thickness measured in MW-12 warrants continued monitoring and EFR. September 2015 Replacement Well Soil Samples: A total of six (6) soil samples were collected from two (2) monitoring well soil borings (MW-02R and MW-04R) for analysis of the NYSDEC s October 21, 2010, Final Commissioner Policy, CP-51 Soil Cleanup Guidance (CP-51) list of VOC and SVOCs and results were compared to CP-51 Soil Cleanup Levels (SCLs) criteria. Two (2) VOCs were reported above their respective NYSDEC SCLs in one (1) sample (MW-02R, 7.0 to 8.0 feet bgs). Total VOC concentrations ranged between below the laboratory reporting limit (i.e. nondetect [ND]) in the MW-04R sample from 14.0 to 15.0 feet bgs and 39,020 mg/kg in the MW-02R, 7.0 to 8.0 feet bgs sample. Seven (7) SVOCs were reported above their respective NYSDEC SCLs in one (1) sample (MW-02R, 6.0 to 7.0 feet bgs). Total SVOC concentrations ranged between ND in 2 samples (MW-02R, 14.0 to 15.0 feet bgs and MW-04R, 14.0 to 15.0 feet bgs) and 102,470 ?g/kg in the MW-02R, 6.0 to 7.0 feet bgs sample. Given the generally low concentrations in soil sample results, no additional soil sampling is warranted in relation to Spill No. 1305932 at this time. Summary: With few exceptions, recent (September 2013/2015) and historic (January 2008) soil sample results report CP-51 list VOCs and SVOCs at generally low (i.e. less than 25,000 ug/kg TVOCs and less than 50,000 ug/kg TSVOCs) concentrations. These SVOC concentrations are typical for urban fill. Based on January, May and September 2015 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not appear to significantly affect groundwater dissolved phase concentrations. Based on the analysis and conclusions presented above, LiRo recommends the following: The following actions will be conducted as part of the routine monitoring program until proposals below are approved by the NYSDEC: -Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). -Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. -Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. Proposals The following proposals require NYSDEC approval: 1) Consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). AD 02/22/2016: In the recent report LiRo states that: Based on recent (September 2015) and historic soil sample results, VOCs are generally absent or at low concentrations (i.e. less than 25,000 ?g/kg total VOCs) in Site soils. Similarly, SVOCs are typically found at low concentrations (i.e. less than 50,000 ?g/kg total SVOCs) which is within the typical concentration range for urban soils. Based on January, May and September 2015 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not contribute to groundwater dissolved phase contamination. Given the generally low concentrations in soil sample results, no additional soil sampling is warranted in relation to Spill No. 1305932 at this time. Taking into consideration most recent results of soil and groundwater investigation, DEC decided to consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). Spill No. 1305932 closed. AD 06/07/2016: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 7, 2016. A link to the website is included:

https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/20/2016: Reviewed the report. It states that for the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on March 8, 2016. LiRo conducted groundwater gauging at accessible Site wells and collected Site-wide groundwater samples from ten (10) sampling locations listed in the SMP. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. The Site monitoring program (SMP) completed for the period of October 1, 2015 to March 31, 2016, included water level gauging from accessible Site wells and an EFR IRM at ten (10) locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13 EW-14, MW-02R, MW-04R and MW-12). During the March 8, 2016, groundwater gauging event groundwater was observed between 3.51 and 5.17 feet bgs. Groundwater elevations ranged between -0.07 and 0.67 feet above mean sea level (AMSL). Free phase product was not observed during gauging. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). Groundwater Sampling March 2016: One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in one (1) (i.e. MW-02R) of ten (10) samples. The reported total VOCs ranged from non-detect [ND] in seven (7) locations (MW-04R, MW-05, MW-06, MW-08, MW-13, MW-17 and MW-18) to 46 micrograms per liter (?g/L) in monitoring well MW-02R. A review of total VOC concentration trends shows generally very low (i.e. less than 10 ?g/L) concentrations of dissolved phase VOCs in Site groundwater, with only one location (MW-02R) reporting VOCs at concentrations above their respective AWQSGVs. EFR: Between October 2015 and March 2016 twelve (12) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 10,875 gallons of total fluids were removed from Site wells for the monitoring period. Overall, product thicknesses were within or below historic averages and with an overall monitoring period average of 0.01 feet. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Reduce the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting of the EFR IRM and Site monitoring at semi-annual. 08/02/2016: Received the following e-mail from Steve Frank: Hi Ainura, Please see the attached letter requesting a reduction in EFR frequency at Brooklyn East 13 and let us know if our proposal is OK with you. Thanks, Steve Frank Will review. AD 08/16/2016: Looked at the request. It states that

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

recent groundwater gauging measurements have indicated a Site-wide reduction in the distribution, incidence and thickness of measurable product in Site wells. Based on this data, LiRo requests reducing the frequency of EFR at the New York City Department of Sanitation (DSNY) Brooklyn East 13 garage from bi-monthly (i.e. twice a month) to monthly. AD 08/17/2016: Sent an e-mail to S. Frank, approving the request. AD 12/30/2016: Received the following e-mail from LiRo; Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 30, 2016. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/25/2017: Reviewed the report. This report presents the results of free-phase product removal and monitoring at the site for the period of April to September 2016. On September 15, 2016, LiRo conducted groundwater gauging at accessible Site wells and collected sitewide groundwater samples from nine (9) sampling locations listed in the SMP. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. September 15, 2016, groundwater elevation measurements indicated that the interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). The groundwater flow direction is generally inconsistent with previous reports/observations, since the site is tidally influenced and flow directions have been variable. Tidal Influence Study: Between June 17, 2013, and June 27, 2013, LiRo conducted a tidal influence study at the Site. The study confirmed that Site monitoring wells are directly influenced by tidal fluctuations in direct proportion to the distance from Coney Island Creek (i.e. higher tidal efficiency in wells closer to the creek). Observed tidal influences ranged between 20.1% (MW-05) and 5.3% (MW-17). The Site monitoring program (SMP) completed for the period of April 1, 2016 to September 30, 2016, included water level gauging from accessible Site wells and an EFR IRM at nine (9) locations (EW-02,EW-05, EW-08, EW-09, EW-11, EW-13, EW-14, MW-02R and MW-12). MW-04R was reported destroyed during the September 15, 2016, groundwater sampling event. Due to the absence of reported product in MW-04/MW-04R between January 2014 and September 2016 and the absence of reportable VOCs in the March 2016 MW-04R groundwater sample, a replacement for MW-04R will not be proposed. GW data: One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in three (3) (i.e. MW-02R, MW-12 and MW-17) of nine (9) samples. The reported total VOCs ranged from ND in three wells (MW-08, MW-13 and MW-18) to 24 ug/L in well MW-12. A review of total VOCs trends show a continuation of generally very low (i.e. less than 25 ?g/L) concentrations of dissolved phase VOCs in site groundwater. Free-product observed in site wells is producing minimal impacts to the site groundwater. EFR: Between April 2016 and September 2016 ten EFR events were conducted at the site. Approximately 9,127 gallons of total fluids were removed from the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

wells for the monitoring period. Overall, product thicknesses were within or below historic averages and with an overall monitoring period average of less than 0.01 feet. Recent EFR events conducted after the end of this reporting period (i.e. October and November 2016) reported a spike in product thickness in MW-02R from a maximum of 0.22 feet and an average of 0.04 between September 2015 and September 2016 to a maximum of 1.65 feet on November 28, 2016, and an average of 1.07 feet between November 2016 and December 2016. Consequently, the frequency of EFR has been increased to a bi-monthly (i.e. twice a month) schedule. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 07/18/2017: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 18, 2017. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 08/02/2017: Reviewed the October 2016-March 2017 monitoring report. The Site monitoring program (SMP) completed for the period of October 1, 2016 to March 31, 2017, included water level gauging from accessible wells and an EFR IRM at nine locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13, EW-14, MW-02R and MW-12). During the March 9, 2017, groundwater gauging event groundwater was observed between 5.70 and 8.51 feet bgs. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). The groundwater flow direction is generally inconsistent with previous reports/observations, likely due to the Site being tidally influenced. For the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on March 9, 2017. One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in one (MW-06) of five (5) samples. The reported total VOCs ranged from ND in three (3) locations (MW-08, MW-17 and MW-18) to 45 ug/L in well MW-06. Groundwater Total VOC Trends A review of total VOC concentration trends show a continuation of generally very low (i.e. less than 50 ug/L) concentrations of dissolved phase VOCs in Site groundwater . Free-product observed in site wells is producing impacts to site groundwater. EFR: Between October 2016 and March 2017, 15 EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 9,058 gallons of total fluids were removed from site wells for the monitoring period and a total of approximately 106,650 gallon removed since the inception of EFR.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Overall, a product thicknesses showed increases above historic averages with an overall monitoring period average of approximately 0.22 feet. EFR conducted during this reporting period reported multiple product thickness measurements in MW-02R with a maximum of 2.07 feet and a six month average of 1.09 feet. Consequently, the frequency of EFR has been changed from monthly to a bi-monthly (i.e. twice a month) schedule. Based on the analysis and conclusions presented above, LiRo recommends the following: - Install replacement monitoring well (MW-12R) for destroyed monitoring well MW-12. Due to the close proximity of former EW-13 and MW-12, former extraction well EW-13 will not be replaced. - Maintain schedule of bi-monthly site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 04/06/2018: Received The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for April 2017 to September 2017. Will review. AD 05/04/2018: Reviewed the report. It states that between April 2017 and September 2017, eleven (11) gauging and/or EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 495 gallons of total fluids were removed from Site wells for the monitoring period and a total of approx. 107,145 gallons removed since the inception of EFR. Overall, product thicknesses showed a decrease above historic averages with an overall monitoring period average of approximately 0.06 feet. No free product was measured in any of the accessible monitoring wells since May 5, 2017. The last EFR event was April 28, 2017. Accessible monitoring wells are gauged on a monthly basis. If measureable free product thickness returns then EFR will be performed on a twice-monthly basis. Soil: Based on recent (September 2015) and historic soil sample results, VOCs are generally absent or at low concentrations (i.e. less than 25,000 ug/kg total VOCs) in Site soils. Similarly, SVOCs are typically found at low concentrations (i.e. less than 50,000 ug/kg total SVOCs) which is within the typical concentration range for urban soils. Based on October 2016 to March 2017 groundwater sample results, reported CP-51 list VOCs and SVOCs in site soils do not contribute to groundwater dissolved phase contamination. Groundwater: The September 2017 sampling event reported generally low (less than 50 ug/L) to ND concentrations of TVOCs in all groundwater samples and a maximum TVOC concentrations of 41 ug/L, at monitoring well MW-18. The TVOC concentration was due to one VOC, Naphthalene is the highest TVOC concentration reported for this monitoring well. Additional sampling events are required to determine if this is an anomalous elevated reading or part of an increasing trend. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13. - Install replacement monitoring well (MW-12R) for destroyed monitoring well MW-12. Due to the close proximity of former EW-13 and MW-12, former extraction well EW-13 will not be replaced. - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). -

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 08/22/2018: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on August 22, 2018. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/26/2018: Reviewed the semi-annual report for the period of October 2017 - March 2018. It states that LiRo performed EFR events on wells with LNAPL on December 12, 2017; January 3, 2018; January 26 2018; February 7, 2018 and March 14, 2018. Between January 2018 and February 2018, LiRo installed, surveyed and developed replacement well MW-12R. On March 7, 2018, LiRo sampled 8 site wells. The reported TVOCs in the wells ranged from ND to 72 ppb in well MW-02R. Free product thickness in the wells ranged from ND to 0.36' in well MW-14 and 0.95' in MW-02R. Free product observed in the site wells is producing low impacts on the GW quality. EFR: Seven gauging and/or EFR events were conducted for the reported period. Approximately 1,145 gallons of total fluids were removed from site wells during reported period. LiRo states that based on the GW data, site soils do not contribute to the GW dissolved contamination. Based on the analysis LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13. - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 01/04/2019: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 4, 2019. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 02/11/2019: Reviewed the report. It states that for the monitoring period: (April 2018 to September 2018) the Site monitoring program (SMP) included water level gauging from accessible wells and EFR at six (6) locations (MW-12R, MW-14, EW-05, EW-04, EW-11, and MW-02R) if product was present. GW sampling: For the reporting period, LiRo completed routine semi-annual groundwater gauging and Site-wide sampling on August 29, 2018. During the August 29, 2018, groundwater gauging event groundwater was observed between 6.22 and 7.70 feet bgs. Groundwater elevations ranged between -0.92 and -2.83 feet above mean sea level (AMSL). GW data: Groundwater The August 2018 sampling event reported no CP-51 VOCs above AWQSGVs. The maximum TVOC concentration of 13 ?g/L, was reported at monitoring well MW-02R. Well MW-02R typically contains free-product. EFR: Between April 2018 and September 2018, 10 gauging/EFR events were conducted on the wells. Approximately 1,312-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 109,602-gallons removed since the inception of EFR. Averall, product thicknesses lowered since the previous monitoring period with an overall monitoring period average of approximately 0.0084 feet. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement well (MW-13R) for the destroyed monitoring well MW-13 (Proposed for the April 2018 to September 2018 monitoring period but was unable to be installed due to construction work in the vicinity of the replacement well location).:\\- Maintain schedule of bi-monthly (i.e. twice a month) to monthly Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 06/25/2019: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 25, 2019. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report includes a proposal which requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/01/2019: Reviewed the report. It states that the site monitoring program (SMP) completed for the period of October 2018 to March 2019, included water level gauging from accessible Site wells and monthly EFR at three (3) locations (EW-05, MW-02R, and MW-12R). LiRo performed groundwater gauging and

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

EFR on wells with free-product on October 22, 2018, November 12, 2018, January 11, 2019, February 6, 2019, February 27, 2019, and March 18, 2019. On March 5, 2019, LiRo conducted groundwater gauging at accessible wells and collected samples from seven of eight site wells. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. No sample was collected from well MW-12R due to the presence of free-phase product. Of the seven groundwater samples collected, only well MW-02R reported VOCs at concentrations above AWQSGVs. Well MW-02R reported three CP-51 list VOCs (Isopropylbenzene, n-Propylbenzene, and sec-Butylbenzene) at concentrations above their respective guidance values. The TVOCs for well MW-02R was reported at 43 ug/L. Hydrogeology: During the March 4, 2019, groundwater gauging event, groundwater was observed between 6.18 and 7.81 feet bgs. Groundwater elevations ranged between -1.67 and -2.84 feet above mean sea level (AMSL). The March 4, 2019, groundwater elevation measurements are presented in Table 3 and a groundwater contour map is presented in Figure 5. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.01 feet per foot (ft/ft) as measured from MW-14 to MW-12R. The groundwater flow direction is generally consistent with the historical groundwater flow direction. However, groundwater flow may vary due to the tidal influence on groundwater elevations as described below. Groundwater TVOC Trends: A review of TVOC concentration trends show a continuation of generally very low (i.e. less than 75 ug/L) concentrations of dissolved phase TVOCs in Site groundwater. Of the seven wells sampled in March 2019, five (5) reported an increase, one (1) reported a decrease and one (1) reported no change in TVOCs when compared to the August 2018 TVOCs. Summary: EFR Between October 2018 and March 2019, six (6) gauging/EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in site wells. Approximately 1,824- gallons of total fluids were removed from wells for the monitoring period and a total of approximately 111,426-gallons removed since the inception of EFR. Overall, product thicknesses increased slightly since the previous monitoring period with an overall monitoring period average of approximately 0.03 feet, with highest thickness of 0.17’ in MW-12R. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Free-phase product at this Site historically has shown significant oscillations in thicknesses. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13 (Proposed for the April 2018 to September 2018 monitoring period but was unable to be installed due to construction work in the vicinity of the replacement well location). - Maintain schedule of bi-monthly (i.e. twice a month) to monthly product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Based on the continuing low levels of TVOCs in groundwater (less than 75 ug/L) since at least 2016, LiRo recommends a reduction in the frequency of groundwater sampling to annual while

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

maintaining the frequency of routine reporting at semi-annual. AD 07/02/2019: Sent the following e-mail to Mr. Aliberi of DDC: Dear Mr. Aliberti: The Department has reviewed the Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report , dated June 25, 2019 pertaining to the above-referenced site, submitted by LiRo, Engineers, Inc. (LiRo). The report states that site-wide groundwater sampling indicate minimal impact to groundwater. Based on the continuing low levels of TVOC concentrations in groundwater (less than 75 ug/L) since at last 2016, LiRo recommends a reduction in the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting at semi-annual. The Department approves these recommendations. Feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova - Environmental Engineer AD 01/20/2020: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 20, 2020. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report includes a proposal which requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 02/18/2020: Reviewed the SAMR for April 2019 to September 2019 time period . It states that the Site monitoring program (SMP) completed for the period of April 2019 to September 2019, included water level gauging from accessible site wells and monthly EFR at three to four locations (EW-02 (once) EW-05, MW-02R, and MW-12R)). The SMP for the upcoming period of October 2019 to March 2020, includes semi-annual water level gauging from accessible Site wells; groundwater sampling with laboratory analysis at eight locations: MW-02R, MW-05, MW-06, MW-08, MW-12R, MW-14, MW-17, and MW-18. EFR: Between April 2019 and September 2019, eight gauging/EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 2,824- gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 114,250-gallons removed since the inception of EFR. Overall, product thicknesses remained fairly low (less than 0.25 feet) during this monitoring period. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. GW sampling results: None of the seven groundwater samples collected in July 2019, reported any VOCs at concentrations above AWQSGVs. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13 (Previously proposed however installation was delayed due to construction work in the vicinity of replacement well locations). This replacement well was subsequently installed in October 2019 and will be discussed in the next monitoring report. - Based on current product levels, the schedule for monitoring and EFR events will be

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

reduced from bi-monthly (i.e. twice a month) to once a month. If product levels show an increase, the frequency will be increased to twice a month. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Based on the continuing low levels of TVOC concentrations in groundwater (less than 75 ug/L) since at least 2016, LiRo recommends a reduction in the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting at semi-annual. This proposal was already approved by DEC in July 2019. AD 07/31/2020: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 31, 2020. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note, that in light of the current circumstances, until further notice, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/02/2020: Reviewed the semi-annual report for October 2019 to March 2020. It states that the site monitoring program (SMP) completed for the period of October 1, 2019, to March 31, 2020, included quarterly groundwater sampling , monthly water level gauging from accessible Site wells and monthly EFR at three to four locations: EW-02 (single event) EW-05, MW-02R, and MW-12R. For the current monitoring period (i.e. October 2019 to March 2020), approximately 1,294-gallons of total fluids were removed from Site wells by EFR. The MW-02R free-product average thickness (less than 0.01 feet) for this monitoring period is a decrease from the most previous monitoring period April 2019 to September 2019 average (0.02 feet). The EW-02 free product average thickness (0.10 feet) for this monitoring period is an increase from the previous monitoring period April 2019 to September 2019 average (0.03 feet). The MW-12R free-product average thickness (0.29 feet) for this monitoring period showed an increase from the most recent previous monitoring period average (0.21 feet). GW sampling: For the reporting period, LiRo completed routine quarterly groundwater gauging on November 18, 2019, and March 30, 2020. Quarterly groundwater sampling was conducted on November 18, 2019, and March 3, 2020. All groundwater samples were submitted for analysis of NYSDEC CP-51 list VOCs via United States Environmental Protection Agency (USEPA) Method 8260. Prior to sampling, wells were purged of at least three well volumes. Hydrogeology: During the November 18, 2019, groundwater gauging event, groundwater was observed between 6.15 and 7.72 feet bgs. Groundwater elevations ranged between -1.66 and -2.71 feet above mean sea level (AMSL). The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.069 feet per foot (ft/ft) as measured from MW-14 to MW-12R. The groundwater flow direction is generally consistent with the historical groundwater flow direction.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

However, groundwater flow may vary due to the tidal influence on groundwater elevations as described below. During the March 30, 2020, groundwater gauging event, groundwater was observed between 5.68 and 7.63 feet bgs. Groundwater elevations ranged between -1.43 and -2.97 feet above mean sea level (AMSL). Groundwater Sampling November 2019: One or more CP-51 VOCs were reported above NYSDEC AWQSGVs in two (i.e. MW-06 and MW-12R) of nine groundwater samples collected. Total VOC concentrations range between below the laboratory reporting limit (i.e. non-detect [ND]) in four samples (i.e. MW-08, MW-13R, MW-14 and MW-18) to 73 ug/L (MW-12R). Groundwater Sampling March 2020: Of the eight groundwater samples collected, none reported VOCs at concentrations above AWQSGVs. Total VOC concentrations range between ND in four samples (i.e. MW-08, MW-13R, MW-17 and MW-18) to 3 ?g/L (MW-02R). A sample was not collected from well MW-12R due to the presence of free-phase product. Groundwater Total VOC Trends A review of TVOCs trends show a continuation of generally very low (i.e. less than 75 ?g/L) concentrations of dissolved phase TVOCs in site groundwater. EFR: Between October 2019 and March 2020, five gauging/EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 1,294-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 115,544-gallons removed since the inception of EFR. Product thicknesses remained fairly low (less than 0.25 feet) during this monitoring period but showed a slight overall increase in average thickness from the previous monitoring period. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Free-phase product at this Site historically has shown significant oscillations in thicknesses. Groundwater Two of the nine groundwater samples (MW-06 and MW-12R) collected in November 2019, reported CP- 51 list VOCs at concentrations above AWQSGVs. The highest total VOC concentration reported was 73 ug/L (MW-12R). None of the eight groundwater samples collected in March 2020, reported any VOCs at concentrations above AWQSGVs. The highest total VOC concentration reported was 3 ug/L (MW-02R). Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals in this report. AD 01/21/2021: Received the following email from LiRo; Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 21, 2021. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note, that in light of the current circumstances, until further notice, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Uploaded the file.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Will review. AD 02/22/2021: Reviewed the report. It states that the Site monitoring program (SMP) completed for the period of April 1, 2020 to September 30, 2020, includes annual groundwater sampling, supplemental monthly water level gauging from accessible site wells and monthly EFR at one to two locations: EW-05 (single event) and MW-12R. The SMP for the upcoming period of October 1, 2020 to March 31, 2021, includes annual water level gauging from accessible Site wells; annual groundwater sampling with laboratory analysis at nine locations: MW-02R, MW-05, MW-06, MW-08, MW-12R, MW-13R, MW-14, MW-17, and MW-18, supplemental monthly groundwater gauging to monitor for free-product, quarterly EFR at wells containing measurable free-product and monthly product removal via peristaltic pump at EW-05, MW-02R, and MW-12R and from any locations with measurable product. For the current monitoring period 4 EFR events were conducted via vacuum truck and two product removal events via peristaltic pumping were conducted. Approximately 817-gallons of total fluids were removed from wells by EFR and peristaltic pumping. During this monitoring period, the NYCDDC notified LiRo that due to the COVID-19 pandemic, the current fiscal year budget for the period of July 2020 through June 2021 would be reduced. As a result, LiRo reduced the frequency of EFR (via vacuum truck) and supplemented product removal with LiRo personnel with a peristaltic pump. The frequency of EFR for the remainder of the fiscal year will be quarterly with LiRo personnel conducting product removal monthly. Supplemental groundwater gauging events were completed to monitor for free-product. A total of five supplemental gauging events were completed during this monitoring period. Free product: For this monitoring period (April 2020 through September 2020), free-product thicknesses have been variable and have ranged from 0.01 feet) represents a slight increase from the previous monitoring period of 0.00 feet. The MW-12R free-product average thickness (0.34 feet) for this monitoring period showed an increase from the previous monitoring period average (0.29 feet). GW sampling: Annual groundwater sampling was conducted at the site on July 20-21, 2020. All groundwater samples were submitted for analysis of NYSDEC CP-51 list VOCs via United States Environmental Protection Agency (USEPA) Method 8260. During the July 20, 2020, groundwater gauging event, groundwater was observed between 5.97 and 7.48 feet bgs. Groundwater elevations ranged between -1.40 and -3.02 feet above mean sea level (AMSL). The interpreted general flow direction is towards the north/northwest with a hydraulic gradient of approximately 0.011 feet per foot (ft/ft) as measured from EW-15 to EW-02. No CP-51 VOCs were reported above NYSDEC AWQSGVs in any of the eight groundwater samples collected. Total VOCs range between ND in three samples (i.e. MW-08, MW-13R and MW-18) to 4 ug/L (MW-02R). Groundwater Total VOC Trends A review of TVOCs trends show a continuation of generally very low (i.e. less than 75 ug/L) concentrations of dissolved phase TVOCs in site groundwater. During this monitoring period, the highest total VOCs was 4 ug/L. Based on October 2018 through July 2020 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not contribute to groundwater dissolved phase contamination. LiRo recommends that the following actions will be conducted as part of the routine monitoring program: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. - Continue to remove

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

free-product through a combination of EFR and Peristaltic Pump. - Continue supplemental monthly gauging of Site wells to monitor for the presence of free-product. Proposals There are no new proposals in this report. AD 06/25/2021: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 25, 2021. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note that unless requested, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/15/2021: Reviewed the report. The site monitoring program (SMP) completed for the period of October 1, 2020 to March 31, 2021, included monthly water level gauging from accessible Site wells and Quarterly EFR and monthly manual (i.e. using a peristaltic pump) product removals at MW-02R, MW-12R, and EW-05. Annual groundwater sampling was completed in the previous monitoring/reporting period in July 2020. For the reporting period, LiRo completed nine rounds of groundwater gauging. Annual groundwater sampling was conducted on July 20-21, 2020, during the previous semi-annual monitoring period. No new groundwater samples were collected during this monitoring period. For the December 29, 2020, groundwater gauging event, groundwater was observed between 5.95 and 7.50 feet bgs. Groundwater elevations ranged between -1.48 and -2.64 feet above mean sea level (AMSL). The interpreted general flow direction is towards the north/northwest. Groundwater Total VOC Trends: A review of TVOC concentration trends show a continuation of generally very low (i.e. less than 75 ug/L) concentrations of dissolved phase TVOCs in Site groundwater. During the previous monitoring period, the highest total VOC concentration was 4 ug/L. EFR/Free-Product Removal: Between October 2020 and March 2021, four product removal events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Product removal efforts consisted of a combination of EFR (via vacuum truck) and product removal via peristaltic pumping. Approximately 160-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 116,521-gallons removed since the inception of EFR. Only one well (MW-12R) consistently contained measurable free-product. The average product thickness in MW-12R for the monitoring period was 0.45 feet. Accessible monitoring wells are gauged on a monthly basis. Free-phase product at this Site historically has shown significant oscillations in thicknesses. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: The following actions will be conducted as part of the routine monitoring program: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. - Continue to remove free-product through a combination of EFR and Peristaltic Pump. - Continue supplemental

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

monthly gauging of Site wells to monitor for the presence of free-product. There are no new proposals in this report. AD 12/27/20221: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 27, 2021. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note that unless requested, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/27/2022: Reviewed the report. It states that the site monitoring program (SMP) completed for the period of April 1, 2021, to September 30, 2021, included monthly water level gauging from accessible Site wells and Quarterly EFR and monthly manual (i.e. using a peristaltic pump) product removals at MW-02R, MW-12R, and EW-05. Annual groundwater sampling was completed in the previous monitoring/reporting period in July 2021. The SMP for the upcoming period of October 1, 2021 to March 31, 2022, includes annual water level gauging from accessible site wells; annual groundwater sampling with laboratory analysis at nine locations: MW-02R, MW-05, MW-06, MW-08, MW-12R, MW-13R, MW-14, MW-17, and MW-18, supplemental monthly groundwater gauging to monitor for free-product, quarterly EFR at wells containing measurable free-product and monthly product removal via peristaltic pump at EW-05, MW-02R, and MW-12R and from any locations with measurable product. LiRo performed supplemental groundwater gauging, product removal and/or EFR on wells with free product on April 14, 2021; April 27, 2021; May 6, 2021; May 25, 2021; June 4, 2021; July 9, 2021; July 16, 2021; July 29, 2021; August 3, 2021; August 10, 2021; and September 1, 2021. Annual groundwater sampling was conducted on July 29 and 30, 2021, during the monitoring period. Groundwater Sampling July 2021 There were no CP-51 VOCs reported above NYSDEC AWQSGVs in any of the seven groundwater samples collected. July 2021 Total VOCs range between below the laboratory reporting limit (i.e. non-detect [ND]) in two samples (i.e. MW-08 and MW-13R) to 4 ug/L (MW-02R). A review of TVOCs trends show a continuation of generally very low (i.e. <10 ug/L) concentrations of dissolved phase TVOCs in Site groundwater. During the previous monitoring period, the highest total VOCs was 4 ug/L. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: Actions The following actions will be conducted as part of the routine monitoring program: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. - Continue to remove free-product through a combination of EFR and Peristaltic Pump. - Continue supplemental monthly gauging of Site wells to monitor for the presence of free-product. Proposals There are no new proposals in this report. AD"

DEC Memo:	"December 23, 2005 A Contaminated Soil Letter was sent to: (Verizon Environmental Affairs Verizon New York 221 East 37th St,- 4th Flr New York, NY 10016) 12/29/05 - Raphael Ketani. I left a message for John Quatrale of Verizon ((516) 292-8166; cell (917) 846-4423) to call me regarding the spill site. 1/5/06 - Raphael Ketani. I spoke to Mr. Quatrale. He said that this was a tank removal project. He said the tanks have been removed and a revised PBS application was submitted to Nick Lombardo of PBS. He said that 300 cu. yds. of soil (375 tons)has been dug out and is presently stockpiled awaiting containerization and carting. The work was completed on 12/14. He added that groundwater is impacted and that they will put in wells. Mr. Quatrale said that Joe Sun of DEC Region 2 is the case manager for a number of Verizon sites. A report will be sent to Spills and to Mr. Sun once the analytical is received and all other work regarding the site is completed. 1/26/06 - Raphael Ketani. I spoke to Mr. Quatrale. He said that he was putting many Verizon site reports together. He said that this site's report was partially done. He said he was waiting for the soil and water analyticals. 2/16/06 - Raphael Ketani. I presented the Spill Report to Randall Austin, Chief Spills Engineer of Region 2, and explained that this case was dealing with groundwater contamination and that Mr. Sun of Region 2 Remediation was already dealing with this case. Mr. Austin transfered the case to Koon Tang of Remediation. 3/16/06 - reviewed the closure report from Verizon. Verizon hired ENvirotrac to remove a 4000-gallon diesel UST and found some contaminated soil. 375 tons of petroleum impacted soil was excavated and disposed of properly. End-point soil samples have no VOCs detected, only SVOCs were detected above the TAGM 4046, but consistent with urban backfill. GW sample taken at the bottom of the tank excavation shows all ND, except for a hit of MTBE at about 50 ppb. No sign of significant environmental impact. Spill closed. - KST "

