

9. Data Reduction, Validation, and Reporting

Data generated by the laboratory operation will be reduced and validated prior to reporting in accordance with the following procedures:

9.1 DATA REDUCTION

9.1.1 Field Data Reduction Procedures

Field data reduction procedures will be minimal in scope compared to those implemented in the laboratory setting. The pH, conductivity, temperature, turbidity, DO, ORP, and breathing zone VOC readings collected in the field will be generated from direct read instruments. The data will be written into field logbooks immediately after measurements are taken. If errors are made, data will be legibly crossed out, initialed, and dated by the field member, and corrected in a space adjacent to the original entry.

9.1.2 Laboratory Data Reduction Procedures

Laboratory data reduction procedures are provided by the appropriate chapter of the EPA's "Test Methods for Evaluating Solid Waste," SW-846, Third Edition. Errors will be noted and corrections made with the original notations crossed out legibly. Analytical results for soil samples will be calculated and reported on a dry weight basis.

9.1.3 Quality Control Data

QC data (e.g., laboratory duplicates, surrogates, MS, and MSD) will be compared to the method acceptance criteria. Data determined to be acceptable will be entered into the laboratory information management system.

Unacceptable data will be appropriately qualified in the project report. Case Narratives will be prepared, which will include information concerning data that fell outside acceptance limits and any other anomalous conditions encountered during sample analysis.

9.2 DATA VALIDATION

Data validation procedures of the analytical data will be performed by the Haley & Aldrich of New York QA Officer or designee using the following documents as guidance for the review process:

- "U.S. EPA National Functional Guidelines for Organic Data Review," "Analysis of Volatile Organic Compounds in Air Contained in Canisters by Method TO-15," "Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances Under NYSDEC's Part 375 Remedial Programs," and the "U.S. EPA National Functional Guidelines for Inorganic Data Review."
- The specific data qualifiers used will be applied to the reported results as presented and defined in the EPA National Functional Guidelines. Validation will be performed by qualified personnel at the direction of the Haley & Aldrich of New York QA Officer. Tier 1 data validation (the equivalent of EPA's Stage 2A validation) will be performed to evaluate data quality.

- The completeness of each data package will be evaluated by the Data Validator. Completeness checks will be administered on all data to determine that the deliverables are consistent with the NYSDEC Analytical Services Protocol (ASP) Category A and Category B data package requirements. The validator will determine whether the required items are present and request copies of missing deliverables (if necessary) from the laboratory.

9.3 DATA REPORTING

Data reporting procedures will be carried out for field and laboratory operations as indicated below:

- Field Data Reporting: Field data reporting will be conducted principally through the transmission of report sheets containing tabulated results of measurements made in the field and documentation of field calibration activities.
- Laboratory Data Reporting: The laboratory data reporting package will enable data validation based on the protocols described above. The final laboratory data report format will include the QA/QC sample analysis deliverables to enable the development of a DUSR based on NYSDEC DER-10, Appendix 2B.

10. Performance and System Audits

A performance audit is an independent quantitative comparison with data routinely obtained in the field or the laboratory. Performance audits include two separate, independent parts: internal and external audits.

10.1 FIELD PERFORMANCE AND SYSTEM AUDITS

10.1.1 Internal Field Audit Responsibilities

Internal audits of field activities will be initiated at the discretion of the Project Manager and will include the review of sampling and field measurements. The audits will verify that all procedures are being followed. Internal field audits will be conducted periodically during the project. The audits will include examination of the following:

- Field sampling records, screening results, and instrument operating records;
- Sample collection;
- Handling and packaging in compliance with procedures;
- Maintenance of QA procedures; and
- Chain-of-custody reports.

10.1.2 External Field Audit Responsibilities

External audits may be conducted by the Project Coordinator at any time during the field operations. These audits may or may not be announced and are at the discretion of the NYSDEC. The external field audits can include (but are not limited to) the following:

- Sampling equipment decontamination procedures;
- Sample bottle preparation procedures;
- Sampling procedures;
- Examination of HASPs;
- Procedures for verification of field duplicates; and
- Field screening practices.

10.2 LABORATORY PERFORMANCE AND SYSTEM AUDITS

10.2.1 Internal Laboratory Audit Responsibilities

The laboratory system audits are typically conducted by the laboratory QA Officer or designee on an annual basis. The system audit will include an examination of laboratory documentation, including sample receiving logs, sample storage, chain-of-custody procedures, sample preparation and analysis, and instrument operating records.

At the conclusion of internal system audits, reports will be provided to the laboratory's operating divisions for appropriate comment and remedial/corrective action where necessary. Records of audits and corrective actions will be maintained by the Laboratory QA Officer.

10.2.2 External Laboratory Audit Responsibilities

External audits will be conducted as required by the NYSDEC, NYSDOH, or designee. External audits may include any of the following:

- Review of laboratory analytical procedures
- Laboratory on-site visits
- Submission of performance evaluation samples for analysis

Failure of any of the above audit procedures can lead to laboratory de-certification. An audit may consist of, but not be limited to:

- Sample receipt procedures
- Custody, sample security, and log-in procedures
- Review of instrument calibration logs
- Review of QA procedures
- Review of logbooks
- Review of analytical SOPs
- Personnel interviews

A review of a data package from samples recently analyzed by the laboratory can include (but not be limited to) the following:

- Comparison of the resulting data to the SOP or method
- Verification of initial and continuing calibrations within control limits
- Verification of surrogate recoveries and instrument timing results
- Review of extended quantitation reports for comparisons of library spectra to instrument spectra, where applicable
- Assurance that samples are run within holding times

11. Preventive Maintenance

11.1 FIELD INSTRUMENT PREVENTIVE MAINTENANCE

The field equipment preventive maintenance program is designed to ensure the effective completion of the sampling effort and to minimize equipment downtime. Program implementation is concentrated in three areas:

- Maintenance responsibilities
- Maintenance schedules
- Inventory of critical spare parts and equipment

The maintenance responsibilities for field equipment will be assigned to the task leaders in charge of specific field operations. Field personnel will be responsible for daily field checks and calibrations and for reporting any problems with the equipment. The maintenance schedule will follow the manufacturer's recommendations. In addition, the field personnel will be responsible for determining that an inventory of spare parts will be maintained with the field equipment. The inventory will primarily contain parts that are subject to frequent failure, have limited useful lifetimes, and/or cannot be obtained in a timely manner.

11.2 LABORATORY INSTRUMENT PREVENTIVE MAINTENANCE

Analytical instruments at the laboratory will undergo routine and/or preventive maintenance. The extent of the preventive maintenance will be a function of the complexity of the equipment.

Generally, annual preventive maintenance service will involve cleaning, adjusting, inspecting, and testing procedures designed to deduce instrument failure and/or extend useful instrument life. Between visits, routine operator maintenance and cleaning will be performed according to manufacturer's specifications by laboratory personnel.

12. Specific Routine Procedures Used to Assess Data Precision, Accuracy, and Completeness

12.1 FIELD MEASUREMENTS

Field-generated information will be reviewed by the Field Coordinator and typically includes evaluation of bound logbooks/forms, data entry, and calculation checks. Field data will be assessed by the Project Coordinator, who will review the field results for compliance with the established QC criteria that are specified in Sections 7.0 and 8.0 of this QAPP. The accuracy of pH and specific conductance will be assessed using daily instrument calibration, calibration check, and blank data. Accuracy will be measured by determining the percent recovery (% R) of calibration check standards. Precision of the pH and specific conductance measurements will be assessed on the basis of the reproducibility of duplicate readings of a field sample and will be measured by determining the RPD. Accuracy and precision of the soil VOC screening will be determined using duplicate readings of calibration checks. Field data completeness will be calculated using the following equation:

$$Completeness = \frac{Valid\ (usable)\ Data\ Obtained}{Total\ Data\ Planned} \ X\ 100$$

12.2 LABORATORY DATA

Laboratory data will be assessed by the Haley & Aldrich of New York QA Officer or designee, who will review the laboratory results for compliance with the established QC criteria that are specified in Sections 7.0 and 8.0 of this QAPP.

13. Quality Assurance Reports

Critically important to the successful implementation of the QAPP is a reporting system that provides the means by which the program can be reviewed, problems identified, and programmatic changes made to improve the plan.

QA reports to management can include:

- Audit reports, internal and external audits, with responses
- Performance evaluation sample results: internal and external sources
- Daily QA/QC exception reports/corrective actions

QA/QC corrective action reports will be prepared by the Haley & Aldrich of New York QA Officer when appropriate and presented to the project and/or laboratory management personnel so that performance criteria can be monitored for all analyses from each analytical department. The updated trend/QA charts prepared by the laboratory QA personnel will be distributed and reviewed by various levels of the laboratory management.

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste and Operations Emergency Response Training (29 CFR 1910.120 and 40 CFR 265.16)
8-Hour HAZWOPER Refresher Course

Suzanne is a senior project manager with over 17 years of experience in the environmental consulting industry. She has worked on soil and groundwater environmental investigations, remediation projects, and prepared reports for private, industrial, and government clients. Her technical experience includes remediation systems; soil and groundwater feasibility studies; Phase I site investigations; environmental file review and historical research; stormwater assessments and SWPPP preparation; reclamation planning for the sand and gravel mining industry; air permitting; and data interpretation.

In New York, Suzanne has experience as an Engineer of Record in completing site closure documentation including Remedial Closure Reports reviewed by the Office of Environmental Remediation as well as Final Engineering Reports and Site Management Plans reviewed by the New York State Department of Environmental Conservation.

Suzanne has managed the investigation, remedial design, remediation and closeout of sites in the Brownfield Cleanup Program and petroleum spill case sites. Her background also includes developing and complying with approved site management plans overseeing the operation and maintenance of on-site engineering controls, such as soil vapor extraction systems, sub-slab depressurization systems, product recovery systems, and ensuring the protection of human health and the environment.

RELEVANT PROJECT EXPERIENCE

Bedford Beverly Redevelopment Site, Brooklyn, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plans for an approximately 5.31-acre non-contiguous property located in the Flatbush neighborhood in the borough of Brooklyn, New York under the New York State Brownfield Cleanup Program (NYSBCP). The remedy included removal of thirteen undocumented underground storage tanks (USTs), removal of over 115,000 tons of non-hazardous and hazardous soil, hotspot excavations, injections of zerovalent iron to treat tetrachlorethylene in groundwater, injection of alkaline-activated persulfate to treat petroleum-based volatile organic compounds in groundwater and establishing a Site Management Plan (SMP) for Institutional and Engineering Controls. The site is being redeveloped from a vacant auto service center, vast open air parking lots, and a vacant commercial building into a vibrant community development. In addition to new residential housing, which includes affordable units, and commercial spaces, the project has preserved the highly recognizable Sears Roebuck & Company Department Store. This includes maintaining its historical architecture, updating the building to meet modern standards, introducing commercial spaces that were previously underutilizing, and maintaining the character of the neighborhood.

Development, EPA Site RCRA-02-2009-7306, NYSDEC Site 243016, Former Port Mobil Terminal, Staten Island, New York. Engineer and project manager responsible for the preparation of the feasibility study, preparation of the Interim Remedial Report, completion of the Interim Remedial Measure, completion of the remedial investigation stages, continued execution of the Monitoring and Natural Attenuation Program, preparation of the Remedial Action Work Plan/Remedial Designs, and RCRA Closure procedures for the Port Mobil Terminal Site under an Environmental Protection Agency and New York State DEC Consent Order. The Site has a footprint of approximately 240 acres with a planned development for commercial/industrial uses.

Rogers Snyder Brownfield Site, 858 Rogers Avenue and 2605 Snyder Avenue, Brooklyn, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plan at the Rogers Snyder redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous and hazardous soil, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of the FER.

Former Garone Bros Auto Service Center Site, 352-362 Shepherd Avenue, Brooklyn, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plan at the 352-362 Shepherd redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous soil, removal of USTs, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of the FER.

Former Fielder Waterproofing & Masonry Site, 91 Bruckner Boulevard, Bronx, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plan at the 91 Bruckner redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous and hazardous soil, removal of USTs, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of the FER and SMP.

828 Metropolitan Avenue Site, 808-834 Metropolitan Avenue, Brooklyn, New York. Suzanne served as project manager and engineer of record for execution of Remedial Action Work Plan at the 828 Metropolitan Avenue redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous soil, removal of USTs, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of Daily Field Reports (DFRs) and the Final Engineering Report (FER).

Waterfront Property Management, 89-91 Gerry Street and 93 Gerry Street, Brooklyn, New York. Suzanne served as project manager for execution of Remedial Action Work Plans at the former Just4Wheels Site and Just4Wheels Site 2 under the New York State Brownfield Cleanup Program (NYSBCP). Responsible for remedial oversight of excavation and removal of non-hazardous and hazardous soil, endpoint sample collection, removal of USTs, air monitoring, dewatering system installation support, communication with soil brokerage firm and environmental laboratory, preparation of DFRs and the FER.

Multiple Clients, Remedial Investigation Work Plans and BCP Applications, New York City, New York. As project manager and engineer, Suzanne has prepared NYSBCP Applications and Remedial Investigation Work Plans for the New York State Department of Environmental Conservation (NYSDEC) for sites within the New York City boroughs.

Multiple Clients, Remedial Action Work Plans, New York City, New York. As project manager and engineer of record, Suzanne has prepared Remedial Action Work Plans for the NYSDEC for sites within the New York City boroughs.

Excavation Oversight and CAMP Monitoring, Various Sites, New York City, New York. Suzanne has served as project manager for projects under the New York City Office of Environmental Remediation (NYCOER) program and NYSBCP. Her responsibilities included managing excavation oversight, air monitoring, and logging trucks for off-site disposal.

Aerospace Manufacturing Facility, Feasibility Study and Remedial Action Plan, Chula Vista, CA. Suzanne co-authored feasibility studies for soil and ground water impacted by chlorinated solvents, metals, and PCBs. She screened ex-situ and in-situ remedial alternatives for effectiveness, implementability, and protectiveness of human health. She also assessed alternative cleanup levels for technical and economic feasibility of achieving background concentrations in accordance with State Water Resources Control Board Resolution 92-49. Additionally, she evaluated groundwater remedial alternatives, including bioremediation, monitored natural attenuation (MNA), pump and treat, chemical oxidation, chemical reduction, and engineered and institutional controls. Lastly, she prepared engineering cost estimates and conceptual designs. Assisted with the preparation of remedial action plans: a bioremediation remedy and MNA program for groundwater, and excavation of contaminated soil.

Aerospace Manufacturing Facility, Groundwater Remediation and Bioremediation Pilot Test, Riverside, CA. Suzanne assisted with data analysis and reporting for the bioremediation pilot test study for groundwater impacted by chlorinated solvents, hexavalent chromium, and 1,4-dioxane. She evaluated site data for trends indicative of MNA using statistical analysis.

Goodyear Tire & Rubber Company, Phoenix Goodyear Airport South Superfund Site, Goodyear, Arizona. Suzanne prepared reports and performed data analysis related to the groundwater monitoring program and operation and maintenance of groundwater treatment systems. Currently, two groundwater extraction and remediation systems are capable of treating more than 1 million gallons per day of groundwater contaminated with trichloroethylene. The upper groundwater zone is treated with an air stripper, while the lower zone is treated with granulated activated carbon. Treated groundwater is reinjected into their respective zones.

Soil and Groundwater Remediation Systems, Arizona. Suzanne **p**erformed operation, maintenance, and sampling activities for two soil vapor extraction systems to remove tetrachloroethylene from subsurface soils at two different dry-cleaning facilities. She prepared soil vapor extraction GAC system test reports in accordance with Maricopa County Air Quality Department Permits.

ASTM Phase I Environmental Site Assessments, Arizona. Suzanne assisted with ASTM Phase I ESAs at various industrial facilities in central and southern Arizona. She evaluated site conditions and regulatory implications as they related to the owner's or potential buyer's property development plans.

Phoenix-Goodyear Airport-North Superfund Site, Focused Feasibility Study, Goodyear, Arizona. Suzanne was a member of team that prepared a source area remediation focused feasibility study report. She evaluated several technologies and alternatives to treat groundwater contaminated with trichloroethylene (TCE) and perchlorate. She analyzed remedial alternatives, including in-well air stripping, a hydraulic barrier, nano- and macro-scale zero-valent iron, anaerobic reductive dechlorination, in-situ chemical oxidation (permanganate), and electrical resistive heating. She prepared cost estimates, conceptual designs, remediation technology summaries, and sustainability evaluation of the alternatives.

Enhanced In-Situ Bioremediation (EISB) and Chemical Reduction Using a Nanoscale, Zero-Valent Metallic Alloy to Treat Co-disposed Chloroethanes and Chloroethenes in Groundwater, Manufacturing Facility, Canton, MA. Suzanne performed data analysis and prepared status reports on effectiveness of EISB in treating chlorinated solvents in shallow groundwater. She reported on the performance monitoring results for the permeable reactive barrier in deep zone groundwater.

Hayden Facilities RI/FS, ASARCO LLC, Hayden, Arizona. Suzanne served as Quality Assurance Officer for the air monitoring program at a copper smelting facility. She developed site-specific data validation procedures according EPA guidelines for several analytical methods.

Market Evaluation for Nanoscale Zero-Valent Iron, Stamford, Connecticut. Suzanne used EPA CERCLIS Public Access Database and select State databases to estimate the market size for potential use of nanoscale zero-valent iron (nZVI) as a remediation technology. She compiled competing vendor information and quotes to estimate the average cost of similar products. She utilized the U.S. Patent and Trademark Office database to analyze competing technologies.

Arizona Pollutant Discharge Elimination System (AZPDES) and National Pollutant Discharge Elimination System (NPDES) Permits, Arizona. Suzanne prepared AZPDES and NPDES) permit renewal applications for a copper mining facility in Southern Arizona, which included updates to the facility's Storm Water Pollution Prevention Plan (SWPPP) and QA Manual.

Spill Prevention, Control and Countermeasure Plans, Aggregate Mining Facilities, Arizona. Suzanne assisted with a Spill Prevention, Control and Countermeasure Plans (SPCC) for aggregate mining facilities in Arizona. She performed site visit, evaluated fuel and oil tanks and secondary containment areas, assisted with calculations to verify compliance, and prepared report.

Copper Mining Facility, Miami, Arizona. Suzanne assisted with Toxic Release Inventory (TRI) and Toxic Substances Control Act (TSCA) reporting, both submitted to the EPA.

Storm Water Pollution Prevention Plan, Franciscan Friars of California, Gila County, Arizona. Suzanne updated the SWPPP for construction activities related to the closure of a historic Gibson copper mine, authorized under the Arizona Pollutant Discharge Elimination System "General Permit for Discharge from Construction Activities to Waters of the United States." The Former Gibson Mine is a small, historic copper mine, located approximately 7 miles southwest of Miami, Arizona, in Gila County. Construction activities covered under the updated SWPPP consisted of the excavation, hauling, and removal of approximately 80,000 tons of soil cover from the Mineral Creek side of the site to mine-scarred areas on the Pinto Creek side of the site. Also included was final grading of the site, which consisted of re-contouring and re-defining any portion of the drainages that were on site; and revegetation.

Stormwater Pollution Prevention Plans, Vulcan Materials Company, Western Division, Arizona. Suzanne prepared SWPPP for 11 aggregate mining facilities in Arizona. Performed site visits, analyzed stormwater flows, prepared reports, and completed Notices of Intent for the Arizona Department of Environmental Quality under a Multi-Sector General Permit.

Uranium Enrichment Facility, Lea County, New Mexico. Suzanne prepared quarterly and annual groundwater monitoring reports, semi-annual radioactive effluent release reports, and radiological environmental monitoring program reports in accordance with New Mexico Environment Department regulations and the Nuclear Regulatory Commission. Performed quarterly data validation on a variety of matrices and analytical methods. She prepared site-specific environmental monitoring procedures, which included field sampling techniques; data collection, management and validation; and an air modeling software package.

Rocket Testing and Research Facility, Western U.S. Suzanne analyzed and evaluated groundwater quality data, prepared reports, and managed data for this Resource Conservation and Recovery Act (RCRA) site. Assisted with management of sampling, analysis, and reporting of constituents of concern for fractured sandstone bedrock aquifer impacted by chlorinated solvents and emergent chemicals 1,4-dioxane, perchlorate, and n-nitrosodimethylamine (NDMA). Performed data validation of water quality data according to U.S. EPA National Functional Guidelines. Queried data from client environmental data management system and prepared summary tables, concentration plots, and water level hydrographs using Microsoft Excel programs. She prepared a quarterly analytical schedule using an Access database application, updated the site-specific Health & Safety Plan, and participated in lean training, which reduced cost of groundwater monitoring tasks by 25 percent.

Federal Superfund Site, Eastern Massachusetts. Suzanne performed data validation and quality assurance/quality control of soil and groundwater data according to U.S. EPA National Functional Guidelines. She performed third-party database updates.

Great Western Bank, Cortaro Ranch Property, Marana, Arizona. For site characterization of undeveloped land, Suzanne performed surficial soil sampling, analytical laboratory coordination, data analysis, and report preparation.

Twin Buttes Properties, Inc., Southern Arizona. Suzanne assisted with report and analytical table preparation for the characterization and analysis of current and historical hydrologic conditions at an inactive mine site near Sahuarita, Arizona in support of regulatory compliance.

Skyworks Solutions, Inc. Site, Newbury Park, California. Suzanne assisted with report and analytical table preparation for a subsurface investigation characterizing the lateral and vertical extent of soil and groundwater impacts from known releases of TCE, 1,4-dioxane and other organic compounds.

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)

10-Hour OSHA Construction Safety

8-Hour OSHA Supervisor of Hazardous Waste (29 CFR 1910.120 & 29 CFR 1926.65)

Mari is a senior client account manager with experience in soil, groundwater and soil vapor investigation and a focus on remedial design and implementation. She is also experienced in completion of numerous Phase I Environmental Site Assessments and Phase II Environmental Site Investigations, site characterization, hazardous materials analysis, regulatory closure reports as well as remedial design and implementation.

Mari has experience in composing site closure documentation including Remedial Closure Reports and Noise Installation Reports reviewed by the Office of Environmental Remediation as well as Final Engineering Reports and Site Management Plans reviewed by the New York State Department of Environmental Conservation. Mari has also worked on city rezoning proposals by performing work associated with and composing the Hazardous Materials Analysis chapter included in Final Environmental Impact Statements published by New York City Department of Planning. Analysis methods were performed in accordance with the City Environmental Quality Review (CEQR) guidelines for neighborhoods including East New York, Brooklyn, Jerome Avenue, Brooklyn, Inwood, and Manhattan.

Mari has managed the investigation, remedial design, remediation and closeout of multiple inactive Resource Conservation and Recovery Act (RCRA) hazardous waste sites, New York State Superfund sites and petroleum spill case sites. Her background includes developing and complying with approved site management plans overseeing the operation and maintenance of on-site engineering controls, such as soil vapor extraction systems, sub-slab depressurization systems, product recovery systems, etc., and ensuring the protection of human health and the environment.

