Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 11/01/2001: TOM HALL TELCON WITH NORMAN SEBOWSKI-NYCHA (718-707-5725) AT 1050 HRS. SEBOWSKI WILL HAVE MARIO MANDALONE UPDATE DEPARTMENT AS TO PROGRESS OF WORK. 11/01/2001: TOM HALL TELCON WITH MARIO MANDALONE AT 1510 HRS. 15K BEING REMOVED AND REPLACED WITH ANOTHER 15K. MODERATE CONTAMINATION ENCOUNTERED IN EXCAVATION. HORIZONTAL EXTENT OF CONTAMINATION SEEMS MINIMAL. VERTICAL EXTENT WILL BE DETERMINED. HOUSING AUTHORITY WILL SUBMIT CLOSURE DOCUMENTATION. 02/14/02 Reassigned from Hall (Region 7) to Kolleeny. 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 6/11/09: JKann - Spill transfered to J.Kann. Meeting held on 5/28 with ALC Environmental and NYCHA. Investigative Work Plan submitted on June 10, 2009. 01/28/2010: Remediation and other associated clean-up activities linked to this spill number is now under the oversight of Moses Ajoku, all correspondence related this case should be addressed

CAREY GARDENS II -NYCHA (Continued) **S105230039**

to me. (MA) 7/15/13: J.Kann - spill transferred from Moses Ajoku to J.Kann. 10/15/13: J.Kann - after reviewing the file, minimal impacts have been noted at this site. The 1996 investigation yielded not impacts to soil or grounwater. During tank removal (as stated above) some impacts to soil were noted. I requested any informaiton on the tank removal from NYCHA today via an email. After receiving a response from them, I will likely request that the two remaining wells be gauged and sampled so the site can be reviewed for closure. 6/13/14: J.kann - received a response from NYCHA. Some lab data was submitted for soil disposal during tank removal work on 10/16/13. In addition, NYCHA responded that a mobile boiler is in place at the site and much sand was washed up into the area as a result of Hurricane Sandy. Therefore, the two older wells are not accessible. I am considering site for closure. 7/16/14: J.Kann - received the RIR for the site on 6/25/14. 3 borings were advanced and 2 monitoring wells installed. Soil analysis was below CP-51 RSCOs. On constituent, naphthalene was detected in groundwater at 12ppb (TOGS guidance of 10ppb), otherwise all gw analysis was below TOGS 1.1.1. Reviewed report. Spill closed."

Remarks: "contaminated soil discovered from tank removal"

As per PBS #2-293210, owner of site is: Friendset Housing Company 9200 Keystone Crossing Suite 500 Indianapolis, In 46240-7602 Operator: Mona Fishman (718)946-7124 Mail to: AIMCO/NHP Management Co. 2911 West 36th Street Brooklyn, NY 11224 Contact: Mona Fishman Ph: 718-946-7124 As per PBS registration, site has 6000-gallon in service #2 fuel oil Aboveground AST with no contact to soil and a closed in place 15,000-gallon #2 fuel oil UST closed in

FRIENDSET APARTMENTS (Continued) **S105997613**

place in 12/6/03. Vought called and spoke to Jesse and work was performed by S and S Energy and Associated Environmental. Jesse will inquire to Associated Environmental and return call.
11/24/08-Vought-DEC Sangesland received message from Jennifer Upchurch (800-773-0660x7626) requesting spill closure.
11/18/08-Vought-Called Curll and left message to return call to DEC.
11/24/08-Vought-DEC Sangesland received call from Jennifer Upchurch (800-733-0660 requesting status on spill closure.
12/04/08-Vought-Reviewed report received via email from Jesse Curll on 11/24. Email included prior correspondence to DEC dated 8/4/03 from SNS Energy Distribution Corporation (Stuart Schwartz 631-891-1700). Lines were pressure tested and foudn that the vetn line fittings have corroded which was the cause of the tank test failure . Associated Environmental performed soil borings. Request for spill closure. Enclosed also is Eastmond and Sons (718-378-3000) invoice dated 1/03/03 that 15,000-gallon UST was pressure washed. Letter from SNS dated 2/4/03 shows tank was opened and inspected and filled with lightweight concrete and lines that were not used were capped including suction, return, fill and vent. Enclosed is also Limited Subsurface Investigation from Associated Environmental Services (631-234-4280). Associated retained by Bill Likos and investigation performed via Geoprobe around the UST. Soil samples had no olfactory odor or visual staining. Composite sample collected from 6-9'bg. Soil samples showed non-detect VOCs and some PAH exceedences attributable to fill material. Spill closed by Vought due to non-detect soil samples and fact that failure came from vent pipe fittings whihc are above oil line. NFA sent to: Mr. Jesse Curll AIMCO - Boston 639 Granite Street, Suite 312 Braintree, MA 02184 Fax:(781) 849-7652 Phone:(781) 849-1471x105"

Remarks: "Tank has been empty. retest at later date."

Tank Info:

Tank Number: 1
Tank Id: 55581
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
L09 - Piping Leak Detection - Exempt Suction Piping
I02 - Overfill - High Level Alarm
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
F04 - Pipe External Protection - Fiberglass
J02 - Dispenser - Suction Dispenser
G02 - Tank Secondary Containment - Vault (w/access)
C01 - Pipe Location - Aboveground
F05 - Pipe External Protection - Jacketed
I04 - Overfill - Product Level Gauge (A/G)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating

PUBLIC SCHOOL 188 - BROOKLYN K188 (Continued) **A100129120**

D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None

Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	11/01/1998
Capacity Gallons:	10000
Tightness Test Method:	-
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	02/02/2017
Register:	True
Modified By:	DAFRANCI

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

Site Description:	"The site is a small portion of the parcel located at 3325 Neptune Avenue, Brooklyn, New York which was operated as dry cleaner from about 1986 to 1995 based on hazardous waste manifest records. The property was identified as Block 6979 Lot 100 in Kings County, New York. The former dry cleaner portion of the property was renovated for commercial usage after the dry cleaner terminated its operation at this location. The site is currently occupied by Neptune Dental and Medical. The size of the proposed site is about 0.04 acres. The site entered the Brownfield Cleanup Program ? see site no. C224151. "
Env Problem:	"Preliminary investigations conducted at the site indicated that the contaminant of concern is Tetrachloroethylene (PCE). PCE was found in sub-slab soil vapor on site with concentration up to 25,000 ug/m3. PCE was detected in 4 of the 10 temporary groundwater monitoring wells, and one well had a concentration marginally above groundwater standards at 5.8ug/l. Additional investigation is needed to identify the source of the PCE. "

Address:	3375-3377 NEPTUNE AVENUE
City,State,Zip:	BROOKLYN, NY 11224
Site Code:	468402
HW Code:	C224151
Control Code:	15
Control Type:	ENG
Date Record Added:	11/07/2016
Date Rec Updated:	07/23/2021
Updated By:	LSZINOMA
Site Description:	"Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast."
Env Problem:	"Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan."

Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 468402
Site Description: "Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast."

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Control Type: INST
Dt record added: 11/07/2016
Dt rec updated: 07/23/2021
Updated By: LSZINOMA
Site Code: 468402
Site Description: "Location: The site is located at 3375-3377 Neptune Avenue, in the borough of Brooklyn, City of New York, and is identified on the local tax maps as Block 6979, portion of Lot 100. Site Features: The site is about 0.04 acres in size and is located within a one story commercial strip which is set back from Neptune Avenue. The site is

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

bordered to the south by Neptune Avenue, to the east by commercial space, to the west by a Key Food Supermarket and residential building, and to the north by a residential building. There is an occupied multi-story residential apartment building which is part of the same structure attached to the rear of the commercial strip. Current Zoning and Land Use: The current site zoning is R6 residential. The site is part of a mixed use development with residential apartments and commercial/retail space. The current land use category is mixed use (commercial/residential) and the site is currently occupied by a dental office. Surrounding parcels are single family homes and apartment buildings. Past Use of the Site: From about 1975 to 1996, the site was occupied by the Gateway French Dry Cleaner, which utilized tetrachloroethylene (PCE or perc) as a cleaning solvent. After 1996, the retail space was occupied by Neptune Dental and AFAM Medical until approximately 2009. Currently the site is being used as a dental office. A sub-slab depressurization system (SSDS) was installed and is operating on the residential building located immediately north of the site, which is owned by the Applicant. This SSDS system was installed by the Applicant in January 2013, and has been operating since April 2013. Site Geology and Hydrogeology: The stratigraphy of the site consists of an asphalt or concrete cover, followed by a layer of urban fill to approximately 6 feet, and native unconsolidated sediments consisting of fine to coarse sand with silts. Groundwater is approximately 9 to 10 feet below grade surface at the site and generally flows toward the southeast."

Env Problem: "Nature and Extent of Contamination: Prior to Remediation: Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE) and its breakdown product trichloroethylene (TCE). Chlorinated solvents, included PCE, were detected in soil, groundwater and soil vapor above applicable standards and guidance values. Soil - PCE was detected in on-site soil at concentrations exceeding the Part 375 Unrestricted Use Soil Cleanup Objectives (UUSCOs) of 1.3 parts per million (ppm), with a maximum PCE concentration of 2.9 ppm. Available soil sample results indicated no other VOCs, metals, SVOCs, pesticides or PCBs were detected above restricted residential SCOs. Site-related soil contamination is not expect to extend off-site base on the available data. Groundwater - PCE was detected in groundwater at concentrations exceeding the applicable groundwater (GW) standards of 5 part per billion (ppb), with a maximum concentration of 5.8 ppb. Several naturally occurring metals were detected in GW at concentration exceeding the applicable standards. Naphthalene was detected above GW standard with concentration of 63.8 ppb. No pesticides or PCBs were detected above groundwater standards. Groundwater contamination does not extend off-site. Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 68,000 ug/m3 and 730 ug/m3 respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 6920 ug/m3, and 29.3 ug/m3 respectively; PCE was detected in indoor air at maximum concentrations of 1.38 ug/m3 while TCE was not detected in indoor air. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were PCE and TCE in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for restricted residential, commercial, and industrial uses. Residual contamination in soil vapor is being managed under a Site Management

FORMER GATEWAY FRENCH DRY CLEANERS (Continued) **S112211617**

Plan."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 8/22/00 Spoke to Mike Berello (Ambient Group). They isolated the pipes and tank and found that the vent and fill lines were not tight. The tank was relined but there was a hole in the top of the tank (only spill upon overfill). They performed soil borings - 3 along a 60' fill line and 6 around the #4 UST. Water is at 5 feet below grade. They are going to propose excavation of tank system and associated soil. They will submit the report to DEC. JMR 01/26/04 Reassigned from Rommel to Austin 02/17/04: Reassigned from AUSTIN to KRIMGOLD. 04/18/05. J.Krimgold spoke to Mike Barello. He will resend the report in a week. 05/03/05. J.Krimgold reviewed the UST Removal Report submitted by Ambient Group, Inc. on 5/3/05 and issued on 11/05/2001. According to the report the tank failed the test due to a loose fitting on the vent pipe. Subsequently the tank was removed. No contamination was found during excavation. Post excavation samples all below TAGM levels. NFA. "

