Certification

I, Frank Cherena, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules and Regulation (NYCRR) Part 375 and that this Remedial Investigation Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010 (DER-10) and Green Remediation (DER-31).

Frank Cherena, PG	January 5, 2026	
Qualified Environmental Professional	Date	Signature

1. Introduction

Roux Environmental Engineering and Geology, D.P.C. (Roux), on behalf of SPN Senior Living LLC (the "Volunteer"), has prepared this Remedial Investigation Work Plan (RIWP) for the Sea Park North property located at 2828 West 28th Street, Brooklyn, New York (Site), as shown on **Figure 1**. The Site is approximately 40,240 square feet (SF) and is identified as Block 7011, Lot 11 on the Brooklyn Tax Map (**Figure 2**). The Site will be properly investigated and remediated under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (NYS BCP) site #C224434.

Currently, the Site is occupied by an asphalt parking lot for the adjacent 15-story, 180,000 gross square foot (GSF) residential building. Historically, Block 7011, Lot 11 included the footprint of the adjacent residential building, however, the lot was split into Lot 11 (containing the parking lot and NYS BCP Site) and Lot 55 (containing the adjacent residential building) as of April 2025. The proposed redevelopment plan includes the construction of a new 8-story, 250-unit 100% affordable senior housing slab-on-grade building. The new building footprint will be approximately 22,316 SF with a new surface parking lot area and outdoor recreation space surrounding the new building. The ground floor of the building will include utility and storage rooms, as well as parking spaces for the proposed and current buildings. The proposed redevelopment does not include the construction of a subgrade cellar.

The Volunteer initiated remediation through the New York City Office of Environmental Remediation (OER) Voluntary Cleanup Program for the Hazardous Materials (Haz Mat) E-Designation at the Site. An OER RIWP was prepared in August 2024 and an OER Remedial Investigation (RI) was implemented in September 2024. Following completion of the OER RI, the Volunteer opted for entry into the NYS BCP and was accepted into the NYS BCP as a Volunteer on October 6, 2025. Further details regarding the OER RIWP and the OER RI are included in Section 2.2.

This RIWP has been prepared in accordance with NYSDEC procedures set forth in the document titled DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010 (DER-10), the New York State Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York* (October 2006, with updates including February 2024) and *Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs* (April 2023), and complies with all applicable Federal, State, and local laws, regulations, and requirements. The purpose of the RI is to identify the nature and extent of the contamination at the Site and to fill any potential data gaps in past investigations to determine the appropriate remediation for the Site. The planned RI includes an investigation of soil; to further characterize environmental media at the Site; to qualitatively assess the potential exposure of receptors to Site contaminants; and to develop any other additional data necessary to support the development of a Remedial Action Work Plan (RAWP).

2. Site Background

This section provides pertinent background information, including a description of the Site and its setting, the history of the Site, and the results of the previous environmental work conducted at the Site.

2.1 Site Description and Setting

A Site Location Map and Tax Map are included as **Figures 1 and 2**, respectively. A summary of the property information is provided below.

Property Location	
Property Name:	Sea Park North
Property Address:	2828 West 28th Street
Property Town, County, State:	Brooklyn, New York
Property Tax Identification:	Brooklyn Block 7011, Lot 11
Property Topographic Quadrangle:	United States Geological Survey - Coney Island, New York
Nearest Intersection:	Neptune Avenue and W 28th Street
Area Description:	The Site is adjoined by residential properties to the east and west, a commercial property and Kaiser Park to the north, and mixed-use residential properties to the south.

A map showing an aerial view of the existing conditions is provided as **Figure 3**.

Property Information	
Property Size:	40,240 SF
Property Use:	The Site was most recently utilized as a residential building and parking lot.
Improvements:	The majority of the Site is paved with asphalt and concrete, with limited areas of landscaping.

2.1.1 Historical Site Operations

According to the Phase I Environmental Site Assessment (ESA) prepared by Hillman Consulting dated September 2022 (Hillman Phase I ESA) and review of Sanborn Fire Insurance Maps (Sanborn Maps) and the City Directory Abstract, the Site was improved with multiple dwellings and stores from 1930 to 1968. Between 1968 and 1977, the dwellings and stores were demolished, and by 1977, the Site is depicted in its current configuration, including the adjacent residential building to the east listed as Coney Island Housing Site 7 Building 10. Prior to 1977, the former occupants listed in the City Directory Abstract were multiple residential occupants.

2.1.2 Neighboring Properties

The Site is bounded by the following properties, as summarized in the table below. Adjacent property owners are shown in **Figure 4** and land use and sensitive receptors around a 0.25 mile radius is shown in **Figure 5**.

There are no NYS BCP sites located in close proximity to the Site. No upgradient sites of environmental concern were identified in the Environmental Database Resources Radius Map included in the Hillman Phase I ESA. The majority of the surrounding and upgradient listings consisted of minor release cases which have been closed to the satisfaction of the NYSDEC with no further action.

During a previous geophysical survey at the Site, a storm drain grate was identified within the parking lot and was assumed to be connected to the public sewer system (**Appendix A**). According to the Hillman Phase I ESA, sanitary sewage generated at the adjacent buildings is discharged via a connection to the local public sewer system and stormwater runoff is discharged via roof drains into the municipal sewer system. The NYC Open Data Sewer Atlas shows that the Site is located within the Coney Island Sewershed and an interceptor sewer line is located to the north of the Site.

Adjacent Property Direction	Property Use
North	Beth Shalom Ministries Church, Neptune Avenue and Kaiser Park
South	Mixed-Use Commercial and Residential Buildings and Mermaid Avenue
East	West 28th Street, Residential Buildings and the United States Postal Service
West	Residential Buildings and West 29th Street

2.1.3 Topography/Hydrogeology/Geology

The land surface elevation is generally flat across the Site, at approximately 6 feet (ft) North American Vertical Datum of 1988 (NAVD88). A Site Survey is included in **Appendix B.** Based on prior investigations, surface soils at the Site consist of a layer of fill material ranging from 4 to 6 ft. The fill material is underlain by greyish brown poorly sorted sands with little to trace amounts of gravel to a maximum boring depth of 14 feet below land surface (ft bls). A geologic cross section is included as **Figure 6**, using soil borings advanced during the OER RI. Additionally, a Geotechnical Report was prepared by Mueser Rutledge Consulting Engineers (MRCE), dated February 23, 2024 (2024 Geotechnical Investigation). The 2024 Geotechnical Investigation identified a fill soil stratum above native material with thicknesses ranging approximately 3 to 7 ft bls, generally aligning with the observations made by Roux during the OER RI. The MRCE Geotechnical Report is included in **Appendix C**.

Bedrock was not encountered during previously completed environmental investigations at the Site and is expected to be encountered at approximately 600 ft bls.

Groundwater was encountered at approximately 6.00 to 6.90 ft bls or -0.78 ft to -0.98 ft relative to NAVD88 in permanent monitoring wells measured during the OER RI by Roux. Permanent monitoring wells were installed to depths ranging from 13 to 14 ft bls. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in **Figure 7**. Groundwater flow is from north to south.

2.1.4 Wetland Areas and Surface Water Bodies

According to the online United States Fish and Wildlife Service National Wetlands Inventory Mapper, the Site is not located in, or adjacent to, regulated wetlands. The closest surface water body is Coney Island Creek, located approximately 0.25 miles to the north. The Site appears in a special flood hazard area subject to inundation by the 1% annual chance flood (100-year flood) according to online Federal Emergency Management Act maps.

2.1.5 Fish, Wildlife and Ecological Resources

The Coney Island Creek, which is a part of the Lower New York Bay, is located approximately 0.16 miles north of the site and is identified as a NYSDEC Regulatory Tidal Wetlands Area. The Lower New York Bay has been previously assessed by the NYSDEC, as summarized in the Lower New York Bay (#1701-0004) fact sheet, as an impaired waterbody due to fish consumption that is impaired by polychlorinated biphenyl (PCBs) and dioxin and receives urban stormwater runoff pollutants from combined sewer overflows, sanitary sewer overflows, and illegal (unpermitted) sanitary discharges. No additional fish, wildlife, or ecological resources have been identified. Additionally, Gravesend Bay properties along Coney Island Creek in the early 1900s have historically been utilized for industrial and manufacturing purposes including manufacturing gas plants (MGPs), railways, and storage for coal, coke and fuel oil. Upgradient of the site, the Coney Island Creek has known MGP coal tar impacts.

There are no contaminants of ecological concern at the Site and no direct exposure pathways exist. According to Section 3.10 of DER-10, and the Fish and Wildlife Resources Impact Analysis Decision Key in DER-10 Appendix 3C, a Fish and Wildlife exposure assessment is not needed for this Site.

2.2 Results of Previous Environmental Investigations

A summary of the following environmental investigations previously conducted at the Site are included below. The Hillman Consulting Phase I ESA encompassed the entirety of former Lot 11; however the subsequent due diligence sampling was conducted in a portion of present Lot 11, which aligns with the boundaries of the Site. As described in Section 1, an OER RIWP was prepared in August 2024 and the subsequent OER RI was implemented in September 2025. A summary of the analytical data from the OER RI is included below. The previously completed Phase I ESA, Due Diligence Soil Sample Collection letter report and OER RWIP are included in **Appendix C**.

- **ASTM Phase I ESA Report**, prepared by Hillman Consulting, dated September 19, 2022;
- **Due Diligence Soil Sample Collection Letter Report**, prepared by Hillman Consulting, dated September 27, 2022;
- **Phase II Work Plan**, prepared by Roux, dated August 5, 2024; and
- **OER Remedial Investigation**, completed by Roux in September 2024.

The proposed Site redevelopment plan is considered a restricted residential use, therefore the soil data from the previous investigations have been compared to NYSDEC Restricted Residential Use Soil Cleanup Objectives (RRSCOs), Unrestricted Use SCOs (UUSCOs), and Protection of Groundwater SCOs (PGWSCOs) in order to develop an appropriate exposure assessment and remedial investigation scope.

2.2.1 Phase I Environmental Site Assessment Report, prepared by Hillman Consulting (Hillman), dated September 19, 2022

The Site was the subject of a Phase I ESA conducted by Hillman Consulting in September 2022. The Hillman Phase I ESA encompasses all of former Lot 11. No onsite recognized environmental conditions were identified during this Phase I ESA. There was one significant data gap identified during the Phase I ESA, which was the lack of closure reports associated with an existing underground storage tank (UST) documenting the presence or absence of impacts to underlying environmental media upon closure of an onsite UST in 2005. The Phase I ESA reports that the UST is located within the existing playground area

associated with the existing 15-story building, which is outside of the proposed redevelopment and outside of the boundaries of the Site.

2.2.2 Due Diligence Soil Sample Collection Letter Report, prepared by Hillman, dated September 27, 2022

Hillman Consulting completed due diligence soil sampling in a portion of present Lot 11, as summarized in a letter report dated September 27, 2022. The due diligence soil sampling included collection of three soil samples from three soil borings from 4.5 – 6.5 ft bls. Soil samples were analyzed for volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), total analyte list (TAL) metals, pesticides, and PCBs. Sample results were compared to NYSDEC UUSCOs and RRSCOs. There were no detections of any compounds exceeding either standard.

2.2.3 Phase II Work Plan, completed by Roux, August 2024

A Phase II Work Plan (OER RIWP) was developed in response to Phase I ESA findings and as per meetings between the project team and OER. The proposed OER RIWP work scope included a geophysical survey, a soil, groundwater, and soil vapor sampling summary, and preparation of an investigation Health and Safety Plan (HASP). The proposed sampling would provide general horizontal/vertical characterization across the Site for development purposes. The OER RIWP proposed the installation of ten soil borings with two soil samples collected from each boring – a surface soil sample (from the 0-2 ft bls interval) and subsurface soil sample (from the 4 to 6 ft bls interval representing the 2-ft interval below the deepest excavation depth). The OER RIWP proposed the installation of six groundwater monitoring wells (three 1-inch diameter temporary monitoring wells and three 2-inch permanent monitoring wells) and groundwater samples would be collected. The OER RIWP also proposed the installation of nine soil vapor implants set to a minimum of 2 feet above the observed water table and the collection of nine parent soil vapor samples. Additionally, the RIWP included quality assurance/quality control (QA/QC) procedures to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for the proposed investigation. In accordance with DER-10, QA/QC samples proposed included field and trip blanks, duplicates, and matrix spike/matrix spike duplicates (MS/MSDs) to be analyzed by an Environmental Laboratory Approval Program (ELAP)-certified laboratory.

2.2.4 OER Remedial Investigation, completed by Roux, September 2024

Roux performed the following scope of work per the OER RIWP at the Site over the course of September 9 through 16, 2024:

- Conducted a Site inspection to identify potential physical obstructions (i.e., structures, buildings, etc.);
- Conducted a geophysical survey to identify potential subsurface utilities (**Appendix A**);
- Installed ten soil borings across the entire project Site and collected 21 soil samples, including a duplicate, for chemical analysis from the soil borings to evaluate soil quality;
- Installed three temporary groundwater monitoring wells and three permanent groundwater monitoring wells throughout the Site to establish groundwater flow and collected seven groundwater samples, including a duplicate, for chemical analysis to evaluate groundwater quality;
- Installed nine soil vapor probes and collected ten samples, including a duplicate, for chemical analysis; and
- Collection of QA/QC samples (field blanks, trip blanks, duplicates, and MS/MSDs) in accordance with DER-10.

Roux subcontracted Coastal Environmental Solutions Inc. to complete the drilling, well installation, and soil vapor point installation during the OER RI. Soil analytical data is summarized in **Tables 1 through 6**, groundwater analytical data is summarized in **Tables 7 through 12**, and soil vapor analytical data is summarized in **Table 13**. Soil, groundwater, and soil vapor analytical data exceeding the applicable Standards, Criteria, or Guidance (SCGs) is summarized in **Figures 8 through 10**. Soil boring logs, groundwater sampling forms and soil vapor sampling forms from the OER RI are included as **Appendix D**. The soil samples collected were compared to the NYSDEC Part 375 UUSCOs, RRSCOs, and PGWSCOs. The groundwater samples collected were compared to NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs). All laboratory analytical reports are included as **Appendix E**.

Soil

A Geoprobe® 7720DT direct push rig was utilized at the Site during the OER RI and involved the advancement of a two-inch Macro-Core® into an undisturbed formation using downward pressure. The soil boring locations were chosen to gain representative soil, groundwater, and soil vapor quality information across the Site. A total of ten soil borings were installed at the locations shown on **Figure 11** as part of the OER RI. Four soil borings were installed to 6 ft bls and six soil borings were installed to 13-14 ft bls, dependent on the observed groundwater table elevation at these locations. All ten soil borings were precleared to 5 ft bls using hand tools (posthole digger, hand auger, etc.) to verify that no underground utilities/obstructions were present at the boring locations. During soil boring installation, all recovered soils were field screened for organic vapors using a photoionization detector (PID). All soils were visually inspected for evidence of impacts (odors, staining, and visible free product) and the lithology was recorded according to the Unified Soil Classification System (USCS).

Two soil samples were collected from each of the soil borings, from the 0-2 ft bls surface interval and from the 4-6 ft bls interval representing the 2-ft interval below the deepest proposed excavation depth. Twenty soil samples, and one duplicate, were collected for chemical analysis during the OER RI and were submitted to Eurofins Environment Testing Northeast, LLC (Eurofins), a NYSDOH ELAP laboratory and analyzed for NYSDEC Part 375 VOCs via United States Environmental Protection Agency (EPA) Method 8260D, NYSDEC Part 375 SVOCs + 1,4-dioxane via EPA Method 8270E, Part 375 Metals via EPA Method 6020B + mercury via EPA Method 7470A, hexavalent/trivalent chromium via EPA Method 7196A, total cyanide via EPA Method 9012B, PCBs via Method 8082A, and NYSDEC Part 375 pesticides via EPA Method 8081B. One soil sample (RXSB-5_0-2), was collected for PFAS via EPA Method 1633. Tables summarizing the soil analytical data collected as part of the OER RI are included as **Tables 1** through **6**. Soil boring locations with exceedances of the NYSDEC SCOs are shown on **Figure 8**. Results with a "J" qualifier are estimated values. The following sections describe the analytical results of samples collected during the OER RI:

VOCs in Soil

No VOCs were detected in soil exceeding any of the SCOs.

SVOCs in Soil

Analyte	NYSDEC Unrestricted Use SCOs (milligrams per kilogram [mg/kg])	Detections above NYSDEC Unrestricted Use SCOs	NYSDEC Protection of Groundwater SCO (mg/kg)	Detections above NYSDEC Protection of Groundwater SCOs	NYSDEC Restricted Residential SCOs (mg/kg)	Detections above NYSDEC Restricted Residential SCOs	Range in Concentration Above NYSDEC SCOs (mg/kg)	Soil Sample with Maximum Detection

PFAS in Soil

NYSDEC has published soil guidance values (GVs), not SCOs for two PFAS compounds: perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS). These guidance values were used to evaluate concentrations of these two compounds only. There were no detections of PFOA or PFOS exceeding any GVs.

Groundwater

Six monitoring wells were installed during the OER RI; three temporary monitoring wells and three permanent monitoring wells. The temporary monitoring wells were constructed using 1-inch diameter polyvinyl chloride (PVC) piping. The bottom 10 ft of the temporary monitoring wells were constructed of 0.002-inch slotted screen PVC. The permanent monitoring wells were constructed using 2-inch diameter PVC piping and 5 ft of 0.002-inch slotted PVC screen. The screened section of PVC was installed to straddle the water table, with a minimum of three feet of screen left above the water table, in order to capture any potential fluctuations in groundwater elevation. The monitoring wells were purged long enough to ensure that recharge was occurring and that there were viable water columns for groundwater sample collection.

A total of seven groundwater samples (six samples and one duplicate groundwater sample) were collected from the six soil boring locations that were converted to monitoring wells. Groundwater samples were submitted to Eurofins and analyzed for NYSDEC Part 375 VOCs via EPA Method 8260D, NYSDEC Part 375 SVOCs + 1,4-dioxane via EPA Method 8270E SIM, Part 375 Metals via EPA Method 6020B + mercury via EPA Method 7470A, hexavalent/trivalent chromium via EPA Method 7196A, total cyanide via EPA Method 9012B, PCBs via Method 8082A, and NYSDEC Part 375 pesticides via EPA Method 8081B. Three groundwater samples (RXSB-1, RXSB-5 and RXSB-6) were collected for PFAS via EPA Method 1633. Tables summarizing the groundwater analytical data collected as part of the OER RI are included as

Tables 7 through **12**. Groundwater sampling locations with exceedances of the NYSDEC AWQSGVs are shown on **Figure 9**. The following Site conditions were identified:

No VOCs, SVOCs, PCBs, or pesticides were detected above AWQSGVs in any sample.

Metals in Groundwater

Analyte	NYSDEC AWQSGVs (micrograms per liter [µg /L])	Detections above NYSDEC AWQSGVs	Range in Concentration Detections (µg/L)	Sample with Maximum Detection
Antimony, Dissolved	3	1	4.7	RXMW-1
Iron, Total	300	5	338 – 1,570	RXTW-3
Iron, Dissolved	300	4	407 – 2,730	RXMW-5
Magnesium, Total	35,000	2	68,600 – 68,900	RXMW-6 (Duplicate)
Magnesium, Dissolved	35,000	3	45,000 – 73,300	RXMW-6 (and its Duplicate)
Sodium, Total	20,000	5	24,400 – 323,000	RXTW-2
Sodium, Dissolved	20,000	7	28,200 – 358,000	RXMW-6

The above metals are naturally occurring in brackish groundwater occurring near saltwater bodies.

PFAS in Groundwater

Analyte	NYSDEC AWQSGVs (ug/L)	Detections above NYSDEC AWQSGVs	Range in Concentration Detections (µg/L)	Sample with Maximum Detection
Perfluorooctanesulfonic acid (PFOS)	0.0027	3	0.0153 – 0.0329	RXMW-5
Perfluorooctanoic acid (PFOA)	0.0067	3	0.0208 - 0.377	RXMW-1

Soil Vapor

Nine soil vapor probes were installed and ten soil vapor samples, including one duplicate, were collected and analyzed for VOCs via TO-15 during the OER RI. Low-level concentrations of multiple petroleum-related and chlorinated VOCs were detected in all ten soil vapor samples. A table summarizing the soil vapor analytical data collected as part of the OER RI is included as **Table 13**. Soil vapor point locations summarizing all detections are shown on **Figure 10**.

Regulatory guidance on soil vapor and indoor air quality is presented in Matrices A, B, C, D, E, and F from the NYSDOH Center for Environmental Health Bureau of Environmental Exposure Investigation Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 (Updated February 2024). The matrices are designed for evaluation of sub-slab and indoor samples and not for pre-development soil vapor sampling, therefore the Site soil vapor detections cannot be compared to the applicable matrices. Detections of the Matrix A through F compounds are summarized below. Results with a "J" qualifier are estimated values. Results with a "D" qualifier means the concentration of the analyte was quantified from diluted analysis.

Matrix A

- Carbon tetrachloride was detected in six soil vapor samples at concentrations ranging from 0.14 J micrograms per cubic meter (ug/m^3) J to 0.21 J ug/m^3, with the maximum detection at RXWV-3 and RXSV-6.
- Trichloroethene (TCE) was detected in four soil vapor samples at concentrations ranging from 0.15 J ug/m^3 to 0.41 ug/m^3, with the maximum detection in soil vapor sample RXSV-3.
- 1,1-dichloroethene (1,1-DCE) and cis-1,2-dichloroethene (cis-1,2-DCE) were not detected in any soil vapor sample collected as part of the OER RI.

Matrix B

- 1,1,1-trichloroethane (1,1,1-TCA) was detected in two soil vapor samples at concentrations ranging from 0.43 J µg/m^3 to 0.61 J µg/m^3, with the maximum detection in soil vapor sample RXSV-8.
- Tetrachloroethene (PCE) was detected in all ten soil vapor samples at concentrations ranging from 0.82 J µg/m^3 to 44 µg/m^3, with the maximum detection in soil vapor sample RXSV-5.
- Methylene chloride was not detected in any soil vapor sample collected as part of the OER RI.

Matrix C

- Vinyl chloride was not detected in any soil vapor sample collected as part of the OER RI.

Matrix D

- 1,2,4-Trimethylbenzene was detected in nine samples, including the duplicate at concentrations ranging from 0.92 J µg/m3 to 370 D µg/m3, with the maximum detection in soil vapor sample RXSV-8.
- 1,3,5-Trimethylbenzene was detected in nine samples, including the duplicate, at concentrations ranging from 0.5 J µg/m3 to 150 µg/m3, with a maximum detection in soil vapor sample RXSV-8.
- Isooctane (2,2,4-Trimethylpentane) was detected in nine samples, at concentrations ranging from 0.2 J µg/m3 to 1.2 µg/m3, with the maximum detection in soil vapor sample RXSV-8.
- Benzene was detected in all ten samples, at concentrations ranging from 0.45 J µg/m3 to 1.8 µg/m3, with the maximum detection in soil vapor sample RXSV-9.
- Cyclohexane was detected in four samples, at concentrations ranging from 0.2 J µg/m3 to 0.43 J µg/m3, with the maximum detection in soil vapor sample RXSV-9.
- Ethylbenzene was detected in eight samples, at concentrations ranging from 0.42 J µg/m3 to 4.1 µg/m3, with the maximum detection in soil vapor sample RXSV-8.
- Naphthalene was detected in one sample, RXSV-8, at a concentration of 4.2 µg/m3.
- O-Xylene was detected in nine samples, including the duplicate, at concentrations ranging from 0.42 J µg/m3 to 19 µg/m3, with the maximum detection in soil vapor sample RXSV-8.

Matrix E

- m,p-xylene was detected in nine samples, including the duplicate, at concentrations ranging from 0.76 J µg/m3 to 17 µg/m3, with the maximum detection in soil vapor sample RXSV-8.
- N-heptane was detected in all ten samples at concentrations ranging from 0.47 J µg/m3 to 49 µg/m3, with the maximum detection in soil vapor sample RXSV-9.
- N-hexane was detected in six samples at concentrations ranging from 0.67 J µg/m3 to 76 µg/m3, with the maximum detection in soil vapor sample RXSV-9.

Matrix F

- Toluene was detected in all ten samples at concentrations ranging from 0.55 J µg/m^3 to 9.8 µg/m^3 with the maximum detection in soil vapor sample RXSV-8.

It should be noted that all samples collected during the OER RI be reviewed for QA/QC and a Data Usability Summary Report (DUSR) will be prepared for the proposed RI in accordance with NYSDEC standards to be included in the final RI Report (RIR).

3. Objectives, Rationale, and Scope of Work

On behalf of the Volunteer, Roux has developed the following RI scope of work that is intended to satisfy NYS BCP requirements to delineate the nature and extent of contamination and allow for effective evaluation of multiple NYS BCP cleanup track alternatives. Data collected during the RI will determine the basis for future Remedial Actions for the Site.

To date, environmental conditions at the Site have been well characterized from comprehensive previous environmental investigations. During the previously completed investigations, a geophysical survey was completed and a total of 24 soil samples were collected from ten soil boring locations, seven groundwater samples were collected from three permanent monitoring wells and three temporary monitoring wells, and ten soil vapor samples were collected. The soil sampling results identified exceedances above SCOs primarily in the fill material layer, and elevated metals and PCB exceedances above UUSCOs, RRSCOs, and PGWSCOs detected at the RXSB-2 boring location suggest that there is a hot spot that requires further delineation. The groundwater exceedances observed above AWQSGVs were minimal and align with conditions which naturally occur in brackish groundwater near saltwater bodies. Additionally, NYSDOH soil vapor matrix compounds were detected at low levels in the soil vapor samples collected. The proposed RI aims to further delineate the elevated metals and PCBs in the area as well as fill in data gaps related to delineation of the nature and extent of fill materials and evaluating the presence of emerging contaminants (ECs; 1,4-Dioxane and PFAS). As a result of the previous investigations, the following areas of concern (AOCs) have been identified at the Site as shown on **Figure 11**:

- AOC-1: Elevated Metals and PCBs (located in the area surrounding RXSB-2); and
- AOC-2: Supplemental delineation of nature and extent of fill materials and evaluating the presence of ECs (located in the remainder of the Site boundary).

Based on the compiled data from these Site investigations, the following scope of work has been developed.

