LIST OF ACRONYMS

ACRONYM	DEFINITION
AOC	Area of Concern
AST	Aboveground Storage Tank
BCP	Brownfield Cleanup Program
bgs	Below Grade Surface
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
CAMP	Community Air Monitoring Program
COC	Contaminants of Concern
CSM	Conceptual Site Model
DER	Division of Environmental Remediation
DER-10	Technical Guidance for Site Investigation and Remediation
DER-31	DER-31 Green Remediation Policy
DOT	Department of Transportation
DUSR	Data Usability Summary Report
EL	Elevation
ELAP	Environmental Laboratory Approval Program
ESA	Environmental Site Assessment
EV	Electron Volt
FWRIA	Fish and Wildlife Resources Impact Analysis
GHG	Greenhouse Gas
GPR	Ground Penetrating Radar
HASP	Health and Safety Plan
HDPE	High-Density Polyethylene
ICP-AES	Inductively Coupled Plasma Atomic Emission Spectrometry
IDW	Investigation-Derived Waste
LLC	Limited Liability Company
L/MIN	Liters per Minute
µg/m^3	Micrograms per Cubic Meter
µg/L	Micrograms per Liter
mg/kg	Milligrams per Kilogram
MS/MSD	Matrix Spike/Matrix Spike Duplicate
NAPL	Non-Aqueous Phase Liquid
NAVD88	North American Vertical Datum of 1988
NTU	Nephelometric Turbidity Units
NWI	National Wetlands Inventory
NYSDEC	New York State Department of Environmental Conservation
NYCDOF	New York City Department of Finance
NYSDOH	New York State Department of Health
NYCRR	New York City Rules and Regulations

ACRONYM	DEFINITION
PCB	Polychlorinated Biphenyls
PCE	Tetrachloroethene
PFAS	Per- and Polyfluoroalkyl Substances
PFOA	Perfluorooctanoic acid
PFOS	Perfluorooctanesulfonic acid
PGW	Protection of Groundwater
PID	Photoionization Detector
PPM	Parts per Million
PVC	Polyvinyl Chloride
QA/QC	Quality Assurance/Quality Control
RAWP	Remedial Action Work Plan
REC	Recognized Environmental Conditions
RI	Remedial Investigation
RL	Reporting Limit
RIR	Remedial Investigation Report
RIWP	Remedial Investigation Work Plan
RR	Restricted-Residential
SCO	Soil Cleanup Objective
SGV	Ambient Water Quality Standards and Guidance Values for Class GA water
SMP	Site Management Plan
SVOC	Semivolatile Organic Compound
TAL	Target Analyte List
TCE	Trichloroethene
TCL	Target Compound List
TOGS	Technical and Operational Guidance Series
USEPA	United Stated Environmental Protection Agency
UST	Underground Storage Tank
UU	Unrestricted Use
VOC	Volatile Organic Compound

CERTIFICATION

I, Brian Gochenaur, certify that I am currently a Qualified Environmental Professional (QEP) as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Report (RIR) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

DRAFT

Brian Gochenaur, QEP
Associate Principal

1.0 INTRODUCTION

This Remedial Investigation Report (RIR) was prepared on behalf of Montrose Meserole Owner LLC (the Participant) for the proposed development located at 172 Montrose Avenue (Kings County Tax Block 3062, Lot 12[1]) in the East Williamsburg neighborhood of Brooklyn, New York (the site). The Participant plans to remediate the site in conjunction with a new affordable housing development under the New York State Brownfield Cleanup Program (BCP), pursuant to the Brownfield Cleanup Agreement (BCA) for Site No. C224417 with the New York State Department of Environmental Conservation (NYSDEC), executed on June 9, 2025.

This RIR presents environmental data and findings from the Remedial Investigation (RI) conducted between August 11 and October 16, 2025. The RI was completed by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) and was conducted in accordance with Title 6 of the Official Compilation of New York Codes, Rules and Regulations (NYCRR) Part 375-1, 3.8, 6.8, NYSDEC Division of Environmental Remediation (DER) Technical Guidances for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31), applicable New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, updated February 2024), and the NYSDEC-approved August 11, 2025 Remedial Investigation Work Plan (RIWP). The objectives of this RI included:

- Defining the nature and extent of soil, soil vapor, and groundwater contamination at or emanating from the site.
- Generating sufficient data to evaluate the remedial action alternatives and prepare a Remedial Action Work Plan (RAWP) to be implemented concurrently with site development.
- Evaluate whether contamination is emanating from the site.
- Generate sufficient data (both on-site and off-site, as necessary) to evaluate the actual and potential threats to human health and the environment from site contamination.

The remainder of this report is organized into the follow sections:

- Section 2.0 describes the site setting and physical characteristics.
- Section 3.0 describes the site background including results of previous investigations and identified areas of concern (AOC).
- Section 4.0 presents the investigation field procedures.
- Section 5.0 describes the field observations and analytical results.

[1] The site was formerly identified as Block 3062, Lots 12 and 17. The lot merger into the current Lot 12 configuration was recorded with the New York City Department of Finance (NYCDOF) on April 5, 2016.

- Section 6.0 describes green remediation principles and techniques implemented in accordance with NYSDEC DER-31.
- Section 7.0 presents an assessment of the exposure risks of site contaminants to human, fish, and wildlife receptors.
- Section 8.0 presents the nature and extent of contamination in all site media as determined through the field investigation and analysis of environmental samples.
- Section 9.0 summarizes the results of the investigation and presents conclusions based on field observations and analytical results.

2.0 SITE PHYSICAL CHARACTERISTICS

2.1 SITE DESCRIPTION

The about 17,000-square-foot (±0.39 acre) site is located at 172 Montrose Avenue in the East Williamsburg neighborhood of Brooklyn, New York and is identified as Block 3062, Lot 12 on the Kings County Tax Map. The site is on the city block bordered by Montrose Avenue to the north, Humboldt Street to the east, Johnson Street to the south, and Avenue of Puerto Rico to the west. A site location map is provided as Figure 1. The site is improved with two connected one-story buildings. The eastern building is occupied by a tour bus company, and the western building is vacant. Two partial cellars are located on the northeastern part of the site. A site plan is provided as Figure 2.

2.2 SURROUNDING PROPERTY LAND USE

The site is in a mixed-use area with residential, commercial, institutional, and industrial properties. The following is a summary of adjacent and surrounding property usage:

Direction	Adjoining Properties	Surrounding Properties
North	Montrose Avenue followed by multi-family residential and mixed-use residential and commercial buildings	Multi-family residential buildings, public parks, and mixed residential and commercial buildings
East	A church and multi-family residential building	Multi-family residential and manufacturing buildings
South	Multi-family residential and mixed-use residential and commercial buildings	Multi-family residential and commercial buildings
West	Mixed-use residential and commercial building	Multi-family residential and mixed-use residential and commercial buildings

Public infrastructure (e.g., storm drains, sewers, and underground utility lines) exists within the streets surrounding the site. A land use map showing the adjacent properties is provided as Figure 3.

Land use within a half-mile radius is urban and includes residential, commercial, institutional, and industrial uses, public parks, and parking and vacant lots. The nearest ecological receptor is the English Kills branch of Newtown Creek, located approximately 0.5 miles northeast of the site. Sensitive receptors, as defined in DER-10, located within a half-mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	K449 The Brooklyn Latin School (about 0.2 miles north of the site)	223 Graham Avenue Brooklyn, NY 11206
2	Uncommon Williamsburg Elementary School (about 0.2 miles west of the site)	140 Montrose Avenue Brooklyn, NY 11206
3	Green School: An Academy for Environmental Careers (about 0.2 miles north of the site)	223 Graham Avenue #337b Brooklyn, NY 11206
4	Lyons Community School (about 0.2 miles north of the site)	223 Graham Avenue Brooklyn, NY 11206
5	K454 - The Williamsburg High School of Art and Technology (about 0.2 miles north of the site)	223 Graham Avenue Brooklyn, NY 11206
6	IS 49 W.J. Gaynor (about 0.2 miles north of the site)	223 Graham Avenue Brooklyn, NY 11206
7	Bushwick United Early Learn (about 0.2 miles north of the site)	212 Graham Avenue Brooklyn, NY 11206
8	P.S. 196 Ten Eyck (about 0.2 miles northeast of the site)	207 Bushwick Avenue Brooklyn, NY 11206
9	MS 582 The Magnet School for Multimedia, Technology, and Urban Planning (about 0.2 miles northeast of the site)	207 Bushwick Avenue Brooklyn, NY 11206
10	Creative Academy (about 0.2 miles east of the site)	228 Bushwick Avenue Brooklyn, NY 11206
11	P.S. 147 Isaac Remsen (about 0.2 miles southeast of the site)	325 Bushwick Avenue Brooklyn, NY 11206
12	Young Women's Leadership School of Brooklyn (about 0.2 miles southeast of the site)	325 Bushwick Avenue Brooklyn, NY 11206
13	Most Holy Trinity School (about 0.2 miles southwest of the site)	153 Johnson Avenue Brooklyn, NY 11206
14	Central Brooklyn Seventh Day Adventist School (about 0.2 miles southwest of the site)	130 Boerum Street Brooklyn, NY 11206
15	Graham Child Care Center (about 0.2 miles north of the site)	222 Graham Avenue Brooklyn, NY 11206
16	Yve's Daycare (about 0.2 miles south of the site)	130 Humboldt Street, Apt 3H Brooklyn, NY 11206
17	Martinez Playground (about 0.2 miles north of the site)	195 Graham Avenue Brooklyn, NY 11206
18	Riddick, Saquana Daycare (about 0.3 miles southeast of the site)	370 Bushwick Avenue, Apt 4I Brooklyn, NY 11206
19	House Of Hope Group Family Daycare (about 0.3 miles southeast of the site)	370 Bushwick Avenue Brooklyn, NY 11206
20	Teodora Rodriguez Group Family Day Care (about 0.3 miles south of the site)	130 Moore Street, Apt 4D Brooklyn, NY 11206
21	Torres Day Care Daycare (about 0.3 miles south of the site)	50 Manhattan Avenue, Apt 5D Brooklyn, NY 11206

Number	Name (Approximate distance from site)	Address
22	The Baby Play Place Preschool (about 0.3 miles west of the site)	25 Boerum Street, Suite 7S Brooklyn, NY 11206
23	Sternberg Park (about 0.3 miles west of the site)	73 Montrose Avenue Brooklyn, NY 11206
24	P.S. 257 John F. Hylan (about 0.4 miles south of the site)	60 Cook Street Brooklyn, NY 11206
25	Grand Street Educational Campus High School (about 0.4 miles northeast of the site)	850 Grand Street Brooklyn, NY 11211
26	School of Rock (about 0.4 miles north of the site)	294 Graham Avenue Brooklyn, NY 11211
27	The High School for Enterprise, Business and Technology (about 0.4 miles northeast of the site)	850 Grand Street Brooklyn, NY 11211
28	Progress High School for Professional Careers (about 0.4 miles northeast of the site)	850 Grand Street Brooklyn, NY 11211
29	East Williamsburg Scholars Academy (about 0.4 miles northeast of the site)	850 Grand Street Brooklyn, NY 11211
30	Williamsburg Charter High School (about 0.4 miles southeast of the site)	198 Varet Street Brooklyn, NY 11206
31	P.S. 018 Edward Bush (about 0.4 miles northwest of the site)	101 Maujer Street Brooklyn, NY 11206
32	Stagg Street Center for Children (about 0.4 miles northwest of the site)	77 Stagg Street Brooklyn, NY 11206
33	Young Garden Day Care (about 0.4 miles west of the site)	11 Meserole Street Brooklyn, NY 11206
34	Whipple Learning Cove (about 0.4 miles southwest of the site)	48 Whipple Street, Apt 1F Brooklyn, NY 11206
35	Queen of the Rosary Academy (about 0.5 miles northeast of the site)	11 Catherine Street Brooklyn, NY 11211
36	Small World Day Care Center (about 0.5 miles north of the site)	211 Ainslie Street Brooklyn, NY 11211

2.3 Site Physical Conditions

2.3.1 Topography

According to the May 2025 ALTA Survey provided by Fehringer Surveying P.C. (Fehringer), the elevation of the site ranges from about elevation (el) 35.31 feet[2] on the eastern part of the site to el 33.23 on the western part of the site. The topography of the site is generally flat with the surrounding area gently sloping towards the northeast.

[2] Elevations in this RIR refer to North American Vertical Datum of 1988 (NAVD88), which is about 1.1 feet above mean sea level at Sandy Hook, NJ.

2.3.2 Regional Geology

Soil and bedrock stratigraphy throughout Brooklyn typically consists of a layer of fill that overlies glacial till, decomposed unconsolidated bedrock, and bedrock. The glacial till deposits, also known as ground moraine, are a widespread dense layer of till material that typically consists of clay, silt, sand, gravel and boulders.

According to a review of the "Bedrock and Engineering Geologic Maps of Bronx County and Parts of New York and Queens Counties, New York" by Charles A. Baskerville, the bedrock underlying the site is part of the Hartland Formation, consisting of interbedded schist, granite, and amphibolite.

2.3.3 Regional Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, coverage by impervious surfaces, and subsurface structures. Other factors influencing groundwater include depth to bedrock, the presence of anthropogenic fill, and variability in local geology and groundwater sources or sinks.

Synoptic groundwater level measurements were collected from permanent groundwater monitoring wells as part of the RI on October 16, 2025. Groundwater depth ranged from about 28.20 to 29.15 feet below ground surface (bgs), corresponding to el 4.98 to el. 5.07. Groundwater elevations are highest in the southwestern part of the site, and groundwater flows to the northeast. Groundwater contours are shown on Figure 4.

2.3.4 Wetlands

Wetlands on or near the site were evaluated by reviewing the National Wetlands Inventory (NWI) and NYSDEC regulated wetlands map. There are no wetlands on or adjacent to the site. The closest wetland to the site is the English Kills branch of Newtown Creek, located about 0.5 miles east-northeast of the site.

3.0 SITE BACKGROUND

This section describes historical site use and the proposed development and provides a summary of the findings from previous environmental investigations. Potential AOCs were developed based on a review of the previous reports and are summarized in Section 3.4.

3.1 Historical Site Usage

A review of historical records revealed that the site is in a densely developed urban area that has been characterized by residential, commercial, and institutional uses since at least 1887. Historically, former Lot 12 was occupied by commercial stores (1887 to 1950), residential housing (1934 to 1949), and a private garage (1964 to 2007); and former Lot 17 was occupied by a carpenter (1887), residential housing (1887 to 1918), a private garage with petroleum bulk storage (1950 to 1986), an oil burner repair company (1949 to 1973), an auto repair facility (1965 to 1976), a mobile electric generator company (1985 to 1997), a mobile steam boiler rental/repair company (1970 to 2017), a solar energy company (2005), and a locksmith (2013). The site was purchased by the current joint property owners in 2017, and the western and eastern buildings were operated by Overton Studios, a creative agency, and GoGo Bus Tours, a tour bus company, respectively. Currently, GoGo Bus Tours continues to operate the eastern building, and the western building is vacant.

3.2 Proposed Development Plan

The proposed development is a 13-story residential building with a cellar level. The cellar floor will contain mechanical and utility rooms, offices, and residential amenity space. The ground floor will contain offices, residential amenity space, and residential units. The second through 13th floor will house residential units. All residential units will be designated as affordable or transient housing. The proposed development plans are included as Appendix A.

3.3 Summary of Previous Environmental Investigations

The following previous environmental reports were reviewed to inform this RIR and are summarized below. The reports are included in Appendix B.

- *June 24, 2014 Phase I Environmental Site Assessment (ESA), prepared by Hydro Tech Environmental, Corp (Hydro Tech)*
- *August 24, 2015 Phase II Subsurface Investigation Report, prepared by Environmental Business Consultants, Inc. (EBC)*
- *July 25, 2025 Spill Investigation Summary Report, prepared by Langan*

<u>June 24, 2014 Phase I ESA Report, prepared by Hydro Tech</u>

Hydro Tech prepared a Phase I ESA in June 2014 for Mobile Steam Boiler. The Phase I ESA identified the following recognized environmental conditions (REC):

- Known presence of underground storage tanks (USTs)
- Historical and current use of the site as an oil burner repair facility
- Historical use of the site as a motor vehicle repair shop
- A potential vapor encroachment condition (VEC) because of a dry-cleaning facility located about 90 feet southwest and upgradient of the site

August 24, 2015 Phase II Subsurface Investigation Report, prepared by EBC

EBC conducted a Phase II subsurface investigation on behalf of Cornell Realty Management for the 172-184 Montrose Avenue property between July 9 and August 10, 2015. The investigation consisted of a geophysical survey, advancement of 12 soil borings, installation of three temporary groundwater monitoring wells, and collection of 12 soil samples and three groundwater samples. Soil and groundwater samples were analyzed for Commissioner Policy (CP)-51 list volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs). Field observations and laboratory analytical results are summarized below:

- Ground Penetrating Radar (GPR) Survey Results: The GPR survey identified four USTs along the northern boundary of the site adjacent to the sidewalk along Montrose Avenue. The UST locations were consistent with fill ports identified within the sidewalk slab and above-grade vent pipes identified along the exterior of the building.
- Site Geology and Hydrogeology: Fill was observed from surface grade to about 5 feet (bgs) and consisted primarily of brown silty sand with varying amounts of gravel, brick, and pockets of compacted ash. This layer is underlain by brown to sandy silt from about 5 feet bgs to the terminal depth of the borings (about 35 feet bgs). Bedrock was not encountered during the subsurface investigation. Groundwater was encountered between about 25 and 30 feet bgs.
- Soil: Petroleum-like impacts (i.e., staining, odors, and photoionization detector [PID] readings up to 297 parts per million [ppm]) were observed in four soil borings (B1, B2, B8, and B10) located in the northeastern part of the site at depths ranging from 1 to 35 feet bgs, and soil boring B12 located on the northwestern part of the site from 10 to 15 feet bgs. VOCs and SVOCs were detected in soil at concentrations exceeding the NYSDEC Chapter 6 New York Codes, Rules and Regulations (6 NYCRR) Unrestricted Use (UU), Restricted Use-Restricted Residential (RR), and/or Protection of Groundwater (PGW) Soil Cleanup Objectives (SCO).
- Groundwater: Petroleum-related VOCs were reported in groundwater above NYSDEC Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) and Guidance Values for Class GA Water (collectively referred to as "SGVs").

Based on petroleum impacts to soil and groundwater documented in the August 2015 Phase II ESI, Spill No. 1505573 was reported to the NYSDEC on August 24, 2015. According to the spill listing, EBC prepared a Remedial Action Work Plan (RAWP) for the former prospective buyer; however, this formerly proposed RAWP was not implemented because the related property transaction was terminated. The most recent correspondence in the listing (November 2016) further states that remediation will not be implemented until the property is sold and the existing buildings are demolished. No further investigation or remedial work has been documented at the site.

July 25, 2025 Spill Investigation Summary Report, prepared by Langan

Langan conducted a spill investigation on behalf of the Participant for the properties located at 170 Montrose Avenue and 172 Montrose Avenue on December 20, 2024 and from May 14 to June 16, 2025, respectively, to evaluate the extent of soil and groundwater contamination resulting from Spill No. 2407320. The spill was reported to NYSDEC on November 20, 2024 after a 1,000-gallon UST was punctured during a geotechnical investigation, resulting in free petroleum product and oily water impacting the cellar of the adjacent Lot 11 building, as observed by the Lot 11 building owner. Subsequent remediation efforts related to this spill included emptying, cleaning, and decommissioning of the UST on Lot 12 by AARCO Environmental Services, Inc. of Lindenhurst, New York, which was completed from November 22 to 25, 2024, and clean-up and remediation of the Lot 11 cellar by SERVPRO of Garden City, New York, which was carried out between November 20, 2024 and February 13, 2025. The investigation included the advancement of eight soil borings, installation of one permanent groundwater monitoring well, and collection of soil and groundwater samples. Soil and groundwater samples were analyzed for CP-51-list VOCs and SVOCs. Field observations and laboratory analytical results are summarized below:

- Total Xylenes and SVOCs were observed above the NYSDEC CP-51 Soil Cleanup Levels (SCLs) for Gasoline and Fuel Oil Contaminated Soils in one shallow soil boring, SB01, located on the off-site Lot 11. VOCs and SVOCs were detected below the SCLs in all remaining soil samples collected on- or off-site. While residual petroleum impacts related to historical operations and petroleum bulk storage (e.g., elevated PID readings, petroleum odor, staining) were observed within the investigated area, evidence of gross impacts (e.g., presence of light nonaqueous-phase liquid [LNAPL], positive sheen) related to Spill No. 2407320 were not observed in any soil borings.
- Groundwater analytical results identified one SVOC (benzo[a]anthracene) above the SGVs in both total and lab filtered groundwater samples collected from permanent monitoring well, MW01; VOCs were not detected above SGVs in the groundwater samples. Benzo(a)anthracene was also identified in the lab-filtered field blank. The presence of benzo(a)anthracene is likely indicative of the quality of entrained sediment and/or

contamination present at the lab, and therefore not representative of dissolved-phase groundwater conditions at the site. Evidence of gross impacts (presence of LNAPL, sheen, discoloration) related to Spill No. 2407320 were not observed at the water table or in purged groundwater.

3.4 Summary of Potential Areas of Concern

Based on site observations, the site development history, and the findings of previous environmental investigations, the potential AOCs identified and investigated during this RI are described in detail below. Potential AOCs are shown on Figure 5.

AOC 1: Historic Site Operations

The site has historically been used for various commercial and industrial purposes, including an oil burner repair facility (1949 to 1973), a garage with petroleum bulk storage (1950 to 1986), an auto repair facility (1965 to 1976), and a steam boiler rental and repair facility (1970 to 2017). The previous site investigation was focused on a localized area of the site to evaluate soil and groundwater impacts related to petroleum bulk storage and included a limited analytical analysis. Additionally, no soil vapor data exist for the site.

AOC 2: Petroleum Storage and Related Impacts in Soil and Groundwater

The 2014 Hydro Tech Phase I ESA identified five fill ports along the site building adjoining sidewalk and two fill ports attached to the building exterior during the site reconnaissance, indicating the presence of on-site USTs. Seven associated vent pipes we also observed along the building exterior and roof. Based on the information provided during the site reconnaissance, the USTs may be related to historic site operations including former auto repair and oil burner repair operations. Four aboveground storage tanks (AST) were also observed, including one inactive 550-gallon fuel oil AST, two active 275-gallon ASTs containing unknown product, and one 275-gallon fuel oil AST, located in the partial cellar, and at-grade in the east-central and north-central parts of the building, respectively. Additionally, the 2015 Phase II investigation identified petroleum-related VOCs in soil and groundwater in the northern part of the site at concentrations above the NYSDEC 6 NYCRR UU, RR, and PGW SCOs and/or NYSDEC SGVs (NYSDEC Spill No 1505573). A maximum PID reading of 297 ppm, petroleum-like odors, and staining were observed between 1 and 35 feet bgs in soil borings B1, B2, B8, and B10 located on the northeastern part of the site, and between 10 and 15 feet bgs in boring B12 located on the northwestern part of the site. UST anomalies were identified in these locations during the geophysical survey conducted as part of the 2015 Phase II subsurface investigation.

AOC 3: NYSDEC Spill No. 2407320

On November 20, 2024, while drilling geotechnical soil borings, GeoDesign, Inc. (GeoDesign) of New York, New York and its drilling subcontractor, Municipal Testing Laboratory (MTL) of Hauppauge, New York, penetrated an estimated 1,000-gallon UST in the northwestern corner of

Lot 12, resulting in the release of free petroleum product and oily water impacting the cellar of the adjacent Lot 11 building. A spill was reported to the NYSDEC, and Spill No. 2407320 was assigned to Lot 11; this spill case remains open pending further investigation and remediation and closure by the Participant under the BCP. Preliminary spill response actions, including clean-up of the impacted Lot 11 building and decommissioning of the on-site UST, were carried out between November 2024 and February 2025. A spill investigation was conducted by Langan in May/June 2025. Due to access limitations with the drill rig and proximate live electrical equipment presenting a safety hazard, the spill investigation soil boring SB08 could not be advanced. Additionally, soil boring SB09/RMW01 could not be advanced to its proposed terminal depth of 35 feet bgs due to obstructions; therefore, potential impacts from the spill may not have been fully investigated.

4.0 REMEDIAL INVESTIGATION

The RI was completed between August 11 and October 16, 2025 to investigate potential AOCs and determine, to the extent practicable, the nature and extent of contamination in soil, groundwater, and soil vapor at the site, evaluate the nature of any impacts emanating from the site and provide sufficient information to evaluate remedial alternatives. The scope of the RI included the field tasks listed below to supplement the data and findings of previous investigations. A summary of samples collected during the RI, with a rationale for each investigation point in relation to the AOCs, is provided in Table 1. Sample locations and AOCs are presented on Figure 5.

The Project Manager or Field Team Leader submitted daily reports to the NYSDEC Project Manager during the RI. Daily reports are included in electronic format in Appendix C. A digital photograph log documenting activities accomplished during the RI is included in Appendix D.

The RI consisted of the following:

Geophysical Survey

- Completion of a geophysical survey to identify potential USTs, underground structures, and utilities and to clear sample locations

Soil Borings and Sampling

- Advancement of 44 soil borings to a maximum depth of 56 feet bgs
- Continuous field screening of recovered soil for impacts using visual and olfactory methods and with a PID equipped with a 10.6 electron volt (eV) lamp
- Collection of 107 grab soil samples (plus quality assurance/quality control [QA/QC] samples) for laboratory analysis

Monitoring Well Installation and Sampling

- Installation and development of ten permanent monitoring wells to a maximum depth of 35 feet bgs
- Collection of groundwater samples from each of the installed permanent monitoring wells for a total of ten groundwater samples (plus QA/QC samples) for laboratory analysis
- Surveying and gauging of permanent monitoring wells to evaluate groundwater elevation
- Development of a groundwater contour map

Sub-Slab Vapor and Ambient Air Sampling

- Installation of six temporary sub-slab vapor points to a depth of about 6 inches bgs

- Collection of one sub-slab vapor sample from each sub-slab vapor point, six co-located indoor air samples, and two ambient air samples for laboratory analysis.

The RI was conducted in accordance with NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation (May 2010), the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, updated February 2024), and the August 11, 2025 NYSDEC-approved RIWP.

4.1 Geophysical Survey and Utility Location

On August 11, 2025, NOVA Geophysical Services of Douglaston, New York completed a geophysical survey under the supervision of Langan field personnel. NOVA used GPR and electromagnetic detection equipment to identify potential USTs and locate buried utilities and anomalies across the site. A copy of the geophysical survey report presenting these findings is included in Appendix E.

4.2 Soil Investigation

4.2.1 Soil Boring Investigation Methodology

A total of 44 soil borings were advanced during the RI by AARCO Environmental Services, Corp. (AARCO) and Lakewood Environmental Services, Corp. (Lakewood) of Lindenhurst, New York. Boring locations were selected to evaluate potential AOCs listed in Section 3.4 and to supplement the previous environmental investigations. Soil borings were advanced using a Geoprobe® 7822DT track-mounted drill rig, a Geoprobe® 420M Limited Access drill rig, a Geoprobe® Sonic 8140LC sonic drill rig, or a limited access Toro®6101 drill rig. A total of 16 borings (RISB03 through RISB05, RISB08, RISB16 through RISB25, RID06, and RID15) were hand-cleared to a depth of 5 feet bgs prior to advancement with a drill rig. A map showing the boring locations is presented in Figure 5. The following table indicates the borings associated with each potential AOC.

Potential AOC	Associated Soil Borings
AOC 1 – Historical Site Operations	RISB06-RISB12, RID07-RID15
AOC 2 – Petroleum Storage and Related Impacts in Soil and Groundwater	RISB02-RISB05, RISB15-RISB19, RISB20-RISB25, RID16-RID19
AOC 3 – NYSDEC Spill No. 2407320	RISB01, RISB13, RISB14, and RID01-RID05

Soil borings were advanced to depths between 12 and 56 feet bgs across the site footprint (el 21.93 feet to -21.06 feet). Soil boring termination depth was determined based on field observations during installation. Details are summarized below:

- Borings RISB01 through RISB04 and RISB06 through RISB18 were advanced to depths ranging from 32 to 45 feet bgs (el 1.54 to -10.06)
- Borings located within the partial cellar along the northern part of the site (RISB05 and RISB19) were advanced to 5 feet and 28 feet (el 22.42 and el -0.58), respectively, within the cellar
- Sidewalk borings RISB20 through RISB25, were advanced to depths ranging from 20 to 50 feet bgs (el 33.84 to -16.16)
- Delineation borings RID01 through RID06 were advanced to depths ranging from 16 to 17 feet bgs (el 16.57 to -17.57)
- Delineation borings RID07 through RID11 and RID13 were advanced to 12 feet bgs (el 22.94), and RID12 and RID14 were advanced to 20 feet bgs (el 14.94)
- Delineation borings RID16 through RID19 were advanced to depths ranging from 20 to 56 feet bgs (el 15.01 to -20.99)

Soil samples were collected into 4-foot-long acetate liners using a 2-inch diameter Macrocore® sampler using direct push technology or 5-foot-long sonic sampling bags. Discrete soil samples were collected from the surface to the final depth of each boring and were screened for visual, olfactory, and instrumental evidence of environmental impacts and visually classified for soil type, grain size, texture, and moisture content. Instrument screening for the presence of VOCs was performed with a PID equipped with a 10.6-eV lamp. Langan personnel documented the work, logged the soil type, screened the soil samples for environmental impacts, and collected environmental samples for laboratory analyses. Soil boring logs are presented in Appendix F.

4.2.2 Soil Sampling Methodology

During implementation of the RI, 107 grab soil samples (plus QA/QC samples) were collected for laboratory analysis. Generally, three grab soil samples were collected from each soil boring. The first sample was collected within the upper two feet of fill. A second sample was collected from the interval exhibiting the greatest degree of impacts (based on the presence of staining, odor, and/or PID readings above background), or from the bottom of the fill layer if no impacts were observed. A third sample was collected from the first underlying depth interval without evidence of impacts or fill (i.e., native soil). In soil borings where petroleum impacts were observed at or below the water table beneath soil with no apparent petroleum impacts (i.e. soil borings in the northeastern part of the site), two additional samples were collected from the interval exhibiting greatest impacts below the water table and first underlying depth interval without evidence of

impacts. Field evidence of impacts were not observed in sidewalk soil borings RISB20, RISB21 and RISB24; therefore, samples were not collected from these locations.