Site Description: "Site Location: The 1.36-acre site is located at 1607 Surf Avenue, in the Coney Island section of Brooklyn. The site occupies Tax Block 7062 Lot 28. The site is bounded to the south by Surf Avenue, followed by MCU Park; to the east by West 16th Street, followed by a vacant lot and several parking lots; to the west by West 17th Street, followed by an office building and parking lot; and to the north by a parking lot. Site Features: The site is a vacant asphalt paved lot. Current Zoning and Land Use: The site is located within the Special Coney Island District (CI). The site is zoned for medium density residential use (R7X) with a commercial overlay (C2-4). The site is currently vacant. Past Use of the Site: By the late 1800s, residential dwellings, a shed, and a store existed on-site. By 1906, the site had been redeveloped with an auditorium, stores and sheds. By 1930, the site was occupied by a theater, storefronts, and an automobile repair facility on the eastern part of the property. On-site businesses include a photo studio (1934-1970), a printing

LOT 28,TAXBLOCK 7062 (Continued) **S109942403**

studio (1934-1970), an exterminator (1934-1945), and a machinist/machine works (1928-1970). Since 2001, the site has been a parking lot. Site Geology and Hydrogeology: The site is underlain with historic fill ranging from 2 and 10 feet below ground surface (bgs). Fill material is underlain by a native tan or gray, fine-grained sand layer with varying amounts of gravel, silt, and clay. The deepest soil borings were 15 feet bgs and the sand layer extends beyond that depth. Bedrock was not encountered during site investigation and minimum expected depth to bedrock is 600 feet bgs. Groundwater occurs between 6 and 8 feet bgs and flows to the southeast. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), pesticides and 1,4-Dioxane. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, polycyclic aromatic hydrocarbons (PAHs), 1,1-trichlorethane (TCA), and 1,1-dichloroethene , and metals. Soil: Soil data were compared to Restricted Residential Soil Cleanup Objectives (RRSCOs), Unrestricted Use Soil Cleanup Objectives (UUSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGSCO). The contaminants of concern in soil are PCE, PAHs, and metals. PCE was detected at 75 parts per million (ppm) above the RRSCO of 19 ppm. PAHs were detected throughout the site. The PAHs detected include benzo(a)anthracene detected between 1.2-36 ppm above the RRSCO of 1 ppm; benzo(b)fluoranthene between 1.2-43 ppm above the RRSCO of 1 ppm; and indeno(1,2,3-cd)pyrene was detected between 0.57-21 ppm above the RRSCO of 0.5 ppm. Barium was detected between 356-730 ppm above the RRSCO of 400 ppm; cadmium was detected at 10.4 ppm above the RRSCO of 4.3 ppm; lead was detected between 64.2-3,110 ppm above the RRSCO of 400 ppm; and mercury was detected between 0.262-0.54 ppm above the RRSCO of 0.81 ppm. 1,4-dioxane was not detected above the reporting limit. Total PFOA and PFOS concentrations detected ranged between 0.000046-0.00334 parts per trillion (ppt). PFOA, PFOS, and 1,4-dioxane are not considered contaminants of concern at this site. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Groundwater data was compared to the NYS DEC TOGS Ambient Water Quality Standards (NY-AWQS). PCE was detected at 10 parts per billion (ppb) which is above the NY-AWQS of 5 ppb. PAHS were detected throughout the site and include benzo(a)anthracene detected between 0.02-0.07 ppb above the NY-AWQS of 0.002 ppb; benzo(b)fluoranthene detected between 0.02-0.07 above the NY-AWQS of 0.002 ppb; and chrysene detected between 0.04-0.06 ppb above the NY-AWQS of 0.002 ppb. 1,4-dioxane was not detected above the reporting limit. Total PFOA and PFOS were detected between 44.4-99.6 ppt. PFAO, PFOS, and 1,4-dioxane are not considered contaminants of concern at this site. Data indicates potential for off-site impacts to groundwater related to this site. Soil Vapor/Indoor Air: PCE was detected throughout the site ranging from 2.76-23,200 micrograms per cubic meter g/m3. TCE was detected between 3.65-1,900 g/m3. Cis-1,2-DCE was detected between 4.08-2,390 g/m3. 1,1-dichloroethene was detected at 1.36 g/m3. Vinyl chloride was detected at 22.2 g/m3. 1,1,1-TCA was detected between 1.36-8.51 g/m3. Petroleum-related compounds, namely benzene, toluene, ethylbenzene, and xylenes, were

LOT 28,TAXBLOCK 7062 (Continued) **S109942403**

	detected between 3.11-90 g/m3. Data indicates potential for off-site impacts to soil vapor related to this site. "
Health Problem:	"Since the site is a vacant lot covered by asphalt or concrete, people will not come in contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, there is a potential for soil vapor intrusion in off-site and future on-site buildings."

Site Description:	"The site consists of a warehouse and a parking lot in Coney Island, Brooklyn, NY. The site is adjacent to Coney Island Creek, which borders the site to the north. Hart Place borders the site to the south. The neighborhood is mainly residential even though the zoning is M3 manufacturing. A former MGP site (Coney Island Works) is located to the north of the site on the other side of Coney Island Creek. The current use of the site is commercial. The former Volunteer, Tops Appliance City, has submitted a Phase I Environmental Investigation Report, which showed contaminants common to the fill material in the area. The area is covered with 11-13 feet of mixed urban fill material. The contaminants of concern were metals and Semi Volatile Organic Compounds (SVOCs) above the NYSDEC TAGM 4046 RSCO. The investigation has not been completed. The negotiations for the Voluntary Cleanup Program Agreement were terminated because the Volunteer has not been responsive to the program requirements. "
Env Problem:	"The Phase I Environmental Assessment has revealed contaminants specific to the urban fill material. The entire area is covered by 11-13 feet of fill material. Contaminants of concern were metals (copper, zinc, lead) and semi-volatile organic compounds (SVOCs) which have been found at levels above the NYSDEC TAGM 4046 RSCO. "

Updated By:	JEBROWN
Site Description:	"Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Surrounding parcels are a mixture of commercial and industrial uses. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S105586297**

pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrogeology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean. "

Env Problem: "Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) was reported at a concentration of 155 parts per trillion (ppt), exceeding the 10 ppt screening level for groundwater. Individual PFAS exceeding the 100 ppt screening level included Perfluorobutanoic Acid (PFBA). Total PFAS, including both PFOA and PFOS, were reported at concentrations of 2,940 ppt, which is above the 500ppt screening level for total PFAS in groundwater. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan. Prior to Remediation: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S105586297**

included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. "

Health Problem: "Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

PFAS 2: New York State Inactive Landfill Initiative

A solid waste site priority list of mitigation and remedial activities to address sites causing, or substantially contributing to, impairments of drinking water quality. The primary focus is inactive solid waste disposal sites, primarily landfills, and their potential impact on New York?s drinking water resources from site-related contaminants, with a focus on emerging contaminants, including per- and polyfluoroalkyl substances (PFAS) and 1,4-dioxane.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/08/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248

West Map:	14071946 THE NARROWS, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

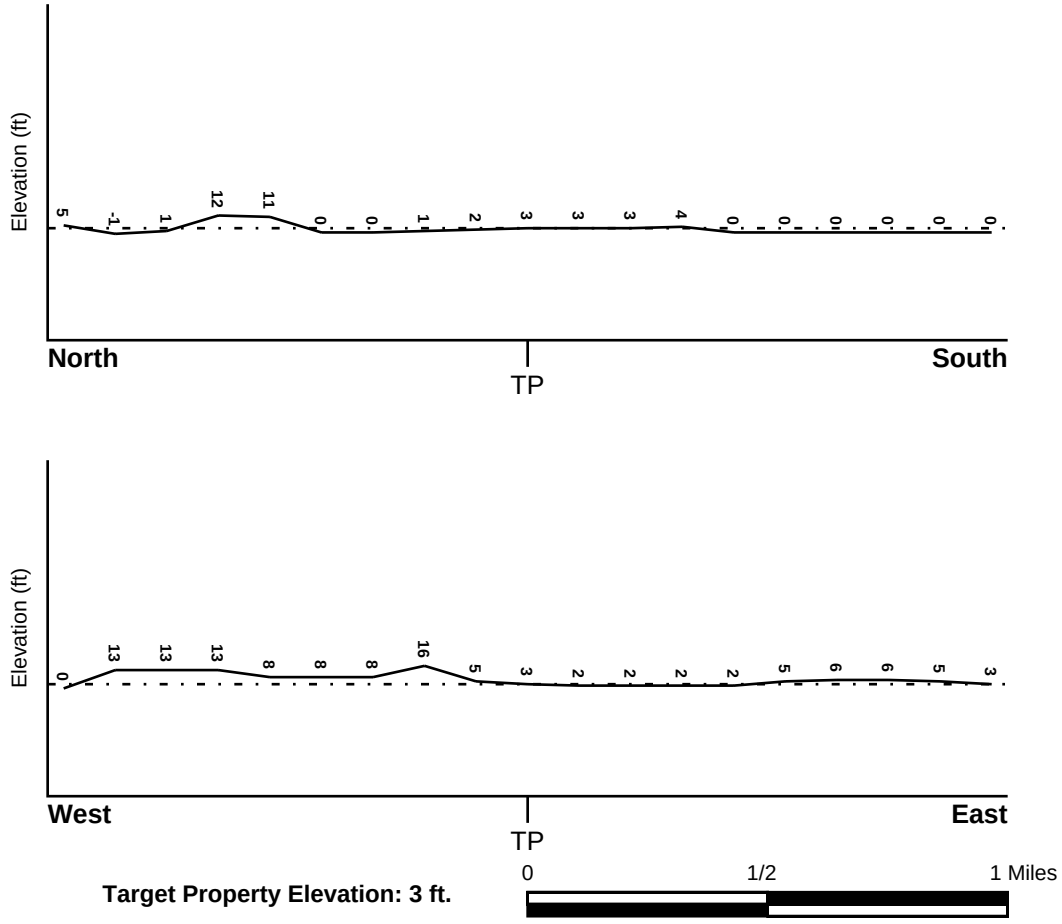
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 3 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970353F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970334F	FEMA FIRM Flood data
3604970117B	FEMA Q3 Flood data
3604970118B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CONEY ISLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sand
mucky-peat

Surficial Soil Types: sand
mucky-peat

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: coarse sand
sand
loamy sand
sapric material

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Subject: FOIL Request :: W105546-081922

Dear Joanne:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 8/19/2022 and given the reference number FOIL #W105546-081922 for tracking purposes. You may expect the Department's response to your request no later than **9/20/2022**.

Record Requested: **Records regarding above and underground storage tanks, permits and/or violations, spills, hazardous material and any other information of environmental concern as we are conducting a Phase I Environmental Site Assessment. (My ref#: Z3-4991.3), Time frame: 01/01/1967 - 08/19/2022, 2828 West 28th Street, Brooklyn, NY 11224 - Block: 7011, Lot: 11**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Request Type: Freedom of Information Law Request

Description: A FOIL request is a request for any "record" under NY's Freedom of Information Law (Article 6 of the Public Officers Law). Section 86 defines a "record" as: "any information kept, held, filed, produced or reproduced by, with or for an agency or the state legislature, in any physical form whatsoever including, but not limited to, reports, statements, examinations, memoranda, opinions, folders, files, books, manuals, pamphlets, forms, papers, designs, drawings, maps, photos, letters, microfilms, computer tapes or discs, rules, regulations or codes. NYSDEC maintains records in a variety of forms, or media, such as in hard copy (on paper), as recordings, as photographs, in electronic form, etc.

APPENDIX G

PROJECT PERSONNEL QUALIFICATIONS

HILLMANN
CONSULTING

Etan Hindin

Senior Project Manager

EDUCATION:

B.S. Biology, Bar Ilan University, Ramat Gan, Israel

CERTIFICATIONS:

US EPA AHERA Asbestos Inspector

New York State Asbestos Project Monitor

New York State Air Sampling Technician

NJDEP GIS Training

Environmental Audit and Site Assessments (Rutgers NJAES)

40-hr OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) Training

8-hr OSHA HAZWOPER Refresher Training

YEARS OF EXPERIENCE:

With Hillmann: 4 year

Total: 14 years

PROFESSIONAL EXPERIENCE:

As a Senior Project and Account Manager, Mr. Etan Hindin advises private and public sector clients on a broad range of environmental projects including due diligence (Phase I and II), regulatory compliance, HSE audits, soil and groundwater remediation, and mold investigations and asbestos surveys. Mr. Hindin is responsible for proposing project services, bidding, managing projects, and meeting with clients.

Mr. Hindin has conducted Phase I's of commercial and industrial sites throughout the country and has provided EH&S consulting to Fortune 500 companies. He is particularly well versed in environmental, health and safety regulations and he strives to provide creative, effective, and efficient solutions to complex environmental problems.

Representative experience includes:

Enviro-Sciences (of Delaware), Inc.: From 2011 to 2018, Mr. Hindin served as a Project Manager at Enviro-Sciences (of Delaware), Inc. where he designed sampling programs, oversaw abatement projects, and performed clearance sampling for mold and asbestos. He also managed environmental due diligence projects of commercial and industrial sites, throughout the US. Mr. Hindin often trained entry-level consultants in database review, report writing, and assessment protocols while working to improve report templates to comply with changing regulations and ASTM standards.

NJDEP Watershed Ambassadors Program: From 2010 to 2011, Mr. Hindin worked as a New Jersey Watershed Ambassador for the NJDEP where he monitored water quality utilizing NJDEP protocols and online reporting software, utilized GIS, NJGeoWeb, and DataMiner to research assigned water bodies and surrounding areas. Mr. Hindin also presented on watershed management, resource conservation, sustainability, and environmental regulations.

HILLMANN
CONSULTING

Dominick Aponte

Environmental Scientist

EDUCATION:

B.A. Biological Sciences, Rowan University

CERTIFICATIONS:

40-hr OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) Training

DOT HAZMAT Advanced General Awareness Training

First Aid/CPR Certified

RCRA Hazardous Waste Generator Training

YEARS OF EXPERIENCE:

With Hillmann: 1 year

Total: 4 years

PROFESSIONAL EXPERIENCE:

As an Environmental Scientist, Mr. Aponte advises private and public sector clients on a broad range of environmental projects including due diligence (Phase I and II), regulatory compliance, HSE audits, soil and groundwater remediation, and mold investigations and asbestos surveys.

Mr. Aponte has conducted Phase I's of commercial and industrial sites throughout the country and has provided EH&S consulting to Fortune 500 companies. He is well versed in environmental health and safety regulations and he strives to provide creative, effective, and efficient solutions to complex environmental problems.

Representative experience includes:

RU2 Engineering.: Mr. Aponte worked as an Environmental Scientist for RU2 Engineering where he conducted and oversaw field sampling events for soil and groundwater. In his position, Mr. Aponte was responsible for the oversight of UST closures.

Envocare: Working as an Environmental Scientist for Envocare in Somerset, NJ, Mr. Aponte prepared reports and data tables for clients. He was responsible for field sampling with a concentration on soil, groundwater, and vapor intrusion. Mr. Aponte oversaw subcontractors and remediation projects as well as overseeing disposal of contaminated soil.

Arecon LTD: As an Environmental Scientist for Arecon LTD in Hamilton, NJ, Mr. Aponte prepared reports and data tables for clients. He was responsible for field sampling of soil and groundwater. Mr. Aponte oversaw subcontractors and remediation projects as well as overseeing disposal of contaminated soil.

Certified Environmental Contractors: Mr. Aponte worked as a Staff Scientist for Certified Environmental Contractors from 2017 to 2018 where he supervised the UST excavation of residential UHOT sites. He performed sampling of soil and groundwater and assisted in the preparation of reports.

HILLMANN CONSULTING

Chris Hirschmann, CHMM

Director, Site Investigation & Remediation Services

EDUCATION:

B.S. Environmental Science, Cornell University

M.S., Environmental Science, NJIT – Rutgers University

CERTIFICATION:

OSHA 40-Hour HAZWOPER

OSHA HAZWOPER Supervisor

OSHA 10-Hour Construction

Certified Hazardous Materials Manager (CHMM) #14701

NJDEP Subsurface Evaluator #572258

Hazardous Waste Management Certification

Site Remediation Basics Certification

New York City Office of Environmental Remediation (NYCOER) Brownfield Certification (TurboTraining)

OSHA 30-Hour 1910 General Industry Training

YEARS OF EXPERIENCE:

With Hillmann: 12

Total: 14

PROFESSIONAL EXPERIENCE:

Mr. Hirschmann is currently the Director, Site Investigation & Remediation Services at Hillmann Consulting, LLC. As such, he is responsible for managing and implementing soil, groundwater, and soil vapor subsurface investigations and remediation; regulatory compliance; storage tank closure and install; and third party document review.

Mr. Hirschmann has extensive experience in evaluating and investigating sites for subsurface contamination and instituting remedial activities for commercial and industrial properties (including City & State regulatory & brownfield programs). He also performs SPCC plan preparation and hazardous materials management; and performs Phase I environmental site assessments to meet due diligence requirements under CERCLA, including the quality assurance of technical reports.

Representative experience includes:

The Doe Fund, Bronx, NY:

Identified as a spill case with confirmed soil, groundwater and soil/vapor contamination with the New York State Department of Environmental Conservation (NYSDEC) and brownfield and e-designation site with New York State Office of Environmental Remediation (NYCOER). Mr. Hirschmann functioned as the project director for Hillmann and prepared the remedial investigation work plan (RIWP), conducted remedial investigation activities and prepared a Remedial Investigation Report (RIR). Based on the RIR Hillmann prepared a Remedial Action Work Plan (RAWP) that was subsequently approved by the NYSDEC and NYCOER. Under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities, including implementation of a Community Air Monitoring Plan, during site redevelopment activities.

Women in Need, Brooklyn, NY:

Identified as an e-designation and brownfield case with soil and soil/vapor contamination with NYCOER. Mr. Hirschmann functioned as the project director for Hillmann and prepared the remedial investigation work plan (RIWP), conducted remedial investigation activities and prepared a Remedial Investigation Report (RIR). Based on the RIR Hillmann designed and prepared a Remedial Action Work Plan (RAWP) that was subsequently approved by the NYCOER. Under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities during site redevelopment activities.

TLK Manor, Bronx, NY:

Identified as a contaminated property under the purview of NYCDEP, Hillmann provided investigation and remediation services related to redevelopment activities. Mr. Hirschmann functioned as the project director and conducted the remedial investigation and prepared a Remedial Action Work Plan based on the results of the soil, groundwater and soil/vapor investigation. During redevelopment

HILLMANN CONSULTING

activities, under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities including implementation of a Community Air Monitoring Plan.

BP Real Estate Fund, Queens, NY

Hillmann was retained to address the e-designation on the property for hazardous materials prior to redevelopment activities. Mr. Hirschmann functioned as the project director and prepared a Remedial Investigation Workplan, conducted the Remedial Investigation soil, groundwater and soil vapor sampling activities and issued the Remedial Investigation Report to the NYCOER. The NYCOER subsequently removed the e-designation from the property after review and approval of project documents.

AIG, Bernardsville, NJ:

The Property had a leaking underground storage tank (UST) identified as a spill case with the New Jersey Department of Environmental Protection (NJDEP) and contained widespread soil and groundwater contamination. Hillmann provided investigation and remedial activities at the site including: delineation of soil and groundwater contamination, preparation of remedial action plans for the NJDEP, enhanced fluid recovery for groundwater remediation, injection remediation of groundwater including chemical oxidation material and microbe material to break down and remediate the elevated contaminants found in the groundwater. Mr. Hirschmann was the project manager and NJDEP certified Subsurface Evaluator for the remedial activities.

City of Newark, New Jersey:

Hillmann provided investigation and remediation activities for five City owned brownfield properties. Mr. Hirschmann functioned as the project manager for oversight, design, implementation and management of soil and groundwater remedial investigations at the properties.

Unique People Services, Bronx, New York

Identified as a contaminated property under the purview of NYCDEP, Hillmann provided investigation and remediation services related to redevelopment activities. Mr. Hirschmann functioned as the project director and conducted the remedial investigation and prepared a Remedial Action Work Plan based on the results of the soil, groundwater and soil/vapor investigation. During redevelopment activities, under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities including implementation of a Community Air Monitoring Plan.

Notias Construction, NY, NY:

Hillmann provided environmental investigation activities for 5 separate sites in Manhattan, NY. Mr. Hirschmann functioned as the project manager and prepared Phase II Investigation workplans for soil and soil-vapor sampling, directed site investigation activities and prepared Remedial Investigation Reports for each site. Where

HILLMANN CONSULTING

contamination was identified, Mr. Hirschmann prepared Remedial Action Work Plans for slated redevelopment activities.

AIG: Northeastern States: Hillmann provides ongoing environmental consulting for this client including decommissioning of fuel oil storage tanks, investigation and remediation of fuel oil contaminated soil and groundwater. Mr. Hirschmann provides third-party oversight on behalf of this client to ensure the contractors/consultants onsite are performing project activities in accordance with industry and regulatory protocol. When applicable on certain projects, Mr. Hirschmann will also direct full remedial investigation and remedial activities as the project manager.

HILLMANN
CONSULTING

Re: Due Diligence Soil Sample Collection
2828 West 28th Street
Brooklyn, NY 11224
Hillmann Project No: Z34991.3

Dear Mr. Sussi,

As requested, Hillmann Consulting, LLC mobilized to the site to collect due diligence soil samples during geotechnical boring activities. Three (3) soil samples were collected from onsite borings advanced by the geotechnical contractor. The samples were labeled as SB1A, SB2, and SB3 and collected from 4.5 – 6.5 feet below ground surface. Locations of the borings are shown on the attached diagram.

Soil samples were placed in laboratory approved containers and kept cool during transport to a New York certified laboratory under chain of custody protocol. All samples were submitted for laboratory analysis of the Target Analyte List/Target Compound List which includes: volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), TAL metals, pesticides, and polychlorinated biphenyls (PCBs).

RESULTS

The soil samples were compared to the New York State Department of Environmental Conservation (NYSDEC) Unrestricted Use (UU) and Restricted Residential Use (RRU) Soil Cleanup Objectives (SCOs). Laboratory results did not indicate any exceedances above the RRUSCO or UUSCO for all analyzed compounds.

A summary of the soil results is included in Table 1 and the full laboratory report included as Attachment A.

Sincerely,

Hillmann Consulting

Ryan K. Powell, P.G.
Environmental Scientist

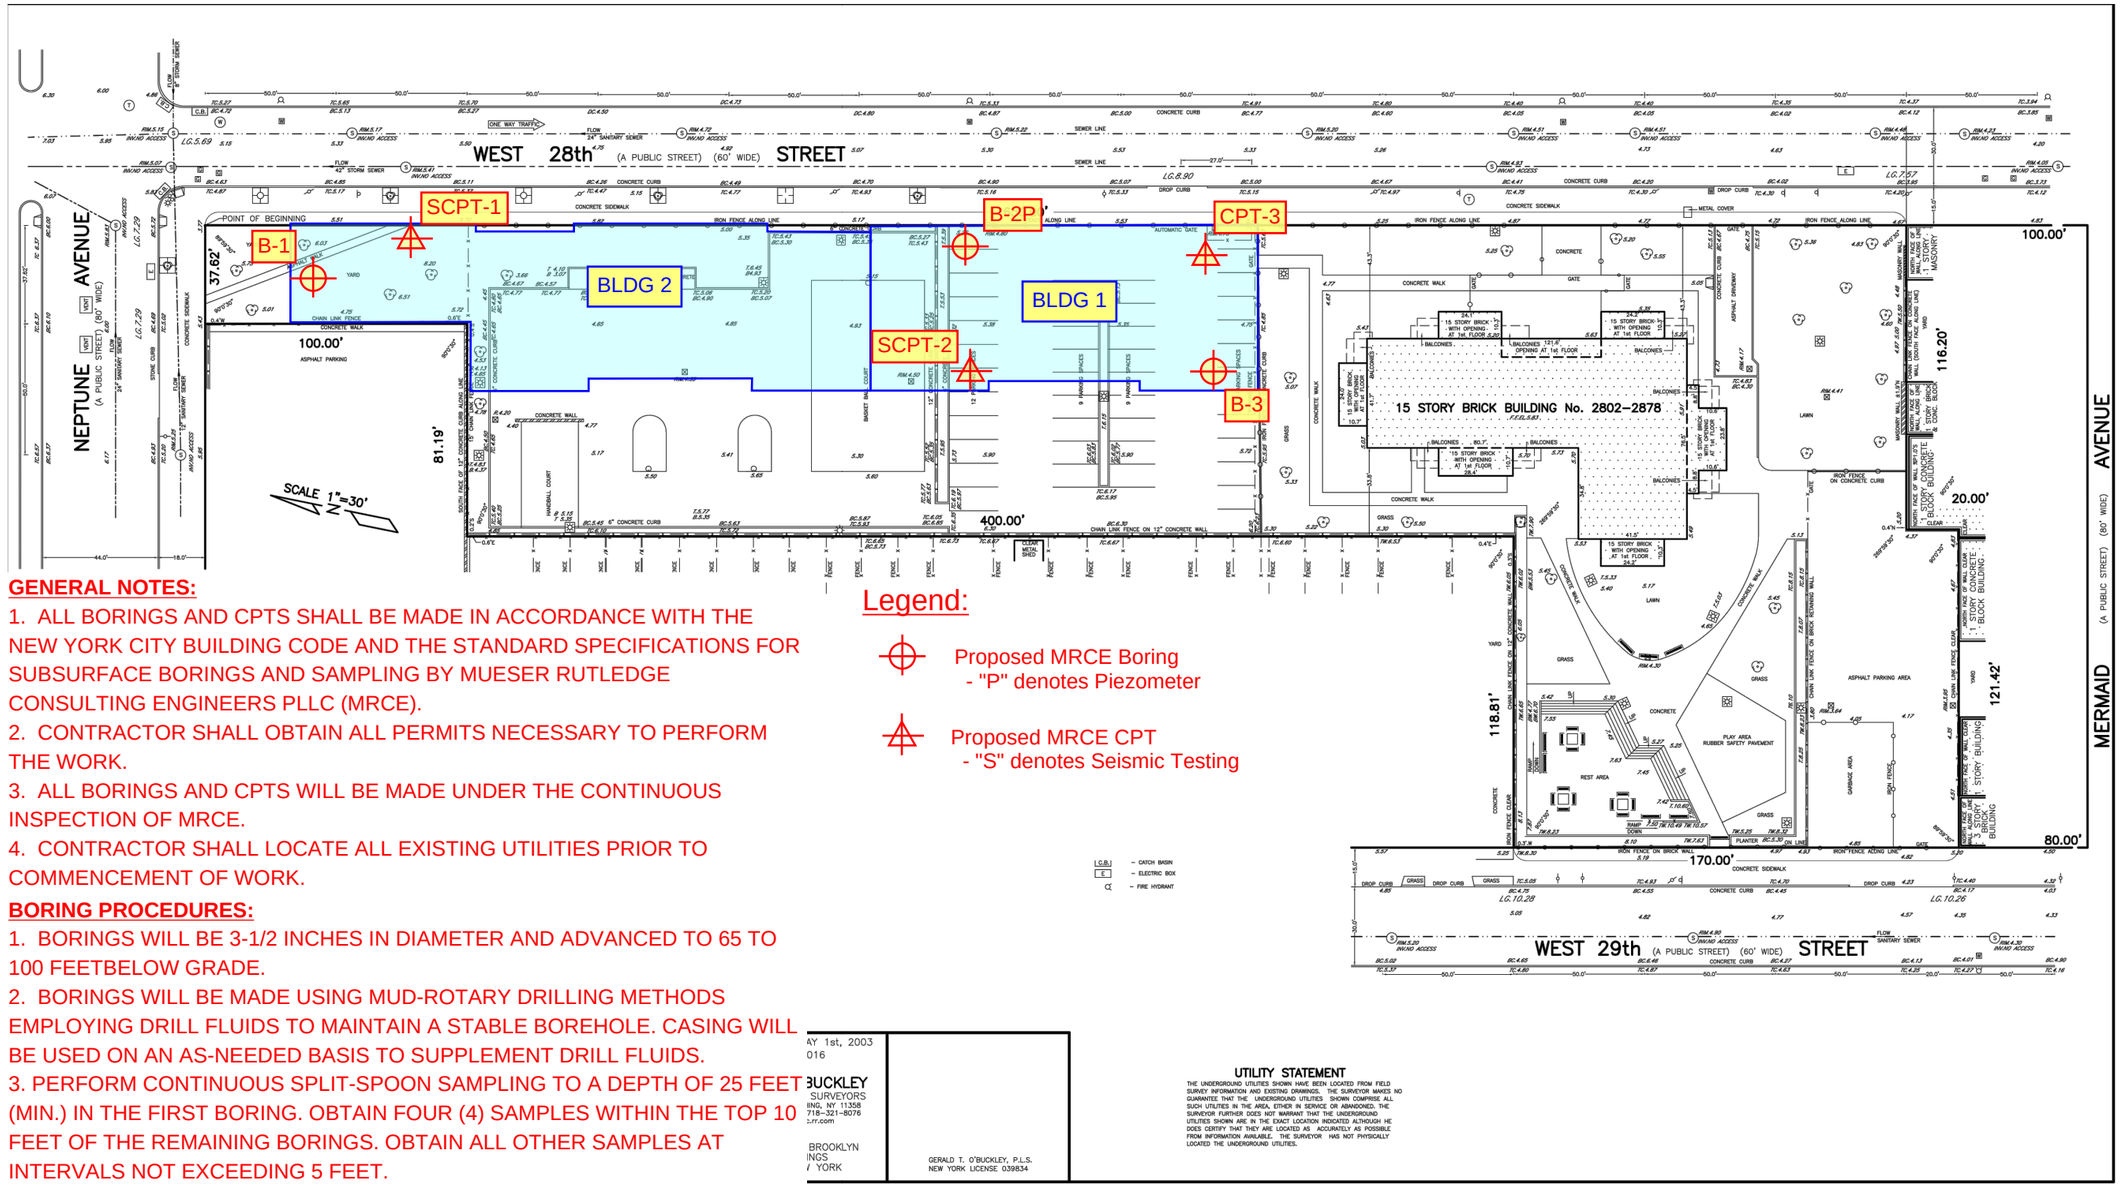
Chris Hirschmann, CHMM
Director, Environmental Services

MRCE P22-454
Boring Location Plan
2022-08-23

SEA PARK NORTH

BROOKLYN, NY

AUFGANG ARCHITECTS



GENERAL NOTES:

1. ALL BORINGS AND CPTS SHALL BE MADE IN ACCORDANCE WITH THE NEW YORK CITY BUILDING CODE AND THE STANDARD SPECIFICATIONS FOR SUBSURFACE BORINGS AND SAMPLING BY MUESER RUTLEDGE CONSULTING ENGINEERS PLLC (MRCE).
2. CONTRACTOR SHALL OBTAIN ALL PERMITS NECESSARY TO PERFORM THE WORK.
3. ALL BORINGS AND CPTS WILL BE MADE UNDER THE CONTINUOUS INSPECTION OF MRCE.
4. CONTRACTOR SHALL LOCATE ALL EXISTING UTILITIES PRIOR TO COMMENCEMENT OF WORK.

