Certifications

I, Jessica L. Taylor, certify that I am currently a qualified environmental professional and a NYS registered Professional Geologist and that this Remedial Investigation Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and DER Green Remediation (DER-31).

Jessica L. Taylor, P.G.	April 24, 2026	
Professional Geologist NY #000320	Date	Signature

1. Introduction

Roux Environmental Engineering and Geology, D.P.C. (Roux), on behalf of GO Quay, LLC (Go Quay), has prepared this Remedial Investigation Work Plan (RIWP) to investigate the 1.29-acre 213 Meadow Street Metropolitan Transportation Authority (MTA) Facilities Project Site located at 213 Meadow Street in the Borough of Brooklyn, New York (Site; Figure 1). Go Quay entered into a Brownfield Cleanup Agreement (BCA), Index No. C224433-10-2025, with the New York State Department of Environmental Conservation (NYSDEC) as a Volunteer on March 22, 2026. As of the time of the BCA, the Site was divided into three tax lots known as Block 2951, Lots 45, 1, and 5 on the New York City (NYC) Tax Map and the BCA only accepted the former Lot 45 into the Brownfields Cleanup Program (BCP). The three tax lots were merged into one lot (Lot 1) as of February 12, 2026, and NYSDEC confirmed via email on March 24, 2026, that they will accept the addition of the two former Lots 1 and 5 into the BCP. At the request of the NYSDEC team a minor BCA Amendment Application was submitted to NYSDEC on April 8, 2026, for the newly consolidated lot, and is still being processed as of the date of this RIWP submission.

The proposed redevelopment of the Site consists of the construction of an approximately 143,000 square foot MTA facility that will house the MTA's mobile wash unit vehicles, materials storage facility, and MTA's emergency response unit. The facility will consist of storage, vehicle parking, and administrative space and will comprise 3 stories with slab on grade construction. The anticipated use is to relocate the current NYC Transit Authority Mobile Wash Unit and Material Control Unit facility located at 40 Quay Street and the NYC Transit Authority Emergency Response Unit from 65 Commercial Street. This project is a public-private partnership between MTA and GO Quay and has been in the planning stages for years.

The purpose of the RI will be to determine the nature and extent of contamination at the Site, characterize environmental media, qualitatively assess the potential exposure of receptors to Site contaminants, and develop any other additional data necessary to support the development of a Remedial Action Work Plan (RAWP).

1.1 RIWP Document Organization

This RIWP contains a background information describing the Site, its history, and results of previous environmental investigations (Section 2); the objectives and scope of the RI (Section 3); Sections 4 and 5 describing the project operations plans (e.g., Quality Assurance/Quality Control, Health and Safety); and the reporting requirements and the proposed project schedule are discussed in Section 6. Figures are provided to illustrate Site conditions and the locations of proposed investigation activities.

1.2 Project Team and Contact Information

A list of names, contact information, qualifications and roles of the principal Roux personnel who will participate in the investigation are included below and in the Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP) in Appendix B.

Roux Personnel	Title	Contact Information
Jessica Taylor, P.G. Principal Hydrogeologist	Project Principal	(631) 232-2600 jtaylor@rouxinc.com
Levi Curnutte Senior Scientist	Project Manager	(631) 232-2600 Lcurnutte@rouxinc.com
To Be Determined	Field Manager	(631) 232-2600
To Be Determined	Quality Assurance Officer	(631) 232-2600

The name and contact information for the Volunteer is:

Mr. Simeon Maleh
Go Quay, LLC
c/o Gotham Organization, Inc.
111 Fifth Avenue, 9th Floor
Brooklyn, New York 10003

Phone: 212-716-2536

Email: smaleh@gothamorg.com

Contact information for the major subcontractors involved in the investigation (driller, data validator and laboratory) are also included below and in the QAPP/FSP.

Subcontractor	Company Name	Contact Information
Laboratory Analysis	Eurofins Environment Testing Northeast, LLC	(203) 308-0880
Data Usability Summary Report Preparation	Judy Harry of Data Validation Services, North Creek, NY	(518) 251-4429
Drilling	To Be Determined	To Be Determined
NYS Licensed Surveying	Nova Geophysical Services	(347) 261-15277

Eurofins Environment Testing Northeast, LLC, a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory, will be used to analyze all samples collected during the RI. Drilling and other subcontracted services have not been selected as part of the preparation of this RIWP. This information will be provided to the NYSDEC prior to the start of field activities.

2. Background

This section provides pertinent background information, including a description of the Site and its setting, the history of the Site, and the results of previous environmental work conducted at the Site.

2.1 Site Description and Setting

A Site location map is included as Figure 1 and a Site plan is included as Figure 2.

Property Location	
Property Name:	213 Meadow Street MTA Facilities Project Site
Property Address:	213 Meadow Street
Property Town, County, State:	Brooklyn, Kings County, New York
Property Tax Identification:	Block 2951; Lots 1, 5, and 45, which are approved for merger into Lot 1 by the City of New York
Property Topographic Quadrangle:	USGS-Brooklyn, New York
Nearest Intersection:	Ten Eyck Street and Varick Street to the northwest, Stewart Avenue and Meadow Street to the southeast, and Varick Avenue and Meadow Street to the southeast.
Site Description:	The Site encompasses an area of 1.29-acres and is paved with concrete and contains a one-story structure located on the eastern portion of the Site. The Site is occupied by Castle Sanitation for truck storage and repairs, a demolition business by Titan Industrial Services and Roma Scaffolding for scaffolding storage.

Property Information	
Property Acreage:	1.29 acres
Property Shape:	L-shaped
Improvements:	Small one-story structure at the southeast corner.

2.1.1 Utilities

The Site is connected to a public water and sanitary sewer system which is serviced by New York City Department of Environmental Protection.

2.1.2 Topography

The grade of the Site is generally flat. The average elevation of the Site is approximately 15 feet above mean sea level (ft amsl) as shown in the USGS 7.5 Minute Series (Figure 1 of the Langan Phase I ESA).

2.1.3 Wetland Areas and Surface Water Bodies

The nearest surface water bodies are Newton Creek and English Kills, a tributary of Newton Creek, to the north and west. English Kills is recognized as a mapped tidal wetland located approximately 0.13 miles west of the Site. The Site is also partially in a flood zone. The northwest corner of the Site is located in a Zone X flood area. A Zone X area designation includes areas with a 0.2% annual chance flood, areas with a 1% annual chance of flood with average depths of less than one foot or with drainage areas less than one square mile, and areas protected by levees from a 1% annual chance flood.

2.1.4 Soil and Lithology

Based on the Langan Phase II EIR, the Site stratigraphy in the western portions of the Site consists of a 1- to 2-foot-thick layer of concrete underlain by an approximate 4- to 6-foot layer of historic fill followed by native sand and silty sand. The central portion of the Site consists of up to a 2-foot-thick layer of concrete underlain by an approximately 6-foot layer of historic fill underlain by native sand and silty sand. The eastern portion of the Site consists of a 2-foot-thick layer of concrete, underlain by an 8- to 15-foot layer of fill followed by native sand, silt, and clay. The top of a peat layer was also encountered between 18.5-19.5 feet below land surface (ft bls) in some borings. All borings completed as part of the Langan Phase II EIR were advanced to approximately 20 ft bls and bedrock was not encountered.

2.1.5 Groundwater

As reported in the Langan Phase II EIR, groundwater was encountered between 9.5 and 11.5 ft bls in monitoring wells. Based on Site/area topography, groundwater flow is anticipated to be to the west, toward English Kills, a tributary of Newton Creek.

2.1.6 Neighboring Properties and Zoning

Historical and current uses of surrounding properties include a private garage with truck repair, paint room, gasoline tank, wire product manufacturing, an oil/fuel company, metals stamping and metal products manufacturing between 1951 and 2007; a vinyl plastics company, and a chemical products company with manufacturing facilities between 1965 and 2007; gasoline storage between 1933 through 1988, auto wrecking between 1965 and 1977; automobile repair facility between 1933 and 1987; and filling stations and an oil terminal between 1933 and 1968. Numerous adjoining facilities were identified in environmental databases, including one listing of small quantity generators, several non-generator/non-RCRA waste facilities, multiple sites with manifesting of waste, one facility with an underground storage tank (UST) and two with above ground storage tanks (ASTs).

The Site is located in a Manufacturing District (M1-3) within the North Brooklyn Industrial Business Zone (IBZ); therefore, the commercial project is consistent with the current zoning and is “as of right.” The area surrounding the Site is similar with mixed commercial and industrial zoning.

2.2 Site History

According to the previous environmental investigations, the Site was operated for oil truck parking, junk yards, and auto wrecking on the western portion of the Site as of 1965. In the early 1980s, the east side of former Lot 45 was used for truck parking, a repair shop, and storage and the west side of former Lot 45 was previously a temporary C&D transfer station from approximately 1985 until it was shut down around 1995. The current use of the Site is for truck storage and repairs and the Site’s property listings in the City Directory Abstract consist of auto wrecking and demolition and salvage companies. Former Lot 1 was an

auto wrecking junk yard and is now used for scaffolding storage. Former Lot 5 was previously known to be vacant and is now used for scaffolding storage.

2.3 Environmental Conditions/Results of Previous Environmental Investigations

This section provides an overview of previous environmental-related activities completed at the Site, based on the following environmental reports (provided in Appendix A) available for review:

- Phase I ESA, prepared by Langan on behalf of GO Quay, LLC dated March 11, 2022;
- Phase II EIR, prepared by Langan on behalf of GO Quay, LLC dated March 11, 2022; and
- Addendum to March 11, 2022 Phase I ESA by Langan on behalf of GO Quay, LLC dated October 26, 2023.

A summary of the findings from assessments of the Site is provided below.

2.3.1 Phase I ESA, prepared by Langan on behalf of GO Quay, LLC, dated March 11, 2022

The Phase I ESA was prepared for the entire Site, which at that time was subdivided into Block 2951, Lots 1, 5 and 45. The following Recognized Environmental Condition (REC) was identified in association with the Site:

- Presence of Contaminated Historic Fill: Findings from the Langan 2022 Phase II EIR, identified contaminated fill with elevated concentrations of metals and semi-volatile organic compounds (SVOCs) above NYSDEC Commercial Soil Cleanup Objective (CSCOs), Industrial SCOs (ISCOs), and Protection of Groundwater Soil Cleanup Objectives (PGWSCOs) at the Site representing a REC.

The following Historical Recognized Environmental Condition (HREC) was identified in association with the Site:

- NYSDEC Spill Case #9315532: The Site was identified in the NY Spills database for a release reported on March 31, 1994, and assigned NYSDEC Spill Number 9315532. A tank truck spilled approximately 5-gallons of diesel fuel onto the concrete while cleanup was in progress. The case was administratively closed on March 31, 1994.

The following *de minimis* condition was identified in association with the Site:

- Motor Oil Release: Evidence of a small, isolated oil release was identified on the concrete in the southeastern lot of the Site during Langan's Phase I ESA Site reconnaissance. Staining was observed and Speedy Dry had been placed on the stained concrete. No cracks or gaps in the concrete were observed.

No Controlled RECs (CRECs) were identified in connection with the Site.

The following Business Environmental Risks (BERs) were identified in connection with the Site:

- Current and Historical Site Operations: Historical uses of concern at the Site included oil truck parking, auto wrecking, and a junk yard between 1960 and 2007 and as a solid waste transfer facility for yard waste and residential, institutional, and commercial waste from at least 2004 through 2012. Current Site use includes truck storage and repairs including three in-service 275-gallon ASTs and one out-of-service AST.

- Potential Presence of Undocumented USTs: No evidence of USTs were observed during the Site inspection or noted in the ESA, however, historical Site use included operation for automotive-related purposes which may have utilized USTs.

2.3.2 Phase II Environmental Investigation Report, prepared by Langan on behalf of GO Quay, LLC, dated March 11, 2022

Langan completed seven soil borings to 20 ft bls, four monitoring wells, and collected four soil vapor samples. The conclusions of the Phase II EIR were:

- Historic fill was observed extending to the terminal depth of 6 ft bls on the western and central portions of the Site and 15 ft bls to the eastern side of the Site.
- Soil samples including one duplicate were collected from seven borings at the Site; four soil samples were collected from 2-4 ft bls, three samples collected from 4-6 ft bls, one collected from 4-7 ft bls, two collected from 8-10 ft bls, and one collected from 15-17 ft bls. Elevated photoionization detector (PID) readings were identified at each of the soil borings with exception to LSB-3. No evidence of staining was identified during sample collection.
- Analytical data indicated soils at the Site are impacted with SVOCs and metals above CSCOs), ISCOs, and PGWSCOs at intervals ranging from 2 to 10 ft bls. Perfluorooctanesulfonic acid (PFOS) was detected in exceedance of the proposed regulatory PGWSCO.
- SVOCs and metals were identified above NYSDEC Ambient Water Quality Standards and Guidance Value (SGVs) in multiple monitoring wells. Analytical results from all four monitoring wells identified per- and polyfluoroalkyl substances (PFAS) in exceedance of the screening values provided in the Sampling, Analysis, and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs (June 2021; has since been updated from the time the Phase II EIR was issued).
- No exceedances in soil or groundwater were detected for polychlorinated biphenyl (PCBs), pesticides, and herbicides.
- Acetone, a volatile organic compound (VOC) and a common laboratory artifact, was identified in soil above the PGWSCO in the 15-17 ft bls interval of LSB-5. Acetone was also detected in groundwater above the NYSDEC SGVs in LMW-1.
- Concentrations of VOCs in soil vapor were detected above laboratory reporting limits at sampling locations and included chlorinated VOCs (CVOCs). Comparison to the applicable NYSDOH Guidance Values did not identify detections that would require mitigation.

Previous sample data from the Langan Phase II EIR is shown on Figure 3, Figure 4, and Figure 5. The soil exceedances depicted on Figure 3 have been updated to reflect the NYCRR Part 375 SCOs effective December 31, 2025.

2.3.3 Addendum to 11 March 2022 Phase I ESA, prepared by Langan on behalf of GO Quay, LLC, dated October 26, 2023

Following submission of the March 11, 2022, Phase I ESA prepared by Langan, additional records were received related to the Site. A copy of the completed User Questionnaire and an Acknowledgement of Notice of Intent for Coverage under State Pollutant Discharge Elimination System (SPDES) Multi-Sector General Permit for Stormwater Discharge Associated with Industrial Activities was received by one of the property owners. The additional records provided by the owner did not change the conclusions of the Langan Phase I ESA.

2.3.4 Identification of Areas of Concern (AOCs) Based on Previous Investigations / Remediation

Based on the findings of the prior investigations, the following AOCs that will be further investigated as part of this RIWP include:

- Presence of contaminated historic fill; and
- Current and historical operations.

3. Preliminary Conceptual Site Model, RI Work Plan Objectives, Scope, and Rationale

Roux, on behalf of the Volunteer, has developed a RI scope of work that satisfies NYSDEC BCP requirements. Data collected during the RI will determine the basis for remedial actions for the Site.

Standards, Criteria, and Guidance (SCGs) for soil at BCP sites are the numerical SCOs presented in Part 375. The SCOs are categorized into unrestricted use criteria and restricted use (residential, restricted-residential, commercial, or industrial) criteria, as well as criteria for protection of groundwater and ecological resources. The applicability of each category of SCOs is determined based upon the current and reasonably anticipated future use of the Site, as well as cleanup tracks being evaluated. The anticipated redevelopment of the Site will include operations related to warehousing and storage and NYSDEC has determined that ISCOs are appropriate for the Site.

The SCGs for groundwater are the NYSDEC Ambient Water-Quality Standards and Guidance Values (AWQSGV)s for Class G groundwater – Technical & Operational Guidance Series (TOGS) 1.1.1 (groundwater is not and will not be used for drinking water, as the Site will be connected to the public water supply and groundwater use as potable water is restricted within New York City).

SCGs for evaluating Soil Vapor Intrusion (SVI) are the NYSDOH's Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006, Revised February 2024 (NYSDOH SVI Guidance). Potential soil vapor impacts identified in accordance with the NYSDOH SVI Guidance will be considered.

3.1 Preliminary Conceptual Site Model

This section describes the Preliminary Conceptual Site Model (PCSM) developed for the Site. The PCSM is a tool used to evaluate and identify potential sources of contamination, target analytes, potential entry and mechanisms for transport in the subsurface environment and into the Site structures, potential exposure routes, and the environmental media and locations most likely to have been impacted by the target analytes.

3.1.1 Potential Sources, Target Analytes, Transport Pathways and Receptors

Based on previous investigations and historical documentation including Sanborn Fire Insurance Maps and the City Directory, the Site was operated for oil truck parking, junk yards, and auto wrecking on the western portion of the Site as of 1965. Four one-story storage buildings were identified from 1965 through 1977. In 1977, only one storage building remained until it was shown as removed in 1986 and remained undeveloped. The Site was used for junk and auto wrecking and oil truck parking through 1986 with the presence of temporary storage buildings. In 2001, portions of the Site were depicted as a lumber yard. City Directory listings for the Site consisted of auto wrecking and demolition and salvage companies. The demolition company that occupied the Site was identified in the Solid Waste Facilities/Landfill Sites database as an inactive C&D processing facility and classified as a landfill facility between 2004 and 2012.

During the 2022 reconnaissance, the Site was observed to be occupied by a demolition company which also leased portions of the Site for truck parking, storage, and scaffolding storage. A shed was identified for truck repair on former Lot 45. Multiple ASTs were present on Lot 45 and reported to contain waste oil,

motor oil and hydraulic oil. There were fourteen 55-gallon drums identified on secondary containment containing degreasers, motor oil, and hydraulic oil. In the area of the truck repair, stained concrete was identified along with the presence of several suspected drains and open-hold sumps identified under metal plates with purpose unconfirmed. The EDR database report identified a release on March 31, 1994 (NYSDEC Spill No. 9315532) associated with a release of 5-gallons of diesel from a tank truck. Cleanup was in progress at the time the spill was reported and the spill was administratively closed on March 31, 1994.

The primary environmental AOCs and potential sources of contamination associated with the Site are the historic fill and current and historical operations at the Site. Langan's Phase II EIR indicated soils at the Site are impacted with one VOC above its UUSCO and PGWSCO. SVOCs and metals were detected above Unrestricted Use SCOs (UUSCOs), PGWSCOs, and ISCOs, and PFAS above UUSCOs and PGWSCOs. PCBs were all below UUSCOs, PGWSCOs, and ISCOs and pesticides were not detected. Groundwater samples were collected from four monitoring wells. SVOCs and metals were in groundwater above AWQSGVs. PFAS were detected above NYSDEC screening values as reported herein. The concentrations of SVOCs and metals are typical of urban sites where fill material was placed in the area and are not indicative of any other potential source or historical activity. Soil vapor samples were collected from four locations at the Site. Concentrations of VOCs in soil vapor were detected above laboratory reporting limits, however, not at concentrations that would warrant mitigation.

Based on the target analytes present and the media in which these contaminants were identified, the following potential transport mechanisms were identified for the Site:

- Target analytes may potentially remain sorbed to soil (soil impacts);
- Leaching of target analytes from soil to groundwater (groundwater impacts);
- Transport of target analytes in the dissolved-state through groundwater flow; and
- Volatilization of target analytes from soil and groundwater into soil pore space and potentially into surface structures (vapor intrusion).

The following potential exposure routes for target analytes have been identified for the Site:

- Inhalation of VOCs/CVOCs from soil vapor;
- Dermal contact and incidental ingestion of soil; and
- Dermal contact with groundwater is also considered minimal risk as groundwater is not used for drinking water or irrigation purposes.

There are no land uses within close proximity of the Site that are sensitive human receptors. Section 3.5 discusses ecological receptors.

3.2 Objectives

The objective of the RI is to further assess the nature and extent of contamination associated with the following AOCs:

- Presence of contaminated historic fill; and
- Current and historical operations.

The RI will evaluate soil, groundwater, and soil vapor impacts on-Site and at the property boundary to provide the basis for refining the PCSM and remedial action selection and to determine the general potential for off-Site impacts. Environmental data collected during the RI will be used to qualitatively assess the potential exposure of receptors to Site contaminants and develop the information necessary to support the development of a RAWP.

3.3 RI Scope

The scope of the RI will include the collection of sufficient Site investigation data so that, together with the historical data, the entire Site will be sufficiently characterized to support the development of the RAWP.

To accomplish this, the scope of work for the RI will include the following:

- The performance of Site reconnaissance to confirm proposed sampling locations;
- The advancement of soil borings, collection of soil samples, installation of permanent groundwater monitoring wells, collection of groundwater samples from new monitoring wells, installation of soil vapor points, and sampling of new soil vapor points;
- The collection of soil, groundwater, and soil vapor data sufficient to define the nature and extent of impacted media and current Site conditions and to evaluate potential off-Site groundwater and/or soil vapor migration;
- The collection of a synoptic round of groundwater level measurements and the collection of additional land survey data as needed for developing a groundwater elevation contour map; and
- The performance of a qualitative human health exposure assessment (QHHEA) to identify existing and potential exposure pathways and evaluate contaminant fate and transport.

All investigation activity will be conducted in accordance with the applicable requirements of the NYSDEC DER-10.

Soil samples from all soil borings and all groundwater samples collected from the investigation described in detail below for soil and groundwater, respectively, will be analyzed for the target compound list (TCL)/Part 375 plus 30/target analyte list (TAL) (TCL + 30/TAL) list of parameters including:

- TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs);
- TCL/Part 375 Base neutral acids (BNA)/SVOCs + 20 TICs;
- TCL/Part 375 Pesticides;
- TCL/Part 375 Herbicides;
- TCL/Part 375 PCBs;
- TAL/Part 375 Metals (including hexavalent chromium);
- Total Cyanide; and
- Emerging Contaminants (ECs) list includes 1,4-Dioxane and all Per- and Polyfluoroalkyl Substances (PFAS) compounds listed in the NYSDEC April 2023 “Sampling, Analysis, and Assessment of PFAS.” PFAS in soil and groundwater will be analyzed by United States Environmental Protection Agency (USEPA) Method 1633A and 1,4-Dioxane in groundwater will be analyzed by USEPA Method 8270D SIM and 1,4-Dioxane in soil will be analyzed by USEPA Method 8270D.

Soil samples will also be collected for geologic logging in accordance with the Unified Soils Classification System (USCS) and for organoleptic inspection (for evidence of contamination including staining and/or odors) as well as using a PID with a 10.6 electron volt (eV) lamp.

All soil vapor samples will be analyzed for VOCs using USEPA Method TO-15.

All data will be produced in accordance with NYSDEC Analytical Services Protocol (ASP) Category B deliverables and will be reviewed and validated by Data Validation Services, Inc. (DVS), an independent data validator. Data Validation Services will prepare a Data Usability Summary Report (DUSR) before data is incorporated into the RI Report (RIR) for the Site. All data will be submitted to NYSDEC in electronic format, in accordance with DER-10, Section 1.15.

The overall scope of each component of the RI is discussed in the following subsections. Detailed field sampling procedures are provided in the Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP; Appendix B of this RIWP). The proposed sampling locations are shown in Figure 6 of this RIWP for soil, groundwater, and soil vapor. Additional information, including intervals to be sampled and sample rationale, is provided in embedded Tables 1, 2 and 3 for soil, groundwater, and soil vapor, respectively.

3.3.1 Site Reconnaissance

An inspection of the existing Site conditions will be conducted to confirm conditions described by the previous investigations and determine final locations of soil borings and monitoring wells based on actual field conditions.

3.3.2 Soil Investigation

To evaluate soil conditions on Site and determine extent of contamination both vertically and horizontally across the Site, twelve borings (RX-01 through RX-12) will be advanced to 20 ft bls at the locations shown in Figure 6. Four of the proposed soil borings (RX-01 through RX-04) will be advanced at the locations shown in Figure 6 for the installation of co-located groundwater monitoring wells as described below. It is anticipated groundwater will be encountered approximately 9.5 to 11.5 ft bls. Four of the proposed soil borings (RX-06 through RX-09) will be advanced at the locations shown in Figure 6 for the installation of co-located soil vapor points as described below.

At each borehole location utility clearances will be performed prior to advancement of soil borings using hand tools and/or vacuum excavation to a minimum of five ft bls to confirm that no subsurface utilities are present. Should a utility or other feature be observed during pre-clearance activities, the sampling location will be relocated. Soil samples will be collected by utilizing a Geoprobe direct-push drill rig. Soil samples will be collected continuously from grade to the terminal depth of each soil boring while continuously inspecting soil for evidence of contamination and logging soil lithology. All soil borings will be surveyed for horizontal coordinates and land surface elevation.

At each soil boring, the proposed sample depth intervals are 2-4 ft bls (or shallowest available interval beneath concrete layer) and 8-10 ft bls (or the 2 ft interval located above observed groundwater level). Each soil sample will be analyzed for TCL + 30/TAL and ECs list of analytes. If odor/ visual evidence of contamination or elevated PID readings are noted, an additional sample will be collected from the interval that exhibits the highest contamination.

3.3.3 Groundwater Investigation

To evaluate groundwater quality conditions across the Site, five permanent monitoring wells (RX-01 through RX-05) will be installed in converted soil boring locations. Roux will collect a groundwater sample from each newly installed monitoring well location, as shown in Figure 6. All monitoring wells will be surveyed for horizontal coordinates, land surface elevation, and measuring point elevation.

Monitoring wells will be constructed of 2-inch inside diameter, Schedule 40 polyvinyl chloride (PVC) casing and 0.020 inch slot, machined screen. Well construction will be as follows:

- Well screens will be 10 ft long, and will be installed with approximately three ft above and seven ft below the water table.
- A sand pack will be placed around the well screen, extending two ft above the top of the screened zone.
- A minimum two-foot thick bentonite pellet seal will be placed above the sand pack. Once the pellets have been allowed to hydrate, cement bentonite grout will be pumped into the remaining annular space from the bottom up.
- The wells will be completed using locking well plugs, and flush mounted, bolt down, watertight, manhole covers cemented into place.

Each monitoring well will be developed to ensure proper hydraulic connection with the aquifer and to reduce/eliminate turbidity of the groundwater. The wells will be developed using a submersible pump, which will be surged periodically until well yield is consistent and has turbidity below 50 nephelometric turbidity units (NTUs), if possible. Detailed procedures regarding well development can be found in the QAPP/FSP (Appendix B).

Prior to sampling, the depth to groundwater in each monitoring well will be measured using an electronic water level meter. At least one week following redevelopment, all on-Site wells will then be sampled consistent with USEPA low-flow sampling requirements, and one round of groundwater samples will be collected in accordance with the QAPP/FSP. Field parameters (e.g., pH, dissolved oxygen, oxidation-reduction potential [ORP], etc.) will also be collected using a water quality meter during purging and prior to sampling. Each groundwater sample will be analyzed for TCL + 30/TAL and ECs list of analytes.

3.3.4 Soil Vapor Investigation

To evaluate soil vapor and the potential for SVI into the proposed building, Roux will install four soil vapor points (SV-06 through SV-09) in converted soil boring locations using a Geoprobe® direct-push rig to be installed approximately two ft above where groundwater is observed in each boring (estimated to be between 7.5-9.5 ft bls). One soil vapor sample will be collected from each point. New Teflon®-lined tubing will be attached to an expendable soil vapor sampling point with a 6-inch stainless steel screen. The soil vapor points will be backfilled with #2 Morie sand to approximately one foot above the screen. The remainder of the borehole will be backfilled with a concrete/bentonite slurry to grade.

In accordance with the NYSDOH Guidance for Evaluating SVI, the integrity of each soil vapor sampling point seal will be checked following installation to verify that the soil vapor sample will not be compromised by inadvertent introduction of ambient air into the sample. The soil vapor samples will be collected using pre-cleaned (batch certified) 6-liter summa canisters with regulators calibrated to collect samples over a 2-hour period and analyzed using USEPA Method TO-15 for VOCs. The proposed soil vapor sampling

locations are shown in Figure 6. Additional details regarding soil vapor sampling methods are provided in the QAPP/FSP (Appendix B).

3.3.5 Management of Investigating Derived Waste

Management of investigation derived waste will be completed in accordance with NYSDEC DER-10, Section 3.3 (e).

All waste materials (drill cuttings, decontamination water, etc.) generated during the RI will be consolidated, and stored in appropriate labeled bulk containers (drums), and temporarily staged at an investigation derived waste storage area onsite. Roux will then coordinate waste characterization and disposal by appropriate means.

3.4 Green and Sustainable Remediation (GSR)

Green remediation principles and techniques will be implemented to the extent feasible in the design, implementation, and Site management of the remedy using best practives described in DER-31: Green Remediation. For each phase of the remediation, starting from the RI through RAWP preparation, the environmental footprint analysis tool, SiteWise™, will be utilized. During the RI phase specifically, green remediation principles and techniques will be implemented to the extent feasible which may include but is not limited to carpooling of field staff and drilling staff, limiting the number of equipment and laboratory drop-offs, utilizing vendors with operation centers local to the Site, limiting water and energy usage, keeping equipment on-Site instead of mobilizing and demobilizing daily, and turning off equipment when not in use.

The Site is entering the program at the investigation Stage; therefore, a Climate Change Screening or Vulnerability Assessment is not applicable or required at this time. The remedial design will include a climate change vulnerability assessment to evaluate the impact of climate change on the project site and the proposed remedy. Potential vulnerabilities associated with extreme weather events (e.g., hurricanes, lightning, heat stress and drought), flooding, and sea level rise will be identified, and the measures to minimize the impact of climate change on potential identified vulnerabilities will be implemented. The reduce the flood potential, ground improvements will be made to raise the first floor and associated utilities above the design flood elevation. The proposed redevelopment and remediation of the Site will not have an adverse impact on any existing natural resources. The proposed redevelopment is not expected to generate more than 50 tons of solid waste per week and therefore will not have a significant adverse impact to the NYC solid waste management systems. On-Site reuse of NYSDEC-approved material will be prioritized during remediation to minimize waste generation and greenhouse gas emissions due to truck traffic.

3.5 Fish and Wildlife Resources Impact Analysis (FWRIA)

A FWRIA Part 1: Resource Characterization will be performed as part of the RIR to determine whether contamination at the Site poses actual or potential ecological risk to fish, wildlife, or sensitive habitats. As stated above, the Site is located in proximity to the water body English Kills, which is a tributary of Newtown Creek.

4. Quality Assurance/ Quality Control (QA/QC)

The goal of the QA/QC aspect of the RI is to ensure that suitable and verifiable data results from sampling and analyses are performed. To accomplish this, a QAPP/FSP has been prepared and is provided as Appendix B.

5. Health and Safety

A site-specific Health and Safety Plan (HASP) has been prepared for the Site and is provided in Appendix C. A site-specific Community Air Monitoring Plan (CAMP) has been prepared for the Site and is provided as Appendix C within the HASP document.

6. Reporting and Schedule

The following will be provided to the NYSDEC during the course of the RI work.

Daily Progress Reports

Daily progress report submittals will be provided to the NYSDEC during RI field activities and will include the following.

- Discovery of any previously unknown contaminated media during RI activities will be promptly communicated to NYSDEC's project manager;
- A Site map will be provided to identify locations discussed in progress reports provided to NYSDEC;
- An update of progress made during the reporting day;
- Locations of work keyed to a map of the Site;
- A summary of CAMP results, including any potential exceedances;
- An explanation of notable Site conditions; and
- Photos of the work.

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the RIWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RIWP will be addressed directly to NYSDEC Project Manager via personal communication.

Monthly Reports

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th of the month following the end of monthly reporting period. Monthly reports will commence upon approval of the RIWP and will include:

- Activities relative to the Site during the previous reporting period and those anticipated for the next reporting period;
- Description of approved activity modifications, including changes of work scope and/or schedule;
- Sampling results received following internal data review and validation, as applicable; and
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.

Remedial Investigation Report

A RIR will be prepared for the Site, which will summarize the results and findings of the investigations on the BCP Site. The RIR will be prepared in accordance with the NYSDEC requirements for the BCP and will meet the technical requirements of DER-10.

Schedule

The following schedule outlines the major milestones for the Site:

Timeframe	Description
June 2025	Submit BCP Application
March 2026	Finalize and Execute Brownfield Cleanup Agreement, Submit Citizen Participation Plan
May 2026	Finalize Remedial Investigation Work Plan
June-July 2026	Remedial Investigation Implementation
August 2026	Submit Remedial Investigation Report
October 2026	Submit Remedial Action Work Plan
January 2027	Remedial Action Work Plan approved, and Decision Document Issued
February – March 2027	Begin construction and remedial action
March – July 2027	Remedial Action and construction
June 2027	Submit Environmental Easement
August 2027	Submit Draft Site Management Plan
October 2027	Submit Draft Final Engineering Report and Approvable SMP
November 2027	Submit Approvable Final Engineering Report and Record Easement
December 2027	Receive Certificate of Completion

Respectfully submitted,

ROUX ENVIRONMENTAL ENGINEERING AND GEOLOGY, D.P.C.

Levi Curnutte
Senior Scientist

Jessica L. Taylor, P.G.
Principal Hydrogeologist

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. on behalf of GO Quay, LLC to identify current or potential environmental concerns and Recognized Environmental Conditions (RECs) at the ±56,200 square foot proposed development site consisting of the property at 213 Meadow Street (Block 2951, Lots 1, 5, and 45) located in Brooklyn, New York ("site" or "subject property"). The ESA included a site inspection, review of historical information, completion of a federal/state/local environmental database search, and interviews with local and state agencies to assess current and past site conditions.

The subject property is zoned M3-1 Heavy Manufacturing District and is used primarily for storage with a small one-story structure located on Lot 45, and is currently occupied by Castle Demolition truck storage and repairs, food truck storage, and scaffolding storage areas. An out-of-service fuel oil aboveground storage tank (AST) and three 275-gallon ASTs containing waste oil, motor oil, and hydraulic oil AST are present in Lot 45. A one-story storage shed is located in Lot 45 also contains approximately 14 55-gallons drum containing degreasers, motor oil, and hydraulic oil staged on secondary containment pallets. The ASTs and drums will require proper closure and removal prior to site redevelopment.

The subject property was operated for oil truck parking, junk yards, and auto wrecking on the western portion of the property from 1965 through 2007 and as a solid waste transfer facility for yard waste and residential, institutional, and commercial waste from at least 2004 through 2012. Historical and current uses of surrounding sites includes a private garage with truck repair, paint room, gasoline tank, wire product manufacturing, an oil/fuel company, metals stamping, and metal products manufacturing between 1951 and 2007, a vinyl plastics company and a chemical products company with manufacturing facilities between 1965 and 2007, gasoline storage between 1933 and 1988, auto wrecking between 1965 and 1977, an automobile repair facility (1933-1987), filling stations (1933-1968), and an oil terminal (1933-1968).

A Phase II Environmental Investigation (EI) conducted by Langan in February 2022 revealed the presence of contaminated historic fill material impacted with heavy metals and semi-volatile organic compounds (SVOCs), some of which exceeded New York State Department of Environmental Conservation (NYSDEC) Commercial Restricted Use Soil Cleanup Objectives (RUSCOs), Industrial RUSCOs, and Protection of Groundwater Soil Cleanup Objectives (SCOs). Groundwater analytical results revealed the presence of elevated concentration of metals and SVOCs, which are consistent with contaminated historic fill

impacts observed in soil. Odors were encountered in some borings and elevated photoionization detector (PID) readings were also present in certain borings as further described below.

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following recognized environmental conditions (RECs), historic recognized environmental conditions (HRECs), de minimis conditions, and business environmental risks that may impact proposed redevelopment of the site were identified:

Recognized Environmental Conditions

A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. It is the opinion of the environmental professional that the following represent RECs:

Presence of Contaminated Historic Fill

Based on the findings of the 2022 Phase II EI, contaminated fill impacted with elevated concentrations of metals and SVOCs above the NYSDEC Soil Cleanup Objectives is present in the subsurface at the subject property. Odors and elevated PID readings were also detected, suggesting contamination may be present that was not found during the initial Phase II EI or that weathered petroleum contamination and nuisance soil conditions are present. The presence of contaminated historic fill material will require implementation of soil handling and management procedures to address excavation, reuse, handling, and possible offsite disposal of this material during site redevelopment. The presence of contaminated fill represents a REC.

Historical Recognized Environmental Conditions

An HREC is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. It is the opinion of the environmental professional that the following represent HRECs:

Spill Case #9315532

The subject property is identified in the NY Spills database for a release reported to the department on 31 March 1994 and assigned NYSDEC Spill No. 9315532. According to the case narrative provided by EDR, a tank truck spilled approximately 5-gallons of diesel onto

the concrete and clean up was in progress at the time the spill was reported. No additional information was provided and the spill was administratively closed on 31 March 1994. It is of the opinion of the environmental professional that the closed spill represents an HREC.

De Minimis Conditions

A de minimis condition is defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. It is the opinion of the environmental professional that the following represent de minimis conditions:

Motor Oil Release

Evidence of a release of oil limited to small, isolated areas on the concrete in the southeastern lot of the subject property was observed during Langan's ESA site inspection. Staining was observed on the concrete and speedy dry had been placed on the stained concrete. No gaps or cracks were observed. There was no evidence of a substantial release that would impact the subsurface of the subject property.

Business Environmental Risks

A BER is defined as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations. It is the opinion of the environmental professional that the following represent business environmental risks:

Current and Historical Site Operations

Historical uses of concern at the subject property included oil truck parking, auto wrecking, and a junk yard between 1960 and 2007 and as a solid waste transfer facility for yard waste and residential, institutional, and commercial waste from at least 2004 through 2012. Current site use includes truck storage and repairs including three in-service 275-gallon ASTs and one out-of-service AST.

Langan completed a Phase II EI in February 2022 to determine if current and historical site operations have impacted subsurface conditions. Soil analytical results revealed the presence of contaminated fill material (discussed above). The potential exists that impacts resulting from these uses may be present at the subject property but were not found during the initial Phase II EI. However, odors were observed at all except one boring. Elevated PID readings were detected between 4.8 parts-per-million (ppm) and 171 ppm at two borings at 8 and 17 feet below

ground surface (bgs) suggesting contamination may be present that was not found during the initial Phase II EI or that weathered petroleum contamination is present and nuisance soil conditions are present. Based on these findings, it is the opinion of the environmental professional that the potential for subsurface impacts as a result of current and historical site use at the subject property represents a business environmental risk.

Potential Presence of Undocumented Underground Storage Tanks

While no evidence of USTs was observed during the site inspection or noted during this ESA, the site has historically been operated for automotive-related purposes. Due to this historical use of the site, it is the opinion of the environmental professional that the potential presence of waste oil or motor oil USTs beneath the lots or adjacent sidewalks represents a business environmental risk. During any proposed site redevelopment, a contingency plan to properly remove and dispose of any USTs that may be encountered in accordance with state and local regulations should be employed. The geophysical utility clearance completed on 3 February 2022 as part of the Phase II EI did detect some small unidentified buried objects in the vicinity of boring LSB-3, LSB-4, and LSB-7 as described in that report.

1.0 INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan) has completed a Phase I Environmental Site Assessment (ESA) of a ±56,200 square foot site located at 213 Meadow Street, Brooklyn, Kings County, New York (Figure 1).

This ESA was conducted to identify current or potential environmental concerns and/or Recognized Environmental Conditions (RECs) resulting from past or current activities on the subject property, as well as to evaluate immediately surrounding environs with the potential to impact upon the property. The assessment consisted of a site reconnaissance of all accessible property areas, a review of State and Federal environmental databases as they concern the subject property and surrounding areas, contact with Federal, State and local agencies, a review of Sanborn Fire Insurance Maps of the subject property and surrounding areas, and a review of local/county records.

The ESA was conducted in a manner consistent with industry standard and practice and in accordance with the Standards of the American Society for Testing and Materials (ASTM) E1527-13 Standard Practice for Environmental Site Assessments. Any deviations from this practice are provided in Section 11.0 of this report.

2.0 RELIANCE/LIMITATIONS

This ESA report was prepared for GO Quay, LLC, for the 213 Meadow Street project and for the objectives of due diligence. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the subject property addressed herein, or by any third party, without a written authorization from Langan.

Langan's scope of services, as described in the proposal dated 14 December 2021, was limited to that agreed to with GO Quay, LLC and no other services beyond those explicitly stated are implied. No exploratory borings, sampling of soil, soil vapor, or groundwater, or laboratory analysis were performed by Langan as part of the scope of services. Reliance on this report is conditioned on agreement to the terms and conditions provided with the December 2021 proposal.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the subject property. The purpose of this investigation was limited to determining if there is reason to suspect the possibility of Recognized Environmental Conditions (RECs) at the subject property. It should be understood that even the most comprehensive Phase I ESA may fail to detect environmental liabilities at a particular site. Therefore, Langan cannot "insure" or "certify" that the subject property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary thoroughness and competence of our profession. The user is cautioned that federal, state, and local laws may impose environmental obligations that are beyond the scope of ASTM Practice E 1527-13.

The conclusions, opinions and recommendations provided in this report are based solely on the following activities:

- Visual observations of the subject property and the immediate vicinity at the time of Langan's site visit;
- Review of relevant available historical information; and,
- Correspondence and/or discussion with personnel knowledgeable about the site.

The conclusions, opinions and recommendations are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the time of our site visit.

The User is responsible for the review and identification of environmental liens, activity, and use limitations, and for ascertaining reasons for significantly lower purchase property price in accordance with Section 6 of ASTM E 1527-13. A questionnaire covering these above-concerns was provided to GO Quay, LLC and is included as Appendix A. In addition, a similar questionnaire was provided to the property owner but was not returned; a blank copy is included as Appendix B. If any of these above-concerns were uncovered during the course of the Phase I ESA, they are addressed in this report.

The report findings are based in part on information provided by local, county and state officials and environmental databases from Federal and State sources. Langan assumes no responsibility for the accuracy and completeness of this information.

Visual observations discussed in this report represent conditions at the time of the site inspection and may not be representative of the past or future site conditions.

As per ASTM E1527-13, Phase I ESA Report deviations, as well as professional opinions regarding these deviations, are listed in Section 11.0.

This ESA has been prepared for the sole use of GO Quay, LLC. This ESA should not be relied upon by other parties without the express consent of Langan and GO Quay, LLC. In accordance with Section 4.6 of ASTM E 1527-13 and 40 CFR §312.20, a Phase I ESA may be considered valid for one year starting from the commencement date of the assessment listed on the front cover of this report. The formal property acquisition/real estate transaction must take place during this period. However, the following components must be conducted or updated within 180 days (six months) prior to the date of the property acquisition/real estate transaction:

- Interviews with past and present owners, operators and occupants;
- Searches for recorded environmental cleanup liens;
- Review of governmental records;
- Site Reconnaissance of the property and adjoining properties; and,
- The declaration by the Environmental Professional.

3.0 SITE DESCRIPTION

The subject property is designated as Block 2951, Lots 1, 5, and 45 by the New York City Department of Finance (Figure 2). The subject property is mostly undeveloped with a small one-story structure located on Lot 45, and is currently occupied Castle Demolition truck storage and repairs, food truck storage, and scaffolding storage areas.

