Env Problem: "Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 04/25/95: SEE SPILL #9403829. DEC (Sigona) issued a hazardous waste cleanup contractor on 3/27/2000 under H0413. DEC referred this site cleanup to USEPA for RCRA Cleanup action. This spill site cleanup has been consolidated under Spill No. 9406807. 4/21/04 - Spill manager's name switched to Tipple from Sigona. 8/23/04 - Raphael Ketani. Case transferred to Jeff Vought. 7/3/12 - Austin - A synopsis to date of the basic activities on this site: Region 2 Spills staff did a PIN project on this site in the 1990s when it was abandoned by the owner, who found PCBS in his stored waste oil tanks. We re-diverted the storm drainage away from the storage tanks to prevent an overflow condition, and secured the site. The EPA then came in, and did a Superfund emergency removal of the hot oil from the tanks. They gave it back to DEC for a NYS Superfund investigation. After Jim Quinn's section did their Superfund investigation of the site, they found there were no hazardous wastes (PCBs) in the ground/groundwater. The original oil spill report, #9406807 (the one of this record), was closed in the interim by Kevin

BCF OIL REFINING, INC (Continued) **1001754932**

Hale, since it was in the State Superfund program. There is still petroleum g.w. contamination from the waste oil operations, so we need to re-open this spill report (#9406807), and assign it to one of our Remediation staff in Region 2 to continue the investigation, presumably under a PIN project. I have done so, by transferring this spill to Vadim Brevedo's section (Remediation Section B , as per the Regional Remediation Engineer. DEC Brevdo will assign this site to a project manager in his section for review and determination of further action. - end 02/12/2013: This spill case was transferred to A. Doronova. - AD Looked for property information on PropertyShark and NYC ACRIS database. According to the results: this property was sold by City of NY in 2006 to Newtown Development LLC. The property was bought at foreclosure. The Newtown Development company was represented by an attorney - Seth Friedland of Friedland Laifer & Robbins, LLP. Address of attorney: 62 William Street, 3rd Floor New York, NY 10005 Phone: 212-344-1400 Called and left a message to Mr. Friedland on his voicemail. Did not find on the Internet any other contact info for Newtown Development LLC. There is no listing for Newtown Development LLC on Department of State's Division of Corporations database. There is a company with a similar name - Newtown Development Group LLC. The company address is: Newtown Development Group LLC 2208 Astoria Blvd. Astoria, NY Phone: (718)545-1850 Called on the listed phone and left a message. Later in the day called and left a message with a secretary of Mr. Friedland. She told me that Newtown Development LLC is still their client. 1:12 PM - Received a call from Mr. Friedland. He told me that the site was cleaned by DEC and they had some kind of agreement with the state that the site will be remediated before purchasing it in 2006. Asked him to submit this agreement and also asked him for RP contact information. He said that he will speak with his client and get back to us in a day. AD 02/13/2013: Received a message from Mr. Friedland. Called and spoke with him. Mr. Friedland was authorized by the property owner to represent him in this case. CEUS Env. will probably be a consultant for the site. Mr. Friedland will confirm it later. He gave the address and contact info of the owner of the site: Marcello Porcelli - president Newtown Development, LLC c/o Fabrizio Realty 364 Maspeth Ave, Brooklyn, NY phone: (718) 782-4200 Mr. Friedland asked for next course of actions required by DEC. Told him that after I review the case file I will issue a letter to his client with a request for further actions depending on soil and groundwater data. Told him to file FOIL request in a meantime to get site-related data. Mr. Friedland will e-mail me a copy of the comfort letter his client received from DEC. Put site priority as P0. AD 02/25/2013: Reviewed the 2009 Investigation Report. The highest concentration of TVOCs is in shoreline sample point PW-1 at 1200 ppb detected in October 2007. Called and left a message to Mr. Friedland. AD 02/26/2013: Called and spoke with Mr. Friedland regarding the site reconnaissance. Requested to inspect all site-related wells and to collect groundwater samples, then based on the result to propose next course of actions. Later in the day received the following e-mail from Mr. Fridland: Dear Ms. Doronova: As just discussed, you advised me that you reviewed the latest available sampling data in NYSDEC's records for this site which are from 2009. Because of the age of those results, you have requested that more current sampling results from the above site be obtained and submitted. You also indicated that the readings in the files were relatively modest with one of the highest reading in the range of 1,300 parts. In this regard, you have requested that our

BCF OIL REFINING, INC (Continued) **1001754932**

client's consultant do the following: " Inspect the wells for sampling ability and determine the status of the wells (you said you thought there were 17 wells on the site); " Sample groundwater from the wells for VOC's and SVOC's which would relate to fuel oil and PCB's; " Upon the consultant's review and analysis of the sampling results, you would like the consultant to submit a Site Sampling Status Report documenting the sampling results. " In the Site Sampling Status Report, depending on the sampling results, you would also like the consultant to recommend a course of action ranging from a request for spill closure, to continued monitoring and natural attenuation, or another method of remediation that will lead to closure, as recommended by our consultant. Please review my summary above and kindly either confirm my understanding above, or add any other language modifications to this email that you feel are appropriate. Once I receive your response hereto, I will arrange for authority for the consultant to perform the required tasks. Thanks again for your cooperation and assistance. Regards. Sent from my BlackBerry Seth D. Friedland Friedland Laifer & Robbins, LLP 62 William Street New York, New York 10005 T 212.344.1400 x. 202 F 212.344.8735 C 917.902.6386 Efax 646.304.1916 email: sfriedland@friedlandlaifer Sent an e-mail to Mr. Friedland confirming the course of actions. AD 03/06/2013: Received the following e-mail from Mr. Friedland: Dear Ms. Doronova, Our client's consultants went to the site to inspect the wells as you requested. They were able to locate and identify approximately 7 or 8 wells so far. Also, the BCF site has been used as an impound lot by New York City for the parking of cars for the last year or so, so it may have been difficult for the consultants to locate some of the wells because of the presence of parked cars. Can you send me a copy of the well map you had reviewed so the consultants can try to reconcile the current site conditions with the site plan in your files. Thanks very much. Sent from my BlackBerry Seth D. Friedland Friedland Laifer & Robbins, LLP Sent the requested site plans. AD 06/03/2013: Sent an e-mail to Mr. Frieland with a request for site status update info. Requested to submit a summary report by end of June. Later in the day received the following e-mail from Mr. Frieland: Ms. Doronova, I know they are working on trying to finalize the report, but the consultants have a couple of questions. Would it be possible to discuss the report questions before they finalize and submit it in order to expedite the process? I can arrange a telephone call with them at a mutually convenient time if ok with you. Thanks for your patience. Seth D. Friedland Gave him time when I am avalable to take conference call. AD 06/04/2013: Finalized time for the conference call for 1:30 PM for June 6, 2013. AD 06/06/2013: received an e-mail from Mr. Friedland with some site maps from the new report. Had a conference call with Mr. Friedland and his consultant. Discussed the new groundwater data and issues with report presentation. The complete report will be submitted to DEC as scheduled by June 30, 2013. AD 06/28/2013: Received the following e-mail from John Rhodes of CEUS Engineering: Ms. Doronova, Attached is the Site Sampling Report and Petition for Closure of NYSDEC Spill Number 9406807 for the former BCF Site. I am also sending this report to you next week in hard copy with a CD containing the report. Please confirm receipt. Thank you for your assistance on this project, John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, 07960 NY: 62 William Street, 3rd Floor, New York, 10005 646 465 2494 DL the report to eDocs. Will review. AD 08/09/2013: Reviewed the report. It states

BCF OIL REFINING, INC (Continued) **1001754932**

that the Site was an Inactive Hazardous Waste Site investigated and cleaned-up through a cooperative arrangement between the NYSDEC, New York City (NYC), the United States Environmental Protection Agency (EPA) and a purchaser of the property, Newtown Development, LLC (NDL) to convert an abandoned hazardous waste site back to a beneficial use. According to the report, as part of the cooperative arrangement, the following have been accomplished: - The NYSDEC responded to discharges of petroleum from the former BCF facility, closed an oil water separator, cleaned up surface debris, supervised and funded a Demonstration of Method Applicability Study (DMA) and a Remedial Investigation (RI), led the Traid team during the RI, partnered with NDL to allow the innocent landowner purchase of the Site, and provided the successful regulatory framework and oversight for the project that led to the current status. - The EPA transferred their CERCLA oversight role to the NYSDEC, subordinated a lien against the property so that NDL could move forward to purchase the property and the remediation move forward, provided the expertise for the Triad approach including participation on the Triad team, provided the regulatory framework and oversight for the decontamination of the steel that otherwise would have been TOSCA waste, and performed an emergency removal action that included cleaning and closure of numerous tanks containing PCB laden oils. - The NYSDEC along with EPA, NYC and NDL led the development of the cooperative arrangement as part of the City s and State s interest in economic development and repatriation of contaminated and abandoned property, coordinated local regulatory and other support for the project, participated on the Triad team and promoted the successful approach to cleaning-up the Site to others addressing contaminated properties in NYC. - NDL (along with NYSDEC and NYC) led the conceptual development of the cooperative arrangement, purchased and funded the property allowing the entire enterprise to move forward, demolished the above ground structures, decontaminated and recycled the steel from tanks and piping; identified, leased to and interfaced with an industrial operation on the property (the impound lot operations for NYC s Marshal s operations), covered and leveled the ground with inch quarry stone, and managed the property to allow all other parties (EPA, NYSDEC, Triad team) to do what they needed to do. NDL is now addressing the residual petroleum (fuel oil) contamination issue brought to NDL s attention by NYSDEC as a continuing obligation to which they agreed as part of the cooperative arrangement and in continued cooperation with the NYSDEC, now through the Region 2 office. 2013 GW sampling: The report states that in February and March of 2013 contractors for NDL conducted groundwater sampling and testing and related activities in accordance with the plan approved by the Region 2 office. The 2013 follow?up groundwater elevation measurements and testing confirmed the southerly flow direction of groundwater from the southern portion of the Site. Additionally, through an examination of the construction of the retaining wall and elevations of the underlying clay layer we confirmed that the retaining wall was keyed into the clay and thereby inhibiting direct impacts on the English Kill from the petroleum release on the Site. The monitoring wells in the southern portion of the Site are representative of downgradient groundwater conditions to the north of the Site. GW data - SVOCs in GW: Naphthalene was not above this groundwater standard in the 2013 follow up testing.The consultant recommends no further action regarding the SVOC contaminants detected at the Site. BTEX: The NYSDEC noted BTEX compounds (benzene, toluene,

BCF OIL REFINING, INC (Continued) **1001754932**

ethylbenzene and xylene) in most of the wells on the properly exceeding their respective Class GA Groundwater standard. The concentrations of BTEX compounds in the 2013 testing were consistent with the concentrations in the RI testing (2009), with improvement but also localized increases in concentrations. The average values of toluene, ethylbenzene and xylene all dropped between the 2009 RI testing and the 2013 testing. In 2009 the average or the total of these three compounds was 7.7 ug/l. By 2013, this average had dropped to 1.9 ug/l. However, the average benzene value increased slightly, from 34.6 ug/l at the time of the RI to 67.5 ug/l in 2013. This is likely due to the small amount of LNAPL that was encountered in MW-12 (0.04 inches) thereby biasing high the average value; and our decision to sample groundwater in MW-12 after removal of this LNAPL even though wells with LNAPL were not sampled during the RI. A longer period of record for MW-7, a downgradient well for contaminants from the northern portion of the BCF Site. Total BTEX and benzene concentrations have dropped over the past five years until they are now nearly within Class GA Groundwater standards. A similar record is indicated for the other wells monitoring the BCF Site. however, the BTEX compounds are not migrating. The furthest downgradient well to the south towards the English Kills, MW-16, contained no BTEX compounds (or any other compounds) exceeding Class GA Groundwater Standards. Further, the retaining wall extends around the entire southern portion of the Site, thereby inhibiting flow into the English Kills. Similarly, the furthest downgradient well to the northeast along the Maspeth Avenue utility beddings, MW-7, contained only benzene at 1.1 ug/l, only slightly above its Class GA Groundwater Standard of 1.0 ug/l. (Isopropylbenzene was also detected at 20 ug/l, above its Class GA Groundwater Standard of 5 ug/l.) Therefore, according to the consultant, the VOC constituents of fuel oil are not migrating beyond the property in significant concentrations. GW data comparison (TVOCs in ppb): well 2009 2013 MW-6 193 23 MW-7 17 24 MW-8 349 99 MW-9 47 89 MW-10 19 6.7 MW-12 366 654 MW-13 25 175 MW-14 88 64 MW-15 101 121 MW-16 55 6 MW-17 277 187 Six wells: MW-6, MW-8, MW-10, MW-14, MW-16 and MW-17 showed decrease in TVOCs levels. Five wells: MW-7, MW-9, MW-12, MW-13 and MW-15 indicated increase in TVOCs. The most contaminated well is MW-12 with 654ppb of TVOCs. Free product in 2013: The 2013 testing confirmed LNAPL at two locations (wells MW-12 and MW-15), in lower amounts than identified during the RI. The area where LNAPL had been suspected but not confirmed by the RI contained no LNAPL in 2013. The RI mobility/recoverability testing was repeated. The LNAPL observed in 2013 was confirmed to be essentially immobile and practicably non-recoverable. The consultant recommends no further action regarding the remaining LNAPL at the site. Exposure assesment: The area of the BCF Site has a long industrial history, much of it as an oil terminal stemming back to 1933. The surrounding area has been industrial including land uses such as the National Grid Greenpoint Energy Facility (Keyspan), major pipelines, scrap metal recycling and oil terminals. Today the Site is an impound lot for the City of New York. The New York City Planning Department s objectives are to keep the area industrial. Groundwater at and in the vicinity of the Site is not potable and not used for any purpose including industrial. Groundwater is sufficiently deep that exposure to users of the industrial property is unlikely, although basic controls during construction would be appropriate. Furthermore, the remaining groundwater contamination is not migrating off the property in

BCF OIL REFINING, INC (Continued) **1001754932**

significant amounts. Therefore, there is no potential for exposure to contaminated groundwater other than when deep excavation is done during redevelopment construction or for utility repairs in the immediate vicinity of the Site. The only environmental receptor is the English Kills adjoining the southern portion of the Site. The English Kills is an industrial waterway with barge and other industrial and commercial traffic. A major outfall of the NYC sewer system is located just upstream of the BCF Site. The RIR indicates that contaminants in the sediment in the English Kills come from upgradient sources and not the BCF Site. The Site groundwater evaluation shows minimal if any impact to the English Kills from the Site. Therefore, there is no significant threat to any environmental receptors from the Site. There are no residential or other sensitive use properties in the vicinity and the entire stretch of Maspeth avenue where the Site is located is exclusively heavy industrial and commercial. Soil vapor intrusion is not a current concern due to the lack of structures. Should future structures be desired on this industrial property, soil vapor intrusion can be better addressed at that time, if necessary. The remaining contamination poses no threat to the current and likely future users of the property. None of the targeted contaminants are present in the upper two feet of soil. Currently, any contaminated soil is well separated from current users by the three-quarter inch gravel placed on the ground surface after the demolition of the aboveground facilities as required by the NYSDEC. A Sensitive Receptor Survey was done in conjunction with the 2013 testing. The Sensitive Receptor survey concluded that there was no threat to human health or the environment. The 2013 testing reported here shows the groundwater plume to be stable and consistent with what was found during the RI. Conditions are improving with time. Contaminants associated with fuel oil are not migrating off-site. Furthermore, the BCF Site is capped with gravel and mine millings and currently supporting an industrial operation; it will continue to support an industrial operation based on NYC plans and the Site s location. There is no impact to the English Kills indicated by the 2009 or 2013 testing. With the stable plume, low and improving concentrations of contaminants, lack of significant off-site migration, and a cap protecting an industrial operation; the Site conditions are fully protective of public health and the environment at this industrial property. Therefore, the consultant petitions for closure of NYSDEC Spill Number 9406807. GW data is limited to only two sampling rounds. The lates data indicated increase in Benzene levels. Free product on two wells. Will discuss the closure request with J. Kolleeny. 08/29/2013: Discussed the closure request with J. Kolleeny of DEC. It was decided that although VOC concentrations in some site wells have decreased since the last groundwater sampling event, performed at the site in 2009, the submitted data indicate that free product is present in two site wells, total VOC concentrations increased in five site wells, and benzene levels increased in seven wells. In light of these conditions, further actions are warranted at the site. AD 09/04/2013: Issued and sent a DEC Response letter to Mr. Porcelli stating that spill case closure cannot be approved at this time and that free product recovery and groundwater monitoring and sampling of site wells should continue in order to eliminate free product to the extent feasible and establish a clear decreasing trend of groundwater contaminant levels. DL pdf copy of the leter to eDocs. AD 09/18/2013: Received a phone call from John A. Rhodes of CEUS Engineering. He

BCF OIL REFINING, INC (Continued) **1001754932**

wanted to discuss free product recovery and GW sampling for the site. Told him to measure LNAPL thickness before bailing it out and suggested to install oil absorbent socks into the wells with free product, if it recharges at very slow rate. Permitted the omission of wells MW-7, MW-05, MW-10 and MW-16 from the sampling program. Also required to sample the rest of the site wells only for VOCs. AD 10/03/2013: Received the following e-mail from J. Rhodes: Ainura, We are going to sample the wells at BCF on Monday, October 7. To re-iterate the plan: We ll be sampling wells MW-8, 9, 12, 13, 14, 15 and 17. We ll test for VOCs (no SVOCS or PCBs), and for petroleum compounds (STARS list compounds). We ll gage the wells for product and evaluate increases or decreases, bale the wells as appropriate, and use absorbent socks after baling the wells. We ll report the results to you shortly after receiving the laboratory analytical reports. I also want to tell you that we collected a few samples from the BCF wells last month to get a preliminary idea of what trends were like. We will include the results from these samples in our next report. Let me know if there are any problems with the above. Thanks, John Rhodes, P.E. AD 12/26/2013: Received the following e-mail from J. Rhodes: Ainura, Attached is the BCF Groundwater Sampling Report. I am also sending you the report in hard copy with a CD. Please confirm receipt. Thanks, Ainura, John John A. Rhodes, P.E. CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineeringPC.com JARhodes1@Verizon.net DL the report to eDocs. Will review. AD 01/10/2014: Reviewed the report. It states that additional groundwater sampling and testing requested by the NYSDEC in September 2013 was conducted in September and up to November 4, 2013. The additional work included sampling and testing of seven wells for specific constituents of petroleum, a trend analysis of groundwater concentrations, and limited remediation comprised of the application of absorbent socks in wells that contained or recently contained LNAPL. Additionally, NDL added a round of groundwater sampling and testing in an effort to better understand contaminant trends. Performed site activities include: - Sample wells MW-8, 9, 12, 13, 14, 15, and 17, - Analyze samples for petroleum VOCs (EPA Method 8260 STARS, no SVOCS or PCBs), - Gauge wells for product to evaluate increases or decreases, and, - Conduct a limited remediation by applying petroleum absorbent socks. Monitoring wells were gauged on September 16, October 8, and November 1, 2013. This gauging confirmed the prior gauging on 2/28/2013, 3/28/2013 and 4/22/2013, as well as the prior readings made during the RI and by Rust in 1998. The groundwater flow in the northern portion of the Site to the north was confirmed. Groundwater from the southern portion of the Site flows south toward the English Kills; this was also confirmed by recent measurements. The presence of the retaining wall at the south end of the Site affects local groundwater flow. This retaining wall is tied into the native clay unit thereby minimizing direct impacts of contaminated groundwater, if any, to the English Kills. MW-16 is a key downgradient well to the south of the BCF source areas. Absorbent socks were employed in wells MW-12, and prophylactically in MW-14 where product was observed during one gauging event, and in MW-15 where a suspended organic sediment was suspected. Due to the one inch diameter of piezometer PZ K-11, a peristaltic pump was used to remove product if encountered in the well. Upon the discovery of product in what is believed to be well MW-2, absorbent socks were applied at that location as well. GW data comparison (TVOCs in ppb): well 2009

BCF OIL REFINING, INC (Continued) **1001754932**

03/2013 10/2013 MW-6 193 23 NS MW-7 17 24 NS MW-8 349 99 ND MW-9 47 89 88 MW-10 19 6.7 NS MW-12 366 654 448 MW-13 25 175 191 MW-14 88 64 65 MW-15 101 121 129 MW-16 55 6 NS MW-17 277 187 ND Three wells: MW-8, MW-12 and MW-17 showed decrease in TVOCs levels. Three wells: MW-9, MW-15 and MW-14 indicated same levels of TVOC for both sampling events. Well MW-13 showed a slight increase in TVOCs. The most contaminated well is MW-12 with 448ppb of TVOCs. Conclusions: According to the consultant, the Exposure Assessment and Sensitive Receptor survey concluded that there was no threat to human health or the environment from the BCF Site. The current and likely future use of the Site and surrounding area is industrial. No threat to the industrial use of the property and surrounding area is presented by the current Site conditions. LNAPL, if any remains, is not a threat to the public or the environment, and practicably unrecoverable. During 2013, LNAPL was intermittently encountered only in small pockets. Through the use of absorbent socks, we have recovered approximately 1 gallon of oil in the latter half of 2013. Although CEUS will continue the application of absorbent socks for prophylactic reasons, further remedial activity will not be significantly effective and would yield diminished returns. Maintaining an open Spill Case will not affect this condition. The 2013 groundwater testing shows remaining contaminant concentrations in all wells to be following an exponential decay pattern similar to that observed in MW-7. The key downgradient well MW-17 decreased in contaminant concentrations over 2013 to the point where the most recent sampling and testing results (October 8) were below Class GA Groundwater Standards. Two other key downgradient wells, MW-16 and MW-7, have also reached the Class GA Groundwater Standards. MW-13, 14 and MW-15 are at lower concentrations and as a result their degradation patterns are not as pronounced. However, concentrations are not significantly increasing, if at all. After repeated groundwater samples and tests from these wells that show no significant contaminant concentrations, further sampling and testing would be of no value. There are currently no receptors for the contaminated groundwater remaining and unlikely to be any receptors in the future for this industrial Site. To the south, the discharge of groundwater to the English Kills is limited by a low permeability retaining wall keyed into the natural clay deposits as described in the RIR. Similarly, a significant contamination is not migrating to the north into the area of high industrial traffic along Maspeth Avenue. Based on the data. the consultant petitioning the NYSDEC for closure of the Spill Number 9406807 stating that there is no threat to the public or the environment from the BCF Site today, and none likely in the future. No remediation is necessary or practicable; further remedial activity will not be significantly effective and would yield diminished returns. No further value is served by additional sampling and testing of groundwater. While TVOCs are low in the site wells and the most contaminated well shows 448 ppb of TVOCs, there still is a free product in some of the site wells. Will diccuss the site with J. Kolleeny of DEC. AD 01/15/2014: Discussed the spill closure request with J. Kolleeny of DEC. The decision was that DEC cannot close the spill case at this time, due to reapearing free product in few site wells. GW sampling frequency could be reduced to a semi-annual basis and some wells could be removed from the sampling program (wells with ND levels of TVOCs). Wells with free product should be monitored on a continious basis to establish decreasing trends. AD 02/2014: Left a message to Mr. Rhodes. AD

BCF OIL REFINING, INC (Continued) **1001754932**

07/08/2014: Received a call from Mr. Friedland. Explained him that DEC requires to monitor free product at the site wells on a continious basis to establish decreasing trend. AD 10/22/2014: Received the following e-mail from Mr. Rhodes: Ainura, Attached is a report on the former BCF Facility, Spill No. 9406807. As you will see in the report, no oil remains at the site in the any of the locations where it was previously detected. As this was the DEC s last concern for this site, we are now renewing our request that this spill case be closed. You will note in the report that in June of this year we found MW-11, a well in which the DEC had observed oil during the RI. We were able to recover a small amount of oil from the well until July when no oil returned. Although we continue to employ absorbent socks to the well, no oil has returned to the well as of today. Throughout our monitoring in 2014, no oil was detected in any of the other areas of the site where it had been previously detected. Therefore, with the absence of oil in the MW-11 area, we conclude that the site is now practicably oil free. Please let me know if you have any questions. We look forward to your earliest response. John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineering.com JARhodes1@Verizon.net Will review. AD 10/28/2014: Reviewed the report. It states that free product monitoring was conducted at the site. LNAPL OBSERVATIONS AND REMEDIATION: After the departure of the impound lot operation in late September, SEUS located MW-11, the 2 well adjacent to the 1 diameter piezometer PZK?11. Since its discovery on June 2, 2014, MW-11 replaced PZK-11 for monitoring and product recovery actions. given its larger size, which makes it more representative of conditions in the area of concern. Product was recovered from MW-11 on the first day of discovery by peristaltic pump, and then by the use of absorption socks. No measurable amount of product has been detected in MW-11 since July 9, 2014. The product observations in calendar year 2014 for MW-11 and MW-2, indicated that these two wells accumulated sufficient oil to stain absorbent socks. No product was indicated in any other well during calendar year 2014. SEUS had applied absorbent socks to all wells in which product had been reported in the past, observed during the investigations or suspected of being present. For a time, small amounts of product absorbed onto the socks and the socks were periodically replaced. As of October 2014, no product is indicated to be absorbing onto any of the absorbent socks that continue to be deployed in all wells in which product had once been indicated or suspected. Conclusions and recommendations: No recoverable LNAPL has been encountered at the former BCF facility since June 2014. The consultant intend to continue the application of absorbent socks for prophylactic and ongoing monitoring reasons, but requests that this activity not hold up the closure of the Spill Case. The Exposure Assessment and Sensitive Receptor Survey presented in prior reports concluded that there is no threat to human health or the environment from the BCF Site. The current and likely future use of the Site and surrounding area is industrial or heavy commercial. No threat to the industrial or heavy commercial use of the property and surrounding area is presented by the current Site conditions. Will discuss the spill closure request with J. kolleeny of DEC. AD 10/29/2014: Discussed the spill closure recommendation with J. Kolleeny of DEC. Given the latest GW monitoring results it was decided to approve spill closure request. Issued and sent a letter to Marcello Porcelli of Newtown

Program:	HW
Site Code:	56747
Classification:	N
Region:	2
Acres:	1.900
HW Code:	224034
Record Add:	07/14/2004
Record Upd:	04/13/2011
Updated By:	JAQUINN
Site Description:	"The BCF Oil site is located within an urban, industrialized area of East Williamsburg, Brooklyn. Previously existing buildings and above ground storage tanks have been removed, and the property is being used as a Marshall's impound lot. A National Grid facility borders the site on the north, Newtown Creek on the south, a city automobile impound lot on the east and a scrap metal processing facility on the west. The total area is 1.9 acres, of which 0.3 acres is land under water. The property was used as a petroleum distribution facility for many years, starting in the early 1900?s. In 1980, the terminal was modified for use as a waste oil processing facility, and was used for waste oil recycling from 1980 to 1994. Routine sampling detected PCBs in the waste oil, and operations ceased in 1994. The property is zoned M3 (manufacturing/industrial), and it is currently used to store impounded automobiles. The site consists primarily of historic fill placed upon wetlands. Groundwater exists approximately 5 to 10 feet below grade and flows both to the north and south from the site. A remedial investigation of the site has been completed. The site was managed as a single operable unit. See also NYSDEC spill #9406807"
Env Problem:	"Based upon investigations conducted to date, the primary contaminant of concern at the site are those associated with petroleum. Separate phase petroleum contamination has been detected in numerous locations, although mobile product may be more limited. The site was extensively assessed for PCB contamination, but no significant levels of PCBs were detected on site. PCBs were detected in the Newtown Creek sediment, but the sediment contamination appears to be part of a larger problem and not related to releases from the site. A significant threat created by the potential for release of PCB-contaminated oil stored in dilapidated storage tank areas was eliminated by a removal action performed by the USEPA in 2000/2001."

DEC Memo:	"9/30/2020 - Feng - Desk Duty in office. Spoke to Nancy Wagner of Miller Environmental. The correct address is 287 Maspeth Ave, Brooklyn. It is a National Grid property. They were doing a fire test today. The fire retardant form, a baking soda like chemical was spilled on the pavement of the basement. The facility is equipped with a gas pump. The chemical material was using in the fire test and spilled on the ground. No known the quantity it spilled. No impact to the soil and drain. The company who spilled the material will vac it up and remove it. She will call them for updates and will respond to my email. Nancy Wagner Miller Environmental 631-506-9144 NWagner@millerenv.com Received photos from Nancy Wagner. It is the dry chemical or fire retardant material, fell from the overhead fire suppression system at the gas pumps. As per R. Austin, it is not something DEC would respond. Spill is closed. "
Remarks:	"unk amount of product freed. clean up pending."