Supplemental delineation borings not originally proposed in the RIWP were advanced on the western and southern parts of the site to further evaluate AOCs 1 and 2 after visual, olfactory, and instrumental indications of petroleum-like impacts were identified in soil borings advanced within these areas. Two soil samples were collected from delineation borings RID07 through RID15 and RID19. The first sample was collected at the depth interval exhibiting the greatest degree of impacts, and the second sample was collected from the first underlying depth interval without evidence of impacts.

Samples submitted for VOC analysis were collected directly from the acetate liner via laboratory-supplied Terra Core® soil samplers. The remaining sample volume was homogenized and placed in appropriate laboratory-supplied containers for all additional analyses. A dedicated pair of nitrile gloves were donned to collect each per- and polyfluoroalkyl substances (PFAS) sample to limit cross-contamination.

The sample containers were labeled, placed in a laboratory-supplied cooler and packed on ice (to maintain a temperature of 4±2°C). The sample coolers were picked up and delivered via courier under standard chain-of-custody protocol to Pace Analytical Laboratories, Inc. (Pace) in Westborough, Massachusetts a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified analytical laboratory (ELAP ID No. 11148).

Soil samples were analyzed for Part 375/Target Compound List (TCL) VOCs, SVOCs, polychlorinated biphenyls (PCBs), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals including hexavalent and trivalent chromium, total cyanide, 1,4-dioxane and PFAS. Soil samples collected from delineation borings were analyzed for only Part 375/TCL VOCs and SVOCs. A sample summary is provided as Table 1.

4.3 Groundwater Investigation

Langan field personnel documented conversion of ten soil borings into permanent groundwater monitoring wells, including RIMW01, RIMW02, RIMW04, RIMW09, RIMW12, RIMW17, RIMW21, RIMW24, and RIMW25 by AARCO and RIMW19 by Lakewood. One groundwater sample was collected from each monitoring well to characterize groundwater conditions and to investigate potential groundwater impacts associated with the AOCs. One duplicate groundwater sample was also collected.

4.3.1 Monitoring Well Installation and Development Methodology

Permanent monitoring wells RIMW01, RIMW02, RIMW04, RIMW09, RIMW17, RIMW19, RIMW21, RIMW24, and RIMW25 were constructed using 2-inch-diameter polyvinyl chloride (PVC) riser pipes attached to 10-foot-long 0.01-inch slotted pre-packed well screen. Due to poor fill quality and drilling conditions, RMW12 was constructed using 1-inch- diameter PVC riser pipe

attached to 10-foot-long 0.01-inch slotted pre-packed well screen. Monitoring wells were constructed so that the well screen straddled the observed groundwater table. Clean sand was used to fill the annulus around the riser to about two feet above the top of the pre-packed screen. A two-foot-thick bentonite seal was installed above the sand, and the borehole annulus was backfilled with clean sand to about 6 inches bgs. The monitoring wells were finished with flush-mount metal manhole covers encased in concrete.

Following installation, the monitoring wells were surged and developed with a submersible pump until the water became clear (having turbidity less than 50 Nephelometric Turbidity Units [NTU]). Purged groundwater was stored in a labeled 55-gallon New York State Department of Transportation (DOT)-approved drum staged on-site pending off-site disposal.

Monitoring well locations are presented on Figure 5, construction details are included in Table 2, and construction logs are found in Appendix G.

Langan field personnel completed synoptic groundwater gauging October 16, 2025 using a Solinst oil/water interface probe. Top of casing elevations of the permanent groundwater monitoring wells were surveyed by Langan on October 16, 2025. Groundwater elevations ranged from about 28.20 ft bgs in RIMW21 to 29.15 feet bgs in RIMW19, corresponding to about el 4.98 to el 5.07. Groundwater elevations are presented in Tables 2 and 3 and Appendix G. A groundwater contour map based on the synoptic groundwater levels of the wells is presented as Figure 4.

4.3.2 Groundwater Sampling

Groundwater samples were collected on September 30 through October 1, and on October 7, 2025. Samples were collected in accordance with the procedures set forth in the United States Environmental Protection Agency (USEPA) low-flow groundwater sampling procedure ("Low Stress [low flow] Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells", EQASOP-GW 001, January 19, 2010) to allow for collection of a representative sample. Monitoring wells were purged and physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, and turbidity) were allowed to stabilize to ranges specified in the USEPA guidance before they were sampled. Because samples were collected for PFAS compounds, monitoring wells were not gauged for static water levels or drawdown during purging to avoid cross-contamination.

Wells were sampled using a peristaltic pump or submersible bladder pump with dedicated high-density polyethylene (HDPE) tubing. Non-disposable equipment was decontaminated between locations with Alconox® and PFAS-free water. Purge water was containerized into labeled 55-gallon DOT-approved drums for off-site disposal. Groundwater sampling logs are included in Appendix H.

A total of ten groundwater samples (one sample from each well) were collected into laboratory-supplied glassware, packed with ice to maintain a temperature of 4±2°C, and transported via courier service to Pace under chain-of-custody protocol. Five groundwater samples were analyzed for Part 375/TCL VOCs, SVOCs, PCBs, herbicides, pesticides, TAL metals (total and dissolved), trivalent and hexavalent chromium, total cyanide, PFAS, and/or 1,4-dioxane. A dedicated pair of nitrile gloves were donned to collect each PFAS sample to limit cross-contamination. A total of five groundwater samples, collected from monitoring wells installed in addition to the original RI scope, were analyzed only for Part 375/TCL VOCs and SVOCs.

4.4 Sub-Slab Vapor Investigation

NYSDEC DER-10 requires an assessment of soil vapor for contaminated sites to evaluate the potential for exposure to VOCs through vapor intrusion into occupied spaces. A total of six temporary sub-slab vapor points (RISV01, RISV02, RISV05, RISV07, RISV09, and RISV12) and co-located indoor air samples were installed across the site's footprint to identify potential impacts associated with historical site use. Two outdoor ambient air samples (RIAA01 and RIAA02) were collected for QA/QC purposes. Sub-slab vapor and indoor air sample locations are presented on Figure 5.

In accordance with the RIWP, Langan requested access to the western adjoining off-site property, 170 Montrose Avenue (Lot 11), on August 25, 2025 to complete sub-slab vapor and indoor air sampling. Langan inquired with the off-site property owner via e-mail and phone, speaking with the current owner of the property. Langan was denied access to the property despite best efforts to secure access; therefore, off-site sub-slab vapor and indoor air sampling could not be completed at 170 Montrose Avenue during the RI. A copy of the correspondence provided to the 170 Montrose Avenue property owner is provided as Appendix J.

4.4.1 Sub-Slab Vapor Point Installation

Sub-slab vapor points were installed by AARCO or Langan using a hand drill and were installed directly beneath the concrete floor slabs within the existing site structure. The sub-slab vapor collection points consisted of Teflon-lined polyethylene tubing and the sampling zone around the installed tubing was filled with a clean, coarse sand pack followed by a hydrated bentonite seal to surface grade. Sub-slab vapor construction/sampling logs are provided in Appendix I.

4.4.2 Sub-Slab Vapor Sampling and Analysis

As a QA/QC measure, an inert tracer gas (helium) was introduced into an above-grade sampling chamber to ensure that the sub-slab vapor points were properly sealed above the target sampling depth, thereby preventing subsurface infiltration of ambient air. Direct readings of less than 10

percent helium in the sampling tube were considered sufficient to verify a tight seal at each soil vapor point.

Each sub-slab vapor point was purged using a MultiRAE meter at a rate less than 200 milliliters per minute (mL/min) to evacuate a minimum of three sample tubing volumes prior to sample collection. The purged sub-slab vapor was also monitored for VOCs and the values were recorded. After purging was completed, the soil vapor samples were collected into laboratory-supplied, batch certified-clean 6.0-liter Summa® canisters calibrated for 8 hours of sampling. Sub-slab construction/sampling logs are provided in Appendix I.

Summa® canisters were labeled and transported via courier to Pace under standard chain-of-custody protocol. Soil vapor samples were analyzed for VOCs by USEPA Method TO-15.

4.4.3 Indoor and Ambient Air Sampling and Analysis

In accordance with the RIWP, Langan requested access to the western adjoining off-site property, 170 Montrose Avenue (Lot 11), to complete indoor air sampling in conjunction with sub-slab vapor sampling. Access to the property was not provided as described above in Section 4.4; therefore, indoor air sampling could not be conducted at 170 Montrose Avenue during the RI.

Six indoor air samples were collected over 8 hours concurrently with co-located sub-slab vapor samples. Prior to sample collection, an NYSDOH Indoor Air Quality Questionnaire and Building Survey was completed to document the presence of equipment or chemicals that could interfere with the laboratory analytical results. The buildings were screened with a PID that can detect organic vapors at concentrations of parts per billion (ppb) during the indoor air survey. The site buildings remained in normal operation prior to and during sample collection. The completed NYSDOH Indoor Air Quality Questionnaire and Building Survey is provided in Appendix I.

Two ambient air samples were collected concurrently with the sub-slab vapor and indoor air samples. The outdoor ambient air samples were collected at breathing height (about 3 feet above the ground surface) to evaluate external influences on soil vapor quality.

Outdoor ambient air sampling was conducted in general accordance with the NYSDOH Guidance. Prior to sample collection, the area was screened using a MultiRAE meter to identify potential sources of organic vapors that may interfere with sampling. The outdoor ambient air samples were collected into laboratory-supplied, batch certified-clean, 6-Liter Summa® canisters. Outdoor ambient air samples RIAA01 and RIAA02 were calibrated for 8 hours of sampling, concurrent with sub-slab vapor sample collection.

The Summa® canisters were labeled and transported via courier to Pace Analytical under standard chain-of-custody protocol. The ambient air samples were analyzed for VOCs by USEPA Method TO-15.

4.5 Quality Control Sampling

Field blanks, PFAS field blanks, trip blanks, field duplicate samples, and matrix spike/matrix spike duplicate (MS/MSD) samples were collected and submitted for laboratory analysis for QA/QC purposes. QA/QC samples are detailed in Table 1 and are summarized below:

4.5.1 Soil QA/QC Samples

- Seven field duplicate samples
- Seven MS/MSD samples
- Six field blanks
- 22 PFAS field blanks
- Six trip blanks

4.5.2 Groundwater QA/QC Samples

- One field duplicate sample
- One MS/MSD sample
- One field blank
- Two PFAS field blanks
- Two trip blanks

4.5.3 Air QA/QC Sample

- Two ambient air samples

MS/MSD samples were collected to assess the effect of the sample matrix on the recovery of target compounds or target analytes. MS/MSD samples were collected from the same material as the primary sample by splitting the volume of the homogenized sample collected in the field into three sample containers.

The field duplicates were collected to assess the precision of the analytical methods relative to the sample matrix. The duplicates were collected from the same material as the primary sample by splitting the volume of homogenized sample collected in the field into two sample containers.

The trip blank samples were collected to assess the potential for contamination of the sample containers and samples during the trip from the laboratory, to the field, and back to the laboratory for analysis. Trip blanks contain about 40 milliliters of acidic water (doped with hydrochloric acid) that is sealed by the laboratory when the empty sample containers are shipped to the field, and unsealed and analyzed by the laboratory when the sample shipment is received from the field. The trip blank samples were analyzed for VOCs.

4.6 Data Validation

Analytical data were submitted to a Langan validator for review in accordance with USEPA and NYSDEC validation protocols. Data usability summary reports (DUSR) are provided in Appendix K.

4.6.1 Data Usability Summary Report Preparation

A DUSR was prepared for each delivery group following data validation. The DUSR presents the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain-of-custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. For each of the organic analytical methods, the following was assessed:

- Holding times
- Instrument tuning
- Instrument calibrations
- Blank results
- System monitoring compounds or surrogate recovery compounds (as applicable)
- Internal standard recovery results
- MS/MSD results
- Target compound identification
- Chromatogram quality
- Compound quantization and reported detection limits
- System performance
- Results verification

For each of the inorganic compounds, the following was assessed:

- Holding times
- Calibrations
- Blank results
- Interference check sample
- Laboratory check samples
- Duplicates
- Matrix Spike

- Inductively Coupled Plasma Atomic Emission Spectrometry (ICP-AES) QC
- ICP serial dilutions
- Results verification and reported detection limits

Based on the results of data validation, the following qualifiers may be assigned to the data in accordance with the USEPA guidelines and best professional judgment:

R – The sample results are unusable due to the quality of the data generated because certain criteria were not met. The analyte may or may not be present in the sample.

J – The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The analyte was not detected at a level greater than or equal to the reporting limit (RL); however, the reported RL is approximate and may be inaccurate or imprecise.

U – The analyte was analyzed for but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

NJ – The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.

After data validation was complete, validated data were used to prepare the tables and figures included in this report. The data were determined to be acceptable and is considered usable as qualified, and completeness, defined as the percentage of analytical results that are judged to be valid, is 100 percent.

4.7 Field Equipment Decontamination

A peristaltic geopump and/or submersible bladder pump with dedicated HDPE bonded tubing was used to sample each groundwater monitoring well. The groundwater sampling equipment, including a water quality meter, were cleaned with Alconox and rinsed with deionized water between sampling locations during groundwater sample collection. Decontamination occurred at the sampling locations, and all liquids were temporarily contained in a 5-gallon bucket. Decontamination wastewater was placed in 55-gallon DOT-approved drums staged on-site pending off-site disposal at a permitted facility.

4.8 Investigation-Derived Waste Management

Soil cuttings, decontamination and well development/purging fluids (investigation-derived wastes [IDW]) were containerized in 55-gallon DOT-approved drums with closed tops. All drums were properly labeled, sealed, and staged in a secured area on-site. A total of 19 drums containing IDW remain on-site for future off-site disposal.

5.0 FIELD OBSERVATIONS AND ANALYTICAL RESULTS

5.1 Geophysical Investigation Findings

NOVA's geophysical survey identified electric, gas, sewer, and water lines running north to south along the northern boundary of the site, entering from Montrose Avenue. NOVA's geophysical survey identified interconnected floor drains within each of the site buildings that connected to the main sewer. The survey also identified multiple unknown linear anomalies running north to south and east to west within each of the site buildings. Consistent with the previous GPR survey conducted in July 2015, NOVA's geophysical survey detected anomalies consistent with potential USTs in the northern and northeastern parts of the site and fill ports and tank vents along the northern boundary of the site. The geophysical survey also identified an AST in concrete in the northeastern corner of the site.

A copy of the geophysical survey report is included in Appendix E of this RIR.

5.2 Geology and Hydrogeology

This section describes the geological and hydrogeological observations made during the RI. A groundwater contour map is provided as Figure 4 and cross-sectional diagrams showing inferred soil profiles are on Figures 6A and 6B. Boring logs are provided in Appendix F.

5.2.1 Fill

The site is underlain by a fill layer that extends from below the surface cover to depths ranging from below the surface cover to about 1 foot to 15 feet bgs, which correspond to elevations of about el 34.08 and 18.07. The bottom of the fill layer was observed to be shallow in the northwestern (RISB07 and RISB12) and southeastern (RID07 trough RID15) parts of the site. The bottom of the fill layer was observed to be deepest in the northern part of the site (RID04). The fill predominantly consists of dark brown to tannish brown, fine-grained sand with varying amounts of silt, gravel, concrete, wood, and brick.

5.2.2 Native Soil Layers

The fill layer is underlain by native soil that predominantly consists of orangish brown to tannish brown, fine- to medium-grained sand with varying amounts of silt, clay, and gravel, which extended to the termination depth of each boring.

5.2.3 Bedrock

Bedrock was not encountered during the RI, the July 2025 spill investigation and the August 2025 geotechnical investigation conducted by Langan.

5.2.4 Hydrogeology

Synoptic groundwater level measurements were collected from permanent groundwater monitoring wells on October 16, 2025. Groundwater depth ranged from about 28.20 to 29.15

feet bgs, corresponding to el 4.98 to 5.07. Generally, groundwater elevation is highest in the southwestern part of the site and flows to the northeast. Groundwater elevations are summarized in Tables 2 and 3 and Appendix G, and a groundwater contour map is presented as Figure 4.

5.2.5 Surface Water and Drainage

The surface of the site is covered with concrete and contains drains that are connected to the municipal sewer system. Surface water does not exist at the site.

5.3 Soil Findings

5.3.1 Soil Boring Field Observations

Environmental impacts, evidenced by odors, staining, and/or PID readings above background, were observed in five of the RI soil borings. Impacts are summarized below:

Soil Boring	Depth Interval of Impacts (feet bgs)	Maximum PID Reading (ppm)	Maximum PID Reading Depth (feet bgs)	Observations
RISB01	8-12	257.4	11.5	Petroleum-like Odors
RISB02	4-6	14.2	4.5	Petroleum-like Odors
RISB04	10-19	3,652	11	Petroleum-like Odors; Staining
	25-31	4,723	27.5	
	37-45	1,956	38	Petroleum-like Odors
RISB12	4-7	134.5	5.5	Petroleum-like Odors
RISB13	8-11	138.4	9	Petroleum-like Odors
RISB14	8-11	292.3	9	Petroleum-like Odors
RISB18	1-5	4.5	12	Petroleum-like Odors
	9.5-18	1,226	10	
	20-22	589.2	20	
RISB22	14-19	2,134	16	Petroleum-like Odors
	30-32	104.5	31.5	
	35-38	674.9	36	
	40-41	1,201	40.5	
RISB23	9-12	2,495	10	Petroleum-like Odors, Staining
	35-36	1,659	36	
	37-41	1,598	39	
RISB25	33-37	708.3	36	Petroleum-like Odors, Staining
RID01	5.5-6	9.7	5.5	Petroleum-like Odors, Staining
RID02	9-9.5	83.2	9.75	Chemical-like Odors
	12-12.5	258	12	
RID03	5-6	205.1	6	Chemical-like Odors
RID07	7-7.5	298.5	7	Chemical-like Odors
RID10	5-7	148.6	6	Petroleum-like Odors, Staining

Soil Boring	Depth Interval of Impacts (feet bgs)	Maximum PID Reading (ppm)	Maximum PID Reading Depth (feet bgs)	Observations
RID11	6.5-7	294.6	5	Petroleum-like Odors, Staining
RID16	30.5-31	1,024	31	Petroleum-like Odors
	33-34	1,772	33.5	
	37-39	2,159	38	
RID17	40-40.5	587.6	40	Petroleum-like Odors, Staining
	41-41.5	1,342	41.5	

Generally, samples were continuously collected until the absence of visual, olfactory, and instrumental field impacts. Vertical and horizontal delineation of petroleum impacts are further discussed in Section 5.8.

5.3.2 Analytical Data

A total of 69 soil samples, plus seven field duplicates, were collected and analyzed for Part 375/TCL VOCs and SVOCs, PCBs, pesticides, herbicides, Part 375/TAL metals including cyanide, hexavalent and trivalent chromium, 1,4-dioxane and PFAS as part of the RI to investigate potential AOCs 1, 2, and 3. An additional 38 grab soil samples were collected and analyzed for Part 375/TCL VOCs and SVOCs to vertically and horizontally delineate petroleum impacts observed in the northwestern, northeastern and southeastern parts of the site. A summary of laboratory detections for soil samples collected during the RI are provided in Table 4 with comparisons to UU, PGW and RR SCOs, and PFAS comparisons to published NYSDEC guidance values. Note that the PGW SCOs are only applicable for soil samples in which the analyte was also detected in groundwater above the SGVs. Soil sample results collected during the RI are shown on Figures 7A, 7B and 7C. Full laboratory reports are included in Appendix L.

The contaminants tabulated below were detected at concentrations exceeding UU (plain text), PGW (underlined), and/or RR (bolded) SCOs:

VOCs

A total of 10 VOCs were detected at concentrations exceeding the UU, PGW and/or RR SCOs in the RI samples. The following table provides concentrations of VOCs that were detected above UU, PGW and/or RR SCOs:

Analyte	UU SCO	PGW SCO	RR SCO	Unit	Minimum Detected Concentration above SCOs	Maximum Detected Concentration above SCOs	Frequency of Detection above SCO
VOCs							

Analyte	UU SCO	PGW SCO	RR SCO	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Frequency of Detection above SCO
1,2,4-Trimethylbenzene	3.6	3.6	52	mg/kg	4	RISB14_9-11	**600**	RISB04_26-28	21
1,3,5-Trimethylbenzene (Mesitylene)	8.4	8.4	52	mg/kg	15	RISB18_0-2	**170**	RISB04_26-28	10
Acetone	0.05	*	100	mg/kg	19	SODUP02_082725	19	SODUP02_082725	1
Benzene	0.06	0.06	4.8	mg/kg	0.14	RID19_41-43	3.1	SODUP02_082725	5
Ethylbenzene	1	1	41	mg/kg	2.4	SODUP06_091525	**200**	SODUP02_082725	10

Total Xylenes	0.26	1.6	100	mg/kg	0.31	RID07_6-8	**1,100**	RISB04_26-28 SODUP02_082725	18

*SODUP02_082725 and SODUP06_091525 are duplicate soil samples of RISB04_11-13 and RID17_38-39, respectively.

SVOCs

A total of 13 SVOCs were detected at concentrations exceeding the UU, PGW and/or RR SCOs in the RI samples. The following table provides concentrations of SVOCs that were detected above UU, PGW and/or RR SCOs:

Parameter	UU SCO	PGW SCO	RR SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Frequency of Detection above SCO
3 & 4 Methylphenol (m&p Cresol)	0.33	*	100	mg/kg	0.34	RID01_4-6	0.34	RID01_4-6	1
Acenaphthene	20	*	100	mg/kg	26	RID01_4-6	26	RID01_4-6	1

*SODUP07_091825 is a duplicate of soil sample RID16_37-39

Pesticides

Three pesticides were detected at concentrations exceeding the UU, PGW and/or RR SCOs in the RI samples. The following table provides concentrations of pesticides that were detected above UU, PGW and/or RR SCOs:

Parameter	UU SCOs	PGW SCOs	RR SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Frequency of Detection above SCO
4,4'-DDD	0.0033	14	13	mg/kg	0.00676	RISB10_0-2	0.0392	RISB06_0-2	3
4,4'-DDE	0.0033	17	8.9	mg/kg	0.00362	RISB13_0-2	0.0079	RISB09_0-2	9
4,4'-DDT	0.0033	136	7.9	mg/kg	0.0041	RISB16_0-2	0.0218	RISB09_0-2	8

Herbicides

No herbicides were detected at concentrations exceeding the UU, PGW and/or RR SCOs.

PCBs

Total PCBs were detected at concentrations exceeding the UU, PGW and/or RR SCOs in the RI samples. The following table provides concentrations of PCBs that were detected above UU, PGW and/or RR SCOs:

Parameter	UU SCOs	PGW SCOs	RR SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Frequency of Detection above SCO
Total PCBs	0.1	3.2	1	mg/kg	0.13	RISB02_0-2	0.137	RISB03_4-6	2

Metals

A total of 10 metals were detected at concentrations exceeding the UU, PGW and/or RR SCOs in the RI samples. The following table provides concentrations of metals that were detected above UU, PGW and/or RR SCOs:

Parameter	UU SCOs	PGW SCOs	RR SCOs	Unit	Minimum Detected Concentration above SCOs		Maximum Detected Concentration above SCOs		Frequency of Detection above SCO
Arsenic	13	16	16	mg/kg	13.2	SODUP01_081925	**90.4**	RISB02_4-6	3
Barium	350	820	400	mg/kg	372	RISB10_0-2	**1980**	RISB02_4-6	6
Cadmium	2.5	7.5	4.3	mg/kg	**4.73**	RISB02_4-6	**4.73**	RISB02_4-6	1

* SODUP01_081925 is a duplicate of soil sample RISB10_0-2

Emerging Contaminants (PFAS: 40-Compound List)

PFOS and PFOA concentrations in soil were compared to the guidance values established in the April 2023 Guidelines for Sampling, Analysis and Assessment of PFAS. PFOS was detected above the UU and PGW guidance values of 0.00088 mg/kg and 0.001 mg/kg, respectively, and PFOA was detected above the UU and PGW guidance values of 0.00066 mg/kg and 0.0008 mg/kg, respectively, in one soil sample, RISB03_0-2. PFOS and PFOA were detected at 0.00674 mg/kg and 0.0013 mg/kg in RISB03_0-2. Analytical results are shown in Table 4.

5.4 Groundwater Findings

5.4.1 Field Observations

Monitoring wells were gauged for non-aqueous phase liquid (NAPL) with an oil-water interface probe. NAPL was not encountered in monitoring wells. Odors, sheen, and PID readings above background level were observed in purged groundwater from monitoring wells RIMW01, RIMW04, RIMW12, RIMW17. Groundwater depth ranged from about 28.20 and 29.15 feet bgs, corresponding to el 4.98 and 5.07, respectively. The groundwater elevation is highest in the southwestern part of the site, and groundwater generally flows to the northeast.

5.4.2 Analytical Data

A total of 10 groundwater samples, plus one QA/QC duplicate, were collected and analyzed for Part 375/TCL VOCs, SVOCs, PCBs, herbicides, pesticides, TAL metals (total and dissolved), trivalent and hexavalent chromium, total cyanide, PFAS, and 1,4-dioxane. A summary of the groundwater sample laboratory detections compared to NYSDEC Title 6 NYCRR Part 703.5 and the SGVs is presented in Table 5. Groundwater sample locations, and results that exceed the NYSDEC SGVs are presented on Figure 8. The following contaminants were detected at concentrations exceeding the NYSDEC SGVs:

VOCs

A total of 17 VOCs were detected at concentrations exceeding the NYSDEC SGVs in groundwater samples collected from seven monitoring wells (RIMW01, RIMW02, RIMW04, RIMW09, RIMW10, RIMW17, and RIMW19).

Parameter	Minimum Detected Concentration above SGVs	Maximum Detected Concentration above SGVs	SGVs (µg/L)	Frequency of Detection above SGVs
1,2,4,5-Tetramethylbenzene	7.8 µg/L in RIMW01_100125	56 µg/L in RIMW04_100225	5	2
1,2,4-Trimethylbenzene	26 µg/L in RIMW01_100125	1,500 µg/L in RIMW04_100225	5	2
1,2-Dichlorobenzene	7.9 µg/L in RIMW04_100225		3	1
1,3,5-Trimethylbenzene (Mesitylene)	400 µg/L in RIMW04_100225		5	1
Benzene	7.2 µg/L in RIMW01_100125		1	1
Chloroform	18 µg/L in GWDUP01_093025	19 µg/L in RIMW09_093025	7	2
Ethylbenzene	680 µg/L in RIMW04_100225		5	1
Isopropylbenzene (Cumene)	49 µg/L in RIMW04_100225		5	1
M,P-Xylene	20 µg/L in RIMW01_100125	2,300 µg/L in RIMW04_100225	5	2
Naphthalene	150 µg/L in RIMW01_100125	500 µg/L in RIMW04_100225	10	2
n-Butylbenzene	10 µg/L in RIMW04_100225		5	1
n-Propylbenzene	150 µg/L in RIMW04_100225		5	1
o-Xylene (1,2-Dimethylbenzene)	34 µg/L in RIMW01_100125		5	1
Sec-Butylbenzene	8.1 µg/L in RIMW04_100225		5	1
Tetrachloroethene (PCE)	5.4 µg/L in RIMW01_100125	12 µg/L in RIMW02_093025	5	5
Total Xylenes	54 µg/L in RIMW01_100125	2,300 µg/L in RIMW04_100225	5	2
Trichloroethene (TCE)	13 µg/L in RIMW19_100725		5	1

1. µg/L = microgram per liter
2. GWDUP01_093025 is a duplicate groundwater sample from parent sample RIMW09_093025

Pesticides, Herbicides, PCBs, and 1,4-Dioxane

Pesticides, herbicides, PCBs, and 1,4-Dioxane were not detected above the NYSDEC SGVs in any groundwater samples.

SVOCs

Five SVOCs were detected at concentrations exceeding the NYSDEC SGVs in groundwater samples collected from two monitoring wells (RIMW01 and RIMW04).

Parameter	Minimum Detected Concentration above SGVs	Maximum Detected Concentration above SGVs	SGVs (µg/L)	Frequency of Detection above SGVs
1,2-Dichlorobenzene	4 µg/L in RIMW04_100225		3	1
Benzo(a)anthracene	0.04 µg/L in RIMW01_100125	0.05 µg/L in RIMW04_100225	0.002	2
Chrysene	0.03 µg/L in RIMW01_100125		0.002	1
Naphthalene	89 µg/L in RIMW01_100125	250 µg/L in RIMW04_100225	10	2
Nitrobenzene	18 µg/L in RIMW04_100225		0.4	1

1. µg/L = microgram per liter

Dissolved Metals

Two dissolved metals were detected at concentrations exceeding the NYSDEC SGVs in groundwater samples collected from four monitoring wells (RIMW01, RIMW02, RIMW09, and RIMW19).

Parameter	Minimum Detected Concentration above SGVs	Maximum Detected Concentration above SGVs	SGVs (µg/L)	Frequency of Detection above SGVs
Manganese	464.9 µg/L in RIMW09_093025	2,675 µg/L in RIMW01_100125	300	5
Sodium	20,000 µg/L in RIMW01_061725	237,000 µg/L in RIMW07_061825	20,000	5

1. µg/L = microgram per liter

Total Metals

Three total metals were detected at concentrations exceeding the NYSDEC SGVs in groundwater samples collected from four monitoring wells (RIMW01, RIMW02, RIMW09, and RIMW19).