Record Added Date:	09/04/2012
Record Updated Date:	01/10/2013
Update By:	BXANDERS
Site Description:	"Location: The site is located at the pre-redevelopment address of 3503-3505 Neptune Avenue in Brooklyn. Site Features: The site occupies a pedestrian common area located in front of a commercial strip. The site encompasses a public common walkway on its north end, is bisected by a retaining wall with planters across the southern third of the parcel and is city sidewalk on the south end. Current Zoning/Use(s): The site is zoned R6 residential. The current land use category is "Mixed Use" (commercial/residential). The site is currently a public common area and sidewalk. Historical Use(s): The site includes the parcel containing the former unnamed ?Historic Dry Cleaners?. The exact duration of time the dry cleaner existed at the site is unknown. The dry cleaner was initially located at the site between 1950 and 1966 and was in operation until sometime between 1968 and 1972. Site Geology and Hydrogeology: The site and surrounding area are relatively flat with a ground surface elevation of approximately 10 feet above Mean Sea Level (MSL). Soil at the site consists of a layer of fill material to approximately five feet below grade, underlain by glacial outwash consisting of layers of fine to medium silty sands and silt. Groundwater is approximately 9 to 10 feet below grade surface and flows toward east-southeast. After careful review, NYSDEC has determined that this site does not qualify for the Brownfield Cleanup Program. The historic dry cleaner is located immediately adjacent to the Former Gateway Cleaners (see site no. C224151). "

J.Kann 8/4/08: J.kann - Investigative work Plan received on 7/29/08. 6/15/09: J.kann - Work

GRAVESEND HOUSES (O'DWYER GARDENS) (Continued) **U001840671**

performed without DEC approval of plan. Draft Report submitted on 6/10/09. 3/23/10: J.Kann - SAR from June 2009 edoced. 12/11/12: J.kann - reviewed SAR and February 1997 report by TRC. Comments sent in an email (edoced) 5/14/13: J.Kann - recvd and revwd the Supp RIR from JC Broderick and dated May 2013. Stained soil exist at the grounwater smear zone but minimal constituents detected in soil or groundwater. 5/17/13: J.Kann - sent an email to Yelena (NYCHA) requesting that the wells be gauged sometime next week. 10/9/14: Visited the site on 5/28/14. Minimal product noted on one sock in well. Will consider for closure. 10/14/15: J.Kann - site included in the NYCHA Sandy recovery list and is slated for UST removal. Brief summary provided to Thomas Larison 518-785-2361 of CBI today in an email. Since known soil disturbance activities will likely take place, spill can not be closed at this time. 4/25/17: J.Kann - visit site with Andre Obligado on 4/19. Met with Meredith, Tom, Steve Sacaccio and Mike Lopez. Discussed the plan for the site. Meeting notes were prepared and email by NYCHA and DECDoced. 06/05/2017: J.Kann - Spill reassigned to Andre Obligado. 9/7/17 - Obligado - I received an Environmental Work Plan for tank removals at the Graves End Houses. The Enviromental Work Plan proposes the removal of 3 USTs at the site site. They propose to sheet pile around the USTs then excavate the tanks and the contaminated soils. Per our discussion at the site in April, the plan proposes to over excavate contaminated soil in the vicinity of MW1 and MW6. Excavation will be to a minimum of 10 ft bgs to remove contamination from the vadose and smear zone. 9/11/17 - Obligado - I provided comments to Tom over the phone and via email. Specifically, I requested 1) a Community Air Monitoring Plan 2) details about the endpoint soil sampling method 3) contingency for free product recovery in the open excavation. 10/23/17 - Obligado - I reviewed an amendment letter which addressed my comments above and I approved the Environmental Work Plan for the tank removal. 8/16/18 - Obligado - Conference call with NYCHA Meredith Menzel, Yelena and others. The UST closure has been completed and a UST closure was submitted. Several endpoint samples were above standard however at levels which I do not believe warrant further action. They will be doing additional excavation for development. 9/25/18 - Obligado - I responded to an email from Meredith regarding the request for closure in the tank closure report. I responded that since there would be additional excavation for site development I was holding of on closing the spill until that additional work was completed as I expected additional contamination may be encountered. 10/4/18 - Obligado - I got a call from Rich Levato stating he was on his way to the Site to perform remediation of free product in an excavation around a former tank. They will apply booms and pads to contain, collect waste characterization, and schedule a vacuum truck event tomorrow. He was not able to provide a spill number but it appears to be related to this NYCHA site. 10/4/18 - Obligado - I received a call from Meredith. She called to inform that additional contamination was encountered at the site during site excavation. We set up a tentative site meeting for the following morning. 7/15/21 - Obligado - I received Spill Closure Report prepared by ASR, dated June 2021. Excavation for new mechanical boiler building adjacent to building 13 started in August 2018. During excavation, floating product was observed on the groundwater on the western part of the excavation. ASR was contracted as an emergency response team. ASR applied absorption booms and pads. A Vacuum truck removed 230 gallons of oilywater mixture from the

GRAVESEND HOUSES (O'DWYER GARDENS) (Continued) **U001840671**

excavation an ddisposed of at Clean Water of NY. A second vacuum truck removal event occurred on 10/17/18 and 663 gallons of oily water mixture was removed and disposed of at Clean Water of NY. A dewatering plan was developed by Joh A Rhodes PE. The dewatering system was activated on 10/17/18 and ran for appxomiately 1 week. On 10/9/18, 4 endpoint samples were collected from the bottom of th excavation (11 ft bgs). No VOC compounds were detected. No SVOC compounds were detected above the regulatory limits. No PCB compounds were detected. Approximately 1,154.66 tons of regulated fill was excavated and disposed of at Coplay Aggregates, Inc. Soil and liquid manifests were provided. All sources of contamination have been removed. Contamination identified in the orinigal UST closure report was over excavated and free product was removed from the water table. A new slab on grade bolier room has been constructed. This spill no longer appears to be a threat to human health or the environment. Based on the documentation submitted, this spill is closed."

Investigative Work Plan submitted on June 10, 2009. 6/09/10: J.kann - comments on the work plan were emailed to NYCHA (edoced). revised plan due July 10. 08/02/2010: J.Kann - revised work plan submitted July 27, 2010. Plan reviewed approved in an email of 8/2/2010. 2/4/11: J.Kann - SAR received on 1/28/11 and edoced. 10/20/11: J.Kann - comments sent to NYCHA on the SAR. One additional sample must be collected north of the tank. 10/27/11: J.Kann - observed collection of sample north of the tank. NO odor or visible contamination noted. NYCHA sent soil and groundwater grab samples to laboratory for analysis. 11/10/11:J.Kann - results of 10/27 sampling submitted. Noted that samples were only analysed for VOCs. Instructed NYCHA that SVOC analysis must also be done. 12/1/11: J.Kann - received results of SVOC sampling and a letter requesting closure of the spill. Reviewed data. Minor SVOCs detected, no VOCs detected. Sample was collected from the fill port area. No further action necessary. Spill closed. "

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 10/28/03 ROSSAN, DDO: Called Norman who confirmed that spill is contained. DEP was informed of the 20 gallons of oil which went into the sewer. The rest of the oil is on concrete pavement and contained. The Mobile Boiler company on site is about to start the clean-up. No soil was impacted. Norman will call back with Up-date. Copy of spill report was given to Jon. Ed. 11/02/05: This spill transferred from J.Kolleeny to S.Kraszewski. 01/17/06: Reviewed NYCHA

CONEY ISLAND SITE 1B (CAREY GARDENS) (Continued) **U001840666**

spill report along with invoice and manifest documents from Clean Venture, contractor hired to clean up spill. But according to report A.L. Eastmond cleaned up the spill. The dates on the invoice and manifest do not match the spill date. Cannot close out until the correct documents are submitted. - SK 01/27/06: This spill transferred from S.Kraszewaski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 09/27/06: Discrepencies in documentation noted above suggest possible confusion in NYCHA documents between this spill and spill 0400233. - JK 06/14/07: This site, based on address listed - 2007 Surf Avenue is actually Coney Island 1 (Site B) NOT Cary GArdens. This is likely the source of the confusion. Spill 0400233 was actually Carey Gardens. A.L. Eastmond did the cleanup at this site, according to NYCHA. The catch basin was vacuumed and affected areas cleaned. For this reason, the spill was closed. - J. Kann"

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY This spill report is believed to refer to an incident in which about 400 gallons of gasoline disappeared from a 550-gallon gasoline UST shortly after a positive pressure test was performed on the tank by NYC Buildings Dept. personnel. Site is currently under remediation for gasoline, diesel fuel, and heating oil contamination. Remediation system installed and overseen by LiRo Engineers under NYCDDC Consent Order. JK 1/6/05. 5/17/05: This spill closed today to consolidate with open spill 9808560 (fuel oil tank pull), under which all site remediation is being conducted by DDC and contractors. - J. Kolleeny"
Remarks:	"WOULD LIKE CALL BACK AS TO NEXT STEP TANK TESTER: MR HOGARSON PLUMING SANITATION CALLED REZA AND BOB OF DGS TO FOLLOW UP."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY. AFTER TANK WAS PULLED, HOLES DISCOVERED IN TANK BOTTOM, PRODUCT POOLED IN EXCAVATION PIT. VAC TRUCK PUMPED ABOUT 300 GALLONS OF PRODUCT FROM PIT, BACKHOE EXCAVATED A LOT OF GROSSLY CONTAMINATED SOIL, BUT THERE'S STILL A LOT OF CONTAMINATED SOIL, PROBABLY WITH PRODUCT ON WATER TABLE, LEFT BEHIND. EXCAVATION STOPPED BECAUSE THREATENED TO UNDERMINE ACTIVE DRIVEWAY. JK ALLOWED BACKFILLING OF EXCAVATION WITH UNDERSTANDING THAT RESIDUAL CONTAM. SOIL AND FREE PRODUCT WILL BE ADDRESSED AT SOME POINT IN THE NEAR FUTURE. END-POINT SAMPLES WERE COLLECTED FOR LAB ANALYSIS. SEE ALSO SPILL #9805012 (TANK TEST FAILURE) AND #9711638 (SOIL CONTAMINATED BY #2 FUEL OIL ENCOUNTERED DURING MONITORING WELL INSTALLATION). See also spill #9401508 (gasoline tank failure). Site is under remediation by LiRo Engineers under the NYCDDC Consent Order. - JK, 1/6/05. LiRo has installed and is operating a multi-phase extraction system at the site. Dissolved-phase groundwater contamination has decreased considerably, though free product continues to appear in several wells. System has been adjusted to focus on remaining hot spots, turning off extraction wells in relatively clean areas of the site. 3/01/05: DEC gave email approval of proposed soil boring locations for upcoming round of semi-annual soil monitoring to evaluate current soil conditions at the site. - JK 7/6/05: DEC reviewed Quarterly Monitoring Report for Dec. '04 through Feb. '05, with recommendation to shut down all extraction wells except EW-12, EW-13 and W-15, and to modify EW-15 to operate as an SVE well, in order to focus on remaining contamination. DEC issued letter approving these recommendations on 7/6/05. - J. Kolleeny 9/26/05: DEC reviewed Quarterly Monitoring Report for June through August 2005, presenting 3 proposed boring locations for upcoming round of soil sampling and recommending installation of ORC socks in wells MW-3 and MW-7. JK of DEC sent approval email on 9/26/05, but also asked that wells MW-10 and MW-13 (MTBE above stds. in April '05 but not sampled in July '05) be sampled in next groundwater monitoring event. - J. Kolleeny 12/07/06: Reviewed LiRo's last quarterly monitoring report for site, for Sept.-Dec. '05, dated Jan. 20, 2006. MPE system is shut down due to problem with liquid ring pump. Groundwater results show low levels of MTBE in wells MW-3, MW-7 & MW-13, and persistent inch or so of free product in MW-12 (product in MW-4, MW-11R comes and goes). LiRo recommended not replacing LRP, installing ORC socks in wells with MTBE, and bi-monthly vac truck visits to address free product in