Contact Name:	CHRIS MORRIS
DEC Memo:	"10/2/20 - Kim - Desk Duty - I called Chris with GEI who stated that this spill is at a State Superfund site; DEC-Albany PM: Greta White. The spill that was called in is not directly related to the Former MGP site. In the southwest corner of the site there are 7 USTs (4 in one bank and 3 in another) that were associated with a former varnish company that closed in 1933. The tank systems have been out of service for approximately 80-90 years. As part of the GEI Work Plan, they investigated the USTs and dug some borings and test pits. In the soil from the borings, GEI found some staining and high PID readings and in a test pit, the water had a sheen. The tanks are supposed to have stored turpentine. After GEI pulled that tanks and inspected them, they found a few inches of water and a small amount of product. The product smelled almost like fuel oil with a hint of a solvent smell. These tanks are located beneath the building foundation so their removal would be complicated. 12/2/20 - Kim - I received a call from DEC-Albany PM Greta White. This spill case is being consolidated and will be managed by DEC White under Remedial MGP Site no. 224052, K - Greenpoint MGP - Energy Center. This spill case is closed."

SHWS:
Name: K - GREENPOINT MGP - ENERGY CENTER
Address: 287 MASPETH AVENUE
City,State,Zip: BROOKLYN, NY 11211
Program: HW
Site Code: 372971
Classification: Significant threat to the public health or environment - action required.
Region: 2
Acres: 117.000
HW Code: 224052
Record Add: 11/02/2006
Record Upd: 06/07/2021
Updated By: DJEATON
Site Description: "Location: The site is a large parcel located along Newtown Creek at 287 Maspeth Avenue in Brooklyn,NY in Kings County. It is bounded by Newtown Creek to the east, Maspeth Ave. to the south, Vandevoort Ave. to the west, and Lombardy St. to the north. This is a large property at 117 acres. Site Features: The site is currently known as the Greenpoint Energy Center and houses a major liquefied natural gas storage facility and compressor station, an operations center for KeySpan's distribution and service units, and a warehouse facility. Current zoning and land uses: Surrounding land uses are mixed industrial, residential, and commercial. The nearest residential land use is located adjacent to the northwest corner of the site. Past use of the site: A large manufactured gas plant (MGP) and byproduct coking operation operated on the site from 1928 until 1952. Coal tar has been found in subsurface soils, but the full extent of contamination has not yet been established. The surrounding neighborhood has also been subject to a large petroleum spill, apparently unrelated to the MGP. A VCA to address the northeast corner of the property was listed under V00631. This work was undertaken to allow expansion of the existing liquefied gas facility and included a relatively small portion of the site. A site-wide RI began in the summer of 2012. The RI will be conducted in 3 phases. Site Geology/hydrogeology: The site is underlain by fill and heterogeneous glacial deposits that include outwash sands with till and lenticular silt deposits. Bedrock is approximately 200 feet below the ground surface. Groundwater flows northeasterly, toward the Newtown Creek."
Env Problem: "A remedial investigation (RI) of the site was performed in a phased approach based on geography and the proximity to adjacent or nearby

GREENPOINT (Continued) **S104787368**

water bodies. Phases 1 and 2 of the RI were located on the eastern and southern boundaries of the site, respectively, and were implemented between October 2011 and March 2016. Phase 3 encompassed the remainder of the site and was implemented between April 2016 and July 2019. An earlier pre-design investigation (PDI) and supplemental PDI were performed to evaluate the potential need for an interim remedial measure (IRM) for non-aqueous phase liquid (NAPL) containment along the Newtown Creek loading platform. The PDI findings indicated that there were no identified subsurface NAPL migration pathways from the site to Newtown Creek sediment, and potentially mobile NAPL was not identified. Throughout the course of site investigations, soil, groundwater, and sediment samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals and cyanide. In addition, soils were analyzed for pesticides, herbicides, hexavalent chromium and total organic carbon while groundwater was analyzed for per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane. Sediment analysis also included pesticides, herbicides, ammonia, hexavalent chromium, dioxins and furans, total petroleum hydrocarbons (TPH), diesel range organics (DRO), black carbon, pH, sulfide, total nitrogen, total organic carbon, total phosphorus, normal alkanes and isoprenoid hydrocarbons. Soil vapor and indoor air have been analyzed for VOCs and naphthalene. Nature and Extent of Contamination: The principal contaminant of concern at the site is MGP related coal tar and associated petroleum contamination. Coal tar contains various volatile organic compounds (VOCs), primarily benzene, toluene, ethylbenzenes, and xylenes (collectively known as BTEX). A family of compounds referred to as polycyclic aromatic hydrocarbons (PAHs) are also associated with MGP coal tar. Areas of potentially NAPL-saturated soil were generally isolated to the southern portion of the Loading Platform Area and in the vicinity of Holder 1 along Maspeth Avenue. Three wells have accumulated recoverable coal tar; two in the loading platform area and one along Maspeth Avenue. No visual observations of potentially NAPL-saturated soil have been identified in the borings advanced within the site interior and no measurable NAPL has been visually observed in any of the wells installed within the interior. Soil: Soil concentrations above the Industrial Use Soil Cleanup Objectives (IUSCOs) primarily included PAHs. In the shallow zone, PAH exceedances of the IUSCOs were identified throughout the site; PAH concentrations generally decreased with depth and were largely identified in areas with noted physical impacts, particularly the Loading Platform Area where PAH exceedances of IUSCOs continued into the deep zone. The maximum concentration of total PAHs was observed near the Loading Dock Area at a concentration of 67,350 mg/kg in a sample collected from three to four feet below grade (ft bg). Concentrations of BTEX above the IUSCOs were identified in a limited number (total of three) samples sitewide. The maximum total BTEX concentration detected was 2,137.4 mg/kg from a sample collected from 15-16 ft bg along the Maspeth Alignment. Detections of metals in soil were mostly limited to the shallow zone. Detections in the intermediate or deep zones were limited to sporadic and relatively low detections of arsenic. Detections of cyanide were few and relatively low in concentration. The cyanide detections were generally limited to the site interior and were confined to the shallow soil zone. The maximum cyanide concentration detected was 29.4 mg/kg from three to four ft bg in the area of the former purifiers. There have been no detections of

GREENPOINT (Continued) **S104787368**

pesticides or herbicides above the IUSCOs. There were no PCB detections in soil above IUSCOs. Groundwater: Groundwater exceedances of standards and guidance values primarily included total BTEX, PAHs, chlorinated volatile organic compounds (CVOCs) and metals; cyanide and PCBs were detected in exceedance less frequently. The areas of elevated BTEX and PAH concentrations were primarily located near the southern Loading Platform Area in the vicinity of the identified soil impacts and along the southern property boundary along Maspeth Avenue. Elevated CVOC concentrations were generally found along the northern and western site perimeters and can be attributed to off-site sources. Total BTEX in groundwater ranged from non-detect (ND) to 455,100 parts per billion (ppb). Total PAHs in groundwater ranged from ND to 12,459 ppb. Numerous metals were detected above their corresponding standards, including arsenic, iron, lead, magnesium, manganese, and sodium, likely associated with regional conditions rather than historical site operations. Total cyanide concentrations in groundwater ranged from ND to 1,060 ppb. PCB exceedances were limited to three of the 148 groundwater samples analyzed, with a maximum total concentration of 1.54 ppb. Groundwater results were non-detect for 1,4-dioxane. While perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) were occasionally detected in groundwater above guidance values, total PFAS concentrations were not detected in any well above guidance values. The maximum PFOS concentration detected was 57.9 parts per trillion (ppt) while the maximum PFOA concentration was 97.5 ppt and maximum total PFAS concentration was 256.17 ppt. These PFAS concentrations are not indicative of a source area and concentrations are likely associated with off-site sources. Soil Vapor: Sub-slab vapor and indoor air samples were collected during 2018 and 2019. Results varied across the site from no further action (nine buildings) to identifying sources and resampling (two buildings) to mitigation recommendations (three buildings). Additional SVI sampling is to take place during the 2021 heating season."

Health Problem:	"Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of fish and shellfish from Newtown Creek is restricted based on fish advisories for the East River, which apply to Newtown Creek as a tributary."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 01/07/2004. Per Bart Polozzitti of Keyspan(516-545-5511), major renovations have occurred at the site. The tank may have been removed, he will forward relevant information when gathered. 01/02/07-Zhune got an e-mail from Bart Polozzitti requesting additional time to get the information. He said hopefully he will get it by 02/17/07. Bart Polozzitti cell # 646-2350403 01/09/07 Bart sent the information a tightness test report from Tanknology Corp. and a letter is included. The letter state the following: The subject underground storage tank (361A)located at 287 Maspeth Ave. Brooklyn, New York was tightness tested unsuccessfully on january 7, 1993. The other three fuel thanks on the same facility (Nos. 363, 364 &365) were tested tight on the same day. After repairing the vent connections causing the ullage leak above the level of product, the tank was retested on January 25, 1993 and passed. There was no release at any time to the surrounding environment. Spill Closed "

Site Description: " The Greenpoint Energy Center is located in the Greenpoint section of Brooklyn, New York. The surrounding area is dominated by industrial and commercial uses with a limited residential area northwest of the the site. "
Env Problem: "The site is impacted by MGP residuals. Coal tar is present at the site. KeySpan has proposed to remediate the most accessible contamination and leave the remaining contamination in place. The proposed remedy is under review by the department."
Health Problem: "Public exposures to wastes in soil and groundwater at the site are unlikely since access to the site is restricted. Potential impacts from soil vapors need to be evaluated. Potential exposures to seepage from the site in the adjacent Newtown Creek are unknown. Eating of

DEC Memo:	"05/23/17-Hiralkumar Patel. 1:17 PM:- spoke with Brittany. they are removing two USTs: one 4,000 gal gasoline and one 1,000 gal diesel UST. during removal of diesel tank, crew noted some odors and upto 100 ppm on PID in soil. the tanks were located on concrete pad at 9 ft bg. crew has removed concrete pad and noted groundwater at bottom of excavation at approx. 10 ft bg. no sheen or product noted on groundwater. D&B will remove tank piping and dispenser islands and will collect endpoint soil and groundwater samples. two new tanks will be installed at the same location. Brittany Gaddy D&B Engineering and Architects, P.C. Ph. (516) 364-9890 Ext. 3439 email: bgaddy@db-eng.com National Grid **site operator** 175 East Old Country Road Hicksville, NY 11801 Attn.: Michael Lauro Environmental Engineering Ph. (516) 545-2562 email: michael.lauro@nationalgrid.com 1:39 PM:- sent letter to Mr. Lauro requiring submission of spill cleanup report by the end of 06/30/17. letter emailed to Mr. Lauro and Brittany. case assigned to DEC Zhune. 8/1/17- Brittany email-As discussed, attached to this email is analytical data, tables and an end point sample location map for NYSDEC review for Spill No. 1701762. Below is a detailed summary of the work that is taking place during the removal and installation of two USTs at the National Grid Greenpoint Energy Center, located at 287 Maspeth Avenue in Brooklyn. National Grid is in the process of removing a 4,000-gallon gasoline UST and a 1,000-gallon diesel UST. Upon removal of the USTs, the Contractor will install 27 concrete filled piles, pour a bottom slab and install two new 10,000-gallon USTs in the same location. Existing piping will be removed after the new tanks are in place and the excavation backfilled. End point samples will also be collected for piping excavation as requested by DEC. On May 23, 2017 during excavation related to existing tank removal, some soils were identified that appeared to be impacted due to elevated PID readings

GREENPOINT (Continued) **S104787368**

and a diesel odor. D&B notified the NYSDEC of a historical petroleum release at the site and a spill case initiated. Soil with elevated PID readings was segregated. Upon removal of the USTs, 14 end point samples were collected and analyzed for the tank excavation. Please see attached for a site plan of the existing fueling station that has been marked with approximate end point sample locations. Table 1, which provides a summary of the removed tanks is attached for reference. Table 2, which provides a summary of PID Readings is also attached for reference. Analytical data related to the endpoint sampling indicates that all VOCs were non detect with the exception of sample GBN which has one exceedance. For sample GBN, benzene was detected at a concentration of 250 ug/kg which exceeds for unrestricted use. This concentration of benzene does not exceed for restricted industrial use. There were several SVOC exceedances for unrestricted and restricted use; however, the Site is known to contain historic fill. Soil borings taken from the area near the USTs show historic fill present up to 12-17 feet below grade.
Additionally, the National Grid Greenpoint Energy Center is a former MGP site and is adjoined by Newtown Creek, a designated Superfund site to the east. As the DEC has requested that the tank closure report include piping excavation endpoint samples, the report cannot be finalized until the new tank installation is complete. However, due to the results of the endpoint sampling below the old USTs, we are requesting NYSDEC review/approval of analytical data provided to close Spill No. 1701762 at this time. A groundwater sample was collected from the base of the former UST excavation. The groundwater sample indicate one VOC (1500 ug/lt Naphathalene)and multiple SVOCs exceedance their repective NYSDEC GWGS. Following the product piping, vent piping and dispensers island removal, five (5) soil sample were collected from those respective areas. All VOC conccentrations were determined to be below their respective SCO's limits. However, the two (2) samples analyzed via EPA Methos 8270, sample 2 and sample 4, exhibited concentrations of several SVOCs above their respective SCOs. On July 30, 2018 I received an email from John Miller and I spoke with him. The email stated that My name is John Miller and I am the NYSDEC project manager for Greenpoint MGP Site (224052). I was informed recently that National Grid is hoping to close out a spill at the site. My understanding is that any contamination that remains related to the spill would be address under the MPG program. I only just to heard of this issue last week, but after speaking with Grid it sounds like reasonable approach. I wanted to confirm with you whether you agree or not. Do you have any issues or concern?. Based on John Miller's email that any contamination that remains related to the spill would be addressed under the MPG program # 224052 this spill is closed. Spill closed. "

DEC Memo:	"02-21-12 - LZ The Fourth Quarter 2011 Status Report prepared by CEUS Engineering, P.C. is in eDocs. 11/30/11 - LZ The Third Quarter 2011 Status Report prepared by CEUS Engineering, P.C. is in eDocs. 9/23/11 - Austin - Spoke with Jim Quinn of DEC/DER in Albany. He indicated that the former BCF waste oil facility located at 360 Maspeth Ave. (next store to this Ditmas/Gaseteria site) had been cleaned suffciently of haz. waste contamination that it was being d-listed as a Superfund site. The remaining issue on the site was petroleum contamination (floating product). Gaseteria/Ditmas/Newtown Development LLC have taken title to the BCF property adjoining theirs, and have been exonerated of liability for the SSF cleanup, but were still liable for the oil spill cleanup as the new owners. The BCF project (originally under spill 3 9406807, assigned to Hale in Albany) will be coming back to the Region, and will be assigned along with this spill (9006603) to a Remediation Section (either Brevdo or Hussein) for remediation of both adjoining sites. Quinn will send down information on the discussions with Gaseteria, et. al. regarding their responsibilities in this matter. - end 09/06/11 - LZ Reviewed the Second Quarter 2011 Status Report (eDocs)describing the activities at the site. bioremediation, now temporarily suspended, is scheduled to be retested in the spring 2012. MW-21 that has been destroyed and MW-9R, located nearby, takes over function of MW-21. 07/20/11 - LZ The April 28, 2011 First Quarter Status report (eDocs) quartely report shows that free product appeared in 6 wells; the highest thickness of it was 0.21 foot. The next report is due August 15, 2011. 03/03/11 - LZ The February 14, 2011 RAWP (eDocs) has been approved by DEC letter dated 03/03/11 (eDocs), including quarterly well monitoring and quarterly submission of reports. 11/02/10 - LZ Has reviewed and approves a CEUS Engineering request for a 90-day extension to collect additional data, design a petroleum recovery system, and submit a revised remedial action work plan. The work plan

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

to be submitted by January 31, 2011. In eDocs is the October 29, 2010 Third Quarter 2010 report. 10/12/10 - LZ The July 30, 2010, quarterly report (eDocs) by CEUS Engineering, P.C., proposes installation of recovery wells south of MW-2 where free product still exists. After five wells are installed, vacuum truck extraction will be performed and its results analyze to determine whether to continue weekly vacuuming or to install a recovery system. 04/22/10 - LZ Staff reviewed the March 31, 2010 report(eDocs)prepared by CEUS Engineering, P.C. To improve the effectiveness of bioremediation, CEUS Engineering proposes the complete extraction of free product. Vacuum-enhanced product recovery will be conducted using temporary extraction points in the vicinity of MW-2 until free product is removed, while the bioremediation process is suspended. Bioremediation will resume in the fall of 2010, utilizing monthly bio-applications, and the process will be monitored by sampling performed quarterly. Staff approved the proposed modifications to product recovery and bioremediation operations as well as the proposed schedule of the future activities requiring that vacuum-enhanced product recovery must be conducted at least weekly. 02/12/10 - LZ John Rhodes (phone 646-465-2494), since his comany CEUS took over the project, requested an extension to submit the report by March 31, 2010. Request granted. 10/27/09 - LZ Reviewed the AST quarterly report (eDocs) that covers April - June 2009 activities. Monthly gauging were conducted in 17 onsite and offsite wells. Well MW-2 exhibited free product during every gauging (0.006 -0.07 foot). 09/16/09 - LZ E-mailed Chris Tomasello of AST, LLC requesting a 2nd quarter 2009 report be submitted by September 22th. In addition to previous reports, this report should include the amount of recovered product and all, listed in TAGM 4046, VOCs, SVOCs, and MTBE being analyzed (we spoke about this in April). 05/04/09 - LZ The May 1, 2009, Advanced Site Restoration Quarterly Status Report (eDocs) covers remedial activities from January to April 2009. The monitoring well network was gauged on January 6, February 6, and March 4, 2009, and sampled on April 13, 2009. Gauging was performed at MW-2 through MW-6, MW-8, MW-10, MW-16, MW-17, MW-19, and MW-21.The groundwater samples were analyzed for VOCs, including BTEX and MTBE. Total BTEX concentrations ranged from non-detected to 350 ug/l (MW-10). MTBE concentrations ranged from non-detected to 11 ug/l (MW-21). Concentration of BTEX in excess of applicable NYSDEC GWQS were detected in 3 groundwater samples collected during this groundwater sampling event. The next sampling event is scheduled for July, 2009. LNAPL was last detected on March 6, 2009 in MW-2 and was bailed out from this well. 05/04/09 - LZ The October-December 2008 quarterly report (eDocs) prepared by Advanced Site Restoration, indicates that 500 gallons of Bio Rem LLC H-10 were pumped monthly into the sit s bio-irrigation system. Since October 2006, total 53.5 gallons of LNAPL have been removed from the ground. Free product still exists in MW-2 and MW-17. Twelve wells (MW-2 through MW-6, MW-8, MW-10, MW-16, MW-17, and MW-19 through MW-21) were gauged on 10/01/08, 11/03/08, and 12/17/08. On October 1, 2008, monitoring wells MW-3 through MW-6, MW-8, MW-10, MW-16, and MW-19 were sampled: total BTEX concentration range was found from non-detected to 68 ug/l (MW-19); MTBE concentration range was found from non-detected to 9 ug/l(MW-5). 06/16/08 - LZ A report, dated April 2008, prepared by the ASR, provides data concerning remediation efforts and the level of current contamination at the site. From October 2006 to February 2008, 53.5 gallons of LNAPL has been extracted from groundwater. The ASR has

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

applied 30,000 gallons of bio solution-BioREm H-10. Total BTEX has decreased in all monitoring wells, except MW-2. Free product is still in MW-2 and MW-17. 08/08/06 -Zielinski A site visit and a meeting with Mr. Tomasello of ASR. Sent a letter to Mr. Tomasello((see eDocs) requesting installation of three additional wells, reinstallation of MW1, MW11, and W9. 07/18/06 - Zielinski A review of the July 2006 monthly montoring report received from Advanced Site Restoration, LLC,(ASR) indicates that at wells MW-2 and MW-6 concentraction of benzene and total BTEX concentration is relatively high. Results from other seven wells indicate low contamination of groundwater. In August, staff will visit the site. In August, ASR will submit a quarterly report regarding the status of remedation process at the site. 08/18/04 - Zielinski In its letter of August 18, 2004, the department requested that the delineation of petrolum contamination had to be performed by Ditmas Oil Association. In addition, a remedial action plan must be submitted by the facility. These documents have not been received by the department, a review of files on July 5, 2006, shows. 4/21/04 - This project is re-assigned to Zhao from Sigona. Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO This site spill cleanup has been consolidated under Spill No. 9006603. 09/15/90: SPILLER WILL DISPOSE OF SOIL PROPERLY & ASSURE WARNING SYSTEM IS IN PROPER WORKING ORDER, SPILL TO BE REFERRED TO MOSF COORDINATOR. DEC Sigona performed follow-up investigation and discovered groundwater contamination. Site is under a consent order to performed remediation of groundwater and tidal wetlands. 06/29/12 - THIS SPILL CASE HAS BEEN TRANSFERRED TO SECTION B ON 06/29/12 AS DISCUSSED WITH RANDY AUSTIN 07/31/2012 - V. Brevdo Received Second Quarter 2012 Status Report, dated July 20, 2012. Reviewed Report. The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was located in an industrial area of Greenpoint, Brooklyn, adjacent to the English Kill, a part of Newtown Creek. The Site received various petroleum products from barges in the adjacent waterway and the Buckeye pipeline that ran through the Site. Fuel was stored in above and below ground storage tanks and then pumped into trucks through an underground piping system. Petroleum products stored included gasoline, kerosene, diesel, No. 2 Fuel Oil and Bunker C oil. A major spill in excess of 40,000 gallons of gasoline occurred on January 15, 1975 during the Gulf operation according to DEC and Coast Guard records. Tank Number 7, a 475,000 gallon storage tank, was overfilled causing gasoline to fill the surrounding (permeable) retaining dyke to a depth of eight feet. Gasoline was observed emerging from the sea wall at the English Kill. An estimated 1,000 gallons reached the English Kill where the fire department prevented the deployment of berms due to a fire hazard. Additional dissolved contaminants reached the English Kill as the result of water being added to the retaining dyke in an attempt to reduce the gasoline s flow into the ground. The Site was decommissioned between February 2004 and June 2005. Approximately twenty petroleum storage tanks were removed from service. (A 2000 gallon fuel oil Underground Storage Tank (UST) remained for heating the onsite office building.) Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. Remediation of the Site has progressed since 2004 under the NYSDEC approved Facility Closure and Oil Spill Remedial Action Plan under the Order on Consent. In 2011 and to date in 2012,

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

approximately 25 gallons of relatively well separated product was recovered using skimmers and peristaltic pumps, and 62 gallons of emulsified product and oily water by bailing. Additional amounts were recovered during vacuum truck visits. Planned activities for the fourth quarter of 2012 include the following: Commencement of the bioremediation and induced oil recovery pilot test; Placement of the scavenger with groundwater pump in recovery well R-9; Continued Gauging and Quarterly testing in accordance with the approved Monitoring Plan; Commencement of Performance Monitoring of the bioremediation and oil recovery pilot test. V. Brevdo 11/09/2012 - Brevdo CEUS Engineering, P.C. (CEUS) submitted status Report for the former Ditmas Terminal. The following provides a Status Report in accordance with Consent Order R2?0272?97?12; the NYSDEC approved Facility Closure and Oil Spill Remedial Action Plan 1 October 2004 (RAP); the Remedial Action Work Plan Addendum and Fourth Quarter 2010 Status Report 8 February 2011 (RAWP Addendum); and the NYSDEC approval letters 18 August 2004, 5 November 2004, 22 April 2010, 5 January 2011 and 3 March 2011 for the former Ditmas Oil Terminal at 364 Maspeth Avenue, Brooklyn, NY (the Site). This Status Report has been prepared by CEUS Engineering, P.C. (CEUS) with field and data management assistance from Advanced Site Restoration, LLC (ASR). Product removal will continue using the skimmer with groundwater depression, a standalone skimmer, a peristaltic pump and bailing.V. Brevdo 07/29/2013 - V. Brevdo E-mail from consultant wiht attached 2nd Quarter 2013 monitoring report. Vadim, Attached is the 2nd Quarter Status Report for the former Ditmas Oil Terminal. I will also follow-up with a hard copy and compact disk. Many thanks, John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, 07960 NY: 62 William Street, 3rd Floor, New York, 10005 646 465 2494 10/31/2013 - V. Brevdo E-mails from CEUS Engineering: Vadim, Attached is the 3rd Quarter Status Report for the former Ditmas Terminal, minus the laboratory analytical reports that I will send you in a separate email. I will also send you a hard copy and CD by mail. Please confirm receipt. Thanks, John A. Rhodes, P.E. CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineeringPC.com JARhodes1@Verizon.net Vadim, Attached are the laboratory analytical reports to accompany the 3rd Quarter Status Report sent in an earlier email. Thanks, John A. Rhodes, P.E. E-Mail from Brevdo of DEC to John Rhodes of CEUS: Dear Mr. Rhodes: This is to acknowledge receipt of two e-mails with attached status report and lab analytical reports. I will review in the upcoming few days and will get back to you if need be. Contact me if you have questions. Thank you. Vadim Brevdo 11/06/2013 - V. Brevdo Summary of the project status as of 11/06/13. Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. Remediation of the Site has progressed since 2004. The Site was decommissioned between February 2004 and June 2005. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,000 gallons of product and water were removed from test pits. A bioremediation

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

system was designed and installed in 2005. The system consisted of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On November 5, 2013, CEUS Engineering, P.C. (CEUS) submitted remediation Status Report for the 3rd quarter of 2013. Planned activities for the 4th quarter of 2013 associated with further implementation of a RAWP Addendum remain similar to those undertaken in 3rd quarter of 2013, and include the following: Continuation of the bioremediation system operation, including the water depression pumping, oil skimming, treatment plant operation; continued evaluation of the effectiveness of the remedial system and its improvements, cleaning of discharge trenches; gauging and quarterly testing; periodic removal of oily water with a vacuum truck. Recoverable product will continue to be removed by peristaltic pump, skimmer or baling, followed by absorbent socks. CEUS advised the Department of their opinion that the Site is affected by migration of contaminants from the upgradient Key Span / National Grid Greenpoint facility (a.k.a. former Equity Manufactured Gas Plant site) which is undergoing remedial investigation via State Superfund program. The Department s oversight of said State Superfund project is conducted by DER s Remedial Bureau C in Central Office, Albany. Region 2 Project Manager for the Former Ditmas Oil Terminal petroleum spill remediation project and Central Office project manager for the Key Span / National Grid Greenpoint State Superfund project discussed future coordination of investigative and remedial work on these adjacent properties. VB 02/10/2014 V. Brevdo - CEUS submitted 4th Quarter 2013 Status Report, dated February 3, 2014. Estimated time frame for completion of the remediation and submission of the Final Engineering Report is early 2015, which is in the Section 5 Estimated Schedule , page 11 of the report. VB 05/02/2014 - V. Brevdo CEUS submitted 1st Quarter 2014 Status Report, dated April 28, 2014. VB 08/06/2014 - V. Brevdo CEUS submitted 2nd quarter 2014 Status Report, dated August 6, 2014. VB. 11/07/2014 - V. Brevdo CEUS/Advanced Site Restoration submitted 3rd quarter 2014 Status Report, dated November 7, 2014. Request Department’s approval of several cleanup technology changes. Department is reviewing the report. VB. 11/10/2014 - V. Brevdo Current Project Status Synopsis: Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On November 7, 2014, CEUS Engineering,

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the 3rd quarter of 2014. As of the end of the third quarter, 2014, the active oil recovery portion of the bioremediation system (skimmer and water depression pump) has eliminated the presence of product in MW-2 area. However, product continues to be detected in R-10 and MW-22 areas. Therefore, CEUS/ASR petitioned the Department for cessation of the active (by pumping) oil recovery operation in the MW-2 area and moving the pumping equipment to other areas. Absorbent socks will continue to be applied at MW-2 and maintained to capture product should it re-appear. CEUS/ASR also proposed several other modifications to the RAWP: elimination of three destroyed wells from monitoring program; pumping water from MW-22 and evaluating the reason MW-22 is slower than the other wells to improve; and adding biodegradable dye or sodium chloride as means of evaluating concentration changes and flows during pumping. CEUS / ASR plans to accomplish remedial objectives and petition the Department for closure of spill case tentatively in early to mid 2015. RP (Malu Properties) continues cooperation with USEPA Remedial Investigation for the Newtown Creek CERCLA Site. Malu Properties has allowed the USEPA to set up a water sampling station on the property s recently repaired bulkhead. Malu Properties also assisted the USEPA in establishing automated sampling station for storm water in the region. The next groundwater sampling is scheduled for December 2014. On November 10, 2014, the Department issued letter of approval of the 3rd quarter 2014 remediation status report and recommendations contained in the report. VB 05-01-2015 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) On April 30, 2015, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the 1st quarter of 2015. As reported in earlier status reports, the active oil recovery portion of the bioremediation system (skimmer and water depression pump) has eliminated the presence of product in MW-2 area. Absorbent socks continue to be applied and maintained to capture product when it re-appear. To date, no product has reappeared in the MW-2 area. However, product continues to be detected in R-10 area. After conducting tidal and product recovery tests, CEUS/ASR decided to implement automatic product recovery in R-10 area to increase recovery rate. Implementation of automated product recovery in R-10 was included in the approved RAWP should absorbent socks be inefficient in removing the product. CEUS/ASR intends to install a belt skimmer in R-10. The next groundwater sampling is scheduled for May 2015. VB 08-25-2015 - V. Brevdo On August 25, 2015, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the second quarter of 2015. As reported in earlier status reports, the active oil recovery portion of the bioremediation system (skimmer and water depression pump) has eliminated the presence of product in MW-2 area. Absorbent socks continue to be applied and maintained to capture product when it re-appear. To date, no product has reappeared in the MW-2 area. However, product continues to be detected in R-10 area. After conducting tidal and product recovery tests, CEUS/ASR decided to implement automatic product recovery in R-10 area to increase recovery rate. Implementation of automated product recovery in R-10 was included in the approved RAWP should absorbent socks be inefficient in removing the product. CEUS/ASR intended to install a belt skimmer in R-10. However, over the second quarter, insufficient product has collected in R-10 area to meet the minimal requirements