BORING PROCEDURES:

1. BORINGS WILL BE 3-1/2 INCHES IN DIAMETER AND ADVANCED TO 65 TO 100 FEETBELOW GRADE.
2. BORINGS WILL BE MADE USING MUD-ROTARY DRILLING METHODS EMPLOYING DRILL FLUIDS TO MAINTAIN A STABLE BOREHOLE. CASING WILL BE USED ON AN AS-NEEDED BASIS TO SUPPLEMENT DRILL FLUIDS.
3. PERFORM CONTINUOUS SPLIT-SPOON SAMPLING TO A DEPTH OF 25 FEET (MIN.) IN THE FIRST BORING. OBTAIN FOUR (4) SAMPLES WITHIN THE TOP 10 FEET OF THE REMAINING BORINGS. OBTAIN ALL OTHER SAMPLES AT INTERVALS NOT EXCEEDING 5 FEET.

SITE SURVEY
NOT TO SCALE

Results in Yellow Highlight displays exceedance above the UUSCO regulatory standard
Results in Green Highlight displays exceedance above both UUSCO & RRUSCO regulatory standard
U = Indicates the analyte was analyzed for but not detected.
NS = No Standard Available
~ = Sample not analyzed
J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
***T = There are no TICs reported for the sample**
***- = LCS and/or LCSD is outside acceptance limits, low biased.**
***+ = LCS and/or LCSD is outside acceptance limits, high biased.**
***1 = LCS/LCSD RPD exceeds control limits.**
***3 = ISTD response or retention time outside acceptable limits.**
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits

Re: Final Geotechnical Report
Sea Park North (2828 W. 28th Street)
Brooklyn, New York
MRCE File No. 14442

Dear Mr. Katehis:

Mueser Rutledge Consulting Engineers (MRCE) has completed a final subsurface investigation for the proposed Sea Park North development at 2828 West 28th Street in accordance with our proposal dated November 28, 2023. This report supersedes our October 2022 Due Diligence Report and presents a summary of the subsurface investigations performed at the project site, our interpretation of subsurface conditions encountered, and recommendations for design and construction of foundations.

Please call if you have any questions regarding our report or require further assistance in design and construction of foundations and other below grade structures.

Very truly yours,

MUESER RUTLEDGE CONSULTING ENGINEERS PLLC

Gregory Lucking, PE

Walter Kaeck, Principal, PE

2.0 DATUM AND REFERENCES

Elevations in this report refer to the North American Vertical Datum of 1988 (NAVD 88).

Our report is based on the proposed building construction depicted in the Schematic Drawings for Sea Park North, prepared by Dattner Architects, dated September 20, 2023, and the Preliminary Column Layout and Foundation Loads (Drawing SK-S1), provided by Murray Engineering, PC on December 6, 2023. For ease in reference herein, project North is taken as parallel to West 28th Street with direction toward Neptune Avenue.

3.0 SITE DESCRIPTION

The Sea Park North project site is at 2828 West 28th Street in the Coney Island neighborhood of Brooklyn, New York (Block 7011, Lot 11) as shown on Figure 1. The block is bound to the north by Neptune Avenue, to the east by West 28th Street, to the south by Mermaid Avenue, and to the west by West 29th Street. Lot 11 encompasses about half of Block 7011 and contains an existing fifteen story building with a footprint area of about 8,000 square feet in its southern third. The area north of the building has street frontage along West 28th Street and generally consists of at grade parking, landscaped areas, and a park (basketball courts). The new development is planned north of the existing building along West 28th Street. The existing fifteen story building will remain in place.

Ground surface at the site is relatively flat, ranging from approximately Elev. +4.5 to Elev. +6.

3.1 Adjacent Structures: In the area where the new development is proposed, Lot 11 is bound to the west by Lot 1 and Lots 63 through 97. Lot 1 contains an approximately 8,700 square foot one-story masonry structure used for religious gatherings and an at grade parking lot. The one-story

structure is located in the northwest corner of the block and is set back from the shared property line with Lot 11. Lots 63 through 97 contain two-story timber framed residential structures. The residential structures are generally set back about 30 feet from the common property line, creating rear yards between the structures and the project site. Additionally, Lot 11 contains an existing 15-story residential building (as noted above) about 50 feet south of the proposed development. Given the building height, the 15-story building is likely supported on deep foundations.

4.0 SITE HISTORY AND REGIONAL GEOLOGY

The subsurface geology along the south shore of Brooklyn and Queens is the product of a series of Pleistocene glacial advances and subsequent retreats combined with sea-level rise. The near surface geology is comprised of older glacial sediments which have been reworked during the Holocene by coastal processes during a rise in sea levels.

Below Coney Island, Cretaceous age Coastal Plain sediments were eroded down and covered with the Jameco Gravel outwash sand during an early period of glaciation. This sand and gravel stratum is encountered around Elev. -175 to Elev. -200 below western Coney Island. When the ice retreated, sea-level rose during the interglacial period and a marine clay, the Gardiners Clay, was deposited above the Jameco outwash. The Gardiners is present at roughly Elev. -150. The next glaciation covered the Gardiners with another layer of outwash sand, the Merrick Formation. This outwash deposit appears to be especially thick around the mouth of New York Harbor (including Coney Island where it is found roughly somewhere between Elev. -60 and Elev. -160) and thins eastward towards Suffolk County.

This glaciation was followed by another episode of sea-level rise, which deposited a layer of marine clay commonly known as the 20-Foot Clay (or the Wantagh Formation) above the outwash sand. The stratum is discontinuous along the south shore, but where present, it is typically encountered between Elev. -40 and Elev. -100 below the barrier islands. The most recent late Wisconsin age glaciation covered the 20-Foot Clay with another layer of outwash sand, the Bellmore Formation.

The last glacial ice retreated during the Holocene and sea-level started to rise to their present levels. Wave action reworked the glacial sediments into barrier islands that paralleled the mainland and migrated landward in-step with the rising sea-levels. Over time the coastal marshes were flooded and covered with back-bay organic clays, which in turn were buried under outwash and barrier beach sands. This action of the barrier islands “rolling over” has led to deposits of more recent marsh and marine organics interlayered with beach sands in the near surface.

As shown in Figure 2, the shoreline of Coney Island once crossed the site in an east-west direction near the current location of the existing 15-story building. Therefore, the area of new development is generally located outboard of the historic shoreline in an area of made land. The creation of new land to expand the western part of Coney Island was generally performed before 1910. The process of raising grades above sea level was likely performed in an uncontrolled manner using miscellaneous fill and soils dredged from nearby water ways resulting in loose granular deposits near the surface.

5.0 PROPOSED CONSTRUCTION

We understand development plans consist of construction of a new nine (9) story residential building along West 28th Street about 50 feet north of the existing fifteen story building. The ground floor level of the new building will generally comprise storage rooms, a parking portico, and other non-habitable utility spaces. The first-floor is planned about 11 feet above existing site grade to place the floor level

above the design flood elevation. Amenity and office space uses are planned at the first floor. Seven (7) levels of residential units are proposed above the first floor.

Based on the September 2023 Schematic Drawings, the building footprint area at the ground level measures about 22,300 square feet. The building will be set back about 46 feet from the west property line adjacent to Lots 63 through 97 to create space for an outdoor recreational area and additional outdoor parking. An elevator servicing the ground level is expected to include an elevator run down pit extending about 6 feet below the ground level. We anticipate other below grade utility pits on the order of 5 feet deep or less. A below grade basement or cellar level is not planned. Additional site improvements to the existing parking and landscaped areas are planned.

At the time of this report, three alternative building construction types are under consideration: (1) Cast-in-Place Concrete, (2) Block and Plank, and (3) Steel and Plank. The three building construction types result in different building weights and foundation loads as summarized on Drawing SK-S1, prepared by Murray Engineering, PC, dated December 6, 2023. The Cast-in-Place Concrete and Block and Plank options have similar total building weights of approximately 45,000 and 44,000 kips, respectively, while the Steel and Plank option is lighter with a total weight of about 36,000 kips. The selected construction type and resulting building loads will impact building settlement and foundation requirements as summarized in Section 11.3 of this report.

6.0 SUBSURFACE INVESTIGATION

6.1 Preliminary Investigation: We completed a preliminary (due diligence) geotechnical investigation to understand subsurface conditions at the site and develop preliminary concepts and pricing for foundations and site improvements in October 2022. The preliminary investigation consisted of three (3) geotechnical borings (B-1 through B-3) and three (3) Cone Penetration Test (CPT) probes (CPT-1 through CPT-3). An open standpipe piezometer was installed in one of the completed borings (B-1P) and seismic shear wave velocity testing was performed in two of the three CPT probes. Logs of the borings and CPT probes are included in Appendix A and B, respectively. We refer to our October 2022 Due Diligence Geotechnical Report for a more detailed description of the results of the preliminary subsurface investigation.

6.2 Final Investigation Scope: The preliminary investigation did not satisfy the minimum exploration requirements of the New York City Building Code (Code) for the proposed development. For a building footprint area of 22,300 square feet supported on deep foundations, the Code requires a subsurface investigation consisting of eleven (11) borings with an allowance for substitution of up to one half of the borings with CPTs at a replacement ratio of 1.5 CPTs for each boring. The preliminary investigation consisted of three (3) borings and three (3) CPT probes. On that basis, we planned a final subsurface investigation to satisfy Code requirements consisting of three (3) additional geotechnical borings (B-4 through B-6) and five (5) additional CPT probes (CPT-4 through CPT-8), resulting in a total of six (6) geotechnical borings and seven (7) CPT probes.

6.2.1 Planning, Layout, and Inspection: We prepared a plan and specification for the work and negotiated a contract with Craig Geotechnical Drilling Company, Inc. (Craig) of Mays Landing, New Jersey. Borings B-4 through B-6 and CPT probes CPT-4 through CPT-8 were completed by Craig between January 8 and January 11, 2024, under the continuous observation of MRCE resident engineer Mr. Seong Hwang who prepared a field log for each boring and daily field report documenting work progress. Boring and CPT layout was arranged to provide overall coverage across the proposed building footprint and fill in areas that were inaccessible during the preliminary investigation, such as the basketball courts.

6.2.2 Geotechnical Borings: The borings were advanced with a track mounted drill rig using wash-rotary methods and a combination of steel casing and drilling mud to stabilize borehole advancement. The borings were advanced to depths ranging from 65 to 120 feet.

6.2.3 Soil Sampling: Four (4) split-spoon samples were obtained in the first 10 feet and at intervals not exceeding 5 feet thereafter. Split-spoon soil samples were obtained in conformance with ASTM D1586 – "Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils" using a two-inch outer diameter split-spoon sampler driven with a 140-pound hammer free-falling 30 inches. Hammer blows were recorded for each of four six-inch drive intervals of the split-spoon sampler. The sum of the blows for the second and third six-inch drive intervals is defined as the Standard Penetration Test (SPT) Resistance, or N-value. The N-value is an index of the relative density of granular soils and a rough approximation of the consistency (strength) of cohesive soils at the sample interval. Recovered split-spoon soil samples were placed in glass, screw-top jars and delivered to our in-house laboratory for verification of field sample descriptions. Soil samples were classified in accordance with the Unified Soil Classification System (USCS) as summarized on Drawing GS-R, Geotechnical Reference Standards. Logs of the borings with complete soil descriptions are included in Appendix A.

N-values shown on the boring logs in Appendix A and next to the borings on Geologic Section A-A on Drawing GS-1 are the uncorrected raw N-values as measured in the field. To account for differences in hammer energy transfer efficiency, the N-value is commonly corrected to a standard transferred energy efficiency of 60%. The corrected N-value is termed N_{60} and allows comparative evaluation of soil properties between borings made with different equipment and is the common basis of some geotechnical analyses, such as liquefaction potential. The drill rig used by Craig was equipped with an automatic hammer. A correction value, C_E, of 1.4 (representing an efficiency of about 84%) was used in our analyses for the automatic hammer.

6.2.4 Undisturbed Tube Sampling: Undisturbed samples of cohesive soil (clay and plastic silt) were collected in accordance with ASTM D1587 – "Standard Practice for Thin-Walled Tube Sampling of Soils for Geotechnical Purposes" using a Shelby tube sampler. The samples were obtained using a three-inch outside diameter thin-walled stainless steel tube with a beveled cutting edge, which is mechanically pushed into the soil by the drill rig. The sampler penetration length and sample recovery length of each undisturbed sample are recorded on the boring logs. The undisturbed tubes were sealed on site by applying paraffin wax to both ends of the tube and capped to preserve moisture content during transport to our in-house laboratory for testing. Pocket penetrometer tests were conducted in the field on the ends of the tube samples to provide a rough measure of soil strength.

6.2.5 Groundwater Monitoring: An open standpipe piezometer was installed during the preliminary investigation in completed borehole B-1P to monitor groundwater levels. The piezometer consists of a 2-inch I.D. PVC standpipe with the bottom 10 feet slotted. The slotted portion of the piezometer is surrounded by filter sand to allow free water flow into the standpipe without movement of soil particles and is sealed from above with a layer of bentonite chips to prevent surface water from infiltrating the piezometer. The piezometer was installed to a depth of 20 feet below ground surface. Piezometer construction details and water level readings are provided on the Piezometer Record accompanying the boring logs in Appendix A including an additional reading during the final investigation.

6.2.6 Backfilling, Restoration, and Final Survey: Upon completion, borings were backfilled with soil cuttings and the surface patched with quick setting cement or cold patch asphalt. Final boring locations were measured from existing features and are shown on Drawing B-1. Ground surface elevations at boring locations were estimated using the available site survey.

6.2.7 CPT Probes: CPT probes were performed in accordance with ASTM D5778 – "Standard Test Method for Electric Friction Cone and Piezocone Penetration Testing of Soils". The CPT probes were performed using a truck-mounted CPT rig, which hydraulically pushed an instrumented piezocone into the ground at a controlled rate of about 20 mm/s. The instrumented piezocone was advanced to record continuous measurements of cone tip resistance, sleeve friction, and excess pore water pressure. CPT-4, CPT-6, and CPT-7 were advanced to a depth of 120 feet, and CPT-5 and CPT-8 were advanced to a depth of 100 feet. Upon completion of testing at each location, the cone apparatus was removed, and the open CPT holes were backfilled with bentonite pellets and/or filter sand. Logs of the CPT probes provided by Craig are included in Appendix B.

7.0 LABORATORY TESTING AND REVIEW

Upon completion of the investigation, all soil samples were transported to our in-house soils laboratory for laboratory testing and verification of soil descriptions in conformance with MRCE Geotechnical Reference Standards described on Drawing GS-R. The sample descriptions on the boring logs in Appendix A reflect the results of the MRCE laboratory review.

Laboratory testing consisted of soil index tests including natural water contents and Atterberg Limits on fine grained, cohesive samples, and one (1) constant rate of strain (CRS) consolidation tests on an undisturbed tube sample of the marine clay deposits. Additional laboratory testing was performed on samples recovered during the preliminary investigation including three (3) incremental load consolidation tests on undisturbed tube samples of the marine clay deposits. The results of laboratory testing, including those from the preliminary investigation, are summarized on Table 1 in the Exhibits.

8.0 SUBSURFACE CONDITIONS

Our interpretation of subsurface conditions is illustrated on Geologic Sections A-A on Drawing GS-1. Information from the borings shown on the sections include sample number and position, SPT resistance (uncorrected N-value) in blows per foot, natural moisture content where determined, and the Unified Soil Classification System (USCS) soil group symbol for each soil sample. Information from the CPTs include the corrected cone tip resistance, q_t, in tons per square foot (tsf), and measured pore water pressure at the cone shoulder (u_2 position) in pounds per square inch (psi).

8.1 Subsurface Stratigraphy

General descriptions of subsurface materials encountered, including material classification (NYC Class) in accordance with the Code, are summarized below in order of their occurrence with depth.

Stratum F – Fill (NYC Class 7): A thin layer of uncontrolled fill is the uppermost soil stratum below the surficial layer of asphalt pavement or topsoil. Stratum F generally consists of loose to medium compact brown, gray and tan fine to coarse sand, trace to some silt, brick, trace gravel, roots. Local accumulations of construction debris and remnants of prior foundations may also be encountered. Stratum F is differentiated from Stratum S1 below by more recent human disturbance and the presence of non-natural soil particles such as brick fragments and debris. N-values from the borings range from 3 to 17, averaging 10. Corrected tip resistance, q_t, from the CPTs ranges from 8 to 183 tsf, correlating to N-values of about 1 to 42, averaging 20. Stratum F ranges in thickness from approximately 3 to 7 feet in the borings and CPT probes.

Stratum S1 – Sand w/ Clay Pockets & Lenses (NYC Class 6): Natural sand with clay pockets and lenses, Stratum S1, underlies Stratum F in all Borings and CPT probes. Stratum S1 is likely comprised of glacial outwash sands that were reworked by coastal processes and occasionally interlayered with back bay marsh deposits. The upper portions of Stratum S1 may be manmade fill comprised of natural sands which were dredged from nearby sources and placed to raise grades above sea level. In general, Stratum S1 consists of loose to medium compact gray fine to medium sand with trace to some silt, trace shells, gravel. The lower portion of Stratum S1 is expected to include pockets and thin lenses of organic silty clay as observed in Boring B-1P, Sample 6D. Additionally, the CPT data show occasional spikes in pore pressure in the lower portions of Stratum S1 which indicate soils with higher fines content and likely presence of thin layers of compressible cohesive soils. N-values from the borings range from 3 to 15, averaging 7. Corrected tip resistance, q_t, from the CPTs ranges from 4 to 143 tsf, correlating to N-values of about 2 to 33, averaging 13. Stratum S1 ranges in thickness from about 6.5 to 12.5 feet in the borings and CPT probes.

Stratum S2 – Upper Outwash Sand (NYC Class 3a/b): Glacial outwash sand, Stratum S2, is present below Stratum S1. Stratum S2 is likely part of the Bellmore Formation deposited after the Wisconsin Age glaciation. In general, Stratum S2 consists of medium compact to very compact gray fine to medium sand, trace silt. N-values from the borings range from 11 to 55, averaging 29. Corrected tip resistance, q_t, from the CPT probes ranges from 39 to 358 tsf, correlating to N-values of about 12 to 65, averaging 40. Stratum S2 ranges in thickness from about 41 to 45 feet in the borings and CPT probes. The top of Stratum S2 ranges from Elev. -7 to Elev. -10.

Stratum SC – Organic Clayey Sand (NYC Class 4c): Organic clayey sand, Stratum SC, is present below Stratum S2 in all borings and CPT probes except Boring B-1P. The presence of Stratum SC is likely related to the underlying interglacial 20-Foot Clay Formation but was deposited in a transitional higher energy environment and contains more sand sized particles than silt and clay. In general, Stratum SC consists of loose to medium compact gray organic clayey fine sand, trace shells and gray silty fine sand, trace medium sand, organic clay, shells, vegetation. N-values from the borings range from 1 to 15, averaging 6.5, excluding one SPT attempt where the sampler advanced at least 18-inches under the weight of the drill rods (WR) or weight of hammer (WH). Corrected tip resistance, q_t, from the CPT probes ranges from 11 to 49 tsf, correlating to N-values of about 4 to 15, averaging 7. Fines content (percent of sample comprised of silt or clay sizes) from two samples (B-4, Sample 14D, and B-5, Sample 15D) range from 27.2 to 31.6 percent. Stratum SC ranges in thickness from about 5 to 7.5 feet in the borings and CPT probes. The top of Stratum SC ranges from Elev. -48 to Elev. -53.

Stratum C – Organic Silty Clay (NYC Class 4c): Marine clay, Stratum C, underlies Stratum SC except in Boring B-1P where it directly underlies Stratum S2. Stratum C is likely part of the interglacial 20-Foot Clay Formation. In general, Stratum C consists of medium gray organic silty clay, trace fine sand, shells, vegetation. N-values from the borings range from 2 to 6, averaging 4, excluding eighteen (18) of twenty-four (24) SPT attempts where the sampler advanced at least 18-inches under the weight of the drill rods (WR) or weight of hammer (WH). Corrected tip resistance, q_t, from the CPT probes ranges from 10 to 65 tsf, correlating to undrained shear strengths of about 900 to 2600 psf, averaging about 1300 psf. Stratum C ranges in thickness from about 30 to 35.5 feet in the borings and CPT probes. The top of Stratum C ranges from Elev. -52 to Elev. -58.

Plate SPP-1 summarizes the results of laboratory testing of samples of the Stratum C clay graphically versus depth. The left panel of the plate presents soil preconsolidation stress determined from the laboratory consolidation tests relative to the estimated existing vertical effective overburden stress.

Water contents and plasticity data are profiled in the center panel. Soil stratigraphy is provided in the right panel.

Water contents, expressed as a percentage of the sample dry weight, range from 45% to 73%, averaging 57%. Atterberg Limits indicate that Stratum C is generally a relatively high plasticity clay OH and CH, with Liquid Limits ranging from 49% to 78%, averaging, 65%, and Plasticity Index ranging from 22% to 41%, averaging 32%. Water contents typically plot below the liquid limit indicating that the Stratum C deposits are slightly overconsolidated.

As shown in Plate SPP-1, consolidation tests indicate preconsolidation pressures in the Stratum C clay ranging from 2.4 to 2.8 tsf, or about 0.5 to 0.6 tsf in excess of existing overburden pressures. The consolidation test results confirm that the Stratum C clay is lightly over-consolidated with an over-consolidation ratio (OCR = ratio of preconsolidation stress to existing overburden stress) generally between about 1.2 and 1.4. Correlations using the CPT data indicate a similar OCR range of between about 1.2 to 1.6. For comparison, the estimated stress increase in the Stratum C clay resulting from the alternative building construction types is also shown on Plate SPP-1 relative to the soil preconsolidation stress. The relative position of new imposed stresses to soil preconsolidation stress is important and will impact building settlement, as discussed further in Section 11.3 of this report.

We note that the consolidation test on Sample 16S in Boring B-6 indicates an OCR closer to 1.0, however, the sample also had the lowest natural water content and plasticity index of the tested samples. The lower plasticity index and likely higher percentage of fine sand makes the sample more prone to disturbance, resulting in a lower estimated preconsolidation stress and OCR. Additional laboratory data obtained within Stratum C from nearby sites supports an OCR between 1.2 and 1.4. The additional laboratory test data was obtained from sites located at 2960 West 29th Street (URS Coney Island Commons Report), 2955 West 28th Street (MRCE SHF Coney Island Site Report), and 2947 West 28th Street (MRCE Report on Foundations, Coney Island I), and is included in Appendix C.

Stratum S3 – Lower Outwash Sand (NYC Class 3a/b): A lower layer of glacial outwash sand, Stratum S3, exists below Stratum C. Stratum S3 is likely part of the Merrick Formation. In general, Stratum S3 consists of medium compact to compact gray and light brown fine to medium sand, trace silt, coarse sand, gravel. N-values from the borings range from 14 to 31, averaging 22. Corrected tip resistance, q_t, from the CPT probes ranges from 70 to 238 tsf, correlating to N-values of about 17 to 50, averaging 27. The top of Stratum S3 ranges from Elev. -85.5 to Elev. -90.5. Stratum S3 was not fully penetrated by the borings/CPT probes, but is expected to continue to approximately Elev. -150 as described above in Section 4.0.

8.2 Groundwater

Groundwater was measured in the piezometer installed in Boring B-1P on September 13, 2022, at a depth of 6.1 feet, corresponding to Elev. -0.4, and on January 11, 2024, at a depth of 4.8 feet, corresponding to Elev. +1.0. Porewater pressure measurements recorded by the CPT probes on August 31, 2022, and January 9 and January 10, 2024, in Strata S1 and S2 indicate groundwater at depths ranging from about 2 to 5 feet, corresponding to about Elev. -0.2 to +2.8. Groundwater levels are expected to vary on a daily basis due to tidal influences, and vary seasonally due to changes in rainfall and other influences. In general, we expect normal groundwater levels between about Elev. -1 and +2. Higher groundwater levels may occur during storm surges and extreme weather events.

9.0 RECOMMENDED DESIGN PARAMETERS

Recommended soil design parameters are provided in Table 9.1 below for use in the design of foundations and temporary construction works such as excavation shoring.

Table 9.1 – Soil Design Parameters

Parameter		Stratum				
	F	S1	S2	SC	C	S3
Total Unit Weight (pcf)	120	110	125	120	100	120
Effective Unit Weight (pcf)	58	48	58	58	38	58
Angle of Internal Friction (deg)	30	30	34	28	0	33
Cohesion (psf)	0	0	0	0	1,000	0
At-Rest Earth Pressure Coefficient, K_o	0.50	0.50	0.44	N/A	N/A	N/A
Active Earth Pressure Coefficient, K_a	0.33	0.33	0.28	N/A	N/A	N/A
Passive Earth Pressure Coefficient, K_p	3.00	3.00	3.54	N/A	N/A	N/A
Ultimate Friction Factor, S – Soil to Concrete	0.3	0.3	0.4	N/A	N/A	N/A

Table 1 Notes:

1. Effective unit weights should be used below the groundwater table and water pressure should be added.
2. Surcharge loads above the ground surface should be included in accordance with the NYC Building Code.
3. For basement walls restrained at the top and bottom (rigid walls), use at-rest pressures. For walls restrained at the bottom and free at the top (flexible), active earth pressures may be used.
4. Active and passive pressures may be computed using Rankine or Coulomb earth pressure theory.

9.1 Design Groundwater Levels

Groundwater is expected to vary between approximately Elev. -1 and +2. For design purposes, we recommend use of a normal design groundwater level at Elev. +3. Foundations and below grade structures must also accommodate a temporary rise in groundwater levels up to the ground surface or higher during a flood event depending on the selected strategy for flood proofing (i.e. dry or wet flood proofing). The use of elevated stress levels in design is appropriate under such temporary loading conditions.

9.2 Flood Levels

Preliminary Flood Insurance Rate Maps (FIRM), produced by the Federal Emergency Management Agency, dated January 30, 2015, indicate that the site lies in Zone AE with a Base Flood Elevation of Elev. +11 (NAVD 88). The Base Flood Elevation corresponds to the 1% annual flood, or 100-year return period.

10.0 SEISMIC EVALUATION

Structural design of the building foundations and superstructure must comply with the Code. The Code requires an evaluation of the seismic Site Class to determine the seismic design parameters and an assessment of the potential hazard of soil liquefaction under the seismic event specified by the Code.

10.1 Liquefaction

Loose granular soils and low-plasticity fine-grained soils below the groundwater table and within 50 feet of the ground surface have the potential to liquefy during earthquake shaking. Liquefaction susceptibility was initially assessed using the Code's Liquefaction Assessment Diagram (Figure 1813.1), which compares field measured SPT N-values corrected to an equivalent transferred energy of 60%, termed N_{60}, with specified liquefaction "screening lines". Soils with N_{60} values plotting to the left of the screening lines are considered potentially liquefiable requiring a liquefaction evaluation, while those with values plotting to the right of the liquefaction screening lines are considered unlikely to liquefy. Using the normal groundwater level of Elev. +2, the Code screening diagram indicates that the soils below groundwater in Stratum S1 are potentially liquefiable. Therefore, a liquefaction evaluation is required.

We initially evaluated the liquefaction potential of the underlying soils below the groundwater table using the Seed and Idriss (1971) simplified procedure, as modified by the consensus NCEER Workshops (Youd et al, 2001) with the available SPT and CPT data. Based on the measured shear wave velocities in SCPT-1 and SCPT-2, the Code specifies analyzing liquefaction potential using a peak ground acceleration PGA_M of 0.26g for the Geometric Mean Maximum Considered Earthquake (MCE_G) adjusted for Site Class effects. Using the Code specified PGA_M and the SPT N-values and CPT measurements at the site, our analysis shows the potential for liquefaction of a thin layer (about 3 feet thick) within Stratum S1 in all borings and CPT probes in the depth interval between about 10 and 15 feet.

Based on the presence of potentially liquefiable soils, the site is classified as Site Class F by the Code, and a site-specific seismic site response evaluation is required to determine the seismic design response spectrum for structures with a period greater than 0.5 seconds. Using the results of the site-specific response evaluation (described in Section 10.2 below), we reevaluated the liquefaction potential of the underlying soils below the groundwater table using the lower PGA of 0.208g indicated by the site response study. Under the reduced PGA, our analysis still shows the potential for liquefaction of a thin soil layer (about 1 to 2 feet thick) within Stratum S1 in all CPT probes and for one SPT interval in Boring B-2 (Sample 5D).