RELEVANT PROJECT EXPERIENCE

State and City Agencies

School Construction Authority, Waste Characterization and Excavation Materials Disposal Plan, Brooklyn, New York. Project manager for consulting services for New York Public School 127. Services included composition of an Excavated Materials Disposal Plan, collection of waste characterization samples and preparation of and preparation of a findings and recommendations report.

Department of City Planning, Rezoning Environmental Impact Statement, Bronx, New York. Project lead for analysis and composing the Hazardous Materials Chapter as per City Environmental Quality Review (CEQR) Technical Manual guidelines included in the Final Environmental Impact Statement (FEIS) for an approximately 92-block area primarily along Jerome Avenue and its east-west commercial corridors in the Bronx. The review assessed the potential for the

presence of hazardous materials in soil and/or groundwater at both the projected and potential development sites identified in the reasonable worst-case development scenario under the proposed East New York Rezoning Proposal. Procedures involved site inspections and review of historic Sanborn fire insurance maps, city directories and city/state regulatory databases. The assessment identified that each of the 146 projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed zoning map actions include (E) designations (E-366) for all privately-held projected and potential development sites.

Department of City Planning, Rezoning Environmental Impact Statement, Brooklyn, New York. Project lead for performance analysis and composing the Hazardous Materials Chapter as per CEQR Technical Manual guidelines included in the FEIS for an approximately 190-block area of East New York, Cypress Hills, and Ocean Hill neighborhoods of Brooklyn, New York. The review assessed the potential for the presence of hazardous materials in soil and/or groundwater at both the projected and potential development sites identified in the reasonable worst-case development scenario under the proposed East New York Rezoning Proposal. Procedures involved site inspections and review of historic Sanborn fire insurance maps, city directories and city/state regulatory databases. The assessment identified that each of the 186 projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed zoning map actions include (E) designations (E-366) for all privately-held projected and potential development sites.

Redevelopment and Remediation

Titan Equity Group, Hotel Redevelopment, Bronx, New York. Project manager for a hotel redevelopment in the south Bronx. The site has been assigned New York City Office of Environmental Remediation (NYC OER) E-Designation status for hazardous materials, noise, and air quality. Services included completion of a remedial investigation, composition of a Remedial Investigation Report and development of Hazardous Material Remedial Action Work Plan and Air Quality/Noise Remedial Action Plan as per NYC OER requirements.

The Related Companies, Chelsea Mixed-Use Redevelopment, New York, New York. Field geologist for oversight of the remediation of a mixed-use residential and commercial building, the second of a two-building development on 30th Street. Contaminants of concern included volatile and semi-volatile organic compounds associated with historic operations and underground storage tanks (USTs) located on the Site. The Site was given an E-designation (E-142) for hazardous materials and noise as part of the Highline/West Chelsea rezoning proposal. To satisfy the requirements of the E-designation program, soil was excavated to at least 12 feet below grade and bottom endpoint collected showing no contaminants of concern exceeding the New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives (SCO). By achieving Unrestricted Use SCOs, no engineering controls were necessary, although the building slab was included as part of development, and removal of the hazardous materials E-designation was requested.

Tishman Speyer, Long Island City Residential Development, Long Island City, New York. Field geologist for remedial oversight and implementation of a Community Air Monitoring Program during concurrent remediation and development of three Brownfield Cleanup Program (BCP) sites located in Long Island City, New York. The Sites were grossly contaminated with creosote, a carcinogenic chemical formed from the distillation of various tars. Remediation strategies included soil excavation and in-situ soil stabilization. To prevent migration of groundwater off-site, a temporary and later a permanent capture well system was installed on the western boundary of the property. The BCP site located on the western portion of the property left residual contamination in place requiring installation of a sub-slab depressurization system.

Queens West Development Corporation, Queens Waterfront Development, Long Island City, New York. Field geologist for performance of site management post remedial action. Services included annual groundwater monitoring, evaluation of engineering and institutional controls completion and Period Review Reports. In addition to conducting annual site management activities, responsibilities included composing a work plan to evaluate the transition from active sub-slab depressurization systems to passive. Upon NYSDEC approval, active systems were shut down for 30 days prior to a sub-slab vapor sampling event evaluation soil vapor, indoor and outdoor air conditions for

potential vapor intrusion risk. As results indicated no evidence of vapor intrusion, continued pressure monitoring was conducted for from the existing monitoring ports for one year assessing whether negative pressure was held by the existing slab by stack-effect or other passive processes.

Jim Beam Brands Co., Brownfield Cleanup Program Remediation Site, Long Island City, New York. Field geologist for oversight of the installation of an Electrical Resistive Heating (ERH) system implemented in order to remediate trichloroethylene groundwater plumes in shallow/intermediate and deep groundwater on- and off-site. The Site, a former stapler manufacturing facility, underwent various remedies, including a Soil Vapor Extraction system, air sparging, ozone injection and chemical oxidation using potassium permanganate injections, which resulted in little reduction to contamination levels and rebounding chlorinated solvents. Components of the ERH system installed included electrodes for delivery of steam, vapor recovery wells, and groundwater monitoring wells. The site is currently under remediation in the state BCP program.

Due Diligence and Site Characterization

Manufacturing Plants, Multiple Investors, Environmental and Compliance Assessment Portfolio United States. Project lead for completion of Phase I Environmental Site Assessments (ESAs) and Limited Compliance Reviews for multiple auto parts manufacturing facilities throughout the United States. Services included completion of Phase I ESAs in accordance with the American Society for Testing and Materials E1527-13 requirements and a limited review of each facility's compliance liabilities including issues pertaining to the Resource Conservation and Recovery Act, Greenhouse Gas Emission Standards and Tier II Emergency and Hazardous Chemical Inventory reporting requirements.

ARM Parking, Environmental Site Assessment and Subsurface Investigation, Brooklyn, New York. Project manager for site assessment and subsurface investigation of parking facility in Sunset Park neighborhood, Brooklyn, New York. Services included ground penetrating radar survey for former and current petroleum USTs, completion of a subsurface investigation of soils and composition of Limited Subsurface Investigation Report.

Spill Consulting

The Trump Organization, Spill Consulting Services, New York, New York. Project manager for consulting services provided after incidental release of calcium carbonate ice rink paint to the Central Park Pond from Wollman Rink. Services included liaising with NYSDEC regarding violations, consent order and required corrective action. Corrective action included designing alterations to the existing on-site drainage plans and routing all meltwater containing paint into the combined sewer system. Coordination was required with property owner, operations personnel, New York City Department of Parks and NYSDEC.

Richmond Gardens Apartments, Spill Management and Closure Services, Staten Island, New York. Project lead responsible for spill closure activities and reporting for Spill 1105661 located at the Richmond Gardens Apartment Complex in the Richmond neighborhood of Staten Island, New York. The spill was opened in 2011 when several underground storage tanks were identified adjacent to the apartments at Jersey Street and Hendricks Avenue. The tanks were cleaned and removed and impacted soils surrounding the tank area excavated to the extent possible. Excavation of all impacted material was not feasible due to the proximity of the tanks to the apartment buildings. Residual contamination in soil and groundwater remained and was monitored through 2016. Upon reviewing the groundwater monitoring data from over 12 consecutive quarters, it was apparent monitored natural attenuation was not a feasible option and an in situ chemical oxidation (ISCO) remedy was approved by NYSDEC. Due to success of the pilot test, the ISCO injection event was implemented utilizing pressure pulse technology to deliver the alkaline activated persulfate solution to the subsurface.

HALEY ALDRICH

PAUL G. PROBASCO, P.G., LSRP

Senior Project Manager, Hydrogeologist

EDUCATION

M.S., Environmental Sciences, University of Virginia
M.S., Hydrogeology, Rensselaer Polytechnic Institute
B.S., Geological Sciences, Cook College, Rutgers University

PROFESSIONAL REGISTRATIONS

2012/ PA: Professional Geologist (Reg. No. PG005055)
2018/ NY: Professional Geologist (Reg. No. 001138)
2021/ NJ: Licensed Site Remediation Professional (Reg. No. 835739)

PROFESSIONAL SOCIETIES

National Ground Water Association

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)
8-Hour OSHA Site Supervisor Training

Paul is a hydrogeologist and project manager with over 18 years of experience in the environmental consulting industry. He applies his expertise in the investigation and remediation of contaminated sites for private and public-sector clients. He has managed and conducted site and remedial investigations, remedial planning and design, and remedial actions at sites in state and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) regulatory programs. Paul is skilled in technical groundwater investigations in unconsolidated and bedrock aquifers, assessment of soil conditions through core sampling and direct-sensing techniques, and application of analytical models toward understanding contaminant transport and fate. His environmental remediation experience focuses on management and oversight of in situ remedial approaches, including enhanced in situ bioremediation, chemical reduction and oxidation, and enhanced monitored natural attenuation.

RELEVANT PROJECT EXPERIENCE

Confidential clients – Brownfield redevelopment, multiple properties, Brooklyn, New York. As project manager, Paul managed due diligence environmental assessments and remedial investigations of sites pursuing entry into and sites within the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program. Coordinated and managed field investigations including a Phase II environmental site assessment and a remedial investigation of soil, groundwater, and soil vapor impacted from previous petroleum UST operations. Developed scopes of work and responsible for managing project budget, schedule, and communications with the client and NYSDEC. Prepared and managed multiple deliverables including project work plans and summary reports describing sampling activities and findings.

U.S. Navy – NAVFAC Mid-Atlantic, Former Naval Weapons Industrial Reserve Plant, groundwater remedial design, Bedford, Massachusetts. As project manager, Paul managed groundwater remedial design, pre-design aquifer testing, supplemental groundwater investigation, and vapor intrusion investigation activities at a former Navy installation. Responsible for managing project budget, schedule, and biweekly meetings with the client, EPA, and MassDEP. Coordinated and managed field activities that consisted of permanent monitoring well installations in a heterogeneous glacial till, aquifer pump and slug tests, temporary well installations and sampling, soil gas point installations and sampling, and the collection of sub-slab and indoor air samples from an off-site residence. Prepared and managed multiple deliverables including project work plans and a site management plan, preliminary assessment, groundwater

investigation report, community involvement plan, and technical memorandum describing focused groundwater and vapor intrusion investigation activities and findings.

U.S. Navy – NAVFAC Mid-Atlantic, Naval Station Newport, pre-design investigation at contaminated bedrock aquifer site, Middletown, Rhode Island. Paul served as project manager for a groundwater pre-design investigation at a contaminated bedrock aquifer site where previous in situ bioremediation had limited success with reducing chlorinated volatile organic compound (CVOC) concentrations in groundwater. He developed a hydraulic testing approach using pump tests and a bromide tracer test to improve understanding of the distribution of an amendment injected into a single well. Coordinated and managed vegetation clearing, a well inventory, two comprehensive site-wide groundwater gauging and sampling events, and preparation of a hydraulic testing work plan and a groundwater pre-design investigation report.

U.S. Navy – NAVFAC Mid-Atlantic, Naval Station Newport, remedial investigation at former tank farm, Portsmouth, Rhode Island. As project hydrogeologist, Paul developed a remedial investigation approach and conducted data analysis to apportion sources of total petroleum hydrocarbons (TPH) in soil at a former tank farm. The approach consisted of grid-based soil sampling across the previously delineated petroleum-impacted area; analysis of soil samples for TPH, saturated hydrocarbons, and biomarkers; and statistical analysis and petroleum fingerprinting of soil data to apportion heavy and mid-distillate components of the TPH that exceed the site cleanup goal. The approach was incorporated into the sampling and analysis plan for the site. Following soil sample and data acquisition, Paul managed data analysis and source apportionment.

U.S. Navy – NAVFAC Mid-Atlantic, Naval Station Newport, groundwater discharge to surface water investigation, Middletown, Rhode Island. Paul served as project hydrogeologist and developed an investigation approach that incorporated aerial infrared imaging, focused porewater sampling, and a vertical tracer study to evaluate groundwater discharge to an estuary. The approach was incorporated into the draft thermal imaging and vertical tracer testing work plan.

Confidential client – former New York air brake manufacturing facility, post-closure operations, maintenance, and monitoring, Watertown, New York. Paul was the project manager for ongoing operations, maintenance, and monitoring (OM&M) of a former manufacturing facility in the 19th year of a 30-year post-closure OM&M program. He managed project tasks, budget, and invoicing. Technical tasks included evaluation of groundwater elevation and chemical data to assess the long-term effectiveness of a groundwater pump and treat system that was installed to remove and prevent off-site transport of volatile organic compounds (VOCs) in groundwater. Paul prepared Annual Groundwater Monitoring Reports that presented findings from the data evaluation to the New York State Department of Environmental Conservation (NYSDEC), and prepared and submitted to NYSDEC a Periodic Review Report that summarized the protectiveness of engineering controls operated and maintained at the site during the previous three years.

Confidential client – former Henry Harris Landfill, remedial investigation and remedial action work plan development, Harrison Township, New Jersey. As the project geologist and task manager, Paul developed a conceptual site model for a former sanitary landfill site that incorporated understanding of the site hydrogeology, contaminant sources, and contaminant distribution to identify data gaps in completing the site remedial investigation (RI). He managed field activities to address data gaps with the RI, which included evaluation of groundwater-surface water interactions, installation of monitoring wells, and targeted soil sampling at soil-related areas of concern. Paul prepared a subsequent Remedial Action Work Plan for soil, groundwater, and surface water at the site, which incorporated the landfill closure plan and proposed Monitored Natural Attenuation (MNA) to address impacts to groundwater. Following implementation of a quarterly groundwater monitoring program, multiple lines of evidence in support of MNA as an effective remedy for groundwater were presented in a Groundwater Remedial Action Report.

Ingersoll Rand – manufacturing facility, pilot and full-scale bioremediation implementation, Hamilton, New Jersey. As project geologist**,** Paul managed and provided field oversight of a full-scale enhanced in situ bioremediation (EISB) remedy to address elevated concentrations of chlorinated VOCs in shallow groundwater at an active manufacturing facility. The full-scale remedy included delivery of emulsified vegetable oil (EVO), ZVI, and KB-1 Plus® microbial culture to outdoor and indoor injection locations. The full-scale remedy was implemented following the completion of a field-scale EISB pilot study that included delivery of amendments under pressure and gravity-fed conditions. Prior to the full-scale EISB remedy, a Groundwater Remedial Action Workplan was prepared that summarized the remedial investigation progress, results of the field pilot study, and scope of work for implementation of the full-scale remedy.

Ingersoll Rand – former manufacturing facility, remedial investigation and conceptual site model refinement, Phillipsburg, New Jersey. Paul served as the field geologist and task manager for the drilling, geophysical logging, packer testing, and construction of monitoring wells in a karst subsurface. Coordinated drilling, investigation-derived waste, and geophysical logging/packer testing subcontractors that included managing changes to the schedule based on variability in subsurface conditions. Monitoring well construction was based on the analytical results for(VOCs in groundwater samples collected from multiple depth intervals within each borehole. Dual or triplet monitoring wells were installed at multiple locations to characterize VOCs in groundwater with depth and provide data on VOC concentrations at the water table (shallow well) for evaluation of potential vapor intrusion.

In addition, Paul analyzed and summarized approximately 20 years of groundwater gauging and analytical data from approximately 80 monitoring and recovery wells at this 383-acre site as part of the conceptual site model development and refinement. Groundwater levels, fracture orientations, chlorinated VOC concentrations, and light nonaqueous phase liquid (LNAPL) extent data were evaluated as part of the conceptual site model development.

BRIAN FITZPATRICK, CHMM

Corporate Director, Health and Safety

EDUCATION

M.P.A., Environmental Policy, Syracuse University
B.S., Environmental Science, University of Massachusetts-Amherst
A.S., Chemistry, Valley Forge Military Junior College
Commissioned Officer, United States Army

AWARDS

Presidents Club Award (one million hours worked without a recordable injury), Cabot Corporation
Chancellors Award for Excellence, Syracuse University

Brian ensures the work we do for our clients is done safely – knowing this reduces costs, improves service quality and site conditions, and ultimately protects our clients' reputations. In addition to building the Haley & Aldrich Health & Safety (H&S) culture, Brian is hands-on with clients to help improve their and their partners' safety cultures.

He has extensive expertise in the Occupational Safety and Health Administration (OSHA) general industry, process safety management, and construction safety programs. He is an active member of the Alliance of Hazardous Materials Professionals and the New England chapter of the Academy of Certified Hazardous Materials Managers.

Brian knows an organization's success is predicated on empowering its people to safely work within the complex, living processes in which they operate. He is a student of human factors in the workplace, of the phenomena of human error and drift into failure, and of the safety applications of Lean techniques.

RELEVANT PROJECT EXPERIENCE

Haley & Aldrich, Inc., Burlington, Massachusetts. As Chief Health and Safety Officer, Brian has led and facilitated the development and implementation of corporate health and safety (H&S) improvement plans to enhance compliance and improve H&S performance. In Brian's time with Haley & Aldrich, Inc., the company has realized dramatic improvement on H&S goals and in Key Performance Indicators. Brian is responsible for developing a risk competence culture, where our staff are empowered to look for and engage to address risk before anyone is injured. Brian oversees the development, implementation and continuous improvement of all H&S programs for the company. Additional responsibilities include:

- Developing a safety culture through incident reporting, root cause analysis, behavior-based safety, hazard recognition and risk assessment, communication, and developing leaders;

- Monitoring proposed and existing SH&E regulations and legislation to determine their impact on operations and to ensure continued compliance;
- Overseeing the safety, industrial hygiene, and toxicology programs for over 600 staff members engaged in remediation, construction, health and safety, consulting, and general office work across 28 offices in the United States and on assignment to international project sites;
- Continuously seeks to improve H&S performance as measured by the OSHA Incident Rating (IR) and Worker's Compensation Experience Modification Rating (EMR), as well as Leading Indicators developed with the management team; and
- Participating in the corporate audit program as an auditor or lead auditor;

Energy Client, California. As Chief Health and Safety Officer, Brian led and facilitated the Alliance Partnership Safety Council in 2017, is still an active contributor to the council, and hosts routine contractor safety forums for the client. Brian is actively involved in the development and implementation of program safety, health, and environmental (SH&E) plans to ensure safe operations on project sites. Brian developed permits and Health and Safety Plans for large projects and routinely audits the site safety. Additional responsibilities include:

- Driving reporting and behavior-based safety initiatives to support our internal safety culture and developing monthly summary reports to illustrate performance to our client.
- Develop, assess and continuously improve site safety plans and practices, including specific safety protocols for working safely over and around water.
- Worked as an extension of the client's organization to provide assurance that the remedy was completed safely and consistent with client-specific requirements.
- Support on-site safety personnel in ensuring the health and safety of the general public, our staff, and our sub-contracted employees.
- Audits and visits sites to ensure compliance with our internal policies and client-specific requirements.

Energy Client, Ohio. As Chief Health and Safety Officer, Brian supports the project team in developing and executing client and project specific health and safety measures, such as a site specific Health and Safety Plan, Job Hazard Analyses, Industrial Hygiene program, and site specific training. Brian also routinely visits the site to assess current practices and condition and to ensure continuous improvement. Additional responsibilities include:

- Develop, assess, and continuously improve site safety plans and practices, including specific safety protocols to comply with supplemental EH&S requirements such as the Duke Health and Safety Handbook, Environmental Supplemental, and EHS Keys to Life.
- Develop, assess, and continuously improve site safety plans and practices to address the risks associated with the work being performed on site, as well as the environmental conditions and simultaneous operations, including trenching and excavation, hot work, work over and near water, heavy equipment, HAZWOPER, etc.
- Worked as an extension of the client's organization to provide assurance that the remedy was completed safely and consistent with client-specific requirements.
- Support on-site safety personnel in ensuring the health and safety of the general public, our staff, and our sub-contracted employees.
- Audits and visits site to ensure compliance with our internal policies and client-specific requirements.

Asbestos Inspector License (June 2018 and renewed Annually)

ENGINEERING EXPERIENCE

Brian has over 23 years of experience serving as a project engineer on a variety of real estate development projects. His project experience has included monitoring field investigations, performing construction oversight, performing due diligence, engineering analyses, performing geotechnical analyses, developing geotechnical recommendations, and preparing geotechnical reports, and project specifications.

As a project engineer, in addition to providing engineering design support, Brian has managed and participated in many field service activities. Field work has included construction monitoring and documentation of contractors' deep and shallow foundation-related construction, including slurry walls, caissons, pile driving, pile cap installation, earthwork, backfilling and compaction, installation of soldier pile and wood lagging support systems, installation of tie backs and rock anchors, reading inclinometers, conducting in-place field unit weight tests, tie-back load testing, seismograph installation, monitoring, and evaluating, and preparation of footing bearing surfaces. Other responsibilities have included site development activities, including placement of utilities and subgrade preparation for roads; observations and testing to determine that work is completed in compliance with contract documents; on-site soil management; sampling of soil and groundwater for chemical laboratory testing and conducting in situ field screening; maintenance of job records including pile driving logs, results of field density tests, records of caisson and footing installations; preparation of daily field reports; in contact with key personnel; and resolution of field related problems.

RELEVANT PROJECT EXPERIENCE

Fenway Center. Project engineer for the construction of laboratory space constructed over the Massachusetts Turnpike, two residential towers, and the Fenway Area consisting of 8 to 14 stories and multiple levels below grade. Construction responsibilities included coordination of construction monitoring, observing Support of Excavation (SOE) and footing installation, coordination of installation of Slurry Walls, assisting with project management, reviewing

weekly field construction reports, reviewing, and responding to geotechnical design submittals, and attending project meetings.

Massachusetts Institute of Technology, The Schwarzman College of Computing Project. Project Engineer for a new approximately eight stories above ground and one story below ground building and contains approximately 189,000 gross square feet (gsf) of mixed-use space for: offices, research laboratory, academic, event, collaboration, meetings, café, convening, and associated services. Responsibilities included coordination of construction monitoring, observing SOE, micropile, and Caisson Installation, assisting with project management, reviewing weekly field construction reports, reviewing, and responding to geotechnical design submittals, and attending project meetings. Brian also was the main point of contact for construction-related issues with the project owner and contractors.

Massachusetts Institute of Technology, Graduate Housing Project. Project Engineer for construction of two new five- to eight- story residential buildings with a total gross floor space of approximately 261,000 square feet (sq ft). Responsibilities included coordination of construction monitoring, observing SOE, micropile, and Caisson Installation, assisting with project management, reviewing weekly field construction reports, reviewing and responding to geotechnical design submittals, and attending project meetings. Brian was the main point of contact for construction-related issues with the project owner and contractors and conducted Health & Safety Audits of Haley & Aldrich personnel during construction.