SCGs for soil at NYS BCP Sites are the numerical SCOs presented in 6 NYCRR Part 375-6.8(a) and (b). The SCOs are categorized into unrestricted and restricted use (residential, restricted-residential, commercial, or industrial) criteria, as well as criteria for protection of groundwater and ecological resources (which can also be satisfied by application of the unrestricted use criteria). The applicability of each category of SCOs is determined based upon the current and reasonably anticipated future use of the Site, as well as cleanup tracks being evaluated. Based on the anticipated future use of the Site as a 100% affordable residential building, the applicable standards are UUSCOs if a Track 1 remedy is contemplated, or RRSCOs if a Track 2 or Track 4 remedy is contemplated.

3.1 Objectives and Relationship to RAWP

Based on the analytical results from the previously completed investigations at the Site, the nature and extent of impacts to soil associated with contaminated fill material from an unknown source to fill out the Coney Island neighborhood has largely been delineated during the previous investigations, however further investigation is still warranted. The primary contaminants of concern (COCs) in soil are SVOCs, metals, and PCBs. The objectives of this RIWP are to:

- Delineate the nature and extent of elevated metals and PCB surrounding the RXSB-2 hot spot (AOC-1);

- Delineate the nature and extent of impacts of fill materials and evaluating the presence of ECs across the Site (AOC-2); and
- Complete a qualitative human health exposure assessment (EA) by evaluating the existing potential exposure pathways for Site-related contaminants both on and offsite and based on the reasonably anticipated future land use of the Site and affected offsite areas.

The data collected as part of previous investigations evaluated soil, groundwater, and soil vapor impacts onsite and at the property boundaries to provide the basis for remedial action selection and to determine the potential for offsite impacts. The soil sampling scope of work to be completed during the RI will supplement the previous investigation data. Environmental data collected will be used to qualitatively assess the potential exposure of receptors to Site contaminants and develop the information necessary to support the development of a RAWP.

3.2 Remedial Investigation Scope

The proposed scope of work was developed in an effort to fill in data gaps for fill material impacts and potential EC contamination across the Site and to delineate the elevated metals and PCB hot spot area of the Site that were not previously investigated during the previously completed investigations so that, together with the previously collected data, the entire Site will be sufficiently characterized to support the development of the Site-wide RAWP. The results of the 24 soil samples, 5 groundwater samples, and 9 soil vapor samples collected during previous investigations will be included in the RIR and will be reviewed for QA/QC and a DUSR will be prepared along with the newly collected data as part of the proposed RI.

To accomplish this, the RI will focus on the following:

- The performance of Site reconnaissance to confirm proposed sampling locations;
- The advancement of four soil borings in AOC-1 to delineate the nature and extent of metals and PCB contamination surrounding previous soil boring location RXSB-2, and the collection of four soil samples for laboratory analysis;
- The collection of one Toxicity Characteristics Leaching Procedure (TCLP) lead analysis soil sample at the soil boring located at the previously completed RXSB-2 in AOC-1 to determine the presence of lead concentration in excess of the RCRA regulatory limits;
- The collection of four surface soil samples (two at RXSB-15 in AOC-1 and two at RXSB-17 in AOC-2) in existing landscaped areas or where soil is present for the purpose of an exposure evaluation;
- The advancement of five soil borings in AOC-2, and the collection of 9 soil samples for laboratory analysis;
- The collection of three groundwater samples from existing monitoring wells in AOC-2 (RXMW-1, RXMW-5 and RXMW-6) for laboratory analysis;
- The installation of six soil vapor monitoring points in AOC-2 for sample collection and laboratory analysis;
- Collection of QA/QC samples (field blanks, trip blanks, duplicates, and MS/MSDs) and preparation of a DUSR will be prepared in accordance with DER-10;
- The collection of supplemental soil data sufficient to define the nature and extent of impacted media; and
- The performance of a qualitative exposure assessment to identify exposure pathways and evaluate contaminant fate and transport.

The overall scope of each component of the RI is discussed in the following subsections. The proposed RI Sampling Locations are shown on **Figure 11** of this RIWP and additional information including intervals to be sampled and sample rationale is provided in the Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP) (**Appendix F**). Detailed field sampling procedures are also provided in the FSP.

3.2.1 Site Reconnaissance

Roux has reviewed the previously completed environmental reports and has identified potential COCs, described in Section 3.1, which will be targeted with additional soil samples during the RI. Roux will perform a Site reconnaissance prior to the implementation of the subsurface investigation. An inspection of the existing Site conditions will be conducted to determine final sampling locations based on actual field conditions. As discussed in Section 2.2, geophysical surveys have been previously completed at the Site (**Appendix A**), therefore an additional geophysical survey is not included in the RI scope of work. The current layout of the proposed sampling locations, as shown in **Figure 11**, was developed to provide coverage across the entire Site footprint. Based on the Site reconnaissance, the layout of proposed sampling locations may change. If proposed sampling locations are adjusted more than 10 ft from their original location on **Figure 11**, Roux will notify NYSDEC prior to installation or sampling.

3.2.2 Soil Investigation

A total of 18 soil samples are proposed to be collected for laboratory analysis from the ten soil borings that will be advanced at the locations shown in **Figure 11** as part of the RI. This data is intended to supplement the 24 soil samples collected as part of previous investigations at the Site. All OER RI data and data collected during the proposed RI will be validated by a third-party data validator, who will prepare a DUSR.

In AOC-1, in order to delineate contamination surrounding the RXSB-2 hot spot, four delineation soil borings (RXSB-11 through RXSB-14) will be advanced to 2 ft bls to the north, south, east, and west approximately 5 feet away from the initial RXSB-2 location. Additionally in AOC-1, a sample will be collected from RXSB-15 to determine the presence of lead concentration in excess of the RCRA regulatory limits at the location of previous soil boring RXSB-2. Previous boring RXSB-2 yielded a total lead concentration of 9,060 mg/kg during the OER RI. One soil sample will be collected from RXSB-15 at the 0 - 2 ft bls interval and analyzed for TCLP lead. Should the samples yield hazardous levels of lead in soil, additional delineation will be completed as part of the waste characterization of the Site.

In AOC-2, five borings (RXSB-15 though RXSB-19) will be advanced to approximately 2 ft bls past the observation of native soil to investigate for potential fill material and EC contamination. During the OER-RI, soil sampling results identified exceedances above SCOs primarily in the fill material layer. Additionally, one EC soil sample was collected at RXSB-5 from the 0-2 ft bls interval, and no exceedances were observed above the GVs. To further investigate potential fill material and EC contamination, each boring location will be completed to a depth of 2 ft bls past the observation of native soil utilizing a Geoprobe®. Two soil samples will be collected from each soil boring, one from the shallow 0-2 ft bls interval and the second from the 2-ft interval with the exhibiting the highest evidence of impact such as elevated PID detections, odors, or staining, or the 2-ft interval directly above the observed water table. Soil will be collected as summarized below.

AOC Location	Boring ID To Be Sampled	Target Soil Sample Depths (ft bls)	Rationale	Analyses
AOC-1	RXSB-11 through RXSB-14	0-2 feet	Delineate the nature and extent of metals and PCB contamination surrounding previous soil boring location RXSB-2.	TAL/NYSDEC Part 375 Metals, total cyanide, hexavalent/trivalent chromium and PCBs
AOC-1	RXSB-15	0-2 inches	A surface soil sample will be collected from a depth of 0-2 in the existing landscaped areas or where soil is present; for the purpose of exposure evaluation.	Target Compound List (TCL)/NYSDEC Part 375 SVOCs, pesticides, PCBs, TAL/NYSDEC Part 375 metals, total cyanide, hexavalent/trivalent chromium
		2-6 inches	A surface soil sample will be collected from a depth of 2-6 inches in the existing landscaped areas or where soil is present; for the purpose of exposure evaluation.	TCL/NYSDEC Part 375 VOCs
		0-2 feet	Determine the presence of lead concentrations in excess of RCRA regulatory limits at RXSB-2.	TCLP lead
AOC-2	RXSB-17	0-2 inches	A surface soil sample will be collected from a depth of 0-2 in the existing landscaped areas or where soil is present; for the purpose of exposure evaluation.	Target Compound List (TCL)/NYSDEC Part 375 SVOCs, pesticides, PCBs, TAL/NYSDEC Part 375 metals, total cyanide, hexavalent/trivalent chromium
		2-6 inches	A surface soil sample will be collected from a depth of 2-6 inches in the existing landscaped areas or where soil is present; for the purpose of exposure evaluation.	TCL/NYSDEC Part 375 VOCs
		Highest impact or 2-ft above observed water table	Supplemental delineation of nature and extent of fill materials and evaluating the presence of ECs	TCL/NYSDEC Part 375 VOCs, SVOCs, pesticides, PCBs, TAL/NYSDEC Part 375 metals, total cyanide, hexavalent/trivalent chromium, ECs*
	RXSB-16 & RXSB-18 through RXSB-20	0-2 feet	Supplemental delineation of nature and extent of fill materials and evaluating the presence of ECs	TCL/NYSDEC Part 375 VOCs, SVOCs, pesticides, PCBs, TAL/NYSDEC Part 375 metals, total cyanide, hexavalent/trivalent chromium, ECs*
		Highest impact or 2-ft above observed water table	Supplemental delineation of nature and extent of fill materials and evaluating the presence of ECs	TCL/NYSDEC Part 375 VOCs, SVOCs, pesticides, PCBs, TAL/NYSDEC Part 375 metals, total cyanide, hexavalent/trivalent chromium, ECs*

*As required by NYSDEC, soil samples will be analyzed for the ECs 1,4-Dioxane and PFAS, which include the 40 compounds listed in accordance with the Sampling, Analysis, and Assessment of PFAS under NYSDEC's Part 375 Remedial Programs guidance document (NYSDEC April 2023 PFAS Guidance).

Soil will be collected from the sample intervals and for the parameters summarized in the table above. During advancement of borings, the soil will be inspected for evidence of contamination (visual and olfactory) and field screened continuously for organic vapors using a PID with a 10.6 eV lamp. Soil lithology will be recorded according to the USCS.

It is estimated that 18 soil samples will be collected for laboratory analysis. One additional blind duplicate soil sample and MS/MSD soil sample, and one field blank per sampling day, will be collected for QA/QC purposes. Additional details regarding sampling methods are provided in the FSP/QAPP (**Appendix F**).

Soil cuttings will be returned to boring locations to the extent possible to reduce the quantity of drummed waste. Soil generated as part of the soil investigation, if any, will be drummed, labeled, sampled, and stored onsite pending disposal.

3.2.3 Groundwater Investigation

To characterize onsite groundwater flow and groundwater quality, three existing monitoring wells (RXMW-1, RXMW-5, and RXMW-6) will be sampled. The proposed RI monitoring well sampling locations are provided in **Figure 11**. The monitoring wells will be sampled and analyzed to delineate groundwater contamination, to provide a better understanding of onsite groundwater flow, and to fill groundwater quality data gaps from prior groundwater investigations.

A comprehensive water-level gauging event will occur prior to groundwater sampling to characterize groundwater flow onsite. Groundwater in each well will be measured using an electronic oil-water interface probe and a groundwater contour map will be developed using the gauging and survey data. Field parameters (e.g., pH, dissolved oxygen, oxidation-reduction potential, turbidity, etc.) will be collected using a water quality meter during monitoring well purging, prior to sampling. Field parameters will be recorded on monitoring well sampling data forms. Following purging, a groundwater sample will be collected from monitoring well.

Three groundwater samples will be collected for laboratory analysis. Additionally, one blind duplicate groundwater sample, MS groundwater sample, MSD groundwater sample, field blank, and trip blank will be collected for QA/QC purposes. Additional details regarding sampling methods are provided in the FSP/QAPP (**Appendix F**). All groundwater samples will be analyzed for the following list of parameters:

- NYSDEC Part 375/TCL VOCs via EPA method 8260D;
- NYSDEC Part 375/TCL SVOCs via EPA method 8270E;
- NYSDEC Part 375/TCL pesticides via EPA method 8081B;
- PCBs via EPA method 8082A;
- NYSDEC Part 375/TAL total and dissolved metals (including hexavalent chromium, trivalent chromium, and total cyanide) via EPA method 6020B, 7470A, and 9012B; and
- ECs* via EPA method 1633A.

  * As required by NYSDEC, groundwater samples will also be analyzed for the ECs 1,4-Dioxane and PFAS, which include the 41 compounds listed in the NYSDEC April 2023 Guidance.

Groundwater samples will be field filtered for metals and both total and dissolved results will be reported.

Water generated as part of the purging effort prior to sample collection will be drummed, labeled, sampled, and stored onsite pending disposal.

3.2.4 Soil Vapor Investigation

Six soil vapor monitoring points will be installed 2-ft above the observed water table. The soil vapor sample locations will be installed using a 6-inch long, stainless steel sample screen attached to Teflon-lined polyethylene sample tubing. Surrounding the screen and sample tubing, #2 Morie sand will be added to 6-inches above the top of the screen. A one-foot thick layer of non-VOC containing and non-shrinking bentonite product will be added to the top of the sand and left to hydrate.

The soil vapor samples will be collected for laboratory analysis of VOCs using EPA Method TO-15 including naphthalene. One blind duplicate soil vapor sample and one ambient air sample will also be collected for QA/QC purposes. The soil vapor samples will be collected using pre-cleaned 6-liter summa canisters with flow regulators that have been batch certified and calibrated to collect samples over an 8-hour period. A tracer gas will be employed prior to the collection of the soil vapor sample to ensure the integrity of the vapor probe seal and to verify that the vapor samples do not become inadvertently diluted with ambient air. Field parameters will be recorded on vapor sampling data forms and included in the RIR. Additional details regarding soil vapor point construction is provided in the FSP/QAPP (**Appendix F**).

3.2.5 Investigation Laboratory Analysis

All samples will be collected in appropriate laboratory-provided containers and transported to a NYSDOH ELAP-certified laboratory, in ice-filled coolers under chain of custody procedures. Additional details regarding laboratory analyses are included in the FSP/QAPP (**Appendix F**). All analytical data for the RI will be received within a standard 5-day turn-around-time.

All RI data will be produced in accordance with NYSDEC Analytical Services Protocols (ASP) Category B deliverables and will be reviewed and validated by a third-party data validator, who will prepare a DUSR before being incorporated into the RIR for the Site. All data will be submitted to NYSDEC in electronic format, in accordance with DER-10, Section 1.15.

3.2.6 Investigation Derived Waste

Purge water and visibly impacted drill cuttings generated as part of the investigation will be drummed, labeled, sampled, and stored onsite pending laboratory results. Disposal will be coordinated following the receipt of laboratory results. Investigative derived waste that is determined to be hazardous waste will be disposed of offsite at one or more selected disposal facilities within 90 days of generation. If RI analytical data is insufficient to gain disposal facility acceptance, additional waste characterization samples will be collected. Additional sampling and analyses may be required based on the selected disposal facility. Waste characterization samples will be submitted to by a NYSDOH ELAP-approved laboratory for analysis in accordance with the FSP/QAPP provided in Appendix E. Management of investigation-derived waste (IDW) will comply with NYSDEC DER-10 3.3(e) and NYSDEC DER-31 Green Remediation (DER-31) (Section 3.11).

3.2.7 Community Air Monitoring Program

Roux will implement the Community Air Monitoring Program (CAMP) during any intrusive subsurface activities to conduct monitoring and protection for potential offsite receptors. The CAMP scope of work will include the use of one downwind air monitoring station and one upwind air monitoring station, each equipped with one PID and one particulate meter. Upwind concentrations will be measured at the start of each workday and periodically throughout the day to establish background concentrations. Daily reporting of any

exceedances will be provided to the NYSDEC and NYSDOH. CAMP data results will be provided with the daily field activity reports and also in the final RIR along with locations of monitoring stations, monitoring equipment, procedures, and contaminant action levels. The NYSDOH Generic CAMP and Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures is included as **Appendix G**.

3.2.8 Qualitative Exposure Assessment

An EA will be performed following the collection of all RI data. The EA will be performed in accordance with Section 3.3(c)4 of DER-10 and the NYSDOH guidance for performing a qualitative EA (NYSDEC DER-10; Appendix 3 B). The results of the qualitative EA will be provided in the final RIR.

3.2.9 Green and Sustainable Remediation

The NYSDEC DER-31 Green and Sustainable Remediation Initiative requires that green remediation concepts and techniques be considered during all stages of the remedial program, including investigation, with the goal of improving the sustainability of the cleanup and summarizing the net environmental benefit of any implemented green technology. The following measures will be implemented during the RI:

- Select service providers, product suppliers and analytical laboratories from the local area and consolidate the service and delivery schedules.
- Identify the nearest facility to be used for disposing of hazardous waste.
- Minimize the need for disposable single-use items such as plastic bags.
- Reduce travel through increased teleconferencing.
- If applicable, integrate sources of onsite renewable energy to power hand-held devices, portable equipment, and stationery monitoring systems.
- Utilize technologies for collecting real-time data which are non-invasive or minimally invasive (i.e., PIDs for screening, SUMMA cannisters for soil vapor sampling, etc.).
- Re-use materials whenever possible.
- Minimize equipment and truck idling to reduce discharges of pollutants and GHGs to the atmosphere.
- Limit use of generators, drilling equipment, and vehicles to reduce emissions to the atmosphere.
- Minimize IDW generated by reusing soil/fill that does not exhibit visual, olfactory, or PID evidence of contamination to backfill boreholes after sampling.
- Minimize truck travel for disposal of IDW by selecting local disposal facilities for IDW.
- Request that the environmental drillers use clean diesel equipment to reduce emissions to the atmosphere.
- Utilize public transportation to access the site during implementation of the RI, to the extent practicable.

3.3 Quality Assurance/ Quality Control Protocols

The goal of the QA/QC aspect of the RI is to ensure that suitable and verifiable data results from sampling and analysis are obtained. To accomplish this, an FSP/QAPP has been prepared and is provided as **Appendix F**. During the OER RI completed by Roux, QA/QC samples were collected in accordance with DER-10. Both the previous OER RI data and data collected during the proposed RI will be reviewed for

QA/QC and a DUSR will be prepared in accordance with NYSDEC standards. The DUSR will be included in the RIR.

3.4 Health and Safety

A HASP has been prepared for the Site and is provided in **Appendix H**.

4. Reporting and Project Schedule

Roux and the Volunteer will commence implementation of this RIWP following the receipt of NYSDEC's written approval. Roux will notify NYSDEC no less than seven days in advance of implementation of the RIWP, unless NYSDEC agrees to a shorter period in writing. Roux will also provide NYSDEC notice as to any change in the approved project schedule.

Daily Reports

Daily report submittals to be provided to the NYSDEC and NYSDOH during intrusive activities during the RI field implementation will include the following.

- A summary of onsite work completed, and summary tables of the CAMP monitoring data will be submitted to NYSDEC on a daily basis;
- NYSDEC and NYSDOH will be notified immediately (within 24 hours) of any CAMP exceedances and corrective actions taken;
- Discovery of any previously unknown contaminated media during RI activities will be promptly communicated to NYSDEC's project manager; and
- A Site map will be provided to identify locations discussed in progress reports provided to NYSDEC.

Monthly Reports

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers. Monthly reports will be submitted within one week following the end of the month of the reporting period and will include:

- Activities relative to the Site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (i.e., tons of material exported and imported, etc.);
- Description of approved activity modifications, including changes of work scope and/or schedule;
- Sampling results received following internal data review and validation, as applicable; and
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays.

RIR and RAWP

Following the completion of the RI, a RIR and RAWP will be prepared to summarize the results and findings of the RI. The RIR will include all data developed during the RI and will meet the technical requirements of DER-10. The RAWP will summarize the results of the RI and outline the recommended remedial actions along with Site management procedures based on the findings of the RI. The RIR will summarize the actions taken to implement the RIWP, include a detailed synopsis of all RIWP work performed, figures depicting the layout of the Site with sampling locations, figures presenting the analytical results and analyses performed, soil boring logs, monitoring well installation logs, tables presenting all laboratory data results, soil vapor screening level comparison, laboratory data packages, a DUSR, and sampling field forms. The RAWP will provide conclusions and recommendations for the Site, will address soil management and disposal procedures, and will address installation of any necessary remedial technologies that will help mitigate any potential exposure to the community, workers, or future inhabitants of the building structure.

Estimated Project Schedule	
RIWP Approval	January 2026
RI Implementation	January 2026
Submission of RIR	February 2026
Submission of RAWP	March 2026
Begin Implementation of the RAWP	June 2026

4.1 Organization/Personnel

The project team is comprised of the Owner/Volunteer (SPN Senior Living LLC), contractors, and consultants specializing in one or more critical aspects of the investigation. It is understood by the project team that close coordination and proper sequencing of all activities occurring on the Site will be crucial to the success of the investigation. The project team and associated responsibilities are as follows.

Company	Project Role	Name (title)	Contact Info (email or phone)
SPN Senior Living LLC	Volunteer	Alexander Marte (Senior Development Manager)	AMarte@GilbaneCo.com (347) 647-0415
Trinity Environmental Corp.	Drilling Subcontractor	Joseph Sakellis	TrinityEnvironmental@gmail.com (973) 572-7802

Notes Utilized Throughout Tables	
Soil Tables	
J -	Estimated value
U -	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit
P -	Concentration difference between the primary and confirmation column >40%. The lower result is reported
T -	Indicates that a quality control parameter has exceeded laboratory limits
ft bls -	Feet below land surface
FD -	Duplicate sample
NA -	Compound was not analyzed for by laboratory
mg/kg -	Milligrams per kilogram
NYSDEC -	New York State Department of Environmental Conservation
SCO -	Soil Cleanup Objectives
--	No SCO available
Bold data indicates that parameter was detected above the NYSDEC Part 375 Unrestricted Use SCO	
Shaded data indicates that parameter was detected above the NYSDEC Part 375 Restricted Residential SCO	
Red data indicates that parameter was detected above the NYSDEC Part 375 Protection of Groundwater SCO	
Groundwater Tables	
J -	Estimated Value
U -	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit
B -	The analyte was found in an associated blank as well as in the sample
T -	Indicates that a quality control parameter has exceeded laboratory limits
FD -	Duplicate
NA -	Compound was not analyzed for by laboratory
µg/L -	Micrograms per liter
NYSDEC -	New York State Department of Environmental Conservation
AWQSGVs -	Ambient Water-Quality Standards and Guidance Values
--	No NYSDEC AWQSGV available
Bold data indicates that parameter was detected above the NYSDEC AWQSGVs	
Soil Vapor/Ambient Air	
J -	Estimated value
U -	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit
D -	Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte
FD -	Duplicate sample
ug/m3 -	Micrograms per cubic meter
Bold data indicates that parameter was detected

Benzyl Chloride	UG/M3	1 U	1 U
Bromodichloromethane	UG/M3	1.3 U	1.3 U
Bromoform	UG/M3	2.1 U	2.1 U
Bromomethane	UG/M3	0.78 U	0.78 U
Butane	UG/M3	**1.5**	**59**
Carbon Disulfide	UG/M3	**3.1**	**10**
Carbon Tetrachloride	UG/M3	**0.14 J**	**0.14 J**
Chlorobenzene	UG/M3	0.92 U	0.92 U
Chlorodifluoromethane	UG/M3	**0.86 J**	**0.54 J**
Chloroethane	UG/M3	1.3 U	1.3 U
Chloroform	UG/M3	**0.94 J**	**0.65 J**

Table 13. Summary of Volatile Organic Compounds in Soil Vapor not Associated with Soil Vapor Intrusion, 2828 West 28th Street, Brooklyn, New York

Sample Designation:		RXSV-8	RXSV-9
Sample Date:		09/13/2024	09/13/2024
Normal Sample or Field Duplicate:		N	N
Parameter	Units		
Chloromethane	UG/M3	**0.34 J**	**0.48 J**
Cis-1,2-Dichloroethylene	UG/M3	0.2 U	0.2 U
Cis-1,3-Dichloropropene	UG/M3	0.91 U	0.91 U
Cyclohexane	UG/M3	**0.28 J**	**0.43 J**
Cymene	UG/M3	**2**	1.1 U
Dibromochloromethane	UG/M3	1.7 U	1.7 U
Dichlorodifluoromethane	UG/M3	**1.9 J**	**2.2 J**
Ethylbenzene	UG/M3	**4.1**	**3.7**
Hexachlorobutadiene	UG/M3	2.1 U	2.1 U
Isopropanol	UG/M3	**4.6 J**	12 U
Isopropylbenzene (Cumene)	UG/M3	**13**	0.98 U
m,p-Xylene	UG/M3	**17**	**7**
Methyl Ethyl Ketone (2-Butanone)	UG/M3	**12**	**14**
Methyl Isobutyl Ketone (4-Methyl-2-Pentanone)	UG/M3	2 U	**1.1 J**
Methyl Methacrylate	UG/M3	2 U	2 U
Methylene Chloride	UG/M3	1.7 U	1.7 U
Naphthalene	UG/M3	**4.2**	2 U
N-Butylbenzene	UG/M3	**3.1**	1.1 U
N-Heptane	UG/M3	**3.3**	**49**
N-Hexane	UG/M3	**0.85 J**	**76**
N-Propylbenzene	UG/M3	**68**	**0.44 J**
O-Xylene (1,2-Dimethylbenzene)	UG/M3	**19**	**4.5**
Sec-Butylbenzene	UG/M3	**2.1**	1.1 U
Styrene	UG/M3	**2.2**	**1.8**
T-Butylbenzene	UG/M3	1.1 U	1.1 U
Tert-Butyl Alcohol	UG/M3	**29**	**29**
Tert-Butyl Methyl Ether	UG/M3	0.72 U	0.72 U
Tetrachloroethylene (PCE)	UG/M3	**4.3**	**19**
Tetrahydrofuran	UG/M3	15 U	15 U
Toluene	UG/M3	**9.8**	**7.8**
Trans-1,2-Dichloroethene	UG/M3	0.79 U	0.79 U
Trans-1,3-Dichloropropene	UG/M3	0.91 U	0.91 U
Trichloroethylene (TCE)	UG/M3	0.2 U	**0.4**
Trichlorofluoromethane	UG/M3	**1.4**	**7.5**
Vinyl Bromide	UG/M3	0.87 U	0.87 U
Vinyl Chloride	UG/M3	0.2 U	0.2 U

OER Remedial Investigation Geophysical Survey

Coastal Environmental Solutions, Inc.

GEOPHYSICAL INVESTIGATION REPORT

2828 W28th Street, Brooklyn, NY
Date of Investigation: 9/9/2024

Prepared for:

Roux Environmental Engineering and Geology, D.P.C.
209 Shafter Street
Islandia, NY 11749

Prepared By:

Dennis Berthold
Director of Geophysical Operations
Coastal Environmental Solutions, Inc.
PO Box 342
Medford, New York 11763

1.0 INTRODUCTION

On 9/9/2024, Coastal Environmental Solutions, Inc (Coastal) personnel performed a limited geophysical investigation at 2828 W28th Street, Brooklyn, NY. The areas of interest included three sections of the property indicated as a parking lot, recreational park, and greenspace as directed by the client. Surface conditions consisted of asphalt and soil/grass.