The subject property is bound to the north by an undeveloped lot used for automobile junking and storage, followed by Ten Eyck Street and a one-story industrial/ manufacturing building; to the east by the undeveloped lot used for automobile junking and storage followed by Stewart Avenue and a two-story industrial/manufacturing building complex; to the south by Meadow Street followed by a two-story industrial/manufacturing building and parking areas; and, to the west by Varick Avenue followed by a two-story industrial/manufacturing waste management building and transfer station. The subject property is located within an area of dense industrial and manufacturing development on the city block bound by Ten Eyck Street to the north, Stewart Avenue to the east, Meadow Street to the south, and Varick Avenue to the west.

The property is currently zoned as a manufacturing district (M1-3).

4.0 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

For the purpose of report completeness and to better understand the subsurface conditions, the geologic conditions in the general area of the subject property are discussed in this section.

Based on borings completed during the February 2022 Phase II Environmental Investigation discussed in Section 5.6, site stratigraphy in the western portions of the site consists of a 1- to 2-foot thick layer of concrete underlain by a 4- to 6-foot layer of fill followed by native sand and silty sand. The central portion of the site consists of a 6-foot layer of fill underlain by native sand and silty sand. The eastern portion of the site consists of a 2-foot thick layer of concrete, underlain by an 8- to 15-foot layer of fill followed by native sand, silt, and clay. All borings were completed to approximately 20 feet below ground surface (bgs).

The "Surficial Geologic Map of New York" by the New York State Museum State Geological Survey indicates that the surficial geology at the site consists of till which is generally an impermeable layer comprised of poorly sorted and variably sized clasts. According to the "Bedrock and Engineering Geologic Maps of New York County" by Charles A. Baskerville the site is underlain by the Hartland Formation which consists of interbedded units of feldspar, schist, and amphibolite.

Groundwater was encountered between 9.5 and 11.5 feet bgs in monitoring wells completed during the Phase II EI. Based on site/area topography, groundwater flow is anticipated to be to the west, toward English Kills, a tributary of Newton Creek.

5.0 USER PROVIDED INFORMATION

A questionnaire was completed by the User and is included in Appendix A. Information obtained from this questionnaire is discussed in the sections below. Documents provided by the User are discussed in this section.

5.1 Title Records

A Title Search was not provided by the User for this ESA. Langan completed a limited review of available online records maintained by the New York City Department of Finance to determine current and former site ownership. These records are discussed in Section 8.0.

5.2 Environmental Liens or Activity and Use Limitations

Reasonably ascertainable recorded land title records and lien records that are filed under federal, tribal, state, or local law should be reviewed to identify environmental liens or activity and use limitations, if any, that are currently recorded against the property. Any environmental liens or activity and use limitations are required to be reported to the Environmental Professional conducting the ESA per ASTM E1527-13.

No environmental liens or use limitations (engineering or institutional controls) were identified for the subject property in the radius report or by the User.

5.3 Specialized Knowledge

Specialized knowledge is defined by ASTM E 1527-13 as *"any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property*". For example, a User is involved in the same line of business as current or former occupants of the property or adjoining property and has specialized knowledge of the chemicals and processes used in this line of business.

The User did not provide specialized knowledge material related to recognized environmental conditions in connection with the property as part of this ESA.

5.4 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the User shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated.

The User indicated that no valuation reduction for environmental issues occurred for the subject property.

5.5 Commonly Known Information

If the user is aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate such information. This information may include past uses of the property, specific chemicals that were used on site, spills or releases or environmental cleanups that have taken place.

No additional information regarding the environmental condition of the subject site was provided to Langan.

5.6 Documentation Provided by the User

The following previous environmental report pertinent to the property located at 213 Meadow Street is provided in Appendix C:

- *Phase II Environmental Investigation Report,* by Langan, dated 11 March 2022

Phase II Environmental Investigation Report

Langan completed a Phase II Environmental Investigation (EI) in February 2022 to determine if current and historical site operations have impacted subsurface conditions. Seven soil borings, four groundwater monitoring wells, and four soil vapor points were completed across the subject property. Eleven soil samples (plus one duplicate sample), four groundwater samples (plus one duplicate sample), and four soil vapor samples (plus one duplicate sample) were collected for laboratory analysis.

Site stratigraphy generally consisted of between 4 and 15 feet of fill below the site cover and underlain by native sand. All borings were completed to approximately 20 feet below ground surface (bgs).

Odors were observed at all except one boring. Elevated photoionization detector (PID) readings were detected between 4.8 parts-per-million (ppm) and 171 ppm at two borings at 8 and 17 feet bgs, suggesting contamination may be present that was not found during this initial Phase II EI or that weathered petroleum

contamination and nuisance soil conditions are present. However, staining was not observed in any soil borings completed as part of the Phase II EI.

Heavy metal and/or semi-volatile organic compounds (SVOCs) were identified above the NYSDEC SCOs in all seven soil borings. The heavy metals including arsenic, barium, copper, lead, and/or mercury were detected in all soil borings except LSB-4 and LSB-7 at concentrations exceeding the Commercial RUSCOs, Protection of Groundwater SCOs, and/or Industrial RUSCOs. SVOCs, including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and/or dibenzo(a,h)anthracene were detected in all soil borings except LSB-1 and LSB-6 above the Commercial RUSCOs, Protection of Groundwater and/or Restricted Industrial RUSCOs. The volatile organic compound (VOC) acetone, a common laboratory artifact, was detected in one soil boring and perfluorooctanesulfonic acid (PFOS) was detected above the proposed soil SCO in one sample. No other compounds were detected in any of the soil samples collected above the Commercial RUSCOs, Protection of Groundwater SCOs, or Industrial RUSCOs.

Metals were detected in exceedance of the NYSDEC standards and guidance values (SGVs) in all four monitoring wells, including iron, lead, magnesium, manganese, and/or sodium. SVOCs including benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were detected above the SGVs in two samples. The VOC acetone, a common laboratory artifact, was detected in one sample above the SGVs. 1,4-Dioxane was detected above the drinking water maximum contaminant level (MCL) in two samples and PFOS and perfluorooctanoic acid (PFOA) were detected above the guidance values in all four samples. No other compounds were detected in any of the groundwater samples collected above the SGVs or guidance values.

Soil vapor analytical results revealed the presence of three out of the eight chlorinated VOCs that are listed in the New York State Department of Health (NYSDOH) Vapor Intrusion Guidance Decision Matrices at concentrations below those that would require monitoring or mitigation when compared against the matrices screening levels.

No additional information regarding the environmental condition of the subject site was provided to Langan.

6.0 REVIEW OF PREVIOUS LAND USE

Historic Sanborn Fire Insurance Maps and City Directory Information were requested from Environmental Data Resources (EDR) of Shelton, Connecticut. Provided are descriptions of the materials provided by these resources.

6.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps of the subject property and surrounding area dated 1888, 1907, 1933, 1951, 1965, 1968, 1977, 1979, 1980, 1981, 1982, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 2001, 2002, 2003, 2004, 2005, 2006, and 2007 were obtained from Environmental Data Resources and reviewed as part of this ESA. Copies of Sanborn Maps are provided in Appendix C.

Subject Property

The subject property was identified on Sanborn Maps as being undeveloped from 1888 through 1951 and Ten Eyck Street and Meadow Street to the north and south are labeled as not open during this time period. In 1965, the subject property is labeled as junk and auto wrecking and oil truck parking, and four one-story storage buildings are shown. No changes are shown through 1977, when only one storage building remains, and again through 1986 when the one storage building is no longer shown. In 1989 the subject property is no longer labeled for oil truck parking. In 2001 a portion of the site is depicted as a lumber yard. No changes are shown through 2007.

Adjacent – North

The property to the north on Block 2951 is shown as undeveloped from 1888 through 2007. Ten Eyck Street is labeled an unpaved from 1965 through 2007.

Between 1888 and 1951, the adjacent property to the north across Ten Eyck Street is depicted as being vacant. In 1951, a private garage with an office building, painting room, truck repair facility, and gasoline tank are shown, and the frontage along Varick Avenue is labeled as Preferred Oil Co. Inc. In 1977, the office building is labeled as wire products manufacturing. In 1991 the wire products manufacturer is no longer labeled, and the Varick Avenue frontage is now identified as Vijax Fuel Corp. No changes are shown through 2007.

Adjacent – East

The property to the east on Block 2951 is shown as undeveloped from 1888 through 2007.

In 1888, the adjacent property to the east across Stewart Avenue is depicted as being vacant. In 1907, the property is depicted as part of the Cross, Austin, & Ireland Lumber Yard. No changes are shown through 1933. In 1951, the property is developed with a one- to two-story plastic film manufacturing facility with a one-story warehouse and a disconnected pump house. In 1965, the development is identified as the Elm Coated Fabrics Co. Inc. which operated with vinyl plastics and has expanded to include a larger complex with a one to two-story warehouse and manufacturing space. No changes are shown through 1988. In 1989, the complex is now labeled as Kalex Chemical Products Inc. and is identified as manufacturing use. No changes are shown through 1992. In 1993, the property is no longer labeled as Kalex Chemical Products Inc. No changes are shown through 2007.

Adjacent – South

In 1888, the adjacent properties to the south are depicted as being vacant. No changes are shown in 1907. In 1933, two storage sheds and a two-story structure labeled as A & Rigger with a gasoline tank are shown. In 1951 and 1965, additional one-story buildings of unspecified use and additional two-story structures labeled rigger storage is shown. No changes are shown through 1968. In 1977, the two-story rigger storage building is no longer shown, and a traveling crane is now depicted. No changes are shown through 1986 when the original one-story storage buildings are no longer shown. In 1989, the rest of the storage sheds are no longer depicted, and the gasoline tank is no longer shown. No changes are shown through 2007.

Adjacent – West

In 1888, the adjacent property to the west is depicted as undeveloped and the former extent of Newtown Creek is mapped further to the west on the adjacent block. No changes are shown in 1907 except that Newtown Creek is no longer mapped on the block. In 1933, the property is now depicted as a lumber corporation with a small one-story office building. No changes are shown in 1951. In 1965, the property is now labeled as auto wrecking and parking and depicted with a one-story storage building in the central portion of the site. No changes are shown in 1968. In 1977, the property has been developed as Tubeco Inc. Ecology

Plant with various parking structures and four-story building. No substantive changes are shown through 2007 with the exception that the operator name changes to Star Recycling, Inc. in 1994 and Waste Management in 2005.

Sanborn Map Review Conclusions

The Sanborn Map review revealed historical uses of concern at the subject property including oil truck parking, auto wrecking, and a junk yard between 1960 and 2007.

As discussed in Section 5.6, Langan completed a Phase II EI in February 2022 to determine if current and historical site operations have impacted subsurface conditions. Soil analytical results revealed the presence of contaminated fill material but the Phase II EI did not otherwise identify the presence of impacts associated with historical or current site operations in soil, groundwater, or soil vapor. However, the potential exists that impacts resulting from these uses may be present at the subject property. It is the opinion of the environmental professional that the potential for subsurface impacts as a result of current and historical site use at the subject property represents a business environmental risk.

Historical uses of concern were identified on adjacent properties to the north, including a private garage with truck repair, paint room, gasoline tank, wire product manufacturing, an oil/fuel company, metals stamping, and metal products manufacturing between 1951 and 2007. Historical uses of concern were also identified on adjacent properties to the east including a vinyl plastics company and a chemical products company, both with manufacturing facilities between 1965 and 2007. A gasoline tank is shown on the property to the south between 1933 and 1988 and the adjacent property to the west was used for auto wrecking between 1965 and 1977.

Surrounding property uses of potential concern include an automobile repair facility approximately 455 feet to the north and hydraulically downgradient (1933-1987), filling stations located approximately 310 and 395 feet to the north and hydraulically downgradient of the subject property (1933-1968), and an oil terminal (1933-1968) located hydraulically downgradient of the subject property approximately 200-feet to the northwest across the intersection of Varick Avenue and Ten Eyck Street.

The Phase II EI conducted by Langan in February 2022 revealed the presence of fill material impacted with metals SVOCs, which are typical of urban areas. Groundwater analytical results revealed the presence of elevated concentration of metals and SVOCs which are consistent with fill impacts observed in soil. Evidence of impacts from surrounding sites were not identified.

6.2 City Directory Search

City directory information was obtained from EDR in an attempt to identify past uses of the subject property and establishments in the surrounding area. As provided in the City Directory Abstract (Appendix D), business directories including city, cross-reference and telephone directories were reviewed. City directories include the site address for the years 1960 and 1965.

The City Directory Report for the subject property listings consists of auto wrecking and demolition and salvage companies. The following historic listings refer to businesses of potential concern that were formerly located on the subject property:

Address	Business Name	Listing Date
190 Varick Avenue	Genl Wrecking Corp	1960
	Demolition & Salvage Co Inc.	1960
	South Shore Wrecking Corp.	1965

Listings over the years for adjacent properties identified businesses of potential concern and confirmed site uses presented on the Sanborn Maps including a fuel oil company (1949-1994) and wire products manufacturer (1970-1973) on the adjacent property to the north, a recycling/waste management facility (1973-2017) on the adjacent property to the west, the coated fabrics and chemical company on the adjacent property to the east (1949-1985), and the fuel oil company across the intersection of Varick Street and Ten Eyck Street to the northwest (1945).

City Directory Review Conclusions

Based on the review of the City Directory Abstract, the Sanborn Maps (discussed above), and the radius report (discussed in detail below), it is the opinion of the environmental professional that the potential for subsurface impacts as a result of current and historical site use at the subject property represents a business environmental risk.

7.0 REGULATORY DATABASE SEARCH

A database search report that identifies sites listed on state and federal databases within the ASTM-required radii was obtained for the property from Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. A copy of EDR's complete report is provided as Appendix E.

The report included the following databases specified by the ASTM Phase I protocol as well as non-ASTM databases (not listed):

RECOMMENDED/**REQUIRED** SEARCH DISTANCES
1.0-mile
Federal National Priority List (NPL)
Federal RCRA CORRACTS Facilities List
State- and Tribal-Equivalent NPL
0.5-mile
Federal Delisted NPL
Federal CERCLIS/SEMS**
Federal CERCLIS NFRAP List/SEMS-Archive**
Federal RCRA non-CORRACTS TSD Facilities List
State- and Tribal-Equivalent CERCLIS
State and Tribal Landfill and/or Solid Waste Disposal Site Lists
State and Tribal Leaking Underground Storage Tanks (LUSTs)
State and Tribal Voluntary Cleanup Sites
State and Tribal Brownfields Sites
Subject Property and Adjacent Properties Only
Federal RCRA Generators List
State and Tribal Registered Storage Tanks
Subject Property Only
Federal ERNS List
Federal Institutional Controls/Engineering Controls Registries
State and Tribal Institutional Controls/Engineering Controls Registries

* A description of these databases and a complete listing of sites identified on the above-referenced databases is provided in the EDR Report.

** As of March 2016, SEMS replaced the CERCLIS database and SEMS-Archive replaced the CERCLIS NFRAP database.

Subject Property

The subject property is identified as Castle Sanitation Corporation and Casalino Interior Demolition located at 213 Meadow Street in the following databases searched by the EDR radius report:

- Casalino Interior Demolition is identified in the NY Spills database for a release reported to the department on 31 March 1994 and assigned NYSDEC Spill No. 9315532. According to the case narrative provided by NYSDEC, a tank truck spilled approximately 5-gallons of diesel onto the concrete and clean up was in progress by Whale Co. at the time of the spill report. No additional information was provided and the spill was administratively closed on 31 March 1994.
- Casalino Interior Demolition is identified in the Solid Waste Facilities/Landfill Sites (SWF/LF) database as an inactive C&D processing facility.
- Recovered Government Archive Landfill database for having previously been classified as a landfill facility between 2004 and 2012.
- Facility Index System (FINDS) database (No. NYR00G305) for non-major National Pollutant Discharge Elimination System (NPDES) non-major and storm water industrial permits and the Environmental Compliance & History (ECHO) database (No. 110070625464) for facility tracking under the Clean Water Act for a minor permit. No violations are currently identified during the most recent compliance period from July-September 2021, although violations were reported for submission of late discharge monitoring reports during the January-March 2021 and April-June 2021 compliance periods.

Surrounding Properties

Based on the large number of database records identified within one mile of the subject property (348), Langan limited the review of surrounding properties to adjacent sites and sites within 1/8-mile from the subject property. It is the environmental professional's opinion that based on the dense development of the site area, and former, current and proposed use of the site that the review of the database pertaining to this more limited area is appropriate.

Langan evaluated the following to determine whether additional environmental records with respect to these facilities, including the orphan sites, should be reviewed:

- Case status (i.e., whether a No Further Action letter has been issued or a case has been closed);

- Type of database and whether the presence of soil or ground water contamination is known;
- Distance of the site from the subject property; and,
- Whether the site is upgradient or downgradient of the subject property based on local topography and the anticipated western groundwater flow direction.

Langan reviewed the information provided using the above criteria and the findings for adjacent and notable records are discussed below.

Newtown Creek

The Newtown Creek Superfund Site is a tidal arm of the New York-New Jersey Harbor Estuary, comprised of five tributaries over approximately 3.8-miles between the northwestern boundary of Brooklyn and the southwestern boundary of Queens. The Creek historically contained more than 50 oil and petrochemical refineries, fertilizer and glue factories, sawmills, lumber yards, and coal yards along its banks. A multi-year Remedial Investigation and Feasibility Study began in February 2010 and is anticipated to be completed in early 2019 according to the USEPA. To date, no decision documents have been issued by the USEPA confirming a proposed remedial action for each of the four Operable Units (OUs) of the Site. The geospatial site location is defined at the English Kills section of Newtown Creek, which is located at the south end of Ivy Hill Road in Brooklyn, New York. It is the opinion of the environmental professional that the potential for adverse environmental impacts to the subject property from this site is low.

210 Varick Avenue

The property located adjacent to the north and hydraulically cross-gradient of the subject property at 210 Varick Avenue is identified as Vijax Corporation in the NY UST database as unregulated/closed Petroleum Bulk Storage (PBS) Facility No. 2-080454 for one 2,750-gallon No. 2 fuel oil UST closed in place on 1 September 2002 and one 4,000-gallon No. 2 fuel oil UST closed in place on 1 October 1981. The site is also identified in the following databases:

- NY Spills database for a release reported to the department on 17 March 2015 and assigned NYSDEC Spill No. 1411768. According to the NYSDEC case narrative provided by EDR, a concrete truck overturned and spilled approximately 15-gallons of diesel onto the street only. FDNY cleaned up the spilled product and placed it into a drum for disposal. The spill was administratively closed on 17 March 2015.

- NY Spills database for a release reported to the department on 20 July 2011 and assigned NYSDEC Spill No. 1205626. According to the NYSDEC case narrative provided by EDR, a spill was discovered during a site investigation at the neighboring property to the west. The investigation found contamination in soil and groundwater associated with a gasoline UST and the property owners of 210 Varick Avenue were requested to perform a site investigation to investigate the source of the spill. The property owner was non-responsive and no investigation was performed; NYSDEC ultimately determined that there was no evidence of a threat to the public or the environment from the contamination found and the spill was administratively closed on 22 September 2015.
- Con Edison is identified in the RCRA NonGen/NLR database for forms received by the USEPA on 15 June 2014 classifying the site as not a generator of hazardous waste. Historical generator information includes forms received by the USEPA on 15 May 2014 classifying the site as a small quantity generator. No violations are reported for the facility. The site is also identified on the NY Manifest database for the disposal of waste impacted with hazardous concentrations of lead in 2018.

Varick Avenue & Meadow Street

Con Edison, located adjacent to the southwest and hydraulically cross-gradient of the subject property at Varick Avenue and Meadow Street was identified in the RCRA NonGen/NLR database for forms received by the USEPA on 6 May 2015 classifying the site as not a generator of hazardous waste. Historical generator information includes forms received by the USEPA on 5 February 2016 and 6 May 2015 classifying the site as a large quantity generator. No violations were reported for the facility. The property was also identified on the NY Manifest database for the disposal of waste impacted with hazardous concentrations of lead in 2015.

Stewart Avenue & Meadow Street

Con Edison, located adjacent to the southeast and hydraulically upgradient of the subject property at Stewart Avenue and Meadow Street was identified in the following databases:

- RCRA NonGen/NLR database for forms received by the USEPA on 26 February 2015 classifying the site as not a generator of hazardous waste. Historical generator information includes forms received by the USEPA on 26 February 2015 classifying the site as a small quantity generator (SQG). No violations were reported for the facility.

- RCRA Very Small Quantity Generator (VSQG) database for forms received by the USEPA on 1 June 2016 classifying the site as a very small quantity generator of hazardous waste. Historical generator information includes forms received by the USEPA on 23 July 2009 and 1 June 2016 classifying the site as a conditionally exempt small quantity generator (CESQG). No violations were reported for the facility.
- NY Manifest database for the disposal of waste impacted with hazardous concentrations of lead in 2009 and 2015.
- NJ Manifest database for the disposal of hazardous waste in 2015.
- The site is also identified as Manhole #57877 and identified in the NY Spills database for a release reported to the department on 21 January 2000 and assigned NYSDEC Spill No. 9912167. According to the case narrative provided by EDR, approximately a half quart of unknown oil was found on 100 gallons of water contained within a manhole and cleanup was pending. The spill was administratively closed on 19 March 2002.
- The site is also identified as Unknown – Drum Run and is identified in the NY Spills database for a release reported to the department on 27 July 2017 and assigned NYSDEC Spill No. 1704150. According to the case narrative provided by EDR, smaller containers of waste oil were overpacked into a 55-gallon drum and was ready for pickup. No additional information was provided and the spill was administratively closed on 1 September 2017.

<u>221-243 Meadow Street</u>

Vault 434, located adjacent to the east and hydraulically upgradient of the subject property at 221 Meadow Street was identified in the NY Spills database for a release reported to the department on 9 October 2002 and assigned NYSDEC Spill No. 0207116. According to the case narrative provided by EDR, dielectric fluid leaked from a transformer and mixed with soil on the concrete floor of the vault. The spill was contained and cleaned up. Asbestos abatement and closure of the transformer occurred, and the transformer was removed from the vault. The spill was administratively closed on 29 March 2003. The site was also identified in the NY Manifest database for the disposal of unspecified hazardous waste.

Vault 434, located at 221-41 Meadow Street, was identified in the NY Spills database for a release reported to the department on 10 January 2008 and assigned NYSDEC Spill No. 0508686. According to the case narrative provided by EDR, approximately one quart of an unknown oil was mixed with leaves on the concrete floor of the vault. The spill was contained and cleaned up. The spill was administratively closed on 10 January 2008.

Con Edison, located at 243 Meadow Street, was identified in the RCRA LQG database for forms received by the USEPA on 7 April 2014 classifying the site as a large quantity generator for the generation of hazardous waste impacted with lead. Historical generator information includes forms received by the USEPA on 29 March 2013 classifying the site as a CESQG and on 29 April 2013 classifying the site as not a generator. No violations were reported for the facility. Additionally, the property is identified in the following databases:

- NY Manifest database for the disposal of unreported hazardous waste.
- NY Spills database for a release reported to the department on 7 September 2006 and assigned NYSDEC Spill No. 0606519. According to the case narrative provided by EDR, dielectric fluid was seen leaking and entering a sewer drain. No additional information was provided and the spill was administratively closed on 7 September 2006.

1250 Metropolitan Avenue

Consolidated Packaging Group, located adjacent to the east and hydraulically up-gradient of the subject property at 1250 Metropolitan Avenue is identified in the following databases:

- RCRA SQG database for forms received by the USEPA on 7 March 2008 classifying the site as a small quantity generator of ignitable waste, and waste impacted with hazardous concentrations of spend halogenated and non-halogenated solvents. Historical generator information includes forms received by the USEPA on 8 March 1990, 21 January 2004, 1 January 2006, 1 January 2007, and 7 March 2008 classifying the site as a small quantity generator, and on 1 January 2001, 19 February 2002, and 16 December 2004 classifying the site as a large quantity generator. Violations were reported for the facility.
- NJ Manifest database for the disposal of hazardous waste in 2004, 2005, 2006, and 2007.
- NY Manifest database for the disposal of waste impacted with hazardous concentrations of spent halogenated solvents and ignitable waste in 2006,
- US Aerometric Information Retrieval System (US AIRS) databases for compliance monitoring.
- FINDS and ECHO databases for being active in the RCRA program.

The subject property is also identified as Aljo Auto Electric Corp and is identified in the RCRA NonGen/NLR database for forms received by the USEPA on 1 January 2007 classifying the site as not a generator of hazardous waste. Historical generator information includes forms received by the USEPA on 8 July 1999 and 1 January 2006 classifying the site as not a generator, and on 11 August 1994 classifying the site as a SQG. No violations were reported for the facility.

221 Varick Street

Waste Management of NY LLC, located adjacent to the west and hydraulically down-gradient of the subject property at 215-221 Varick Avenue, is identified in the following databases:

- NY AST database as active PBS Facility No. 2-605532 for one 2,000-gallon diesel AST closed and removed on 1 January 1990, one in-service 275-gallon waste oil/used oil AST installed on 1 January 1990, one in-service 550-gallon lube oil AST installed on 1 January 1990, and one in-service 550-gallon hydraulic oil AST installed on 15 January 1997.
- NY AST database as unregulated/closed PBS Facility No. 2-602605 for one 2,000-gallon diesel AST converted to non-regulated use, one 275-gallon AST of unreported contents converted to non-regulated use, and one 275-gallon lube oil AST tank converted to non-regulated use.
- RCRA NonGen/NLR database for forms received by the USEPA on 1 January 2007 classifying the site as not a generator of hazardous waste. Historical generator information includes forms received by the USEPA on 1 January 2006 classifying the site as not a generator, on 22 July 2005 classifying the site as a large quantity generator. Violations were reported for the facility but the case is reportedly closed.
- NY Manifest database for the disposal of ignitable waste in 2007.
- SWF/LF database as an active transfer station for yard waste and residential, institutional, and commercial waste.
- NY Financial Assurance for closure of the transfer station in 2004.

NY LTANKS

The NY LTANKS database contains an inventory of reported leaking storage tank incidents from April 1986 to the present. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents identified within this database are either tank test failures, tank failures or tank overfills.

According to the Radius Report provided by EDR, there are four NY LTANKS sites located within 1/8-mile of the subject property; each of the spill cases associated with these sites were administratively closed between 1987 and 2006. There are no NY LTANK sites located adjacent to the subject property. Due to the closed regulatory status of the spill cases, it is the opinion of the environmental professional that the potential for adverse impacts to the subject property from these sites is low.

NY Spills

The NY Spills database includes data collected on spills reported to NYSDEC. It includes spills active as of April 1, 1986, as well as spills occurring since this date. According to the Radius Report provided by EDR, there are 37 NY Spills sites located within 1/8-mile of the subject property; each of the NY Spills cases were administratively closed between 1992 and 2019. There are seven NY Spills sites located adjacent to the subject property and are discussed in detail above. Due to the cleanup activities completed and the closed regulatory status of the spill cases, it is the opinion of the environmental professional that the potential for adverse impacts to the subject property from these sites is low. Two notable closed spills are discussed below.

Manhattan Poly Bag Corp, located approximately 310 feet to the northwest and downgradient of the subject property at 1150 Metropolitan Avenue is identified in the NY Spills database for a release reported to the facility on 22 November 2006 and assigned NYSDEC Spill No. 0609662. According to the case narrative provided by EDR, petroleum odors and staining along with elevated PID readings were identified in eight soil borings during a Phase II Environmental Site Investigation. Elevated VOCs, SVOCs and metals were present in groundwater. A remediation work plan was submitted and sodium persulfate injections were performed. Groundwater sampling was performed after chemical injections and showed decreased levels of VOCs and SVOCs in groundwater and a No Further Action letter was approved for the site. The spill was administratively closed on 28 July 2009.

Metro Garage located approximately 296 feet to the north and cross-gradient of the subject property at 1188 Metropolitan Avenue is identified in the NY Spill database for a release reported to the department on 17 June 2003 and assigned NYSDEC Spill No. 0302832. According to the case narrative provided by EDR, a gas station that was never registered was court ordered to remove tanks onsite. Seven 550-gallon tanks were removed, three 550-gallon tanks were abandoned in place, and four additional tanks were planned to be removed. The soil in the excavation area of these USTs

was heavily contaminated. Delineation was performed and soil and groundwater samples were collected and revealed concentrations of VOCs and SVOCs in upgradient monitoring wells. The exceedances were linked to a potential previously closed UST at the neighboring property. Additional sampling was performed around that closed UST at the neighboring property. VOCs and SVOC results came back well below standards. NYSDEC determined that there was no threat to the public or the environment and the spill was administratively closed on 18 January 2012.

Government Databases Review Conclusions

The subject property is identified in the NY Spills database for a release reported to the department on 31 March 1994 and assigned NYSDEC Spill No. 9315532. According to the case narrative provided by EDR, a tank truck spilled approximately 5-gallons of diesel onto the concrete and clean up was in progress by Whale Co. No additional information was provided and the spill was administratively closed on 31 March 1994. It is of the opinion of the environmental professional that the closed spill represents an HREC.

Based on the review of the City Directory Abstract and the Sanborn Maps (discussed above) and the radius report, historical uses of concern at the subject property included oil truck parking, auto wrecking, and a junk yard between 1960 and 2007 and as a solid waste transfer facility for yard waste and residential, institutional, and commercial waste from at least 2004 through 2012.

As discussed in Section 5.6, Langan completed a Phase II EI in February 2022 to determine if current and historical site operations have impacted subsurface conditions. Soil analytical results revealed the presence of contaminated fill material but the Phase II EI. However, the potential exists that impacts resulting from these uses may be present at the subject property. It is the opinion of the environmental professional that the potential for subsurface impacts as a result of current and historical site use at the subject property represents a business environmental risk.

Based on the review of the City Directory Abstract and the Sanborn Maps (discussed above) and the radius report, historical and current uses of surrounding sites includes a private garage with truck repair, paint room, gasoline tank, wire product manufacturing, an oil/fuel company, metals stamping, and metal products manufacturing between 1951 and 2007, a vinyl plastics company and a chemical products company with manufacturing facilities between 1965 and 2007, gasoline storage between 1933 and 1988, auto

wrecking between 1965 and 1977, an automobile repair facility (1933-1987), filling stations (1933-1968), and an oil terminal (1933-1968).

A Phase II Environmental Investigation (EI) conducted by Langan in February 2022 revealed the presence of fill material impacted with metals and semi-volatile organic compounds (SVOCs), which are typical of urban areas. Groundwater analytical results revealed the presence of elevated concentration of metals and SVOCs, which are consistent with fill impacts observed in soil. Evidence of impacts from surrounding sites were not identified.

Additionally, the potential for vapor intrusion impacts to the subject property from onsite or nearby sources was evaluated. No specific potential vapor intrusion concerns (pVICs) were identified as part of this Phase I ESA or in the soil vapor analytical results from the Phase II EI; however, it should be noted that due to the number of spill sites identified in the area of the subject property and the associated potential for groundwater impacts in the site area, vapor intrusion issues at the site may exist. These conditions are consistent with the urban setting in which the subject property is located and do not present a specific or unique concern for the subject property.

8.0 GOVERNMENT AGENCY RECORDS REVIEW

Federal, state and local agencies were contacted via written correspondence, telephone interviews and/or personnel interviews regarding records of environmental concerns, violations, and/or permits, or any other potentially environmentally-relevant records on the subject property. In additional, government information that was readily available online on government websites was also reviewed. A listing of agencies/individuals contacted by Langan as part of this ESA is provided in Table 1. Copies of government correspondence are provided in Appendix F.

US Environmental Protection Agency (USEPA)

Langan reviewed the online USEPA MyProperty database (https://enviro.epa.gov/facts/myproperty/) and the RCRAInfo Search, ECHO, and the Superfund Enterprise Management System (SEMS) databases maintained online by USEPA. Review of available records verified the radius report listings discussed in Section 7.0.

US Fish and Wildlife Service (US FWS)

Information regarding critical habitats or endangered species with the vicinity of the subject property was obtained from the US FWS Information Service Information for Planning and Conservation online database (https://ecos.fws.gov/ipac/). The federally-listed candidate insect species the monarch butterfly, the federally-listed threatened bird species the piping plover and the red knot, and the flowering plant seabeach amaranth and the federally-listed endangered bird species the roseate tern are known to exist in the vicinity of the subject property.

New York State Department of Environmental Conservation Region 2

The NYSDEC Region 2 office was contacted by Langan on 20 January 2022 and online file review requests were submitted for the subject property. In an email dated 21 January 2022, Langan received a response acknowledging receipt of the request. To date, no response has been received. If any additional pertinent information is provided subsequent to issuance of this report, it will be provided as an addendum. Langan also reviewed the Environmental Site Database records maintained online by the NYSDEC. No storage tanks or remediation sites were identified for the subject property. Spill No. 9315532 was identified for the site and is discussed in detail above.

NYSDEC Division of Fish, Wildlife, & Marine Resources

Langan reviewed records maintained online on the NYSDEC Environmental Resource Mapper (http://www.dec.ny.gov/gis/erm/) which revealed that no state-designated significant natural communities and rare plants and animals are found in the vicinity of the subject property. Based on these results, a written records request was not submitted.

New York State Department of Health (NYSDOH)

The NYSDOH Records Access Officer was contacted by Langan on 20 January 2022 and an online file review requests was submitted for the subject property. In an email dated 21 January 2022, Langan received acknowledgement from the NYSDOH of the records request. To date, no response has been received by Langan regarding this request. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

New York City Department of Environmental Protection (NYCDEP)

On 20 January 2022, the NYCDEP online FOIL request form was submitted for the subject property. In an email dated 20 January 2022, Langan received acknowledgement from the NYCDEP of the records request. In an email dated 26 January 2022, Langan received a response indicating that no records are available for the subject property. If any

additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

According to records maintained online by the NYCDEP Clean Air Tracking System (CATS), no boiler records are documented for the subject property.

New York City Department of Health & Mental Hygiene (NYC DOHMH)

The NYC DOHMH Records Office was contacted by Langan and an online file review request was submitted for the subject property on 20 January 2022. In an email dated 8 February 2022, Langan received acknowledgement from the NYC DOHMH of the records request. In a letter dated 7 February 2022, Langan received a response from the Office of Environmental Investigations stating no records are available for the subject property. If any additional pertinent information is provided subsequent to issuance of this report that will change the conclusions of this report, it will be provided as an addendum.

New York City Department of City Planning (NYC DCP)

An electronic version (effective zoning date 23 November 2021) of the NYC Zoning Map for the subject property was downloaded from the NYC DCP website (http://www.nyc.gov/html/dcp/html/zone/zh_zmaptable.shtml).

New York City Mayor's Office of Environmental Coordination (NYC MOEC)

Records maintained online by NYC MOEC through the CEQR Access Portal (https://a002-ceqraccess.nyc.gov/ceqr/) were reviewed on 20 January 2022. The subject property was not identified as being a part of the CEQR program.

'E'-Designation Status

The New York City Department of City Planning coordinated a program identifying properties for special environmental concerns based on documented historical use, neighborhood noise concerns, and neighborhood air quality issues. These properties are identified on 'E'-designated sites on zoning maps and in the NYC Department of Buildings (NYCDOB) Building Information System (BIS) database. The NYCDOB is restricted from issuing building permits for the property until the NYC Mayor's Office of Environmental Remediation (NYC OER) has reviewed information prepared by an environmental professional and made a determination to issue of "Notice-of-No-Objection" or a "Notice-to-Proceed" to the NYCDOB. Prior to the NYCOER's creation in 2008, the NYC Department of Environmental Protection (NYCDEP) conducted these reviews.

Langan reviewed the following information sources to determine if the subject property is listed as an 'E'-designated property:

- Appendix C: CEQR Environmental Designations List (https://zr.planning.nyc.gov/appendix-c-table-1-city-environmental-quality-review-ceqr-environmental-requirements-e-designations) on 18 February 2022
- Appendix C: CEQR Restrictive Declaration List (https://zr.planning.nyc.gov/appendix-c-table-2-city-environmental-quality-review-ceqr-environmental-requirements-environmental) on 18 February 2022
- NYCOER Environmental Project Information Center (EPIC) (https://a002-epic.nyc.gov/app/search/erdproperty) on 18 February 2022, and,
- NYCDOB BIS on 18 February 2022 (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp)

The subject property was not listed as an E-designated site based on these resources.

New York City Department of Buildings (NYC DOB)

Langan completed a limited review of available records maintained online by the NYC DOB. The only Certificate of Occupancy available for Lot 45 was dated 22 July 1993 and revealed that the lot is approved for a junk and salvage yard and parking. This corresponds to a permits approved in 1993 to change the use of the lot for vacant to junk and salvage yard and to erect temporary structures and install three 275-gallon motor oil tanks for this use. A demolition permit was issued for the lot in 1911. The only Certificate of Occupancy available for Lot 1 was dated 11 December 1956 and revealed that the lot is approved for a junk yard, metal and car wrecking, and a temporary shed. No information was available for Lot 5.

New York City Department of Finance (NYC DOF)

Langan completed a limited review of available records maintained online by the NYC DOF to determine current and former site ownership (https://a836-acris.nyc.gov/CP/). According to the DOF Automated City Register Information System (ACRIS), Lot 45 is currently owned by Meadow St. Rlty Corp, and Lot 1 and 5 are currently owned by 190 Varick Ave Realty Cp. Ownership history was available from 1969 to present. The ownership information reviewed provided no additional information regarding environmental conditions related to past usage different than represented by review of other historical information sources.

9.0 SITE RECONNAISSANCE

Langan conducted an inspection of the site on 25 January 2022. The inspection included a walk-through inspection of the entire site for the purposes of identifying Recognized Environmental Conditions (RECs). Typical RECs may include:

Drum storage	Dumpsters	Aboveground storage tanks	Stained areas
Drains and Sumps	Wells	Underground storage tanks	Pump stations
Waste piles	Landfills	Loading and transfer areas	Boiler rooms
Pits, Ponds, Lagoons	Swales	Process air vents	Process sinks
Storm sewers	Trenches	Detention ponds	PCBs
Impoundments	Lagoons	Floor drains and piping	Transformers
Septic systems	Dry wells	Waste treatment areas	Capacitors
Rail spurs	Incinerators	Compressor discharges	Odors
Pools of liquid	Wastewater	Stressed vegetation	Surface waters

Limiting conditions encountered during the inspection of the site included the following:

- Portions of ground surface in each lot could not be observed due to truck parking and equipment storage.

Photographs of the subject property taken during the site inspection are provided in Appendix G. Langan was accompanied by a representative from Castle Demolition who provided access to onsite buildings and answered questions during the site inspection. A questionnaire was not completed by the property owner, operator, and site manager; a blank copy is included as Appendix B. The inspection included a walk-through inspection of the entire site for the purposes of identifying Recognized Environmental Conditions (RECs) as detailed below.

The southeast and southern portions of the subject property is occupied by Castle Demolition Corporation (Lot 45), the southwestern portion of the subject property is leased and used as food truck parking and contains a storage container used as an office (Lot 1), and the northwestern portion of the site is leased and used as scaffolding storage and contains several storage containers used as an office and storage (Lot 5). Lot 45 is separated by fencing into two parcels for Castle Demolition Corporation's operations. One area is used as truck storage and the other area is used as the truck repair area. The truck repair area contains a one-story shed along with several other storage containers and structures providing roofs over supplies and materials. All lots are separated by fencing and are only accessible from the street.

An out-of-service fuel oil AST is present in the south-central area of Lot 45 under a partial shed, and three 275-gallon ASTs, consisting of one waste oil, one motor oil, and one hydraulic oil AST are present in the northeastern portion in the truck repair area of Lot 45. Additionally located in the truck repair area is a one-story storage shed in the north-central portion of Lot 45 and contained approximately 14 55-gallons drum containing degreasers, motor oil, and hydraulic oil. The drums were staged on secondary containment pallets. Additional quart and gallon-sized containers containing a variety of degreasers and motor oil were also observed in the storage shed. Speedy dry and stained concrete were observed throughout the truck repair area in the southeastern lot. Several suspected drains and open-hole sumps were observed under metal plates throughout the subject property. At the time of the site inspection, the representative onsite from Castle Demolition could not confirm the purpose of the drains and open-hole sumps.

Adjacent Properties

A visual inspection of adjoining properties from the subject property line and public rights-of-way including a visual inspection where hazardous substances may be or may have been stored, treated, handled, or disposed was also conducted.

Limiting conditions encountered during the inspection of adjoining properties were encountered due to the dense urban nature of the surrounding areas which only allowed for limited line of sight that did not extend to areas where hazardous materials or substances might be stored.

Properties located adjacent to the subject property consist of warehouses, truck parking and staging, and a Waste Management facility. No other visual evidence of hazardous material storage, treatment, handling, or disposal areas was observed at adjacent properties.

10.0 ADDITIONAL ISSUES

The following items fall outside the scope of ASTM 1527-13, however Langan can and often does provide these services to its clients if specifically requested and included in the proposed scope of work or are issues that may impact current or proposed site use.

10.1 Wetlands/Floodplain Designation

Langan reviewed the United States Fish and Wildlife National Wetland Inventory (NWI) and New York State Freshwater Wetlands maps. Based on these documents no mapped wetlands are listed on the subject property. No evidence of the presence of existing onsite wetlands was identified during Langan's site inspection. However, a formal wetland and floodplain designation assessment was not conducted as part of this ESA.

10.2 Protected Endangered Species / Critical Habitats

A determination regarding the potential presence of protected or endangered species and critical habitats on or near the subject property was not conducted as part of this ESA. This determination is often required in order to receive state or federal grants, loans, and/or permits.

Based on historic use of the subject property and the current condition and urban setting of the site, the potential presence of threatened or endangered (T&E) species on the site is low. A request for information regarding T&E species on the site was provided to New York State Division of Fish, Wildlife and Marine Resources (NYSDFWMR) and to the United States Fish and Wildlife Service (USFWS). This correspondence is discussed in detail in Section 8.0.

10.3 Asbestos

In 1973, use of sprayed on fireproofing on structural building components was prohibited by the EPA. On July 12, 1989, EPA issued a final rule banning most friable asbestos-containing products. The following specific asbestos-containing products remain banned: flooring felt, roll board, and corrugated, commercial, or specialty paper. In addition, the regulation continues to ban the use of asbestos in products that have not historically contained asbestos, otherwise referred to as "new uses" of asbestos. Use of asbestos in textured paint and in patching compounds used on wall and ceiling joints was banned in 1977.

An asbestos survey was not conducted as part of this ESA as there are no permanent structures present at the subject property.

10.4 Lead-based Paint

In 1977, the Consumer Product Safety Commission (CPSC) banned the use of lead based paint (LBP) in housing and restricted maximum levels in lead in new residential paint to less than 0.05% by weight. A lead-based paint inspection was not conducted as part of this ESA as there are no permanent structures present at the subject property.

10.5 Lead in Drinking Water

A lead in drinking water survey was not conducted as part of this ESA.

10.6 Indoor Air / Microbial Assessment (Mold)

A mold survey was not conducted as part of this ESA.

10.7 Radon

The subject property is located in a Tier 3 Zone as identified by USEPA based on sampling conducted of buildings within the site area. The Tier 3 Zone is considered an area of low radon gas intrusion potential with typically concentrations less than 2 pCi/liter. A radon survey of the existing building was not conducted as part of this ESA. Radon test results from adjacent or surrounding properties are not necessarily indicative of radon conditions on the subject property. As no building specific radon survey documentation was provided to Langan, no opinion regarding potential risks associated with radon gas exposure can be made.