Parameter	Minimum Detected Concentration above SGVs	Maximum Detected Concentration above SGVs	SGVs (µg/L)	Frequency of Detection above SGVs
Iron	304 µg/L in RIMW02_093025		300	1
Manganese	428.2 µg/L in GWDUP01_093025	2,806 µg/L in RIMW01_100125	300	5
Sodium	25,900 µg/L in RIMW02_093025	242,000 µg/L in RIMW01_100125	20,000	5

1. µg/L = microgram per liter
2. GWDUP01_093025 is a duplicate groundwater sample from parent sample RIMW09_093025

Emerging Contaminants (PFAS: 40-Compound List) and 1,4-Dioxane

PFOS and PFOA concentrations in groundwater were compared to the NYSDEC guidance values. PFOS was detected above its NYSDEC guidance value (0.0027 µg/L) in five groundwater samples from monitoring wells RIMW01, RIMW02, RIMW09, RIMW12 and RIMW19, at concentrations ranging from 0.00561 µg/L in RIMW12_100225 to 0.0198 µg/L in RIMW01_100125. PFOA was detected above its NYSDEC guidance value (0.0067 µg/L) in five groundwater samples from monitoring wells RIMW01, RIMW02, RIMW09, RIMW12 and RIMW19, at concentrations ranging from 0.0199 µg/L in RIMW09_093025 to 0.0581 µg/L in RIMW12_100225.

5.5 Sub-Slab Vapor Findings

Six sub-slab vapor samples, six co-located indoor air samples and two outdoor ambient air samples (one per day of sampling) were collected and submitted for laboratory analysis for USEPA TO-15 VOCs. Co-located sub-slab vapor and indoor air sample results are summarized in Table 6 and shown on Figure 9. Laboratory analytical reports are included in Appendix L.

5.5.1 Sub-Slab and Indoor Air Analytical Data

VOCs detected in sub-slab vapor and indoor air samples include the following:

- 1,2,4-Trimethylbenzene
- 1,3,5-Trimethylbenzene
- 1,3-Butadiene
- 2,2,4-Trimethylpentane
- 2-Hexanone (MBK)
- 4-Ethyltoluene
- Acetone
- Benzene
- Bromodichloromethane
- Carbon Disulfide
- Carbon Tetrachloride
- Chloroform
- Chloromethane
- Cyclohexane
- Dichlorodifluoromethane
- Ethanol
- Ethyl Acetate
- Ethylbenzene
- Isopropanol
- M,P-Xylene
- Methyl Ethyl Ketone
- Methyl Isobutyl Ketone (4-Methyl-2-Pentanone)
- Methylene Chloride
- Naphthalene
- n-Heptane
- n-Hexane
- o-Xylene
- Styrene
- Tert-Butyl Alcohol
- Tetrachloroethene (PCE)
- Tetrahydrofuran
- Toluene
- Total Xylenes
- Trichloroethene (TCE)
- Trichlorofluoromethane
- Vinyl Chloride

As a reference for evaluating potential soil vapor intrusion, soil vapor and indoor air sample results were compared to Matrices A through F (Revised 2017, 2024) in the 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York. The matrices evaluate eight chlorinated VOCs (CVOC) and 13 petroleum-related VOCs using six matrices that evaluate the relationship between soil vapor and indoor air concentrations and provide recommendations for actions such as monitoring or mitigation. The indoor air sampling results were also compared to the ambient air results and the NYSDOH AGVs. Comparison to the matrices include the following:

- (RISV01/RIIA01): The matrices recommend no further action for the concentrations of 2,2,4-trimethylpentane, benzene, carbon tetrachloride, m,p,-xylene, n-hexane, PCE and toluene detected in the sub-slab and/or indoor air sample. The remaining CVOCs and petroleum-related VOCs evaluated in the matrices were not detected in either sample.
- (RISV02/RIIA02): The matrices recommend no further action for the concentrations of 2,2,4-trimethylpentane, benzene, carbon tetrachloride, m,p,-xylene, n-hexane, PCE, toluene, and TCE detected in the sub-slab and/or indoor air sample. The remaining CVOCs and petroleum-related VOCs evaluated in the matrices were not detected in either sample.
- (RISV05/RIIA05): TCE was detected at a concentration of 1.48 µg/m^3 in indoor air sample RIIA05; however, TCE was not detected in the co-located sub-slab vapor sample. Matrix A recommends "identify source(s) and resample or mitigate" for these concentrations. The matrices recommend no further action for the concentrations of 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, benzene, carbon

tetrachloride, cis-1,2-dichloroethene, ethylbenzene, m,p,-xylene, methylene chloride, naphthalene, n-hexane, n-heptane, o-xylene, PCE, toluene, TCE and vinyl chloride detected in the sub-slab and/or indoor air sample. The remaining CVOCs and petroleum-related VOCs evaluated in the matrices were not detected in either sample.

- (RISV07/RIIA07): 2,2,4-trimethylpentane and benzene were detected at concentrations of 27.2 µg/m^3 and 34.5 µg/m3, respectively, in sub-slab vapor sample RISV07, and at concentrations of 16 µg/m^3 and 11.1 µg/m^3, respectively, in RIIA07; Matrix D recommends "identify source(s) and resample or mitigate" for these concentrations. The matrices recommend no further action for the concentrations of 1,2,4-trimethylbenzene, carbon tetrachloride, cyclohexane, ethylbenzene, m,p,-xylene, n-hexane, n-heptane, o-xylene, PCE, and toluene detected in the sub-slab and/or indoor air samples. The remaining CVOCs and petroleum-related VOCs evaluated in the matrices were not detected in either sample.
- (RISV09/RIIA09): The matrices recommend no further action for the concentrations of 1,2,4-trimethylbenzene, 2,2,4-trimethylpentane, benzene, carbon tetrachloride, cyclohexane, ethylbenzene, m,p,-xylene, naphthalene, n-heptane, n-hexane, o-xylene, PCE, and toluene, detected in the sub-slab and/or indoor air sample. The remaining CVOCs and petroleum-related VOCs evaluated in the matrices were not detected in either sample.
- (RISV12/RIIA12): The matrices recommend no further action for the concentrations of 1,2,4-trimethylbenzene, 2,2,4-trimethylpentane, benzene, carbon tetrachloride, cyclohexane, ethylbenzene, m,p,-xylene, n-heptane, n-hexane, o-xylene, PCE, and toluene detected in the sub-slab and/or indoor air sample. The remaining CVOCs and petroleum-related VOCs evaluated in the matrices were not detected in either sample.

2,2,4-trimethylpentane, benzene, carbon tetrachloride, ethylbenzene, m,p-xylene, n-heptane, n-hexane, o-xylene and PCE were identified in one or both ambient air samples (RIAA01 and RIAA02) at concentrations within one order of magnitude of indoor air samples.

Product Inventory and Site Inspection

Prior to sampling, Langan completed an NYSDOH Indoor Air Quality Questionnaire and Building Survey to identify potential VOC-containing chemicals and other conditions that could influence the sub-slab soil vapor and indoor air sampling results. The inspection included an inventory of chemical products in the sampling areas and an evaluation of floor and wall penetrations, cracks, sumps, and other potential soil vapor intrusion pathways. Langan screened each area for organic vapors with a PID. A completed NYSDOH Indoor Air Quality Questionnaire and Building Inventory Form for each sampled area is provided as Appendix I. Five VOCs (acetone, heptane, ethanol, ethylbenzene and toluene) were observed in products on-site and were detected in sub-slab vapor and/or indoor air samples; however, the matrices recommend no further action for the

detected concentrations of these VOCs. 2,2,4-trimethlypentane and benzene are both commonly found in motor vehicle exhaust and gasoline-powered engines; elevated concentrations of these analytes may be due to the presence of cars and buses on- and off-site. These co-located samples were located in a part of the site where buses are stored and maintained and the storage of chemicals including brake fluids, paint thinners, vehicle fuels/oils, coolants, and degreasers was observed; therefore, the presence of these VOCs in indoor air samples may be the result of existing above-grade site conditions.

5.6 Quality Control Results

Duplicates, MS/MSDs, field blanks, PFAS blanks, and trip blanks collected during the RI are detailed in Table 1. The duplicates, field blanks, and MS/MSD sample pairs for soil and groundwater were collected at a frequency of 1 quality control sample per 20 primary samples. Quality control sample results were evaluated during data validation, and the laboratory analytical reports are provided in Appendix L.

5.7 Data Usability

Category B laboratory reports for soil, groundwater, soil vapor, and air samples collected during the RI were provided by Pace and were forwarded to Langan's data validator. DUSRs are provided in Appendix K. The results of the data validation review are summarized below.

After data validation was complete, validated data were used to prepare the tables and figures included in this report. The data were determined to be acceptable and is considered usable as qualified, and completeness, defined as the percentage of analytical results that are judged to be valid, is 100 percent.

5.8 Evaluation of Potential Areas of Concern

This section discusses the results of the RI with respect to the AOCs described in detail in Section 3.4. AOC locations are shown on Figure 5.

5.8.1 AOC 1: Historic Site Operations

The site has historically been used for various commercial and industrial purposes, including an oil burner repair facility (1949 to 1973), a garage with petroleum bulk storage (1950 to 1986), an auto repair facility (1965 to 1976), and a steam boiler rental and repair facility (1970 to 2017). The previous site investigation was focused on a localized area of the site to evaluate soil and groundwater impacts related to petroleum bulk storage, and included a limited analytical analysis. Additionally, no soil vapor data exist for the site.

Analytical results for AOC 1 are summarized as follows:

AOC 1 – Soil

- Three VOCs (1,2,4-Trimethylbenzene, naphthalene, and total xylenes) were detected

above UU, PGW and/or RR SCOs in samples collected from four soil borings across AOC 1 at depths ranging from surface grade to 16 feet bgs.

- Nine SVOCs (Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)athracene, fluoranthene, ideno(1,2,3-cd)pyrene, and naphthalene) were detected above UU, PGW and/or RR SCOs in soil samples (including one duplicate sample) collected from 15 soil borings across AOC 1 at depths ranging from surface grade to 15 feet bgs.
- Three pesticides (4,4'-DDD, 4,4'-DDE, and 4,4'-DDT) were detected above the UU SCOs, but below the RR SCOs, in samples collected from four soil borings across AOC 1 at depths ranging from surface grade to 11 feet bgs.
- Seven metals (arsenic, barium, copper, lead, mercury, nickel, and zinc) were detected above the UU, PGW and/or RR SCOs in samples (including a duplicate sample) collected from 15 soil borings across AOC 1 at depths ranging from surface grade to 11 feet bgs.
- Total PCBs were detected above the UU SCOs, but below the RR SCOs, in samples collected from two soil borings, RISB02 and RISB03, at depths ranging from surface grade to 6 feet bgs.
- PFOS and PFOA were detected above the guidance values in one sample from soil boring RISB03 at a depth of surface grade to 2 feet bgs.

AOC 1 - Groundwater

- Two VOCs (Chloroform and PCE) were detected above the SGVs in groundwater samples from the three monitoring wells across AOC 1. PCE was detected at concentrations above the SGVs in monitoring wells RIMW01, RIMW02, RIMW17 and RIMW19, and TCE was detected at concentrations above the SGVs in monitoring well RIMW19.
- SVOCs (1,2-Dichlorobenzene, benzo[a]anthracene, chrysene, and/or nitrobenzene) were detected at concentrations above the NYSDEC SGVs in the groundwater sample collected from monitoring wells RIMW01 andRIMW04.
- Two metals (Manganese and sodium) were detected at total and dissolved concentrations above the SGVs in the groundwater sample collected from one well RIMW01 and RIMW09.
- PFOA and PFOS were detected at concentrations above the guidance values in groundwater samples collected from RIMW02, RIMW09,RIMW12 and RIMW19.

AOC 1 – Sub-Slab Vapor and Indoor Air

- 2,2,4-trimethylpentane was detected at a concentration of 27.2 µg/m^3, and benzene was detected at 34.5 µg/m^3 in sub-slab vapor sample RISV07. 2,2,4-trimethylpentane and benzene, were detected at concentrations of 16 µg/m^3 and 11.1 µg/m^3, respectively, in RIIA07. When compared to NYSDOH Decision Matrix D, "identifying source(s) and resampling or mitigation" is recommended. TCE was detected at a concentration of 1.48 µg/m^3 in indoor air sample RIIA05; however, TCE was not detected in the co-located sub-slab vapor sample RISV05. Matrix A recommends "identify source(s) and resample or mitigate" for these concentrations.
- Concentrations of 2,2,4-trimethylpentane and benzene were identified in both ambient air samples (RIAA01 and RIAA02).
- The matrices recommend no further action for the concentrations of 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, carbon tetrachloride, cyclohexane, ethylbenzene, m,p,-xylene, methylene chloride, naphthalene, n-hexane, n-heptane, o-xylene, PCE, and toluene detected in the sub-slab and/or indoor air samples collected from RISV02/RIIA02, RISV07/RIIA07, RISV09/RIIA09 or RISV12/RIIA12.

AOC 1 - Conclusions

VOCs were detected at concentrations above UU and/or PGW SCOs in soil samples collected from the southeastern part of the site and are attributed to historical site operations. The petroleum-related impacts identified on the southeastern part of the site were vertically delineated by the analytical data from RISB12 indicating the absence of petroleum-related VOCs above the UU, PGW or RR SCOs, and visual/olfactory observation of impacts at about 8 feet bgs. The horizontal extents of the petroleum impacts were delineated through the analytical data indicating the absence of petroleum-related VOCs above the UU, PGW and RR SCOs in soil samples collected between surface grade to 10 feet bgs from the following delineation borings: RID08, RID10, RID12, RID13 and RID15. While petroleum-related impacts in the northern and northwestern parts of the site fall within the AOC 1 boundary, those data are further evaluated in the discussions of AOC 2 and AOC 3 findings.

SVOCs, pesticides and metals were detected at concentrations above the UU, PGW and/or RR SCOs in soil samples collected across the site from the non-native fill layer. Concentrations of SVOCs, pesticides, and metals are attributed to releases from historical operations and/or the quality of backfill used during historical development of the site. The vertical extent of SVOC, pesticide, and metal impacts was delineated by analytical data indicating the absence of SVOCs, pesticides, and metals above the UU, PGW, and/or RR SCOs in soil borings between 1 and 15 feet bgs, with exceedances at shallower elevations.

Total PCB concentrations detected above the UU SCOs in the northern part of the site are attributed to releases from historical operations and/or the quality of backfill used during historical

development of the site and were vertically delineated by the absence of total PCB detections in borings between 6 and 8 feet bgs, with concentrations exceeding the SCOs at shallower elevations.

PFOS and PFOA were identified above UU Guidance Values in one soil sample between surface grade and 2 feet bgs; however, an on-site source of PFOS/PFOA was not identified.

PCE was detected above the SGVs in monitoring wells site-wide; however, PCE was not detected in soil samples collected from across the site and was not detected in sub-slab vapor or indoor air at concentrations that warrant mitigation. TCE was detected in groundwater above the SGVs in one monitoring well, RIMW19, located in the building's cellar; however, TCE was not detected in soil samples at concentrations that warrant mitigation. CVOC contamination in groundwater may be attributed to chemical releases associated with historical site operations or may be attributed to an off-site source.

SVOCs, specifically the polyaromatic hydrocarbon (PAH) benzo(a)anthracene, were detected at concentrations exceeding the NYSDEC SGVs in groundwater samples collected from RIMW04; however, non-native fill at this site is not in contact with groundwater and SVOCs do not appear to have leached into native soil since these compounds were not detected in native soil below the historic fill. PAHs identified in groundwater are likely related to an off-site source. 1,2-Dichlorobenzene and nitrobenzene were detected at concentrations exceeding the SGVs in RIMW04; however, these compounds were not detected in soil and may be associated with an off-site source.

Metals (total and dissolved) were detected at concentrations exceeding the SGVs (manganese and sodium) in groundwater samples collected from one or more monitoring wells on site and are attributed to regional groundwater conditions.

PFOA and PFOS were identified in groundwater samples above the guidance values; however, an on-site source was not identified.

TCE and petroleum-related VOCs identified in soil vapor are attributed to historical site operations as an oil burner repair facility, a garage with petroleum bulk storage, an auto repair facility, and a steam boiler rental and repair facility, and off-site sources. 2,2,4-trimethlypentane, benzene and TCE were identified in indoor air samples at concentrations for which the Decision Matrices recommend identification of source(s) and/or mitigation. These compounds are commonly found in materials used to service motor vehicles, trucks and equipment with gasoline-powered engines. These co-located vapor samples were collected in areas of chemical storage including brake fluids, paint thinners, vehicle fuels/oils, coolants, and degreasers, and bus maintenance areas; therefore, the presence of these VOCs in indoor air samples may be the result of current building operations and not any sub-surface source on the site. CVOC contamination in soil vapor

may be attributed to chemical releases associated with historical site operations or may be attributed to an off-site source.

5.8.2 AOC 2: Petroleum Storage and Related Impacts in Soil and Groundwater

The 2014 Hydro Tech Phase I ESA identified five fill ports along the site building adjoining sidewalk and two fill ports attached to the building exterior during the site reconnaissance, indicating the presence of on-site USTs. Seven associated vent pipes we also observed along the building exterior and roof. Based on the information provided during the site reconnaissance, the USTs may be related to historic site operations including former auto repair and oil burner repair operations. Four ASTs were also observed, including one inactive 550-gallon fuel oil AST, two active 275-gallon ASTs containing unknown product, and one 275-gallon fuel oil AST, located in the partial cellar, and at-grade in the east-central and north-central parts of the building, respectively. Additionally, the 2015 Phase II investigation identified petroleum-related VOCs in soil and groundwater in the northern part of the site at concentrations above the NYSDEC 6 NYCRR UU, RR, and PGW SCOs and/or NYSDEC SGVs (NYSDEC Spill No 1505573). A maximum PID reading of 297 ppm, petroleum-like odors, and staining were observed between 1 and 35 feet bgs in soil borings B1, B2, B8, and B10 located on the northeastern part of the site, and between 10 and 15 feet bgs in boring B12 located on the northwestern part of the site. UST anomalies were identified in these locations during the geophysical survey conducted as part of the 2015 Phase II subsurface investigation.

A summary of the findings for AOC 2 is provided below:

AOC 2 - Soil

- Petroleum-related VOCs (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, ethylbenzene, naphthalene, n-butylbenzene, n-propylbenzene, toluene and total xylenes) were detected at concentrations above the UU, PGW and/or RR SCOs in AOC 2 soil borings RISB04 and RISB18, off-site sidewalk borings RISB22, RISB23, and RISB25, and delineation borings RID16, RID17 and RID19 at depths ranging from surface grade to 17 feet bgs and from 26 to 48 feet bgs.

AOC 2 - Groundwater

- Petroleum-related VOCs (1,2,4,5-tetramethylbenzene, 1,2,4-trimethylbenzene, 1,2-dichlorobenzene, 1,3,5-trimethylbenzene, ethylbenzene, isopropylbenzene, m,p-xylene, naphthalene, n-butylbenzene, n-propylbenzene, and sec-butylbenzene) were detected at concentrations above the SGVs in the groundwater sample collected from one monitoring well, RIMW04.

AOC 2 – Sub-Slab Vapor and Indoor Air

- Petroleum-related VOCs (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 2,2,4-trimethylpentane, benzene, ethylbenzene, naphthalene, m,p,-xylene, n-heptane, n-hexane, o-xylene, and toluene) were detected in co-located sub-slab vapor and indoor air samples RISV02/RIIA02 and/or RISV05/RIIA05. These VOCs were detected at concentrations that do not warrant mitigation per the decision matrices.

AOC 2 - Conclusions

Concentrations of petroleum-related VOCs and naphthalene above regulatory standards in soil and groundwater are attributed to residual contamination associated with releases from petroleum bulk storage present during historic site operations and NYSDEC Spill No. 1505573.

The vertical extent of petroleum impacts in the northeastern part of the site was delineated at the following boring locations by the absence of visual, olfactory, and instrumental field impacts and analytical data indicating the absence of petroleum-related VOCs and SVOCs above the UU, PGW and RR SCOs between 24 and 51 feet bgs: RISB04, RID17, RISB18, RID19, and off-site sidewalk soil borings RISB23 and RISB25.

The horizontal extent of petroleum impacts was delineated at the following boring locations by analytical data indicating the absence of petroleum-related VOCs and naphthalene above the UU, PGW, or RR SCOs from 2 to 48 feet bgs: RISB03, RISB07, RISB08, RISB13, RISB17, RID18, RISB19, and off-site sidewalk soil borings RISB21 and RISB24.

The extent of petroleum impacts in groundwater was delineated horizontally by the absence of visual/olfactory observations, PID headspace readings above background, and/or petroleum-related VOCs and naphthalene above the SGVs in monitoring wells RIMW17, RIMW21, RIMW24, and RIMW25.

Petroleum-related VOCs detected in sub-slab vapor samples may be the result of NYSDEC Spill No. 1505573; however, when compared to the Decision Matrices D through F, petroleum-related VOCs were not detected in indoor air or sub-slab vapor samples at concentrations that would warrant mitigation.

5.8.3 AOC 3: NYSDEC Spill No. 2407320

On November 20, 2024, while drilling geotechnical soil borings on the site, GeoDesign and its drilling subcontractor MTL penetrated an estimated 1,000-gallon UST in the northwestern corner of Lot 12, resulting in free petroleum product and oily water impacting the cellar of the adjacent Lot 11 building, as observed by the Lot 11 building owner. A spill was reported to the NYSDEC, and Spill No. 2407320 was assigned to Lot 11; this spill case remains open pending further investigation and remediation and closure by the Participant under the BCP. Preliminary spill response actions, including clean-up of the impacted Lot 11 building and decommissioning of the on-site UST, were carried out between November 2024 and February 2025. A spill investigation was conducted by Langan in May/June 2025. Due to access limitations with the drill rig and

proximate live electrical equipment presenting a safety hazard, the spill investigation soil boring SB08 could not be advanced. Additionally, SB09/RMW01 could not be advanced to its proposed terminal depth of 35 feet bgs due to obstructions; therefore, potential impacts from the spill may not have been fully investigated yet.

A summary of the findings for AOC 3 is provided below:

AOC 3 - Soil

- Petroleum-related VOCs (1,2,4-trimethylbenzene and total xylenes) were detected at concentrations above UU and/or PGW SCOs in soil samples collected from soil borings RISB01 and RISB14 at depths ranging from 9 to 12 feet bgs.

AOC 3 - Groundwater

- Petroleum-related VOCs (1,2,4,5-tetramethylbenzene, 1,2,4-trimethylbenzene, benzene, m,p-xylene, naphthalene, and o-xylene) were detected above the SGVs in the groundwater sample collected from RIMW01, installed proximate to the decommissioned UST. Petroleum-like odors and a maximum PID reading of 0.6 ppm were observed in the headspace of monitoring well RIMW01.

AOC 3 – Sub-Slab Vapor and Indoor Air

- 2,2,4-trimethylpentane, benzene, carbon tetrachloride, m,p,-xylene, n-hexane, PCE and toluene were detected in co-located sub-slab vapor and indoor air samples, RISV01/RIIA01, proximate to the UST. These VOCs were detected at concentrations that do not warrant mitigation per the decision matrices.

AOC 3 - Conclusions

Concentrations of petroleum-related VOCs were detected in soil above the UU and/or PGW SCOs and above the NYSDEC SGVs in the groundwater sample collected from monitoring well RIMW01 installed on the eastern side of the punctured UST. Petroleum-related VOC contamination is attributed to the historic operation of the former UST or NYSDEC Spill No. 2407320.

The vertical extent of petroleum impacts in soil in AOC 3 was delineated at the following boring locations by the absence of visual, olfactory, and instrumental field impacts and analytical data indicating the absence of petroleum-related VOCs and SVOCs above the UU, PGW and RR SCOs between 9 and 12 feet bgs: RISB01, RISB13 and RISB14.

The horizontal extent of petroleum impacts in AOC 3 observed in soil borings RISB01, RISB13 and RISB14 was delineated by analytical data indicating the absence of petroleum-related VOCs and SVOCs above the UU and PGW SCOs in soil samples collected between 4 to 15 feet bgs from the following delineation borings: RID02, RID03, RID04, RID05, and RID06.

Petroleum-related VOCs were identified in groundwater above their respective SGVs; however, these compounds were not detected in overlying soil samples in the vicinity of the UST, and visual and/or olfactory impacts were not observed at the water table. Based on the known pathway created during the geotechnical drilling investigation in November 2024, petroleum-related VOC contamination may be attributed to petroleum impacts resulting from NYSDEC Spill No. 2407320.

Petroleum-related VOCs detected in sub-slab vapor samples may be the result of NYSDEC Spill No. 2407320 or an off-site source. When compared to the NYSDOH Decision Matrices D through F, petroleum-related VOCs were not identified in indoor air or sub-slab vapor samples at concentrations that would warrant mitigation.

6.0 GREEN REMEDIATION STANDARDS

Green remediation principles and techniques were implemented to the extent feasible in the design and implementation of the RI as per DER-31. DER-31 requires the following green remediation/sustainability concepts be considered and/or implemented, to the extent feasible, during investigations:

- Increase energy efficiency/minimize total energy use and direct and indirect carbon dioxide/greenhouse gas (GHG) emissions to the atmosphere
- Reduce emissions of air pollutants
- Minimize habitat disturbance and create or enhance habitat or usable land
- Conserve natural resources such as soil and water; promote the sequestration of carbon through reforestation or afforestation
- Minimize fresh water consumption and maximize water reuse during daily operations and treatment processes
- Prevent long-term erosion, surface runoff, and off-site water quality impacts, and prevent unintended soil compaction
- Minimize waste or implement beneficial use of materials that would otherwise be considered a waste
- Minimize equipment and truck idling and use sustainably produced biofuels to reduce discharges of pollutants and GHGs to the atmosphere
- Utilize clean diesel (new or retrofitted) equipment to reduce emissions to the atmosphere
- Minimize truck travel for disposal to save energy, reduce emissions, reduce localized noise, vibration, and wear and tear on roads
- Minimize use of heavy equipment to save energy and reduce emissions

During the RI, the following elements were implemented, to the extent feasible, to reduce GHG and other emissions:

- Use of Ultra Low Sulfur Diesel in vehicles and machinery by drilling contractor
- Use of diesel exhaust purifier scrubbers on machinery (drill rigs) by drilling contractor
- Minimization of vehicle idling of all vehicles (including construction equipment) in accordance with 6 NYCRR Part 217 Motor Vehicle Emissions, Subpart 217-3 Idling Prohibition for Heavy Duty Vehicles

- Reduction of materials consumption and off-site transport by reuse of non-impacted soil cuttings within the boring of origin and containerizing of soil cuttings exhibiting visual, olfactory, and instrumental signs of contamination

7.0 QUALITATIVE HUMAN AND FISH/WILDLIFE EXPOSURE ASSESSMENT

Human health exposure risk was evaluated for both current and future site and off-site conditions, in accordance with the May 2010 NYSDEC Final DER-10 Technical Guidance for Site Investigation and Remediation and DER-10 Appendix 3B. The assessment includes an evaluation of potential sources and migration pathways of site contamination, potential receptors, exposure media, and receptor intake routes and exposure pathways.

In addition to the human health exposure assessment, NYSDEC DER-10 requires an on-site and off-site Fish and Wildlife Resources Impact Analysis (FWRIA) if certain criteria are met. Based on the requirements stipulated in Section 3.10 and Appendix 3C of DER-10, a FWRIA is not required because contamination at the site does not have the potential to impact any on or off-site habit of endangered species or other fish and wildlife.

7.1 Current Conditions

The about 17,000-square-foot (0.39-acre) site is located at 172 Montrose Avenue within an urbanized area of the East Williamsburg neighborhood of Brooklyn, New York and is identified on the Kings County Tax Map as Tax Block 3062 Lot 12. Block 3062 is bordered by Montrose Avenue to the north; Humboldt Street to the east; Johnson Street to the south; and Avenue of Puerto Rico to the west. A site location map is provided as Figure 1. The eastern building of the site is currently operated by GoGo Bus Tours as a bus maintenance, storage, and operations facility. The western building of the site is vacant.

7.2 Proposed Conditions

The proposed development is a 13-story residential building with a cellar level. The cellar floor will contain mechanical and utility rooms, offices, and residential amenity space. The ground floor will contain offices, residential amenity space, and residential units. The second through 13th floor will house residential units. All residential units will be designated as affordable or transient housing.

7.3 Summary of Environmental Conditions

AOCs include historic on-site operations and/or quality of backfill used at the site, petroleum storage and related impacts in soil and groundwater (NYSDEC Spill No. 1505573), and residual contamination in soil and groundwater from NYSDEC Spill No. 2407320. The following contaminants of concern (COCs) were identified:

- VOCs, SVOCs, pesticides, PCBs, metals in soil
- VOCs and SVOCs in groundwater
- Petroleum-related VOCs and CVOCs in soil vapor

Petroleum-Impacted Soil

Petroleum-impacted soil was identified in three areas of the site: the northwestern part of the site between surface grade and 12 feet bgs; the southeastern part of the site between surface grade and 10 feet bgs; and in the northeastern part of the site between surface grade and 17 feet bgs and between 26 and 48 feet bgs. Evidence of contamination in the deeper impacted interval on the northeastern part of the site was observed at and below the water table. The impacts were generally associated with staining, petroleum-like odors, organic vapors above background concentrations (i.e., nuisance conditions), and detections of petroleum-related VOCs and naphthalene above the UU, PGW, and/or RR SCOs.

Petroleum-related VOCs and naphthalene concentrations above regulatory standards detected in soil in the northeastern and southeastern parts of the site are attributed to contamination associated with possible releases from petroleum bulk storage present and/or historic site operations. Shallow petroleum-related VOCs in the northwestern part of the site are attributed to historic operation of and/or possible release from the UST.

Soil Impacted with SVOCs, PCBs, Metals, Pesticides, and PFAS

SVOCs, PCBs, metals and pesticides were detected at concentrations above the UU, PGW and/or RR SCOs in samples collected from non-native fill across the site. Generally, SVOCs, PCBs, pesticides and metals were detected at concentrations that are typical of non-native fill in New York City. PAHs were detected in soil samples collected from RISB03 in the northern part of the site at concentrations about one order of magnitude higher relative to other areas of the site. SVOC, PCB, pesticide and metal detections are attributed to historic on-site operations and/or the quality of backfill used at the site.

PFOS and PFOA were identified above UU guidance values in RISB03 between surface grade and 2 feet bgs; however, an on-site source of PFAS was not identified.

Groundwater

Petroleum-Impacted Groundwater

Concentrations of petroleum-related VOC and naphthalene above SGVs detected in groundwater in the northwestern and northeastern parts of the site (RIMW01 and RIMW04, respectively) are attributed to contamination from historic site operations, including possible releases from petroleum bulk storage.