2.0 SCOPE OF WORK

1. Locate and mark evidence of former or current Underground Storage Tanks (USTs), underground utilities, and other subsurface features for the purposes of clearing proposed soil borings.

3.0 EQUIPMENT

ImpulseRadar PinPointR Ultra-Wide Band (UWB) Penetrating Radar System

Ground Penetrating RADAR (GPR) is a non-destructive geophysical method that produces a continuous cross-sectional profile of subsurface features in real time. GPR operates by transmitting both high and low frequency electromagnetic wave pulses down into the ground through a transmitter in the antenna. The transmitted electromagnetic waves reflect off materials with contrasting dielectric properties from surrounding medium such as underground storage tanks, utilities, distinct contacts between different earth materials, and other various subsurface objects. The antenna receiver collects the reflected electromagnetic waves which are then interpreted by the operator.

The ImpulseRadar PinPointR UWB GPR utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame which rolls over the surface. The total depth of penetration achieved with the antenna can be up to 10 feet but widely varies based on site-specific subsurface conditions. Conductive materials in the soil attenuate the GPR signal causing a decrease in effective depth of penetration and clarity.

Vivax-Metrotech vLoc3-Pro Receiver/Transmitter

The vLoc3-Pro Receiver is a hand-operated antenna capable of detecting electromagnetic (EM) fields emitted from a source. The EM antenna can detect pipes and cables in the ground at depths of up to 20 feet using active or passive tracing techniques. Passive tracing is the act of locating an underground utility through the detection of electrical or radio signals travelling along conductive utilities. Active tracing is used in conjunction with the Transmitter that is directly connected to the target utility or to a conductive rodder within a non-conductive line. A signal is sent through the utility at a specific frequency that can be detected by the Receiver. The detectability of a target utility depends on many factors including access to the target utility, grounding, depth of utility, conductivity, and other site-specific factors.

TW-6 Pipe and Cable Locator

The TW-6 Pipe and Cable locator is a handheld magnetometer which utilizes a transmitter-receiver pair attached to opposite ends of a handle and carried approximately 1-2ft from the surface. The magnetometer induces an electromagnetic (EM) field into the ground that is generated by the

transmitter. Once the induced EM field passes through a buried metallic object, it generates a secondary EM field which is detected by the receiver, generating an audible tone. Based on the calibration of the magnetometer, the audible tone reflects the strongest response as the highest pitched sound, trailing off on all sides of the peak. This piece of technology can be used to detect subsurface features such as metallic USTs, large diameter conductive pipes, and buried manholes, especially in areas in which traditional GPR methods cannot be utilized, such as overgrown or uneven surfaces.

4.0 METHODOLOGY

1. A subsurface investigation was performed in close proximity to the client proposed soil boring locations. Active and passive detection methods were utilized with the VLoc3-Pro receiver/transmitter. Coastal personnel directly connected to all accessible and traceable pipes, conduits, valve covers, and any other surface feature throughout the site. A passive scan was performed throughout the site to detect any potential underground utilities that could not be located with active scan.
2. (If applicable) The TW-6 was utilized to sweep accessible areas around suspected UST locations in 3-to-5-foot spacings for readings that may represent a buried metallic anomaly. Upon detection of a reading, the approximate size and shape of the anomalous area was marked on the surface to be investigated further with GPR.
3. GPR was utilized to further characterize the approximate dimensions, depth, and shape of the anomalies located with the TW-6. The remainder of the areas around the suspected locations were scanned with GPR in 3-to-5-foot spacing to locate any anomalous features not previously detected such as non-conductive piping and former excavations.
4. All findings were marked on the surface utilizing the American Public Works Association (APWA) recommended color code, seen below:

WHITE	Proposed Excavation/Limits of Investigation
PINK	Temporary Survey Markings (Approximate UST Locations, Soil Boring Locations)
RED	Electric Power Lines, Cables, Conduit and Lighting Cables
YELLOW	Gas, Oil, Steam, Petroleum or Gaseous Materials
ORANGE	Communication, Alarm or Signal Lines, Cables or Conduit
BLUE	Water (Domestic and Fire Lines)
PURPLE	Irrigation, Slurry Lines, Reclaimed Water
GREEN	Sewers and Drain Lines

5.0 SUMMARY OF FINDINGS

Geophysical Investigation

Coastal personnel conducted a limited geophysical investigation on all investigatory areas as indicated by the client. Coastal visually inspected the site to locate evidence of former and current utilities servicing the sites. During the initial site walk of the property, a number of surface features related to utilities were located including site lighting poles, partially visible electrical conduits, and storm drain grates.

Within the asphalt parking lot, a storm drain grate and multiple electrical lines were located in the shallow subsurface which were determined to be connected to other lights across the parcels. The storm drain was inaccessible for direct investigation due to vehicle traffic but was assumed to be connected to the three storm drains and their associated lines located in the adjacent recreational park.

The recreational park contained three storm drains all interconnected with shallow pipes. The lines appeared to only connect to each other and not connect to a discharge point, though the solitary drain in the parking lot likely had contained a discharge line to the street.

No subsurface features were detected within the park at the corner lot of the sites.

Limitations

The effective depth of GPR penetration was limited to 3 feet below the soil and asphalt grade surface. The limiting factor was due to soil conductivity attenuating the GPR signal. The GPR and TW-6 was unable to be utilized within close proximity to parked vehicles and exterior walls, as well as over reinforced concrete. The reduced GPR effective depth was likely due to shallow saturated soils attenuating the signal.

Disclaimer

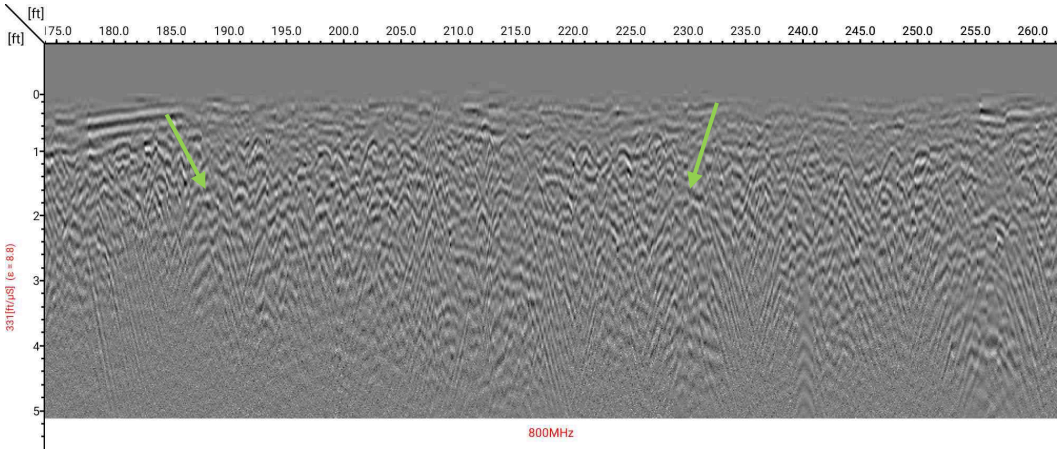
The subsurface investigation was performed by Coastal after considering the limits of the scope of work and the time constraint for the investigation. The investigation that is described in this report was undertaken in accordance with current accepted standards and practices of the geophysical survey industry. The results and interpretations that are presented are based on professional judgment and are as accurate as can reasonably be achieved. However, no geophysical equipment can accurately depict all subsurface features due to the geology and environmental conditions of the subsurface. Any intrusive work in proximity to identified anomalies should be carefully considered and cross-referenced with all available site-specific documentation. Coastal is not liable for the use, interpretation, or application of the data and information in this report.

PHOTOS & GPR SCREENSHOTS

Photos 1 & 2 – Photos of the asphalt parking lot containing three of the proposed soil borings. A shallow electrical line was detected leading from the light pole towards the main residential building.

Photos 3 & 4 – View of some of the proposed soil borings as well as the storm drains and lines within the asphalt recreational park.

Photo 5 - View of the electrical lines and the storm drain line within the asphalt recreational park area, as well as one of the proposed boring locations.



GPR Data Screenshot 1 – GPR screenshot showing one of the shallow storm drain lines detected in the recreational park.

Photo 6 – Proposed boring location in the grass park at the corner of the properties.

Photo 7 – View of the natural gas main line located in the sidewalk along West 28th Street, marked by 811.

Brooklyn, New York 11224
Hillmann Project No: Z34991.3

Dear Blaise Rastello:

Hillmann Consulting LLC has completed a Phase I Environmental Site Assessment of the above referenced property. This assessment was performed in conformance with the scope and limitations of ASTM Practice E 1527-21, which is the latest version of the E1527 standard published by the ASTM.

We appreciate the opportunity to provide environmental due diligence services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact our office at 908-688-7800.

Sincerely,

Hillmann Consulting, LLC

Chris Hirschmann

List of Abbreviations/Acronyms

Hillmann may use the following abbreviations and acronyms for common terminology described in our report. Not all abbreviations or acronyms may be applicable to this report:

ACM	– Asbestos Containing Material
AOC	– Area of Concern
AST	– Aboveground Storage Tank
ASTM	– American Society for Testing Materials
BER	– Business Environmental Risk
CEA	– Classification Exception Area
CERCLA	– Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	– Comprehensive Environmental Response Compensation and Liability Information System
CESQG	– Conditionally Exempt Small Quantity Generator
COC	– Chemicals of Concern
CORRACTS	– Corrective Action Sites
CREC	– Controlled Recognized Environmental Condition
DEC	– Department of Environmental Conservation
DEP	– Department of Environmental Protection
DHS	– Department of Health Services
DNPL	– Delisted National Priority List
DOB	– Department of Buildings
DOH	– Department of Health
DOT	– Department of Transportation
DTSC	– Department of Toxic Substances Control
ENG	– Engineering
EPA	– Environmental Protection Agency
ERNS	– Emergency Response Notification System
FD	– Fire Department
FOI/FOIA/FOIL	– Freedom of Information / Freedom of Information Act / Freedom of Information Letter
HVAC	– Heating Ventilation & Air Conditioning
HREC	– Historic Recognized Environmental Condition
IAQ	– Indoor Air Quality
ISRA	– Industrial Site Recovery Act
LBP	– Lead-Based Paint
LCP	– Lead-Containing Paint
LQG	– Large Quantity Generator
LTANK	– Leaking Storage Tank
LUST	– Leaking Underground Storage Tank
SDS/MSDS	– Safety Data Sheet / Material Safety Data Sheet
NA	– Not Applicable
NFA	– No Further Action
NFRAP	– No Further Remedial Actions Planned
NPDES	– National Pollutant Discharge Elimination System
NPL	– National Priority List
OER	– Office of Environmental Remediation
OPRA	– Open Public Records Act
PAH	– Polycyclic Aromatic Hydrocarbon
PCE	– Perchloroethylene
RAO	– Response Action Outcome
RCRA	– Resource Conservation and Recovery Act
RCRIS	– Resource Conservation and Recovery Information System
REC	– Recognized Environmental Condition
RWQCB	– Regional Water Quality Control Board
SCAQMD	– South Coast Air Quality Management District
SDG	– Significant Data Gap
SEMS	– Superfund Enterprise Management System
SRP	– Site Remediation Program
SQG	– Small Quantity Generator
SVOC	– Semi-Volatile Organic Compound
TCE	– Trichloroethylene
TSDF	– Treatment Storage and/or Disposal Facility
UST	– Underground Storage Tank
VEC	– Vapor Encroachment Condition
VOC	– Volatile Organic Compound

1.0 FINDINGS, OPINIONS, AND CONCLUSIONS

Hillmann Consulting, LLC (Hillmann) performed a Phase I Environmental Site Assessment (ESA) of 2828 West 28th Street, Brooklyn, New York (the Subject Property). The assessment has been conducted in accordance with our contracted scope of work and the ASTM Standard Practice E 1527-21 for Phase I Environmental Site Assessments and All Appropriate Inquiries (AAI) Final Rule 40 CFR Part 312. This section contains a summary of findings, opinions and conclusions made by this assessment. However, this section, alone, does not constitute the complete assessment. The report must be read in its entirety.

1.1 Summary of Project Details

Primary Street Address:		2828 West 28th Street			
City:	Brooklyn	**County:**	Kings	**State:**	New York
Tax ID/Parcel Number:		Block 7011 Lot 11			
Property Owner:		Park, Sea Housing			
Zoning Designation:		R6 (Residential) with no commercial overlay			
Approx. Property Area:		2.03-acres			
Buildings:		One (1) 15-story apartment building			
Approx. Building Size:		102,000-ft²			
Approx. Year Built:		1972			
Commercial Occupants:		None			
Current Use:		Residential apartments			
Inspected By:		Mr. Ryan Powell			
Site Contact/Company:		Ilso Kim / Property Manager with Progressive Management			
Site Escort/Company:		Ilso Kim / Property Manager with Progressive Management			
Inspection Date:		August 30, 2022			
Weather Conditions:		Sunny, 83 degrees F

1.3 Findings, Opinions and Conclusions

Recognized Environmental Conditions & Significant Data Gaps

Hillmann has performed a Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527-21 of the Subject Property as described in Section 2.2 of this report. Any additions to, exceptions to, or deletions from this practice are also described in Section 2 of this report. This assessment has revealed the following *recognized environmental conditions* (RECs), *controlled recognized environmental conditions* (CRECs) and/or *significant data gaps* (SDGs) in connection with the Subject Property:

RECOGNIZED ENVIRONMENTAL CONDITIONS
No RECs were identified.
CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CRECs)
No CRECs were identified.
SIGNIFICANT DATA GAPS (SDGs)
The Property address – 2828 West 28th Street is listed on the UST database. The UST listing is for Petroleum Bulk Storage (PBS) registration 2-600253 set to expire July 23, 2024. The UST Tank ID is listed as 41680, for a 10,000-gallon UST containing #2-fuel oil for onsite consumption. The UST status is listed as having been installed in 1973 and closed-in-place in 2005. Hillmann recommends obtaining UST closure reports documenting whether presence/absence of impact to underlying environmental media was verified upon UST closure in 2005.

Historical Recognized Environmental Conditions (HRECs)

This assessment has revealed the following *historical recognized environmental conditions* (HRECs) in connection with the Subject Property:

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS	
	No HRECs were identified

De Minimis and Other Environmental Conditions

The following *de minimis* and other environmental conditions were identified:

OTHER ENVIRONMENTAL CONDITIONS / DE MINIMIS CONDITIONS
Multiple listing within the Property vicinity are listed on the MANIFEST and RCRA-NonGen databases associated with Con Edison infrastructure work which generated regulated waste for offsite transport/disposal. The listings are not indicative of a release and not considered a REC.
The Property address / tax block and lot is listed on the E-Designation database for a) exhaust stack location limitations, b) hazardous materials Phase I and II Testing Protocols and c) window wall attenuation & alternate ventilation. In the event of a change in land use or redevelopment involving a zoning action, the aforementioned environmental requirements will be required, per New York City Office of Environmental Remediation requirements, prior to issuance of permits and/or certificates of occupancy.

Environmental Professional Statement

I/We declare that, to the best of my professional knowledge and belief, I/we meet the definition of *Environmental professional* as defined in § 312.10 of 40 C.F.R. 312. I/we have the specific qualifications based on education, training and experience to assess a *property* of the nature, history and setting of the *subject property*. I/We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Etan Y. Hindin
Environmental Professional

Chris Hirschmann
Environmental Professional

1.4 Business Environmental Risks / Non-ASTM Scope

Hillmann has performed a limited review of the following potential Business Environmental Risks (BER), also known as "Non-ASTM Scope concerns", in accordance with the contracted scope of work scope for this assessment. BER is defined by ASTM E1527-21 as *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."* The following is a summary of findings for the limited review of potential BERs, where applicable, as per the contracted scope of work and limitations outlined in Section 2. For a more detailed discussion of the findings and contracted scope of work, please see the referenced report section.

BUSINESS ENVIRONMENTAL RISKS / NON-ASTM SCOPE			
Subject	**Findings**	**Not Appl.**	**Rpt. Ref.**
Asbestos	Given the 1972 year of construction ACM is suspected unless ruled out by laboratory analysis.		7.1
Lead Paint	Given the 1972 year of construction lead-paint is suspected unless ruled out by laboratory analysis and/or field detection.		7.2
Radon	The Property is located in the USEPA radon designation Zone 3 or 'low risk' area for radon.		7.3
Mold / Microbial Damage	Hillmann did not observe evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.		7.4
NWI Wetlands/ FEMA Flood Zones	No NWI mapped Wetlands are present at the Subject Property. The Property is located within a FEMA 100-year flood zone.		7.5
Drinking Water	Potable water service at the Subject Property is provided by the City of New York which meets or exceeds USEPA drinking water quality standards. Building specific drinking water sampling was not performed.		7.6

2.0 INTRODUCTION

2.1 Purpose and Scope

This assessment was conducted utilizing generally accepted Phase I ESA industry standards in accordance with the ASTM Standard Practice E 1527-21. The ASTM describes these methodologies as representing good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. § 9601) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses the property consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35) (B). The goal of the processes established by ASTM E1527-21 is to identify *recognized environmental conditions* in connection with the Subject Property.

The term *recognized environmental condition* (REC) is defined by ASTM E1527-21 as *"(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."*

The term *controlled recognized environmental condition* (CREC) is a type of recognized environmental condition and defined by ASTM E1527-21 as a *"recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations)."*

The term *historical recognized environmental condition* (HREC) is defined as a *"previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations)."* The ASTM E1527-21 standard has clarified that a *historical recognized environmental condition* is not a *recognized environmental condition*.

The term *de minimis condition* is defined by the ASTM, *"…a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."* A condition determined to be a *de minimis condition* is not REC nor a CREC.

The chief components of this assessment are generally described as follows:

- A non-invasive visual reconnaissance of the Subject Property and adjoining properties in accordance with ASTM guidelines for evidence of RECs.

- Interviews of past and present owners and occupants and state and local government officials, seeking information related to the potential presence of RECs at the Subject Property.

- A review of standard physical record sources for available topographic, geologic and groundwater data.

- A review of standard historic record sources, such as fire insurance maps, city directories, aerial photographs, prior reports and interviews, etc., to determine prior uses of the Subject Property from the present, back to the Subject Property's first developed use, or back to 1940, whichever is earlier.

- A review of standard environmental record sources including federal and state environmental databases, and additional environmental record sources, to identify potential regulatory concerns with the Subject Property, adjoining properties and properties located within the surrounding area.

An evaluation of environmental or other regulatory compliance matters is excluded from the scope of this assessment.

These methodologies are described as representing good commercial and customary practice for conducting an Environmental Site Assessment of a property for the purpose of identifying recognized environmental conditions.

Business Environmental Risks/Non-ASTM Scope Considerations

In accordance with our contract agreement, Hillmann may have addressed the following potential environmental subject matters that are outside of the requirements of the ASTM E1527-21 standard:

Asbestos-Containing Materials (ACM): A cursory non-intrusive visual screening for the presence of suspect ACM within the accessed areas of buildings built prior to 1990 on the Subject Property. If the Subject Property contains buildings built in 1990 or later, the contracted scope of work excludes a cursory non-intrusive visual screening or any other level of evaluation for suspect ACM; however, the exclusion for buildings built ≥1990 should not be interpreted to suggest that any such buildings are free of ACM or would not warrant evaluation of building materials for ACM prior to disturbance. It is emphasized that this cursory non-intrusive visual screening does not constitute an asbestos survey/inspection of the premises. An asbestos survey/inspection should be sought by the report User(s) if a greater certainty is desired regarding ACM and potential asbestos hazards at the Subject Property. Furthermore, a review of regulatory compliance matters pertaining to asbestos is excluded from the scope of work.

Lead-Based Paint (LBP): A cursory non-intrusive visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1980 on the Subject Property. If the Property contains buildings built in 1980 or later, the contracted scope of work excludes any cursory non-intrusive visual screening or other level of evaluation for suspect LPB;

however, the scope of work exclusion for building built ≥1980 should not be interpreted to suggest that any such buildings are free of LPB or other lead hazards. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for LBP or potential lead hazards. A comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding LBP at the Subject Property. Furthermore, a review of regulatory compliance matters pertaining to lead-based paint is excluded from the scope of work.

USEPA Designated Radon Potential: Review of general non-site specific data published by the USEPA regarding the Radon Zone classification for the area of the Subject Property.

Mold/Microbial Damage: A cursory non-intrusive visual screening within the accessed areas of buildings on the Subject Property for evidence of systemic microbial problems, including visible mold growth, water damaged building materials or musty odors. It is emphasized that this cursory non-intrusive visual screening does not constitute a comprehensive survey for moisture/mold/microbial damage. A more comprehensive inspection should be sought by the report User(s) if more certainty is desired regarding the potential for moisture/mold/microbial damages at the Subject Property.

Drinking Water: The source of drinking water to Property will be identified. If not provided by a municipal or public water system, Hillmann will request, review and summarize available data of drinking water quality testing from the Property.

2.2 Property Location/Legal Description

Property location and legal description details are described as follows:

Primary Street Address:	2828 West 28th Street				
City:	Brooklyn	**County:**	Kings	**State:**	New York
Tax ID/Parcel Number:	Block 7011 Lot 11				
Approx. Land Area:	2.03-acres				
Apprx. Latitude/Longitude:	North 40.5573548 degrees/West 73.993936 degrees				
Additional Details (if appl.):	Secondary Addresses: 2802-2878 West 28th Street and 2861-2871 West 29th Street and 2802-2804 Neptune Avenue.				
Property Owner:	Park, Sea Housing				
Zoning Designation:	R6 (Residential) with no commercial overlay				

2.3 Data Gaps

A *data gap* is defined by the ASTM as a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A data gap is only significant if other information and/or professional experience raises reasonable concerns involving the data gap and the ability to determine the presence or absence of recognized

environmental conditions. The following table summarizes data gaps encountered during the assessment as well as a discussion of their significance.

Data Gap:	Significant (Yes/No)?	Discussion
Historical records data failure	No	The date and/or type of the first developed use of the Subject Property was not documented. Records gaps exceeding five years were encountered; however, no significant site use changes are suspected during these intervals.
Response to agency records requests not received as of date of report.	No	Any additional information indicative of a REC will be forwarded upon receipt.

2.4 ESA Report Component Dates/Viability

The ASTM E1527-21 standard states that an environmental site assessment (ESA) is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the Subject Property (or, for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). Specifically, all of the following components must be conducted or updated within 180 days prior to the date of acquisition or prior to the date of the transaction. The following table summarized the component completion dates:

ESA Component	Completion Date
Interviews	August 30, 2022
Env Lien Search	(excluded from scope)
Government Records Review	August 22, 2022
Visual Inspections	August 30, 2022
Env. Professional Declaration	September 19, 2022

2.5 User Reliance

This report is for the exclusive use of TerreAlto and additional relying entities, if any, named on the front cover. No additional individuals or entities shall be permitted to rely upon any data, interpretation, reports or other information or documentation contained in this report, without first obtaining the consent of TerreAlto; and without obtaining written consent from Hillmann in the form of a reliance agreement/letter.

Hillmann may, in its sole discretion, withhold its consent to additional reliance and/or Hillmann may condition consent for reliance upon payment of a fee or other conditions.

2.6 Significant Assumptions

The following significant assumptions are made:

- The site operations at the time of the site visit are assumed to reflect typical site conditions relative to potential environmental conditions and that no concealment of environmental conditions or releases by site owners or occupants has occurred. Likewise, it is assumed that no

areas of the Subject Property with potential environmental concerns or RECs were concealed or otherwise not reported, intentionally or unknowingly, by the Subject Property owners/occupants and/or site escort at the time of the site visit.

- For the purpose of estimating the approximate direction of groundwater flow in the absence of site specific groundwater data, unless indicated otherwise, an assumption has been made that the gradient of groundwater flow follows the surface topography of the Subject Property and immediate surrounding area.

2.7 General Limitations and Exceptions

Limitations

The report turnaround time specified by the contract agreement for this assessment may present a limitation to the availability of pertinent regulatory agency records. Such limitations, if encountered, would be further specified in Section 4.1.

Significant limitations related to the condition or accessibility of the Subject Property at the time of the site reconnaissance, if encountered, are reported in Section 6.1.

Other Exceptions or Deletions

No other exceptions or deletions from the ASTM Standard E 1527-21 are reported.

Special Terms and Conditions

This Phase I Environmental Site Assessment has been prepared using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Subject Property. Findings within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, site development, redevelopment, or other construction purposes. No representation or warranty is made that the past or current operations at the Subject Property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes.

Findings, conclusions and recommendations presented in this report are based on visual observations of the Subject Property, interviews conducted, the records reviewed, information provided by the Client, and/or a review of readily available and supplied drawings and documents. Information obtained during the assessment, whether written, graphic or verbal, provided by the Subject Property contact(s) or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or government agency source; is assumed to be accurate except as specifically stated otherwise in this report. Independent verification of the accuracy or

completeness of all information reviewed or received during the course of this assessment is not made and excluded from the scope of work for this assessment. No warranty or guarantee is made of the accuracy or completeness of information that was obtained from ostensibly knowledgeable individuals, regulatory agency representatives or other secondary sources.

Regardless of the findings stated in this report, Hillmann is not responsible for consequences or conditions arising from facts that were concealed, withheld or not fully disclosed at the time the assessment was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. Hillmann can neither warrant nor guarantee the accuracy or completeness of the information obtained from the regulatory database report provider during the course of this assessment.

Subsurface conditions may differ from the conditions implied by the surface observations and can only be reliably evaluated through intrusive techniques.

Reasonable efforts have been made during this assessment to identify aboveground and underground storage tanks and ancillary equipment. Reasonable efforts are limited to information gained from visual observation of largely unobstructed areas, recorded database information held in public record and available information gathered from interviews. Such methods may not identify surficial and subsurface features that may have been hidden from view due to parked automobiles and other vehicles, snow cover, vegetative growth, pavement, construction or debris pile storage or incorrect information from sources.

No guarantee, explicit or implied, is made that the records pertaining to historical ownership or occupancy which were reviewed represent a comprehensive or precise delineation of past Property ownership or tenancy for legal purposes.

The ASTM E1527-21 standard states that recommendations are not required to be included in a Phase I ESA report; however, further that recommendations are an additional service that may be useful in the User's analysis of landowner liability protections or business environmental risks; and that the User should consider whether recommendations for additional inquiries or other services are desired.