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

for removal by a belt skimmer. Therefore, CEUS delayed implementation of product removal by a belt skimmer, and continue using absorbent sock instead. Groundwater was tested on June 8, 2015. The next groundwater sampling is scheduled for September 2015. VB 11-02-2015 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On November 2, 2015, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the third quarter of 2015. The Department is reviewed the report which has good news. CEUS / ASR intensified effort at product removal from recovery well R-10, coordinating recovery with the tides, and have not detected product since early August 2015. CEUS / ASR feel that they may be able to declare the Site product free in the upcoming few months. The focused recovery efforts on well MW-22 have also been successful. As extended pumping indicated improving conditions, CEUS / ASR took an unscheduled sample on September 29, 2015 in which benzene was detected at low concentrations of 29 microgram per liter (ppb). CEUS / ASR intend to continue focused efforts and sampling and testing to check for rebound. However, if aforementioned improvements continue, then all contaminants in all wells are expected to be below standards / cleanup criteria or trending downward criteria. Therefore, CEUS anticipate being in a position for closure in the spring of 2016. VB 02-02-2016 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (NYSDEC Spill No. 9006603) The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution and oxygenated water to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

of product using mechanical oil skimmer. The upgraded system began operation in September 2012. On February 1, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the fourth quarter of 2015. No free product has been encountered in any well other than R-10 since June 2014. CEUS / ASR therefore proposed the cessation of product gauging and recovery in all wells other than R-10. CEUS / ASR will continue to monitor for product in R-10 well and recover product using absorbent socks. CEUS/ ASR concluded that the bioremediation is no longer necessary except to enable the surging of MW-22, an inland well, and the discharge of contaminated water pumped from MW-22. CEUS /ASR proposed to maintain the bioremediation system while they continue to address the conditions at MW-22, and operate the system in conjunction with activities related to MW-22. Planned activities for the next quarter as related to the RAWP Addendum include the following: The bioremediation system will be maintained and operated on an as-needed basis to accommodate continued sampling and/or remedial activities at MW-22; If benzene concentrations remain elevated at MW-22 during upcoming March 2016 sampling event, CEUS /ASR will recommence remedial activities, including pumping and pulsing of the well; Sampling and testing will continue for wells MW-8 and MW-23 for at least two more quarters to confirm a downward trend in benzene concentrations; Frequent monitoring for product in well R-10 will continue and product, if encountered, will be removed using absorbent socks. A scope of reduction in the sampling/monitoring and remedial activities in the next quarter is presented in detail on Page 10 of the January 31, 2016 Status Report. On February 2, 2016, the Department approved Fourth Quarter 2015 Status Report including the course of action and reduction of the scope of sampling/monitoring and remediation activities proposed by CEUS /ASR. CEUS /ASR anticipate to accomplish closure of this spill case in late 2016 or early 2017. VB May 2, 2016 - V. Brevdo Received and e-mail from John A. Rhodes of CEUS Engineering, P.C. and first quarter of 2016 monitoring report: Vadim, Attached is the 1st Quarter 2016 Status Report for the former Ditmas Terminal. There is not much to report as we were unable to do much over the winter. However, we have put the treatment system back on line and have begun working on MW-22, so we should have more news in the next status report. Benzene in MW-22 and product in R-10 are about the same. Thanks, John John A. Rhodes, P.E., F.NSPE CEUS Engineering, P.C. NJ: 5 Bedford Place, Morristown, NJ 07960 NY: 62 William Street, New York, NY 10005 646 465 2494 JRhodes@CEUSEngineering.com JARhodes1@Verizon.net 08/03/2016 - V. Brevdo On August 1, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the second quarter of 2016. CEUS / ASR continued gauging and product recovery activities for well R-10. Product recovery was done using the absorbent socks. Planned activities for the next quarter as related to the RAWP Addendum include the following: The bioremediation system will be maintained and operated on an as-needed basis to accommodate continued sampling and/or remedial activities at MW-22; CEUS / ASR will continue the recent successful activities in the MW-22 area to improve rate of contaminant degradation, including sustained and monitored pumping, and surging of the well; CEUS / ASR will continue frequent monitoring for product in R-10, and remove it using absorbent socks should it be encountered. CEUS /ASR anticipate to accomplish closure of this spill case in late 2016 or early 2017. VB 10/28/2016 - V. Brevdo On October 31, 2016, CEUS Engineering, P.C.

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

/ Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the third quarter of 2016. CEUS / ASR concluded that the recalcitrant oil observed in well R-10 was the result of seepage from the blocked sewer. Upon removal of the blocked portion of the sewer pipe, the oily sediment and soil in the vicinity of the blocked portion of the pipe, no oil has been detected in R?10. No oil has been detected anywhere on the former Ditmas property and the oil recovery program has been completed. The March, June and September 2016 sampling and testing show benzene concentrations in remaining wells to be below or near 100 ?g/l with the exception of MW?22. Focused activities on MW?22 will continue. CEUS /ASR anticipate to accomplish closure of this spill case in 2017. VB 02/01/2017 - V. Brevdo On February 1, 2017, CEUS Engineering / ASR submitted 4Q 2016 Site Status Report and Spill Case Closure Petition. Upon review of both report and petition, DEC project manager requested ASR to revise report and petition to make a better and more compelling case to support merits of spill case closure petition. VB 02/15/2017 - V. Brevdo Former Ditmas Oil Terminal, 364 Maspeth Avenue, Brooklyn (NYSDEC Spill No. 9006603). Project Summary and Spill Case Closure Decision. The Ditmas Oil Terminal (the Site) was an independent petroleum products storage and distribution bulk terminal. The Site was decommissioned between February 2004 and June 2005. Remediation of the Site has progressed since 2004 and is implemented under the Order on Consent. Approximately twenty petroleum storage tanks were removed from service. Underground contamination was delineated. All tanks and underground piping were drained of their content, demolished and removed from the Site. The Site is now a short term parking area for film production trailers, and other commercial fleet vehicles. Previously, it was a motor vehicles impound lot operated by the NYC Marshal. The Department approved Facility Closure / Oil Spill Remedial Action Plan and Addendum in October 2004 and March 2011 respectively. Initially, approximately 15,715 gallons of product and water were removed from test pits. A bioremediation system was designed and installed in 2005. The system consists of a series of trenches to allow seepage of a solution to enhance the biological degradation of petroleum contaminants. The March 2011 RAWP addendum required upgraded recovery of product using mechanical oil skimmer in Recovery Well R-9 near Monitoring Well MW-2. The upgraded system began operation in September 2012 and completed oil recovery by June 2014. CEUS / ASR therefore proposed the cessation of product gauging and recovery in all wells other than R-10, where oil recovery continued. Additionally, CEUS/ ASR concluded that the bioremediation is no longer necessary except to enable the surging of MW-22 and the discharge of contaminated water pumped from MW-22. CEUS /ASR maintained the bioremediation system while they continue to address the conditions at MW-22, and operate the system in conjunction with activities related to MW-22. On October 31, 2016, CEUS Engineering, P.C. / Advanced Site Restoration (CEUS / ASR) submitted remediation status report for the third quarter of 2016. CEUS / ASR concluded that the recalcitrant oil observed in well R-10 was the result of seepage from the blocked sewer. Upon removal of the blocked portion of the sewer pipe, the oily sediment and soil in the vicinity of the blocked portion of the pipe, no oil has been detected in R?10. As of February, 2017, no oil has been detected anywhere on the former Ditmas property and the oil recovery program has been completed. The March, June and September 2016 sampling and testing show benzene concentrations in remaining wells to be below or near 100 ?g/l with

DITMAS OIL ASSOCIATES, INC. (Continued) **S103827207**

the exception of MW?22. Focused activities on MW?22 continued through December 2016. In the 4th Quarter 2014 Status Report (dated January 31, 2015), a proposal was submitted to undertake tests on MW-22 and a pilot study involving surging to try to increase the rate of contaminant reduction. This proposal was approved by the NYSDEC, and the tests conducted in the spring of 2015 and pilot study begun in September of 2015. Initially, a dye study demonstrated that MW-22 was not being adequately affected by the bioremediation system - oxygenated water was not reaching the area of the well. Aquifer testing evaluated the hydraulic conductivity to be 0.85 gallons per day per foot squared, a substantially lower value than that measured in surrounding areas. With the low hydraulic conductivity and lack of flow to the south toward the bio-remediation trenches and the English Kills, the only sensitive receptor for contaminated groundwater, CEUS/ASR concluded that remaining contaminants were isolated and contained, and not affecting the English Kills. Further, CEUS/ASR concluded that continued surging of the well would have limited effectiveness as the spreading of oxygenated water via the bio-remediation trenches or the recovery of contaminated water would be limited by the low hydraulic conductivity. In turn, CEUS/ASR submitted that the dissolved groundwater concentrations at MW-22 posed no further threat to human health and the environment and have been addressed to the extent feasible. CEUS /ASR proposed closure of this spill case in February, 2017, based on the following criteria: " The Primary Spill Source has been addressed, " Free product has been removed, " Grossly contaminated soil has been addressed to the extent feasible, " The remaining areas of contaminated soil have been addressed to the extent feasible as per CP-51 Soil Cleanup Guidance, " Residual groundwater contaminants either meet standards/cleanup guidance values or are within the range acceptable to the Department, " The nature and extent of groundwater contamination has been delineated, " Dissolved groundwater concentrations have been addressed to the extent feasible, " No migration of contaminants off site is occurring and no threats to sensitive receptors exist, " Remaining contamination is contained, " No threat of exposure to vapors from remaining contamination exists, and, " The Site poses no further threat to human health and the environment for the contemplated use. The Department closed this spill case on February 15, 2017. "

Remarks: "GASOLINE Spill into secondary containment - NYCDEP,USCG,NYCFD ON SCENE, ALARM FAILURE CAUSED PRODUCT TO EXIT THROUGH VENT IN FIRE EXTINGUISHING SYSTEM,APPROX 200 CU YDS OF CONTAMINATED SOIL."

Update By:	HMDUDEK
Site Description:	"Location: The site is located at 46-81 Metropolitan Avenue and occupies Queens Borough Tax Block 2611, Lot 71. The site is bound to the north by a bulkhead, the majority of which is a part of the east-adjoining lot, followed by Newtown Creek (a National Priorities List [NPL] site), followed by a parking lot and Grand Avenue; to the east by a grocery store, caf , liquor store, and an asphalt-paved parking area; to the south by Metropolitan Avenue followed by a wholesale grocery store and industrial buildings; and to the west by a concrete supplier and a New York City Transit Authority building,

46-81 METROPOLITAN AVE (Continued) **S127990275**

followed by Newtown Creek. Surrounding properties include single- and multi-story buildings occupied by industrial and commercial occupants. Site Features: The site is approximately 4.5 acres (195,698 square feet) in area and is located in an industrial part of the Ridgewood neighborhood of Queens, New York. According to the 2013 United States Geological Survey (USGS) Brooklyn Quadrangle 7.5-Minute Series Topographic Maps, the site is at an elevation of about 5 to 10 feet above mean sea level (msl). The site and surrounding area slope down to the northwest towards Newtown Creek. The site primarily consists of an asphalt parking lot with a one-story bus maintenance building with an attached two-story office building in the southern portion of the site, and four office trailers in the northeastern portion of the site. Current Zoning and Land Use: According to the New York City (NYC) Planning Commission Zoning Map 13b, the site is located in an M3-1 manufacturing zoning district. M3 districts are designated as areas with heavy industries that generate noise, traffic or pollutants. Typical uses include power plants, solid waste transfer facilities and recycling plants, and fuel supply depots. Past Use of the Site: The site has been occupied by commercial and industrial facilities since as early as 1902. The site is currently developed with a large asphalt paved parking lot, offices and a bus maintenance facility. The historical and current site uses of environmental concern include: automotive repair operations (1971-present); gasoline filling station (1971-2006); Bohack Terminal (1936-1950); and, Hardy, Voorhees and Co. Lumber Yard and Planing Mill (1902). Previous studies dating back to 2014 indicated that stored petroleum and hazardous substances were associated with the current bus repair operations. In addition, several regulatory listings for the site (Resource Conservation and Recovery Act Generators [RCRA], Facility Index System, New York State Department of Environmental Conservation [NYSDEC] Spills and NYSDEC Petroleum Bulk Storage Facilities databases) identified petroleum storage, petroleum releases (closed status) and hazardous waste generation at the site. Previous studies indicate that a total of 21 underground storage tanks (USTs) were removed from the site (along with petroleum-impacted soil and groundwater), and petroleum spills were reported and closed. These reports also indicate that at least one closed-in-place UST; hazardous lead; and petroleum-impacted soil and petroleum-impacted groundwater, including light non-aqueous phase liquid (LNAPL), remain at the site, despite documented remedial efforts related to the petroleum spills. In addition, chlorinated solvents were identified in sub-slab soil vapor at the site. Site Geology and Hydrogeology: The site is underlain by fill to depths ranging from about 4 to 9 feet below grade surface (bgs) across the site; the fill generally consists of sand with varying amounts of gravel, brick, slag, glass, and coal ash. The fill is underlain by native soil which consists of varying amounts of clay, peat, sand and silt. Groundwater was encountered at about 3.5 to 7.5 feet bgs. Groundwater flow is presumed to be to the north towards Newtown Creek. The United States Geological Survey (USGS) Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and Parts of Bergen and Hudson Counties, New Jersey estimate bedrock to be about 200-feet bgs and indicate the bedrock underlying the site is the Hartland Formation. The Hartland Formation is comprised of a dark gray, medium to coarse-grained muscovite-biotite-garnet (mica) schist and gray fine-grained quartz-feldspar granulite with biotite and garnet, with localized

46-81 METROPOLITAN AVE (Continued) **S127990275**

	concentrations of granite and intrusions of coarse-grained granitic pegmatite."

DEC Memo:	"05/17/06-Hiralkumar Patel. Spoke to Jim at Protest. it was 1500 gal AST. tank was cleaned in past and doesn't have manhole. and Jim found dry leak and thinks it is from patch on top of tank. he hasn't find any oil stains on floor. he has send proposal to owner and planning to clean tank and to put manhole on tank. haven't found PBS number. Spoke to Derek. he is process of buying this property and gave current owner's name and number. Joseph Heimlich (718) 381-2405 As per Derek, he has closing of this property on Jun 30 2006. once he will get property on his name, he will remove tank and system. owner is not using tank currently. asked him to send tank test results and letter signed by current owner and purchaser stating that they will remove tank after closing and tank is not in use currently by end of tomorrow. told Derek that as this tank is more than 1100 gal capacity, it has to be registered with PBS eventhought they are planning to remove it after Jun. Spoke to Joseph. as per him, he has turn off boiler and tank is not in use currently. tank has oil less than half of the volume. told Joseph that if Department receive letter from him and Derek, Department can wait till they remove tank. but tank has to registered with PBS now. send out letter with tank registration requirement. faxed to Joseph and Derek. Joseph Heimlich 35 Meadow Street Brooklyn, NY 11206 FAX (718) 381-2875 05/19/06-Hiralkumar Patel. Received letter from Joseph and Derek. abstract: - owner is selling property and property is set to close on or about July 30, 2006. - heating season is over and boiler is currently turned off and will remain turned off through contract closing date - based on tank test, owner has cancelled all scheduled oil deliveries and suspended oil delivery service until further notice. 08/01/06-Hiralkumar Patel. spoke with Derek. he is no longer in process of buying this property. spoke with Joseph. owner has removed oil, clean tank and sealed it back. he didn't do any isolation test or system test after tank cleaning. asked Joseph to do system test again. he will call ABC tank for further testing. 08/02/06-Hiralkumar Patel. received call from Robert from ABC Tank. they will do system test probably next week. Robert will call once he gets test result. 08/29/06-Hiralkumar Patel. spoke with Donna at ABC

APARTMENT BUILDING (Continued) **S107789405**

Tank. they have changed rubber gasket on tank. she doesn't have any information about system test. she will check and call back. received call from Donna. she got test result and will fax it. got passing system test in fax. tank is registered now. PBS#: 2-610289 based on available informations, case closed."

Site Description: "Location: The site is located at 88 Ingraham Street in Brooklyn, NY. Site Features: It consists of a two story building with an adjoining garage. The building comprises approximately 11,000 sq ft. and occupies the entire site. Current Zoning/Use: The site is currently used as for storage and restoration of antique furniture and artwork. The surrounding area is industrial. Historical Use: Since 1933 the building has been used for skein dying, dry cleaning and laundry operations. The site was acquired by Popular Hand Laundry (circa 1970) which operated dry cleaning services. Prior to 1970, a dry cleaning and laundry facility was operated by Klink. The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north. "
Env Problem: "Nature and extent of contamination: Post remediation: remediation at

88 INGRAHAM REALTY CORP (Continued) **1000425382**

	the site is complete. prior to remediation, the primary contaminants of concern were the chlorinated solvents tetrachloroethene and trichloroethene in soil, groundwater and soil vapor. Remediation has successfully achieved soil cleanup objectives for commercial and industrial use. Remaining contamination in soil vapor is being managed under a Site Management Plan. "
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Description: "Location: The site is located at 88 Ingraham Street in Brooklyn, NY. Site Features: It consists of a two story building with an adjoining garage. The building comprises approximately 11,000 sq ft. and

88 INGRAHAM REALTY CORP (Continued) **1000425382**

occupies the entire site. Current Zoning/Use: The site is currently used as for storage and restoration of antique furniture and artwork. The surrounding area is industrial. Historical Use: Since 1933 the building has been used for skein dying, dry cleaning and laundry operations. The site was acquired by Popular Hand Laundry (circa 1970) which operated dry cleaning services. Prior to 1970, a dry cleaning and laundry facility was operated by Klink. The site remedial program is being performed by 88 Ingraham Realty Corp. and Popular Hand Laundry and Cleaners of Richmond Hill, Inc. under the DEC's Voluntary Cleanup Program. Site Geology and Hydrogeology: Groundwater was detected at about 15 feet below grade, and measurements of groundwater elevation indicated that groundwater flow is to the north. "

Env Problem: "Nature and extent of contamination: Post remediation: remediation at the site is complete. prior to remediation, the primary contaminants of concern were the chlorinated solvents tetrachloroethene and trichloroethene in soil, groundwater and soil vapor. Remediation has successfully achieved soil cleanup objectives for commercial and industrial use. Remaining contamination in soil vapor is being managed under a Site Management Plan. "

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	"9/21/07 bf: Called Allan Hoffman 718-381-3000 and left message to call me back. Sent ttf letter to: Allan Hoffman Cornell Beverages, Inc. 105 Harrison Place Brooklyn, NY 11237 9/24/07 Received call from Donna Hoffman. Tank failed with a dry leak and the tank is ot in use at this time. She said that she they are working on the repair or closure of the tank. They are not sure which they want to do at this time. She did not know how to proceed on repairs. I told her that her tank company may do repairs and she should contact them or another company. She also wanted to know about closure. I told her it would need to be emptied and cleaned prior to filling it with sand, cement, or foam. If it's removed in place, it would also need emptying and cleaning prior to its removal. I told her I sent Allan Hoffman a letter on Friday explaining how to proceed. bf 10/31/07 On 10/12/07, received letter from A. Hoffman. They are in the process of locating a company to do the repair work. They only fill the tank half full and that was the approximate level at which the test was performed. Leak is a dry leak. he will be having surgery on 10/16 and will be recovering two weeks after that. bf 11/8/07 Received call from A.

CORNELL BEVERAGES INC (Continued) **U000394301**

Hoffman. He requested a list of contractors to repair tank. I faxed him the list and disclaimer. Fax:718-381-3001. bf 4/11/08 received letter from Allan Hoffman of Cornell. Fill box was replaced by Empire Fuel and the work order was attached. Passing tank test results were also attached. 10/15/08 Informed by Alan Hoffman that fill box is above ground so any spills would be visible. bf"

DEC Memo:	"4/4/16 - See BCP C224210, K. Forster, PM. Spill to remain open until BCP complete. 10/5/17 TJD Site inspection. The former junk yard operating at this address is no longer in business. All structures have been removed from the property and the parcel is now vacant. As per above note this site is in the BCP program which is being managed by Central Office DER staff. Following the inspection, DeMeo (R2) contacted Forster (CO) regarding this reported housekeeping condition at a former junk yard site - based upon staff discussions the following decision has been made. Spill 1305242 is closed and cross-referenced to spill 0510000. CO DER staff will manage both the spill and BCP project simultaneously. "

DEC Memo:	"12/23/04 Tipple updating//all prior notes lost in database// Tipple

NMS WASTE PAPER (Continued) **S105842307**

has conducted two site visits, the last of which was 12/22 PM. There had been a machinery problem in the recycling facility which required the excavation of a large area of the floor. Tipple met with Joel Adrian of the Jacques Whitford company to conduct a visual/ olfactory inspection of the excavation. The excavation was approximately 20-25' long by 10-12' wide and extended about 6 foot below the floor surface. The excavation revealed no visual, olfactory /PID evidence of petroleum products, what the excavation did reveal was broken brick, some concrete, glass and what I observed to be clean brown soil. Jacques Whitford will grab one sample from this excavation and advance two geoprobe borings to groundwater and collect samples from the soil/water interface. The results of the three above described samples will be used to determine weather any additional actions will be required. 12/29/04 tipple delivering a STIP and CAP to the site while the two additional borings are being advanced. Upon arrival at the site, the Rig was too large to maneuver through the available space, the additional borings have been tentatively rescheduled for next Tuesday Jan. 4, 05 1/31/05 reviewed submission, discussed with DEC Attorney Nehila, Oliva & Nehila ok with closing if data is ok. Data has some SVOC exceedances which can be associated with the broken asphalt pieces in the urban fill material which I witnessed in the excavation. NFA letter written including a caveat which reads if excavation is to proceed, a health and safety plan must be followed. "
Not reported
Remarks: "11/18/04 site mtg. with contractor, purchaser, and agent. Discussed the future actions necessary to attain a NFA."

BROWNFIELDS:

Name:	FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP.
Address:	1181 FLUSHING AVENUE
City,State,Zip:	BROOKLYN, NY 11237
Program:	BCP
Site Code:	505316
Acres:	0.502
HW Code:	C224210
SWIS:	2401
Town:	New York City
Record Added Date:	03/10/2015
Record Updated Date:	01/06/2021
Update By:	SMQUANDT
Site Description:	"Location: The Former Universal Scrap Metal Processors Corp. site is located in an urban area in the East Williamsburg neighborhood of Brooklyn, Kings County. The irregularly-shaped site has approximately 109 feet of street frontage on Flushing Avenue and 203 feet of street frontage on Stewart Avenue. Site Features: The property was partially developed with a 1-story 4,500 square foot commercial building which was constructed in 1931, but demolished in 2016. The site is currently vacant, surrounded by a fence and unpaved. Current Zoning and Land Use: The site is located in a M1-2 zone which allows nearly all industrial type uses. Additional uses are allowed, including office, hotel, and retail. M1 districts are often buffers between M2

FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP. (Continued) **S117394468**

or M3 districts and adjacent residential or commercial districts. The scrap metal operation which previously occupied the building and property no longer operates. Past Use of the Site: The entire property was used as a railroad freight yard from sometime between 1888 and 1907 to sometime between 1951 and 1965. The south end of the site was utilized as a filling station from approximately 1955 until at least 2003. The southern portion of the site and the building were used for auto repair from 1955 until 2007. The northern portion of the property was used as an auto scrap yard from 1981 through 2007. From 2007 through 2014 the property was used as a scrap metal facility. In January 2006, under Spill #0510000, eleven (11) 550-gallon gasoline underground storage tanks (USTs) and 240 tons of petroleum-impacted soil were removed, and a chemical oxidant was applied to treat groundwater. Site Geology and Hydrogeology: Soil at the site is described as historic fill to a depth of approximately 4 feet below the surface followed by native brown fine sand with silt. The bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Bedrock was not encountered during the remedial investigation, but is anticipated to reside at depths greater than 100 feet below grade. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Depth to groundwater at the site is approximately 12 feet below grade and flows to the north/ northeast, toward the English Kills Channel. Groundwater flow is also highly variable as it may be influenced by the subway tunnel which runs underground north of the site."

Env Problem:

"Site soils and groundwater have been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and poly chlorinated biphenyls (PCBs). Soil vapor has been analyzed for VOCs. Soil: Several VOCs have been detected in site soils, primarily petroleum constituents including 1,2,4-trimethylbenzene at concentrations up to 910 parts per million (ppm) (Unrestricted Use Soil Cleanup Objective (UUSCO) is 3.6 ppm), 1,3,5-trimethylbenzene up to 320 ppm (UUSCO is 8.4), benzene up to 1.9 ppm (UUSCO is 0.06 ppm), ethylbenzene up to 190 ppm (UUSCO is 1 ppm), n-propylbenzene up to 140 ppm (UUSCO is 3.9 ppm), n-butylbenzene up to 70 ppm (UUSCO is 12 ppm), sec-butylbenzene up to 23 ppm (UUSCO is 11 ppm), m-p-xylenes up to 720 ppm (UUSCO is 0.26 ppm), o-xylene up to 260 ppm (UUSCO is 0.26 ppm), toluene up to 20 ppm (UUSCO is 0.7 ppm), and naphthalene up to 17 ppm (UUSCO is 12 ppm). Chlorinated volatile organic compounds (CVOCs) were detected at two locations, including tetrachloroethene at concentrations up to 22 ppm (UUSCO is 1.3 ppm), cis-1,2-dichloroethene up to 27 ppm (UUSCO is 0.25 ppm), trans-1,2-dichloroethene up to 2.3 ppm (UUSCO is 0.19), and vinyl chloride up to 3 ppm (UUSCO is 0.02 ppm). Several Polycyclic aromatic hydrocarbons (PAHs) were also detected in shallow subsurface soils, including benzo(a)anthracene at concentrations up to 1.5 ppm (UUSCO is 1 ppm), benzo(a)pyrene up to 1.1 ppm (UUSCO is 1 ppm), indeno(1,2,3-cd)pyrene up to 0.72 ppm (UUSCO is 0.5 ppm), benzo(b)fluoranthene up to 1.1 ppm (UUSCO is 1 ppm), benzo(k)fluoranthene up to 0.9 ppm (UUSCO is 0.8 ppm), and chrysene up to 1.6 ppm (UUSCO is 1 ppm). Metals, including mercury were detected at concentrations up to 1.57 ppm (UUSCO is 0.18 ppm), barium

FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP. (Continued) **S117394468**

up to 446 ppm (UUSCO is 350 ppm), cadmium up to 7.67 ppm (UUSCO is 2.5 ppm), copper up to 266 ppm (UUSCO is 50 ppm), lead up to 754 ppm (UUSCO is 63 ppm), and zinc up to 1,100 ppm (UUSCO is 109 ppm). Groundwater: Several petroleum-related VOCs were detected in site groundwater including 1,2,4-trimethylbenzene up to 1,400 parts per billion (ppb) (NYSDEC groundwater quality standard is 5 ppb), 1,3,5-trimethylbenzene up to 400 ppb (standard is 5 ppb), benzene up to 380 ppb (standard is 1 ppb), ethylbenzene up to 940 ppb (standard is 5 ppb), isopropylbenzene up to 79 ppb (standard is 5 ppb), m-p-xylenes up to 3,700 ppb (standard is 5 ppb), methyl ethyl ketone up to 780 ppb (standard is 50 ppb), MTBE up to 66 ppb (standard is 10 ppb), naphthalene up to 250 ppb (standard is 10 ppb), n-butylbenzene up to 20 ppb (standard is 5 ppb), sec-butylbenzene up to 13 ppb (standard is 5 ppb), n-propylbenzene up to 200 ppb (standard is 5 ppb), o-xylene up to 1,500 ppb (standard is 5 ppb), and toluene up to 1,100 ppb (standard is 5 ppb). Minor detections of CVOCs were also found, including tetrachloroethene at concentrations up to 8.1 ppb (standard is 5 ppb), and trichloroethene up to 7.4 ppb (standard is 5 ppb). Metals were also detected in site groundwater, including lead at concentrations up to 59 ppb (standard is 25 ppb), barium up to 1,330 ppb (standard is 1,000 ppb), cadmium up to 18 ppb (standard is 5 ppb), magnesium up to 95,100 ppb (standard is 35,000 ppb), manganese up to 44,800 ppb (standard is 300 ppb), sodium up to 343,000 ppb (standard is 20,000 ppb), and iron up to 868,000 ppb (standard is 300 ppb). The manganese, magnesium, and sodium is believed to be naturally-occurring. PCB-1016 was also detected at 0.16 ppb (standard is 0.09 ppb). Soil Vapor: In soil gas, several CVOCs were detected, including tetrachloroethene up to 34.3 micrograms per cubic meter (ug/m^3), trichloroethene up to 11.3 ug/m^3, cis-1,2-dichloroethene up to 109 ug/m^3, and vinyl chloride up to 2,530 ug/m^3. Benzene was detected up to 1,140 ug/m^3."