Edwards Vacuum Project. Project Engineer for a new single-level 101,000-sq ft building with a mezzanine located in the south portion of the proposed building. Responsibilities included developing subsurface exploration program coordination, writing the Geotech Report, and coordinating field staff to observe construction activities, including mass excavation of approximately 100,000 cubic yards of soil, installation of spread footing, and construction dewatering. Brian assisted with project management, reviewing weekly field construction reports, reviewing, and responding to geotechnical design submittals, and attending project meetings. Brian was the main point of contact for construction-related issues with the project owner and contractors and conducted Health & Safety Audits of Haley & Aldrich personnel during construction.

St. Elizabeth's Hospital – **West Campus Forensic Evaluations, Washington, D.C.** Project Engineer for forensic evaluations on the adaptive reuse of former hospital buildings. Responsibilities included coordination of a field exploration program, including test borings and test pits to obtain subsurface information for project design and construction, overseeing multiple field personnel and subcontractors, assisting with project management, reviewing subcontractors invoices, reviewing and summarizing subsurface data, and writing data reports.

NICOLE MOONEY

Assistant Project Manager | Geologist

EDUCATION

B.S., Earth and Environmental Science with a minor in Oceanography, University of Michigan-Ann Arbor

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)
8-Hour OSHA Hazardous Waste Worker Refresher Training (29 CFR 1910.120)
8-Hour OSHA HAZWOPER Supervisor for Construction Training
OSHA 10-Hour Construction Safety
OSHA 30-Hour Construction
NYC SST-307 8-Hour Fall Prevention for Construction
NYC SST-302 2-Hour Drug and Alcohol Awareness for Construction
DOT Hazmat Employee & RCRA Hazardous Waste Generator Training
American Red Cross Adult First Aid/CPR/AED Training and Bloodborne Pathogens Training
USACE Construction Quality Management for Contractors
Level I Antiterrorism Awareness Training

Nicole is a geologist with over four years of experience in site characterization and investigation, subsurface investigations, preparation of technical reports and work plans, and data collection and analysis. She has extensive experience conducting Phase I Environmental Site Assessments (ESAs), Phase II Environmental Site Investigations (ESIs), and other aspects of environmental due diligence. She has experience with preparation and overseeing execution of remedial investigation and actions at sites within the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) and the New York City Mayor's Office of Environmental Remediation (NYCOER). She has performed soil, groundwater, and soil vapor sampling events and has drafted various site investigation plans and reports.

RELEVANT PROJECT EXPERIENCE

Environmental Investigation, Site Characterization, and Remediation

340 Myrtle Development LLC, 340 Myrtle Avenue, Brooklyn, New York. As a project geologist, Nicole coordinated and managed implementation of the Remedial Action Work Plan (RAWP) at the approximately 8,828 square foot site enrolled in the NYSDEC BCP. The remedial action included excavation and off-site disposal of soil, installation of an active sub-slab depressurization system (including cover system), installation of injection wells, and reinstallation of permanent monitoring wells for post-remedy groundwater monitoring. Nicole was responsible for the preparation of the Final Engineering Report (FER) and the Site Management Plan (SMP) which are undergoing review by the NYSDEC. Construction for the new development is currently ongoing and, when completed, the site will be improved with a new eight-story mixed-use commercial and residential building with a full cellar level.

B Contractors Group, LLC, 711-713 East 214th Street, Bronx, New York. As a project geologist, Nicole was responsible for coordinating and managing the implementation of the NYCOER-approved Remedial Action Plan (RAP) and preparing the Remedial Closure Report (RCR) for the approximately 6,252 square foot site. The redevelopment included a new eight-story residential building with a full cellar level.

650 Southern Blvd Bronx LLC, 650 Southern Boulevard, Bronx, New York. As a project geologist, Nicole was responsible for preparation and implementation of the Remedial Investigation Work Plan (RIWP), which included the installation of eleven soil borings, seven permanent groundwater monitoring wells (some of which extended into

bedrock), and seven soil vapor points, and the collection of soil, groundwater, and soil vapor samples. Nicole was also responsible for preparation of the Citizen Participation Plan (CPP), Remedial Investigation Report (RIR), and RAWP. The site is in the pre-construction phase.

Degraw Holdings LLC, 563 Sackett Street Site, Brooklyn, New York. As a project geologist, Nicole was responsible for due diligence during acquisition, including preparation of the Phase I ESA and Limited Phase II ESI. The initial Limited Phase II ESI and delineation sampling have been completed and the Limited Phase II ESI Delineation Report, Brownfield Cleanup Agreement (BCA) Major Amendment Application, and Supplemental Remedial Investigation Report (SRIR) are being drafted.

291 Wallabout Realty LLC, 291 Wallabout Street, Brooklyn, New York. As a project geologist, Nicole was responsible for the due diligence during acquisition of the property, including preparation of a Phase I ESA, Phase II ESI, BCP Application, and RIWP.

401 West 207th Realty LLC, 401 West 207th Street, New York, New York. As a project geologist, Nicole was responsible for oversight during implementation of the RAWP under the NYSDEC BCP. During remediation, Nicole observed and documented the excavation and proper disposal of on-site soil required for installation of the foundational elements. Nicole oversaw the proper cleaning and removal of two underground storage tanks encountered during excavation.

BCP Applications and Remedial Investigation Work Plans for NYSDEC. Nicole has prepared several BCP Application packages for various clients in New York State, which requires reviewing the site's history, including any previous investigation reports available, to assist with entry into the BCP to be remediated and redeveloped in accordance with applicable NYSDEC requirements. Nicole also prepares an RIWP to be submitted to the NYSDEC either concurrently or following submittal of the BCP Application for full investigation of the site to facilitate proper remedial action.

Excavation Oversight and CAMP Monitoring, Various Sites, Bronx, Brooklyn, and Queens, New York. As a project geologist, Nicole completed remedial oversight for several projects in the NYCOER cleanup program and NYSDEC BCP. Her responsibilities included excavation oversight, air monitoring, truck logging during off-site disposal of excavated materials, collection of endpoint and/or documentation samples, vapor barrier inspection, and oversight of installation of post-remedy groundwater monitoring wells.

Multiple Clients, Phase I ESAs and Due Diligence, Multiple Locations in New York. As a project geologist, Nicole completed several Phase I ESAs for buyers of properties in New York. She has extensive experience completing site reconnaissance and reviewing historical site documentation to identify potential environmental concerns at properties.

Multiple Clients, Phase II ESIs, Multiple Locations in New York. As a project geologist, Nicole conducted several Phase II ESIs for projects in New York, including oversight of the installation of soil borings, groundwater monitoring wells, and soil vapor points and the collection of soil, groundwater, and soil vapor samples. She assisted with the development of sampling plans based on previous environmental investigations and due diligence findings.

Former Grissom Air Force Base, Kokomo, Indiana. As a project geologist, Nicole was responsible for coordinating and performing quarterly groundwater sampling and/or Land Use Control (LUC) inspections in accordance with the deeds and Decision Documents for nine sites (FT001, FT002, SS190, SS035, SS053, SS058, LF003, LF004, and SS049) located on the 2,722-acre former Grissom Air Force Base under the Base Realignment and Closure (BRAC)/Environmental Construction Optimization Services (BECOS) program. Nicole was also responsible for the coordination and implementation of a Data Gap Investigation (DGI) at the SS035, SS053, and SS058 sites and a Site Investigation (SI) at the former Navy Skeet Range (site SR406). Nicole prepared LUC Inspection reports, Annual Groundwater Monitoring Reports, an SI Report, a DGI Report, and the Five-Year Review Report for this work.

KATHERINE R. MILLER

Senior Project Manager

EDUCATION

BS, Chemistry, University of Arizona

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120 and 40 CFR 265.16)
8-Hour OSHA Refresher Training (29 CFR 1910.120)
Level IV Data Validation Training

AWARDS

Pinnacle Award, 2009
Pathfinder Award, 2014

In her 10+ years at Haley & Aldrich, Katherine has worked on soil and groundwater environmental investigations and the preparation of environmental reports for private, industrial, and government-based project clients. She is a qualified Data Validator capable of performing various levels of validation on laboratory water quality data according to US Environmental Protection Agency (EPA) National Functional Guidelines and to U.S. Department of Energy radiochemical guidelines. She also has experience designing and maintaining databases for project-specific needs.

Project management responsibilities for a $1.5 million per year stormwater project include preparation of subcontractor bids and contracts; preparation of cost estimates, proposals, and reports; coordination of field testing programs; and interpretation of chemical testing results. She has interacted with local regulatory agencies.

RELEVANT PROJECT EXPERIENCE

Confidential Aerospace Manufacturer, Groundwater Monitoring, Western U.S. Katherine served as project manager for the comprehensive stormwater management program. Responsibilities included project finance management and data management including quality assurance/quality control (QA/QC) and interpretation of chemical testing results. Evaluated QA/QC of groundwater quality data, prepared reports and managed data for the site. Performed data validation of quarterly water quality data from over 300 locations according to EPA National Functional Guidelines and to DOE radiochemical guidelines over a six-year period. Also, responsible for updating and maintaining the integrity of over 200,000 records during that time period. Assisted with management of sampling, analysis, and reporting of constituents of concern, ensured compliance with post-closure permit monitoring and reporting requirements, Data Management Plan, QAPP, and Environmental Data Management System, and ensured and maintained 100% compliance with the QAPP and Data Management Plan. Additionally, prepared groundwater data summaries for proposed extraction wells including comparisons to site NPDES outfall limits in support of Groundwater Interim Measures planning.

Asarco Hayden Plant Site, Hayden, Arizona. Katherine assisted with field preparation, QA/QC of analytical data, and data validation as part of the Remedial Investigation/Feasibility Work Plan including soil, sediment, air, process water, surface water, and stormwater.

Former MGP Site, California. Katherine assisted with report preparation, QA/QC of soil and/or groundwater quality data, and data validation for the investigation of three large former MGP sites in an urban, residential setting; includes over 200 residential properties.

General Manufacturing, Leitchfield, Kentucky. Katherine assisted with report preparation, QA/QC of soil and/or groundwater quality data, and data validation for a soil and groundwater RCRA site. Groundwater monitoring is conducted annually at more than 50 locations for volatile organic compounds (VOCs), including 1,4-dioxane and semi-volatile organic compound (SVOCs).

Skyworks Solutions, Inc., Newbury Park, California. Katherine assisted with report preparation, QA/QC of soil and/or groundwater quality data, and data validation at groundwater remediation site. She monitored for VOCs, including 1,4-dioxane, and inorganic chemicals, including hexavalent chromium.

Teledyne Scientific Company, Thousand Oaks, California. Katherine assisted with report preparation for this groundwater assessment site. Monitored natural attenuation has been instituted as the long-term site remedy.

Port of Redwood City, Permitting and Sediment Characterization, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Kiewit Infrastructure West, Sediment Quality Study, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Aeolian Yacht Harbor, Permitting, Eel Grass Conservation and Sediment Characterization, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

Marin County, Paradise Cay Permitting and Sediment Characterization, California. Katherine assisted with report preparation, QA/QC of sampling data, and data validation.

APPENDIX D
Excavation Work Plan

APPENDIX D – EXCAVATION WORK PLAN (EWP)

D-1 Notification

At least 15 days prior to the start of any activity that is anticipated to encounter remaining contamination or breach or alter the 4001 4th Avenue Site's (the Site) cover system, the Site owner or their representative will notify the New York State Department of Environmental Conservation (NYSDEC) contacts listed in the table below (Table I). The information in Table I will be updated as necessary to provide accurate contact information.

Table I: Notifications*	
Shawn Roberts, NYSDEC Case Manager	518-402-9799, shawn.roberts@dec.ny.gov
David Gardner, NYSDEC Supervisor	518-402-9818, david.gardner@dec.ny.gov
Christopher Budd, NYSDOH Case Manager	518-402-1769, christopher.budd@health.ny.gov
Note: **Notifications are subject to change and will be updated as necessary.*	

This notification will include:

- A detailed description of the work to be performed, including the location and areal extent of excavation, plans/drawings for Site re-grading, intrusive elements or utilities to be installed below the soil cover, estimated volumes of contaminated soil to be excavated, any modifications of truck routes, and any work that may impact an engineering control (EC);
- A summary of environmental conditions anticipated to be encountered in the work areas, including the nature and concentration levels of contaminants of concern, the potential presence of grossly contaminated media, and plans for any pre-construction sampling;
- A schedule for the work, detailing the start and completion of all intrusive work;
- A summary of the applicable components of this EWP;
- A statement that the work will be performed in compliance with this EWP, 29 CFR 1910.120 and 29 CFR 1926 Subpart P;
- A copy of the contractor's health and safety plan (HASP), in electronic format, if it differs from the HASP provided in Appendix B of the Interim Remedial Measures Work Plan (IRMWP);
- Identification of disposal facilities for potential waste streams; and,
- Identification of sources of any anticipated backfill, along with the required request to import form and all supporting documentation including, but not limited to, chemical testing results.

The NYSDEC project manager will review the notification and may impose additional requirements for the excavation that are not listed in this EWP.

D-2 Soil Screening Methods

Visual, olfactory, and instrument-based (e.g., photoionization detector) soil screening will be performed during all excavations into known or potentially contaminated material (remaining contamination) or a breach of the cover system. A qualified environmental professional (QEP) as defined in Title 6 of the

New York Codes, Rules and Regulations (NYCRR) Part 375, a professional engineer (P.E.) who is licensed and registered in New York State, or a qualified person who directly reports to a P.E. who is licensed and registered in New York State will perform the screening. Soil screening will be performed when invasive work is done and will include all excavation and invasive work performed during development, such as excavations for foundations and utility work, after issuance of the Certificate of Completion.

Soils will be segregated based on previous environmental data and screening results into material that requires off-site disposal and material that requires testing to determine if the material can be reused on the Site as soil beneath a cover or if the material can be used as cover soil. Further discussion of off-site disposal of materials and on-site reuse is provided in Sections B-6 and B-7 of this Appendix.

D-3 Soil Staging Methods

Soil stockpiles will be continuously encircled with a berm and/or silt fence. Hay bales will be used as needed near catch basins, surface waters, and other discharge points. Stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced. Stockpiles will be inspected at a minimum of once each week and after every storm event. Results of inspections will be recorded in a logbook maintained at the site and available for inspection by the NYSDEC.

D-4 Materials Excavation and Load-Out

A QEP as defined in 6 NYCRR Part 375, a P.E. who is licensed and registered in New York State, or a qualified person who directly reports to a P.E. who is licensed and registered in New York State will oversee all invasive work and the excavation and load-out of all excavated material.

The owner of the property and remedial party (if applicable) and its contractors are responsible for the safe execution of all invasive and other work performed under this EWP. The presence of utilities and easements on the Site will be investigated by the QEP. It will be determined whether a risk or impediment to the planned work under this IRMWP is posed by utilities or easements on the Site. A Site utility stakeout will be completed for all utilities prior to any ground intrusive activities at the Site.

Loaded vehicles leaving the Site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate federal, state, local, and New York State Department of Transportation (NYSDOT) requirements (and all other applicable transportation requirements).

A truck wash will be operated on the Site, as appropriate. The QEP will be responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the Site until the activities performed under this section are complete. Truck wash waters will be collected and disposed of off-site in an appropriate manner. Locations where vehicles enter or exit the Site shall be inspected daily for evidence of off-site soil tracking.

The QEP will be responsible for ensuring that all egress points for truck and equipment transport from the Site are clean of dirt and other materials derived from the Site during intrusive excavation activities. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived materials. Material accumulated from the street cleaning and egress cleaning activities will be disposed off-site at a permitted landfill facility in accordance with all applicable local, state, and federal regulations.

D-5 Materials Transport Off-Site

All transport of materials will be performed by licensed haulers in accordance with appropriate local, state, and federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded. Material transported by trucks exiting the Site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

Truck transport routes are as follows: Trucks will enter the Site from 40th Street and exit by turning right onto 40th Street from the designated point of egress along the northeastern boundary of the Site. Alternatively, trucks will enter the Site from 4th Avenue and exit by turning right onto 4th Avenue from the designated point of egress along the northwestern boundary of the Site. All trucks loaded with Site materials will exit the vicinity of the Site using an approved truck route. This is the most appropriate route and takes into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city-mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport.

Egress points for truck and equipment transport from the Site will be kept clean of dirt and other materials during Site remediation and development. Trucks will be prohibited from stopping and idling in the neighborhood outside the Site. Queuing of trucks will be performed on-site in order to minimize off-site disturbance. Off-site queuing will be prohibited.

D-6 Materials Disposal Off-Site

All material excavated and removed from the Site will be treated as contaminated and regulated material and will be transported and disposed of off-site in a permitted facility in accordance with all local, state, and federal regulations. If disposal of material from this Site is proposed for unregulated off-site disposal (i.e., clean soil removed for development purposes), a formal request with an associated plan will be made to the NYSDEC project manager. Unregulated off-site management of materials from this Site will not occur without formal NYSDEC project manager approval.

Off-site disposal locations for excavated soils will be identified in the pre-excavation notification. This will include estimated quantities and a breakdown by class of disposal facility if appropriate [e.g., hazardous waste disposal facility, solid waste landfill, petroleum treatment facility, construction and demolition (C&D) debris recovery facility]. Actual disposal quantities and associated documentation will be reported to the NYSDEC in the Periodic Review Report (PRR). This documentation will include, but will not be limited to: waste profiles, test results, facility acceptance letters, manifests, bills of lading and facility receipts.

Non-hazardous historic fill and contaminated soils taken off-site will be handled consistent with 6 NYCRR Parts 360, 361, 362, 363, 364 and 365. Material that does not meet Unrestricted Use Soil Cleanup Objectives (UUSCOs) is prohibited from being taken to a New York State C&D debris recovery facility (6 NYCRR Subpart 360-15 registered or permitted facility).

D-7 Materials Reuse On-Site

The QEP as defined in 6 NYCRR Part 375 will ensure that procedures defined for materials reuse in this IRMWP are followed and that unacceptable material (i.e., contaminated) does not remain on the Site. Contaminated on-site material, including historic fill and contaminated soil, that is acceptable for reuse on the Site will be placed below the demarcation layer or impervious surface, and will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines.

Proposed materials for reuse on the Site must be sampled for full suite analytical parameters including per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. The sampling frequency will be in accordance with Division of Environmental Remediation (DER)-10 Table 5.4(e)10 unless prior approval is obtained from the NYSDEC project manager for modification of the sampling frequency. The analytical results of soil/fill material testing must meet the site use criteria presented in NYSDEC DER-10 Appendix 5 – Allowable Constituent Levels for Imported Fill or Soil for all constituents listed, and the NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances April 2023 guidance values. Approvals for modifications to the analytical parameters must be obtained from the NYSDEC project manager prior to the sampling event.

Soil/fill material for reuse on the Site will be segregated and staged as described in Sections B-2 and B-3 of this EWP. The anticipated size and location of stockpiles will be provided in the 15-day notification to the NYSDEC project manager. Stockpile locations will be based on the location of Site excavation activities and proximity to nearby Site features. Material reuse on the Site will comply with requirements of NYSDEC DER-10 Section 5.4(e)4. Any modifications to the requirements of DER-10 Section 5.4(e)4 must be approved by the NYSDEC project manager.

Any demolition material proposed for reuse on the Site will be sampled for asbestos and the results will be reported to the NYSDEC for acceptance. Concrete crushing or processing on the Site will not be performed without prior NYSDEC approval. Organic matter (wood, roots, stumps, etc.) or other solid waste derived from clearing and grubbing of the Site will not be reused on the Site.

D-8 Fluids Management

All liquids to be removed from the Site, including but not limited to, excavation dewatering, decontamination waters and groundwater monitoring well purge and development waters, will be handled, transported, and disposed of off-site at a permitted facility in accordance with applicable local, state, and federal regulations. Dewatering, purge, and development fluids will not be recharged back to the land surface or subsurface of the Site, and will be managed off-site, unless prior approval is obtained from NYSDEC.

Discharge of water generated during large-scale construction activities to surface waters (i.e., a local pond, stream, or river) will be performed under a State Pollutant Discharge Elimination System (SPDES) permit.

D-9 Backfill from Off-Site Sources

All materials proposed for import onto the Site will be approved by the QEP, as defined in 6 NYCRR Part 375, and will be in compliance with provisions in this IRMWP prior to receipt at the Site. A Request to Import/Reuse Fill or Soil form, which can be found at

http://www.dec.ny.gov/regulations/67386.html, will be prepared and submitted to the NYSDEC project manager allowing a minimum of five business days for review. A copy of the form is presented in Appendix F of the IRMWP.

Material from industrial sites, spill sites, other environmental remediation sites, or potentially contaminated sites will not be imported to the Site.

All imported soils will meet the backfill and cover soil quality standards established in 6 NYCRR 375-6.7(d) and DER-10 Appendix 5 for residential use. Based on an evaluation of the land use, protection of groundwater, and protection of ecological resources criteria, the resulting soil quality standards meet Track 1 UUSCOs in all areas of the Site except the Track 4 area. Soils that meet "general" fill requirements under 6 NYCRR Part 360.13, but do not meet backfill or cover soil objectives for this Site, will not be imported onto the Site without prior approval by the NYSDEC project manager. Soil material will be sampled for the full suite of analytical parameters, including PFAS and 1, 4-dioxane. Solid waste will not be imported onto the Site.

Trucks entering the Site with imported soils will be securely covered with tight-fitting covers. Imported soils will be stockpiled separately from excavated materials and covered to prevent dust releases.

D-10 Stormwater Pollution Prevention

Barriers and hay bale checks will be installed and inspected once a week and after every storm event, as necessary. Results of inspections will be recorded in a logbook maintained at the Site and available for inspection by the NYSDEC. All necessary repairs shall be made immediately.

Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. All undercutting or erosion of the silt fence toe anchor shall be repaired immediately with appropriate backfill materials. Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

Erosion and sediment control measures identified in the IRMWP shall be observed to ensure that they are operating correctly. Where discharge locations or points are accessible, they shall be inspected to ascertain whether erosion control measures are effective in preventing significant impacts to receiving waters. Silt fencing or hay bales will be installed around the entire perimeter of the construction area.

D-11 Excavation Contingency Plan

If underground tanks or other previously unidentified contaminant sources are found during post-remedial subsurface excavations or after development-related construction, excavation activities will be suspended until sufficient equipment is mobilized to address the condition. The NYSDEC project manager will be promptly notified of the discovery.

Sampling will be performed on product, sediment, surrounding soils, etc. as necessary to determine the nature of the material and the proper disposal method. Chemical analysis will be performed for a full list of analytes (Target Analyte List [TAL] metals, Target Compound List [TCL] volatiles and semi-volatiles [including 1,4-dioxane], TCL pesticides and polychlorinated biphenyls [PCBs], and PFAS), unless the Site history and previous sampling results provide sufficient justification to limit the list of analytes. In this

case, a reduced list of analytes will be proposed to the NYSDEC project manager for approval prior to sampling. Any tanks will be closed as per NYSDEC regulations and guidance.