Recommended response actions offered in Section 1.3, if any, are provided as an option to the Client, and may have taken into account the Client's relation to the Subject Property and/or their intended purpose of this assessment. If included, it is not intended by Hillmann to represent the only course(s) of action, or inaction, to take. Furthermore, it is emphasized that additional response actions may become advisable depending on the outcome of the initial action(s) taken. Hillmann advises that Client and any additional authorized relying parties as specified on the report Cover and Section 2.5, or via letter of reliance extension, undertake consultation with legal counsel familiar with environmental and real estate law would be beneficial to the decision making process

for the type and timing of a response action to identified RECs or Business Environmental Risks, if any.

Due to the limited nature of our review of potential Business Environmental Risks, the User(s) of the report should consider whether to take additional action(s) to further define, properly manage and/or mitigate potential BERs.

The User(s) assumes responsibility for business decisions that it makes utilizing information in the report provided by Hillmann. Hillmann shall not be responsible for any conclusions, interpretations and/or decisions of the User(s).

In the event of any conflict between the terms and conditions of this report and the terms and conditions of the consulting services agreement for this project, the consulting services agreement shall control.

3.0 USER PROVIDED INFORMATION

The term "User" is defined by ASTM as the party seeking to use Practice E1527 to complete an environmental site assessment of the Subject Property; specifically, the entity or entities named on the front cover to which the report has been addressed.

3.1 Prior Environmental Reports/Documentation

No prior environmental reports/documentation were provided.

3.2 User Responsibilities

In order to qualify for Landowner Liability Protections (LLPs) offered by federal regulations, the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User should provide the following information to the environmental professional (Hillmann). Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete. To assist the report User to meet these requirements, Hillmann has provided a questionnaire of inquiries (User Questionnaire) specified in 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31 with instructions to complete and return to Hillmann. A completed questionnaire was not returned to Hillmann.

Question:	Yes/No:	Detail:
1. Search of Land Title and Judicial Records: Has the User performed a search of land title records and judicial records for environmental liens and/or Activity and Use Limitations (AULs) filed or recorded against the property?	NR	
1.a. If yes to Question 1: Did the search identify any environmental liens or Activity and Use Limitations (AUL), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	NR	
1.b. If yes to Question 1: Has the User provided the result of the search of land title and judicial records to Hillmann?	NR	
2. Specialized knowledge or experience of the person seeking to qualify for the LLP: Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	NR	
3. Relationship of the purchase price to the fair market value of the property if it were not contaminated: Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	NR	

Question:	Yes/No:	Detail:
4. Commonly Known or Reasonably Ascertainable Information: Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,		
4.a. -Do you know the past uses of the property?	NR	
4.b. -Do you know of specific chemicals that are present or were once present at the property?	NR	
4.c. -Do you know of spills or other chemical releases that have taken place at the property?	NR	
4.d. -Do you know of any environmental cleanups that have taken place at the property?	NR	
5. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation: Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?	NR	
6. Litigation/Administrative Proceedings/Government Notices: As the User of this ESA, do you have knowledge of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	NR	
7. User's Reason/Purpose for Performing Phase I ESA:	The User did not indicate the purpose of the assessment. In accordance with ASTM E1527-21, it is assumed that the Phase I ESA was being performed in order to qualify for landowner liability protection to CERCLA liability.	

4.0 RECORDS REVIEW

4.1 Environmental Information

Physical Setting

Source	Discussion
USGS 7.5 minute Topographic Map Data: (EDR Geocheck-Physical Setting Source Addendum)	The Property lies at an elevation of approximately 3 feet above mean sea level. An interpretation of topographic contour lines as well as a review of the EDR Geocheck-General Topographic Gradient suggested terrain sloping downward towards the east-northeast. The closest down gradient water body is the Coney Island Channel, located approximately 800-feet to the south.
USDA SCS Soil Data: (EDR Geocheck-Physical Setting Source Addendum)	The soil type at the Subject Property is classified as "Urban Land". The Urban Land designation indicates that a majority of the original soils on the site have been disturbed by development or covered with impervious surfaces, such as buildings or pavement.
Geologic Data: (EDR Geocheck-Physical Setting Source Addendum)	The Geologic Age Identification is Stratified Sequence and the Rock Stratigraphic Unit is the Cenozoic Era, Quaternary System, and Pleistocene Series.
Prior Env. Reports: (Section 3.2)	None provided.
Additional Sources/ Data:	No additional physical setting sources or data was obtained.
Groundwater Flow Discussion:	Based on a review of the above information as well as observation of the site, the direction of shallow groundwater flow at the site is inferred to be towards the south.

Federal, State and Tribal Environmental Record Sources

Standard government records were obtained and reviewed primarily via a third-party regulatory database report, titled EDR Radius Map™ Report, prepared by Environmental Data Resources of Shelton, CT. The report provided government records from the standard environmental resources and within minimum search distances specified by Section 8.2.2-Table 2 of the ASTM E1527-21; and were reviewed for the purpose of identifying potential RECs in connection with the Subject Property. Additional detail of the source and significance of the regulatory databases can be found in the regulatory database report in Appendix E. Hillmann has also included discussion of records pertaining to the Subject Property from other government record sources not specifically listed under Table 2, as applicable.

Reported distances for adjoining property listings, if applicable, are approximate and indicative of the presence of a public roadway or right-of-way between the adjoining site and Property.

The reported gradients have been estimated based on a number of factors including but not necessarily limited to field observation, review of topographic maps, database listing details and/or site specific geo-technical data.

Limited analysis of the details of on-site, adjoining and vicinity database sites was conducted to identify potential sources of sub-surface vapor encroachment. This review was based on elements of the ASTM "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E 2600-15); and also on elements of "Methodology for Identifying the Area of Concern Around a Property Potentially Impacted by Vapor Migration from Nearby Contaminated Sources" (Buonicore, 2011-S-103-AWMA). Vicinity database sites pertaining to

non-petroleum product releases within 1,760 feet of the Subject Property in the up-gradient direction, 365 feet of the Subject Property in the cross gradient direction and 100 feet of the Subject Property in the down gradient direction; and vicinity database sites pertaining to petroleum product releases within 528 feet of the Subject Property in the up-gradient direction, 165 feet of the Subject Property in the cross gradient direction and 100 feet of the Subject Property in the down gradient direction were reviewed to identify active contamination sites with the potential to affect subsurface vapor conditions at the Subject Property. The potential for vapor encroachment was considered in assessing whether or not a REC exists in connection with the Subject Property when reviewing applicable sites within those distances.

Regulatory database sites with active petroleum or non-petroleum releases that are considered to constitute a vapor encroachment condition (VEC) to the Subject Property, if any, are identified and discussed in this section.

The EDR Radius Map report is attached in Appendix E.

Property Listings

The Property address / tax block and lot is listed on the E-Designation database for a) exhaust stack location limitations, b) hazardous materials Phase I and II Testing Protocols and c) window wall attenuation & alternate ventilation. In the event of a change in land use or redevelopment involving a zoning action, the aforementioned environmental requirements will be required, per New York City Office of Environmental Remediation requirements, prior to issuance of permits and/or certificates of occupancy.

The Property address – 2828 West 28th Street is listed on the UST database. The UST listing is for Petroleum Bulk Storage (PBS) registration 2-600253 set to expire July 23, 2024. The UST Tank ID is listed as 41680, for a 10,000-gallon UST containing #2-fuel oil for onsite consumption. The UST status is listed as having been installed in 1973 and closed-in-place in 2005.

The Property is further listed on the AST database for a 7,098-gallon #2 fuel oil AST installed in 2005.

Adjoining Property Listings

Multiple listings within the Property vicinity were identified associated with Con Edison infrastructure work which generated regulated waste for offsite transport/disposal. The listings are not indicative of a release and not considered a REC.

Multiple LTANKS and NY SPILLS listings within the Property vicinity were identified. Each case obtained regulatory closure. Given the regulatory status, the adjoining LTANKS and NY SPILLS cases are not considered a REC in connection with the Property.

Surrounding Area Findings

The following is a discussion of non-adjoining sites identified as located within the ASTM specified search distance surrounding the Subject Property. In order to keep this discussion informative and

concise, discussion(s) is/are provided of the listed site(s) for each database category that appears most likely to impact the Subject Property based on distance, area topography and/or regulatory status. Listings of sites within the applicable search distances not specifically discussed below were reviewed and concluded not to be RECs in connection with the Subject Property or VECs based on various factors including distance, area topography, known or inferred groundwater flow direction and/or regulatory status.

Federal NPL				**# of sites:**	0	**Search Distance:**	1-mile
Notable Listing:	None

State/Tribal BROWNFIELD SITES				**# of sites:**	3	**Search Distance:**	½-mile
Notable Listing:	3375-3377 Neptune Avenue / Former Gateway French Dry Cleaners						
Distance in feet:	1,273	**Direction:**	NW	**Gradient:**	Cross		
Data Discussion:	As noted above, (the site is also listed on the SHWS database) remediation is complete at the site and given the distance, is not considered a REC in connection with the Property.						
REC Discussion:	Based on the details provided above, a REC is not suspected in connection with the Property.						
VEC Discussion:	Based on the available data, a VEC is not suspected.						

UNMAPPED/ORPHAN LIST SITES

	Hillmann has also reviewed a list of unmapped sites (a.k.a. "Orphan List" sites) indicated by the database report. Unmapped sites that were identified as falling within an applicable specific search distance or warranting discussion have either been discussed in the preceding tables or are detailed below:
Notable Listings:	None

Additional Environmental Record Sources

Requests have been submitted to local, municipal and state agencies for pertinent records pertaining to the Subject Property, particularly with regard to potential environmental concerns such as petroleum storage tanks, storage and usage of hazardous substances and petroleum products, and/or known or suspected environmental contamination. Where applicable, internet research of government environmental regulatory databases was also conducted, as well as a general cursory internet search of the Subject Property address, for information indicative of a REC. The following table summarizes the findings of the research:

Source	Type of Request	Outcome
Building/Code Enforcement.	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified. Boiler information indicating dual natural gas / number 2 fuel oil was noted.
FDNY-Public Records Unit / Tank Section	Storage tank search request	No response was received prior to report issuance.
NYS Dept of Environmental Conservation	FOI request	No response was received prior to report issuance.
NYC Dept of Environmental Protection	FOI request	A response was recieved stating that no records were found.
EPA Envirofacts	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.
Internet Search Engine	Online search	Hillmann reviewed available on-line records pertaining to the Property. No information indicative of a REC was identified.

Pertinent records referenced in the above table have been included in Appendix F.

4.2 Historical Research

Historical records have been compiled and analyzed for historical property information and developing a history of previous uses of the Subject Property, adjoining properties and surrounding area. These records were reviewed for the purpose of identifying the likelihood of past uses having led to RECs in connection with the Subject Property.

The historical record sources listed below have been sought with the objective to document past uses of the Subject Property from the present back to the Subject Property's first developed use, or back to 1940, whichever is earlier. The term "developed use" includes agricultural use, placement

of fill dirt and other uses that do not involve structures. Hillmann has sought to review historical records in minimum intervals of five years.

Fire Insurance Maps

A Certified Sanborn Map Report was obtained from EDR for a review of published historic fire insurance maps for the Subject Property and surrounding area. The following is a summary of site uses and notable details depicted by the available maps:

Year(s)	Prop/Adj	Depicted Use(s)	Notable Details
1895, 1905, 1906, 1930, 1950, 1966, 1968, 1977-1983, 1986, 1987, 1989, 1991-1996, 2001-2007	**Property:**	Multiple dwellings and stores are depicted in beginning in 1930. Beginning in 1977, the Property is depicted in its present configuration, and listed as Coney Island Housing – site 7 Building 10.	None
	Adjoining:	Multiple dwellings and stores	None

A copy of the Certified Sanborn Map Report is attached in Appendix D.

City Directories

An EDR City Directory Abstract report was reviewed for data of former occupants of the Subject Property's street address. The following is a generalized summary of the findings of city directory research for past occupants of the Subject Property.

Property	
Use(s) / Occupant(s):	**Years**
Multiple residential occupants.	1928-2017

The EDR City Directory Abstract report was also reviewed for listings of historic occupants of the adjoining properties. The following is a general summary of listings of historic adjoining property occupants:

Adjoining Properties	
Use and/or Occupant(s)	**Years**
Primarily residential listings.	1928 - 2017

A copy of the EDR City Directory report is attached in Appendix D.

Historical Topographic Maps

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

Historical Aerial Photographs

Due to the availability of alternate historic sources, as well as the likelihood that this source would not provide any significant data, historical aerial photographs were not researched for this assessment.

EDR High-Risk Historical Records

The EDR Radius Map™ report, which is discussed in greater detail in Section 4.1 and attached in Appendix E, provided a search of proprietary databases of potential historical high-risk uses at or in the vicinity of the Subject Property. These databases include EDR Historic Cleaners – a database of property addresses with records of historical occupancy by suspected cleaners businesses; EDR Historic Auto – a database of property addresses with records of historical occupancy by potential automotive gas/filling stations and repair facilities; and EDR MGP- a database of sites historically occupied by manufactured gas plants and related facilities.

EDR Database	On-site Listings:	Adjoining/Off-Site Listings
Historic Cleaners: (on-site/adjoining only)	None	None
Historic Auto: (on-site/adjoining only)	None	None
MGP: (1-mile distance)	None	None within area of potential concern

Petroleum/Natural Gas Well Review

The historical record sources were reviewed for records of historic petroleum and/or natural gas wells at the Subject Property. No record of any historical petroleum/natural gas wells at or adjoining the Property was identified.

Additional Historical Data

Where applicable, the following additional pertinent historical data was obtained:

Interviews/Anecdotal:	No additional pertinent historical data was obtained.
Local Gov't Records:	No additional pertinent historical data was obtained.
Prior Env. Reports: (Section 3.2)	Not applicable; no prior reports were provided.
Site Observations:	Indications of historic uses of the Property or adjoining properties were not observed during the site reconnaissance.
Other Sources:	No additional pertinent historical data was obtained.

Summary of Identified Historic Uses

The following table presents a summary of the types and approximate date ranges of identified prior uses of the Subject Property:

Property	
Date Range	**Use**
1906-1972	Residential, commercial
1972-Present	Apartments and daycare

The following table presents a summary of the types of identified prior uses of the adjoining properties:

Adjoining Properties	
Date Range	**Use**
1906-Present	Residential, commercial

Historical Records Data Failure

The ASTM E1527-21 standard defines data failure as failure to achieve the historical research objective even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. The objective is to identify all obvious uses of the property from the present, back to the property's first developed use, or back to 1940, whichever is earlier. Furthermore, records of historic use/conditions were sought in intervals no less than approximately five years, unless the property conditions appear unchanged over a longer interval. In encountered, data failure and its significance as a data gap is discussed below:

Objective	Met?	Detail	Significant?
First developed use/date determined?	Yes	The first developed use of the Property was stores and dwellings in the early 1900's.	NA
Record sources at 5-year intervals back to 1940 or first developed use?	No	Historical record gaps exceeding five years were encountered. However, significant site-use changes or undiscovered site uses appear unlikely to have occurred during the record gaps.	No
All obvious prior uses identified?	Yes	See Summary of Identified Past Uses of this section.	NA

Please refer to Section 2.3 for additional discussion of data gaps and their significance to the findings of the assessment.

Historic Uses REC Discussion

The review of historical records did not indicate evidence of a REC in connection with the Property.

5.0 INTERVIEWS

5.1 Interviews with Owners, Operators and Occupants

Current Owner/Operator, Super, Occupant (as available)

Property Escort	Contact Name	Affiliation	Interview Type
Property Manager	Ilso Kim	Property Manager	In person
Interview Date:	August 30, 2022		
Interview Outcome/Findings:			
An interview for information pertinent to the assessment was conducted in person at the time of the site visit. The following pertinent information was indicated: Ilso Kim was unaware of any environmental conditions at the Property.			

Prior Owners/Operators/Occupants

Name	Company/Title	Yrs @ Site	Interview Type
Interview Date:			
Interview Outcome/Findings:			
No prior owners, operators or occupants were interviewed.			

Neighboring Property Owner/Occupants

Name	Company/Title	Yrs at site	Interview Type
Interview Date:			
Interview Outcome/Findings:			
The Property was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews with adjoining or nearby property owners or occupants were not conducted.			

5.2 Interviews with State and/or Local Government Officials

State and/or local governmental officials have been interviewed to obtain information of potential RECs in connection with the Subject Property. Many government agencies and their officials require submittal of written request for records in order to respond. The details in Section 4.1 list the various state and local government agencies contacted as part of this assessment, and the outcome of each inquiry. In addition, the details of regulatory database research in Section 4.1 may have included detail of interviews with officials pertinent to government records review and identification of RECs.

Additional interview of government officials not previously detailed in Sections 4.1 are discussed below, if applicable.

Name	**Agency Name/Title**	**Interview Type**
Interview Outcome/Findings:		
No additional local/state government officials were interviewed.		

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

A site reconnaissance was conducted to collect information and make observations to help identify RECs in connection with the Subject Property. This included visual and/or physical observations of the Subject Property and its structures, adjoining properties as viewed from the Subject Property boundaries and the surrounding area based on visual observations from adjoining public thoroughfares and accessed Subject Property structures. Subject property building exteriors were observed at ground level, unless otherwise indicated. Where applicable, building interiors were accessed and observed to the extent they were made safely accessible with the cooperation of the site escort.

Site Inspection Personnel:	Mr. Ryan Powell
Property Escort/Company:	Ilso Kim / Property Manager with Progressive Management
Inspection Date:	August 30, 2022
Weather Conditions:	Sunny, 83 degrees F

Significant Inaccessible Areas

No significant areas of the Property inaccessible at the time of the inspection were noted.

Significant Limiting Site Conditions

No significant limiting site conditions were noted at the time of the site reconnaissance.

6.2 General Site Setting

Site and Vicinity Characteristics

Abutting Roadways:	West 29th Street to the west; West 28th Street to the east and Neptune Avenue to the north.
Current Property Use:	Residential apartments
Evidence of Past Property Uses:	None observed.
Evidence of Past Adjoining Property Uses:	None observed.
Surrounding Area Uses:	Residential, mixed-use

Current Adjoining Property Uses

Dir	Street Address	Description
N	2529 Neptune Ave	Recreational
S	2805 Mermaid Ave	Mixed-use
E	2727 Mermaid Ave	USPS
W	2901 Mermaid Ave	Shopping Center

No visual observations indicative of a potential environmental concern were noted on the adjoining properties.

Topographic Characteristics

Terrain:	Flat
Direction of Downward Slope:	None observed
On-site Water Bodies:	None observed
Other Significant Features:	None observed

General Description of Structures and Improvements

Buildings:	One
Approx. Building Size:	102,000-ft²
Approx. Year Built:	1972
Number of Stories:	15
Basement/Subgrade Levels:	None
Exterior Ground Cover:	Concrete sidewalk, asphalt parking, landscaped areas
Ancillary Structures:	None
Sources of Heating & Cooling:	Dual Natural gas /No. 2 Fuel oil, and electric powered systems
Potable Water/Sewage Disposal:	Municipal utility connections

6.3 Site Features and Conditions

Storage/Usage of Hazardous Substances and Petroleum Products

The following approximate number of containers, and general description of their contents, capacity, container types and storage conditions, were observed to be stored and/or used at the Subject Property:

Occupant	Substance	Qty/Container Type	Storage Conditions
Super	Cleaning/Maintenance materials	Various	Stored indoors on intact concrete. No concerns noted.

Bulk Petroleum/Hazardous Material Storage Tanks

The following storage tanks for bulk petroleum or hazardous material storage were identified or reported to be present; or are suspected to be present based on visual observations:

AST/ UST	Product	Capacity	Construction	Year Installed	Status	Location/Notes
UST	No. 2. Fuel Oil	10,000-gal	Steel	1973	Closed-in-place	Playground area.
AST	No. 2 Fuel Oil	7,098-gal	metal	2005	Active	No concerns noted.

See discussion above in CRECs section pertaining to the closed-in-place UST.

Strong, Pungent or Noxious Odors and their Sources

No strong, pungent or noxious odors were noted at the Subject Property.

Standing Surface Water/Pools & Sumps

No standing water, pools or sumps containing liquids likely to be hazardous substances or petroleum products were noted.

Drums, Totes and Intermediate Bulk Containers

No hazardous substance or petroleum product drums were noted.

Unidentified Substance Containers

No unidentified substance containers suspected of containing hazardous substance or petroleum product were noted.

PCBs in Oil Filled Electrical/Hydraulic Equipment

No oil-filled electrical or hydraulic equipment was identified at the Subject Property.

It is noted that identification of PCB containing fluorescent light ballasts, caulk, paint, or other materials located inside and are part of the building or structure is outside of the scope of the ASTM E1527-21 standard and this assessment.

Stains or Corrosion on Floors, Walls or Ceilings

No stains or corrosion of floors, walls or ceilings, excluding any staining from water, were noted.

Drains and Sumps

No floor drains or sumps indicative of a REC were identified.

Pits/Ponds/Lagoons

No pits, ponds or lagoons were identified in connection with waste treatment or disposal.

Stained Soil, Pavement/Stressed Vegetation

No stained soil, pavement or stressed vegetation was observed.

On-Site Solid Waste Disposal/Fill Material

No evidence of on-site disposal of trash, construction debris, demolition debris or other solid waste was observed.

Waste Water

Sanitary sewage generated at the Subject Property is discharged via a connection to the local public sewer system.

Storm water runoff at the Subject Property is discharged via roof drains into the municipal sewer system.

No additional waste water discharges were identified at the Subject Property.

Septic Systems/Cesspools

No septic systems or cesspools were identified at the Subject Property.

Wells

No wells (including any dry wells, irrigation wells, injection wells, abandoned wells, or other wells) were identified at the Subject Property.

Railroad Spurs

No railroad spurs were identified on the Subject Property.

7.0 BUSINESS ENVIRONMENTAL RISKS

In accordance with the contract agreement for this assessment, Hillmann has performed cursory reviews of several potential Business Environmental Risks (also known as "Non-Scope Considerations"). The ASTM E1527-21 standard defines the term business environmental risk (BER) as, *"a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."*

7.1 Asbestos-Containing Material (ACM)

The contracted scope of work included a cursory visual screening of the accessed portions of buildings at the Subject Property for suspect asbestos containing materials (ACM). The information provided in this section, where applicable, is limited to identification of potential suspect materials in the readily accessible and observed areas of the building, and their general condition. This is not intended to be a comprehensive survey for the presence of ACM, and no testing has been conducted.

Given the 1972 construction ACM is suspected unless ruled out by laboratory analysis.

7.2 Lead-Based Paint

The contracted scope of work included a cursory visual screening of the condition of painted surfaces in the accessed areas of residential buildings/units built prior to 1978. This is not intended to constitute a comprehensive survey for LBP or potential lead hazards.

Given the 1972 construction LBP is suspected unless ruled out by laboratory analysis and/or field detection.

7.3 Radon

Data compiled by the USEPA, as summarized by the regulatory database report, indicated that the Subject Property is located in an area classified as Zone 3 or 'low risk' area for radon.

7.4 Mold/Microbial Damage

The contracted scope of work included a cursory visual screening of the accessed areas of the building for evidence of significant damage to building materials and finishes as result of moisture intrusion and/or mold/microbial growth. Hillmann did not observe evidence of significant problems with moisture intrusion or mold/microbial growth at the Property.

7.5 NWI Mapped Wetlands

The National Wetlands Inventory online Wetland Mapper (https://www.fws.gov/wetlands/data/mapper.html) was reviewed for indications of jurisdictional wetlands at or immediately adjoining the Subject Property. The scope of work for this assessment excluded a visual

determination of regulated wetlands at the Subject Property. It is emphasized that, regardless of the data reviewed via the NWI Wetlands Mapper, a field delineation of regulated wetlands by a qualified professional would be warranted to determine the presence or absence of regulated wetlands at the Subject Property.

The review did not indicate regulated wetland areas on the Property.

7.6 Drinking Water

Potable water service at the Subject Property is provided by the City of New York which meets or exceeds USEPA drinking water quality standards.

Building specific drinking water sampling was not performed.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

08/25/22

Site Name:

2930 W 30th St, 2828 W 28th S
2930 W 30th St, 2828 W 28th S
Brooklyn, NY 11224
EDR Inquiry # 7093643.3

Client Name:

Hillmann Environmental Co.
1600 Route 22 East
Union, NJ 07083
Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Joanne Bedkowski

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hillmann Environmental Co. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 15 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/09/2022 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/09/2022 has revealed that there are 24 NY LTANKS sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 17 NY UST sites within approximately 0.25 miles of the target property.

Records of Emergency Release Reports

EXECUTIVE SUMMARY

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/09/2022 has revealed that there are 53 NY Spills sites within approximately 0.125 miles of the target property.