Health Problem: "The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater and soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment and occupancy. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site."

DEC Memo:	"1/14/2015 - Feng - Duty Desk. Left call back information to the receptionist at EBC (631-504-6000) and asked Charles Sosik to call back. 3/30/2016 Feng This spill is transferred from J. Feng to V. Brevdo as per J. Vought. 03/31/2016: This spill case was transferred to A. Doronova. - AD 05/20/2016: called and left a message for Mr. Sosik with the receptionist. AD 09/20/2016: Called and left a message to Mr. Sosik with the receptionist. AD 09/29/2016: Looked for the owner information on the Internet. Found records saying that Riverside Developers USA is the property owner. called and spoke with the receptionist. Her name is Rachel Mittelman. She informed me that they are longer involved with this property. She will find out the new owner info. AD 09/30/2016: Received a phone call from Joe

FORMER UNIVERSAL SCRAP METAL PROCESSORS CORP. (Continued) **S117394468**

Greenfeld. He was referred by Ms. Mittelman. He is representative of the new owner of the site. The company name is All Year Management. Phone numbers: (718)623-9430, ext.111, 110,989; (917)-470-3650. He said that they will retain Mr. Sosik's company to deal with this spill. He will gather more info and get back. AD 01/19/2017: Called and left a message for Mr. Greenfeld regarding update info. Later in the day received a call from Mr. Greenfeld. He said that they still work with Mr. Sosik on the site remediation, and that a work plan will be submitted to DEC shortly. AD 06/29/2017: Called and spoke with Charlie Sosik. He informed me that this site is in Brownfield Program and is managed by Albany. He will sent an e-mail with info. AD"

Remarks: "contamination based on sample results"

Site Description: "Site being handled under BCP - C224036 Location: The Former Jayer Plating site is located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto

FORMER JAYER PLATING (Continued) **S110487597**

scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "

Env Problem:	"This site is now in the BCP as 2 Ingraham Street site (C224036). Project was reclassed to N. "

Site Description:	"2 Ingraham Street, site represents the Block 3084, Lot 1, in the Williamsburg Area of Brooklyn, NY 11206. The site is a 0.5 acre warehouse. The property is bordered by Ingraham Street to the north, by Marrisson Place to the south, by Bogart Street to the west and by Morgan Avenue to the east. The current use of the site is commercial. Before 1998, the building was used for cloth manufacturing and one of its section was used as a plating factory (Former Jayer Plating Co.). In spring 1998, the warehouse was vacant. The neighbourhood was mixed industrial, residential, and commercial. In the western section of the warehouse, where the plating factory has operated a deep corroded dry drain was noticed. In this area the concrete floor was also broken and corroded, perhaps due to waste bath residues of the metal plating processes on the floor. The VCP investigation was not compleated and the Volunteer Cleanup Agreement negotiations have been closed . See project C224036 "

Site Description:	"This project (2 Ingraham Street Off-Site, C224036A) was created to investigate for potential off-site impacts from the 2 Ingraham Street BCP Site (C224036). Location: This site is the off-site component to the 2 Ingraham Street Site located at 2 Ingraham Street in the East Williamsburg Area of Brooklyn, New York. Site Features: The BCP site is a 0.5 acre warehouse and is bordered on the south by Harrison Place, on the north by Ingraham Street, on the west by Bogart Street, and on the east by Morgan Avenue. The BCP site is affected by an easement for the New York City Water Tunnel No. 3. Current Zoning and Land Use: The current zoning of the BCP site is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the BCP site was used as an orphanage. In 1948, the BCP site was occupied by an umbrella manufacturing plant and a metal plating company between 1946 and early 1990's. After the 1990's, the BCP site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The BCP site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with

FORMER JAYER PLATING (Continued) **S110487597**

	gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "
Env Problem:	"This Site represents an off-site project to investigate the area surrounding BCP Site C224036, 2 Ingraham Street. The environmental assessment below is for C224036. Off-site investigation including groundwater sampling, soil vapor sampling, and soil vapor intrusion investigation is planned. Nature and Extent of Contamination: The primary contaminants of concern off-site include metals, and volatile organic compounds (VOCs). Previous environmental investigation in the area revealed concentrations of metals and VOCs exceeding Standards, Criteria, and Guidance values in the soil and/or groundwater. Based upon investigations to date, shallow soils (up to 5 feet below ground surface) are contaminated with metals. Data results from soils sampling reported metals (lead, mercury and nickel). Maximum detections vs. applicable unrestricted use or protection of groundwater cleanup objectives are as follows: lead at 106 parts per million (ppm) vs. 63 ppm, mercury at 18.2 ppm vs. 0.73 ppm, and nickel at 433 ppm vs. 130 ppm. Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: tetrachloroethene at 17 parts per billion (ppb) vs. 5 ppb, trichloroethene at 140 ppb vs. 5 ppb, chromium at 10,800 ppb vs. 50 ppb, and nickel at 8,690 ppb vs. 100 ppb. "
Health Problem:	"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Current Zoning and Land Use: The current zoning of the property is M1-2 (light manufacturing), and it is currently vacant. The surrounding land use is mainly manufacturing (M-1 and M-2) with residential (R-6) farther east and west of the site. The businesses in the immediate area include warehouses, auto scrap yards, masonry materials sales, waste management and trucking. The neighborhood surrounding the site includes some residential units interspersed with commercial properties. A New York City Transit Authority subway line is located beneath Harrison Place, and there are rail yards nearby which are connected to the Long Island Railroad Bushwick Branch. Past Use of the Site: Prior 1946 the Site was used as an orphanage. In 1948, the site was occupied by an umbrella manufacturing plant and a metal

FORMER JAYER PLATING (Continued) **S110487597**

plating company between 1946 and early 1990's. After the 1990's, the site has been used as a warehouse without major changes. The site structure has been unoccupied since April 2016. Site Geology and Hydrogeology: The site is underlain by 0 to 8 feet of fill. The fill consists predominantly of silty sands with gravel, bricks, rock fragments, concrete, and coal cinders. Native soils beneath the fill layer consist of medium to fine sand and silt and continues with slight variations up to 35 feet below ground surface (bgs). Clay was encountered at several boring locations at depths greater than 6 feet bgs. The depth to groundwater is approximately 15 feet below grade. The regional groundwater flow direction is roughly south to north, towards the English Kills. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. The primary contaminants of concern at the site include metals, SVOCs, and VOCs. Environmental investigation in the area revealed concentrations of metals, SVOCs, and VOCs exceeding Standards, Criteria, and Guidance values (SCGs) in the soil and/or groundwater. Soil: Based upon investigations to date, sub-surface soils are contaminated with metals, SVOCS, and VOCs. Results from soils sampling reported metals (chromium, lead, mercury, and nickel), SVOCs (polyaromatic hydrocarbons or PAHs), and VOCs(tetrachloroethene or PCE). The PAHs contamination in soils is likely related to the presence of historic fill. Maximum detections vs. applicable unrestricted use or protection of groundwater soil cleanup objectives (UUSCO/PGWSCO) are as follows: chromium at 8,400 ppm vs. 19 ppm, lead at 607 ppm vs. 63 ppm, mercury at 1,790 ppm vs. 0.73 ppm, nickel at 3,720 ppm vs. 130 ppm, several PAHs including benzo(a)pyrene at 16 ppm vs. 1 ppm, and PCE at 1.9 ppm vs. 0.47 ppm. Mercury and nickel (up to 18.2 ppm, and 433 ppm, respectively) were detected off-site at soil boring SSB7N. Lead (up to 106 ppm) was detected off-site at soil boring SB8. Groundwater: Groundwater sampling indicates metals and VOCs contamination above Class GA groundwater standards. Some metals were found in relative low levels in groundwater and are likely related to the presence of historic fill. Maximum groundwater detections vs. standards are as follows: chromium at 110,000 parts per billion (ppb) vs. 50 ppb, lead at 461 ppb vs. 25 ppb, and nickel at 90,900 ppb vs. 100 ppb. PCE (up to 17 ppb) and mercury (up to 3.3 ppb) were detected in off-site downgradient groundwater at MW-7. Chromium, lead, and nickel (up to 10,800 ppb, 802 ppb, and 8,690 ppb, respectively) were detected off-site in down-gradient groundwater at MW-8. Trichloroethene up to 140 ppb was detected off-site in groundwater at MW-6. Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor. The maximum concentrations of PCE and 1,1,1-Trichloroethane in sub-slab soil vapor were detected in the northwestern/northeastern portion of the site at the respective concentrations of 827 micrograms per cubic meter (ug/m3) and 1,220 ug/m3. In addition, soil vapor intrusion (SVI) levels for methylene chloride (e.g., 42 ug/m3 [below the slab] and 20.5 ug/m3 [indoor air]) require additional assessment, investigation or mitigation in accordance with NYSDOH SVI matrices. Therefore, additional sampling is needed to determine whether actions are needed to address soil vapor intrusion on- and off-site. Significant Threat: Recent public events held at the site and past unapproved activities are likely to increase the risk of direct contact with the contamination visually observed on the surface of the slab and/or slab areas with broken

FORMER JAYER PLATING (Continued) **S110487597**

	concrete in which the upper soils likely contain hazardous waste levels of contamination. Contravention of SCOs for metals pose a significant threat to human health due to accessibility. Also, metals contamination in soil at the source area exceeds respective industrial and/or protection of groundwater SCOs. This has resulted in contamination of shallow groundwater at levels several orders of magnitude above standards, creating a significant threat to the environment."
Health Problem:	"Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. People may come into contact with contaminants in soils if they dig below the surface or contact exposed soil. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the event the site is re-occupied and for any future buildings developed on the site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

DEC Memo: "need to send CSL 01/13/06-Vought-Received call from Ted Yen (718-857-3100) and returned call and no answer on phone. 02/24/06-Vought-Spoke with Ted Yen and tank closure report. 02/27/06-Hiralkumar Patel. Abstracts of Tank Closure Report: - Work performed: notification with NYSDEC for closure of tanks, excavation, cleaning/purging and removal of eleven (11) 550 gallon gasoline USTs - total of 239.78 tons of contaminated soil was removed from the site and transported to Soil Safe Inc. Bridgeport in Logan Township NJ. - soil and site assessments were conducted using PGM 30 PID. - based on

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

visual and olfactory evidence, there was some contamination localized in the area located on the west perimeter of the tank grave near the fill pipes. (PID readings 80-150 ppm) - six end point soil samples (EP-1, EP-2, EP-3, EP-4, BS-1 & BS-2) taken from the four side walls and mid-grave east and mid-grave west. - groundwater flow is assumed to be in a westerly direction. - no groundwater intrusion in the pit. - groundwater contamination was identified from a Phase-II subsurface assessment previously conducted by Giorgio Envirnomental. - no private wells in the vicinity of tanks. - two groundwater wells were installed at depth of 22'-24' on two separate locations on the subject property. One monitoring well installed on the middle of the previous tank grave and second well was installed on northwest of the previous tank grave (east of office) Report Review Letter, with the requirement of water sample at middle of previous tank grave, sent out to James Ruggiero. faxed to Ted yen at don carlo. 03/28/06-Hiralkumar Patel. REceived fax from Don Carlo regarding groundwater sample result. but i have received only first four pages, and doesn't have lab results. Spoke with Danny and he told me that he going to drop report personally today. 04/04/06-Vought-Received and reviewed groundwater analyticals received from Don Carlo Environmental Services-3/27/06. Groundwater analyticals show 130ppb benzene(MW1), 1600ppb toluene(MW1), 1200ppb ethylbenzene(MW1), 4400ppb xylene(MW1) and 300ppb napthalene(MW1). Spill referred to DEC Austin for transfer due to groundwater contamination. 04/06/06-Vought-Spill transferred from DEC Vought to DEC Tang as per DEC Austin due to groundwater contamination and need for long term remediation. 4/12/06 - reviewed the case file. Will wait for the next round of groundwater sample before assigning the priority. - KST. 10/30/06 - Reassigned from Tang to Sun. (JS/MS) 1/3/07: Called Don Carlo (Ted Yen) and left message with secretary inquiring about latest round of ground water sampling at site. Expecting a return call. (JS/MS) 3/1/07: Followed up with Don Carlo- client has not yet paid them for the last round of groundwater sampling, once payment is received, sampling will be performed. (JS/MS) 7/28/07: Client has paid and on-site sampling is to be conducted on 7/15/07 as per Dan from DCS Services. (JS/MS) 1/24/08: MS spoke to Ted to get update. He said property came under new ownership and he is waiting for them to approve proposal to continue work. He will call back this afternoon or tomorrow to let me know details as he was out of office. (MS/JS) 2/5/08: DCES is taking 5th sampling event in 3 weeks from today. Danny from DCES is emailing all results to DEC to obtain electronic copies. (JS/MS) 4/3/08: Spoke to Danny Singh from Don Carlo. Reported frozen groundwater in monitoring wells. Supposed to resample 4/10/08. (JS/MM) 4/23/08: Email from Don Carlo (JS/MM) Please be advised that the groundwater samples at the above referenced site were collected as per our telephone conversation; however, the samples weren't collected on April 10, 2008 they were collected approx one week later. The samples were sent to York Analytical Laboratories in Stratford, CT for analysis. Upon receipt of the analytical results, you will receive the necessary lab data together with our Groundwater monitoring table. Danny Singh 06/02/08: Received groundwater table from Don Carlo Environmental; missing lab results from latest round of sampling. Ask to resubmit and correct for updated TAGM 4046 table. York Labs MDL for MTBE, BTEX 50 ppb to 125 ppb...when groundwater standards are 0.7/5/10 ppb (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 10/13/08: Danny Singh stated Don Carlo did not sample because owner did not give permission to sample (JK/MM)

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

01/06/09: Left message with receptionist for Danny Singh to call back with update. (JK/KG) 01/15/09: Tried to call Don Carlo, but no answer (JK/KG) 01/26/09: Left message with receptionist for Danny Singh to call back with update. (JK/KG) 02/03/09: K. Green sent D. Singh email: Mr. Singh, I will be managing Spill No. 0510000 located at 1175 Flushing Avenue from now on, under supervision of Jon Kolleeny. My contact information is provided below. Can you please provide me with an update on status of this site? Latest rpt I have is a GW monitoring rpt for samples collected in April 2008. Have you been able to collect any samples since then? Please feel free to contact me if you have any questions. Response from Singh: Ms. Green, We have tried several times to contact owner for monies to continue with GW monitoring at site. Todate no response were gained. Our office will not continue with monitoring until money is received from client. (JK/KG) 02/09/09: Letter sent to Ruggiero requesting: Dept requires that a subsurface investig work plan be prepared & submitted for our review by 3/13/09. Work plan should include install'n of at least one addt'l monitoring well to further delineate GW contaminant plume and determine GW flow direction. During well install'n, soil must be sampled continuously and screened with a PID, and sample with highest PID reading and sample just above water table should be submitted for lab analysis. New and existing wells should be surveyed so that local GW flow direction can be determined, and GW samples should be collected from all wells for lab analysis. Work plan should include a site location map and a site plan showing current and former tank locations and locations of existing and proposed monitoring wells, and a North arrow and scale bar must be included on site plan. An investigation summary rpt with conclusions and recommendations should be submitted to DEC. SIWP due 3/19/09. (JK/KG) 02/17/09: Letter sent on 2/9/09 to Mr. Ruggiero at 1175 Flushing Ave was returned to sender. Addressee moved and did not leave a forwarding address. Sent Danny Singh an email to see if he has any contact information for Mr. Ruggiero. (JK/KG) 02/23/09: No response from D. Singh pertaining contact info for Ruggiero. Property Shark gives an address for Ruggiero in Howard Beach, NY. Re-sent letter requesting work plan be submitted by 3/27/09. Letter sent to 163-14 92nd St, Howard Beach, NY 11414. J. Kolleeny also sent an email to D. Singh requesting updated contact info (if any) for Ruggiero. (JK/KG) 03/25/09: On 3/4/09 Jon rec'd call from D. Singh stating that Ruggiero rec'd letter and the work will be performed. Singh was supposed to fax a letter to Jon. (JK/KG) 03/31/09: I spoke to D. Singh to find out status of site. He said DCES just received payment from Ruggiero and once the check clears they will begin to prepare the work plan. He will give me an update in the next couple of days.(JK/KG) 04/06/09: Rec'd voice message from D. Singh on 4/3/09 stating that payment has been rec'd and he has begun preparing the work plan. He was requesting an extension until 4/6/09. Rec'd pdf of work plan; under review. (JK/KG) 04/13/09: Rev'd work plan and spoke to D. Singh about making some revisions. He will resubmit a pdf of the revised plan and send me a hard copy. (JK/KG) 04/21/09: Rec'd pdf of revised Subsurface Investigation & GW Monitoring Well Work Plan dated 4/20/09. D. Singh will mail hardcopy. Letter sent approving work plan; investig summary rpt is due 6/19/09. Scope of work includes install'n of an addt'l monitoring well, collection of soil and GW samples, and submission of investig summary rpt. Letter states that new and existing wells should be surveyed so that local GW flow direction can be determined and that proposed well MW-3 should be installed as close as possible

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

to existing on-site building, conditions permitting. D. Sing has indicated that property is a metal scrap/salvage yard and open space is limited. (JK/KG) 06/15/09: Rec'd pdf and hardcopy of Envt'l Subsurface Assessment rpt dated 6/5/09 prepared by Don Carlo. Spoke to D. Singh and requested well install'n/boring log for W-3 and site map. He said wells were not surveyed because owner did not want to pay to have it done. Well W-3 was installed on 4/22/09 and all wells were sampled for GW on 4/23/09. No SVOCs or VOCs detected in soil samples collected from B-3 (W-3). No SVOCs or VOCs detected in GW in W-2 and W-3. No SVOCs detected in GW in W-1. Detected VOCs include: Benzene (99 ug/L), n-Butylbenzene (59 ug/L), Ethylbenzene (990 ug/L), Isopropylbenzene (68 ug/L), Napthalene (850 ug/L), n-Propylbenzene (150 ug/L), 1,2,4-Trimethlybenzene (2,200 ug/L), 1,3,5-Trimethlybenzene (640 ug/L), m,p-Xylene (3,700 ug/L), o-Xylene (91 ug/L). (JK/KG) 06/16/09: Rec'd pdf of boring log for W-3 and site plan with well locations. I spoke to Danny Singh and requested a well construction log as well. I asked him if depths given on GW analysis table were depths to water measured for each sample. He said they were. There is a huge discepency in depths. W-1 and W-2 were installed to depths of 22 and 24 ft bgs and measured depths to water vary from 32' bgs to 14' bgs (i.e., deeper than total depth of well). Danny said he would look into it. I also asked him what kind of probe they were using to measure depth to water. He said it is an electronic water sensing device and it doesn't detect product. I also asked him to find out what is smallest interval probe can detect, since usually it is 0.01'. He said he doesn't have well construction details for W-1 or W-2. I asked him if W-3 was installed as close to building as possible and he said that it was. There is a scale for trucks directly behind building and well was installed next to a dumpster in an area that would be accessible. (JK/KG) 06/18/09: Letter dated 6/17/09 sent to Ruggiero requiring a work plan for a supplemental subsurface investigation be submitted by 7/17/09. Wells must be surveyed. A Stipulation Agreement was issued to Ruggiero on 6/18/09. Signed stip is due on 7/2/09. (JK/KG) 07/02/09: Rec'd faxed copy of signed Stipulation Agreement. Called Mr. Ruggiero (718-381-1000 or 718-791-4351) and he said a hard copy of Stip would be delivered today. He wanted clarification on letter sent on 6/17. I told him contaminant plume needs to be delineated and that was reason DEC is requiring a work plan for further investigation. He said he contacted a surveyor but they were not familiar with surveying monitoring wells. I explained to him process of surveying wells. Rec'd original signed Stip. (JK/KG) 07/06/09: Stipulation Agreement was executed on 7/3/09. (JK/KG) 07/14/09: Rec'd messsage from Zeb Youngman of P.W. Grosser (631-589-6353). Spoke to Youngman on 7/14. He said he was contacted by Ruggiero to submit a proposal for the additional investigation. If PWGC's proposal is accepted he will need some extra time to submit the work plan. (JK/KG) 07/20/09: Rec'd call from Ruggiero. He informed me that he has hired PWGC and a work plan will be submitted soon. Rec'd an email from Youngman as well, stating he will have the work plan by 7/23/09. (JK/KG) 07/23/09: Rec'd pdf of Monitoring Well Installation / Groundwater Monitoring Work Plan dated 7/21/09 submitted by PWGC. The work plan proposes installation of one permanent and three temporary monitoring wells, collection of groundwater samples, a groundwater elevation survey, and implementation of quarterly groundwater monitoring at the site for one year. The work plan was approved with the following comments: During well installation, soil must be sampled and screened

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

continuously, and the sample with the highest PID reading and the deepest dry soil sample should be submitted for laboratory analysis. If PID readings are not detected, only the deepest dry soil sample need be analyzed. In addition to surveying the existing and new monitoring wells, well construction details such as well depth and screened interval should be determined for the existing wells. If the existing wells are not screened appropriately to assess groundwater conditions, additional wells will need to be installed. Well construction logs should be provided for all wells. The proposal to limit quarterly monitoring to a one-year period is not approved at this time. The results of this investigation should be presented in a summary report with conclusions and recommendations for further action. An investigation summary report is due by 9/25/09. Email for Ruggiero - JCR327@aol.com (JK/KG) 07/29/09: Rec'd call from Youngman. He was at the site today to survey and assess the condition of the existing wells. He sent a revised site plan showing the GW flow direction and proposed location of the new well, as well as GW elevation survey data. (eDocs)(JK/KG) 08/03/09: A copy of the executed Stip sent certified mail to Ruggiero was returned to the Dept. as unclaimed. It was resent to Ruggiero via email and regular mail. Spoke to Ruggiero and he said he receives mail at the Howard Beach address. (JK/KG) 08/05/09: Rec'd an email from Youngman stating that PWGC will be installing the well and performing soil and groundwater sampling on 8/7. (JK/KG) 09/21/09: Rec'd call from Ruggiero. He said PWGC has proposed injections and he wanted to know if it would be a good approach for site. I told him that I would have to review recent data when rpt is submitted. Once rpt is submitted & reviewed he would like to discuss PWGC's recommendations as soon as possible. He can be reached on his cell phone (718-791-4351). Rec'd Monitoring Well Installation / First Quarter Groundwater Monitoring Report dated 9/21/09 submitted by PWGC. On 8/7/09 one permanent and three temporary monitoring wells were installed. Soil and GW contamination was encountered. The new and existing monitoring wells were surveyed and groundwater flow is northerly. Soil samples were collected at 10-12' and 14-16' bgs from borings GW-1, 2, and 3 and at 10-12' bgs from MW-4. Depth to water is approximately 12' bgs. VOCs in excess of RSCO's were found in GW-1 (10-12' and 14-16'), GW-2(14-16'), and GW-3(14-16'). Summary of GW samples: MW-1: Total VOCs - 2,779 ug/L MW-2: Total VOCs - 185 ug/L MW-3: Total VOCs - 3.26 ug/L MW-4: Total VOCs - 4.04 ug/L GW-1: Total VOCs - 9,217 ug/L GW-2: Total VOCs - 7,570 ug/L GW-3: Total VOCs - 2,849 ug/L PWGC recommends chemical oxidation and ORC injections, followed by quarterly monitoring and reporting. Need to respond to recommendations. Contaminant plume needs to be delineated prior to remedial action. (JK/KG) 09/22/09: A letter was sent to Ruggiero requiring a brief work plan with a diagram showing the proposed locations for the new wells by 10/23/09. At least 2 wells should be installed: one to the NE of the former USTs and one to the SW of the former USTs. Soil samples should be collected during installation. After the wells have been installed and sampled a remedial action plan detailing PWGC's proposed remedial strategy should be submitted. (JK/KG) 09/23/09: Zeb Youngman called to discuss the requirement to install additional wells. He doesn't think they are necessary. I told him that the contaminant plume needs to be delineated prior to implementing remedial action. The well proposed to the SW of the former USTs does not need to be installed at this time. (JK/KG) 11/3/09 Spill case transferred from J. Kolleeny to J.A. Maisonave. - JAM 11/4/09 Spoke

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

to Zeb Youngman. He will be submitting a work plan to install additional monitoring wells and propose RegenOx injections to address soil and GW contamination. - JAM 1/20/10 Reviewed the Remedial Action Work Plan (RAWP) submitted by P.W. Grosser (PWG) via email on January 4, 2010. The report is dated December 2009. The work plan proposes injecting chemical oxidants and oxygen releasing compounds to address groundwater contamination in the former UST area and installing two (2) additional monitoring wells to fully delineate groundwater contamination. Details are as follows: 1. 15 injection points in an area approximately 30 X 50 feet. 2. Based on RegenOx calculations, a total of 2,640 lbs of RegenOx and 450lbs of ORC advanced will be injected in 2 events. 3. First injection event will consist of 1,500 lbs of RegenOx (750 lbs each of Part-A and Part-B) 4. Second injection event will consist of a mixture of 1,110 lbs of RegenOx (750 lbs of Part-A, 360 lbs of Part-B) and 450 lbs of ORC advanced. 5. Installing 2 monitoring wells to the North and South of the Former UST area to fully delineate groundwater contamination. I issued a response letter to James Ruggiero approving the installation of the two monitoring wells. The locations of the wells should be modified as shown on a diagram, which was attached and issued with the letter. A third well should be installed to the northwest of the on-site building, between existing wells MW-2 and MW-4, also shown on the diagram. Groundwater samples should be collected from all wells and analyzed for the TAGM 4046 list of petroleum related VOCs as well as for chlorinated solvents (in response to the one boring have a solvent odor according to the Sept 2009 well installation report). A summary report should be submitted for review prior to implementing the proposed remedy and should include any changes to the remedy based on new information. The RAWP and DEC response letter are uploaded to eDocs. - JAM 2/5/10 Received an email from Jon Eichler from PW Grosser. The 3 monitoring wells will be installed Saturday, February 6th. - JAM 3/31/10 Received the Supplemental Monitoring Well Installation and Sampling Report submitted by PW Grosser dated March 15, 2010. On February 6, 2010, three new monitoring wells (MW-5 through MW-7) were installed and well MW-4 was re-installed because it had been destroyed. Groundwater was encountered at approx. 12 feet. Soil was screened and sampled only in new wells. PID readings above background were only observed in well MW-7 from 4' to 12' below grade. A soil sample was collected from deepest dry soil interval in each of wells and also from 5'-7' depth interval of MW-7 (highest PID reading). Laboratory results showed several VOCs in soil samples collected from MW-6 and MW-7, however, concentrations were below RSCOs. No VOCs were detected in soil from well MW-5. Groundwater samples were collected from wells MW-1 through MW-7. VOCs were detected at concentrations exceeding DEC standards from wells MW-1, MW-2, MW-5, MW-6, and MW-7, and Total VOCs ranged from 58 ug/L in well MW-5 to 12,413 ug/L in well MW-1. Even though well MW-1 had highest concentration of Total VOCs, well MW-2 had highest concentrations of petroleum related VOCs (MW-1 had Acetone concentration of 11,500 ug/L). Total BTEX concentration in well MW-2 was 2,517 ug/L. Contamination in MW-2 has always been relatively low in previous sampling events (185 ug/L Total VOCs from August 2009 sampling event). PW Grosser does not propose any changes in the RAWP, which was submitted in January 2010, even though the Total VOC concentrations increased in well MW-2. On March 31, 2010, DEC issued a letter appproving the RAWP and states that, Follow-up groundwater sampling must be performed subsequent to the chemical oxidant and ORC