As per USEPA guidelines, the only way to assess potential radon gas exposure risks is to conduct a radon assessment. In addition, the US EPA recommends that follow-up tests on large buildings should be conducted when major modifications are made either to the building structure or HVAC system or the HVAC system's operation settings.

10.8 Historical and Archaeological Review

Langan reviewed the NYCityMap (http://maps.nyc.gov/doitt/nycitymap/) to review the potential presence of historical landmark buildings near the subject property. As of 18 February 2022, no historical landmark buildings were identified on or near the property.

In addition, Langan reviewed the New York City Landmarks Preservation Commission (NYCLPC) online historic maps (https://nyclpc.maps.arcgis.com/apps/webappviewer/index.html?id=93a88691cace4067828b1eede432022b). As of 18 February 2022, no Historic Districts or Landmarks were identified on the subject property.

Langan also reviewed the NYSHPO online database (http://nysparks.com/shpo/online-tools/). As of 18 February 2022, no National Register Listed or State Register Listed sites were identified on or adjacent to the subject property.

11.0 DEVIATIONS

This Phase I ESA conforms with ASTM with the following deviations noted:

- Data gaps in excess of 5 years were encountered during the review of historic resources;
- Government agencies that have not responded to record review inquiries are listed above - additional pertinent information provided to Langan subsequent to the issuance of this report will be provided in an addendum;
- Limited visual access was provided as part of this ESA due to vehicles parked across the subject property as identified in Section 9.0;
- Based on the large number of database records identified within one mile of the subject property (348), Langan limited the review of surrounding properties to adjacent sites and sites within 1/8-mile from the subject property;
- Interviews of former business operators were not conducted;
- Interviews of property owners were not conducted;
- Questionnaires were not completed by the property owner, operator, or site manager; and,
- A FOIL request was not submitted to the New York City Fire Department (FDNY) as response times do not meet ASTM's Reasonable Time and Cost requirements.

It is the opinion of the reviewing Environmental Professional that the above deficiencies will not detrimentally affect the identification of potential recognized environmental conditions. This opinion is based on the following factors:

- Based on the Sanborn Maps and the City Directory information reviewed, the use of the property is consistent between the 5-year data gaps. Therefore, operations on the site between these data gaps will not detrimentally affect the identification potential RECs.
- Langan limited the database review to adjacent sites and sites within 1/8-mile from the subject property. It is the environmental professional's opinion that based on the dense development of the site area, and former, current and proposed use of the site that the review of the database pertaining to this more limited area is appropriate and will not detrimentally affect the identification of potential recognized environmental conditions.

12.0 FINDINGS/OPINIONS

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, the following recognized environmental conditions (RECs), historic recognized environmental conditions (HRECs), de minimis conditions and business environmental risks that may impact proposed redevelopment of the site were identified:

1. Presence of contaminated urban fill;
2. Spill Case #9315532;
3. Motor Oil Release;
4. Current and historic site operation; and,
5. Potential presence of undocumented USTs.

Contaminated fill material impacted with metals and SVOCs at concentrations exceeding the NYSDEC Commercial RUSCOs, Industrial RUSCOs, and/or Protection of Groundwater SCOs was identified at the subject property during the Phase II EI. Finding 1 represents a REC. The subject property is identified in the NY Spills database for a release reported to the department on 31 March 1994 and assigned NYSDEC Spill No. 9315532. The spill was administratively closed on 31 March 1994, therefore Finding 2 represents a HREC. Evidence of a release of oil limited to small, isolated areas on the concrete in the southeastern lot of the subject property was observed during Langan's site inspection. It is the opinion of the environmental professional that Finding 3 represents a de minimis

condition. Historical site use consisted of oil truck parking, auto wrecking, and a junk yard between 1965 and 2007 and a solid waste transfer facility between 2004 and 2012. Current site use includes vehicle storage and repairs including three in-service 275-gallon ASTs and one out-of-service AST. Although odors and elevated PID readings were detected in fill during the investigation, the Phase II EI did not identify specific impacts associated with historical site use. It is the opinion of the environmental professional that Finding 4 represents a BER. It is the opinion of the environmental professional that undocumented USTs may be present beneath the site or sidewalk adjacent to the site. Therefore, Finding 5 represents a business environmental risk.

13.0 CONCLUSIONS

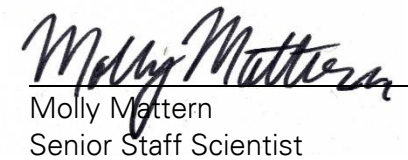
Langan has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of a ±56,200 square foot site located at 213 Meadow Street, Brooklyn, Kings County, New York, the subject property. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report.

Based on information obtained during the visual inspection of the subject property, review of environmental databases and historic information, and contact with federal/state/local official agencies, this assessment has revealed the following recognized environmental conditions (RECs) in connection with the property:

Recognized Environmental Conditions

It is the opinion of the environmental professional that the following represent RECs:

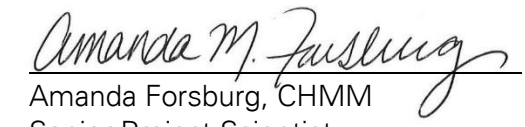
Presence of Contaminated Urban Fill



Based on the findings of the 2022 Phase II EI, contaminated fill impacted with elevated concentrations of metals and SVOCs above the NYSDEC Soil Cleanup Objectives is present in the subsurface at the subject property. Odors and elevated PID readings were also detected, suggesting contamination may be present that was not found during the initial Phase II EI or that weathered petroleum contamination and nuisance soil conditions are present. The presence of fill material will require implementation of soil handling and management procedures to address excavation, reuse, handling, and possible offsite disposal of this material during site redevelopment. The presence of contaminated fill represents a REC.

14.0 QUALIFICATIONS / CERTIFICATION

The following professionals assisted in the completion of this report.



We, the undersigned, declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property as documented in Appendix H. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

APPENDIX A

USER QUESTIONNAIRE

LANGAN

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "all appropriate inquiry" is not complete.

General Information

User/Client Name (s): GO Quay LLC

Property Name: 213 Meadow Street, Brooklyn, NY

Address: 213 Meadow Street, Brooklyn, NY

Block 2591; Lot 1, 5, and 45

Property Type: Storage Facility

Type of Property Transaction:

- Purchase of property ☐
- Financing of property ☐
- Sale of property ☐
- Ground Lease ☐
- Build to Suit Lease ☐
- Other Development for purposes of conveyance of new facility / ground lease

Reason Why Phase I ESA is required: Due diligence

Site Contact (s): Daniel Colasuonno

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

	Yes	No
(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	☐	☒
(2.) Activity and Land Use (AUL) limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	☐	☒

LANGAN

	Yes	No
(3.) Specialized knowledge or experience of the person seeking to qualify for LLP (40 CFR 312.28).		
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐	☒
(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).	**Yes**	**No**
(a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Parts 4a and 4b.]	☒	☐
(b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	☐	☐
(c.) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.		
(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30).	**Yes**	**No**
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,	☐	☒
(a.) Do you know the past uses of the property?	☐	☐
(b.) Do you know of specific chemicals that are present or once were present at the property?	☐	☐
(c.) Do you know of spills or other chemical releases that have taken place at the property?	☐	☐
(d.) Do you know of any environmental cleanups that have taken place at the property?	☐	☐
(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate Investigation (40 CFR 312.31).	**Yes**	**No**
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	☐	☒

SIGNATURE:

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/20/2021 has revealed that there are 2

SEMS sites within approximately 0.5 miles of the target property.

EPA Id: NYD068273044				

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 5 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/06/2022 has revealed that there are 15 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2021 has revealed that there are 30 NY SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/09/2021 has revealed that there are 40 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 20 NY UST sites within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 4 NY MOSF UST sites within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are

2 NY CBS AST sites within approximately 0.25 miles of the target property.

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 4 NY MOSF AST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that

there are 37 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 7 NY HSWDS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

CON EDISON (Continued) **1018279092**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"9/5/12 - Raphael Ketani. The subject site is a commercial building owned by Anthony Losquadro, 210-222 Varick Avenue, Brooklyn, 11237-1027. His phone is (917) 681-1206. According to an old deed in ACRIS, Mr. Losquadro lives at 94 Payne Whitney Lane in Manhasset, NY. For 210 Varick Avenue, there is PBS case #2-080454. The facility listed is VIJAX Corp. at 210 Varick Avenue. A 275 gal. UST with #2 oil was closed in place on 9/1/02. A 4000 gal. UST with gasoline was closed in place on 10/1/81. The 222 Varick Avenue site used to house oil delivery trucks. Now, the 222 address houses a tiling company called Buy Tile. A metal recycling company operates out of 210 Varick Avenue. The spill was originally reported by the consultants (Sander Sternig, Director) at Volumetric Techniques, Ltd. (631) 472-4848 in their 7/20/11 soil and groundwater delineation report for their client next door, Metro Garage gas station at 1188 Metropolitan Avenue, Brooklyn. The soil and groundwater results for SB-5 and MW-1 in the 7/20/11 Volumetric report indicate exceedences of the CP-51 standards. The suite of exceedences are reflective of gasoline contamination, not fuel oil. The consultants for Volumetric have indicated that the Metro Garage UST near SB-5 and MW-1 held only diesel. However, there is a UST nearby just inside the former VIJAX building at 210-222 Varick Avenue. The UST was allegedly used to fuel oil delivery trucks with gasoline. A later investigation of the abandoned Metro Garage diesel UST was done and a report was generated by Volumetric dated 1/6/12. Two soil borings were done next to the diesel UST. The results indicated very little residual oil contamination in the soil. 9/13/12 - Raphael Ketani. A draft CSL was submitted to Hassan Hussein, supervisor of Unit C in Region 2 DER. Mr. Hussein approved the CSL and it was sent out today. 9/18/12 - Raphael Ketani. Anthony Losquadro (917) 681-1206 called yesterday regarding the CSL. He wanted to know what it was about. I explained that soil and groundwater contamination had been found at MW-1 and MW-2 during an investigation for Metro Garage. He said that his gasoline UST and fuel oil UST had been closed in place many years ago after they both had passing EZ-3 tank tests. I told him that the contamination is in the subsurface and his property is the closest

COMMERCIAL BUILDING (Continued) **S112226424**

facility to the wells. He said that he had a subsurface investigation performed by Fenley & Nicol and everything was fine in the subsurface. I asked him to send me the Fenley & Nicol report and the passing tank tests. He said he will. He asked for the reports showing that contamination was found. I sent him the Volumetric Techniques 7/20/11 and 1/6/12 reports by e-mail (tony@vijax.com). Later, Mr. Losquadro sent me a tank system integrity report dated 8/22/02 and the Fenley & Nicol Limited Subsurface Investigation and Tank Closure Report dated 12/19/02. The tank system report was for only the 4,000 gal. gasoline UST. The tank system had passed the integrity test. The Fenley & Nicol report dealt with an investigation of only the gasoline UST. The UST was located in the southwest corner of the property. Four (4) soil borings were performed around the UST and were turned into temporary monitoring wells. These wells were TW-1 to TW-4. Two (2) additional temporary wells were installed in the vicinity of the tank. These wells are TW-5a and TW-6a. The borings went down to 8 feet, except TW-6a went to 12 feet. The soil samples were taken from 0 to 4 feet and from 4 to 8 feet. TW-1 had virtually no PID detects. TW-2 had 10.8 ppm at 0 to 4 feet. TW-3 had 5.8 ppm at 0 to 4 feet. TW-4 had 2 ppm at 0 to 4 feet and 79.2 ppm at 4 to 8 feet with olfactory detection of odors. TW-5a had 63 ppm at 0 to 4 feet and 75 ppm at 4 to 8 feet. TW-6a had 5.8 ppm at 0 to 4 feet, 0.4 ppm or less deeper. Groundwater was determined to vary from 6.7 feet to 8.6 feet below grade and flowed north to Metropolitan Avenue. Groundwater samples were taken from TW-1 (upgradient), TW-2 (downgradient) and TW-6a (northernmost location). All of the results were non-detect for VOCs and SVOCs. It was not indicated in the report that the soil samples had been sent to a lab for analysis. I found the report and the investigation to be deficient. I drafted a letter for the review of Mr. Hussein. In the letter, I requested that Mr. Losquadro have a new investigation performed to delineate the soil and groundwater contamination throughout the 210-222 Varick Avenue site. 9/20/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today. A due date of October 19, 2012 was set for the submission of the work plan. 11/13/12 - Raphael Ketani. The deadline for submission of the work plan had passed. I drafted a strongly worded letter for the review of Mr. Hussein. In the letter, I ordered Mr. Losquadro to submit the work plan by November 30, 2012. I stated that he was in violation of Section 173 and Section 176 of Article 12 of the Navigation Law. If he doesn't send the work plan, then the case will be referred to the Office of General Counsel and he may face fines, penalties and prosecution. The letter was approved by Mr. Hussein and was sent out with a green return card. 11/19/12 - Raphael Ketani. The green card was returned, but there was only a mark in the signature box for the receiving party. 12/4/12 - Raphael Ketani. The work plan was not received by the November 30, 2012 due date. A draft Stipulation Agreement package was put together and submitted to Mr. Hussein for his approval. Mr. Hussein approved the Stipulation Agreement and it was sent to Anthony Losquadro at 222 Varick and to Joseph Losquadro at 94 Whitney Lane, Manhasset, NY, 11030. According to the ACRIS property database, the Losquadro Family, LLC owns 222 Varick. So they were put on the Stip itself. A deadline of January 4, 2013 was set for the receipt of the signed Stip. The Stip Package went out today. 12/14/12 - Raphael Ketani. The green return card for the Stipulation Agreement package was received today with a mark in the signature box. 12/21/12 - Raphael Ketani. Robert Dooley from The Law Office of Frederick Eisenbud (The

COMMERCIAL BUILDING (Continued) **S112226424**

Environmental Law Firm, 6165 Jericho Turnpike, Commack, NY, 11725-2803, (631) 493-9800/rd@li-envirolaw.com) called to request an extension of the deadline for submitting the Stipulation Agreement. I granted him an extension to January 25, 2013. Later, Mr. Eisenbud sent me an e-mail requesting additional documentation regarding the spill investigation at the Metro Garage site at 1188 Metropolitan Avenue, Brooklyn (#0302832). He also asked a number of questions about the Metro Garage investigation and included questions from Mike Zobel of Fenley & Nicol. Lastly, Mr. Eisenbud asked whether Losquadro Family LLC could be reimbursed by making a claim to the Spill Fund for the expense of the investigation work if their investigation indicates that 210-222 Varick Avenue is not the source of the contamination at MW-1. 12/24/12 - Raphael Ketani. I responded to Mr. Eisenbud's e-mail by sending him a pdf of the VTEQE 6/7/11 investigation report and by stating the reasons why the spill case was being kept open for 210-222 Varick Avenue. These reasons were: 1) soil and groundwater samples were analyzed for MW-1 for VOCs. These VOCs were typical of gasoline. 2) there is a gasoline UST near MW-1 and just inside the building footprint. So it is not unreasonable to assume that the gasoline contamination came from this UST system. 3) there are no gasoline USTs under the Metro garage site which are near MW-1, only a fuel oil UST. 4) the gasoline contamination is less at the downgradient location of boring SB-4 than it is at SB-5. 5) aside from these points, a report was obtained for the site at 210-222 Varick Avenue which indicated that fuel oil had leaked from the fuel oil UST system and hinted at elevated contamination. I finished the e-mail by stating that I would have to get back to him regarding reimbursement for the expense of the investigative work that will be performed - if the results indicate that 210-222 Varick is not the source. 12/27/12 - Raphael Ketani. I sent an e-mail to Mr. Eisenbud wherein I referred him to John Urda, Assistant Regional Attorney. Mr. Urda can answer his question about reimbursement for his client. 1/2/2013 - Raphael Ketani. I received information regarding reimbursement for the costs of doing an investigation for contamination that is not the responsibility of the property owner. I forwarded the information to Mr. Eisenbud. 1/24/13 - Raphael Ketani. A conference call took place between Mr. Zobel, Mr. Eisenbud and myself regarding the site and the previous Fenley & Nicol investigation. I told them that samples from SB-5 and MW-1 had indicated gasoline contamination, but Metro Garage had only a diesel fuel UST in this area. I added that groundwater flow was due north and the contamination was less at a further downgradient boring SB-4. Mr. Eisenbud stated that SB-5 and MW-1 were sidegradient, not downgradient and didn't reflect contamination from his client's property. I told them that there were high PID hits at the 4 to 8 foot interval at TW-4 and at both the 0 to 4 foot and 4 to 8 foot internvals at TW-5A. So there were indications of soil contamination that had never been addressed. I added now that the DEC was made aware of this, we were obligated to request that an investigation take place. Mr. Eisenbud pointed out that there was no groundwater contamination from the gasoline UST. So, the contamination at MW-1 was from somewhere else. I told both of them that an investigation needed to take place in order to resolve the matter. Mr. Eisenbud requested an extension of the deadline for submission of the Stipulation Agreement. I gave him until February 8. I added that a work plan will need to be submitted that will describe an investigation of all of the tanks below the property. With that, the

COMMERCIAL BUILDING (Continued) **S112226424**

conversation ended. 2/13/13 - Raphael Ketani. I tried to contact Mr. Dooley (631) 493-9800/rd@li-envirolaw.com regarding the submission of the overdue signed STIP, but could only leave a message. Mr. Dooley called me back. He said that he is involved in the case, but Mr. Eisenbud has the case file and so he is the person to talk to. However, he isn't here now. Mr. Dooley said that he had no idea why the STIP hadn't been signed and forwarded to the DEC, but he will let Mr. Eisenbud know that the DEC is looking for the document. He asked for a two day extension to submit the STIP. I told him that I will grant the two day extension, but, if the STIP is not received by that time, then I will be forced to pass the case up to our legal division. Mr. Dooley said that he understood. 2/15/13 - Raphael Ketani. Mr. Dooley called regarding the STIP. He said that due to the deadline being today for submission of the STIP, there is not enough time to go over it with Mr. Losquadro and get him to sign it. Also, he had heard about other spill sites having work plans instead of STIPs for oil spill cases. I told Mr. Dooley that the STIP was sent because the DEC was not receiving cooperation from Mr. Losquadro - in other words, no investigative work was taking place. Mr. Dooley said that he understood. Mr. Dooley asked whether the DEC was willing to accept a work plan at this time. I told him Yes, but the plan must cover an investigation of the entire site as we don't know what is taking place below the property regarding the oil contamination. Mr. Dooley said that he will send the DEC a work plan very soon. 3/18/13 - Raphael Ketani. I reviewed the Fenley & Nicol 3/7/13 Remedial Investigation Work Plan. There is a 2750 gal. fuel oil AST and a 4000 gal. gasoline UST below the site. Both passed the tightness tests on 11/4/97. The gas UST was retested on 8/22/02 and passed the second tightness test. Both tanks were abandoned in place with concrete slurry on 9/3/02. A GPR survey will be performed across the site in order to locate any utilities. The borings will be hand cleared down to 5 feet. Sampling will be every 3 feet. The soil and groundwater samples will be tested via method 8260 for samples that are collected from around the gasoline UST. For samples that are collected from around the fuel oil AST, the testing will be via methods 8260 and 8270. I found the work plan to be unacceptable. First, the number of borings is insufficient for determining whether there is contamination around the tanks, given their large sizes. Second, standard split spoon sampling is with a 2 foot split spoon. Third, it is not mentioned that soil sampling will take place in the vicinity of former borings TW-4 and TW-5a, where the contamination was originally found around the gasoline UST. Fourth, the well that they plan to install next to the fuel oil AST is not downgradient. Fifth, no borings were planned just inside of the garage door at 222 Varick Avenue that is next to Metro Garage. I drafted a letter for the review of Mr. Hussein stating the above deficiencies and requesting that a new work plan be submitted within 30 days of the response letter (by April 22). 3/19/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 3/20/13 - Raphael Ketani. In response to the 3/19/13 letter, Mr. Dooley called me. We discussed the work that was being requested by the DEC. He said that it was much more than he expected and that he thought the object of the investigation was to see whether there was oil contamination below and around the tanks at 210-220 Varick Avenue, not to also investigate 222 Varick Avenue for an orphan tank. I reminded him that both the soil and the groundwater at the location MW-1, outside of the garage at 222 Varick, have gasoline contamination. I also stated again that Metro

COMMERCIAL BUILDING (Continued) **S112226424**

Garage does not have a gasoline tank in this area. So, given the analytes concentrations, there must be a gasoline UST nearby. The most likely location would be just inside 222 Varick. Mr. Dooley stated that it was not possible to do borings with a geoprobe inside the building as the ceiling was too low. I told him that there are all kinds of small equipment that can do the boring and, worse comes to worse, the consultants can use a small power drill to core the concrete floor and then do hand soil coring. I added that this was not easy, but I had seen it done on a number of projects where a geoprobe couldn't be used. Mr. Dooley stated that this was a possibility, but that he wanted to talk to Fenley & Nicole first before doing any of this work. I told him that would be fine. 5/10/13 - Raphael Ketani. As Mr. Dooley (631) 493-9800/rd@li-envirolaw.com has not responded since 3/20/13 and as the Department has not received the signed STIP (which was due 2/15/13) nor the revised Remedial Investigation Work Plan (which was due 4/22/13), I sent him an e-mail stating that either he sends the signed STIP or the revised work plan by May 31, or else a legal case will be initiated. 5/13/13 - Raphael Ketani. Mr. Dooley sent me an e-mail stating that the DEC will receive the work plan by the end of the week. 6/14/13 - Raphael Ketani. As neither the work plan nor the Stipulation Agreement have been forthcoming, I referred the spill case to our legal division. 2/7/14 - Raphael Ketani. There has been no contact from Mr. Losquadro or his consultant. There have been no changes regarding site status or property ownership. Ownership of the entire site is split into two groups: according to a 7/28/92 deed in ACRIS, 222 Varick Avenue is owned in common by Paul and Anthony Losquadro (both at 94 Payne Whitney Lane, Manhasset, New York) and by Monica Losquadro (145 Hicks Street, Brooklyn); 210-220 Varick is owned by the Losquadro Family, LLC. 2/11/14 - Raphael Ketani. A revised case referal was submitted to the Region 2 legal division. 10/30/14 - Raphael Ketani. I spoke to Sandy Sternig (631) 472-4848/cell (631) 514-1094 today (the consultant who had installed MW-1 and MW-2 outside of the site) about 222 Varick Avenue. He told me new information about the alleged gasoline UST at 222 Varick Avenue. Mr. Sternig said that he thought the UST was a little inside and to the right of the garage entrance nearest Metro Garage. I then asked Mr. Sternig how Dennis Firpo (the owner of Metro Garage to the north) knew about the pump island and the tank. He said that Mr. Firpo used to own the property 222 Varick Avenue when the tank and pump were there and then had sold the property to Mr. Losquadro years ago. I checked ACRIS and there is a deed dated 7/28/92 which shows the change in ownership from 222 Varick Avenue Corporation to Paul Losquadro (94 Payne Whitney Lane), Anthony Losquadro (94 Payne Whitney Lane) and Monica Losquadro (145 Hicks Street, Brooklyn). 9/16/15 - Raphael Ketani. I tried to contact Mr. Frederick Eisenbud [(The Environmental Law Firm, 6165 Jericho Turnpike, Commack, NY, 11725-2803, (631) 493-9800] by phone regarding progress at the site. I contacted Mr. Eisenbud as Mr. Dooley had left the law firm some time ago. In my message, I asked whether any work was taking place at the site. 9/22/15 - Raphael Ketani. Mr. Eisenbud still hasn't returned my phone call. The spill case data and information were discussed amongst staff at the Region 2 office of the Department. It was concluded that there is no evidence of a threat to the public or the environment from the contamination that was found at MW-1, SB-5 and around the fuel oil tank (according to the Fenley and Nicol report). It was decided that the spill case should be closed. Therefore, the spill case was administratively

DEC Memo:	"e2mis no 154293 ROSALIE REPORTS WHILE ON LOCATION HE SAW A PERSON FROM KORYO CORP, ORIENTAL MARINE PRODUCTS INC (IN FRONT 200 STEWART) AVE, DUMP A GALLON OF LIQUID INTO OUR SB-55893. HE THINKS IT SMELLS LIKE TERPENTINE. THE POLICE ARRIVED AND SO DID THE FDNY. ROSALIE WILL TAKE 3 SAMPLES. THIS IS A THIRD PARTY SPILL. Lab Sequence Number: 04-05405-001: Analysis indicates the presence of a substance similar to a light fuel oil. UPDATE: 10-JUL-2004 2226HRS 7/10/04 = 19:45 Hrs = Env. Ops. Supv. C.Fernandez reports that upon arrival at location a Mr. Steve Hong, Manager of Koreyo International Corp., approached him and admitted that his employees had poured paint thinner and oil based primer into our structure. After Mr. Fernandez spoke with Mr. DeMeo of the DEC on his cell phone it was agreed that Mr. Fernandez would call Clean Harbors to clean the structure as soon as possible. Mr. Fernandez was also informed that Officer Valente from the NYS DEC would be arriving soon. Officer Valente issued a summons to the consumer and informed him that Con Edison would have Clean Harbors clean the structure and bill him for it. FOD personnel, Mr. Rosalie and Mr. Ciampa, gave their statement to Officer Valente (of which Mr. Fernandez has a copy) and also gave Mr. Fernandez a written statement. At 17:50 Hrs Clean Harbors personnel arrived, proceeded to clean the structure and completed the job at 19:30 Hrs. From beginning to end Mr. Fernandez kept in touch with Mr.DeMeo, Mr. Silano and shift manager Mr. Sorrentino. Clean Harbors manifest, job sheet and Con Edison employees statements will be located in the Environmental Operations office. UPDATE: 10-JUL-2004 2234HRS TAG 30402 WAS REMOVED JOB IS 100% COMPLETE"

DEC Memo:	"04/01/10 - See eDocs for Con Ed report detailing cleanup and closure. 2/22/10 - Raphael Ketani. I spoke to Paul Walsh from the Con Ed ERT desk (212) 580-8383. He said that the spill was from a manhole that was found to be smoking at 6:03AM this morning. Oil was discovered on the street and in the catch basin nearby at 10:50AM. A crew could not inspect the manhole until it had cooled down. Two pints of oil were on the street and 1 gal. of dielectric fluid had run into the catch basin. Mr. Walsh stated that even though the oil had entered the basin, it did not travel into the sewer pipe that connects the basin to the rest of the sewer. He said that he is still waiting on the PCB content report. He should have it soon. The crew is still on the scene. Mr. Walsh will call me with the PCB results. Mr. Walsh called me back. He said that his supervisor was now on the scene. He's been informed that there is a green substance on the street. They don't know where it is from or what it is. Additionally, the historic information on the transformer is from 4/7/03 and simply says that the PCB concentration is 0 ppm. So Con Ed will take samples from the manhole and the catch basin. Mr. Walsh will get back to me. 2/23/10 - Raphael Ketani. I spoke to Dennis Michael Ides at the ERT desk. He said that the analytical results came back. The grab sample from the street had 12 ppm of PCBs in the oil. The sample from the transformer itself had 13 ppm of PCBs. He said that he was at the site during the cleanup. The spill consisted of 1 gal. down the catch basin and two pints on the pavement. He said that everything was cleaned up. "
Remarks:	"SOME MAY HAVE BEEN LOST INTO SEWER. CONTAINED AND CLEAN UP PENDING"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name:	MATT BOECKEL
DEC Memo:	"12/11/06-Hiralkumar Patel. received message from Matt (Cell: 631-767-9098) from Associated Environmental. spoke to John at Associated and asked him to DEC Rahman. 12/18/06 Rahman- Phase II(partial) Subsurface Investigation is prepared by Associated Environmental Services Ltd(Matthew Boeckel@631.234.4280).The site was utilized as a paving company and a oil company from at least 1807 to the late 1960s.Sanborn Fire Insurance Maps indicated the presence of large gasoline and fuel oil storage tanks.The site is currently utilized as warehouse and distribution purposes.During the Phase II investigation, soil/ground water samples were collected from the ground surface to a depth of 20' below grade.A majority of the site could not be investigated due to the presence of merchandise.Ground water flows to the west, towards English Kills.There was petroleum based odor and staining as well as elevated PID readings detected in the soil samples collected from borings B-1 through B-8. Ground water analytical results show presence of elevated levels of VOCs(MTBE- 33 ug/l,Naphthalene-6900 ug/l),SVOCs and RCRA metals.RP's consultant plans to conduct additional investigation after clearing the interior of the subject building that could not be accessed due to storage of

MANHATTAN POLYBAG CORP (Continued) **S108296225**

merchandise. Spill case is transferred to Remediation section B for determination regarding further investigation/remedial work. 1/11/2007 - Vadim Brevdo spoke with Matt (Consultant) and agreed that Site Investigation Work Plan can be submitted to Vadim Brevdo's name. Vadim Brevdo 1/25/2007 - Vadim Brevdo spoke with Matt Boeckel of Associated Environmental Service, reviwed and approved remedial investigation work plan dated January 18, 2007. Approval letter is dated January 24. 02/16/07: This spill case transferred from V. Brevdo to J. Kolleeny. Tried calling Matt Boeckel of Associated Environmental Services (631-234-4280), but he was out; spoke with John Schretzmayer, mentioned some deficiencies with reports submitted (Phase II Remedial Investigation report (2/7/07) and Interim Remedial Measure Work Plan (2/8/07)), including inaccurate boring labelling on site plan, lack of former tank locations depicted on site plan, and need for greater detail regarding remedial proposal of sodium persulfate injections, such as quantity of material to be injected and health and safety considerations. Also asked that electronic versions of each report be submitted. John said Matt will get back to me. - JK 02/23/07: After discussing deficiencies in Interim Remedial Measure Work Plan with Matt Boeckel of Assoc. Env'tal Svcs, and receiving several faxed revised versions, entitled Remedial Measure Work Plan (with site location figure, Sanborn map showing former tank locations, more detailed discussion of proposed sodium persulfate injections with health and safety considerations, added language about soil sampling during installation of permanent monitoring wells and surveying of wells to determine groundwater flow direction, analytical parameters changed to STARS list of petroleum-related VOCs and SVOCs), I sent approval letter (in eDocs) to 221 Realty Co., LLC of 500 Broadway, Brooklyn, NY 11211, attn: Alex Gross, with cc's to Ken Zucker of Beechwood Mountain, LLC and Matt of AES. Approval letter asked for additional permanent well near boring B-9, installation and sampling of permanent wells prior to chem. ox. injections to determine baseline GW conditions, and commented that if follow-up GW monitoring fails to show sodium persulfate effectiveness, alternative remedial approach must be developed. Also, sent email to Matt of AES asking for hard copy of finalized work plan report, and electronic copies of all site-related reports. - J. Kolleeny 08/07/2007: This spill case was transferred to A. Doronova. -AD 09/2007: Spoke to Matt Boeckel regarding implementation of the work plan. He said that they encountering constant refusal during soil borings, so they need to use different drilling equipment. AES plans to perform this work in a few weeks. Matt will call back with an update information. AD 01/09/2008: Call and spoke with Jon of AES regarding work plan status update. He promised to get back. AD 02/28/2008: Jon of AES called and asked if they may re-locate proposed monitoring wells due to technical difficulties (thick layer of concrete - 3ft and more). He also wants to meet with us at the site. Told him to send us a site diagram with new locations for the wells and said that site visit may be possible next week. Spoke with J. Kolleeny regarding wells installation on this site. Called and left a message to Jon of AES. Talked later with him regarding concrete specification, groundwater depth and if air rotary drilling was applied. Jon said that concrete is re-bar concrete; air rotary drilling could not be applied due to low clearance - 8' and groundwater depth from the basement floor is about 5' deep. The site visit was scheduled on Monday, March 3, 2008. AD 03/03/2008: Received a message from AES, left on Friday, February 29, 2008 at 5 PM, that

MANHATTAN POLYBAG CORP (Continued) **S108296225**

they would like to re-schedule site visit. Called and spoke with Christina of AES. The site visit was cancelled for today. AD 03/05/2008: Scheduled new site visit for Friday March 7, 2008. AD 03/07/2008: Visited the site with J. Kolleeny. Met there with John Schretzmayer of AES. He showed the property and explained why some of the injection points could not be installed. The soil has some elevated levels of SVOC contamination, groundwater result indicates exeedances in VOC. We discussed the implementation of the proposed remedial action plan and agreed to reduce the numbers of proposed injection point from 21 to 15 and add one more monitoring well. AD 08/07/2008: Called and left a message to J. Schretzmayer of AES regarding a summary report submission. AD 08/14/2008: Called and left a message to J. Schretzmayer of AES. AD 08/15/2008: Received a message from AES. The hard copy of the report will be submitted next week. AD 09/19/2008: Did not receive report. Spoke with a secretary of AES, left a message for J. Schretzmayer regarding the report submission. AD 10/14/2008: Called and left a message to J. Schretzmayer to call me back. AES email address is: <AssociatedEnv@aol.com>. AD 10/29/2008: Received the report. DL to eDocs. Will review. AD 11/03/2008: Reviewed the report. It states that a total of four monitoring wells were installed at the site. The analytical results for the April 2008 groundwater samples indicated that there were several VOCs and SVOCs at concentrations exceeding their NYSDEC standards (MTBE in MW-01 at 44 ppb). To remove dissolved phase contamination in the groundwater, AES used sodium persulfate solution (oxidizer) by introducing it via 14 injection wells at a depth of 10 to 15' bellow grade. October 2008 groundwater sampling event was scheduled to determine if the chemical oxidant solution has effectively reduced contaminant concentrations in the groundwater. A summary report will be provided to DEC following October 2008 monitoring event with conclusions and recommendations. AD 03/30/2009: Called to AES and left a message to a secretary for J. Shretzmayer regarding a QMR submission. AD 04/27/2009: Did not receive any response yet. Called and left a message to Mr. Shretzmayer. AD 05/08/2009: Received ecopy of the IRM - Groundwater Sampling Report from J. Shretzmayer of AES via e-mail. DL to eDocs. AD 05/11/2009: Received a hard copy of the report. Will review. AD 05/14/2009: Reviewed the report. It states that on February 9, 2009 AES sampled three out of four monitoring wells at the site. The most contaminated well MW-4 could not be located due to the debris and reorganization of the warehouse. Baseline GW sampling in April 2008 indicated several VOCs and SVOCs at concentrations exceeding their NYSDEC standards (MTBE in MW-01 at 44 ppb). February 2009 sampling results indicated lower levels of SVOCs and MTBE in well MW-1 and ND levels of VOCs and SVOCs in wells MW-2 and MW-3. Based on the analytical results of the GW sampling and due to the fact that the subject site is occupied and soil removal is not feasible, the consultant recommends no further actions for this site. Discussed the site with J. Kolleeny of DEC. Called and spoke with Christine Mazzarella of AES. Asked if the location of the well MW-4 could be found, they should sample it, if not - than they should try to collect groundwater grab sample in its vicinity. Ms. Mazzarella will get back to us with their response. AD 07/13/2009: Received an e-mail from C. Mazzarella of AES saying: Hello Ainura Attached please find subject report for your review.? Please reference?Spill #06-09662. Please contact us with any questions or comments following your review of the attached. Thank you Christine Mazzarella Associated Environmental

MANHATTAN POLYBAG CORP (Continued) **S108296225**

Services, Ltd. 25 Central Avenue Hauppauge, New York 11788 631 234 4280 tel 631 234 4297 fax DL the report to eDocs. Will review. AD 07/21/2009: Reviewed the report. It states that on May 27, 2009 AES sampled one temporary well point in the vicinity of well MW-4, according to the DEC request. The most contaminated well MW-4 could not be located during previous sampling event, due to the debris and reorganization of the warehouse. May 2009 sampling results indicated low levels of SVOCs and MTBE and ND levels of VOCs in the area of well MW-4. Based on historical analytical results of the GW sampling and due to the fact that the subject site is occupied and soil removal is not feasible, the consultant recommends no further actions for this site. Discussed the site with J. Kolleeny of DEC. Taking into consideration investigative and remedial activities performed at the site, clear decreasing trend of VOCs and SVOCs in GW, and current GW conditions, it was decided to approve NFA request for this site. AD 07/27/2009: Issued and sent NFA letter. DL to eDocs. Case closed. AD"

Remarks: "PHASE TWO CONDUCTED AT SITE: LAB RESULTS REVEALED ELEVATED CONATMINENTS IN SOIL AND GROUNDWATER ABOVE STATE LEVEL: SITE WAS HISTORIACALLY UTILIZED FROM EARLY 1900'S TO THE LATE 1960'S AS A ASPHALT PAVING COMPANY, AND OIL TERMINAL:"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
RISK AND TECHNOLOGY REVIEW
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when

PATSON CORP (Continued) **1011490373**

complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"Sangesland spoke to Vicky at Island Tank. This is a heating oil tank in the garage area of an apartment building. Island Tank is already doing the dig out and knows to take the end point samples. No Tank Test Failure or Contaminated Soil letter was sent. 09.22.05 SR// Sharif spoke with Mr. Friedman . He informed me Island Tank took care of the problem. I tried to hold Vicky but not able. 12/09/05-Sharif// I rec'd report prepared by Island Tank.The UST was 3000 gallons and was removed from the property as clean scrap metal.Six end point samples were taken from the UST cavity. Approx. 26 yards of contaminated soil was removed from the hole.Soil analytical result came back almost clean with no significant contaminants left at the site.Disposal manifests are provided. NFA action required."
Remarks:	"LINES ON 3000 GALLON TANK ARE ROTTED AND THEY NEED TO REMOVE SOME CONTAMINATED SOIL"

Updated By:	KALEWAND
Site Description:	"This property is located in Brooklyn (Block #2962 - lots 1, 5, & 37), and is owned by Rhino Trust (Albert Realty Co.). The site is a vacant lot, except for two, one-story shed buildings in a state of disrepair. The site has a develop- ment history dating back to the early 1900's; site uses have included an asphalt paving company and a lumber company. As a result of an environmental survey of this site conducted in 1988 and 1989, traces of 4-chloroaniline, pentachlorophenol, butyl-ben zylpthalate; di-N-butylphthalate and flouranthene were found. Metals and total petroleum hydrocarbons were also found in the soils, surface and groundwater. Contamination of soils by metals was found to include: silver, barium, cadmium, chromium , iron, lead and copper. Concentrations of metals in the groundwater exceeded groundwater quality standards for lead and iron. Rhino Trust has carried out a supplemental site assessment under a consent order in the summer of 1992. An interpretation of the analytical results from the previous investigation has been inconclusive due to data gaps in the reports. Rhino Trust performed a Supplemental Site Assessment, and the fieldwork was completed in 1994. The PRP has removed the contaminated soils. Hazardous waste is no longer present and significant threat no longer exists."
Env Problem:	"Contaminated soils have been removed but groundwater contamination evidently due to construction and demolition debris (non-hazardous), still exists."

DEC Memo:	"1/22/08 - Raphael Ketani. I called Fireman Scott Sarnell of Hazmat 1 (347) 203-6886. He said that a tanker truck had leaked #2 oil onto

METRO GARAGE (Continued) **S108982334**

the street at Metropolitan Avenue and Varick Street. The surface spill is about 100 feet long and covers a 4 lane road. So the surface spill is about 50 gals. He said there is another 90 gals. in the sewer. Fireman Sarnell said that Sanitation is sending a sander. I contacted DOS and DEP about the spill. Later, I received an updated spill report stating that the NYFD units were containing the spill. Fireman Sarnell also stated in the revised report that Right Way Fuel Oil (718) 574-4004 had hired Trade Winds to do the cleanup. As the NYFD is containing the street spill, Trade Winds is coming to do the cleanup, and the DEP and DOS have been notified, I am closing the spill case. 1/23/08 - Raphael Ketani. I contacted Right Way and spoke to Mitchel. He said they were welding the pipe that had leaked on the truck. He said that Trade Winds had worked into the night yesterday and they will finish the cleanup today. He said they had pumped out the sewer."

Remarks: "50 GALLONS ON GROUND WITH AN UNDETERMINED AMOUNT IN THE SEWER; IN ROUTE TO SCENE AND REPOSONSIBLE PARTY ON SITE; UNITS ON SCENE ARE CONTAINING THE MATERIAL AND THE RESPONSIBLE PARTY WILL BE HANDLING THE CLEAN UP;"

Contact Name:	CHARLES SCHMIDGALL
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL Sangesland DDO Charles Schmidgall of Aggressive Environmental 631-224-1680 Gas Station which was never registered is now under an EPA court order to pull tanks. Of 10 - 550's on site, 7 were removed, 3 are under the building and are being abandoned in place. 4 other tanks are also probably being pulled: Two 1080 gal, One 2000 gal, One 4000 gal. The owner would like to get two of these tanks approved for heating oil storage. Mr. Schmidgall says the excavation is heavily contaminated. He is trying to dig out as much contaminated soil as possible. Sangesland directed him to do a delineation and a remediation plan. Contaminated soil letter was sent to the owner: Dennis Firpo 1188 Metropolitan Ave. Brooklyn, NY 11237 10/20/03 TJD cross reference spill #0206511. 12/9/03 TJD Spill reassigned Demeo greater than greater than greater than Rommel. 3/16/04-Vought-See also closed spill #0206038 at same location. PBS 2-602411 5/18/2006 - Mike - Contacted Dennis Firpo who is aware that he needs to deal with soil problem. Also spoke with Russel Construction (718-909-0148) who is doing the work with Agressive Environmental. Firpo still has fines he has to pay to the EPA. Work along with soil testing and removal of if contamination, is going to be performed within the next eight weeks by Russel Construction once the fines are paid. Gave the spill number to Russel Construction so they can report back once the work is done at the site. 10/29/10 - Austin - Reassigned from Scibelli in Albany to Ketani in Region 2 for following up and closing - end 11/9/10 - Raphael Ketani. The spill was called in on 6/17/03. The spill involved the discovery of contaminated soil while removing the tanks. The site is block and lot 2945 and 8. According to the deed dated 12/23/93 in ACRIS, the owner is Diecor Realty Corp., 1176 Metropolitan Avenue, Brklyn, 11237. The NYC MAP DoITT database shows the site address as including 228 and 230 Varick Avenue. The property includes an L shaped building along the southern part of the combined property. The PBS is #2-602411. There were 23 tanks. The first 14 were closed and removed on 2/1/99. Tank #15 is a 550 gal. UST with #2 oil. Tanks #16 to #23 are each 4,000 gals. and contain either

METRO GARAGE (Continued) **S108982334**

gasoline or diesel fuel. The owner is listed as Die Cor Realty Corp., 1194 Metropolitan Avenue, Brklyn. Dennis Firpo is the contact at (718) 628-5000. Mail goes to Mr. Firpo (718) 381-5050 at 1188 Metropolitan Avenue. There is no paper file. There is only a CSL in the E-docs. There are 4 other spill cases for 1188 Metropolitan Avenue. These are closed cases: 0011310; 0206038 (referred to this case); 0206511 (referred to this case); 0711153. In general, the cases involved spills of oil onto the ground and into the sewers, and contaminated soil. I tried to contact Mr. Firpo, the owner, at (718) 381-5050. I reached his secretary. She said that he wasn't in yet, but that she will give him my message. I asked her whether the addresses 1176 and 1194 were part of the same company. She said that she didn't think they were. I asked her whether (718) 628-5000 was also Mr. Firpo's number. She said that I could call this number, too. Mr. Firpo called me back. He said that Russel Construction (718) 909-0148 had done all of the tank pulling and cleaning. He said that he wasn't sure whether he had the cleanup report, but he will look for it. I told him that if he doesn't have the report and Russel doesn't have the report, then a new investigation will need to take place. I asked him what the correct name of the company was. Mr. Firpo said it's called Metro Garage. I tried to contact Russel Construction and request a copy of the cleanup report, but I could only leave a phone message for James. 11/15/10 - Raphael Ketani. Mike Gimelfarb of GE Consulting (718) 997-1282/ cell (917) 868-4713/e-mail gimelfarb.m@att.net called regarding the site. He said that he was the consultant on the job. He thought that all of the reports had been sent to the DEC. I told him that we had nothing. He said that he will look into the matter. Later, I spoke to James. He said that the phone number I had called was his number, not that of Russel Construction. He had no forwarding information regarding Russel Construction. Next, I tried to contact Mr. Firpo. However, again, I reached one of his secretaries. I left a message that I could not get the cleanup report from Russel Construction and that he was responsible for either providing the report or doing another investigation. Mr. Firpo returned my call. He said that he contacted his architect, Mr. Gimelfarb, and Russel Construction. He said that they, as well as he, are looking for the cleanup report. 12/14/10 - Raphael Ketani. Rich Spadalik of ARCO (631) 586-5900 called to request information regarding the spill. He wanted to know who were the parties involved in the cleanup of the site. I gave him the various names. Mr. Spadalik said that Russel Construction went out of business. He tried to contact them (as they owed him money), but he had no success and couldn't find them. He said that he will look for any documents that he has. 2/18/11 - Raphael Ketani. As there has been no response in some time from either Mr. Firpo or Mr. Gimelfarb, and as I haven't received the remediation report, I sent a followup letter to Mr. Firpo. I set a deadline of March 18, 2011 for the remediation report to be submitted or for another soil investigation to take place. 3/3/11 - Raphael Ketani. Mr. Gimelfarb [(718) 997-1282/ cell (917) 868-4713/e-mail gimelfarb.m@att.net] called me today. He wanted to know what Mr. Firpo needed to resolve the spill case. I told him that either he should send me the complete remediation report for the work that was performed previously or he should start a new investigation. Mr. Gimelfarb stated that Russel Construction did the work. However, they were out of business and so the remediation report could not be obtained. I told Mr. Gimelfarb that, in such a case, a new investigation will have to be performed.