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

MW-12. Site transferred to Greyhawk/Roux. Reviewed Roux's first quarterly report, for April-June 2006, dated June 30, 2006. Free product present in MW-4 (0.06 ft. in 5/06, 0.09 ft. in 6/06) and MW-12 (0.19 ft. in 5/06, 0.39 ft. in 6/06); sheen in MW-11R in June '06. MTBE detected in MW-3 (110 ppb) and MW-7 (11 ppb), naphthalene detected in MW-11R (11 ppb). Roux plans to use a bailer or Spill Buddy to recover product from MW-4 and MW-12; they recommend maintaining system shutdown status, evaluating alternative remedial options for remaining contamination, continuing quarterly groundwater sampling and monthly well gauging, and dropping wells MW-1, MW-2, MW-5, MW-6, MW-8, MW-9, MW-14 and MW-15 from groundwater monitoring program. Sent email to Brian Morrissey of Roux (copied Andy Ledins, Ed Looney of Greyhawk) asking that this site be added to agenda for upcoming meeting with DDC on Dec. 12, 2006. Will discuss site at meeting. - J. Kolleeny 02/08/07: Reviewed Roux's Quarterly report for July-Aug. '06, and received/reviewed email from Brian Morrissey of Roux on 2/7/07 stating: Here is an update regarding NYCDOS Brooklyn East 13; Spill #9808560: Product Levels/Groundwater Gauging: Monthly groundwater gauging and quarterly sampling are conducted. Although several site wells have historically exhibited free phase product, there are currently only 3 wells that routinely require replacement of absorbent socks for sheen control. As you may note from attached PDF file of groundwater gauging tables [in eDocs], only trace amounts of product have been detected sporadically in one well (MW-12) over past six months (0.01 ft in Aug. and 0.01 ft in Jan., no detectable product other months). Wells MW-04 and MW-11R have not exhibited any measurable free product, but do exhibit a sheen. Groundwater Results: As reported in Dec. 15, '06 quarterly report, groundwater results show that NYSDEC AWQSGVs were only exceeded in 4 monitoring wells (MW-01, MW-03, MW-04, and MW-14) with highest total VOCs being 88 ppb (MW-03). Also note that total VOCs of 51 ppb in MW-04 represent only minor exceedances for Isopropylbenzene, Naphthalene and tert-Butylbenzene. Monitoring well MW-11R exhibits only 10 ppb of MTBE, equal to its AWQSGV. No SVOCs were detected, with exception of MW-11R (5.4 ppb, Fluorene), far below its AWQSGV of 50 ppb. Based on these fairly clean analytical results, Roux Associates will attempt to take fingerprint samples of detected product in MW-04, MW-11R and MW-12 during next gauging round to determine if interface being detected by equipment is, in fact, petroleum product. Recommendations: Roux Associates would like to respectfully reiterate recommendations set forth at December 12, 2006 meeting and in Dec. 15, '06 Quarterly Monitoring: 1) Maintain remedial system shutdown status and secure system (to remain onsite). 2) Reduce groundwater sampling frequency from quarterly to semi-annual. 3) Remove SVOCs from sampling program, since SVOCs were detected in only one well and below NYSDEC AWQSGVs. 4) Remove monitoring wells MW-02, MW-05, MW-06, MW-07, MW-08, MW-09, MW-10 and MW-15 from sampling schedule since no compound, either VOC or SVOC, has been detected above NYSDEC AWQSGVs for more than two consecutive monitoring periods. 5) Reduce gauging frequency from monthly to quarterly, as sporadic, trace amounts of product are only detectable in one monitoring well (MW-12), and appear to be effectively controlled by use of petroleum absorbent socks. 6) Remove absorbent socks from MW-04 and MW-11R. If product reappears during the next subsequent gauging round, absorbent socks will be re-installed. 7) Obtain a sample for petroleum fingerprint analysis from MW-04, MW-11R and MW-12. I sent email approving these recommendations on 2/8/07. - J. Kolleeny 03/01/2007: This spill case

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

was transferred to A. Doronova. - AD 03/12/2007: Reviewed site file. This site is in semi-annual monitoring stage. AD 04/24/2007: Received quarterly monitoring report dated April 11, 2007 by Roux. Report covers period October through December 2006. It states that, low-level residual VOC groundwater contamination remains in only four MW on the site. During November 8 and 9 gauging events, odor was detected in wells MW-01, MW-07, MW-08, MW-13 and MW-14. On November 9, 2006, free-phase product appear in wells MW-04 and MW-12 and these two wells could not be sampled. But in the Product Thickness evaluation it states that no free-phase product was detected during the reporting period. (Statements conflict?)In total 14 groundwater samples were conducted on November 8 and 9, 2006. VOC were detected in only five of the 14 MW sampled. The NYSDEC AWQSGVs were exceeded only in four of the five MW. (MTBE - 97ug/L at MW-03). No SVOCs were detected in any of the MW. Based on the data Roux recommends to reduce the frequency of groundwater monitoring from quarterly to annual due low-level residual contamination remains only in four site MW. Spoke to J. Kolleeny regarding free-phase product statements conflict. Sent an email to B. Morrissey of Roux, where asked to clarify this issue; and also, as J. Kolleeny suggested, asked him to keep MW-07, which was previously approved to be removed from sampling program, and suggested to remove MW-01 instead. AD 04/26/2007: Received an email from B. Morrissey. He will clarify free-product statements conflict in the next QMR (1st quarter of 2007). In this report Roux will also comply with the recommendations approved by J. Kolleeny. AD 10/17/2007: Received semi-annual monitoring report. Will review. AD 11/14/2007: During the reporting period Roux performed two rounds of gauging (January and June 2007) and one round of groundwater sampling (January 2007). On the January gauging round, 0.01 feet of free-product was detected in well MW-12 and product sheen was detected in wells MW-04 and MW-11R. Absorbent socks were replaced in all these wells. Although MW-04 and MW-11R exhibited an apparent sheen, no VOCs were detected in MW-11R and naphthalene (9ug/L) was only detected VOC in MW-04. Therefore, Roux conclusion is that the product sheen detected in these two wells may not be petroleum related. But according to data from July 2005 sampling round a fingerprint analysis for a sample of free product from well MW-04 indicated it as a weathered No. 2 fuel oil. Groundwater analytical results: VOCs were detected only in four (MW-03, MW-04, MW-14 and MW-18) of the 15 wells sampled and at relatively low levels. MTBE (14ug/L) in MW-03; benzine (2ug/L) in MW-14 and MW-18; naphthalene (9ug/L) in MW-04. Based on the data Roux states that very low-level residual VOC groundwater contamination remain at the site. Roux recommends to conduct additional soil investigation to determine the current soil quality conditions. An additional site investigation work plan proposes to advance ten soil borings in the historically most impacted soil locations. After evaluation of the results of investigation Roux will determine whether the site should be considered for closure. AD 11/20/2007: Spoke with Jon Kolleeny regarding this site. He suggested to use vacuum truck for wells exhibiting free product and sheen. Spoke with B. Morrissey of Roux, asked him if they gauged the wells since June round. Roux gauged them in July and free product re-appeared in the wells MW-12 and MW-04. Product from MW-12 was identified as No. 2 fuel oil. Asked him if they can apply vacuum truck to these wells. Brian said that the amount of the free product is too small for such measure and that they will try to do bailing. Roux going to perform next gauging event

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

in a week. Asked him to collect free product sample for fingerprint analysis. Later sent an email to Afsar Samani approving ASIWP with a suggestion to apply vacuum truck to wells historically exhibiting sheen and free product. AD 08/08/2008: Received a Semi-Annual Monitoring report. Will review. AD 10/22/2008: Reviewed the report. Roux performed additional site investigation from January 14 to 15, 2008. The scope of work included advancing if 9 soil borings, followed by collection of soil samples. According to the report: Soil quality: No VOCs were detected above RSCOs in any of the 18 soil samples collected from 9 soil borings. Three SVOCs were detected in only one soil boring (RXSB-10) slightly above their RSCOs. Groundwater quality: In April 2008 only Naphthalene was detected in MW-04 (12ppb) No VOCs were detected in the remaining six wells sampled (MW-03, -07, -13, -14, -17 and -18). Based on the historical GW quality data, the majority of the site wells stabilized at non-detect conditions. Free-phase product was detected in two wells during the monitoring period: MW-04 (0.01' in July 2007; and MW-12 (0.01' in July 2007, and 0.03' in November 2007 and April 2008). Based on this data, Roux concludes that: resuming operation of the MPE system would not be efficient of cost effective due to high level of achieved cleaup; low-level residual VOC GW contamination remains in one onsite well near the source area, in which free-phase product intermittently appears; residual SVOC soil contamination slightly above NYSDEC RSCOs remains in a localized area; natural attenuation is apparently taking place at the site. Roux recommends: remove wells MW-03, MW-13 and MW-18 from the GW sampling program due to non-detect VOCs in these wells for two consecutive events; remove SVOCs from the GW sampling program; reduce the frequency of the gauging program; decommission and dismantle the MPE; use petroleum-absorbent socks in MW-04 and MW-12 on as-needed basis. Will prepare a letter. AD 11/10/2008: Sent an email to Afsar Samani. Approved the recommendations with some comments. AD 04/28/2009: Received a Semi-Annual Monitoring report for July 2008 - February 2009 period. DL pdf copy to eDocs. Will review. AD 05/21/2009: Reviewed the report. During the reporting period, on July 23 and October 10, 2008, Roux Associates performed gauging of site monitoring wells. Monitoring wells MW-01 and MW-16 have been paved over and MW-11R was found to have an irretrievable metallic obstruction at 3.91 feet bls; thus, they can no longer be gauged. In addition, MW-06 was not accessible during the July and October 2008 gauging events due to NYCDOS equipment. On July 23, 2008, a petroleum absorbent sock was installed in monitoring well MW-04 and one was replaced in MW-12. Due to the presence of free product on October 10, 2008 the socks were replaced. Groundwater Sampling: Following the October 2008 gauging event, Roux Associates performed groundwater sampling of site monitoring wells. Groundwater flow at the site is in a general north-northwesterly direction on the south side of the site and in a southerly direction beneath the site, under these possibly tidally-influenced conditions. Product Thickness: Free-phase product was detected in two wells during the monitoring period in October 2008: MW-04 (0.01 foot); and MW-12 (0.02 foot). Groundwater Quality: In October 2008, one VOC (MTBE) was detected in monitoring wells MW-03 and MW-07, at concentrations of 9 and 7 micrograms per liter (?g/L), respectively. Neither concentration exceeds the NYSDEC AWQSGV for MTBE of 10 ?g/L. No additional VOCs were detected in the remaining four wells sampled (MW-13, MW-14, MW-17, and MW-18). Based on the historical groundwater quality data presented in the report,