Groundwater-Impacted with PAHs, Metals, CVOCs, and PFOS

PAHs were detected in groundwater from two monitoring wells (RIMW01 and RIMW04) in the northern part of the site at concentrations greater than the SGVs. Concentrations of two PAHs were detected above the SGVs in groundwater; however, non-native fill at this site is not in contact with groundwater, and PAHs do not appear to have leached into native soil since these compounds were not detected in native soil below the non-native fill. 1,2-Dichlorobenzene and

nitrobenzene were not detected in soil samples; therefore, their presence in groundwater is attributed to an off-site source. The concentrations of total and dissolved metals found in groundwater are generally representative of regional groundwater conditions.

PCE and TCE were detected in one or more monitoring wells; however, PCE and TCE were not detected in soil samples collected from across the site. CVOC contamination in groundwater may be attributed to chemical releases associated with historical site operations or may be attributed to an off-site source.

PFOA and PFOS were identified in groundwater samples site-wide above the guidance values; however, an on-site source was not identified. PFOA and PFOS concentrations in groundwater were not indicative of an on-site source or release.

Sub-Slab Vapor and Indoor Air

Petroleum-related VOCs and CVOCs in Sub-Slab Vapor and Indoor Air

Petroleum-related VOCs and CVOCs were identified in sub-slab vapor and indoor air samples across the site and may be attributed to historical and current site uses, former petroleum bulk storage on-site and/or off-site sources.

7.4 Conceptual Site Model

A conceptual site model (CSM) was developed based on the findings of the RI and previous investigations to produce a simplified framework for understanding the distribution of impacted materials, potential migration pathways, and potentially complete exposure pathways.

7.4.1 Potential Sources of Contamination

Potential sources of contamination have been identified as historical site uses and backfilling activities, known on-site petroleum bulk storage releases, and unknown off-site sources.

The findings of the RI indicate that petroleum-related impacts to soil and/or groundwater in the northwestern, northeastern and southeastern parts of the site are attributed to historic site operations and/or releases from petroleum bulk storage.

Historical development and backfilling activities and historical site use may be a source of SVOCs, PCBs, pesticides, and metals that were detected above the UU, PGW and/or RR SCOs across the site footprint.

PFOA and PFOS were identified in one soil sample and groundwater across the site; however, an on-site source was not identified.

Petroleum-related and CVOCs detected in soil vapor and indoor air are attributed to historical and current site uses, former petroleum bulk storage on-site and/or off-site sources.

7.4.2 Exposure Media

The impacted media include soil, groundwater, and to a lesser extent, soil vapor. Petroleum-related nuisance conditions and/or detections of petroleum-related VOCs and naphthalene above the UU, PGW, and/or RR SCOs were identified in soil between surface grade and 12 feet bgs in the northwestern part of the site, between surface grade and 17 feet bgs, and at the water table ranging from depths of 26 to 48 feet bgs in the northeastern part of the site and beneath the Montrose Avenue sidewalk, and between surface grade and 10 feet bgs in the southeastern part of the site. SVOCs, PCBs, metals, and pesticides were detected at concentrations above the applicable Part 375 UU, PGW and/or RR SCOs in soil samples throughout the site. Groundwater samples collected from monitoring wells across the site contained VOCs, SVOCs, metals, PFOA, and PFOS above the SGVs (or guidance values for PFAS). Groundwater samples collected from monitoring wells in the northwestern and northeastern parts of the site contained petroleum-related VOCs and naphthalene above the SGVs, with the highest VOC concentrations occurring in RIMW04. Petroleum-related VOCs and CVOCs were detected in sub-slab and indoor air samples across the site and are likely associated with historical and/or current site operations, former petroleum bulk storage on-site and/or off-site sources.

7.4.3 Receptor Populations.

The site is currently improved with two connected one-story buildings and two partial cellars in the northeastern part of the site. The eastern building is occupied by a tour bus company, and the western building is vacant. Current receptor populations are limited to employees and visitors of the tour bus company and the public and pedestrians adjacent to the site. During site development, human receptors will consist of construction and remediation workers, authorized guests visiting the site, and the public and pedestrians adjacent to the site. Under future conditions, human receptors may include residential use occupants, employees, and the nearby community, including children.

7.5 Potential Exposure Pathways – On-Site

7.5.1 Current Conditions

Human exposure to contaminated soil is prevented by an impermeable concrete slab that overlies the site. Site access is restricted by roll up or traditional doors; therefore, human exposure to contaminated soil is limited. There is a potential pathway through dermal absorption, inhalation and ingestion for investigation workers that handle soil beneath the surface cover materials, but this is controlled by implementation of a site-specific Health and Safety Plan (HASP).

Groundwater in this area of New York City is not used as a potable water source. There is a potential exposure pathway during groundwater sampling associated with site investigation. The potential pathway for site investigation workers is through dermal absorption and ingestion, but this potential pathway is controlled by implementation of a site-specific HASP.

Petroleum-related VOCs and CVOCs were detected in the sub-slab, indoor air and ambient air samples. The detection may be attributed to solvents and petroleum products stored in the bus depot, to vapors emanating from beneath the subsurface, or to an off-site source (e.g., vehicle exhaust); however, since part of the site is vacant and occupied areas are ventilated via the opening of floor-to-ceiling bay doors during business hours, there is limited potential for vapor accumulation or exposure to contaminated vapor through inhalation.

7.5.2 Construction/Remediation Conditions

Construction and remediation may result in potential exposures to site contaminants in the absence of a HASP and a Community Air Monitoring Plan (CAMP). Construction and remedial activities will likely include excavation and off-site disposal of impacted soil, and construction of foundation components. In the absence of a HASP and CAMP, this scenario presents the potential for exposure of soil contaminants to construction and remediation workers via dermal absorption, ingestion, and inhalation of vapors and particulate matter. This exposure pathway will be marginalized through the implementation of the HASP, CAMP, and vapor and dust suppression techniques.

7.5.3 Proposed Future Conditions

The planned redevelopment includes the construction of a 13-story residential building with a cellar. The site is anticipated to undergo a combined Track 2 and Track 4 cleanup which will include the excavation of non-native fill and contaminated soil across the site between surface grade and 17 feet bgs and in-situ groundwater treatment.

There is no pathway for ingesting residual groundwater impacts from off-site, since the site and surrounding areas obtain their drinking water supply from surface water reservoirs located upstate and not from groundwater.

If necessary, institutional controls will require maintenance of engineering controls and will serve to further mitigate exposure under future conditions.

7.6 Potential Exposure Pathways – Off-Site

The potential off-site migration of site soil contaminants is not expected to result in a complete exposure pathway for current, construction and remediation, or future conditions for the following reasons:

- The site is in an urban area and predominantly covered with continuous impervious surface covering.
- During site remediation and construction, the following protective measures will be implemented:

- A site-specific HASP, including a CAMP, will be implemented to protect the community and to monitor the perimeter of the site for off-site migration of particulates and VOCs during construction.
- Air monitoring will be conducted for particulates (i.e., dust) and VOCs during intrusive activities as part of a CAMP. Dust and/or vapor suppression techniques will be employed as needed to limit potential for off-site migration of dust.
- Vehicle tires and undercarriages will be washed prior to leaving the site to prevent tracking soil off-site.
- A soil erosion/sediment control plan will be implemented during construction to control off-site migration of soil.
- No pathway for ingesting residual groundwater impacts exists, as the site and surrounding areas obtain their drinking water supply from surface water reservoirs located upstate and not from groundwater. In addition, a local prohibition restricts the potable use of groundwater.

7.7 Evaluation of Human Health Exposure

Based upon the CSM and the review of environmental data, partial on-site exposure pathways appear to be present under current conditions, and in the absence of institutional and engineering controls, complete on-site exposure pathways could potentially exist in construction/remediation and future conditions.

Complete exposure pathways have the following five elements: 1) a contaminant source; 2) a contaminant release and transport mechanism; 3) a point of exposure; 4) a route of exposure; and 5) a receptor population.

7.7.1 Current Conditions

Contaminant sources include non-native fill with varying concentrations of VOCs, SVOCs, PCBs, metals and pesticides; VOC-, SVOC-, metals-, and PFAS-impacted groundwater; and VOC-impacted soil vapor.

Contaminant release and transport mechanisms include contaminated soil transported as dust (dermal, ingestion, inhalation). Under current conditions, the likelihood of human exposure is limited, as 1) the site is covered by concrete site cover and site access is restricted to employees, ownership and authorized visitors; 2) the site is not a source of drinking water; and 3) soil vapor exposure is limited since the site has floor-to-ceiling bay doors open for ventilation during business hours and is partially vacant.

7.7.2 Construction/Remediation Activities

During development and remediation, the contaminant sources are the same as for current conditions. Points of exposure include disturbed and exposed soil during excavation, dust and organic vapors generated during excavation. Routes of exposure include ingestion and dermal absorption of contaminated soil and inhalation of dust and vapor arising from contaminated soil. The receptor population includes construction and remediation workers and, to a lesser extent, the public adjacent to the site.

The potential for completed exposure pathways is present since all five elements exist; however, the risk will be minimized by the implementation of appropriate health and safety measures, such as monitoring the air for organic vapors and dust, using vapor and dust suppression measures, cleaning truck undercarriages before they leave the site to prevent off-site soil tracking, maintaining site security, and wearing the appropriate personal protective equipment (PPE).

7.7.3 Proposed Future Conditions

For the proposed future conditions, a combined Track 2 and Track 4 cleanup to Restricted-Residential criteria is anticipated; residual contaminants may remain on-site and would, to a lesser extent, include those listed under current conditions. In this scenario, if institutional and/or engineering controls are not implemented, points of exposure would include potential cracks in the foundation or slab of the proposed development, and exposure during any future soil-disturbing activities. The receptor population would include potential building tenants and/or employees, visitors, and maintenance workers. The possible routes of exposure can be avoided or mitigated by the installation of engineering controls, such as a vapor mitigation system, and the implementation of institutional controls, such as a Site Management Plan (SMP) and Environmental Easement (EE), if necessary.

7.7.4 Human Health Exposure Assessment Conclusions

1. Under current conditions, there is a marginal risk for exposure. The primary exposure pathways are dermal contact, ingestion and inhalation of soil, dust, soil vapor or groundwater by authorized site visitors in instances where the impermeable site cover is compromised or during site investigation. The exposure risks can be avoided or minimized by following the appropriate HASP and vapor and dust suppression measures, and by implementing a CAMP during intrusive activities.
2. In the absence of monitoring and control measures, there is a moderate risk of exposure during the construction and remediation activities. The primary exposure pathways are:
    a. Dermal contact, ingestion and inhalation of contaminated soil by construction workers.
    b. Dermal contact, ingestion and inhalation of soil (dust) by the community in the vicinity of the site.

These exposure risks can be avoided or minimized by implementing CAMP and by following the appropriate HASP, vapor and dust suppression, site security measures, and a NYSDEC-approved RAWP.

3. The existence of a complete exposure pathway for site contaminants to human receptors under future conditions is unlikely, as the site will be remediated to meet restricted-residential cleanup criteria, and, if any residual soil remains, the impermeable foundation cover would serve as a cap in the anticipated Track 4 portion of the site to prevent exposure. Regional groundwater is not used as a potable water source in New York City, so exposure to regional groundwater contaminants is unlikely.

4. It is unknown if a complete exposure pathway exists for off-site soil vapor intrusion. However, it is unlikely that a complete exposure pathway exists for the migration of site contaminants to off-site human receptors for current, construction phase, or future conditions. Monitoring and control measures would be used during remediation and construction to prevent completion of this pathway. Under future conditions, the site will be remediated and, if necessary, institutional and engineering controls may be implemented to prevent completion of this pathway.

8.0 NATURE AND EXTENT OF CONTAMINATION

This section evaluates the nature and extent of soil, groundwater, and soil vapor contamination. The nature and extent of the contamination is derived from a combination of field observations and analytical data that were discussed in Section 5.0.

8.1 Soil Contamination

Petroleum-related VOCs and naphthalene concentrations above regulatory standards detected in soil in the northwestern, northeastern and southeastern parts of the site are attributed to possible releases from on-site petroleum bulk storage and historic site operations. The depths of petroleum impacts were delineated vertically and horizontally based on visual/olfactory impacts and PID readings above background, and/or analytical data indicating the absence of petroleum-related VOCs and naphthalene. The northwestern petroleum-impacted area comprises about 500 square-feet, is vertically delineated by soil borings RISB01, RISB13 and RISB14, and is horizontally delineated by soil borings RISB15, RID02, RID03 and RISB13. The northeastern petroleum-impacted area comprises about 3,400 square feet on-site, and an additional about 1,700 square feet beneath the Montrose Avenue sidewalk, is vertically delineated by soil borings RISB04, RID17, RISB18, RID19, RISB23 and RISB25, and is horizontally delineated by soil borings RISB03, RISB07, RISB08, RISB13, RISB17, RID18, RISB19, and off-site sidewalk soil borings RISB21 and RISB24. The southeastern petroleum-impacted area comprises about 950 square-feet, is vertically delineated by soil boring RISB12, and is horizontally delineated by soil borings RID08, RID10, RID12, RID13 and RID15

Non-native fill predominantly consisting of dark brown to tannish brown, fine-grained sand with varying amounts of silt, gravel, concrete, wood, and brick was encountered up to 13 feet bgs. SVOCs, PCBs, metals, and pesticides detected at concentrations above regulatory standards are associated with historical operations or the quality of backfill used during historical development of the site. No historical use consistent with PFOS or PFOA was identified at the site; therefore, their presence is attributed to an unknown off-site source.

8.2 Groundwater Contamination

Evaluation of the groundwater analytical results identified VOCs, SVOCs, Metals, and PFAS above the SGVs (or guidance values for PFAS). Elevated PID readings and/or petroleum-like odors were observed during groundwater sampling at monitoring wells RIMW01, RIMW04, RIMW12 and RIMW17. Petroleum-related VOC and naphthalene concentrations above SGVs were identified in RIMW01 and RIMW04. Petroleum impacts in groundwater were delineated horizontally by the absence of visual/olfactory impacts and PID headspace readings above background, and/or the absence of petroleum-related VOCs and naphthalene above SGVs in monitoring wells RIMW12, RIMW17, RIMW19, RIMW21, RIMW24 and RIMW25.

SVOCs detected in soil were also identified in groundwater at concentrations above SGVs; however, non-native fill at this site is not in contact with groundwater. 1,2-Dichlorobenzene and nitrobenzene were not detected in soil samples; therefore, the presence of SVOCs in groundwater is attributed to an off-site source. Dissolved metals detected in groundwater above the SGVs (iron, manganese, and sodium) are attributed to regional groundwater conditions. PFOA and PFOS were identified in groundwater samples site-wide above the guidance values; however, an on-site source was not identified. PFOA and PFOS concentrations in groundwater were not indicative of an on-site source or release.

8.3 Soil Vapor Contamination

Petroleum-related and CVOCs identified in sub-slab vapor, indoor air and ambient air samples may be the result of historical and/or current site uses, releases from on-site petroleum bulk storage, and/or an off-site source.

9.0 CONCLUSIONS

1. Stratigraphy: The stratigraphy of the site consists of a fill layer that extends from below the surface grade to about 1 to 15 feet bgs, which corresponds to elevations of about el 34.08 and el 18.07. Non-native fill predominantly consists of dark brown to tannish brown, fine-grained sand with varying amounts of silt, gravel, concrete, wood, and brick. The non-native fill layer is underlain by native soil that predominantly consists of orangish brown to tannish brown, fine- to medium-grained sand with varying amounts of silt, clay, and gravel, which extended to the termination depth of each boring. Bedrock was not encountered in any of the soil borings.
2. Hydrogeology: Groundwater depth ranged from about 28.20 and 29.15 feet bgs corresponding to el 4.98 to 5.07. Groundwater elevation is highest in the southwestern part of the site, and groundwater flows to the northeast.
3. Petroleum-Impacted Soil and Groundwater: Petroleum impacts were identified in soil and/or groundwater in the northwestern, northeastern and southeastern parts of the site. Petroleum-impacted soil exceeding the UU, PGW, and/or RR SCOs and groundwater exceeding the SGVs remain across roughly 30% of the site, about 5,250 square feet, at depths between surface grade and 51 feet bgs on-site and between surface grade and 47 feet bgs on the Montrose Avenue sidewalk outside the northeastern part of the site. Petroleum impacts appear to related to historic use of the site and releases from historic on-site petroleum bulk storage operations. The petroleum impacts were vertically and horizontally delineated during the RI.
4. Soil and Groundwater Impacts from Historical Operations: SVOCs, PCBs, pesticides, and metals were detected at concentrations above the Part 375 UU, PGW, and/or RR SCOs. Concentrations of SVOCs, PCBs, pesticides, and metals are attributed to either releases from historical operations or the quality of backfill used during historical development of the site. The presence of CVOCs in groundwater is attributed to historical site operations and/or unknown off-site source, and the presence of SVOCs and PFAS in groundwater is attributed to off-site sources.
5. CVOC and Petroleum-Related Vapor: Petroleum-related and CVOCs were detected in sub-slab vapor, indoor air and ambient air samples and are attributed to current and historic site operations, historical petroleum bulk storage and/or off-site sources.
6. Sufficient analytical data were gathered during the RI to establish site-specific soil cleanup levels and to develop a remedy for the site. The remedy will be described and evaluated in the forthcoming RAWP prepared in accordance with New York State BCP guidelines. The remedy will address the impacts to soil, groundwater, and soil vapor described in this RIR.

Notes and abbreviations:

1. Sample depth intervals were determined in the field.
2. Soil samples were analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
3. bgs = below grade surface
4. VOC = volatile organic compound
5. SVOC = semivolatile organic compound
6. PCB = polychlorinated biphenyl
7. TCL = Target Compound List
8. TAL = Target Analyte List
9. QA/QC = quality assurance/quality control
10. NA = not applicable
11. PFAS = per- and polyfluoroalkyl substances as limited to the list of compounds designated by NYSDEC
12. TO-15 = United States Environmental Protection Agency Method TO-15

RIMW25	9/12/2025			33	23 to 33			0 to 23		33.34	5.04	28.30

Notes:

1. PVC = Polyvinyl chloride
2. bgs = Below ground surface
3. in/ = inches
4. DTW = depth to water
5. NAVD88 = North Americal Vertical Datum of 1988
6. Top of casing elevations of groundwater monitoring wells were surveyed by Langan Engineering on October 16, 2025.
7. Langan field personnel conducted a synoptic groundwater gauging event on October 16, 2025 using a Solinist oil/water interface probe.

Table 3
Groundwater Elevation Summary
Remedial Investigation Report

172 Montrose Avenue
Brooklyn, New York
NYSDEC BCP Site No.: C224417
Langan Project No.: 170824801

Monitoring Well	Elevation of Top of Casing (NAVD88)	Depth to Groundwater (Feet bTOC)	Groundwater Elevation (NAVD88)	Total Depth (Feet bTOC)
RIMW01	33.25	28.20	5.05	33.85
RIMW02	33.62	28.60	5.02	34.40
RIMW04	34.64	29.60	5.04	32.90
RIMW09	33.71	28.62	5.09	34.60
RIMW12	34.71	29.70	5.01	33.90
RIMW17	34.70	29.65	5.05	34.30
RIMW19	27.22	22.15	5.07	29.80
RIMW21	33.18	28.20	4.98	35.30
RIMW24	34.16	29.15	5.01	34.20
RIMW25	33.34	28.30	5.04	33.20

Notes:
1. All elevations are in North American Vertical Datum of 1988 (NAVD88)
2. Well elevations and depth to water readings were measured to a marked location at the top of each well casing
3. Depth to water readings are measured in feet below top of well casing (bTOC)
4. Depth to water was measured during a synoptic gauging event on October 16, 2025
5. Top of casing elevations of groundwater monitoring wells were surveyed by Langan Engineering on October 16, 2025

Remedial Investigation Report
Soil Sample Analytical Results

172 Montrose Avenue
Brooklyn, New York
NYSDEC BCP Site No.: C224417
Langan Project No.: 170824801

Notes:

CAS - Chemical Abstract Service
NS - No standard
mg/kg - milligram per kilogram
NA - Not analyzed
ND - Not detected
RL - Reporting limit
<RL - Not detected
* - Analytes below the NYSDEC SGVs were not compared to the 6 NYCRR Part 375 Protection of Groundwater (PGW) SCOs.
Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use, Protection of Groundwater, and Restricted Use Restricted-Residential Soil Cleanup Objectives (SCO).
Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) Unrestricted Use, Restricted Use Restricted-Residential, and Protection of Groundwater Guidance Values (April 2023).
Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds Unrestricted Use SCOs
10 - Result exceeds Protection of Groundwater SCOs
10 - Result exceeds Restricted Use Restricted-Residential SCOs

Remedial Investigation Report
Soil Sample Analytical Results - Delineation Areas

172 Montrose Avenue
Brooklyn, New York
NYSDEC BCP Site No.: C224417
Langan Project No.: 170824801

Notes:

CAS - Chemical Abstract Service
NS - No standard
mg/kg - milligram per kilogram
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

* - Analytes below the NYSDEC SGVs were not compared to the 6 NYCRR Part 375 Protection of Groundwater (PGW) SCOs.

Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use, Protection of Groundwater, and Restricted Use Restricted-Residential Soil Cleanup Objectives (SCO).
Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds Unrestricted Use SCOs
10 - Result exceeds Protection of Groundwater SCOs
10 - Result exceeds Restricted Use Restricted-Residential SCOs

Table 6
Remedial Investigation Report
Groundwater Sample Analytical Results

172 Montrose Avenue
Brooklyn, New York
NYSDEC BCP Site No.: C224417
Langan Project No.: 170824801

Notes:

CAS - Chemical Abstract Service
NS - No standard
ug/l - microgram per liter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water and published addenda (herein collectively referenced as "NYSDEC SGVs").

The criteria comparison for total metals (Chromium, Total) is provided for reference. The promulgated SGV shown is for hexavalent chromium.

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds NYSDEC SGVs

Table 7
Remedial Investigation Report
Sub-Slab Vapor and Indoor Air Sample Analytical Results

172 Montrose Avenue
Brooklyn, New York
NYSDEC BCP Site No.: C224417
Langan Project No.: 170824801

Notes:

AA - Ambient Air
IA - Indoor Air
SSV - Sub-Slab Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
NA - Not detected
RL - Reporting limit
<RL - Not detected
Indoor air sample analytical results are compared to the New York State Department of Health (NYSDOH) Air Guideline Values (AGVs) as set forth in the NYSDOH October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York and subsequent updates (through to 2024).
Ambient air sample analytical results are shown for reference only.

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds NYSDOH AGVs

Exceedance Summary:

10 - Result exceeds Unrestricted Use SCOs
10 - Result exceeds Protection of Groundwater SCOs
10 - Result exceeds Restricted Use Restricted-Residential SCOs

Legend

- Soil Boring Location
- Approximate Site Boundary

Notes:

1. Aerial imagery provided through Langan's subscription to Near Map, dated 07/03/2025.
2. Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use, Protection of Groundwater, and Restricted Use Restricted-Residential Soil Cleanup Objectives (SCO).
3. mg/kg - milligram per kilogram
4. RL - Reporting limit
5. <RL - Not detected

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds NYSDEC SGVs

Notes:

1. Aerial imagery provided through Langan's subscription to Near Map, dated 07/03/2025.
2. Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operation Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water and published addenda (herein collectively referenced as “NYSDEC SGVs”).
3. ug/l - microgram per liter
4. RL - Reporting limit
5. <RL - Not detected

Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Legend

- Ambient Air Sample Location
- Co-located Sub-slab Vapor and Indoor Air Sample Location
- Approximate Site Boundary

Notes:
1. Aerial imagery provided through Langan's subscription to Near Map, dated 07/03/2025.
2. Co-located sub-slab vapor and indoor air sample analytical results are evaluated using the New York State Department of Health (NYSDOH) October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2017 and 2024).
3. ug/m3 - microgram per cubic meter
4. RL - Reporting limit
5. <RL - Not Detected

Qualifiers:
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

ISSUE DATE: 08/22/25
PROJECT NO: 2025070.00
DRAWN BY: BIM
CHECKED BY: VS
SCALE:
SHEET NO: 1 OF 12
DRAWING NO: FO-000.00
NYC DOB NUMBER:

GENERAL NOTES:

1. All work shall conform to the requirements of the 2022 New York City Building Code.
2. The Contractor shall verify all dimensions and conditions in the field prior to commencing work. Where dimensions and elevations of existing construction could affect the new construction, it is the Contractor's responsibility to make field measurements in time for their incorporation in the Shop Drawings. The Architect and Engineer shall be notified of any discrepancies that may exist.
3. See architectural drawings for floor elevations, slopes, locations of depressed floor areas, and floor openings. The Contractor shall compare the structural drawings with the architectural drawings and report any discrepancy to the Architect and Engineer prior to construction.
4. Principal openings through the framing are shown on these drawings. The General Contractor shall examine the structural, architectural and mechanical drawings for the required openings and shall verify size and location of all openings with the Mechanical Contractor. Providing all openings required by the Mechanical, Electrical, or Plumbing trades shall be a part of the General Contract, whether or not shown in the structural drawings. Any deviation from the openings shown on the structural drawings shall be brought to the Engineer's attention for review.
5. Furnish and place all supports, temporary and permanent, whether shoring, bracing, needling, underpinning, or sheet piling, necessary to brace existing walls or framing to remain, so that no horizontal or vertical settlement occurs to the existing structures. Temporary supports shall be maintained in place until permanent supports are installed. Design of these supports shall be by a registered Structural Engineer in the state of New York in the employ of the Contractor.
6. Alternate connection details may be approved if such details are submitted to the Engineer for review and acceptance is granted. However, the Engineer shall be the sole judge of acceptability and the Contractor's bid shall anticipate the use of those specific details shown on the drawings. The Contractor shall retain a registered Structural Engineer to be responsible for the design of any alternate details which he proposes.
7. Work not indicated on a part of the drawings but reasonably implied to be similar to that shown at corresponding places, shall be included in the Contractor's work.
8. The Contractor shall be completely responsible for the safety of adjacent structures, property, his workmen, and the public, as affected by the construction of this project.
9. All Contractors are required to examine the drawings and specifications carefully, visit the site and fully inform themselves as to all existing conditions and limitations, prior to agreeing to perform the work. Failure to visit the site and familiarize themselves with the existing conditions and limitations will in no way relieve the Contractor from furnishing any materials or performing any work in accordance with drawings and specifications without additional cost to the Owner.
10. Structural drawings may represent construction with a reference scale. Due to the inherent process of drawing development and presentation not all work may be shown "exact" in that scale. Do not "scale" drawings to obtain any missing information or to interpret any information not specifically dimensioned for "exact" detailing or construction purposes.
11. The Contract Documents represent final conditions. Stability of the structure during construction and means and methods that impose temporary loading conditions on the incomplete structure is the sole responsibility of the General Contractor. This responsibility includes, but is not limited to, the design and furnish of any temporary supports, shoring, and/or bracing required for the safety and stability of the structure during construction.

DESIGN LOADS		
Design Code: ASCE 7 - 16 as per NYCBC		
Occupancy category: II		
Snow Loads	Ground snow load, pg	25 psf
	Flat roof snow load, p=0.7(Ce)(Ct)(Is)(pg)	18 psf
	Snow exposure factore, Ce	1.0
	Thermal factor, Ct	1.0
	Snow load importance factor, I	1.0
	Snow drift conditions in accordance with Section 1608.0	
Wind Loads	Basic Wind Speed (3-Second gust)	Vult = 117mph, Vasd = 93 mph
	Wind Importance factor, Iw	1.0
	Wind Exposure	B
	Design wind pressures for main wind force resisting system in accordance with ASCE 7-16 Chapter 27	
	Design wind pressures on components and cladding in accordance with ASCE 7-16 Chapter 30	
	Wind Base Shear	788 k (N-S direction)
		292 k (E-W direction)
Earthquake Loads	Seismic importance factor, I	1.0
	Spectral response acceleration, Ss	0.296
	Spectral response acceleration, S1	0.061
	Long-Period Transitional Period, T	6 sec
	Site class	D
	Design spectral response coefficient, Sds	0.3085
	Design spectral response coefficient, Sd1	0.0976
	Seismic design category	B
	Basic Seismic force resisting system	Ordinary reinforced concrete shear walls (N-S direction)
		Ordinary reinforced concrete shear walls (E-W direction)
	Seismic Base Shear	359 k (N-S direction)
		536 k (E-W direction)
	Seismic response coefficient, Cs	0.0137 (N-S direction)
		0.0204 (E-W direction)
	Response Modification Coefficient, R	5 (N-S direction)
		5 (E-W direction)
	Analysis procedure: Equivalent Lateral Force	

LOADING SCHEDULE				
Occupancy	Superimposed Dead Load (psf)	Live Load (psf)	Live Load Reduction	Concentrated Load (lbs)
Residential	15	40	Yes	
Corridors above 1st Floor	30	100	No	2000
First Floor Lobbies and Public Areas	30	100	No	
Retail	30	100	No	1000
Stairs	5	100	No	
Mechanical Areas	30	150	No	
Elevator Machine Rooms	5	75+Equip but not less than 150	No	300 (Grating, on area of 4in²)
Roof	40	30	No	[Concrete roof 2000, on 30in²] [All other roofs 300, on 6in²]

FOUNDATIONS:

1. The foundation design is based on recommendations contained in the Geotechnical Report by LANGAN dated August 2025. This report is available to bidding Contractors for their information, however their attention is directed to the limitations of the report described therein.
2. All footings & mat foundation shall be carried down to soil having minimum bearing capacity of 3 tons per square foot. Elevations if given, are the bottom of the footings, are minimum depths, and are not to be construed as limiting in any way the depth of excavation required to reach good bearing.
3. Individual pile plan locations to submit to the Structural Engineer for review prior to fabrication of reinforcing for pile caps. Pile caps with piles driven out of plan tolerance will require adjustment to cap size and reinforcing. Adjustments may also be required at adjacent tie beams and grade beams. Plan dimensions shown for pile caps on structural drawings represent minimum requirements.
4. All footings shall be placed on undisturbed soil or compacted engineered fill.
5. All footing excavations are to be finished by hand, unless otherwise directed by the Geotechnical Engineer.
6. No foundations shall be placed in water or on frozen ground.
7. All finished foundation excavations shall be inspected and approved by the Geotechnical Engineer or his designate before any concrete is placed.
8. Unless otherwise noted, all foundations and buttresses shall be centered under supported members.
9. Carefully follow the requirements of the specifications for back fill under or adjacent to any portion of the building.
10. Where foundation elements are to have fill on both sides, each side shall be filled simultaneously, maintaining a common elevation.
11. Coordinate under floor drain requirements with architectural and mechanical drawings and the requirements of the Geotechnical Engineer.
12. Contractor shall provide continuous control of surface and underground water as required during construction such that the work is done in the dry. However, the Contractor shall insure that ground water levels under adjacent structures are not lowered by his construction techniques. Additionally, if so directed by notes in the plans, the Contractor will continue to maintain a condition of no hydrostatic pressure until sufficient building weight is in place to prevent flotation of any part of the structure.
13. Building walls retaining earth rely on the completed floor slabs for lateral support. If required by the construction sequence, the Contractor shall temporarily brace all building walls against which back fill is to be placed until all floor slabs supporting the walls are in place and have attained at least 75% of their specified design strength. Design of temporary braces shall be by a registered Structural Engineer in the state of New York in the employ of the Contractor.