Identification of unknown or unexpected contaminated media identified by screening during invasive site work will be promptly communicated by phone within two hours to NYSDEC's project manager. Reportable quantities of petroleum product will also be reported to the NYSDEC spills hotline. These findings will be also included in applicable reports.

D-12 Community Air Monitoring Plan (CAMP)

A figure showing the location of air sampling stations based on generally prevailing wind conditions will be provided as part of the notification process and to the NYSDEC during daily field reports. These locations will be adjusted on a daily or more frequent basis based on actual wind directions to provide one upwind and at least one downwind monitoring station. Exceedances of action levels listed in the CAMP will be reported to NYSDEC and New York State Department of Health (NYSDOH) project managers.

D-12A: Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures

When work areas are within 20 feet of potentially exposed populations or occupied structures, the continuous monitoring locations for volatile organic compounds (VOCs) and particulates must reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. The use of engineering controls such as vapor/dust barriers, temporary negative-pressure enclosures, or special ventilation devices will be considered to prevent exposures related to work activities and to control dust and odors. Consideration will be given to implementing the planned activities when potentially exposed populations are at a minimum, such as during weekends or evening hours in non-residential settings.

- If total VOC concentrations opposite the walls of occupied structures or next to intake vents exceed 1 part per million, monitoring may occur within the occupied structure(s) pending access. Depending upon the nature of contamination, chemical-specific colorimetric tubes of sufficient sensitivity may be necessary for comparing the exposure point concentrations with appropriate pre-determined response levels (response actions should also be pre-determined). Background readings in the occupied spaces must be taken prior to commencement of the planned work. Any unusual background readings should be discussed with NYSDOH prior to commencement of the work.
- If total particulate concentrations opposite the walls of occupied structures or next to intake vents exceed 150 micrograms per cubic meter, work activities will be suspended until controls are implemented and are successful in reducing the total particulate concentration to 150 micrograms per cubic meter or less at the monitoring point.
- Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions should be pre-determined, as necessary, for each site.

D-13 Odor Control Plan

This odor control plan is capable of controlling emissions of nuisance odors on-site and off-site. If nuisance odors are identified at the Site boundary, or if odor complaints are received, work will be halted, and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. The NYSDEC and NYSDOH will be notified of all odor events and of any other complaints about the project. Implementation of all odor controls, including the halt of work, is the responsibility of the remedial party's Remediation Engineer, and any measures that are implemented will be discussed in the PRR.

All necessary means will be employed to prevent on- and off-site nuisances. At a minimum, these measures will include: (a) limiting the area of open excavations and size of soil stockpiles; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soils. If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-site disposal; (e) use of chemical odorants in spray or misting systems; and, (f) use of staff to monitor odors in surrounding neighborhoods.

If nuisance odors develop during intrusive work that cannot be corrected, or where the control of nuisance odors cannot otherwise be achieved due to on-site conditions or close proximity to sensitive receptors, odor control will be achieved by sheltering the excavation and handling areas in a temporary containment structure equipped with appropriate air venting/filtering systems.

D-14 Dust Control Plan

Particulate monitoring must be conducted according to the CAMP provided in Section B-12. If particulate levels at the Site exceed the thresholds listed in the CAMP or if airborne dust is observed on the Site or leaving the Site, the dust suppression techniques listed below will be employed. The remedial party will also take the measures listed below to prevent dust production on the Site.

A dust suppression plan that addresses dust management during invasive on-site work will include, at a minimum, the items listed below:

- Dust suppression will be achieved using a dedicated on-site water truck for road wetting. The truck will be equipped with a water cannon capable of spraying water directly onto off-road areas including excavations and stockpiles.
- Clearing and grubbing of larger areas will be done in stages to limit the area of exposed, unvegetated soils vulnerable to dust production.
- Gravel will be used on roadways to provide a clean and dust-free road surface.
- On-site roads will be limited in total area to minimize the area required for water truck sprinkling.

D-15 Other Nuisances

A plan for rodent control will be developed and utilized by the contractor prior to and during Site clearing and Site grubbing, and during all remedial work.

A plan will be developed and utilized by the contractor for all remedial work to ensure compliance with local noise control ordinances.

APPENDIX E
Resumes

JAMES BELLEW

Principal

EDUCATION

M.S., Environmental Geology, Queens College
B.S., Geology, Pre-Law, Environmental Science, Binghamton University

Urban Land Institute, Member, 2016
Business Council of New York, Member, 2018

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)
30-Hour OSHA Construction Safety and Heath
8-hour OSHA Site Supervisor Certification
OSHA Confined Space Entry Training Certification
Erosion and Sediment Control, New York, No. 006925
USDOT/IATA Training on the Shipping and/or Transportation of Hazardous Materials

James has a hands-on approach to every project. He believes that being present and putting himself into his clients' shoes is the best way to understand their needs. As a Principal, James's expertise includes due diligence, environmental risk development, building surveys, remedial investigations, remedial design, and technical oversight. Mr. Bellew has completed over 50 NYCOER E-Designation Sites and NYSDEC Brownfield Cleanup Program Sites which include preparation of all reports through to the certificate of completion and a certificate of occupancy.

Clients appreciate James' strategies from the inception of a project through closure under various regulatory programs nationwide. That comprehensive approach is what James loves the most about his job. He enjoys taking on complex projects and finding rational, cost-effective, remedial solutions.

RELEVANT PROJECT EXPERIENCE

Development, EPA Site RCRA-02-2009-7306, NYSDEC Site 243016, Former Port Mobil Terminal, Staten Island, New York. Principal responsible for the preparation of the feasibility study, preparation of the Interim Remedial Reports, completion of the Interim Remedial Measures, completion of the remedial investigation stages, continued execution of the Monitoring and Natural Attenuation Program, preparation of the Remedial Action Work Plan/Remedial Designs, and RCRA Closure procedures for the Port Mobil Terminal Site under an Environmental Protection Agency and New York State DEC Consent Order. The Site has a footprint of 240-Acres SF with a planned development for commercial/industrial uses.

Government, NYCDDC Shirley Chisholm Recreational Center, Brooklyn, New York. Principal for the project released by the New York City Department of Design and Construction, on behalf of the NYC Parks Department, for the design and construction of a new recreational center located at 3002 Foster Avenue in Brooklyn New York. Scope of services included execution of a Phase II Environmental Site Assessment, soil characterization, remedial oversight, geotechnical percolation testing and closure with the NYC Department of Environmental Protection.

Development's, New York State Superfund Site 224136, Former NuHart Plastics Site, New York State Superfund Site (NuHart West) and NYSDEC Brownfield Program Site C224287 (NuHart East), Brooklyn, New York. Principal for the preparation of the feasibility study, offsite investigation reports, RCRA (Resource Conservation and Recovery Act) Closure Work Plan, execution of the RCRA Closure, preparation of the Brownfield Cleanup Application (NuHart East), 100% Remedial Design, preparation of all BCP related work plans (NuHart East), coordination to vest the Site for 421-, Final Engineering Reports, RCRA Closure Reports, Site Management Plan, Remedial Memorandum and all community

outreach programs for a former plasticizer facility with on- and off-site pollutant concerns. Responsible for all remedial cost and alternative analysis with the client to bring the Site to a certificate of completion. NuHart is a high-profile Site that requires coordination with the New York State Department of Environmental Conservation (NYSDEC), the New York City Office of Environmental Remediation (NYCOER), local regulatory agencies, community stakeholders and local elected officials. Remediation included shipping off a majority of the Site soil for thermal desorption under a nonhazardous contained in determination for thermal treatment, erection of a negative pressure enclosure in OU-1, groundwater extraction and treatment, underground storage tank (UST) removal, ex-situ chemical soil mixing of Zero Valent Iron (OU-1), In Situ Injection of Zero Valent Iron (OU-2), containment walls (OU-1 and OU-2), In Situ Soil Stabilization and Solidification, and automated LNAPL recovery (OU-2). The NuHart East Site has completed the remediation and received the Certificate of Completion from the NYSDEC in 2023 and the NuHart West Site is receiving its Certificate of Completion in 2025 with an anticipated transition from a Class 2 to a Class 4 Inactive Hazardous waste Site.

Development, NYSDEC Site C224345, 101 Fleet Place, Brooklyn, New York. Principal responsible for the due diligence during acquisition, preparation of the Brownfield Cleanup Program Application, Change of Use Documents, BCA Amendments, remedial investigation, remedial action design (BCP and OER) and Final Engineering Report for the former bus depot Site under the New York State Brownfield Cleanup program and NYCOER E-Designation Programs (Air/Noise). The Site has a footprint of 20,000 SF with a planned development of a 21-story mixed use building with approximately 292 units which include affordable housing. This Site received a NYSDEC Certificate of Completion in 2024.

Development, NYSDEC Site C231150 644 East 14th Street, New York, New York. Principal responsible for the due diligence during acquisition, preparation of the Brownfield Cleanup Program Application, Change of Use Documents, BCA Amendments, remedial investigation, remedial action design and Final Engineering Report for the 644 East 14th Street Site under the New York State Brownfield Cleanup program. The Site has a footprint of 10,000 SF with a planned development of a 24-story mixed use building with approximately 196 units which include affordable housing. The Site received a certificate of completion from the NYSDEC in 2024.

Development, NYSDEC Site C224338 Former Garone Bros Auto Site, 352-362 Shepherd, Brooklyn, New York. Principal responsible for the due diligence during acquisition, preparation of the Brownfield Cleanup Program Application, Change of Use Documents, BCA Amendments, remedial investigation, remedial action design (BCP and OER) and Final Engineering Report for the former Garone Bros Auto Site under the New York State Brownfield Cleanup program and NYCOER E-Designation Programs (Air/Noise). The Site has a footprint of 10,000 SF with a planned development of a 7-story mixed use building with approximately 56 units which include affordable housing. The Site received a certificate of completion from the NYSDEC in 2024.

Development's, NYSDEC Sites C224369, C224348, Speedway Portfolio, Multiple Boroughs, New York. Principal responsible for the expedited due diligence during acquisition of 5 former Speedway Sites of Phase I ESA's and Limited Phase II ESI's, preparation of the Brownfield Cleanup Program Applications, Remedial Investigation Work Plans, Interim Remedial Measure Work Plans, Air/Noise Remedial Action Work Plans (NYCOER), remedial investigations, remedial action designs (BCP and OER), Final Engineering Reports and Site Management Plans. Five of the Sites including 808-834 Metropolitan (C224368), 210 Greenpoint Avenue (C224348) 1885 Atlantic (C224347), 2864 Atlantic (C224349) and 401 West 207th (C231151), were accepted into the NYSDEC Brownfield Cleanup program. The remedial actions for the Sites included a variety of approaches which consisting of in situ chemical treatment for groundwater, soil vapor extraction, excavation and dewatering removal and treatment. All of the Sites received a certificate of completion from the NYSDEC in 2023 and 2024.

Development, NYSDEC Site C203127, 138 Bruckner Boulevard, Bronx, New York. Principal responsible for the due diligence during acquisition, preparation of the Brownfield Cleanup Program Application, Change of Use Documents, coordination to vest the Site for 421-a, BCA Amendments, remedial investigation, remedial action design (BCP and OER) and Final Engineering Report for the former Zaro's Bakery Site under the New York State Brownfield Cleanup program and NYCOER E-Designation Programs (Air/Noise). The Site has a footprint of 50,000 SF with a planned

development of a 12-story mixed use building with approximately 447 units which include affordable housing. The Site received a certificate of completion from the NYSDEC in 2023.

Development, NYSDEC Site C203156 Former Mill Sanitary Wiping Cloth Site, 40 Bruckner Boulevard, Bronx, New York. Principal responsible for the due diligence during acquisition, preparation of the Brownfield Cleanup Program Application, Change of Use Documents, BCA Amendments, remedial investigation, remedial action design (BCP and OER) and Final Engineering Report for the former Mill Sanitary Wiping Cloth Site under the New York State Brownfield Cleanup program and NYCOER E-Designation Programs (Air/Noise). The Site has a footprint of 45,000 SF with a planned development of a 12-story mixed use building with approximately 480 units which include affordable housing. The Site received a certificate of completion from the NYSDEC in 2023.

Development, NYSDEC Site C203121, 310 Grand Concourse, Bronx, New York. Principal responsible for environmental and construction management services required to successfully navigate this two-building redevelopment project through the NYSDEC Brownfield Cleanup Program (BCP) and NYCOER E-Designation Program (Air/Noise). Project included site investigation, design, and remediation for development of two buildings within a 30,000 square-foot lot in the Bronx, New York. Remediation included excavation of approximately 20,000 cubic yards of soil, groundwater extraction and treatment, underground storage tank (UST) removal, design, and installation an ex-situ chemical in situ soil stabilization process for elevated levels of metals.

Development, NYSDEC Site C224299, 297 Wallabout Street, Brooklyn New York. Principal responsible for the due diligence during acquisition, preparation of the Brownfield Cleanup Program Application, Change of Use Documents, BCA Amendments, remedial investigation, and remedial action design (BCP and OER), Final Engineering Report and Site Management Plan for the 297 Wallabout Street Site under the New York State Brownfield Cleanup program and NYCOER E-Designation Programs (Air). Successfully delineated the onsite tetrachloroethene (PCE) plume in soil and groundwater. The Site is currently in the remedial implementation phase. Remediation included excavation of approximately 5,000 cubic yards of soil, groundwater extraction and treatment, underground storage tank (UST) removal, design, and installation an ex-situ chemical oxidation process for chlorinated solvents and monitoring and natural attenuation. The Site received a certificate of completion from the NYSDEC in 2024.

Development, NYSDEC Site C224239, Former Techtronics Site (8 Walworth Street), Brooklyn, New York. Principal for the remedial investigation, remedial action design and remedial action implementation for the former Techtronics Site under the New York State Brownfield Cleanup program as a Participant where trichloroethene (TCE) and tetrachloroethene (PCE) were encountered in soil and groundwater. James successfully delineated the vertical and lateral extents of the plumes which were identified as an upgradient, on-site. For this Site we have designed source removal to 20'bgs, Zero Valent Iron (ZVI) Reactive Barrier Wall, in situ ZVI injections sitewide and a vertical vapor mitigation system. The Site is currently in the remedial implementation phase.

Development, New York City OER Site - 346 Grand Concourse, Bronx, New York. Principal for the proposed 9-story, 60 key commercial building with one-level deep cellar. Design phase environmental services consist of guiding the Site through the New York City Office of Environmental of Remediation Voluntary Cleanup and E-Designation Programs, including Hazmat, Air Quality and Noise requirements. This program included submission of a Remedial Investigation Work Plan, implementation of a Remedial Investigation, submittal of a Remedial Investigation Report, Remedial Action Work Plans (Hazmat Air and Noise) and the Final Installation Report for the Certificate of Occupancy.

Development, New York City OER Site - 3294 Atlantic Avenue, Brooklyn, New York. Principal for the proposed 12-story, 80 key commercial building with one-level deep cellar. Design phase environmental services consist of guiding the Site through the New York City Office of Environmental of Remediation Voluntary Cleanup and E-Designation Programs, including Hazmat, Air Quality and Noise requirements. This program included submission of a Remedial Investigation Work Plan, implementation of a Remedial Investigation, submittal of a Remedial Investigation Report, Remedial Action Work Plans (Hazmat Air and Noise) and the Final Installation Report for the Certificate of Occupancy.

Development, New York City OER Site - 590-594 Myrtle Avenue, Brooklyn, New York. Principal for the proposed 6-story, 12-unit residential building with one-level deep cellar. Design phase environmental services consist of guiding the Site through the New York City Office of Environmental of Remediation Voluntary Cleanup and E-Designation Programs, including Hazmat, Air Quality and Noise requirements. This program included submission of a Remedial Investigation Work Plan, implementation of a Remedial Investigation, submittal of a Remedial Investigation Report, Remedial Action Work Plans (Hazmat Air and Noise) and the Final Installation Report for the Certificate of Occupancy.

Development, New York City OER Site - 3530 Webster Avenue, Bronx, New York. Principal for the proposed 8-story, 75 key commercial building with one-level deep cellar. Design phase environmental services consist of guiding the Site through the New York City Office of Environmental of Remediation Voluntary Cleanup and E-Designation Programs, including Hazmat, Air Quality and Noise requirements. This program included submission of a Remedial Investigation Work Plan, implementation of a Remedial Investigation, submittal of a Remedial Investigation Report, Remedial Action Work Plans (Hazmat Air and Noise). The project is currently in the construction phase of the NYCOER program.

Development, Former BP Station, Elmhurst Queens, New York. Principal for the preparation of a full environmental impact statement with respect to a mixed-use development proposed in Elmhurst Queens for submission to the NYC Department of City Planning to rezone the project. The work included a full impact assessment of the proposed construction with respect to the neighborhood, evaluation of green/open spaces for the community and environmental site investigation and remediation services.

Development, NYSDEC Site C224204, Former Delta Metals Site, Brooklyn, New York. Senior Project manager for the remedial investigation and remedial action design for the former Delta Metal Products Company. Project is under the New York State Brownfield Cleanup program as a Participant where TCE and tetrachloroethene (PCE) were encountered in soil and groundwater. James successfully delineated the vertical and lateral extents of the plumes which were identified as an upgradient, on-site and downgradient plume. Investigation results triggered the NYSDEC to utilize its call-out contract to perform a plume track down for the immediate area and identify additional Potentially Responsible Parties. The design for an Air Sparge Soil Vapor Extraction system has been accepted and the project is currently under construction.

Manufacturing-Industrial, Hess Amerada, Bogota and Edgewater, New Jersey. Senior Project Manager and technical Lead for the construction management services for the demolition of two waterfront terminals on the Hackensack and Hudson rivers. Services included demolition design, submittal review, site execution and coordination of activities related to asbestos abatement, demolition of buildings, thirty holding tanks, piping structures, containment structures and storm water structures.

Manufacturing-Industrial, PQ Corporation, Northeastern United States. Senior Project Manager responsible for the design and implementation of a three phased program for handling polychlorinated biphenyl (PCB) containing materials on approximately 100 tank structures at large, active industrial sites, which included coating removal, encapsulation, demolition, and Toxic Substances Control Act (TSCA) remediation. He was responsible for development of the overall program, specifications, drawings, bid packages, construction oversight and project administration until closure. The program also included design and oversight of a new façade and roof upgrades completed concurrently to client operations.

Development, NYSDEC Site C224194, Former Cascade Laundry, Brooklyn, New York. Senior Project Manager responsible for environmental and construction management services required to successfully navigate a seven-building redevelopment project through the NYSDEC Brownfield Cleanup Program (BCP) and NYCOER E-Designation Program (Air/Noise). Project included site investigation, design, and remediation for development of seven buildings within a 2-acre site in Brooklyn, New York. Remediation included excavation of approximately 40,000 cubic yards of soil, groundwater extraction and treatment, underground storage tank (UST) removal, design, and installation of a sub slab depressurization system (SSDS) and ex situ chemical oxidation of groundwater impacted by petroleum.

Development, New York City OER Site - 520-534 West 29th Street, New York, New York. James was responsible for environmental site investigation and remediation activities required to successfully navigate the project through the

NYCOER's E-Designation and Voluntary Cleanup Programs. This program included submission of a Remedial Investigation Work Plan, implementation of a Remedial Investigation, submittal of a Remedial Investigation Report, Remedial Action Work Plans (Hazmat Air and Noise). The project is currently in the construction phase of the NYCOER program.

Development, New York State Brownfield Site, BJ's Wholesale, Brooklyn, New York. Senior Project Manager for the remedial execution within the NYSDEC BCP and NYCOER E-Designation programs at an 8-acre peninsula in Gravesend Bay being redeveloped by BJ's Wholesale Club (BJ's) into a "big-box" warehouse and parking garage, and a publicly accessible, waterfront open space. He implemented a comprehensive community air monitoring plan (CAMP), managed the design and installation of a passive sub slab depressurization system, and oversaw handling and off-site disposal of impacted material generated by BJ's (the Lessee for the subject site) during their foundation construction activities.

Development, New York State Brownfield Site, Coney Island, Brooklyn, New York. Senior Project Manager responsible for the environmental design during the rehabilitation and expansion of a 1970s-era mixed-use complex, which covers an area equivalent to three city blocks. He facilitated the BCP applications for two adjacent parcels within the complex impacted by historic dry-cleaning uses. Site investigations performed had documented the presence of PCE in soil gas and was delineated over three separate structural slabs in commercial and residential space utilizing a mobile laboratory. He designed and installed two sub-slab depressurization systems and prepared Remedial Investigation Work Plan which outlined work required to delineate the vertical and horizontal extent of the impacted soils, soil vapor and groundwater at both BCP sites. The system was designed with below slab suction pits, remote sensing vacuum monitoring points, and a variable frequency drive blower tied into the monitoring points for optimization and power savings.

Development, New York City OER Site - Memorial Sloan Kettering Cancer Center (MSKCC), New York, New York. Project Manager for environmental remediation for this MSKCC development project. James was solely responsible for subsurface investigation and remediation activities, large, manufactured gas plant (MGP) gas holder removal (from former Con Edison Operations), UST removal, daily status updates to the NYCOER, implementation of the CAMP and the management, handling, characterization, and off-site disposal of MGP impacted soil and dewatering fluids.

New York State Spill Remediation, Metropolitan Transportation Agency Bridges and Tunnels, New York, New York. Project Manager responsible for execution of a remedial action scope which included UST removal, excavation of 600 cubic yards of petroleum impacted soil, design and installation of a groundwater extraction and treatment system and post remediation samples. He implemented the In Situ Chemical Oxidation program for the injection of 54,000 gallons of 8 percent solution Fenton's Reagent and the O&M (Operation & Maintenance) of the petroleum spill with respect to Fenton's performance and the plume migration.

Various Public Schools, New York City School Construction Authority, New York, New York. Project Manager responsible for environmental remediation proposed several school developments sites, including PS 312, P.S. 281, and PS 27K. Assisted in the design and implementation of the remediation programs for the sites for petroleum spills, PCB TSCA contamination and hazardous lead hot spots.

Development, i.Park Edgewater, Edgewater, New Jersey. Project Manager responsible for the design and environmental remediation on-site. Implemented the construction plan for remediation of arsenic, pitch- and PCB-impacted soil for excavation and off-site disposal of 20,000 tons. He managed the air monitoring system on-site which consisted of four permanent stations set upwind and downwind on-site for volatile organic compounds (VOCs) and particulate migration off-site. Also, James performed redesigns throughout the project to keep within the current schedule and budget.

Development, New York State Brownfield, Queens West, Long Island City, New York. Project Manager responsible for oversight of the Environmental Remediation on-site. James implemented the construction plan for remediation of 20,000 cubic yards of LNAPL on the Site; he assisted in design and oversight of the In Situ Chemical Oxidation mixing on-site. The project was eventually developed into three large towers and a new school.