METRO GARAGE (Continued) **S108982334**

I told him that Mr. Firpo had until March 18 to send the DEC a work plan for the new investigation. Mr. Gimelfarb said that he understood. Later, Sandy of Volumetric Techniques (VTEQE) (631) 472-4848 called. He wanted to know what the site was about and what the DEC was asking to be done. I told him that the DEC was requiring a full soil and groundwater contamination delineation and groundwater flow determination. He said that he will submit a proposal to Mr. Firpo. He said to contact him in 3 weeks if DEC doesn't hear back from him. 3/14/11 - Raphael Ketani. I spoke to Ariel Czemerinski cell (516) 987-1662. He wanted to know what type of work was required at the site. I told him that the soil and groundwater contamination will need to be delineated and the groundwater flow direction will need to be determined. 3/18/11 - Raphael Ketani. As the work plan had not been submitted by today, the deadline that was indicated in the followup letter, I sent a STIP package to Mr. Firpo. I set a deadline for submission of the signed STIP of April 15. 3/23/11 - Raphael Ketani. The green return card was received with a squiggle as someone's signature in the signature box. Today, I received the soil and groundwater delineation work plan from Volumetric Techniques (VTEQE), Ltd. dated 3/22/11. I began my reivew. 3/24/11 - Raphael Ketani. Jared Bretas (212) 788-3220 of the Mayor's Office of Environmental Remediation called. He said that there is a tax lene on Mr. Firpo's property. The Mayor's Office is trying to estimate how much the property is worth in preparation for an auction. I read some of the case notes to Mr. Bretas. He thanked me and the call ended. 3/28/11 - Raphael Ketani. I finished my review of the VTEQE work plan. They proposed 5 boring locations which they estimated to be on the downgradient side of 3 abandoned tanks, 5 active tanks and 3 pump islands. They will collect the most contaminated soil sample, the lowest dry soil sample and a groundwater sample from each boring. As this is an initial investigation, I found the plan to be acceptable. I called up Sander Sternig, Director (631) 472-4848, and told him that the plan was acceptable and to proceed as soon as possible. 4/15/11 - Raphael Ketani. The investigation report was due today. I tried to contact Mr. Sternig (631) 472-4848, but could only leave a message. The message stated that the report was due today. I spoke to Mr. Firpo (718) 381-5050. I asked him why the STIP wasn't sent in. He said that he had given Mr. Gimelfarb all of his paperwork. I told Mr. Firpo that he needed to send the signed STIP to the DEC and today was the due date. I added that he was risking receiving fines and penalties by not sending in the STIP on time. Mr. Firpo said that he will contact Mr. Gimelfarb and try to find out why the STIP wasn't sent in. I asked Mr. Firpo who he had retained as a contractor. He said that it was VTEQE. I told him that the DEC had approved the work plan some time ago and we are now waiting for the investigation report. Mr. Firpo said that he will get back to me. Later, Mr. Firpo called me and said that he had the STIP. He said that he will FAX the signed STIP and send the original by regular mail. I received the FAXed version of the STIP a little while later. 4/16/11 - Raphael Ketani. Mr. Sternig (Sandy) (631) 472-4848/cell (631) 514-1094 called me today, saturday, and left a message. He said that the investigation work was conducted on 4/8/11. There was contamination upgradient. End point samples were taken. The samples have been sent to the lab. 4/18/11 - Raphael Ketani. Today I received the signed STIP with the original signature which had arrived by regular mail. I walked it up to our legal division with a cover memo to our director, Suzanne Matei. 4/21/11 - Raphael Ketani. I received the STIP package

METRO GARAGE (Continued) **S108982334**

with the approval signature of Suzanne Matei, Director of Region 2. I sent the approved STIP to Mr. Firpo. 5/23/11 - Raphael Ketani. I spoke to Mr. Sternig (Sandy) (631) 472-4848/cell (631) 514-1094. He said that he received the analytical results. There is gasoline contamination both upgradient and downgradient. The concentrations of the different analytes are greater upgradient. The upgradient sample was taken at the edge of the sidewalk where there is another property (a large warehouse that fronts on Metropolitan and Varick) that has a gas UST, according to Mr. Sternig. There is also a diesel pump in this building. He added that one has to walk down the block and look inside and I would see an old car over the UST and the diesel pump. Mr. Sternig said that he will not submit the investigation report as Mr. Firpo owes him lots of money. I tried to contact Mr. Firpo (718) 381-5050, but I could only leave a message that the DEC needed to receive the investigation report. 5/24/11 - Raphael Ketani. I made an unannounced site visit. Metro Garage is a SUNOCO station. They service cars and pump gas. The site is at the corner of Varick Avenue and Metropolitan Avenue. I saw one round mark in the sidewalk in front of the site which was probably from a soil boring. Across Varick Avenue there was what looked like a warehouse. I saw a fill port and vent pipe for the warehouse, but nothing else. 5/25/11 - Raphael Ketani. I tried to contact Mr. Firpo, but could only leave a message. Later, I contacted Mr. Sternig and asked him to include a page in the investigation report that he will submit showing a schedule for the additional work that must take place and for sending in reports. He said that he will. 5/26/11 - Raphael Ketani. Mr. Firpo (718) 381-5050/cell (917) 603-0377 tried to contact me yesterday after work, but I wasn't in. I tried to return his call today, but could only leave a message. Mr. Firpo returned my call. I told him that the DEC hadn't received the investigation report. He said that he thought Mr. Sternig was going to send it when he talked to him weeks ago. I told him that Mr. Sternig was holding the report until he receives more money. Mr. Firpo said that he will give Mr. Sternig enough money so that he releases the report. He said that I should get the report next week. I told Mr. Firpo that I will keep an eye out for it. 6/16/11 - Raphael Ketani. I received the June 7, 2011 VTEQE soil and groundwater delineation report yesterday. Groundwater was found to be at about 8 feet below grade. It is believed to be tidal as Maspeth Creek is one block to the north and one block to the west. The soil results were almost entirely non-detect for the first three samples and below CP-51 standards for #4 and #5 (except for 1,2,4-trimethylbenzene which was a little elevated). SVOCs were almost entirely non-detect or below standards. For the groundwater, only the sample from #5 had exceedences that were slightly elevated. There were six analytes and the highest concentration was 277 ppb for 1,2,4-trimethylbenzene in the sample from #5. Well installation is supposed to take place during mid-July. Sampling is supposed to take place during mid-August. A RAP will be submitted in mid-September. I spoke to Mr. Sternig (Sandy) (631) 472-4848/cell (631) 514-1094 about the results and data in the report. I asked him where the active diesel tank was. He said that it is under the sidewalk near boring #5. Mr. Sternig added that the diesel pump is here, too. He said that it didn't make sense to install another boring between locations #4 and #5 because the utilities below the sidewalk prevented him from putting another boring in a middle location. He could have installed another boring near the edge of the building, but then he would have been next to one of the borings. I told Mr. Sternig that installing

METRO GARAGE (Continued) **S108982334**

just the two borings sounded fine. I also told him that the only issue I saw was the groundwater contamination at #5. I added that he should install two permanent wells, one at #5 and one further south to see whether the contamination is from off site. I stated that he should try a couple of groundwater evacuations to see whether the water will clean up. Mr. Sternig said that he will approach Mr. Firpo with the idea of installing the wells and doing the groundwater recovery and sampling. However, Mr. Firpo still owes him lots of money. 7/22/11 - Raphael Ketani. I spoke to Mr. Sternig (Sandy) (631) 472-4848/cell (631) 514-1094. He said that he had installed a couple of wells upgradient of Metro Garage. He found many gas constituents in the groundwater just upgradient and fewer constituents in the groundwater further upgradient. Mr. Sternig believes that there are gas USTs in this neighboring building at about 230 Varick Avenue, but he could not find any PBS registrations for the facility. He added that Mr. Firpo never had gas USTs in an upgradient location bordering the neighboring building. He said that the DEC will receive a report regarding this part of the investigation by e-mail and hard copy. I told him that I will look out for them. I reminded Mr. Sterning that he had said that he will approach Mr. Firpo regarding the installation of two permanent recovery wells. Mr. Sternig said that he had forgotten to approach Mr. Firpo about this, but he will. Later, Mr. Sternig sent me the VTEQE 7/20/11 data results report. This report showed that well MW-1 was installed next to boring #5 just upgradient (allegedly) and that well MW-2 was installed about 75 feet further upgradient. Both wells were at the corners of the neighboring, upgradient building. Well MW-1 is supposedly next to a gasoline UST that is in this neighboring building. The soil analytical results for borings #1 to #5 were almost entirely non-detect or below CP-51 standards for VOCs, except for a couple of hits for boring #5. These were 6500 ppb of 1,2,4-trimethylbenzene and 2595 ppb of total xylenes. The SVOCs were almost entirely non-detect. Groundwater samples for the 5 borings were almost entirely non-detect. However, the sample for #5 had many below standard hits. Naphthalene was at 141 ppb, 1,2,4-trimethylbenzene was at 277 ppb and total xylenes were at 237 ppb. The groundwater SVOCs were almost entirely non-detect with several hits for the #5 sample. Only groundwater results were presented for MW-1 and MW-2. They showed many VOC and SVOC hits and exceedences. MW-1 had very high exceedences for phenanthrene (4470 ppb), flourene (1280 ppb), and four other SVOCs in the hundreds of parts per billion. MW-2 had very high exceedences for naphthalene (906 ppb), and 4-isopropyltoluene (488 ppb). I spoke to Mr. Sternig (631) 472-4848/cell (631) 514-1094 about the neighboring building. He said that he had talked to Mr. Firpo about this neighbor. Mr. Firpo told him that there used to be a pump island inside the building for delivering gasoline. The building used to house an oil delivery company, but now houses a granite supply company. Allegedly, there is a gasoline UST just inside and below the entrance to the neighboring building. I asked Mr. Sternig about MW-1 and boring #5 and why the groundwater results were so different. He said that boring #5 was just a geoprobe punch. He took a quick groundwater sample and then filled the hole. MW-1 was constructed as a permanent monitoring well. Mr. Sternig said that he saw a sheen on the water when he was developing the well. I asked Mr. Sternig whether he was sure about the address of the neighboring building. He said that he was. I asked him who the tenant or owner was. He said that he didn't know. After this, the conversation ended.

METRO GARAGE (Continued) **S108982334**

I checked the 230 Varick Avenue address. It did not appear in the Spills or PBS databases. Google Earth lists the building at 226 Varick Avenue. However, this address also doesn't appear in either database. I will make a site visit in order to determine the correct address and the ownership of the property. 8/5/11 - Raphael Ketani. I made an unannounced visit to the building to the south which abuts Metro Garage on Varick Avenue. The building used to house an oil trucking company called VIJAX. It now houses a tile company called Buy Tile. There was a vent pipe sticking out from the wall near well MW-2. However, the fill pipe had been removed. I met an employee of the tile company and he told me that Anthony Losquadro owns the building. He showed me mail that was in the inside mailbox for Mr. Losquadro. The pieces of mail didn't have a company name, but the address was 222 Varick Avenue, Brooklyn, 11237-1027. Mr. Losquadro's phone is (917) 681-1206. I looked around the insides of the building and didn't see any oil spills. I assumed that if there still were tanks, that they were somewhere below the floor.
========== THE INFORMATION WITHIN THE LINES PERTAINS TO 210 VARICK AVENUE, NOT 222 VARICK AVENUE. I returned to the office and checked the PBS database. I found PBS case #2-080454. The facility is VIJAX Corp. at 210 Varick Avenue. A 275 gal. UST with #2 oil was closed in place on 9/1/02. A 4000 gal. UST with gasoline was closed in place on 10/1/81. Mr. Losquadro was listed as the operator contact. The E-docs for this PBS case contain a file which has passing tank tests for both USTs. The tests were of the Horner EZY 3 type and took place on 11/4/97. A check of Property Shark revealed that 210 Varick Avenue is a corner building, NOT a building next to Metro Garage.
========== I checked the Spills database, but did not find any spill cases for VIJAX, nor for the addresses 210 or 222 Varick Avenue. The NYC MAP DoITT database includes 222 to 226 Varick Avenue as the same building. The Property Shark database lists 222 Varick Avenue as block and lot 2945 and 10. Mr. Losquadro is the latest owner. 8/8/11 - Raphael Ketani. I contacted Sandy Sternig (631) 472-4848/cell (631) 514-1094. I explained that the DEC had reviewed the 7/20/11 VTEQE report. I added that, according to the soil and groundwater results, the DEC has determined that the abandoned diesel UST in the southwest corner of Metro Garage may have leaked in the past. I asked Mr. Sternig to install borings around this tank. He said that the clearance is the real problem. He has 4 foot rods. He's not sure he will have enough clearance under the roof of the bay. I told him to find the equipment that will do the job and to install the borings around the tank and to the bottom of the tank grave. He said that he will contact Mr. Firpo regarding the request for additional work. 8/11/11 - Raphael Ketani. Yesterday, Mr. Sternig sent me the e-mail shown below: I spoke with Mr. Firpo regarding our conversation on Monday. Mr. Firpo believes that the diesel UST tank was tested prior to concrete slurry abandonment. He has reached out to the contractor for that documentation. If end point samples and satisfactory tank test data are not produced then we will attempt borings within the building. Mr. Firpo also explains that this UST was installed about 2 years prior to the abandonment. He has no objections on providing the recent delineation reports to the owner of 230 Varick St. 8/16/11 - Raphael Ketani. Mr. Sternig sent me the following e-mail: Speaking with Dennis Firpo, Mr. Firpo explained

METRO GARAGE (Continued) **S108982334**

that the present dispenser pump resides above the abandoned UST under the rear garage bay is the original pump. Said dispenser pump originally was connected to the now abandoned diesel UST under the rear garage bay. This diesel dispenser pump is presently connected to the newly installed diesel UST on the north side of the subject property via double walled piping. The original connection to the UST used less than five (5) feet of connecting piping. This area was excavated during re-piping yielding the present connection. The 550 UST heating oil tank also in this area was installed in 2006 during the station redevelopment. Mr. Firpo also explained that the Fire Department was present during the abandonment and would have seen the excavated piping. 9/12/11 - Raphael Ketani. I tried to contact Mr. Sternig (631) 472-4848/cell (631) 514-1094 regarding whether soil borings were performed next to the abandoned diesel UST. 9/13/11 - Raphael Ketani. Mr. Sternig returned my call and left a phone message. He said that Mr. Firpo is still waiting for the tank testing contractor to send him the paperwork for the testing before letting any soil work take place. Mr. Sternig said in the message that he had told Mr. Firpo that the State is loosing patients with him and wants the soil investigation around the tank to move forward. Mr. Sternig finished the message by stating that this is where things stand today. 9/14/11 - Raphael Ketani. I put together a letter to Mr. Firpo explaining that he was in violation of the STIP and that he had until September 30 to submit a work plan for performing borings in the vicinity of the abandoned diesel UST, or else he would face legal action. 9/20/11 - Raphael Ketani. I received the green return card for the 9/14/11 letter, but it did not have a date on it, nor a signature. 9/21/11 - Raphael Ketani. Mr. Sternig sent me an e-mail with the documentation regarding the abandoned UST. He wrote that the documentation was not sufficient for DEC's purposes (it was just a one page tank cleaning, removal, abandonment affidavit from 2008). Mr. Firpo authorized VTEQE to perform soil borings around the UST. The borings will take place this friday. 9/27/11 - Raphael Ketani. Mr. Sternig (631) 472-4848/cell (631) 514-1094 sent me an e-mail. In the e-mail, he stated that two sets of soil and groundwater samples were taken next to the abandoned diesel UST on its south side. Groundwater was at 7.5 feet below grade. Both soil samples had odors of old gasoline and OVA hits up to 110ppm. Data will be submitted to the DEC in about 2 weeks. 10/18/11 - Raphael Ketani. I spoke to Mr. Sternig regarding receipt of the data. He said that the samples were processed and that he has the results. However, he is waiting to be paid for the work before sending the report to the DEC. He expects to submit the report sometime during October 2011. Mr. Sternig added as a sidenote that during the installation of the borings, a water line was severed. This line had not been indicated on the markout. 1/10/12 - Raphael Ketani. I received the VTEQE 1/6/12 Bay Soil and Groundwater Delineation Report. I began my review. 1/18/12 - Raphael Ketani. I finished my review. Two locations were bored on 9/20/11. At each location at soil sample (7.5') and a groundwater sample (10'-12') were taken. The soil VOCs were well below standards and so were the SVOCs. Most of the SVOCs were non-detect. There were several oil analytes present, but their concentrations were well below standards. The groundwater samples were mostly non-detect for VOCs and SVOCs. The analytes that were found were very low. As the information in the case file indicates that there is minimal soil and groundwater contamination from on site facilities, I have determined that there is no threat to the public or the environment. Therefore,

METRO GARAGE (Continued) **S108982334**

Remarks: I closed the spill case. I sent Mr. Sternig a spill closure letter." "spill at gas station taking out tanks discovered spill req dec to call him "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Spill Nos. 0305740 and 0204630 have been consolidated under this Spill No. 8/20/02: FUTURE DEPT OF SANITATION DISTRICT 1 AND 4 GARAGE. HIGH LEVELS OF PCB'S. HWR MEETING WITH LIRO ON 8/20/02. SMM. 10/16/03 1030 Hrs - Sawyer - I discussed with Roland Fisher of Tyree Environmental the contaminated soil in the area of the removal of the two 550 gallon tanks. He told me about the excavation planned for 10/20. I informed him that this site had tested high for PCB's in the past. This factor must also be addressed. 10/20/03 1030 Hrs - Sawyer - Met with Roland Fisher and Barry Aronowitz of Arnell Construction Corp. at the site. They had a back hoe dig out approximatly 35 cubic yds with no endpoints in site. Overall contractor stopped excavation

NYC DEPART OF SANITATION (VARICK ST) (Continued) **S106003231**

with plans to meet and discuss another path of remediation. 02/15/06 File reviewed, DOS has submitted various reports. D. Wolterding had previous contact with the DOS, recommended signing agreement - no legal agreement signed. 03/29/06 Recommended next: Transfer project from spills to Haz Waste Remediation, PCBs an issue here. BURA to forward to BURC/REGION."

Remarks: "caller doing site work found contaminated soil."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel 12/29/05 Transferred to E. Hampston via Spill Initative. Called listed owner via PBS information (J. Brown 718-243-4581) no pickup, no voice mail. Will forward letter requesting information. 11/02/06 Reassigned to Sun.(JS/MS) 2/13/07: Original contact number on PBS is for former location (on Jay Street) of MTA facility. Contact made with representative at 646.252.5777. Rachel Kron who is in charge of MTA spills will get back to me (MS) upon obtaining associated documents. (JS/MS) 5/15/07: As per R. Kron, MTA meets with DEC monthly and this site will be brought up at next meeting. She will contact me with update after meeting. See M.Tibbe. (JS/MS) 8/2/07: DEC still has not heard from MTA. Will contact Mrs. Kron again and issue a letter if necessary. (JS/MS) 12/3/07: Site should be brought up at next MTE/DEC meeting. (JS/MS) 04-04-08: Transferred to Tibbe. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/28/11 - Obligado - Spill re-assigned from O'Connell to Obligado 10/30/13 - I reviewed the file. File contains a Phase I and II report prepared for MTA. The Phase I report mentions the spill. Apparently,

46-25 METROPOLITAN AVE (Continued) **S102671916**

the spill was called in as a result of contaminated soil found during excavation of the 550 USTs. There were historically 18 550 USTs at the site encased in concrete. The Phase 1 report referrences a UST Removal Management Report prepared by Kemron Enviornmental Services, dated September 1992. The actual report is not included in the Phase 1. According to the Phase 1 description of the report, soil contamination was discovered in the vicinity of the former UST area. The tanks were enclosed in a concrete vault. The tanks and soil were excavated and analysis of final pit samples indicated no soil contamination. The contamination was reportedly removed in its entirety. During the Phase II assessment, 3 soil borings and 1 monitoring well was installed in the vicinity of this former 550 gallon UST area. While petroleum staining and odors were noted in 3 of the 4 soil borings, analytical results were below SCOs for VOCs. SVOCs were predominantly below SCOs with the exception of some minor exceedence of PAHs which were attributed to historic fill. The GW sample from B/MW5 within the former tank footprint was ND for both VOCs and SVOCS. Based on the documents in the file, it appears that this spill has been remediated in 1992 when the tanks were pulled. The 2000 Phase II investigation confirmed that there were limited impacts to the environment. According to the file, the site was purchased by MTA and has already been redeveloped into a new receiving facility. This spill is closed."

Remarks: "CONTAM SOIL DISCOVERED DURING EXCAVATION. WILL STOCKPILE, TEST, & DISPOSE."

DEC Memo:	"05/24/06-Vought-Spill transferred from DEC Vought to DEC Tang as per DEC Austin due to necessity of long term remediation. 07/13/06-Vought-Received call from Amit Haryani (Earth Tech 973-337-4218) who is representing Waste Management. NYC looking to buy property from Waste management and as part of due diligence two rounds of site investigation were performed and gasoline contamination was detected in soil and groundwater. Onsite and offsite investigation was performed and source was inconclusive due to occurrence of off site contamination and spill case was filed with DEC. Waste Management hired Earth Tech to perform additional investigation and determine groundwater flow direction. Earth Tech prepared Site Investigation workplan and requesting meeting with DEC to discuss scope of work. Waste Management wishes to be proactively aggressive in pursuing cleanup due to possible NYC purchase. ---------- ---------- 10/16/06 Re-assigned from Yau to Chanda (Chanda) 12/21/06: Kartik Chanda of DEC called Mr.Amit Haryani(Earth Tech) regarding the site update information. He stated that Earth Tech has prepared site investigation work plan and he will send DEC office as soon as possible. 01/12/07: Chanda received Supplemental Site Investigation Work Plan, August, 2006 and Health & Safety Plan, August 2006, prepared by Earth Tech, Inc. 2/6/07: Chanda reviewed the site investigation work plan and approved with the following conditions on 2/6/07: 1.The Department requires an additional monitoring well (MW-7) should be installed at location down- gradient of the existing monitoring well (MW-1). 2. A surrounding property sketch including property layout and usage must be submitted to the Department. North arrow and scale must also be included on the site plan. 2/7/07: Chanda sent a letter to RP(Jay Kaplan) and Amit Haryani(Earth Tech), requiring that a site investigation summary report be submitted to DEC for review by 4/6/2007. 4/10/07: Chanda received a phone call from Amit Haryani(Earth Tech.) regarding to extension time to submit investigation report. He will send Time extension request letter as soon as possible. 4/11/07: Chanda

COMMERCIAL PROPERTY (Continued) **S107788365**

received an extention request letter from Earth Tech, Inc on 4/11/07. 4/12/07: Chanda sent the approval letter to RP(Jay Kaplan) and Amit Haryani (Earth Tech), requiring that a Site Investigation Summary Report be submitted to DEC for review by June 11, 2007. 4/16/07: Chanda received an email from Amit Haryani, Earth Tech, Inc. He proposed to use the Membrane Interface Probe (MIP) to delineate the extent of soil contamination on-site. 4/25/07: Per conversation with Joe Sun and Consultant (Amit)regarding of the Triad Approach method.Joe Sun is satisfied with explanation regarding Membrane Interface Probe (MIP). The Department recommends using the MIP to delineate the extent of soil contamination on- site.(Chanda) 6/18/07: Chanda received an email from Amit Haryani, Earth Tech. He requested that he would like to set a meeting with NYSDEC. He proposed to meet on 7/2/07 to discuss about investigation findings and recommendations. 7/2/07: Amit Haryani, Joseph J. Fiteni(Earth Tech), Jay Kaplan, and Christopher P. Prucha (Wast Management) attened to meet in DEC office with Kartik Chanda,and Joe Sun of DEC to discuss site investigation results and remediation method regarding the GW contamination at the site.The meeting is concluded that a remedial action plan is required to be submitted to the DEC for approval. 9/6/07: Chanda received a Supplemental Site Investigation Report (SSIR) prepared by Earth Tech dated on Auguest 29, 2007. 9/25/07: Chnada reviewed the SSIR report and has the following comment: The groundwater(GW) analytical results showed elevated levels of VOCs. For well MW-2, the levels of BTEX and MTBE are 6,660 ppb and 27 ppb, respectively. In addition benzene and MTBE were detected in the temporary well points (TW-1 and TW-2) and a permanent monitoring well (MW-1). The high VOCs concentrations indicated that the GW had been contaminated and thus, is required to be remediated and monitored. On 9/25/07: Chanda approves the SSIR. A Remedial Action Plan (RAP) be submitted to the NYSDEC by 11/12/07. The RAP shall detail the work proposed to remediate all contaminated media. 10/12/07: Chanda received a RAP from Mr. Jay Kaplan, Environmental Manager, Wast management of New York, LLC dated 10/2/07 prepared by Construction Service International, Inc., dated October 2007. 10/24/07: On 10/23/07, Chanda reviewed and approved the RAP with the following conditions: 1.Soil endpoint samples will be collected in accordance with DER-10 in the area of concern subsequent to the soil excavation near the UST area. 2.The permanent monitoring wells should be developed and sampled to determine baseline groundwater quality conditions prior to implementing the RegenOX"! and ORC Advanced"! injections. 3. Several parameters, including temperature, pH, oxidation-redox potential (ORP), conductivity and dissolved oxygen (DO) shall be monitored in all the monitoring wells. Any potential accumulation of vapors during the injection activities shall be avoided. 4. If follow-up groundwater monitoring indicates that the RegenOX"! and ORC Advanced"! are not effectively reducing contaminant concentrations, an alternative remedial approach must be developed. 10/24/07: Chanda sent an approval letter to RP (Jay Kaplan) and his consultant, requiring that the RP shall implement the RAP incorporating the above conditions according to the schedule indicated in table -2 of the RAP. 3/17/08: Chanda received a letter with RAP implementation schedule and site plan for existing wells, new well location (MW-8), proposed in-situ remediation injection locations for this site. UST Closure and GW remediation project schedule are figure-5. The Remedial Action Report will be submit to DEC by 8/8/08.(see eDocs) 7/28/08: Chanda received a Supplemental

COMMERCIAL PROPERTY (Continued) **S107788365**

Baseline Groundwater Results prepared by Construction Services International, Inc., dated 7/22/08. (see eDocs) 8/01/08: Chanda received a Remedial Action Plan Revised Implementation Schedule from Construction Services International, Inc. dated 7/30/08. Revised Implementation Schedule stated that a final remediation report will be submitted in January 2009.(see eDocs) 8/26/08: Chanda sent a letter to RP and his consultant, requiring that the final remedial report be submitted to DEC by 1/31/09 for review and approval. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 11/2/11 - Raphael Ketani. Spill case reassigned from O'Connell to Ketani. 11/8/11 - Raphael Ketani. I received an e-mail from Mr. O'Connell. He said that Craig Stevens cell (443) 871-8347 called him regarding the site. Mr. Stevens wanted to meet with DEC staff to discuss what is going on at the site. Mr. Stevens later sent Mr. O'Connell the January 7, 2011 Remedial Action Work Plan Addendum 2 and the July 12, 2011 Remedial Action Work Plan Addendum 2, Revision 1. 11/9/11 - Raphael Ketani. Mr. Stevens contacted Mr. O'Connell again, who referred him to Hassan Hussein, the manager of the Hazardous Materials Unit. Mr. Hussein called Mr. Stevens and I and we had a conference call. Mr. Stevens said that soil excavation was taking place and that he would like to meet with us and show us the site. We tentatively set up a site meeting for monday, 11/14/11, at 11 AM. The spill was reported to the DEC on 5/23/06 as a site where groundwater contamination was being treated and further investigation was taking place. According to ACRIS, the site is block and lot 2962 and 11. The City took over the property from Louis Fine of M. Fine Lumber. The deed was dated 5/28/86. The PBS is #2-604641. There was a 550 gal. UST with diesel fuel that was removed on 7/1/2000. M. Fine Lumber was the owner at the time. There are no other spill cases. Craig Stevens, PG, Principal Hydrogeologist, is at Construction Services International, Inc., 918 Chesapeake Avenue, Anapolis, MD, 21403, (410) 268-7261/ cell (443) 871-8347. I reviewed the July 12, 2011 RAWP Addendum 2, Revision 1. The site is a former Fine Lumber Yard. The material is petroleum from a UST that was removed. Two (2) applications of the treatment solutions were applied to the groundwater. Mr. Stevens stated that the applications were effective in reducing the contamination in the groundwater. The former UST area is very contaminated at 7 to 9 feet below grade, about just above the water table. The contaminants are VOCs. During 3/2008, the UST was removed. During 11/2008 and 12/2008, there was a round of treatment solution injections for each month. Six (6) rounds of groundwater monitoring took place from February to October of 2009. During 3/2010, more groundwater monitoring took place. During 6/2010, 7 borings and 3 more monitoring wells were installed, and soil and groundwater samples were collected. The 9/2010 letter report stated that during 6/2010 there was a supplemental environmental study. The vertical extent of the contamination was defined and it was found that the petroleum was not migrating laterally beyond the locations of MW-2R and MW-10 (historically the most contaminated locations). The purpose of the Addendum is to provide the scope of work for addressing the soil contamination at 7 to 9 feet below grade. RegenOx will be used as a contingency plan if the bulk of the contaminated soil can not be removed. The soil results will be compared to STARS standards. The building will be demolished and some of the wells may be destroyed in the process. 11/10/11 - Raphael Ketani. I tried to find the paper files for the case, but could not locate anything. 11/14/11 - Raphael Ketani. A site visit took place today. In

COMMERCIAL PROPERTY (Continued) **S107788365**

attendance were Paul John, DEC Regional Environmental Engineer, Hassan Hussein, DEC Environmental Engineer III - head of the Hazardous Materials Unit, myself, Mr. Stevens of CSI Environmental, John Sullivan, Site Manager Waste Management of New York, and Christopher Prucha, CPG - Waste Management. Mr. Stevens presented the site history and the efforts that were made to investigate and remediate the site. It was stated that the site is owned by Waste Management. The City plans to buy the site and build a salt storage facility on the eastern half of the property. This part of the property will be convered with asphalt by the City. The property borders the English Kills. Groundwater is at about 5 feet to 7 feet below grade, depending on the season. Ninety seven percent of the contaminant mass was at the 7 to 9 foot level and has been removed. The contamination is not moving off site. We then toured the site itself. It was a vacant lot. The building had been torn down. Mr. Stevens pointed out on a site plan where the 550 gal. diesel UST had been. We saw a depression where contaminated soil had been excavated. Mr. Stevens explained a little more about the remediation efforts. After this we left the site. Before leaving, Mr. Stevens gave me copies of the 11/13/09 Remedial Action Status Report, 9/14/10 June 2010 Post-Remedial Action Environmental Study Report, 11/4/11 Remedial Action Closure Report, and a copy on disc of the November 2011 WMNY Closure Report. 11/18/11 - Raphael Ketani. I reviewed the Construction Services November 13, 2009 Remedial Action Status Report, September 14, 2010 June 2010 Post Remedial Action Environmental Study Report, and November 4, 2011 Remedial Action Closure Report. The 11/13/09 Remedial Action Status Report described the two rounds of treatment solution injections and listed the groundwater analyte VOC concentrations up to the 10/6/09 and 10/7/09 sampling round. The results for MW-2R and MW-10 were still very high with hits predominantly in the triple digit range for most analytes. The 9/14/10 June 2010 Post Remedial Action Environmental Study Report described that the soil analytical results and the groundwater analytes suggest that the contaminants are still mostly bound up in the soil (Construction Services estimates the total is 97% of the VOC mass) and are not being readily released. The bulk of the adsorbed VOCs are in an area from SB-1 to SB-4 and include MW-2R and MW-10. However, the contamination is not leaving the site. The groundwater analyte results (6/24/10 and 6/25/10 rounds) were in the high double digits to 4,000 ppb of total xylenes at boring SB-3. The results for MW-2R and MW-10 actually decreased, in general, from the concentrations in the October 2010 samples 10/6/09 and 10/7/09. The 11/4/11 Remedial Action Closure Report stated that soil excavation was completed during August 2011. Residual hydrocarbons were found in the soil at a depth of 7 to 9 feet below grade in an area from well MW-10 to well MW-2R. About 700 cubic yards of soil were removed. The excavation area was partially within the footprint of the former building. Groundwater samples were taken from wells MW-2R to MW-7 and MW-9 to MW-12 on 8/8/11 (the other wells were destroyed when the building was knocked down earlier). Table 2 shows that the analyte concentrations for the groundwater sample from MW-2R typically vary from non-detect to the high double digits with only four analytes showing up to 190 ppb. However, the 8/8/11 sample from MW-10 has 4 analytes up to 490 ppb and three analytes up to 2300 ppb. These results for MW-10 are in the low range for all of the results that have been obtained from this well over the course of the 4 years of sampling from 2008 to 2011. Table 5 contains the post excavation soil

COMMERCIAL PROPERTY (Continued) **S107788365**

sampling results. The great majority of the analytes from each sample are non-detect. Sample EX BASE 5 had 230 ppb of benzene, but this was the only hit of significance amongst all of the data in the table. A statement towards the end of the report says that the fill in the area is a source of high concentrations of analytes. There are pictures in the report which show the sidewalls of the excavation. One picture shows historical fill over red-brown glacial sediments (possibly more fill) which is underlain by dark brownish gray clay and sand. As a side note, it was mentioned to staff at the DEC by Mr. Stevens and Mr. Sullivan that the NYC DOS wants to pave the eastern part of the site where the excavating took place and put up a salt shed (see e-docs). As the great majority of the contamination was removed when the soil was excavated in the eastern part of the site, and as the groundwater analyte concentrations were largely non-detect or low by 8/8/11, and as the site is underlain with historical fill which yields various analytes, and as the area surrounding the site is an industrial area which generates contaminants, and as the future use of the site will be a salt shed on pavement, I have determined that the remaining contamination is not a threat to the public or the environment. Therefore, I am closing the spill case. 11/21/11 - Raphael Ketani. I sent a Spill Closure Letter to Mr. Stevens, Mr. Sullivan and Mr. Prucha. "

Remarks: "THIS IS GROUNDWATER CONTAMINATION. CLEAN UP IS NOT IN PROCESS. THEY ARE STILL INVESTIGATING THE AREA."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	161550
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill was reassigned from DEC Sigona to Rommel on January 7, On Thursday January 25, 1996, Dave Pulvermiller of MTS Environserve called A.Sigona and informed that the 550 gallon UST which failed a tank test would be removed along with two other 550 gallon gasoline USTs. They would be taking samples and doing a site assessment during the tank removal. The tanks will be registered and will submit a substantial modification application. The tanks will be removed the week of January 29, 1996, and DEC Sigona is planning to view the excavations on Tuesday January 30, 1996 at 3:30 PM. The consultant plans to sample and test using EPA method 8020. 3/10/05 - Received Phase II Investigation Report from Laurel Environmental. Re-assigned to Zhitomirsky for followup. - KST 4/25/2005 I left a message for Carla Sullivan.AZ 4/27/2005 Conversation with Carla Sullivan (Laurel Environmental). They plan to excavate contaminated soil and take post excavation samples. I requested to take groundwater samples if gorundwater is encountered. GWT is 10' below the grade. The tank was located at 1181 Grand Street.This is a

CONSOLIDATED CARPET (Continued) **S102619094**

warehouse. They will submit a report in June 2005. AZ 7-27-2005 Laurel Environmental informed DEC that they will remove contaminated soils and apply ORC into the exposed groundwater during the week of August 1, 2005. AZ 10/14/2005 I reviewed Soil Removal Report for this spill. A letter was sent to Laurel Env. with my comments. The letter stated that the following deficiencies were noticed in the report: 1. Post excavation soil samples were not taken 2. The site plan was not drawn to scale 3. Groundwater flow direction was not indicated on the plan 4. Well design diagrams were not submitted 5. Soil samples were not collected and screened during well installation. The report stated that analytical results of groundwater samples collected during this investigation indicate minor exceedances of State water quality standards in samples collected from wells MW-1and MW-2. Laurel Environmental recommended no further action with respect to the removed USTs. The Department could not approve no further action at this time. In consultation with J. Kolleeny it was decided that an additional monitoring well should be installed near the excavated area. Soil samples should be collected during well installation and analyzed in a laboratory. Groundwater at the site should be monitored and sampled again three months after the recent samples were taken. Laboratory data should be provided for all compounds analyzed by EPA Method 8021 plus MTBE, and the results compared to State guidelines. These recommendations were mailed to Laurel Env. AZ 1/17/2006 Additional investigation/delineation is pending. Field work has been done. AZ 2/7/2006 I have reviewed a report by Laurel Environmental Assosiates (LEA). The report states that LEA installed 3 one-inch groundwater monitoring wells. On December 16, 2005, LEA purged and sampled the wells. Laboratory analysis inicates that with the exception of a slight exceedance of m and p xylenes and total xylenes at 7 ppb in MW-2, the concentrations of VOCs are below NYSDEC ambient groundwater criteria. According to the report, the tank and contaminated soil have been removed and groundwater treated in-situ. Based on this information the spill is closed. This spill case was discussed with Koon Tang on 1/23/2006 and he concurred with this decision. AZ"

DEC Memo:	"Inspection findings forwarded to OGC (Mintzer). Owner's son (Eli) was advised of findings and given direction to clean affected areas and prevent further discharges by modifying housekeeping activities. Unregister 275 waste oil tank in service - no labeling, color coding or inspection records. 7/20/17 TJD Site inspection. Met onsite with owner (Joey). The zipper drains have been cleaned of residual product. Oil water separator has been serviced (Saftey Clean) and is now operating as designed. General housekeeping of shop area is improved. Owner is in the process of loading debris from rear storage yard into a roll-off container for offsite recycling/disposal. Bulkhead remains in poor condition - owner states he is obtaining quotes for repair and/or replacement. DeMeo spoke at length with owner regarding pollution prevention and best management practices. 275 Waste oil tank is properly labeled and color coded - secondary containment beneath AST has been cleaned. No further requirements from the R2 Spills program. Outstanding violations to be addressed by other DEC programs. Spill closed."
Remarks:	"Multi-program inspection performed due to recent complaint from Riverkeeper. Housekeeping issues with resultant petroleum discharges identified as follows: 1) Petroleum discharge to interior zipper/trench drain interior to the structure discharging to a poorly maintained oil water separator with ultimate discharge to NYC sewer system (not known at this time if sewer is storm, sanitary or combined) 2) Oil drip pan (estimated 5 gallon capacity) was found overturned in rear of property, adjacent to Newtown Creek, with visible petroleum impacts to surrounding debris, vegetation and soil. 3) Oil residue and stained concrete surrounding and within secondary containment of unregistered Waste Oil 275 AST 4) Various housekeeping

ULTIMATE TRUCK & EQUIPMENT (Continued) **S120701231**

issues throughout facility with visible petroleum staining and/or accumulation noted both interior and exterior to structure with visible rainbow sheens emanating from spilled petroleum products at time of inspection"

METROPOLITAN AVE BRIDGE (Continued) **S106469921**

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 6/10/04 Tipple updating////wood cribbing below movable bridge soaked with oil,approx 10'x20' area. (Sample results back today) and gasoline approx 2' below pavement at the intersection of Metropolitan and Varick Streets. DOT will excavate as per design for both bridge footing and roadway and properly dispose of all contaminated debris. Report will follow once the subsurface work is completed. 06/28/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Contacted to Mr. John Kurrey at (212)788-2083 regarding information of spill. He said that they did rebuilding the bridge and collected soil samples. He will find out the report and he will fax me. -QA 07/07/06: Reviewed report of soil samples analytical data recieved today from Mr. John Kurre by mail. Soil samples are not cleaned yet. They have to do additional Investigation including Investigation of groundwater and soil sampling from different locations. -QA 08/17/06: Recieved call from Mr. John Kurre he said this is not the remedial project. He excavated the soil where the have made the bidge. He also said that whole neighbourhood is contaminated. He will send a letter explaining the situation. -QA 08/21/06: Called Mr. John Kurre he will send a letter soon because he is not going to do anything over there. He will explain the situation in the letter. -QA 08/23/06: Called Mr. John Kurre and asked about waste manifest report. He said that he will fax it to me at the earliest. -QA 08/24/06: Called Mr. John Kurre for waste manifest report and left message to call me back. -QA 08/25/06: According to the letter of Mr. John Kurre, Director, Environmental Engineering unit, Only contaminated soil encountered during construction activities was excavated and the excavated soil was disposed of at a licenced and permitted disposal facility. No attempt was made to identify the source of the spill. Currently the metropolitan bridge construction has been completed and all excavated areas were backfilled with clean fill and the bridge roadways were replaced. Based on this information staff closed the spill. -QA "

Remarks: "Cleanup is pending."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

BAYSIDE FUEL OIL DEPOT CORP (Continued) **1000366366**

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo:	"2/8/21 - Sekhon Due to human error 1000 - 3000 gallons spilled, contained, Miller environmental on its way. Case discussed with DEC Austin & DEC Lin dispatched to investigate. 2/9/21 - Kim - I returned to the site at 10AM. Dan with Miller Environmental and Mike with Bayside Fuel were on site. Miller Environmental had a crew working on the soil covered tanks, removing impacted snow and soil. A Miller Environmental guzzler vacuum truck was being used to collect impacted material. Dan with Miller Environmental stated that oil started coming out of the gauge opening, which is located close to the concrete curb surrounding the soil covered tanks, and a small amount of oil went over the curb. Some oil also likely came out of the vent lines as well. The impacted area past the concrete curb was removed and drummed. The majority of the oil went into the drain located on top of the soil covered tanks and into the soil covering the tanks within the concrete curb. This drainage system discharges to a holding tank connected to the Oil Water Separator. I did not observe any spilled oil in the Oil Water Separator. Mike with Bayside Fuel showed me some of the site's monitoring wells; I did not observe any spilled oil in the monitoring wells. 2/12/21 - Kim - I revisited the Bayside Terminal today at 11:30AM and met with Dan Goodwin with Miller Environmental. Miller is continuing to work on removing the contaminated soil on top of the soil covered tanks. Today they were working on the area towards Newtown Creek and closer to where the storm drain on top of the tanks is located. Miller Environmental's crew was working on removing another load of soil by hand-digging impacted soil and using a Miller guzzler truck. As there is a storm expected over the weekend, Miller are going to cover any unexcavated areas impacted by the spilled oil with a tarp. Based on the current forecast, it is questionable whether they will be able to continue working on the cleanup on Tuesday. 2/16/21 - Kim - I spoke with Dan Goodwin with Miller Environmental this morning. Today, they had a rolloff truck remove 2 containers with waste debris for disposal. In anticipation of the storm over this past 3-day weekend, they cancelled soil excavation work for today. On Friday 2/12, they covered unexcavated, soil-impacted areas on top of these tanks with a plastic cover that appeared to have held up well over the weekend. There are some areas on top of these tanks where precipitation accumulated, so they placed absorbent booms within the concrete curb to contain any oil. There was no sheen observed on Newtown Creek and

BAYSIDE FUEL OIL DEPOT-1100 GRAND ST (Continued) **S102150611**

no sheen observed on standing puddles of water located outside of the concrete curb. 2/23/21 - Kim - I revisited the Bayside Terminal today at 10AM and met with'Dan Murphy with Miller and a crew that were at on site today continuing to dig contaminated soil and collecting the contaminated soil with their guzzler truck. They are planning to have a rolloff truck remove 1 container with waste debris for disposal today. Dan Murphy anticipates that they may be able to complete digging the contaminated soil tomorrow. 3/19/21-lin-According to Bayside Fuel Depot, the terminal operator was conducting a transfer between tanks following a power outage. During the transfer, the operator left his post to check on a person trying to gain access to the control room. The power outage affected the high alarm's ability to operate to design criteria. When the operator returned he noticed the release and stopped the transfer. Inventory reconciliation indicate the release was 1,870 gallons. Majority of the oil made it to the collection system on-site and went to a holding tank. About 1,876 gallons of oil and water was pumped out from the holding tank. According to miller most of the liquid pumped out from the holding tank was oil (approximately 1,600 gallons. About 200 to 300 gallons of oil made it onto the soil on the tank farm. The contaminated soil was removed using a guzzler and trenches were dug to capture the oil. Spills staff confirmed that the contaminated soil was removed from the tank farm using a PID meter. Groundwater monitoring wells on-site were checked and no free product were found in all the wells that were checked. All waste material generated were properly disposed of. Case closed."

