[1] Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.

[3] Difference = Final Pressure - Initial Pressure . Acceptance Criteria: (1) The difference must be less than or equal to + 0.25psi. (2) Pressure readings must be at least 24 hours apart.

If time frame was not met, the PM must authorize shipment of canister **PM Authorization** **Date:**

REVISION

The report being provided is a revision of the original report sent on 9/18/2024. The report (revision 1) is being revised due to Correcting compound list to Part 375 only..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/10/2024 6:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.1°C.

Receipt Exceptions

Job Narrative
460-311100-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/10/2024 6:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C.

Method 1633 - Per- and Polyfluoroalkyl Substances by LC/MS/MS
Samples RXSB-5_0-2_P (460-311100-1) and FB_09092024_P (460-311100-2) were analyzed for Per- and Polyfluoroalkyl Substances by LC/MS/MS. The samples were prepared on 9/12/2024 and 9/13/2024 and analyzed on 9/13/2024 and 9/14/2024.

Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the low-level laboratory control sample (LLCS) associated with prep batch 240-626866. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries. The LLCS recovered within limits for associated target analyte(s), therefore, the associated samples are reported. The following samples are affected:RXSB-5_0-2_P (460-311100-1) and (LLCS 240-626866/2-A).

The continuing calibration verification (CCV) recovered outside of control limits for IDA compound(s) . Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analytes associated with this IDA are within spec, data is reported. The following samples are impacted: FB_09092024_P (460-311100-2) and (240-211064-B-1-A).

Method Moisture - Percent Moisture
Sample RXSB-5_0-2_P (460-311100-1) was analyzed for Percent Moisture. The sample was prepared on 9/12/2024 and analyzed on 9/13/2024 and 9/14/2024.

Job Narrative
460-311117-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/10/2024 6:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.2°C.

Job Narrative
460-311172-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/11/2024 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.7°C.

Receipt Exceptions
Insufficient sample volume was provided for the following sample for the Field Filtered Dissolved metals analysis: FB_09112024 (460-311172-2). Container was not received. Per client request, the lab was instructed to filter unpreserved volume for Dissolved Metals.

Per laboratory policy, the Trip Blank sample date/time was changed to reflect the latest sample date/time of the sampling event. TB_09112024 (460-311172-3)

Method 8260D - Volatile Organic Compounds by GC/MS
Samples RXTW-4 (460-311172-1), FB_09112024 (460-311172-2) and TB_09112024 (460-311172-3) were analyzed for Volatile Organic Compounds by GC/MS. The samples were analyzed on 9/14/2024.

The continuing calibration verification (CCV) analyzed in batch 460-995829 was outside the method criteria for the following analytes: 1,1,1-Trichloroethane and Carbon tetrachloride (biased high). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analytes is considered estimated.

The laboratory control sample (LCS) for analytical batch 460-995829 recovered outside control limits for the following analyte: Carbon tetrachloride. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

REVISION

The report being provided is a revision of the original report sent on 9/19/2024. The report (revision 1) is being revised due to Correcting compound list to Part 375 only..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/12/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.1°C and 1.2°C.

Method 8260D - Volatile Organic Compounds by GC/MS
Samples RXTW-3 (460-311253-1), RXTW-2 (460-311253-2), RXTW-6 (460-311253-3), TB_09122024 (460-311253-4) and Dup_09122024 (460-311253-5) were analyzed for Volatile Organic Compounds by GC/MS. The samples were prepared on 9/13/2024 and 9/16/2024 and analyzed on 9/15/2024, 9/16/2024 and 9/17/2024.

The continuing calibration verification (CCV) associated with batch 460-996032 recovered above the upper control limit for 1,1,2-Trichloro-1,2,2-trifluoroethane and Dichlorodifluoromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

The method blank for analytical batch 460-996032 contained 1,2,4-Trichlorobenzene and Methylene Chloride above the method detection limit. These target analytes concentration was less than the reporting limit (RL) in the method blank; therefore, re-analysis of samples was not performed.

The continuing calibration verification (CCV) associated with batch 460-996003 recovered above the upper control limit for Isopropylbenzene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

The method blank for analytical batch 460-996003 contained Methylene Chloride above the reporting limit (RL). This compound is considered a common laboratory contaminant. The associated samples were not re-analyzed because the concentration of the common lab contaminant in the method blank was less than 5 times the RL.

Method 8270E - Semivolatile Organic Compounds (GC/MS)
Samples RXTW-3 (460-311253-1), RXTW-2 (460-311253-2), RXTW-6 (460-311253-3) and Dup_09122024 (460-311253-5) were analyzed for Semivolatile Organic Compounds (GC/MS). The samples were prepared on 9/13/2024 and analyzed on 9/14/2024.

The continuing calibration verification (CCV) analyzed in batch 460-995765 was outside the method criteria for the following analyte(s): 2,2'-oxybis[1-chloropropane], 2-Nitroaniline, 4-Methylphenol and Benzaldehyde. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 460-995677 and analytical batch 460-995765 recovered outside control limits for the following analytes: Atrazine and Benzaldehyde. These analytes were biased high in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8082A - Polychlorinated Biphenyls (PCBs) by Gas Chromatography
Samples RXTW-3 (460-311253-1), RXTW-2 (460-311253-2), RXTW-6 (460-311253-3) and Dup_09122024 (460-311253-5) were analyzed for Polychlorinated Biphenyls (PCBs) by Gas Chromatography. The samples were prepared on 9/14/2024 and analyzed on 9/16/2024.

Method 8081B - Organochlorine Pesticides (GC)
Samples RXTW-3 (460-311253-1), RXTW-2 (460-311253-2), RXTW-6 (460-311253-3) and Dup_09122024 (460-311253-5) were analyzed for Organochlorine Pesticides (GC). The samples were prepared on 9/14/2024 and analyzed on 9/16/2024.

The laboratory control sample duplicate (LCSD) for preparation batch 460-995875 and analytical batch 460-996147 recovered outside control limits for Endosulfan I on the primary column. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.
(LCSD 460-995875/3-A)

The surrogates Tetrachloro-m-xylene and DCB Decachlorobiphenyl recovery for the blank associated with preparation batch 460-995872 and 460-995875 and analytical batch 460-996147 was outside the upper control limits.
(MB 460-995872/1-B)

Job Narrative
460-311274-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 9/12/2024 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.6°C.

Method 1633 - Per- and Polyfluoroalkyl Substances by LC/MS/MS
Samples RXMW-6_P (460-311274-1) and FB_09122024_P (460-311274-2) were analyzed for Per- and Polyfluoroalkyl Substances by LC/MS/MS. The samples were prepared on 9/16/2024 and analyzed on 9/17/2024.

The low level continuing calibration verification (CCVL) and continuing calibration verification (CCV) associated with batch 240-627188 recovered outside of control limits for IDA compound(s) (flagged). Section 14.3.3 of the finalized EPA 1633 states that the recovery of target analytes for the CCV(s) must be within 70 - 130%, unless the analyte is not of concern for a given project. Since target analyte(s) associated with this IDA are within spec, data is reported.