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there are 2 NY SPILLS 90 sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that

there are 38 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

DEC Memo:	"9/4/12-Vought-Primary off hours responder. This spill assigned to DEC Feroze as part of routine Con Edison minor spill porfolio review and possible closure. Initial EMIS #230931 added to Cross Reference Field, deleted from Proxy and downloaded into E-docs. As per EMIS, F.O.D. Mech Mr. Dacon reports while being sent to phase check VS5589 (11B03) he discovered 30 gal of unknown oil in structure on 50 gal. of water contained. Possible source to be the unit and a pressure test is required. It is possible this structure is a tide hole as well. E-tag# 105972 was hung and a liquid sample of the structure was taken C/C# GG36440. Acct#C3237. N/P Tues & Friday 8:00 - 9:30 Am. See also duplicate spill 1205589 at same site. 9/25/14 - Austin - 30 gals motor oil (oil cans found in vicinity) atop 50 gals water in vault - Con Ed contained and cleaned up the spill - See the document files for further information - Spill closed - end"

DEC Memo:	"01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. One TTF in 1990 for a 35K tank installed in 1974. Tank was repaired and retested in 1993 and passed. Next test was in 1998. PBS database shows tank as active. However, NYCHA Tank Status Report does not have

SURFSIDE -NYCHA (Continued) **U000410718**

the tank listed for Surfside Houses. Unsure if tank is still active. Also, since a spill was recorded for this site a subsurface investigation must be performed to determine the extent of the contamination. - SK 03/14/06: This spill reassigned to K.Tang. - SK 09/23/08: Documents related to tank tightness testing submitted to the Department. Results indicate that manway gasket nuts and bolts were cause of testing failure, they were replaced and the tank passed testing. Spill closed based on this information. J.kann "

DER Facility ID:	306848
DEC Memo:	"Sangesland spoke to Rose Guido at Petro. She says the building has two 275 gal tanks tied together. There was a previous leak in one tank that was repaired in the past. Now there is a leak in the bottom of the second tank. Petro has called Milro to the site to vac out both tanks, they will set up a temp tank and will work on the clean up and tank repair/replacement in the next few days. *****Need to contact Milro in a few days to find out what work was done and if a digout is needed. ****** 12/20/05 - Raphael Ketani. I called Milro ((800) 773-6780), but there was no one there who could tell me what was taking place at the site. I left a message for someone to call me back. I spoke to Nick Charonotoulos of PTC and he said that the two tanks had been removed, but he didn't know anything else. Anthony called me back to say that the tanks were only pumped out and not removed. He sent a FAX with the hazardous waste material manifest for the tank bottom sludge. 12/29/05 - Raphael Ketani. I left a message for Anthony of Milro to call me back regarding progress on cleaning up the spill. Anthony called me back and said that he would look into what was happening with the site. 07/18/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Mr. Nick (Manager) at (718)628-3305 and left message to call me back. -QA 08/08/06: Called Mr. Nick and left message to call me back. -QA 08/21/06: Called Anthony (Milro Company) and left message to call me back. -QA 08/21/06: According to the letter of Mr. Nick Chronopoulos, Manager (Petro Heating Company) in which he mentioned they cleaned up all the oil and debris, at above premises. The oil in the basement fell on a concrete floor which had no cracks. All the oil was contained near the tanks and picked up. The tanks were leaking were pumped out by Milro Company and removed from the premises. Based on this information this spill is closed. -QA "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Contact Name:	CALLER
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was BREEN 01/12/06: This spill transferred from Breen to S.Kraszewski. This site has only one TTF from 1998. Documentation on file mentions the need for a dewatering system but it is not said that GW was encountered during excavation. Therefore I must presume that the GW has been impacted but not quantified. One document contains analysis of wastewater from the dewatering system, no petroleum effluent detected. Site assessment performed on May 14, 2003 with J.Kolleeny attending the work. A total of 5 soil borings taken including one at the fill port. Tank had not been removed yet. Only one boring registered a PID reading, but very low - 5.9 No site assessment repor on file. Call NYCHA and ask about the report. Tank was replaced in Fall of 2003. - SK 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill trasferred from Q. Abidi to Koon Tang. 6/11/09: JKann - Spill transfered to J.Kann. Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 6/10/10: J.Kann - comments sent on the work plan via email (edoced). Revised plan due 7/10/10. 12/30/14: J.Kann - multi site stip. SIR due 4/14/15 6/1/15: J.Kann - SIR submitted on 5/20/15. Soils collected and analyzed were below CP-51 RSCOs. Three monitoring wells were installed and minor VOC exceedences were noted in one well (less than 100 ppb total VOCs) A second round of sampling was performed in May 2015 with concentrations of less than 10 ppb total VOCs in the same well. The other wells were non detect. The site is located in Coney Island less than a block from the ocean. Based on the minimal impacts, the decrease in concentrations, the proximity to the ocean and the fact that the original tank from which the suspected leak occurred has been removed and replaced, the spill has been closed. NFA"
Remarks:	"pulling tank. encountered contaminated soil."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY DEC Inspector Notes: W 31st St between Surf and Mermaid Aves., Coney Island. Ron James notified Foley of transformer fire which went to two cars and a tree. Foley responded. ERTs David Duke and Mike Daughtrey on site. White hat is Nick Caputo, section manager for B/Q Emergency Dept. DEP Stanley Baldwin and Elie St. Jean also on site. Electric Ops EH&S Ron James, Steve Stathis, Tino Feranandez and Keith Barouch. Upon arrival, Con Edison was in the process of double washing the street and two affected cars. Con Ed removed 65gal oily water from street and dried with speedy-dry. Two cars were wrapped and taken to Astoria by Apple Towing. Overhead Dept. cut down tree and put the debris on the contaminated grass area until dumpster was delivered. No oil was found on building. Approx 1 oz. oil got into catch basin due to the FDNY unable to shut off hydrant. DEP responded to shut off hydrant. Con Ed will continue cleanup through the night. To drain and remove transformer tonight and replace tomorrow. Con Ed e2mis #142844: 5-17-2002 08:30HRS K. NEWLAND (#9) REPORTS, ONE GALLON OF TRANSFORMER OIL SPRAYED OUT INTO ST, AND ONE GALLON OF TRANSFORMER OIL WITH APPROX 80 GALLONS OF WATER IN STRUCTURE. THERE WAS FIRE AND SMOKE INVOLVED BUT IS NOW CONTAINED. THE ONLY PRIVATE PROPERTY INVOLVED WAS TWO CARS IST CAR WITH PLATE# IS FR897E, AND 2ND PLATE# IS AHX2410 AND THAT BELONGS TO A MR. PORTALATIN. ALSO SMALL 4X2 PATCH OF GRASS. AT THIS TIME SPILL SEEMS TO BE CONTAINED AND NO SEWERS OR WATERWAYS WERE AFFECTED. POLICE AND FIRE DEPT ON LOCATION. POLICE LT. AURELIA AND CHEIF FOX OF FIRE DEPT. NO INJURIES WERE RELATED TO SPILL AND NO WEATHER CONDITIONS CONTRIBUTED TO HAZARD OF SPILL. HISTORICAL RECORDS INDICATE 10 PPM. OIL WAS DISCOVERED WHEN #9 WAS DISPATCHED TO LOCATION FOR 7B54 OUTAGE. ENV STOP TAG# 07302 WAS PLACED. THE

TRANSFORMER 4364 (Continued) **S106003688**

STANDING WATER IN STRUCTURE HAS NO MOVEMENT AND NO SEWER CONNECTION NOTICED. ALSO CAN NOT VERIFY IF SUMP IS PRESENT. ALSO AT THIS TIME, SAMPLE CAN NOT BE TAKEN UNTILL JOB IS MADE SAFE. ENV OPS CREW WAS SENT TO LOCATION AND WILL BE CLEANING AS A 50-499. S. STATHIS ON LOCATION AT 08:20HRS. 0920HRS P. COONEY REPORTS THAT FEILD SUPERVISOR TOLD HIM THAT ONE OUNCE OF THE ONE GALLON THAT SPRAYED ONTO STREET WENT INTO CATCH BASIN. S.PACE 49874. 09:20HRS TWO CATCH BASINS WERE DAMMED BUT BECAUSE OF DEFECTIVE FIRE DEPT EQUIPMENT WATER OVERCAME BOTH CATCH BASINS. 09:22HRS CIG WAS NOTIFIED. 09:30HRS R. JAMES GOING TO LOCATION. 09:40HRS S. STATHIS REPORTS, DEP ARRIVED ON LOCATION AND TURNED OFF FIRE PUMP. ALSO N. CAPUTO EMERGENCY MANAGER ARRIVED ON LOCATION. 09:45HRS S. STATHIS REPORTS, E.R.T ARRIVED ON LOCATION. 09:50HRS K. NEWLAND (#9) REPORTS, SAMPLE WAS TAKEN FROM VS4364. 10:15HRS EPA# NYP 004 098 448. 10:20HRS ENG RECORDS INDICATE THERE IS A SOIL DRAIN IN VS 4364. 10:25HRS S. STATHIS REPORTS, DEP (KEITH WILLIAMS) OF INDUSTRIAL DEPT ON LOCATION AND HIS PHONE NUMBER IS 595-4718. HIS SUPERVISOR NAME IS COSMO ZINGNROPOLI FAX NUMBER IS (718) 595-4771). 10:30HRS R. JAMES REPORTS, AT 10:15HRS R. JAMES CALLED N.Y.STATE D.E.C REP, KERRY FOLEY AND INFORMED HER OF TRANSFORMER FIRE AND SPILL. ALSO AT THE REQUEST OF D.E.P, WE WILL BE INSPECTING THE UPPER FLOORS OF THE AFFECTED BUILDING. 10:35HRS OVER 50 TANKER WAS ORDERED AND WILL HEADING TO LOCATION. UPDATE 5/17/02 11:30 HRS. -- E. WILLIAMS, O.S. BROOKLYN ENV. OPS, REPORTS D.E.P. REQUESTED WE TAKE WATER SAMPLES FROM CATCH BASINS AT EITHER END OF STREET: N/W/C W.31 ST & SURF AVE -AND- N/W/C W.31 ST & MERMAID AVE. SAMPLES WILL BE DELIVERED TO CHEM LAB FOR PCB TESTING UNDER SAME CHAIN OF CUSTODY FORM (#AA-07575) AS THE SAMPLE ALREADY TAKEN FROM VS-4364. UPDATE : 17-MAY-2002 11:45 HRS. EH&S ENVIR. SPECIALIST R.JAMES EMP# 50683 REPORTS: DEP HAZMAT INSPECTOR S.BALDWIN ENTERED BUILDING 2960 W.31 STREET, INSPECTED H BANK APARTMENT'S (WINDOWS & SILLS) ON FLOORS 8,7,6 & 4 FOR SIGNS OF OIL . NO OIL FOUND. AT 11:20 HRS. DEC INSPECTOR KERRY FOLEY ARRIVED ON LOCATION. WAS BRIEFED ON INCIDENT, SHOWN SPILL AREA AND TOLD OF CLEANUP PLANS. UPDATE : 17-MAY-2002 13:35 HRS. EH&S ENVIR. SPECIALIST R.JAMES EMP# 50683 REPORTS: THE OWNER OF NYS PLATE# BBK2927 RAMON CORDERO 2960 W.31 STREET APT# 2-D, REQUESTED HIS VEHICLE BE INSPECTED FOR OIL CONTAMINATION. AFTER THOROUGH INSPECTION OF VEHICLE R.JAMES REPORTS: NO EVIDENCE OF OIL CONTAMINATION FOUND ON VEHICLE. UPDATRE: 5/17/02 - 1500 R. JAMES - PROJECTS SPEC, REPORTS TANKER REMOVED 65 GALS OF WATER MIXED WITH A SMALL AMOUNT OF OIL FROM THE STREET. MR. JAMES INFORMED ASSISTANT HOUSING MGR HUGGINS THAT THE AFFECTED TREE WOULD BE REMOVED & REPLACED AND THE GRASS FROM THE LAWN WOULD ALSO BE REMOVED & REPLACED. MS. HUGGINS WAS GIVEN THE PHONE NUMBER OF JIM DOWLING OF CLAIMS. UPDATE : 17-MAY-2002 16:15 HRS. EH&S ENVIR. SPECIALIST R.JAMES EMP# 50683 REPORTS: DEP HAZMAT INSPECTOR S.BALDWIN & DEC INSPECTOR KERRY FOLEY LEAVE LOCATION AT THIS TIME. LAB RESULT OF SAMPLE TAKEN FROM VAULT RECEIVED 5/17/02 - 1637 HRS. 02-04444. <1.0 PPM. UPDATE: 17-MAY-2002 17:30 HRS. EH&S SPECIALIST R.JAMES REPORTS: RUBEN SANTANA OWNER OF VEHICLE NYS PLATE# FR897E WAS GIVEN A CLAIMS CARD TO CALL J.DOWLING. HE WOULD ALSO LIKE TO HAVE THE PLATES TO HIS CAR RETURNED TO HIM. R.JAMES WILL CALL TRANSPORTATION TO FACILITATE THAT. UPDATE: 5/17/02 - 1755 M. DAUGHERTY - ERT, REPORTS A MR. HOLLOWAY (718-714-4240), THE OWNER OF A 1989 WHITE HONDA ACCORD LXI HAS DECIDED TO CLEAN HIS CAR AT HIS OWN EXPENSE. HE WAS TOLD THAT, IF HE CHOOSES TO, HE CAN PUT A CLAIM INTO CON EDISON. UPDATE: 5/17/02 - 1820 K. BAROUCH - ENV MGR, REPORTS THAT MR. HOLLOWAY (OWNER OF THE WHITE HONDA ACCORD) RETURNED TO THE CLEAN UP SITE. ENV.

TRANSFORMER 4364 (Continued) **S106003688**

OPS. INSPECTED HIS VEHICLE AND DECIDED TO WIPE IT DOWN WITH A CLEANER. MR. BARUCH & RON JAMES ARE NOW LEAVING THE SITE. STEVE STATHIS REMAINS. LAB RESULTS OF BOTH CATCH BASINS (S/W/C MERMAID AVE & W.31 ST AND N/W/C SURF AVE & W.31 ST) RECEIVED 5/17/02 - 1931. BOTH RESULTS <1.0 PPM. Update - 5/17/02 2015hrs S. Stathis removed from the street 65 gallons of water. Removed 665 gallons of oil/water mix from structure and 230 gallon oil from unit. The dumpster will be picked up at 7am. Found cement sump in structure. Partial clean up of structure is completed . 3-11 crew is doing catch basin, lawn and fence. Will be leaving location at this time. 5/17/02-2340HRS O.S. HOWELL REPORTS REMOVED SLUDGE FROM 2-STORM DRAINS S/W/C & N/W/C OF W31 ST.NO OIL FOUND. UPDATE - 18-MAY-2002 13:40 HRS. ENVIR. FLUSH DEPT. MECH-A K.QUEST EMP# 55475 REPORTS: AN > 50 TANKER REMOVE APPROX. 500 GAL'S OF WASH WATER/OIL FROM STRUCTURE. ALL SOLID DEBRIS REMOVED BY VACTOR. DBL WASHED STRUCTURE WITH BIO-GEN 760. SUMP WAS FOUND CEMENTED. ENVIR.TAG# 07302 REMOVED. CLEANUP COMPLETE 100% UPDATE - 19-MAY-2002 18:49 PER FDR REP H.BROWN UNIT WAS REMOVED ON 5/18. UPDATE - 5/22/02 @ 0850 HRS. -- Bob: Please have someone include in the E2mis: The capacity indicated on the transformer was 339 gallons. Subtracting the 230 removed from the transformer would show 109 gallons missing; however, looking into the transformer through the hole in the top, it was evident that most of the oil was still in the transformer. The label had to be incorrect."

Remarks: "transformer fire/explosion spill on to the groudn and cars. crew on site. no con ed # yet...nrc has been notified there # 604736."

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D005
Waste Description:	BARIUM
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D009
Waste Description:	MERCURY
Waste Code:	D010
Waste Description:	SELENIUM
Waste Code:	D011

RITE AID #04257 (Continued) **1014926838**

Waste Description: SILVER

Waste Code: D013
Waste Description: LINDANE (1,2,3,4,5,6-HEXA-CHLOROCYCLOHEXANE, GAMMA ISOMER)

Waste Code: D016
Waste Description: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

Waste Code: D018
Waste Description: BENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: D026
Waste Description: CRESOL

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U072
Waste Description: BENZENE, 1,4-DICHLORO- (OR) P-DICHLOROBENZENE

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U129
Waste Description: CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE

RITE AID #04257 (Continued) **1014926838**

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U188
Waste Description: PHENOL

Waste Code: U201
Waste Description: 1,3-BENZENEDIOL (OR) RESORCINOL

Waste Code: U205
Waste Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Waste Code: U211
Waste Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Waste Code: U240
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U279
Waste Description: U279

SPLICER V.DINEEN EMP# 41974 REPORTS: WHILE ON LOCATION TO PRESSURE TEST UNIT VS5993 FOUND IN V5977 APPROX. 50 GAL'S OF DIELECTRIC TRANSFORMER FLUID ON APPROX. 1000 GAL'S OF WATER. UNIT TESTED WELL BELOW MIN. VS5977 CAN NOT BE PRESSURE TESTED UNTIL UNIT IS DENERGIZED. HISTORICAL RECORDS INDICATE 10 PPM 3/2/95, TRANS. SER# H357726, TRAN. CODE HIGAO, MFR. CODE GE, INSTALLED 1/1/74, MANUFACTURED 1/1/74, UNIT CAPACITY 255 GAL'S. STRUCTURE TO BE CLEANED AS 50-499 BY ASTORIA TANKER. UNIT# 5953 WAS PRESSURE TESTED & PASSED, UNIT V6002 WAS

VAULT 5977 (Continued) **S106008000**

PRESSURE TESTED & PASSED. UPDATE - 01-OCT-2002 05:00 HRS. EH&S R.JAMES REPORTS: AT 04:40 HRS. M.DAUGHTREY ARRIVED ON LOCATION., INSPECTED STRUCTURE AND OIL SPILL. AFTER INSPECTION IT IS NOW BELIEVED 100 GAL'S OF DIELECTRIC FLUID IS MISSING FROM UNIT. UPDATE 10-1-02 AS R. JAMES ENVIR REP. HE REPORTS WHEN THEY DRAINED 550 GALLONS OF LIQUIDS FROM V5977 WITH OVER 50 PPM TANKER THEY FOUND THERE WAS NO TIE BET THE OTHER 3 STRUCTURES. THEY WENT BACK AND FOUND THAT VS5993 STILL HAD 5 GALLONS UNKNOWN OIL ON 300 GALLONS WATER. THEY PRESSURE TESTED TRANSF AND IT WAS GOOD. SAMPLE RESULT CAME BACK < 1 PPM. AND CAN BE CLEAN AS SUCH. CHECK V6002 AND FOUND IT ONLY CONTAINED WATER AND TRANSF PRESSURE TESTED GOOD. ALSO CHECK VS5953 AND FOUND WATER AND MUD AND TRANSF PRESSURE TESTED GOOD. SPOKE TO ERT M KESSLER AND A NEW INCIDENT WILL HAVE TO BE MADE FOR VS5977. "

Remarks: "Faulty transformer deposited material into vault. sample taken cleanup pending. unit shows below minimum "

Tank Info:

Tank Number:	001
Tank Id:	34514
Material Code:	0002
Common Name of Substance:	#4 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
E00 - Piping Secondary Containment - None
C03 - Pipe Location - Aboveground/Underground Combination
J02 - Dispenser - Suction Dispenser
G02 - Tank Secondary Containment - Vault (w/access)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	01/25/1961
Capacity Gallons:	7000

DEC Memo: "Closure report in edocs.LIRO engineers prepared closure report. Cleanup and debris removal activities were performed by Williams and vacuum truck liquid extraction was provided by AARCO. AARCO pumped flood waters and the oil/water mixture from the basement (electrical and storage rooms, boiler room and tank room) to frac tanks located outside of the facility. Based on the remediation performed and visual observations, LiRo concludes that the oil release has been satisfactorily remediated and thereby requests that this spill case be closed. "

Remarks: "contained to boiler room and basement clean up in progress"

DEC Memo:	"09/19/2013 - V. Brevdo This is Hurricane Sandy related spill (1208483) that was unassigned until today. Attention to this was brought up by NYCDDC during today's quarterly meeting. Alex Zhitomirsky has three other spill cases on Coney Island Maintenance Garage: 0550468; 1113400; and 1206177. V. Brevdo discussed this with Jeffrey Vought of Spill Prevention and Response in the absence of Randall Austin. Jeff did not have objections against Section B (Alex Zhitomirsky) managing this spill, given Alex has three other spill cases on this address/site. Spill Case is assigned to Alex Zhitormirsky effective today 09/19/2013. VB 11/17/13 TJD Site inspection - met on site with NYC Parks Maintenance Supervisor (Robert Sangroni). Location is the NYC Parks Department Coney Island Garage. Interview with Mr. Sangroni reveals the following: - Underground tank system was empty and in process of replacement at time of storm. - Spill was associated with discharge from (55) gallon drum of gasoline onsite for contractor (Franklin Company) purposes as part of tank replacement project. - Area sustained significant flooding and sand deposits associated with Hurricane Sandy - Franklin Company reported to have cleaned spill and removed an unknown volume

CONEY ISLAND MAINT GARAGE (Continued) **S112228662**

of contaminated sand to the satisfaction of NYC Parks Department. - A 3K FO AST located in basement/crawlspace was inservice prior to storm - tank is strapped down - piping was dislodged from tank during storm but no reported discharge occurred. - 3K AST is Out of Service since storm - unknown if tank has been pumped - not leaking - no petroleum odors interior or exterior of structure was evident at time of inspection. Unknown if tank still contains contaminated product from storm impacts. - A 1K FO AST temp tank is currently staged on sidewalk for on site consumption. - Facility has a pending contract to convert to gas heat and remove AST in basement. - New UST's were installed and operating since January 2013 include 1K Gasoline & 2K Diesel - Perimiter of structure and basement/crawlspace floor (sand) appear clean and free of residual petroleum impacts based upon visual and olfactory inspection. No further action is required associated with reported Hurricane Sandy spill at this property. Spill is closed and cross-referenced to existing open spill numbers (1206177) at this site (referenced in DEC remarks dated 9/19/13)."

Remarks: "total 600 gallons - cleanup crew on scene"

DEC Memo:	"8/10/05- The site's GW contamination was being addressed by injecting ORC in two events by URS Corp and O'Brien-Kreitzberg since 2001 with DEC's approval. URS performs semi-annual GW monitoring at the site and submit report to the Dept. Reviewed the report dated June 28, 2005 containing the GW sampling results from three monitoring wells (MW-01, MW-04 & MW-10).In March/05 semi-annual sampling event, only MW-10 was sampled and no compounds were detected. MW-01 was dropped from sampling for being under compliance for previous two consecutive sampling events. And, MW-04 was not sampled for increase of Free Product in the well which appeared first in Feb/04 sampling event. Absorbent Sock has been installed in this well and being monitored monthly. URS has been advised to check the upgradient well MW-03 as well for Free Product.Semi-annual sampling of MW-04 and MW-10 should continue.- II 10/12/05- Reviewed the semi-annual GW monitoring report through August/05. Only well MW-10 was sampled and was found under compliance. The well MW-04 could not be sampled for appearance of free product, and its treatment by absorbent sock. URS will continue monthly visit to gauge wells for free product.- II 3/09/06: This spill transferred from I. Islam to Q. Abidi. [05/17/06: This spill was opened by Imdadul Islam to track remediation of this site, because I. Islam was apparently unaware of the existence of spill 9505745 for this site. That spill has now been closed to consolidate with this spill. - J. Kolleeny] 7/27/06: DEC case lead transferred from Q. Abidi to J.A. Maisonave. - JAM 8/3/06 Reviewed Greyhawk/Roux Associates Semi-annual Monitoring report dated July 28, 2006. On May 10, 2006, Roux performed groundwater monitoring, which included gauging all accessible wells and sampling monitoring well MW-4. No free phase product was encountered in any wells. Groundwater flow direction is easterly towards the Atlantic Ocean. MW-4 showed levels of Benzene to be 20 ug/L, isopropyl benzene to be 7 ug/L and propylbenzene to be 15 ug/L. The total VOC concentration is 42 ug/L. Roux will continue to do semi-annual sampling of MW-4 and requests that monthly groundwater gauging be reduced to quarterly. - JAM 8/21/06 Wrote email to DDC and Roux Associates approving their recommendation to reduced gauging frequency from monthly to quarterly and continuing sampling of MW-4. - JAM 4/11/07 Reviewed the Semi-Annual Monitoring Report for period July through December 2006, submitted by Roux dated April 11, 2007. Groundwater contamination was treated with two rounds of ORC injections: the first on August 22, 2001 and the second on September 24, 2003. Quarterly gauging was conducted on August 8 and October 10 and 25, 2006. Product sheen was detected in MW-4 on October 10, and on Obtober 25, trace free-phase product (0.01 foot thickness) was

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

detected. A groundwater sample was collected from MW-4 on October 10, however, the analytical results could not be used because due to an invalid pH value. The previous sampling round conducted in May 2006 only showed total VOC concentration of 42ug/L in MW-4. Roux recommends the following tasks: attempt to locate well MW-4, which was paved over during the second quarter 2007, and continuing quarterly well gauging and semi-annual GW sampling and evaluate results for spill closure. The report is uploaded to eDocs. - JAM 11/13/07 Reviewed the Semi-Annual Monitoring Report for period January through June 2007, submitted by Roux dated October 26, 2007. On April 5, 2007, Roux gauged wells MW-01 through MW-03, MW-7 through MW-09 and MW-11. Wells MW-4 and MW-10 were paved over and are no longer accessible (well MW-4 historically had sheens and small amounts of free-product). No product was observed in any of the wells gauged. No groundwater samples were collected this period because well MW-4 was not accessed. Roux recommends replacing well MW-04, as per the work plan in appendix A, and continue quarterly gauging and semi-annual sampling. The report is uploaded to eDOcs. - JAM 8/4/09 Reviewed the Semi-annual Monitoring Report for period July 2007 through September 2008 submitted by Roux dated October 16, 2008. On October 24, 2007 and June 23, 2008, all accessible wells were gauged and no free product was observed. On June 23, 2008, wells Mw-02, MW-03, and MW-07 were sampled for VOCs and results were returned ND. Well RXMW-01 was installed on July 18, 2008, as a replacement for well MW-04, and sampled on July 28. Results showed benzene concentration of 12 ug/L and n-propylbenzene concentration of 9ug/L. An ORC sock was installed in well RXMW-01 to treat the low concentrations of VOCs. Roux recommends sampling all accessible monitoring wells during the next monitoring period and based on the results, they will petition for spill closure. The report is uploaded to eDocs. - JAM 8/4/09 Reviewed the Semi-annual Monitoring Report for period October 2008 through March 2009, submitted by Roux dated May 6, 2009. On December 26, 2008 all accessible wells were gauged and sampled, with the exception of MW-07 because it was submerged in a large puddle. No free product was observed in any well. VOCs were detected in wells MW-08 at 210ug/L, MW-11 at 10ug/L and RXMW-01 at 13ug/L. MW-08 had an exceedence for Napthalene and RXMW-01 had an exceedence for Benzene. An ORC sock was installed in well MW-08. Roux recommends continuing quarterly gauging of all accessible wells and semi-annual sampling in wells MW-08 and RXMW-01. Report is uploaded to eDocs. - JAM 11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ 6-6-2011 Reviewed Site turn-over status report and semi-annual monitoring report. Before MW-04 was paved over in 2007, VOC contaminants were detected but concentrations were decreasing. ORC injections were completed in 2003. ORC sock was in installed in RXMW-10 in 2008. An e-mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: I have reviewed a site turn-over status report and semi-annual monitoring report dated 1/24/2011. The report stated that the closed in-place and removed USTs are not registered with NYSDEC PBS. Necessary paperwork must be submitted to DEC PBS and PBS records should be reconciled. The City should submit all necessary applications without delay. A monitoring well MW-08 exhibited very high levels of naphthalene (690 ppb). In order to achieve closure, this contamination should be addressed. USTs closed in place could be a source of this contamination. AZ 4-26-2012 The following e-mail was sent to S. Frank/V.Brevdo/F. Ashkan: Dear Steve, I have reviewed a