Initiation of liquefaction potential can result in a significant loss of soil strength and stiffness. We understand the proposed structure will be supported on deep foundations. Liquefaction impacts pile supported structures primarily by inducing settlement around the piles (a form of "downdrag" on the pile and differential settlements at connections to surrounding grades and utilities) and by reducing the ability of the soils to resist lateral loads by reducing their strength, turning them into a more cohesive state. For the design of deep foundations and connection with utilities, we have estimated the magnitude of seismically induced settlement of the soil deposit (free-field), using Zhang et al. (2002) procedures to range between about 0.5 and 3 inches. However, it should be noted that accurately estimating seismically induced ground settlement is difficult and estimates should be considered approximate. Seismically induced settlements should be considered additional to any other static settlements.

10.2 Site Class

Based on the presence of potentially liquefiable material the Seismic Site Class is F and a seismic response study is required to determine the seismic design spectrum. We performed a site-specific seismic response study based on the geologic, seismologic, and soil characteristics of the site. The borings and CPTs revealed a consistent soil profile to a depth of 120 feet. As discussed above, the Stratum S3 glacial sands are expected to extend to the top of older cretaceous soils at a depth of about 150 feet. Bedrock at the site is mapped at a depth of about 600 feet. Therefore, a single soil profile was analyzed to determine the recommended design spectrum. Properties for the soil and rock layers below the depth of exploration were estimated from available sources and historic data. We refer to the memorandum in Appendix D for a detailed summary of our seismic analyses.

Recommended Design Spectrum: The recommended site-specific response spectrum is presented in Figure S-1 as a plot of Spectral Acceleration (SA) vs structural period (T) for structural damping (ξ) of 5%. The SA values correspond to 2/3 of the Code specified design earthquake. SA values for discrete structural periods are provided in the table included on Figure S-1.

The limitations in applying the design spectrum of Figure S-1 are:

- Site Class is F.
- Recommended design spectrum developed for the foundation bottom elevation based on a site-specific seismic study performed by MRCE according to 2022 New York Building Code (Code). The spectral acceleration SA values correspond to 2/3 of the Risk-targeted Maximum Considered Earthquake (MCE_R) Code event.
- The recommended design response spectrum was developed based on the bottom of foundation structure, approximately 4 feet below the ground surface.
- The recommended design spectrum supersedes any generic site response spectrum and we recommend using it in accordance with ASCE 7-16 § 21.4 for the equivalent lateral force procedure. The spectrum shall be used for the range of periods shown. The SA values at 0.2 sec, S_{DS}, and at 1 sec, S_{D1}, cannot be used to generate an alternative response spectrum for the site.
- Structural damping ξ of 5%.

Based on the S_{DS} and S_{D1} shown on Figure S-1 and assuming a Structural Occupancy/Risk Category II or III, the structure should be designed to Seismic Design Category B.

11.0 FOUNDATION DESIGN RECOMMENDATIONS

Foundation recommendations are based on the findings of the subsurface investigation and the proposed building configuration depicted on the Schematic Drawings for Sea Park North, 2828 West 28th Street, prepared by Dattner Architects and the Preliminary Column Layout and Foundation Loads (Drawing SK-S1), prepared by Murray Engineering, PC. Foundation recommendations should be reviewed and revised if the scope of the proposed construction changes significantly from that described herein.

11.1 Challenges in Foundation Design

Foundation selection and design must consider the following subsurface challenges:

1. **Loose and Weak Near Surface Soils** - The surficial fill material and shallow natural soils (Strata F and S1) extending to a depth of about 15 feet are unsuitable as a bearing material for foundations, other than for lightly loaded structures that can tolerate settlement, due to their variable density, potential for liquefaction, and potential presence of layers of compressible organic silt within Stratum S1 that could result in excessive total and/or differential building settlement.

2. **Compressible Stratum C Clay at Depth** - The underlying glacial outwash sands (Stratum S2) are medium compact to compact and are a suitable foundation bearing stratum. However, the sands are underlain by compressible Stratum C clay that is only lightly overconsolidated (precompressed) relative to existing ground stresses. Excessive building settlement may therefore occur if stresses within the clay increase substantially and exceed the clay preconsolidation pressure as a result of new building loads. Increasing the separation distance between the foundation bearing elevation and the top of the clay will allow new building loads to dissipate before reaching the top of the clay, resulting in smaller stress increases within the clay, and reduced building settlement. Therefore, careful consideration of foundation element loads and bearing depths is necessary to consider foundations that bear above the Stratum C clay.

11.2 Foundation Alternatives

The weak surficial soils will preclude the use of shallow foundations (footings or a mat) bearing on natural soil for building support. Foundations must derive their support in the underlying more competent soils. On that basis, viable foundation alternatives to control building settlement include:

- Foundation mat supported on relatively low capacity, **short piles** with shallow penetration in the upper Stratum S2 glacial sands to dissipate foundation loads above the Stratum C clay.
- Fewer, higher capacity **long piles** penetrating into the lower Stratum S3 sand below the Stratum C clay.

11.2.1 Short Piles

Both driven piles and drilled piles are viable shallow pile alternatives. For driven piles, we recommend considering tapered tip piles such as TaperTube piles based on the subsurface conditions. Experience has shown that a tapered tip pile can achieve considerably higher capacity relative to a straight sided cylindrical pile for equal penetration in the Stratum S2 glacial sands due to the combination of bearing and frictional resistance produced by the wedge shape of the taper which is greater than the side friction and end bearing of a cylindrical pipe pile. Drilled pile options include conventional Continuous Flight Auger (CFA) piles, Drilled Displacement (DD) piles, and pressure grouted micropiles. In general, CFA piles have lower capacities for the same pile diameter and pile length when compared to DD piles. Therefore, use of CFA piles may result in more piles, or larger diameter piles compared to DD piles or pressure grouted micropiles.

For the short pile option, we recommend maintaining pile tip elevations at Elev. -25 or higher to allow building loads to dissipate above Stratum C and control building settlement. Table 11.2 summarizes the necessary pile size for several alternative pile types to achieve an allowable pile design load in compression of about 70 to 75 tons with a pile tip at Elev -25.

Table 11.2 – Estimated Pile Size by Type with Pile Tip @ El. -25

Pile Type	Outside Diameter (in)	Design Load in Compression (tons)
Driven Taper Tip Pile	18	75
Drilled Displacement (DD) Pile	14	75
Drilled Continuous Flight Auger (CFA) Pile	18	70
Drilled Pressure Grouted Micropile	16	70

11.2.2 Long Piles

If short piles cannot reasonably control building settlements within tolerable limits due to the magnitude of building loads, deep foundations consisting of long piles which penetrate below Stratum C and into Stratum S3 will be required. The top of Stratum S3 is about 90 to 95 feet below grade. Therefore, pile lengths of about 110 to 120-feet are needed to provide adequate pile penetration into Stratum S3. Both driven piles and drilled piles are viable alternatives for the long pile option. However, driving of long piles through the dense Stratum S2 sands may result in excessive vibrations and potential impacts to adjacent structures. The use of drilled piles is therefore recommended for the long pile option.

The length of CFA and DD piles is generally limited by the height of the fixed-mast drill rig used for installation, which limits the capacity that can be achieved. Pile lengths for CFA and DD piles are generally not greater than 120 feet. Additionally, the soils in Stratum S2 may be too dense for DD pile installation equipment to penetrate the entire stratum thickness. Drilled pressure grouted micropiles on the other hand can advance deeper, generally enabling higher design loads and a reduction in the quantity of piles.

We anticipate allowable pile design loads in compression of about 125 to 175 tons can be achieved with pile tip elevations at about Elev. -110 depending on the selected pile diameter.

11.3 Settlement Estimates and Viability of Short Pile Option

The viability of the short pile option depends on the magnitude of the building loads and resulting building settlement. Settlement analyses were therefore performed to estimate building settlement for the three alternative building construction types under consideration: Cast-in-Place Concrete, Block and Plank, and Steel and Plank.

Short Piles: For foundations consisting of short piles, building settlement must be carefully analyzed for the proposed design loads and pile bearing depths. Settlement will be a combination of elastic compression of the foundation elements and glacial sands of Stratum S2, and consolidation settlement of Stratum C. Elastic settlements will occur with the application of load to the soil as the structure is constructed and should be relatively small. Consolidation settlement due to compression of the Stratum C clay is comparatively greater and will occur more gradually and continue for some time after building construction.

Consolidation settlement is the result of pore water being squeezed out of fine-grained cohesive soils

due to an increase in stress. The magnitude of consolidation settlement is largely controlled by final internal stress imposed by new loads relative to the soil preconsolidation stress (i.e. maximum stress to which the soil was previously loaded). The preconsolidation of a soil deposit is therefore important. Soils that are preconsolidated were subject to higher stresses in their past history. When subject to new loads, a preconsolidated soil will undergo recompression. Recompression produces relatively small settlement. However, new loads exceeding the preconsolidation stress will produce comparably much greater settlement. The ratio of the preconsolidation stress to the in-situ stress (before new loading) is known as the over-consolidation ratio, or OCR. An OCR equal to 2 implies that the soil was previously loaded to twice its current stress state. However, laboratory testing and CPT results indicate that Stratum C is only lightly over-consolidated with an OCR of about 1.2 to 1.4.

Table 11.3 summarizes estimated building settlements for the short pile option for each of the alternative building construction types under consideration.

Table 11.3 – Estimated Building Settlement with Short Pile Option

Building Construction	Building Weight (kips)	Estimated Uniform Building Pressure (tsf)		Stress Increase at Top of Clay (tsf)		Estimated Building Settlement (inch)	
		DL/LL= 4	DL/LL= 6	DL/LL= 4	DL/LL= 6	DL/LL= 4	DL/LL= 6
CIP Concrete	45,000	0.91	0.95	0.55	0.57	3.0	3.3
Block and Plank	44,000	0.89	0.93	0.54	0.56	2.9	3.1
Steel and Plank	36,000	0.73	0.76	0.44	0.46	1.6	1.8

Our settlement estimates are based on the following data and assumptions:

- Preliminary column and foundation loads provided by Murray Engineering, P.C. based on the Schematic Drawings by Dattner Architects for three proposed construction types: Cast-in-Place Concrete, Block and Plank, and Steel and Plank.
- A building design life of 50 years. Settlement estimates used 50 percent of the live load component and considered two dead load (DL) to live load (LL) ratios (4 and 6) provided by Murray Engineering, P.C.
- Use of short piles with tip elevations at Elev. -25 or higher to allow building loads to dissipate before reaching the top of Stratum C.
- Building load assumed as a uniform vertical pressure over an equivalent building footprint area and applied as an equivalent footing about 3 feet above the pile tip.
- Average OCR of Stratum C clay equal to 1.25 based on laboratory testing. We note that our settlement estimates are highly sensitive to the OCR used in the analysis. For the Block and Plank construction, total settlement magnitude increases to about 4.1 inches for an OCR of 1.2 and reduces to about 2.1 inches for an OCR of 1.3. For the Steel and Plank construction, total settlement magnitude ranges from about 2.9 to 1.5 inches for a similar OCR range of 1.2 to 1.3.

As shown graphically in Plate SPP-1, the heavier CIP Concrete and Block and Plank construction options result in stress increases above the preconsolidation stress in the top of the Stratum C clay. As a result, these heavier construction options result in comparably greater building settlement than the Steel and Plank construction as shown in Table 11.3. Furthermore, small changes in the OCR (and corresponding preconsolidation stress) have a large impact on the settlement magnitudes. On that basis, we recommend the lighter construction type (Steel and Plank) if the short pile option is

desired. Long piles penetrating below the Stratum C clay are recommended if either the CIP Concrete or Block and Plank construction options are selected.

Long Piles: For foundations consisting of deep piles, settlement will depend on the foundation type chosen, but should be less than one inch, with differential settlement between columns on the order of ½ inch. The majority of settlement will occur with the application of load to the soil as the structure is constructed. Long term creep settlement of the structure supported on long piles bearing below Stratum C is not anticipated.

11.4 Pile Design

Pile Spacing: Piles should maintain a minimum center-to-center spacing of three pile diameters to avoid a reduction in allowable compression loads. Lateral loads must be reduced to include group effects where pile spacing is less than six pile diameters. Group reduction factors depend on actual pile group arrangement and pile spacing. Consideration of group effects is also required in evaluation of uplift loading (to account for overlapping of failure wedges in soil under tension loading) and downdrag loading.

Pile Downdrag: Piles installed through compressible soils such as Stratum C are subject to downward frictional loading by settling soils contacting the pile. Current development plans are unlikely to cause significant consolidation settlements of Stratum C soils; however, due to uncertainty of future developments in the project area which may include changes in surrounding grades and/or significant dewatering, long piles bearing in Stratum S3 should be designed to account for downdrag loads resulting from compression of Stratum C. Additionally, drag load can arise from liquefaction induced settlements. The potentially liquefiable soils are generally located above Elev. -10 and downdrag loads resulting from liquefaction induced settlement are expected to be minimal. Estimated frictional resistance along the pile shaft from settling soils should be added to the applied loads at the pile head for structural design of the piles. The estimated downdrag load does not need to be added to the test load to verify allowable geotechnical capacity.

Corrosion Considerations: If steel piles are utilized, we recommend pile design include a loss of 1/8 inch in pile diameter (1/16 inch all around perimeter) to account for corrosion over the useable life of the structure. For concrete or grouted piles, a minimum of 3-inches of cover should be provided between the ground and all reinforcing elements. Use of high sulfate resistant Type V cement is likely not required.

Pile Testing: Pile design loads must be substantiated by load testing. A minimum of two compression load tests are required by Code for buildings occupying an area between 5,000 and 30,000 square feet. If more than one pile type is used, each pile type is subject to the minimum load testing requirements. If pile lateral loads exceed 1 ton, lateral load tests are required by the Code. Tension testing is not required if a minimum safety factor of 3 is demonstrated by analysis. Installation and testing of pile foundations are subject to Special Inspection by a qualified geotechnical engineer in accordance with the Code.

11.5 Slabs at Grade Level

Ground level of the proposed building is planned near existing grade at about Elev. +5.5. The design groundwater level is at Elev. +3, and the Preliminary Base Flood Elevation is at Elev. +11. Ground floor slab design may consist of a slab on grade or structural slab depending on the strategy for flood proofing the ground level portions of the building. Where dry flood proofing is provided, the ground

floor slabs should be designed as structural slabs capable of resisting hydrostatic pressures during flood loading.

11.6 Below Grade Walls

Development plans do not currently include a cellar level. However, elevator rundown and trap pits are expected to extend below grade. Permanent foundation walls should be designed to withstand long-term, at-rest earth pressures and water pressures consistent with Code requirements. These pressures can be calculated using an equivalent fluid pressure of 60 psf per foot of depth above the groundwater table and 95 psf per foot below the design groundwater level.

Below grade wall walls must also accommodate temporary increases in lateral pressure such as may occur from a temporary stockpiling of materials or equipment adjacent to the structure or a temporary rise in groundwater levels up to the ground surface as may occur during a flood event. For surcharge loading, we recommend foundation wall design include a temporary uniform vertical surcharge of 300 psf at the ground surface. Lateral pressure from this surcharge should be calculated using an at-rest earth pressure coefficient of 0.5 applied as a uniform lateral earth pressure of 150 psf over the upper 15 feet of the wall. The use of elevated stress levels is appropriate in the design of foundation walls for these temporary load conditions.

11.7 Waterproofing

The proposed development is located in a low-lying coastal community with a Base Flood Elevation located about 5 to 6 feet above existing grade. Therefore, occasional flooding events with flood waters located at or above the ground surface should be expected over the design life of the building.

Elevator rundown pits are expected to extend about 6 feet below existing surface grades, and about 2 to 3 feet below the normal groundwater level. In order to prevent water infiltration into elevator pits and ground floor interior spaces during flooding events, it will be necessary to install waterproofing on the exterior of below-grade walls and below ground floor slabs. We recommend using a bonded membrane waterproofing system for all interior ground floor areas, placed below the underside of the slab and on the exterior of below grade walls with a suitable protection board used to prevent damage to the waterproofing during installation. Bonded membranes are installed prior to casting concrete, so-called “blind-side” applications. If the walls are double formed with sufficient work areas on the exterior of the foundation walls, we recommend installation of a post applied membrane on the exteriors of the cured concrete walls. Form ties penetrating the walls often result in leaks; therefore, we recommend that the forms be externally braced. Construction joints in all below-grade structures including walls and slabs should be furnished with hydrophilic waterstops, such as Swellseal joints.

The waterproofing system must be carefully designed and detailed. Construction inspection by a qualified inspector experienced with foundation waterproofing is vital to provide proper quality control. It has been our experience that waterproofed spaces may eventually develop leaks, in some cases due to slab cracking or gaps in the membrane, despite good construction practice and inspection. Remedial grouting may be needed to stem minor leakage. As an alternative, integral concrete waterproofing, such as Krystol concrete waterproofing by Kryton, may be considered.

12.0 CONSTRUCTION CONSIDERATIONS

Construction of the proposed building requires installation of deep foundations and excavation to a depth of approximately 6 feet below ground surface for construction of elevator pits and pile caps. Temporary works including excavation support, construction dewatering, and monitoring systems are required to facilitate this below grade construction.

12.1 Special Inspection Requirements

In accordance with the Code, Special Inspection for the work discussed in this report will include but is not limited to subsurface conditions – subgrade inspection, deep foundations, fill placement & in-place density, and excavations – sheeting, shoring, and bracing.

12.2 General Excavation

Construction of pile caps and elevator pits requires excavation of Strata F and S1 soils. Excavation of site soils can be accomplished using conventional earth moving equipment. While the borings and CPTs did not encounter significant obstructions in the fill, existing remnant foundations, slabs, and other obstructions may be present and will likely require removal using pneumatic hammers.

12.3 Support of Excavation (SOE)

Temporary construction excavations in soil should be sloped as necessary for safety and stability or supported by sheeting and bracing in accordance with OSHA regulations. Open-cut excavation is permissible for shallow excavations, such as for pile caps or local pits within the general excavation, provided such excavation is stable and does not undermine or cause damage to adjacent structures. Where such conditions permit, the excavation sides should be sloped no steeper than 1V:1.5H in soil. Sloped excavations along public sidewalks should be protected using a thin concrete cover, minimum three inches thick, to prevent erosion and undermining of the sidewalk and/or street. For deeper excavations, or where conditions do not permit sloped excavations, vertical shoring such as drilled-in soldier piles and timber lagging or steel sheeting can be used. SOE design must be performed by a New York State licensed Professional Engineer experienced in this work.

12.4 Dewatering

Temporary construction dewatering is required for excavations penetrating below the water table. We recommend groundwater levels be lowered in advance of excavation and maintained a minimum of two feet below subgrade elevation to provide a dry and stable subgrade for foundation construction.

Considering the anticipated elevator pit and pile cap depth is approximately 2 feet below the normal groundwater level, dewatering will likely be required to facilitate foundation construction. The dewatering system, including monitoring of the system and adjacent structures, must be designed by a Professional Engineer with dewatering experience. The NYC Department of Environmental Protection (NYC DEP) requires discharge permits for disposal of groundwater extracted from temporary, construction-related sources. The NYS Department of Environmental Conservation (NYS DEC) also requires a Long Island Well Permit in order to install and operate a dewatering system.

12.5 Pile Installation and Verification Testing

Load testing to verify design loads is required by Code prior to installation of production elements.

Two compressive load tests are required to satisfy the Code for the proposed building area. If compression load tests are performed from an elevation above final cut-off elevation, test loads must be increased to account for resistance above proposed pile cutoff elevation and instrumentation installed to evaluate the stiffness of the soils at and below the pile head. Lateral load tests, if required, should be performed from an elevation at or close to final pile cutoff.

Pile installation and testing should be performed by experienced specialty subcontractors and carefully monitored by a qualified geotechnical engineer. Following completion of load testing, the Contractor should submit a plan for review by the Owner and geotechnical engineer for installation of production elements including proposed final installation criteria. Production elements must be installed to the minimum tip elevations established by load testing using the same equipment and methods used in installation of the test piles.

12.6 Earthwork / Backfill

Structural Fill is recommended for use below slabs on grade and pavements and should conform to the Code requirements for structural fill: a well graded sand, gravel, crushed rock, recycled concrete aggregate, or a mixture of these containing no organic matter, wood, brick, or other deleterious material with a maximum of 10 percent passing the No. 200 sieve, as determined from the percent passing the No. 4 sieve. Structural Fill should be placed and compacted in lifts, not exceeding 12 inches loose, at its optimum moisture content plus or minus 2 percent, and to a minimum of 95 percent of modified Proctor maximum dry density (ASTM D1557).

Granular soils of Stratum F and S1 may be suitable for reuse as fill provided that they meet the above gradation requirements; are free of organic or other deleterious materials; particles larger than three inches are removed; and moisture content is suitable for compaction. Grain size (gradation) and Proctor (density) testing is required to determine if the onsite soil is suitable for reuse as structural fill. Some processing may be needed including sieving and moisture conditioning. Otherwise, granular material can be imported for fill. Both on-site soils and sources of off-site borrow should be subjected to laboratory testing including grain size and moisture-density tests prior to use to determine if they meet the specified backfill requirements.

12.7 Protection of Adjacent Structures

The adjacent structures located on Lot 1, and Lots 63 through 97 are expected to be supported on shallow foundations without below grade cellars. All adjacent structures are set back from the proposed building footprint by more than 50 feet. The existing 15-story building on Lot 11 is likely supported on deep foundations and is set back from the proposed building footprint by about 50 feet. The support of excavation scheme as described in Section 12.4 above must provide sufficient rigidity to prevent movement of these structures during construction. Excavation for building foundations is expected to be performed with open cuts of limited depth and lateral extents. On that basis, the adjacent structures are expected to be outside the zone of influence of excavation. Vibrations from driven piles, if used in building construction, are expected to impact a wider zone of influence.

Additional protection measures during construction to limit nuisance disturbances at the adjacent properties and to protect the public along the sidewalks should also be considered. In particular, drilling operations have the potential to spray drilling fluid and soil cuttings. The foundation contract documents should include provisions to protect adjacent properties and the public from such nuisances, such as the erection of temporary barriers when drilling near the adjacent buildings and sidewalks.

12.8 Construction Monitoring

A pre-construction condition survey of the adjacent buildings within 100 feet of construction should be made to document existing conditions. The survey should include photographs of existing conditions with written description of any defects observed. Crack gauges should be installed to monitor existing cracks (as permitted by owner). A post-construction survey is recommended to verify building and structure conditions.

A program to monitor vibration and movement of adjacent structures during construction is required by Code. The monitoring program should include seismographs and survey points on adjacent buildings to measure construction vibrations and vertical and lateral movements and should identify threshold criteria and limiting values for vibration and deformation based on the condition and movement tolerances of adjacent structures. Survey points should also be established at regular intervals along each side of the excavation support system for similar movement monitoring. Monitoring should occur on a regular basis during demolition, excavation, and foundation construction. Noise monitoring could be considered depending on community issues. Monitoring plans may be included as a component of other drawings such as support of excavation.

13.0 GEOTECHNICAL REVIEW OF FOUNDATION DESIGN AND CONSTRUCTION

Interaction between the geotechnical and structural engineer is essential as foundation design progresses to optimize building foundations and confirm building settlement performance under final loadings. Geotechnical review and assistance in preparation of foundation plans and specifications for below grade work is also recommended so that foundation and construction recommendations provided herein are properly interpreted and implemented in the design and contract documents.

Recommendations for foundation design and construction in this report are based on the information obtained from the borings and CPT probes and associated field and laboratory testing. However, conditions on the site may vary between discrete boring/CPT locations observed at the time of our subsurface exploration. The nature and extent of variations between borings may not become evident until exposed in construction. Geotechnical observation of foundation construction and testing is recommended to provide an opportunity to observe soil conditions and behavior as exposed during construction, evaluate the applicability of the recommendations provided in this report to the soil conditions encountered, and recommend appropriate changes in design or construction procedures if conditions differ from those described herein. We recommend that all foundation construction be observed by qualified geotechnical engineer and special inspector in accordance with the requirements of the New York City Building Code

14.0 CLOSURE

This report is prepared for the sole use of the client and is specific to the project design contemplated at the time of report issue. Foundation design and construction recommendations should be reviewed and modified as necessary if the location, depth or scope of the proposed construction changes from that described herein.

15.0 AVAILABLE INFORMATION

The following information was used to assist in our development of the subsurface investigation and preparation of this report:

1. Schematic Drawings for Sea Park North, prepared by Dattner Architects, dated September 20, 2023.
2. Preliminary Column Layout and Foundation Loads (Drawing SK-S1), prepared by Murray Engineering, PC, dated December 6, 2023.
3. Site Survey, prepared by Gerald T. O'Buckley, dated May 1, 2003, revised May 3, 2016.
4. Geotechnical Investigation Report, Coney Island Commons, Brooklyn, New York, prepared by URS, dated February, 2009, revised May, 2010.
5. Geotechnical Report, SHF: Coney Island Site, 2955 West 28th Street, prepared by MRCE, dated August 25, 2023.
6. Report on Foundations, Coney Island I, Community Development Area Sites 4 & 5, prepared by MRCE, dated June 1971.

Notes:

1. Site Class is F.
2. Recommended design spectrum developed for the foundation bottom elevation based on a site-specific seismic study performed by MRCE according to 2022 New York Building Code (Code). The spectral acceleration SA values correspond to 2/3 of the Risk-targeted Maximum Considered Earthquake (MCE_R) Code event.
3. The recommended design response spectrum was developed based on the bottom of foundation structure, approximately 4 feet below the ground surface.
4. The recommended design spectrum supersedes any generic site response spectrum and we recommend using it in accordance with ASCE 7-16 § 21.4 for the equivalent lateral force procedure. The spectrum shall be used for the range of periods shown. The SA values at 0.2 sec, S_{DS}, and at 1 sec, S_{D1}, cannot be used to generate an alternative response spectrum for the site.
5. Structural damping ξ of 5%.

STRATA DESIGNATIONS

C - Organic Silty Clay

SC - Organic Clayey Sand

NOTES

1. All tests summarized were performed in the laboratory of Mueser Rutledge Consulting Engineers.
2. The sample elevation is the average of the sampling interval.
3. Ground surface elevations at borings are:

BORING NO.	BORING ELEVATION
B-1P	+5.8 ±
B-2	+5.4 ±
B-3	+5.4 ±
B-4	+4.5 ±
B-5	+6.0 ±
B-6	+5.0 ±

4. "Average natural water content" is a weighted average of all material tested.
5. Compression Index, Cc = slope of the virgin compression portion of the e-log p curve.
6. Swelling Index, Cs = slope of the rebound portion of the e-log p curve.
7. Most probable preconsolidation stress, Pc is determined by the Casagrande method of construction.
8. Consolidation tests were performed using incremental loading (IL), or constant rate of strain (CRS) at the strain rate indicated.

Introduction

The enclosed report presents the results of piezocone penetration testing (CPTu or CPT) program carried out at 2828 W. 28th Street, Coney Island NY. The site investigation was conducted by Craig Geotechnical Drilling Co., Inc. under contract to Mueser Rutledge.

A total of 3 cone penetration tests were completed. The CPT program was performed to evaluate the subsurface soil conditions. CPT sounding locations were selected and numbered under the supervision of Mueser Rutledge personnel.

Project Information

Project	
Client:	Mueser Rutledge
Project:	2828 W. 28th Street, Coney Island NY
Job Number:	225206
Date:	8/31/22

Rig Description	Deployment System	Test Type
CPT Truck Rig	20 Ton Truck (Twin Cylinders)	CPT & SCPT

Cone Penetration Test (CPT)	
Depth Reference	Ground Surface at the time of the investigation.
Seismic Shear Wave Velocity	

Limitations

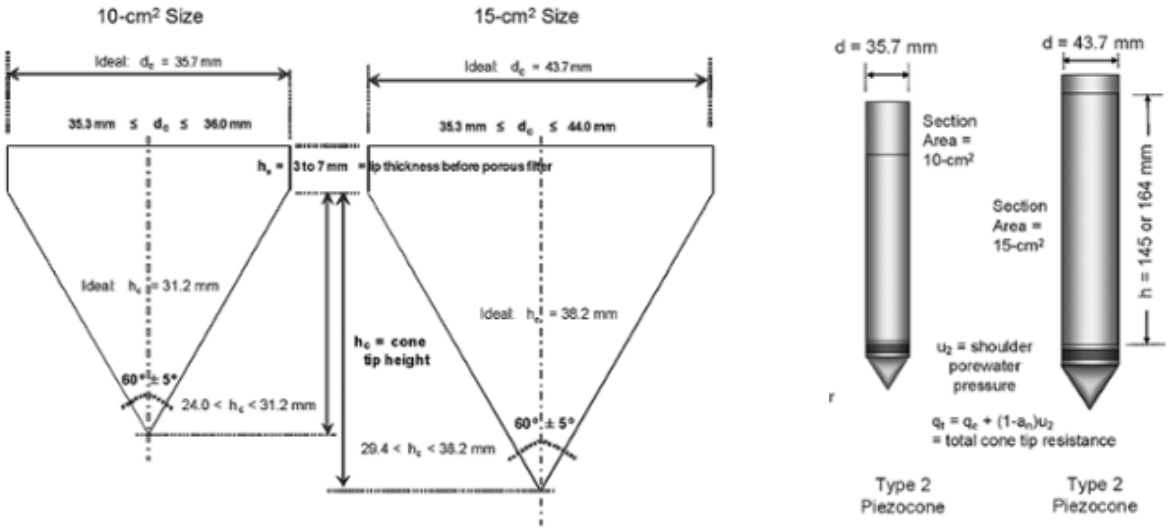
This report has been prepared for the exclusive use of Mueser Rutledge for the project titles "2828 W. 28th Street, Coney Island NY". The report's contents may not be relied upon by any other party without the express written permission of Craig Geotechnical Drilling Co., Inc.. CGD has provided site investigation services, prepared the factual data reporting, and provided geotechnical parameter calculations consistent with current best practices. No other warranty, expressed or implied, is made.

The information presented in the report document and the accompanying data set pertain to the specific project, site conditions and objectives described to Craig Geotechnical Drilling by the client. In order to properly understand the factual data, assumptions and calculations, reference must be made to the documents provided and their accompanying data sets, in their entirety.

CPT Cones

Cone Penetration tests (CPTu) are conducted using an integrated electronic piezocone penetrometer and data acquisition system manufactured by Vertek of Randolph, VT 05060.

CPT cones are available in multiple sizes, but the10 cm^2 cone and 15 cm^2 cone are the industry standard. Penetrometers are made of high strength steel and designed to resist abrasion by soil. The **15 cm^2 cone** was used on this project.