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

the majority of the site wells appear to have stabilized at non-detect conditions. Residual low-level VOC contamination was detected in two onsite monitoring wells (MW-03 and MW-07), which have been fluctuating at low levels since at least April 2005. Based on the conclusions cited above, Roux Associates recommends the following: 1. Replace petroleum absorbent socks in monitoring wells MW-04 and MW-12 on an as-needed basis. 2. Decommission and dismantle the MPE system pending NYSDEC approval. 3. Continue semi-annual groundwater monitoring (gauging and sampling) until free-phase product is no longer detected in MW-04 and MW-12 and confirmation site-wide VOC groundwater sampling is conducted in support of a request for NFA. Some of these recommendations, such as decommission and dismantling of the MPE; usage of petroleum-absorbent socks in MW-04 and MW-12 on as-needed basis, were approved by DEC in November of 2008. AD 02/24/2011: Received a Semi-Annual Monitoring report (July to December 2010). DL the report to eDocs. Will review. AD 03/24/2011: Reviewed the report. In February 2010, NYCDDC replaced Greyhawk/Roux with LiRo Engineers, Inc. (LiRo) to serve as construction manager (CM) for the Brooklyn East 13 site. On March 17, 2010, LiRo conducted a site reconnaissance, completed well inspections and gauged accessible site monitoring wells. During the gauging event, MW-04 was noted as not destroyed and an absorbent sock was observed in the well. On August 4, 2010, LiRo conducted quarterly groundwater gauging of fourteen of fifteen active Site monitoring wells. GW flow indicate radial flow outward from a hydraulic high centered in the southwest portion of the site in the vicinity of MW-02, MW-04, MW-06 and MW-15, with an underlying generally westward gradient. On September 23, 2010, LiRo conducted semi-annual groundwater sampling and collected samples from five of six wells: MW-03, MW-04, MW-07, MW-14 and MW-17. Approximately 0.10 feet of free product was measured in MW-12 and GW sample was not collected from this well. The oil was identified as a weathered #2 fuel oil by fingerprint analysis. On January 7, 2011 EFR was conducted at monitoring wells MW-04 and MW-12. Approximately 105 and 109 gallons of total fluids were removed by EFR from MW-04 and MW-12. Prior to EFR, some visible indications of free product were observed on the water level probe at MW-04 and MW-12, but no measurable product thickness was observed in either well. After the completion of EFR, there were no visible indications of free product observed at either well. Groundwater gauging was conducted on 11 of 15 monitoring wells on January 7, 2011. Groundwater samples were collected from 5 of 6 wells and analyzed of STARS list VOCs, MTBE and Naphthalene. A sample was not collected from MW-12 due to the presence of approximately 0.10 feet of a LNAPL. The MPE system, which is currently inactive, consists of a network of 17 extraction wells (EW-01 through EW-17) from which free phase product, contaminated groundwater and soil vapors were extracted using a liquid ring vacuum pump. Dismantling and removal of the system will be deferred until confirmation of the absence of free product in Site monitoring wells. The most recent soil investigation was completed in January 2008. A total of 18 soil samples were collected from 9 soil borings and submitted for STARS list VOCs and SVOCs. No VOCs were detected above their NYSDEC TAGM guidance values for soils in any of the 18 soil samples. Three SVOCs were detected in only one soil boring (RXSB-10) at concentrations slightly above their respective guidance values. The highest TVOCs and TSVOCs were measured in the sample from RXSB-05 (6 to 8 feet bgs) at 7,830 ppb and 47,800 ppb. There were, however, no TAGM 4046

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

exceedences in the sample from RXSB-05. One or more VOC were detected in 2 of 5 monitoring wells sampled at concentrations above their respective TOGS guidance value. Monitoring well MW-04 exhibited the highest TVOCs at 124.53 ppb and MW-03 of 13.88 ppb ith only one elevated compound - MTBE. Based on the data, LiRo concludes the following: " Moderate levels of TSVOCs were observed in soil samples collected in January 2008 from RXSB-05 and RXSB-10, however only three SVOCs were found above their NYSDEC standards in RXSB-10 soil samples. " Recent and historic groundwater sampling results show de-minimums VOC concentrations in MW-4 and MW-12. " Indications of a very thin free-phase product (i.e. sheen to 0.10 feet) have been historically observed in MW-04 and MW-12 with decreasing thicknesses and volumes over time. The recent observation of free-phase product in MW-12 was a weathered #2 fuel oil. LiRo recommends the following: " Prepare and submit a 6-month Summary Monitoring Report and an Annual Monitoring Report with recommendations for changes (as necessary) to the remedial program. Proposals " Conduct monthly enhanced fluid recovery (EFR) on MW-04 and MW-12, for the next six months. " Revise the current Site Monitoring Program (SMP) to semi-annual gauging of all wells, and semiannual sampling of only MW-4 and MW-12 for VOCs, MTBE and Naphthalene. " Petition for Spill Closure if supported by EFR program and sampling results. AD 09/30/2011: Received a Semi-Annual Monitoring report (January to June 2011). DL the report to eDocs. Will review. AD 10/11/2011: Reviewed the report. It states that between January 7, 2011 and July 13, 2011, LiRo conducted five EFR events at site wells MW-04 and MW-12 in an effort to induce mobilization of small volumes of free-phase product presumed to remain in the vicinity of these wells. An event was not conducted in February 2011, due to weather conditions and access restrictions. Trace amounts of free-phase product (i.e. visible sheen or beads on probe) were observed diring January 2011 EFR event in both wells, and during April EFR event in well MW-12, but no measurable thicknesses or quantifiable volumes were recorded. During the following May and July EFR events no free product was detected in these wells. The EFR efforts at the site was discontinued after the last event conducted on July 13, 2011. On April 22, 2011, LiRo conducted semi-annual groundwater sampling and collected samples from six wells: MW-03, MW-04, MW-07, MW-12, MW-14 and MW-17. Samples were submitted for analysis of STARS list VOCs, MTBE and Naphthalene. One or more VOCs were detected in 3 of 6 monitoring wells sampled at concentrations above their respective NYSDEC AWQSGVs. Monitoring well MW-04 exhibited the highest TVOCs at 45.12 ug/L. Excluding Naphthalene, monitoring well MW-07 exhibited a TVOC concentration of 13 ug/L with only one compound (MTBE) above its AWQSGV. Groundwater elevation contour maps, generated from both the January and April 2011 water level measurements indicate variable flow directions at the site, likely due to tidal influences, with an underlying generally westward flow direction. Typical hydraulic gradients observed at the site - range between approximately 0.023 feet per feet between MW-7 and MW-10 on January 7, 2011) and 0.004 ft/ft (as measured between MW-4 and MW-6 on April 22, 2011). Based on the information presented in this monitoring report, LiRo concludes the following: " The MPE system and post MPE remedial measures have successfully removed soil and groundwater petroleum contamination at the Site. " No VOCs were detected above guidance values in any of the 18 soil samples collected in 2008. " Dissolved phase VOC concentrations are near or below AWQSVGs with TVOC concentrations

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

consistently below 130 ug/L. " No measurable thicknesses or volume of product was observed during routine water level measurements or during the 5 EFR events conducted at MW-04 and MW-12 throughout this monitoring period. Based on the analysis and conclusions presented above, LiRo recommends the closure of Spill No. 9808560. Following spill closure approval, Site monitoring wells will be decommissioned in accordance with NYSDEC CP-43, Groundwater Monitoring Well Decommissioning Policy. To discuss the spill closure request with J. Kolleeny of DEC. AD 11/21/2011: Discussed the spill closure with J. Kolleeny of DEC. Based on the soil and GW data provided it was decided to approve case closure. Issued and sent an approval letter to A. Samani of DDC. DL pdf copy of the letter to eDocs. Case closed. AD "

Remarks: "during an underground tank pull they encountered contaminated soil & its all been excavated - they have also backfilled - dec was on site [ACTUALLY, IT HASN'T ALL BEEN EXCAVATED - SEE DEC NOTES]"

DEC Memo:	"5/19/21 - Obligado - Desk Duty - I called David. DEP got a report about a hazardous chemical odor at a sanitation garage. 2 550 gallon unused storage tanks which are emitting odors. They reporting sulfurous odor. They ventilated the tanks. The odors are still strong right now. Sanitation will have a vac truck to flush out the tanks. Sanitation contact - Joseph Liberta -(646) 847 4854. Waiting for crew. The smell appears to be coming from 2 sumps. There are 2 closed in place tanks. The smell is coming from the tanks. 2 nights ago they put sand in the tanks. The whiff comes every few minutes. One employee went to the hospital earlier today. He threw up several times. He was cleaning in the area and felt ill. The other was just complaining of being nauseaus. The garage doors are wide open so the area is well ventilated. Closed in place in 1995. I received a call back from Mr. Joseph Liberta at Department of Sanitation. They had a vac truck vacuum out the abandoned top of tank sumps. They confirmed the tanks were infact closed in place with sand. Subsequent to vacuuming out the sumps, no additional odors were reported. They plan to seal the manholes with cement. As per Randall Austin, no further action required and spill can be closed."
Remarks:	"2 550g storage tanks underground omitting strong sulphur odor. 2 employees have gone for medical treatment"

DEC Memo:	"A LiRo Engineers field geologist was preparing to abandon wells at the DOS Brooklyn East 13 facility located at 2012 Neptune Avenue, Brooklyn, NY, as part of our contract with the New York City Department of Design and Construction NYCDDC. This work was initiated in response to the recent closure of Spill No. 9808560. During pre-abandonment activities at former extraction well (EW-02), the geologist discovered approximately 1-foot of free product in the well casing. EW-02 is a 2-inch diameter extraction well for the former Multi-Phase Extraction (MPE) system shut-down in January 2004. See spill 9808560 01/06/2012: This spill case was transferred to A. Doronova. - AD Put site priority as P1. Sent an e-mail to S. Frank of LiRo requesting to submit all available data for the case to my attention. AD 01/13/2012: Received an e-mail from S. Frank of LiRo with an attached report detailing the status of spill #1109339. Report also includes IRM for the site. A hard copy of the report forwarded to DEC as well. DL the pdf copy of the report to eDocs. Will review. AD 01/17/2012: Reviewed the report. It states that in a letter dated October 21, 2011, the NYSDEC approved spill No. 9808560 closure and subsequently, LiRo initiated the abandonment of monitoring wells and 17 remnant extraction wells at the site on October 25, 2011 and abandonment proceeded from north to south, with the successful abandonment of monitoring wells MW-03, MW-07, MW-09, MW-10 and extraction wells EW-04 and EW-06. During the abandonment of extraction well EW-02 approximately 0.5 feet of free-product was observed. The product was described as used oil, opaque and black in color. Upon discovery, LiRo reported the new spill and Spill No. 1109339 was assigned. Further investigation exposed more residual free-product in other extraction wells (EW-02, EW-05, EW-08, EW-09 and EW-13). As reported in the field, the product appeared to have two different consistencies (i.e. originating from two different sources) one discolored black with a thick and viscous consistency (EW-02 and EW-05) and one with a light brown color, translucent appearance and a less weathered and less viscous consistency (EW-08, EW-09 and EW-13). Two product samples of the two different consistencies, were collected from two extraction wells (EW-02 and EW-09) on October 25, 2011, and submitted for petroleum finger-print analysis. Laboratory analytical results reported Lubricating Oil for the EW-02 sample and Weathered Diesel for the EW-09 sample. EFR events were conducted at the site on October 27, November 2 and December 19, 2011 and supplemental groundwater monitoring was