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

Work Plan submitted for the above site and have the following comments: 1. Soil map should be included in the Work Plan. 2. Soil borings should be installed near wells MW-7, MW-9, MW-10 and MW-11, since there is no information regarding the soil contamination in these areas. 3. Tanks and piping, including the remote fill piping closed in place, should excavated, if feasible. 4. Only one boring could be installed next to monitoring well MW-8. 5. A catch basin should be investigated since it could be a source of free product in RXMW-1. Please submit modified Work Plan to DEC. Sincerely, Alex Zhitomirsky 5-1-2012 An e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, Four tanks were closed in place and three tanks were removed at this site. The tanks are not registered with DEC. LiRo is working with the facility to obtain additional tank information. Please make sure that when the tanks information is finalized, the tanks taken out of service are registered with DEC. AZ 12-26-2012 Reviewed semi-annual monitoring report dated September 4, 2012. Naphthalene was reported in the monitoring well MW-08 at a concentration of 530 ppb. Naphthalene concentrations fluctuate. Currently the cause of this fluctuation is unknown since the well is located about 85' southwest of the UST area and no naphthalene presently detected in the UST area wells. Spill #0550468 is assumed not to be the source. Additional investigation is required to determine if soil or groundwater is affecting the dissolved phase VOC contamination levels. Removal of four USTs and associated piping is scheduled for October 2012. The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed a semi-annual monitoring report dated September 5, 2012. The report stated that Naphthalene was reported in the monitoring well MW-08 at a concentration of 530 ppb and the concentrations fluctuate. Currently the cause of this fluctuation is unknown since the well is located about 85' southwest of the UST area and no Naphthalene presently detected in the UST area wells. LiRo proposed installation of two additional soil borings near MW-08 to confirm that the soil surrounding the well is the source of the Naphthalene contamination in groundwater. However, several wells in the vicinity of MW-08 have not been analyzed for Naphthalene. Prior to the installation of the new borings, all wells should be analyzed for the presence of Naphthalene. Also, LiRo did not update DEC on the progress of free product removal in wells RXMW-01 and MW--01. A progress report should be submitted to DEC without delay. A closure report and end-point sampling report should be submitted to DEC upon the scheduled removal of the seven (7) USTs. Sincerely, Alexander Zhitomirsky 1-28-2014 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a semi-annual report for this site dated July 10, 2013. Free phase product identified as hydraulic oil was detected in MW-09 in January 2013. On February 13, 2013, LiRo performed enhanced fluid recovery on monitoring well MW-09. During the excavation of the USTs in September 2012, one excavation pit water sample was collected. Analytical results reported VOC exeedances for all listed VOCs. During excavation and removal of seven USTs in September 2012, ten soil samples were collected and analyzed. Minor VOCs concentrations were reported. Since free phase product was observed at the site, semi-annual monitoring should be continued. Monitoring wells ME-02 and MW-11 could be removed from the current sampling program since no exceedances were reported during the past eight monitoring periods. Sincerely, Alexander Zhitomirsky 6-17-2014 Reviewed a semi-annual monitring report dated Dec. 16, 2013. The report stated that

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

groundwater sampling was performed on Spetember 5, 2013. Monitoring well MW-03 reported unusually TVOC concentrations, an order of magnitude increase in VOC when compared to the previous monitoring period. Two soil borings near MW-08 to a proposed depth of 20' were installed to confirm that soil is not the source of naphtalene contamination. Results will be presented in the next monitoring reports. AZ 10-29-2014 Reviewed a semi-annual monitoring report and spill closure report dated 6-10-2014. I called S. Frank and discussed the report. The following should be submitted by LiRo: 1. information regarding remote fills piping (closed in place), 2. area west of the tank field was not investigated. Information about this area should be submitted to DEC 3. Historical analytical data obtained from the destroyed wells should be submitted to DEC 4.Free phase map should be submitted to DEC. Free phase historical distribution at the site was not properly reflected in the report's figures. AZ 4-16-2015 Reviewed a spill closure request dated 1/22/2015. I contacted S. Frank and requested historical groundwater data for two previously destroyed wells. AZ 12-23-2015 Reviewed a spill closure request dated 8/3/2015. This spill was opened when free-phase product was encountered in in well MW-4 associated with the former fueling system of the 550-gallon USTs which were previously closed in place and subsequently removed in September 2012. MW-04 was destroyed and eventually replaced with the well RXMW-01. Free-phase product was absent from well RXMW-01 since March 2012. There is very little water at this well. The total VOC dissolved-phase concentrations over the five sampling events (since September 2012) has been less than 20 ppb and was not detected in April 2015. I discussed the site with S. Frank. I have reiterated questions asked in October 2014: 1. remote fills piping and remote fills are not indicated on the plan 2. it appears that the west side of the tanks was not investigated. AZ 1-4-2016 Email from S. Frank: Dear Alex, In response to the questions you asked about Coney Island Garage, please see below: 1). Where is the location of the fill port? Available historical documents do not indicate where the former fill ports were located, only the remote fill lines are shown with a terminus not specifically marked as the fill port. We will propose completing two borings along the historically mapped fill lines as shown on the attached plan. 2). There is no sampling locations west within the playground-How can we address? The current open Spill No. 0550468 relates to the former fueling system (the 550-gallon gasoline/diesel USTs) which were located to the east of the current tanks/dispenser (shown on attached site plan) and free-phase product formerly reported in well MW-04 (since replaced with RXMW-01). Monitoring wells MW-01, MW-02 and MW-03 are west of the former tanks and RWMW-01 and show no significant impacts. These wells are located between the spill source and the playground to the west. The adjacent Poseidon Playground surface cover is concrete, therefore there is no potential exposure pathway at the playground. Based on these conditions, we do not believe that additional wells or borings are required at the playground. Let me know if you have any further questions, Steve 9-28-2016 Reviewed a semi-annual monitoring report dated 3/4/2016. This spill number was created as a result of the free-phase product in well MW-04 associated with the former fueling system of the 550-gallon USTs which were previously closed-in-place. These former USTs were removed in September 2012.MW-04 was destroyed and replaced with RXMW-01. Free-phase product has been absent from well RXMW-01 since March 2012. AZ 3-27-2016 Reviewed a semi-annual monitoring report dated 8/5/2016. This spill number was created as a

CONEY ISLAND GARAGE DPR -DDC (Continued) **S106968831**

result of the free-phase product in well MW-04 associated with the former fueling system of the 550-gallon USTs which were previously closed-in-place. These former USTs were removed in September 2012.MW-04 was destroyed and replaced with RXMW-01. In March 2016 LiRo proposed to advance two soil borings to address DEC's concerns. AZ 7-21-2017 Reviewed a semi-annual monitoring report dated 1/6/2017. This spill number was created as a result of the free-phase product in well MW-04 associated with the former fueling system of the 550-gallon USTs which were previously closed-in-place. These former USTs were removed in September 2012. MW-04 was destroyed and replaced with RXMW-01. Free phase in this well was absent since March 2012. There is very little groundwater impact at this well. The total VOC dissolved phase concentrations has been less than 20 ppb. In March 2016 LiRo proposed to advance two soil borings to address DEC's concerns regarding the former fill port and piping. In August 2016, the two soil borings were advanced to investigate the former fill port and piping. No VOC impacts were recorded. The adjacent Poseidon Playground surface cover is concrete, therefore, there is no potential exposure pathway at the playground. Based on the most recent soil and groundwater data, LiRo recommended closure of this spill. AZ 7-25-2017 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Semi- Annual Report for the above site for the period of June 2016 to November 2016. The report stated that the former USTs were removed in September 2012. MW-04 was destroyed and replaced with RXMW-01. Free phase in this well was absent since March 2012. There is very little groundwater impact at this well. The total VOC dissolved phase concentrations have been less than 20 ppb. In March 2016 LiRo proposed to advance two soil borings to address DEC's concerns regarding the former fill port and piping. In August 2016, the two soil borings were advanced to investigate the former fill port and piping. No VOC impacts were recorded. The adjacent Poseidon Playground surface cover is concrete, therefore, there is no potential exposure pathway at the playground. Based on the most recent soil and groundwater data, LiRo recommended closure of this spill. Based on this information spill # 0550468 is closed. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 NYS Department of Environmental Conservation 47-40 21st Street, Long

DEC Memo: "5-21-2013 As per conversation with S. Sangesland, this spill was assigned to Alex Zhitomirsky 5-23-2013 Reviewed Underground Storage Tank Closure Report. Franklin removed seven USTs and associated piping. During sampling of the groundwater a strong odor was present and free-phase product was visible on the surface. Groundwater was encountered at 5.5 ft. bgs. Based on the evidence of petroleum leakeage, further soil and groundwater investigation was recommended. AZ The following e-mail was sent to S. Frank/F. Ashkan/v. BREVDO: Dear Steve, I have reviewed Underground Storage Tank Closure Report. Franklin removed seven USTs and associated piping. During sampling of the groundwater a strong odor was present and free-phase product was visible on the surface. Groundwater was encountered at 5.5 ft. bgs. Based on the evidence of petroleum leakage, further soil and groundwater investigation was recommended. This recommendation is approved. A Work Plan should be submitted to DEC for review. Sincerely, Alexander Zhitomirsky 11/17/13 TJD Spill #1208483 closed and cross-referenced to open spill file (1206177). 12-23-2015 Reviewed Semi-Annual Monitoring Report dated 8-3-2015. The spill was reported based on the tank closure results from a groundwater grab sample collected in September 2012. At that time, two 1,000 gallon diesel and one 1,000 gallon gasoline USTs were removed. Since 2006 no site wells have reported dissolved-phase contamination at levels reported in the tank closure groundwater grab sample. At the three monitoring wells surrounding the tank area (MW-01, MW-02 and MW-03) dissolved-phase contamination have ranged from non-detect to 268 ppb since October 2009. In April 2015 contaminant concentrations were non-detect.Based upon results of the sampling, LiRo recommended closure of spill # 1206177. DEC concurred with this request. The following letter was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed the Semi-Annual Monitoring Report dated 08/3/2015. The spill was reported based on the tank closure results from a groundwater grab sample collected in September 2012. At that time, two 1,000 gallon diesel and one 1,000 gallon gasoline USTs were removed. Since 2006 no site wells have reported dissolved-phase contamination at levels reported in the tank closure groundwater grab sample. At the three monitoring wells surrounding the tank area (MW-01, MW-02 and MW-03) dissolved-phase contamination have ranged from non-detect to 268 ppb since October 2009. During April 2015 sampling event contaminant concentrations were non-detect. Based upon results of the sampling, LiRo recommended closure of spill # 1206177. I concur with this request. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into

CONSTRUCTION SITE (Continued) **S112226819**

any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alex Zhitomirsky - Engineering Geologist 2 "

Remarks: "Digging at construction site and discovered old tank with soil contaminated with Gas or Diesel fuel. Tanks are being removed."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Transferred from Krimgold to Kolleeny on 3/24/05. - JK 11/29/05: This spill transferred from J.Kolleeny to S.Kraszewski. 02/02/06: This spill transferred from S.Kraszewski to Q.Abidi. 04/04/06: This spill transferred from Q. Abidi to Koon Tang. 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 3/10/11: J.Kann - Investigative work plan submitted on 3/3/11. 5/14/15: J.Kann - IWP approved. One soil sample per boring for analysis and min 3 groundwater samples. SIR due 11/14/15. 10/14/15: J.Kann -site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. 1/5/16: J.Kann - spoke with Tyler Goodnough of Ecosystem Strategies (845-452-1658) on 12/7 regarding this spill. Originally he did not collect groundwater samples at the site, however some minor contamination was in the laboratory data. I informed him that groundwater samples were to be taken regardless of field observations as per my email to NYCHA on 5/14/15. Tyler agreed to go out and collect groundwater samples from the two locations where minor exceedences were noted. The Summary Report of Subsurface Investigation was submitted to the Department on 1/4/16 and is under review. Sent an email to the consultant to revise the tables in the report to reflect the correct sampling date. Four borings were advanced and two temporary wells installed. Minor PAH exceedences were present in the soil borings, but groundwater did not have any exceedences of TOGS 1.1.1. NFA once revised tables are received. 1/6/16: J.Kann - revised tables were received and report decdoced. Tank/primary source removal occurred in 1999 and no impact to groundwater from current investigation as mentioned above. In addition, no field screening indicated petroleum contamination (no PID readings, odors or sheen on soils). 1/26/16: J.Kann - spill closed. 1/26/16: J.Kann "
Remarks:	"contaminated soil discovered during tank pull"

Tank Info:

Tank Number:	002
Tank Id:	42897
Material Code:	0008
Common Name of Substance:	Diesel

Equipment Records:

B00 - Tank External Protection - None
F00 - Pipe External Protection - None
H00 - Tank Leak Detection - None
C03 - Pipe Location - Aboveground/Underground Combination
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
I05 - Overfill - Vent Whistle

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	550
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

DEC Memo:	"12/20/05: This spill transferred from J.Kolleeny to S.Kraszewski. 09/01/06: DEC Lead for this spill changed from unassigned to S. Kraszewski. - J. Kolleeny 02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann. 01/15/08- J.Kann - Spill consolidated with closed spill 9416977. 03/1/12: J.kann - iwp submitted 2/28/12 and edoced today. 10/14/15: J.Kann- site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. 4/27/16: J.Kann - the following email was sent to NYCHA on 1/17/16: Yelena- I am reviewing the investigative work plan (Plan) for O'Dwyer Houses prepared by Gannett Fleming. Based on review of my files and the Plan, there seems to be a discrepancy. The Plan includes an investigation around spill 9011619 (2950 West 33rd? or 35th) and not spill 9415851 (2959 West 33rd Street). Spill 9011619 for O'Dwyer Houses and the 15,000 gallon UST was already investigated and closed. Spill 9415851 still needs to be investigated (the area around (2) removed 30,000 gallon tanks). It appears they were replaced with a 20,000 gallon UST in 2000. The investigation around these USTs is not included in the Plan. The Plan will need to be revised to investigate the area around the former 30,000 gallon USTs. If you have any additional knowledge about the site that could help clarify this, please call to discuss. We may need to do a site visit to confirm the area to be investigated. Thanks -Jennifer 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 5/3/21 - Obligado - I received an email dated 4/30/21 from Ryan McPherson at NYCHA. the GC MLJ has recently encountered oil/petroleum like material during their trenching and excavation at the O Dwyer new Building 8 (OG8) location. MLJ is currently running a test and are awaiting the report. MLJ also uncovered some brick structure which they would like to suspect / claim that it could be part of an underground fuel tank. Please let me know if you want to visit the site as we are trying to get caught up to speed on this construction and their findings. I emailed Ryan

Tank Info:

Tank Number:	2
Tank Id:	246516
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

O'DWYER GARDENS (SURFSIDES) (Continued) **A100364502**

J03 - Dispenser - Gravity
I05 - Overfill - Vent Whistle
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
C01 - Pipe Location - Aboveground
F00 - Pipe External Protection - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	11/20/2012
Capacity Gallons:	6000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported

KAISER PARK (Continued) **S128042649**

Spiller Company: NEW YORK CITY
Spiller Address: Not reported
Spiller Company: 999
Contact Name: ASSEMBLYWOMAN MATHYLDA FRONTF
DEC Memo: "10/07/21-Hiralkumar Patel. 6:45 PM:- visited site. NYS assembly member Mathylde Frontus reported release of an unknown amount of an unknown material into the Coney Island Creek from a construction site (NRC #: 1318945). Kaiser Park fishing pier is being built on north side of the Kaiser park, immediately north of track and field area. it was low tide at the time of inspection and there was no construction activity at that time. inspected water surface around the fishing pier and along the work barge at the site. no signs (olfactory or visible) of any chemical/petroleum spill were noted in the area. during inspection, noted a hard boom partially covering newly built pier, but no boom around the work barge.
10/08/21-Hiralkumar Patel. 9:10 AM:- revisited site and met Evan Walton from Skanska. noted high tide during the inspection. this time, noted garbage floating on water but there was no signs of any chemical/petroleum spill. Evan stated that they have received many complaints claiming garbage being dumped by construction crew, but he claimed that garbage is visible during high tide and Skanska or his crew is not responsible for that. asked Evan about dredging operations. he mentioned that Skanska is working in two locations in the area: 1) north of Kaiser Park (fishing pier) and 2) approx. 1,000 ft (or more) in water north of W 37th Street. Evan mentioned that they area dredging area north of W 37th St, but there was no activity today. based on field observations, strongly recommended Evan to place hard boom around the work barge to prevent damage to water from any accidental chemical/petroleum release on the barge. Evan Walton Skanska Ph. (908) 444-6824 email: evan.walton@skanska.com
10/13/21-Hiralkumar Patel. case closed based on field observations."
Remarks: "near kaiser park fishing pier (bayview and neptune) -"

DEC Memo:	"9/13/05-Vought-Responsded to spill with DEC Ketani. School was evacuated by FDNY who is also onscene (Lt. Gleason 718-965-8345). Odors due to anaerobic degradation of organic matter in creek behind school (generation of methane and hydrogen sulfide). Odors were highest at low tide. No sheen or product visible in creek. Odors have been detected previously at low tide. At time of DEC visit school was reoccupied by students as per FDNY. DOH representative employed full time at school. Ten students went to local hospitals with nausea but FDNY paramedics indicated no serious conditions. No petroluem spill. Spill closed by Vought."
Remarks:	"SCHOOL CALLED AND SAID THAT THERE IS A VERY FOUL ODOR COMING INTO SCHOOL, THERE IS A CREEK THAT RUNS BEHIND THE SCHOOL , KIDS AND ADULTS ARE FEELING SICK: PLEASE CALL:"

Tank Info:

Tank Number: 001
Tank Id: 62482
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
E00 - Piping Secondary Containment - None

I.S. 239 - BROOKLYN K239 (Continued) **A100194218**

K01 - Spill Prevention - Catch Basin
I02 - Overfill - High Level Alarm
G02 - Tank Secondary Containment - Vault (w/access)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
L99 - Piping Leak Detection - Other
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	02/01/2001
Capacity Gallons:	10000
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	JSMACRI

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY HA (McInnis) says that valve in the return line was in the wrong position, causing fuel to enter the full tank. Unknown why the alarm did not sound. George Breen 01/17/06: This spill transferred from J.Kolleeny to S.Kraszewski. Reviewed NYCHA spill report and invoice from Clean Venture, consultant hired to clean up the spill. Area was cleaned up properly and work performed is reflected in the invoice. Ok to close out. - SK "
Remarks:	"CALLER REPORTS OVER FLOW FROM VENT PIPE CAUSED APPROX 50-75 GAL OF FUEL OIL TO SPILL ONTO SOIL. MOST OF THE SPILL WAS ABSORBED BY SOIL. SPILL IS CONTAINED - NO ACTIVE LEAK. FIRE DEPT IS CLEANING UP WHAT THEY CAN. FD UIS WAITING FOR DEP AND HOUSING AUTHORITY REP TO ARRIVE."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY SEE ALSO SPILL NO. 0109738, WHICH WAS CLOSED TO CONSOLIDATE. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/23/05: ISRP from 1997 reveals 9 borings and 5 MWs were installed. Thin fimls of product and olfactory contamination was present. Six volatile compound detected in three of the borings. All exceeded STARS levels; TPH ranged from 28ppm to 3.0% in impacted soils. Three wells contained ten volatile compounds, and seven of them met or exceeded GW quality standards. Recommended product removal vai vaccum or pump, monitor GW for six months and removal of impacted soils when tanks are excavated. Notes from hotline report indicate contractor noticed odor and sheen. Says that test results from stockpile came back contaminated. No paperwork on report is available nor is there any site assessment. - SK 09/27/06: Spill no. 0400233 at this site (April 7, 2004), occurred during tank overfill when oil came out vent pipe and fill pipe. Spill was closed because NYCHA spill report indicated cleanup was done and contaminated soil removed. However, my field notes indicate that not all contaminated soil was dug out; PID readings after soil was excavated were up to 90 ppm and no end-point samples were collected. Site near the beach and groundwater is shallow, possibly impacted by this spill. Potential groundwater impacts must be investigated. This spill should be tracked under this spill number. - J. Kolleeny 6/11/09: JKann - Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 01/28/2010: Remediation and other associated clean-up activities linked to this spill number is now under the oversight of Moses Ajoku, all correspondence related this case should be addressed to me. (MA) 7/15/13: J.Kann - spill transferred from Moses Ajoku to J.Kann. 12/30/13: J.kann - approved IWP. SIR due 6/30/14. 01/07/14: Site included in multi-site stip 6/4/15: J.Kann - Phase II submitted on 12/16/14. REport reviewed. Some slightly elevated SVOCs detected in soils and some in groundwater. A second round of groudnwater sampling from the 4 on site wells was requested from NYCHA on 6/4/15. Results are due by 6/30/15. 8/3/15: J.Kann - Results of gw sampling submitted on 7/7/15. 10/5/15: J.Kann - Samples collected in the 2nd round of groundwater sampling were below TOGS 1.1.1. Closure was requested by NYCHA. Based on review of the Phase II and the second round of groundwater sampling, no further action is necessary. Spill closed."
Remarks:	"CONTAMINATED SOIL FROM TANK PULL FOUND AT THE BASE OF THE TANK "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Region:	2
DER Facility ID:	268769
DEC Memo:	"01/24/06: This spill transferred from J.Kolleeny to S.Kraszewski. One TTF in 1990 for 15K tank installed in 1973. ISRP from 1996 shows soil and GW contamination. TPH in soil range from 71ppm to 3.1% in the soil, no SVOCs in soil but 3 VOCs were detected. GW sample detected 3 VOCs from one MW above standards. Monthly monitoring and yearly GW sampling was the verdict. Only one additional round of sampling was performed, which did not detect petroleum compounds above standards. The tank was replaced in 2000 by an 8K tank. A tank assessment was supposedly done also but no results are on file. - SK 03/22/06: This spill transferred to K.Tang - SK 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 05/26/11: J.Kann - This site contained a 15,000 No. 4 fuel oil tank which was removed in 2004 and replaced with an 8,000 gallon No. 2 fuel oil tank. This spill was called in after the 15,000 gallon tank failed tightness testing in 1990. Based on review of all available information, No. 4 fuel oil was stored originally and was the oil spilled. Another spill was called in after contaminated soils were encountered during tank replacement activities in 2004 - spill no 0408649. A field investigation was performed by Athenica for NYCHA in 2010. As a part of this investigation, five soil borings were advanced and three wells installed. One soil sample collected west of the tank contained low levels of PAHs above RSCOs. Groundwater (shallow-approx 7 ft bgs) collected in this location did not contain VOCs or SVOCs. All other soil samples collected contained PAHs below RSCOs. All groundwater samples were non-detect for SVOCs and VOCs with the exception of a detection of pyrene, which was below Class GA standards. Athenica s investigation supplements two previous investigations performed at the site one in 1995 by TRC and one in 2004 by Kosuri Engineering. Based on review of historic information contained in the file, and review of Athenica s Site Assessment Report, the spills were closed. Discussed site with Joe O'connell prior to spill closure - he concurs. NFA."
Remarks:	"15K TANK,SYSTEM TEST, FAILED HORNER EZY CHECK WITH A GROSS LEAK, NO ACTION YET DETERMINED."

DER Facility ID:	245604
DEC Memo:	"01/20/06: This spill transferred from J.Kolleeny to S.Kraszewski. One active 20K tank installed in 1969 with one TTF in 1991. An ISRP performed in 1997 developed 4 borings and 3 MWs. 2 soil samples were analyzed and found no VOCs or SVOCs. TPH ranged from 41 to 137ppm. One VOC compound was detected in a GW samples equal to the AWQS. NO SVOCs detected in GW. In 2000, another 20K tank was installed at the site. No other TTFs on record for this site. Need additional information from NYCHA before closing this spill. - SK 03/22/06: This spill transferred to K.Tang - SK 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 6/5/15: J.Kann - reviewed site file. File indicates that the Department agreed to NFA after the initial ISRP in 1997 was reviewed. The spill was only to stay open until the tank was retested. It is not clear if/when the tank was retested, but it was removed and replaced in 2000. No additional spills were called in for the site related to the tank (at one point a surface spill was called in and immediately cleaned) As discussed above, no impacts to grounwater were detected in the ISRP witht the exception of t-butylbezene at 5ppb (TOGS 5ppb). Spill closed. "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number:	1
Tank Id:	233458
Material Code:	0008
Common Name of Substance:	Diesel

POLICE SERVICE AREA #1 NYPD HOUSING BUREAU (Continued) **U004151159**

Equipment Records:
I00 - Overfill - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
G02 - Tank Secondary Containment - Vault (w/access)
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: 10/01/1995
Capacity Gallons: 2500
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 01/31/2019
Register: True
Modified By: DAFRANCI
Last Modified: 03/20/2019
Material Name: diesel

Tank Number: 2
Tank Id: 278191

Equipment Records:
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
E00 - Piping Secondary Containment - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser
L00 - Piping Leak Detection - None
D11 - Pipe Type - Flexible Piping
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 11/01/2017
Capacity Gallons: 1065
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 11/01/2001: TOM HALL TELCON WITH NORMAN SEBOWSKI-NYCHA (718-707-5725) AT 1050 HRS. SEBOWSKI WILL HAVE MARIO MANDALONE UPDATE DEPARTMENT AS TO PROGRESS OF WORK. 11/01/2001: TOM HALL TELCON WITH MARIO MANDALONE AT 1510 HRS. 15K BEING REMOVED AND REPLACED WITH ANOTHER 15K. MODERATE CONTAMINATION ENCOUNTERED IN EXCAVATION. HORIZONTAL EXTENT OF CONTAMINATION SEEMS MINIMAL. VERTICAL EXTENT WILL BE DETERMINED. HOUSING AUTHORITY WILL SUBMIT CLOSURE DOCUMENTATION. 02/14/02 Reassigned from Hall (Region 7) to Kolleeny. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 6/11/09: JKann - Spill transfered to J.Kann. Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 01/28/2010: Remediation and other associated clean-up activities linked to this spill number is now under the oversight of Moses Ajoku, all correspondence related this case should be addressed

CAREY GARDENS II -NYCHA (Continued) **S105230039**

to me. (MA) 7/15/13: J.Kann - spill transferred from Moses Ajoku to J.Kann. 10/15/13: J.Kann - after reviewing the file, minimal impacts have been noted at this site. The 1996 investigation yielded not impacts to soil or grounwater. During tank removal (as stated above) some impacts to soil were noted. I requested any informaiton on the tank removal from NYCHA today via an email. After receiving a response from them, I will likely request that the two remaining wells be gauged and sampled so the site can be reviewed for closure. 6/13/14: J.kann - received a response from NYCHA. Some lab data was submitted for soil disposal during tank removal work on 10/16/13. In addition, NYCHA responded that a mobile boiler is in place at the site and much sand was washed up into the area as a result of Hurricane Sandy. Therefore, the two older wells are not accessible. I am considering site for closure. 7/16/14: J.Kann - received the RIR for the site on 6/25/14. 3 borings were advanced and 2 monitoring wells installed. Soil analysis was below CP-51 RSCOs. On constituent, naphthalene was detected in groundwater at 12ppb (TOGS guidance of 10ppb), otherwise all gw analysis was below TOGS 1.1.1. Reviewed report. Spill closed."