CONCRETE:

1. All concrete work shall conform to the 2014 edition of the ACI Building Code Requirements for Reinforced Concrete (ACI 318) and the 2022 New York City Building Code. In case of conflict, the City Building Code shall govern.
2. All concrete shall be controlled concrete, mixed and placed under the supervision of an approved concrete testing agency.
3. Concrete shall be normal weight concrete unless otherwise noted with sand and gravel aggregate, Type I or Type II Portland Cement and minimum compressive strength (f'c) in 28 days as specified in the Concrete Strength Table.
4. All concrete exposed to the weather or possible freeze/thaw action shall contain an air entrainment admixture. Air content to be 6% ± 1 1/2%.
5. All concrete shall be proportioned for a maximum allowable unit shrinkage of 0.03% measured at 28 days after curing in lime water as determined by ASTM C 157 (using air storage)
6. All concrete shall be placed without horizontal construction joints, except where specifically noted. Vertical construction joints and stops in shored concrete work shall be made at midspan. Horizontal reinforcement shall be continuous through vertical construction joints.
7. Construction joint locations other than shown on the drawings are permitted subject to prior approval of the Engineer. Expansion joint and control joint locations are mandatory as shown. Contractor shall submit drawings showing intended placing sequences and locations of construction joints to the Engineer for approval.
8. Unless otherwise shown on drawings, slabs on grade shall be cast in alternating strips, one (1) column bay wide. Adjacent sections shall be placed no sooner than three days apart. Alternatively, slab on grade areas may be poured in as large an area as can be handled provided that saw cut joints are cut as soon as the concrete will support a man's weight without permanent deformation and the joint process does not dislodge aggregates. Saw cut locations shall be submitted to engineer for review prior to construction.
9. Grout under column base plates and under other bearing plates shall be non-shrink, nonmetallic grout with a minimum compressive strength of 5000 psi at 3 days.
10. Pipes or conduits placed in slabs on grade shall not be placed closer than 3 diameters on centers and shall have an outside diameter less than 1/3 of the slab thickness and be positioned so that they do not interfere with slab reinforcement. Aluminum conduits shall not be placed in concrete. No conduits or pipes shall be placed in composite slabs on metal deck.
11. All keys shall be 2" x 4" (nominal) unless otherwise shown on the drawings.
12. Concrete cast on sloped surfaces shall begin at the lowest elevation and continue monolithically toward the higher elevations until the intended pour is completed.
13. No concrete shall be cast before review and approval of the reinforcing and embedded items have been obtained from the Special Inspector.
14. All exposed edges of concrete members shall be chamfered 3/4" unless shown otherwise on architectural drawings.
15. Concrete must reach the following percentages of its 28-day compressive strength (f'c) before forms or shores may be removed: Pile caps....20%, Walls and beam sides....20%, Columns....40% (1500psi min), Beam bottoms (if shored)....70%, Floor systems....85%
16. See architectural drawings for concrete finishes. Where finish is not specified, conform to requirements of ACI 301 - "Specifications for Structural Concrete for Buildings."
17. See architectural drawings for door and window openings, drips, washes, reglets, concrete finishes, masonry anchors, and for miscellaneous embedded plates, bolts, anchors, angles, etc.
18. The placement of sleeves, outlet boxes, box-outs, anchors, etc., for the mechanical, electrical and plumbing trades is the responsibility of the trade involved.
19. At sawcutting of existing concrete, including slabs on grade, no overcut at corners is allowed. All corners shall have a core hole of sufficient diameter made prior to cutting at adjacent sides to prevent cut beyond the required dimension.

CONCRETE STRENGTH TABLE		
Intended Use	28 Day Strength, f'c (psi)	Other Requirements & Admixtures
Footings	6000	
Mat Foundation	6000	
Grade Beams	6000	
Foundation Walls	6000	
Fill concrete	4000	
Mud mats/slab	2500	

REINFORCING:

1. Detailing of concrete reinforcement and accessories shall be in accordance with ACI 315 - "Manual of Standard Practice for Detailing Reinforced Concrete Structures," latest edition.
2. Reinforcement shall be continuous through all construction joints unless otherwise noted on drawings.
3. Provide and schedule with the shop drawings, all necessary accessories to hold reinforcing securely in position. Minimum requirements shall be: High chairs....4'-0" OC, Slab bolsters....4'-0" OC. Support bars for high chairs shall be #5 min.
4. All continuous reinforcement shall have a minimum lap as required for a Class B splice (AC1 318) unless noted otherwise.
5. WWF shall be provided in flat sheets. All laps in WWF shall be one mesh plus two inches at splices.
6. Concrete protection for reinforcement including WWF shall be provided as follows unless otherwise shown on the drawings:
7. All hooks shown on drawings shall be standard hooks unless noted otherwise.
8. Where continuous bars are called for, they shall run continuously around corners and be lapped at necessary splices, or hooked at discontinuous ends. Lap lengths shall be as given in the splice and development table. Lap beam top bars at mid-span and beam bottom bars at supports, unless otherwise noted.

REINFORCING MATERIAL TABLE			
Reinforcing element	ASTM	Grade, Fy (ksi)	Comments
Reinforcing bars equal to and less than #11	A615	60	
Reinforcing bars greater than #11	A615	75	
Welded reinforcing	A 706	60	Reinforcing bars may not be welded without prior approval of the Structural Engineer.
Slab on grade (6x6 - W2.9 x W2.9)	A185	65	
Slab on metal deck (6x6 - W2.1 x W2.1)	A185	65	
Around structural members encased in concrete (4x4 - W1.4 x W1.4), plus (1)-#5 spacer bar each corner	A185	65	
In middle of concrete fill for stairs (2x2 - W1.4 x W1.4)	A185	65	Fibermesh at 1 1/2#/cu. yd. may be substituted for WWF in stairs.

CONCRETE COVER TABLE (UNO)		
Condition		Cover
Surfaces cast against earth		3 inches
Formed surfaces exposed to earth or weather:	#6 bars and larger	2 inches
	#5 bars and smaller	1 1/2 inches
Formed surfaces not exposed to earth or weather. Slabs, walls, joists:	#11 bars and smaller	3/4 inches
	#14 - #18	1 1/2 inches
Formed surfaces not exposed to earth or weather. Beams and columns:		1 1/2 inches
Slabs on grade (from top of slab)		3/4 inches

SPECIAL INSPECTIONS:

1. All special inspections shall be made by a NYC DOB approved special inspection agency selected and paid by the owner. Contractor shall furnish testing agency access to work, facilities and incidental labor required for testing and inspection. Retention by the Owner of an independent testing agency shall in no way relieve the Contractor of responsibility for performing all work in accordance with the contract requirements.
2. Special inspections required are as follows:

SPECIAL INSPECTIONS NYCBC 2022	
Concrete - Cast-In-Place	BC 1704.3
Subgrade Inspection	BC 1705.6
Subsurface Conditions - Fill placement & In-Place Density	BC 1705.6
Subsurface Conditions - Borings/Test Pits	(TR-4) BC 1705.6
Excavations - Sheeting, shoring, and Bracing	BC 1705.25.3
Post-installed Anchors	BC 1705.37
Concrete Design Mix	(TR-3) BC 1905.3
Concrete Sampling and Testing	(TR-2) BC 1905.6

Rodent proofing will be provided, as per BC F102.1. Refer to Architectural Drawings

Scope of Work: Foundation work as per plans filed, Filed in conjunction with NB #

The following applications being filed in conjunction with NB filing:
- **SOE :**

DESIGN LOADS COMPLY AS PER BC 107.7, BC 1604 & CHAPTER 18

- **Foundations comply with Frost Protection protection as per BC 1805.3.1**
- **Foundations design comply with allowable stress design load combinations specified in BC 1605.3**
- **Frost Protection protection as per BC 1805.3.1 shall be provided.**

Waterproofing and dampproofing to be provided as per BC 1807.2 and BC 1807.3

NOTES:

1. TOP BARS ARE HORIZONTAL BARS WITH MORE THAN 12 INCHES OF CONCRETE CAST BELOW THE BARS.
2. CLEAR BAR SPACING = CENTER TO CENTER SPACING - BAR DIAMETER.
3. AVOID SPLICES IN REGIONS OF MAXIMUM MOMENT. IF THIS IS NOT POSSIBLE, STAGGER SPLICES SO THAT SPLICES DO NOT REQUIRE MORE THAN 50% OF THE BARS ARE SPLICED WITHIN Ld REQUIRED SPLICE LENGTH OTHERWISE INCREASE SPLICE LENGTH BY 30%.

ISSUE DATE:	08/22/25
PROJECT NO:	2025070.00
DRAWN BY:	BIM
CHECKED BY:	VS
SCALE:	
SHEET NO:	1 OF 38
DRAWING NO:	S-000.00
NYC DOB NUMBER:	

GENERAL NOTES:

1. All work shall conform to the requirements of the 2022 New York City Building Code.
2. The Contractor shall verify all dimensions and conditions in the field prior to commencing work. Where dimensions and elevations of existing construction could affect the new construction, it is the Contractor's responsibility to make field measurements in time for their incorporation in the Shop Drawings. The Architect and Engineer shall be notified of any discrepancies that may exist.
3. See architectural drawings for floor elevations, slopes, locations of depressed floor areas, and floor openings. The Contractor shall compare the structural drawings with the architectural drawings and report any discrepancy to the Architect and Engineer prior to construction.
4. Principal openings through the framing are shown on these drawings. The General Contractor shall examine the structural, architectural and mechanical drawings for the required openings and shall verify size and location of all openings with the Mechanical Contractor. Providing all openings required by the Mechanical, Electrical, or Plumbing trades shall be a part of the General Contract, whether or not shown in the structural drawings. Any deviation from the openings shown on the structural drawings shall be brought to the Engineer's attention for review.
5. Furnish and place all supports, temporary and permanent, whether shoring, bracing, needling, underpinning, or sheet piling, necessary to brace existing walls or framing to remain, so that no horizontal or vertical settlement occurs to the existing structures. Temporary supports shall be maintained in place until permanent supports are installed. Design of these supports shall be by a registered Structural Engineer in the state of NY in the employ of the Contractor.
6. Alternate connection details may be approved if such details are submitted to the Engineer for review and acceptance is granted. However, the Engineer shall be the sole judge of acceptability and the Contractor's bid shall anticipate the use of those specific details shown on the drawings. The Contractor shall retain a registered Structural Engineer to be responsible for the design of any alternate details which he proposes.
7. Work not indicated on a part of the drawings but reasonably implied to be similar to that shown at corresponding places, shall be included in the Contractor's work.
8. The Contractor shall be completely responsible for the safety of adjacent structures, property, his workmen, and the public, as affected by the construction of this project.
9. All Contractors are required to examine the drawings and specifications carefully, visit the site and fully inform themselves as to all existing conditions and limitations, prior to agreeing to perform the work. Failure to visit the site and familiarize themselves with the existing conditions and limitations will in no way relieve the Contractor from furnishing any materials or performing any work in accordance with drawings and specifications without additional cost to the Owner.
10. Structural drawings may represent construction with a reference scale. Due to the inherent process of drawing development and presentation not all work may be shown "exact" in that scale. Do not "scale" drawings to obtain any missing information or to interpret any information not specifically dimensioned for "exact" detailing or construction purposes.
11. The Contract Documents represent final conditions. Stability of the structure during construction and means and methods that impose temporary loading conditions on the incomplete structure is the sole responsibility of the General Contractor. This responsibility includes, but is not limited to, the design and furnish of any temporary supports, shoring, and/or bracing required for the safety and stability of the structure during construction.

DESIGN LOADS		
Design Code: ASCE 7 - 16 as per NYCBC		
Occupancy category: II		
Snow Loads	Ground snow load, pg	25 psf
	Flat roof snow load, p=0.7(Ce)(Ct)(Is)(pg)	18 psf
	Snow exposure factore, Ce	1.0
	Thermal factor, Ct	1.0
	Snow load importance factor, I	1.0
	Snow drift conditions in accordance with Section 1608.0	
Wind Loads	Basic Wind Speed (3-Second gust)	Vult = 117mph, Vasd = 93 mph
	Wind Importance factor, Iw	1.0
	Wind Exposure	B
	Design wind pressures for main wind force resisting system in accordance with ASCE 7-16 Chapter 27	
	Design wind pressures on components and cladding in accordance with ASCE 7-16 Chapter 30	
	Wind Base Shear	788 k (N-S direction)
		292 k (E-W direction)
Earthquake Loads	Seismic importance factor, I	1.0
	Spectral response acceleration, Ss	0.296
	Spectral response acceleration, S1	0.061
	Long-Period Transitional Period, T	6 sec
	Site class	D
	Design spectral response coefficient, Sds	0.3085
	Design spectral response coefficient, Sd1	0.0976
	Seismic design category	B
	Basic Seismic force resisting system: Ordinary reinforced concrete shear walls (N-S direction)	
	Basic Seismic force resisting system: Ordinary reinforced concrete shear walls (E-W direction)	
	Seismic Base Shear	359 k (N-S direction)
		536 k (E-W direction)
	Seismic response coefficient, Cs	0.0137 (N-S direction)
		0.0204 (E-W direction)
	Response Modification Coefficient, R	5 (N-S direction)
		5 (E-W direction)
	Analysis procedure: Equivalent Lateral Force	

LOADING SCHEDULE				
Occupancy	Superimposed Dead Load (psf)	Live Load (psf)	Live Load Reduction	Concentrated Load (lbs)
Residential	15	40	Yes	
Corridors above 1st Floor	30	100	No	2000
First Floor Lobbies and Public Areas	30	100	No	
Retail	30	100	No	1000
Stairs	5	100	No	
Mechanical Areas	30	150	No	
Elevator Machine Rooms	5	75+Equip but not less than 150	No	300 (Grating, on area of 4in²)
Roof	40	30	No	[Concrete roof 2000, on 30in²] [All other roofs 300, on 6in²]

REINFORCED MASONRY:

1. All masonry work shall conform to the "Building Code Requirements of Masonry Structures" (ACI 530-13/ASCE 5-13) and (ACI 530.1-13/ASCE 6-13).
2. The compressive strength of the masonry, f'm, shall be at least 1500 psi. Unless otherwise approved by the Structural Engineer on the basis of prism testing the components of the masonry shall have compressive strengths as given below: 2000psi.
3. All concrete masonry units (CMU) shall conform to ASTM C90, grade N-1, with an individual compressive strength of 2400 psi
4. Mortar for block wall construction shall be Type M or S conforming to ASTM C270.
5. Grout for piers and block walls shall conform to ASTM C476 with a minimum compressive strength of 2000 psi determined in accordance with the provisions of ASTM C1019.
6. Reinforcing bars shall conform to ASTM A615, Grade 60, except bars to be welded shall conform to ASTM A706.
7. Wire for joint reinforcing shall conform to ASTM A82, yield point = 70 ksi (min.).
8. Unless noted otherwise provide minimum reinforcing per the typical details.
9. Provide bond beams with (2)-#5 continuous, at the top of parapets, at each floor level, and where shown on the drawings.
10. Unless noted otherwise on plans, provide the following additional vertical reinforcement in the cell immediately adjacent to each side of a masonry opening and in the cell of discontinuous walls. These bars are to extend full height of the wall or in the case of masonry openings at multi-story walls, from story to level above to story level below the opening. For 6" and 8" CMU Walls provide (2)-#5. For 10" and 12" CMU Walls provide (2)-#6.
11. Extend additional reinforcement a minimum of 36 bar diameters beyond the opening.
12. The minimum length of lap for reinforcing bars embedded in grout is 48 bar diameters, unless shown otherwise on the drawings.
13. Place reinforcing bars before grouting. Place grout in lifts not exceeding 5 feet. Consolidate each lift by mechanical vibration. The next lift of the pour may be made after the initial water loss and reconsolidation of the prior lift, while it is still plastic.
14. Properly secure reinforcing bars to maintain the positions indicated on the drawings. Bars to be located in center of cells unless otherwise noted.
15. All CMU shall be braced during construction for the governing code lateral design loads until permanent restraints have been installed.
16. The following steps are to be followed when laying masonry in the temperatures stated below:

COLD WEATHER MASONRY CONSTRUCTION	
Mean daily air temperature	Instructions
40° - 32° F	Heat mixing water or aggregate to 70° F. Protect masonry from rain or snow for 24 hours.
32° - 20° F	Heat mixing water and aggregate to 70° F. Provide wind breaks for wind velocity in excess of 15 m.p.h. Cover masonry with insulating blankets for 24 hours and provide heat sources on both sides of masonry construction.
Below 20° F	Heat mixing water and aggregate to 70° F. Provide enclosures and heat to maintain 40° minimum temperature. Temperature of masonry units must be 40° F minimum when laid. Maintain masonry above 40° F for 24 hours by enclosures and supplemental heat.

Scope of Work: Structural work as per plans filed, Filed in conjunction with NB #

The following applications being filed in conjunction with NB filing:
- **Sprinkler & Standpipe Job No**
- **Plumbing) Job No**
- **Mechanical Job No**
- **Curb Cut Job No**
- **Foundation No: M01128646/S1**
- **BPP -**

DESIGN LOADS COMPLY AS PER BC 107.7 & BC 1604

CONCRETE:

1. All concrete work shall conform to the 2014 edition of the ACI Building Code Requirements for Reinforced Concrete (ACI 318) and the 2022 New York City Building Code. In case of conflict, the City Building Code shall govern.
2. All concrete shall be controlled concrete, mixed and placed under the supervision of an approved concrete testing agency.
3. Concrete shall be normal weight concrete unless otherwise noted with sand and gravel aggregate, Type I or Type II Portland Cement and minimum compressive strength (f'c) in 28 days as specified in the Concrete Strength Table.
4. All concrete exposed to the weather or possible freeze/thaw action shall contain an air entrainment admixture. Air content to be 6% ± 1 1/2%.
5. All concrete shall be proportioned for a maximum allowable unit shrinkage of 0.03% measured at 28 days after curing in lime water as determined by ASTM C 157 (using air storage)
6. All concrete shall be placed without horizontal construction joints, except where specifically noted. Vertical construction joints and stops in shored concrete work shall be made at midspan. Horizontal reinforcement shall be continuous through vertical construction joints.
7. Construction joint locations other than shown on the drawings are permitted subject to prior approval of the Engineer. Expansion joint and control joint locations are mandatory as shown. Contractor shall submit drawings showing intended placing sequences and locations of construction joints to the Engineer for approval.
8. Unless otherwise shown on drawings, slabs on grade shall be cast in alternating strips, one (1) column bay wide. Adjacent sections shall be placed no sooner than three days apart. Alternatively, slab on grade areas may be poured in as large an area as can be handled provided that saw cut joints are cut as soon as the concrete will support a man's weight without permanent deformation and the joint process does not dislodge aggregates. Saw cut locations shall be submitted to engineer for review prior to construction.
9. Grout under column base plates and under other bearing plates shall be non-shrink, nonmetallic grout with a minimum compressive strength of 5000 psi at 3 days.
10. Pipes or conduits placed in slabs on grade shall not be placed closer than 3 diameters on centers and shall have an outside diameter less than 1/3 of the slab thickness and be positioned so that they do not interfere with slab reinforcement. Aluminum conduits shall not be placed in concrete. No conduits or pipes shall be placed in composite slabs on metal deck.
11. All keys shall be 2" x 4" (nominal) unless otherwise shown on the drawings.
12. Concrete cast on sloped surfaces shall begin at the lowest elevation and continue monolithically toward the higher elevations until the intended pour is completed.
13. No concrete shall be cast before review and approval of the reinforcing and embedded items have been obtained from the Special Inspector.
14. All exposed edges of concrete members shall be chamfered 3/4" unless shown otherwise on architectural drawings.
15. Concrete must reach the following percentages of its 28-day compressive strength (f'c) before forms or shores may be removed: Pile caps....20%, Walls and beam sides....20%, Columns....40% (1500psi min), Beam bottoms (if shored)....70%, Floor systems....85%
16. See architectural drawings for concrete finishes. Where finish is not specified, conform to requirements of ACI 301 - "Specifications for Structural Concrete for Buildings."
17. See architectural drawings for door and window openings, drips, washes, reglets, concrete finishes, masonry anchors, and for miscellaneous embedded plates, bolts, anchors, angles, etc.
18. The placement of sleeves, outlet boxes, box-outs, anchors, etc., for the mechanical, electrical and plumbing trades is the responsibility of the trade involved.
19. At sawcutting of existing concrete, including slabs on grade, no overcut at corners is allowed. All corners shall have a core hole of sufficient diameter made prior to cutting at adjacent sides to prevent cut beyond the required dimension.

CONCRETE STRENGTH TABLE		
Intended Use	28 Day Strength, f'c (psi)	Other Requirements & Admixtures
Columns	See column schedule	
Framed slabs and beams	See Framing Plans	
Fill concrete	4000	
Shear walls	6000	

REINFORCING:

1. Detailing of concrete reinforcement and accessories shall be in accordance with ACI 315 - "Manual of Standard Practice for Detailing Reinforced Concrete Structures," latest edition.
2. Reinforcement shall be continuous through all construction joints unless otherwise noted on drawings.
3. Provide and schedule with the shop drawings, all necessary accessories to hold reinforcing securely in position. Minimum requirements shall be: High chairs....4'-0" OC, Slab bolsters....4'-0" OC. Support bars for high chairs shall be #5 min.
4. All continuous reinforcement shall have a minimum lap as required for a Class B splice (AC1 318) unless noted otherwise.
5. WWF shall be provided in flat sheets. All laps in WWF shall be one mesh plus two inches at splices.
6. Concrete protection for reinforcement including WWF shall be provided as follows unless otherwise shown on the drawings:
7. All hooks shown on drawings shall be standard hooks unless noted otherwise.
8. Where continuous bars are called for, they shall run continuously around corners and be lapped at necessary splices, or hooked at discontinuous ends. Lap lengths shall be as given in the splice and development table. Lap beam top bars at mid-span and beam bottom bars at supports, unless otherwise noted.

REINFORCING MATERIAL TABLE			
Reinforcing element	ASTM	Grade, Fy (ksi)	Comments
Reinforcing bars equal to and less than #11	A615	60	
Reinforcing bars greater than #11	A615	75	
Welded reinforcing	A 706	60	Reinforcing bars may not be welded without prior approval of the Structural Engineer.
Slab on grade (6x6 - W2.9 x W2.9)	A185	65	
Slab on metal deck (6x6 - W2.1 x W2.1)	A185	65	
Around structural members encased in concrete (4x4 - W1.4 x W1.4), plus (1)-#5 spacer bar each corner	A185	65	
In middle of concrete fill for stairs (2x2 - W1.4 x W1.4)	A185	65	Fibermesh at 1 1/2#/cu. yd. may be substituted for WWF in stairs.

CONCRETE COVER TABLE (UNO)		
Condition		Cover
Formed surfaces exposed to earth or weather:	#6 bars and larger	2 inches
	#5 bars and smaller	1 1/2 inches
Formed surfaces not exposed to earth or weather. Slabs, walls, joists:	#11 bars and smaller	3/4 inches
	#14 - #18	1 1/2 inches
Formed surfaces not exposed to earth or weather. Beams and columns:		1 1/2 inches
Slabs on metal deck	Top	3/4 inches
	Bottom	3/4 inches
Slabs on metal deck (Parking Levels or Parking Ramps)	Top	1 1/2 inches
	Bottom	3/4 inches

DRILLED-IN CONCRETE ANCHORS:

1. Mechanical Anchors: Wedge type with current ICBO approval and published in ICC ESR Code Report and conforming to ICC ES AC193. Complete with required nuts, washers, and manufacturer's installation instructions. Size and manufacturer as indicated on drawings. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by Architect, provide one of the following listed in the Post Installed Anchor Table for cracked and un-cracked concrete (unless otherwise noted)
2. Chemical Anchors: Threaded carbon steel or stainless steel rod complete with required nuts, washers, adhesive system and manufacturer's installation instructions. Current ICBO approval and published ICC ESR Code Report required and conforming to ICC ES AC308. Size and manufacturer as indicated on drawings. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Architect, provide one of the following listed in the Post Installed Anchor Table for cracked and un-cracked concrete (unless otherwise noted)
3. At locations where post installed anchors are being used in concrete, a survey shall be preformed to locate existing rebar. using ground penetrating radar. Survey results are to be coordinated with shop drawings. Alternatively, anchor rods are to be installed after which a template is to be created for use by the fabricator in the shop drawings. Notify Engineer of record (E.O.R.) if as-installed location varies more than 1/2" from theoretical.

POST INSTALLED ANCHOR MATERIAL TABLE			
Manufacture	Anchor Type	Name	Comments
Hilti	Mechanical	HAD ICC	--
Hilti	Mechanical	HSL-3	--
Hilti	Mechanical	Kwik Bolt TZ	--
Hilti	Mechanical	Kwik Bolt 3	un-cracked concrete only
Power Fasteners	Mechanical	Power-Stud + SD11 Category 1	1/4"Ø - uncracked concrete only, all others acceptable for both cracked and un-cracked concrete
Power Fasteners	Mechanical	Power-Stud + SD2 Category 1	--
Power Fasteners	Mechanical	Wedge-Bolt+ Category1	1/4"Ø - uncracked concrete only, all others acceptable for both cracked and un-cracked concrete
Power Fasteners	Mechanical	Snake+ Category 1	--
Power Fasteners	Mechanical	Vertigo + Category 1	--
Simpson Strong-Tie	Mechanical	Strong-Bolt	--
Simpson Strong-Tie	Mechanical	Titen HD	--
Simpson Strong-Tie	Mechanical	Titen HD Rod Hanger	3/8", 1/2"Ø only for both cracked and un-cracked concrete
ITW Red Head	Mechanical	Trubolt +	3/8", 1/2", 5/8"Ø only
ITW Red Head	Mechanical	Trubolt	1/4", 3/8", 1/2"Ø - uncracked concrete only, all others acceptable for both cracked and un-cracked concrete
Hilti	Chemical	HIT-RE 500 SD	--
Hilti	Chemical	HIT-HY 200 SAFE SET	1 1/4"Ø max. for both cracked and un-cracked concrete. Note: for embedment greater than 15" use HIT-RE 500 SD due to the quick setting time of the 200 SAFE SET.
Power Fasteners	Chemical	AC100+ Gold-Dry, Wet, Water-Filled	un-cracked concrete only
Power Fasteners	Chemical	PE1000+ -Dry, Wet, Water-Filled	3/8", 1", 1 1/4"Ø - acceptable for un-cracked concrete only, all others acceptable for both cracked and un-cracked concrete
Power Fasteners	Chemical	T308+	3/8" - 7/8"Ø - un-cracked concrete only, none acceptable for cracked concrete
Simpson Strong-Tie	Chemical	SET-XP	--
ITW Red Head	Chemical	EPCON G5	un-cracked concrete only

SPECIAL INSPECTIONS:

1. All special inspections shall be made by a NYC DOB approved special inspection agency selected and paid by the owner. Contractor shall furnish testing agency access to work, facilities and incidental labor required for testing and inspection. Retention by the Owner of an independent testing agency shall in no way relieve the Contractor of responsibility for performing all work in accordance with the contract requirements.
2. Special inspections required are as follows:

SPECIAL INSPECTIONS NYCBC 2022	
Concrete - Cast-In-Place	BC 1704.3
Masonry	BC 1704.4
Post-installed Anchors	BC 1705.37
Concrete Design Mix	(TR-3) BC 1905.3
Concrete Sampling and Testing	(TR-2) BC 1905.6

COLUMN NOTES:

1. FIRST COLUMN DIMENSION SHOWN IN SCHEDULE IS IN THE **[NORTH-SOUTH][EAST-WEST]** DIRECTION.
2. LOADS SHOWN ARE GIVEN IN KIPS, AND ARE ULTIMATE LOADS UNO
3. LOADS SHOWN FOR FOUNDATIONS ARE SERVICE LOADS.
4. SEE COLUMN SCHEDULE FOR CONCRETE COMPRESSIVE STRENGTH, f'c.
5. COLUMN SIZES AND REINFORCING ARE ONLY SHOWN WHERE SIZES START AND STOP. SIZES AND REINFORCING REMAIN CONSTANT OVER BLANK SPACES BETWEEN START AND STOP.
6. ——— HEAVY LINE INDICATES TOP OF COLUMN.
7. "B" INDICATES BUTTRESS.
8. * INDICATES TENSION SPLICE
9. ▭ INDICATES COLUMN BEING PICKED-UP
10. ▲ INDICATES ADDITIONAL LOAD FROM PICKED-UP COLUMN OR LOAD TRANSFER
11. —●— INDICATES CHANGE IN HOLD POINT OF COLUMN
12. ▭ INDICATES SHEAR WALL
13. FOR GENERAL NOTES SEE S-00X SERIES DRAWINGS.
14. FOR COLUMN DETAILS SEE S-910 SERIES DRAWINGS.