Manufactured Gas Plant, National Grid, Rockaway, New York. James aided in the design and implementation of the soil characterization plan for MGP impacted sands. After delineation of the contamination plume, drafted work plans and site layout of the negative pressure tent. He performed and trained the on-site staff on the use of personal air monitoring equipment and aided with design considerations on the installation of a waterloo barrier to be advanced to minus 80 feet below grade surface. James also helped with the design and permitting for the groundwater treatment system installed on-site.

Manufactured Gas Plant, Con Edison, New York, New York. Environmental engineer for responsible party for all environmental issues associated with this job, including transportation and disposal of 8,000 tons of MGP contaminated soil from former Con Edison operations. James scheduled weekly work for all civil and environmental tasks on the job. He was responsible for the design and installation of the dewatering treatment system with a daily discharge of 25,000 gallons per day of MGP -impacted water.

New York State Superfund Project, NYSDEC, Hicksville, New York. James performed O&M and reporting on the Site's Potassium Permanganate Injection system, which was on a timed system; maintained the system, troubleshooting problems and ensuring that the proper ratios were being injected. He performed the fieldwork for analysis and drafted interim reports for the project manager.

Retail Petroleum, New York State Spills Program, Hess Amerada, Various Locations, New York. Environmental Engineer responsible for the design and installation of groundwater and soil vapor remedial systems at over 30 retail petroleum stations for Hess. Responsible for ensuring that the remedial systems were operating properly and performing repairs as necessary during operation. He performed groundwater and soil vapor monitoring and drafted O&M reports for the NYSDEC. Plume size ranged from within the retail station property with monitoring off-site impacts in local neighborhoods greater than a 3-mile radius.

Retail Petroleum, New York State Spills Program, British Petroleum (BP), Various Locations, New York. Environmental Engineer responsible for the design and installation of groundwater and soil vapor remedial systems at over 10 retail petroleum stations for BP. He was responsible for ensuring that the remedial systems were operating properly and performing repairs necessary during operation. He performed groundwater and soil vapor monitoring and drafted O&M reports for the NYSDEC. Plume size ranged from within the retail station property with monitoring off-site impacts in local neighborhoods greater than a 2-mile radius.

Development, 524 West 19th Street, New York, NY (Metal Shutter Homes). Project Engineer responsible party for all environmental and civil issues associated with this job, including transportation and disposal of 5,000 tons of MGP contaminated soil from former Con Edison operations. James scheduled weekly work for all civil and environmental tasks on the job. He successfully redesigned the grout cutoff wall connections to the installed steel sheeting with a secant wall installed off-site. He provided technical guidance for drilling 4-foot diameter exploratory casings for subsurface anomalies. Additionally, James was responsible for the design and installation of the dewatering treatment system with a daily discharge of 25,000 gallons per day of MGP impacted water.

EPA Superfund Site, Newtown Creek Superfund, Brooklyn, New York. Environmental Engineer who aided in the design of the pump and treat system installed at Peerless Importers. He also aided in the design and installation of the harbor boom set up. Operated and Maintained groundwater/LNAPL extraction systems on-site and performed monthly site gauging as part of the O&M plan.

MARI C. CONLON

Senior Client Account Manager

EDUCATION

MS, Geology, Boston College

BS, Geology with a minor in Economics and Business, Lafayette College

PROFESSIONAL REGISTRATIONS

NY: Professional Geologist (License No. 000769)

PROFESSIONAL SOCIETIES

Big Apple Brownfield Awards, Co-Chair, 2018-2022

Big Apple Brownfield Awards Nomination Committee, 2016-2025

New York City Brownfield Partnership Executive Board, 2021-2025

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)

10-Hour OSHA Construction Safety

8-Hour OSHA Supervisor of Hazardous Waste (29 CFR 1910.120 & 29 CFR 1926.65)

Mari is a senior client account manager with experience in soil, groundwater and soil vapor investigation and a focus on remedial design and implementation. She is also experienced in completion of numerous Phase I Environmental Site Assessments and Phase II Environmental Site Investigations, site characterization, hazardous materials analysis, regulatory closure reports as well as remedial design and implementation.

Mari has experience in composing site closure documentation including Remedial Closure Reports and Noise Installation Reports reviewed by the Office of Environmental Remediation as well as Final Engineering Reports and Site Management Plans reviewed by the New York State Department of Environmental Conservation. Mari has also worked on city rezoning proposals by performing work associated with and composing the Hazardous Materials Analysis chapter included in Final Environmental Impact Statements published by New York City Department of Planning. Analysis methods were performed in accordance with the City Environmental Quality Review (CEQR) guidelines for neighborhoods including East New York, Brooklyn, Jerome Avenue, Brooklyn, Inwood, and Manhattan.

Mari has managed the investigation, remedial design, remediation and closeout of multiple inactive Resource Conservation and Recovery Act (RCRA) hazardous waste sites, New York State Superfund sites and petroleum spill case sites. Her background includes developing and complying with approved site management plans overseeing the operation and maintenance of on-site engineering controls, such as soil vapor extraction systems, sub-slab depressurization systems, product recovery systems, etc., and ensuring the protection of human health and the environment.

RELEVANT PROJECT EXPERIENCE

State and City Agencies

School Construction Authority, Waste Characterization and Excavation Materials Disposal Plan, Brooklyn, New York. Project manager for consulting services for New York Public School 127. Services included composition of an Excavated Materials Disposal Plan, collection of waste characterization samples and preparation of and preparation of a findings and recommendations report.

Department of City Planning, Rezoning Environmental Impact Statement, Bronx, New York. Project lead for analysis and composing the Hazardous Materials Chapter as per City Environmental Quality Review (CEQR) Technical Manual guidelines included in the Final Environmental Impact Statement (FEIS) for an approximately 92-block area primarily along Jerome Avenue and its east-west commercial corridors in the Bronx. The review assessed the potential for the

presence of hazardous materials in soil and/or groundwater at both the projected and potential development sites identified in the reasonable worst-case development scenario under the proposed East New York Rezoning Proposal. Procedures involved site inspections and review of historic Sanborn fire insurance maps, city directories and city/state regulatory databases. The assessment identified that each of the 146 projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed zoning map actions include (E) designations (E-366) for all privately-held projected and potential development sites.

Department of City Planning, Rezoning Environmental Impact Statement, Brooklyn, New York. Project lead for performance analysis and composing the Hazardous Materials Chapter as per CEQR Technical Manual guidelines included in the FEIS for an approximately 190-block area of East New York, Cypress Hills, and Ocean Hill neighborhoods of Brooklyn, New York. The review assessed the potential for the presence of hazardous materials in soil and/or groundwater at both the projected and potential development sites identified in the reasonable worst-case development scenario under the proposed East New York Rezoning Proposal. Procedures involved site inspections and review of historic Sanborn fire insurance maps, city directories and city/state regulatory databases. The assessment identified that each of the 186 projected and potential development sites has some associated concern regarding environmental conditions. As a result, the proposed zoning map actions include (E) designations (E-366) for all privately-held projected and potential development sites.

Redevelopment and Remediation

Titan Equity Group, Hotel Redevelopment, Bronx, New York. Project manager for a hotel redevelopment in the south Bronx. The site has been assigned New York City Office of Environmental Remediation (NYC OER) E-Designation status for hazardous materials, noise, and air quality. Services included completion of a remedial investigation, composition of a Remedial Investigation Report and development of Hazardous Material Remedial Action Work Plan and Air Quality/Noise Remedial Action Plan as per NYC OER requirements.

The Related Companies, Chelsea Mixed-Use Redevelopment, New York, New York. Field geologist for oversight of the remediation of a mixed-use residential and commercial building, the second of a two-building development on 30th Street. Contaminants of concern included volatile and semi-volatile organic compounds associated with historic operations and underground storage tanks (USTs) located on the Site. The Site was given an E-designation (E-142) for hazardous materials and noise as part of the Highline/West Chelsea rezoning proposal. To satisfy the requirements of the E-designation program, soil was excavated to at least 12 feet below grade and bottom endpoint collected showing no contaminants of concern exceeding the New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use Soil Cleanup Objectives (SCO). By achieving Unrestricted Use SCOs, no engineering controls were necessary, although the building slab was included as part of development, and removal of the hazardous materials E-designation was requested.

Tishman Speyer, Long Island City Residential Development, Long Island City, New York. Field geologist for remedial oversight and implementation of a Community Air Monitoring Program during concurrent remediation and development of three Brownfield Cleanup Program (BCP) sites located in Long Island City, New York. The Sites were grossly contaminated with creosote, a carcinogenic chemical formed from the distillation of various tars. Remediation strategies included soil excavation and in-situ soil stabilization. To prevent migration of groundwater off-site, a temporary and later a permanent capture well system was installed on the western boundary of the property. The BCP site located on the western portion of the property left residual contamination in place requiring installation of a sub-slab depressurization system.

Queens West Development Corporation, Queens Waterfront Development, Long Island City, New York. Field geologist for performance of site management post remedial action. Services included annual groundwater monitoring, evaluation of engineering and institutional controls completion and Period Review Reports. In addition to conducting annual site management activities, responsibilities included composing a work plan to evaluate the transition from active sub-slab depressurization systems to passive. Upon NYSDEC approval, active systems were shut down for 30 days prior to a sub-slab vapor sampling event evaluation soil vapor, indoor and outdoor air conditions for

potential vapor intrusion risk. As results indicated no evidence of vapor intrusion, continued pressure monitoring was conducted for from the existing monitoring ports for one year assessing whether negative pressure was held by the existing slab by stack-effect or other passive processes.

Jim Beam Brands Co., Brownfield Cleanup Program Remediation Site, Long Island City, New York. Field geologist for oversight of the installation of an Electrical Resistive Heating (ERH) system implemented in order to remediate trichloroethylene groundwater plumes in shallow/intermediate and deep groundwater on- and off-site. The Site, a former stapler manufacturing facility, underwent various remedies, including a Soil Vapor Extraction system, air sparging, ozone injection and chemical oxidation using potassium permanganate injections, which resulted in little reduction to contamination levels and rebounding chlorinated solvents. Components of the ERH system installed included electrodes for delivery of steam, vapor recovery wells, and groundwater monitoring wells. The site is currently under remediation in the state BCP program.

Due Diligence and Site Characterization

Manufacturing Plants, Multiple Investors, Environmental and Compliance Assessment Portfolio United States. Project lead for completion of Phase I Environmental Site Assessments (ESAs) and Limited Compliance Reviews for multiple auto parts manufacturing facilities throughout the United States. Services included completion of Phase I ESAs in accordance with the American Society for Testing and Materials E1527-13 requirements and a limited review of each facility's compliance liabilities including issues pertaining to the Resource Conservation and Recovery Act, Greenhouse Gas Emission Standards and Tier II Emergency and Hazardous Chemical Inventory reporting requirements.

ARM Parking, Environmental Site Assessment and Subsurface Investigation, Brooklyn, New York. Project manager for site assessment and subsurface investigation of parking facility in Sunset Park neighborhood, Brooklyn, New York. Services included ground penetrating radar survey for former and current petroleum USTs, completion of a subsurface investigation of soils and composition of Limited Subsurface Investigation Report.

Spill Consulting

The Trump Organization, Spill Consulting Services, New York, New York. Project manager for consulting services provided after incidental release of calcium carbonate ice rink paint to the Central Park Pond from Wollman Rink. Services included liaising with NYSDEC regarding violations, consent order and required corrective action. Corrective action included designing alterations to the existing on-site drainage plans and routing all meltwater containing paint into the combined sewer system. Coordination was required with property owner, operations personnel, New York City Department of Parks and NYSDEC.

Richmond Gardens Apartments, Spill Management and Closure Services, Staten Island, New York. Project lead responsible for spill closure activities and reporting for Spill 1105661 located at the Richmond Gardens Apartment Complex in the Richmond neighborhood of Staten Island, New York. The spill was opened in 2011 when several underground storage tanks were identified adjacent to the apartments at Jersey Street and Hendricks Avenue. The tanks were cleaned and removed and impacted soils surrounding the tank area excavated to the extent possible. Excavation of all impacted material was not feasible due to the proximity of the tanks to the apartment buildings. Residual contamination in soil and groundwater remained and was monitored through 2016. Upon reviewing the groundwater monitoring data from over 12 consecutive quarters, it was apparent monitored natural attenuation was not a feasible option and an in situ chemical oxidation (ISCO) remedy was approved by NYSDEC. Due to success of the pilot test, the ISCO injection event was implemented utilizing pressure pulse technology to deliver the alkaline activated persulfate solution to the subsurface.

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste and Operations Emergency Response Training (29 CFR 1910.120 and 40 CFR 265.16)
8-Hour HAZWOPER Refresher Course

Suzanne is a senior project manager with over 17 years of experience in the environmental consulting industry. She has worked on soil and groundwater environmental investigations, remediation projects, and prepared reports for private, industrial, and government clients. Her technical experience includes remediation systems; soil and groundwater feasibility studies; Phase I site investigations; environmental file review and historical research; stormwater assessments and SWPPP preparation; reclamation planning for the sand and gravel mining industry; air permitting; and data interpretation.

In New York, Suzanne has experience as an Engineer of Record in completing site closure documentation including Remedial Closure Reports reviewed by the Office of Environmental Remediation as well as Final Engineering Reports and Site Management Plans reviewed by the New York State Department of Environmental Conservation.

Suzanne has managed the investigation, remedial design, remediation and closeout of sites in the Brownfield Cleanup Program and petroleum spill case sites. Her background also includes developing and complying with approved site management plans overseeing the operation and maintenance of on-site engineering controls, such as soil vapor extraction systems, sub-slab depressurization systems, product recovery systems, and ensuring the protection of human health and the environment.

RELEVANT PROJECT EXPERIENCE

Bedford Beverly Redevelopment Site, Brooklyn, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plans for an approximately 5.31-acre non-contiguous property located in the Flatbush neighborhood in the borough of Brooklyn, New York under the New York State Brownfield Cleanup Program (NYSBCP). The remedy included removal of thirteen undocumented underground storage tanks (USTs), removal of over 115,000 tons of non-hazardous and hazardous soil, hotspot excavations, injections of zerovalent iron to treat tetrachlorethylene in groundwater, injection of alkaline-activated persulfate to treat petroleum-based volatile organic compounds in groundwater and establishing a Site Management Plan (SMP) for Institutional and Engineering Controls. The site is being redeveloped from a vacant auto service center, vast open air parking lots, and a vacant commercial building into a vibrant community development. In addition to new residential housing, which includes affordable units, and commercial spaces, the project has preserved the highly recognizable Sears Roebuck & Company Department Store. This includes maintaining its historical architecture, updating the building to meet modern standards, introducing commercial spaces that were previously underutilizing, and maintaining the character of the neighborhood.

Development, EPA Site RCRA-02-2009-7306, NYSDEC Site 243016, Former Port Mobil Terminal, Staten Island, New York. Engineer and project manager responsible for the preparation of the feasibility study, preparation of the Interim Remedial Report, completion of the Interim Remedial Measure, completion of the remedial investigation stages, continued execution of the Monitoring and Natural Attenuation Program, preparation of the Remedial Action Work Plan/Remedial Designs, and RCRA Closure procedures for the Port Mobil Terminal Site under an Environmental Protection Agency and New York State DEC Consent Order. The Site has a footprint of approximately 240 acres with a planned development for commercial/industrial uses.

Rogers Snyder Brownfield Site, 858 Rogers Avenue and 2605 Snyder Avenue, Brooklyn, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plan at the Rogers Snyder redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous and hazardous soil, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of the FER.

Former Garone Bros Auto Service Center Site, 352-362 Shepherd Avenue, Brooklyn, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plan at the 352-362 Shepherd redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous soil, removal of USTs, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of the FER.

Former Fielder Waterproofing & Masonry Site, 91 Bruckner Boulevard, Bronx, New York. Suzanne served as engineer of record for execution of Remedial Action Work Plan at the 91 Bruckner redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous and hazardous soil, removal of USTs, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of the FER and SMP.

828 Metropolitan Avenue Site, 808-834 Metropolitan Avenue, Brooklyn, New York. Suzanne served as project manager and engineer of record for execution of Remedial Action Work Plan at the 828 Metropolitan Avenue redevelopment project under the NYSBCP. Responsible for remedial oversight of excavation and removal of non-hazardous soil, removal of USTs, endpoint sample collection, air monitoring, communication with soil brokerage firm and environmental laboratory, preparation of Daily Field Reports (DFRs) and the Final Engineering Report (FER).

Waterfront Property Management, 89-91 Gerry Street and 93 Gerry Street, Brooklyn, New York. Suzanne served as project manager for execution of Remedial Action Work Plans at the former Just4Wheels Site and Just4Wheels Site 2 under the New York State Brownfield Cleanup Program (NYSBCP). Responsible for remedial oversight of excavation and removal of non-hazardous and hazardous soil, endpoint sample collection, removal of USTs, air monitoring, dewatering system installation support, communication with soil brokerage firm and environmental laboratory, preparation of DFRs and the FER.

Multiple Clients, Remedial Investigation Work Plans and BCP Applications, New York City, New York. As project manager and engineer, Suzanne has prepared NYSBCP Applications and Remedial Investigation Work Plans for the New York State Department of Environmental Conservation (NYSDEC) for sites within the New York City boroughs.

Multiple Clients, Remedial Action Work Plans, New York City, New York. As project manager and engineer of record, Suzanne has prepared Remedial Action Work Plans for the NYSDEC for sites within the New York City boroughs.

Excavation Oversight and CAMP Monitoring, Various Sites, New York City, New York. Suzanne has served as project manager for projects under the New York City Office of Environmental Remediation (NYCOER) program and NYSBCP. Her responsibilities included managing excavation oversight, air monitoring, and logging trucks for off-site disposal.

Aerospace Manufacturing Facility, Feasibility Study and Remedial Action Plan, Chula Vista, CA. Suzanne co-authored feasibility studies for soil and ground water impacted by chlorinated solvents, metals, and PCBs. She screened ex-situ and in-situ remedial alternatives for effectiveness, implementability, and protectiveness of human health. She also assessed alternative cleanup levels for technical and economic feasibility of achieving background concentrations in accordance with State Water Resources Control Board Resolution 92-49. Additionally, she evaluated groundwater remedial alternatives, including bioremediation, monitored natural attenuation (MNA), pump and treat, chemical oxidation, chemical reduction, and engineered and institutional controls. Lastly, she prepared engineering cost estimates and conceptual designs. Assisted with the preparation of remedial action plans: a bioremediation remedy and MNA program for groundwater, and excavation of contaminated soil.

Aerospace Manufacturing Facility, Groundwater Remediation and Bioremediation Pilot Test, Riverside, CA. Suzanne assisted with data analysis and reporting for the bioremediation pilot test study for groundwater impacted by chlorinated solvents, hexavalent chromium, and 1,4-dioxane. She evaluated site data for trends indicative of MNA using statistical analysis.

Goodyear Tire & Rubber Company, Phoenix Goodyear Airport South Superfund Site, Goodyear, Arizona. Suzanne prepared reports and performed data analysis related to the groundwater monitoring program and operation and maintenance of groundwater treatment systems. Currently, two groundwater extraction and remediation systems are capable of treating more than 1 million gallons per day of groundwater contaminated with trichloroethylene. The upper groundwater zone is treated with an air stripper, while the lower zone is treated with granulated activated carbon. Treated groundwater is reinjected into their respective zones.

Soil and Groundwater Remediation Systems, Arizona. Suzanne **p**erformed operation, maintenance, and sampling activities for two soil vapor extraction systems to remove tetrachloroethylene from subsurface soils at two different dry-cleaning facilities. She prepared soil vapor extraction GAC system test reports in accordance with Maricopa County Air Quality Department Permits.

ASTM Phase I Environmental Site Assessments, Arizona. Suzanne assisted with ASTM Phase I ESAs at various industrial facilities in central and southern Arizona. She evaluated site conditions and regulatory implications as they related to the owner's or potential buyer's property development plans.

Phoenix-Goodyear Airport-North Superfund Site, Focused Feasibility Study, Goodyear, Arizona. Suzanne was a member of team that prepared a source area remediation focused feasibility study report. She evaluated several technologies and alternatives to treat groundwater contaminated with trichloroethylene (TCE) and perchlorate. She analyzed remedial alternatives, including in-well air stripping, a hydraulic barrier, nano- and macro-scale zero-valent iron, anaerobic reductive dechlorination, in-situ chemical oxidation (permanganate), and electrical resistive heating. She prepared cost estimates, conceptual designs, remediation technology summaries, and sustainability evaluation of the alternatives.

Enhanced In-Situ Bioremediation (EISB) and Chemical Reduction Using a Nanoscale, Zero-Valent Metallic Alloy to Treat Co-disposed Chloroethanes and Chloroethenes in Groundwater, Manufacturing Facility, Canton, MA. Suzanne performed data analysis and prepared status reports on effectiveness of EISB in treating chlorinated solvents in shallow groundwater. She reported on the performance monitoring results for the permeable reactive barrier in deep zone groundwater.

Hayden Facilities RI/FS, ASARCO LLC, Hayden, Arizona. Suzanne served as Quality Assurance Officer for the air monitoring program at a copper smelting facility. She developed site-specific data validation procedures according EPA guidelines for several analytical methods.

Market Evaluation for Nanoscale Zero-Valent Iron, Stamford, Connecticut. Suzanne used EPA CERCLIS Public Access Database and select State databases to estimate the market size for potential use of nanoscale zero-valent iron (nZVI) as a remediation technology. She compiled competing vendor information and quotes to estimate the average cost of similar products. She utilized the U.S. Patent and Trademark Office database to analyze competing technologies.

Arizona Pollutant Discharge Elimination System (AZPDES) and National Pollutant Discharge Elimination System (NPDES) Permits, Arizona. Suzanne prepared AZPDES and NPDES) permit renewal applications for a copper mining facility in Southern Arizona, which included updates to the facility's Storm Water Pollution Prevention Plan (SWPPP) and QA Manual.

Spill Prevention, Control and Countermeasure Plans, Aggregate Mining Facilities, Arizona. Suzanne assisted with a Spill Prevention, Control and Countermeasure Plans (SPCC) for aggregate mining facilities in Arizona. She performed site visit, evaluated fuel and oil tanks and secondary containment areas, assisted with calculations to verify compliance, and prepared report.

Copper Mining Facility, Miami, Arizona. Suzanne assisted with Toxic Release Inventory (TRI) and Toxic Substances Control Act (TSCA) reporting, both submitted to the EPA.

Storm Water Pollution Prevention Plan, Franciscan Friars of California, Gila County, Arizona. Suzanne updated the SWPPP for construction activities related to the closure of a historic Gibson copper mine, authorized under the Arizona Pollutant Discharge Elimination System "General Permit for Discharge from Construction Activities to Waters of the United States." The Former Gibson Mine is a small, historic copper mine, located approximately 7 miles southwest of Miami, Arizona, in Gila County. Construction activities covered under the updated SWPPP consisted of the excavation, hauling, and removal of approximately 80,000 tons of soil cover from the Mineral Creek side of the site to mine-scarred areas on the Pinto Creek side of the site. Also included was final grading of the site, which consisted of re-contouring and re-defining any portion of the drainages that were on site; and revegetation.