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

injections to evaluate the effectiveness of the remedy. If this remedy is not effective at reducing groundwater contamination, then additional remediation will be required. The report and the approval letter are uploaded to eDocs. - JAM 10/20/10 From emails with Jim Eichler: First round of ChemOx injections performed on July 30 and 31, 2010. The second round of injections occurred on September 11, 2010. The first post-injection sampling is scheduled for Tuesday, October 26, 2010. The Remedial Action Report should be completed in November 2010. - JAM 05/09/11: This spill case is transferred from J. Maisonave to J. Kolleeny. Received email from John Eichler of PW Grosser: We are performing a round of quarterly GW monitoring at 1175 Flushing Avenue in Brooklyn this Friday. I sent email reply asking him to send me pdf's of any rpts more recent than their 3/15/10 Suppl'tal Mon Well Install'n & Sampling Rpt, and noting that Joe Maisonave's notes indicated he was expecting a Remedial Action Rpt in late 2010. Eichler sent reply: We re finalizing RAR. We ve had some delays with project, but chemox injections went smoothly. We ll have RAR to you soon. - J. Kolleeny 06/03/11: Reviewed May 2011 Remedial Action Rpt by P.W. Grosser (in eDocs). Rpt summarizes injections of RegenOx and ORC Advanced in August and Sept. 2010 and gives results of GW sampling done in Feb. and Oct. 2010, before and after injections. Most impacted wells, MW-1 and MW-2, showed significant declines in contaminant levels after injections: MW-1 had 1,021 ug/L total VOCs in Oct. 2010, down from 12,413 ug/L in Feb. 2010; MW-2 had 892 ug/L tVOCs in Oct. 2010, down from 4,540 ug/L in Feb. 2010. Rpt recommends replacing wells MW-5 and MW-7, which were damaged/destroyed (resp.) by site activities, and continued quarterly GW sampling to monitor contam trends. I sent email (in eDocs) to James Ruggiero (RP, jcr327@aol.com), cc to John Eichler of PWGC, approving these recommendations. Changed site priority ranking from P0 to P2 since site is in follow-up monitoring after remedial action. - J. Kolleeny 04/13/12: Received email from John Eichler of PWGC, with attached pdf file of GW Mon Rpt by PWGC (rpt was dated Jan. 2012 until I pointed this out to John, then he sent rpt with April 2012 on title page; both are in eDocs). Email stated: Jon, Attached is GW mon rpt for this site. We intend to replace damaged monitoring wells and perform another round of sampling in very near future. I will give you 2 weeks notice of this fieldwork. Please contact me with your questions and comments. Rpt presents results of GW sampling in Dec. 2011; four of 7 wells were sampled; MW-3 and MW-7 could not be found and MW-5 is partially filled with sediment so could not be sampled. Sample results for wells sampled show significant impacts only in MW-1, which had 4,207 ug/L total VOCs (up from 1,748 ug/L in May 2011). PWGC recommends continued quarterly GW sampling and replacement of wells MW-3, MW-5 and MW-7. I sent email (in eDocs) to James Ruggiero (RP, jcr327@aol.com), cc to John Eichler, approving continued quarterly GW sampling and replacement of wells MW-5 and MW-7; said MW-3 need not be replaced at this time, but if significant increases in VOCs are seen in wells MW-4 and/or MW-7, then MW-3 should be replaced. I further noted that if contam in MW-1 does not decrease significantly, then addt'l injections and/or other remedial actions may be warranted. - JK 10/04/12: Received email from John Eichler of PWGC: Jon, We will be replacing and repairing damaged monitoring wells at Spill Site # 05-10000 located at 1175 Flushing Avenue in Brooklyn on Saturday, October 13, 2012. We will sample wells approximately 2 weeks after that. Please contact me if you have any questions or comments. Thank you. - J. Kolleeny 03/06/13: I sent

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

email to John Eichler of PWGC: John, It's been a while since I've heard anything about this site or received a GW monitoring rpt. Latest GW data I have are from Dec. 2011 (submitted in an April 2012 monitoring rpt). Your email below [10/4/12] states that damaged monitoring wells at site were to be replaced in Oct. 2012, and then sampled two weeks afterwards. Were damaged wells replaced? If so, which ones? April 2012 rpt indicates that well MW-5 was dry, having been partly filled in with sediment; MW-5 is only well down-gradient of former UST area, where RegenOx/ORC Advanced injections were performed, so replacement (or flushing/redevelopment) of that well is critical. Have monitoring wells (replaced and previously existing) been sampled? I've had an inquiry regarding this site from my supervisors here at DEC. Please provide a project update as soon as possible. Received email reply from Eichler: Jon, We replaced monitoring wells MW-2 and MW-7, and repaired MW-4. I checked MW-5 during repair and it appears to be viable. So all of wells, with exception of MW-3 (consistently outside impacted area), are ready to be sampled. I have impressed upon owner importance of sampling wells as soon as possible. I expect that he will respond quickly and I will let you know as soon as we schedule a round. Please contact me if you would like to discuss this further. I then sent reply: Thanks for your quick response. If I understand your email correctly, replacement wells were installed but no GW sampling has been done at site since Dec. 2011. Please let me know if you need me to contact owner about doing sampling. Eichler sent reply: Thanks. Jaime Ruggiero (owner) just responded to me. It looks like we re back on track. I will contact you next week with schedule. - J. Kolleeny 04/16/13: On 4/84/13, I sent email to John Eichler of PWGC: John, Have you been able to schedule a round of GW sampling at this site? Recently, DEC has been concerned about housekeeping practices at this site (an active scrap processing facility), and I would like to be able to confirm that on-site activities are not adversely impacting monitoring wells and GW in general. Please let me know as soon as possible. On 4/16/13, Eichler sent reply: Jon, We re looking to sample monitoring wells at 1175 Flushing Ave, Brooklyn on Saturday, May 4. Please contact me if you have any questions. - J. Kolleeny 06/05/13: Received email from John Eichler of PWGC: Jon, I just wanted to let you know that we did sample monitoring wells at 1175 Flushing Ave on May 29th. I am expecting data soon and will prepare a rpt for your review. Please contact me if you have any questions. - JK 10/23/13: I sent email to John Eichler of PWGC: John, I haven't heard from you about this site in a while (since April 2013). Was a round of GW sampling performed? If so, was a rpt prepared? Please send update on status of site, and if GW sampling was done, please send monitoring rpt or at least lab data. Eichler sent reply: Jon, I ll send you data tables for last round of sampling, and a rpt. Owner of property is looking to redevelop site. Redevelopment would include some more remediation. I will contact you soon to discuss this with you. - J. Kolleeny 11/05/13: Received email from John Eichler of PWGC: Jon, Attached is historical data table for 1175 Atlantic [sic] Avenue, Brooklyn. As you know, site underwent an initial remedial excavation and subsequent chemical injection. However, gasoline-related VOCs remain elevated in portions of site. I will call you soon to discuss site s options. Data (in eDocs) show significant increases in contam levels in a number of wells: well MW-1 had 6,159 ug/L total VOCs (up from 4,207 ug/L in Dec. 2011), well MW-2 had 24,002 ug/L tVOCs (up dramatically from 86 ug/L in Dec.

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

2011), well MW-4 had 392 ug/L tVOCs (up from ND in Dec. 2011), well MW-7 had 992 ug/L tVOCs (up from 144 ug/L in Dec. 2011). I sent email to Eichler: John, Thanks for sending May 2013 GW data. I took a quick look and compared results with data from Dec. 2011, and I'm a little alarmed by dramatic increase in total VOCs in well MW-2. That well only had 86 ug/L total VOCs in Dec. 2011, but May 2013 result shows 24,000 ug/L tVOCs! A site plan in April 2012 rpt shows well MW-2 on up-gradient edge of site (along Stewart Ave.), in terms of GW flow direction. Were wells gauged in May 2013 to determine up-to-date flow direction? Do you have any ideas of what could have caused dramatic increase in total VOCs in well MW-2? Feel free to call to discuss. Eichler sent reply: Jon, MW-2 is one of wells we re-installed (due to damage) prior to last sampling. While new location is only a few ft from old location (in order to avoid vehicles), it seems we hit a hotter spot. I will call you. - J. Kolleeny 07/24/14: Reviewed GW Monitoring Rpt May 2014 by PW Grosser Consulting, Inc., received via email from John Eichler on 7/22/14 (in DecDocs). Eichler's email stated: Jon, Attached for your review is Monitoring Well Sampling Rpt for 1175 Flushing Ave in Brooklyn. Results of this most recent sampling round indicate a decrease in contaminant concentrations. PWGC recommends continued GW monitoring and removal of a recently-discovered out-of-service fuel oil UST located in subject building. Please contact me with your questions and comments. Rpt presents results of well gauging and sampling in May 2014. No LNAPL was detected in any wells. Depth to water/water table elevation measurements suggest GW flow to NE. GW samples were collected from 5 existing mon wells; well MW-7, in area of site operations (auto scrapping), was destroyed (2nd time a well at that location has been destroyed by site ops). Sample results show well MW-1 had 2,675 ug/L total VOCs (down from 6,159 ug/L in May 2013), well MW-2 had 1,110 ug/L tVOCs (down dramatically from 24,002 ug/L in May 2013), well MW-3 was ND (same as in May 2013), well MW-4 had 0.92 ug/l of benzene (below std), with no other detections (down from 392 ug/L in May 2013), well MW-5 was ND (down from 22 ug/L tVOCs in May 2013), well MW-6 had 4 VOC J detections of ~1-2 ug/L each (was ND in May 2013). Rpt states that absence of contam in up-gradient wells MW-5 & MW-6 indicate contam is from on-site source, and based on contam levels in MW-1 & MW-2, PWGC recommends continued GW sampling to monitor GW quality trends. Rpt makes no mention of recently discovered fuel oil UST mentioned in Eichler's email. On 7/24/14, I sent email to Eichler, cc to James Ruggiero, RP (jcr327@aol.com): John, Thanks for monitoring rpt. I agree with recommendation to remove out-of-service fuel oil UST. Tank should be registered and listed as removed by filing a PBS Application/Information Correction Form, and a UST Closure Assessment should be performed and results presented in a Closure Rpt. I also agree with recommendation for addt'l GW sampling to monitor trends in contaminant concentrations. However, I'm not sure if we have ever agreed formally on a GW monitoring schedule for this site. Table 3 in rpt, with historical GW sampling results, shows sampling events performed at irregular intervals ranging from about 6 months to about a year and a half. Other spill sites I manage which have comparable contaminant levels in GW are usually on a quarterly sampling schedule, and I'd like to require quarterly sampling at this site as a way to keep closer track of GW trends, evaluate possible need for addt'l remedial injections, and expedite movement of this case towards closure. Please discuss this with your client and let me know if he will agree to this schedule. Also, I'd like to request two

UNIVERSAL USED AUTO PARTS INC (BROOKLYN) (Continued) **S107488576**

small modifications to future monitoring rpts: (1) Table 2 lists main gasoline-related compounds that DEC regulates, which is good, but it lacks a line for Total VOCs; please add a line for Total VOCs to this table in future rpts. (2) Table 3, with historical GW data, provides a complete list of all VOCs; analyte list should be reduced to report only gasoline-related VOCs as listed in Table 2. These changes will help facilitate my review of rpts. Please let me know if these changes can be made to monitoring rpts. Feel free to contact me if you have any questions/comments. - J. Kolleeny 06/08/15: Reviewed GW Mon Rpt for May 2015 (in DecDocs), submitted via email from John Eichler of PW Grosser on 6/1/15. GW gauging & sampling in April 2015 showed no LNAPL detected; well MW-1 had 3,596 ug/L total VOCs (up from 2,675 ug/L in May 2014), well MW-2 had 1,566 ug/L tVOCs (up from 1,110 ug/L in May 2014), well MW-3 was not sampled, well MW-4 was virtually ND (same as May 2014), well MW-5 had 25 ug/L tVOCs (was ND in May 2014), well MW-6 had 20 ug/L tVOCs (up from ND in May 2014), well MW-7 has been destroyed by site operations (for 2nd time). Rpt states that MW-3 is consistently located outside of contaminant plume. Water table map shows GW flow direction to SE. Rpt text concludes that contam levels decreased after chem ox injections, but then increased in May 2013, possibly due to changes in water table elevations or GW flow direction related to dewatering in subway tunnel adjacent to site; levels decreased again in May 2014. Data for May 2015 show migration of contam from source area around MW-1 in direction of GW flow to NE (?sic) towards MW-2. PW Grosser recommends continued sampling to monitoring GW quality trends at site. - J. Kolleeny Spill transferred from J. Kolleeny to K. Forster since property is part of the BCP (K. Forster) 3/30/17: Working with BCP Consultant, Environmental Business Consultants, to submit a work plan for the off-site groundwater investigation. - K. Forster Consultant is awaiting disposal facility acceptance based on waste characterization sampling results. Remedial work is anticipated to begin in April. jeb (3/29/2018) 6/30/21: BCA for Site C224210 terminated due to lengthy delays. Sent request to James Ruggiero for a work plan to address remaining groundwater contamination. New attorney representing James. Maggie Macdonald, mmacdonald@sprlaw.com. - kmf"

Remarks: "phase 2 investigation."

DEC Memo:	"12/21/07 Received call from Sean Healy of Getty. He believes the vent line failed due to fitting at tank was loose. No contamination found. Metro Environmental will be testing line tonight. Will send test report and letter. bf 12/28/07 received fax from Laurie Jodice of Tyree. There was a crossover line that was not removed. Fitting for line was plugged and tank was restested by Metro Environmental and passed. Called Sean Healy and he told me no signs of petroleum contamination was found during repairs. He then transferred me to Laurie Jodice of Tyree who is the project manager. I told her I need test results and letter regarding contamination. She said that she will send letter and send test results when she gets them. Letter stating no visdible signs of petroleum contamination received by fax from L. Jodice. Received passing tightness test results. NFA. bf"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL SEE SPILL NUMBER 8908532. 4/12/04-Vought-Spill transferred from Sullivan to Rommel as per Rommel. 2/2/07 - Haggerty - Alphonse Milo (718-388-7575) brought the property shortly after the tank test failures and is still owner today. He states he is will be building a parking lot on the subject property and all soil will be excavated for the foundation. I instructed Mr. Milo to contact the DEC as soon as possible because there is a good chance contamination is present. Spill to remain open 10/4/07 - Haggerty - received Phase II subsurface Investigation report from Al Milo. Phase II completed to satisfy the bank requirement. Report states that all soil samples and groundwater samples are below standards. MW's in the area surrounding the former tank field. No groundwater contamination was detected. PM stated that all tanks must be properly closed out in PBS wether tanks are registered or previously unknown and this spill will remain open until this is resolved. 07/21/08 - Haggerty: Spoke with Mrs. Milo. She stated that the PBS issue has been resovled. I checked the PBS

Classification:	N
Region:	2
Acres:	0.630
HW Code:	224296
Record Add:	05/09/2019
Record Upd:	03/04/2021
Updated By:	KALEWAND
Site Description:	"Location: The subject site consists of 7 separate tax lots (block 3046, lots 22, 24, 26, 27, 47, 48 and 49) and is an irregularly shaped parcel. The following addresses are associated with the Site: 254-258 and 262-264 Scholes Street, and 249-257 Meserole Street. The Site fronts the south side of Scholes Street, extending south to Meserole Street, between Bushwick Avenue and Waterbury Street. The total Site area is approximately 27,500 square feet (0.63 acres). The site is currently used for vehicle maintenance for an armored car service. Site Features: The Site lots are currently occupied with warehouse-style buildings and a surface parking area. The site is surrounded by commercial properties to the south and east, Scholes Street to the north and a playground to the west. Current Zoning and Land Use: The site is zoned M1-1 (light manufacturing/industrial) and is located in an industrial business zone. Past Use of the Site: Historically, the site used for auto repair, machine repair, machine shops, printing, unspecified manufacturing and textile/knitting mill. Site Geology and Hydrogeology: The site is underlain by fill and sands extending to the groundwater interface. Fill layer ranges from 2 to 30 ft thick and consists of brown to red silty sand with concrete, brick and glass fragments. The sand is fine with few cobbles at shallower depths. Groundwater was measured below 32 ft depth."
Env Problem:	"Nature and Extent of Contamination: A limited subsurface

RAPID ARMORED CORPORATION (Continued) **S123661630**

investigation performed in early 2019 consisted of collection of soil, groundwater and soil vapor samples. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides and PBCs. Soil No VOCs, SVOCs, metals, pesticides or PCBs were detected at concentrations exceeding the unrestricted use soil cleanup objectives. Groundwater VOCs were detected in groundwater at concentrations exceeding the applicable ambient water quality standards (AWQS), including: trichloroethene (TCE) at 16 parts per billion (ppb) compared to the AWQS of 5 ppb; cis-1,2-dichloroethene (DCE) at 220 ppb (AWQS is 5 ppb); vinyl chloride at 150 ppb (AWQS is 5 ppb); 1,2-dichlorobenzene at 410 ppb (AWQS is 3 ppb); and 1,4-dichlorobenzene at 160 ppb (AWQS is 3 ppb). Sub-slab soil vapor VOCs were detected at elevated concentrations including: tetrachloroethene (PCE) at 104 micrograms per cubic meter (ug/m3); TCE at 83 ug/m3; and chloroform at 33 ug/m3. "

DEC Memo:	"3/6/2019 - Feng - Duty Desk. Left Matthew Carroll a message. Matthew Carroll Tenen Environmental 646-606-2332 3/7/2019 - Feng - Received email from Matthew Carroll that he is away on vacation and will call back on Monday. 3/11/2019 - Feng - Call back from Matt Carroll of Tenen Environmental. The site is currently used as an armored car facility. A realty broker company hired him to do a due diligent investigation to know the environmental liability. Unknown there is any development schedule. They installed soil borings. The groundwater samples collected revealed dissolved residual contamination and some chlorinated solvent, not too bad. Because of the cVOCs, they want to consider different program, maybe BCP. They will have a meeting tomorrow. He will update me on the owner's information, sending the Phase 1 and Phase 2 reports and decide whether to enter BCP. 03/13/19-Hiralkumar Patel. received Phase I and II reports from Matt. POM Realty Holdings, Inc. **property owner** 160 Oak Drive Syosset, New York 11791 Attn.: James L. Shreero Ph. (516) 880-8641 email: JShreero@payomatic.com during Phase I, review of available records revealed no evidence of recognized environmental conditions excepts following: - current use of portion of site for vehicle maintenance - historical use of the site for machine repair, machine shops, printing, unspecified manufacturing and textile/knit mill - historical use of the adjoining properties for machine shops, brass works, manufacturing, blacksmithing, auto wrecking, chemical

filling, knit good processing and industrial-sized brewing facilities - presence of a large quantity generator of ignitable hazardous waste on an adjoining property summary of Phase II: - site includes lots # 22, 24, 26, 27, 47, 48 and 49 on block # 3046 - site lots are currently occupied with warehouse-style buildings, used for armored car activities including vehicle maintenance, and surface parking areas - site is underlain by fill and sands extending to the groundwater interface. fill layer ranges from 2 to 30 ft thick and consists of brown to red silty sand with concrete, brick and glass fragments. the sand is fine with few cobbles at shallower depths - installed six (6) soil borings (SB-1 through SB-6) to a depth of 35 ft bg, except boring SB-1 which was installed to a depth of 40 ft bg - signs (staining/odor/PID) of contamination were noted in boring SB-1 only - one soil sample was collected from each boring except boring SB-1 where two soil samples were collected - soil sample from 13-15 ft bg (with highest PID of 595.8 ppm) from SB-1 was lost in transit to the lab, so only one sample from 7-9 ft bg from SB-1 was analyzed - no contamination was noted in soil samples (even with 411.7 ppm on PID in sample from SB-1) - three (3) 1-in temporary wells (MW-1 through MW-3) were installed in soil borings SB-1, SB-2 and SB-3, respectively - well MW-1 was installed to a depth of 45 ft bg; wells MW-2 and MW-3 were installed to a depth of 40 ft bg - groundwater was measured at depths ranging from approx. 32.43 ft bg in MW-2 to 37.31 ft bg in MW-1 - measured 271.6 ppm on PID in headspace of well MW-1 - no visual evidence of petroleum impacts was observed in purged groundwater - minute petroleum VOC contamination (max. 26 ppb Xylene in MW-2) was noted in groundwater samples (even with 271.6 ppm in headspace of well MW-1) - installed four (4) soil-vapor points: probes SS-1 through SS-3 were installed within the existing buildings and probe SV-1 was installed in the exterior parking lot along Meserole St - soil-vapor probes were installed approx. 6 inches below the bottom of the existing concrete or asphalt slabs - minor petroleum VOCs noted in soil-vapor samples (max. 43.3 ug/m3 of Xylene in SS-1) - chlorinated VOCs noted in groundwater and soil-vapor samples groundwater analyticals (in ppb):
----------MW-1-----MW-2-----MW-3
1,1-Dichlorobenzene----------180------410------220
1,4-Dichlorobenzene----------69------160------120
Chlorobenzene----------27-------42-------38
cis-1,2-Dichloroethene----------7-------18------220
TCE----------16
Vinylchloride----------2-------12------150 soil-vapor
analyticals (in ug/m3): ----------SS-1------SS-3
Chloroform----------33---------8
1,1,1-Trichloroethane---------26--------46
TCE----------83--------30
PCE----------104--------15 alternate address
including all lots: 249-257 Meserole St, 254-264 Scholes St no PBS or other spills found. discussed with DEC Jane regarding detection of CVOCs in subsurface. she asked to refer case in couple of weeks if property owner does not meet Section A for BCP pre-application meeting. 12:23 PM:- left message for Matt and informed him about discussion with DEC Jane. 05/02/19-Hiralkumar Patel. 10:17 AM:- spoke with Matt who confirmed that BCP pre-app meeting has not happened yet. 10:36 AM:- sent p-site memo to DEC Jane. case assigned to DEC Jane. Site reclassed P to N 2/25/21. p-site closed out. Consulted with Patel Hiralkumar, no petroleum related concerns, okay to close."

Site Description: "The Technical Metal Finishers Company was a plating company located in a light industrial/residential area. The company is out of business and the site is abandoned. The site was discovered in June 1982 when a fire occurred at the abandoned plant. The facility

TECHNICAL METAL FINISHERS (Continued) **1003864057**

	contained waste acids, caustics and cyanides stored in tanks and drums. The wastes contained in the tanks and drums were removed by a contractor hired by NYC Dept. of Environmental Protection. Clean up has been initiated by NYC Dept. of Environmental Protection through contract with Radiac Research Corporation. All tanks and debris have been removed from site and soil has been excavated. The building was demolished, and all work has been completed."
Env Problem:	"The site was delisted from the Registry as removal action conducted at the site has removed all hazardous waste."
Health Problem:	"NYSDOH has insufficient information to fully evaluate the potential for human exposures."

Site Description: "Location The 1.08-acre site is located in the Greenpoint/East Williamsburg industrial section of Brooklyn, NY. The site is located on the southwest corner of the intersection of Vandervoort Avenue and Richardson Street. Please refer to Figures 1 2. Site Features The site is completely covered by a one-story brick building. Numerous other commercial and industrial properties are located to the north, south, and west of the site. The Greenpoint Little League fields and a National Grid energy facility are east of the site across Vandervoort Avenue. A small residential area is located 1-2 blocks north of the site. An eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located 4 blocks to the north. Current Zoning and Land Use The site is zoned for (M1) manufacturing. Per NYC Planning, M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. The site is currently used for sheet metal fabrication and offices. Past Use of the Site The Department began a Site Characterization in this area in2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, Site ID No. 224121). This property was identified as a potential source of contamination based on its past use. Klink Cosmo Cleaners operated as a commercial dry cleaner from the 1950's to the mid 1990's. During that time, hazardous waste (spent halogenated solvents) was generated under EPA ID no. NYD000824334. Site Geology and Hydrogeology The site is underlain by urban fill unit (0.5-8 feet thick), a sand unit (approximately 100 feet thick) with varying textural features, and the Raritan (clay) Formation approximately 110 feet below ground surface (bgs). Groundwater is present approximately 35 feet bgs and flows north to northeast toward Newtown Creek. "
Env Problem: "Soil and groundwater were analyzed for volatile organic compounds

FORMER KLINK COSMO CLEANERS (Continued) **S109416412**

(VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern include VOCs and metals. Nature and Extent of Contamination: Soil The VOC source area was identified in the northeast corner of the current building at depths from 1 - 35 feet below ground surface (bgs). Tetrachloroethylene (PCE) was detected in soils on-site at concentrations up to 273 parts per million or ppm, exceeding the soil cleanup objective (SCO) for commercial use (150 ppm) and for the protection of groundwater (1.3 ppm). Trichloroethene (TCE) was detected in two on-site samples which slightly exceed the protection of groundwater SCO (0.47 ppm). PCE contaminated soil exceeding the protection of groundwater SCO extends off-site approximately ten feet to the north and east below the adjacent sidewalks of Vandervoort Avenue and Richardson Street. Metals contamination associated with urban fill was detected in shallow soil on-site. For example, lead was detected up to 2,680 ppm (exceeding the commercial SCO of 1,000 ppm) and arsenic up to 38.7 ppm (exceeding the commercial SCO of 16 ppm). The data does not indicate any off-site metal impacts in soil related to this site. Groundwater Based on the investigations conducted to date, the primary contaminants of concern detected in groundwater include PCE and trichloroethene (TCE). PCE has been found in shallow groundwater at concentrations up to 46,000 parts per billion or ppb (exceeding the groundwater standard of 5 ppb). PCE has also been found in deep groundwater (atop the Raritan clay) up to 4,500 ppb. TCE, a daughter product of PCE, was detected up to 2,100 ppb (exceeding the groundwater standard of 5 ppb). The groundwater plume extends north and east from the site to at least Lombardy street where it becomes co-mingled with contamination originating from other sites. Soil Vapor PCE has been found in soil vapor beneath the site at concentrations up to 2,090,000 micrograms per cubic meter, or ug/m^3. TCE has been found at concentrations up to 7,380 ug/m^3. Soil vapor intrusion sampling has been completed at twenty off-site structures. Actions described in Section 6.2 were needed to address potential exposure at twelve structures. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered by a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sub?slab depressurization systems (SSDSs) have been installed in twelve off?site residential buildings to prevent the indoor air quality from being affected by the contamination in soil vapor in the area. SSDSs remain available to homeowners in the vicinity of the site who previously rejected the State s offer for a system. The on-site building does not have an SSDS; however, the potential for soil vapor intrusion is being addressed by the soil vapor extraction/air sparge system which is being constructed and will be operated on-site. "

SHWS:

Name:	FORMER GOODMAN BROTHERS STEEL DRUM CO.
Address:	18 DIVISION PLACE
City,State,Zip:	BROOKLYN, NY 11222
Program:	HW
Site Code:	505634
Classification:	Significant threat to the public health or environment - action required.
Region:	2
Acres:	0.670
HW Code:	224211
Record Add:	03/18/2015
Record Upd:	08/10/2020
Updated By:	HMDUDEK
Site Description:	"Location: The 0.67 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the south side of Division Place between Kingsland and Debevoise Avenues. Site Features: The site is mostly covered with one-story buildings, with a storage yard located on the south side along Richardson Street. Current Zoning and Land Use: The site is zoned for manufacturing. The site is currently used for storage and light manufacturing. Numerous commercial, industrial, and residential properties surround the site. Past Use of the Site: Goodman Brothers began operations in 1909 as a re-conditioner and recycler of used steel drums for re-use or disposal. The Department's initial involvement with the facility was a RCRA inspection conducted in September 1982, as the company was a large quantity generator of hazardous waste above a sole-source aquifer. The company went out of business in June 2002. During the last 20 years of its operation, Goodman Brothers entered into one consent order with the USEPA (1983), and two consent orders with the Department (1987 and 2003), and agreed to pay penalties in the overall amount of $28,000 for numerous violations. Site Geology and Hydrogeology: The site is underlain by a sand/silty sand unit (~15-35' thick), a discontinuous sand/gravel unit within the

GOODMAN BROTHERS CO STEEL DRUM DIV (Continued) **1000190383**

sand/silty sand unit (~5' thick), a discontinuous clayey silt unit within the sand/silty sand unit (~5' thick), and a sand unit below. Groundwater is approximately 15-20' below grade in the immediate vicinity of the site. Groundwater below the site flows toward the east in the direction of Newtown Creek (~3,600' away)."