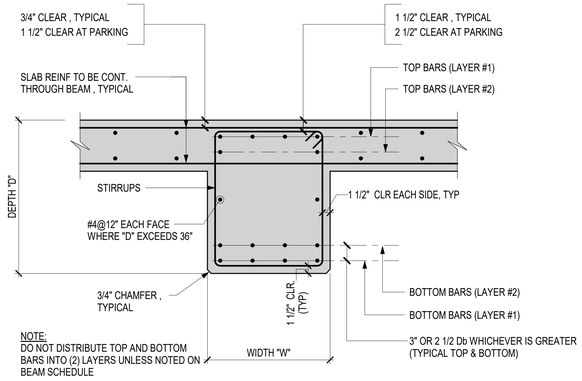
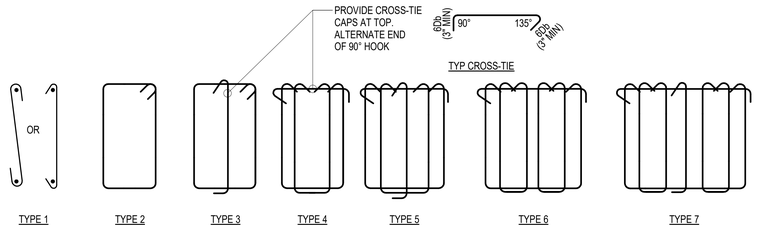
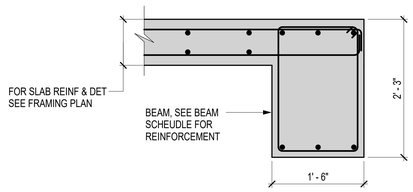
1. L * IS THE LARGER OF ADJACENT SPANS L1 AND L2.
2. IF BEAM "A" TOP BARS DO NOT MATCH BEAM "B" TOP BARS AS SCHEDULED, THE LARGER STEEL AREA SHALL GOVERN.
3. BOTTOM BAR SPLICES (IF REQUIRED) SHALL BE STAGGERED AND SHALL OCCUR WITHIN THE END THIRDS OF THE BEAM CLEAR SPAN.
4. REFER TO DETAIL BELOW FOR TYPICAL STIRRUP TYPES.
5. IF S1 AND S2 SPACING NOT GIVEN SEPARATELY IN SCHEDULES, USE SPACING="S" GIVEN THROUGHOUT BOTH ZONES

1 TYPICAL REINFORCING CONCRETE BEAM ELEVATION



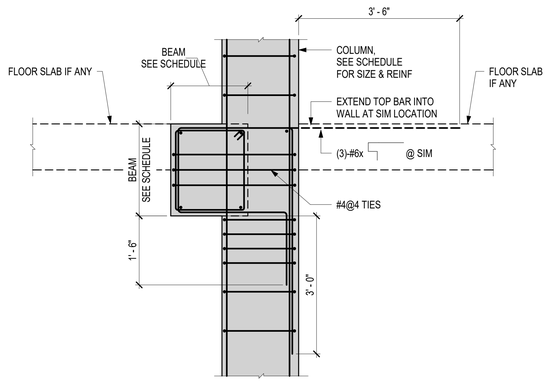
NOTE:
DO NOT DISTRIBUTE TOP AND BOTTOM BARS INTO (2) LAYERS UNLESS NOTED ON BEAM SCHEDULE



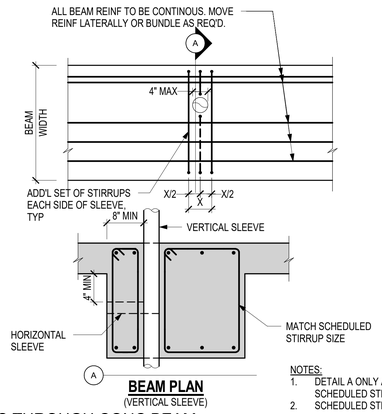


2 TYPICAL BEAM SECTION AND STIRRUP TYPES

3 SPANDREL BEAM



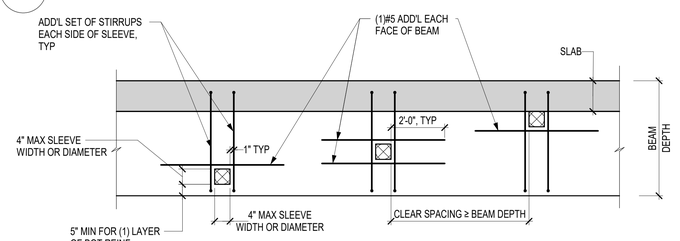
4 BRACKET DETAIL



BEAM PLAN
(VERTICAL SLEEVE)

NOTES:
1. DETAIL A ONLY APPLIES WHEN "X" IS GREATER THAN SCHEDULED STIRRUP SPACING.
2. SCHEDULED STIRRUPS NOT SHOWN FOR CLARITY.

5 TYPICAL SLEEVE PENETRATIONS THROUGH CONC BEAM



BEAM ELEVATION
(HORIZONTAL SLEEVES)

NOTES:
1. SCHEDULED BEAM REINF NOT SHOWN FOR CLARITY IS TO BE CONTINUOUS.
2. SCHEDULED STIRRUPS NOT SHOWN FOR CLARITY.

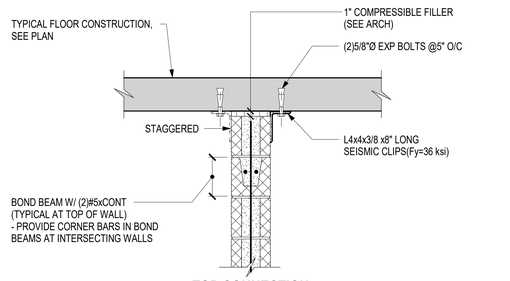
3. EXPANSION BOLTS SHALL BE:
   DEWALT POWER-STUD+ SD 1
   W/ 2 3/8" EMBEDMENT
   OR HILTI KWIK BOLT TZ
   W/ 2 3/4" EMBEDMENT
4. DOWELS MAY BE POST INSTALLED WITH HILTI HY-200 ADHESIVE OR APPROVED EQUAL. EMBEDMENT LENGTH SHALL BE 6" FOR #4 AND #5 BARS.
5. ALTERNATE CONNECTION DETAILS WITH SIGNED AND SEALED CALCULATIONS BY MANUF'S PE MAY BE SUBMITTED TO EOR FOR APPROVAL

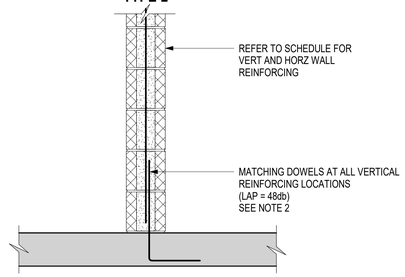
TYPE-2 NOTES:

1. TYPE 2 CONNECTION MAY BE USED FOR SEISMIC/ NON-SEISMIC CONDITIONS
2. TOP CONNECTIONS SHALL BE LOCATED AT EACH VERTICAL REINF BAR IN CMU WALL, BUT NO MORE THAN (1) ANGLE CONNECTION PER BLOCK REQ'D.
3. EXPANSION BOLTS SHALL BE:
   DEWALT POWER-STUD+ SD 1
   W/ 4 5/8" EMBEDMENT
   OR HILTI KWIK BOLT TZ
   W/ 3 1/8" EMBEDMENT
4. SCREW ANCHORS SHALL BE:
   DEWALT SCREW BOLT+
   W/ 4 1/4" EMBEDMENT
   OR HILTI KWIK HUS
   W/ 4 1/4" EMBEDMENT
5. DOWELS MAY BE POST INSTALLED WITH HILTI HY-200 ADHESIVE OR APPROVED EQUAL. EMBEDMENT LENGTH SHALL BE 6" FOR #4 AND #5 BARS.
6. ALTERNATE CONNCECTION DETAILS WITH SIGNED AND SEALED CALCULATIONS BY MANUF'S PE MAY BE SUBMITTED TO EOR FOR APPROVAL

2 TYPICAL CMU LINTEL DETAIL NON-BEARING WALL

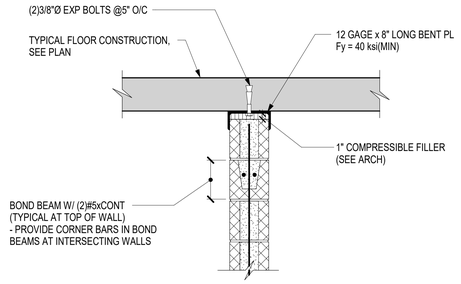


TOP CONNECTION TYPE-2

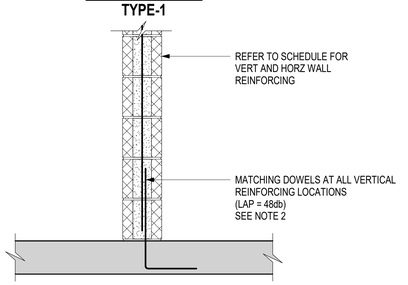


TYPE-2 NOTES:

1. TOP CONNECTIONS SHALL BE LOCATED AT ALL VERTICALLY REINFORCED CELLS, STAGGER ON ALTERNATING SIDES.
2. EXPANSION BOLTS SHALL BE:
   DEWALT POWER-STUD+ SD 1
   W/ 3 3/8" EMBEDMENT
   HILTI KWIK BOLT TZ
   W/ 3 1/8" EMBEDMENT
3. DOWELS MAY BE POST INSTALLED WITH HILTI HY-200 ADHESIVE OR APPROVED EQUAL. EMBEDMENT LENGTH SHALL BE 6" FOR #4 AND #5 BARS.



TOP CONNECTION TYPE-1



TYPE-1 NOTES:

1. DETAIL IS ONLY APPLICABLE IN SEISMIC DESIGN CATEGORY B AND WHERE THE WALL IS NOT REQUIRED TO FUNCTION FOR LIFE SAFETY PURPOSES AFTER AN EARTHQUAKE.
2. TOP CONNECTIONS SHALL BE LOCATED AT ALL VERTICALLY REINFORCED CELLS.
3. EXPANSION BOLTS SHALL BE:
   DEWALT POWER-STUD+ SD 1
   W/ 2 3/8" EMBEDMENT
   OR HILTI KWIK BOLT TZ
   W/ 2 3/4" EMBEDMENT
4. DOWELS MAY BE POST INSTALLED WITH HILTI HY-200 ADHESIVE OR APPROVED EQUAL. EMBEDMENT LENGTH SHALL BE 6" FOR #4 AND #5 BARS.
5. ALTERNATE CONNECTION DETAILS WITH SIGNED AND SEALED CALCULATIONS BY MANUF'S PE MAY BE SUBMITTED TO EOR FOR APPROVAL

DAILY FIELD REPORTS

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170890901	**CLIENT:**		**DATE:**	Monday, August 11, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 72-87 °F Wind: SW @ 1-4 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 12:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Olivia O'Donnell

EQUIPMENT:
Ground Penetrating Radar (GPR) Detector
Electromagnetic (EM) Detector
Measuring Wheel

PRESENT AT SITE:
Environmental Staff (Langan): Olivia O'Donnell & Padmanabhan Krishnaswamy
Geophysical Survey Contractor (NOVA Geophysical Services [NOVA]): Tolga Ybas, Ethan Siegenthaler, Athanasios Ntarlagiannis

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.: Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose Avenue (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- NOVA conducted a geophysical survey to identify underground storage tanks (UST), subsurface structures, and utility lines beneath the site and adjacent sidewalks. The geophysical survey was conducted using ground penetrating radar (GPR) and electromagnetic (EM) detection equipment. Anomalies consistent with USTs were identified in the central and northeastern parts of the site. Multiple live utilities including water, sewer, gas and electric were identified coming into the building from the Montrose Avenue sidewalk. A concrete encased aboveground storage tank (AST) in the subcellar located in the northeastern part of the site.

Material Tracking

- No material was imported to the site.
- No material was exported from the site.

Sampling

- No samples were collected.

Community Air Monitoring Plan (CAMP) Activities

- Ground intrusive activities were not performed; therefore, CAMP was not implemented.

Anticipated Activities

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Olivia O'Donnell **LANGAN**

- AARCO Environmental Services Corp. (AARCO) will mobilize to the site Wednesday (August 13, 2025) to begin the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170890901	**CLIENT:**		**DATE:**	Wednesday, August 13, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 76-85 °F Wind: NE @ 1-8 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Gianna Allegretti
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Greg Rivera

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings, RISB13 and RISB14. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
    - Soil boring RISB13 was advanced to about 40 feet below grade surface (bgs). Petroleum-like odors were observed between about 8 and 11 feet bgs. A maximum PID reading of 138.4 parts per million (ppm) was observed at about 9 feet bgs. Groundwater was observed at about 25.5 feet bgs.
    - Soil boring RISB14 was advanced to about 36 feet bgs. Petroleum-like odors were observed between about 8 and 11 feet bgs. A maximum PID reading of 292.3 ppm was observed at about 9 feet bgs. Groundwater was observed at about 28 feet bgs.

  Upon completion of soil boring, the boreholes were backfilled with clean soil cuttings and sand.
- Impacted soil cuttings were containerized in sealed and labeled 55-gallon United Nations/Department of Transportation (UN/DOT)-approved drums, which were staged in the northwest part of the site for future off-site disposal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB13_0-2
    - RISB13_9-11
    - RISB13_12-14
    - RISB14_0-2
    - RISB14_9-11

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170890901	**CLIENT:**		**DATE:**	Thursday, August 14, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 75-89 °F Wind: ENE @ 3-7 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Gianna Allegretti
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Greg Rivera

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RISB01 to about 12 feet below grade surface (bgs). Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors and PID readings above background levels were observed between about 9 and 12 feet bgs. A maximum PID reading of 257.4 parts per million (ppm) was observed at about 11 feet bgs. RISB01 will continue to be advanced the following workday.
- AARCO used a hand auger to advance soil borings RISB15 and RISB16 to about 5 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. No impacts were observed.
- Impacted soil cuttings were containerized in sealed and labeled 55-gallon United Nations/Department of Transportation (UN/DOT)-approved drums, which were staged in the northwestern part of the site for future off-site disposal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB01_0-2
    - RISB01_10-12
    - RISB15_0-2
    - RISB16_0-2
- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_081425

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

CAMP Data Summary

Date: Thursday, August 14, 2025
Start: 7:11
End: 15:56 **UPWIND - UW**
Observer: Olivia O'Donnell **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.026	0.058
Minimum 15min Average	0.007	0.014
Maximum 15min Average	0.042	0.067
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.006	0.046
Maximum 1min Reading	0.111	0.089

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.2
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	3.2

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170890901	**CLIENT:**		**DATE:**	Friday, August 15, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 75-88 °F Wind: NE @ 3-7 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy,
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings, RISB14, RISB15, and RISB16. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
    - Soil boring RISB15 was advanced to about 37 feet below grade surface (bgs). No impacts were observed. Groundwater was observed at about 29.5 feet bgs.
    - Soil boring RISB16 was advanced to about 37 feet bgs. No impacts were observed. Groundwater was observed at about 29.5 feet bgs.
    - Soil boring RISB14 was readvanced to about 16 feet bgs to collect a soil sample from directly beneath petroleum-like impacts observed on August 13, 2025. A maximum PID reading of 4.8 parts per million (ppm) was observed at about 12.5 feet bgs.
- Upon completion of soil boring, the boreholes were backfilled with clean soil cuttings and sand.
- Impacted soil cuttings were containerized in sealed and labeled 55-gallon United Nations/Department of Transportation (UN/DOT)-approved drums, which were staged in the northwest part of the site for future off-site disposal.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including

hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.

  - RISB14_12-14
  - RISB15_9-11
  - RISB15_11-13
  - RISB16_9-11
  - RISB16_11-13

- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_081525

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Monday, August 18, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Mostly Cloudy, 66-77 °F Wind: NE @ 3-14 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings, RISB01, RISB02, and RISB06. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
  - Soil boring RISB01 was readvanced to about 20 feet below grade surface (bgs) to collect a soil sample from directly beneath petroleum-like impacts observed on August 14th, 2025. Petroleum-like odors were observed between about 8 and 12 feet bgs. A maximum PID reading of 201 parts per million (ppm) was observed at about 10.5 feet bgs.
  - Soil boring RISB02 was advanced to about 36 feet bgs. Petroleum like-odors were observed between 4 and 6 feet bgs. A maximum PID reading of 14 ppm was observed at about 4.5 feet bgs. Groundwater was observed at about 30 feet bgs.
  - Soil boring RISB06 was advanced to about 36 feet bgs. Evidence of petroleum impacts (i.e., odors, staining, PID readings) were not observed. Groundwater was observed at about 30 feet bgs.
- Upon completion of soil boring, the boreholes were backfilled with clean soil cuttings and sand.
- Impacted soil cuttings were containerized in sealed and labeled 55-gallon United Nations/Department of Transportation (UN/DOT)-approved drums, which were staged in the northwest part of the site for future off-site disposal.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB01_12-14
    - RISB02_0-2
    - RISB02_4-6
    - RISB02_8-10
    - RISB06_0-2
    - RISB06_8-10
    - RISB06_12-14
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_081825 (PFAS field blank), SOFB01_081825 (field blank), and TB01_081825 (trip blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

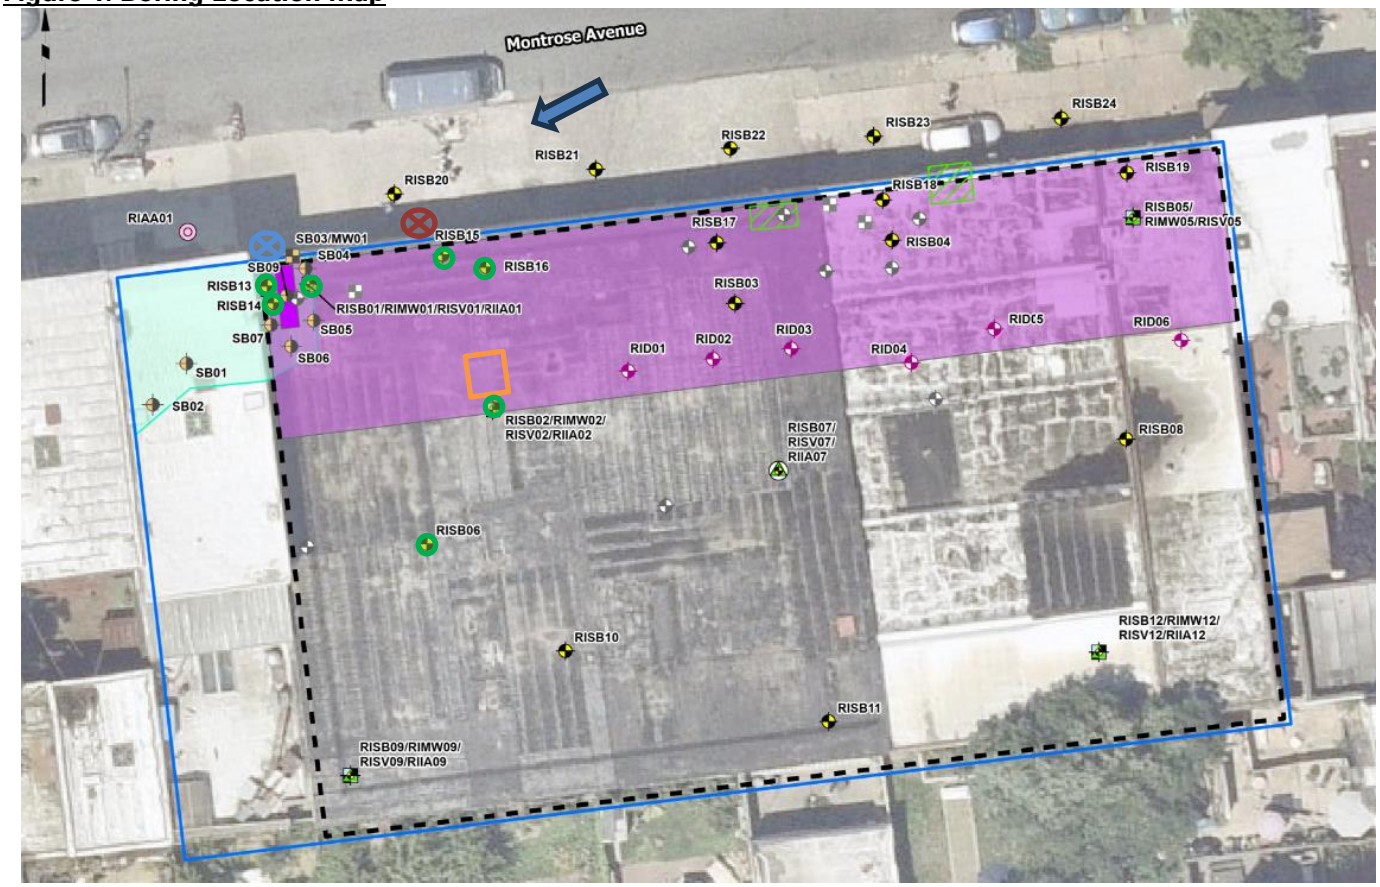
Figure 1: Boring Location Map



Legend

- Approximate Site Boundary
- AOC 1: Historic Site Operations
- AOC 2: Petroleum Storage and Related Impacts in Soil and Groundwater
- AOC 3: NYSDEC Spill No. 2407320
- Punctured UST - Spill No. 2407320
- Approximate Location of 2015 Phase II Suspect UST Anomalies
- Proposed Soil Boring Location
- Proposed Co-located Soil Boring, Monitoring Well, Sub-slab Vapor, and Indoor Air Sample
- Proposed Co-Located Soil Boring, Sub-Slab Vapor, and Indoor Air Locations
- Proposed Ambient Air Location
- 2015 Phase II Soil Boring Location
- 2015 Phase II Soil Boring/Temporary Monitoring Well Location
- 2025 Spill Investigation Soil Boring Location
- 2025 Spill Investigation Soil Boring and Groundwater Monitoring Well Location
- Proposed Delineation Soil Boring Locations
- Soil Boring Advanced and Sampled
- Soil Boring Advancement and Sampling in Progress
- Groundwater Monitoring Well Installed
- Groundwater Monitoring Well Installed and Sampled
- Upwind CAMP Station
- Downwind CAMP Station
- Wind Direction
- Drum Staging Area

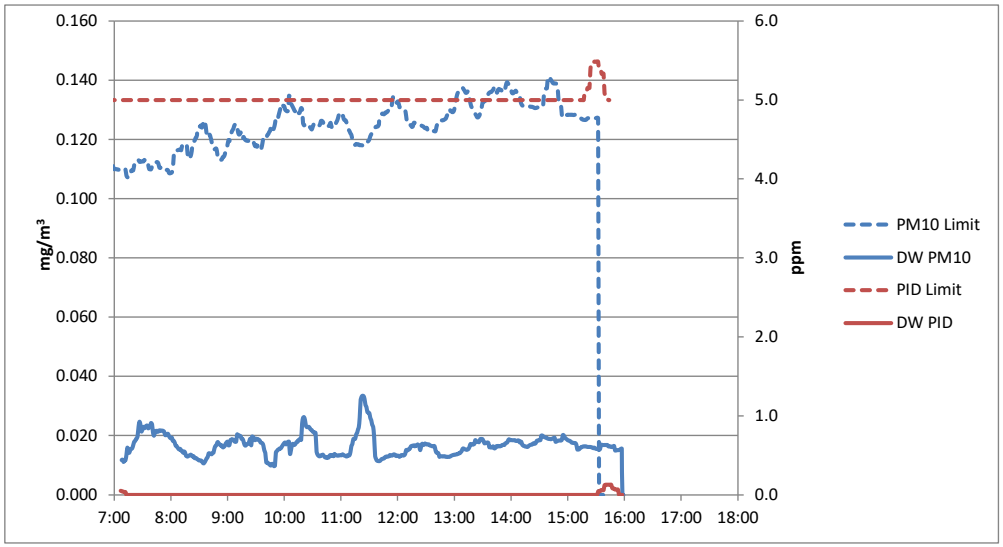
CAMP Data Summary

Date: Monday, August 18, 2025
Start: 6:52
End: 16:03 **UPWIND - UW**
Observer: Olivia O'Donnell **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.025	0.017
Minimum 15min Average	0.007	0.010
Maximum 15min Average	0.041	0.033
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.006	0.007
Maximum 1min Reading	0.111	0.103

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise



Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.5	0.1
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	3.6	0.9

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

Monday, August 18, 2025						
Number of Instances Where Downwind Particulates Exceeds Upwind Particulate + 150 =						0
Number of Comparable Data Points =						519
Start Time:						6:54
End Time:						15:57

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Tuesday, August 19, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Cloudy, 67-75 °F Wind: ENE @ 9-15 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Olivia O'Donnell
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings RISB09 and RISB10. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
  - Soil boring RISB09 was advanced to about 36 feet below grade surface (bgs). Evidence of petroleum impacts (i.e., odors, staining, PID readings) were not observed. Groundwater was observed at about 29 feet bgs.
  - Soil boring RISB10 was advanced to about 36 feet bgs. Evidence of petroleum impacts (i.e., odors, staining, PID readings) were not observed. Groundwater was observed at about 29.5 feet bgs.
- Upon completion of soil boring, the boreholes were backfilled with clean soil cuttings and sand.
- Langan used a hammer drill to install six temporary sub-slab vapor points (RISV01, RISV02, RISV05, RISV07, RISV09, and RISV12) directly beneath the building's concrete slab. Temporary monitoring points were constructed of polyethylene tubing and the point was sealed using hydrated bentonite to surface grade. Shroud tests will be performed prior to collection of sub-slab vapor samples to confirm adequate seal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.

    - RISB10_4-6
    - RISB10_6-8
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_081925 (PFAS field blank), SODUP01_081925 (duplicate), and a matrix spike/matrix spike duplicate (MS/MSD).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

CAMP Data Summary

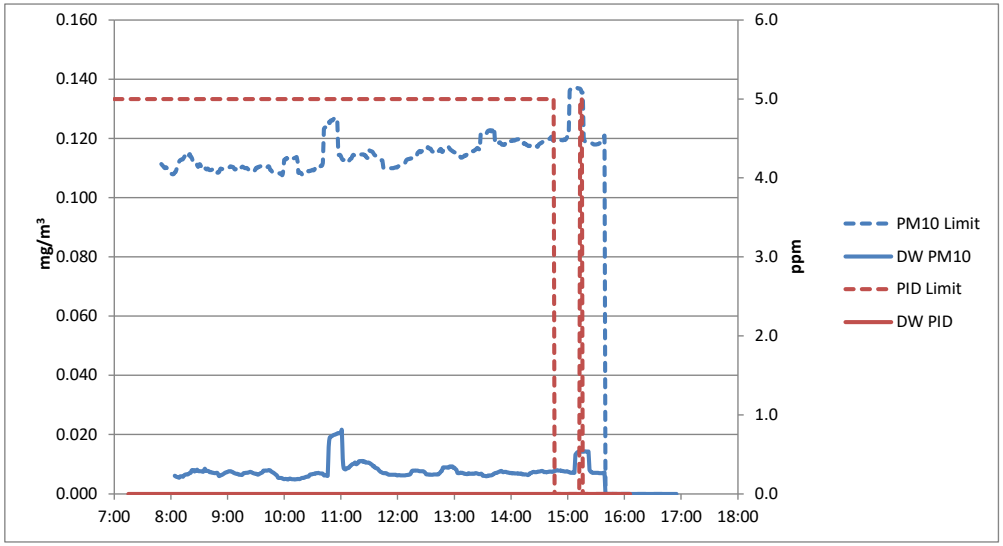
Date: Tuesday, August 19, 2025
Start: 7:00
End: 15:53 **UPWIND - UW**
Observer: Olivia O'Donnell **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.015	0.008
Minimum 15min Average	0.008	0.005
Maximum 15min Average	0.037	0.022
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.005	0.004
Maximum 1min Reading	0.246	0.152

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.0
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	0.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise



Tuesday, August 19, 2025						
Number of Instances Where Downwind Particulates Exceeds Upwind Particulate + 150 =						0
Number of Comparable Data Points =						456
Start Time:						7:50
End Time:						15:53

Number of Instances Where Downwind VOCs Exceeds Upwind VOCs + 5 = **0**

Number of Comparable Data Points = **458**

Start Time: **7:00**

End Time: **14:59**

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Wednesday, August 20, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Cloudy/Rain, 59-70 °F Wind: ENE @ 8-16 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Olivia O'Donnell, Lilah Willis
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RISB07 to about 36 feet below grade surface (bgs). Langan documented the work, logged the soil boring, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Evidence of petroleum impacts (i.e., odors, staining, PID readings) were not observed. Groundwater was observed at about 27 feet bgs. Upon completion of soil boring, the borehole was backfilled with clean soil cuttings and sand.
- Langan collected four co-located sub-slab vapor, four indoor air samples and one outdoor ambient air sample into 6-liter (L) Summa canisters with regulators calibrated for an 8-hour sampling period. Prior to and after sampling, shroud tests were performed prior to confirm adequate seal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
  - RISB07_0-1
  - RISB07_1-3
- Langan collected sub-slab vapor, indoor air and ambient air samples for laboratory analysis. The following samples were analyzed for TO-15 VOCs. Samples were relinquished to Pace Analytical under standard chain-of-custody protocol.
  - RISV01_082025, RIIA01_082025
  - RISV02_082025, RIIA02_082025
  - RISV05_082025, RIIA05_082025
  - RISV09_082025, RIIA09_082025
  - AA01_082025
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_082025 (PFAS field blank), SOFB02_082025 (field blank), TB02_082025 (trip blank) and RIAA01_082025 (ambient air).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Thursday, August 21, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Partly Cloudy, 63-71 °F Wind: NE @ 12-22 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings RISB03 and RISB11. Langan documented the work, logged the soil boring, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
    - Soil boring RISB03 was advanced to about 36 feet below grade surface (bgs). A maximum PID reading of 6.4 parts per million (ppm) was observed at about 29.5 feet bgs; however, evidence of petroleum or impacts (i.e., odors, staining) were not observed. Groundwater was observed at about 29.5 feet bgs.
    - Soil boring RISB11 was advanced to about 36 feet bgs. Evidence of petroleum impacts (i.e., odors, staining, PID readings) were not observed. Groundwater was observed at about 32 feet bgs.
- Upon completion of soil boring, the borehole was backfilled with clean soil cuttings and sand.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB03_0-2
    - RISB03_4-6
    - RISB03_6-8
    - RISB11_0-2
    - RISB11_2-4
    - RISB11_4-6
- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_082125 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