Stormwater Pollution Prevention Plans, Vulcan Materials Company, Western Division, Arizona. Suzanne prepared SWPPP for 11 aggregate mining facilities in Arizona. Performed site visits, analyzed stormwater flows, prepared reports, and completed Notices of Intent for the Arizona Department of Environmental Quality under a Multi-Sector General Permit.

Uranium Enrichment Facility, Lea County, New Mexico. Suzanne prepared quarterly and annual groundwater monitoring reports, semi-annual radioactive effluent release reports, and radiological environmental monitoring program reports in accordance with New Mexico Environment Department regulations and the Nuclear Regulatory Commission. Performed quarterly data validation on a variety of matrices and analytical methods. She prepared site-specific environmental monitoring procedures, which included field sampling techniques; data collection, management and validation; and an air modeling software package.

Rocket Testing and Research Facility, Western U.S. Suzanne analyzed and evaluated groundwater quality data, prepared reports, and managed data for this Resource Conservation and Recovery Act (RCRA) site. Assisted with management of sampling, analysis, and reporting of constituents of concern for fractured sandstone bedrock aquifer impacted by chlorinated solvents and emergent chemicals 1,4-dioxane, perchlorate, and n-nitrosodimethylamine (NDMA). Performed data validation of water quality data according to U.S. EPA National Functional Guidelines. Queried data from client environmental data management system and prepared summary tables, concentration plots, and water level hydrographs using Microsoft Excel programs. She prepared a quarterly analytical schedule using an Access database application, updated the site-specific Health & Safety Plan, and participated in lean training, which reduced cost of groundwater monitoring tasks by 25 percent.

Federal Superfund Site, Eastern Massachusetts. Suzanne performed data validation and quality assurance/quality control of soil and groundwater data according to U.S. EPA National Functional Guidelines. She performed third-party database updates.

Great Western Bank, Cortaro Ranch Property, Marana, Arizona. For site characterization of undeveloped land, Suzanne performed surficial soil sampling, analytical laboratory coordination, data analysis, and report preparation.

Twin Buttes Properties, Inc., Southern Arizona. Suzanne assisted with report and analytical table preparation for the characterization and analysis of current and historical hydrologic conditions at an inactive mine site near Sahuarita, Arizona in support of regulatory compliance.

Skyworks Solutions, Inc. Site, Newbury Park, California. Suzanne assisted with report and analytical table preparation for a subsurface investigation characterizing the lateral and vertical extent of soil and groundwater impacts from known releases of TCE, 1,4-dioxane and other organic compounds.

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)
8-Hour OSHA Site Supervisor Training

Paul is a hydrogeologist and project manager with over 18 years of experience in the environmental consulting industry. He applies his expertise in the investigation and remediation of contaminated sites for private and public-sector clients. He has managed and conducted site and remedial investigations, remedial planning and design, and remedial actions at sites in state and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) regulatory programs. Paul is skilled in technical groundwater investigations in unconsolidated and bedrock aquifers, assessment of soil conditions through core sampling and direct-sensing techniques, and application of analytical models toward understanding contaminant transport and fate. His environmental remediation experience focuses on management and oversight of in situ remedial approaches, including enhanced in situ bioremediation, chemical reduction and oxidation, and enhanced monitored natural attenuation.

RELEVANT PROJECT EXPERIENCE

Confidential clients – Brownfield redevelopment, multiple properties, Brooklyn, New York. As project manager, Paul managed due diligence environmental assessments and remedial investigations of sites pursuing entry into and sites within the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program. Coordinated and managed field investigations including a Phase II environmental site assessment and a remedial investigation of soil, groundwater, and soil vapor impacted from previous petroleum UST operations. Developed scopes of work and responsible for managing project budget, schedule, and communications with the client and NYSDEC. Prepared and managed multiple deliverables including project work plans and summary reports describing sampling activities and findings.

U.S. Navy – NAVFAC Mid-Atlantic, Former Naval Weapons Industrial Reserve Plant, groundwater remedial design, Bedford, Massachusetts. As project manager, Paul managed groundwater remedial design, pre-design aquifer testing, supplemental groundwater investigation, and vapor intrusion investigation activities at a former Navy installation. Responsible for managing project budget, schedule, and biweekly meetings with the client, EPA, and MassDEP. Coordinated and managed field activities that consisted of permanent monitoring well installations in a heterogeneous glacial till, aquifer pump and slug tests, temporary well installations and sampling, soil gas point installations and sampling, and the collection of sub-slab and indoor air samples from an off-site residence. Prepared and managed multiple deliverables including project work plans and a site management plan, preliminary assessment, groundwater

investigation report, community involvement plan, and technical memorandum describing focused groundwater and vapor intrusion investigation activities and findings.

U.S. Navy – NAVFAC Mid-Atlantic, Naval Station Newport, pre-design investigation at contaminated bedrock aquifer site, Middletown, Rhode Island. Paul served as project manager for a groundwater pre-design investigation at a contaminated bedrock aquifer site where previous in situ bioremediation had limited success with reducing chlorinated volatile organic compound (CVOC) concentrations in groundwater. He developed a hydraulic testing approach using pump tests and a bromide tracer test to improve understanding of the distribution of an amendment injected into a single well. Coordinated and managed vegetation clearing, a well inventory, two comprehensive site-wide groundwater gauging and sampling events, and preparation of a hydraulic testing work plan and a groundwater pre-design investigation report.

U.S. Navy – NAVFAC Mid-Atlantic, Naval Station Newport, remedial investigation at former tank farm, Portsmouth, Rhode Island. As project hydrogeologist, Paul developed a remedial investigation approach and conducted data analysis to apportion sources of total petroleum hydrocarbons (TPH) in soil at a former tank farm. The approach consisted of grid-based soil sampling across the previously delineated petroleum-impacted area; analysis of soil samples for TPH, saturated hydrocarbons, and biomarkers; and statistical analysis and petroleum fingerprinting of soil data to apportion heavy and mid-distillate components of the TPH that exceed the site cleanup goal. The approach was incorporated into the sampling and analysis plan for the site. Following soil sample and data acquisition, Paul managed data analysis and source apportionment.

U.S. Navy – NAVFAC Mid-Atlantic, Naval Station Newport, groundwater discharge to surface water investigation, Middletown, Rhode Island. Paul served as project hydrogeologist and developed an investigation approach that incorporated aerial infrared imaging, focused porewater sampling, and a vertical tracer study to evaluate groundwater discharge to an estuary. The approach was incorporated into the draft thermal imaging and vertical tracer testing work plan.

Confidential client – former New York air brake manufacturing facility, post-closure operations, maintenance, and monitoring, Watertown, New York. Paul was the project manager for ongoing operations, maintenance, and monitoring (OM&M) of a former manufacturing facility in the 19th year of a 30-year post-closure OM&M program. He managed project tasks, budget, and invoicing. Technical tasks included evaluation of groundwater elevation and chemical data to assess the long-term effectiveness of a groundwater pump and treat system that was installed to remove and prevent off-site transport of volatile organic compounds (VOCs) in groundwater. Paul prepared Annual Groundwater Monitoring Reports that presented findings from the data evaluation to the New York State Department of Environmental Conservation (NYSDEC), and prepared and submitted to NYSDEC a Periodic Review Report that summarized the protectiveness of engineering controls operated and maintained at the site during the previous three years.

Confidential client – former Henry Harris Landfill, remedial investigation and remedial action work plan development, Harrison Township, New Jersey. As the project geologist and task manager, Paul developed a conceptual site model for a former sanitary landfill site that incorporated understanding of the site hydrogeology, contaminant sources, and contaminant distribution to identify data gaps in completing the site remedial investigation (RI). He managed field activities to address data gaps with the RI, which included evaluation of groundwater-surface water interactions, installation of monitoring wells, and targeted soil sampling at soil-related areas of concern. Paul prepared a subsequent Remedial Action Work Plan for soil, groundwater, and surface water at the site, which incorporated the landfill closure plan and proposed Monitored Natural Attenuation (MNA) to address impacts to groundwater. Following implementation of a quarterly groundwater monitoring program, multiple lines of evidence in support of MNA as an effective remedy for groundwater were presented in a Groundwater Remedial Action Report.

Ingersoll Rand – manufacturing facility, pilot and full-scale bioremediation implementation, Hamilton, New Jersey. As project geologist**,** Paul managed and provided field oversight of a full-scale enhanced in situ bioremediation (EISB) remedy to address elevated concentrations of chlorinated VOCs in shallow groundwater at an active manufacturing facility. The full-scale remedy included delivery of emulsified vegetable oil (EVO), ZVI, and KB-1 Plus® microbial culture to outdoor and indoor injection locations. The full-scale remedy was implemented following the completion of a field-scale EISB pilot study that included delivery of amendments under pressure and gravity-fed conditions. Prior to the full-scale EISB remedy, a Groundwater Remedial Action Workplan was prepared that summarized the remedial investigation progress, results of the field pilot study, and scope of work for implementation of the full-scale remedy.

Ingersoll Rand – former manufacturing facility, remedial investigation and conceptual site model refinement, Phillipsburg, New Jersey. Paul served as the field geologist and task manager for the drilling, geophysical logging, packer testing, and construction of monitoring wells in a karst subsurface. Coordinated drilling, investigation-derived waste, and geophysical logging/packer testing subcontractors that included managing changes to the schedule based on variability in subsurface conditions. Monitoring well construction was based on the analytical results for(VOCs in groundwater samples collected from multiple depth intervals within each borehole. Dual or triplet monitoring wells were installed at multiple locations to characterize VOCs in groundwater with depth and provide data on VOC concentrations at the water table (shallow well) for evaluation of potential vapor intrusion.

In addition, Paul analyzed and summarized approximately 20 years of groundwater gauging and analytical data from approximately 80 monitoring and recovery wells at this 383-acre site as part of the conceptual site model development and refinement. Groundwater levels, fracture orientations, chlorinated VOC concentrations, and light nonaqueous phase liquid (LNAPL) extent data were evaluated as part of the conceptual site model development.

NICOLE MOONEY

Assistant Project Manager | Geologist

EDUCATION

B.S., Earth and Environmental Science with a minor in Oceanography, University of Michigan-Ann Arbor

SPECIAL STUDIES AND COURSES

40-Hour OSHA Hazardous Waste Operations and Emergency Response Training (29 CFR 1910.120)
8-Hour OSHA Hazardous Waste Worker Refresher Training (29 CFR 1910.120)
8-Hour OSHA HAZWOPER Supervisor for Construction Training
OSHA 10-Hour Construction Safety
OSHA 30-Hour Construction
NYC SST-307 8-Hour Fall Prevention for Construction
NYC SST-302 2-Hour Drug and Alcohol Awareness for Construction
DOT Hazmat Employee & RCRA Hazardous Waste Generator Training
American Red Cross Adult First Aid/CPR/AED Training and Bloodborne Pathogens Training
USACE Construction Quality Management for Contractors
Level I Antiterrorism Awareness Training

Nicole is a geologist with over four years of experience in site characterization and investigation, subsurface investigations, preparation of technical reports and work plans, and data collection and analysis. She has extensive experience conducting Phase I Environmental Site Assessments (ESAs), Phase II Environmental Site Investigations (ESIs), and other aspects of environmental due diligence. She has experience with preparation and overseeing execution of remedial investigation and actions at sites within the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) and the New York City Mayor's Office of Environmental Remediation (NYCOER). She has performed soil, groundwater, and soil vapor sampling events and has drafted various site investigation plans and reports.

RELEVANT PROJECT EXPERIENCE

Environmental Investigation, Site Characterization, and Remediation

340 Myrtle Development LLC, 340 Myrtle Avenue, Brooklyn, New York. As a project geologist, Nicole coordinated and managed implementation of the Remedial Action Work Plan (RAWP) at the approximately 8,828 square foot site enrolled in the NYSDEC BCP. The remedial action included excavation and off-site disposal of soil, installation of an active sub-slab depressurization system (including cover system), installation of injection wells, and reinstallation of permanent monitoring wells for post-remedy groundwater monitoring. Nicole was responsible for the preparation of the Final Engineering Report (FER) and the Site Management Plan (SMP) which are undergoing review by the NYSDEC. Construction for the new development is currently ongoing and, when completed, the site will be improved with a new eight-story mixed-use commercial and residential building with a full cellar level.

B Contractors Group, LLC, 711-713 East 214th Street, Bronx, New York. As a project geologist, Nicole was responsible for coordinating and managing the implementation of the NYCOER-approved Remedial Action Plan (RAP) and preparing the Remedial Closure Report (RCR) for the approximately 6,252 square foot site. The redevelopment included a new eight-story residential building with a full cellar level.

650 Southern Blvd Bronx LLC, 650 Southern Boulevard, Bronx, New York. As a project geologist, Nicole was responsible for preparation and implementation of the Remedial Investigation Work Plan (RIWP), which included the installation of eleven soil borings, seven permanent groundwater monitoring wells (some of which extended into

bedrock), and seven soil vapor points, and the collection of soil, groundwater, and soil vapor samples. Nicole was also responsible for preparation of the Citizen Participation Plan (CPP), Remedial Investigation Report (RIR), and RAWP. The site is in the pre-construction phase.

Degraw Holdings LLC, 563 Sackett Street Site, Brooklyn, New York. As a project geologist, Nicole was responsible for due diligence during acquisition, including preparation of the Phase I ESA and Limited Phase II ESI. The initial Limited Phase II ESI and delineation sampling have been completed and the Limited Phase II ESI Delineation Report, Brownfield Cleanup Agreement (BCA) Major Amendment Application, and Supplemental Remedial Investigation Report (SRIR) are being drafted.

291 Wallabout Realty LLC, 291 Wallabout Street, Brooklyn, New York. As a project geologist, Nicole was responsible for the due diligence during acquisition of the property, including preparation of a Phase I ESA, Phase II ESI, BCP Application, and RIWP.

401 West 207th Realty LLC, 401 West 207th Street, New York, New York. As a project geologist, Nicole was responsible for oversight during implementation of the RAWP under the NYSDEC BCP. During remediation, Nicole observed and documented the excavation and proper disposal of on-site soil required for installation of the foundational elements. Nicole oversaw the proper cleaning and removal of two underground storage tanks encountered during excavation.

BCP Applications and Remedial Investigation Work Plans for NYSDEC. Nicole has prepared several BCP Application packages for various clients in New York State, which requires reviewing the site's history, including any previous investigation reports available, to assist with entry into the BCP to be remediated and redeveloped in accordance with applicable NYSDEC requirements. Nicole also prepares an RIWP to be submitted to the NYSDEC either concurrently or following submittal of the BCP Application for full investigation of the site to facilitate proper remedial action.

Excavation Oversight and CAMP Monitoring, Various Sites, Bronx, Brooklyn, and Queens, New York. As a project geologist, Nicole completed remedial oversight for several projects in the NYCOER cleanup program and NYSDEC BCP. Her responsibilities included excavation oversight, air monitoring, truck logging during off-site disposal of excavated materials, collection of endpoint and/or documentation samples, vapor barrier inspection, and oversight of installation of post-remedy groundwater monitoring wells.

Multiple Clients, Phase I ESAs and Due Diligence, Multiple Locations in New York. As a project geologist, Nicole completed several Phase I ESAs for buyers of properties in New York. She has extensive experience completing site reconnaissance and reviewing historical site documentation to identify potential environmental concerns at properties.

Multiple Clients, Phase II ESIs, Multiple Locations in New York. As a project geologist, Nicole conducted several Phase II ESIs for projects in New York, including oversight of the installation of soil borings, groundwater monitoring wells, and soil vapor points and the collection of soil, groundwater, and soil vapor samples. She assisted with the development of sampling plans based on previous environmental investigations and due diligence findings.

Former Grissom Air Force Base, Kokomo, Indiana. As a project geologist, Nicole was responsible for coordinating and performing quarterly groundwater sampling and/or Land Use Control (LUC) inspections in accordance with the deeds and Decision Documents for nine sites (FT001, FT002, SS190, SS035, SS053, SS058, LF003, LF004, and SS049) located on the 2,722-acre former Grissom Air Force Base under the Base Realignment and Closure (BRAC)/Environmental Construction Optimization Services (BECOS) program. Nicole was also responsible for the coordination and implementation of a Data Gap Investigation (DGI) at the SS035, SS053, and SS058 sites and a Site Investigation (SI) at the former Navy Skeet Range (site SR406). Nicole prepared LUC Inspection reports, Annual Groundwater Monitoring Reports, an SI Report, a DGI Report, and the Five-Year Review Report for this work.

APPENDIX F
NYSDEC Request to Import/Reuse Form

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e) and 6NYCRR Part 360.13. Use of this form is not a substitute for reading the applicable regulations and Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Choose an item

Have Ecological Resources been identified? Choose an item

Is this soil originating from the site? Choose an item

How many cubic yards of soil will be imported/reused? Choose an item

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? Choose an item

Does it contain less than 10%, by weight, material that passes a size 100 sieve? Choose an item

Is this virgin material from a permitted mine or quarry? Choose an item

Is this material recycled concrete or brick from a DEC registered processing facility? Choose an item

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.4(e)5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Location where fill was obtained:

Identification of any state or local approvals as a fill source:

If no approvals are available, provide a brief history of the use of the property that is the fill source:

Provide a list of supporting documentation included with this request:

The information provided on this form is accurate and complete.

Albany, NY 12233-7014

Subject: Interim Remedial Measure Work Plan
4001 4th Avenue Redevelopment Site
4001-4011 4th Avenue
Brooklyn, New York
BCP Site C224412

H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) presents the following environmental footprint analysis in accordance with U.S. Environmental Protection Agency (EPA) 542-R-12-002 for the proposed Interim Remedial Measure Work Plan (IRMWP) of the above-referenced site located at 4001-4011 4th Avenue, Queens, New York (Site).

4001 4TH AVENUE REDEVELOPMENT SITE – PROPOSED WORK PLAN

The IRMWP is anticipated to result in estimated totals of:

- 1836.20 metric million British thermal units (MMBtus) of energy used;
- 147.30 tons of total greenhouse gas emissions (CO2e);
- 5705.67 pounds (lbs) of NOx + SOx +PM emissions; and,
- 21.43 lbs of Hazardous Air Pollutants (HAP) emissions.

Energy

- 140.35 MMbtus used for on-site activities, such as air monitoring.
- 0.26 MMbtus used for Grid Electricity Generation.
- 230.41 MMbtus used for transportation of personnel and equipment.
- 1,465.18 MMbtus used for off-site activities.

Greenhouse Gas Emissions (CO2e)

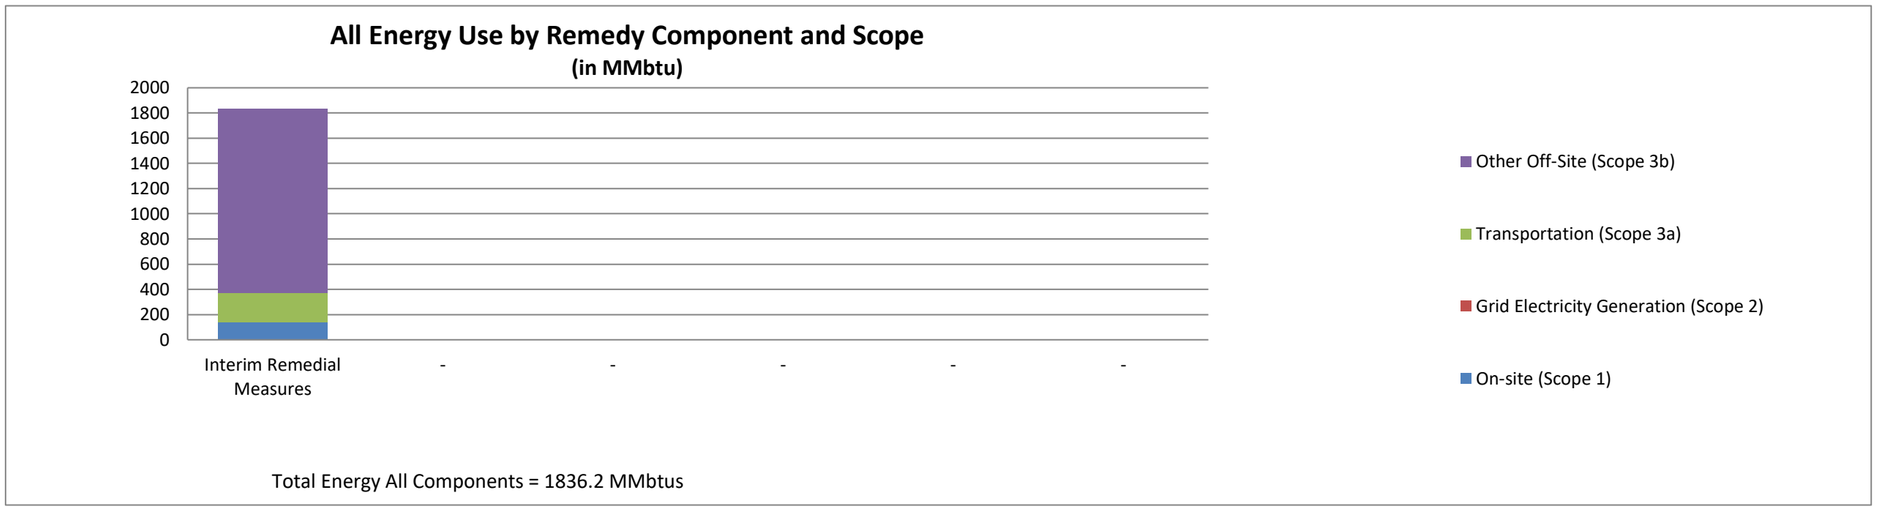
- 22,435.52 tons of CO2e produced from on-site activities, such as excavation.
- 42.09 tons of CO2e produced from Grid Electricity Generation.
- 37,234.76 tons of CO2e produced from transportation of personnel and equipment.
- 234,874.27 tons of CO2e produced from off-site activities.