Minimum and Maximum Cone Measurements

Cone Size (Cross-Sectional Area)	**10 cm^2**			**15 cm^2**		
Measurement	***Min***	***Ideal***	***Max***	***Min***	***Ideal***	***Max***
Cone Diameter (d_c)	35.3 mm	35.7 mm	36.0 mm	35.3 mm	43.7 mm	44.0 mm
Cone Tip Height (h_c)	24.0 mm	31.2 mm	31.2 mm	29.4 mm	38.2 mm	38.2 mm
Cone Tip Angle	55°	60°	65°	55°	60°	65°
Lip Thickness Before Porous Filter (h_e)	3 mm	N/A	7 mm	3 mm	N/A	7 mm
Friction Sleeve Diameter	35.7 mm	35.7 mm	36.05 mm	43.7 mm	43.7 mm	44.05 mm
Friction Sleeve Surface Area	147 cm^2	150 cm^2	153 cm^2	220.5 cm^2	225 cm^2	229.5 cm^2

Cone Penetration Tests

Prior to the start of a CPTu sounding a suitable cone is selected, the cone and data acquisition system are powered on, the pore pressure system is saturated with silicone oil and the baseline readings are recorded with the cone hanging freely in a vertical position. The CPTu is conducted at a steady rate of 2 cm/s, within acceptable tolerances. Typically, one-meter length rods with an outer diameter of 15cm are added to advance the cone to the sounding termination depth. After cone retraction final baselines are recorded.

Dissipation Tests

As a CPT cone is pushed into saturated subsurface soil, it creates a localized increase in pore pressure (denoted excess pore pressure, u_i) as groundwater is pushed out of the way of the cone. In a pore pressure dissipation test, the downward movement of the cone is paused and the time it takes for the pore pressure to stabilize is measured. This stable pore pressure is called equilibrium pore pressure, u_o. This information allows the user to identify important hydrogeologic features:

The water table (or phreatic surface) depth is defined as the distance below the soil surface at which pore pressure is equal to atmospheric pressure. This can be roughly visualized as the level below which subsurface materials are fully saturated with groundwater.

Especially in fine-grained soils, estimating the water table can be more complex than simply detecting moisture, since surface tension draws groundwater upwards, creating negative pore pressures. This is effect is called capillary rise.

Very low or negative pressures can be difficult to measure precisely with the piezocone, which is primarily designed to measure high pressures below the water table. In this case, the water table depth can be calculated by the following formula:

$$d_{water} = d_{cone} - h_w$$

d_{water} = *water table depth*
d_{cone} = *depth of piezocone*
h_w = *water head*

The **water head**, h_w, is the height of the water above the cone, which can be calculated based on the pore pressure and the unit weight of water:

$$h_w = u/\gamma_w + z$$

h_w = *water head*
u_o = *equilibrium pore pressure*
γ_w = *unit weight of water*
z = *distance, if any, between pressure sensor location and depth reference point on the piezocone*

The rate of dissipation indicates the permeability or hydraulic conductivity of the soil – that is, the tendency of the soil to allow or resist the flow of groundwater.

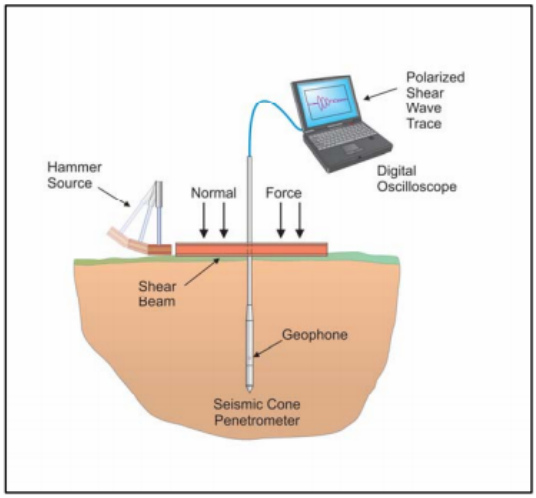
A rapidly dissipating pore pressure indicates the presence of an aquifer (a porous region where groundwater tends to flow), while a slowly dissipating pore pressure indicates an aquitard (a compacted region that resists the flow of groundwater).

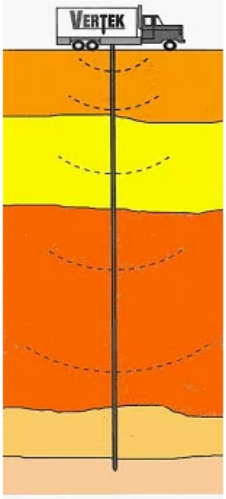
Seismic CPTs

Seismic CPT or SCPT is a method of calculating the *small strain shear modulus* of the soil by measuring shear wave velocity through the soil. The small strain modulus is an important quantity for determining the *dynamic response* of soil during earthquakes, explosive detonations, vibrations from machinery, and during wave loading for offshore structures. The wave speeds and moduli derived from seismic CPT measurements aid in the determination of *soil liquefaction potential* and improve the interpretation of surface seismic surveys by *providing wave speed profiles as a function of depth*.

SCPT Cone: The SCPT cone is a CPT or CPTU cone that is equipped with one or more geophone sensors. These sensors measure the magnitude and arrival time of seismic shear and compression waves.
Wave Generator: Seismic shear waves are generated at the soil surface.
This method uses an electronic wave generator attached to the CPT rig and increases repeatability and reduces physical strain and testing time for the field team.
The CPT test must be paused briefly at the desired intervals to perform the wave generation and data collection.
Data Acquisition System: As seismic waves are registered by the geophone sensors, data is transferred from the cone to the soil surface by wires that run though the push rods. The SCPT data acquisition system logs this data and analyzes it to determine the speed of the waves based on their arrival time and the distance between the wave generator and the sensors.

Calculation of the interval velocities are performed by visually picking a common feature (e.g. the first characteristic peak, trough, or crossover) on all of the recorded wave sets and taking the difference in ray path divided by the time difference between subsequent features. Ray path is defined as the straight-line distance from the seismic source to the geophone, accounting for beam offset, source depth and geophone offset from the cone tip.





Cone Penetration Test Summary and Cone Penetration Test Plots

Bearing Capacity calculation is perfromed based on the formula:

$$Q_{ult} = R_k \times q_t + q_{soil}$$

where:
R_k: Bearing capacity factor
q_t: Average corrected cone resistance over calculation depth
q_{soil}: Pressure applied by soil above footing

Presented below is a list of formulas used for the estimation of various soil properties. The formulas are presented in SI unit system and assume that all components are expressed in the same units.

:: Unit Weight, g (kN/m³) ::

$$g = g_w \cdot \left(0.27 \cdot \log(R_f) + 0.36 \cdot \log(\frac{q_t}{p_a}) + 1.236 \right)$$

where g_w = water unit weight

:: Permeability, k (m/s) ::

$I_c < 3.27$ and $I_c > 1.00$ then $k = 10^{0.952-3.04 \cdot I_c}$

$I_c \leq 4.00$ and $I_c > 3.27$ then $k = 10^{-4.52-1.37 \cdot I_c}$

:: N_{SPT} (blows per 30 cm) ::

$$N_{60} = \left(\frac{q_c}{P_a} \right) \cdot \frac{1}{10^{1.1268-0.2817 \cdot I_c}}$$

$$N_{1(60)} = Q_{tn} \cdot \frac{1}{10^{1.1268-0.2817 \cdot I_c}}$$

:: Young's Modulus, Es (MPa) ::

$(q_t - \sigma_v) \cdot 0.015 \cdot 10^{0.55 \cdot I_c + 1.68}$

(applicable only to $I_c < I_{c_cutoff}$)

:: Relative Density, Dr (%) ::

$100 \cdot \sqrt{\frac{Q_{tn}}{k_{DR}}}$ (applicable only to SBT_n: 5, 6, 7 and 8 or $I_c < I_{c_cutoff}$)

:: State Parameter, ψ ::

$\psi = 0.56 - 0.33 \cdot \log(Q_{tn,cs})$

:: Drained Friction Angle, φ (°) ::

$\varphi = \varphi'_{cv} + 15.94 \cdot \log(Q_{tn,cs}) - 26.88$

(applicable only to SBT_n: 5, 6, 7 and 8 or $I_c < I_{c_cutoff}$)

:: 1-D constrained modulus, M (MPa) ::

If $I_c > 2.20$
$\alpha = 14$ for $Q_{tn} > 14$
$\alpha = Q_{tn}$ for $Q_{tn} \leq 14$
$M_{CPT} = \alpha \cdot (q_t - \sigma_v)$

If $I_c \geq 2.20$

$M_{CPT} = 0.03 \cdot (q_t - \sigma_v) \cdot 10^{0.55 \cdot I_c + 1.68}$

:: Small strain shear Modulus, Go (MPa) ::

$G_0 = (q_t - \sigma_v) \cdot 0.0188 \cdot 10^{0.55 \cdot I_c + 1.68}$

:: Shear Wave Velocity, Vs (m/s) ::

$$V_s = \left(\frac{G_0}{\rho} \right)^{0.50}$$

:: Undrained peak shear strength, Su (kPa) ::

$N_{kt} = 10.50 + 7 \cdot \log(F_r)$ or user defined

$$S_u = \frac{(q_t - \sigma_v)}{N_{kt}}$$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Remolded undrained shear strength, Su(rem) (kPa) ::

$S_{u(rem)} = f_s$ (applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Overconsolidation Ratio, OCR ::

$$k_{OCR} = \left[\frac{Q_{tn}^{0.20}}{0.25 \cdot (10.50 \cdot +7 \cdot \log(F_r))} \right]^{1.25}$$ or user defined

$OCR = k_{OCR} \cdot Q_{tn}$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: In situ Stress Ratio, Ko ::

$K_O = (1 - \sin\varphi') \cdot OCR^{\sin\varphi'}$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Soil Sensitivity, S_t ::

$$S_t = \frac{N_S}{F_r}$$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Peak Friction Angle, φ' (°) ::

$\varphi' = 29.5° \cdot B_q^{0.121} \cdot (0.256 + 0.336 \cdot B_q + \log Q_t)$

(applicable for $0.10 < B_q < 1.00$)

Introduction

The enclosed report presents the results of piezocone penetration testing (CPTu or CPT) program carried out at 2828 W. 28th St Brooklyn NY. The site investigation was conducted by Craig Geotechnical Drilling Co., Inc. under contract to Mueser Rutledge.

A total of 5 cone penetration tests were completed. The CPT program was performed to evaluate the subsurface soil conditions. CPT sounding locations were selected and numbered under the supervision of Mueser Rutledge personnel.

Project Information

Project	
Client:	Mueser Rutledge
Project:	Sea Park North - 2828 W. 28th St Brooklyn NY
Job Number:	235275
Date:	1/9/24 – 1/10/24

Rig Description	Deployment System	Test Type
CPT Truck Rig	20 Ton Truck (Twin Cylinders)	CPT & SCPT

Cone Penetration Test (CPT)	
Depth Reference	Ground Surface at the time of the investigation.
Seismic Shear Wave Velocity	

Limitations

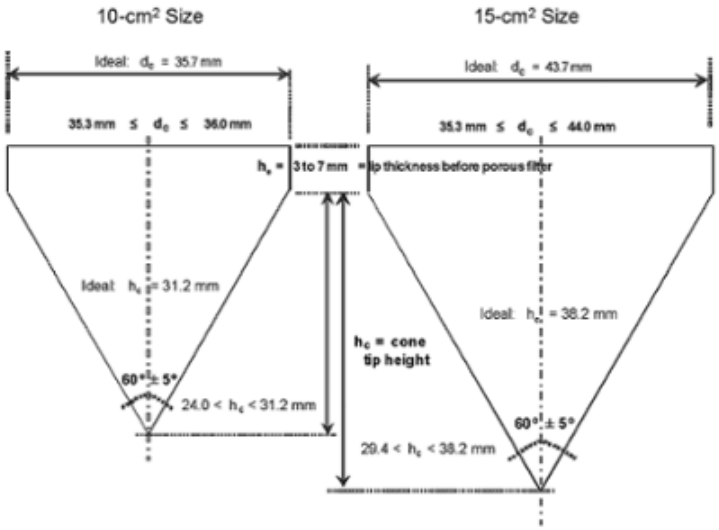
This report has been prepared for the exclusive use of Mueser Rutledge for the project titles "2828 W. 28th St Brooklyn NY". The report's contents may not be relied upon by any other party without the express written permission of Craig Geotechnical Drilling Co., Inc.. CGD has provided site investigation services, prepared the factual data reporting, and provided geotechnical parameter calculations consistent with current best practices. No other warranty, expressed or implied, is made.

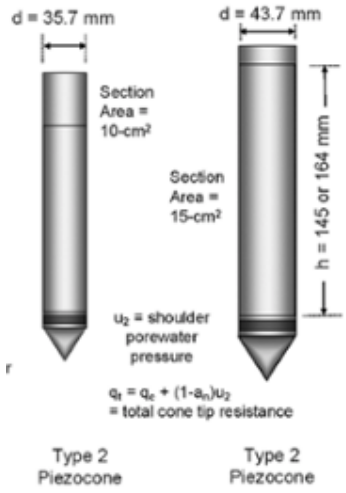
The information presented in the report document and the accompanying data set pertain to the specific project, site conditions and objectives described to Craig Geotechnical Drilling by the client. In order to properly understand the factual data, assumptions and calculations, reference must be made to the documents provided and their accompanying data sets, in their entirety.

CPT Cones

Cone Penetration tests (CPTu) are conducted using an integrated electronic piezocone penetrometer and data acquisition system manufactured by Vertek of Randolph, VT 05060.

CPT cones are available in multiple sizes, but the10 cm^2 cone and 15 cm^2 cone are the industry standard. Penetrometers are made of high strength steel and designed to resist abrasion by soil. The **15 cm^2 cone** was used on this project.





Minimum and Maximum Cone Measurements

Cone Size (Cross-Sectional Area)	**10 cm^2**			**15 cm^2**		
Measurement	***Min***	***Ideal***	***Max***	***Min***	***Ideal***	***Max***
Cone Diameter (d_c)	35.3 mm	35.7 mm	36.0 mm	35.3 mm	43.7 mm	44.0 mm
Cone Tip Height (h_c)	24.0 mm	31.2 mm	31.2 mm	29.4 mm	38.2 mm	38.2 mm
Cone Tip Angle	55°	60°	65°	55°	60°	65°
Lip Thickness Before Porous Filter (h_e)	3 mm	N/A	7 mm	3 mm	N/A	7 mm
Friction Sleeve Diameter	35.7 mm	35.7 mm	36.05 mm	43.7 mm	43.7 mm	44.05 mm
Friction Sleeve Surface Area	147 cm^2	150 cm^2	153 cm^2	220.5 cm^2	225 cm^2	229.5 cm^2

Cone Penetration Tests

Prior to the start of a CPTu sounding a suitable cone is selected, the cone and data acquisition system are powered on, the pore pressure system is saturated with silicone oil and the baseline readings are recorded with the cone hanging freely in a vertical position. The CPTu is conducted at a steady rate of 2 cm/s, within acceptable tolerances. Typically, one-meter length rods with an outer diameter of 15cm are added to advance the cone to the sounding termination depth. After cone retraction final baselines are recorded.

Dissipation Tests

As a CPT cone is pushed into saturated subsurface soil, it creates a localized increase in pore pressure (denoted excess pore pressure, u_i) as groundwater is pushed out of the way of the cone. In a pore pressure dissipation test, the downward movement of the cone is paused and the time it takes for the pore pressure to stabilize is measured. This stable pore pressure is called equilibrium pore pressure, u_o. This information allows the user to identify important hydrogeologic features:

The water table (or phreatic surface) depth is defined as the distance below the soil surface at which pore pressure is equal to atmospheric pressure. This can be roughly visualized as the level below which subsurface materials are fully saturated with groundwater.

Especially in fine-grained soils, estimating the water table can be more complex than simply detecting moisture, since surface tension draws groundwater upwards, creating negative pore pressures. This is effect is called capillary rise.

Very low or negative pressures can be difficult to measure precisely with the piezocone, which is primarily designed to measure high pressures below the water table. In this case, the water table depth can be calculated by the following formula:

$$d_{water} = d_{cone} - h_w$$

d_{water} = *water table depth*
d_{cone} = *depth of piezocone*
h_w = *water head*

The **water head**, h_w, is the height of the water above the cone, which can be calculated based on the pore pressure and the unit weight of water:

$$h_w = u/\gamma_w + z$$

h_w = *water head*
u_o = *equilibrium pore pressure*
γ_w = *unit weight of water*
z = *distance, if any, between pressure sensor location and depth reference point on the piezocone*

The rate of dissipation indicates the permeability or hydraulic conductivity of the soil – that is, the tendency of the soil to allow or resist the flow of groundwater.

A rapidly dissipating pore pressure indicates the presence of an aquifer (a porous region where groundwater tends to flow), while a slowly dissipating pore pressure indicates an aquitard (a compacted region that resists the flow of groundwater).

Seismic CPTs

Seismic CPT or SCPT is a method of calculating the *small strain shear modulus* of the soil by measuring shear wave velocity through the soil. The small strain modulus is an important quantity for determining the *dynamic response* of soil during earthquakes, explosive detonations, vibrations from machinery, and during wave loading for offshore structures. The wave speeds and moduli derived from seismic CPT measurements aid in the determination of *soil liquefaction potential* and improve the interpretation of surface seismic surveys by *providing wave speed profiles as a function of depth*.

SCPT Cone: The SCPT cone is a CPT or CPTU cone that is equipped with one or more geophone sensors. These sensors measure the magnitude and arrival time of seismic shear and compression waves.
Wave Generator: Seismic shear waves are generated at the soil surface.
This method uses an electronic wave generator attached to the CPT rig and increases repeatability and reduces physical strain and testing time for the field team.
The CPT test must be paused briefly at the desired intervals to perform the wave generation and data collection.
Data Acquisition System: As seismic waves are registered by the geophone sensors, data is transferred from the cone to the soil surface by wires that run though the push rods. The SCPT data acquisition system logs this data and analyzes it to determine the speed of the waves based on their arrival time and the distance between the wave generator and the sensors.

Calculation of the interval velocities are performed by visually picking a common feature (e.g. the first characteristic peak, trough, or crossover) on all of the recorded wave sets and taking the difference in ray path divided by the time difference between subsequent features. Ray path is defined as the straight-line distance from the seismic source to the geophone, accounting for beam offset, source depth and geophone offset from the cone tip.

Presented below is a list of formulas used for the estimation of various soil properties. The formulas are presented in SI unit system and assume that all components are expressed in the same units.

:: Unit Weight, g (kN/m³) ::

$$g = g_w \cdot \left(0.27 \cdot \log(R_f) + 0.36 \cdot \log(\frac{q_t}{p_a}) + 1.236 \right)$$

where g_w = water unit weight

:: Permeability, k (m/s) ::

$I_c < 3.27$ and $I_c > 1.00$ then $k = 10^{0.952-3.04 \cdot I_c}$

$I_c \leq 4.00$ and $I_c > 3.27$ then $k = 10^{-4.52-1.37 \cdot I_c}$

:: N_{SPT} (blows per 30 cm) ::

$$N_{60} = \left(\frac{q_c}{P_a} \right) \cdot \frac{1}{10^{1.1268-0.2817 \cdot I_c}}$$

$$N_{1(60)} = Q_{tn} \cdot \frac{1}{10^{1.1268-0.2817 \cdot I_c}}$$

:: Young's Modulus, Es (MPa) ::

$$(q_t - \sigma_v) \cdot 0.015 \cdot 10^{0.55 \cdot I_c + 1.68}$$

(applicable only to $I_c < I_{c_cutoff}$)

:: Relative Density, Dr (%) ::

$$100 \cdot \sqrt{\frac{Q_{tn}}{k_{DR}}}$$ (applicable only to SBT_n: 5, 6, 7 and 8 or $I_c < I_{c_cutoff}$)

:: State Parameter, ψ ::

$$\psi = 0.56 - 0.33 \cdot \log(Q_{tn,cs})$$

:: Drained Friction Angle, φ (°) ::

$$\varphi = \varphi'_{cv} + 15.94 \cdot \log(Q_{tn,cs}) - 26.88$$

(applicable only to SBT_n: 5, 6, 7 and 8 or $I_c < I_{c_cutoff}$)

:: 1-D constrained modulus, M (MPa) ::

If $I_c > 2.20$
$\alpha = 14$ for $Q_{tn} > 14$
$\alpha = Q_{tn}$ for $Q_{tn} \leq 14$
$M_{CPT} = \alpha \cdot (q_t - \sigma_v)$

If $I_c \geq 2.20$

$$M_{CPT} = 0.03 \cdot (q_t - \sigma_v) \cdot 10^{0.55 \cdot I_c + 1.68}$$

:: Small strain shear Modulus, Go (MPa) ::

$$G_0 = (q_t - \sigma_v) \cdot 0.0188 \cdot 10^{0.55 \cdot I_c + 1.68}$$

:: Shear Wave Velocity, Vs (m/s) ::

$$V_s = \left(\frac{G_0}{\rho} \right)^{0.50}$$

:: Undrained peak shear strength, Su (kPa) ::

$N_{kt} = 10.50 + 7 \cdot \log(F_r)$ or user defined

$$S_u = \frac{(q_t - \sigma_v)}{N_{kt}}$$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Remolded undrained shear strength, Su(rem) (kPa) ::

$S_{u(rem)} = f_s$ (applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Overconsolidation Ratio, OCR ::

$$k_{OCR} = \left[\frac{Q_{tn}^{0.20}}{0.25 \cdot (10.50 \cdot +7 \cdot \log(F_r))} \right]^{1.25}$$ or user defined

$OCR = k_{OCR} \cdot Q_{tn}$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: In situ Stress Ratio, Ko ::

$$K_O = (1 - \sin\varphi') \cdot OCR^{\sin\varphi'}$$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Soil Sensitivity, S_t ::

$$S_t = \frac{N_S}{F_r}$$

(applicable only to SBT_n: 1, 2, 3, 4 and 9 or $I_c > I_{c_cutoff}$)

:: Peak Friction Angle, φ' (°) ::

$$\varphi' = 29.5° \cdot B_q^{0.121} \cdot (0.256 + 0.336 \cdot B_q + \log Q_t)$$

(applicable for $0.10 < B_q < 1.00$)

SAMPLE INFORMATION

Boring:	B-20
Sample:	U-1D
Depth:	79.00 feet
Elevation:	
Type:	3-inch thin wall tube
Description:	MH, gray clayey SILT.

LL = 79, PL = 38, PI = 41

SPECIMEN INFORMATION

(NOTE: Initial and final states refer to beginning and end of test)

Initial height:	0.62	inch
Diameter:	2.50	inch

Initial water content:	57.0	%
Initial total unit weight:	96.9	pcf
Initial dry unit weight:	61.7	pcf
Initial void ratio:	1.700	
Initial degree of saturation:	89	%
Final water content:	53.7	%
Final total unit weight:	105.2	pcf
Final dry unit weight:	68.4	pcf
Final void ratio:	1.436	
Final degree of saturation:	100	% (assumed specific gravity = 2.67)

TEST SUMMARY

Construction Method:	Casagrande (Log)
Estimated preconsolidation stress (tsf):	2.9 (Range: 2.7 to 3.0)
Estimated in situ effective overburden stress (tsf):	
Compression Ratio (strain per log cycle stress):	0.285
Compression Index (void ratio per log cycle stress):	0.770
Swell Ratio (strain per log cycle stress):	0.033
Swell Index (void ratio per log cycle stress):	0.089
Recompression Ratio (strain per log cycle stress):	0.028
Recompression Index (void ratio per log cycle stress):	0.076

STRATA DESIGNATIONS

O - Organic Silty Clay and Peat

NOTES

1. All tests summarized were performed in the laboratory of Mueser Rutledge Consulting Engineers.
2. The sample elevation is the average of the sampling interval.
3. Ground surface elevations at borings are:

BORING NO.	BORING ELEVATION
MR-1S	+6.9 ±
MR-2S	+8.8 ±
MR-3S	+7.9 ±

4. "Average natural water content" is a weighted average of all material tested.
5. Compression Index, Cc = slope of the virgin compression portion of the e-log p curve.
6. Swelling Index, Cs = slope of the rebound portion of the e-log p curve.
7. Most probable preconsolidation stress, Pc is determined by the Casagrande method of construction.
8. Consolidation tests were performed using incremental loading (IL), or constant rate of strain (CRS) at the strain rate indicated.

From: Masoud Janbaz, Gregory Lucking, Jesse Richins

Re: Seismic Evaluation – Site Response Analysis

File: 2828 West 28th Street, Brooklyn, NY
File # 14442-Task 12

SEISMIC DESIGN

Structural design of the proposed structure is based on the 2022 New York Building Code (Code). The Code requires an evaluation of the seismic Site Class to determine the seismic design parameters and an assessment of the potential hazard of soil liquefaction under the seismic event specified by the Code. Based on the presence of potentially liquefiable soils (see liquefaction section below), a Site-Specific response study was performed to better define seismic response parameters and evaluate liquefaction potential and consequences of liquefaction in more detail.

Site-Specific Seismic Response Study

MRCE performed a site-specific seismic response study based on geologic, seismologic, and soil characteristics of the site. The site-specific analyses were performed using the 1-D equivalent-linear ground response analysis program SHAKE (Schnabel et al. 1972). The program analyzes horizontally layered soil columns excited by vertically propagating shear waves originating from the bedrock. Input for the analysis includes the shear wave velocity (v_s) profile, additional geotechnical properties for each soil stratum, and acceleration time histories at the bedrock level.

The available geotechnical information at the site indicates a relatively uniform subsurface conditions. The v_s profiles were developed based on data from empirical correlations from SPT blow count data obtained from the soil borings. The depth to bedrock and information for deeper strata was based on USGS publications and our experience from nearby sites, the Vs profiles were also based on downhole seismic CPT measurements. We performed parametric analyses to address uncertainties in properties of the soil strata and evaluation of v_s by considering ± 15 to 20% of the best estimates of the Vs of each stratum. The nonlinearity of the soil properties was addressed by applying appropriate shear strain dependent shear modulus reduction and damping ratio curves and evaluating site response as equivalent linear elements. The v_s values used in our analysis are shown in Table S-1.

Table 1 Shear Wave Velocity Profiles

STRATUM	DESIGN PROFILE	
	Depth (ft)	Vs (ft/s)
Loose to Compact Granular Fill - F	0-5	400
Loose Shallow Sand – S1	5-13	450
Medium Compact to Compact Sand – S2	13-56	600-800
Medium Compact Clayey Sand – SC	56-65	650
20-ft Clay - Organic Silty Clay - C	65-90	550-600
Medium Compact to Compact Sand – S3	90-122	700-1000
Jameco Gravel	122-220	1200-1250
Raritan Clay	220-255	1500-1550
Magothy Sand	255-400	1400-1550
Lloyd Sand	400-600	1650-1800
Bedrock	600	2500

For ground motion input at the bedrock level, MRCE used Code compatible time histories of acceleration, selected based on in-house site-specific Probabilistic Seismic Hazard Analysis (PSHA) deaggregation results and time histories matched using RSPMatch (Al Atik and Abrahamson 2010) to the PSHA Risk Targeted Maximum Considered Earthquake (MCE_R) response spectrum for Class B bedrock. The site-specific PSHA considered the 2014 USGS background historical seismicity source model and the updated Next Generation Attenuation for Central and Eastern North America (NGA-East) Ground Motion Models. Consistent with the Code's seismic design basis, we used input rock acceleration time histories representative of the seismic hazard at the site for the MCE_R, equivalent to an earthquake with a 2,500-year return period with appropriate risk factors according to the Code's seismic design basis applied. Three pairs of horizontal input rock acceleration time histories were applied, with each pair corresponding to two orthogonal directions of shaking.

Site-Specific Liquefaction Evaluation

Typically, loose granular soils and low-plasticity cohesive soils below the groundwater table and within 50 feet of the ground surface are subject to potential liquefaction. Based on the presence of soils matching this description at the site, we determined that a liquefaction evaluation was necessary. Groundwater observations indicate that the groundwater level is as high as approximately El. +2.0. The bottom of the proposed foundation structure is approximately 4 feet below existing grade.

A liquefaction assessment was performed to determine potential liquefaction susceptibility. We evaluated liquefaction potential of the underlying soils below the water table using the Seed and Idriss (1971) simplified procedure, as modified by the NCEER Workshops (Youd et al, 2001) with the available SPT and CPT data. Based on the measured shear wave velocities in SCPT-1 and SCPT-2, the Code specifies analyzing liquefaction potential using a peak ground acceleration PGA_M of 0.26g for the Geometric Mean Maximum Considered Earthquake (MCE_G) adjusted for Site Class effects. Based on SPT N-values and CPT measurements at the site, our analysis shows a potentially liquefiable layer about 3 feet thick within Stratum S1 in all borings and CPT probes in the depth interval between about 10 and 15 feet. Based on the presence of potentially liquefiable soils, the site is classified as Site Class F by the Code, and a site-specific seismic response evaluation is required to determine the seismic design response spectrum.

We reevaluated the liquefaction potential of the underlying soils below the groundwater table using a PGA of 0.208g based on the results of the site response study with the available SPT N-values and CPT measurements. Under the reduced PGA, our analysis shows a potentially liquefiable layer about 1 to 2 feet thick within Stratum S1 in all CPT probes and for one SPT sampling interval in Boring B-2 (Sample 5D).

Initiation of liquefaction potential can result in a significant loss of soil strength and stiffness. We understand the proposed structure will be supported on deep foundations. Liquefaction impact pile supported structures primarily by inducing settlement around the piles (a form of "downdrag" on the pile and differential settlements at connections to surrounding grades and utilities) and by reducing the ability of the soils to resist lateral loads by reducing their strength, turning them into a more cohesive state. For the design of deep foundations and connection with utilities, we have estimated the magnitude of seismically induced settlement of the soil deposit (free-field), using Zhang et al (2002) procedures to range between about 0.5 and 3 inches. However, it should be noted that accurately estimating seismically induced ground settlement is difficult and estimates should be considered approximate. Seismically induced settlemets should be considered additional to any other static settlements.