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

conducted on October 27th, 31st and December 19th. Product thickness measurements were conducted in site wells and vacuum induced EFR was applied to extraction wells EW-02, EW-09, EW-11 and EW-13. It is suspected that the source of product observed in EW-02 is from improper handling and storage of waste oil at the site and the source of product observed in EW-09 is remnant contamination from the former remedial system or from Spill No. 9808560. LiRo states that the observations of product from either source represent small volumes and may be effectively remediated by the application of EFR as IRM. The proposed IRM includes monthly EFR with groundwater level and product thickness monitoring at the site between February 2012 and July 2012 to provide information and field data on the nature and volume of product at the site. A vacuum truck will be used to conduct EFR extraction on site monitoring and extraction wells that have measurable thicknesses of free-product during each event or as indicated by monthly groundwater and product monitoring. At the end of the IRM period LiRo will make recommendations for further actions based on the results of the IRM. LiRo recommends re-opening the closed spill number (Spill No. 9808560) and maintaining the new spill (Spill No. 1109339) as separate spill numbers for the purpose of tracking the observations of two separate types of free-product at the site. Diccussed the WP with J. Kolleeny of DEC. The closed spill 9808560 will not be reopend. The site will have new spill number - 1109339. GW samples should be collected at the end of the proposed 6-month period. To issue an IRM WP approval letter. AD 01/18/2012: issued and sent an approval letter to A. Samani of DDC with the following remark: At the end of IRM period, groundwater samples should be collected from all wells from which LNAPL has been successfully removed, and from a selection of nearby monitoring wells, and submitted for laboratory analysis. The groundwater analytical data should be included in the summary report. AD 08/08/2012: Had a quarterly meeting with DDC and LiRo. Discussed the site. Monthly EFR events are conducted at the site. Evaluation of this IRM will be presented in 2nd quarter 2012 monitoring report. AD 11/16/2012: Received IRM report for the period January - September 2012. Will review. AD 12/21/2012: Reviewed the report. It states that the IRM performed thus far in 2012 (January through September) included monthly EFR with groundwater level and product thickness monitoring at the Site. EFR events during this monitoring period were completed in February through May, August and September 2012. A vacuum truck was used to conduct EFR extraction on Site monitoring wells and extraction wells that have measurable thicknesses of free-product during each event or as indicated by monthly groundwater and product monitoring. Hydraulic Monitoring During this monitoring period, groundwater gauging events were conducted on February 8, March 13, April 26, May 31, August 23 and September 10, 2012. Water levels were collected from non-abandoned, accessible monitoring and extraction wells. Groundwater elevation contour maps, were generated from both the February 2012 and September 2012 water level measurements. Contours indicate variable flow directions at the Site, likely due to tidal influences. Typical hydraulic gradients observed at the Site range between approximately 0.01 feet per foot (ft/ft) (as measured between MW-18 and MW-12 on February 8, 2012) and 0.003 ft/ft (as measured between MW-5 and MW-6 on September 10, 2012). Between January and September 2012 six EFR events were conducted in an effort to induce mobilization and remove small volumes of residual free-phase product remaining in the wells mentioned above. Varying

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

amounts of free-phase product were observed, but no quantifiable removal volumes were recorded. The suspected source of product observed in EW-02 (and surrounding wells) is from improper handling and storage of waste oil at the Site (Spill No 1109339). The source of product observed in EW-09 (and surrounding wells) is remnant contamination from the former remedial system or from Spill No. 9808560. In general, there was measurable free-phase product observed at Site in monitoring and extraction wells EW-02, EW-05, EW-08, EW-09, EW-13 and MW-12. However, there is no distinct trend in measured product thicknesses for this monitoring period. On October 29, 2012, flooding occurred at the Site from Hurricane Sandy. On November 1, 2012, at the request of NYCDDC, LiRo attempted a Site visit to determine what impacts (if any) the hurricane had at the Site. DOS representatives refused access to the Site. NYCDDC is currently coordinating access with DOS to evaluate current Site conditions. Groundwater samples will be collected, analyzed and submitted for the NYSDEC CP-51 list of VOCs, MTBE, Naphthalene and SVOCs (where applicable) when monitoring and extraction wells are free of petroleum product for six months. AD 12/10/2013: Received semi-annual IRM report for the periods: November 2012 to April 2013, and May 2013 to November 2013. DL the report to eDocs. Will review. AD 01/09/2014: Reviewed the report. It states that the scheduled EFR events for October 2012 through December 2012 were not conducted due to severe damage and flooding inflicted at the Site by Hurricane Sandy. During a November 1, 2012, Site walkover, conducted immediately after the storm, it was noted that a puddle of free-phase product (oil) of an unknown origin was in the road curb outside the Site. It was reported by the DSNY Site contact that the Site was closed and had been flooded by up to 7-feet of water and that the interior of the Site was contaminated by motor oil, waste oil and raw sewage. Access to the Site was not provided. During a November 30, 2012, follow-up Site visit to assess interior conditions, the DSNY Site contact stated that DSNY had not yet assessed the Site USTs or ASTs for damage or leakage. The DSNY Site contact noted that one (1) of the five (5) interior ASTs (the 275-gallon used oil AST) had become dislodged from its saddle and had been found floating on the other side of facility. The IRM EFR events and water level measurements resumed on January 9, 2013, and were conducted on a twice a month frequency between January 2013 and May 2013 and between September 2013 and November 2013. In June and July 2013 EFR events were performed on a monthly frequency and none were completed in August 2013 due to sub-contract issues. Between June 17 and 27, 2013, LiRo conducted a tidal influence study utilizing three (3) Site monitoring wells (MW-05, MW-08 and MW-17) and one extraction well (EW-14). On September 5, 2013, a new Spill was listed on the NYSDEC Database for the Site (Spill No. 1305932) with an unknown material and a reported cause of vandalism. The spill was called in during a floor drain/catch basin excavation when oil stained soil was observed. A separate Site Investigation Plan (SIP) for Spill Mo. 1305932 will be prepared and submitted to the NYSDEC after LiRo reviews proposed catch-basin excavation soil sample results. On November 26, 2013, LiRo collected supplemental fingerprint samples from EW-02, EW-05, EW-09 and EW-11. Conclusions: Between December 2012 and September 2013 fourteen EFR events were conducted in an effort to induce mobilization and remove residual free-phase product remaining in the wells with measurable product. Approximately 22,102 gallons of total fluids were removed from Site wells for the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

monitoring period (November 2012 to November 2013) for the IRM. Spill No. 1109339: For the monitoring period, there was measurable free-phase product (Waste Oil) observed at extraction wells EW-02 and EW-05. However, there was no distinct trend in measured product thicknesses due to the increase in thicknesses observed in EW-05 between June 2013 and September 2013 and subsequent decline. Spill No. 1305932: In general for the monitoring period, there was measurable free-phase product (Weathered Diesel) observed at Site in monitoring and extraction wells EW-08, EW-09, EW-13 and MW-12. There was a distinct decreasing trend in measured product thicknesses from the December 2012 high to the end of this monitoring period. The suspected source of waste oil product observed in EW-02 and EW-05 is from improper handling and storage of waste oil at the Site (Spill No 1109339). The suspected source of product observed in EW-09, EW-08, EW-13 and MW-12 is remnant contamination from the former remedial system from Spill No. 9808560 and is also associated with the oily soil reported for Spill No. 1305932. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect groundwater samples from all accessible Site wells and submit for analysis of the NYSDEC CP-51 list of VOCs and SVOCs. - Coordinate with the on-site DSNY representative to collect soil samples from the final catch basin excavation and submit for analysis of the NYSDEC CP-51 list of VOCs and SVOCs. Prepare a SIP after review of planned Site-wide groundwater sample results and catch basin soil sample results. There are no proposals that require NYSDEC approval. AD 07/24/2014: received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13 Garage, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 23, 2014. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a recommendation to reduce the groundwater sampling frequency from semi-annual to annual. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Craig T. Taylor Project Hydrogeologist LiRo Engineers, Inc. Will review. AD 08/05/2014: Reviewed the report. It states that the Site monitoring program (SMP) for the period of December 1, 2013 to May 31, 2014, included water level gauging from accessible Site wells, semi-annual sampling from nine (9) wells (MW-04, MW-05, MW-06, MW-08, MW-12, MW-13, MW-14, MW-17 and MW-18) and an EFR IRM at nine (9) locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13 EW-14, MW-04 and MW-12). All groundwater samples are submitted for analysis of CP-51 list VOCs and results are compared to the NYSDEC Division of TOGS (1.1.1). On October 25, 2011, abandonment of MPE system wells was initiated at the Site from north to south, however, the abandonment of extraction well EW-02 revealed approximately 0.5 feet of free-product within the well. The product was described as used oil, opaque and black in color. The completion of dismantling and removal of the system was deferred until freephase product is absent in remaining monitoring and extraction wells at the Site. Free

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

product data: For the current monitoring period there was an overall decrease, albeit sporadic, in thicknesses in EW-08, EW-09, EW-13 and MW-12 from the December 2012/January 2013 highs to December 2013/May 2014 lows. The product thicknesses measured at EW-11 exhibited an anomalous rise, up to 3.12 feet, between January 2014 and April 2014. The thicknesses in EW-11 have remained below 0.10 feet for the last three EFR events of the monitoring period. GW data: For the reporting period, routine semi-annual groundwater gauging and sampling was completed by LiRo on April 17, 2014. LiRo conducted semi-annual water level gauging at accessible Site monitoring wells and collected nine (9) semi-annual groundwater samples from Site wells April 2014 groundwater analytical results were compared to NYSDEC AWQSGVs. One VOC (Benzene) was reported at a concentration above its respective NYSDEC AWQSGV at one well location (MW-17). Groundwater total VOC concentrations ranged from non-detect (ND) in five (5) locations (MW-05, MW-06, MW-08, MW-12, and MW-13) to 10 micrograms per liter (?g/L) in monitoring well MW-17. A comparison of total VOC concentration trends between April 2011 and April 2014 shows low (i.e. less than 10 mg/L) concentrations of dissolved phase VOCs in site groundwater, with 8 of 9 sampled locations reporting all VOCs below their respective AMQSGVs in April 2014. All monitoring wells report a decreasing trend in VOC concentrations or no change with the exception of MW-18 which reported a slight increase in TVOC concentrations. EFR: Between December 2013 and May 2014 eleven (11) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 13,364 gallons of total fluids were removed from Site wells for the monitoring period. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. These actions will be conducted as part of the routine monitoring program until proposals beloware approved by the NYSDEC: The following proposals require NYSDEC approval: 1) Reduce the frequency of groundwater sampling from semi-annual to annual. AD 03/13/2015: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on March 13, 2015. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval for consolidation of Spill Number 1305932 into Spill Number 1109339. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 04/03/2015: Reviewed the report. It states that: EFR: For the monitoring period (June 2014 to December 2015) approximately 4,041