Env Problem:	"Nature and Extent of Contamination: - Groundwater The primary contaminants in groundwater are Volatile Organic Compounds or VOCs and Per/ polyfluoroalkyl substances (PFAS). For example, the chlorinated VOC, cis-1,2 dichloroethene (DCE) was detected up to 61,000 parts per billion or ppb, compared to groundwater standard of 5 ppb. The PFAS compound Perfluorooctanoic acid (PFOA) was detected up to 5,100 parts per trillion or ppt, compared to a groundwater standard of 10 ppt. - Soil The primary contaminants in soil are VOCs and Polychlorinated Biphenyls (PCBs). For example, the chlorinated VOC, tetrachloroethene (PCE) was detected up to 1,200 parts per million or ppm. This exceeds the commercial Soil Cleanup Objective (SCO) of 150 ppm. Total PCBs were detected up on 130 ppm, which exceeds the commercial SCO of 1 ppm. Soil Vapor: Numerous VOCs were detected in soil vapor. For example, DCE was detected up to 5,600,000 micrograms per cubic meter (ug/m3). Numerous Significant Threat: The site poses a significant environmental threat due to ongoing releases of PCE (and its breakdown products), BTEX compounds, and PCBs from source areas into soil groundwater and soil vapor."
Health Problem:	"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion in on-site and off-site structures exists and should be evaluated and may need to be evaluated for off-site structures. "

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Acres: 0.460
HW Code: 224182
Record Add: 09/17/2013
Record Upd: 08/10/2020
Updated By: HMDUDEK
Site Description: "Location: The approximately 1/2 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the northeast corner of the intersection of Lombardy Street and Varick Avenue. Site Features: The site is completely covered by two (2) masonry block buildings. Current Zoning and Land Use(s): The site is zoned for manufacturing. The site is currently utilized as a warehouse. Numerous commercial and industrial properties are located to the north, east, and west of the site. A National Grid energy facility is located south of the site across Lombardy Street. The Brooklyn-Queens Expressway (I-278) is located 1 block north of the site. A residential area is located 2 blocks southwest of the site. Newtown Creek is located 4 blocks east of the site. Past Use(s) of the Site: The Department began a Site Characterization in this area during the Summer of 2011 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular area was specifically targeted for investigation based on its previous use as a lacquer storage facility in the 1930s, as a soap manufacturer from the early 1950s to 1989, and on data collected by the Department during investigations conducted at an adjacent site between 2007-2009 (ACME Steel - Brass Foundry) which indicated the presence of an additional source area along Varick Avenue between Anthony and Lombardy Streets. Site Geology and Hydrogeology: The site is underlain by a sand unit (~110' thick) with a discontinuous clayey silt/silty sand unit within the sand unit, and the Raritan formation. Groundwater is present at a depth of approximately 45-50' below ground surface in the vicinity of the site. Groundwater flows north towards Newtown Creek, which lies approximately 1,600' northeast of the site."
Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 8,400 ppb, and in deep groundwater up to 20,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. - Soil PCE has been found in soil up to 23,000 ppm @ 1-1.5' below grade adjacent to a site-related cesspool, which is well above the soil cleanup objective for unrestricted use (1.3 ppm). Significant Threat: The site poses a significant environmental threat due to the ongoing release of PCE from source areas into soil and groundwater and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures."
Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the

FORMER LOMBARDY STREET LACQUER AND SOAP MFG. (Continued) **S102637940**

indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in on-site structures should be evaluated. In addition, off-site sampling indicates soil vapor intrusion is a concern for off-site buildings."

Updated By:	HMDUDEK
Site Description:	"Location: The 1.01 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Vandervoort Avenue between Anthony and Lombardy Streets. Site Features: The site is completely covered by one (1) two-story and three (3) one-story brick buildings. The site is surrounded by other commercial and industrial properties. Sergeant William Dougherty Playground is located immediately north of the site across Anthony Street, and the eastbound on-ramp to the Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area

95 LOMBARDY ST./ACME ARCH. PRODS., INC. (Continued) **U003652054**

is located one block south of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a granite warehouse and showroom at 95 Lombardy Street, and a paper distribution office and a kitchen cabinet warehouse/showroom at 46 Anthony Street. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a metal fabricator and painting facility from the 1930's to the late 2000's, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site."

Env Problem: "Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is trichloroethene (TCE). TCE has been found on-site in shallow groundwater at concentrations up to 66,000 ppb, and in deep groundwater at concentrations up to 70,000 parts per billion or ppb, exceeding Part 703.5 class GA standards (5 ppb). Concentrations of tetrachloroethene (up to 8,000 ppb) and 1,2-dichloroethene (3,200 ppb) have also been found above their respective Part 703.5 class GA standards (5 ppb each). - Soil TCE was detected in soil at 2.3 parts per million or ppm in one sample (exceeding the unrestricted Soil Cleanup Objective). - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been found up to 3,100 ug/m^3. Concentrations of TCE in soil vapor have been found up to 4,500 ug/m^3, and in indoor air up to 13 ug/m^3. Significant Threat: The site poses a significant environmental threat due to ongoing releases of TCE from source areas into soil and groundwater."

Health Problem: "Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. "

Site Description: "Location: The site is located at 513 Porter Avenue in the Greenpoint section of the Borough of Brooklyn. It is bounded by Cherry Street to the north, Porter Avenue to the east, and Anthony Street to the south. Site Features: The site was once occupied by 5 contiguous, 1-story masonry construction buildings with an area of 39,000 sq. ft. (181.95 ft. x 200 ft.) constructed in 1950 (now demolished). Sergeant William Dougherty Playground was located immediately west of the site (now partially demolished and closed). The eastbound on-ramp to the

FORMER ACME STEEL PARTITION CO. (Continued) **S118950564**

Brooklyn-Queens Expressway (I-278) is located immediately north of the site. A small residential area is located two block south of the site. Current Zoning and Land Use: The site is located in a manufacturing area. The site was used as a staging area for equipment and materials as part of the Kosciuszko Bridge replacement project. Past Use of the Site: The site was operated by the ACME Steel Partition Company until 2007 when operations at the property ceased. The property was acquired via eminent domain by the NYSDOT as part of the Kosciuszko Bridge replacement project. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~100' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~120-125' below ground surface). Groundwater is approximately 35-45' below ground surface in the vicinity of the site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,500' northeast of the site."

Env Problem:	"Nature and Extent of Contamination: Soil - PCE has been found in on-site soils at concentrations up to 2.2 ppm, which is slightly above the soil cleanup objective for unrestricted use (1.3 ppm). Lead had been found up to 6,400 ppm, which is well above the soil cleanup objective for restricted residential use (400 ppm). Lead-hazardous soils were also identified on-site. Groundwater - The primary contaminants of concern at the site are tetrachloroethene (PCE), trichloroethene (TCE), and lead. PCE (up to 70 parts per billion, or ppb), TCE (up to 80 ppb), and lead (up to 254 ppb) have been found at concentrations slightly above their Part 703.5 class GA standards of 5, 5, and 25 ppb respectively. Soil Vapor - PCE has been found in soil vapor at concentrations up to 11,000 micrograms per cubic meter (ug/m3). TCE has been found at concentrations up to 106 ug/m3. "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description: "Location: The 1.21 acre site is located in the Greenpoint/East Williamsburg Industrial Area section of Kings County (Borough of Brooklyn, New York City). The site is located on the east side of Porter Avenue between Anthony and Lombardy Streets. Site Features: The site consists of one 1-story brick building, three 1-story metal sheds, two truck parking areas and a bus parking lot. The site is surrounded by other commercial and industrial properties. A large National Grid energy facility is located one block south of the site across Lombardy Street. Sergeant William Dougherty Playground is located one block northwest of the site across Anthony Street, and the elevated Brooklyn-Queens Expressway (I-278) is located one block to the north. A small residential area is located one block southwest of the site. Current Zoning/Use(s): The site is zoned for manufacturing. The site is currently used as a marble and granite distribution warehouse and and a City-Wide truck maintenance shop at 498 Porter Avenue. Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was utilized as a brass foundry from the 1960's to 1993, and a Department database which lists the site as a generator of F001 waste (spent halogenated solvents used in de-greasing). This investigation was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-9' thick), a sand/silty sand unit (~110' thick), a discontinuous clay/silt unit (~1-10' thick) within the sand/silty sand unit at various depths within the site area, a sand and gravel unit (~5' thick), and the Raritan Formation (~130-135' below ground surface). Groundwater is approximately 45-55' below ground surface in the vicinity of the

ACME STEEL/BRASS FOUNDRY (Continued) **S118950559**

	site. Groundwater flows northeast toward Newtown Creek, which lies approximately 2,000' northeast of the site."
Env Problem:	"Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been detected up to 1,800 parts per billion or ppb (compared to a groundwater standard of 5 ppb). - Soil PCE has been found in on-site soils at concentrations up to 220 parts per million or ppm (compared to a commercial use soil cleanup objective of 150 ppm). - Soil Vapor Concentrations of PCE have been found up to 19,000 ug/m^3. Concentrations of TCE have been found up to 1,300 ug/m^3. "
Health Problem:	"Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available. Updated By: JHOCONNE
Site Description: "Location: The Site is located at 152 Graham Avenue in the Borough of Brooklyn, Kings County, NY. The site is located in the East Williamsburg section of Brooklyn, New York. The property is bordered by Graham Avenue on the west, by a three-story mixed commercial/residential building to the north, by a four-story mixed commercial/residential building and a three-story mixed commercial/residential building to the south, and by a four-story residential building to the east. The three-story building located to the southeast of the site also has a dry cleaner on the first floor. Site Features: The 2,500 square foot (0.057 acre) site parcel is occupied by a three-story building built in 1920. The site parcel also contains an open yard area behind (east of) the structure. The first floor is occupied by a dry cleaner and the upper two floors are occupied by residential apartments. Current Zoning and Land Use: The current site use is a dry cleaner (Top Hat Cleaners) on the first floor with residential apartments on the second and third floors. Past Use of the Site: According to the historical records, a dry cleaner has occupied the 152 Graham Ave location since approximately 1960. A Phase I study at the adjacent property (154 Graham Avenue) identified current and prior occupants of the ground floor retail space (pastry shop, shoe retailer and moving company, among others) which were not likely to be a source for chlorinated VOC impacts beneath the site. The report identifies the dry cleaner at 152 Graham Avenue (Top Hat Cleaners) as the most likely source of the contaminants identified in soil vapor. Site Geology and Hydrogeology: The site elevation is approximately 27 feet above mean sea level. Soil lithology consists of two main types of soils. The first soil type was fill material that consisted of fine to medium sand to silt with fine to coarse gravel and traces of brick and other miscellaneous debris. The second type was natural material composed of fine to coarse sand to silt with fine to coarse gravel and little clay. Groundwater was encountered between 17.5 feet and 22.5 feet below ground surface. Groundwater flow was determined to be in the north to northwest direction. Site is transferred and being remediated under BCP Site No. C224208."
Env Problem: "Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs). Based upon investigations conducted to date, the primary contaminant of concern is tetrachloroethene (PCE). Soil - Sampling of soil beneath and behind the site structure was limited due to inability to access the area with a drill rig. Sample results from other media indicate that a source area of higher contaminant concentrations may be present beneath the site structure. Two detections of PCE were observed in soil borings advanced during the Site Characterization. PCE was

TOP HAT CLEANERS (Continued) **1004758111**

detected at MW-02 (0.0036 ppm 17 19) and MW-04 (0.0017 ppm 5 6). Both detections are below the NYCRR Part 375 Soil Clean-up Objective of 1.3 ppm for PCE meeting both Unrestricted Use and Protection of Groundwater objectives. Groundwater - PCE was found in groundwater at two of the three boring locations advanced into the water table. Concentrations in contravention of the Class GA Groundwater standard of five (5) ppb were observed at 56 ppb and 10 ppb. Each of these exceedances were located in the public sidewalk immediately off the site parcel. Soil Vapor & Indoor Air A Vapor Intrusion Investigation was performed at the adjacent building to the north (154 Graham Avenue) as part of a real estate transaction. As part of that investigation two sub-slab vapor samples, one basement indoor air sample, and one ambient air sample were collected. At sub-slab location SG2, 43,399 ug/m3 of PCE was detected in soil vapor. (Note that the concentration reported is from a sample that was diluted 600 times. The concentration of PCE in the undiluted sample was 10,171 ug/m3, which exceeded the calibration range of the equipment.) Trichloroethylene (TCE) was detected at 1074 ug/m3 in the diluted sample and at 1504 ug/m3 in the undiluted sub-slab vapor sample. Cis-1,2-dichlorothylene (cis-1,2-DCE) was detected at 2180 ug/m3 in the diluted sample and at 1110 ug/m3 in the undiluted sub-slab vapor sample. Indoor air sampling results identified 44.1 ug/m3 of PCE and 0.43 ug/m3 of TCE in the basement air sample. See site no. C224208 for additional updates."

Health Problem: "People may contact contaminated soil or groundwater if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Additional investigation of the potential for soil vapor intrusion to occur off-site is needed."

Site Description:	"Location: The Former W.L.K. Corp. Site (58-30 57th St.) is located near the intersection of Grand Avenue and 57th Street in Maspeth, Queens County, New York. Site Features: The site is identified on the Queens Business Borough Tax Map as Block 2610, Lots 412 and 440 and is approximately 2.01 acres in size. The site is bordered on the north by MTA/LIRR rail lines, on the south by Grand Avenue, on the east by 57th Street, and on the west by a commercial/industrial property. The site is mostly paved, with a small area overgrown with vegetation (former railroad spur) present adjacent to the western portion of the building. Current Zoning and Land Use: Lots 412 and 440 are currently zoned M3-l. The site is currently used as a lumber yard with some offices. The surrounding parcels are currently used for a combination of commercial, light industrial, and transportation. The closest residential area is directly across 57th Street. Past Use of the Site: The northern portion of the site has historically been used by a radiator distribution facility (1930's-1940's), a steel pipe distributor (1950's- early 1970's), corrugated box company (early 1980's), a beer distributing company (mid/late 1980's), and a recycling facility (early 1990's - early 2000's). The southern portion of the site is currently occupied by

FORMER W.L.K. CORP. (Continued) **S109209067**

offices and has been used for several businesses. A lubricating oils company occupied this portion of the site at least from 1936 into the 1970's. Over the years other occupants included an oil company sales office, a milk products company, and an engineering firm. Also, a filling station was located on the site at the corner of Grand Avenue and 57th Street from early 1930's to early 1970's. Site Geology and Hydrogeology: Based on soil collected by continuous sampling activities, stratigraphy along the northwestern portion of the site consists of between 8 and 10 feet of fine to medium sand with trace silt and gravel. Along the northern portion of the property the subsurface material is made up of fill consisting of fine sand and rock fragments. The fine to medium sand/silty-sand in the area of the former rail spur next to the loading dock is underlain by a gray to brown clay that is at least several feet thick. The water table is generally encountered at a depth of approximately eight feet below ground surface (bgs) in either the clay or the overlying sand. The shallow groundwater flow is generally southwest."

Env Problem: "Nature and Extent of Contamination: The primary contaminants of concern at the site include chlorinated volatile organic compounds (CVOCs), specifically, Tetrachloroethylene (PCE) and 1,1,1-Trichloroethane (TCA) and their respective breakdown products. Soil: Exceedances of standards, criteria, and guidance in the on-site soils include TCE (max. 31 ppm), 1,1,1-TCA (1.1 ppm), PCE (max. 2.6 ppm), and total 1,2-DCE (max. 46.2 ppm). Groundwater: Exceedances of standards, criteria, and guidance in the groundwater include 1,1,1-TCA (max. 16 ppb), TCE (max. 710 ppb), PCE (max. 47 ppb), and total 1,2-DCE (max. 548 ppb). Samples taken off-site, adjacent to the former railroad spur area, revealed exceedances in the groundwater of 1,1,1-TCA (max. 71,000 ppb), TCE (360,000 ppb) and 1,2-DCE (max. 42,000 ppb). Soil Vapor: Elevated levels of VOCs were detected in sub-slab soil vapor and indoor air. The maximum concentrations of PCE and TCE in sub-slab soil vapor were detected in the western portion of the existing warehouse at the respective concentrations of 22 micrograms per cubic meter (ug/m3) and 2,310 ug/m3. The maximum concentrations of PCE and TCE in indoor air were detected in the same portion of the warehouse at the concentrations of 1.8 ug/m3 and 2.5 ug/m3. Sampling indicates that contaminated soil vapor extends off-site with TCE in sub-slab soil vapor and indoor air up to 7,260 ug/m3 and 0.38 ug/m3, respectively. Significant Threat: The site presents a significant threat to the environment due to significant groundwater and soil contamination. PCE and TCA are chlorinated volatile organics that are mobile in groundwater, persistent in soil vapor, and considered carcinogenic. Groundwater was observed approximately 8 feet below ground surface and determined flowing in a southwesterly direction. Contamination has been detected migrating downgradient from the site. "

Health Problem: "Further investigation is needed to assess the nature and extent of site-related contamination and the potential for exposure to site contaminants. The site currently has several buildings and a paved parking lot, therefore, contact with subsurface contamination is unlikely. Exposure to site-related contaminants in drinking water is not expected because the area is served by public water. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion to occur. "

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/23/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

UTM Y (Meters):	4507243.5
Elevation:	14 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

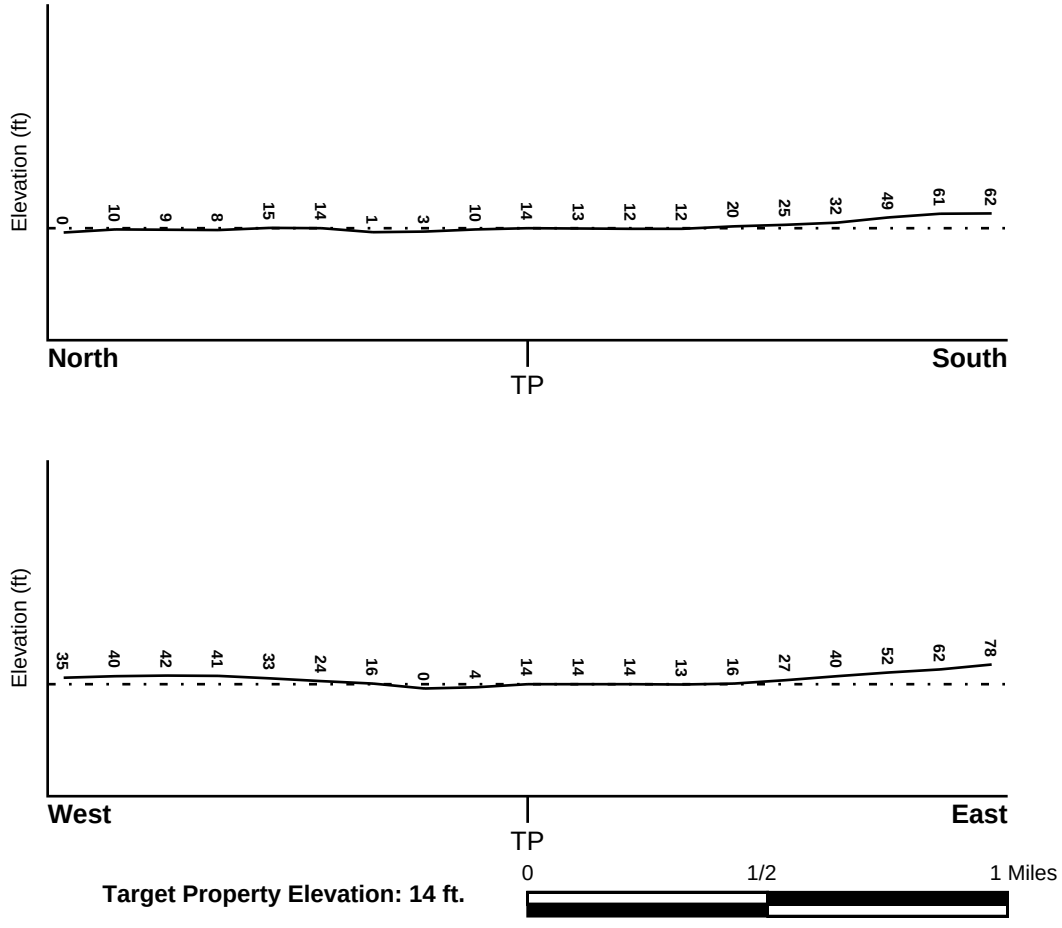
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 14 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970208F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970202F	FEMA FIRM Flood data
3604970206F	FEMA FIRM Flood data
3604970204F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles NNE
Site Name:	Phelps Dodge Refining Corp
Site EPA ID Number:	NYD039138789
Groundwater Flow Direction:	DEPENDENT ON WELL PUMPING RATES.
Measured Depth to Water:	not available.
Hydraulic Connection:	Salt water intrusion may be present at the site. Information about the hydraulic connection between aquifers underlying the site is not available. The depth to bedrock is approximately 60 feet.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Upper Cretaceous
Code:	uK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Subject: [External] [OpenRecords] Request FOIL-2022-826-00315 Closed

Follow Up Flag: Follow up
Flag Status: Flagged

The Department of Environmental Protection (DEP) has **closed** your FOIL request FOIL-2022-826-00315 for the following reasons:

- A diligent search for records responsive to your request did not locate any such records. Accordingly, your request is denied.

You may appeal the decision to deny access to material that was redacted in part or withheld in entirety by contacting the agency's FOIL Appeals Officer: foilappeals@dep.nyc.gov within 30 days.

Dear Molly:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 1/21/2022 and given the reference number FOIL #W095078-012122 for tracking purposes. You may expect the Department's response to your request no later than **2/18/2022**.

Record Requested: **213 Meadow Street (Block 2591, Lots 1, 5, and 45), Brooklyn NY Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 213 Meadow Street (Block 2591 Lots 1, 5, and 45), Brooklyn NY.**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

FOIL #: 22-01-362
RE: 213 Meadow Street, Brooklyn, NY

Dear Molly Mattern:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on January 20, 2022.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

FOIL #: 22-01-362

Dear Molly Mattern:

This letter is in regard to your Freedom of Information Law (FOIL) request of January 20, 2022, which is currently being processed.

Please be advised this Office is unable to respond to your request by the date previously given to you because a diligent search for responsive documents is still being conducted.

We estimate that this Office will complete its process by April 4, 2022. The Department will notify you in writing when/if the responsive materials are available for release or if the time needed to complete your request extends beyond the above date.

Should you require additional information or wish to discuss this matter further, please do not hesitate to contact me at (518) 474-8734.

Sincerely,

Rosemarie Hewig, Esq.

FOIL Control #: 2022FR00325

The NYC Department of Health and Mental Hygiene (DOHMH) acknowledges receipt of your Freedom of Information Law request. It has been assigned the above-noted control number and has been forwarded to the following bureau for processing:

Environmental Health Services
Alfreda Torbert, e-mail: atorber1@health.nyc.gov
Sheba Taylor-Medina, e-mail: staylor2@health.nyc.gov

You should receive a response from the program/bureau within twenty(20) business days. Please note that as of January 1, 2019, the Department may charge the statutorily allowable fee of 25¢ per page for photocopied pages of FOIL responses. You will be advised by the program/bureau of the fee that is due and, upon receipt of your payment by check or money order, the copies will be forwarded to you.
All inquiries about the status of your request should be made with the program/bureau and control number noted above.

Thank you,

In Reply Refer To: January 20, 2022
Consultation Code: 05E1LI00-2022-SLI-0496
Event Code: 05E1LI00-2022-E-01133
Project Name: 213 Meadow Street (Block 2591, Lots 1, 5, and 45), Brooklyn NY

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Long Island Ecological Services Field Office
340 Smith Road
Shirley, NY 11967-2258
(631) 286-0485

Project Summary

Consultation Code: 05E1LI00-2022-SLI-0496
Event Code: Some(05E1LI00-2022-E-01133)
Project Name: 213 Meadow Street (Block 2591, Lots 1, 5, and 45), Brooklyn NY
Project Type: ** OTHER **
Project Description: Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 213 Meadow Street (Block 2591 Lots 1, 5, and 45), Brooklyn NY.

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@40.7130045,-73.9284963543846,14z

Counties: Kings County, New York

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Birds

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened
Roseate Tern *Sterna dougallii dougallii* Population: Northeast U.S. nesting population No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/2083	Endangered

Legend

- Selected Facility
- EPA Facility of Interest
- State/Tribe Facility of Interest

The facility locations displayed come from the FRS Spatial Coordinates tables. They are the best representative locations for the displayed facilities based on the accuracy of the collection method and quality assurance checks performed against each location. The North American Datum of 1983 is used to display all coordinates.

EJSCREEN EJ Indexes

Eleven primary environmental justice (EJ) indexes of EJSCREEN, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. The index values below are for the Census block group in which the facility is located. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJSCREEN provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJSCREEN home page.

Census Block Group EJ Indexes (percentile)	
Particulate Matter (PM 2.5)	58.9
Ozone	58.9
NATA Diesel PM	61.3
NATA Air Toxics Cancer Risk	58.9
NATA Respiratory Hazard Index (HI)	59.1
Traffic Proximity	68.2
Lead Paint Indicator	66.9
National Priority List (NPL) Site Proximity	73
Risk Management Plan (RMP) Site Proximity	60.6
Hazardous Waste Proximity	83.5
Wastewater Discharge Proximity	94.8

Number of EJ Indexes Above 80th Percentile

Demographic Profile of Surrounding Area (1 Mile)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2014 - 2018 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. EPA's spatial processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary.

General Statistics	
Total Persons (U.S. Census)	83,210
Population Density	27,778/sq.mi.
Percent People of Color	68%
Households in Area	32,563
Housing Units in Area	32,039
Total Persons (ACS (American Community Survey))	84,953
Households on Public Assistance	1,405
Persons With Low Income	36,324
Percent With Low Income	43%

Geography	
Radius of Selected Area	1 mi.
Center Latitude	40.71283
Center Longitude	-73.92806
Land Area	96%

Age Breakdown - Persons (%)	
Children 5 years and younger	5,157 (6%)
Minors 17 years and younger	17,358 (21%)
Adults 18 years and older	65,853 (79%)
Seniors 65 years and older	6,366 (8%)

Race Breakdown - Persons (%)	
White	40,831 (49%)
African-American	9,239 (11%)
Hispanic-Origin	47,387 (57%)
Asian/Pacific Islander	5,371 (6%)
American Indian	916 (1%)
Other/Multiracial	26,854 (32%)

Education Level (Persons 25 & older) - Persons (%)	
Less than 9th Grade	7,110 (12.01%)
9th through 12th Grade	6,340 (10.71%)

Geography	
Water Area	4%

Income Breakdown - Households (%)	
Less than $15,000	5,731 (17.6%)
$15,000 - $25,000	3,049 (9.36%)
$25,000 - $50,000	6,006 (18.45%)
$50,000 - $75,000	4,626 (14.21%)
Greater than $75,000	13,147 (40.38%)

Education Level (Persons 25 & older) - Persons (%)	
High School Diploma	12,547 (21.19%)
Some College/2-year	10,343 (17.46%)
B.S./B.A. (Bachelor of Science/Bachelor of Arts) or More	22,875 (38.63%)

Demographic Profile of Surrounding Area (1 Mile)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2014 - 2018 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. EPA's spatial processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary.

General Statistics	
Total Persons (U.S. Census)	83,210
Population Density	27,778/sq.mi.
Percent People of Color	68%
Households in Area	32,563
Housing Units in Area	32,039
Total Persons (ACS (American Community Survey))	84,953
Households on Public Assistance	1,405
Persons With Low Income	36,324
Percent With Low Income	43%

Geography	
Radius of Selected Area	1 mi.
Center Latitude	40.71283
Center Longitude	-73.92806
Land Area	96%

Age Breakdown - Persons (%)	
Children 5 years and younger	5,157 (6%)
Minors 17 years and younger	17,358 (21%)
Adults 18 years and older	65,853 (79%)
Seniors 65 years and older	6,366 (8%)

Race Breakdown - Persons (%)	
White	40,831 (49%)
African-American	9,239 (11%)
Hispanic-Origin	47,387 (57%)
Asian/Pacific Islander	5,371 (6%)
American Indian	916 (1%)
Other/Multiracial	26,854 (32%)

Education Level (Persons 25 & older) - Persons (%)	
Less than 9th Grade	7,110 (12.01%)
9th through 12th Grade	6,340 (10.71%)

Geography	
Water Area	4%

Income Breakdown - Households (%)	
Less than $15,000	5,731 (17.6%)
$15,000 - $25,000	3,049 (9.36%)
$25,000 - $50,000	6,006 (18.45%)
$50,000 - $75,000	4,626 (14.21%)
Greater than $75,000	13,147 (40.38%)

Education Level (Persons 25 & older) - Persons (%)	
High School Diploma	12,547 (21.19%)
Some College/2-year	10,343 (17.46%)
B.S./B.A. (Bachelor of Science/Bachelor of Arts) or More	22,875 (38.63%)

Request a Record

Please make your request specific so you receive the fastest service. After you submit a FOIL request you will receive a confirmation number so you can track the status of the response. The agency will notify you about how much time is required to respond to your request.

Category (optional)

Selecting a category helps clarify which agency will receive the request by listing agencies grouped by categories.