- AOC 3: NYSDEC Spill No. 2407320
- Punctured UST - Spill No. 2407320
- Approximate Location of 2015 Phase II Suspect UST Anomalies
- Proposed Soil Boring Location
- Proposed Co-located Soil Boring, Monitoring Well, Sub-slab Vapor, and Indoor Air Sample
- Proposed Co-Located Soil Boring, Sub-Slab Vapor, and Indoor Air Locations
- Proposed Ambient Air Location
- 2015 Phase II Soil Boring Location
- 2015 Phase II Soil Boring/Temporary Monitoring Well Location
- 2025 Spill Investigation Soil Boring Location
- 2025 Spill Investigation Soil Boring and Groundwater Monitoring Well Location
- Proposed Delineation Soil Boring Locations
- Soil Boring Advanced and Sampled
- Soil Boring Advancement and Sampling in Progress
- Groundwater Monitoring Well Installed
- Groundwater Monitoring Well Installed and Sampled
- Sub-Slab Vapor Point Installed
- Sub-Slab Vapor Point Installed and Sampled
- Upwind CAMP Station
- Downwind CAMP Station
- Wind Direction
- Drum Staging Area

CAMP Data Summary

Date: Thursday, August 21, 2025
Start: 7:20
End: 15:50
Observer: Olivia O'Donnell

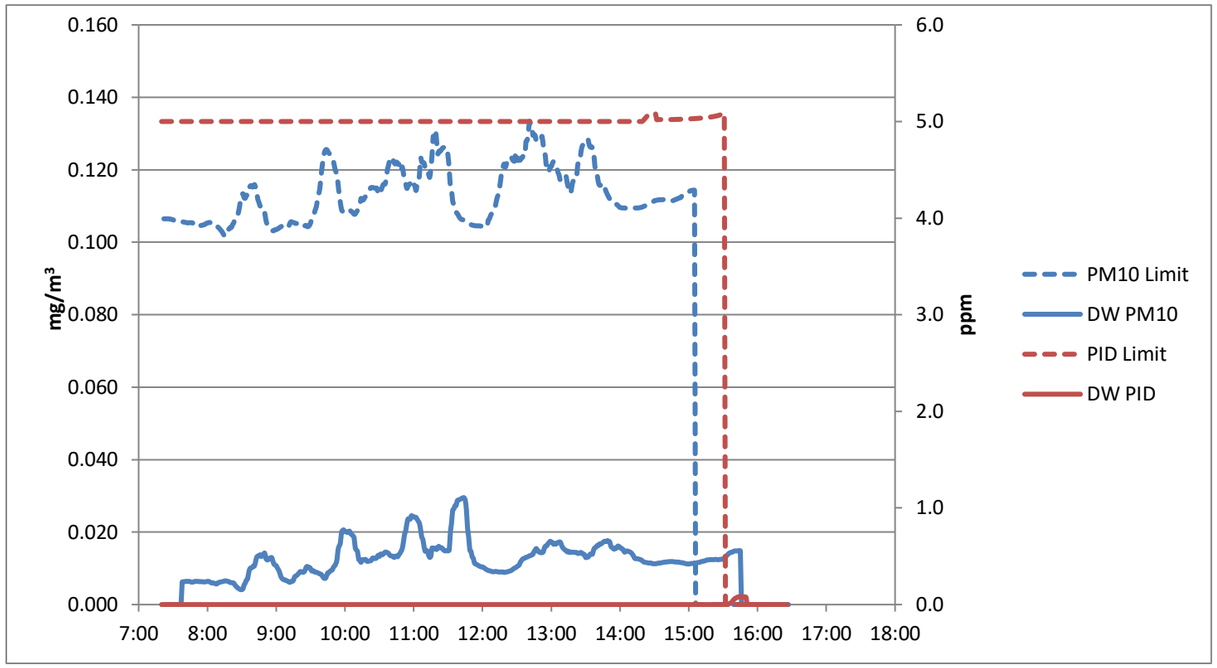
UPWIND - UW
DOWNWIND - DW

Particulate Monitoring		
	UW	**DW**
Daily Average	0.013	0.014
Minimum 15min Average	0.002	0.004
Maximum 15min Average	0.033	0.029
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.000	0.004
Maximum 1min Reading	0.082	0.087

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.1	0.1
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.2	0.2

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise



Thursday, August 21, 2025						
				Number of Instances Where Downwind Particulates Exceeds Upwind Particulate + 150 =		0
				Number of Comparable Data Points =		462
				Start Time:		7:22
				End Time:		12:58

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Friday, August 22, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Partly Cloudy, 65-82 °F Wind: NNE @ 0-8 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Lilah Willis

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Lilah Willis, Mat Frankel
AARCO Environmental Services Corp. (AARCO): Jose Garcia, Joe Contezaro
New York State Department of Environmental Conservation – Haala Al-Hadithy
New York State Department of Health – Kari Pollard

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used hand augers to advance soil boring RISB17 to about 5 feet below grade surface (bgs) and a Geoprobe® 7822DT drill rig to advance the boring to about 36 feet bgs. Langan documented the work, logged the soil boring, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). A maximum PID reading of 38 parts per million (ppm) was observed at about 29.5 feet bgs; however, evidence of petroleum or impacts (i.e., odors, staining) were not observed. Groundwater was observed at about 29 feet bgs.
- Prior to installation of permanent monitoring well RIMW01, AARCO used a Geoprobe® 7822DT drill rig to advance a boring in the monitoring well location to a depth of about 34 feet bgs. Permanent monitoring well installation will be completed the following workday.
- Upon completion of soil boring, the borehole was backfilled with clean soil cuttings and sand.
- Impacted soil cuttings were containerized in sealed and labeled 55-gallon United Nations/Department of Transportation (UN/DOT)-approved drums, which were staged in the northwestern part of the site for future off-site disposal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Lilah Willis **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB17_0-2
    - RISB17_9-11
    - RISB17_11-13
- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_082225 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Monday, August 25, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 73-86 °F Wind: W @ 5-13 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 15:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Lilah Willis

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Lilah Willis, Kiki Wallick
AARCO Environmental Services Corp. (AARCO): Mike Martino, Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- Prior to installation of permanent monitoring well RIMW09, AARCO used a Geoprobe® 7822DT drill rig to advance a boring in the monitoring well location to a depth of about 20.5 feet below grade surface (bgs). The boring will be further advanced and permanent monitoring wells installation will be completed later during the remedial investigation.
- AARCO used a Geoprobe® 7822DT drill rig to install one permanent monitoring well RIMW01 to a depth of about 34 feet bgs. The well was installed across the observed groundwater table and constructed with a 2-inch diameter polyvinyl chloride (PVC) 0.01-inch slot well screen and will be finished with a flush-mounted steel manhole cover. RIMW01 screen was installed from 24 to 34 feet bgs.

Sampling

- No samples were collected.

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

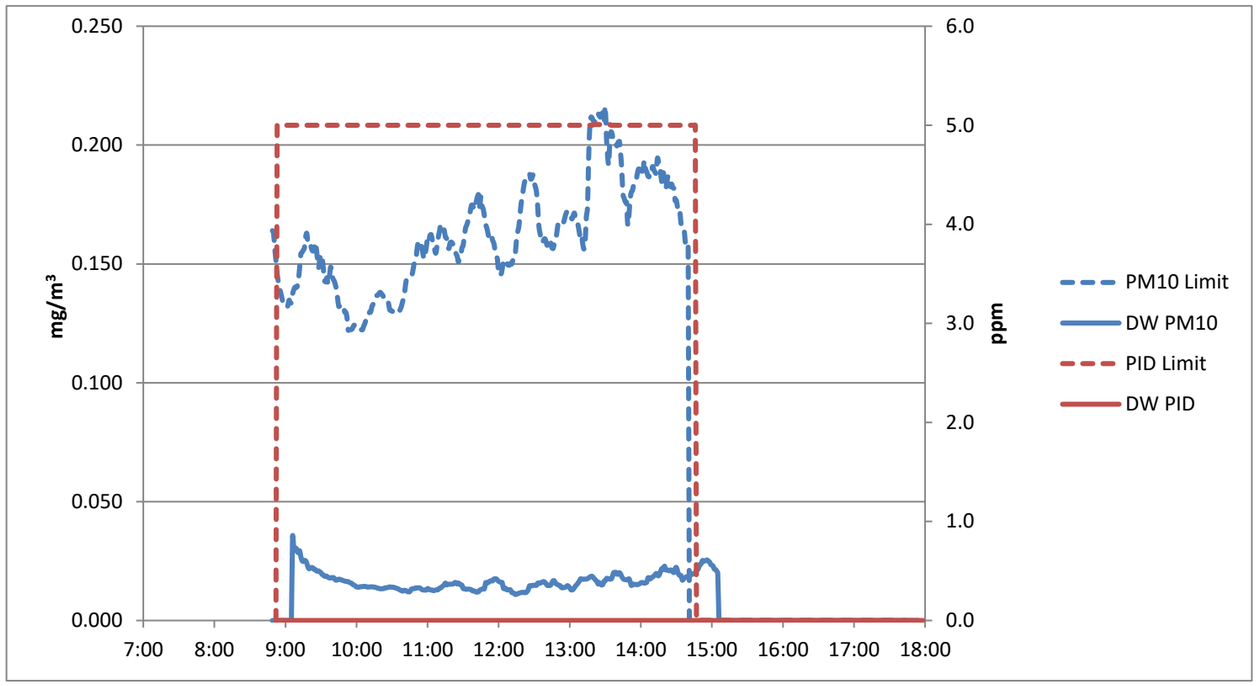
CAMP Data Summary

Date: Monday, August 25, 2025
Start: 8:49
End: 15:43
Observer: Lilah Willis

UPWIND - UW
DOWNWIND - DW

Particulate Monitoring		
	UW	**DW**
Daily Average	0.061	0.016
Minimum 15min Average	0.022	0.011
Maximum 15min Average	0.116	0.035
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.015	0.008
Maximum 1min Reading	0.368	0.050

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise



Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.0
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.1	0.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

Monday, August 25, 2025						
Number of Instances Where Downwind Particulates Exceeds Upwind Particulate + 150 =						0
Number of Comparable Data Points =						360

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Tuesday, August 26, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 65-80 °F Wind: NW @ 6-12 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 18:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Kiki Wallick

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Kiki Wallick
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used hand augers to advance soil borings RISB04 and RISB18 to about 5 feet below grade surface (bgs) and a Geoprobe® 7822DT drill rig to advance boring RISB18 to about 36 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
    - Soil boring RISB18 was advanced to about 36 feet bgs. Petroleum-like odors were observed from about 1 foot bgs to 16 feet bgs. A maximum PID reading of 1,226 parts per million (ppm) was observed at about 10 feet bgs. Groundwater was observed at about 28 feet bgs.
    - Soil boring RISB04 was advanced to about 5 feet bgs. No impacts were observed. The soil boring will continue to be advanced the following workday.
- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings RID02 and RID03 to delineate the petroleum-like impacts observed in the northwestern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID.
    - Soil boring RID02 was advanced to about 16 feet bgs. Petroleum-like odors were observed from 6 feet bgs to 12 feet bgs. A maximum PID reading of 258 ppm was observed at about 12 feet bgs.
    - Soil boring RID03 was advanced to about 16 feet bgs. Petroleum-like odors were observed from 5 feet grade to 12 feet bgs. A maximum PID reading of 205 ppm was observed at about 6 feet bgs.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory under standard chain-of-custody protocol.
    - RISB04_0-2
    - RISB18_0-2
    - RISB18_9-11
    - RISB18_24-26
- Soil samples collected from delineation borings were analyzed for Part 375 VOCs, only. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
    - RID02_8-10
    - RID02_13-15
    - RID03_8-10
    - RID03_12-14
- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_082625 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Wednesday, August 27, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 63-75 °F Wind: NW @ 8-17 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil borings RID01 and RID04 to delineate the petroleum-like impacts observed in the northwestern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
    - Soil boring RID01 was advanced to about 16 feet below grade surface (bgs). Petroleum-like odors were observed from 6 feet bgs to 8 feet bgs. A maximum PID reading of 9.7 parts per million (ppm) was observed at about 5.5 feet bgs.
    - Soil boring RID04 was advanced to about 16 feet bgs. Petroleum-like odors were observed from about 4 feet bgs to 8 feet bgs. A maximum PID reading of 20.2 ppm was observed at about 5.5 feet bgs.
- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RISB04 to about 29 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. Petroleum-like odors and staining were observed from about 6 to 21 feet bgs. A maximum PID of 3,652 ppm was observed at about 11 feet bgs. Langan will return to this boring location at a later date during the RI advance RISB04 to its termination depth.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory under standard chain-of-custody protocol.
    - RISB04_11-13
- Soil samples collected from delineation borings were analyzed for Part 375 VOCs, only. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
    - RID01_4-6
    - RID04_4-6
- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_082725 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Thursday, August 28, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 66-75 °F Wind: SW @ 7-16 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Carli Piretra
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used hand augers to advance soil borings RISB05 and RISB23 to about 5 feet below grade surface (bgs). Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). No evidence of impacts was observed.
- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RID05 to about 16 feet bgs to delineate the petroleum-like impacts observed in the northwestern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. No evidence of impacts was observed.
- Langan collected two co-located sub-slab vapor, two indoor air samples, and one outdoor ambient air sample into 6-liter (L) Summa canisters with regulators calibrated for an 8-hour sampling period. Prior to and after sampling, shroud tests were performed prior to confirm adequate seal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory under standard chain-of-custody protocol.
    - RISB05_0-2
- Soil samples collected from delineation borings were analyzed for Part 375 VOCs, only. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
    - RID05_8-10
- Langan collected sub-slab vapor, indoor air, and ambient air samples for laboratory analysis. The following samples were analyzed for TO-15 VOCs. Samples will be relinquished to Pace Analytical under standard chain-of-custody protocol on the following day of the remedial investigation.
    - RISV07_082825, RIIA07_082825
    - RISV12_082825, RIIA12_082825
- The following quality assurance/quality control (QA/QC) sample was collected: SOFB_PFAS_082825 (PFAS field blank) and RIAA02_082825 (ambient air).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Friday, August 29, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 62-78 °F Wind: SW @ 7-16 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 14:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Carli Piretra
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RISB23 to about 45 feet below grade surface (bgs) to delineate the petroleum-like impacts observed in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors were observed from about 9 to 16 feet below grade surface (bgs) and from 34 to 39 feet bgs. A maximum PID of 2,495 parts per million (ppm) was observed at about 10 feet bgs. Groundwater was observed at about 29.5 feet bgs.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC) and semivolatile organic compounds (SVOC). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory under standard chain-of-custody protocol.
  - RISB23_9-11
  - RISB23_35-36
  - RISB23_41-43
- Langan collected sub-slab vapor, indoor air, and ambient air samples for laboratory analysis. The following samples were analyzed for TO-15 VOCs. Samples were relinquished to Pace Analytical under standard chain-of-custody protocol on the following day of the remedial investigation.
  - RISV07_082825, RIIA07_082825
  - RISV12_082825, RIIA12_082825
- The following quality assurance/quality control (QA/QC) sample was collected: RIAA02_082825 (ambient air).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

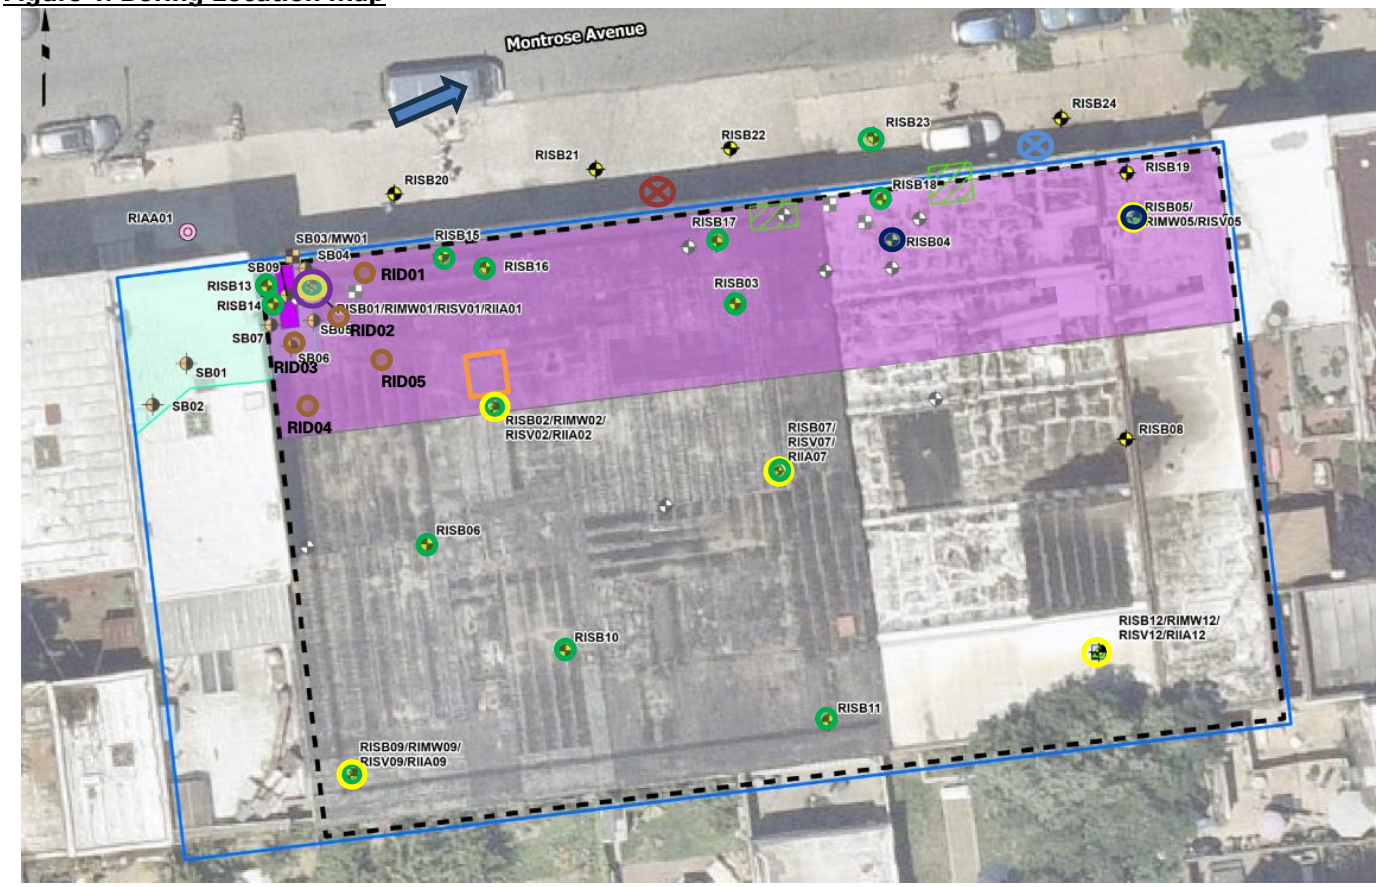
Figure 1: Boring Location Map



Legend

- Approximate Site Boundary
- AOC 1: Historic Site Operations
- AOC 2: Petroleum Storage and Related Impacts in Soil and Groundwater
- AOC 3: NYSDEC Spill No. 2407320
- Punctured UST - Spill No. 2407320
- Approximate Location of 2015 Phase II Suspect UST Anomalies
- Proposed Soil Boring Location
- Proposed Co-located Soil Boring, Monitoring Well, Sub-slab Vapor, and Indoor Air Sample
- Proposed Co-Located Soil Boring, Sub-Slab Vapor, and Indoor Air Locations
- Proposed Ambient Air Location
- 2015 Phase II Soil Boring Location
- 2015 Phase II Soil Boring/Temporary Monitoring Well Location
- 2025 Spill Investigation Soil Boring Location
- 2025 Spill Investigation Soil Boring and Groundwater Monitoring Well Location
- Proposed Delineation Soil Boring Locations
- Soil Boring Advanced and Sampled
- Soil Boring Advancement and Sampling in Progress
- Groundwater Monitoring Well Installed
- Groundwater Monitoring Well Installed and Sampled
- Sub-Slab Vapor Point Installed
- Sub-Slab Vapor Point Installed and Sampled
- Delineation Soil Boring Advanced and Sampled
- Upwind CAMP Station
- Downwind CAMP Station
- Wind Direction
- Drum Staging Area

CAMP Data Summary

Date: Friday, August 29, 2025
Start: 7:02
End: 13:36
Observer: Padmanabahn Krishnaswamy

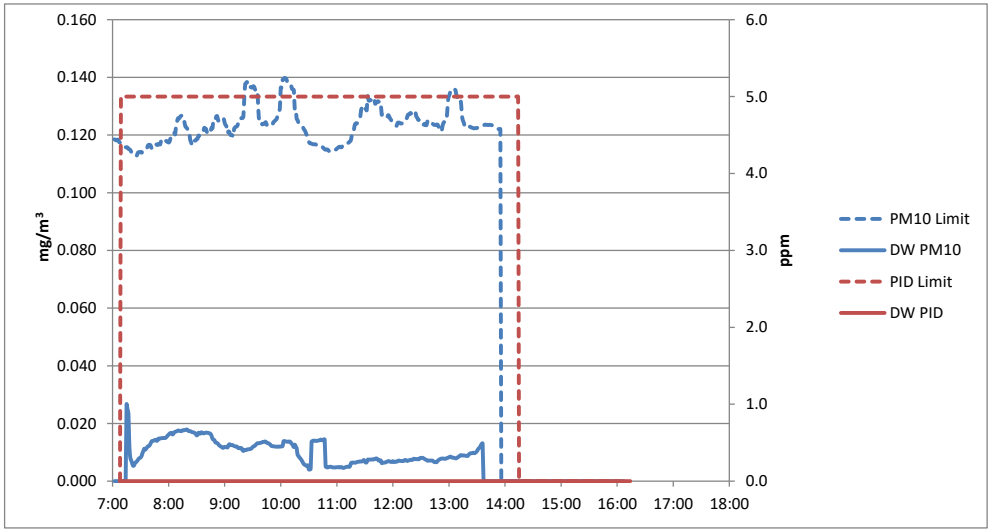
UPWIND - UW
DOWNWIND - DW

Particulate Monitoring		
	UW	**DW**
Daily Average	0.022	0.009
Minimum 15min Average	0.013	0.004
Maximum 15min Average	0.597	0.027
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.006	0.003
Maximum 1min Reading	0.134	0.147

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.0
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	0.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise



Friday, August 29, 2025						
Number of Instances Where Downwind Particulates Exceeds Upwind Particulate + 150 =						0
Number of Comparable Data Points =						381
Start Time:						7:02
End Time:						12:38

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Tuesday, September 2, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 62-78 °F Wind: SW @ 7-16 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 14:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used hand augers to advance soil boring RISB25 to about 5 feet below grade surface (bgs) and a Geoprobe® 7822DT drill rig to advance the soil boring to about 36 feet bgs to delineate the petroleum-like impacts observed in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors were observed from about 11 to 14 feet bgs and from 33 to 36 feet bgs. A maximum PID of 1,534 parts per million (ppm) was observed at about 13.5 feet bgs. Groundwater was observed at about 25 feet bgs. The soil boring will be further advanced the following workday.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC) and semivolatile organic compounds (SVOC). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory under standard chain-of-custody protocol.
  - RISB25_13-15
  - RISB25_17-19

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Wednesday, September 3, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 64-77 °F Wind: NE @ 3-9 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Sonic Geoprobe 8140LC
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro, Daybi Pacheco, Jose Galarza, Angel Midrano, Tim Terlaga, Lawrence Miller

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RISB25 from about 33 feet below grade surface to about 40 feet bgs to delineate the petroleum-like impacts observed in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). A maximum PID of 708.3 parts per million (ppm) was observed at about 36 feet bgs.
- AARCO used hand augers to advance soil boring RISB08 to about 5 feet bgs and a Geoprobe® 7822DT drill rig to advance the soil boring to about 36 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. No impacts were observed.
- AARCO used a Geoprobe® 8140LC sonic drill rig to install two permanent monitoring wells, RIMW02 and RIMW09, to depths of about 35 feet and 34 feet bgs, respectively. The wells were installed across the observed groundwater table and constructed with 2-inch diameter polyvinyl chloride (PVC) 0.01-inch slot well screens and will be finished with a flush-mounted steel manhole covers. The screen was installed from 25 to 35 feet bgs in RIMW02 and the screen was installed from 24 to 34 feet bgs in RIMW09.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB08_0-2
    - RISB08_2-4
    - RISB08_5-7
- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/TCL VOCs and SVOCs. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
    - RISB25_34-36
    - RISB25_37-39
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_090325 (PFAS field blank), SODUP03_090325 (duplicate), SODUP04_090325 (duplicate), two matrix spike/matrix spike duplicates (MS/MSD) and SOFB03_090325 (field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

CAMP Data Summary

Date: Thursday, September 4, 2025
Start: 6:57
End: 16:20
Observer: Padmanabahn Krishnaswamy

UPWIND - UW
DOWNWIND - DW

Particulate Monitoring		
	UW	**DW**
Daily Average	0.022	0.014
Minimum 15min Average	0.012	0.009
Maximum 15min Average	0.043	0.022
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.009	0.008
Maximum 1min Reading	0.140	0.142

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.0
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	0.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Thursday, September 4, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 67-77 °F Wind: SSE @ 6-18 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 18:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Sonic Geoprobe 8140LC
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro, Daybi Pacheco, Jose Galarza, Angel Midrano, Tim Terlaga, Lawrence Miller

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used hand augers to advance soil borings RISB22 and RISB24 to about 5 feet below grade surface (bgs) and a Geoprobe® 8140LC sonic drill rig to advance the soil borings to about 50 feet and 40 feet bgs, respectively, to delineate the petroleum-like impacts observed in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
    - RISB22 was advanced to about 50 feet bgs. Petroleum-like odors were observed from 13 to 17 feet bgs and from 35 to 50 feet bgs. A maximum PID of 2,134 parts per million (ppm) was observed at about 16 feet bgs. Groundwater was observed at about 30 feet bgs.
    - RISB24 was advanced to about 40 feet bgs. No impacts were observed. Groundwater was observed at about 30 feet bgs.
- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RISB12 to about 36 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. Petroleum-like odors and staining were observed from 4 to 6 feet bgs. A maximum PID of 134.5 ppm was observed at about 5.5 feet bgs. Groundwater was observed at about 28 feet bgs.
- AARCO used a Geoprobe® 7822DT drill rig to advance four soil borings, RID07 through RID10, to about 12 feet bgs to delineate the petroleum-like impacts observed in soil boring RISB12 in the southeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID.
    - RID07 was advanced to 12 feet bgs. Petroleum-like staining was observed from about 7 to 7.5 feet bgs and petroleum-like odors were observed from 0 to 12 feet bgs. A maximum PID of 298.5 ppm was observed at about 7 feet bgs.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

- RID08 was advanced to 12 feet bgs. Petroleum-like odors were observed from 0 to 4 feet bgs. A maximum PID of 5.5 ppm was observed at about 1 feet bgs.
- RID09 was advanced to 12 feet bgs. Petroleum-like odors were observed from 4 to 12 feet bgs. A maximum PID of 140.5 ppm was observed at about 2 feet bgs.
- RID10 was advanced to 12 feet bgs. Petroleum-like staining was observed from 5 to 7 feet bgs and petroleum-like odors were observed from 4 to 8 feet bgs. A maximum PID of 148.6 ppm was observed at about 6 feet bgs.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB12_0-2
    - RISB12_4-6
    - RISB12_8-10
- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/TCL VOCs and SVOCs. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
    - RISB22_15-17
    - RISB22_20-22
    - RISB22_45-47
    - RID07_6-8
    - RID07_10-12
    - RID08_1-3
    - RID08_4-6
    - RID09_0-2
    - RID09_8-10
    - RID10_5-7
    - RID10_8-10
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_090425 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Friday, September 5, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 67-77 °F Wind: SW @ 6-13 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 18:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Sonic Geoprobe 8140LC
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Carli Piretra
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro, Jose Galarza, Angel Midrano,

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12). Observed activities were as follows:

Site Activities

- AARCO used hand augers to advance soil borings RISB20 and RISB21 to about 5 feet below grade surface (bgs) and a Geoprobe® 8140LC sonic drill rig to advance the soil borings to about 20 feet and 40 feet bgs, respectively, to delineate the petroleum-like impacts observed in the northwestern and northeastern parts of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). No impacts were observed therefore soil samples were not collected from these two soil boring locations.
- AARCO used a Geoprobe® 7822DT drill rig to readvance soil boring RISB04 from about 21 feet bgs to about 45 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. Petroleum-like odors were observed from 21 feet to 45 feet bgs. A maximum PID of 4,723 parts per million (ppm) was observed at about 27.5 feet bgs. Groundwater was observed at about 27 feet bgs.
- AARCO used a submersible pump to develop monitoring well RIMW02 and RIMW09 until the purged groundwater was clear. Evidence of impacts were not observed. Purged groundwater was containerized into one United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drum. The sealed and labeled drum was staged in the central part of the site.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB04_21-23
    - RISB04_26-28
    - RISB04_41-43
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_090525 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

CAMP Data Summary

Date: Friday, September 5th 2025
Start: 7:30
End: 15:03 **UPWIND - UW**
Observer: Carli Piretra **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.057	0.005
Minimum 15min Average	0.030	0.004
Maximum 15min Average	0.105	0.036
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.004	0.000
Maximum 1min Reading	0.302	0.030

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.1	0.2
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	1.6	3.7

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Monday, September 8, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 60-72 °F Wind: NE @ 6-10 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Mike Martino

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used hand augers to advance soil boring RISB19 to about 5 feet below grade surface (bgs) and a Geoprobe® 420M Limited Access drill rig to advance RISB05 and RISB19 to about 11 feet bgs. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). No impacts were observed.
- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RID11 to about 16 feet bgs to delineate the petroleum-like impacts observed in the southeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. Petroleum-like odors were observed from 0 feet to 8 feet bgs. A maximum PID of 304.9 parts per million (ppm) was observed at about 3 feet bgs.
- AARCO used a Geoprobe® 7822DT drill rig to install one permanent monitoring well, RIMW12, to a depth of about 34 feet bgs. The well was installed across the observed groundwater table and constructed with a 1-inch diameter polyvinyl chloride (PVC) 0.01-inch slot well screen and will be finished with a flush-mounted steel manhole covers. The screen was installed from 24 to 34 feet bgs.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC), semivolatile organic compounds (SVOC), polychlorinated biphenyls (PCB), pesticides, herbicides, Part 375/Target Analyte List (TAL) metals (including hexavalent and trivalent chromium), cyanide, 1,4-dioxane, and per- and polyfluoroalkyl substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.
    - RISB19_0-2
- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/TCL VOCs and SVOCs. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
    - RID11_2-4
    - RID11_10-12
- The following quality assurance/quality control (QA/QC) samples were collected: SOFB_PFAS_090825 (PFAS field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Tuesday, September 9, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 61-72 °F Wind: NE @ 8-17 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Mike Martino

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used hand augers to advance soil boring RID19 to about 5 feet below grade surface (bgs) and a Geoprobe® 7822DT drill rig to advance the boring to about 49 feet bgs to delineate the petroleum-like impacts observed in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors were observed from 4 feet to 6 feet bgs and from 37 feet to 44 feet bgs. A maximum PID of 1,472 parts per million (ppm) was observed at about 38 feet bgs.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/TCL VOCs and SVOCs. Samples were relinquished to Pace Analytical, a NYSDOH ELAP-certified laboratory under standard chain-of-custody protocol.
  - RID19_5-7
  - RID19_9-11
  - RID19_37-39
  - RID19_45-47

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Wednesday, September 10, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Rainy, 62-76 °F Wind: NE @ 6-13 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Geoprobe 420M Limited Access Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance four soil borings, RID12 through RID15, to delineate the petroleum-like impacts observed in the southeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID).
  - RID12 was advanced to 20 feet below grade surface (bgs). Petroleum-like odors were observed from about 0 to 4 feet bgs. A maximum PID of 18.2 parts per million (ppm) was observed at about 0.5 feet bgs.
  - RID13 was advanced to 12 feet bgs. No impacts were observed.
  - RID14 was advanced to 20 feet bgs. Petroleum-like odors were observed from 0 to 14 feet bgs. A maximum PID of 273.5 ppm was observed at about 7 feet bgs.
  - RID15 was advanced to 20 feet bgs. No impacts were observed.