Remarks: "Oil depot spilled and has been stopped and has osro oil spill response company or MEG miller environmental Group. is on the way. all contents spilled into the ground."

DEC Memo:	"Location is English Kills section of Newtown Creek . Sangesland spoke to Tracy at spill center for owner. She said the canal overflowed into the basement, knocked over drums of oil, oil floated on top of canal water and spilled back into the canal. Facility has no power. No cleanup happening yet. 10/30/12- Zhune responded to this site and spoke to Tim 347-351-1166. He brougt me to the truck mechanic shop but I could not get inside becouse he had no keys to open the door. I saw oil (black oil) outside the shop and a heavy rainbow sheen in the water (Gowanus canal). Tim said tomorrow the Environmental Company is going to do the clean up. 10/31/12-Zhune spoke to tracy. She said Environmental Products and Service are going to clean tha spill. She said call J. Bradshw 518-470-0010 and find out if they are going to do the the clean up. Zhune called J. Bradshw at 2:00 PM. he said we are going to the site now. 12/27/12-Trace Murphy from Spill Canter Inc. emailed the spill cloure letter provided by Environmental Products & Services of Vermont Inc. dated December 21, 2012. On October 31, 2012, Environmental Products and Servises of Vermont Inc. was contacted to respond to a motor oil release of aproximately 400 gallons located at Transervice Logistics. The motor oil was located in drums within the building. The canal adjacent to the property fooded and caused the drums to spill. The motor oil then covered the duck floor and parking lot outside of the building. The area impacted by the oil was absorbed with speedi-dry,

1213 GRAND STREET (Continued) **S103479685**

sweep it up, and placed into drums for disposal. the parking lot and interior floor was pressure washed. a total of 4 drums of oil soaked debris were generated snd 2 drums of liquid for disposal. The drums were removed from site and trasnported to Environmental Products & Service of Vermont Inc. in the Port of Albany, New York recycling Disposal. Spill Closed. "

Remarks: "Storm related: water came into basement of facility tipping over 55 gal drums with motor oil & used oil. Cleanup is pending."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	293056
DEC Memo:	"Phase 1 & Phase 2 done - found petroleum mixed with paint 10.14.05 SR// Sharif rec'd the site assesment report with remedial action plan. I suggested to prepare a health & safety plan, set a time frame to complete the remedial work and installation of monitoring wells to confirm the ground water flow.Paul Stewart of ACT,Inc will forward DEC an addendum. 12/20/05-Sharif//Case was transferred to Koon Tang for reassignment since the site is going through extensive remedial activities. 1/11/2006 - Feng - File reviewed by Feng: 1) On 5/2005, ATC performed Phase I/Phase II Environmental Site Assessment (ESA) for the site, and found elevated VOCs present in soil and groundwater beneath the western portion of the sotrage yard. and the source might be the historical gasoline UST and storage of solvents. 2) On 10/25/2005, ATC proposed RAP to remediate the site. a) removal of contaminated soil beneath the storage yard, b) install monitoring wells. DEC approved the RAP. Waiting for soil excavation report, MWs installation, and groundwater sampling results. 2/1/2006 - Feng - call from Caroline Cadalso (ACT) stated that about 700 tons of soil were excavated, endpoint samples were taken. groundwater encountered at 12' and it looks like perched water. They plan to install the monitoring well deeper, down to 25'-35' bg to delineate the extend of contamination. approved. (RJF) 3/22/2006 - Feng - Remedial Closure Report, prepared by ACT, dated 3/20/2006. ACT excavated the contaminated soil from Area A, B, C and D down to depth of 12' bg. Endpoint samples show high PERC concentration found in Area B and Area D. Extend the excavation of soil in Area B, and 2nd round of soil samples show low concentration (only one were sent for lab analysis). Confirmatory samples were taken from Area D, show low concentration (only one were sent for lab analysis). 3 MWs were installed and groundwater contour were provided. Groundwater flows to northwest. Analyticals show low concentration. ACT requested spill closure. Spill closure request was denied and letter sent requiring 2 more monitoring wells in the 2 former drain. According to Phase II site assessment, high PERC has been found in former drain B (soil boring SB-3). Installtion report due 5/31/2006. 4/24/2006 - Feng - Addendum to Closure Report dated 3/20/2006, 4/5/2006 submitted by Advanced CleanUp Technologies, Inc. 2 monitoring wells were installed in the former Drain B (W-5) and former Drain D (W-4). Groundwater depth encounterred at 10'. Screen depth of 25'-35' bg. low Soil concentration. Groundwater samples show low concentration, 8.73 ppb of Trichloroethene, 11.4 ppb Tetrachloroethene and 10.9 ppb 1,2-dichloroethene in W-4. Request closure. Emailed to Caroline

EMEQUIFT CHEMICAL CORP - MISC (Continued) **S118953501**

Cadalso and inquired if it is perched or true groundwater at 10' and if we missed the groundwater at 10'-25'. (RJF) 5/31/2006 - Feng - Have been discussed with DEC Joe Sun. Spill closed for: 1) source removal, soil was excavated down to 12' bg and endpoint samples are in low concentration. 2) The groundwater encountered at about 10 feet is perched water due to low recharge. 3) The groundwater samples taken from 12' bg in Phase II is present in fill material (fill material found from 12' to 20' bg). 4) 5 Groundwater samples collected from 25' to 35' bg show low contamination (given that contaminants are PCE and TCE, deeper gw was selected). 5) Sensitive Receptor survey was done and it is fine. Spill closed and NFA issued. (RJF)"

Tank Info:

Tank Number: 001
Tank ID: 8583
Tank Status: Tank Converted to Non-Regulated Use
Material Name: Tank Converted to Non-Regulated Use
Capacity Gallons: 3000
Install Date: Not reported
Date Tank Closed: 03/01/2000
Registered: True
Tank Location: Underground
Tank Type: Steel/carbon steel
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: 03
Date Test: 02/01/1988
Next Test Date: Not reported
Pipe Model: Not reported
Modified By: TRANSLAT
Last Modified: 04/14/2017

Equipment Records:

H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None

DEC Memo:	"after discussing with DEC Austin, case transferred to DEC Patel. the subject spill case was reported by USCG. as per hand written notes from previous project manager, estimated 200-300 gal of material was observed in the English Kills during inspection on 11/06/1992. 04/20/12-Hiralkumar Patel. DEC remarks from 11/06/1992 to 04/19/12 are stored separately in e-docs. DEC Vought forwarded email from DEC Ketani who received email from Bill Hughes from GeoQuest, Inc. dated 02/07/12. Bill mentioned that scaffolding company has left the site and left mess behind. they are currently cleaning up the site. Bill

NYC DEP HAZ MAT (Continued) **S102143390**

Hughes GeoQuest, Inc. Ph. (860) 243-1757 Ext. 103 (860) 402-9592 (C) email: williamhughes01@gmail.com 1:00 PM:- left message for Bill at GeoQuest. 2:00 PM:- visited site with DEC Vought. site contains lots of junk left behind by scaffolding company. no environmental work in progress. found multiple wells (some destroyed and some in bad condition) on and around the property. Vought showed a large aboveground tank in concrete vault along south side of the property. some rainbow and silver sheen (could be mixed of biological and petroleum) observed on water in creek along north of the site. 04/27/12-Hiralkumar Patel. 10:16 AM:- received message from Bill. 11:43 AM:- spoke with Bill. he mentioned that due to access issue with the previous tenant (scaffolding company) for couple of years and large piles of junk left behind after tenant left, no environmental work is in progress at the site. once all the scaffolding junk removed, they are planning to conduct additional soil/gw investigation for additional data. asked him to send summary of work done till now and future plan. also asked him to submit property owner's contact information. 5/8/12-Vought-Vought and Patel held teleconference with NYSOAG Judith Karpen and State will only release lien upon cleanup of site to satisfaction of NYSDEC. Karpen noted that new owner was English Kills and former owner was Corpus Christi and that Corpus Christi declared bankruptcy and as a result State will receive minor settlement amount in lieu of total monies spent. Karpen noted that Corpus Christi may have secured eight million dollar loan for cleanup (as per former OAG Buss) but not sure if monies are being used for cleanup and also not sure whether Corpus Christi or English Kills is supervising cleanup. Karpen will begin file research upon completion of file review by DEC Patel and subsequent call to NYSOAG Karpen. Spill transferred to DEC Patel as per RSE. 05/18/12-Hiralkumar Patel. completed review of available documents and found following: 1) 10/12/2006: Robert Feller from Bond, Schoeneck & King, PLLC sent fax including a singed copy of Agreement for Discharge of Environmental Liens. RCC & York Associates, Inc. signed the agreement. RCC agreed on following terms: - payment of $ 25,000 upon execution of this agreement - upon completion of cleanup of environmental contamination to the satisfaction of NYS DEC, RCC or its assigns, heirs, or successors of interest, shall pay $ 100,000 - upon receipt of the final payment, DEC shall issue a release of its said environmental liens against the said property 2) 05/27/2009: DEC Ketani referred case to legal as no response to the STIP letter (dated 03/18/09). 05/23/12-Hiralkumar Patel. 2:40 PM:- received email from Bill including summary of work done by GeoQuest and disposal manifests for soil removed during removal of eastern tanks (400,000 gal and 200,000 gal). GeoQuest is planning to remove southern tanks (total five tanks). once the tank complex has been removed and extent of the sub-surface structure is known, a proposed plan of action for determining the extent of the subsurface contamination will be submitted. Bill will visit the site on 05/30/12. 05/24/12-Hiralkumar Patel. alternate address: 192-200 Morgan Ave MOSF #: 2-1500. MOSF registration showing tanks still in-service. registration expired on 03/31/1991. other spill #: 8808176, 9105949, 9112693, 9208755 and 9211657 spill # 8808176 was reported on 01/13/1989 as 100 gal #2 oil dumped into creek. case closed on 08/07/1995. no documents on e-docs. spill # 9105949 was reported on 09/03/1991 as #6 oil found in creek which might be coming from a 55 gal abandoned drum or from bulkhead. case closed 09/19/1991. spill # 9112693 was reported on 03/12/1992 as 50 gal #6

NYC DEP HAZ MAT (Continued) **S102143390**

oil spilled. case closed on 03/13/1992. spill # 9208755 was reported on 10/29/1992 as 50 gal #6 oil sludge spilled during tank cleaning operation. spill cleaned up by Citi Fuel. case closed on 02/05/1998. spill # 9211657 was reported on 12/23/1992 by DEC Mitchell due to contamination found in wells as part of PIN job. 05/25/12-Hiarlkumar Patel. 12:43 PM:- spoke with DEC legal regarding case initiation and confirmed no legal action from region 2 office as owner was doing work. 05/30/12-Hiralkumar Patel. 1:30 PM:- visited site. met Bill. found tank removal operation at the site. crew already removed more than 70% of the tank #1 (which is closest to the Morgan Ave - 647,000 gal tank). found about 12 inches thick concrete pad under the tank metal. water found on the side of the tank pad and oil found on water. no petroleum odors noticed. Bill mentioned that tank removal operation begun probably at the beginning of the month. informed him that the department has not received any work plans or notification to MOSF regarding removal of the tanks. after discussing with DEC Austin, asked Bill to stop tank removal work immediately and informed him that work should only be resumed after getting approval from the Department. Bill spoke with property owner and requested a meeting in DEC office. informed Bill that meeting can be scheduled once required work plan/documents submitted to the Department. during visit, met with Jacques Guillet (914-309-4317), contractor who is removing tank metals. informed him about no more work without the department's approval. 2:30 PM:- spoke with Ms. Karpen. she found the Agreement for Discharge of Environmental Liens (dated 10/12/2006) in her file. she will review available documents to see if any consent order or STIP signed for cleanup work. informed her about a meeting requested by RP. she mentioned that she needs to review the entire file and the work plan/documents, that will be submitted by RP, before any meeting with RP. she requested copy of work plan/documents, once submitted. 05/31/12-Hiralkumar Patel. discussed with DEC Austin and DEC Vought. Austin required submission of following documents: - work plan for tanks removal including community air monitoring plan and health and safety plan - submission of MOSF application for tanks closure - copy of NYC DOB's work permit for tanks removal - documentation about notification to FDNY 1:52 PM:- received email from Bill. he mentioned that the site owner has a prospective tenant who would rent part of the space (starting in two weeks), but currently, access to the area being rented is blocked by physical obstacles on the ground. Bill asked if they can move stockpiled soil to other part of the site and remove already cut-up steel off-site. discussed with DEC Austin. Austin approved to move soil and metal to other part of the site, but no off-site disposal without approval of the work plan. 2:25 PM:- spoke with Bill and informed him that the department approves moving of stockpiled soil and cut-up steel to other part of the site, but does not approve off-site disposal of any material until all required documents submitted and approved. asked him to send property owner's contact info. asked Bill about well monitoring. Bill mentioned that wells were lastly checked in 2009 before scaffolding removed. after removing scaffolding, most of the wells are covered under dirt/metal and are not accessible. asked Bill about DOB work permit. he believes that permit is not needed for tank removal. asked him to check with NYC DOB regarding required work permit. 06/01/12-Hiralkumar Patel. 2:01 PM:- received email from Bill including property owner's contact info. English Kills Ventures LLC c/o Asher Zwebner, Trustee 5014 16th Avenue, Suite 110 Brooklyn, NY 11219 6:15 PM:- sent email to Bill and asked to provide owner's phone number and email address.

NYC DEP HAZ MAT (Continued) **S102143390**

06/05/12-Hiralkumar Patel. 11:08 AM:- received email from Bill. he mentioned that property owner asked to send documents to their attorney. Robert H. Feller, Esq. **property owner's attorney** Bond, Schoeneck & King, PLLC. 111 Washington Avenue Albany, NY 12210-2211 Ph. (518) 533-3222 Fax (518) 533-3299 email: rfeller@bsk.com 1:44 PM:- received email from Bill. due to open tank excavation pit, he requested to backfill it using on-site stockpiled soil. 2:33 PM:- forwarded Bill's email to DEC Austin for review. 6/6/12-Vought-DEC Patel received email from GeoQuest (Bill Hughes Ph:860-243-1757 Cell:860-402-5292) that When you closed down the site on Wednesday (5-30-12) you may not have realized that a dangerous condition resulted - an open pit. Granted, the work area is theoretically closed to any and all persons and/or vehicles, but we all know that stuff happens. In addition, the open pit is subject to flooding which could result in a multitude of unforeseeable problems including exacerbating the danger of this site condition.We propose the following solution: 1) Continue the removal of the steel bottom of the tank (at the very least) and store the steel on-site. The next level of action would be to also remove the steel back wall (south wall), remaining steel west wall (only about 30% still remains), and remove the remainder of the north wall (storing all removed steel on-site, of course). 2) Back-fill the open pit with the on-site soil as you and I discussed. The on-site soil is fill removed from the tank top and walls which exhibits no sign of any contamination. The backfilling of this area would eliminate a very dangerous situation. 3) Consider allowing the stored steel to be removed from the site. It could be used to pay for the rental equipment. Steel is steel- it is not a source of contamination. 4) Consider the power of inertia- the longer a project remains stalled, the harder it is to get it moving again. Regards. DEC Patel forwarded email to RSE with request for advisement and RSE forwarded mail to DEC Vought asking to look into matter. Vought called and spoke to Geoquest who noted that tanks bottoms were approximately 5-6'below grade on concrete and close to groundwater. Geoquest also noted that the concrete under the tanks was at groundwater level. Vought after concurring with DEC Farrar called back Geoquest and noted that backfilled soils must meet STARS Memo #1 parameters. Vought also called and spoke to NYCOEM McIntyre who noted that site is not in a NYC Program and as such there are to date no institutional or engineering controls for site but that if applicants are interested in alternate SCOs associated with a different program then they should call NYCOER Chawla. Vought spoke to DEC Patel who noted that when he was onsite last week he also noted to contractor that wells will need to be installed at the tank locations through the concrete. Vought to meet Hughes on site at 1pm today and required that: 1)samples be collected from the soil pile analyzied for Full List 8260/8270 (due to history of chlorinated solvents) 2)note that wells will be required in the future in the backfilled areas 3)Submission of analyticals to DEC for review prior to use as backfill. Vought received callback from Hughes who noted that site was zoned M-1(manufacturing). Vought performed site visit and received call from Hughes who noted that his car broke down in Brooklyn and he will not be able to make it to site but will arrange to have sampling company come to site and collect sam[ple. Vought repeated that sample must be collected for 8260/8270 Full List and compared to STARS Memo#1 values. Vought observed approximately 2O' high by 70' long pile of soil up against large MOSF tank but noted no petroleum odors or staining in pile. Vought also observed standing

NYC DEP HAZ MAT (Continued) **S102143390**

water in open tank pit and water was connected to soil as west wall of UST removed down to tank bottom. No sheen or product in water in tank pit. Bottom of tank pit composed of concrete pad and steel(of which is scheduled to be removed). Vought met English Kills (Arthur Schwartz Ph:732-309-2063) onsite and discussed tank removal and future use of site (which may be parking lot for buses) as well as need for installation of wells at tank location through concrete pad as per DEC Patel. Vought also observed approximately 6' width of soil between steel tank and outer support wall with no staining as well. Note soil pile covering many monitoring wells. Rush turnaround time will be requested for soil samples as well. Vought sent email update to Kumar. 6/7/12-Vought-Received message from Hughes and returned call and left message to return call with confirmation of sample collection. Vought received callback from Hughes who was enroute to site to perform soil sampling of proposed soils for backfill (EPA 8260/8270 Full List) due to former presence of chlorinated solvents as well as petroleum in tank. Results to be compared to STARS Alternative Guidance values and examined for possible Haz Waste contaminants as well. Results should be received and Hughes will follow up with Vought on Friday. 06/12/12-Hiralkumar Patel. 11:58 AM:- received email from Bill including sample results. three samples were collected. some SVOCs found in samples. found maximum 460 ppb of Naphthalene in one sample. Bill requested approval to backfill the excavation. DEC Austin and DEC Vought inspected site. based on observations during the site inspection, Austin mentioned that the department does not approve backfilling of the tank excavation. he asked for a meeting in DEC office, with property owner. 2:36 PM:- spoke with Bill and informed him about the discussion with DEC Austin. asked him to set up meeting with property owner. 4:25 PM:- sent email to Bill. informed him that the department does not approve backfilling of the excavation. informed him that the department requests a meeting with property owner. asked him to provide timing for the meeting. email copied to DEC Vought, DEC Austin, Judy Karpen, Jay Soltis (jsoltis@geoquestinc.com) and Marc Casslar (mcasslar@geoquestinc.com). 06/14/12-Hiralkumar Patel. 11:51 AM:- received email from Bill. he mentioned that him, Marc Casslar (GeoQuest) and Robert Feller (owner's attorney) will meet at 10 AM on 06/20/12, in DEC office. spoke with DEC Austin. he requested presence of property owner. he mentioned that if owner brings his attorney, then DEC attorney will be present in the meeting and it will be an enforcment issue. 2:32 PM:- spoke with Bill and informed him about discussion with DEC Austin. Bill asked to reply by email. 06/18/12-Hiralkumar Patel. discussed with DEC Vouth, DEC Austin and Judith Karpen. Ms. Karpen is still reviewing legal documents. as the legal review is pending, Austin mentioned that the meeting on 06/20/12 will be to discuss technical issues only. 3:31 PM:- sent email to Bill including meeting agenda. informed him that this meeting will be for technical discussion only. email copied to DEC Austin, DEC Vought, Judy Karpen, Jay Soltis and Marc Casslar. 06/20/12-Hiralkumar Patel. 10:00 AM:- discussed with DEC Austin, DEC Vought, Bill, Marc Casslar, Robert Feller and Ryan Karben during meeting in DEC office and agreed upon following: - notification to NYC DOB and FDNY (if applicable) - submission of MOSF application for tanks removal - monitoring of bulkhead during low tide for possible oil seepage into the creek and installation of boom, if product seepage noted - submission of tank removal plan, including health and safety plan and CAMP, by the end of 07/16/12 - subsurface soil and

NYC DEP HAZ MAT (Continued) **S102143390**

groundwater investigation, at and around the tanks location during discussion, Bill mentioned that removal of remaining tanks would take another 6-8 months and subsurface investigation will be peformed after that. informed RP that the department requires delineation under the tank pads, via installation of wells through the pads. also, the department may require replacement of wells, if existing wells are destroyed or clogged. during discussion, Austin approved to use on-site stockpiled soil to backfill the tank excavation and RP agreed that depends on future site use, backfilled soil may be removed during future development. asked RP to submit MOSF application for tanks removal. Ryan Scott Karben, Esq. **owner's representative** Law Office of Ryan Scott Karben 11 Tara Drive Pomona, NY 10970 Ph. (914) 536-4402 email: ryan@ryankarben.com 1:01 PM:- spoke with Judy. she mentioned that due to statue of limitation, she can not enforce for money spent more than 6 years ago. also, there is no dicussion about spill remediation in the Agreement for Discharge of Environmental Liens signed by RCC & York Associates, Inc. in 2006. she also mentioned that bankruptcy court has found environmental liens be not valid. 06/29/12-Hiralkumar Patel. 3:50 PM:- spoke with Bill and informed him that a STIP agreement will be mailed today. 4:06 PM:- sent STIP letter to Mr. Feller. informed him that the signed STIP and a tank removal plan (including schedule) must be submitted by the end of 07/27/12. letter emailed to Mr. Feller, DEC Austin, DEC Urda, Ms. Karpen, Bill, Mr. Casslar and Mr. Karben. 07/05/12-Hiralkumar Patel. 12:14 PM:- received email from Bill including MOSF notification, tank removal plan and health & safety plan (including CAMP). 1:02 PM:- sent email to Bill. informed him that a signed stipulation must be submitted to the Department prior to review of any work plans. email copied to DEC Austin, DEC Urda, Ms. Karpen, Mr. Fellller, Mr. Casslar and Mr. Karben. 07/12/12-Hiralkumar Patel. received email from Mr. Casslar (at 6:11 PM on 07/11/12) including revised STIP and CAP. Mr. Casslar noted following nine reasons for changes in STIP and CAP: - the spill occurred in 1992, more than 20 years ago - the oil terminal has been closed for almost 20 years - all of the tanks were emptied, cleaned, and inspected more than 18 years ago - active remediation of groundwater was conducted for about 8 years - NYSDEC concluded almost 8 years ago that no further benefit could be achieved from active groundwater remediation - all of the work was conducted under the supervision of the NYSDEC - no new spills have occurred since the facility was closed - the site has been used and occupied at various times in the last 20 years and there is no indication that a risk to human health or safety exists; and - throughout time the importance of removing the tanks has been continuously discussed 07/18/12-Hiralkumar Patel. discussed with DEC Austin, DEC Vought, DEC Urda and Ms. Karpen. Ms. Karpen will discuss with Patrick Hallaway in AG's office to discuss about third party claim to the spill fund by the property owner. discussed submitted revised CAP and changed as needed. Urda will revised the CAP after gets update from Ms. Karpen. 07/31/12-Hiralkumar Patel. visited site. found water in tank excavation area. some sheen observed on water. 3:23 PM:- received email from Ms. Karpen inquiring if English Kills had a Phase I done prior to purchasing the property. 08/01/12-Hiralkumar Patel. 4:43 PM:- sent email to Ms. Karpen. informed her that the department does not have any Phase I report in file and doesn't know if English Kills ever conducted Phase I investigation. 08/03/12-Hiralkumar Patel. received call from DEC Urda. he will arrange a conference call with

NYC DEP HAZ MAT (Continued) **S102143390**

AG's office and spill fund. 08/07/12-Hiralkumar Patel. yesterday (08/06/12), DEC Austin, DEC Vought, DEC Urda, DEC Ben Conlon, Ms. Karpen (AG's office), Bonnie Riggi (AG's office), Luzette Baker (spill fund) and Patrick Halloway (spill fund) discussed the case and decided to send a consent order. spoke with DEC Urda. he has asked DEC Leszek to review available MOSF documents and waiting for his response before drafting response to the revised STIP sent by RP. 3:48 PM:- spoke with DEC Ian Beilby who inquired about spill # 1202045, which was reported by BCP contractor as they noticed some sheen in water near the site. informed Ian that no sheen observed during the site visit on 05/31/12 and based on site observation, case 1202045 is closed. during conversation, Ian mentioned that they have meeting with EPA on 08/09/12 regarding Newtown Creek cleanup project and will discuss about possible impact to the creek from the Morgan Terminal. asked Ian to update after meeting. 08/13/12-Hiralkumar Patel. 3:33 PM:- received call from DEC Beilby. he mentioned that EPA and respondent's consultant (Anchor QEA) are considering sending a letter (104E request) to English Kills Ventures LLC requiring to submit all investigation/compliance documents for review. 08/14/12-Hiralkumar Patel. 2:47 PM:- received email from DEC Beilby. he will send CD of available documents to AnchorQEA. 08/14/12-Ian Beilby CD with edoc files sent to AnchorQEA for review and possible 104e request. 08/16/12-Hiralkumar Patel. 12:38 PM:- received email from DEC Michele Albert including copy of cover letter that was sent to Anchor QEA (with document CD). 09/06/12-Hiralkumar Patel. reviewed tank removal plan, submitted previously on 07/05/12. abstract of tank removal plan: - fill material removed from the top and sides of the tank will be assigned to one of two piles - if soil appears normal with no dark stains or odor it will be placed onto a clean pile - if soil has dark stains or odor or if it registers on a PID meter it will be placed onto a dirty pile and be stored on and under plastic for sampling, laboratory analysis and eventually off-site disposal - when half of the bottom plate has been removed, the excavation resulting from the tank removal will be partially backfilled to allow the excavator to move into the tnak area to reach the remainder of the bottom plate and the tank back wall - upon completion of the removal of each tank section, the excavation for that tank section will be backfilled and compacted to grade - use of previously excavated clean fill from the on-site clean pile is done with the understanding that in the future, this fill may have to be sampled and/or remediated the tank removal plan does not discuss about endpoint sampling. 10/23/12-Hiralkumar Patel. received email from DEC Urda (at 10:39 AM on 10/17/12) including copy of email from Mr. Feller. Mr. Feller sent signed copy of the consent order. as per the Corrective Action Plan of the Consent Order, the Department must be notified two days prior to backfilling of any part of the excavation and the Department may require collection of endpoint soil and groundwater samples. waiting for copy of fully executed Consent Order. 11/13/12-Hiralkumar Patel. 11:46 AM:- received email from DEC Urda including fully-executed order. 11/29/12-Hiralkumar Patel. 4:07 PM:- spoke with Bill. they started work about 2-3 days ago. 12/05/12-Hiralkumar Patel. 2:55 PM:- visited site. crew was working in tank pit, cutting angle brackets to the south wall of tank. no structural supports were observed to the south wall. also noted that the tank pit was partially backfilled, without prior notification to the department as required in signed consent order. 3:25 PM:- left message for Bill and asked him to ensure worker's safety. 3:50 PM:-

NYC DEP HAZ MAT (Continued) **S102143390**

sent email to Bill regarding operation at the site. asked him to ensure safe operation. email copied to DEC Urda and Mr. Feller. 12/06/12-Hiralkumar Patel. 11:08 AM:- received email from Bill. he has spoke with Jacques and was informed that there is still a piece of the bottom plate attached to the south wall as well as the eastern end wall and the angle brackets are for tank stiffness, and are not for structural integrity. 2:16 PM:- spoke with Bill regarding partial backfilling of excavation without prior notice to the department. he mentioned that the excavation was partially backfilled so a backhoe can be used for further work. he mentioned that soil in tank excavation pit will be tested as part of investigation after tank removal and removed, if found contaminated. 12/10/12-Hiralkumar Patel. received email from Bill (at 4:18 PM on 12/09/12). he mentioned that when remedial investigation work plan is submitted, the soil in the area occupied by the tanks will be addressed along with the soils on the remainder of the property. 01/22/13-Hiralkumar Patel. 9:00 AM:- visited site. first section of the tank is removed completely and area has been backfilled to grade. no crew was on-site. 03/20/13-Hiralkumar Patel. 10:45 AM:- visited site. crew was removing the tank. the site is divided in two sections: section towards Morgan Ave is occupied by buses and section towards the water is occupied by construction equipments. 05/04/13-Hiralkumar Patel. another spill reported at the site (spill #: 1301162) by FDNY as fire occurred in tank pit during tank removal. 1:30 PM:- visited site. FDNY had left. met with Jacques Guillet, site supervisor. he mentioned that due to very hot weather, some of the left over oil got vaporized and flash fire occurred. FDNY extinguished the fire and stopped work until they get fitness certificate. FDNY issued violation order (# A181083). Mr. Guillet mentioned that work will resume only after necessary documents submitted to FDNY. inspected tank pit. only eastern section of last tank left. found burned steel in tank pit. no odors noted. as per Mr. Guillet, no one was injured. 05/06/13-Hiralkumar Patel. 9:17 AM:- DEC Urda forwarded email from Mr. Feller (dated 05/02/13). Mr. Feller mentioned that tank removal report will be submitted by 05/31/13, as approved by DEC. 05/24/13-Hiralkumar Patel. 11:03 AM:- received call from Bill. he inquired about document from previous contractors regarding cleaning of tanks. 11:10 AM:- sent email to Bill including copy of report from Winston Contracting dated 02/25/1995. 05/31/13-Hiralkumar Patel. 10:42 AM:- received email from Bill including tank removal report. abstract: - two tanks (# 6 and 7) in eastern tank complex - five tanks (# 1 through 5) in southern tank complex - tanks were fabricated on the site from individual steel plates with welded seams - tank structures were supported with internal steel angle brackets welded into a rigid pattern - soil was placed on the exterior of the tanks to create bunders , and appeared to consist of the same fill-type materials underlying the property - both the eastern (with two tanks # 6 and 7) and southern (with five tanks # 1 through 5) tank complexes were constructed approx. 4 ft bg - on-site soil, including bunkering material, was utilized to backfill the excavations - during the remvoal of the tank bottom plates, small quantities of free product were occasionally observed on groundwater - when encountered, the oil was collected using oil absorbent material - total of 835.84 tons of soil, from removal of eastern tanks, transported in Mar. 2012 - total of 1,696.63 tons of soil, from removal of southern tanks, transported in Aug. 2012 2:18 PM:- tank removal report forwarded to Ms. Karpen. 2:22 PM:- sent email to

NYC DEP HAZ MAT (Continued) **S102143390**

Bill and asked to submit remedial investigation work plan and tank registration forms as per item # 5 and 6 of the correction action plan of the signed consent order. email copied to DEC Urda, Ms. Karpen, Mr. Casslar, Mr. Feller and Mr. Karben. 05/31/13-Hiralkumar Patel. 2:57 PM:- received email from Bill. he inquired if tank removal report is accepted. he mentioned that investigation work plan will be submitted within 30 days of acceptance of the tank removal report. he also mentioned that required tank registration forms will be submitted upon approval of the remedial investigation work plan. 06/04/13-Hiralkumar Patel. discussed with DEC Leszek regarding submission of MOSF/PBS forms. he mentioned that required tank registration forms should be submitted now to correct the tank status. 06/05/13-Hiralkumar Patel. 3:02 PM:- sent email to Bill. informed him that the tank removal report is accepted. informed him that as per the signed consent order, a remedial investigation work plan is due within 30 days of submission of the tank removal report. asked him to submit the work plan on or before June 30, 2013. also asked him to submit required tank registration forms now instead of waiting for work plan approval. email copied to DEC Urda, Ms. Karpen, Mr. Casslar, Mr. Feller and Mr. Karben. 06/20/13-Hiralkumar Patel. 11:41 AM:- received email from Bill including PBS/MOSF applications. 06/25/13-Hiralkumar Patel. discussed with DEC Leszek about PBS/MOSF forms. he mentioned that hard copy must be submitted with original signature. 12:56 PM:- sent email to Bill and asked him to submit hard copy of required PBS/MOSF forms with original signature. 06/28/13-Hiralkumar Patel. received signed hard copy of PBS/MOSF forms. gave forms to DEC Leszek for review and processing. 07/01/13-Hiralkumar Patel. received email from Marc Casslar from GeoQuest including Remedial Investigation Work Plan. abstract: - total of 12 soil borings wil be advanced to the base concrete slab of the former southern tank complex - for the eastern tank complex, a total of 8 soil borings will be advanced to the base concrete slab - 2 of the borings in each complex will be advanced through the slab to a total depth of 12 ft bg - soil with the highest PID readings or the most visual or olfactory contamination will be collected for lab analysis - soil samples will be analyzed for DRO, VOCs by 8260B and PAHs by 8270 - five (5) additional borings will be developed as 1 inch monitoring wells, with 5 ft of screen and sufficient riser, in the vicinity of the former tanks - work can commence within 90 to 120 days after the acceptance of this work plan - report should be completed within 180 days after commencement work the proposed work plan is not acceptable for following reasons: - it proposes to begin work within 90 to 120 days after the acceptance of the work plan. the department requires that investigation work must begin within 45 days of work plan approval - it propose to submit report within 180 days after commencement of work. the department requires that Remedial Investigation Report must be submitted within 120 days of work plan - a scaled site map must be submitted including all previous boring/well locations and location of proposed borings/wells - it proposes installation of 1 inch well with 5 ft screen. work plan does not specify minimum depth of proposed wells. the proposed wells must be at least 2 inch in diameter and must be installed to minimum depth of 12 ft bg with 10 ft of screen - all existing monitoring wells must be gauged and sampled 10:26 AM:- spoke with Marc at GeoQuest. asked him to submit revised work plan with following changes: - investigation work must begin within 45 days of department’s approval (instead of within 90 to 120 days) - Remedial Investigation Report

NYC DEP HAZ MAT (Continued) **S102143390**

must be submitted within 120 days of department's approval (instead of 180 days after commencement of work) - revised scaled site map including all previous boring/well locations, alongwith location of proposed borings/wells - wells must be at least 2 inch in diameter and must be installed to minimum depth of 12 ft bg with 10 ft of screen - gauging/sampling of all existing monitoring wells Marc mentioned that site access may be issue for field work. informed him that the site is being used as parking lot, occupied by buses which can be moved for field work. Marc mentioned that Bill is out of office till next week and will submit revised work plan upon his arrival. 3:40 PM:- received message from Sam Levin, attorney for property owner. Sam Levin Ph. (347) 564-3597 07/02/13-Hiralkumar Patel. 1:16 PM:- spoke with Mr. Levin. he inquired about insurance carrier of previous property owners. informed him that no such information seen in file. suggested him to review available files. he will talk to Bill. 07/19/13-Hiralkumar Patel. 4:12 PM:- received email from Bill including work plan, with changes in work schedule only. but no changes about well diameter or depth. 08/02/13-Hiralkumar Patel. Bill proposed to install total 20 soil borings to the base concrete slab in former two tank fields, but soil above concrete bases are basically on-site backfill soil which was removed from around the tanks during tank removal. as such there is no need to sample this soil again. instead deeper and larger diameter monitoring wells are needed at the source area. 1:26 PM:- spoke with Bill. informed him that the department requires minimum 4-inch wells at former tank locations, to a minimum depth of 12 ft bg with 10 ft of screen. asked him to submit revised work plan. Bill asked to send email with comments on work plan. 08/06/13-Hiralkumar Patel. discussed with DEC Vought. as stated in signed consent order, complete delineation (on- and off-site) is required. 11:12 AM:- spoke with Bill. informed him that the department requires complete delineation of contamination, which includes impact to off-site also. asked him to submit revised work plan including off-site delineation. strongly suggested him to locate previous monitoring wells and sample existing wells prior to finalizing the work plan. Bill asked for written note about the requirements. 1:52 PM:- sent email to Bill. informed him that as per the signed consent order, the department requires complete delineation of contamination. asked him to submit a revised RIWP, by the end of 09/13/13, including on- and off-site delineation. suggested him to locate and sample existing wells prior to finalizing the RIWP. email copied to DEC Urda, Mr. Feller, Jay Soltis (jsoltis@geoquestinc.com) and ekvllc@gmail.com. 08/20/13-Hiralkumar Patel. 4:35 PM:- received message from Bill. 08/21/13-Hiralkumar Patel. 12:42 PM:- left message for Bill. 08/22/13-Hiralkumar Patel. 11:29 AM:- received message from Bill. 08/26/13-Hiralkumar Patel. 12:52 PM:- spoke with Bill. he inquired about reason for 4 inch well. informed him that 4 inch wells are preferred in case product recovery or other remediation needed. he mentioned that as there was not much oil found on concrete pad during tanks removal, property owner wants to install 2 inch well. informed him that its ok to install 2 inch well now, but the department may require to install larger diameter well based on investigation results. he agreed to it. Bill will submit work plan by first week of Sept. 2013. 09/13/13-Hiralkumar Patel. 2:05 PM:- received email from DEC Beilby. he mentioned that EPA will visit site on 09/18/13 to determine whether there are any likely on-site point source discharges to Newtown Creek. 10/03/13-Hiralkumar Patel. 12:19 PM:-

NYC DEP HAZ MAT (Continued) **S102143390**

received email from DEC Beilby. Anchor QEA indicated that the morgan oil terminal would not likely be targeted for sampling because of a lack of discharge. 10/29/13-Hiralkumar Patel. received email from Bill (at 2:02 PM on 10/28/13) including a revised work plan. Bill proposes to install total of twenty (20) soil borings to the base concrete slab of the former tank complexes. two borings will be advanced to 12 ft bg. three (3) 2-inch wells will be installed to 15 ft depth, with 10 ft of screen. Bill also proposes to sample seven (7) existing wells. the submitted work plan does not include information about number of wells available at the site and it only proposes to investigate soils and groundwater in the footprint and vicinity of the former tank complexes. 11/14/13-Hiralkumar Patel. 2:55 PM:- spoke with Bill. discussed about existing wells and complete delineation. Bill mentioned that they found total 12 wells. out of 12 wells, product found in 5 of the existing wells. asked Bill to submit a revised work plan including site map with location of all existing wells and information about product in existing wells. informed him that further delineation may be requuired, based on investigation results. 3:17 PM:- sent email to Bill and asked to submit a revised work plan. 11/26/13-Hiralkumar Patel. received email from Bill (at 4:14 PM on 11/20/13) including work plan with revised site map including location of wells where free product found. 12/20/13-Hiralkumar Patel. 11:30 AM:- sent letter to property owner approving work plan, pending inclusion of immediate gauging of wells to determine product thickness, installation of absorbent socks in impacted wells and weekly monitoring/removal of product from wells. asked owner to submit monthly records of well gauging/product removal activities and investigation report by the end of 06/30/2014. letter emailed to Bill, DEC Urda and Mr. Feller. 01/08/14-Hiralkumar Patel. DEC Peter Malaty (Fish, Wildlife and Marine Resources) visited site earlier today to inspect bulkhead at the site. during inspection, he noted spill of unknown amount of motor fuel onto the soil, from one of the parked bus at the site. he sent pictures taken during the site visit. 11:28 AM:- left message for Bill and informed him about unreported spill, from a bus, at the site. asked him to call back with bus company's information. informed him that the department requires reporting of this spill incident and cleanup of spilled material. 11:36 AM:- sent email to Bill including pictures received from DEC Peter. informed Bill that the department requires reporting of this spill incident and immediate cleanup. also asked him to provide bus company's information. 01/10/14-Hiralkumar Patel. 12:28 PM:- received call from Bill. discussed about unreported spill under the parked bus. he will ask bus owner/operator to report the spill. Bill mentioned that spill was cleaned up. spoke with Bill about installation of absorbent socks in well and removing product. he mentioned that no work has been done yet and they believe that installing absorbent socks in wells would not do any benefit. asked Bill to submit written reply to the requirement of well gauging/product removal as listed in letter dated 12/20/13. 03/10/14-Hiralkumar Patel. 10:43 AM:- received email from Bill including addendum to remedial investigation work plan dated 10/18/13. Bill proposed to install an appropriate absorbent sock , as soon as practical, into each of the contaminated wells and weekly checking and repalcement of these socks. specific work schedule is missing in the addendum. 04/23/14-Hiralkumar Patel. 1:33 PM:- left message for Bill. 06/02/14-Hiralkumar Patel. 4:48 PM:- received email from Bill including a letter including summary of interim remedial