Environment

Agency (required)

Select the agency that will handle your request.

Department of Environmental Protection (DEP)

Request Title (required)

213 Meadow Street (Block 2591, Lots 1, 5, and 45), Brooklyn NY

28 characters remaining

Note: The agency, category, and title of your request will be visible to the public. Do not enter personal information here.

Ex: Queens Blvd Roadwork Permit.

Request Description (required)

Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 213 Meadow Street (Block 2591, Lots 1, 5, and 45), Brooklyn NY.

4599 characters remaining

Note: The request details you write here will not be visible to the public. However, the agency may post a description of the records provided.

Ex: Roadwork permits for work done in on Queens Blvd. between 40th and 45th streets, Borough of Queens, in September and October 2017.

IPaC **U.S. Fish & Wildlife Service**

Endangered Species Act Review

Step 1: Request an official species list

An official species list is a letter from the local U.S. Fish and Wildlife Service field office that assists in the evaluation of potential impacts of your project. It includes a list of species that should be considered under Section 7 of the Endangered Species Act, a project tracking number, and other pertinent information from the field office.

Does this project require an official species list?

☑ Yes, request a species list

Upon submitting this form, IPaC will provide a letter from the local U.S. Fish and Wildlife Service office containing a species list that fulfills the requirement listed above, a project tracking number, as well as other pertinent information from the local office.

The following information will be submitted to the U.S. Fish and Wildlife Service and will be part of the public record. All fields are required unless otherwise noted.

LANGAN RESUMES

MOLLY MATTERN

STAFF SCIENTIST

ENVIRONMENTAL ENGINEERING

Ms. Gutelius has over 4 years of environmental engineering, which includes conducting environmental site remediation at various industrial locations in New Jersey. Her specialties include environmental field sampling, construction oversight, data tabulation and analysis, and report composition. Ms. Gutelius is skilled in Groundwater Well Instillation / Monitoring, In-Situ Chemical Oxidation, and Low-Flow Sampling.

SENIOR PROJECT SCIENTIST

BROWNFIELD REDEVELOPMENT, DUE DILIGENCE AND SITE INVESTIGATION, REMEDIAL ACTIONS

Ms. Forsburg has 14 years of experience primarily focused on providing environmental support to redevelopment sites within the metropolitan New York area. She has experience with projects in the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP) and Spill Programs, New York City Office of Environmental Remediation (NYCOER) E-Designated and New York City Voluntary Cleanup Program (VCP) sites, and New York City Department of Environmental Protection (NYCDEP) remediation sites. Her field experience includes implementation and management of all phases of environmental projects involving soil, groundwater, and soil vapor contamination including Phase I inspections, Phase II site investigations, Remedial Investigations, and Remedial Actions.

During her tenure at Langan, Ms. Forsburg's experience has included schematic-, design-, and construction-phase project team involvement on numerous large scale construction projects requiring multi-disciplinary coordination and collaboration across different Langan teams and offices.

SELECTED PROJECTS

Steven Ciambruschini, PG, LEP

Principal/Vice President
Environmental Site Assessments/Investigations, Brownfield Remediation, UST Management

33 years in the industry ~ 28 years with Langan

Mr. Ciambruschini has over 30 years of experience in hydrogeologic and environmental investigations including management of environmental and geotechnical investigations relating to petroleum and chlorinated solvent spill sites, underground storage tank sites, manufactured gas plant sites, landfills, wastewater treatment facilities and industrial/commercial sites. His experience includes managing environmental compliance audits, remedial investigation, pre-acquisition due diligence and permitting assessment, feasibility studies and design, construction and operation of complex innovative remediation systems to treat, contain and recover contaminated soil and groundwater. These projects are managed under various NJDEP, PADEP, NYDEC, NYCDEP and CTDEP programs. Mr. Ciambruschini provides consultation to a diverse group of clients including private developers, utilities, retail and industrial facilities and is expert in assessing remediation options and funding options under various state and federal grant, loan and tax reimbursement programs including Brownfield programs.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) has prepared this report to document the results of a Phase II Environmental Investigation (Phase II EI) completed at the above referenced property. A site location map is provided as Figure 1. The investigation was completed to assess potential subsurface impacts at the site.

1.1 Site Description

The site is an approximately 56,200-square-foot property located at Block 2951, Lots 1, 5, and 45 in Brooklyn, New York. The property is mostly undeveloped with a small one-story structure located on Lot 45 and is currently occupied by Castle Demolition truck storage and repairs, food truck storage, and scaffolding storage areas. The project site is zoned M3-1 Heavy Manufacturing District.

The site is bound to the north by an undeveloped lot used for automobile junking and storage, followed by Ten Eyck Street and a one-story industrial/ manufacturing building; to the east by the undeveloped lot used for automobile junking and storage followed by Stewart Avenue and a two-story industrial/manufacturing building complex; to the south by Meadow Street followed by a two-story industrial/manufacturing building and parking areas; and, to the west by Varick Avenue followed by a two-story industrial/manufacturing waste management building and transfer station. The subject property is located within an area of dense industrial and manufacturing development on the city block bound by Ten Eyck Street to the north, Stewart Avenue to the east, Meadow Street to the south, and Varick Avenue to the west.

1.2 Historical Site Use

Sanborn Fire Insurance Maps were reviewed. According to the Sanborn Maps, the subject property was operated for oil truck parking, junk yards, and auto wrecking on the western portion of the property from 1965 through 2007 and as a solid waste transfer facility for yard waste and residential, institutional, and commercial waste from at least 2004 through 2012. Historical and current uses of surrounding sites includes a private garage with truck repair, paint room, gasoline tank, wire product manufacturing, an oil/fuel company, metals stamping, and metal products manufacturing between 1951 and 2007, a vinyl plastics company and a chemical products company with manufacturing

facilities between 1965 and 2007, gasoline storage between 1933 and 1988, auto wrecking between 1965 and 1977, an automobile repair facility (1933-1987), filling stations (1933-1968), and an oil terminal (1933-1968).

According to the City Directory Abstract, the subject property listings consist of auto wrecking and demolition and salvage companies.

The site is identified in the NY Spills database for a release reported to the department on 31 March 1994 and assigned NYSDEC Spill No. 9315532. According to the case narrative provided by EDR, a tank truck spilled approximately 5-gallons of diesel onto the concrete and clean up was in progress at the time the spill was reported. No additional information was provided and the spill was administratively closed on 31 March 1994.

1.3 Geological and Hydrogeological Conditions

Based on borings completed during the February 2022 Phase II EI, stratigraphy in the western portion of the site consists of a 1- to 2-foot-thick layer of concrete underlain by 4 to 6 feet of fill followed by sand, silty sand, and clay. The central portion of the site consists of a 6-foot layer of fill underlain by sand with no concrete present. The eastern portion of the site consists of a 2-foot-thick layer of concrete, underlain by a 6- to 15-foot layer of fill underlain by sand, silt, and clay. All borings were completed to approximately 20 feet below ground surface (bgs). The top of a peat layer was encountered between 18.5 and 19.5 feet bgs in the western and eastern portions of the site.

The "Surficial Geologic Map of New York" by the New York State Museum State Geological Survey indicates that the surficial geology at the site consists of till which is generally an impermeable layer comprised of poorly sorted and variably sized clasts. According to the "Bedrock and Engineering Geologic Maps of New York County" by Charles A. Baskerville the site is underlain by the Hartland Formation which consists of interbedded units of feldspar, schist, and amphibolite.

Groundwater was encountered between 9.5 feet bgs in LMW-1 and 11.5 feet bgs in LMW-4, completed during the Phase II EI. Based on site/area topography, groundwater flow is anticipated to be to the west, toward English Kills, a tributary of Newton Creek.

2.0 PHASE II ENVIRONMENTAL INVESTIGATION

Langan completed this Phase II investigation in February 2022 to assess if adverse subsurface environmental impacts have resulted from historical operations at the site and surrounding sites.

The investigation included the installation of seven soil borings, four groundwater monitoring wells, four soil vapor sampling points, and the collection of soil, groundwater, and soil vapor samples for laboratory analysis. The borings, monitoring wells, and soil vapor sample locations were biased towards the locations of historical auto wrecking operations and onsite ASTs and drum storage. All soil boring, monitoring well, and soil vapor sampling locations are shown on Figure 2.

2.1 Geophysical Utility Clearance

The geophysical utility clearance was completed on 3 February 2022 by Hager Richter Geoscience, Inc. of Fords, New Jersey using ground penetrating radar (GPR) and precision utility location (PUL). The purpose of the geophysical utility clearance was to identify any underground structures within the survey area and to clear the proposed soil boring locations for utilities. The clearance was completed in a 10-foot radius around six of the seven soil boring locations, as one soil boring location in Lot 5 was not accessible at the time of the survey.

Small unidentified buried objects were detected in the vicinity of LSB-3, LSB-4, and LSB-7. A possible electric utility was identified in the vicinity of LSB-2 and possible water lines were detected at LSB-5 and LSB-7. Based on these findings, boring locations were moved at least five feet from any suspected utility or unidentified buried object. The soil investigation at LSB-1 on Lot 5 was hand-cleared to 5 feet bgs prior to the start of drilling to confirm that no below ground utilities would be disturbed during the investigation activities. The geophysical survey report is provided as Attachment A.

2.2 Soil Investigation and Field Observations

On 3 and 4 February 2022, seven soil borings (LSB-1 through LSB-7) were completed by AARCO Environmental Services, Corp. (AARCO) of Lindenhurst, New York. The borings were completed to 20 feet bgs with a track-mounted Geoprobe® 7782DT direct push drill rig. Three soil borings (LSB-5 through LSB-7) were completed in the eastern portion of the Lot 45 footprint to assess

potential impacts from the drum storage area, three active 275-gallon ASTs, and one out-of-service AST. Three soil borings (LSB-1 through LSB-3) were completed across Lots 1 and 5 to assess potential impacts from historical auto wrecking and oil truck parking operations. One soil boring (LSB-4) was completed in the western portion of Lot 45 to assess general site conditions.

All soil boring locations are shown on Figure 2, soil sample analytical results are provided in Table 1 and summarized on Figure 3. Soil boring logs are provided in Attachment B and complete laboratory data packages are provided in Attachment D.

Continuous macrocore samples were collected to the bottom of each boring. Field screening of soil during sample collection for volatile organic compounds (VOCs) using a photo-ionization detector (PID) was completed during the installation of all seven soil borings and all soil samples were screened for visual or olfactory evidence of impacts. PID readings above background were detected up to 4.8 parts-per-million (ppm) at LSB-2 at 17 feet bgs, 7.9 ppm at LSB-4 at 4 feet bgs, 52.7 ppm at LSB-5 at 15.5 feet bgs, and up to 171 ppm at LSB-6 at 8 feet bgs. Odors were observed at all borings except for LSB-3. Staining was not observed in any soil borings completed as part of the Phase II EI.

Eleven soil samples were collected for chemical analysis during the Phase II EI. Three discrete soil samples were collected from LSB-3, two discrete soil samples were collected from LSB-1 and LSB-5, and one discrete soil sample was collected from LSB-2, LSB-4, LSB-6, and LSB-7. One sample was collected from the 2-foot interval with the highest PID screening results or physical evidence of impacts (i.e., odors). If no impacts were identified, soil samples were collected from within the fill layer. Soil samples were collected from the interval exhibiting the highest level of impacts as determined by PID screening results and odors from 4 to 6 feet bgs at LSB-1 and LSB-4, from 8 to 10 feet bgs at LSB-6, and from 15 to 17 feet bgs at LSB-5. Soil samples were collected from the fill layer from 2 to 4 feet bgs at LSB-1, LSB-2, LSB-3, and LSB-7, from 4 to 6 feet bgs at LSB-3, and from 4 to 7 feet bgs at LSB-5. One sample was collected from the 2-foot interval immediately above inferred groundwater from 8 to 10 feet bgs at LSB-3.

Soil samples were submitted to York Analytical Laboratories, Inc. (York) of Stratford, CT for NYSDEC Part 375-specified volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated

biphenyls (PCBs), herbicides, target analyte list (TAL) metals, total cyanide, trivalent and hexavalent chromium, 1,4-dioxane, and perfluoroalkyl substances (PFAS). Four soil samples, LSB-1 from 2 to 4 feet bgs, LSB-3 from 4 to 6 feet and 8 to 10 feet bgs, and LSB-5 from 4 to 7 feet were analyzed for polycyclic aromatic hydrocarbons (PAHs) and TAL Metals, only.

Soil Sampling Quality Assurance/Quality Control

All soil sampling devices were properly decontaminated according to NYSDEC and ASTM (ASTM D-5088-90) guidelines prior to each sampling location. Each macrocore was lined with a dedicated acetate liner prior to the collection of each 5-foot-long soil sample collected in the use of the Geoprobe® 7782DT. Soil samples were then placed in glass jars supplied by the laboratory. Soil samples collected for VOCs were obtained via a plunger calibrated to collect approximately 5 grams of soil and then placed in a vial that was preserved with methanol or distilled water.

Each soil sample was recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed and were stored at a maximum of 4° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Quality assurance (trip blanks) and quality control samples (field blanks, equipment blanks, and duplicate samples) were incorporated into the sampling event and consisted of one field blank, one duplicate sample, three equipment blanks, and two trip blanks during the Phase II EI. The Phase II EI soil duplicate and field blank sample were analyzed for VOCs, SVOCs, PCBs, pesticides, herbicides, TAL metals, hexavalent chromium, total cyanide, PFAS, and 1,4-dioxane. The equipment blanks were analyzed for PFAS and 1,4-dioxane only. The trip blank samples were analyzed for VOCs only.

2.3 Groundwater Investigation and Field Observations

On 3 and 4 February 2022, four groundwater monitoring wells (LMW-1 through LMW-4) were installed by a licensed well driller from AARCO. Monitoring wells were completed to approximately 20 feet bgs at all four locations. LMW-1 was installed at LSB-2 to assess for impacts from oil truck parking. LMW-2 was installed at LSB-4, to assess general site conditions. LMW-3 and LMW-4, installed at LSB-5 and LSB-6 respectively, were installed to assess impacts from onsite ASTs and drum storage in Lot 45. The monitoring wells were

constructed with 10 feet of 2-inch diameter Schedule 40 PVC well screen and 10 feet of 2-inch diameter PVC riser. Monitoring well locations were measured in the field from the nearest property boundary and are shown on Figure 2. Monitoring well construction logs are provided in Attachment B.

Groundwater levels were measured prior to sampling with an oil/water interface probe. Light non-aqueous phase liquid (LNAPL) was not detected in any of the groundwater monitoring wells and groundwater was measured to be approximately 9.5 feet bgs in monitoring wells LMW-1 and 11.5 feet bgs in monitoring well LMW-4.

On 7 and 8 February 2022, four groundwater samples (LMW-1 through LMW-4) were collected for chemical analysis via United States Environmental Protection Agency (USEPA) low-flow purging and sampling methods using dedicated polyethylene tubing and a peristaltic pump at each location. Groundwater field parameters, including pH, specific conductivity, dissolved oxygen, oxidation-reduction potential, temperature, and turbidity were measured during low-flow purging activities at the remaining wells during purging activities. No evidence of sheen, or free product were observed during purging or sampling activities in any of the wells. Odors were observed at LMW-3 and LMW-4 during the beginning purging. Groundwater analytical results are provided in Table 2 and are summarized on Figure 4. Low-flow groundwater sampling logs are provided in Attachment C and a complete laboratory data package is provided in Attachment D.

Groundwater samples were submitted to York for NYSDEC Part 375-specified VOCs, SVOCs, PCBs, pesticides, herbicides, TAL metals, hexavalent chromium, total cyanide, PFAS, and 1,4-dioxane analysis.

Groundwater Sampling Quality Assurance/Quality Control

Collected groundwater samples were placed in containers supplied by the laboratory with the appropriate preservatives. Each groundwater sample was recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed and were stored prior to submission to the laboratory at a maximum of 4° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

Quality assurance (trip blanks) and quality control samples (field blank and duplicate samples) were incorporated into the sampling event and consisted of one field blank, two trip blanks, two equipment blanks, and one duplicate sample for groundwater samples collected during the Phase II EI. The groundwater field blank and duplicate samples were analyzed for VOCs, SVOCs, PCBs, pesticides, herbicides, TAL metals, hexavalent chromium, total cyanide, PFAS, and 1,4-dioxane. The equipment blanks were analyzed for PFAS and 1,4-dioxane. The trip blank was analyzed for VOCs only.

2.4 Soil Vapor Investigation and Field Observations

On 8 February 2022, four soil vapor sampling points (LSV-1 through LSV-4) were installed and five soil vapor samples, including one duplicate sample, were collected for chemical analysis during the Phase II EI. Soil vapor sampling locations are shown on Figure 2. LSV-1 was installed adjacent to LSB-1 and LSV-2 was installed adjacent to LSB-2 to assess historical site operations. LSV-3 was installed adjacent to LSB-4 to assess general site conditions. LSV-4 was installed adjacent to LSB-6 to assess for impacts from the onsite ASTs.

Soil vapor sampling points were installed approximately 2-feet above the observed groundwater interface as measured in the installed monitoring wells. Soil vapor sampling logs are included in Attachment C. Methodologies used for soil vapor assessment conform to the NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006.

Temporary soil vapor sampling points were installed using Teflon-lined polyethylene tubing connected to a dedicated expendable six-inch stainless steel screen. Quartz filter media was used to backfill the screened interval followed by No. 2 sand to approximately 0.5-feet above the screened interval followed by a hydrated granular bentonite clay to the ground surface. Each soil vapor sampling location was sealed at the surface with hydrated bentonite clay.

Each soil vapor sampling point was tightness tested using the helium tracer gas method and purged at a flow-rate of <200-ml per minute. No evidence of helium breakthrough (i.e., helium concentrations above 5%) was observed in any of the sample locations prior to sample collection. PID readings for VOCs ranging from 32 ppb in LSV-3 to 580 ppb in LSV-4 were observed during field screening at each location.

Soil Vapor Sampling Quality Assurance/Quality Control

Soil vapor samples were collected in laboratory-cleaned and certified evacuated 6-Liter stainless steel summa canisters with regulators supplied by York. The regulators were set to collect each sample over a 2-hour sampling period (a flow rate of <200-ml per minute) as per USEPA soil vapor sampling guidance. Each soil vapor sample was numbered and recorded in a field log book. Samples were transferred to the laboratory immediately after field sampling was completed and stored at a maximum room temperature of 30° Celsius. Chain-of-custody forms were utilized to document custody for the acquisition, possession, and analysis.

A quality control sample was incorporated into the sampling event and consisted of one duplicate sample submitted for VOC analysis.

3.0 PHASE II ENVIRONMENTAL INVESTIGATION FINDINGS

Soil, groundwater, and soil vapor samples collected during this Phase II, including all QA/QC samples, were submitted to York for the analyses listed above. Soil sample laboratory analytical results were compared to NYSDEC Protection of Groundwater Soil Cleanup Objectives (SCOs), Commercial Restricted Use SCOs (RUSCOs), and Industrial RUSCOs. Groundwater sample laboratory analytical results were compared to NYSDEC Ambient Water Quality Standards and Guidance Value (SGVs). Soil vapor laboratory analytical results were compared to NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion Matrices A through C dated October 2006 and revised in May 2017. Soil, groundwater, and soil vapor analytical results are summarized in Tables 1, 2 and 3, respectively. Laboratory analytical data packages are included in Appendix D.

3.1 Soil Analytical Results

All soil analytical results were compared to the NYSDEC Protection of Groundwater SCOs, Commercial RUSCOs, and Industrial RUSCOs and are presented in Table 1 and summarized on Figure 3. Sample depths are identified as depth below ground surface (bgs).

VOCs

Acetone (0.067 mg/kg), a common laboratory artifact, was detected in exceedance of the Protection of Groundwater SCO in the sample collected from 15 to 17 feet bgs in LSB-5.

SVOCs

Analytical results revealed exceedances of the NYSDEC Commercial RUSCOs, Industrial RUSCOs, and/or Protection of Groundwater SCOs for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and dibenzo(a,h)anthracene, in LSB-2, LSB-3, and LSB-7 from 2 to 4 feet bgs, in LSB-4 from 4 to 6 feet bgs, in LSB-5 from 4 to 7 feet bgs, and in LSB-3 from 8 to 10 feet bgs.

- Exceedances of Protection of Groundwater SCOs include benzo(a)anthracene (1.61 mg/kg – 11.6 mg/kg), benzo(b)fluoranthene (2.68 mg/kg – 7.91 mg/kg), benzo(k)fluoranthene (2.65 mg/kg – 7.8 mg/kg), and chrysene (1.02 mg/kg – 11.7 mg/kg).
- Exceedances of Commercial RUSCOs include benzo(a)anthracene (10.3 mg/kg – 11.6 mg/kg), benzo(a)pyrene (1.49 mg/kg – 9.58 mg/kg), benzo(b)fluoranthene (6.54 mg/kg – 7.91 mg/kg), and dibenzo(a,h)anthracene (0.772 mg/kg – 1.31 mg/kg).
- Exceedances of the Industrial RUSCOs include benzo(a)anthracene (11.6 mg/kg), benzo(a)pyrene (1.49 mg/kg – 9.58 mg/kg), and dibenzo(a,h)anthracene (1.31 mg/kg).

Metals

Analytical results revealed exceedances of the NYSDEC Commercial RUSCOs, Industrial RUSCOs, and/or Protection of Groundwater SCOs for arsenic, barium, copper, lead, and mercury in LSB-1, LSB-2, and LSB-3 from 2 to 4 feet bgs, in LSB-3 from 4 to 6 feet bgs, in LSB-5 from 4 to 7 feet bgs, and in LSB-6 from 8 to 10 feet bgs.

- Exceedances of Protection of Groundwater SCOs include arsenic (32.3 mg/kg – 41.8 mg/kg), barium (1,140 mg/kg), lead (531 mg/kg – 1,420 mg/kg), and mercury (0.868 mg/kg – 1.25 mg/kg).
- Commercial RUSCOs exceedances include arsenic (32.3 mg/kg – 41.8 mg/kg), barium (452 mg/kg – 1,140 mg/kg), copper (303 mg/kg – 445 mg/kg), and lead (1,420 mg/kg).
- Exceedances of the Industrial RUSCOs include arsenic (32.3 mg/kg – 41.8 mg/kg).

PFAS

Perfluorooctanesulfonic Acid (PFOS) (0.0107 mg/kg) was detected in exceedance of the proposed regulatory Protection of Groundwater SCO identified in the Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs dated June 2021 in the sample collected from 4 to 6 feet bgs in LSB-4.

No exceedances of the NYSDEC Commercial RUSCOs, Industrial RUSCOs, or Protection of Groundwater SCOs were detected for PCBs, pesticides, and herbicides.

3.2 Groundwater Analytical Results

All groundwater analytical results were compared to the NYSDEC Ambient Water Quality Standards and Guidance Value (SGVs) and are presented in Table 2 and summarized on Figure 4.

VOCs

Analytical results revealed exceedances of the NYSDEC SGVs for the VOC acetone (127 µg/l), a common laboratory artifact, in LMW-1.

SVOCs

Analytical results revealed exceedances of the NYSDEC SGVs for the SVOCs benzo(a)anthracene (0.0778 µg/l – 0.5 µg/l), benzo(a)pyrene (0.0778 µg/l – 0.48 µg/l), benzo(b)fluoranthene (0.0667 µg/l – 0.39 µg/l), benzo(k)fluoranthene (0.0667 µg/l – 0.38 µg/l), and chrysene (0.0778 µg/l – 0.59 µg/l) in LMW-1 and LMW-4 and indeno(1,2,3-cd)pyrene (0.3 µg/l) in LMW-1.

Metals

Analytical results revealed exceedances of the NYSDEC SGVs for metals in all four monitoring wells including lead (31.3 µg/l – 92.5 µg/l), magnesium (42,500 µg/l – 94,500 µg/l), manganese (774 µg/l – 1,030 µg/l), and sodium (53,200 µg/l – 412,000 µg/l).

PFAS

Analytical results revealed exceedances of the screening values provided in the Sampling, Analysis, and Assessment of PFAS Under NYSDEC's Part 375 Remedial Programs (June 2021) in all four monitoring wells including PFOS (0.0794 µg/l – 0.115 µg/l) and perfluorooctanoic acid (PFOA) (0.0608 µg/l – 0.135 µg/l).

No exceedances of the NYSDEC SGVs were detected for PCBs, pesticides, or herbicides.

3.3 Soil Vapor Analytical Results

All soil vapor analytical results were compared to the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion Matrices A through C dated October 2006 and

revised in May 2017. These results are presented in Table 3 and summarized on Figure 5.

The following compounds are included in the decision matrices in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion:

- Carbon tetrachloride
- 1,1,1-Trichloroethane (1,1,1-TCA)
- cis-1,2-DCE
- Methylene chloride
- TCE
- PCE
- 1,1-Dichloroethene (1,1-DCE)
- Vinyl Chloride

Concentrations of 1,1,1-TCA, 1,1-DCE, cis-1,2-DCE, PCE, and vinyl chloride were not detected in any of the soil vapor samples collected. The following VOCs were detected in soil vapor samples collected across the site:

- Carbon tetrachloride, with a concentration of 0.279 µg/m^3;
- Methylene chloride, with concentrations ranging from 4.67 µg/m^3 to 6.20 µg/m^3; and,
- TCE, with a concentration of 0.397 µg/m^3.

Comparison of these results to the applicable NYSDOH Guidance Values did not reveal detections at concentrations that would require mitigation.

3.4 Data Usability Summary Reports (DUSRs)

DUSRs were prepared for data collected during the investigation. The DUSRs were prepared in accordance with DER-10 and reviewed by Langan's in-house validator before issuance. The DUSRs present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain of custody procedures, and a summary assessment of deficiencies for each analytical method. DUSRs are provided in Appendix E.

All data are considered usable, as qualified. Some data qualifiers were appended to the reported results, which have been included in the respective data summary tables (Tables 1 through 3).

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analytical results of the Phase II EI, the presence of contaminated fill was detected in soil samples collected to a depth of 10 feet on the western side of the site, 4 feet bgs in the central portion of the site, and to 10 feet bgs on the eastern side of the site (acetone, a common laboratory artifact, was detected at 17 feet bgs on the eastern side of the site). Elevated concentrations of SVOCs and/or metals above the Protection of Groundwater SCOs and/or Commercial and Industrial RUSCOs at each of the 7 soil boring locations.

SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and/or dibenzo(a,h)anthracene were detected in all borings except LSB-1 and LSB-6 above the Commercial RUSCOs, Protection of Groundwater and/or Restricted Industrial RUSCOs. Metals including arsenic, barium, copper, lead and/or mercury were detected in all soil borings except LSB-4 and LSB-7 at concentrations exceeding the Commercial RUSCOs, Protection of Groundwater SCOs, and/or Industrial RUSCOs. PFOS was detected at LSB-4 above the proposed regulatory Unrestricted Use SCOs, Protection of Groundwater RUSCOs and may be attributed to historical site operations or an unknown off-site source. Petroleum- or solvent-related VOCs, herbicides, pesticides, and PCBs were not detected above the SCOs in any of the soil samples collected, but odors were detected in all of the borings except one and elevated PID readings were also detected, suggesting that weathered petroleum contamination, nuisance soil conditions, or additional contamination may be present.

Metals, including lead, magnesium, manganese, and/or sodium, were detected in exceedance of the NYSDEC SGVs in all four monitoring wells (LMW-1 through LMW-4). Detections of total lead in groundwater is likely attributable to sediment entrainment in the samples; the remaining metals detected above the SGVs are likely the result of natural background conditions. SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene were detected in LMW-1 and LMW-4. PFOS and PFOA was detected in all four monitoring wells above the NYSDEC screening values and may be attributed to historical site operations or an unknown off-site source. Petroleum- or solvent-related VOCs, herbicides, pesticides, and PCBs were not detected above the SGVs in any of the groundwater samples collected. Odors were also detected in two wells.

Three out of the eight chlorinated VOCs that are listed in the New York State Department of Health (NYSDOH) Vapor Intrusion Guidance Decision Matrices were detected at concentrations below those that would require monitoring or mitigation when compared

against the matrices screening levels. Based on the soil and groundwater analytical results, the presence of fill contaminated with metals, SVOCs, and PFAS up to 10 feet bgs was identified. The presence of contaminated fill will require special handling and disposal requirements during disturbance of this material during future site work.