Site Class and Recommended Design Spectrum

Based on the site-specific site response study results, the recommended site-specific design response spectrum is presented in Figure S-1 as a plot of Spectral Acceleration (SA) vs. structural period (T) for structural damping (ξ) of 5%. Appropriate risk factors according to the Code's seismic design basis have been applied. The SA values correspond to 2/3 of the MCE_R. SA values for discrete structural periods are provided in the table of Figure S–1.

The limitations in applying the design spectrum of Figure S-1 are:

- Site Class is F.
- Recommended design spectrum developed for the foundation bottom elevation based on a site-specific seismic study performed by MRCE according to 2022 New York Building Code (Code). The spectral acceleration SA values correspond to 2/3 of the Risk-targeted Maximum Considered Earthquake (MCE_R) Code event.
- The recommended design response spectrum was developed based on the bottom of foundation structure, approximately 4 feet below the ground surface.
- The recommended design spectrum supersedes any generic site response spectrum and we recommend using it in accordance with ASCE 7-16 § 21.4 for the equivalent lateral force procedure. The spectrum shall be used for the range of periods shown. The SA values at 0.2 sec, S_{DS}, and at 1 sec, S_{D1}, cannot be used to generate an alternative response spectrum for the site.
- Structural damping ξ of 5%.

Based on the above S_{DS} and S_{D1} and assuming a Structural Occupancy/Risk Category II or III, the structure should be designed to Seismic Design Category B.

Introduction

This Phase II Investigation Work Plan has been developed for the above referenced site. The site is located in Coney Island in Brooklyn. The following work scope has been developed in response to Phase I ESA findings, and as per a meeting between the Project Team and New York City Office of Environmental Remediation (OER) on June 7, 2024.

Site Location, Current Use, and Proposed Development Plan

The development Site is located in the Coney Island neighborhood in the borough of Brooklyn and is identified as Block 7011 and p/o Lot 11, specifically the asphalt parking lot located in the northern portion of Lot 11 (Site), comprising a footprint of approximately 40,240 square feet of land. Currently, the Site is occupied by an asphalt parking lot for an adjacent 15-story, 180,000 gross square foot (GSF) residential building that is located in the southern portion of Block 7011, Lot 11. The redevelopment project does not include any improvements to the adjacent existing 15-story building, and a new lot (tentative Block 7011, Lot 55) will be created for this redevelopment project. The location of the development Site relative to existing Lot 11 is shown on **Figure 1**. The redevelopment project includes the construction of a new 8-story, 246-unit affordable senior housing building. The new building footprint will be approximately 22,316 square feet with a new surface parking lot area and outdoor recreation space surrounding the new building. The grade level will include utility and storage rooms, as well as parking spaces for the proposed and current building. The redevelopment does not include the construction of a subgrade cellar. The water table is expected to be encountered at approximately 4.5 and 7.5 feet below land surface (ft bls) or El. +1.25 ft and El.+1.85 ft North American Vertical Datum of 1988 (NAVD 88). Layout of the proposed Site (tentative Lot 55) development is presented in **Figure 1**.

The Site is relatively flat and ranges in elevation from El. +4.20 to +7.63 feet North American Vertical Datum of 1988 (NAVD 88).

Phase I ESA Summary

No onsite recognized environmental conditions (RECs) were identified during the Phase I ESA completed by Hillman Consulting in September 2022. There was one significant data gap (SDG) identified during the Phase I ESA, which was the lack of closure reports associated with an existing underground storage tank (UST) documenting the presence or absence of impacts to underlying environmental media upon closure of an onsite UST in 2005. The Phase I ESA reports that the UST is located within the existing playground area associated with the existing 15-story building, which is outside of the redevelopment area. The Phase I ESA is included in **Attachment 1**.

Phase II Investigation Work Scope

Geophysical Survey

A geophysical survey including ground penetrating radar (GPR) will be performed across the entire Site to investigate for the presence of potential utilities present on the Site.

Soil, Groundwater, and Soil Vapor Summary

An investigation of soil, groundwater, and soil vapor will be performed to properly characterize the Site for potential environmental impacts from historic onsite/offsite uses, operations, etc. The proposed sampling event will provide general horizontal/vertical characterization across the Site for development purposes. The sampling procedures of this investigation will be performed in accordance with the New York State Department of Environmental Conservation (NYSDEC) Technical Guidance for Site Investigation and Remediation DER-10 as well as NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS), dated April 2023 under NYSDEC Part 375 Remedial Program.

Ten soil borings will be completed at the Site. Please see attached Site plan (**Figure 2**) depicting sample point locations, where soil, groundwater, and soil vapor samples will be collected. At a minimum, a total of 21 (20 parent samples and one duplicate) discrete soil samples will be collected from the ten test borings. A minimum of seven (six parent samples and one duplicate) groundwater samples will be collected. A total of 10 soil vapor samples (nine parent samples and one duplicate). Based on a review of readily available environmental reports from

nearby properties, the depth of groundwater is expected to be encountered between 4.5 and 7.5 ft bls or El. +1.25 ft and El.+1.85 ft North American Vertical Datum of 1988 (NAVD 88). A groundwater flow evaluation has not been completed at this Site, and the groundwater flow direction will be determined during the investigation. Each sample point location at the Site will be accurately measured to fixed benchmarks (i.e., select property lines, adjacent structures, etc.) or by a precision GPS that is capable of coordinating a fixed point within +/- 1 foot.

Soil Sampling

A geologist / engineer / Qualified Environmental Professional (QEP) will screen the soil samples during borehole advancement for organic vapors with a photoionization detector (PID) and will evaluate for visual and olfactory impacts prior to collecting environmental samples. All field work will be recorded in a field log. A geoprobe direct push drill rig will be used and, if necessary, more advanced drilling technology will be used to complete the Site investigation. At a minimum, two soil samples will be collected from each of the test borings and one duplicate sample (for a total of 21 soil samples) for laboratory analysis. A surface soil sample (from the 0-2 feet bls interval) and subsurface soil sample (from the 4 to 6 feet bls interval representing the 2-foot interval below the deepest excavation depth) will be collected. Discrete (grab) samples will be taken from the aforementioned sampling intervals. The subsurface soil samples may also serve as in-situ post-excavation soil samples for the remedial plan. A third soil sample may be collected from each or several test boring(s) if 1) elevated PID readings and/or visual and olfactory observations are noted during borehole advancement; and/or 2) field observations identify an upper fill layer underlain by native material. The additional soil sample would be collected from the upper zone of the native layer to help delineate the vertical migration of impacts (if any), as well as determine a more detailed remedy and potentially provide cost savings for disposal options.

Monitoring Well Installation and Groundwater Sampling

Six groundwater monitoring wells will be installed as part of the investigation. Three of the monitoring wells will be constructed as 1-inch diameter temporary monitoring wells and three will be constructed as 2-inch permanent monitoring wells. The three permanent monitoring wells will be surveyed by a trained QEP and/or New York State (NYS) licensed surveyor to facilitate preparation of a groundwater contour map and determine the direction of groundwater flow.

Representative groundwater samples will be collected using low-flow sampling techniques. Well screens will be installed based on the observed groundwater level to bridge the water table and will be appropriately packed with #2 Morie sand to a minimum of 1-foot above the top of the well screen. A representative groundwater sample will be collected from each well with a peristaltic pump and dedicated tubing. Six parent samples and one duplicate sample will be collected. Sampling will be conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and Sampling Guidelines and Protocols, dated March 1991. Groundwater wells will be gauged with a water level meter to record a depth to groundwater reading (1/100 foot), and if necessary, an interface meter to determine the thickness of light non-aqueous phase liquid (LNAPL) or dense non-aqueous phase liquid (DNAPL).

Soil Vapor Sampling

Soil vapor samples will be collected in accordance with the New York State Department of Health (NYSDOH) October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York, as amended February 2024 (NYSDOH SVI Guidance). Conditions in the field may require adjustment of sampling locations. Groundwater is expected to be encountered between 4.5 and 7.5 ft bls.

Nine parent soil vapor samples, and one duplicate. Soil vapor implants will be set a minimum of 2 feet above the observed water table. Due to the anticipated shallow water table, all soil vapor monitoring points will be installed within the existing asphalt and concrete parking lot and within no less than 1 ft bls in order to limit interference of ambient air. The integrity of the soil vapor point will be confirmed prior to sampling, as discussed below. The vapor implants will be installed with a Geoprobe direct push drill rig. Sampling will occur for the duration of two hours.

Samples will be collected in appropriately sized Summa canisters that have been certified clean by the laboratory and samples will be analyzed by using United States Environmental Protection Agency (USEPA) Method TO-15. Flow rate for both purging and sampling will not exceed 0.2 L/min. 24-hours following soil vapor probe installation,

one to three implant volumes shall be purged prior to the collection of any soil-gas samples. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.

As part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH SVI Guidance protocols to serve as a quality assurance/quality control (QA/QC) device to verify the integrity of the soil vapor probe seal. A container (box, plastic bucket, etc.) will serve to keep the tracer gas in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer gas prior to sampling. If the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

Sample Analysis

Soil, groundwater, and soil vapor samples will be submitted to a NYSDOH Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for Full analysis:

- Part 375 volatile organic compounds (VOCs) by EPA Method 8260;
- Part 375 semi-volatile organic compounds (SVOCs) by EPA Method 8270;
- Part 375 pesticides/polychlorinated biphenyls (PCBs) by EPA Method 8081/8082; and
- Part 375 metals by EPA Method 6010, 7471, 7196, and 9012B; and
- Soil vapor samples will be analyzed for VOCs by USEPA Method TO-15.

All groundwater samples will be analyzed for both filtered (dissolved) and unfiltered (total) metals.

In addition, one soil sample and three groundwater samples will also be analyzed for PFAS (NYSDEC Analyte List) by LC-MS/MS via EPA Method 1633 and 1,4-dioxane via EPA Method 8270 SIM. Sampling will be performed in accordance with *NYSDEC Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS),* dated April 2023.

The analytical methods above should include all compounds included in NYSDEC Part 375-6.8 and CP-51 for soil, NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) or Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS) for groundwater, and NYSDOH SVI Guidance Matrices for soil vapor.

While not anticipated, if either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and “fingerprint analysis” and required regulatory reporting (i.e., NYSDEC spills hotline) will be performed.

Quality Assurance/Quality Control Procedures

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the Site; and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. QA/QC samples (field and trip blanks, duplicates, etc.) will be collected and analyzed at an ELAP-certified laboratory.

Investigation Derived Waste

Cuttings may be disposed at the Site within the borehole that generated them to within 24 inches of the surface unless:

- Free product or grossly contaminated soil, are present in the cuttings;
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability; and
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed onsite will be containerized in properly labeled Department of Transportation (DOT) approved 55-gallon drums for future offsite disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including spoons, gloves, bags, paper towels, etc. that come in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

Reporting

A Phase II Investigation Report (template version) will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives and supplemental cleanup objectives in NYSDEC CP-51 Soil Cleanup Guidance. Groundwater analytical results will be compared to NYSDEC Part 703 GQS (class GA) or Division of Water TOGS 1.1.1 AWQS. Soil vapor analytical results will be compared to NYSDOH SVI Guidance Matrices.

The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and remedial recommendations, as warranted.

The report will also include all sampling logs and photos taken during the investigation.

Investigation HASP

An OSHA compliant Health and Safety Plan (HASP) that meets all OSHA HAZWOPER requirements will be implemented during the Site work to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the Site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential onsite chemicals of concern include VOCs, SVOCs, Pesticides/PCBs, and Metals (specifically arsenic, lead, and mercury at a minimum). Information fact sheets and/or summary tables for each contaminant group will be included in the HASP. A copy of this HASP will be onsite during each sampling event.

RE: Phase I Environmental Site Assessment
2828 West 28th Street
Brooklyn, New York 11224
Hillmann Project No: Z34991.3

Dear Blaise Rastello:

Hillmann Consulting LLC has completed a Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in conformance with the scope and limitations of ASTM Practice E 1527-21, which is the latest version of the E1527 standard published by the ASTM.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact our office at 908-688-7800.

Sincerely,

Hillmann Consulting, LLC

Chris Hirschmann
Director, Environmental Services

Etan Hindin
Senior Project Manager

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AOC	– Area of Concern
AST	– Aboveground Storage Tank
ASTM	– American Society for Testing Materials
BER	– Business Environmental Risk
CEA	– Classification Exception Area
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
COC	– Chemicals of Concern
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DEC	– Department of Environmental Conservation
DEP	– Department of Environmental Protection
DHS	– Department of Health Services
DNPL	– Delisted National Priority List
DOB	– Department of Buildings
DOH	– Department of Health
DOT	– Department of Transportation
DTSC	– Department of Toxic Substances Control
ENG	– Engineering
EPA	– Environmental Protection Agency
ERNS	– Emergency Response Notification System
FD	– Fire Department
FOI/FOIA/FOIL	– Freedom of Information / Freedom of Information Act / Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LCP	– Lead-Containing Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
LUST	– Leaking Underground Storage Tank
SDS/MSDS	– Safety Data Sheet / Material Safety Data Sheet
NA	– Not Applicable
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
OER	– Office of Environmental Remediation
OPRA	– Open Public Records Act
PAH	– Polycyclic Aromatic Hydrocarbon
PCE	– Perchloroethylene
RAO	– Response Action Outcome
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System

1.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Hillmann Consulting, LLC (Hillmann) performed a Phase I Environmental Site Assessment (ESA) of 2828 West 28th Street, Brooklyn, New York (the Subject Property). The assessment has been conducted in accordance with our contracted scope of work and the ASTM Standard Practice E 1527-21 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312. This section contains a summary of findings, opinions and conclusions made by this assessment. However, this section, alone, does not constitute the complete assessment. The report must be read in its entirety.

1.1 Summary of Project Details

Primary Street Address:		2828 West 28th Street			
City:	Brooklyn	**County:**	Kings	**State:**	New York
Tax ID/Parcel Number:		Block 7011 Lot 11			
Property Owner:		Park, Sea Housing			
Zoning Designation:		R6 (Residential) with no commercial overlay			
Approx. Property Area:		2.03-acres			
Buildings:		One (1) 15-story apartment building			
Approx. Building Size:		102,000-ft²			
Approx. Year Built:		1972			
Commercial Occupants:		None			
Current Use:		Residential apartments			
Inspected By:		Mr. Ryan Powell			
Site Contact/Company:		Ilso Kim / Property Manager with Progressive Management			
Site Escort/Company:		Ilso Kim / Property Manager with Progressive Management			
Inspection Date:		August 30, 2022			
Weather Conditions:		Sunny, 83 degrees F			

1.2 Findings Summary Table

Assessment Subject	No REC	REC	CREC	HREC	SDG	Rpt. Ref.
Property Regulatory Records Review:	X					4.3
Property Historical Records Review:	X					4.2
Bulk Petroleum Storage:					X	6.3
On-Site Operations:	X					6.3

1.3 Findings, Opinions and Conclusions

Recognized Environmental Conditions & Significant Data Gaps

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-21 of the Subject Property as described in Section 2.2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed the following *recognized environmental conditions* (RECs), *controlled recognized environmental conditions* (CRECs) and/or *significant data gaps* (SDGs) in connection with the Subject Property:

RECOGNIZED ENVIRONMENTAL CONDITIONS
No RECs were identified.
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CRECs)
No CRECs were identified.
SIGNIFICANT DATA GAPS (SDGs)
The Property address – 2828 West 28th Street is listed on the UST database. The UST listing is for Petroleum Bulk Storage (PBS) registration 2-600253 set to expire July 23, 2024. The UST Tank ID is listed as 41680, for a 10,000-gallon UST containing #2-fuel oil for onsite consumption. The UST status is listed as having been installed in 1973 and closed-in-place in 2005. Hillmann recommends obtaining UST closure reports documenting whether presence/absence of impact to underlying environmental media was verified upon UST closure in 2005.

Historical Recognized Environmental Conditions (HRECs)

This assessment has revealed the following *historical recognized environmental conditions* (HRECs) in connection with the Subject Property:

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No HRECs were identified

De Minimis and Other Environmental Conditions

The following *de minimis* and other environmental conditions were identified:

OTHER ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS
Multiple listing within the Property vicinity are listed on the MANIFEST and RCRA-NonGen databases associated with Con Edison infrastructure work which generated regulated waste for offsite transport/disposal. The listings are not indicative of a release and not considered a REC.
The Property address / tax block and lot is listed on the E-Designation database for a) exhaust stack location limitations, b) hazardous materials Phase I and II Testing Protocols and c) window wall attenuation & alternate ventilation. In the event of a change in land use or redevelopment involving a zoning action, the aforementioned environmental requirements will be required, per New York City Office of Environmental Remediation requirements, prior to issuance of permits and/or certificates of occupancy.

Environmental Professional Statement

I/We declare that, to the best of my professional knowledge and belief, I/we meet the definition of *Environmental professional* as defined in § 312.10 of 40 C.F.R. 312. I/we have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the *subject property*. I/We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Etan Y. Hindin
Environmental Professional

Chris Hirschmann
Environmental Professional

1.4 Business Environmental Risks / Non-ASTM Scope

Hillmann has performed a limited review of the following potential Business Environmental Risks (BER), also known as "Non-ASTM Scope concerns", in accordance with the contracted scope of work scope for this assessment. BER is defined by ASTM E1527-21 as *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."* The following is a summary of findings for the limited review of potential BERs, where applicable, as per the contracted scope of work and limitations outlined in Section 2. For a more detailed discussion of the findings and contracted scope of work, please see the referenced report section.

BUSINESS ENVIRONMENTAL RISKS / NON-ASTM SCOPE			
Subject	**Findings**	**Not Appl.**	**Rpt. Ref.**
Asbestos	Given the 1972 year of construction ACM is suspected unless ruled out by laboratory analysis.		7.1
Lead Paint	Given the 1972 year of construction lead-paint is suspected unless ruled out by laboratory analysis and/or field detection.		7.2
Radon	The Property is located in the USEPA radon designation Zone 3 or 'low risk' area for radon.		7.3
Mold / Microbial Damage	Hillmann did not observe evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.		7.4
NWI Wetlands/ FEMA Flood Zones	No NWI mapped Wetlands are present at the Subject Property. The Property is located within a FEMA 100-year flood zone.		7.5
Drinking Water	Potable water service at the Subject Property is provided by the City of New York which meets or exceeds USEPA drinking water quality standards. Building specific drinking water sampling was not performed.		7.6

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-21. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. § 9601) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The goal of the processes established by ASTM E1527-21 is to identify *recognized environmental conditions* in connection with the Subject Property.

The term *recognized environmental condition* (REC) is defined by ASTM E1527-21 as *"(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."*

The term *controlled recognized environmental condition* (CREC) is a type of recognized environmental condition and defined by ASTM E1527-21 as a *"recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

The term *historical recognized environmental condition* (HREC) is defined as a *"previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations)."* The ASTM E1527-21 standard has clarified that a *historical recognized environmental condition* is not a *recognized environmental condition*.

The term *de minimis condition* is defined by the ASTM, *"…a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."* A condition determined to be a *de minimis condition* is not REC nor a CREC.

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Subject Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Subject Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Subject Property from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Subject Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-21 standard:

Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Subject Property. If the Subject Property contains buildings built in 1990 or later, the contracted scope of work excludes a cursory non-intrusive visual screening or any other level of evaluation for suspect ACM; however, the exclusion for buildings built ≥1990 should not be interpreted to suggest that any such buildings are free of ACM or would not warrant evaluation of building materials for ACM prior to disturbance. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if a greater certainty is desired regarding ACM and potential asbestos hazards at the Subject Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Subject Property. If the Property contains buildings built in 1980 or later, the contracted scope of work excludes any cursory non-intrusive visual screening or other level of evaluation for suspect LPB;

however, the scope of work exclusion for building built ≥1980 should not be interpreted to suggest that any such buildings are free of LPB or other lead hazards. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Subject Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Subject Property.

Mold/Microbial Damage: A cursory non-intrusive visual screening within the accessed areas of buildings on the Subject Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Subject Property.

Drinking Water: The source of drinking water to Property will be identified. If not provided by a municipal or public water system, Hillmann will request, review and summarize available data of drinking water quality testing from the Property.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:	2828 West 28th Street				
City:	Brooklyn	**County:**	Kings	**State:**	New York
Tax ID/Parcel Number:	Block 7011 Lot 11				
Approx. Land Area:	2.03-acres				
Apprx. Latitude/Longitude:	North 40.5573548 degrees/West 73.993936 degrees				
Additional Details (if appl.):	Secondary Addresses: 2802-2878 West 28th Street and 2861-2871 West 29th Street and 2802-2804 Neptune Avenue.				
Property Owner:	Park, Sea Housing				
Zoning Designation:	R6 (Residential) with no commercial overlay				

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized

environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	No	The date and/or type of the first developed use of the Subject Property was not documented. Records gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals.
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.4 ESA Report Component Dates/Viability

The ASTM E1527-21 standard states that an environmental site assessment (ESA) is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the Subject Property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). Specifically, all of the following components must be conducted or updated within 180 days prior to the date of acquisition or prior to the date of the transaction. The following table summarized the component completion dates:

ESA Component	Completion Date
Interviews	August 30, 2022
Env Lien Search	(excluded from scope)
Government Records Review	August 22, 2022
Visual Inspections	August 30, 2022
Env. Professional Declaration	September 19, 2022

2.5 User Reliance

This report is for the exclusive use of TerreAlto and additional relying entities, if any, named on the front cover. No additional individuals or entities shall be permitted to rely upon any data, interpretation, reports or other information or documentation contained in this report, without first obtaining the consent of TerreAlto; and without obtaining written consent from Hillmann in the form of a reliance agreement/letter.

Hillmann may, in its sole discretion, withhold its consent to additional reliance and/or Hillmann may condition consent for reliance upon payment of a fee or other conditions.

2.6 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no

areas of the Subject Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Subject Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Subject Property and immediate surrounding area.

2.7 General Limitations and Exceptions

Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, would be further specified in Section 4.1.

Significant limitations related to the condition or accessibility of the Subject Property at the time of the site reconnaissance, if encountered, are reported in Section 6.1.

Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E 1527-21 are reported.

Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Subject Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Subject Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Subject Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Information obtained during the assessment, whether written, graphic or verbal, provided by the Subject Property contact(s) or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or government agency source; is assumed to be accurate except as specifically stated otherwise in this report. Independent verification of the accuracy or

completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment. No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-21 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

Recommended response actions offered in Section 1.3, if any, are provided as an option to the Client, and may have taken into account the Client's relation to the Subject Property and/or their intended purpose of this assessment. If included, it is not intended by Hillmann to represent the only course(s) of action, or inaction, to take. Furthermore, it is emphasized that additional response actions may become advisable depending on the outcome of the initial action(s) taken. Hillmann advises that Client and any additional authorized relying parties as specified on the report Cover and Section 2.5, or via letter of reliance extension, undertake consultation with legal counsel familiar with environmental and real estate law would be beneficial to the decision making process

for the type and timing of a response action to identified RECs or Business Environmental Risks, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User(s) of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

The User(s) assumes responsibility for business decisions that it makes utilizing information in the report provided by Hillmann. Hillmann shall not be responsible for any conclusions, interpretations and/or decisions of the User(s).

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Subject Property; specifically, the entity or entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

No prior environmental reports/documentation were provided.

3.2 User Responsibilities

In order to qualify for Landowner Liability Protections (LLPs) offered by federal regulations, the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User should provide the following information to the environmental professional (Hillmann). Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete. To assist the report User to meet these requirements, Hillmann has provided a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 with instructions to complete and return to Hillmann. A completed questionnaire was not returned to Hillmann.

Question:	Yes/No:	Detail:
1. Search of Land Title and Judicial Records: Has the User performed a search of land title records and judicial records for environmental liens and/or Activity and Use Limitations (AULs) filed or recorded against the property?	NR	
1.a. If yes to Question 1: Did the search identify any environmental liens or Activity and Use Limitations (AUL), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	NR	
1.b. If yes to Question 1: Has the User provided the result of the search of land title and judicial records to Hillmann?	NR	
2. Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	NR	
3. Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	NR	

Question:	Yes/No:	Detail:
4. Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,		
4.a. -Do you know the past uses of the property?	NR	
4.b. -Do you know of specific chemicals that are present or were once present at the property?	NR	
4.c. -Do you know of spills or other chemical releases that have taken place at the property?	NR	
4.d. -Do you know of any environmental cleanups that have taken place at the property?	NR	
5. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	NR	
6. Litigation/Administrative Proceedings/Government Notices: As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	NR	
7. User's Reason/Purpose for Performing Phase I ESA:	The User did not indicate the purpose of the assessment. In accordance with ASTM E1527-21, it is assumed that the Phase I ESA was being performed in order to qualify for landowner liability protection to CERCLA liability.	

4.0 RECORDS REVIEW

4.1 Environmental Information

Physical Setting

Source	Discussion
USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property lies at an elevation of approximately 3 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the east-northeast. The closest down gradient water body is the Coney Island Channel, located approximately 800-feet to the south.
USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum)	The soil type at the Subject Property is classified as "Urban Land". The Urban Land designation indicates that a majority of the original soils on the site have been disturbed by development or covered with impervious surfaces, such as buildings or pavement.
Geologic Data: (EDR Geocheck-Physical Setting Source Addendum)	The Geologic Age Identification is Stratified Sequence and the Rock Stratigraphic Unit is the Cenozoic Era, Quaternary System, and Pleistocene Series.
Prior Env. Reports: (Section 3.2)	None provided.
Additional Sources/ Data:	No additional physical setting sources or data was obtained.
Groundwater Flow Discussion:	Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the south.

Federal, State and Tribal Environmental Record Sources

Standard government records were obtained and reviewed primarily via a third-party regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT. The report provided government records from the standard environmental resources and within minimum search distances specified by Section 8.2.2-Table 2 of the ASTM E1527-21; and were reviewed for the purpose of identifying potential RECs in connection with the Subject Property. Additional detail of the source and significance of the regulatory databases can be found in the regulatory database report in Appendix E. Hillmann has also included discussion of records pertaining to the Subject Property from other government record sources not specifically listed under Table 2, as applicable.

Reported distances for adjoining property listings, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to

non-petroleum product releases within 1,760 feet of the Subject Property in the up-gradient direction, 365 feet of the Subject Property in the cross gradient direction and 100 feet of the Subject Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Subject Property in the up-gradient direction, 165 feet of the Subject Property in the cross gradient direction and 100 feet of the Subject Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the Subject Property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Subject Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that are considered to constitute a vapor encroachment condition (VEC) to the Subject Property, if any, are identified and discussed in this section.

The EDR Radius Map report is attached in Appendix E.

Property Listings

The Property address / tax block and lot is listed on the E-Designation database for a) exhaust stack location limitations, b) hazardous materials Phase I and II Testing Protocols and c) window wall attenuation & alternate ventilation. In the event of a change in land use or redevelopment involving a zoning action, the aforementioned environmental requirements will be required, per New York City Office of Environmental Remediation requirements, prior to issuance of permits and/or certificates of occupancy.

The Property address – 2828 West 28th Street is listed on the UST database. The UST listing is for Petroleum Bulk Storage (PBS) registration 2-600253 set to expire July 23, 2024. The UST Tank ID is listed as 41680, for a 10,000-gallon UST containing #2-fuel oil for onsite consumption. The UST status is listed as having been installed in 1973 and closed-in-place in 2005.

The Property is further listed on the AST database for a 7,098-gallon #2 fuel oil AST installed in 2005.

Adjoining Property Listings

Multiple listings within the Property vicinity were identified associated with Con Edison infrastructure work which generated regulated waste for offsite transport/disposal. The listings are not indicative of a release and not considered a REC.

Multiple LTANKS and NY SPILLS listings within the Property vicinity were identified. Each case obtained regulatory closure. Given the regulatory status, the adjoining LTANKS and NY SPILLS cases are not considered a REC in connection with the Property.

Surrounding Area Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Subject Property. In order to keep this discussion informative and

concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Subject Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and concluded not to be RECs in connection with the Subject Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status.

State/Tribal SUPERFUND & HAZARDOUS WASTE				**# of sites:**	3	**Search Distance:**	1-mile
Notable Listing:	3375-3377 Neptune Avenue / Former Gateway French Dry Cleaners						
Distance in feet:	1,273	**Direction:**	NW	**Gradient:**	Cross		
Data Discussion:	Given the distance and gradient, the SHWS listing is not considered a REC in connection with the Property. The case status is listed as: "*Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site*."						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

State/Tribal LANDFILL/SOLID WASTE DISPOSAL				**# of sites:**	0	**Search Distance:**	½-mile
Notable Listing:	None						
Distance in feet:		**Direction:**		**Gradient:**

State/Tribal BROWNFIELD SITES				**# of sites:**	3	**Search Distance:**	½-mile
Notable Listing:	3375-3377 Neptune Avenue / Former Gateway French Dry Cleaners						
Distance in feet:	1,273	**Direction:**	NW	**Gradient:**	Cross		
Data Discussion:	As noted above, (the site is also listed on the SHWS database) remediation is complete at the site and given the distance, is not considered a REC in connection with the Property.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

UNMAPPED/ORPHAN LIST SITES

	Hillmann has also reviewed a list of unmapped sites (a.k.a. "Orphan List" sites) indicated by the database report. Unmapped sites that were identified as falling within an applicable specific search distance or warranting discussion have either been discussed in the preceding tables or are detailed below:
Notable Listings:	None

Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Subject Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government environmental regulatory databases was also conducted, as well as a general cursory internet search of the Subject Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
Building/Code Enforcement.	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified. Boiler information indicating dual natural gas / number 2 fuel oil was noted.
FDNY-Public Records Unit / Tank Section	Storage tank search request	No response was received prior to report issuance.
NYS Dept of Environmental Conservation	FOI request	No response was received prior to report issuance.
NYC Dept of Environmental Protection	FOI request	A response was recieved stating that no records were found.
EPA Envirofacts	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.
Internet Search Engine	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.

Pertinent records referenced in the above table have been included in Appendix F.

4.2 Historical Research

Historical records have been compiled and analyzed for historical property information and developing a history of previous uses of the Subject Property, adjoining properties and surrounding area. These records were reviewed for the purpose of identifying the likelihood of past uses having led to RECs in connection with the Subject Property.

The historical record sources listed below have been sought with the objective to document past uses of the Subject Property from the present back to the Subject Property's first developed use, or back to 1940, whichever is earlier. The term "developed use" includes agricultural use, placement

of fill dirt and other uses that do not involve structures. Hillmann has sought to review historical records in minimum intervals of five years.