NYC DEP HAZ MAT (Continued) **S102143390**

measures. on 05/14/14, GeoQuest gauged wells previously reported to contain LNAPL (MW-14, MW-15, MW-28A, MW-34 and MW-40) and installed absorbent socks. they visited site again on 05/21/14 and replaced the absorbent socks. found product in all five wells during both visits. product thickness (in ft): ---------05/14/14-----05/21/14 MW-14------0.90---------0.72 MW-15-----0.001--------0.001 MW-28A----0.001--------0.001 MW-34------6.20---------0.01 MW-40------1.50---------0.45 absorbent sock weight difference (in oz) on 05/21/14: ---------weight diff. MW-14------25.8 MW-15-------3.0 MW-28A------1.1 MW-34------11.0 MW-40------47.7 06/23/14-Hiralkumar Patel. 3:44 PM:- received email from Bill including a letter including summary of interim remedial measures. on 06/11/14, GeoQuest gauged wells with the installed absorbent socks. a previously obstructed well (MW-12) has been available and installed absorbent sock in it. previously reported to contain LNAPL (MW-14, MW-15, MW-28A, MW-34 and MW-40) and installed absorbent socks. they visited site again on 05/21/14 and replaced the absorbent socks. found product in all five wells during both visits. product thickness (in ft): ---------06/11/14 MW-12------0.001 MW-14------0.001 MW-15------0.001 MW-34------0.001 MW-40------0.001 absorbent sock weight difference (in oz) on 06/11/14: ---------weight diff. MW-14------35.6 MW-15-------5.1 MW-28A------2.0 MW-34-------4.2 MW-40------42.5 10/28/14-Hiralkumar Patel. 11:24 AM:- received email from Bill including remedial investigation report. abstract: - on 06/09/14, installed 20 soil borings in the area under and around the former bulk storage tanks - twelve (12) soil borings (B-1 through B-12) were advanced to a depth of 5 ft within the footprint of the former southern tank complex, six (6) soil borings (E-1 through E-6) were advanced to a depth of five ft within the footprint of the former eastern tank complex, and two borings (B-13 and B-14) were advanced to a depth of 15 ft bg along the north side of the southern tank complex - ten soil samples were submitted for lab analysis - on 06/10/14, three (3) 2-inch monitoring wells, with ten (10) ft of screen, were installed to a depth of fifteen (15) ft bg - total of ten monitoring wells were sampled for analysis: seven existing wells (FN-19, FN-20, FN-22, FN-28A, FN-31, FN-35 and FN-39) and three new wells (GQ-41, GQ-42 and GQ-43) - boring logs shows the predominant material encountered in the footprint of each tank complex was: brown, dark brown or black sand with silt or sand, silt, and clay, with a variety of crushed materials: asphalt, brick, pieces of concrete, stone, coal, plus ceraimc, glass, metal, wood and paper - groundwater was encountered at 3.5 ft bg in boring B-13 and B-14 - direction of groundwater flow across the site ‘would be expected’ to be predominantly west to east and from south to north ---------- - the exception is on the southern side of the former Southern tank complex where it is believed that the 17 ft high bunkering wall filled with permeable fill, has influenced the local flow direction, forcing a reported southeasterly flow direction ---------- - very minor VOCs detection noted in few samples - SVOCs were detected in all soil samples (backfill material found in soil borings) - using absorbent socks in wells with product, a total of 1.5 gal of product has been removed to-date - there are at least two USTs still on-site including a 3,000 to 5,000 gal UST in a vault in the northwest corner of the site and a 1,000 gal heating oil tank on the south side of the terminal buiding - recommends removal of remaining tanks and continuation of interim-remedial measures (product recovery using absorbent socks in wells with product) the

NYC DEP HAZ MAT (Continued) **S102143390**

report is missing site map with location of existing tanks and well FN-28A. 11/04/14-Hiralkumar Patel. 8:57 AM:- sent email to Bill. asked him to submit site map with location of existing tanks and well FN-28A. also asked him to submit records of interim remedial measures as per the department's letter dated 12/20/13 (copy attached in email). email copied to Aaron Abraham (aarbenabe@yahoo.com), Marc Casslar (mcasslar@geoquestinc.com), Jay Soltis (jsoltis@geoquestinc.com) and lepmanagement89@gmail.com. 11/06/14-Hiralkumar Patel. 2:14 PM:- received email from Bill including site map with location of existing tanks and well FN-28A. Bill mentioned that location of FN-28/FN-28A is uncertain. according to well location maps available to GeoQuest, there should be two wells close together off of the eastern end of the office buildiing, labeled FN-28 and FN-28A, but when GeoQuest did the well usability survey in September 2013 they could only locate one well. Bill will refer this well from now on as FN-28A. 11/10/14-Hrialkumar Patel. 9:15 AM:- received email from Bill including well monitoring data table, which was previously submitted in June. 10:22 AM:- sent email to Bill and asked him to submit interim remedial measure record from June to Nov. email copied to lepmanagement89@gmail.com, Mr. Abraham, Mr. Casslar, Mr. Soltis. 12/24/14-Hiralkumar Patel. 12:08 PM:- received email from Bill: My apologies, there have been no sock exchanges since our last report. We initiated the Interim Remedial Measures (IRM) and made our first report, but, while the initial levels were high, the levels dropped quickly to near zero floating product and we wanted to wait a bit to see if the levels would rebound and by how much. We just completed another round and it appears that the levels, for the most part, have remained low except for one well- FN-40, which still shows some floating product. We were unable to access FN-34 for this round of sampling. absorbent sock weight difference (in oz) on 11/11/14: ---------weight diff. MW-12-------7.5 MW-14------38.5 MW-15------29.0 MW-28A------8.8 MW-40------54.8 01/21/15-Hiralkumar Patel. 8:57 AM:- left message for Bill inquiring update about recommended tank removal. 01/28/15-Hiralkumar Patel. 3:03 PM:- received call from Bill. asked him about status on recommended tank removal. he mentioned that they are waiting for approval from DEC on investigation report. he also mentioned that owner is planning to use the site as it is and there is no redevelopment plan at this time. 07/10/15-Hiralkumar Patel. received email from Paul McGaha (at 6:02 PM on 06/22/15) from McGaha Consulting including well gauging record. Mr. McGaha was recently contracted to assist with project. he inspected site on 06/12/15 and gauged seven existing wells (MW-12, MW-14, MW-15, MW-28A, MW-34, MW-39 and MW-40). 2.35 ft of floating product was noted in well MW-15. absorbent socks with weight difference were found in wells MW-12, MW-28A and MW-40. Paul McGaha McGaha Consulting, Inc. Ph. (908) 285-1207 Fax (888) 680-2762 email: paul.mcgaha@mcgahaconsulting.com Mr. McGaha mentioned that responsible parties will be initiating a remedial action at the property upon approval of the remedial investigation report (dated Sep. 2014 and submitted on 10/28/14). in that report, GeoQuest recommended removal of two USTs and continuation of interim remedial measure program. 09/02/15-Hiralkumar Patel. 1:39 PM:- spoke with Mr. McGaha. informed him that property owner has failed to comply with a requirement of weekly well gauging and monthly submission of well gauging report. Mr. McGaha recommended use of a more active remedial method instead of absorbent socks. asked him to submit a written plan

NYC DEP HAZ MAT (Continued) **S102143390**

for review. 2:38 PM:- sent email to Mr. McGaha and asked to submit written plan for alternative remedial method. email copied to LEP Management (lepmanagement89@gmail.com). 12/11/15-Hiralkumar Patel. a new spill report (# 1509305) received from a member of Newton Creek Alliance. spill report was filed due to oil slick and heavy sheen noted in creek adjacent to the subject site. 3:35 PM:- spoke with Mr. McGaha. he mentioned that this afternoon, he was informed about sheen along side of the property but doesn't think it came from the site. they will install absorbent booms in the creek. 4:10 PM:- inspected site. no sheen noted on water in the creek. 4:36 PM:- spoke with Mr. McGaha. informed him about observations during the site visit. he mentioned that booms will be installed this weekend. 12/14/15-Hiralkumar Patel. 7:52 AM:- left message for Mr. McGaha. 11:15 AM:- received email from Mr. McGaha including some pics. he mentioned that booms were deployed early Saturday morning. residual sheen was present on the water, therefore, the booms were allowed to cross the waterway closer to the boats docked in the inlet, and pulled back to their current position to collect the floating material causing the sheen. a security camera has been focused on the area to monitor the conditions. Mr. McGaha submitted pics from security camera. pics taken on 12/12/15 at 9:13 am, 10:27 am, 11:45 am, 12:02 pm, 1:03 pm, 2:10 pm, 3:15 pm, and 4:35 pm. Paul mentioned that the condition will continue to be monitored and the boom will not be removed until the condition is no longer present. pics show sheen on water. 11:23 AM:- received email from Mr. McGaha including interim remedial measure report. abstract: - report included well gauging data since May 2014 - since May 2014, wells FN-12, FN-14, FN-15, FN-28A and FN-40 were gauged on 05/14/14, 05/21/14, 06/11/14, 12/11/14, 06/12/15 and 09/21/15 - well FN-39 was also gauged during 06/12/15 and 09/21/15 events - absorbent socks have been used to collect LNAPL in wells exhibiting floating product - based on available data, groundwater elevations fluctuate between 1.32 ft above mean sea level at FN-12 in Dec. 2014 to 8.88 ft above mean sea level at FN-34 in May 2014 - total of 3.38 gal of oil have been collected using the absorbent socks since May 2014 - weight of oil was converted to gallons using the specific gravity of #6 fuel oil - site has acquired equipment capable of pumping LNAPL from the groundwater table during liquid product recovery events - based on product recovery amount, Morgan Terminal requests that the frequency of petroleum pumping and absorbent sock removal and replacement be modified to biweekly events. Morgan Terminal also requests that the reporting frequency and submission of Interim Remedial Measures Progress Reports be modified to quarterly reporting product thickness (in ft) in wells:

06 12/15/15-Hiralkumar Patel. received email from Willis (at 4:28 PM on 12/14/15) from Newtown Creek Alliance including pics of the creek showing sheen. Willis went to the site and met property owner and manager. Willis mentioned that property owner, Arthur, made strong

NYC DEP HAZ MAT (Continued) **S102143390**

claims that no product was migrating off his property and likely someone spilled a quart of oil into the water. 8:30 AM:- after discussing with DEC Austin last night, visited site this morning during high tide. minor non-recoverable sheen noted on water in the creek. based on observations during the site visit, it looks like the site has been divided into following four sections: - eastern end of the property (the former eastern tank complex) has been separated from the rest of the site using chain-linked fence. there are sheds on the eastern most part of the site, along the water so could not inspect waterbody from the land - the former southern tank complex area is now occupied by a lumber yard - the remaining area of the site between the creek and the former tank complex (southern tank complex) is used as a parking lot occupied by a private bus company - the northwest corner of the site (former maintenance building), immediately west of the end of the creek, is used as parking lot also noted repaved parking lot around the former maintenance building and a wooden deck along the bulkhead, on east of the former maintenance building. as per available site maps, few monitoring wells were installed around the former maintenance building, including well FN-46 which is along the bulkhead and closest to the point where sheen noted on creek recently. during site visit, there were some vehicles parked on-site and could not see any of the formerly installed monitoring wells around former maintenance building in remaining open area. 9:36 AM:- spoke with Mr. McGaha inquiring about well gauging data. he mentioned that property owner has hired someone who gauge and remove product from the monitoring wells and Paul has prepared report based on data received from property owner. asked Mr. McGaha to send email confirming this activity and including contact information for the person who is gauging wells and removing product. also asked him to schedule gauging of all monitoring wells in presence of DEC personnel. informed him that this may require moving parked vehicles. 2:02 PM:- sent email to Mr. McGaha and asked him to submit - an email (or a letter) confirming his involvement in the project (active field duties vs report preparation/submission based on information collected/submitted by others) - contact name and number for the person/contractor who is gauging on-site wells and recovering product - photographs from the security camera at every hour beginning at 5 PM on 12/12/2015 email copied to DEC Austin, DEC DeMeo, DEC Urda, LEP Management (lepmanagement89@gmail.com) and Arthur Schwartz (aschwartzesq@optonline.net). reviewed NYC ACRIS record and noted that the site has been sold to new property owner in Mar. 2014. Greenpoint Bushwick LLC. **current property owner** 675 3rd Avenue, 8th Floor New York, NY 10017 2:55 PM:- sent email to Mr. McGaha and asked to submit property owner/manager's contact information. email copied to LEP Management and Arthur Schwartz. 3:02 PM:- spoke with Aaron Cohen, property's leasing manager. he is aware of the issue in the creek. he mentioned that property owner (represented by Robert Feller) is planning to conduct further investigation in this matter. he also mentioned that a local contractor (Newtown Williamsburg) was gauging the wells and recovering product. asked Mr. Cohen to schedule a field work for well gauging and product recovery, in presence of DEC personnel. he agreed to it and will ask Mr. McGaha/well gauging technician to schedule this work, in this week. Mr. Cohen mentioned that project managers from DEC Permit unit were on-site recently regarding bulkhead permit issue. Aaron Cohen **property's leasing manager** LEP Management Ph. (347) 901-9045 email: lepmanagement89@gmail.com 3:36 PM:- received

NYC DEP HAZ MAT (Continued) **S102143390**

email from Mr. McGaha. he mentioned that McGaha Consulting, Inc. has provided consulting services for the property including a site visit to demonstrate the operation of the interface meter and well gauging procedures to the previous on-site technician responsible for collection of well gauging data and just last week a second visit to demonstrate the operation of the interface meter and well gauging procedures to the site's new on-site technician. Mr. McGaha has made recommendations for the improvement of well gauging techniques and have prepared a proposal to deliver a mobile pumping system to remove free product from the wells containing free product using a double diaphragm pump. Mr. McGaha was also requested to prepare a standard Interim Remedial Measures Report submission containing well gauging data that is collected and provided by the property's on-site technician, which was recently provided by email. Mr. McGaha mentioned that the on-site technician responsible for well gauging is Mr. Issac Gut. Isaac Gut **on-site technician for well gauging** Ph. (914) 319-1104 (347) 771-7927 email: gut.isaac@gmail.com 3:38 PM:- received email from Mr. McGaha including photographs from on-site security camera. 3:55 PM:- spoke with Sandra Reyes-Guerra (Regional Environmental Permit). she and Justin Falls (DEC Habitat Protection) were on-site as part of bulkhead repair permit application. Sandra doesn't recall noticing any sheen on water. 12/16/15-Hiralkumar Patel. received email from Mr. McGaha (at 9:58 PM on 12/15/15) confirming field work on 12/18/15. 8:00 AM:- visited site. inspected western end of the creek, along the bulkhead east of the former maintenance building. noted some sheen on water. 8:51 AM:- sent email to Mr. McGaha. informed him about a wooden deck in the area of monitoring well FN-46 which is along the bulkhead and closest to the point where sheen noted in creek recently. asked him to have this deck lifted, if possible, for access during field work on 12/18/15. informed him that a new well may be needed in this area, if accessing existing well is not possible. 12/17/15-Hiralkumar Patel. 8:00 AM:- visited site. found sheen on water near the bulkhead at the end of the creek. re-inspected area around the former maintenance building. found formerly installed monitoring well FN-34. some part of the parking lot has been repaved. reviewed NYC ACRIS record and google maps and noted following: - the former Morgan Terminal site occupied lots 101, 207, 220, 160 and 157 on block 2942 - the creek is divided in two sections: north and south and both sections are part of private property - the northern half section of the creek is part of lot # 105 - the southern half section of the creek is subdivided. the eastern portion of the subdivided creek is actually lot # 157 and the western portion of the subdivided creek is part of lot # 101 - all five morgan terminal lots (101, 207, 220, 160 and 157) were owned by Corpus Christi Resources, LLC. from 10/2007 to 12/2008 - all five morgan terminal lots were owned by English Kills Ventures, LLC. from 12/2008 to 04/2014 - in Apr. 2014, former morgan terminal lots were sold to different entities: * lot 101 to Greenpoint Bushwick LLC. * lot 207 to Bushwick Star Management LLC. * lot 157 to 192 Morgan Realty LLC. * lots 220 and 160 to Morgan Williamburg LLC. owners for all five lots have same address: 675 3rd Avenue, 8th Floor New York, NY 10017 12/18/15-Hiralkumar Patel. 11:30 AM:- visited site. met Steve (McGaha Consulting) and Isaac (owner's representative) and gauged wells FN-12, FN-14, FN-15A, FN-22, FN-28A, FN-34, FN-39 and FN-40. inspected creek and noted some sheen on water. - well FN-34 is located in northwest corner of the site, west of the former maintenance building. no product found on top of the water, but heavy

NYC DEP HAZ MAT (Continued) **S102143390**

tar like material noted on side of the well casing and at the bottom of the well. - well FN-28A is located east of the two-story building. no product noted in this well - wells FN-12, FN-14, FN-15A, FN-22, FN-39 and FN-40 are located in alley (access to 190 Morgan Ave) on south side of the former southern tank complex. - well FN-39 is located on south side of the alley. no product noted in this well - well FN-15A is located north side of the alley (adjacent to former tank complex wall). free phase petroleum product noted in the well. due to product viscosity, water interface was not used to measure thickness. a product sample was collected for fingerprint analysis. - well FN-12 is located on north side of the alley (adjacent to former tank complex wall and east of well FN-15). no product noted in this well. - well FN-40 is located on south side of alley (south of well FN-12). 0.4 ft of product noted in this well, and noted diesel like odors. - well FN-14 is located in middle of alley (southeast of well FN-12 and closest accessible well to 190 Morgan Ave). free phase product noted in the well. due to clogged bottom, could not measure product thickness. product sample collected for fingerprint analysis. diesel like odors noted in the well - well FN-22 is located far south end of the open lot on south side of the property. no product noted in this well 1:46 PM:- spoke with Mr. Cohen and informed him about finding product in wells. asked him to analyze product samples. due to diesel like odors in wells located in the alley, went to site 190 Morgan Ave which is a bus repair facility. met with on-site operator who refused to provide name and number. he provided business email (jbrserviceinc@gmail.com) and allowed access to the repair area for inspection. noted a waste oil tank along south wall of the facility. I left site after this. Steve was going to check two more wells: FN-16 (east of FN-15 and adjacent to former tank complex wall) and FN-19 (at curb on southwest side of the site and at the entrance of the alley) 12/21/15-Hiralkumar Patel. 9:27 AM:- spoke with Mr. McGaha and discussed observations during the site visit. asked him to submit a summary of field activity on 12/18/15. 9:35 AM:- spoke with Mr. Cohen. based on field observations, asked him to immediately remove product from the impacted monitoring wells and conduct weekly well gauging/product recovery, for at least a month. Mr. Cohen inquired about approval of remedial action report submitted in Oct. 2014. informed him that the report recommended removal of two on-site tank systems. after reviewing the report, the department had discussed tank removal activity with consultant at that time and waiting for result of tank removal activities. 12/23/15-Hiralkumar Patel. 8:18 AM:- left message for Mr. McGaha inquiring about status on product removal from impacted wells at the site. 8:20 AM:- left message for Mr. Cohen inquiring about status on product removal from impacted wells at the site. 8:25 AM:- sent email to Mr. Cohen and Mr. McGaha. asked them to submit document confirming removal of free phase product from impacted monitoring wells. 11:10 AM:- spoke with Mr. McGaha. he is going to the site today to deliver the pump system for product removal. he believes that product from the impacted wells will be removed today. asked him to send email, once product removed from the wells. 12/24/15-Hiralkumar Patel. 9:38 AM:- sent email to Mr. Cohen and Mr. McGaha inquiring about document confirming removal of free phase product from the impacted wells. 11:00 AM:- received email from Isaac. he mentioned that today they will be pump wells with product and gauge accessible wells. 11:02 AM:- sent email to Isaac. asked him to provide information about amount of oil recovered from each well and to re-gauge existing wells. email copied to Mr.

NYC DEP HAZ MAT (Continued) **S102143390**

Cohen and Mr. McGaha. 2:00 PM:- received email from Isaac. he mentioned that they are having trouble with the pump. 12/28/15-Hiralkumar Patel. received email from Isaac (at 6:28 PM on 12/24/15). he gauged eight wells and found product in one well. he is unable to pump out oil due to pump issue. received another email from Isaac (at 6:51 PM on 12/24/15) including gauging data for eight wells. almost 2 ft product found in well FN-15A. 12/29/15-Hiralkumar Patel. 8:52 AM:- sent email to Isaac inquiring update on removal of free phase product from impacted monitoring wells at the site. email copied to Mr. Cohen and Mr. McGaha. 12/30/15-Hiralkumar Patel. 10:50 AM:- left message for Mr. Cohen inquiring update on product removal from impacted monitoring wells. 10:53 AM:- left message for Mr. McGaha. 11:03 AM:- received email from Isaac stating that pump does not work. 11:10 AM:- sent email to Isaac. informed him that if the pump does not work, then alternate method must be used. also informed him that the Department requires immediate removal of free phase petroleum product from the impacted monitoring wells at the site and document confirming such activity must be submitted to the Department no later than COB December 31, 2015. email copied to Mr. Cohen and Mr. McGaha. 01/04/16-Hiralkumar Patel. received email from Isaac (at 7:50 PM on 12/31/15). they gauged wells today and found 2 ft of product in well FN-15A. he mentioned that product was removed from the impacted well. they have not found product in other wells. they are working on uncovering more wells. 1:20 PM:- sent email to Isaac and asked to provide schedule for this week's well gauging activities so site visit can be made. email copied to Mr. McGaha and Mr. Cohen. 01/05/16-Hiralkumar Patel. received email from Isaac (at 4:40 PM on 01/04/16). he will be on-site on 01/08/16 to gauge the wells. 01/08/16-Hiralkumar Patel. 9:15 AM:- visited site and met Patrick, person working for property management. while at the site, witnessed gauging of two monitoring wells: FN-14 and FN-15A. thin layer of product noted in well MW-14 and approx. 1 ft of product noted in well MW-15A. asked Patrick to remove product from the wells. he will continue gauging other wells. inspected creek and found no sheen on water. 10:59 AM:- spoke with Isaac and asked him to continue weekly well gauging and product removal until further notice. 1:03 PM:- sent email to Mr. McGaha and asked to submit report for fingerprint analysis. email copied to Mr. Cohen. 2:29 PM:- received email from Isaac including well gauging summary. product found in well FN-15A only. 2:59 PM:- received email from Mr. McGaha. he has not received fingerprint results yet. 01/15/16-Hiralkumar Patel. received email from Isaac (at 6:38 PM on 01/14/16) including well gauging data. out of seven monitoring wells gauged, product found (approx. 1 ft) in well FN-15A only. 01/19/16-Hiralkumar Patel. 12:25 PM:- received email from Mr. McGaha including result of fingerprint analysis for two product samples collected on 01/12/16. Mr. McGaha stated results present the findings of undermined . I have requested the laboratory provide any additional details available regarding the carbon chain length etc. reviewed fingerprint sample results. as per lab report, two product sample (White Top & Black Top) were collected on 01/12/16. also as per comments in the lab report: petroleum hydrocarbon chromatogram most closely resembles diesel fuel / fuel #2. the sample was quantitated against C9-C alkane hydrocarbon standard. 01/20/16-Hiralkumar Patel. 10:36 AM:- spoke with Mr. McGaha regarding product sample collection for fingerprint analysis. he mentioned that result of product samples collected on 12/18/16 were inconclusive, so they collected another set of samples on 01/12/16.

NYC DEP HAZ MAT (Continued) **S102143390**

informed Mr. McGaha that as per gauging data from Isaac, product found in only one well FN-15A during gauging on 12/24/15, 12/31/15, 01/08/16 and 01/14/16. asked him to submit result of fingerprint analysis for product samples collected on 12/18/15 and information about from where the two product samples were collected on 01/12/16. reviewed chain-of-custody submitted with fingerprint analysis report and it was noted that the sample was collected from NJ. also, there is no indication anywhere in the report that these product samples were collected from 200 Morgan Ave. 10:51 AM:- spoke with Mr. McGaha again and informed him about sampling location (NJ) noted in chain-of-custody. at this time, he mentioned that sampling report he submitted yesterday is actually for samples collected on 12/18/16. he thinks lab filled up the chain-of-custody when samples were dropped there. asked him to send letter report including sample result and explaining issues with chain-of-custody. 11:05 AM:- left message for Mr. Cohen. 2:00 PM:- received email from Mr. McGaha explaining information noted on chain-of-custody. Regarding the fingerprint samples collected on 12/18/2015. The results of these samples were submitted on January 19, 2016. Today you pointed out errors on the chain of custody related to these samples. The information on the chain of custody is wrong. Steve collected the samples on 12/18/2015, when you were on-site, and dropped the samples to our office location that evening. Steve told me the labels for the samples were filled out, but he did not have a chain of custody. I requested another individual to get the samples to the laboratory. It is at this point that the sample was mishandled and errors were introduced into the process. After our phone call I took a closer look at the chain of custody and attempted to determining what happened to the samples. Just before but also after our second phone call, I learned that the samples were not dropped off to the laboratory until after the Christmas and New Year holidays. When they were dropped off, they were dropped to our sales representative for Phoenix Laboratories for delivery to Phoenix Laboratory. The laboratory sales representative completed the chain of custody so that the samples could be processed. The information for the chain of custody was provided by the individual who was requested to get the samples to the laboratory. Unfortunately, for fear of reprimand for not delivering the samples on time, that individual did not consult Steve or I for the correct details for the chain of custody. When inquiring about the time-frame to receive the results I was presented with an excuse for the delay which. The samples were obviously mishandled. I take full responsibility for this situation. I chose an under-qualified person to complete what I considered to be a simple task, and get the samples to the laboratory. The chain of custody was completed poorly, at best, and is the only reason for this communication. The transport of the samples to the laboratory had nothing to do with the responsible party for Morgan Terminal. The samples from Morgan Terminal were analyzed by a NY State certified laboratory. The fingerprint analysis samples delivered to Phoenix were the only fingerprint analysis samples we have collected since 12/18/2015. I apologize for the situation and I will again offer to re-sample the product for fingerprint analysis to eliminate issues related to the sample handling and chain of custody errors caused during sample delivery to the laboratory. 01/25/16-Hiralkumar Patel. 1:01 PM:- sent email to Mr. McGaha. informed him that the department has not received a report for field work conducted on 12/18/15. asked him to submit report, including details about product sample and analysis

NYC DEP HAZ MAT (Continued) **S102143390**

and results of subsequent well gauging/product recovery activities. email copied to Mr. Cohen and Arthur Schwartz (aschwartzesq@optonline.net). 01/26/16-Hiralkumar Patel. received email from Mr. McGaha (at 10:47 PM at 01/25/16) including an interim remedial measures progress report. abstract: - a magnetometer survey was performed to locate all monitoring wells at the property that have been covered or for which the current location is currently not visible or known. the report is missing date and result of this survey ---------- - wells FN-12, FN-14, FN-15, FN-22, FN-28A, FN-34 and FN-39 (and also FN-40 which is not listed in text part of the report) were gauged on 12/18/16 - sample of LNAPL was collected from FN-14 and FN-15 - groundwater elevations fluctuate between 1.32 ft above mean sea level at FN-12 in Dec. 2014 to 8.88 ft above mean sea level at FN-34 in May 2014 - morgan terminal has removed 1.029 gal of oil during the reporting period between 12/14/15 and 01/15/16 - owner requested to modify well gauging/product recovery schedule from weekly to bi-weekly the submitted report is considered incomplete due to: - missing results of magnetometer survey - site map including location of formerly removed tanks and all the wells installed in past whether it is visible or not at this point 1:46 PM:- sent email to Mr. McGaha and asked him to submit revised report including following: 1. result of magnetometer survey performed (to locate all monitoring wells at the property that have been covered or for which the current location is currently not visible or known) at the site, including date of the survey. 2. a scaled site map including current site use, existing structures, tank systems and monitoring wells. ask him to mark working condition of each available monitoring well. also informed Mr. McGaha that the Department does not agree with the proposed Remedial Action Schedule submitted in the report and requires continuation of weekly well gauging/product removal. asked him to submit a revised report no later than COB February 05, 2016. email copied to Mr. Cohen. 02/03/16-Hiralkumar Patel. 10:13 AM:- sent email to Mr. McGaha and asked him to include results of weekly well gauging for the week of Jan. 18, Jan. 25 and Feb. 1st, in the revised report (due on 02/05/16). email copied to Mr. Cohen. 02/09/16-Hiralkumar Patel. 1:31 PM:- spoke with Mr. McGaha and inquired him about report. he just received some missing information about well monitoring/gauging last week and the report will be submitted by tomorrow morning. 02/10/16-Hiralkumar Patel. 2:06 PM:- received email from Mr. McGaha including amended interim remedial measures progress report. the amended report includes date (12/16/15) and result of magnetometer survey, description of existing site use and location of on-site structures, and results of well gauging conducted on 02/05/16. on-site wells were not gauged on 01/22/16 and 01/29/16 as site was covered with snow. during well gauging on 02/05/16, 2.4 ft of product found in well FN-15. 02/16/16-Hiralkumar Patel. received email from Mr. McGaha (at 5:27 PM on 02/12/16) including well gauging data for week of Feb. 8th. total of ten wells (FN-12, FN-14, FN-19, FN-22, FN-28, FN-34, FN-39, FN-40, GW-42 and GQ-43) were gauged. record does not include result for well FN-15. record includes numbers, but does not include information about what this numbers represent to. also there is no result for well FN-15. 9:16 AM:- sent email to Mr. McGaha inquiring about result for well FN-15. also inquired about numbers listed in last week's well gauging data. email copied to Mr. Cohen, Cameron Hendrick (deweyhendrick@yahoo.com) and Arthur Schwartz (aschwartzesq@optonline.net). 11:58 AM:- sent letter to English Kills

NYC DEP HAZ MAT (Continued) **S102143390**

Ventures LLC requiring submission of revised RIR including: 1) continuation of weekly groundwater monitoring/product removal, 2) inspection/maintenance of boom in the creek and 3) further groundwater delineation via installation of monitoring wells along creek. asked property owner to submit revised RIR no later than 05/31/16. letter emailed to Mr. McGaha, Mr. Feller and Mr. Cohen. letter copied to DEC Austin, DEC Vought, DEC DeMeo and DEC Urda. 03/24/16-Hiralkumar Patel. 12:04 PM:- received email from Mr. McGaha including a aerial map with proposed location of two monitoring wells. Mr. McGaha mentioned that they have added new absorbent boom in the waterway adjacent to the property to address the sheen on the water that has been/is being observed in the last several months. the new boom does not extend across the entire waterway, and does not capture material that may be entering the waterway from the outfall at the end of the waterway. the goal is to determine if the sheen originates from outfall or another location. they have also performed a dye trace of drains at the subject building to determine if the source of the sheen on the waterway could originate from piping below the property. a magnetometer was used to locate additional monitoring wells at the property. they have located 11 monitoring wells. additional effort has been scheduled to continue this effort. repair of the damaged wells is also being scheduled. the magnetometer also identified an anomaly near the small structure at the north side of the property. additional investigation of the anomaly is proposed including a small excavation above the anomaly. Mr. McGaha mentioned that weekly well gauging is continuing. 03/25/16-Hiralkumar Patel. 2:42 PM:- sent email to Mr. McGaha and asked him to submit a scaled site map including all existing wells and location of proposed monitoring wells. email copied to Arthur Schwartz and Mr. Cohen. 04/07/16-Hiralkumar Patel. received email from Mr. McGaha (at 10:17 PM on 04/06/16) including a site map with location of two proposed wells. he mentioned that the wells at the property will be repaired and re-surveyed for horizontal position and elevation following the installation of the two proposed wells. he also mentioned that the survey will allow for an improved scaled map, but they do not anticipate improving the maps until the survey is complete. 04/08/16-Hiralkumar Patel. 3:08 PM:- sent email to Mr. McGaha and informed him that proposed well locations look fine. 06/02/16-Hiralkumar Patel. received email from Mr. McGaha (at 12:55 PM on 06/01/16) including remedial investigation report. abstract: - remedial investigatory efforts performed at the site between Feb. 2016 and May 2016: weekly well gauging and LNAPL removal; monitoring well repair; magnetometer survey; dye trace - two (2) 2-inch monitoring wells (MC-1 and MC-2) were installed at the south and west side of bulkhead at the end of inlet, to a depth of 20 ft bg with 15 ft of screen - during the well installation the soil was screened using PID. PID readings were not detected above background levels - site is underlain by dark, very loose to medium compacted, fine to medium-grained sand with a trace pebbles, silt, brick and concrete - at 12 ft a peat layer consisting of very soft to medium compacted peat and/or organic silt with trace plant fibers and fine sand was encountered - soil samples were not collected during installation of wells MC-1 and MC-2 -------- - groundwater samples were collected from MC-1 and MC-2 - found CVOCs in groundwater sample from MC-2 - wells FN-12, FN-14, FN-15, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 were gauged weekly - during the reporting period, absorbent socks were used to collect LNAPL form wells - in addition

NYC DEP HAZ MAT (Continued) **S102143390**

to absorbent socks, a double diaphragm pump is used to collect LNAPL directly from wells containing LNAPL during regular product recovery events - based on all available data, groundwater elevations fluctuate between 1.32 ft above mean sea level at FW-12 in Dec. 2014 to 15 ft above mean sea level at FN-34 in May 2014 - presence of LNAPL is currently limited to an isolated area surrounding FN-14, FN-15 and FN-40 - manholes of the nine of the existing wells (FN-12, FN-14, FN-15, FN-22, FN-28, FN-34, FN-39, FN-40 and FN-42) were replaced - magnetometer survey was helpful in locating a total of 12 existing monitoring wells at the site (these wells were known for last couple of years) - magnetometer survey was hindered by the presence of steel storage container near the office building, therefore, the location of 550 gal heating oil tank could not be determined - the 3,000 gal diesel tank was not located at the property and it is presumed that the tank was previously removed - one anomaly indicative of a suspect UST was identified during the magnetometer survey. the anomaly was located 8 ft east from the south corner of the ancillary building at the north side of the property. the anomaly was approx. 4 ft wide and extended approx. 3 ft from the wall of the ancillary building. the asphalt paving was removed above the area of the anomaly and soil was excavated to a depth of 5 ft bg, however, no UST or evidence of petroleum were discovered in this location - in an effort to investigate potential sources related to the oil sheen identified on the English Kills, the drains at the bus area and the domestic drains within the building were tested with a non-hazardous dye. dye was not identified in the creek ---------- - during a period of low tide, the skeleton of what appears to be a boat was observed in the mud at the bottom of the inlet below the water - based on the initial site characterization soil samples collected by Fenley & Nicol in 1993 and the more recent soil samples collected by GeoQuest in 2014, the contaminants identified in soil are considered historic fill and not related to a specific discharge incident or area of concern ---------- groundwater analyticals: ----------MC-2 1,2-Dichlorobenzene----------40 1,3-Dichlorobenzene----------4 1,4-Dichlorobenzene----------10 Chlorobenzene----------8 cis-1,2-Dichloroethene-------11 Vinyl Chloride----------12 - during weekly gauging since Mar. 2016, product found in wells FN-14 (0.01 to 0.31 ft), FN-15 (0.01 to 0.49 ft) and FN-40 (0.13 to 0.60 ft) recommendations: - probing the mud with a tile probe is recommended to determine if an un-natural structural may be present in the mud below the creek - additional investigation for detection of chlorinated compounds in MC-2 - bi-weekly (instead of weekly) gauging of wells - further investigation for USTs using GPR Survey 06/13/16-Hiralkumar Patel. 2:08 PM:- left message for Mr. McGaha. asked him to submit missing boring/well logs for MC-1/MC-2 and Appendix A. also asked him to call back to discuss use of Proposed Conceptual Approach to Site Remediation dated 07/11/2005. 2:09 PM:- sent email to Mr. McGaha and asked to submit missing information in the report. email copied to Mr. Schwartz and Mr. Cohen. 06/16/16-Hiralkumar Patel. received email from Mr. McGaha (at 2:32 PM on 06/15/16). he mentioned that missing information will be submitted in few days. 08/31/16-Hiralkumar Patel. 11:16 AM:- sent email to Mr. McGaha and asked him to submit missing information immediately. email copied to Mr. Schwartz and Mr. Cohen. 12:03 PM:- received email from Mr. McGaha including boring logs for MC-1 and MC-2 and Remediation System Evaluation report prepared for EPA dated 06/04/2003. as per

NYC DEP HAZ MAT (Continued) **S102143390**

boring logs: - concrete fill and silty sand noted in both borings - both borings were installed to 20 ft bg - groundwater was found at 11 ft bg in MC-1 and 10 ft in MC-2 - gross contamination encountered at 12-13 ft bg - PID reading above 100 ppm recorded below 5 ft depth in MC-1 with maximum of 950 ppm recorded at the end of boring - PID readings noted below 5 ft depth in MC-2 with maximum of 150 ppm at the end of boring Mr. McGaha mentioned that to make the deadline for the submission of the recent report, he relied on verbal communication with Derik, the field technician on-site during the recent field work, regarding the description of soil at MC-1, MC-2, and the soil at the anomaly investigated. Mr. McGaha questioned Derik about gross contamination in MC-1, he described the area of moist and black with an obvious odor. Derick described the layer as having the texture of wood chips. Mr. McGaha stated that this observation did not translate into groundwater contamination, based on the analytical results of the groundwater sample at MC-1, however, the finding warrants further investigation. he intends to inspect the bulkhead on the water side at the same depth to determine if the gross contamination can be associated with the sheen observed on the water. this work will be performed during the investigation of the structure identified on the bottom of the waterway. 09/13/16-Hiralkumar Patel. 1:44 PM:- received message from Mr. McGaha. he mentioned that during well monitoring, they noted product in one of the two wells installed along bulkhead. they are planning to install a pneumatic skimmer to recover product. Mr. McGaha will submit a written work plan for review. 09/15/16-Hiralkumar Patel. 1:01 PM:- sent email to Mr. McGaha and asked him to submit a revised RIR (including discussion of elevated PID readings and field observations that were noted in the boring logs) and results of well monitoring/product recovery since May 2016, by the end of 09/30/16. email copied to Mr. Cohen and Mr. Schwartz. 09/20/16-Hiralkumar Patel. 1:07 PM:- received email from greenpoint11237@gmail.com (without any name) stating that the new well that we installed near the bulkhead recently which has been showing small amounts of oil, we are pumping the oil every day as per Mr. Mcgaha suggestion. Additionally, the two booms that were installed in the water will be changed soon. 09/23/16-Hiralkumar Patel. 2:21 PM:- received email from Mr. McGaha including interim remedial measure report. 09/28/16-Hiralkumar Patel. received email from Mr. McGaha (at 8:56 PM on 09/27/16) including link to amended RIR. 10/26/16-Hiralkumar Patel. DEC Falls came to discuss issues at the site. they received an application for bulkhead repair permit. informed DEC Falls about petroleum contaminated soil and groundwater at the site. 11/01/16-Hiralkumar Patel. 3:30 PM:- received email from Mr. McGaha including interim remedial measure report for Oct. 2016. 11/07/16-Hiralkumar Patel. abstract of amended RIR dated 09/30/16: - two wells (MC-1 and MC-2) were installed - concrete fill and silty sand noted in both borings - both borings were installed to 20 ft bg - groundwater was found at 11 ft bg in MC-1 and 10 ft in MC-2 - gross contamination encountered at 12-13 ft bg - PID reading above 100 ppm recorded below 5 ft depth in MC-1 with maximum of 950 ppm recorded at the end of boring - PID readings noted below 5 ft depth in MC-2 with maximum of 150 ppm at the end of boring - on 09/11/16, LNAPL was identified in well MC-1 - the fact that LNAPL was not immediately identified in MC-1, suggests that the LNAPL could originate closer to the bulkhead and/or north of MC-1, placing a potential source of LNAPL under the boiler house building. the boiler house building is downgradient of the 3,000 gal diesel potentially existing UST

NYC DEP HAZ MAT (Continued) **S102143390**

location - a magnetometer survey failed to identify the 3,000 gal UST - will conduct ground penetrating radar survey to locate 3,000 gal UST - if the ground penetrating radar survey does not locate the UST, a hole will be dug by hand to determine if the USTs are in the areas identified on historical maps - monitoring wells (FN-12, FN-14, FN-15, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2) gauged weekly - absorbent socks and double diaphragm pump were used to collect LNAPL - groundwater flow tends to be in a northeast direction - proposes to excavate immediately adjacent to the bulkhead that parallels Morgan Ave to a depth of 14 ft bg to investigate presence of sheen on both side of bulkhead in area of MC-1. the size of the excavation will be limited to 14 ft bg inside the bulkhead, and is expected to be the width of a single backhoe bucket (2 ft) and 6-8 ft long to allow the arm of the excavator to reach the required depth - will remove any LANPL from the excavation and install a 4 inch diameter recovery sump - property owner proposes to use previously approved conceptual approach dated 07/11/2005 - during weekly gauging, found product in wells FN-15 and FN-40 - report notes that well FN-12 is in close proximity to a water line that has somehow been damaged and is leaking water. the water level is just below grade from 09/02/16 through 09/16/16. abstract of interim remedial measure report dated Oct. 2016: - gauged wells FN-12, FN-14, FN-15, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 - total of 5.87 gal of oil have been collected using the absorbent socks since May 2014 - total of 3.91 gal of oil have been collected by pumping since Dec. 18, 2015 - will replace boom in creek - will install an active LNAPL skimmer near the bulkhead to the Newtown Creek inlet that parallels Morgan Ave (in area of well MC-1) - weekly gauging data from 09/16/16 through 10/28/16 shows presence of product in wells FN-15, FN-40 and MC-1 (0.38 ft on 09/23/16) discussed with DEC Austin and DEC Vought. based on result of historical investigation and recent groundwater monitoring, the department will request: - installation of additional monitoring wells (south of FN-40, east of FN-14, northeast of FN-14, couple of well on north side of former southern tank complex, at least two wells east of MC-2 along the bulkhead) to confirm containment of plume and for continuous monitoring/product removal - continuation of well monitoring/product removal (on monthly basis) and submission of quarterly reports until site development a meeting with property owner is needed to discuss future actions and submission of a RAWP. 3:06 PM:- spoke with DEC Falls regarding requirements for bulkhead permit application. he mentioned that missing information in the application can be discussed during meeting with property owner in office. Caroline Kwan Project Manager Special Projects Branch U.S. Environmental Protection Agency Ph. (212) 637-4275 email: kwan.caroline@epa.gov Supinderjit Kaur Remedial Project Manager EPA, Region 2, ERRD-SPB-MPS PH. (212) 637-4167 email: kaur.supinderjit@epa.gov 11/08/16-Hiralkumar Patel. 8:52 AM:- left message for (and sent email to) Mr. McGaha requesting a call back. email copied to Mr. Schwartz and Mr. Cohen. 11/10/16-Hiralkumar Patel. 1:34 PM:- received call from Mr. McGaha. informed him that to discuss further remediation activities at the site and actions related to bulkhead repair/replacement work, the department likes to meet property owner, environmental contractor/consultant and contractor for bulkhead work. Mr. McGaha will call back after discussing with property owner. 11/18/16-Hiralkumar Patel. 12:04 PM:- received email from Mr. McGaha confirming meeting on 12/14/16. 12/06/16-Hiralkumar Patel. spoke with