Remarks: "contaminated soil discovered from tank removal"

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

NYCHA - CAREY GARDENS (Continued) **1004762086**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

place in 12/6/03. Vought called and spoke to Jesse and work was performed by S and S Energy and Associated Environmental. Jesse will inquire to Associated Environmental and return call.
11/24/08-Vought-DEC Sangesland received message from Jennifer Upchurch (800-773-0660x7626) requesting spill closure.
11/18/08-Vought-Called Curll and left message to return call to DEC.
11/24/08-Vought-DEC Sangesland received call from Jennifer Upchurch (800-733-0660 requesting status on spill closure.
12/04/08-Vought-Reviewed report received via email from Jesse Curll on 11/24. Email included prior correspondence to DEC dated 8/4/03 from SNS Energy Distribution Corporation (Stuart Schwartz 631-891-1700). Lines were pressure tested and foudn that the vetn line fittings have corroded which was the cause of the tank test failure . Associated Environmental performed soil borings. Request for spill closure. Enclosed also is Eastmond and Sons (718-378-3000) invoice dated 1/03/03 that 15,000-gallon UST was pressure washed. Letter from SNS dated 2/4/03 shows tank was opened and inspected and filled with lightweight concrete and lines that were not used were capped including suction, return, fill and vent. Enclosed is also Limited Subsurface Investigation from Associated Environmental Services (631-234-4280). Associated retained by Bill Likos and investigation performed via Geoprobe around the UST. Soil samples had no olfactory odor or visual staining. Composite sample collected from 6-9'bg. Soil samples showed non-detect VOCs and some PAH exceedences attributable to fill material. Spill closed by Vought due to non-detect soil samples and fact that failure came from vent pipe fittings whihc are above oil line. NFA sent to: Mr. Jesse Curll AIMCO - Boston 639 Granite Street, Suite 312 Braintree, MA 02184 Fax:(781) 849-7652 Phone:(781) 849-1471x105"

Remarks: "Tank has been empty. retest at later date."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

Site Description:	"The site is a small portion of the parcel located at 3325 Neptune Avenue, Brooklyn, New York which was operated as dry cleaner from about 1986 to 1995 based on hazardous waste manifest records. The property was identified as Block 6979 Lot 100 in Kings County, New York. The former dry cleaner portion of the property was renovated for commercial usage after the dry cleaner terminated its operation at this location. The site is currently occupied by Neptune Dental and Medical. The size of the proposed site is about 0.04 acres. The site entered the Brownfield Cleanup Program ? see site no. C224151. "
Env Problem:	"Preliminary investigations conducted at the site indicated that the contaminant of concern is Tetrachloroethylene (PCE). PCE was found in sub-slab soil vapor on site with concentration up to 25,000 ug/m3. PCE was detected in 4 of the 10 temporary groundwater monitoring wells, and one well had a concentration marginally above groundwater standards at 5.8ug/l. Additional investigation is needed to identify the source of the PCE. "

Site Description:	"Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast."
Env Problem:	"Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan."

Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Name: FORMER GATEWAY FRENCH DRY CLEANERS
Address: 3375-3377 NEPTUNE AVENUE
City,State,Zip: BROOKLYN, NY 11224
Site Code: 468402
Control Name: Soil Management Plan
HW Code: C224151
Control Code: 14
Control Type: INST
Dt record added: 11/07/2016
Dt rec updated: 07/23/2021
Updated By: LSZINOMA
Site Code: 468402
Site Description: "Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

10 feet below grade surface at the site and generally flows toward the southeast."

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Description: "Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast."

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 8/22/00 Spoke to Mike Berello (Ambient Group). They isolated the pipes and tank and found that the vent and fill lines were not tight. The tank was relined but there was a hole in the top of the tank (only spill upon overfill). They performed soil borings - 3 along a 60' fill line and 6 around the #4 UST. Water is at 5 feet below grade. They are going to propose excavation of tank system and associated soil. They will submit the report to DEC. JMR 01/26/04 Reassigned from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 04/18/05. J.Krimgold spoke to Mike Barello. He will resend the report in a week. 05/03/05. J.Krimgold reviewed the UST Removal Report submitted by Ambient Group, Inc. on 5/3/05 and issued on 11/05/2001. According to the report the tank failed the test due to a loose fitting on the vent pipe. Subsequently the tank was removed. No contamination was found during excavation. Post excavation samples all below TAGM levels. NFA. "

Update By:	BXANDERS
Site Description:	"Location: The site is located at the pre-redevelopment address of 3503-3505 Neptune Avenue in Brooklyn. Site Features: The site occupies a pedestrian common area located in front of a commercial strip. The site encompasses a public common walkway on its north end, is bisected by a retaining wall with planters across the southern third of the parcel and is city sidewalk on the south end. Current Zoning/Use(s): The site is zoned R6 residential. The current land use category is "Mixed Use" (commercial/residential). The site is currently a public common area and sidewalk. Historical Use(s): The site includes the parcel containing the former unnamed ?Historic Dry Cleaners?. The exact duration of time the dry cleaner existed at the site is unknown. The dry cleaner was initially located at the site between 1950 and 1966 and was in operation until sometime between 1968 and 1972. Site Geology and Hydrogeology: The site and surrounding area are relatively flat with a ground surface elevation of approximately 10 feet above Mean Sea Level (MSL). Soil at the site consists of a layer of fill material to approximately five feet below grade, underlain by glacial outwash consisting of layers of fine to medium silty sands and silt. Groundwater is approximately 9 to 10 feet below grade surface and flows toward east-southeast. After careful review, NYSDEC has determined that this site does not qualify for the Brownfield Cleanup Program. The historic dry cleaner is located immediately adjacent to the Former Gateway Cleaners (see site no. C224151). "

GRAVESEND HOUSES (O'DWYER GARDENS) (Continued) **U001840671**

performed without DEC approval of plan. Draft Report submitted on 6/10/09. 3/23/10: J.Kann - SAR from June 2009 edoced. 12/11/12: J.kann - reviewed SAR and February 1997 report by TRC. Comments sent in an email (edoced) 5/14/13: J.Kann - recvd and revwd the Supp RIR from JC Broderick and dated May 2013. Stained soil exist at the grounwater smear zone but minimal constituents detected in soil or groundwater. 5/17/13: J.Kann - sent an email to Yelena (NYCHA) requesting that the wells be gauged sometime next week. 10/9/14: Visited the site on 5/28/14. Minimal product noted on one sock in well. Will consider for closure. 10/14/15: J.Kann - site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. Since known soil disturbance activities will likely take place, spill can not be closed at this time. 4/25/17: J.Kann - visit site with Andre Obligado on 4/19. Met with Meredith, Tom, Steve Sacaccio and Mike Lopez. Discussed the plan for the site. Meeting notes were prepared and email by NYCHA and DECDoced. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 9/7/17 - Obligado - I received an Environmental Work Plan for tank removals at the Graves End Houses. The Enviromental Work Plan proposes the removal of 3 USTs at the site site. They propose to sheet pile around the USTs then excavate the tanks and the contaminated soils. Per our discussion at the site in April, the plan proposes to over excavate contaminated soil in the vicinity of MW1 and MW6. Excavation will be to a minimum of 10 ft bgs to remove contamination from the vadose and smear zone. 9/11/17 - Obligado - I provided comments to Tom over the phone and via email. Specifically, I requested 1) a Community Air Monitoring Plan 2) details about the endpoint soil sampling method 3) contingency for free product recovery in the open excavation. 10/23/17 - Obligado - I reviewed an amendment letter which addressed my comments above and I approved the Environmental Work Plan for the tank removal. 8/16/18 - Obligado - Conference call with NYCHA Meredith Menzel, Yelena and others. The UST closure has been completed and a UST closure was submitted. Several endpoint samples were above standard however at levels which I do not believe warrant further action. They will be doing additional excavation for development. 9/25/18 - Obligado - I responded to an email from Meredith regarding the request for closure in the tank closure report. I responded that since there would be additional excavation for site development I was holding of on closing the spill until that additional work was completed as I expected additional contamination may be encountered. 10/4/18 - Obligado - I got a call from Rich Levato stating he was on his way to the Site to perform remediation of free product in an excavation around a former tank. They will apply booms and pads to contain, collect waste characterization, and schedule a vacuum truck event tomorrow. He was not able to provide a spill number but it appears to be related to this NYCHA site. 10/4/18 - Obligado - I received a call from Meredith. She called to inform that additional contamination was encountered at the site during site excavation. We set up a tentative site meeting for the following morning. 7/15/21 - Obligado - I received Spill Closure Report prepared by ASR, dated June 2021. Excavation for new mechanical boiler building adjacent to building 13 started in August 2018. During excavation, floating product was observed on the groundwater on the western part of the excavation. ASR was contracted as an emergency response team. ASR applied absorption booms and pads. A Vacuum truck removed 230 gallons of oilywater mixture from the

GRAVESEND HOUSES (O'DWYER GARDENS) (Continued) **U001840671**

excavation an ddisposed of at Clean Water of NY. A second vacuum truck removal event occurred on 10/17/18 and 663 gallons of oily water mixture was removed and disposed of at Clean Water of NY. A dewatering plan was developed by Joh A Rhodes PE. The dewatering system was activated on 10/17/18 and ran for appxomiately 1 week. On 10/9/18, 4 endpoint samples were collected from the bottom of th excavation (11 ft bgs). No VOC compounds were detected. No SVOC compounds were detected above the regulatory limits. No PCB compounds were detected. Approximately 1,154.66 tons of regulated fill was excavated and disposed of at Coplay Aggregates, Inc. Soil and liquid manifests were provided. All sources of contamination have been removed. Contamination identified in the orinigal UST closure report was over excavated and free product was removed from the water table. A new slab on grade bolier room has been constructed. This spill no longer appears to be a threat to human health or the environment. Based on the documentation submitted, this spill is closed."

Investigative Work Plan submitted on June 10, 2009. 6/09/10: J.kann - comments on the work plan were emailed to NYCHA (edoced). revised plan due July 10. 08/02/2010: J.Kann - revised work plan submitted July 27, 2010. Plan reviewed approved in an email of 8/2/2010. 2/4/11: J.Kann - SAR received on 1/28/11 and edoced. 10/20/11: J.Kann - comments sent to NYCHA on the SAR. One additional sample must be collected north of the tank. 10/27/11: J.Kann - observed collection of sample north of the tank. NO odor or visible contamination noted. NYCHA sent soil and groundwater grab samples to laboratory for analysis. 11/10/11:J.Kann - results of 10/27 sampling submitted. Noted that samples were only analysed for VOCs. Instructed NYCHA that SVOC analysis must also be done. 12/1/11: J.Kann - received results of SVOC sampling and a letter requesting closure of the spill. Reviewed data. Minor SVOCs detected, no VOCs detected. Sample was collected from the fill port area. No further action necessary. Spill closed. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 10/28/03 ROSSAN, DDO: Called Norman who confirmed that spill is contained. DEP was informed of the 20 gallons of oil which went into the sewer. The rest of the oil is on concrete pavement and contained. The Mobile Boiler company on site is about to start the clean-up. No soil was impacted. Norman will call back with Up-date. Copy of spill report was given to Jon. Ed. 11/02/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/17/06: Reviewed NYCHA

CONEY ISLAND SITE 1B (CAREY GARDENS) (Continued) **U001840666**

spill report along with invoice and manifest documents from Clean Venture, contractor hired to clean up spill. But according to report A.L. Eastmond cleaned up the spill. The dates on the invoice and manifest do not match the spill date. Cannot close out until the correct documents are submitted. - SK 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 09/27/06: Discrepencies in documentation noted above suggest possible confusion in NYCHA documents between this spill and spill 0400233. - JK 06/14/07: This site, based on address listed - 2007 Surf Avenue is actually Coney Island 1 (Site B) NOT Cary GArdens. This is likely the source of the confusion. Spill 0400233 was actually Carey Gardens. A.L. Eastmond did the cleanup at this site, according to NYCHA. The catch basin was vacuumed and affected areas cleaned. For this reason, the spill was closed. - J. Kann"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY. AFTER TANK WAS PULLED, HOLES DISCOVERED IN TANK BOTTOM, PRODUCT POOLED IN EXCAVATION PIT. VAC TRUCK PUMPED ABOUT 300 GALLONS OF PRODUCT FROM PIT, BACKHOE EXCAVATED A LOT OF GROSSLY CONTAMINATED SOIL, BUT THERE'S STILL A LOT OF CONTAMINATED SOIL, PROBABLY WITH PRODUCT ON WATER TABLE, LEFT BEHIND. EXCAVATION STOPPED BECAUSE THREATENED TO UNDERMINE ACTIVE DRIVEWAY. JK ALLOWED BACKFILLING OF EXCAVATION WITH UNDERSTANDING THAT RESIDUAL CONTAM. SOIL AND FREE PRODUCT WILL BE ADDRESSED AT SOME POINT IN THE NEAR FUTURE. END-POINT SAMPLES WERE COLLECTED FOR LAB ANALYSIS. SEE ALSO SPILL #9805012 (TANK TEST FAILURE) AND #9711638 (SOIL CONTAMINATED BY #2 FUEL OIL ENCOUNTERED DURING MONITORING WELL INSTALLATION). See also spill #9401508 (gasoline tank failure). Site is under remediation by LiRo Engineers under the NYCDDC Consent Order. - JK, 1/6/05. LiRo has installed and is operating a multi-phase extraction system at the site. Dissolved-phase groundwater contamination has decreased considerably, though free product continues to appear in several wells. System has been adjusted to focus on remaining hot spots, turning off extraction wells in relatively clean areas of the site. 3/01/05: DEC gave email approval of proposed soil boring locations for upcoming round of semi-annual soil monitoring to evaluate current soil conditions at the site. - JK 7/6/05: DEC reviewed Quarterly Monitoring Report for Dec. '04 through Feb. '05, with recommendation to shut down all extraction wells except EW-12, EW-13 and W-15, and to modify EW-15 to operate as an SVE well, in order to focus on remaining contamination. DEC issued letter approving these recommendations on 7/6/05. - J. Kolleeny 9/26/05: DEC reviewed Quarterly Monitoring Report for June through August 2005, presenting 3 proposed boring locations for upcoming round of soil sampling and recommending installation of ORC socks in wells MW-3 and MW-7. JK of DEC sent approval email on 9/26/05, but also asked that wells MW-10 and MW-13 (MTBE above stds. in April '05 but not sampled in July '05) be sampled in next groundwater monitoring event. - J. Kolleeny 12/07/06: Reviewed LiRo's last quarterly monitoring report for site, for Sept.-Dec. '05, dated Jan. 20, 2006. MPE system is shut down due to problem with liquid ring pump. Groundwater results show low levels of MTBE in wells MW-3, MW-7 & MW-13, and persistent inch or so of free product in MW-12 (product in MW-4, MW-11R comes and goes). LiRo recommended not replacing LRP, installing ORC socks in wells with MTBE, and bi-monthly vac truck visits to address free product in

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

MW-12. Site transferred to Greyhawk/Roux. Reviewed Roux's first quarterly report, for April-June 2006, dated June 30, 2006. Free product present in MW-4 (0.06 ft. in 5/06, 0.09 ft. in 6/06) and MW-12 (0.19 ft. in 5/06, 0.39 ft. in 6/06); sheen in MW-11R in June '06. MTBE detected in MW-3 (110 ppb) and MW-7 (11 ppb), naphthalene detected in MW-11R (11 ppb). Roux plans to use a bailer or Spill Buddy to recover product from MW-4 and MW-12; they recommend maintaining system shutdown status, evaluating alternative remedial options for remaining contamination, continuing quarterly groundwater sampling and monthly well gauging, and dropping wells MW-1, MW-2, MW-5, MW-6, MW-8, MW-9, MW-14 and MW-15 from groundwater monitoring program. Sent email to Brian Morrissey of Roux (copied Andy Ledins, Ed Looney of Greyhawk) asking that this site be added to agenda for upcoming meeting with DDC on Dec. 12, 2006. Will discuss site at meeting. - J. Kolleeny 02/08/07: Reviewed Roux's Quarterly report for July-Aug. '06, and received/reviewed email from Brian Morrissey of Roux on 2/7/07 stating: Here is an update regarding NYCDOS Brooklyn East 13; Spill #9808560: Product Levels/Groundwater Gauging: Monthly groundwater gauging and quarterly sampling are conducted. Although several site wells have historically exhibited free phase product, there are currently only 3 wells that routinely require replacement of absorbent socks for sheen control. As you may note from attached PDF file of groundwater gauging tables [in eDocs], only trace amounts of product have been detected sporadically in one well (MW-12) over past six months (0.01 ft in Aug. and 0.01 ft in Jan., no detectable product other months). Wells MW-04 and MW-11R have not exhibited any measurable free product, but do exhibit a sheen. Groundwater Results: As reported in Dec. 15, '06 quarterly report, groundwater results show that NYSDEC AWQSGVs were only exceeded in 4 monitoring wells (MW-01, MW-03, MW-04, and MW-14) with highest total VOCs being 88 ppb (MW-03). Also note that total VOCs of 51 ppb in MW-04 represent only minor exceedances for Isopropylbenzene, Naphthalene and tert-Butylbenzene. Monitoring well MW-11R exhibits only 10 ppb of MTBE, equal to its AWQSGV. No SVOCs were detected, with exception of MW-11R (5.4 ppb, Fluorene), far below its AWQSGV of 50 ppb. Based on these fairly clean analytical results, Roux Associates will attempt to take fingerprint samples of detected product in MW-04, MW-11R and MW-12 during next gauging round to determine if interface being detected by equipment is, in fact, petroleum product. Recommendations: Roux Associates would like to respectfully reiterate recommendations set forth at December 12, 2006 meeting and in Dec. 15, '06 Quarterly Monitoring: 1) Maintain remedial system shutdown status and secure system (to remain onsite). 2) Reduce groundwater sampling frequency from quarterly to semi-annual. 3) Remove SVOCs from sampling program, since SVOCs were detected in only one well and below NYSDEC AWQSGVs. 4) Remove monitoring wells MW-02, MW-05, MW-06, MW-07, MW-08, MW-09, MW-10 and MW-15 from sampling schedule since no compound, either VOC or SVOC, has been detected above NYSDEC AWQSGVs for more than two consecutive monitoring periods. 5) Reduce gauging frequency from monthly to quarterly, as sporadic, trace amounts of product are only detectable in one monitoring well (MW-12), and appear to be effectively controlled by use of petroleum absorbent socks. 6) Remove absorbent socks from MW-04 and MW-11R. If product reappears during the next subsequent gauging round, absorbent socks will be re-installed. 7) Obtain a sample for petroleum fingerprint analysis from MW-04, MW-11R and MW-12. I sent email approving these recommendations on 2/8/07. - J. Kolleeny 03/01/2007: This spill case

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

was transferred to A. Doronova. - AD 03/12/2007: Reviewed site file. This site is in semi-annual monitoring stage. AD 04/24/2007: Received quarterly monitoring report dated April 11, 2007 by Roux. Report covers period October through December 2006. It states that, low-level residual VOC groundwater contamination remains in only four MW on the site. During November 8 and 9 gauging events, odor was detected in wells MW-01, MW-07, MW-08, MW-13 and MW-14. On November 9, 2006, free-phase product appear in wells MW-04 and MW-12 and these two wells could not be sampled. But in the Product Thickness evaluation it states that no free-phase product was detected during the reporting period. (Statements conflict?)In total 14 groundwater samples were conducted on November 8 and 9, 2006. VOC were detected in only five of the 14 MW sampled. The NYSDEC AWQSGVs were exceeded only in four of the five MW. (MTBE - 97ug/L at MW-03). No SVOCs were detected in any of the MW. Based on the data Roux recommends to reduce the frequency of groundwater monitoring from quarterly to annual due low-level residual contamination remains only in four site MW. Spoke to J. Kolleeny regarding free-phase product statements conflict. Sent an email to B. Morrissey of Roux, where asked to clarify this issue; and also, as J. Kolleeny suggested, asked him to keep MW-07, which was previously approved to be removed from sampling program, and suggested to remove MW-01 instead. AD 04/26/2007: Received an email from B. Morrissey. He will clarify free-product statements conflict in the next QMR (1st quarter of 2007). In this report Roux will also comply with the recommendations approved by J. Kolleeny. AD 10/17/2007: Received semi-annual monitoring report. Will review. AD 11/14/2007: During the reporting period Roux performed two rounds of gauging (January and June 2007) and one round of groundwater sampling (January 2007). On the January gauging round, 0.01 feet of free-product was detected in well MW-12 and product sheen was detected in wells MW-04 and MW-11R. Absorbent socks were replaced in all these wells. Although MW-04 and MW-11R exhibited an apparent sheen, no VOCs were detected in MW-11R and naphthalene (9ug/L) was only detected VOC in MW-04. Therefore, Roux conclusion is that the product sheen detected in these two wells may not be petroleum related. But according to data from July 2005 sampling round a fingerprint analysis for a sample of free product from well MW-04 indicated it as a weathered No. 2 fuel oil. Groundwater analytical results: VOCs were detected only in four (MW-03, MW-04, MW-14 and MW-18) of the 15 wells sampled and at relatively low levels. MTBE (14ug/L) in MW-03; benzine (2ug/L) in MW-14 and MW-18; naphthalene (9ug/L) in MW-04. Based on the data Roux states that very low-level residual VOC groundwater contamination remain at the site. Roux recommends to conduct additional soil investigation to determine the current soil quality conditions. An additional site investigation work plan proposes to advance ten soil borings in the historically most impacted soil locations. After evaluation of the results of investigation Roux will determine whether the site should be considered for closure. AD 11/20/2007: Spoke with Jon Kolleeny regarding this site. He suggested to use vacuum truck for wells exhibiting free product and sheen. Spoke with B. Morrissey of Roux, asked him if they gauged the wells since June round. Roux gauged them in July and free product re-appeared in the wells MW-12 and MW-04. Product from MW-12 was identified as No. 2 fuel oil. Asked him if they can apply vacuum truck to these wells. Brian said that the amount of the free product is too small for such measure and that they will try to do bailing. Roux going to perform next gauging event

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

in a week. Asked him to collect free product sample for fingerprint analysis. Later sent an email to Afsar Samani approving ASIWP with a suggestion to apply vacuum truck to wells historically exhibiting sheen and free product. AD 08/08/2008: Received a Semi-Annual Monitoring report. Will review. AD 10/22/2008: Reviewed the report. Roux performed additional site investigation from January 14 to 15, 2008. The scope of work included advancing if 9 soil borings, followed by collection of soil samples. According to the report: Soil quality: No VOCs were detected above RSCOs in any of the 18 soil samples collected from 9 soil borings. Three SVOCs were detected in only one soil boring (RXSB-10) slightly above their RSCOs. Groundwater quality: In April 2008 only Naphthalene was detected in MW-04 (12ppb) No VOCs were detected in the remaining six wells sampled (MW-03, -07, -13, -14, -17 and -18). Based on the historical GW quality data, the majority of the site wells stabilized at non-detect conditions. Free-phase product was detected in two wells during the monitoring period: MW-04 (0.01' in July 2007; and MW-12 (0.01' in July 2007, and 0.03' in November 2007 and April 2008). Based on this data, Roux concludes that: resuming operation of the MPE system would not be efficient of cost effective due to high level of achieved cleaup; low-level residual VOC GW contamination remains in one onsite well near the source area, in which free-phase product intermittently appears; residual SVOC soil contamination slightly above NYSDEC RSCOs remains in a localized area; natural attenuation is apparently taking place at the site. Roux recommends: remove wells MW-03, MW-13 and MW-18 from the GW sampling program due to non-detect VOCs in these wells for two consecutive events; remove SVOCs from the GW sampling program; reduce the frequency of the gauging program; decommission and dismantle the MPE; use petroleum-absorbent socks in MW-04 and MW-12 on as-needed basis. Will prepare a letter. AD 11/10/2008: Sent an email to Afsar Samani. Approved the recommendations with some comments. AD 04/28/2009: Received a Semi-Annual Monitoring report for July 2008 - February 2009 period. DL pdf copy to eDocs. Will review. AD 05/21/2009: Reviewed the report. During the reporting period, on July 23 and October 10, 2008, Roux Associates performed gauging of site monitoring wells. Monitoring wells MW-01 and MW-16 have been paved over and MW-11R was found to have an irretrievable metallic obstruction at 3.91 feet bls; thus, they can no longer be gauged. In addition, MW-06 was not accessible during the July and October 2008 gauging events due to NYCDOS equipment. On July 23, 2008, a petroleum absorbent sock was installed in monitoring well MW-04 and one was replaced in MW-12. Due to the presence of free product on October 10, 2008 the socks were replaced. Groundwater Sampling: Following the October 2008 gauging event, Roux Associates performed groundwater sampling of site monitoring wells. Groundwater flow at the site is in a general north-northwesterly direction on the south side of the site and in a southerly direction beneath the site, under these possibly tidally-influenced conditions. Product Thickness: Free-phase product was detected in two wells during the monitoring period in October 2008: MW-04 (0.01 foot); and MW-12 (0.02 foot). Groundwater Quality: In October 2008, one VOC (MTBE) was detected in monitoring wells MW-03 and MW-07, at concentrations of 9 and 7 micrograms per liter (?g/L), respectively. Neither concentration exceeds the NYSDEC AWQSGV for MTBE of 10 ?g/L. No additional VOCs were detected in the remaining four wells sampled (MW-13, MW-14, MW-17, and MW-18). Based on the historical groundwater quality data presented in the report,