Fire Insurance Maps

A Certified Sanborn Map Report was obtained from EDR for a review of published historic fire insurance maps for the Subject Property and surrounding area. The following is a summary of site uses and notable details depicted by the available maps:

Year(s)	Prop/Adj	Depicted Use(s)	Notable Details
1895, 1905, 1906, 1930, 1950, 1966, 1968, 1977-1983, 1986, 1987, 1989, 1991-1996, 2001-2007	**Property:**	Multiple dwellings and stores are depicted in beginning in 1930. Beginning in 1977, the Property is depicted in its present configuration, and listed as Coney Island Housing – site 7 Building 10.	None
	Adjoining:	Multiple dwellings and stores	None

A copy of the Certified Sanborn Map Report is attached in Appendix D.

City Directories

An EDR City Directory Abstract report was reviewed for data of former occupants of the Subject Property's street address. The following is a generalized summary of the findings of city directory research for past occupants of the Subject Property.

Property	
Use(s) / Occupant(s):	**Years**
Multiple residential occupants.	1928-2017

The EDR City Directory Abstract report was also reviewed for listings of historic occupants of the adjoining properties. The following is a general summary of listings of historic adjoining property occupants:

Adjoining Properties	
Use and/or Occupant(s)	**Years**
Primarily residential listings.	1928 - 2017

A copy of the EDR City Directory report is attached in Appendix D.

Historical Topographic Maps

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

Historical Aerial Photographs

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

EDR High-Risk Historical Records

The EDR Radius Map™ report, which is discussed in greater detail in Section 4.1 and attached in Appendix E, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Subject Property. These databases include EDR Historic Cleaners – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Historic Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a database of sites historically occupied by manufactured gas plants and related facilities.

EDR Database	On-site Listings:	Adjoining/Off-Site Listings
Historic Cleaners: (on-site/adjoining only)	None	None
Historic Auto: (on-site/adjoining only)	None	None
MGP: (1-mile distance)	None	None within area of potential concern

Petroleum/Natural Gas Well Review

The historical record sources were reviewed for records of historic petroleum and/or natural gas wells at the Subject Property. No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

Interviews/Anecdotal:	No additional pertinent historical data was obtained.
Local Gov't Records:	No additional pertinent historical data was obtained.
Prior Env. Reports: (Section 3.2)	Not applicable; no prior reports were provided.
Site Observations:	Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance.
Other Sources:	No additional pertinent historical data was obtained.

Summary of Identified Historic Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Subject Property:

Property	
Date Range	**Use**
1906-1972	Residential, commercial
1972-Present	Apartments and daycare

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Adjoining Properties	
Date Range	**Use**
1906-Present	Residential, commercial

Historical Records Data Failure

The ASTM E1527-21 standard defines data failure as failure to achieve the historical research objective even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions were sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval. In encountered, data failure and its significance as a data gap is discussed below:

Objective	Met?	Detail	Significant?
First developed use/date determined?	Yes	The first developed use of the Property was stores and dwellings in the early 1900's.	NA
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps.	No
All obvious prior uses identified?	Yes	See Summary of Identified Past Uses of this section.	NA

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

Historic Uses REC Discussion

The review of historical records did not indicate evidence of a REC in connection with the Property.

5.0 INTERVIEWS

5.1 Interviews with Owners, Operators and Occupants

Current Owner/Operator, Super, Occupant (as available)

Property Escort	Contact Name	Affiliation	Interview Type
Property Manager	Ilso Kim	Property Manager	In person
Interview Date:	August 30, 2022		
Interview Outcome/Findings:			
An interview for information pertinent to the assessment was conducted in person at the time of the site visit. The following pertinent information was indicated: Ilso Kim was unaware of any environmental conditions at the Property.			

Prior Owners/Operators/Occupants

Name	Company/Title	Yrs @ Site	Interview Type
Interview Date:			
Interview Outcome/Findings:			
No prior owners, operators or occupants were interviewed.			

Neighboring Property Owner/Occupants

Name	Company/Title	Yrs at site	Interview Type
Interview Date:			
Interview Outcome/Findings:			
The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjoining or nearby property owners or occupants were not conducted.			

5.2 Interviews with State and/or Local Government Officials

State and/or local governmental officials have been interviewed to obtain information of potential RECs in connection with the Subject Property. Many government agencies and their officials require submittal of written request for records in order to respond. The details in Section 4.1 list the various state and local government agencies contacted as part of this assessment, and the outcome of each inquiry. In addition, the details of regulatory database research in Section 4.1 may have included detail of interviews with officials pertinent to government records review and identification of RECs.

Additional interview of government officials not previously detailed in Sections 4.1 are discussed below, if applicable.

Name	**Agency Name/Title**	**Interview Type**
Interview Outcome/Findings:		
No additional local/state government officials were interviewed.		

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

A site reconnaissance was conducted to collect information and make observations to help identify RECs in connection with the Subject Property. This included visual and/or physical observations of the Subject Property and its structures, adjoining properties as viewed from the Subject Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares and accessed Subject Property structures. Subject property building exteriors were observed at ground level, unless otherwise indicated. Where applicable, building interiors were accessed and observed to the extent they were made safely accessible with the cooperation of the site escort.

Site Inspection Personnel:	Mr. Ryan Powell
Property Escort/Company:	Ilso Kim / Property Manager with Progressive Management
Inspection Date:	August 30, 2022
Weather Conditions:	Sunny, 83 degrees F

Significant Inaccessible Areas

No significant areas of the Property inaccessible at the time of the inspection were noted.

Significant Limiting Site Conditions

No significant limiting site conditions were noted at the time of the site reconnaissance.

6.2 General Site Setting

Site and Vicinity Characteristics

Abutting Roadways:	West 29th Street to the west; West 28th Street to the east and Neptune Avenue to the north.
Current Property Use:	Residential apartments
Evidence of Past Property Uses:	None observed.
Evidence of Past Adjoining Property Uses:	None observed.
Surrounding Area Uses:	Residential, mixed-use

Current Adjoining Property Uses

Dir	Street Address	Description
N	2529 Neptune Ave	Recreational
S	2805 Mermaid Ave	Mixed-use
E	2727 Mermaid Ave	USPS
W	2901 Mermaid Ave	Shopping Center

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

Topographic Characteristics

Terrain:	Flat
Direction of Downward Slope:	None observed
On-site Water Bodies:	None observed
Other Significant Features:	None observed

General Description of Structures and Improvements

Buildings:	One
Approx. Building Size:	102,000-ft²
Approx. Year Built:	1972
Number of Stories:	15
Basement/Subgrade Levels:	None
Exterior Ground Cover:	Concrete sidewalk, asphalt parking, landscaped areas
Ancillary Structures:	None
Sources of Heating & Cooling:	Dual Natural gas /No. 2 Fuel oil, and electric powered systems
Potable Water/Sewage Disposal:	Municipal utility connections

6.3 Site Features and Conditions

Storage/Usage of Hazardous Substances and Petroleum Products

The following approximate number of containers, and general description of their contents, capacity, container types and storage conditions, were observed to be stored and/or used at the Subject Property:

Occupant	Substance	Qty/Container Type	Storage Conditions
Super	Cleaning/Maintenance materials	Various	Stored indoors on intact concrete. No concerns noted.

Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

AST/ UST	Product	Capacity	Construction	Year Installed	Status	Location/Notes
UST	No. 2. Fuel Oil	10,000-gal	Steel	1973	Closed-in-place	Playground area.
AST	No. 2 Fuel Oil	7,098-gal	metal	2005	Active	No concerns noted.

See discussion above in CRECs section pertaining to the closed-in-place UST.

Strong, Pungent or Noxious Odors and their Sources

No strong, pungent or noxious odors were noted at the Subject Property.

Standing Surface Water/Pools & Sumps

No standing water, pools or sumps containing liquids likely to be hazardous substances or petroleum products were noted.

Drums, Totes and Intermediate Bulk Containers

No hazardous substance or petroleum product drums were noted.

Unidentified Substance Containers

No unidentified substance containers suspected of containing hazardous substance or petroleum product were noted.

PCBs in Oil Filled Electrical/Hydraulic Equipment

No oil-filled electrical or hydraulic equipment was identified at the Subject Property.

It is noted that identification of PCB containing fluorescent light ballasts, caulk, paint, or other materials located inside and are part of the building or structure is outside of the scope of the ASTM E1527-21 standard and this assessment.

Stains or Corrosion on Floors, Walls or Ceilings

No stains or corrosion of floors, walls or ceilings, excluding any staining from water, were noted.

Drains and Sumps

No floor drains or sumps indicative of a REC were identified.

Pits/Ponds/Lagoons

No pits, ponds or lagoons were identified in connection with waste treatment or disposal.

Stained Soil, Pavement/Stressed Vegetation

No stained soil, pavement or stressed vegetation was observed.

On-Site Solid Waste Disposal/Fill Material

No evidence of on-site disposal of trash, construction debris, demolition debris or other solid waste was observed.

Waste Water

Sanitary sewage generated at the Subject Property is discharged via a connection to the local public sewer system.

Storm water runoff at the Subject Property is discharged via roof drains into the municipal sewer system.

No additional waste water discharges were identified at the Subject Property.

Septic Systems/Cesspools

No septic systems or cesspools were identified at the Subject Property.

Wells

No wells (including any dry wells, irrigation wells, injection wells, abandoned wells, or other wells) were identified at the Subject Property.

Railroad Spurs

No railroad spurs were identified on the Subject Property.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-21 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Subject Property for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

Given the 1972 construction ACM is suspected unless ruled out by laboratory analysis.

7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1978. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards.

Given the 1972 construction LBP is suspected unless ruled out by laboratory analysis and/or field detection.

7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Subject Property is located in an area classified as Zone 3 or 'low risk' area for radon.

7.4 Mold/Microbial Damage

The contracted scope of work included a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth. Hillmann did not observe evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.

7.5 NWI Mapped Wetlands

The National Wetlands Inventory online Wetland Mapper (https://www.fws.gov/wetlands/data/mapper.html) was reviewed for indications of jurisdictional wetlands at or immediately adjoining the Subject Property. The scope of work for this assessment excluded a visual

determination of regulated wetlands at the Subject Property. It is emphasized that, regardless of the data reviewed via the NWI Wetlands Mapper, a field delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Subject Property.

The review did not indicate regulated wetland areas on the Property.

7.6 Drinking Water

Potable water service at the Subject Property is provided by the City of New York which meets or exceeds USEPA drinking water quality standards.

Building specific drinking water sampling was not performed.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

08/25/22

Site Name:

2930 W 30th St, 2828 W 28th S
2930 W 30th St, 2828 W 28th S
Brooklyn, NY 11224
EDR Inquiry # 7093643.3

Client Name:

Hillmann Environmental Co.
1600 Route 22 East
Union, NJ 07083
Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 15 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/09/2022 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/09/2022 has revealed that there are 24 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 17 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/09/2022 has revealed that there are 53 NY Spills sites within approximately 0.125 miles of the target property.

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there are 2 NY SPILLS 90 sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that

there are 38 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY LEAD: The results of the inspections for all classrooms serving students under six in applicable buildings. Identifies all classrooms, whether there was observation of peeling paint, and if there was, standard response protocol was followed.

A review of the NY LEAD list, as provided by EDR, has revealed that there is 1 NY LEAD site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

DEC Memo:	"9/4/12-Vought-Primary off hours responder. This spill assigned to DEC Feroze as part of routine Con Edison minor spill porfolio review and possible closure. Initial EMIS #230931 added to Cross Reference Field, deleted from Proxy and downloaded into E-docs. As per EMIS, F.O.D. Mech Mr. Dacon reports while being sent to phase check VS5589 (11B03) he discovered 30 gal of unknown oil in structure on 50 gal. of water contained. Possible source to be the unit and a pressure test is required. It is possible this structure is a tide hole as well. E-tag# 105972 was hung and a liquid sample of the structure was taken C/C# GG36440. Acct#C3237. N/P Tues & Friday 8:00 - 9:30 Am. See also duplicate spill 1205589 at same site. 9/25/14 - Austin - 30 gals motor oil (oil cans found in vicinity) atop 50 gals water in vault - Con Ed contained and cleaned up the spill - See the document files for further information - Spill closed - end"

DEC Memo:	"01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. One TTF in 1990 for a 35K tank installed in 1974. Tank was repaired and retested in 1993 and passed. Next test was in 1998. PBS database shows tank as active. However, NYCHA Tank Status Report does not have

SURFSIDE -NYCHA (Continued) **U000410718**

the tank listed for Surfside Houses. Unsure if tank is still active. Also, since a spill was recorded for this site a subsurface investigation must be performed to determine the extent of the contamination. - SK 03/14/06: This spill reassigned to K.Tang. - SK 09/23/08: Documents related to tank tightness testing submitted to the Department. Results indicate that manway gasket nuts and bolts were cause of testing failure, they were replaced and the tank passed testing. Spill closed based on this information. J.kann "

Remarks: "35K TANK FAILED HORNER EZY CHECK,SYSTEM TEST,GROSS LEAK,WILL EXCAVATE,ISOLATE & RETEST."

DEC Memo:	"Sangesland spoke to Rose Guido at Petro. She says the building has two 275 gal tanks tied together. There was a previous leak in one tank that was repaired in the past. Now there is a leak in the bottom of the second tank. Petro has called Milro to the site to vac out both tanks, they will set up a temp tank and will work on the clean up and tank repair/replacement in the next few days. *****Need to contact Milro in a few days to find out what work was done and if a digout is needed. ****** 12/20/05 - Raphael Ketani. I called Milro ((800) 773-6780), but there was no one there who could tell me what was taking place at the site. I left a message for someone to call me back. I spoke to Nick Charonotoulos of PTC and he said that the two tanks had been removed, but he didn't know anything else. Anthony called me back to say that the tanks were only pumped out and not removed. He sent a FAX with the hazardous waste material manifest for the tank bottom sludge. 12/29/05 - Raphael Ketani. I left a message for Anthony of Milro to call me back regarding progress on cleaning up the spill. Anthony called me back and said that he would look into what was happening with the site. 07/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Mr. Nick (Manager) at (718)628-3305 and left message to call me back. -QA 08/08/06: Called Mr. Nick and left message to call me back. -QA 08/21/06: Called Anthony (Milro Company) and left message to call me back. -QA 08/21/06: According to the letter of Mr. Nick Chronopoulos, Manager (Petro Heating Company) in which he mentioned they cleaned up all the oil and debris, at above premises. The oil in the basement fell on a concrete floor which had no cracks. All the oil was contained near the tanks and picked up. The tanks were leaking were pumped out by Milro Company and removed from the premises. Based on this information this spill is closed. -QA "
Remarks:	"TANK IS LEAKING ON THE BOTTOM. CLEAM UP IN PROGRESS"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	T-1
Tank Id:	60323
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	C01 - Pipe Location - Aboveground
	I04 - Overfill - Product Level Gauge (A/G)
	H00 - Tank Leak Detection - None
	J02 - Dispenser - Suction Dispenser
	B00 - Tank External Protection - None
	F00 - Pipe External Protection - None
	G01 - Tank Secondary Containment - Diking (Aboveground)
	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	I03 - Overfill - Automatic Shut-Off
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	03/01/2000
Capacity Gallons:	6000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	06/01/2002
Register:	True

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was BREEN 01/12/06: This spill transferred from Breen to S.Kraszewski. This site has only one TTF from 1998. Documentation on file mentions the need for a dewatering system but it is not said that GW was encountered during excavation. Therefore I must presume that the GW has been impacted but not quantified. One document contains analysis of wastewater from the dewatering system, no petroleum effluent detected. Site assessment performed on May 14, 2003 with J.Kolleeny attending the work. A total of 5 soil borings taken including one at the fill port. Tank had not been removed yet. Only one boring registered a PID reading, but very low - 5.9 No site assessment repor on file. Call NYCHA and ask about the report. Tank was replaced in Fall of 2003. - SK 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill trasferred from Q. Abidi to Koon Tang. 6/11/09: JKann - Spill transfered to J.Kann. Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 6/10/10: J.Kann - comments sent on the work plan via email (edoced). Revised plan due 7/10/10. 12/30/14: J.Kann - multi site stip. SIR due 4/14/15 6/1/15: J.Kann - SIR submitted on 5/20/15. Soils collected and analyzed were below CP-51 RSCOs. Three monitoring wells were installed and minor VOC exceedences were noted in one well (less than 100 ppb total VOCs) A second round of sampling was performed in May 2015 with concentrations of less than 10 ppb total VOCs in the same well. The other wells were non detect. The site is located in Coney Island less than a block from the ocean. Based on the minimal impacts, the decrease in concentrations, the proximity to the ocean and the fact that the original tank from which the suspected leak occurred has been removed and replaced, the spill has been closed. NFA"
Remarks:	"pulling tank. encountered contaminated soil."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY DEC Inspector Notes: W 31st St between Surf and Mermaid Aves., Coney Island. Ron James notified Foley of transformer fire which went to two cars and a tree. Foley responded. ERTs David Duke and Mike Daughtrey on site. White hat is Nick Caputo, section manager for B/Q Emergency Dept. DEP Stanley Baldwin and Elie St. Jean also on site. Electric Ops EH&S Ron James, Steve Stathis, Tino Feranandez and Keith Barouch. Upon arrival, Con Edison was in the process of double washing the street and two affected cars. Con Ed removed 65gal oily water from street and dried with speedy-dry. Two cars were wrapped and taken to Astoria by Apple Towing. Overhead Dept. cut down tree and put the debris on the contaminated grass area until dumpster was delivered. No oil was found on building. Approx 1 oz. oil got into catch basin due to the FDNY unable to shut off hydrant. DEP responded to shut off hydrant. Con Ed will continue cleanup through the night. To drain and remove transformer tonight and replace tomorrow. Con Ed e2mis #142844: 5-17-2002 08:30HRS K. NEWLAND (#9) REPORTS, ONE GALLON OF TRANSFORMER OIL SPRAYED OUT INTO ST, AND ONE GALLON OF TRANSFORMER OIL WITH APPROX 80 GALLONS OF WATER IN STRUCTURE. THERE WAS FIRE AND SMOKE INVOLVED BUT IS NOW CONTAINED. THE ONLY PRIVATE PROPERTY INVOLVED WAS TWO CARS IST CAR WITH PLATE# IS FR897E, AND 2ND PLATE# IS AHX2410 AND THAT BELONGS TO A MR. PORTALATIN. ALSO SMALL 4X2 PATCH OF GRASS. AT THIS TIME SPILL SEEMS TO BE CONTAINED AND NO SEWERS OR WATERWAYS WERE AFFECTED. POLICE AND FIRE DEPT ON LOCATION. POLICE LT. AURELIA AND CHEIF FOX OF FIRE DEPT. NO INJURIES WERE RELATED TO SPILL AND NO WEATHER CONDITIONS CONTRIBUTED TO HAZARD OF SPILL. HISTORICAL RECORDS INDICATE 10 PPM. OIL WAS DISCOVERED WHEN #9 WAS DISPATCHED TO LOCATION FOR 7B54 OUTAGE. ENV STOP TAG# 07302 WAS PLACED. THE

TRANSFORMER 4364 (Continued) **S106003688**

STANDING WATER IN STRUCTURE HAS NO MOVEMENT AND NO SEWER CONNECTION NOTICED. ALSO CAN NOT VERIFY IF SUMP IS PRESENT. ALSO AT THIS TIME, SAMPLE CAN NOT BE TAKEN UNTILL JOB IS MADE SAFE. ENV OPS CREW WAS SENT TO LOCATION AND WILL BE CLEANING AS A 50-499. S. STATHIS ON LOCATION AT 08:20HRS. 0920HRS P. COONEY REPORTS THAT FEILD SUPERVISOR TOLD HIM THAT ONE OUNCE OF THE ONE GALLON THAT SPRAYED ONTO STREET WENT INTO CATCH BASIN. S.PACE 49874. 09:20HRS TWO CATCH BASINS WERE DAMMED BUT BECAUSE OF DEFECTIVE FIRE DEPT EQUIPMENT WATER OVERCAME BOTH CATCH BASINS. 09:22HRS CIG WAS NOTIFIED. 09:30HRS R. JAMES GOING TO LOCATION. 09:40HRS S. STATHIS REPORTS, DEP ARRIVED ON LOCATION AND TURNED OFF FIRE PUMP. ALSO N. CAPUTO EMERGENCY MANAGER ARRIVED ON LOCATION. 09:45HRS S. STATHIS REPORTS, E.R.T ARRIVED ON LOCATION. 09:50HRS K. NEWLAND (#9) REPORTS, SAMPLE WAS TAKEN FROM VS4364. 10:15HRS EPA# NYP 004 098 448. 10:20HRS ENG RECORDS INDICATE THERE IS A SOIL DRAIN IN VS 4364. 10:25HRS S. STATHIS REPORTS, DEP (KEITH WILLIAMS) OF INDUSTRIAL DEPT ON LOCATION AND HIS PHONE NUMBER IS 595-4718. HIS SUPERVISOR NAME IS COSMO ZINGNROPOLI FAX NUMBER IS (718) 595-4771). 10:30HRS R. JAMES REPORTS, AT 10:15HRS R. JAMES CALLED N.Y.STATE D.E.C REP, KERRY FOLEY AND INFORMED HER OF TRANSFORMER FIRE AND SPILL. ALSO AT THE REQUEST OF D.E.P, WE WILL BE INSPECTING THE UPPER FLOORS OF THE AFFECTED BUILDING. 10:35HRS OVER 50 TANKER WAS ORDERED AND WILL HEADING TO LOCATION. UPDATE 5/17/02 11:30 HRS. -- E. WILLIAMS, O.S. BROOKLYN ENV. OPS, REPORTS D.E.P. REQUESTED WE TAKE WATER SAMPLES FROM CATCH BASINS AT EITHER END OF STREET: N/W/C W.31 ST & SURF AVE -AND- N/W/C W.31 ST & MERMAID AVE. SAMPLES WILL BE DELIVERED TO CHEM LAB FOR PCB TESTING UNDER SAME CHAIN OF CUSTODY FORM (#AA-07575) AS THE SAMPLE ALREADY TAKEN FROM VS-4364. UPDATE : 17-MAY-2002 11:45 HRS. EH&S ENVIR. SPECIALIST R.JAMES EMP# 50683 REPORTS: DEP HAZMAT INSPECTOR S.BALDWIN ENTERED BUILDING 2960 W.31 STREET, INSPECTED H BANK APARTMENT'S (WINDOWS & SILLS) ON FLOORS 8,7,6 & 4 FOR SIGNS OF OIL . NO OIL FOUND. AT 11:20 HRS. DEC INSPECTOR KERRY FOLEY ARRIVED ON LOCATION. WAS BRIEFED ON INCIDENT, SHOWN SPILL AREA AND TOLD OF CLEANUP PLANS. UPDATE : 17-MAY-2002 13:35 HRS. EH&S ENVIR. SPECIALIST R.JAMES EMP# 50683 REPORTS: THE OWNER OF NYS PLATE# BBK2927 RAMON CORDERO 2960 W.31 STREET APT# 2-D, REQUESTED HIS VEHICLE BE INSPECTED FOR OIL CONTAMINATION. AFTER THOROUGH INSPECTION OF VEHICLE R.JAMES REPORTS: NO EVIDENCE OF OIL CONTAMINATION FOUND ON VEHICLE. UPDATRE: 5/17/02 - 1500 R. JAMES - PROJECTS SPEC, REPORTS TANKER REMOVED 65 GALS OF WATER MIXED WITH A SMALL AMOUNT OF OIL FROM THE STREET. MR. JAMES INFORMED ASSISTANT HOUSING MGR HUGGINS THAT THE AFFECTED TREE WOULD BE REMOVED & REPLACED AND THE GRASS FROM THE LAWN WOULD ALSO BE REMOVED & REPLACED. MS. HUGGINS WAS GIVEN THE PHONE NUMBER OF JIM DOWLING OF CLAIMS. UPDATE : 17-MAY-2002 16:15 HRS. EH&S ENVIR. SPECIALIST R.JAMES EMP# 50683 REPORTS: DEP HAZMAT INSPECTOR S.BALDWIN & DEC INSPECTOR KERRY FOLEY LEAVE LOCATION AT THIS TIME. LAB RESULT OF SAMPLE TAKEN FROM VAULT RECEIVED 5/17/02 - 1637 HRS. 02-04444. <1.0 PPM. UPDATE: 17-MAY-2002 17:30 HRS. EH&S SPECIALIST R.JAMES REPORTS: RUBEN SANTANA OWNER OF VEHICLE NYS PLATE# FR897E WAS GIVEN A CLAIMS CARD TO CALL J.DOWLING. HE WOULD ALSO LIKE TO HAVE THE PLATES TO HIS CAR RETURNED TO HIM. R.JAMES WILL CALL TRANSPORTATION TO FACILITATE THAT. UPDATE: 5/17/02 - 1755 M. DAUGHERTY - ERT, REPORTS A MR. HOLLOWAY (718-714-4240), THE OWNER OF A 1989 WHITE HONDA ACCORD LXI HAS DECIDED TO CLEAN HIS CAR AT HIS OWN EXPENSE. HE WAS TOLD THAT, IF HE CHOOSES TO, HE CAN PUT A CLAIM INTO CON EDISON. UPDATE: 5/17/02 - 1820 K. BAROUCH - ENV MGR, REPORTS THAT MR. HOLLOWAY (OWNER OF THE WHITE HONDA ACCORD) RETURNED TO THE CLEAN UP SITE. ENV.

TRANSFORMER 4364 (Continued) **S106003688**

OPS. INSPECTED HIS VEHICLE AND DECIDED TO WIPE IT DOWN WITH A CLEANER. MR. BARUCH & RON JAMES ARE NOW LEAVING THE SITE. STEVE STATHIS REMAINS. LAB RESULTS OF BOTH CATCH BASINS (S/W/C MERMAID AVE & W.31 ST AND N/W/C SURF AVE & W.31 ST) RECEIVED 5/17/02 - 1931. BOTH RESULTS <1.0 PPM. Update - 5/17/02 2015hrs S. Stathis removed from the street 65 gallons of water. Removed 665 gallons of oil/water mix from structure and 230 gallon oil from unit. The dumpster will be picked up at 7am. Found cement sump in structure. Partial clean up of structure is completed . 3-11 crew is doing catch basin, lawn and fence. Will be leaving location at this time. 5/17/02-2340HRS O.S. HOWELL REPORTS REMOVED SLUDGE FROM 2-STORM DRAINS S/W/C & N/W/C OF W31 ST.NO OIL FOUND. UPDATE - 18-MAY-2002 13:40 HRS. ENVIR. FLUSH DEPT. MECH-A K.QUEST EMP# 55475 REPORTS: AN > 50 TANKER REMOVE APPROX. 500 GAL'S OF WASH WATER/OIL FROM STRUCTURE. ALL SOLID DEBRIS REMOVED BY VACTOR. DBL WASHED STRUCTURE WITH BIO-GEN 760. SUMP WAS FOUND CEMENTED. ENVIR.TAG# 07302 REMOVED. CLEANUP COMPLETE 100% UPDATE - 19-MAY-2002 18:49 PER FDR REP H.BROWN UNIT WAS REMOVED ON 5/18. UPDATE - 5/22/02 @ 0850 HRS. -- Bob: Please have someone include in the E2mis: The capacity indicated on the transformer was 339 gallons. Subtracting the 230 removed from the transformer would show 109 gallons missing; however, looking into the transformer through the hole in the top, it was evident that most of the oil was still in the transformer. The label had to be incorrect."

Remarks: "transformer fire/explosion spill on to the groudn and cars. crew on site. no con ed # yet...nrc has been notified there # 604736."

Waste Code: D026
Waste Description: CRESOL

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U072
Waste Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U129
Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

RITE AID #04257 (Continued) **1014926838**

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U188
Waste Description: PHENOL

Waste Code: U201
Waste Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Waste Code: U205
Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Waste Code: U211
Waste Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Waste Code: U240
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U279
Waste Description: U279

Tank Info:

Tank Number:	001
Tank Id:	34514
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
G02 - Tank Secondary Containment - Vault (w/access)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/25/1961
Capacity Gallons:	7000

DEC Memo: "Closure report in edocs.LIRO engineers prepared closure report. Cleanup and debris removal activities were performed by Williams and vacuum truck liquid extraction was provided by AARCO. AARCO pumped flood waters and the oil/water mixture from the basement (electrical and storage rooms, boiler room and tank room) to frac tanks located outside of the facility. Based on the remediation performed and visual observations, LiRo concludes that the oil release has been satisfactorily remediated and thereby requests that this spill case be closed. "

Remarks: "contained to boiler room and basement clean up in progress"

Contact Name:	BILL KLEIN
DEC Memo:	"09/19/2013 - V. Brevdo This is Hurricane Sandy related spill (1208483) that was unassigned until today. Attention to this was brought up by NYCDDC during today's quarterly meeting. Alex Zhitomirsky has three other spill cases on Coney Island Maintenance Garage: 0550468; 1113400; and 1206177. V. Brevdo discussed this with Jeffrey Vought of Spill Prevention and Response in the absence of Randall Austin. Jeff did not have objections against Section B (Alex Zhitomirsky) managing this spill, given Alex has three other spill cases on this address/site. Spill Case is assigned to Alex Zhitormirsky effective today 09/19/2013. VB 11/17/13 TJD Site inspection - met on site with NYC Parks Maintenance Supervisor (Robert Sangroni). Location is the NYC Parks Department Coney Island Garage. Interview with Mr. Sangroni reveals the following: - Underground tank system was empty and in process of replacement at time of storm. - Spill was associated with discharge from (55) gallon drum of gasoline onsite for contractor (Franklin Company) purposes as part of tank replacement project. - Area sustained significant flooding and sand deposits associated with Hurricane Sandy - Franklin Company reported to have cleaned spill and removed an unknown volume

CONEY ISLAND MAINT GARAGE (Continued) **S112228662**

of contaminated sand to the satisfaction of NYC Parks Department. - A 3K FO AST located in basement/crawlspace was inservice prior to storm - tank is strapped down - piping was dislodged from tank during storm but no reported discharge occurred. - 3K AST is Out of Service since storm - unknown if tank has been pumped - not leaking - no petroleum odors interior or exterior of structure was evident at time of inspection. Unknown if tank still contains contaminated product from storm impacts. - A 1K FO AST temp tank is currently staged on sidewalk for on site consumption. - Facility has a pending contract to convert to gas heat and remove AST in basement. - New UST's were installed and operating since January 2013 include 1K Gasoline & 2K Diesel - Perimiter of structure and basement/crawlspace floor (sand) appear clean and free of residual petroleum impacts based upon visual and olfactory inspection. No further action is required associated with reported Hurricane Sandy spill at this property. Spill is closed and cross-referenced to existing open spill numbers (1206177) at this site (referenced in DEC remarks dated 9/19/13)."