NYC DEP HAZ MAT (Continued) **S102143390**

Mr. McGaha. he confirmed that Mr. Schwartz, Allan and himself will meet DEC on 12/14/16. asked him about any consultant/engineer who will be handling bulkhead repair/replacement project. he will contact property owner. 12/14/16-Hiralkumar Patel. 1:00 PM:- met with Mr. Schwartz, Mr. McGaha, Allan Francis, DEC Vought, DEC Urda, DEC Chan, DEC Greco and DEC Falls. Mr. Schwartz mentioned that they are planning to replace rotted sections of bulkhead above water line and planning to work during low tide. DEC permit unit has asked for detailed plan on bulkhead repair work, including containment procedure and counter measures on-hand. asked Mr. Schwartz to inform DEC prior to beginning of bulkhead work and report immediately of any petroleum discharge issue during bulkhead work. to remediate remaining petroleum contaminated areas at the site, Mr. McGaha proposed following: - a test pit trench perpendicular to bulkhead in the area of well MC-1 - placement of larger diameter recovery well in proposed trench in area of MC-1 with installation of skimmer at beginning and possible use of pump & treat technique later on - a pump test prior to beginning pump & treat operation in area of MC-1 to confirm radius of influence - in-situ remediation using oxidants in alley - a pilot test prior to application of oxidants in alley prior to in-situ remediation at the site, informed Mr. Schwartz and Mr. McGaha that the department requires additional monitoring wells to the north, east and south of existing wells MW-15, MW-14 and MW-40 to confirm plume containment and effectiveness of in-situ remediation. Mr. Schwartz mentioned that a re-zoning application has been submitted to city department for redevelopment of the site in a manufacturing building. asked Mr. Schwartz to submit copy of re-zoning application. Allan Francis **site manager** Ph. (347) 859-6925 email: allanfrancis73@gmail.com Arthur Schwartz, esq. PH. (732) 905-1008 email: arthur@aschwartzesq.com 2:59 PM:- sent email to Mr. McGaha requesting property owner's mailing address. email copied to Mr. Francis, Mr. Schwartz and LEP Management. 12/16/16-Hiralkumar Patel. 1:47 PM:- received email from Mr. McGaha including mailing address for property owner. Novack Burnbaum Crystal LLP. 675 Third Avenue, 8th Floor New York, NY 10017 Attn.: Edward Burnbaum 3:30 PM:- sent letter to owners of lot # 101 (Greenpoint Bushwick LLC.) and 207 (Bushwick Star Management LLC.) including approval for amended RIR dated 09/30/16 and requiring submission of RAWP within 90 days of the date of this letter (as per the signed consent order). asked them to include following in RAWP, which was agreed upon during meeting: 1) details about installation of sentinel wells on lot 207, 2) sampling methodology during installation of sentinel wells, 3) test pit investigation at location of MC-1, 4) active remediation at location of MC-1 and 5) application of oxidants to treat groundwater contamination on lot 207. letter emailed to DEC Urda, DEC Greco, DEC Falls, DEC Chan, Mr. Schwartz, Mr. McGaha and LEP Management. 12/19/16-Hiralkumar Patel. 2:52 PM:- received email from Mr. Schwartz including a copy of letter to NYC Dept. of City Planning. as per the letter, a site redevelopment is proposed including one (1) 10-story building. one of the site plan shows garage in cellar. no other construction details are available. 12/23/16-Hiralkumar Patel. 2:21 PM:- received email from Mr. McGaha including interim remedial measure report for Nov. 2016. -wells FN-12, FN-14, FN-15, FN-19, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 were gauged - based on all available data, groundwater elevations fluctuate between 1.22 ft bg at FN-12 on 08/18/16 to 13.85 ft bg at MC-1 on 11/25/16 - total of 4.31 gal of oil have been collected by pumping

NYC DEP HAZ MAT (Continued) **S102143390**

since Dec, 2015 - weekly gauging data from 11/08/16 through 12/02/16 shows presence of product in wells FN-15 (0.12 to 0.65 ft) and FN-40 (0.14 to 0.25 ft) 01/11/17-Hiralkumar Patel. received email from DEC legal including copy of full-executed modification to the consent order. 01/26/17-Hiralkumar Patel. received email from Mr. McGaha (at 6:40 PM on 01/25/17) including interim remedial measure report for Dec. 2016. -wells FN-12, FN-14, FN-15, FN-19, FN-22, FN-28A, FN-34, FN-39, FN-40, FN-42, MC-1 and MC-2 were gauged - based on all available data, groundwater elevations fluctuate between 1.22 ft bg at FN-12 on 08/18/16 to 13.85 ft bg at MC-1 on 11/25/16 - total of 4.40 gal of oil have been collected by pumping since Dec, 2015 - wells were gauged three times in Dec. 2016: 12/02/16, 12/06/16 and 12/22/16 - gauging data shows presence of product in wells FN-15 (0.22 to 0.33 ft) and FN-40 (0.18 to 0.24 ft) - proposes to submit a remedial action work plan by 03/13/17 02/06/17-Hiralkumar Patel. DEC Austin received an email (on 02/04/17) from Seth Friedland. he mentioned that his client is seeking to develop the site and they are having an exploratory meeting with OER on 02/08/17. Seth D. Friedland Friedland Law, LLC. PH. (212) 344-1400 Ext. 202 (917) 902-6386 Fax (212) 344-8735 Efax (646) 304-1916 email: sfriedland@friedland.law discussed with OAG Karpen and informed her about scheduled meeting between site developer and NYC OER. inquired her about status on environmental lien on property. 2/27/17-Vought-Conference call on 2/24/17 with RSE, Vought, and Patel. Friedland noted that the site developer he is working for is Arthur Schwartz, who is also the current property owner. Friedland noted that he and Schwartz went to OER to seek possible help on having NYC Dept of Planning rezone the site via a zoning application and were hoping that OER could facilitate the process. Friedland noted that they are considering redeveloping the property for commercial purposes and were intending to perform excavation for at least one underground level . Friedland noted that at time of conference call, his only authorized role was in the rezoning effort but that he may be also brought in as counsel for the environmental issues. Friedland also noted he know nothing of the bulkhead issues with DEC Permits and DEC to send him copy of last email chain. Friedland also noted that Magaha was currently working on RAP as previously discussed with DEC. Freidland also noted he knew of prior Consent Order on site and may possibly want to explore closure of the Consent Order so that Schwartz may enter the OER BCP Program. RSE and Vought replied that any possible closure of the Consent Order would have to go through DEC OGC. Friedland noted that they would proceed with developing the RAP until the possible zoning change is approved and that he would get back to DEC with more information. 2/27/17-Vought-Received email on 2/26/17 from Friedland with cc to RSE and DEC Patel that Randy, Jeff and Kumar, Glad we were able to catch up on Friday. In response to your questions and requests for further information about the project, and DEC s interest in the proposed development of this site, here is some further information about the proposed development project and the zoning changes that are going to be needed to see it through to fruition. Any assistance that DEC can provide of course would be very much appreciated. Here is a very quick summary of the our client s interaction so far with the Department of City Planning (DCP) on the critical zoning issues: First meeting with DCP on February 4, 2016: We need Zoning map amendment from M3-1 to M1-5 that would enable the redevelopment of the Premises with a ten (10) story, 495,370 square foot building. (A copy of the architect s renderings

NYC DEP HAZ MAT (Continued) **S102143390**

showing the proposed building is attached). Designed to align with the City s vision of the North Brooklyn IBZ. The proposal now contains one building (as opposed to two), which rises to ten (10) stories, and consists of 495,370 square feet of commercial floor area (office and retail building). (A copy of the most recent revised Proposed Plans from December 2016, is also attached hereto). Met with City Planning again, January 2017 (LAST MONTH): At that meeting, the following was discussed: 1)Need to Further Revise the plans to depict a more realistic proposal that will incorporate the following: a.Noise; b.Emissions; c.What floor plates could be used without the sky exposure plane; d.Parking whether we need all the proposed spaces and whether we should have the cellar parking when it is prone to flooding; e.Incorporating higher than the current 12 floor to ceiling heights; f.Pedestrian and vehicular (truck) access; g.Creek access; h.Flood resiliency; i.Types of businesses and how the newly constructed buildings will meet their needs; j.Ventilation - if there is going to be manufacturing use shared with commercial use; 2)Create an urban planning report to support the case for the density, which will include: a. Transportation; b. Neighboring uses; c.Waterfront esplanade 3.Marketing/real estate analysis that shows the proposed uses are needed in this neighborhood. Thanks again, and enjoy the remainder of your week-end. Regards . Vought added attached rendering and revised proposed plans to D2. Vought sent reply to Friedland with cc to RSE, Patel, OGC Urda, NYSOAG Karpen, DEC Greco and DEC Falls that Seth, It was good talking to you as well on Friday and thanks for the email below as well as the attached conceptual site plans. The plans show the development of an underground parking garage so this would certainly be optimum as it would likely allow for source removal down to and including the water table. The Department can assist in expediting the review of any proposed plans as well as participate in any meetings to facilitate approval of such plans. I will also inform both OGC and the NYSOAG of your possible request, as per our teleconference, to close the Consent Order, pending the rezoning of the site. I will also forward you the email chain with regards to the bulkhead and Permit issues we discussed on Friday. Thanks as well and keep us posted. Vought sent OGC Urda and NYSAOG Karpen spill notes above from Fridays call. Vought sent another email to Friedland that Seth, After checking my emails, I realized I have no external emails regarding the Bulkhead Permit request. Please contact Tamara Greco or Justin Falls, copied above, for more information regarding the permit request, if needed. Thanks, . Vought received reply from Friedland with cc to all that Thanks very much, Jeff. I sincerely appreciate it. 03/24/17-Hiralkumar Patel. 12:58 PM:- received email from Mr. McGaha including remedial action work plan. summary: - selected remedial alternatives involves isolating the historic fill over the entire footprint of the site with a cap in areas not already capped with asphalt or concrete and treating residual areas of petroleum contamination using in-situ chemical oxidation and multi-phase extraction for residual LNAPL, establishing an declaration of covenant and restrictions and environmental easement, along with site management plan and operation, maintenance and monitoring plan - capping of currently exposed soil will be performed using a demarcation layer, followed by subgrade material asphalt paving - in-situ chemical oxidation is proposed in the vicinity of monitoring wells FN-14, FN-15 and FN-40 - oxidant solutions would be injected into the soil and groundwater through 15 injection points constructed as temporary well points to a depth of

NYC DEP HAZ MAT (Continued) **S102143390**

approx. 4-5 ft bg, or 0-2 ft below the water table - three additional monitoring wells would be installed to monitor progress of oxidation remediation efforts in this area - multiphase extraction will be performed at the bulkhead with the Newtown Creek and near MC-1 to removal LNAPL and groundwater contamination - multiphase extraction will be operated until LNAPL is removed and groundwater contamination meets stable and acceptable concentrations - following completion of RAWP implementation, quarterly groundwater monitoring would be implemented to document effectiveness of the remedy - groundwater would be samples for one year (four monitoring events) ---------- - track 4 - industrial restricted use soil cleanup objectives are proposed ---------- the work plan does not include sampling methodology during installation of sentinel wells.
07/10/17-Hiralkumar Patel. 10:25 AM:- spoke with Mr. McGaha inquiring about current status on product recovery. he will submit report and interim work plan to address LNAPL contamination. 09/18/17-Hiralkumar Patel. received email from Mr. McGaha (at 11:55 AM on 09/12/17) including an interim remedial measure progress report (last report submitted on 01/25/17). report included results of gauging events conducted until 09/05/17. since 12/22/16, product noted in following wells: product thickness (in ft):
----------FN-14------FN-15------FN-40------MC-1
01/12/17----------0.12-------0.12
03/09/17----------0.28-------0.66
03/30/17----------0.42----------5.14
04/06/17----------0.68-------0.31------3.59
04/19/17----------0.36----------4.89
04/28/17----------0.29-------0.75------3.71
05/11/17----------0.62-------1.56------3.72

08/23/17--------0.10-------0.20----------0.40
08/29/17--------0.10-------0.10----------0.29
09/05/17--------0.20-------0.20----------0.40 Mr. McGaha is preparing proposal for operation of an alternative LNAPL remediation system. received email from DEC Ian Beilby. he received pics from NYC's consultant claiming NAPL seeping from bulkhead along the site. 09/20/17-Hiralkumar Patel. 1:15 PM:- visited site and met Arron Abraham (347-773-9633, aarbenabe@yahoo.com) from property management office. inspected creek inlet adjacent in northwest corner of the site (near well location MC-1). noted two layers of sausage booms covering southern half of bulkhead which is owned by former morgan terminal. minor sheen was noted within boom area. no signs of product were noted outside the booms. need to re-inspect area during low tide. 09/25/17-Hiralkumar Patel. received powerpoint presentation from DEC Ian Beilby. pics show seepage of free product from bulkhead towards northern section of inlet which is not covered by booms. 10:08 AM:- sent email to Mr. McGaha inquiring about plan for alternative LNAPL remediation system. email copied to LEP Management, Mr. Schwartz and Mr. Abraham. 09/27/17-Hiralkumar Patel. 9:30 AM:- visited site and met Mr. Abraham. noted heavy sheen between absorbent booms and bulkhead. some of the sheen had escaped boom area as one end of the boom was in air during low tide. spoke with Mr. McGaha. asked Mr. Abraham and Mr. McGaha to adjust booms to contain oil seepage. also asked Mr. McGaha about remediation plan. after

NYC DEP HAZ MAT (Continued) **S102143390**

reviewing pump option, he wants to use previously proposed remedial method: installation of sump between well MC-1 and bulkhead and pumping oil into oil/water separator and discharge water into sewer system after getting necessary permit. 10/03/17-Hiralkumar Patel. 11:51 AM:- received email from Mr. Abraham. he mentioned that a hard boom with sweeps will be installed in the creek. 10/04/17-Hiralkumar Patel. 10:25 AM:- left message for Mr. Abraham inquiring about installation of hard boom and sweeps, and update on site redevelopment plans. 11/04/17-Hiralkuamr Patel. 5:30 PM:- visited site while investigating a report of oil sheen (spill #: 1707515) in Newtown Creek. found free phase product between the bulkhead and boom in the creek. petroleum sheen were noted outside the boom area. a drainage pipe was visible in bulkhead wall due to low tide at the time of inspection. no signs of oil discharge from the drainage pipe. 11/09/17-Hiralkumar Patel. 12:16 PM:- left message for Mr. McGaha. 11/16/17-Hiralkumar Patel. received email from Wardah Azhar from CDM Smith (EPA consultant working on Newtown Creek superfund cleanup) inquiring about the site. Wardah Azhar CDM Smith Ph. (303) 383-2364 email: azharw@cdmsmith.com 11/28/17-Hiralkumar Patel. 11:16 AM:- received message from Mr. McGaha. he mentioned that remediation system for LNAPL has been installed. 12:02 PM:- spoke with Mr. McGaha. he mentioned that a remediation system has been installed and he likes to discuss it prior to turning it on. asked Mr. McGaha to submit details about the remediation system for review. 12/07/17-Hiralkumar Patel. 12:28 PM:- left message for Ms. Azhar. 12:37 PM:- received call from Ms. Azhar. she requested copy of documents/reports received since 2015. 12/11/17-Hiralkumar Patel. as instructed, reports requested by CDM were sent to DEC Austin. 06/07/18-Hiralkumar Patel. DEC Austin forwarded email from Newtown Creek Alliance including site pics of collapsed bulkhead. 8:11AM:- left message for Mr. McGaha. DEC Piper inspected the site and found no sheens emanating from the shoreline. discussed with DEC Stephen Watts in permits. Steve mentioned that they have sent a second incomplete notice on 12/28/16 for an application originally received on 07/20/15. they have not received any response after that. 07/11/18-Hiralkumar Patel. 10:59 AM:- spoke with Mr. McGaha and inquired him about details of remediation system as discussed in Nov. 2017. he mentioned that the system was installed and being managed/monitored by owner's on-site representative. Mr. McGaha will submit remediation system details and summary of work performed since Sept. 2017, by end of the week. Mr. McGaha doesn't know anything about bulkhead work. 07/13/18-Hiralkumar Patel. 1:19 PM:- sent email to Mr. McGaha and asked him to submit remediation system design details and summary of work performed since Sept. 2017. 1:33 PM:- received email from Mr. McGaha including an IRM progress report and design details of LNAPL recovery system installed at well location MC-1. the LNAPL recovery system has been running since Oct. 2017 and has collected approx. 140 gal of oil. according to on-site system attendant, since the LNAPL pumping system has been installed, a significant decrease has been observed on the sheen in the Newtown Creek. also as per site attendant, bulkhead was partially collapsed at the site. report also mentioned that a water leak occurred in the alley in Feb. 2018, causing water to rise to grade in wells FN-39 and FN-12, making it impossible to measure a depth to water at these wells. few weeks later, 04/10/18, wells FN-15a and FN-14 were also under water. the water line leak is reportedly going to be repaired in the near future. report included results of gauging events

NYC DEP HAZ MAT (Continued) **S102143390**

conducted until 07/03/18. since 09/05/16 (last IRM report), product was noted in following wells: product thickness (in ft):
----------FN-14------FN-15------FN-40
12/01/17----------0.18
05/29/18--------0.91-------0.82 06/05/18--------0.70-------1.10
06/12/18--------0.01-------0.69 06/19/18--------0.02-------0.09
06/26/18--------0.01-------1.10 07/03/18----------0.80
08/10/18-Hiralkumar Patel. spoke with DEC Falls. he inspected site on 06/21/18 after bulkhead collapsed. he noticed repair activity without proper permit and asked to stop work. when he re-inspected the site in early July, bulkhead work was completed. Justin issued a NOV on 07/17/18. recently, he received a permit application to legalize previously replaced bulkhead. 09/05/18-Hiralkumar Patel. 12:40 PM:- visited site. currently, the site is being used by a lumber company and almost entire site is full of lumber. on-site tenant mentioned that they moved to the site in Nov. 2017 and doesn't know anything about on-site well monitoring. inspected water channel along the side of the property. silver sheen was noted within/outside the boom at the end of the channel near well MC-1. found partially sunken boat (boom around it) in middle of the channel along the side of the property. no sheen was noted around the boat. inspected on-site building near well MC-1 (former maintenance building), but no oil recovery system was found within the building. inspected alley on south side of the site. multiple 5 gal oil pails and two 55 gal drums were found along the building wall. 5 gal pails were empty but open. one of the drum was closed, but the other drum contained oil to the top and was open. 1:12 pm:- left message for Mr. McGaha and informed him about pails/drums in alley. asked him to immediately secure oil drum and remove other containers. 1:59 PM:- received call from Mr. McGaha. he mentioned 5 gal pails and 55 gal oil drum were removed from the site when lumber company occupied the site. the closed drum contains boom/dirt removed during well monitoring activities. he also confirmed that site representative has closed the oil drum. oil drum and pails will be removed soon. asked Mr. McGaha to schedule a site inspection. 10/05/18-Hiralkumar Patel. 9:30 AM:- visited site and met Mr. McGaha and Arron Abraham. Mr. McGaha showed location of oil recovery tank which is near northeast corner of main building, between the building wall and south bulkhead at the end of water channel. a compressor for the oil recovery system is in basement of main building. total of 240 gal of oil has been recovered since beginning of oil recovery using double diaphragm pump. the 275 gal tank was pumped out last month. asked Mr. McGaha to submit details about time duration and amount recovered from well MC-1. inspected wells in alley on south side of the site where oil found in well FN-15 only. based on shallow depth of groundwater beneath the alley and detection of oil in only one well now, suggested Mr. McGaha/Mr. Abraham to expedite remediation via soil excavation, removal of free phase product and installation of a larger diameter well in the excavation to recover any remaining product. Mr. McGaha will discuss with property owner. Mr. McGaha also proposed to install an another well, north of well MC-1 to increase product recovery using two wells, instead of one. asked him to submit email with plan for additional well installation and remediation via excavation (if approved by property owner) in south alley. 02/07/19-Hiralkumar Patel. discussed with DEC general counsel regarding compliance of existing consent order and pending bulkhead violations. DEC legal will contact property owner to discuss possible way to expedite both

NYC DEP HAZ MAT (Continued) **S102143390**

petroleum remediation and correction of bulkhead violations. 02/12/19-Hrialkuamr Patel. 9:28 AM:- sent email to Mr. McGaha requesting update regarding proposed installation of an additional well near MC-1 to expedite LNAPL recovery, and possible excavation in south alley to remove heavily contaminated material. email copied to lepmanagement89@gmail.com. 03/11/19-Hiralkumar Patel. received email from Mr. McGaha (at 7:49 PM on 03/10/19) including a RAWP. 04/19/19-Hiralkumar Patel. reviewed RAWP submitted on 03/10/19. the RAWP proposes: 1) isolating the historic fill over the entire footprint of the site with in areas not already capped with asphalt or concrete, 2) treating residual areas of contamination via excavation (approx. 25 ft by 35 ft to a depth of 5 ft bg) in alley. endpoint samples from sidewalls will be collected after excavation in alley. bottom samples will not be collected as excavation will be below the water table. a larger diameter (not specified in the RAWP) will be installed with excavation area for post remediation well gauging for a period of three months. 3) multi-phase extraction (including oil/water separator and discharge permit) for LNAPL near well MC-1 via installation of additional recovery wells. multiphase extraction will be operated until LNAPL is removed and groundwater contamination meets stable and acceptable concentrations 4) establishing an declaration of covenant and restrictions and environmental easement. one of the prohibition will be residential land usage without NYSDEC approval 5) submission of site management plan including groundwater sampling from existing wells. groundwater will be sampled for one year (four monitoring events) for VOCs, SVOCs and metals. the RAWP needs to be revised due to following: - the work plan does not include size of replacement well in the alley after excavation - the work plan proposes to analyze soil samples for EPH and SVOCs, and not VOCs/SVOCs - schedule milestone refers to weeks from remedial action start 10:16 AM:- spoke with Mr. McGaha and discussed the proposed RAWP dated Mar. 2019. he mentioned that a 6 inch well will be installed in excavation in alley. informed Mr. McGaha that a revised RAWP is needed including following: - well size in alley excavation - all soil/groundwater samples must be analyzed for VOCs/SVOCs/metals - schedule milestone should be weeks from the RAWP approval (not weeks from remedial action start) 05/08/19-Hiralkumar Patel. 10:45 AM:- sent email to Mr. McGaha and asked him to submit a re-revised RAWP including/correcting following: - size of replacement well that will be installed in the alley after excavation - analysis of all samples for VOCs and SVOCs - schedule milestones should be weeks from the RAWP approval instead of weeks from remediation action start - clarification on # of recovery wells that will be installed around the existing well MC-1 email copied to lepmanagement89@gmail.com, Arthur Schwartz (arthur@aschwartzesq.com) and Aaron Abraham (aarbenabe@yahoo.com). 05/23/19-Hiralkumar Patel. 1:51 PM:- sent email to Mr. McGaha inquiring updates on submission of re-revised RAWP. email copied to lepmanagement89@gmail.com, Arthur Schwartz and Aaron Abraham. 05/30/19-Hiralkumar Patel. 7:41 AM:- received email from Mr. McGaha with a re-revised RAWP including information requested in email dated 05/08/19. a 6 inch diameter well will be installed in a proposed excavation in the alley. the RAWP does not specify total # of wells be installed around MC-1, but proposes to install more product recovery points if needed to achieve remediation completion date of three years. 01/14/20-Hiralkumar Patel. 2:30 PM:- spoke with Mr. McGaha inquiring updates. he mentioned that property owner implemented the proposed Remedial

NYC DEP HAZ MAT (Continued) **S102143390**

Action Work Plan dated May 2019 without being approved by the Department. property owner conducted excavation in alley in Nov. 2019. Mr. McGaha was informed about field work shortly before and was asked to collect endpoint samples. Mr. McGaha visited the site during excavation and collected endpoint samples. the excavation was backfilled without installing proposed larger diameter well. Mr. McGaha has installed two (2) 2-inch diameter wells around existing well MC-1, but no product was noted in new wells. Mr. McGaha stated that the 275 gal product recovery tank was pumped out last month. asked Mr. McGaha to submit report for work conducted at the site. 01/15/20-Hiralkumar Patel. 9:00 AM:- visited site. noted gravel surface in alley indicating possible excavation activities in the alley. no sheen noted in the creek. previously installed boom was damaged and needs to be replaced. noted one new monitoring well near southwest corner of the on-site building (approx. 25 ft away from previously installed well MC-1 near bulkhead). 9:19 AM:- spoke with Aaron Abraham and asked him to 1) submit report for work done to date by the end of 01/22/20, and 2) replace boom in the creek by tomorrow. Aaron Abraham Ph. (347) 294-9566 email: aarbenabe@yahoo.com 10:36 AM:- sent email to Mr. Abraham and asked him to 1) replace boom in the creek by tomorrow, and 2) submit report for activities conducted since Jan. 2018. asked him to submit report by the end of 01/22/20. email copied to Mr. McGaha. 11:44 AM:- received call from Mr. Abraham. he mentioned that Mr. McGaha has ordered a new boom which will be placed in the creek upon arrival (should be done before 01/18/20). he also mentioned that on-site meeting (to gauge wells) will be scheduled after submission of a required report by 01/22/20. 01/23/20-Hiralkumar Patel. 9:17 AM:- sent email to Mr. Abraham and asked him to immediately submit 1) confirmation of replacement of absorbent boom in the creek, and 2) report including details of remediation activities conducted at the site since Jan. 2018. email copied to Mr. McGaha. 01/24/20-Hiralkumar Patel. received email from Mr. McGaha (at 8:10 PM on 01/23/20) including a limited RAR. the report was found incomplete and needed revision due to following: - report is a mixture of a field activities and proposed remedial action. need to remove information previously submitted in the Remedial Action Work Plan dated May 2019 - details about slug test are missing - the report is missing Figure 3, Figure 5, scaled site map with excavation area and endpoint sample locations, endpoint sampling depths, and pictures confirming replacement of boom in the creek - as per first paragraph in Section 3.5, base samples were not collected as excavation extended below the groundwater, but the second paragraph in the same section mention about collection of base samples. also third paragraph in section 3.9 states groundwater was not encountered in the excavation' - there is confusing details about depth of excavation in the alley. as per text on page 11, area was excavated to depth of 8 ft bg, but page 34 states excavation ranged from 5 to 12 ft bg - the report is missing result of waste characterization sampling - as per Section 3.4, excavation was conducted in the vicinity of monitoring wells FN-14, FN-15 and FN-40, but review of attached pictures suggests excavation did not include area of well FN-14 where near 3 feet of product has been noted since 08/24/2018 ---------- (this was clarified later in a revised Limited RAR dated Feb. 2020 submitted on 02/06/20) - the Report is missing detailed logs for wells MC-3 and MC-4. as per the Report, these wells were installed on 05/19/19, but there is no mention about this work in a RAWP submitted on 05/30/19. - section 3.2.9 reads Field notes

NYC DEP HAZ MAT (Continued) **S102143390**

are included in Appendix 4 , but there are no field notes in the report. - the report is missing schedule for installation of replacement well FN-15R and frequency of proposed VEFRring. the Report should include a separate section for proposed remedial activities (addendum to the previously submitted RAWP) such as installation of replacement well FN-15R (including a map with well location), vacuum enhanced fluid recovery (including frequency) at well location MC-1, monthly gauging (and product removal, if noted) of wells in the alley, and groundwater sampling to confirm achievement of remedial goals. 9:07 AM:- left message for Mr. McGaha. 10:02 AM:- received call from Mr. Abraham requesting to schedule a site inspection. informed him that the submitted Limited RAR needs to be revised and site inspection will be scheduled upon review of the revised Limited RAR, once received. 1:45 PM:- sent email to Mr. McGaha and asked him to submit a revised Limited RAR. email copied to Mr. Abraham, Arthur Schwartz and LEP Management. 02/03/20-Hiralkumar Patel. 1:04 PM:- sent email to Mr. McGaha and asked him to submit the revised Limited RAR. email copied to Mr. Abraham, Arthur Schwartz and LEP Management. 02/06/20-Hiralkumar Patel. received email from Mr. McGaha (at 12:05 AM today) including a revised Limited Remedial Action Report which was found incorrect/incomplete. summary: - a slug test was performed at well FN-34 on 03/08/19 - well was pumped while continuous depth to groundwater measurements were collected. when the water level drooped to within one foot of the bottom of the well, the well was allowed to recharge while continuous depth to groundwater measurements were collected - results of three tests presented a hydraulic conductivity of 5.774e-002 m/day - volume of water collected over time was measured and a recharge rate of 2 gal/min was determined - results of slug test indicate that the proposed 5 gal/min oil-water separate could accommodate two multiphase extraction wells and one single phase extraction well --------- - current system near MC-1 is equipped with an oil-water separator, but the system bypasses the oil-water separator and collects only oil from a skimmer positioned in MC-1 - two additional wells MC-3 and MC-4 were installed on 05/19/19 - both wells MC-3 and MC-4 were 2 inch in diameter and 18 ft deep, with screen from 5 to 18 ft bg - groundwater was noted between 9.2 and 9.9 ft bg in wells MC-3 and MC-4 - wells MC-3 and MC-4 were found dry during gauging on 01/03/20 and 01/10/20 - absorbent boom in the creek was replaced 11/16/16, 09/08/17, 11/15/17, 05/31/18, 05/10/19, 08/15/19 and 01/19/20 - excavation was conducted in alley on 11/02/19 - LNAPL has not been identified in FN-14 since Sept. 2017. previously submitted table of well gauging data presents 0.0 as a depth to oil but erroneously reported as oil thickness as a result of spreadsheet calculation error ---------- - LNAPL has not been identified in FN-40 since Dec. 2017 - soil 'near' FN-4 and 'around' FM-15 (25 ft wide by 35 ft long area) were excavated to an average depth of 6 ft bg with over excavation (to 12 ft bg) near former well FN-15 - well FN-15 was removed during excavation - neither groundwater nor LNAPL accumulated in the excavation - based on slug test, absence of groundwater in excavation may be attributable to the density of the soil at the site - a water pipe was damaged during excavation activities resulting in water entering the northeast end of the excavation ---------- - accumulated water was isolated by damming the water at the northeast end of the excavation - water was mixed with soil and disposed with the soil - due to heavy use of the alley, excavation occurred on Saturday and all excavated material was live-loaded directly into

NYC DEP HAZ MAT (Continued) **S102143390**

trucks - total of 205.1 tons of soil were removed - six endpoint sidewall soil samples were collected at the base of the excavation around the perimeter and two endpoint bottom soil samples were collected for 8260/8270 analyses proposed remedial activities (page 27): - will replace former well FN-15 with a 6 inch diameter well FN-15R following the re-surfacing of the area - well FN-15R will be installed to a depth of 15 ft bg, with 1 ft of riser and 14 ft of screen - monthly gauging for wells FN-15R, FN-35, FN-40, FN-12 and FN-14 with product removal, if noted - wells in alley will be gauged for a period of six months - well gauging will be discontinued if no LNAPL noted in alley after six month's monitoring - single phase LNAPL removal will continue at MC-1 until LNAPL is removed from this well - VEFR will be performed at MC-1 on a quarterly basis until LNAPL is removed from this well - absorbent boom in the creek will be maintained and replaced as needed - wells MC-1, MC-2, MC-3, MC-4, FN-34, FN-28A and GQ-41 will be sampled for VOC/SVOC to investigate groundwater near the creek - wells FN-12, FN-14, FN-15R, FN-39, FN-40 and FN-22 will be sampled for VOC/SVOC to investigate groundwater near the alley - interim remedial measure progress report will be submitted semiannually - upon approval of RAWP, site capping will be performed - a RAR will be submitted including deed notice, engineering control for soil, monitored natural attenuation for groundwater under site management plan as per gauging data table, product was not observed in any well except MC-1 and FN-15 since Dec. 2017. as per submitted report, total of twelve (12) wells are currently being monitored: FN-12, FN-14, FN-19, FN-22, FN-28A (or FN-28), FN-34, FN-39, FN-40, FN-42, MC-2, MC-3 and MC-4. well FN-15 was recently removed during excavation in alley and a product recovery system installed in well MC-1. 10:05 AM:- sent email to Mr. McGaha and asked him to submit a re-revised report correcting/including following: - last bullet on page 30 reads: Recorded Declaration of Covenants and Restrictions (if required) . This is required. - as per key note on figure 3, endpoint sample locations are indicated as proposed monitoring well locations - as per list of Figures on page 4, Figure 5 should be Location of Waste Classification and Post Excavation Sampling Points , but figure 5 on page 48/49 is surrounding Land Use Map - as per section 2.2.9 on page 27, field notes should be in Appendix E, but it only includes site photographs - as per section 2.4 on page 27, excavation was performed in the vicinity of monitoring wells FN-14, FN-15 and FN-40, but as per last paragraph on page 20, soil near FN-40 and around FN-15 were excavated - as per appendix list on page 6, Appendix F should be Result of Slug Test, but it is missing - analytical results of waste classification are missing in Appendix G - report is missing pics of replaced boom in the creek - report missing couple of pages on Table 1 (missing gauging data for 08/31/18 to 12/07/18, 05/10/19 to 08/02/19, and 11/08/19 to 01/03/20) email copied to Mr. Abraham, Arthur Schwartz and LEP Management. 02/12/20-Hiralkumar Patel. received email from Mr. McGaha (at 4:52 PM on 02/11/20) stating that replacement well at FN-15 has been scheduled for installation for early next week. 02/20/20-Hiralkumar Patel. received email from Mr. McGaha (at 3:48 PM on 02/19/20) stating that well installed is rescheduled for next week. 02/26/20-Hiralkumar Patel. 2:17 PM:- received email from Mr. McGaha. he mentioned that they have rescheduled the well installation for next Tuesday (03/03/20). they are trying to schedule a vacuum extraction event for next Tuesday also. 03/02/20-Hiralkumar Patel. received email from Mr. McGaha (at

NYC DEP HAZ MAT (Continued) **S102143390**

12:22 PM on 02/28/20) with a revised Limited RIR including correct/missing information as requested in email dated 02/06/20. 05/21/20-Hiralkumar Patel. 3:05 PM:- received email from DEC Austin. he received pics/video from Newtown Creek Alliance showing water leak from the site (which now occupied by a concrete plant) into the creek and cement dust cloud over the concrete plant. 05/26/20-Hiralkumar Patel. 10:11 AM:- sent email to Mr. McGaha has asked him to provide update on installation of well FN-15R and result of well gauging/VEFRring. also asked him to mark maps for location of MC-3 and MC-4. 1:20 PM:- visited site to confirm report of water leak and cement dust at the site. no cement dust cloud or water leak noted at the site. no petroleum sheen noted in boomed area at the end of the creek. reviewed video sent by Newtown Creek Alliance which shows low water level in the creek. as the water level in the creek was high during the inspection, there was no water leak observed. the northwest portion of the site (at the end of creek where well MC-1 is located) was previously used as a parking lot and now being used for lumber storage. the remaining site (more than 75%) which used to be a lumber storage yard until late 2019 is now occupied by a concrete plant. as per lumber yard operator, they sold site lease in Nov. 2019 and construction of the concrete plant begun in Nov. 2019. the concrete plant started its operation in Feb. 2020. concrete plant uses entrance on Morgan Ave for truck entering the plant and uses access at the end of south alley as exit route for trucks. the entire site is now capped with concrete surface. noted a new well (possibly FN-15R proposed in Limited RAR) in previously excavated area in the alley. lumber is stored, around existing wells, on northwest portion of the site. due to heavy operation, could not confirm existence of previously installed monitoring wells in the concrete plant area. 07/08/20-Hiralkumar Patel. 12:24 PM:- sent email to Mr. McGaha and asked him to provide update on installation of replacement well and well monitoring/product recovery. 07/09/20-Hiralkumar Patel. Willis Elkins (welkins@newtowncreekalliance.org) of Newtown Creek Alliance reported another spill (# 2002669) due to sheen observed in creek. 07/10/20-Hiralkumar Patel. 10:12 AM:- spoke with DEC Sekhon who visited site yesterday. he did not observe any petroleum sheen in or out of the boom area. 07/23/20-Hiralkumar Patel. DEC Austin received a complaint from Newtown Creek Alliance about some water discharge from the concrete plant at the site. 12:30 PM:- visited site to inspect any dust/oil discharge into the creek from the site. noted water dripping from behind the bulkhead along the concrete plant, but no signs of any concrete dust or petroleum discharge noted. noted some silver sheen at the end of creek, but no petroleum sheen was noted in the creek. during inspection, noted two 55 gal drums near well MC-1. also noted that the well MC-1 was open and oil recovery pump was outside the well. 07/27/20-Hiralkumar Patel. DEC Austin received email from Newtown Creek Alliance including pics of drum/oil recovery hose near well MC-1. 07/28/20-Hiralkumar Patel. discussed with DEC Austin. he asked to readjust hard boom to close open area at one end and also to replace dirty sausage boom. 9:28 AM:- spoke with Mr. McGaha and inquired him about open well MC-1. Mr. McGaha stated that Aaron (site representative) reported some issue with float within the well. so Aaron removed oil recovery system to fix the float. asked Mr. McGaha to schedule site visit to fix hard boom/replace sausage boom/gauge wells. 10:37 AM:- sent email to Mr. McGaha and asked him to provide site updates (including installation of well FN-15R and product recovery) and schedule for boom

NYC DEP HAZ MAT (Continued) **S102143390**

fix/replacement. email copied to Mr. Abraham, Arthur Schwartz and LEP Management. 07/29/20-Hiralkumar Patel. 2:31 PM:- received email from Mr. McGaha stating that contractor is expected to tighten the hard boom and replace the soft boom tomorrow. he also mentioned that the LNAPL collection drum was reportedly a temporary condition and has been cleaned up. 07/31/20-Hiralkumar Patel. 2:25 PM:- received email from Mr. McGaha including site pics confirming fixing/replacement of booms. he mentioned that the soft boom has been replaced and a pipe was installed along the bulkhead to allow the rise and fall of the hard boom that is now closer to the bulkhead. also, the drums near MCMW-1 have been cleaned up. 08/03/20-Hiralkumar Patel. DEC Austin received pics from Newtown Creek Alliance showing some used booms stockpiled atop the bulkhead. 1:40 PM:- sent email to Mr. McGaha including pics of used booms stored atop the bulkhead. asked him to have these booms removed immediately. also asked him to submit an interim remedial measure report as proposed in the limited RAR. 08/05/20-Hiralkumar Patel. discussed with DEC Austin, OGC and RD. based on review of available information, Austin asked to visit the site during low tide to inspect bulkhead/outfall adjacent to the site. 10:27 AM:- sent email to DEC Susan Maresca requesting help to get tide cycle near the site. email copied to DEC Austin. 08/06/20-Hiralkumar Patel. 6:00 PM:- visited site during low tide. no signs of oil seepage were noted from bulkhead near well MC-1 or from an outfall (which is approx. 50-60 ft north of well MC-1 location). noted some open areas in bulkhead. no sheen was noted on water. oily garbage bag and wheelbarrow were noted on-land near well MC-1. also noted garbage bags (possibly containing dirty booms as per site occupant) on side of bulkhead. the soft boom that was placed in the creek on 07/30/20 was found partially soaked and needs to be replaced. 6:28 PM:- left message for Mr. McGaha. 08/07/20-Hiralkumar Patel. 1:11 PM:- sent email to Mr. McGaha including site pics taken yesterday. asked him to have boom in creek replaced with clean one, clean/remove oily debris and bags containing used booms. 08/11/20-Hiralkumar Patel. 11:20 AM:- received email from Mr. McGaha. he mentioned that the boom in the creek is new. a piece of metal roofing fell in the water, landing on the boom and causing it to be stained with mud. the spent boom has been secured in drums which should be picked up next week. Mr. McGaha stated that the Interim Remedial Measures Report is being finalized, and needs to be reviewed by the property owner. 08/19/20-Hiralkumar Patel. 12:03 PM:- received email from Mr. McGaha including an IRM report which was found incomplete/unacceptable. the report also includes information that has already been submitted previously. 2:34 PM:- sent email to Mr. McGaha and asked him to submit a revised report including only details of work performed since Jan. 2020. asked him to submit a revised report including/correcting following: - the report states on page 10 that 'capping of the site with concrete was performed between March and May 2020', but as per on-site occupant the site was capped and the on-site concrete plant was in operation by Feb. 2020. Please confirm this timeline and update current use of the site - revised Table 1 including well gauging measurements since Jan. 2020 - remove tables 2 (post excavation sample results) and 3 (soil cleanup objectives) - revised scaled site plan including 'all' existing monitoring wells (submitted figures don't include location of wells MC-3, MC-4 and FN-15R) - (no need for Fig. 2 and 3 which were submitted previously in the Limited RAR) - construction details (well depth/diameter, screen length/depth, riser length/depth) of

NYC DEP HAZ MAT (Continued) **S102143390**

replacement well MW-15R - disposal manifest for oil impacted booms removed from the creek to date. - details about method/condition that will be used to determine need for vacuum enhanced fluid recovery from well MC-1 - schedule for sampling of existing wells for lab analysis - revised schedule for well gauging and report submission {all existing wells must be gauged monthly (instead of quarterly) and reports must be submitted quarterly (instead of annually)} email copied to Mr. Schwartz, LEP Management and Mr. Abraham. 08/20/20-Hiralkumar Patel. 10:21 AM:- received email from Willis Elkins from Newtown Creek Alliance including pics showing accumulation of dark material on outside of hard boom at the site. 2:30 PM:- visited site to confirm any product seepage/accumulation inside/outside boom. no signs of any sheen or product seepage were noted in the creek. noted few 55 drums at the site possibly storing previously removed soft booms that were stored in garbage bags atop bulkhead. 2:44 PM:- sent site pics to DEC Austin. 08/28/20-Hiralkumar Patel. 10:53 AM:- received email from Mr. McGaha including a revised IRM report but it needs to be re-revised to clarify/correct/include information. 09/09/20-Hiralkumar Patel. 10:52 AM:- sent email to Mr. McGaha and asked him to submit re-revised report including/correcting/clarifying following: - as per information provided to date, the oil recovery system in well MC-1 is equipped with floatable sensor and it pumps only oil and not oil and water. and as per the revised report, the 275 gal tank associated with the oil recovery system has been emptied five times since installation. is that mean, approx. 1,000 gal of oil recovered from MC-1? or does this system pumps water also? if it pumps water also, then what is % of oil in total volume removed from the tank? - the well gauging measurement table needs to be revised. first of all, it does not include any details about depth to water for wells FN-12, FN-39, MC-2, MC-3 and MC-4 (as per well data monitoring forms included in Appendix E, wells MC-3 and MC-4 were found dry but this information is missing in the table). second, there are two different sets of data for 01/10/2020. third, as per the table, well FN-15 was present with no product during gauging in month of Jan, but the well was removed during excavation in Nov. 2019. - include well gauging data after 07/10/20 also asked him to provide schedule for next well gauging. as per the report, there are total of fourteen (14) wells available to gauge. asked Mr. McGaha to make sure that all fourteen wells are accessible during this site visit. also recommended him to collect groundwater samples from these wells during the visit. email copied to Mr. Schwartz, LEP Management and Mr. Abraham. 09/24/20-Hiralkumar Patel. 12:49 PM:- sent email to Mr. McGaha inquiring update on re-revised report and schedule for next well gauging. email copied to Mr. Schwartz, LEP Management and Mr. Abraham. 10/09/20-Hiralkumar Patel. 11:25 AM:- received email from Mr. McGaha. he mentioned that groundwater is influenced by the tide and at times the floatable sensor is swamped resulting in the collection of water rather than oil. also the floatable sensor can stick causing it to collect water. tank pumping contractor reported presence of 10-20% of oil in the tank. Mr. McGaha stated that gauging was performed at MC-3 and MC-4 but notation of no water was not added to the table. gauging was not performed at MC-2, since this well is no longer accessible. well FN-12 has not been relocated since the excavation in the alley. a metal detector will be used to locate and uncover this well location. Mr. McGaha will submit an amended report including all available well gauging data. 2:09 PM:- sent email to