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

gallons of total fluids were removed from site wells by EFR. For the current monitoring period ten (10) EFR events were conducted. A 2nd event for July 2014 was not conducted due to site inaccessibility and after the 1st event for November 2014 due to NYCDDC budgetary constraints. Starting in January 2015, product removals will be completed by hand-bailing (i.e. wells with 2-inch or greater inner diameters) and/or eristaltic pumps (i.e. wells with less than 2-inch inner diameters) until the resumption of removal by EFR. Soil conditions: Oily soil was observed during the excavation of a Site catch-basin in September 2013 and subsequently Spill No. 1305932, was assigned to the site. LiRo coordinated with DSNY to collect soil samples from the final excavation. During this monitoring period five (5) soil samples (i.e. W1 through W4 and Bottom) were collected from a DSNY managed catch-basin excavation. All December 2013 soil samples were submitted for analysis of the NYSDEC s October 21, 2010, Final Commissioner Policy, CP-51 Soil Cleanup Guidance (CP-51) list of VOC and SVOCs and results were compared to CP-51 Soil Cleanup Levels (SCLs) criteria. One or more CP-51 list VOCs were reported at concentrations above SCLs in three (3) of five (5) December 2013 soil samples: W1, 5.5 to 6.0 feet bgs; W2, 5.5 to 6.0 feet bgs and W4, 5.5 to 6.0 feet bgs. Reported total VOCs ranged between ND in W3 sample to 27,000 ug/kg in the W2 sample. One or more CP-51 list SVOCs were reported at concentrations above SCLs in four (4) of five December 2013 soil samples: W2, 5.5 to 6.0 feet bgs; W3, 5.5 to 6.0 feet bgs; W4, 5.5 to 6.0 feet bgs and Bottom, 6.5 to 7.0 feet bgs. Reported total SVOC concentrations ranged between 15,560 ug/kg in the Bottom sample to 116,500 ug/kg in the W2 sample. Summary: On December 17, 2014, LiRo conducted groundwater gauging at accessible Site wells. The performance of field activities has been impacted at the site due to NYCDDC delays in funding for the new PW348-64 contract. As a result of these delays, groundwater sampling and November/December 2014 EFR events were not completed during this monitoring period. EFR Between June 2014 and December 2014 ten (10) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 4,041 gallons of total fluids were removed from Site wells for the monitoring period. Overall, product thicknesses were typically below in EW-02 and EW-05 with an overall monitoring period average of 0.06 feet, when compared to the previous monitoring periods. The distinct decreasing trend in measured product thicknesses, from the December 2012 high to the end of this monitoring period at the site in monitoring and extraction wells EW-08, EW-09, EW-13 and MW-12, has been maintained. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program until proposals below are approved by the NYSDEC: - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. Proposals: The following proposals require NYSDEC approval: 1) Consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). As it was discussed and agreed at the quarterly meeting with DDC and LiRo, consolidation of the spills will be postponed till groundwater samples from the new spill will be collected. AD

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

12/21/2015: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill Nos. 1109339 and 1305932, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 21, 2015. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/25/2016: Reviewed the report. It states that for the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on May 14, 2015, and September 23 to 24, 2015. A supplemental groundwater sampling event was also completed on January 23, 2015, in lieu of the 2nd 2014 sampling round not completed due to NYCDDC delays in funding for the new PW348-64 contract. For each of the three sampling rounds, LiRo conducted water level gauging at accessible Site wells. For the January 2015 and May 2015 sampling rounds LiRo collected eight (8) groundwater samples. For the September 2015 sampling round LiRo collected nine (9) groundwater samples. During the September 23, 2015, groundwater gauging event groundwater was observed between 3.44 and 5.41 feet bgs. Groundwater elevations ranged between -0.37 and 0.41 feet AMSL. Free phase product was detected in two (2) gauging locations: EW-09 and MW-02R, with thickness ranging between 0.17 feet (EW-09) and 0.19 feet (MW-02R). Groundwater Total VOC Trends: A review of total VOCs trends in the January 2015, May 2015 and September 2015 shows very low (i.e. less than 10 ug/L) concentrations of dissolved phase VOCs in Site groundwater, with all sampled locations reporting all VOCs below their respective AWQSGVs in all three sampling rounds. During the August 6, 2015, quarterly meeting with NYCDDC, NYSDEC and LiRo, the NYSDEC expressed concern that VOCs observed in the December 2013 catch-basin soil samples may be impacting groundwater and requested the completion of site-wide groundwater sampling. On September 11, 2015, two (2) replacement monitoring wells (MW-02R and MW-04R) were installed at the Site and both wells were developed on September 14, 2015. EFR: The performance of field activities had been impacted at the Site due to NYCDDC delays in funding for the new PW348-64 contract and as a result of these delays, EFR events were not completed between January 2015 and March 22, 2015. On March 2, 2015, March 9, 2015 and March 16, 2015, LiRo conducted hand-bailing and product removal using a peristaltic pump. However, due to the relatively small volumes removed (i.e. typically less than 5 gallons), the March 2015 removals via peristaltic pump are not included in EFR total fluid volume estimates. EFR events resumed at the Site on March 23, 2015. For the monitoring period approximately 16,685 gallons of total fluids were removed from Site wells by EFR. For the current monitoring period fifteen (15) EFR events were conducted. Overall, product thicknesses were within historic averages and with an overall monitoring period average of 0.03 feet, when compared to the previous monitoring periods. A June 2015 spike in the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

thickness measured in MW-12 warrants continued monitoring and EFR. September 2015 Replacement Well Soil Samples: A total of six (6) soil samples were collected from two (2) monitoring well soil borings (MW-02R and MW-04R) for analysis of the NYSDEC s October 21, 2010, Final Commissioner Policy, CP-51 Soil Cleanup Guidance (CP-51) list of VOC and SVOCs and results were compared to CP-51 Soil Cleanup Levels (SCLs) criteria. Two (2) VOCs were reported above their respective NYSDEC SCLs in one (1) sample (MW-02R, 7.0 to 8.0 feet bgs). Total VOC concentrations ranged between below the laboratory reporting limit (i.e. nondetect [ND]) in the MW-04R sample from 14.0 to 15.0 feet bgs and 39,020 mg/kg in the MW-02R, 7.0 to 8.0 feet bgs sample. Seven (7) SVOCs were reported above their respective NYSDEC SCLs in one (1) sample (MW-02R, 6.0 to 7.0 feet bgs). Total SVOC concentrations ranged between ND in 2 samples (MW-02R, 14.0 to 15.0 feet bgs and MW-04R, 14.0 to 15.0 feet bgs) and 102,470 ?g/kg in the MW-02R, 6.0 to 7.0 feet bgs sample. Given the generally low concentrations in soil sample results, no additional soil sampling is warranted in relation to Spill No. 1305932 at this time. Summary: With few exceptions, recent (September 2013/2015) and historic (January 2008) soil sample results report CP-51 list VOCs and SVOCs at generally low (i.e. less than 25,000 ug/kg TVOCs and less than 50,000 ug/kg TSVOCs) concentrations. These SVOC concentrations are typical for urban fill. Based on January, May and September 2015 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not appear to significantly affect groundwater dissolved phase concentrations. Based on the analysis and conclusions presented above, LiRo recommends the following: The following actions will be conducted as part of the routine monitoring program until proposals below are approved by the NYSDEC: -Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). -Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. -Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. Proposals The following proposals require NYSDEC approval: 1) Consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). AD 02/22/2016: In the recent report LiRo states that: Based on recent (September 2015) and historic soil sample results, VOCs are generally absent or at low concentrations (i.e. less than 25,000 ?g/kg total VOCs) in Site soils. Similarly, SVOCs are typically found at low concentrations (i.e. less than 50,000 ?g/kg total SVOCs) which is within the typical concentration range for urban soils. Based on January, May and September 2015 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not contribute to groundwater dissolved phase contamination. Given the generally low concentrations in soil sample results, no additional soil sampling is warranted in relation to Spill No. 1305932 at this time. Taking into consideration most recent results of soil and groundwater investigation, DEC decided to consolidate Spill Nos. 1305932 and 1109339 into one Spill No. (e.g. 1109339). Spill No. 1305932 closed. AD 06/07/2016: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 7, 2016. A link to the website is included:

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report includes a proposal that requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/20/2016: Reviewed the report. It states that for the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on March 8, 2016. LiRo conducted groundwater gauging at accessible Site wells and collected Site-wide groundwater samples from ten (10) sampling locations listed in the SMP. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. The Site monitoring program (SMP) completed for the period of October 1, 2015 to March 31, 2016, included water level gauging from accessible Site wells and an EFR IRM at ten (10) locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13 EW-14, MW-02R, MW-04R and MW-12). During the March 8, 2016, groundwater gauging event groundwater was observed between 3.51 and 5.17 feet bgs. Groundwater elevations ranged between -0.07 and 0.67 feet above mean sea level (AMSL). Free phase product was not observed during gauging. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). Groundwater Sampling March 2016: One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in one (1) (i.e. MW-02R) of ten (10) samples. The reported total VOCs ranged from non-detect [ND] in seven (7) locations (MW-04R, MW-05, MW-06, MW-08, MW-13, MW-17 and MW-18) to 46 micrograms per liter (?g/L) in monitoring well MW-02R. A review of total VOC concentration trends shows generally very low (i.e. less than 10 ?g/L) concentrations of dissolved phase VOCs in Site groundwater, with only one location (MW-02R) reporting VOCs at concentrations above their respective AWQSGVs. EFR: Between October 2015 and March 2016 twelve (12) EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 10,875 gallons of total fluids were removed from Site wells for the monitoring period. Overall, product thicknesses were within or below historic averages and with an overall monitoring period average of 0.01 feet. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Reduce the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting of the EFR IRM and Site monitoring at semi-annual. 08/02/2016: Received the following e-mail from Steve Frank: Hi Ainura, Please see the attached letter requesting a reduction in EFR frequency at Brooklyn East 13 and let us know if our proposal is OK with you. Thanks, Steve Frank Will review. AD 08/16/2016: Looked at the request. It states that

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

recent groundwater gauging measurements have indicated a Site-wide reduction in the distribution, incidence and thickness of measurable product in Site wells. Based on this data, LiRo requests reducing the frequency of EFR at the New York City Department of Sanitation (DSNY) Brooklyn East 13 garage from bi-monthly (i.e. twice a month) to monthly. AD 08/17/2016: Sent an e-mail to S. Frank, approving the request. AD 12/30/2016: Received the following e-mail from LiRo; Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 30, 2016. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/25/2017: Reviewed the report. This report presents the results of free-phase product removal and monitoring at the site for the period of April to September 2016. On September 15, 2016, LiRo conducted groundwater gauging at accessible Site wells and collected sitewide groundwater samples from nine (9) sampling locations listed in the SMP. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. September 15, 2016, groundwater elevation measurements indicated that the interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). The groundwater flow direction is generally inconsistent with previous reports/observations, since the site is tidally influenced and flow directions have been variable. Tidal Influence Study: Between June 17, 2013, and June 27, 2013, LiRo conducted a tidal influence study at the Site. The study confirmed that Site monitoring wells are directly influenced by tidal fluctuations in direct proportion to the distance from Coney Island Creek (i.e. higher tidal efficiency in wells closer to the creek). Observed tidal influences ranged between 20.1% (MW-05) and 5.3% (MW-17). The Site monitoring program (SMP) completed for the period of April 1, 2016 to September 30, 2016, included water level gauging from accessible Site wells and an EFR IRM at nine (9) locations (EW-02,EW-05, EW-08, EW-09, EW-11, EW-13, EW-14, MW-02R and MW-12). MW-04R was reported destroyed during the September 15, 2016, groundwater sampling event. Due to the absence of reported product in MW-04/MW-04R between January 2014 and September 2016 and the absence of reportable VOCs in the March 2016 MW-04R groundwater sample, a replacement for MW-04R will not be proposed. GW data: One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in three (3) (i.e. MW-02R, MW-12 and MW-17) of nine (9) samples. The reported total VOCs ranged from ND in three wells (MW-08, MW-13 and MW-18) to 24 ug/L in well MW-12. A review of total VOCs trends show a continuation of generally very low (i.e. less than 25 ?g/L) concentrations of dissolved phase VOCs in site groundwater. Free-product observed in site wells is producing minimal impacts to the site groundwater. EFR: Between April 2016 and September 2016 ten EFR events were conducted at the site. Approximately 9,127 gallons of total fluids were removed from the