Water Usage

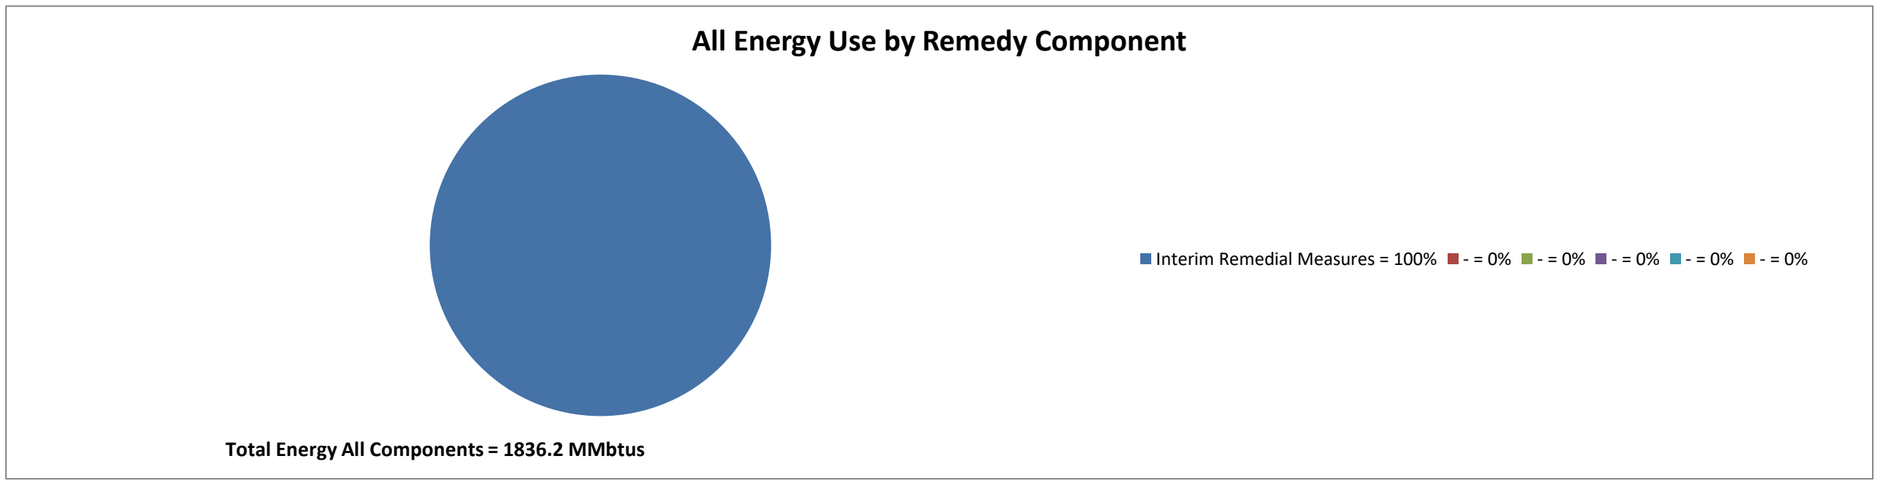
- 8400 gallons of water are estimated to be used during the investigation.

Overall, the estimated environmental footprint of the IRMWP is dominated by off-site activities, which include off-site laboratory analysis and diesel fuel production. Transportation of materials and personnel is the next largest contributor to the environmental footprint of the IRMWP, which is anticipated to generate 37,235 lbs of CO2e and use 230 MMbtus of energy. Off-site energy use is anticipated to comprise 79.79 of all energy use and off-site greenhouse gas emissions to comprise 79.73 of all emissions for the investigation.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP



Environmental Footprint Summary



Core Element	Metric		Unit of Measure	Footprint						
				Interim Remedial Measures	-	-	-	-	-	Total

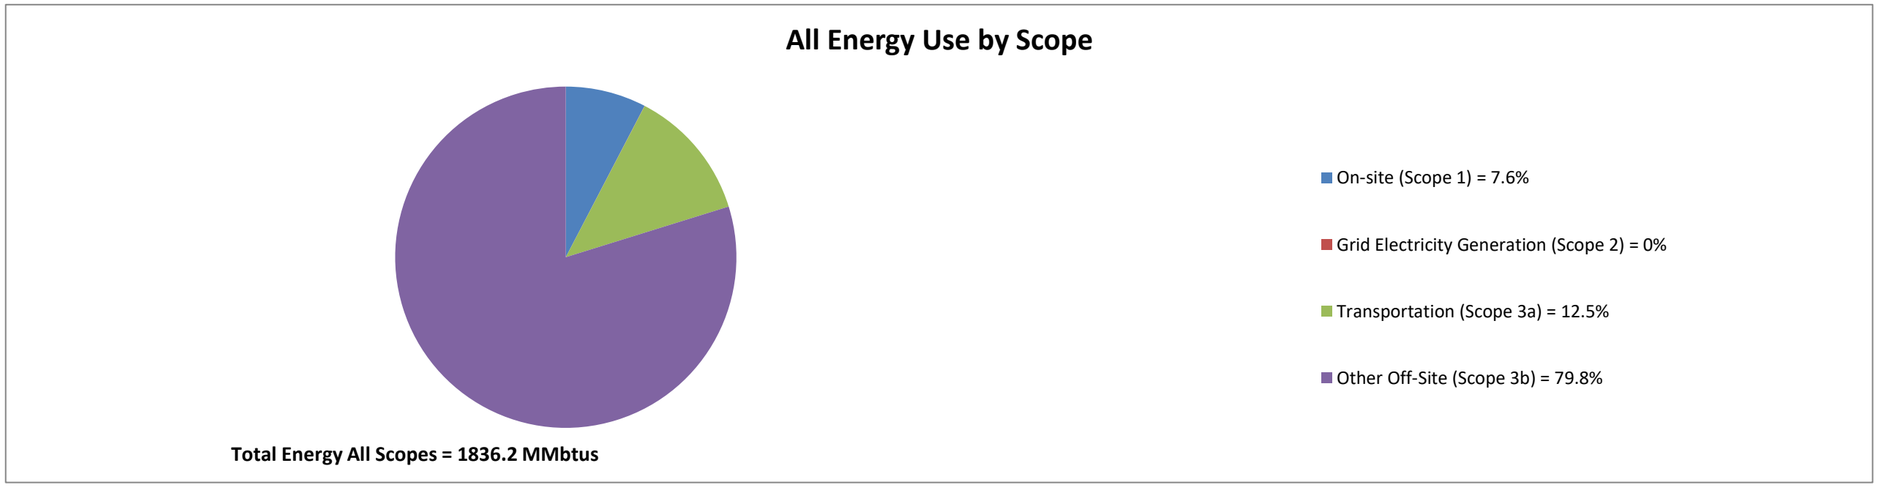
	A-5	Total greenhouse gas emissions	Tons CO2e*	147.3	0.0	0.0	0.0	0.0	0.0	147.3
Land & Ecosystems	Qualitative Description									



** Total greenhouse gases emissions (in CO2e) include consideration of CO2, CH4, and N2O (Nitrous oxide) emissions.*
"MMBtu" = millions of Btus
"MG" = millions of gallons
"CO2e" = carbon dioxide equivalents of global warming potential
"MWh" = megawatt hours (i.e., thousands of kilowatt-hours or millions of Watt-hours)
"Tons" = short tons (2,000 pounds)

The above metrics are consistent with EPA's Methodology for Understanding and Reducing a Project's Environmental Footprint (EPA 542-R-12-002), February 2012

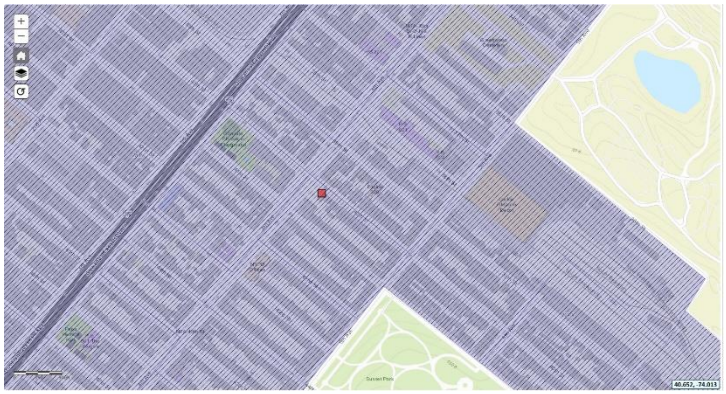
Climate Screening Checklist

Background Information

- Project Manager: Paul Probasco
- Site Name: 4001 4th Avenue Redevelopment Site (the "Site")
- Site Number: C224412
- Site Location: 4001-4011 4th Avenue, Brooklyn, New York
- Site Elevation (average above sea level): Approximately 58 feet above sea level (Google Earth)



- ClimAID Region (Responding Climate Change in New York State (ClimAID) - NYSERDA): Region 4 – New York City and Long Island

- Remedial Stage/Site Classification: Investigation.
- Contamination - Media Impacted/ Contaminants of Concern: Volatile organic compounds (VOCs) specifically petroleum-related VOCs (benzene, toluene, ethylbenzene, and xylenes [BTEX]) and semi-volatile organic compounds (SVOCs), specifically polycyclic aromatic hydrocarbons (PAHs), and metals in soil; VOCs in groundwater; and VOCs in soil vapor.
- Proposed/Current Remedy: The proposed Interim Remedial Measure Work Plan (IRMWP) includes the excavation of source material to 12 feet below ground surface (ft bgs); the closure and removal of four 4,000-gallon underground storage tanks (USTs); and installation of hydraulic control around the 12-ft excavation to the west and south via sealed steel sheeting, secant pile wall, or industry equivalent extending to 50 ft bgs. Additional remedy components for the remaining portion of the Site will be addressed under a forthcoming Remedial Action Work Plan (RAWP) to be submitted to the New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH) for review and approval.
- What is the predicted timeframe of the remedy? Will components of the remedy still be in place in 10+ years? The predicted timeframe for the implementation of the Interim Remedial Measure Work Plan (IRMWP) is November 2025 to December 2025. Components of the remedy that will be in place in 10+ years include the hydraulic barrier.
- Is the site in proximity to any sensitive receptors? (e.g., wetlands, waterbodies, residential properties, hospitals, schools, drinking water supplies, etc.) There are three sensitive receptors within a 500-ft radius of the Site: New York City Public I.S. 136, located west of the Site beyond 4th Avenue; Family Day Care Graciela's Little Angels, located approximately 250 ft to the south of the Site; and Sunset Park Group Family Daycare, located approximately 475 ft to the west of the Site.

Is the site in a disadvantaged community (DAC) or potential environmental justice area (PEJA) (Use DECinfolocator: DECinfo Locator (ny.gov))?

X Yes ☐ No

If the site is in a DAC or PEJA, will climate impacts be magnified? If yes, list how and why.

☐ Yes X No

Should thresholds of concern be lowered to account for magnification of impacts? If yes, indicate how lower thresholds will be used in the screening.

☐ Yes X No

APPENDIX H
Community Air Monitoring Plan

Appendix 1A
New York State Department of Health
Generic Community Air Monitoring Plan

Overview

A Community Air Monitoring Plan (CAMP) requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind perimeter of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of investigative and remedial work activities. The action levels specified herein require increased monitoring, corrective actions to abate emissions, and/or work shutdown. Additionally, the CAMP helps to confirm that work activities did not spread contamination off-site through the air.

The generic CAMP presented below will be sufficient to cover many, if not most, sites. Specific requirements should be reviewed for each situation in consultation with NYSDOH to ensure proper applicability. In some cases, a separate site-specific CAMP or supplement may be required. Depending upon the nature of contamination, chemical- specific monitoring with appropriately-sensitive methods may be required. Depending upon the proximity of potentially exposed individuals, more stringent monitoring or response levels than those presented below may be required. Special requirements will be necessary for work within 20 feet of potentially exposed individuals or structures and for indoor work with co-located residences or facilities. These requirements should be determined in consultation with NYSDOH.

Reliance on the CAMP should not preclude simple, common-sense measures to keep VOCs, dust, and odors at a minimum around the work areas.

Community Air Monitoring Plan

Depending upon the nature of known or potential contaminants at each site, real-time air monitoring for VOCs and/or particulate levels at the perimeter of the exclusion zone or work area will be necessary. Most sites will involve VOC and particulate monitoring; sites known to be contaminated with heavy metals alone may only require particulate monitoring. If radiological contamination is a concern, additional monitoring requirements may be necessary per consultation with appropriate DEC/NYSDOH staff.

Continuous monitoring will be required for all ground intrusive activities and during the demolition of contaminated or potentially contaminated structures. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings or monitoring wells.

Periodic monitoring for VOCs will be required during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. “Periodic” monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or

overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) must be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis or as otherwise specified. Upwind concentrations should be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The monitoring work should be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment should be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment should be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

1. If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.

2. If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.

3. If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.

4. All 15-minute readings must be recorded and be available for State (DEC and NYSDOH) personnel to review. Instantaneous readings, if any, used for decision purposes should also be recorded.

Particulate Monitoring, Response Levels, and Actions

Particulate concentrations should be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations. The particulate monitoring should be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment must be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

1. If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m^3) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m^3 above the upwind level and provided that no visible dust is migrating from the work area.

2. If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m^3 above the upwind level, work must be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m^3 of the upwind level and in preventing visible dust migration.

3. All readings must be recorded and be available for State (DEC and NYSDOH) and County Health personnel to review.

December 2009

Appendix 1B
Fugitive Dust and Particulate Monitoring

A program for suppressing fugitive dust and particulate matter monitoring at hazardous waste sites is a responsibility on the remedial party performing the work. These procedures must be incorporated into appropriate intrusive work plans. The following fugitive dust suppression and particulate monitoring program should be employed at sites during construction and other intrusive activities which warrant its use:

1. Reasonable fugitive dust suppression techniques must be employed during all site activities which may generate fugitive dust.

2. Particulate monitoring must be employed during the handling of waste or contaminated soil or when activities on site may generate fugitive dust from exposed waste or contaminated soil. Remedial activities may also include the excavation, grading, or placement of clean fill. These control measures should not be considered necessary for these activities.

3. Particulate monitoring must be performed using real-time particulate monitors and shall monitor particulate matter less than ten microns (PM10) with the following minimum performance standards:

(a) Objects to be measured: Dust, mists or aerosols;
(b) Measurement Ranges: 0.001 to 400 mg/m3 (1 to 400,000 :ug/m3);
(c) Precision (2-sigma) at constant temperature: +/- 10 :g/m3 for one second averaging; and +/- 1.5 g/m3 for sixty second averaging;
(d) Accuracy: +/- 5% of reading +/- precision (Referred to gravimetric calibration with SAE fine test dust (mmd= 2 to 3 :m, g= 2.5, as aerosolized);
(e) Resolution: 0.1% of reading or 1g/m3, whichever is larger;
(f) Particle Size Range of Maximum Response: 0.1-10;
(g) Total Number of Data Points in Memory: 10,000;
(h) Logged Data: Each data point with average concentration, time/date and data point number
(i) Run Summary: overall average, maximum concentrations, time/date of maximum, total number of logged points, start time/date, total elapsed time (run duration), STEL concentration and time/date occurrence, averaging (logging) period, calibration factor, and tag number;
(j) Alarm Averaging Time (user selectable): real-time (1-60 seconds) or STEL (15 minutes), alarms required;
(k) Operating Time: 48 hours (fully charged NiCd battery); continuously with charger;
(l) Operating Temperature: -10 to 50^{o} C (14 to 122^{o} F);
(m) Particulate levels will be monitored upwind and immediately downwind at the working site and integrated over a period not to exceed 15 minutes.

4. In order to ensure the validity of the fugitive dust measurements performed, there must be appropriate Quality Assurance/Quality Control (QA/QC). It is the responsibility of the remedial party to adequately supplement QA/QC Plans to include the following critical features: periodic instrument calibration, operator training, daily instrument performance (span) checks, and a record keeping plan.

5. The action level will be established at 150 ug/m3 (15 minutes average). While conservative,

this short-term interval will provide a real-time assessment of on-site air quality to assure both health and safety. If particulate levels are detected in excess of 150 ug/m3, the upwind background level must be confirmed immediately. If the working site particulate measurement is greater than 100 ug/m3 above the background level, additional dust suppression techniques must be implemented to reduce the generation of fugitive dust and corrective action taken to protect site personnel and reduce the potential for contaminant migration. Corrective measures may include increasing the level of personal protection for on-site personnel and implementing additional dust suppression techniques (see paragraph 7). Should the action level of 150 ug/m3 continue to be exceeded work must stop and DER must be notified as provided in the site design or remedial work plan. The notification shall include a description of the control measures implemented to prevent further exceedances.

6. It must be recognized that the generation of dust from waste or contaminated soil that migrates off-site, has the potential for transporting contaminants off-site. There may be situations when dust is being generated and leaving the site and the monitoring equipment does not measure PM10 at or above the action level. Since this situation has the potential to allow for the migration of contaminants off-site, it is unacceptable. While it is not practical to quantify total suspended particulates on a real-time basis, it is appropriate to rely on visual observation. If dust is observed leaving the working site, additional dust suppression techniques must be employed. Activities that have a high dusting potential--such as solidification and treatment involving materials like kiln dust and lime--will require the need for special measures to be considered.

7. The following techniques have been shown to be effective for the controlling of the generation and migration of dust during construction activities:

(a) Applying water on haul roads;
(b) Wetting equipment and excavation faces;
(c) Spraying water on buckets during excavation and dumping;
(d) Hauling materials in properly tarped or watertight containers;
(e) Restricting vehicle speeds to 10 mph;
(f) Covering excavated areas and material after excavation activity ceases; and
(g) Reducing the excavation size and/or number of excavations.

Experience has shown that the chance of exceeding the 150ug/m3 action level is remote when the above-mentioned techniques are used. When techniques involving water application are used, care must be taken not to use excess water, which can result in unacceptably wet conditions. Using atomizing sprays will prevent overly wet conditions, conserve water, and provide an effective means of suppressing the fugitive dust.

8. The evaluation of weather conditions is necessary for proper fugitive dust control. When extreme wind conditions make dust control ineffective, as a last resort remedial actions may need to be suspended. There may be situations that require fugitive dust suppression and particulate monitoring requirements with action levels more stringent than those provided above. Under some circumstances, the contaminant concentration and/or toxicity may require additional monitoring to protect site personnel and the public. Additional integrated sampling and chemical analysis of the dust may also be in order. This must be evaluated when a health and safety plan is developed and when appropriate suppression and monitoring requirements are established for protection of health and the environment.

Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures

When work areas are within 20 feet of potentially exposed populations or occupied structures, the continuous monitoring locations for VOCs and particulates must reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. The use of engineering controls such as vapor/dust barriers, temporary negative-pressure enclosures, or special ventilation devices should be considered to prevent exposures related to the work activities and to control dust and odors. Consideration should be given to implementing the planned activities when potentially exposed populations are at a minimum, such as during weekends or evening hours in non-residential settings.

- If total VOC concentrations opposite the walls of occupied structures or next to intake vents exceed 1 ppm, monitoring should occur within the occupied structure(s). Background readings in the occupied spaces must be taken prior to commencement of the planned work. Any unusual background readings should be discussed with NYSDOH prior to commencement of the work.

- If total particulate concentrations opposite the walls of occupied structures or next to intake vents exceed 150 mcg/m^3, work activities should be suspended until controls are implemented and are successful in reducing the total particulate concentration to 150 mcg/m^3 or less at the monitoring point.

- Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions should be pre-determined, as necessary, for each site.

Special Requirements for Indoor Work With Co-Located Residences or Facilities

Unless a self-contained, negative-pressure enclosure with proper emission controls will encompass the work area, all individuals not directly involved with the planned work must be absent from the room in which the work will occur. Monitoring requirements shall be as stated above under "Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures" except that in this instance "nearby/occupied structures" would be adjacent occupied rooms. Additionally, the location of all exhaust vents in the room and their discharge points, as well as potential vapor pathways (openings, conduits, etc.) relative to adjoining rooms, should be understood and the monitoring locations established accordingly. In these situations, it is strongly recommended that exhaust fans or other engineering controls be used to create negative air pressure within the work area during remedial activities. Additionally, it is strongly recommended that the planned work be implemented during hours (e.g. weekends or evenings) when building occupancy is at a minimum.

Safety Data Sheet

Section 1 – Chemical Products and Company Identification

Product Names: BioSolve® Pinkwater®

Product Uses: Remediation of hydrocarbon (oil, fuel, petrochemical) contamination, including: impacted soils, suppression of VOCs, decontamination of equipment and protective clothing, and surface washing

Manufacturer:
The BioSolve Company
24 Victory Lane
Dracut, MA 01826 USA

Contact Information:

+1 (800) 225-3909	US, Canada, Mexico and Puerto Rico
+1 (781) 482-7900	All other locations

Section 2 – Hazards Identification

Health Hazards:

Eye Contact:	Causes transient eye irritation
Skin Contact:	May cause mild, transient irritation
Ingestion:	May be harmful if swallowed; can cause gastrointestinal irritation, nausea, vomiting and/or diarrhea

Hazard Mitigation: Wear protective gloves and eye/face protection
Avoid prolonged breathing of spray

Environmental Hazards: Moderately toxic to aquatic life. Avoid discharge to storm drains and waterways

GHS Classification: Toxic to aquatic life, Acute Category 2

Section 3 – Composition/Information on Ingredients

Proprietary formulation with nonionic surfactants (32% active ingredients in water)

BioSolve products contain no caustic, d-limonene or hydrocarbon solvents.

BioSolve products do not contain any hazardous ingredients as defined by CERCLA, Massachusetts Right to Know Law and California Prop 65. All ingredients are TSCA compliant.

Section 4 – First Aid Measures

Eyes: Immediately flush eyes with water for at least 15 minutes. Hold eyelids apart while flushing to rinse entire surface of eye and lids with water. Seek medical attention for lasting irritation.

Skin: Rinse exposed area and wash with mild soap and water for several minutes. Seek medical attention if irritation develops.

Ingestion: Seek medical attention in the event of serious or persistent abdominal discomfort, nausea or diarrhea.

Inhalation: Inhalation of concentrated vapors resulting from spraying or heating in confined or poorly ventilated areas may cause irritation of nose and throat. Remove person to fresh air and seek medical attention if irritation persists.

Section 5 – Fire Fighting Measures

Suitable Extinguishing Media: None required; BioSolve products are non-flammable

Special Protective Equipment for Firefighters: None necessary

Unusual Fire or Explosive Hazards: None

Section 6 – Accidental Release Measures

In case of accidental release, breakage or leakage: Eliminate or contain source with inert material, such as sand, earth, absorbent pads, etc. Transfer liquid to suitable containers for recovery, re-use or disposal. Wipe up or mop up using water. Hard surfaces (e.g., floors, driveways) may be slippery; use care to avoid falling.

Rinse area with water. Avoid flow of run-off to surface waters. Always check with local regulations before discharging effluent to storm drains or sewers.

Section 7 – Handling and Storage

Handling: Minimize periods of exposure to extreme temperatures. Keep from freezing. If frozen, separation may occur; thaw and stir thoroughly prior to use. Freezing will not affect product performance.

Precautions: Chemical resistant gloves and eye protection are recommended while mixing and using.

Incompatibilities: Avoid contact with strong acids or strong oxidants.

Storage: Recommended storage temperature: 35° – 120° F (1° – 48° C).

Shelf Life: If unopened, more than 10 years.

Section 8 – Exposure Controls / Personal Protection

Eyes Protection: Safety glasses; chemical goggles or face shield recommended when spraying to protect against backsplash and drift.