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

the majority of the site wells appear to have stabilized at non-detect conditions. Residual low-level VOC contamination was detected in two onsite monitoring wells (MW-03 and MW-07), which have been fluctuating at low levels since at least April 2005. Based on the conclusions cited above, Roux Associates recommends the following: 1. Replace petroleum absorbent socks in monitoring wells MW-04 and MW-12 on an as-needed basis. 2. Decommission and dismantle the MPE system pending NYSDEC approval. 3. Continue semi-annual groundwater monitoring (gauging and sampling) until free-phase product is no longer detected in MW-04 and MW-12 and confirmation site-wide VOC groundwater sampling is conducted in support of a request for NFA. Some of these recommendations, such as decommission and dismantling of the MPE; usage of petroleum-absorbent socks in MW-04 and MW-12 on as-needed basis, were approved by DEC in November of 2008. AD 02/24/2011: Received a Semi-Annual Monitoring report (July to December 2010). DL the report to eDocs. Will review. AD 03/24/2011: Reviewed the report. In February 2010, NYCDDC replaced Greyhawk/Roux with LiRo Engineers, Inc. (LiRo) to serve as construction manager (CM) for the Brooklyn East 13 site. On March 17, 2010, LiRo conducted a site reconnaissance, completed well inspections and gauged accessible site monitoring wells. During the gauging event, MW-04 was noted as not destroyed and an absorbent sock was observed in the well. On August 4, 2010, LiRo conducted quarterly groundwater gauging of fourteen of fifteen active Site monitoring wells. GW flow indicate radial flow outward from a hydraulic high centered in the southwest portion of the site in the vicinity of MW-02, MW-04, MW-06 and MW-15, with an underlying generally westward gradient. On September 23, 2010, LiRo conducted semi-annual groundwater sampling and collected samples from five of six wells: MW-03, MW-04, MW-07, MW-14 and MW-17. Approximately 0.10 feet of free product was measured in MW-12 and GW sample was not collected from this well. The oil was identified as a weathered #2 fuel oil by fingerprint analysis. On January 7, 2011 EFR was conducted at monitoring wells MW-04 and MW-12. Approximately 105 and 109 gallons of total fluids were removed by EFR from MW-04 and MW-12. Prior to EFR, some visible indications of free product were observed on the water level probe at MW-04 and MW-12, but no measurable product thickness was observed in either well. After the completion of EFR, there were no visible indications of free product observed at either well. Groundwater gauging was conducted on 11 of 15 monitoring wells on January 7, 2011. Groundwater samples were collected from 5 of 6 wells and analyzed of STARS list VOCs, MTBE and Naphthalene. A sample was not collected from MW-12 due to the presence of approximately 0.10 feet of a LNAPL. The MPE system, which is currently inactive, consists of a network of 17 extraction wells (EW-01 through EW-17) from which free phase product, contaminated groundwater and soil vapors were extracted using a liquid ring vacuum pump. Dismantling and removal of the system will be deferred until confirmation of the absence of free product in Site monitoring wells. The most recent soil investigation was completed in January 2008. A total of 18 soil samples were collected from 9 soil borings and submitted for STARS list VOCs and SVOCs. No VOCs were detected above their NYSDEC TAGM guidance values for soils in any of the 18 soil samples. Three SVOCs were detected in only one soil boring (RXSB-10) at concentrations slightly above their respective guidance values. The highest TVOCs and TSVOCs were measured in the sample from RXSB-05 (6 to 8 feet bgs) at 7,830 ppb and 47,800 ppb. There were, however, no TAGM 4046

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

exceedences in the sample from RXSB-05. One or more VOC were detected in 2 of 5 monitoring wells sampled at concentrations above their respective TOGS guidance value. Monitoring well MW-04 exhibited the highest TVOCs at 124.53 ppb and MW-03 of 13.88 ppb ith only one elevated compound - MTBE. Based on the data, LiRo concludes the following: " Moderate levels of TSVOCs were observed in soil samples collected in January 2008 from RXSB-05 and RXSB-10, however only three SVOCs were found above their NYSDEC standards in RXSB-10 soil samples. " Recent and historic groundwater sampling results show de-minimums VOC concentrations in MW-4 and MW-12. " Indications of a very thin free-phase product (i.e. sheen to 0.10 feet) have been historically observed in MW-04 and MW-12 with decreasing thicknesses and volumes over time. The recent observation of free-phase product in MW-12 was a weathered #2 fuel oil. LiRo recommends the following: " Prepare and submit a 6-month Summary Monitoring Report and an Annual Monitoring Report with recommendations for changes (as necessary) to the remedial program. Proposals " Conduct monthly enhanced fluid recovery (EFR) on MW-04 and MW-12, for the next six months. " Revise the current Site Monitoring Program (SMP) to semi-annual gauging of all wells, and semiannual sampling of only MW-4 and MW-12 for VOCs, MTBE and Naphthalene. " Petition for Spill Closure if supported by EFR program and sampling results. AD 09/30/2011: Received a Semi-Annual Monitoring report (January to June 2011). DL the report to eDocs. Will review. AD 10/11/2011: Reviewed the report. It states that between January 7, 2011 and July 13, 2011, LiRo conducted five EFR events at site wells MW-04 and MW-12 in an effort to induce mobilization of small volumes of free-phase product presumed to remain in the vicinity of these wells. An event was not conducted in February 2011, due to weather conditions and access restrictions. Trace amounts of free-phase product (i.e. visible sheen or beads on probe) were observed diring January 2011 EFR event in both wells, and during April EFR event in well MW-12, but no measurable thicknesses or quantifiable volumes were recorded. During the following May and July EFR events no free product was detected in these wells. The EFR efforts at the site was discontinued after the last event conducted on July 13, 2011. On April 22, 2011, LiRo conducted semi-annual groundwater sampling and collected samples from six wells: MW-03, MW-04, MW-07, MW-12, MW-14 and MW-17. Samples were submitted for analysis of STARS list VOCs, MTBE and Naphthalene. One or more VOCs were detected in 3 of 6 monitoring wells sampled at concentrations above their respective NYSDEC AWQSGVs. Monitoring well MW-04 exhibited the highest TVOCs at 45.12 ug/L. Excluding Naphthalene, monitoring well MW-07 exhibited a TVOC concentration of 13 ug/L with only one compound (MTBE) above its AWQSGV. Groundwater elevation contour maps, generated from both the January and April 2011 water level measurements indicate variable flow directions at the site, likely due to tidal influences, with an underlying generally westward flow direction. Typical hydraulic gradients observed at the site - range between approximately 0.023 feet per feet between MW-7 and MW-10 on January 7, 2011) and 0.004 ft/ft (as measured between MW-4 and MW-6 on April 22, 2011). Based on the information presented in this monitoring report, LiRo concludes the following: " The MPE system and post MPE remedial measures have successfully removed soil and groundwater petroleum contamination at the Site. " No VOCs were detected above guidance values in any of the 18 soil samples collected in 2008. " Dissolved phase VOC concentrations are near or below AWQSVGs with TVOC concentrations

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

consistently below 130 ug/L. " No measurable thicknesses or volume of product was observed during routine water level measurements or during the 5 EFR events conducted at MW-04 and MW-12 throughout this monitoring period. Based on the analysis and conclusions presented above, LiRo recommends the closure of Spill No. 9808560. Following spill closure approval, Site monitoring wells will be decommissioned in accordance with NYSDEC CP-43, Groundwater Monitoring Well Decommissioning Policy. To discuss the spill closure request with J. Kolleeny of DEC. AD 11/21/2011: Discussed the spill closure with J. Kolleeny of DEC. Based on the soil and GW data provided it was decided to approve case closure. Issued and sent an approval letter to A. Samani of DDC. DL pdf copy of the letter to eDocs. Case closed. AD "

Remarks: "during an underground tank pull they encountered contaminated soil & its all been excavated - they have also backfilled - dec was on site [ACTUALLY, IT HASN'T ALL BEEN EXCAVATED - SEE DEC NOTES]"

DEC Memo:	"5/19/21 - Obligado - Desk Duty - I called David. DEP got a report about a hazardous chemical odor at a sanitation garage. 2 550 gallon unused storage tanks which are emitting odors. They reporting sulfurous odor. They ventilated the tanks. The odors are still strong right now. Sanitation will have a vac truck to flush out the tanks. Sanitation contact - Joseph Liberta -(646) 847 4854. Waiting for crew. The smell appears to be coming from 2 sumps. There are 2 closed in place tanks. The smell is coming from the tanks. 2 nights ago they put sand in the tanks. The whiff comes every few minutes. One employee went to the hospital earlier today. He threw up several times. He was cleaning in the area and felt ill. The other was just complaining of being nauseaus. The garage doors are wide open so the area is well ventilated. Closed in place in 1995. I received a call back from Mr. Joseph Liberta at Department of Sanitation. They had a vac truck vacuum out the abandoned top of tank sumps. They confirmed the tanks were infact closed in place with sand. Subsequent to vacuuming out the sumps, no additional odors were reported. They plan to seal the manholes with cement. As per Randall Austin, no further action required and spill can be closed."
Remarks:	"2 550g storage tanks underground omitting strong sulphur odor. 2 employees have gone for medical treatment"

DEC Memo:	"A LiRo Engineers field geologist was preparing to abandon wells at the DOS Brooklyn East 13 facility located at 2012 Neptune Avenue, Brooklyn, NY, as part of our contract with the New York City Department of Design and Construction NYCDDC. This work was initiated in response to the recent closure of Spill No. 9808560. During pre-abandonment activities at former extraction well (EW-02), the geologist discovered approximately 1-foot of free product in the well casing. EW-02 is a 2-inch diameter extraction well for the former Multi-Phase Extraction (MPE) system shut-down in January 2004. See spill 9808560 01/06/2012: This spill case was transferred to A. Doronova. - AD Put site priority as P1. Sent an e-mail to S. Frank of LiRo requesting to submit all available data for the case to my attention. AD 01/13/2012: Received an e-mail from S. Frank of LiRo with an attached report detailing the status of spill #1109339. Report also includes IRM for the site. A hard copy of the report forwarded to DEC as well. DL the pdf copy of the report to eDocs. Will review. AD 01/17/2012: Reviewed the report. It states that in a letter dated October 21, 2011, the NYSDEC approved spill No. 9808560 closure and subsequently, LiRo initiated the abandonment of monitoring wells and 17 remnant extraction wells at the site on October 25, 2011 and abandonment proceeded from north to south, with the successful abandonment of monitoring wells MW-03, MW-07, MW-09, MW-10 and extraction wells EW-04 and EW-06. During the abandonment of extraction well EW-02 approximately 0.5 feet of free-product was observed. The product was described as used oil, opaque and black in color. Upon discovery, LiRo reported the new spill and Spill No. 1109339 was assigned. Further investigation exposed more residual free-product in other extraction wells (EW-02, EW-05, EW-08, EW-09 and EW-13). As reported in the field, the product appeared to have two different consistencies (i.e. originating from two different sources) one discolored black with a thick and viscous consistency (EW-02 and EW-05) and one with a light brown color, translucent appearance and a less weathered and less viscous consistency (EW-08, EW-09 and EW-13). Two product samples of the two different consistencies, were collected from two extraction wells (EW-02 and EW-09) on October 25, 2011, and submitted for petroleum finger-print analysis. Laboratory analytical results reported Lubricating Oil for the EW-02 sample and Weathered Diesel for the EW-09 sample. EFR events were conducted at the site on October 27, November 2 and December 19, 2011 and supplemental groundwater monitoring was

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

conducted on October 27th, 31st and December 19th. Product thickness measurements were conducted in site wells and vacuum induced EFR was applied to extraction wells EW-02, EW-09, EW-11 and EW-13. It is suspected that the source of product observed in EW-02 is from improper handling and storage of waste oil at the site and the source of product observed in EW-09 is remnant contamination from the former remedial system or from Spill No. 9808560. LiRo states that the observations of product from either source represent small volumes and may be effectively remediated by the application of EFR as IRM. The proposed IRM includes monthly EFR with groundwater level and product thickness monitoring at the site between February 2012 and July 2012 to provide information and field data on the nature and volume of product at the site. A vacuum truck will be used to conduct EFR extraction on site monitoring and extraction wells that have measurable thicknesses of free-product during each event or as indicated by monthly groundwater and product monitoring. At the end of the IRM period LiRo will make recommendations for further actions based on the results of the IRM. LiRo recommends re-opening the closed spill number (Spill No. 9808560) and maintaining the new spill (Spill No. 1109339) as separate spill numbers for the purpose of tracking the observations of two separate types of free-product at the site. Diccussed the WP with J. Kolleeny of DEC. The closed spill 9808560 will not be reopend. The site will have new spill number - 1109339. GW samples should be collected at the end of the proposed 6-month period. To issue an IRM WP approval letter. AD 01/18/2012: issued and sent an approval letter to A. Samani of DDC with the following remark: At the end of IRM period, groundwater samples should be collected from all wells from which LNAPL has been successfully removed, and from a selection of nearby monitoring wells, and submitted for laboratory analysis. The groundwater analytical data should be included in the summary report. AD 08/08/2012: Had a quarterly meeting with DDC and LiRo. Discussed the site. Monthly EFR events are conducted at the site. Evaluation of this IRM will be presented in 2nd quarter 2012 monitoring report. AD 11/16/2012: Received IRM report for the period January - September 2012. Will review. AD 12/21/2012: Reviewed the report. It states that the IRM performed thus far in 2012 (January through September) included monthly EFR with groundwater level and product thickness monitoring at the Site. EFR events during this monitoring period were completed in February through May, August and September 2012. A vacuum truck was used to conduct EFR extraction on Site monitoring wells and extraction wells that have measurable thicknesses of free-product during each event or as indicated by monthly groundwater and product monitoring. Hydraulic Monitoring During this monitoring period, groundwater gauging events were conducted on February 8, March 13, April 26, May 31, August 23 and September 10, 2012. Water levels were collected from non-abandoned, accessible monitoring and extraction wells. Groundwater elevation contour maps, were generated from both the February 2012 and September 2012 water level measurements. Contours indicate variable flow directions at the Site, likely due to tidal influences. Typical hydraulic gradients observed at the Site range between approximately 0.01 feet per foot (ft/ft) (as measured between MW-18 and MW-12 on February 8, 2012) and 0.003 ft/ft (as measured between MW-5 and MW-6 on September 10, 2012). Between January and September 2012 six EFR events were conducted in an effort to induce mobilization and remove small volumes of residual free-phase product remaining in the wells mentioned above. Varying

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

amounts of free-phase product were observed, but no quantifiable removal volumes were recorded. The suspected source of product observed in EW-02 (and surrounding wells) is from improper handling and storage of waste oil at the Site (Spill No 1109339). The source of product observed in EW-09 (and surrounding wells) is remnant contamination from the former remedial system or from Spill No. 9808560. In general, there was measurable free-phase product observed at Site in monitoring and extraction wells EW-02, EW-05, EW-08, EW-09, EW-13 and MW-12. However, there is no distinct trend in measured product thicknesses for this monitoring period. On October 29, 2012, flooding occurred at the Site from Hurricane Sandy. On November 1, 2012, at the request of NYCDDC, LiRo attempted a Site visit to determine what impacts (if any) the hurricane had at the Site. DOS representatives refused access to the Site. NYCDDC is currently coordinating access with DOS to evaluate current Site conditions. Groundwater samples will be collected, analyzed and submitted for the NYSDEC CP-51 list of VOCs, MTBE, Naphthalene and SVOCs (where applicable) when monitoring and extraction wells are free of petroleum product for six months. AD 12/10/2013: Received semi-annual IRM report for the periods: November 2012 to April 2013, and May 2013 to November 2013. DL the report to eDocs. Will review. AD 01/09/2014: Reviewed the report. It states that the scheduled EFR events for October 2012 through December 2012 were not conducted due to severe damage and flooding inflicted at the Site by Hurricane Sandy. During a November 1, 2012, Site walkover, conducted immediately after the storm, it was noted that a puddle of free-phase product (oil) of an unknown origin was in the road curb outside the Site. It was reported by the DSNY Site contact that the Site was closed and had been flooded by up to 7-feet of water and that the interior of the Site was contaminated by motor oil, waste oil and raw sewage. Access to the Site was not provided. During a November 30, 2012, follow-up Site visit to assess interior conditions, the DSNY Site contact stated that DSNY had not yet assessed the Site USTs or ASTs for damage or leakage. The DSNY Site contact noted that one (1) of the five (5) interior ASTs (the 275-gallon used oil AST) had become dislodged from its saddle and had been found floating on the other side of facility. The IRM EFR events and water level measurements resumed on January 9, 2013, and were conducted on a twice a month frequency between January 2013 and May 2013 and between September 2013 and November 2013. In June and July 2013 EFR events were performed on a monthly frequency and none were completed in August 2013 due to sub-contract issues. Between June 17 and 27, 2013, LiRo conducted a tidal influence study utilizing three (3) Site monitoring wells (MW-05, MW-08 and MW-17) and one extraction well (EW-14). On September 5, 2013, a new Spill was listed on the NYSDEC Database for the Site (Spill No. 1305932) with an unknown material and a reported cause of vandalism. The spill was called in during a floor drain/catch basin excavation when oil stained soil was observed. A separate Site Investigation Plan (SIP) for Spill Mo. 1305932 will be prepared and submitted to the NYSDEC after LiRo reviews proposed catch-basin excavation soil sample results. On November 26, 2013, LiRo collected supplemental fingerprint samples from EW-02, EW-05, EW-09 and EW-11. Conclusions: Between December 2012 and September 2013 fourteen EFR events were conducted in an effort to induce mobilization and remove residual free-phase product remaining in the wells with measurable product. Approximately 22,102 gallons of total fluids were removed from Site wells for the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

monitoring period (November 2012 to November 2013) for the IRM. Spill No. 1109339: For the monitoring period, there was measurable free-phase product (Waste Oil) observed at extraction wells EW-02 and EW-05. However, there was no distinct trend in measured product thicknesses due to the increase in thicknesses observed in EW-05 between June 2013 and September 2013 and subsequent decline. Spill No. 1305932: In general for the monitoring period, there was measurable free-phase product (Weathered Diesel) observed at Site in monitoring and extraction wells EW-08, EW-09, EW-13 and MW-12. There was a distinct decreasing trend in measured product thicknesses from the December 2012 high to the end of this monitoring period. The suspected source of waste oil product observed in EW-02 and EW-05 is from improper handling and storage of waste oil at the Site (Spill No 1109339). The suspected source of product observed in EW-09, EW-08, EW-13 and MW-12 is remnant contamination from the former remedial system from Spill No. 9808560 and is also associated with the oily soil reported for Spill No. 1305932. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect groundwater samples from all accessible Site wells and submit for analysis of the NYSDEC CP-51 list of VOCs and SVOCs. - Coordinate with the on-site DSNY representative to collect soil samples from the final catch basin excavation and submit for analysis of the NYSDEC CP-51 list of VOCs and SVOCs. Prepare a SIP after review of planned Site-wide groundwater sample results and catch basin soil sample results. There are no proposals that require NYSDEC approval. AD 07/24/2014: received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13 Garage, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 23, 2014. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a recommendation to reduce the groundwater sampling frequency from semi-annual to annual. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Craig T. Taylor Project Hydrogeologist LiRo Engineers, Inc. Will review. AD 08/05/2014: Reviewed the report. It states that the Site monitoring program (SMP) for the period of December 1, 2013 to May 31, 2014, included water level gauging from accessible Site wells, semi-annual sampling from nine (9) wells (MW-04, MW-05, MW-06, MW-08, MW-12, MW-13, MW-14, MW-17 and MW-18) and an EFR IRM at nine (9) locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13 EW-14, MW-04 and MW-12). All groundwater samples are submitted for analysis of CP-51 list VOCs and results are compared to the NYSDEC Division of TOGS (1.1.1). On October 25, 2011, abandonment of MPE system wells was initiated at the Site from north to south, however, the abandonment of extraction well EW-02 revealed approximately 0.5 feet of free-product within the well. The product was described as used oil, opaque and black in color. The completion of dismantling and removal of the system was deferred until freephase product is absent in remaining monitoring and extraction wells at the Site. Free

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

product data: For the current monitoring period there was an overall decrease, albeit sporadic, in thicknesses in EW-08, EW-09, EW-13 and MW-12 from the December 2012/January 2013 highs to December 2013/May 2014 lows. The product thicknesses measured at EW-11 exhibited an anomalous rise, up to 3.12 feet, between January 2014 and April 2014. The thicknesses in EW-11 have remained below 0.10 feet for the last three EFR events of the monitoring period. GW data: For the reporting period, routine semi-annual groundwater gauging and sampling was completed by LiRo on April 17, 2014. LiRo conducted semi-annual water level gauging at accessible Site monitoring wells and collected nine (9) semi-annual groundwater samples from Site wells April 2014 groundwater analytical results were compared to NYSDEC AWQSGVs. One VOC (Benzene) was reported at a concentration above its respective NYSDEC AWQSGV at one well location (MW-17). Groundwater total VOC concentrations ranged from non-detect (ND) in five (5) locations (MW-05, MW-06, MW-08, MW-12, and MW-13) to 10 micrograms per liter (?g/L) in monitoring well MW-17. A comparison of total VOC concentration trends between April 2011 and April 2014 shows low (i.e. less than 10 mg/L) concentrations of dissolved phase VOCs in site groundwater, with 8 of 9 sampled locations reporting all VOCs below their respective AMQSGVs in April 2014. All monitoring wells report a decreasing trend in VOC concentrations or no change with the exception of MW-18 which reported a slight increase in TVOC concentrations. EFR: Between December 2013 and May 2014 eleven (11) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 13,364 gallons of total fluids were removed from Site wells for the monitoring period. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. These actions will be conducted as part of the routine monitoring program until proposals beloware approved by the NYSDEC: The following proposals require NYSDEC approval: 1) Reduce the frequency of groundwater sampling from semi-annual to annual. AD 03/13/2015: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on March 13, 2015. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval for consolidation of Spill Number 1305932 into Spill Number 1109339. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 04/03/2015: Reviewed the report. It states that: EFR: For the monitoring period (June 2014 to December 2015) approximately 4,041

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

gallons of total fluids were removed from site wells by EFR. For the current monitoring period ten (10) EFR events were conducted. A 2nd event for July 2014 was not conducted due to site inaccessibility and after the 1st event for November 2014 due to NYCDDC budgetary constraints. Starting in January 2015, product removals will be completed by hand-bailing (i.e. wells with 2-inch or greater inner diameters) and/or eristaltic pumps (i.e. wells with less than 2-inch inner diameters) until the resumption of removal by EFR. Soil conditions: Oily soil was observed during the excavation of a Site catch-basin in September 2013 and subsequently Spill No. 1305932, was assigned to the site. LiRo coordinated with DSNY to collect soil samples from the final excavation. During this monitoring period five (5) soil samples (i.e. W1 through W4 and Bottom) were collected from a DSNY managed catch-basin excavation. All December 2013 soil samples were submitted for analysis of the NYSDEC s October 21, 2010, Final Commissioner Policy, CP-51 Soil Cleanup Guidance (CP-51) list of VOC and SVOCs and results were compared to CP-51 Soil Cleanup Levels (SCLs) criteria. One or more CP-51 list VOCs were reported at concentrations above SCLs in three (3) of five (5) December 2013 soil samples: W1, 5.5 to 6.0 feet bgs; W2, 5.5 to 6.0 feet bgs and W4, 5.5 to 6.0 feet bgs. Reported total VOCs ranged between ND in W3 sample to 27,000 ug/kg in the W2 sample. One or more CP-51 list SVOCs were reported at concentrations above SCLs in four (4) of five December 2013 soil samples: W2, 5.5 to 6.0 feet bgs; W3, 5.5 to 6.0 feet bgs; W4, 5.5 to 6.0 feet bgs and Bottom, 6.5 to 7.0 feet bgs. Reported total SVOC concentrations ranged between 15,560 ug/kg in the Bottom sample to 116,500 ug/kg in the W2 sample. Summary: On December 17, 2014, LiRo conducted groundwater gauging at accessible Site wells. The performance of field activities has been impacted at the site due to NYCDDC delays in funding for the new PW348-64 contract. As a result of these delays, groundwater sampling and November/December 2014 EFR events were not completed during this monitoring period. EFR Between June 2014 and December 2014 ten (10) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 4,041 gallons of total fluids were removed from Site wells for the monitoring period. Overall, product thicknesses were typically below in EW-02 and EW-05 with an overall monitoring period average of 0.06 feet, when compared to the previous monitoring periods. The distinct decreasing trend in measured product thicknesses, from the December 2012 high to the end of this monitoring period at the site in monitoring and extraction wells EW-08, EW-09, EW-13 and MW-12, has been maintained. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program until proposals below are approved by the NYSDEC: - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. Proposals: The following proposals require NYSDEC approval: 1) Consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). As it was discussed and agreed at the quarterly meeting with DDC and LiRo, consolidation of the spills will be postponed till groundwater samples from the new spill will be collected. AD

12/21/2015: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 21, 2015. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval for consolidation of Spill Number 1305932 into Spill Number 1109339. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/25/2016: Reviewed the report. It states that for the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on May 14, 2015, and September 23 to 24, 2015. A supplemental groundwater sampling event was also completed on January 23, 2015, in lieu of the 2nd 2014 sampling round not completed due to NYCDDC delays in funding for the new PW348-64 contract. For each of the three sampling rounds, LiRo conducted water level gauging at accessible Site wells. For the January 2015 and May 2015 sampling rounds LiRo collected eight (8) groundwater samples. For the September 2015 sampling round LiRo collected nine (9) groundwater samples. During the September 23, 2015, groundwater gauging event groundwater was observed between 3.44 and 5.41 feet bgs. Groundwater elevations ranged between -0.37 and 0.41 feet AMSL. Free phase product was detected in two (2) gauging locations: EW-09 and MW-02R, with thickness ranging between 0.17 feet (EW-09) and 0.19 feet (MW-02R). Groundwater Total VOC Trends: A review of total VOCs trends in the January 2015, May 2015 and September 2015 shows very low (i.e. less than 10 ug/L) concentrations of dissolved phase VOCs in Site groundwater, with all sampled locations reporting all VOCs below their respective AWQSGVs in all three sampling rounds. During the August 6, 2015, quarterly meeting with NYCDDC, NYSDEC and LiRo, the NYSDEC expressed concern that VOCs observed in the December 2013 catch-basin soil samples may be impacting groundwater and requested the completion of site-wide groundwater sampling. On September 11, 2015, two (2) replacement monitoring wells (MW-02R and MW-04R) were installed at the Site and both wells were developed on September 14, 2015. EFR: The performance of field activities had been impacted at the Site due to NYCDDC delays in funding for the new PW348-64 contract and as a result of these delays, EFR events were not completed between January 2015 and March 22, 2015. On March 2, 2015, March 9, 2015 and March 16, 2015, LiRo conducted hand-bailing and product removal using a peristaltic pump. However, due to the relatively small volumes removed (i.e. typically less than 5 gallons), the March 2015 removals via peristaltic pump are not included in EFR total fluid volume estimates. EFR events resumed at the Site on March 23, 2015. For the monitoring period approximately 16,685 gallons of total fluids were removed from Site wells by EFR. For the current monitoring period fifteen (15) EFR events were conducted. Overall, product thicknesses were within historic averages and with an overall monitoring period average of 0.03 feet, when compared to the previous monitoring periods. A June 2015 spike in the