.

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC) and semivolatile organic compounds (SVOC). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) -certified laboratory under standard chain-of-custody protocol.
  - RID12_0-2
  - RID12_8-10
  - RID13_4-6
  - RID14_8-10
  - RID14_16-18
  - RID15_4-6
- The following quality assurance/quality control (QA/QC) samples were collected: SODUP05_091025 (duplicate), matrix spike/matrix spike duplicates (MS/MSD), TB04_091025 (trip blank), and SOFB04_091025 (field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

Number of Instances Where Downwind VOCs Exceeds Upwind VOCs + 5 =						0
Number of Comparable Data Points =						494
Start Time:						8:36
End Time:						17:01
PID DATA						
Upwind			Downwind			Exceeds VOCs Alarm Limits

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Friday, September 12, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 66-78 °F Wind: NE @ 5-14 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 15:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to install two permanent monitoring wells, RIMW24 and RIMW25, on the Montrose Avenue sidewalk to depths of about 34 feet and 33 feet below grade surface (bgs), respectively. The wells were installed across the observed groundwater table and constructed with 2-inch diameter polyvinyl chloride (PVC) 0.01-inch slot well screens and were finished with a flush-mounted steel manhole covers. The screen was installed from 24 to 34 feet bgs in RIMW24 and the screen was installed from 23 to 33 feet bgs in RIMW25.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- No samples were collected.

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

CAMP Data Summary

Date: Friday, September 12, 2025
Start: 7:51
End: 14:40 **UPWIND - UW**
Observer: Pad Krishnaswamy **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.020	0.021
Minimum 15min Average	0.013	0.016
Maximum 15min Average	0.034	0.066
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.012	0.015
Maximum 1min Reading	0.090	0.399

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.0
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	0.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Monday, September 15, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 69-79 °F Wind: NE @ 8-14 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance one soil boring, RID17, to about 52 feet below grade surface (bgs), to delineate the petroleum-related impacts in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors were observed from about 4 to 8 feet bgs and 37 to 48 feet bgs. A maximum PID of 1,728 parts per million (ppm) was observed at about 39 feet bgs.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC) and semivolatile organic compounds (SVOC). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory under standard chain-of-custody protocol.
  - RID17_4-6
  - RID17_8-10
  - RID17_38-39
  - RID17_48-50
- The following quality assurance/quality control (QA/QC) samples were collected: SODUP06_091525 (duplicate), SOFB05_091525 (field blank), TB05_091525 (trip blank), and a matrix spike/matrix spike duplicate (MS/MSD) sample (RID17_48-50).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Tuesday, September 16, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 66-72 °F Wind: NE @ 9-18 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to install one permanent monitoring well, RIMW17, in the northeastern part of the site to a depth of about 34 feet below grade surface (bgs). The well was installed across the observed groundwater table and constructed with 2-inch diameter polyvinyl chloride (PVC) 0.01-inch slot well screens and were finished with a flush-mounted steel manhole covers. The screen was installed from 24 to 34 feet bgs.

Sampling

- No samples were collected.

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

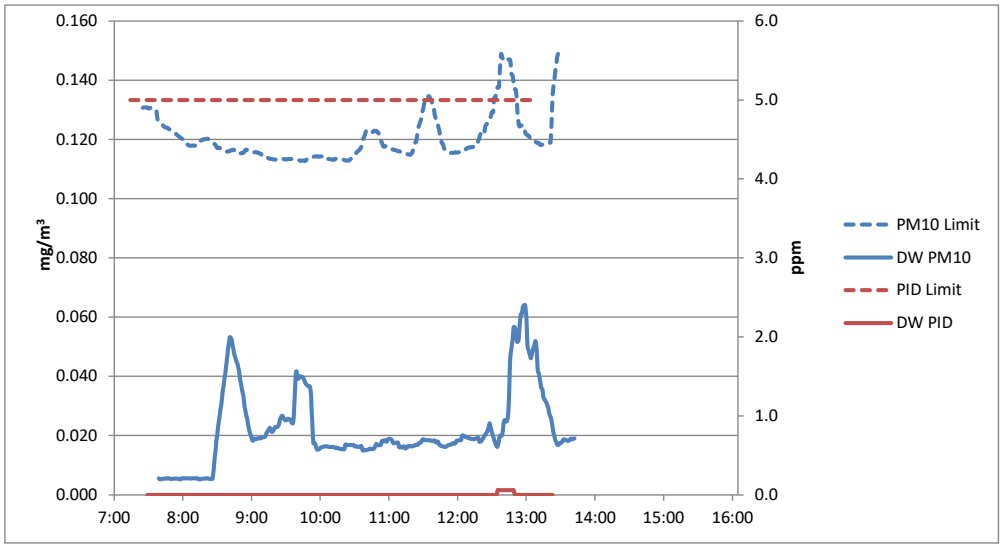
CAMP Data Summary

Date: Tuesday, September 16, 2025
Start: 7:14
End: 13:42 **UPWIND - UW**
Observer: Pad Krishnaswamy **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.021	0.023
Minimum 15min Average	0.013	0.005
Maximum 15min Average	0.049	0.064
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.011	0.000
Maximum 1min Reading	0.183	0.168

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise



Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.1
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	0.9

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Wednesday, September 17, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 64-69 °F Wind: NE @ 13-21 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to install two permanent monitoring wells, RIMW04 and RIMW21, in the northeastern part of the site and in the Montrose Avenue sidewalk, respectively. The monitoring wells were advanced to depths of about 33 feet below grade surface (bgs) and about 35 feet bgs, respectively. The wells were installed across the observed groundwater table and constructed with 2-inch diameter polyvinyl chloride (PVC) 0.01-inch slot well screens and were finished with a flush-mounted steel manhole covers. The screen was installed from 23 to 33 feet bgs in RIMW04 and the screen was installed from 25 to 35 feet bgs in RIMW21.

- AARCO used hand augers to advance soil boring RID06 to about 5 feet bgs on the Montrose Avenue sidewalk to delineate the petroleum-like impacts observed in the northwestern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). No impacts were observed.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- No samples were collected.

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Thursday, September 18, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 65-88 °F Wind: NW @ 3-10 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 16:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance two soil borings, RID06 and RID16, to delineate petroleum-related impacts observed in the northeastern part of the site. Langan documented the work, logged the soil borings, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID.
  - RID06 was advanced to about 16 feet below grade surface (bgs). Evidence of impacts were not observed.
  - RID16 was advanced to about 49 feet bgs. Petroleum-like odors were observed from about 30 to 45 feet bgs. A maximum PID of 2,159 parts per million (ppm) was observed at about 38 feet bgs.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Padmanabhan Krishnaswamy **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) volatile organic compounds (VOC) and semivolatile organic compounds (SVOC). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) -certified laboratory under standard chain-of-custody protocol.
  - RID06_9-11
  - RID16_37-39
  - RID16_46-48
- The following quality assurance/quality control (QA/QC) samples were collected: SODUP06_091825 (duplicate), matrix spike/matrix spike duplicates (MS/MSD), TB06_091825 (trip blank), and SOFB06_091825 (field blank).

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. PM10 and VOC concentrations did not exceed the action levels established in the site CAMP. Fugitive dust or odors associated with intrusive activities were not observed.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

CAMP Data Summary

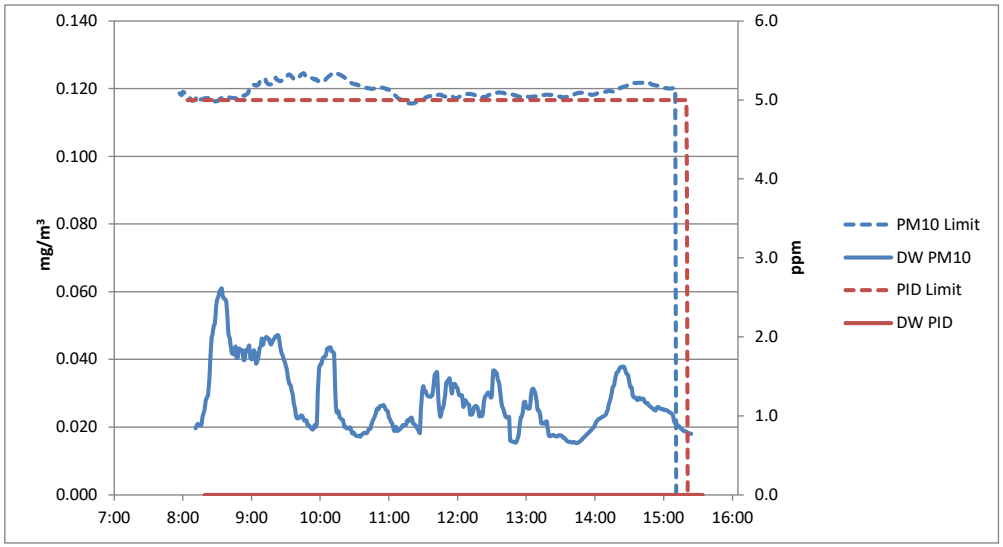
Date: Thursday, September 18, 2025
Start: 7:57
End: 15:34 **UPWIND - UW**
Observer: Pad Krishnaswamy **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.019	0.025
Minimum 15min Average	0.016	0.015
Maximum 15min Average	0.025	0.061
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.014	0.012
Maximum 1min Reading	0.038	0.175

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise

Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.0
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	0.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise



Thursday, September 18, 2025

Number of Instances Where Downwind Particulates Exceeds Upwind Particulate + 150 = 0

Number of Comparable Data Points = 434

Start Time: 7:57

End Time: 15:24

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**	Montrose Meserole Owner LLC	**DATE:**	Friday, September 19, 2025
PROJECT:	172 Montrose Avenue			**WEATHER:**	Sunny, 65-84 °F Wind: NE @ 2-9 mph
LOCATION:	Brooklyn, New York			**TIME:**	6:30 – 17:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Padmanabhan Krishnaswamy, Lilah Willis

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor

PRESENT AT SITE:
Environmental Staff (Langan): Padmanabhan Krishnaswamy, Lilah Willis
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RID19 to about 53 feet below grade surface (bgs) to delineate the petroleum-like impacts observed in the northeastern part of the site. Langan documented the work, logged the soil boring, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors were observed from 29 feet bgs to 49 feet bgs. A maximum PID reading of 1,660 parts per million (ppm) was observed at about 35 feet bgs.
- AARCO placed a permanent manhole cover on previously installed monitoring well, RIMW12, in the southeastern part of site.
- AARCO developed previously installed permanent monitoring wells, RIMW4, RIMW24, and RIMW25 using a submersible whale pump. Purged groundwater was containerized in an appropriately labeled, 55-gallon drum for future off-site disposal.

Sampling

- No samples were collected.

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. VOC concentrations did not exceed the action levels established in the site CAMP. Due to an equipment error with the downwind DustTrak, particulate measurements were not recorded; however, Langan did not observe exceedances of the action levels in real-time, and fugitive dust or odors associated with intrusive activities migrating off-site. A new DustTrak until was delivered to the site for the following work day.

Anticipated Activities

- AARCO will continue to advance soil borings for the remedial investigation.

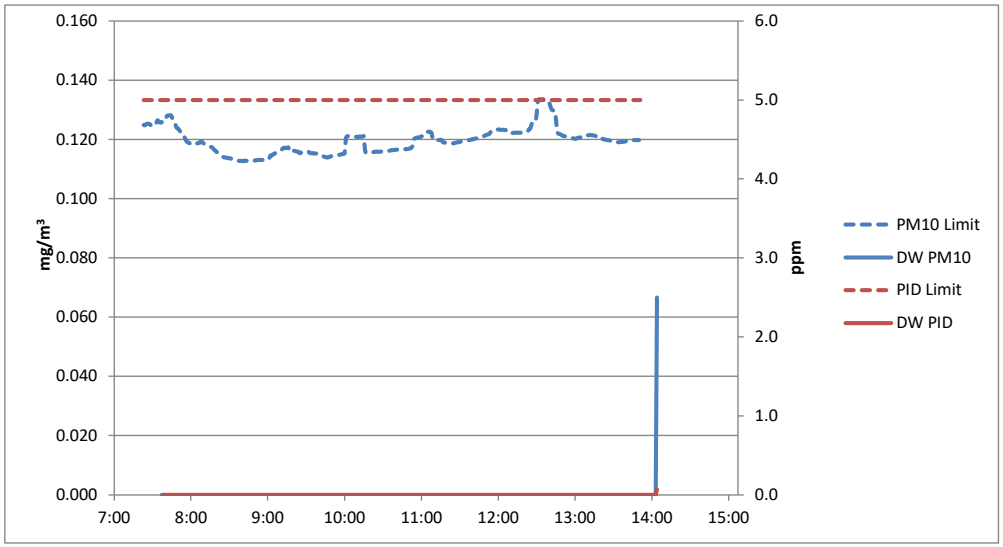
CAMP Data Summary

Date: Friday, September 19, 2025
####### Start 7:23
End: 14:04 **UPWIND - UW**
Observer: Pad Krishnaswamy **DOWNWIND - DW**

Particulate Monitoring		
	UW	**DW**
Daily Average	0.020	0.003
Minimum 15min Average	0.013	0.000
Maximum 15min Average	0.308	0.067
High Intervals "exceedances" (15min > 1.5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.012	0.000
Maximum 1min Reading	0.090	1.000

NA - Not applicable, upwind unit used for background concentrations
All reported units are mg/m^3 or milligrams per cubic meter unless specified otherwise



Organic Vapor Monitoring		
	UW	**DW**
Daily Average	0.0	0.0
Minimum 15min Average	0.0	0.0
Maximum 15min Average	0.0	0.1
High Intervals "exceedances" (15min > 5 + Upwind level)	NA	0.0
Minimum 1min Reading	0.0	0.0
Maximum 1min Reading	0.0	1.0

NA - Not applicable, upwind unit used for background concentrations
All reported units are ppm or parts per million unless specified otherwise

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Monday, September 22, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Sunny, 54-73 °F Wind: N @ 1-7 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 14:00
BCP SITE NUMBER:	C224417			**MONITOR:**	Olivia Miller

EQUIPMENT:
Geoprobe 7822DT Drill Rig
Hand Auger
(3) Photoionization Detector (PID)
(2) DustTrak II
(1) Handheld MultiRAE Multi-Gas Monitor
(1) Submersible Whale pump
(1) Check Valve

PRESENT AT SITE:
Environmental Staff (Langan): Olivia Miller
AARCO Environmental Services Corp. (AARCO): Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RID02 on the northwestern part of the site to about 15 feet below grade surface (bgs) to delineate observed petroleum-like impacts. Langan documented the work, logged the soil boring, and screened the recovered soil/fill for odors, staining, and organic vapors using a photoionization detector (PID). Petroleum-like odors were observed from 13 feet bgs to 14 feet bgs. A maximum PID reading of 47.1 parts per million (ppm) was observed at about 13.5 feet bgs.
- AARCO used a Geoprobe® 7822DT drill rig to advance soil boring RID03 on the northeastern part of the site to about 14 feet bgs to delineate observed petroleum-like impacts. Langan documented the work, logged the soil boring, and screened the recovered soil/fill for odors, staining, and organic vapors using a PID. No impacts were observed.
- AARCO developed previously installed permanent groundwater monitoring wells, RIMW01, RIMW12, RIMW17, and RIMW21, using a submersible whale pump or check-valve. Purged groundwater was containerized in an appropriately labeled, 55-gallon drum for future off-site disposal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Olivia Miller **LANGAN**

Sampling

- Langan collected soil samples for laboratory analysis. The following samples were analyzed for Part 375/Target Compound List (TCL) semivolatile organic compounds (SVOC). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) -certified laboratory under standard chain-of-custody protocol.
  - RID02_13-15
  - RID03_12-14

Community Air Monitoring Plan (CAMP) Activities

- Langan set up CAMP stations at the upwind and downwind site perimeters to monitor VOCs and particulate matter less than 10 micrometers (µm) in diameter (PM10) during intrusive activity. VOC concentrations did not exceed the action levels established in the site CAMP. Due to an equipment error with the downwind DustTrak, particulate measurements were not recorded; however, Langan did not observe exceedances of the action levels in real-time, and fugitive dust or odors associated with intrusive activities migrating off-site. A new DustTrak until was delivered to the site for the following work day.

Anticipated Activities

- AARCO will demobilize from the site.

DAILY OBSERVATION REPORT

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Tuesday, September 23, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Cloudy, 64-82 °F Wind: SW @ 5-15 mph
LOCATION:	Brooklyn, New York			**TIME:**	7:00 – 9:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Kiki Wallick

EQUIPMENT: None	**PRESENT AT SITE:** **Environmental Staff (Langan):** Kiki Wallick **AARCO Environmental Services Corp. (AARCO)**: Jose Garcia Sr., Joe Contezaro

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- AARCO staged and sealed the 55-gallon drums in the northwestern part of the site for future off-site disposal.
- AARCO demobilized from the site.

Sampling

- Langan did not collect samples today.

Community Air Monitoring Plan (CAMP) Activities

- Langan did not set up CAMP stations due to lack of ground-intrusive activities.

Anticipated Activities

- Langan will collect groundwater samples from the installed permanent monitoring wells.

LANGAN

PROJECT No.:	170824801	**CLIENT:**		**DATE:**	Wednesday, October 1, 2025
PROJECT:	172 Montrose Avenue		Montrose Meserole Owner LLC	**WEATHER:**	Cloudy, 57 - 69 °F Wind: N @ 8-11 mph
LOCATION:	Brooklyn, New York			**TIME:**	8:30 – 17:30
BCP SITE NUMBER:	C224417			**MONITOR:**	Olivia Miller

EQUIPMENT: Horiba U52 Peristaltic Geopump MiniRAE 3000 Photoionization Detector	**PRESENT AT SITE:** **Environmental Staff (Langan):** Olivia Miller

OBSERVATIONS, DISCUSSIONS, TEST RESULTS, ETC.:

Langan was present to perform a remedial investigation in accordance with the New York State Department of Environmental Conservation (NYSDEC)-approved August 2025 Remedial Investigation Work Plan (RIWP) for Brownfield Cleanup Program (BCP) Site No. C224417 at 172 Montrose (Block 3062, Lot 12).

Site Activities

- Langan used a peristaltic pump to purge and sample permanent groundwater monitoring wells, RIMW01, RIMW21, RIMW24, and RIMW25. Purged groundwater was screened for odors, sheen, and organic vapors using a photoionization detector (PID). Maximum PID readings of 0.6 ppm (RIMW01), 1.9 ppm (RIMW21), 1.4 ppm (RIMW25) were observed. A petroleum-like odor was observed in groundwater purged from RIMW01. Purged groundwater was containerized in a 55-gallon steel drum located in the western part of the site pending future off-site disposal.

Cc:	C. Devin, M. Aronica, K. Semon, B. Gochenaur (Langan)	By:	Olivia Miller **LANGAN**

Sampling

- Langan collected groundwater samples for laboratory analysis. The following samples were analyzed for Target Compound List (TCL)/Part 375 volatile organic compounds (VOC) and semivolatile organic compounds (SVOC). Samples from RIMW01 were also analyzed for polychlorinated biphenyls (PCB), pesticides, herbicides, Target Analyte List (TAL) metals (total and dissolved) including hexavalent and trivalent chromium and total cyanide, 1,4-dioxane and Polyfluoroalkyl Substances (PFAS). Samples were relinquished to Pace Analytical, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) laboratory under standard chain-of-custody protocol.

- The following quality assurance/quality control (QA/QC) samples were collected: GWFB_PFAS_100125 (PFAS field blank) and GWTB02_100125 (trip blank)

Community Air Monitoring Plan (CAMP) Activities

- Ground intrusive work was not performed; therefore, CAMP was not implemented.

Anticipated Activities

- Langan will continue to collect groundwater samples from the installed permanent monitoring wells.

Site Activities

- Langan used a peristaltic pump and/or submersible pump to purge and sample permanent groundwater monitoring wells, RIMW04, RIMW12, and RIMW17. Purged groundwater was screened for odors, sheen, and organic vapors using a photoionization detector (PID). PID readings above background levels and petroleum-like odors were observed in purged groundwater from all monitoring wells. Maximum PID readings of 3.7 ppm (RIMW04), 3.6 ppm (RIMW12), and 0.3 ppm (RIMW17) were observed. Purged groundwater was containerized in a 55-gallon steel drum located in the western part of the site pending future off-site disposal.

Re: Geophysical Engineering Survey (GES) Report
Commercial Property
172 Montrose Avenue,
Brooklyn, NY 11206

Dear Ms. Aronica,

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 172 Montrose Avenue, Brooklyn, NY (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify utilities, underground storage tanks and other substructures as well as to clear and mark proposed boring and test pit locations at the project site on August 11th, 2025.

The equipment selected for this investigation was a GSSI UtilityScan 350 MHz ground penetrating radar (GPR) with a shielded antenna Sensors and Software Noggin 250 MHz GPR with a shielded antenna and a RadioDetection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250/350 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

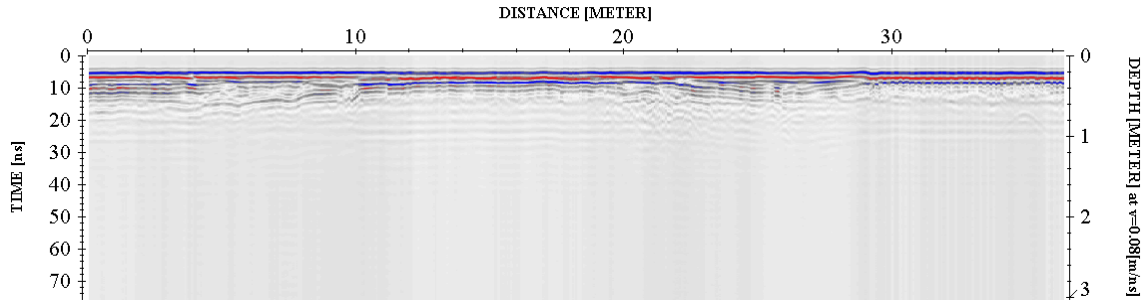
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

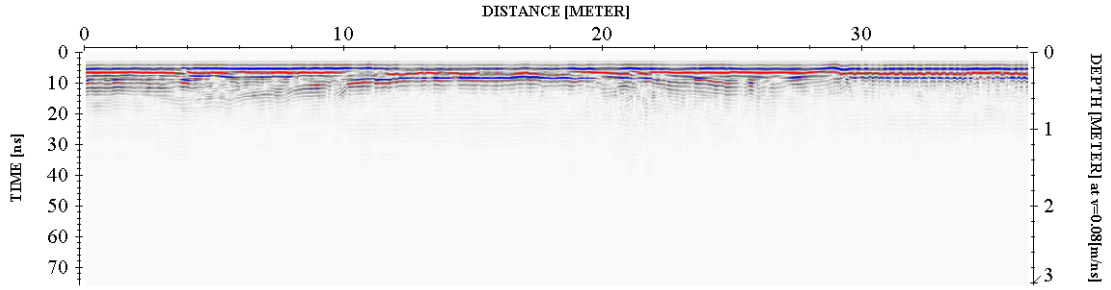
DATA PROCESSING

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

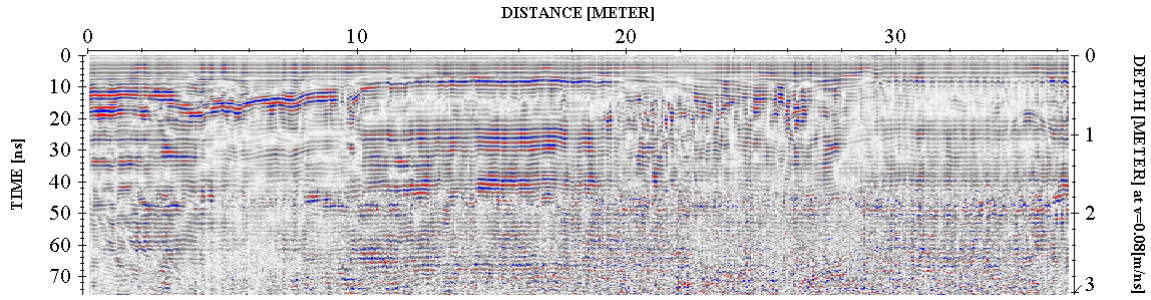
Step 1. Import Raw RAMAC data to standard processing format



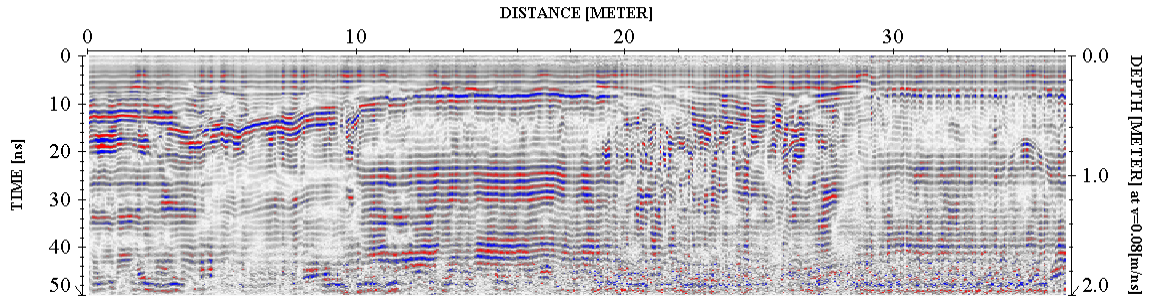
Step 2. Remove instrument noise *(dewow)*



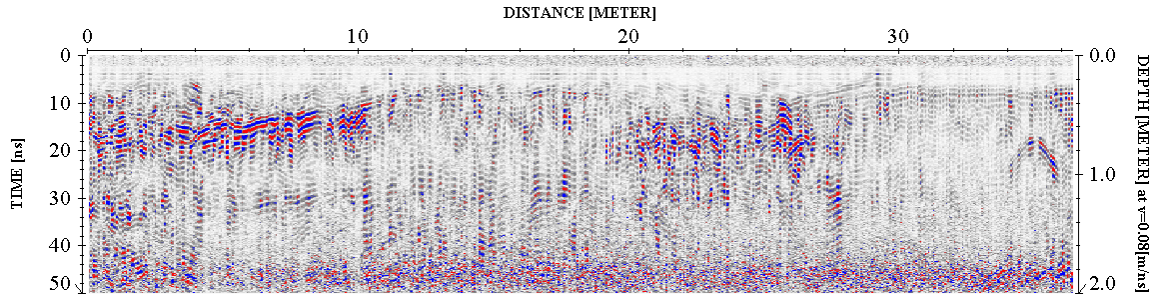
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Sunny

Temperature: 71° F

Surface: Concrete

Survey Parameters: A GPR grid scan was conducted within the survey areas as shown on the survey plan. The approximate line spacing of the grid survey was approximately 5'. Additional GPR data was collected over features of interest.

Limitations: The geophysical noise level (GNL) at the site was high due to being in an urban environment as well as other unknown anthropogenic sources. Parts of the site were inaccessible to the GPR due to parked vehicles, debris or not enough space to properly maneuver.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- Anomalies resembling potential subsurface utilities (such as electric, water, sewer, and fuel) were identified.
  locations were also cleared and marked. The approximate locations are shown in the survey plan.
- The GES identified that all site utilities entered from Montrose Ave.
- The GES identified floor drains within the garage areas of the site buildings. Each Site building has 3 interconnected floor drains that connect to the main sewer lines. Each parking lot drain connects to each other and discharges into the main sewer lines (see survey plan). The drain pipes are located 0.5ft below ground surface (BSG).
- The GES identified an anomaly consistent with an UST in the middle lot near the entrance garage door. The UST is located 2ft BGS, the UST dimensions are 8ft by 4ft.
- The GES identified multiple linear anomalies in each lot ranging from 2-3ft BGS.
- The GES identified fill ports and tank vents attached to each site lot (see survey plan).
- During the surveying a narrow hallway area was inaccessible to the GPR due to not enough space for proper data collection. (See survey map). This area was surveyed with an EM surveying tool.

- The basement area was surveyed with an EM surveying tool, the GPR could not be maneuvered into this area. No significant anomalies were idenrtified.
- NOVA cleared and marked all proposed boring locations and relocated them as needed if in proximity to buried utilities

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Manager