Skin Protection: Rubber or latex gloves recommended.

Respiratory Protection: None required, except if application results in significant misting of product. If so, use of an approved air purifying respirator is recommended.

Engineering Controls: For indoor use or for use in a confined space, normal ventilation is generally satisfactory.

Section 9 – Physical and Chemical Properties

Appearance: Deep red

Odor: Mild, pleasant sassafras fragrance

Concentration: ~32% active ingredients as sold

Boiling Point	265°F/129°C	**Vapor Pressure mm/Hg**	Not available
Melting/Freezing Point	28°F/-2°C	**Vapor Density (Air=1)**	Not available
Flash Point	Non-flammable	**Surface Tension***	29 Dyne/cm @25°C
Flammability Limits	Not applicable	**Viscosity (concentrate)**	490 centipoise
Reactivity with Water	None	**Viscosity (6% solution)**	1.5 centipoise
Evaporation Rate	Not determined	**Solubility in Water**	100%
Specific Gravity	1.01 gms/cc	**VOC Content**	Not determined
	8.43 lbs/U.S. gal	**pH**	9

*6% solution

Section 10 – Stability and Reactivity

Chemical Stability: Stable; will not decompose if used according to manufacturer's directions.

Conditions to Avoid: Prolonged exposure to heat may cause product degradation. Freezing should also be avoided as discussed in Section 7.

Incompatible Materials: Normally unreactive. Avoid strong alkalis, strong acids, strong oxidizing agents and materials with reactive hydroxyl compounds. These materials could damage the product and reduce its effectiveness during application.

Hazardous Decomposition Products: None are known.

Hazardous Polymerization: Will not occur.

Section 11 – Toxicological Information

Overview: No adverse acute or chronic health effects expected if product used in accordance with manufacturer's directions.

Carcinogenicity: No ingredient has been shown to cause cancer in laboratory animals.

Specific Organ Toxicity: None are known.

Section 12 – Ecological Considerations

Persistence and Degradability: The total of the organic components contained in this product is not classified as readily biodegradable (OECD-301 A-F). However, this product is inherently biodegradable with 60% degradation in 28 days (OECD-301B) and estimated >95% degradation in 120 days.

Bioaccumulation Potential: The bioaccumulation factor in fish has been estimated to be low, ranging from 87 to 344.

Mobility: No data available

Aquatic Toxicity:

LC_{50} of Concentrate (As shipped)		
Mysidopsis bahia	48-hours	3.6 mg/L
Menidia beryllina	96-hours	6.4 mg/L
LC50 of 3% Dilute Solution (As Used)		
Mysidopsis bahia	48-hours	185 mg/L
Menidia beryllina	96-hours	247 mg/L
LC50 of 6% Dilute Solution (As Used)		
Daphnia magna	48-hours	287 mg/L
Pimephales promelas	96-hours	124 mg/L
Onchorhynchus mykiss	96-hours	177 mg/L

Section 13 - Disposal

DO NOT DUMP INTO STORM DRAINS OR INTO ANY BODY OF WATER. All disposal practices must be in compliance with all Federal, State/Provincial and local laws and regulations. As manufactured, BioSolve products do not meet the definition of a hazardous waste. Small quantities of unused and uncontaminated product may be discharged to a qualified wastewater treatment facility. Always obtain approval from local and Federal regulatory agencies prior to discarding this product into public sewers.

As your supplier, we have no control over your handling and use of this product. However, the intended use of this product as a remediation and/or surface washing agent may produce wastewater containing emulsified or dispersed hydrocarbons that may be classified as a hazardous waste and should be treated and disposed of accordingly.

Section 14 – Transportation Information

USDOT Freight Class 55 (Liquid Cleaning Compound, Non-Hazardous)
This product is not regulated by USDOT or Canadian TDG when shipped domestically by land.

North American Industry Classification System (NAICS) # 325613

U.S. ITC, Harmonized Tariff Schedule B Classification: 3402.90.30.00

Section 15 – Regulatory Information

This product is considered non-hazardous as defined by CERCLA, according to OSHA, Massachusetts Right to Know Law and California Prop 65.

Toxic Substances Control Act:	All components of this product are on the TSCA inventory or are exempt from TSCA Inventory requirements under 40 CFR 720.30.
CEPA – Domestic Substances List:	All substances contained in this product are listed on the Canadian Domestic Substances List (DSL) or not required to be listed.
Canadian CPR Compliance:	This product has been classified in accordance with the hazard criteria of the Canadian Controlled Products Regulations (CPR) and the SDS contains all the information required by the CPR
WHMIS Classification:	D2B Eye or skin irritant

Regulatory requirements are subject to change and may differ from one location to another; it is the buyer's responsibility to ensure that its activities comply with Federal, state or provincial and local laws.

Section 16 – Other Information

HMIS Rating	Health Hazard:	1 (Eye/Skin Irritant)
	Fire Hazard:	0
	Reactivity:	0
	Personal Protective Equipment:	Rubber gloves, safety glasses or face shield
NFPA Rating	Health:	1 (Eye/Skin Irritant)
	Flammability:	0
	Reactivity:	0
	Other Hazard:	None

BioSolve Pinkwater is on the US Environmental Protection Agency's NCP Product Schedule. This listing does NOT mean that EPA approves, recommends, licenses, certifies or authorizes the use of BioSolve Pinkwater on an oil discharge. This listing means only that data have been submitted to EPA as required by Subpart J of the National Contingency Plan, 40 CFR Section 300.915.

SDS Effective Date: January 1, 2018

The information contained herein is accurate to the best of our knowledge. The BioSolve Company makes no warranty of any kind, express or implied, concerning the safe use of this material in your process or application or in combination with other substances.

For more information, visit: www.biosolve.com

SAFETY DATA SHEET

SOIL EQUIVALENT FOAM AC-667SE

Section 1. Identification

GHS product identifier : SOIL EQUIVALENT FOAM AC-667SE

Chemical name : Proprietary Surfactant.

Other means of identification : Starch modified hydrolyzed protein surfactant.

Product type : Liquid.

Relevant identified uses of the substance or mixture and uses advised against

Product use : Aqueous Surfactant. Spray application for VOC and Odor control.

Area of application : Industrial applications.

Supplier/Manufacturer : Rusmar, Inc.
216 Garfield Avenue
West Chester, PA 19380
Phone: 610-436-4314
Fax: 610-436-8436

e-mail address of person responsible for this SDS : info@rusmarinc.com
Website: www.rusmarinc.com

Emergency telephone number (with hours of operation) : 888 488 8044 or 212 682 1200
CHEMTREC 800 424 9300

Section 2. Hazards identification

OSHA/HCS status : While this material is not considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200), this SDS contains valuable information critical to the safe handling and proper use of the product. This SDS should be retained and available for employees and other users of this product.

Classification of the substance or mixture : Not classified.

GHS label elements

Signal word : No signal word.

Hazard statements : No known significant effects or critical hazards.

Precautionary statements

Prevention : Not applicable.

Response : Not applicable.

Storage : Not applicable.

Disposal : Not applicable.

Hazards not otherwise classified : None known.

Section 3. Composition/information on ingredients

Substance/mixture : Substance

Chemical name : Proprietary Surfactant.

Other means of identification : Starch modified hydrolyzed protein surfactant.

CAS number/other identifiers

CAS number : Not available.

Product code : Not available.

Ingredient name	Other names	%	CAS number
Proprietary Surfactant.	-	100	-

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health and hence require reporting in this section.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact : Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Get medical attention if irritation occurs.

Inhalation : Remove victim to fresh air and keep at rest in a position comfortable for breathing. Get medical attention if symptoms occur.

Skin contact : Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Get medical attention if symptoms occur.

Ingestion : Wash out mouth with water. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Do not induce vomiting unless directed to do so by medical personnel. Get medical attention if symptoms occur.

Most important symptoms/effects, acute and delayed

Potential acute health effects

Eye contact : No known significant effects or critical hazards.

Inhalation : No known significant effects or critical hazards.

Skin contact : No known significant effects or critical hazards.

Ingestion : No known significant effects or critical hazards.

Over-exposure signs/symptoms

Eye contact : No specific data.

Inhalation : No specific data.

Skin contact : No specific data.

Ingestion : No specific data.

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician : Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.

Specific treatments : No specific treatment.

Section 4. First aid measures

Protection of first-aiders : No action shall be taken involving any personal risk or without suitable training.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media : Use an extinguishing agent suitable for the surrounding fire.

Unsuitable extinguishing media : None known.

Specific hazards arising from the chemical : In a fire or if heated, a pressure increase will occur and the container may burst.

Hazardous thermal decomposition products : Decomposition products may include the following materials:
carbon dioxide
carbon monoxide
sulfur oxides
Ammonia.

Special protective actions for fire-fighters : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Put on appropriate personal protective equipment.

For emergency responders : If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Section 6. Accidental release measures

Large spill : Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures : Put on appropriate personal protective equipment (see Section 8).

Advice on general occupational hygiene : Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities : Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

None.

Appropriate engineering controls : Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Environmental exposure controls : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Hygiene measures : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields.

Skin protection

Section 8. Exposure controls/personal protection

Hand protection : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Body protection : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Other skin protection : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Appearance

Physical state : Liquid. [Viscous Gel.]

Color : Opaque. [Dark]

Odor : Cinnamon.

Odor threshold : Not available.

pH : Not available.

Melting point : Not available.

Boiling point : 99°C (210.2°F)

Flash point : Non-flammable. ASTM E1354.

Evaporation rate : Not available.

Flammability (solid, gas) : Not applicable.

Lower and upper explosive (flammable) limits : Not available.

Vapor pressure : 3.3 kPa (25 mm Hg) [room temperature]

Vapor density : Not available.

Relative density : 0.99 to 1.01

Solubility : Easily soluble in the following materials: cold water and hot water.

Solubility in water : Easily soluble.

Partition coefficient: n-octanol/water : Not available.

Auto-ignition temperature : Not available.

Decomposition temperature : Not available.

SADT : Not available.

Viscosity : Not available.

Section 10. Stability and reactivity

Reactivity : No specific test data related to reactivity available for this product or its ingredients.

Chemical stability : The product is stable.

Possibility of hazardous reactions : Under normal conditions of storage and use, hazardous reactions will not occur.

Under normal conditions of storage and use, hazardous polymerization will not occur.

Conditions to avoid : Keep from freezing. Keep away from heat.

Incompatible materials : No specific data.

Hazardous decomposition products : Low levels of sulfur oxides and ammonia on exposure to high temperatures.

Section 11. Toxicological information

Information on toxicological effects

Acute toxicity

Not available.

Conclusion/Summary : Not expected.

Irritation/Corrosion

Not available.

Sensitization

Not available.

Mutagenicity

Conclusion/Summary : Not available.

Carcinogenicity

Conclusion/Summary : Not available.

Reproductive toxicity

Conclusion/Summary : Not available.

Teratogenicity

Conclusion/Summary : Not available.

Specific target organ toxicity (single exposure)

Not available.

Specific target organ toxicity (repeated exposure)

Not available.

Aspiration hazard

Not available.

Information on the likely routes of exposure : Not available.

Section 11. Toxicological information

Potential acute health effects

Eye contact : No known significant effects or critical hazards.

Inhalation : No known significant effects or critical hazards.

Skin contact : No known significant effects or critical hazards.

Ingestion : No known significant effects or critical hazards.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact : No specific data.

Inhalation : No specific data.

Skin contact : No specific data.

Ingestion : No specific data.

Delayed and immediate effects and also chronic effects from short and long term exposure

Short term exposure

Potential immediate effects : Not available.

Potential delayed effects : Not available.

Long term exposure

Potential immediate effects : Not available.

Potential delayed effects : Not available.

Potential chronic health effects

Not available.

General : No known significant effects or critical hazards.

Carcinogenicity : No known significant effects or critical hazards.

Mutagenicity : No known significant effects or critical hazards.

Teratogenicity : No known significant effects or critical hazards.

Developmental effects : No known significant effects or critical hazards.

Fertility effects : No known significant effects or critical hazards.

Numerical measures of toxicity

Acute toxicity estimates

Not available.

Section 12. Ecological information

Toxicity

Not available.

Persistence and degradability

Conclusion/Summary : OECD METHOD 301

Section 12. Ecological information

Product/ingredient name	Aquatic half-life	Photolysis	Biodegradability
Proprietary Surfactant.	-	-	Readily

Bioaccumulative potential

Not available.

Mobility in soil

Soil/water partition coefficient (K_{OC}) : Not available.

Other adverse effects : No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Section 14. Transport information

Hazardous Material Information System (U.S.A.)

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks Although HMIS® ratings are not required on SDSs under 29 CFR 1910. 1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

The customer is responsible for determining the PPE code for this material.

National Fire Protection Association (U.S.A.)

SAFETY DATA SHEET

LONG DURATION FOAM AC-645

Section 1. Identification

GHS product identifier : LONG DURATION FOAM AC-645

Chemical name : Proprietary Surfactant.

Other means of identification : Aqueous anionic surfactant mixture.

Product type : Liquid.

Relevant identified uses of the substance or mixture and uses advised against

Product use : Aqueous Surfactant. Spray application for VOC and Odor control.

Area of application : Industrial applications.

Supplier/Manufacturer : Rusmar, Inc.
216 Garfield Avenue
West Chester, PA 19380
Phone: 610-436-4314
Fax: 610-436-8436

e-mail address of person responsible for this SDS : info@rusmarinc.com
Website: www.rusmarinc.com

Emergency telephone number (with hours of operation) : 888 488 8044 or 212 682 1200
CHEMTREC 800 424 9300

Section 2. Hazards identification

OSHA/HCS status : While this material is not considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200), this SDS contains valuable information critical to the safe handling and proper use of the product. This SDS should be retained and available for employees and other users of this product.

Classification of the substance or mixture : Not classified.

GHS label elements

Signal word : No signal word.

Hazard statements : No known significant effects or critical hazards.

Precautionary statements

Prevention : Not applicable.

Response : Not applicable.

Storage : Not applicable.

Disposal : Not applicable.

Hazards not otherwise classified : None known.

Section 3. Composition/information on ingredients

Substance/mixture : Substance

Chemical name : Proprietary Surfactant.

Other means of identification : Aqueous anionic surfactant mixture.

CAS number/other identifiers

CAS number : Not available.

Product code : Not available.

Ingredient name	Other names	%	CAS number
Proprietary Surfactant.	-	100	-

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health and hence require reporting in this section.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact : Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Get medical attention if irritation occurs.

Inhalation : Remove victim to fresh air and keep at rest in a position comfortable for breathing. Get medical attention if symptoms occur.

Skin contact : Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Get medical attention if symptoms occur.

Ingestion : Wash out mouth with water. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Do not induce vomiting unless directed to do so by medical personnel. Get medical attention if symptoms occur.

Most important symptoms/effects, acute and delayed

Potential acute health effects

Eye contact : No known significant effects or critical hazards.

Inhalation : No known significant effects or critical hazards.

Skin contact : No known significant effects or critical hazards.

Ingestion : No known significant effects or critical hazards.

Over-exposure signs/symptoms

Eye contact : No specific data.

Inhalation : No specific data.

Skin contact : No specific data.

Ingestion : No specific data.

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician : Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.

Specific treatments : No specific treatment.

Section 4. First aid measures

Protection of first-aiders : No action shall be taken involving any personal risk or without suitable training.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media : Use an extinguishing agent suitable for the surrounding fire.

Unsuitable extinguishing media : None known.

Specific hazards arising from the chemical : In a fire or if heated, a pressure increase will occur and the container may burst.

Hazardous thermal decomposition products : Decomposition products may include the following materials:
carbon dioxide
carbon monoxide
sulfur oxides

Special protective actions for fire-fighters : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Put on appropriate personal protective equipment.

For emergency responders : If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Section 6. Accidental release measures

Large spill : Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures : Put on appropriate personal protective equipment (see Section 8).

Advice on general occupational hygiene : Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities : Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

None.

Appropriate engineering controls : Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Environmental exposure controls : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Hygiene measures : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection : Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields.

Skin protection

Section 8. Exposure controls/personal protection

Hand protection : Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Body protection : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Other skin protection : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Appearance

Physical state : Liquid. [Clear viscous liquid.]

Color : Translucent. White.

Odor : Odorless.

Odor threshold : Not available.

pH : Not available.

Melting point : Not available.

Boiling point : 99°C (210.2°F)

Flash point : Not applicable.

Evaporation rate : Not available.

Flammability (solid, gas) : Not applicable.

Lower and upper explosive (flammable) limits : Not available.

Vapor pressure : 3.3 kPa (25 mm Hg) [room temperature]

Vapor density : Not available.

Relative density : 1.01 to 1.06

Solubility : Easily soluble in the following materials: cold water and hot water.

Solubility in water : Easily soluble.

Partition coefficient: n-octanol/water : Not available.

Auto-ignition temperature : Not available.

Decomposition temperature : Not available.

SADT : Not available.

Viscosity : Not available.

Section 10. Stability and reactivity

Reactivity : No specific test data related to reactivity available for this product or its ingredients.

Chemical stability : The product is stable.

Possibility of hazardous reactions : Under normal conditions of storage and use, hazardous reactions will not occur.

Under normal conditions of storage and use, hazardous polymerization will not occur.

Conditions to avoid : Keep away from heat.

Incompatible materials : No specific data.

Hazardous decomposition products : Low levels of sulfur oxides on exposure to high temperatures (concentrate).

Section 11. Toxicological information

Information on toxicological effects

Acute toxicity

Not available.

Conclusion/Summary : Not expected.

Irritation/Corrosion

Not available.

Sensitization

Not available.

Mutagenicity

Conclusion/Summary : Not available.

Carcinogenicity

Conclusion/Summary : Not available.

Reproductive toxicity

Conclusion/Summary : Not available.

Teratogenicity

Conclusion/Summary : Not available.

Specific target organ toxicity (single exposure)

Not available.

Specific target organ toxicity (repeated exposure)

Not available.

Aspiration hazard

Not available.

Information on the likely routes of exposure : Not available.

Section 11. Toxicological information

Potential acute health effects

Eye contact : No known significant effects or critical hazards.

Inhalation : No known significant effects or critical hazards.

Skin contact : No known significant effects or critical hazards.

Ingestion : No known significant effects or critical hazards.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact : No specific data.

Inhalation : No specific data.

Skin contact : No specific data.

Ingestion : No specific data.

Delayed and immediate effects and also chronic effects from short and long term exposure

Short term exposure

Potential immediate effects : Not available.

Potential delayed effects : Not available.

Long term exposure

Potential immediate effects : Not available.

Potential delayed effects : Not available.

Potential chronic health effects

Not available.

General : No known significant effects or critical hazards.

Carcinogenicity : No known significant effects or critical hazards.

Mutagenicity : No known significant effects or critical hazards.

Teratogenicity : No known significant effects or critical hazards.

Developmental effects : No known significant effects or critical hazards.

Fertility effects : No known significant effects or critical hazards.

Numerical measures of toxicity

Acute toxicity estimates

Not available.

Section 12. Ecological information

Toxicity

Not available.

Persistence and degradability

Not available.

Section 12. Ecological information

Bioaccumulative potential

Not available.

Mobility in soil

Soil/water partition coefficient (K_{OC}) : Not available.

Other adverse effects : No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Section 14. Transport information

	DOT Classification	IMDG	IATA
UN number	Not regulated.	Not regulated.	Not regulated.
UN proper shipping name	-	-	-
Transport hazard class(es)	-	-	-
Packing group	-	-	-
Environmental hazards	No.	No.	No.
Additional information	-	-	-

Special precautions for user : **Transport within user's premises:** always transport in closed containers that are upright and secure. Ensure that persons transporting the product know what to do in the event of an accident or spillage.

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code : Not available.

Section 15. Regulatory information

U.S. Federal regulations : **United States inventory (TSCA 8b)**: Not determined.

Clean Air Act Section 112 (b) Hazardous Air Pollutants (HAPs) : Not listed

Clean Air Act Section 602 Class I Substances : Not listed

Clean Air Act Section 602 Class II Substances : Not listed

DEA List I Chemicals (Precursor Chemicals) : Not listed

DEA List II Chemicals (Essential Chemicals) : Not listed

Section 16. Other information

Hazardous Material Information System (U.S.A.)

Health	0
Flammability	0
Physical hazards	0

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks Although HMIS® ratings are not required on SDSs under 29 CFR 1910. 1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

The customer is responsible for determining the PPE code for this material.

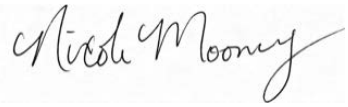
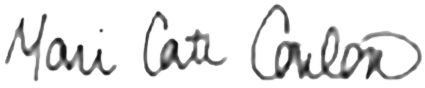
Subject: Interim Remedial Measure Notification Letter
4001 4th Avenue Redevelopment Site
NYSDEC Site No. C224412
4001-4011 4th Avenue
Brooklyn, New York

Dear Myrna Gonzalez Rojas:



On behalf of 4 Ave Property LLC, H & A of New York Engineering and Geology, LLP (Haley & Aldrich of New York) is sending this letter as official notification regarding the Interim Remedial Measure (IRM) for the 4001 4th Avenue Redevelopment Site, New York State Department of Environmental Conservation (NYSDEC) Site No. C224412, located at 4001-4011 4th Avenue in Brooklyn, New York (Site). The objective of this IRM is to facilitate the removal of four 4,000-gallon underground storage tanks (USTs) and associated impacted soils. The IRM will be completed in accordance with the NYSDEC-approved IRM Work Plan (IRMWP), and the Site will be locked and inaccessible to the public during IRM implementation. The proposed IRM activities are summarized as follows:

- Implementation of a Community Air Monitoring Plan (CAMP), including monitoring for the presence of volatile organic compounds (VOCs) and particulates. Dust, odor, and nuisance controls will be implemented, (as needed);
- Equipment mobilization;
- Concrete pavement removal in the area of excavation;
- Support-of-excavation (SOE) installation to the west and south of the tank area;
- Excavation and off-Site disposal of historic fill and hydrocarbon contaminated soil;
- Although not anticipated, localized dewatering (as needed);
- Cleaning and removal of residual UST contents;
- Removal of USTs and/or associated appurtenances;
- Collection of confirmation samples; and,
- Installation of a demarcation barrier and backfilling of the UST area with a 6-inch-thick temporary cover of NYSDEC-approved certified clean fill and/or gravel.



Implementation of the IRM activities will be conducted in accordance with the NYSDEC approved IRMWP available at https://extapps.dec.ny.gov/data/DecDocs/C224412/, which includes measures for community air monitoring.

Should you have any questions or comments, please feel free to contact the NYSDEC Project Manager (Shawn Roberts) at Shawn.Roberts@dec.ny.gov, the New York State Department of Health (NYSDOH) Project Manager (Christopher Budd) at Christopher.Budd@health.ny.gov.

Sincerely yours,
H & A OF NEW YORK ENGINEERING AND GEOLOGY, LLP