Field observations during the Phase II EI included odors, which were detected in all soil borings with the exception of LSB-3. Odors were observed between 3 and 6 feet bgs on the western and in the central portion of the site and from the surface to 20 feet bgs on the eastern side of the site. The highest PID readings were also detected on the eastern side of the site, ranging from 15.9 ppm to 171 ppm between 5.5 and 17 feet bgs in LSB-5 and LSB-6, which were advanced in the vicinity of the drum storage area and the 275-gallon ASTs, respectively. Odors were also observed at the beginning of purging the monitoring wells installed at these locations (LMW-3 and LMW-4). Although the laboratory analytical results did not identify evidence of a petroleum release in soil or groundwater, the quality of fill or historical surficial spills may have contributed to the presence of degraded petroleum compounds in the subsurface as observed by olfactory observations and PID detections. Degraded petroleum and the presence of peat observed between 18.5 and 19.5 feet bgs may also potentially contribute to the presence of methane in these layers.

This Phase II EI was limited in scope and additional areas of impacts may exist at the site that may be encountered as part of any redevelopment activities. If encountered, additional areas of impacts would require additional investigation to determine the nature and extent of these impacts.

Table 1
Phase II Environmental Site Investigation Report
Soil Sample Analytical Results

213 Meadow Street
Brooklyn, NY
Langan Project No.: 100964202

Notes:

CAS - Chemical Abstract Service
NS - No standard
mg/kg - milligram per kilogram
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Protection of Groundwater, Restricted Use Commercial, and Restricted Use Industrial Soil Cleanup Objectives (SCO).

Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) Protection of Groundwater, Restricted Use Commercial, and Restricted Use Industrial Guidance Values (April 2023).

Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:

D - The concentration reported is a result of a diluted sample.
B - The analyte was found in the associated analysis batch blank.
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds Protection of Groundwater SCOs
10 - Result exceeds Restricted Use Commercial SCOs
10 - Result exceeds Restricted Use Industrial SCOs

Table 2
Phase II Environmental Investigation Report
Groundwater Sample Analytical Results

213 Meadow Street
Brooklyn, NY
Langan Project No.: 100964202

Notes:

CAS - Chemical Abstract Service
NS - No standard
ug/l - microgram per liter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) (June 2021) and the 1,4-Dioxane value reflects the drinking water maximum contaminant level (MCL) adopted by New York State for public water systems (July 2020). Pursuant to Part 375-1.7(f)(2), the NYSDEC will treat the MCL as relevant and appropriate and will consider this value in remedy selection.

Qualifiers:

D - The concentration reported is a result of a diluted sample.
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10	- Result exceeds NYSDEC SGVs
10	- Result exceeds NYSDEC Guidance Values

Table 3
Phase II Environmental Investigation Report
Soil Vapor Sample Analytical Results

213 Meadow Street
Brooklyn, NY
Langan Project No.: 100964202

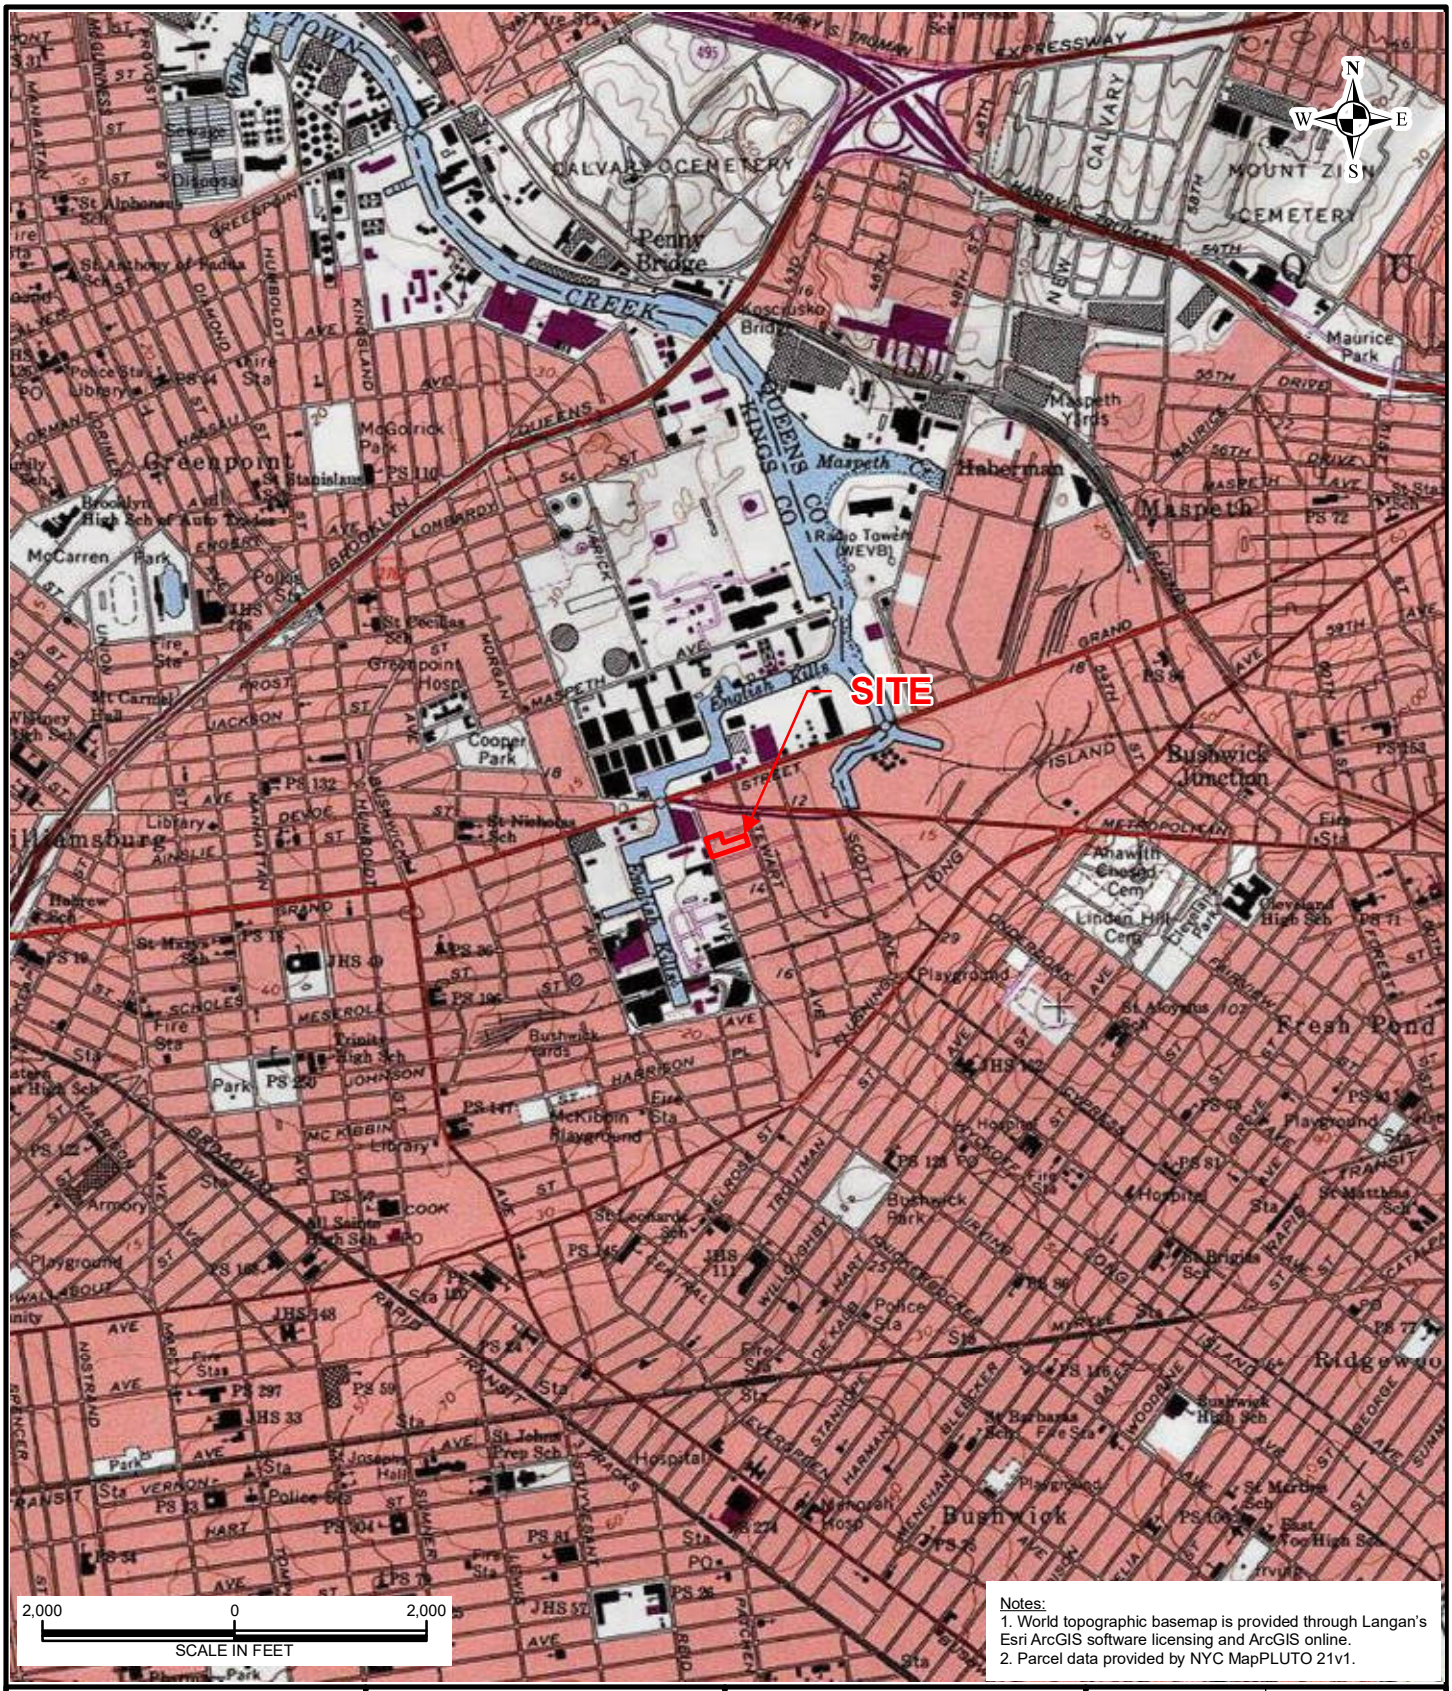
Notes:

SV - Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected

Soil vapor sample analytical results are compared to the minimum soil vapor concentrations at which mitigation is recommended as set forth in the New York State Department of Health (NYSDOH) October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2017).



Qualifiers:

J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds minimum soil vapor concentrations recommending mitigation

Soil sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 375 Protection of Groundwater, Restricted Use Commercial, and Restricted Use Industrial Soil Cleanup Objectives (SCO).
Criterion comparisons for 3- & 4-methylphenol (m&p cresol) are provided for reference. Promulgated SCOs are for 3-methylphenol (m-cresol) and 4-methylphenol (p-cresol).

Qualifiers:
D - The concentration reported is a result of a diluted sample.
B - The analyte was found in the associated analysis batch blank.
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules, and Regulations (NYCRR) Part 703.5 and the NYSDEC Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values for Class GA Water (herein collectively referenced as "NYSDEC SGVs").

Groundwater sample analytical results are compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Remedial Programs Guidelines for Sampling and Analysis of Per- and Polyfluoroalkyl Substances (PFAS) (June 2021) and the 1,4-Dioxane value reflects the drinking water maximum contaminant level (MCL) adopted by New York State for public water systems (July 2020). Pursuant to Part 375-1.7(f)(2), the NYSDEC will treat the MCL as relevant and appropriate and will consider this value in remedy selection.

Exceedance Summary:

10 - Result exceeds minimum soil vapor concentrations recommending mitigation

Notes:
SV - Soil Vapor
CAS - Chemical Abstract Service
NS - No standard
ug/m3 - microgram per cubic meter
NA - Not analyzed
RL - Reporting limit
<RL - Not detected
Soil vapor sample analytical results are compared to the minimum soil vapor concentrations at which mitigation is recommended as set forth in the New York State Department of Health (NYSDOH) October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York Decision Matrices for Sub-Slab Vapor and Indoor Air and subsequent updates (2017).

Qualifiers:
J - The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.
UJ - The analyte was not detected at a level greater than or equal to the RL; however, the reported RL is approximate and may be inaccurate or imprecise.
U - The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

RE: Utility Location Services
213 Meadow Street
Brooklyn, New York

Dear Ms. Mattern:

In this report, we summarize the results of a geophysical survey conducted in February 2022, by Hager-Richter Geoscience, Inc. (HRGS), at the above referenced site for LANGAN. The scope of the project and areas of interest (AOIs) were specified by LANGAN.

INTRODUCTION

The site is an active industrial property located at 213 Meadow Street (shown at Block 2951, Lot 45 on NYC Oasis database) in Brooklyn, New York. Figure 1 shows the general location of the site. Langan planned on conducting drilling activities at the site and several adjacent properties (Block 2951, Lot 5 and Lot 7). Prior to drilling, LANGAN requested a geophysical survey to determine the locations of subsurface utilities in the accessible portions of a total of seven (7) proposed boring locations. Figure 2 shows the approximate location of the areas of interest (AOIs), that measured approximately 20-ft by 20-ft and centered at the locations of the proposed borings. Potential utilities and other features detected in the vicinity of proposed borings were marked on the ground at the time of the survey. Access to the northwestern property (Block 2951, Lot 5) at the proposed location of Boring 7, was not available at the time of the survey, therefore, information for this boring will not be reported in this document.

OBJECTIVE

The objective of the geophysical survey was to detect and, if detected, to locate utilities and other subsurface obstructions in the accessible portions of approximately 20 ft by 20 ft areas centered at the locations of six (6) proposed boring locations.

THE SURVEY

Amanda Fabian, P.G. and Alexis Martinez of HRGS conducted the field operations on February 3rd, 2022. The project was coordinated with Ms. Molly Mattern of LANGAN. Ms. Morgan Mcbride, also of LANGAN, was present for the survey and specified the proposed boring locations.

The geophysical survey was conducted using two (2) complementary geophysical methods: ground penetrating radar (GPR) and precision utility location (PUL).

GPR data were acquired in two mutually perpendicular directions and spaced no more than 5 feet apart across the accessible portions of the AOIs. The GPR method is useful for detecting both metallic and non-metallic subsurface objects.

The PUL system was used for tracking utilities in the AOIs by scanning the AOI for the presence of live electric lines and connecting the transmitter to surface features such as valves and hydrants, where visible. Utilities and other features detected in the vicinity of proposed borings were marked on the ground at the time of the survey. LANGAN was notified where proposed boring locations conflicted with detected utilities and/or features.

The survey crew arbitrarily numbered the proposed boring locations as they conducted the field work. The locations were identified as Borings 1 through 7. As indicated above, since access to the northwestern property was not available, no survey was conducted at the proposed boring location (Boring 7) on that lot.

EQUIPMENT AND PROCEDURES

GPR. The GPR survey was conducted using a Geophysical Survey Systems, Inc. UtilityScan HS system with a 350 MHz Hyper Stacking digital antenna and an 80 ns time window. The system includes a survey wheel that triggers the recording of the data at fixed intervals, thereby ensuring the accuracy of the locations of features detected along the survey lines.

GPR uses a high-frequency electromagnetic pulse (referred to herein as “radar signal”) transmitted from a radar antenna to probe the subsurface. The transmitted radar signals are reflected from subsurface interfaces of materials with contrasting electrical properties. Travel times of the radar signal can be converted to approximate depth below the surface by correlation with targets of known depths and by a curve matching routine. We monitor the acquisition of GPR data in the field and record the GPR data digitally for subsequent processing. Interpretation of the records is based on the nature and intensity of the reflected signals and on the resulting patterns.

Data from the GPR survey were processed using RADAN 7.4 GPR processing software from Geophysical Survey Systems, Inc. We reviewed profile images of the GPR data. Interpretation of the records is based on the nature and intensity of the reflected signals and on the resulting patterns.

PUL. The PUL survey was conducted using a Radiodetection RD 7000 series PUL instrument. The RD 7000 series consists of separate transmitter and receiver. The system can be used in "passive" and "active" modes to locate buried pipes by detecting electromagnetic signals carried by the pipes. In the "passive" mode, only the receiver unit is used to detect signals carried by the pipe from nearby power lines, live signals transmitted along underground power cables, or very low frequency radio signals resulting from long wave radio transmissions that flow along buried conductors. In the "active" mode of operation, the transmitter is used to induce a signal on a target pipe, and the receiver is used to trace the signal along the length of the pipe. Our system uses a 10W transmitter.

LIMITATIONS OF THE METHOD

> HRGS MAKES NO GUARANTEE THAT ALL TARGETS WERE DETECTED IN THIS SURVEY. HRGS IS NOT RESPONSIBLE FOR DETECTING TARGETS THAT CANNOT BE DETECTED BY THE METHODS EMPLOYED OR BECAUSE OF SITE CONDITIONS. GPR SIGNAL PENETRATION MIGHT NOT BE SUFFICIENT TO DETECT ALL TARGETS.

Field mark-outs. Utilities and other features detected by the GPR and PUL methods at the time of the survey are marked in the field. Adverse weather and site conditions (rain, uneven surfaces, high traffic, etc.) can hamper in-field interpretation. Field markings made on wet pavement, sand, or gravel surfaces, or in active construction zones may not last. HRGS is not responsible for maintaining field markings after leaving the work area.

GPR. There are limitations of the GPR technique as used to detect and/or locate targets such as those of the objectives of this survey: (1) surface conditions, (2) electrical conductivity of the ground, (3) contrast of the electrical properties of the target and the surrounding soil, and (4) spacing of the traverses. Of these restrictions, only the last is controllable by us.

The condition of the ground surface can affect the quality of the GPR data and the depth of penetration of the GPR signal. Sites covered with snow piles, high grass, bushes, landscape structures, debris, obstacles, soil mounds, etc. limit the survey access and the coupling of the GPR antenna with the ground. In many cases, the GPR signal will not penetrate below concrete pavement, especially inside buildings, and a target may not be detectable. The GPR method also commonly does not provide useful data under canopies found at some facilities. GPR surveys inside buildings may be severely constrained by space limitations and interference from above-grade structures.

The electrical conductivity of the ground determines the attenuation of the GPR signals and thereby limits the maximum depth of exploration. For example, the GPR signal does not penetrate clay-rich soils and targets buried in clay might not be detected.

A definite contrast in the electrical conductivities of the surrounding ground and the target material is required to obtain a reflection of the GPR signal. If the contrast is too small, possibly due to construction details or deeply corroded metal in the target, then the reflection may be too weak to recognize, and the target can be missed. In many cases, plastic, clay, asbestos concrete (transite), brick-lined, stone-lined, and other non-metallic utilities cannot be detected.

Spacing of the traverses is limited by access at many sites, but where flexibility of traverse spacing is possible, the spacing is adjusted to the size of the target. The GPR operator controls the spacing between lines, and the design of the survey is based on the dimensions of the smallest feature of interest. Targets with dimensions smaller than the spacing between GPR survey lines can be missed.

PUL. The PUL equipment cannot detect non-metallic utilities, such as pipes constructed of vitrified clay, transite, plastic, PVC, fiberglass, and unreinforced concrete, when used in passive mode alone. Such pipes can be detected if a wire tracer is installed with access to such tracer for transmission of a signal or where access (such as floor drains and clean-outs) permits insertion of a device on which a signal can be transmitted.

In some, but not all, cases, the subsurface utility designation equipment cannot detect metal utilities reliably under reinforced concrete because the signal couples onto the metal reinforcing in the concrete. Similarly, the method commonly cannot be used adjacent to grounded metal structures such as chain link fences and metal guardrails.

In congested areas, where several utilities are bundled or located within a short distance, the signal transmitted on one utility can couple onto adjacent utilities, and the accuracy of the location indicated by the instrument decreases.

RESULTS

The geophysical survey was conducted using the GPR and PUL methods across the accessible portions of the specified AOIs. Utilities and other features detected in the vicinity of proposed borings were marked on the ground at the time of the survey. Figure 2 shows the locations of the AOIs, and Figure 3 shows the GPR traverses and an integrated interpretation of the geophysical data.

GPR. Apparent GPR signal penetration was variable, with reflections received for about 10 - 20 nanoseconds. Based upon velocity matching calibrations made for the area of interest, the GPR signal penetration is estimated to have been about 1 - 2 feet.

Several unidentified buried objects were detected, and their locations are shown in Figure 3 using “X” symbols. No indication of anomalies associated with possible utilities were identified in the GPR records.

Whether additional utilities, or other features occur at a depth greater than the effective depth of penetration of the GPR signal (~1 to 2 feet) or in areas inaccessible to the geophysical survey cannot be determined from the geophysical data.

PUL. The PUL transmitter was attached to conduits located in or near the AOIs, such as electrical conduit, a water spigot, etc. The PUL survey was also conducted in "passive" mode to detect signals carried by utilities from nearby power lines. An electric utility was detected at Boring 1. Water utilities were detected at Boring 5 and Boring 6. Ms. McBride was notified that the detected water utilities conflicted with the nearby proposed boring locations. No manholes or catch basins were seen in the vicinity of the proposed borings to observe visual alignment of possible sewer and drain utilities. Utilities detected with the PUL were marked in field at the time of the survey.

CONCLUSIONS

Based upon the geophysical survey performed by HRGS at 213 Meadow Street in Brooklyn, New York, we conclude that:

- A possible electric utility was detected at proposed Boring 1.
- Possible water lines were detected at proposed Borings 5 and 6.
- Small unidentified buried objects were detected at proposed borings 2, 3 and 5.
- *Whether additional utilities or other features occur at a depth greater than the effective depth of penetration of the GPR signal (~1 to 2 feet) or in areas inaccessible to the geophysical survey cannot be determined from the geophysical data*.

LIMITATIONS ON USE OF THE REPORT

This letter report was prepared for the exclusive use of LANGAN and its client (collectively, the Client). No other party shall be entitled to rely on this Report, or any information, documents, records, data, interpretations, advice, or opinions given to the Client by Hager-Richter Geoscience, Inc. (HRGS) in the performance of its work. The Report relates solely to the specific project for which HRGS has been retained and shall not be used or relied upon by the Client or any third party for any variation or extension of this project, any other project or any other purpose without the express written permission of HRGS. Any unpermitted use by the Client or any third party shall be at the Client's or such third party's own risk and without any liability to HRGS.

HRGS has used reasonable care, skill, competence, and judgment in the performance of its services for this project consistent with professional standards for those providing similar services at the same time, in the same locale, and under like circumstances. Unless otherwise stated, the work performed by HRGS should be understood to be exploratory and interpretational

in character and any results, findings or recommendations contained in this Report or resulting from the work proposed may include decisions which are judgmental in nature and not necessarily based solely on pure science or engineering. It should be noted that our conclusions might be modified if subsurface conditions were better delineated with additional subsurface exploration including, but not limited to, test pits, soil borings with collection of soil and water samples, and laboratory testing.

Except as expressly provided in this limitations section, HRGS makes no other representation or warranty of any kind whatsoever, oral or written, expressed or implied; and all implied warranties of merchantability and fitness for a particular purpose, are hereby disclaimed.

If you have any questions or comments on this letter report, please contact us at your convenience. It has been a pleasure to work with LANGAN on this project. We look forward to working with you again in the future.

Sincerely yours,
HAGER-RICHTER GEOSCIENCE, INC.

Remarks (Drilling Fluid, Depth of Casing, Fluid Loss, Drilling Resistance, etc.)

Started Drilling on 2/3/2022.

10:35 AM - Collect sample 001_LSB-2_2-4 from 2-4' bgs. VOCs collected from 2.5-3' bgs.

Slight Odor.
10:40 AM - Collect sample 002_LSB-2_4-6 from 4-6' bgs. VOCs collected from 4.5-5' bgs.

Bottom of boring at 20' bgs.

WELL CONSTRUCTION SUMMARY

Well No. LMW-1

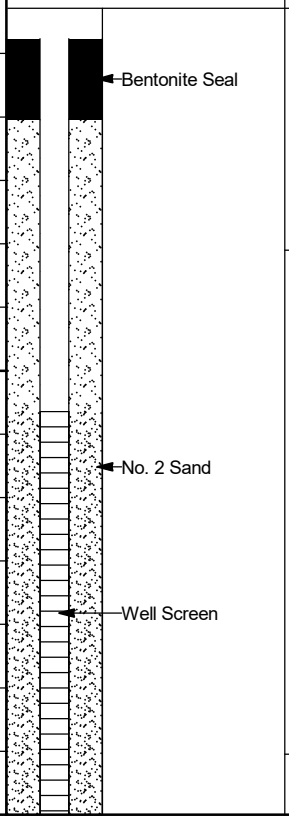
Well Permit No. --

Project: 213 Meadow Street	Project No.: 100964202
Location: LSB-2	Elevation And Datum: Approx. el 12 Brooklyn Highway Datum
Drilling Agency: AARCO Environmental Services Corp.	Date Started: 2/3/2022 / Date Finished: 2/3/2022
Drilling Equipment: Geoprobe 7822 DT	Driller: Jose Garcia
Size And Type of Bit: 2in Direct Push	Inspector: Morgan McBride

Method of Installation

A Geoprobe 7822 DT was used to advance LSB-2 to approximately 20-feet below ground surface. A two-inch Sch. 40 PVC well was installed consisting of approximately 10 feet of No. 10 (0.010-inch) screen packed with No. 2 sand and 10 feet of two-inch Sch. 40 PVC riser. The well was finished with a flush mount manhole cover and concrete pad.

Method of Well Development



LMW-1 was developed with a whale pump and developed until the water ran free of fines. Approximately 5 gallons were purged.

Type of Casing: --	Diameter: --	Type of Backfill Material: No. 2 Sand

LANGAN

WELL CONSTRUCTION SUMMARY

Well No. LMW-3

Well Permit No. --

Project: 213 Meadow Street	Project No.: 100964202
Location: LSB-5	Elevation And Datum: Approx. el 12 Brooklyn Highway Datum
Drilling Agency: AARCO Environmental Services Corp.	Date Started: 2/4/2022 / Date Finished: 2/4/2022
Drilling Equipment: Geoprobe 7822 DT	Driller: Jose Garcia
Size And Type of Bit: 2in Direct Push	Inspector: Morgan McBride

Method of Installation

A Geoprobe 7822 DT was used to advance LSB-5 to approximately 20-feet below ground surface. A two-inch Sch. 40 PVC well was installed consisting of approximately 10 feet of No. 10 (0.010-inch) screen packed with No. 2 sand and 10 feet of two-inch Sch. 40 PVC riser. The well was finished with a flush mount manhole cover and concrete pad.

Method of Well Development

LMW-3 was developed with a whale pump and developed until the water ran free of fines. Approximately 5 gallons were purged.

WELL CONSTRUCTION SUMMARY

Well No. LMW-4

Well Permit No. --

Project: 213 Meadow Street	Project No.: 100964202
Location: LSB-6	Elevation And Datum: Approx. el 12 Brooklyn Highway Datum
Drilling Agency: AARCO Environmental Services Corp.	Date Started: 2/4/2022 / Date Finished: 2/4/2022
Drilling Equipment: Geoprobe 7822 DT	Driller: Jose Garcia
Size And Type of Bit: 2in Direct Push	Inspector: Morgan McBride

Method of Installation

A Geoprobe 7822 DT was used to advance LSB-6 to approximately 20-feet below ground surface. A two-inch Sch. 40 PVC well was installed consisting of approximately 10 feet of No. 10 (0.010-inch) screen packed with No. 2 sand and 10 feet of two-inch Sch. 40 PVC riser. The well was finished with a flush mount manhole cover and concrete pad.

Method of Well Development

LMW-4 was developed with a whale pump and developed until the water ran free of fines. Approximately 5 gallons were purged.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 03, 2022 and listed below. The project was identified as your project: **100964201**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22B0179

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By  **Date:** 02/25/2022

Cassie L. Mosher
Laboratory Manager

Sample and Data Qualifiers Relating to This Work Order

QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
PCB-I	PCB calculations are based uoon the average response of 5 peaks for each Aroclor. For this sample an internference was present and the analyst was unable to use all 5 peaks.
M-SPKM	The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.
M-ICV2	The recovery for this element in the ICV was outside the 90-110% recovery criteria.
M-DUPS	The RPD between the native sample and the duplicate is outside of limits due to sample non-homogeneity
M-BLK	The target analyte was detected above the RL in the batch method blank. All samples showed >10x the concentration in the blank for this analyte. Data are reported.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-01	This result was reported from an analysis conducted outside of the EPA recommended holding time.
CCV-H	The value reported is estimated due to its behavior during continuing calibration verification (>20% difference for average RF or >20% drift for linear or quadratic fit.) This value may be biased high.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis

Low Bias — Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias — High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. — Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Revision Description: This report has been revised to include additional analyses as requested by the client

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 04, 2022 and listed below. The project was identified as your project: **100964201**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 22B0234

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Approved By  **Date:** 02/17/2022