NYC DEP HAZ MAT (Continued) **S102143390**

Mr. McGaha and inquired him about reason for no accessibility to well MC-2. also asked him to schedule site inspection on 10/22/20, if possible. 2:41 PM:- received email from Mr. McGaha stating that well MC-2 is not accessible as tenant placed storage container on it. 10/14/20-Hiralkumar Patel. 10:10 AM:- received email from Mr. McGaha stating that container (over well MC-2) cannot be moved. 10/22/20-Hiralkumar Patel. 9:00 AM:- visited site and met Mr. McGaha and Aaron Abraham. Aaron gauged wells MC-1, MC-3, MC-4, FN-14, FN-15R, FN-19, FN-22, FN-28, FN-34 and FN-40. well MC-2 was not accessible due to storage container at the location. wells FN-12, FN-39 and FN-42 were not accessible as were buried under dirt/concrete. Mr. McGaha had brought GPR to locate wells FN-12, FN-39 and FN-42. during well gauging in south alley, another monitoring well was noted south of well FN-40 and west of well which is listed as FN-22 in reports from McGaha Consulting. reviewed old site maps and noted that the well FN-22 listed in reports from McGaha Consulting is actually well FN-24 and the unknown well noted during site visit earlier today is well FN-22. inspected creek during the site visit. sheen or product was not observed in the creek, but the soft boom was found stained. asked Mr. McGaha to replace the soft boom in the creek. observations during well gauging: - well MC-1: this well is equipped with an oil recovery system and has a floating sensor in it. the sensor was removed for well gauging. layer of oil was noted on floating sensor. very little oil was noted on water using oil/water interface, but noted a thick layer of oil on oil/water interface probe once removed from the well. Mr. McGaha mentioned that system in well MC-1 continuously pumps oil into oil/water separator tank and that could be the reason for not detecting much oil using the oil/water interface. asked Mr. McGaha to gauge oil/water separator tank weekly. also asked him to turn off oil recovery system in MC-1 once a month and gauge well MC-1 24 hours after turning off the system. - well MC-3: this well is within 10 ft to the northeast of well MC-1. no product was noted in well MC-3. - well MC-4: no oil detection by oil/water interface probe, but oil sheen noted on the probe. asked Mr. McGaha to place an absorbent sock in the well and have the sock inspected/photographed weekly. - well FN-14: no product/sheen observed - well FN-15R: no product/sheen observed - well FN-19: no product/sheen observed - well FN-22 (actually well FN-24 as per historical maps): no product/sheen observed - well FN-28: no product/sheen observed - well FN-34: no oil detection by oil/water interface probe, but oil sheen noted on the probe. asked Mr. McGaha to place an absorbent sock in the well and have the sock inspected/photographed weekly. - well FN-40: this well is approx. 30 ft southeast of well FN-15R. area around well FN-15R was excavated in Nov. 2019. during well gauging today, approx. 1 ft of heavy product was noted in well FN-40. asked Mr. McGaha to initiate product recovery from well FN-40. Mr. McGaha recommended excavation around well FN-40 to expedite remediation. asked Mr. McGaha to submit the pending re-revised report including observations/data of today's inspection, and recommendations/proposals to address product gauging/recovery in wells MC-1, MC-4, FN-34 and FN-40. 12:45 PM:- sent email to Mr. McGaha and informed him confusing notation about well FN-22 and FN-24. asked him to include the actual well FN-22 in future well gauging/monitoring/sampling. asked him to correct well notations in the revised report. email copied to Aaron. 10/23/20-Hiralkumar Patel. 12:15 PM:- sent email to Mr. McGaha and asked him to immediately

NYC DEP HAZ MAT (Continued) **S102143390**

remove product from well FN-40. email copied to Aaron. 1:07 PM:- received email from Aaron Abraham confirming that he pumped out the well FN-40 today. 10/29/20-Hiralkumar Patel. 2:05 PM:- sent email to Mr. McGaha inquiring updates on re-revised report including details about recent site inspection and recommendations based on field observations. email copied to Mr. Abraham. 11/02/20-Hiralkumar Patel. 1:45 PM:- received email from Mr. Abraham. he stated that he has pumped well FN-40 in the alley that had product, removing nearly all product, and now it has only a sheen. he has put in an absorbent sock which should eliminate the sheen. he also put absorbent socks in the two wells in the small yard by the water that had a sheen. he will measure large oil tank today and forward the results to Paul. 12/16/20-Hiralkumar Patel. received copy of a joint permit application package for bulkhead replacement at the site. - four borings (B1 through B4) were installed along the bulkhead - boring B1 was in area of existing well MC-2 - boring B4 was in area of existing well MC-1 - silty sand, clay, wood and fill material were noted in borings - groundwater was noted at 14 ft bg in B1, 12.5 ft bg in B2, 8 ft bg in B3 and 12 ft bg in B4 noted following issues with the bulkhead replacement application: - no pollution control methods proposed in section 6 (i) of the Joint Application Form - incorrect information in section E.1 (g) of Full Environmental Assessment Form Part 1 - Project and Setting. there is history of storage of chlorinated solvents in two of the seven major storage tanks, but the applicant has failed to indicate that - the applicant has only listed remediation project # 241117 in section E.1 (h) of Full Environmental Assessment Form Part 1 - Project and Setting, but has failed to mention spill cases at the site (total of eleven spills reported at the site to date) 1:28 PM:- sent email to Mr. Abraham and reminded him about pending revised report including additional remedial activities discussed during the site visit on 10/22/2020. email copied to Mr. McGaha. 12/22/20-Hiralkumar Patel. received email from Mr. McGaha (at 6:55 PM on 12/21/20) including a revised interim remedial measure report. Mr. McGaha mentioned that LNAPL in well FN-40 has been reduced to a sheen, therefore, the remediation approach is to monitor this well for a little longer. summary of IRM: - on 01/19/20 and 08/01/20, absorbent boom, used to control a petroleum sheen on the water, was removed and replaced - on 03/05/20, well FN-15 was replaced by well FN-15R at the same location. well FN-15R was constructed with 2 inch diameter riser from grade to 1 ft bg and screen from 1 ft to 20 ft bg - on 03/20/20 and 07/20/20, the LNAPL recovery system 275 gal AST was emptied and a high volume extraction event was performed at MC-1 - as per disposal manifests, total of 1,700 gal of oily water was disposed on 03/20/20 and 1,000 gal of oily water was disposed on 07/20/20 - weekly gauging events have continued at FN-14, FN-19, FN-22, FN-28A, FN-34, FN-40, FN-42, MC-3 and MC-4 - automated and manual LNAPL recovery is ongoing at MC-1 - proportions of oil in oil/water mixture removed from the site is estimated to be approx. 20% oil - spent absorbent boom from the creek are stored in drums for later disposal proposed remedial activities: - wells FN-14, FN-15R, FN-19, FN-22, FN-28A, FN-34, FN-40, FN-42, MC-3 and MC-4 will be gauged monthly for six months, after which time, if no LNAPL is identified, monthly gauging will be discontinued - absorbent socks will be used to passively remove sheen of oil in wells FN-34 and FN-40 (also include well MC-4 where sheen noted during gauging on 10/22/20) - single phase LNAPL removal will continue at MC-1 until LNAPL is removed from the well - LNAPL removal

NYC DEP HAZ MAT (Continued) **S102143390**

system in MC-1 will be shut down for a day once per month to allow the pump to be removed from MC-1 and LNAPL thickness to be gauged. at this time, the thickness of oil in the AST servicing the LNAPL recovery system will also be measured - VEFR will be performed at MC-1 on a quarterly basis until LNAPL is removed from this well - absorbent boom in the Newtown Creek will be maintained and replaced as needed until a sheen on the groundwater is no longer detected - wells MC-1, MC-2, MC-3, MC-4, FN-34, FN-28A and GQ-41 (not shown on map) will be sampled for VOCs/SVOCs to investigate groundwater near the Newtown Creek - wells FN-12, FN-14, FN-15R, FN-39, FN-40 and FN-22 (FN-24 as per historical maps) will be sampled for VOCs/SVOCs to investigate groundwater near the alley (as per note in table 1, wells FN-12 and FN-39 are generally covered with soil due to traffic in alley) - upon removal of LNAPL at MC-1, a remedial action report will be submitted detailing the installed site cap, including a deed notice, engineering controls for soil, monitored natural attenuation for groundwater under a site management plan ---------- the proposed remedial activities in the IRM includes only submission of a remedial action report upon removal of LNPAL from MC-1, but does not include any proposal to submit an interim reports (bi-annual interim remedial action reports should be submitted). 01/22/21-Hiralkumar Patel. 11:29 AM:- sent email to DEC Lisa Horwitz including comments on the bulkhead replacement application. email copied to DEC Austin, DEC Falls and OGC Heather. 11:31 AM:- sent email to OGC Heather including comments on the IRM Report and bulkhead replacement application. email copied to DEC Austin. 06/30/21-Hiralkumar Patel. 10:00 AM:- DEC Horwitz, DEC Falls, OGC Heather, Andrew Thyberg (andrew.thyberg@bayenviro.com) and Patrick McPeak (pmcpeak@peakcivilassociates.com). **need to add gauging data on site map.** **MOSF documents on e-docs are only part of larger file in box located in basement storage.**"

DEC Memo: "7/9/20 - Sekhon Got access to the creek through 200 morgan ave (Gotham Ready Mix). No sheen observed. Due to hot weather pieces of sediments burping up to the surface. DEC Austin updated. 7/14 - Sekhon Site visited again. very little amount of leftover sediments (from last week) noticed. No sheen observed anywhere in the vicinity. Case discussed with DEC Austin and closed. "
Remarks: "booms failing to keep oil contained"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 12/29/05 Transferred to E. Hampston via Spill Initiative. Contaced DLE caller who reported spill seeking update on referal to other Department representatives or issuance of tickets. 1/5/05 Lt. Fitzpatrick (DLE) indicated that the site was visited in conjunction with NYPD Auto Crimes group. He returned to site with ECO and tickets were issued. Consent Order R2-20030820-221 signed on 8/21/03. Close based on implementation of Order and regulation by DSHM. "
Remarks:	"Location is a junk yard. Various unpermitted discharges of automotive waste fluids found on ground surface at above location."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Control Code:	13
Control Type:	ENG
Date Record Added:	10/22/2013
Date Rec Updated:	05/31/2017
Updated By:	CHPOST
Site Description:	"Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel."
Env Problem:	"The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site."
Health Problem:	"The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied."

The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel."

Env Problem:	"The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site."
Health Problem:	"The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied."

Site Description:	"Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site.

FRITO LAY (Continued) **S109416391**

	Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel."

Site Code: 407689
Site Description: "Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel."
Env Problem: "The remedial plan for the site was implemented such that the site no

FRITO LAY (Continued) **S109416391**

longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals, such as lead and mercury, in soil throughout the site."

Health Problem: "The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied."

Site Code: 407689
Site Description: "Location: The site is located at 202-218 Morgan Avenue in an urban area in the north end of the Borough of Brooklyn, Kings County. To the north of the property is a warehouse, to the east and south is the English Kills, a tributary to the Newtown Creek, and to the west the site is bordered by Morgan Avenue, between Ten Eyck Street and Stagg Street. Site Features: The site property is approximately 2.8 acres in area and is currently undeveloped with no standing structures. Current Zoning and Land Use: The site is currently vacant, and is zoned for industrial use. The surrounding parcels are currently used for a combination of commercial and industrial use. Past Use of the Site: The site was previously used as a scrap metal yard. The activities related to this type of business are the apparent source of site-wide PCB contamination. Scrap activities and the presence of historic fill material are believed to be the cause of the site-wide metals contamination. Site Geology and Hydrogeology: The site is approximately 13 feet above mean sea level. Depth to groundwater is approximately 11 feet below ground surface. The nearest water body is the English Kills, a tributary to the Newtown Creek, which abuts the eastern and south sides of the site. Groundwater flow is to the southeast. The site soil is primarily fill material to the water table. Below the fill material the site is underlain by sand and gravel."
Env Problem: "The remedial plan for the site was implemented such that the site no longer presents a significant environmental threat due to the ongoing release of arsenic contamination from source areas in the soil to groundwater, as well as the high levels of PCBs and other metals,

FRITO LAY (Continued) **S109416391**

	such as lead and mercury, in soil throughout the site."
Health Problem:	"The site is fenced and covered with asphalt and concrete; therefore, people are not expected to come into contact with site-related contaminants in soil and groundwater unless they dig below the site cover system. People are not coming into contact with the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site buildings which are developed and occupied."

DEC Memo:	"6/13/20-Lin-According to caller, a former employee was suspected to open the valve to a diesel tote and about 40 gallons of diesel went onto facility concrete and a storm drain. The storm drain goes to the Newtown creek but the oil was contained in the drain and did not make it out to the creek. ACV was hired to perform the cleanup and pump out the drain. DEC Zhune was dispatched to site. Site contact: Leon Bangari 917-468-8097 ACV environmental 718-456-7779 ext 5516 6/13/20-Zhune responded to this spill. During my inspection I observed the surface cleaned. It was cleaned by Watco personal. Watco checked the four storm drain and the oil did not go to the creek, ACV confirmed that the oil did not reach the creek. ACV was going to pumped out the oil from the storm drain. Sunil- 347-865-9937 3/11/21- Zhune- Jesse Rivera from ACV Enviro sent the following email. Attaches are the T&M and manifest document for the clean up at Varick Ave. ACV was called by Watco companies to pump out and wash down storm drain that was impacted by approx.. 2-3 gallons of diesel. ACV cleaned the affected storm drain and also 3 more that were connected. Spill Closed."
Remarks:	"clean up in progress was removed from storm drain"

DEC Memo: "7/30/10 - Raphael Ketani. Advanced Tank Service (Jeff McKenzie - (800) 440-8265) did a tank system test. The system failed and the spill was called in today. The subject UST is 1,000 gal. and contains #2 oil. It was installed on 12/1/88. The site is Roadway Express Inc., 1313 Grand Street, Brooklyn. The local contact is Marc Shirley (212) 292-2210. There are two PBS cases, #2-157724 and 32-043826. The #2-157724 case shows 17 tanks that were all closed prior to March 1991. The #2-043826 case shows 21 tanks. Most of the tanks had diesel or gasoline. One 1,000 gal. tank has #2 oil. Sixteen tanks were

YRC BROOKLYN (187) (Continued) **1004756458**

closed prior to March 1991. Four tanks were closed and removed on 9/1/88. The one active tank is the 1,000 gal. UST. Mail goes to Roadway Express Inc., 1077 Gorge Blvd., Akron, OH, 44310, attn: Phyllis Tainish - Dept. A-20, (330) 258-2475. The owner is Roadway Express, 1077 Gorge Blvd., Akron, OH, 44309, (216) 384-1717, local number (718) 821-5410 - Jack Leslie T.M. A TTF letter was sent to the mailing address. 8/27/10 Received 2 voicemail messages from Jeff Lawson, consultant from Cleveland, OH. Phone: (440)268-0333. He requested more time to respond to ttf letter. I was not aware of this spill case until yesterday. This is a non-regulated site since the tank stores less than 1000 gallons of heating oil. He requested more time to respond to the ttf letter and he believed the site was unregulated. I called him today at approximately 3:15 PM and left a message allowing more time for a response; stating that based on the info in DEC database the site is unregulated, but the spill must be addressed as per NL; and that he should call me this afternoon or next week so we can discuss the case. bf 9/20/10 Found letter dated 8/27/10 on my desk. It was received by DEC on 9/3/10. The letter asks the questions that were answeered in the voicemail on 8/27/10. Letter is in e-docs. bf 1/19/11 Received voicemail from PBS Voicemail at 9:46 from Jeff Lawson. Phone:(440)268-0333. He stated that they are ready to close the tank and would like to discuss. I returned call at approx. 1:30 PM and left a message to call me. bf 1/26/11 Spoke to Mike Ruffoni of Reliance Environmental (717)735-9508. Explained that he needs to address ttf. They are still not sdure why tank failed. Tank removal is planned. bf 2/22/13-Vought-This spill transferred from Falvey to Vought as Vought performing comprehensive file and site review in relation to reviewing results for above tank excavation and removal as well as all former tanks on property. This spill closed and referred to open Spill 0910021 at same site."

Spill Record Last Update: 2013-02-22
Spiller Name: DERRIC KEARNS
Spiller Company: NORTH AMERICAN TERMINALS MANAGEMENT
Spiller Address: 1313 GRAND ST
Spiller Company: 999
Contact Name: DERRIC KEARNS
DEC Memo: "Phase 2 being done for a property transfer. Two groundwater samples slightly over limits for Benzene. Property Owner is: North American Terminals Management Inc. Attn: Miss Coleman Natmi Truck Terminals LLC c/o LaSalle Investment Management Inc. 100 East Pratt St.20th Flr Baltimore, Maryland 21202 No CSL letter was sent out, because Mr. Kearns said a full Phase 2 report was completed and he believes NYSDEC may just close the case out with the minor benzene numbers. Sangesland asked Mr. Kearns to submit the report to Hasan Ahmed and wait for further direction from the DEC for either closure or additional work. 02/24/10-HRAHMED-Deric Kearns (267 685 1800) called to get an update. Ask him to send me an electronic version of the report. 10/27/11 - Austin - Spill Transferred from Ahmed to Vought - end 7/31/12-Vought-Received call from and spoke to Mathew Sabbetta (Arcadis Ph:267-685-1800x1803). Contact is Robert Zimmermann (Arcadis Ph:330-434-1995). Site has a 1000-gallon #2 fuel tank that was noted in 2/11. Approximately fifteen soil borings were performed and one monitoring well was installed. 8/30/12-Vought-Reviewed July 2011 Subsurface Investigation Report and UST Investigation Report received via email on 7/31/12 from Matt Sabbetta. Complete file review by Vought: Vought reviewed Spills and PBS Database: PBS #2-043826 (expired 12/01): One 1000-gallon #2 fuel oil UST in service; one 2000-gallon diesel UST closed in 1998; two 4000-gallon diesel USTs closed in 1998; one 500-gallon gasoline UST closed in 1998; eight 550-gallon gasoline USTs and eight 550-gallon diesel USTs in service. PBS #2-157724(expired 10/92): Seventeen 550-gallon diesel USTs in service. SPILL 8708981: 1000-gallon UST system failed hydrostatic test and product to be removed and tank replaced as per caller remarks. No spill notes and no reports in e-docs. Spill closed 10/7/92. SPILL 9808077: As per DEC Remarks, Tank Closure Report from APEX shows that site has been adequetely cleaned after the removal of fuel, diesel, and waste oil USTs. Approx 300 tons of soil was disposed of properly and the excavations were all backfilled with certified clean fill. A NFA letter was sent to Phyllis Tainish - the representative of Roadway Express Inc., at 1077 Gorge Blvd in Akron, OH 44310. This spill case closed on 9/12/07. (JS/MS) Vought noted no report in edocs and no file able to be located in historical file room. SPILL 0103983: Caller Remarks noted that CRACK IN FUEL LINE CAUSED SPILL - SPEEDY DRY CONTAINED SPILL AND CLEAN UP IN PROGRESS . Spill closed on 7/28/01 and DEC remarks spill was all cleaned up . No reports in e-docs. SPILL 1004888: Tank Test failure of a 1000-gallon fuel oil UST and still spill open. No files in e-docs. SPILL 1130727: Spill report of contaminated soil. E-docs had Underground Storage Tank Closure report submitted by Reliance Environmental dated 3/28/11. Spill closed on 11/30/11. Removal of one 1000-gallon UST containing #2 fuel oil. Tank was out of service since 11/09 and was used as part of the maintenance garage heating system. UST was in concrete vault and 50-gallons of sludge and waste was removed from UST and tank and associated piping was removed from the ground. No holes or voids observed in tank and tank appeared to be in good condition . Groundwater was encountered at an initial depth of 5 feet below ground surface within the tank grave and was observed to

YRC BROOKLYN (187) (Continued) **1004756458**

contain a petroleum hydrocarbon layer . Elevated PID readings and staining in soils in northeastern sidewall of excavation at approximately 4.5'bg. Final excavation was 15' x 12' x 6'. No soil samples collected from base of excavation as they were below soil water interface. Photo in report shows recovery from water table in excavation. Soil analyticals show PAH exceedences attributable to fill. Spill closed by DEC Piper on 11/30/11 as no CP-51 Unrestricted Use exceedences for VOCs. 9/17/12-Vought-Continued File Review by Vought. Vought spoke with DEC Falvey (project manager of open TTF spill 1004888 and noted that UST that was subject of TTF in 1004888 was removed as subject of closed spill spill 1130727. Falvey agreed that spill 1004888 could be closed and that no PBS update was needed to reflect closure of 1000-gallon #2 fuel oil UST since all other tanks were administratively closed and the site falls currently under the 1100-gallon PBS registration requirement. July 2011 Subsurface Investigation Report (Arcadis)-4/25/12. Sampling done without written instruction from DEC as numerous requests submitted to DEC project manager Hasan Ahmed with out a response. Groundwater sampling done following discussion with DEC Ahmed and RSE in 6/10. DEC required soil and groundwater sample be taken across various locations onsite however DEC did not send letter formalizing requirements. Soil borings from previous investigations also included in report. Phase I and Phase II completed in 2009 and showed elevated SVOCs, metals in soil and 43ppb benzene in groundwater. In 2009 soil temporary wells were installed and subsequently abandoned. Maximum benzene concentrations in groundwater of 17ppb and spill 0910021 was reported. A Groundwater Investigation Report was submitted to DEC on 12/21/09. DEC Ahmed during a follow up conversation requested borings locations be placed around various former USTs, near a GPR anomoly and in the central asphalt lot. Soil analyticals showed no CP51 SCO exceedences and groundwater analyticals showed 57ppb napthalene(SW5). Report concludes that additional investigation is not warranted. Vought spoke to DEC Ahmed who forwarded email for 12/21/09 report however due to large file size, a separate CD would have to be sent from Arcadis. Former 1000 Gallon Underground Storage Tank (UST) Investigation (Arcadis)-4/25/12. Seven soil borings installed around 1000-gallon gasoline UST including collection of seven groundwater samples. No soil samples were above Part 375 Unrestricted SCOs excluding elevated PAHs which can be attributed to fill material. Groundwater samples also showed no TOGs exceedences. 9/17/12-Vought-Called and left message for Arcadis (Zimmerman) to send in Groundwater Investigation Report dated 10/23/09 via CD and Tank Closure Report for spill 9808077. Vought reviewed abbreviated Phase II Groundwater Investigation Report received from email from DEC Ahmed. Vought added Abbreviated Phase II to e-docs. Additional groundwater samples collected in August 2009 around the existing and former USTs. Cover Letter dated 12/21/09 for Report notes that either Newtown Creek or historic fill is source of dissolved phase benzene observed in site groundwater . Seven borings installed via Geoprobe and four of these were installed to assess downgradient locations of potential sources areas . Maximum concentrations of 17ppb benzene were noted. Report notes that there is not ample background information available at this time to determine potential sources . 9/18/12-Vought-Called Deric Kearns and left message to return call and that DEC needed copy of 1998 Tank Closure Report. Vought also sent email to Kearns with DEC requirements including submission of USTs and piping on site plans for both PBS Registrations, Submission

YRC BROOKLYN (187) (Continued) **1004756458**

of Tank Closure Report for closed spill 9808077 or possible investigation around USTs and piping as no leak detection and no tightness testing data in PBS Registration, closure of open spill 104888 at same site and referral to open spill 1103727, Submission of complete Groundwater Investigation Report dated 12/21/09. Vought received email from Kearns that We received your email and voicemail messages, thanks for laying these items out for us. We have begun to review our historic files and are actively trying to track down these items. I will contact you directly if we have any questions. 12/12/12-Vought-Received call from contact (Claudio) who is working for potential purchaser (Tony Argento) who is wishing to purchase property for use of production films. Contact for Claudio is Ph:917-939-8034 email:claudio@broadway-stages.com). Vought forwarded 9/18/12 email string to Kearns to Claudio with cc to Kearns. 2/12/13-Vought-Received call from and spoke to Ruben Byerley (YRC Freight Ph:913-344-3644 email:ruben.byerley@yrcfreight.com) and he is manager of environmental services for the corporate owner and operator. He was requesting file review and Vought told him to return call to Vought in one week for update. 2/20/13-Vought-File review by Vought. Vought received two CDs dated 12/13/12 that contained the following files: APEX UST Closure Report(9/20/99) ARCADIS Subsurface Investigation (4/25/12)-reviewed by Vought above ARCADIS UST Investigation and Closure Report(4/25/12)-reviewed by Vought above ARCADIS Groundwater Investigation(10/23/99) ATC Phase I ESA (4/27/09) ATC Phase II ESA (4/27/09) Misc. Documents Relating to Former 3000-Gallon UST (1988) Document Review by Vought of above documents: Misc. Documents Relating to Former 3000-Gallon UST-1988. Proposal to replace 1000-gallon heating oil tank with all associated piping into the garage furnace and fill and abandon second tank near office with concrete slurry. Contamination was minimal because leak was caught almost immediately . 1000-gallon UST was replaced and 3000-gallon UST by office was filled with concrete. UST Closure Report (APEX Environmental)-9/20/99. One 2000-gallon, two (4000-gallon) and one 500 gallon UST were removed on 9/29/98. Diesel fuel used for refueling tractor trailers. English Kills/Maspeth Creek to the north and east and commercial properties to the south and west of site. Facility has two story office building with a large connecting loading dock. Product dispenser was dismantled and product was removed from the USTs. Tanks were reported to be in good condition with minor pitting and no holes. Soil excavation at diesel USTs was 28’x36’x10’deep and seven endpoint samples collected. Used motor oil UST excavation in garage was 12’x6’ and five endpoint samples were collected. 171 tons of soil were removed from the site. Soil endpoint analyticals for alll three tanks were non-detect for VOCs. Report recommends No Further Action. Phase I Environmental Site Assesssment (ATC)-4/27/09. Report notes that YRC Logistics is at site and report prepared for NATMI Trucking Terminals, LLC. Property was occupied by a saw mill and lumber yard before trucking terminal and maintenance facility was built onsite in 1959. Fill port and vent pipe noted adjacent to western exterior wall of the property’s office building. Scrap metal facility is potentially upgradient of site. Report recommends performance of a Phase II investigation. Property currently used as a cross-dock truck terminal by YRC Logistics and a truck maintenance facility is on the northern portion of the property. Phase II Environmental Site Assessment (ATC)-4/27/09. Phase II included a GPR survey and subsuface investigation. GPR found a 6-foot by 6-foot anamoly approximately two feet below grade in the

YRC BROOKLYN (187) (Continued) **1004756458**

area of the observed fill port and vent pipe on the southwestern portion of the property . Five Geoprobe borings installed to a maximum depth of 15'bg. Groundwater at 15'bg. Peat found at 6-10'bg in some borings and groundwater is from 5-8'bg. No petroleum related VOCs in soil and groundwater samples noted 43ppb benzene in sample B1. ATC recommends additional investigation to see if GPR anamoly is a UST and installation of monitoring wells to delineate bezene contamination in groundwater. Groundwater Investigation Report (ARCADIS)-10/23/09. Additional investigation by ARCADIS upon review of Phase II by ATC dated 4/27/09. Metals and PAHs in soils were indicative of historic fills and were not observed in groundwater. Purpose of investigation was to confirm 43pp benzene in B1 groundwater sample in ATC Phase II. Seven borings installed via Geoprobe. Groundwater analyticals show: 1.6ppb benzene (TW5) and 17ppb benzene(TW7). Groundwater samples analyzed for 8260/8270 analyses. Groundwater sample collected at B1 of ATC Phase II was non-detect for benzene. Possible sources of benzene include historic fill materials beneath the site and the close proximity of the sample locations to the heavily polluted Newtown Creek . Report recommends submission to DEC. 2/22/13-Vought-After completion of file review by Vought, spill closed due to minor benzene only detections in groundwater possibly attributable to historic fill and or contaminant contribution fron adjacent Newtown Creek or English Kills. Area also heavy industrialized for past 100 years. Groundwater benzene concentrations are within natural attenuation parameters and likley oxidizing conditions in soil necessary for promotion of aerobic degradation. Vought called YRC Byerly for address of spill closure letter for this spill and Spill 1004888 for same site and 1000-gallon UST TTF (removal discussed above). Received email from YRC Byerly that mailing address for Spill Closure Letter is: YRC Freight Attn: Ruben Byerley (MS-A650) 10990 Roe Ave. Overland Park, KS 66211 Vought sent out Closure Letter to Byerly via mail and email with cc to ARCADIS Kearns. Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits

YRC BROOKLYN (187) (Continued) **1004756458**

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

NEO RAY LIGHTING PRODUCTS (Continued) **1000139537**

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was AUSTIN 3/11/03 - SAMUEL- File available in active unassigned spill files. 8/18/2004 Consultant called to say there is a DEC Consent Order on this site which covers the tank. Tank was closed in place. Sangesland requested copies of soil boring/testing done under the tank to prove it is clean. When this information is submitted, DEC will closed the case out. 9/14/2004 Consultant called to say they can not find any historical soil boring work, so they have contracted with Impact Environmental to do new soil borings around the tank and sample them to EPA Method 8260. 10/14/2004 Sangesland reviewed a submittal from Maureen Frazier of Schillinger Environmental. They have hired Impact Environmental to do soil borings. A report should be submitted to DEC by 10/29/2004. 10/20/2004 Impact Environmental called in a new spill on the site. Found Diesel contaminated Soil Ref Spill #0408008 Both of these spills 0408008 and 9708693 have been closed and referred back to the original spill # 9702085 -"

BROWNFIELDS:
Name: 255 RANDOLPH STREET
Address: 255 RANDOLPH STREET
City,State,Zip: BROOKLYN, NY 11237
Program: BCP
Site Code: 534911
Acres: 0.427
HW Code: C224247
SWIS: 2401
Town: New York City
Record Added Date: 10/25/2016
Record Updated Date: 01/25/2021
Update By: JCGRATHW
Site Description: "Location: The site is located in an urban area on the north side of Randolph Street just east of Scott Avenue in an industrial section of Brooklyn. Site Features: Most of the 17,741 square foot (SF) property is covered with a 15,000 SF warehouse building with a small dirt lot located on the north side of the building. The site is adjacent to the Long Island Railroad (LIRR) right-of-way. Current Zoning and Land Use: The lot and the surrounding area are currently zoned M3-1 (Manufacturing/Industrial). There are no residential uses within the surrounding area. The property is currently vacant. Past Use of the Site: The site was last used for warehousing by Handy Lee Enterprises, an importer of Asian food products, from approximately 2006 until August 2015. The City Directory Abstract states the site was occupied by a sheet metal fabricator in the 1990s. Prior to this, according to Sanborn Fire Insurance Maps, the site was associated with the manufacture of ammonia for many decades, from at least 1907 to 1985. Sanborn maps from 1933 through 2007 show two exterior steel ammonia tanks and an acid storage area on adjacent property to the east, with no indication of production operations within the site. However, the 1907 Sanborn map shows the manufacturing facility in a different location on the block, with components of such facility within the footprint of the current site (acid tank and evaporation pan) or partially within the footprint of the current Site (storage area, grinding and mixing area, acid chambers). None of the Sanborn maps or other historical resources indicate the use or storage of chlorinated solvents, which are key contaminants of concern at the site. Site Geology and Hydrogeology: The depth to groundwater is approximately 15 feet below grade, with the flow towards the north."
Env Problem: "Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil, soil vapor and groundwater are impacted with tetrachloroethene (PCE) and its breakdown compounds: trichloroethene (TCE), cis-1,2-dichloroethene (1,2-DCE), and vinyl chloride. "
Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised

255 RANDOLPH STREET (Continued) **S120706187**

	as additional information becomes available."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD Called John (718) 497-6044, left message. Allison Walsh returned call. Allison is a Lawyer, representing APT Complex, (John). She asked that the tank test failure letter sent to her. Her address is 460 Park Avenue New York, NY 10022. # (212) 421-2150 Letter was prepared and sent 4/10/03. This facility is not registered with PBS E.R. Tank test letter was returned 5/2/03. Tank test failure letter sent to John 349 Scholes Street Brooklyn, NY 11206 E.R. 10/22/03. YK. Facility registered on 4/25/03 PBS # 2-608900. However, TT is overdue. 2/2/2004. YK faxed an old TTF letter dated April 10, 2003 to David Yudelson (212-421-2150 X 219) attorney for this property. 2/23/04. J.Krimgold talked to David Y. Tank taken out of service but

APT COMPLEX (Continued) **S105998649**

not close yet. Trade-Winds did soil borings(?). He should call me back today with more info. 3/24/04. J.Krimgold reviewed a letter report prepared by Trade-Winds dated 3/16/04. 3 soil samples was taken by drilling through the tank bottom of 3000 gal tank and 2 samples from 1100 gal tank. All came out negative. NFA letter on 3/24/04. "

DEC Memo:	"Referred to DLE for follow up. DEC Piper spoke with DLE Iovino on 4/8. Her inspection revealed no sighs of diesel spillage, tank or sheen on water or bulkhead. Bsaed on DLE inspection and anonynous call with no additional info, this spill is closed. "
Remarks:	">>> 4/7/2014 20:18 >>> The following information was received through the DEC website Report an Environmental Violation Online or sent directly by the complainant to an OPP dispatch mailbox: Who Did It: TNT Scrap Yard on Maspeth ave Brooklyn, NY. On Newtown Creek What Occurred: There is a large amount of what looks and smells like diesel fuel flowing into the Newtown Creek from the scrap yard. It is in the rear right hand side if looking from the water. When Did It Occur: 4/7/14. Late afternoon evening. Appears to be running with storm water run off. County: Kings Municipality: Brooklyn Location Or Address: 340 Maspeth Ave How Did It Occur: It looks like their old fuel truck is leaking out diesel into the creek. Complainants Name: Complainants Phone: Complainants Email: Date of Submittal: 04/07/2014"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 10/15/04-Vought-File review by Vought: Access Agreement-7/10/02. Access agreement for FedEx to remove USTs and portion of tankfield on adjacent property. Letter from Testwell Labs(Pearce) to FedEx(Swart)-7/10/02. Work proposal for installation of nine soil borings, field screening of soil samples, conversion of three of the borings into monitoring wells, quarterly sampling of the wells and further excavation of the soil and piping. Letter from Testwell Labs(Pearce) to DEC Vought-7/22/02. Soil samples were taken from the walls and groundwater after the underground fuel storage tanks and surrounding had been removed... Testwell recommends: 1)backfilling of UST excavation 2)SVOC's are due to fill material 3)if wells are deemed necessary they are to be installed at a later date after site work (piles and foundations) is complete 4)remaining vent lines terminate at surface level and remaining contaminated soil on adjacent property should be removed. Letter from Gannett Fleming (Ernst) to DEC Vought-8/13/02. This letter is intended to inform the NYSDEC of the projected site remediation activities. Based on the endpoint soil data (samples WSW and SSW no further action is recommended for the soil beneath facility footprint which is currently under construcion . No groundwater monitoring wells are proposed inside the facility. Gannett Fleming will provide a comprehensive site investigation report on both the UST removal and for the black tar like substance found in the southwestern portion of the site . Report from Gannett Fleming to DEC Vought-8/28/04. This letter provides a summary of the additional investigation activities and sample analysis that have taken place..... Removal of twenty (550-gallon) gasoline USTs and 900 tons of impacted soil. See above 7/22/02 entry for endpoint analyticals. Soil analyticals show 7750ppb 1,3,5-trimethylbenzene(WSW Wall) and 6470ppb xylene(WSW Wall), 110ppb benzene(vent x bottom), 110ppb benzene(Vent x sw), 120ppb benzene(n wall composite), 5900ppb 1,3,5-trimethylbenzene(n wall composite), 11000ppb 1,2,4-trimethylbenzene(n wall composite). Groundwater analytical from one well shows 40ppb benzene and 26ppb xylene. Black stained soil exhibiting a strong petroleum odor was observed adjacent to the southwestern portion of the existing warehouse . Seven test pits were dug to delineate the stained soil but no groundwater samples were collected. Report recommends: 1)no further actions for

FEDEX FACILITY (Continued) **S106004598**

soils south and west of the former UST area 2)additional delineation north and east of the former UST area via Geoprobe 3)installation of six montoring wells (two upgradient and four downgradient). Investigation activities will be provided to DEC in a supplemental site investigation report. Soil analyticals shos PAH exceedences throughout site due to fill material. Report from Gannett Fleming to DEC Vought-6/8/04. This letter report documents the results of investigative activities conducted.... A review of historic Sanborn maps indicate a Brooklyn Union Gas bulk petroleum storage and distribution terminal was present in the southwestern portion of the site in 1951. Installation of six monitoring wells. An additional well was installed to replace a well destroyed in the tankfield excavation. Groundwater at a depth of 8' below grade. ..groundwater flows to the north in the northern portion of the site. Groundwater flows converge to the east in the southern portion of the site . Groundwater analyticals show 21ppb ethylbenzene(MW1), 13ppb 1,3,5-trimethylbenzene(MW1), 97ppb napthalene(MW1), 10ppb benzene(MW2), 7ppb ethylbenzene(MW2), 93ppb napthalene(MW2), 20ppb benzene(MW7), 7ppb ethylbenzene(MW7), 35ppb xylene(MW7), 52ppb napthalene(MW7). Soil analyticals showed no VOC exceedences and SVOC exceedences attributable to fill material. Report recommends: 1)no further action with respect to soil 2)no further action for onsite groundwater due to poor regional groundwater quality . Report requests no further action. DEC requires: 1)one full year of groundwater monitoring prior to closure. 10/18/04-Vought-Sent letter with above requirement. 9/27/05 - Obligado - SITE TRANSFERRED FROM VOUGHT TO OBLIGADO 9/30/05 - Obligado - Called Manfred Bohms, left message. 10/03/05 - Obligado - Spoke with Manfred Bohms (516) 671-8440. Said that a final quarterly monitoring report should be received by Department in a few weeks. 11/7/05 - Obligado - Review final quarterly monitoring report. Ground water results show 28 ppb benzene (MW1), 28 ppb ethylbenzene (mw1), 10 ppb xylenes (mw1), 3 ppb benzene (mw3), 34 ppb benzene (mw7), 6 ppb toluene (mw7), 32 ppb xylenes (mw7), 150 ppb napthalene (mw7). Conclusions: GW data indicate ground water contmaination is stagnant. GW flow and quality have remained consistent throughout monitoring program. Stagnant gw plume indicate groundwater impacts representative of regional groundwater quality . Requests no further action. Will discuss with Joe Sun. 12/22/05 - Obligado - Spoke with Koon. Approves NFA. Minor residual contamination possibly coming from offsite - former Brooklyn Union is across the street. Spill closed. Letter sent. "

Remarks: "they were excavating a previously closed tank & came across it by the piping - they will excavate & stock pile the soil"

Control Code:	18
Control Type:	ENG
Date Record Added:	05/10/2010
Date Rec Updated:	11/08/2021
Updated By:	MXMAGLOI
Site Description:	"Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site. "

Env Problem: "Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion. "

Site Description:	"Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site. "
Env Problem:	"Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

	(DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. Site Code: 58133
Site Description: "Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory's parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

	the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site. "
Env Problem:	"Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. "
Health Problem:	"Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion. "

Site Code: 58133
Site Description: "Location: The Cornish Knit Goods/Cornish Mini-Mills site is located at 89 Porter Avenue, Brooklyn, NY. The former address of this site was 121 Ingraham Street/89-111 Porter Ave. The 0.57 acre site is in East Williamsburg, an urban area of Brooklyn. The tax map identifies the site as Block 2993, Lot 1. The site is bordered by Porter Avenue to the west, by Ingraham Street to the south, by Joyva Candy Factory’s parking lot to the east, and by Johnson Avenue to the north. Site Features: The site is completely covered by a four story building, which was renovated in order to be designated for restricted residential use. Current zoning/use(s): The site is in an area zoned M1-2, light manufacturing. The site building is currently operated as the Peter Jay Sharp Center for Opportunity (PJSCO). The building is used as shelter and rehabilitation center for homeless men. The surrounding parcels are currently used for a combination of commercial, industrial and residential. Historical Use(s): Until 1980 the property was operated by Cornish Knit Goods/Cornish Mini-Mills as a textile factory. From 1980 until 1995, the building was vacant, and

CORNISH KNIT GOODS/CORNISH MINI-MILLS (Continued) **S110043685**

it was illegally operated as a dry cleaning facility and as a stolen car scrap yard. In 2000, the property was owned by ABC Closing Corp. and the owner entered in a Voluntary Cleanup Agreement (VCA) with NYSDEC. In 2003, site ownership was transferred to Porter Avenue HDFC, a subsidiary of the DOE Fund, Inc., and the VCA was amended to reflect the change in ownership. Dry cleaning activities and uncontrolled disposal of waste solvents (perchloroethylene, or PCE, and its breakdown product trichloroethylene, or TCE) led to contamination of the soil and groundwater at the site. Site Geology and Hydrogeology: The surficial geology in the vicinity of the site is characterized by layered loose sediment. Soils recovered from the western portion of the site appear to be loose sands and sediments to approximately nine feet below ground surface (bgs) mixed with fill material such as gravels, brick, and old timbers. From 9 feet bgs to the top of the water table (approximately 13 feet bgs), soils are compact clays and sands. Soils recovered from drilling in the eastern portion of the site were characterized as fill. Groundwater depth ranges from 7 feet below ground surface (ft bgs) at the northwest portion of the site, 11-11.5 ft bgs across the western portion of the site, and 12-12.5 ft bgs across the southeast portion of the site. "

Env Problem: "Nature and Extent of the Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. A vapor barrier and an Air Sparge/Soil Vapor Extraction System (AS/SVES) were installed and are operating on site to mitigate the remaining PCE and TCE contamination in soil vapor. Remaining contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Groundwater beneath the site is contaminated with volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), at levels above NYS drinking water standards. There are no active public water supply wells within a one mile radius of the site and public exposure to contaminated groundwater is unlikely because all businesses and residences are supplied by public water. Exposure to contaminated soil is not expected since the site is covered by buildings and is paved. A vapor barrier and active soil vapor extraction system is at the site to prevent exposures from soil vapor intrusion. "