Remarks: "total 600 gallons - cleanup crew on scene"

Brevdo discussed this with Jeffrey Vought of Spill Prevention and Response in the absence of Randall Austin. Jeff did not have objections against Section B (Alex Zhitomirsky) managing this spill, given Alex has three other spill cases on this address/site. Spill Case is assigned to Alex Zhitormirsky effective today 09/19/2013. VB 11/17/13 TJD Site inspection - met on site with NYC Parks Maintenance Supervisor (Robert Sangroni). Location is the NYC Parks Department Coney Island Garage. Interview with Mr. Sangroni reveals the following: - Underground tank system was empty and in process of replacement at time of storm. - Spill was associated with discharge from (55) gallon drum of gasoline onsite for contractor (Franklin Company) purposes as part of tank replacement project. - Area sustained significant flooding and sand deposits associated with Hurricane Sandy - Franklin Company reported to have cleaned spill and removed an unknown volume of contaminated sand to the satisfaction of NYC Parks Department. - A 3K FO AST located in basement/crawlspace was inservice prior to storm - tank is strapped down - piping was dislodged from tank during storm but no reported discharge occurred. - 3K AST is Out of Service since storm - unknown if tank has been pumped - not leaking - no petroleum

CONEY ISLAND MAINT GARAGE (Continued) **S112228662**

odors interior or exterior of structure was evident at time of inspection. Unknown if tank still contains contaminated product from storm impacts. - A 1K FO AST temp tank is currently staged on sidewalk for on site consumption. - Facility has a pending contract to convert to gas heat and remove AST in basement. - New UST's were installed and operating since January 2013 include 1K Gasoline & 2K Diesel - Perimiter of structure and basement/crawlspace floor (sand) appear clean and free of residual petroleum impacts based upon visual and olfactory inspection. No further action is required associated with reported Hurricane Sandy spill at this property. Spill is closed and cross-referenced to existing open spill numbers (1206177) at this site (referenced in DEC remarks dated 9/19/13)."

Remarks: "total 600 gallons - cleanup crew on scene"

DEC Memo:	"8/10/05- The site's GW contamination was being addressed by injecting ORC in two events by URS Corp and O'Brien-Kreitzberg since 2001 with DEC's approval. URS performs semi-annual GW monitoring at the site and submit report to the Dept. Reviewed the report dated June 28, 2005 containing the GW sampling results from three monitoring wells (MW-01, MW-04 & MW-10).In March/05 semi-annual sampling event, only MW-10 was sampled and no compounds were detected. MW-01 was dropped from sampling for being under compliance for previous two consecutive sampling events. And, MW-04 was not sampled for increase of Free Product in the well which appeared first in Feb/04 sampling event. Absorbent Sock has been installed in this well and being monitored monthly. URS has been advised to check the upgradient well MW-03 as well for Free Product.Semi-annual sampling of MW-04 and MW-10 should continue.- II 10/12/05- Reviewed the semi-annual GW monitoring report through August/05. Only well MW-10 was sampled and was found under compliance. The well MW-04 could not be sampled for appearance of free product, and its treatment by absorbent sock. URS will continue monthly visit to gauge wells for free product.- II 3/09/06: This spill transferred from I. Islam to Q. Abidi. [05/17/06: This spill was opened by Imdadul Islam to track remediation of this site, because I. Islam was apparently unaware of the existence of spill 9505745 for this site. That spill has now been closed to consolidate with this spill. - J. Kolleeny] 7/27/06: DEC case lead transferred from Q. Abidi to J.A. Maisonave. - JAM 8/3/06 Reviewed Greyhawk/Roux Associates Semi-annual Monitoring report dated July 28, 2006. On May 10, 2006, Roux performed groundwater monitoring, which included gauging all accessible wells and sampling monitoring well MW-4. No free phase product was encountered in any wells. Groundwater flow direction is easterly towards the Atlantic Ocean. MW-4 showed levels of Benzene to be 20 ug/L, isopropyl benzene to be 7 ug/L and propylbenzene to be 15 ug/L. The total VOC concentration is 42 ug/L. Roux will continue to do semi-annual sampling of MW-4 and requests that monthly groundwater gauging be reduced to quarterly. - JAM 8/21/06 Wrote email to DDC and Roux Associates approving their recommendation to reduced gauging frequency from monthly to quarterly and continuing sampling of MW-4. - JAM 4/11/07 Reviewed the Semi-Annual Monitoring Report for period July through December 2006, submitted by Roux dated April 11, 2007. Groundwater contamination was treated with two rounds of ORC injections: the first on August 22, 2001 and the second on September 24, 2003. Quarterly gauging was conducted on August 8 and October 10 and 25, 2006. Product sheen was detected in MW-4 on October 10, and on Obtober 25, trace free-phase product (0.01 foot thickness) was

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

detected. A groundwater sample was collected from MW-4 on October 10, however, the analytical results could not be used because due to an invalid pH value. The previous sampling round conducted in May 2006 only showed total VOC concentration of 42ug/L in MW-4. Roux recommends the following tasks: attempt to locate well MW-4, which was paved over during the second quarter 2007, and continuing quarterly well gauging and semi-annual GW sampling and evaluate results for spill closure. The report is uploaded to eDocs. - JAM 11/13/07 Reviewed the Semi-Annual Monitoring Report for period January through June 2007, submitted by Roux dated October 26, 2007. On April 5, 2007, Roux gauged wells MW-01 through MW-03, MW-7 through MW-09 and MW-11. Wells MW-4 and MW-10 were paved over and are no longer accessible (well MW-4 historically had sheens and small amounts of free-product). No product was observed in any of the wells gauged. No groundwater samples were collected this period because well MW-4 was not accessed. Roux recommends replacing well MW-04, as per the work plan in appendix A, and continue quarterly gauging and semi-annual sampling. The report is uploaded to eDOcs. - JAM 8/4/09 Reviewed the Semi-annual Monitoring Report for period July 2007 through September 2008 submitted by Roux dated October 16, 2008. On October 24, 2007 and June 23, 2008, all accessible wells were gauged and no free product was observed. On June 23, 2008, wells Mw-02, MW-03, and MW-07 were sampled for VOCs and results were returned ND. Well RXMW-01 was installed on July 18, 2008, as a replacement for well MW-04, and sampled on July 28. Results showed benzene concentration of 12 ug/L and n-propylbenzene concentration of 9ug/L. An ORC sock was installed in well RXMW-01 to treat the low concentrations of VOCs. Roux recommends sampling all accessible monitoring wells during the next monitoring period and based on the results, they will petition for spill closure. The report is uploaded to eDocs. - JAM 8/4/09 Reviewed the Semi-annual Monitoring Report for period October 2008 through March 2009, submitted by Roux dated May 6, 2009. On December 26, 2008 all accessible wells were gauged and sampled, with the exception of MW-07 because it was submerged in a large puddle. No free product was observed in any well. VOCs were detected in wells MW-08 at 210ug/L, MW-11 at 10ug/L and RXMW-01 at 13ug/L. MW-08 had an exceedence for Napthalene and RXMW-01 had an exceedence for Benzene. An ORC sock was installed in well MW-08. Roux recommends continuing quarterly gauging of all accessible wells and semi-annual sampling in wells MW-08 and RXMW-01. Report is uploaded to eDocs. - JAM 11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ 6-6-2011 Reviewed Site turn-over status report and semi-annual monitoring report. Before MW-04 was paved over in 2007, VOC contaminants were detected but concentrations were decreasing. ORC injections were completed in 2003. ORC sock was in installed in RXMW-10 in 2008. An e-mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: I have reviewed a site turn-over status report and semi-annual monitoring report dated 1/24/2011. The report stated that the closed in-place and removed USTs are not registered with NYSDEC PBS. Necessary paperwork must be submitted to DEC PBS and PBS records should be reconciled. The City should submit all necessary applications without delay. A monitoring well MW-08 exhibited very high levels of naphthalene (690 ppb). In order to achieve closure, this contamination should be addressed. USTs closed in place could be a source of this contamination. AZ 4-26-2012 The following e-mail was sent to S. Frank/V.Brevdo/F. Ashkan: Dear Steve, I have reviewed a

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

Work Plan submitted for the above site and have the following comments: 1. Soil map should be included in the Work Plan. 2. Soil borings should be installed near wells MW-7, MW-9, MW-10 and MW-11, since there is no information regarding the soil contamination in these areas. 3. Tanks and piping, including the remote fill piping closed in place, should excavated, if feasible. 4. Only one boring could be installed next to monitoring well MW-8. 5. A catch basin should be investigated since it could be a source of free product in RXMW-1. Please submit modified Work Plan to DEC. Sincerely, Alex Zhitomirsky 5-1-2012 An e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, Four tanks were closed in place and three tanks were removed at this site. The tanks are not registered with DEC. LiRo is working with the facility to obtain additional tank information. Please make sure that when the tanks information is finalized, the tanks taken out of service are registered with DEC. AZ 12-26-2012 Reviewed semi-annual monitoring report dated September 4, 2012. Naphthalene was reported in the monitoring well MW-08 at a concentration of 530 ppb. Naphthalene concentrations fluctuate. Currently the cause of this fluctuation is unknown since the well is located about 85' southwest of the UST area and no naphthalene presently detected in the UST area wells. Spill #0550468 is assumed not to be the source. Additional investigation is required to determine if soil or groundwater is affecting the dissolved phase VOC contamination levels. Removal of four USTs and associated piping is scheduled for October 2012. The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed a semi-annual monitoring report dated September 5, 2012. The report stated that Naphthalene was reported in the monitoring well MW-08 at a concentration of 530 ppb and the concentrations fluctuate. Currently the cause of this fluctuation is unknown since the well is located about 85' southwest of the UST area and no Naphthalene presently detected in the UST area wells. LiRo proposed installation of two additional soil borings near MW-08 to confirm that the soil surrounding the well is the source of the Naphthalene contamination in groundwater. However, several wells in the vicinity of MW-08 have not been analyzed for Naphthalene. Prior to the installation of the new borings, all wells should be analyzed for the presence of Naphthalene. Also, LiRo did not update DEC on the progress of free product removal in wells RXMW-01 and MW--01. A progress report should be submitted to DEC without delay. A closure report and end-point sampling report should be submitted to DEC upon the scheduled removal of the seven (7) USTs. Sincerely, Alexander Zhitomirsky 1-28-2014 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a semi-annual report for this site dated July 10, 2013. Free phase product identified as hydraulic oil was detected in MW-09 in January 2013. On February 13, 2013, LiRo performed enhanced fluid recovery on monitoring well MW-09. During the excavation of the USTs in September 2012, one excavation pit water sample was collected. Analytical results reported VOC exeedances for all listed VOCs. During excavation and removal of seven USTs in September 2012, ten soil samples were collected and analyzed. Minor VOCs concentrations were reported. Since free phase product was observed at the site, semi-annual monitoring should be continued. Monitoring wells ME-02 and MW-11 could be removed from the current sampling program since no exceedances were reported during the past eight monitoring periods. Sincerely, Alexander Zhitomirsky 6-17-2014 Reviewed a semi-annual monitring report dated Dec. 16, 2013. The report stated that

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

groundwater sampling was performed on Spetember 5, 2013. Monitoring well MW-03 reported unusually TVOC concentrations, an order of magnitude increase in VOC when compared to the previous monitoring period. Two soil borings near MW-08 to a proposed depth of 20' were installed to confirm that soil is not the source of naphtalene contamination. Results will be presented in the next monitoring reports. AZ 10-29-2014 Reviewed a semi-annual monitoring report and spill closure report dated 6-10-2014. I called S. Frank and discussed the report. The following should be submitted by LiRo: 1. information regarding remote fills piping (closed in place), 2. area west of the tank field was not investigated. Information about this area should be submitted to DEC 3. Historical analytical data obtained from the destroyed wells should be submitted to DEC 4.Free phase map should be submitted to DEC. Free phase historical distribution at the site was not properly reflected in the report's figures. AZ 4-16-2015 Reviewed a spill closure request dated 1/22/2015. I contacted S. Frank and requested historical groundwater data for two previously destroyed wells. AZ 12-23-2015 Reviewed a spill closure request dated 8/3/2015. This spill was opened when free-phase product was encountered in in well MW-4 associated with the former fueling system of the 550-gallon USTs which were previously closed in place and subsequently removed in September 2012. MW-04 was destroyed and eventually replaced with the well RXMW-01. Free-phase product was absent from well RXMW-01 since March 2012. There is very little water at this well. The total VOC dissolved-phase concentrations over the five sampling events (since September 2012) has been less than 20 ppb and was not detected in April 2015. I discussed the site with S. Frank. I have reiterated questions asked in October 2014: 1. remote fills piping and remote fills are not indicated on the plan 2. it appears that the west side of the tanks was not investigated. AZ 1-4-2016 Email from S. Frank: Dear Alex, In response to the questions you asked about Coney Island Garage, please see below: 1). Where is the location of the fill port? Available historical documents do not indicate where the former fill ports were located, only the remote fill lines are shown with a terminus not specifically marked as the fill port. We will propose completing two borings along the historically mapped fill lines as shown on the attached plan. 2). There is no sampling locations west within the playground-How can we address? The current open Spill No. 0550468 relates to the former fueling system (the 550-gallon gasoline/diesel USTs) which were located to the east of the current tanks/dispenser (shown on attached site plan) and free-phase product formerly reported in well MW-04 (since replaced with RXMW-01). Monitoring wells MW-01, MW-02 and MW-03 are west of the former tanks and RWMW-01 and show no significant impacts. These wells are located between the spill source and the playground to the west. The adjacent Poseidon Playground surface cover is concrete, therefore there is no potential exposure pathway at the playground. Based on these conditions, we do not believe that additional wells or borings are required at the playground. Let me know if you have any further questions, Steve 9-28-2016 Reviewed a semi-annual monitoring report dated 3/4/2016. This spill number was created as a result of the free-phase product in well MW-04 associated with the former fueling system of the 550-gallon USTs which were previously closed-in-place. These former USTs were removed in September 2012.MW-04 was destroyed and replaced with RXMW-01. Free-phase product has been absent from well RXMW-01 since March 2012. AZ 3-27-2016 Reviewed a semi-annual monitoring report dated 8/5/2016. This spill number was created as a

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

result of the free-phase product in well MW-04 associated with the former fueling system of the 550-gallon USTs which were previously closed-in-place. These former USTs were removed in September 2012.MW-04 was destroyed and replaced with RXMW-01. In March 2016 LiRo proposed to advance two soil borings to address DEC's concerns. AZ 7-21-2017 Reviewed a semi-annual monitoring report dated 1/6/2017. This spill number was created as a result of the free-phase product in well MW-04 associated with the former fueling system of the 550-gallon USTs which were previously closed-in-place. These former USTs were removed in September 2012. MW-04 was destroyed and replaced with RXMW-01. Free phase in this well was absent since March 2012. There is very little groundwater impact at this well. The total VOC dissolved phase concentrations has been less than 20 ppb. In March 2016 LiRo proposed to advance two soil borings to address DEC's concerns regarding the former fill port and piping. In August 2016, the two soil borings were advanced to investigate the former fill port and piping. No VOC impacts were recorded. The adjacent Poseidon Playground surface cover is concrete, therefore, there is no potential exposure pathway at the playground. Based on the most recent soil and groundwater data, LiRo recommended closure of this spill. AZ 7-25-2017 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Semi- Annual Report for the above site for the period of June 2016 to November 2016. The report stated that the former USTs were removed in September 2012. MW-04 was destroyed and replaced with RXMW-01. Free phase in this well was absent since March 2012. There is very little groundwater impact at this well. The total VOC dissolved phase concentrations have been less than 20 ppb. In March 2016 LiRo proposed to advance two soil borings to address DEC's concerns regarding the former fill port and piping. In August 2016, the two soil borings were advanced to investigate the former fill port and piping. No VOC impacts were recorded. The adjacent Poseidon Playground surface cover is concrete, therefore, there is no potential exposure pathway at the playground. Based on the most recent soil and groundwater data, LiRo recommended closure of this spill. Based on this information spill # 0550468 is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long

DEC Memo: "5-21-2013 As per conversation with S. Sangesland, this spill was assigned to Alex Zhitomirsky 5-23-2013 Reviewed Underground Storage Tank Closure Report. Franklin removed seven USTs and associated piping. During sampling of the groundwater a strong odor was present and free-phase product was visible on the surface. Groundwater was encountered at 5.5 ft. bgs. Based on the evidence of petroleum leakeage, further soil and groundwater investigation was recommended. AZ The following e-mail was sent to S. Frank/F. Ashkan/v. BREVDO: Dear Steve, I have reviewed Underground Storage Tank Closure Report. Franklin removed seven USTs and associated piping. During sampling of the groundwater a strong odor was present and free-phase product was visible on the surface. Groundwater was encountered at 5.5 ft. bgs. Based on the evidence of petroleum leakage, further soil and groundwater investigation was recommended. This recommendation is approved. A Work Plan should be submitted to DEC for review. Sincerely, Alexander Zhitomirsky 11/17/13 TJD Spill #1208483 closed and cross-referenced to open spill file (1206177). 12-23-2015 Reviewed Semi-Annual Monitoring Report dated 8-3-2015. The spill was reported based on the tank closure results from a groundwater grab sample collected in September 2012. At that time, two 1,000 gallon diesel and one 1,000 gallon gasoline USTs were removed. Since 2006 no site wells have reported dissolved-phase contamination at levels reported in the tank closure groundwater grab sample. At the three monitoring wells surrounding the tank area (MW-01, MW-02 and MW-03) dissolved-phase contamination have ranged from non-detect to 268 ppb since October 2009. In April 2015 contaminant concentrations were non-detect.Based upon results of the sampling, LiRo recommended closure of spill # 1206177. DEC concurred with this request. The following letter was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed the Semi-Annual Monitoring Report dated 08/3/2015. The spill was reported based on the tank closure results from a groundwater grab sample collected in September 2012. At that time, two 1,000 gallon diesel and one 1,000 gallon gasoline USTs were removed. Since 2006 no site wells have reported dissolved-phase contamination at levels reported in the tank closure groundwater grab sample. At the three monitoring wells surrounding the tank area (MW-01, MW-02 and MW-03) dissolved-phase contamination have ranged from non-detect to 268 ppb since October 2009. During April 2015 sampling event contaminant concentrations were non-detect. Based upon results of the sampling, LiRo recommended closure of spill # 1206177. I concur with this request. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into

CONSTRUCTION SITE (Continued) **S112226819**

any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 "

Remarks: "Digging at construction site and discovered old tank with soil contaminated with Gas or Diesel fuel. Tanks are being removed."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Abidi to Koon Tang. 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 3/10/11: J.Kann - Investigative work plan submitted on 3/3/11. 5/14/15: J.Kann - IWP approved. One soil sample per boring for analysis and min 3 groundwater samples. SIR due 11/14/15. 10/14/15: J.Kann -site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. 1/5/16: J.Kann - spoke with Tyler Goodnough of Ecosystem Strategies (845-452-1658) on 12/7 regarding this spill. Originally he did not collect groundwater samples at the site, however some minor contamination was in the laboratory data. I informed him that groundwater samples were to be taken regardless of field observations as per my email to NYCHA on 5/14/15. Tyler agreed to go out and collect groundwater samples from the two locations where minor exceedences were noted. The Summary Report of Subsurface Investigation was submitted to the Department on 1/4/16 and is under review. Sent an email to the consultant to revise the tables in the report to reflect the correct sampling date. Four borings were advanced and two temporary wells installed. Minor PAH exceedences were present in the soil borings, but groundwater did not have any exceedences of TOGS 1.1.1. NFA once revised tables are received. 1/6/16: J.Kann - revised tables were received and report decdoced. Tank/primary source removal occurred in 1999 and no impact to groundwater from current investigation as mentioned above. In addition, no field screening indicated petroleum contamination (no PID readings, odors or sheen on soils). 1/26/16: J.Kann - spill closed. 1/26/16: J.Kann "
Remarks:	"contaminated soil discovered during tank pull"

DEC Memo:	"12/20/05: This spill transferred from J.Kolleeny to S.Kraszewski. 09/01/06: DEC Lead for this spill changed from unassigned to S. Kraszewski. - J. Kolleeny 02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann. 01/15/08- J.Kann - Spill consolidated with closed spill 9416977. 03/1/12: J.kann - iwp submitted 2/28/12 and edoced today. 10/14/15: J.Kann- site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. 4/27/16: J.Kann - the following email was sent to NYCHA on 1/17/16: Yelena- I am reviewing the investigative work plan (Plan) for O'Dwyer Houses prepared by Gannett Fleming. Based on review of my files and the Plan, there seems to be a discrepancy. The Plan includes an investigation around spill 9011619 (2950 West 33rd? or 35th) and not spill 9415851 (2959 West 33rd Street). Spill 9011619 for O'Dwyer Houses and the 15,000 gallon UST was already investigated and closed. Spill 9415851 still needs to be investigated (the area around (2) removed 30,000 gallon tanks). It appears they were replaced with a 20,000 gallon UST in 2000. The investigation around these USTs is not included in the Plan. The Plan will need to be revised to investigate the area around the former 30,000 gallon USTs. If you have any additional knowledge about the site that could help clarify this, please call to discuss. We may need to do a site visit to confirm the area to be investigated. Thanks -Jennifer 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 5/3/21 - Obligado - I received an email dated 4/30/21 from Ryan McPherson at NYCHA. the GC MLJ has recently encountered oil/petroleum like material during their trenching and excavation at the O Dwyer new Building 8 (OG8) location. MLJ is currently running a test and are awaiting the report. MLJ also uncovered some brick structure which they would like to suspect / claim that it could be part of an underground fuel tank. Please let me know if you want to visit the site as we are trying to get caught up to speed on this construction and their findings. I emailed Ryan

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

KAISER PARK (Continued) **S128042649**

Spiller Company: NEW YORK CITY
Spiller Address: Not reported
Spiller Company: 999
Contact Name: ASSEMBLYWOMAN MATHYLDA FRONTF
DEC Memo: "10/07/21-Hiralkumar Patel. 6:45 PM:- visited site. NYS assembly member Mathylde Frontus reported release of an unknown amount of an unknown material into the Coney Island Creek from a construction site (NRC #: 1318945). Kaiser Park fishing pier is being built on north side of the Kaiser park, immediately north of track and field area. it was low tide at the time of inspection and there was no construction activity at that time. inspected water surface around the fishing pier and along the work barge at the site. no signs (olfactory or visible) of any chemical/petroleum spill were noted in the area. during inspection, noted a hard boom partially covering newly built pier, but no boom around the work barge.
10/08/21-Hiralkumar Patel. 9:10 AM:- revisited site and met Evan Walton from Skanska. noted high tide during the inspection. this time, noted garbage floating on water but there was no signs of any chemical/petroleum spill. Evan stated that they have received many complaints claiming garbage being dumped by construction crew, but he claimed that garbage is visible during high tide and Skanska or his crew is not responsible for that. asked Evan about dredging operations. he mentioned that Skanska is working in two locations in the area: 1) north of Kaiser Park (fishing pier) and 2) approx. 1,000 ft (or more) in water north of W 37th Street. Evan mentioned that they area dredging area north of W 37th St, but there was no activity today. based on field observations, strongly recommended Evan to place hard boom around the work barge to prevent damage to water from any accidental chemical/petroleum release on the barge. Evan Walton Skanska Ph. (908) 444-6824 email: evan.walton@skanska.com
10/13/21-Hiralkumar Patel. case closed based on field observations."
Remarks: "near kaiser park fishing pier (bayview and neptune) -"

DEC Memo:	"9/13/05-Vought-Responsded to spill with DEC Ketani. School was evacuated by FDNY who is also onscene (Lt. Gleason 718-965-8345). Odors due to anaerobic degradation of organic matter in creek behind school (generation of methane and hydrogen sulfide). Odors were highest at low tide. No sheen or product visible in creek. Odors have been detected previously at low tide. At time of DEC visit school was reoccupied by students as per FDNY. DOH representative employed full time at school. Ten students went to local hospitals with nausea but FDNY paramedics indicated no serious conditions. No petroluem spill. Spill closed by Vought."
Remarks:	"SCHOOL CALLED AND SAID THAT THERE IS A VERY FOUL ODOR COMING INTO SCHOOL, THERE IS A CREEK THAT RUNS BEHIND THE SCHOOL , KIDS AND ADULTS ARE FEELING SICK: PLEASE CALL:"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY SEE ALSO SPILL NO. 0109738, WHICH WAS CLOSED TO CONSOLIDATE. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/23/05: ISRP from 1997 reveals 9 borings and 5 MWs were installed. Thin fimls of product and olfactory contamination was present. Six volatile compound detected in three of the borings. All exceeded STARS levels; TPH ranged from 28ppm to 3.0% in impacted soils. Three wells contained ten volatile compounds, and seven of them met or exceeded GW quality standards. Recommended product removal vai vaccum or pump, monitor GW for six months and removal of impacted soils when tanks are excavated. Notes from hotline report indicate contractor noticed odor and sheen. Says that test results from stockpile came back contaminated. No paperwork on report is available nor is there any site assessment. - SK 09/27/06: Spill no. 0400233 at this site (April 7, 2004), occurred during tank overfill when oil came out vent pipe and fill pipe. Spill was closed because NYCHA spill report indicated cleanup was done and contaminated soil removed. However, my field notes indicate that not all contaminated soil was dug out; PID readings after soil was excavated were up to 90 ppm and no end-point samples were collected. Site near the beach and groundwater is shallow, possibly impacted by this spill. Potential groundwater impacts must be investigated. This spill should be tracked under this spill number. - J. Kolleeny 6/11/09: JKann - Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 01/28/2010: Remediation and other associated clean-up activities linked to this spill number is now under the oversight of Moses Ajoku, all correspondence related this case should be addressed to me. (MA) 7/15/13: J.Kann - spill transferred from Moses Ajoku to J.Kann. 12/30/13: J.kann - approved IWP. SIR due 6/30/14. 01/07/14: Site included in multi-site stip 6/4/15: J.Kann - Phase II submitted on 12/16/14. REport reviewed. Some slightly elevated SVOCs detected in soils and some in groundwater. A second round of groudnwater sampling from the 4 on site wells was requested from NYCHA on 6/4/15. Results are due by 6/30/15. 8/3/15: J.Kann - Results of gw sampling submitted on 7/7/15. 10/5/15: J.Kann - Samples collected in the 2nd round of groundwater sampling were below TOGS 1.1.1. Closure was requested by NYCHA. Based on review of the Phase II and the second round of groundwater sampling, no further action is necessary. Spill closed."
Remarks:	"CONTAMINATED SOIL FROM TANK PULL FOUND AT THE BASE OF THE TANK "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	268769
DEC Memo:	"01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. One TTF in 1990 for 15K tank installed in 1973. ISRP from 1996 shows soil and GW contamination. TPH in soil range from 71ppm to 3.1% in the soil, no SVOCs in soil but 3 VOCs were detected. GW sample detected 3 VOCs from one MW above standards. Monthly monitoring and yearly GW sampling was the verdict. Only one additional round of sampling was performed, which did not detect petroleum compounds above standards. The tank was replaced in 2000 by an 8K tank. A tank assessment was supposedly done also but no results are on file. - SK 03/22/06: This spill transferred to K.Tang - SK 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 05/26/11: J.Kann - This site contained a 15,000 No. 4 fuel oil tank which was removed in 2004 and replaced with an 8,000 gallon No. 2 fuel oil tank. This spill was called in after the 15,000 gallon tank failed tightness testing in 1990. Based on review of all available information, No. 4 fuel oil was stored originally and was the oil spilled. Another spill was called in after contaminated soils were encountered during tank replacement activities in 2004 - spill no 0408649. A field investigation was performed by Athenica for NYCHA in 2010. As a part of this investigation, five soil borings were advanced and three wells installed. One soil sample collected west of the tank contained low levels of PAHs above RSCOs. Groundwater (shallow-approx 7 ft bgs) collected in this location did not contain VOCs or SVOCs. All other soil samples collected contained PAHs below RSCOs. All groundwater samples were non-detect for SVOCs and VOCs with the exception of a detection of pyrene, which was below Class GA standards. Athenica s investigation supplements two previous investigations performed at the site one in 1995 by TRC and one in 2004 by Kosuri Engineering. Based on review of historic information contained in the file, and review of Athenica s Site Assessment Report, the spills were closed. Discussed site with Joe O'connell prior to spill closure - he concurs. NFA."
Remarks:	"15K TANK,SYSTEM TEST, FAILED HORNER EZY CHECK WITH A GROSS LEAK, NO ACTION YET DETERMINED."

DER Facility ID:	245604
DEC Memo:	"01/20/06: This spill transferred from J.Kolleeny to S.Kraszewski. One active 20K tank installed in 1969 with one TTF in 1991. An ISRP performed in 1997 developed 4 borings and 3 MWs. 2 soil samples were analyzed and found no VOCs or SVOCs. TPH ranged from 41 to 137ppm. One VOC compound was detected in a GW samples equal to the AWQS. NO SVOCs detected in GW. In 2000, another 20K tank was installed at the site. No other TTFs on record for this site. Need additional information from NYCHA before closing this spill. - SK 03/22/06: This spill transferred to K.Tang - SK 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 6/5/15: J.Kann - reviewed site file. File indicates that the Department agreed to NFA after the initial ISRP in 1997 was reviewed. The spill was only to stay open until the tank was retested. It is not clear if/when the tank was retested, but it was removed and replaced in 2000. No additional spills were called in for the site related to the tank (at one point a surface spill was called in and immediately cleaned) As discussed above, no impacts to grounwater were detected in the ISRP witht the exception of t-butylbezene at 5ppb (TOGS 5ppb). Spill closed. "