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

wells for the monitoring period. Overall, product thicknesses were within or below historic averages and with an overall monitoring period average of less than 0.01 feet. Recent EFR events conducted after the end of this reporting period (i.e. October and November 2016) reported a spike in product thickness in MW-02R from a maximum of 0.22 feet and an average of 0.04 between September 2015 and September 2016 to a maximum of 1.65 feet on November 28, 2016, and an average of 1.07 feet between November 2016 and December 2016. Consequently, the frequency of EFR has been increased to a bi-monthly (i.e. twice a month) schedule. Based on the analysis and conclusions presented above, LiRo recommends the following: - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 07/18/2017: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 18, 2017. A link to the website is included: https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 08/02/2017: Reviewed the October 2016-March 2017 monitoring report. The Site monitoring program (SMP) completed for the period of October 1, 2016 to March 31, 2017, included water level gauging from accessible wells and an EFR IRM at nine locations (EW-02, EW-05, EW-08, EW-09, EW-11, EW-13, EW-14, MW-02R and MW-12). During the March 9, 2017, groundwater gauging event groundwater was observed between 5.70 and 8.51 feet bgs. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.002 feet per foot (ft/ft). The groundwater flow direction is generally inconsistent with previous reports/observations, likely due to the Site being tidally influenced. For the reporting period, routine semi-annual groundwater gauging and Site-wide sampling was completed by LiRo on March 9, 2017. One or more CP-51 list VOCs were reported at concentrations above the NYSDEC AWQSGVs in one (MW-06) of five (5) samples. The reported total VOCs ranged from ND in three (3) locations (MW-08, MW-17 and MW-18) to 45 ug/L in well MW-06. Groundwater Total VOC Trends A review of total VOC concentration trends show a continuation of generally very low (i.e. less than 50 ug/L) concentrations of dissolved phase VOCs in Site groundwater . Free-product observed in site wells is producing impacts to site groundwater. EFR: Between October 2016 and March 2017, 15 EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 9,058 gallons of total fluids were removed from site wells for the monitoring period and a total of approximately 106,650 gallon removed since the inception of EFR.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Overall, a product thicknesses showed increases above historic averages with an overall monitoring period average of approximately 0.22 feet. EFR conducted during this reporting period reported multiple product thickness measurements in MW-02R with a maximum of 2.07 feet and a six month average of 1.09 feet. Consequently, the frequency of EFR has been changed from monthly to a bi-monthly (i.e. twice a month) schedule. Based on the analysis and conclusions presented above, LiRo recommends the following: - Install replacement monitoring well (MW-12R) for destroyed monitoring well MW-12. Due to the close proximity of former EW-13 and MW-12, former extraction well EW-13 will not be replaced. - Maintain schedule of bi-monthly site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 04/06/2018: Received The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for April 2017 to September 2017. Will review. AD 05/04/2018: Reviewed the report. It states that between April 2017 and September 2017, eleven (11) gauging and/or EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 495 gallons of total fluids were removed from Site wells for the monitoring period and a total of approx. 107,145 gallons removed since the inception of EFR. Overall, product thicknesses showed a decrease above historic averages with an overall monitoring period average of approximately 0.06 feet. No free product was measured in any of the accessible monitoring wells since May 5, 2017. The last EFR event was April 28, 2017. Accessible monitoring wells are gauged on a monthly basis. If measureable free product thickness returns then EFR will be performed on a twice-monthly basis. Soil: Based on recent (September 2015) and historic soil sample results, VOCs are generally absent or at low concentrations (i.e. less than 25,000 ug/kg total VOCs) in Site soils. Similarly, SVOCs are typically found at low concentrations (i.e. less than 50,000 ug/kg total SVOCs) which is within the typical concentration range for urban soils. Based on October 2016 to March 2017 groundwater sample results, reported CP-51 list VOCs and SVOCs in site soils do not contribute to groundwater dissolved phase contamination. Groundwater: The September 2017 sampling event reported generally low (less than 50 ug/L) to ND concentrations of TVOCs in all groundwater samples and a maximum TVOC concentrations of 41 ug/L, at monitoring well MW-18. The TVOC concentration was due to one VOC, Naphthalene is the highest TVOC concentration reported for this monitoring well. Additional sampling events are required to determine if this is an anomalous elevated reading or part of an increasing trend. Based on the analysis and conclusions presented above, LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13. - Install replacement monitoring well (MW-12R) for destroyed monitoring well MW-12. Due to the close proximity of former EW-13 and MW-12, former extraction well EW-13 will not be replaced. - Maintain schedule of bi-monthly (i.e. twice a month) Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). -

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 08/22/2018: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on August 22, 2018. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/26/2018: Reviewed the semi-annual report for the period of October 2017 - March 2018. It states that LiRo performed EFR events on wells with LNAPL on December 12, 2017; January 3, 2018; January 26 2018; February 7, 2018 and March 14, 2018. Between January 2018 and February 2018, LiRo installed, surveyed and developed replacement well MW-12R. On March 7, 2018, LiRo sampled 8 site wells. The reported TVOCs in the wells ranged from ND to 72 ppb in well MW-02R. Free product thickness in the wells ranged from ND to 0.36' in well MW-14 and 0.95' in MW-02R. Free product observed in the site wells is producing low impacts on the GW quality. EFR: Seven gauging and/or EFR events were conducted for the reported period. Approximately 1,145 gallons of total fluids were removed from site wells during reported period. LiRo states that based on the GW data, site soils do not contribute to the GW dissolved contamination. Based on the analysis LiRo recommends the following: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13. - Maintain schedule of bi-monthly (i.e. twice a month) site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 01/04/2019: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 4, 2019. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v=8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 02/11/2019: Reviewed the report. It states that for the monitoring period: (April 2018 to September 2018) the Site monitoring program (SMP) included water level gauging from accessible wells and EFR at six (6) locations (MW-12R, MW-14, EW-05, EW-04, EW-11, and MW-02R) if product was present. GW sampling: For the reporting period, LiRo completed routine semi-annual groundwater gauging and Site-wide sampling on August 29, 2018. During the August 29, 2018, groundwater gauging event groundwater was observed between 6.22 and 7.70 feet bgs. Groundwater elevations ranged between -0.92 and -2.83 feet above mean sea level (AMSL). GW data: Groundwater The August 2018 sampling event reported no CP-51 VOCs above AWQSGVs. The maximum TVOC concentration of 13 ?g/L, was reported at monitoring well MW-02R. Well MW-02R typically contains free-product. EFR: Between April 2018 and September 2018, 10 gauging/EFR events were conducted on the wells. Approximately 1,312-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 109,602-gallons removed since the inception of EFR. Averall, product thicknesses lowered since the previous monitoring period with an overall monitoring period average of approximately 0.0084 feet. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: Actions The following actions will be conducted as part of the routine monitoring program: - Install a replacement well (MW-13R) for the destroyed monitoring well MW-13 (Proposed for the April 2018 to September 2018 monitoring period but was unable to be installed due to construction work in the vicinity of the replacement well location).:\\- Maintain schedule of bi-monthly (i.e. twice a month) to monthly Site-wide product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals that require NYSDEC approval. AD 06/25/2019: Received the following e-mail from LiRo: Ms. Doronova, The Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 25, 2019. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report includes a proposal which requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/01/2019: Reviewed the report. It states that the site monitoring program (SMP) completed for the period of October 2018 to March 2019, included water level gauging from accessible Site wells and monthly EFR at three (3) locations (EW-05, MW-02R, and MW-12R). LiRo performed groundwater gauging and

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

EFR on wells with free-product on October 22, 2018, November 12, 2018, January 11, 2019, February 6, 2019, February 27, 2019, and March 18, 2019. On March 5, 2019, LiRo conducted groundwater gauging at accessible wells and collected samples from seven of eight site wells. Groundwater samples were submitted for CP-51 list VOCs and analytical results were compared to the NYSDEC AWQSGVs. No sample was collected from well MW-12R due to the presence of free-phase product. Of the seven groundwater samples collected, only well MW-02R reported VOCs at concentrations above AWQSGVs. Well MW-02R reported three CP-51 list VOCs (Isopropylbenzene, n-Propylbenzene, and sec-Butylbenzene) at concentrations above their respective guidance values. The TVOCs for well MW-02R was reported at 43 ug/L. Hydrogeology: During the March 4, 2019, groundwater gauging event, groundwater was observed between 6.18 and 7.81 feet bgs. Groundwater elevations ranged between -1.67 and -2.84 feet above mean sea level (AMSL). The March 4, 2019, groundwater elevation measurements are presented in Table 3 and a groundwater contour map is presented in Figure 5. The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.01 feet per foot (ft/ft) as measured from MW-14 to MW-12R. The groundwater flow direction is generally consistent with the historical groundwater flow direction. However, groundwater flow may vary due to the tidal influence on groundwater elevations as described below. Groundwater TVOC Trends: A review of TVOC concentration trends show a continuation of generally very low (i.e. less than 75 ug/L) concentrations of dissolved phase TVOCs in Site groundwater. Of the seven wells sampled in March 2019, five (5) reported an increase, one (1) reported a decrease and one (1) reported no change in TVOCs when compared to the August 2018 TVOCs. Summary: EFR Between October 2018 and March 2019, six (6) gauging/EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in site wells. Approximately 1,824- gallons of total fluids were removed from wells for the monitoring period and a total of approximately 111,426-gallons removed since the inception of EFR. Overall, product thicknesses increased slightly since the previous monitoring period with an overall monitoring period average of approximately 0.03 feet, with highest thickness of 0.17’ in MW-12R. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Free-phase product at this Site historically has shown significant oscillations in thicknesses. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13 (Proposed for the April 2018 to September 2018 monitoring period but was unable to be installed due to construction work in the vicinity of the replacement well location). - Maintain schedule of bi-monthly (i.e. twice a month) to monthly product gauging and EFR events at wells with observed product (current or if observed within the previous year). - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Based on the continuing low levels of TVOCs in groundwater (less than 75 ug/L) since at least 2016, LiRo recommends a reduction in the frequency of groundwater sampling to annual while

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

maintaining the frequency of routine reporting at semi-annual. AD 07/02/2019: Sent the following e-mail to Mr. Aliberi of DDC: Dear Mr. Aliberti: The Department has reviewed the Interim Remedial Measure (IRM) Monitoring and Semi-Annual Monitoring Report , dated June 25, 2019 pertaining to the above-referenced site, submitted by LiRo, Engineers, Inc. (LiRo). The report states that site-wide groundwater sampling indicate minimal impact to groundwater. Based on the continuing low levels of TVOC concentrations in groundwater (less than 75 ug/L) since at last 2016, LiRo recommends a reduction in the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting at semi-annual. The Department approves these recommendations. Feel free to contact me if you have any questions or comments. Sincerely, Ainura Doronova - Environmental Engineer AD 01/20/2020: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 20, 2020. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report includes a proposal which requires your review and approval. The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 02/18/2020: Reviewed the SAMR for April 2019 to September 2019 time period . It states that the Site monitoring program (SMP) completed for the period of April 2019 to September 2019, included water level gauging from accessible site wells and monthly EFR at three to four locations (EW-02 (once) EW-05, MW-02R, and MW-12R)). The SMP for the upcoming period of October 2019 to March 2020, includes semi-annual water level gauging from accessible Site wells; groundwater sampling with laboratory analysis at eight locations: MW-02R, MW-05, MW-06, MW-08, MW-12R, MW-14, MW-17, and MW-18. EFR: Between April 2019 and September 2019, eight gauging/EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 2,824- gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 114,250-gallons removed since the inception of EFR. Overall, product thicknesses remained fairly low (less than 0.25 feet) during this monitoring period. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. GW sampling results: None of the seven groundwater samples collected in July 2019, reported any VOCs at concentrations above AWQSGVs. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: The following actions will be conducted as part of the routine monitoring program: - Install a replacement monitoring well (MW-13R) for the destroyed monitoring well MW-13 (Previously proposed however installation was delayed due to construction work in the vicinity of replacement well locations). This replacement well was subsequently installed in October 2019 and will be discussed in the next monitoring report. - Based on current product levels, the schedule for monitoring and EFR events will be

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

reduced from bi-monthly (i.e. twice a month) to once a month. If product levels show an increase, the frequency will be increased to twice a month. - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. The following proposal requires NYSDEC approval: - Based on the continuing low levels of TVOC concentrations in groundwater (less than 75 ug/L) since at least 2016, LiRo recommends a reduction in the frequency of groundwater sampling to annual while maintaining the frequency of routine reporting at semi-annual. This proposal was already approved by DEC in July 2019. AD 07/31/2020: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on July 31, 2020. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note, that in light of the current circumstances, until further notice, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 09/02/2020: Reviewed the semi-annual report for October 2019 to March 2020. It states that the site monitoring program (SMP) completed for the period of October 1, 2019, to March 31, 2020, included quarterly groundwater sampling , monthly water level gauging from accessible Site wells and monthly EFR at three to four locations: EW-02 (single event) EW-05, MW-02R, and MW-12R. For the current monitoring period (i.e. October 2019 to March 2020), approximately 1,294-gallons of total fluids were removed from Site wells by EFR. The MW-02R free-product average thickness (less than 0.01 feet) for this monitoring period is a decrease from the most previous monitoring period April 2019 to September 2019 average (0.02 feet). The EW-02 free product average thickness (0.10 feet) for this monitoring period is an increase from the previous monitoring period April 2019 to September 2019 average (0.03 feet). The MW-12R free-product average thickness (0.29 feet) for this monitoring period showed an increase from the most recent previous monitoring period average (0.21 feet). GW sampling: For the reporting period, LiRo completed routine quarterly groundwater gauging on November 18, 2019, and March 30, 2020. Quarterly groundwater sampling was conducted on November 18, 2019, and March 3, 2020. All groundwater samples were submitted for analysis of NYSDEC CP-51 list VOCs via United States Environmental Protection Agency (USEPA) Method 8260. Prior to sampling, wells were purged of at least three well volumes. Hydrogeology: During the November 18, 2019, groundwater gauging event, groundwater was observed between 6.15 and 7.72 feet bgs. Groundwater elevations ranged between -1.66 and -2.71 feet above mean sea level (AMSL). The interpreted general flow direction is towards the west with a hydraulic gradient of approximately 0.069 feet per foot (ft/ft) as measured from MW-14 to MW-12R. The groundwater flow direction is generally consistent with the historical groundwater flow direction.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

However, groundwater flow may vary due to the tidal influence on groundwater elevations as described below. During the March 30, 2020, groundwater gauging event, groundwater was observed between 5.68 and 7.63 feet bgs. Groundwater elevations ranged between -1.43 and -2.97 feet above mean sea level (AMSL). Groundwater Sampling November 2019: One or more CP-51 VOCs were reported above NYSDEC AWQSGVs in two (i.e. MW-06 and MW-12R) of nine groundwater samples collected. Total VOC concentrations range between below the laboratory reporting limit (i.e. non-detect [ND]) in four samples (i.e. MW-08, MW-13R, MW-14 and MW-18) to 73 ug/L (MW-12R). Groundwater Sampling March 2020: Of the eight groundwater samples collected, none reported VOCs at concentrations above AWQSGVs. Total VOC concentrations range between ND in four samples (i.e. MW-08, MW-13R, MW-17 and MW-18) to 3 ?g/L (MW-02R). A sample was not collected from well MW-12R due to the presence of free-phase product. Groundwater Total VOC Trends A review of TVOCs trends show a continuation of generally very low (i.e. less than 75 ?g/L) concentrations of dissolved phase TVOCs in site groundwater. EFR: Between October 2019 and March 2020, five gauging/EFR events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Approximately 1,294-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 115,544-gallons removed since the inception of EFR. Product thicknesses remained fairly low (less than 0.25 feet) during this monitoring period but showed a slight overall increase in average thickness from the previous monitoring period. Accessible monitoring wells are gauged on a monthly basis. If measureable free product is present, then EFR is performed on a routine basis, depending on product levels. Free-phase product at this Site historically has shown significant oscillations in thicknesses. Groundwater Two of the nine groundwater samples (MW-06 and MW-12R) collected in November 2019, reported CP- 51 list VOCs at concentrations above AWQSGVs. The highest total VOC concentration reported was 73 ug/L (MW-12R). None of the eight groundwater samples collected in March 2020, reported any VOCs at concentrations above AWQSGVs. The highest total VOC concentration reported was 3 ug/L (MW-02R). Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect semi-annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. There are no new proposals in this report. AD 01/21/2021: Received the following email from LiRo; Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on January 21, 2021. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note, that in light of the current circumstances, until further notice, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Uploaded the file.

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

Will review. AD 02/22/2021: Reviewed the report. It states that the Site monitoring program (SMP) completed for the period of April 1, 2020 to September 30, 2020, includes annual groundwater sampling, supplemental monthly water level gauging from accessible site wells and monthly EFR at one to two locations: EW-05 (single event) and MW-12R. The SMP for the upcoming period of October 1, 2020 to March 31, 2021, includes annual water level gauging from accessible Site wells; annual groundwater sampling with laboratory analysis at nine locations: MW-02R, MW-05, MW-06, MW-08, MW-12R, MW-13R, MW-14, MW-17, and MW-18, supplemental monthly groundwater gauging to monitor for free-product, quarterly EFR at wells containing measurable free-product and monthly product removal via peristaltic pump at EW-05, MW-02R, and MW-12R and from any locations with measurable product. For the current monitoring period 4 EFR events were conducted via vacuum truck and two product removal events via peristaltic pumping were conducted. Approximately 817-gallons of total fluids were removed from wells by EFR and peristaltic pumping. During this monitoring period, the NYCDDC notified LiRo that due to the COVID-19 pandemic, the current fiscal year budget for the period of July 2020 through June 2021 would be reduced. As a result, LiRo reduced the frequency of EFR (via vacuum truck) and supplemented product removal with LiRo personnel with a peristaltic pump. The frequency of EFR for the remainder of the fiscal year will be quarterly with LiRo personnel conducting product removal monthly. Supplemental groundwater gauging events were completed to monitor for free-product. A total of five supplemental gauging events were completed during this monitoring period. Free product: For this monitoring period (April 2020 through September 2020), free-product thicknesses have been variable and have ranged from 0.01 feet) represents a slight increase from the previous monitoring period of 0.00 feet. The MW-12R free-product average thickness (0.34 feet) for this monitoring period showed an increase from the previous monitoring period average (0.29 feet). GW sampling: Annual groundwater sampling was conducted at the site on July 20-21, 2020. All groundwater samples were submitted for analysis of NYSDEC CP-51 list VOCs via United States Environmental Protection Agency (USEPA) Method 8260. During the July 20, 2020, groundwater gauging event, groundwater was observed between 5.97 and 7.48 feet bgs. Groundwater elevations ranged between -1.40 and -3.02 feet above mean sea level (AMSL). The interpreted general flow direction is towards the north/northwest with a hydraulic gradient of approximately 0.011 feet per foot (ft/ft) as measured from EW-15 to EW-02. No CP-51 VOCs were reported above NYSDEC AWQSGVs in any of the eight groundwater samples collected. Total VOCs range between ND in three samples (i.e. MW-08, MW-13R and MW-18) to 4 ug/L (MW-02R). Groundwater Total VOC Trends A review of TVOCs trends show a continuation of generally very low (i.e. less than 75 ug/L) concentrations of dissolved phase TVOCs in site groundwater. During this monitoring period, the highest total VOCs was 4 ug/L. Based on October 2018 through July 2020 groundwater sample results, reported CP-51 list VOCs and SVOCs in Site soils do not contribute to groundwater dissolved phase contamination. LiRo recommends that the following actions will be conducted as part of the routine monitoring program: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. - Continue to remove

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

free-product through a combination of EFR and Peristaltic Pump. - Continue supplemental monthly gauging of Site wells to monitor for the presence of free-product. Proposals There are no new proposals in this report. AD 06/25/2021: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on June 25, 2021. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note that unless requested, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 07/15/2021: Reviewed the report. The site monitoring program (SMP) completed for the period of October 1, 2020 to March 31, 2021, included monthly water level gauging from accessible Site wells and Quarterly EFR and monthly manual (i.e. using a peristaltic pump) product removals at MW-02R, MW-12R, and EW-05. Annual groundwater sampling was completed in the previous monitoring/reporting period in July 2020. For the reporting period, LiRo completed nine rounds of groundwater gauging. Annual groundwater sampling was conducted on July 20-21, 2020, during the previous semi-annual monitoring period. No new groundwater samples were collected during this monitoring period. For the December 29, 2020, groundwater gauging event, groundwater was observed between 5.95 and 7.50 feet bgs. Groundwater elevations ranged between -1.48 and -2.64 feet above mean sea level (AMSL). The interpreted general flow direction is towards the north/northwest. Groundwater Total VOC Trends: A review of TVOC concentration trends show a continuation of generally very low (i.e. less than 75 ug/L) concentrations of dissolved phase TVOCs in Site groundwater. During the previous monitoring period, the highest total VOC concentration was 4 ug/L. EFR/Free-Product Removal: Between October 2020 and March 2021, four product removal events were conducted in an effort to induce mobilization and removal of residual free-phase product in Site wells. Product removal efforts consisted of a combination of EFR (via vacuum truck) and product removal via peristaltic pumping. Approximately 160-gallons of total fluids were removed from Site wells for the monitoring period and a total of approximately 116,521-gallons removed since the inception of EFR. Only one well (MW-12R) consistently contained measurable free-product. The average product thickness in MW-12R for the monitoring period was 0.45 feet. Accessible monitoring wells are gauged on a monthly basis. Free-phase product at this Site historically has shown significant oscillations in thicknesses. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: The following actions will be conducted as part of the routine monitoring program: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. - Continue to remove free-product through a combination of EFR and Peristaltic Pump. - Continue supplemental

BROOKLYN EAST 13 DOS -DDC (Continued) **S111318243**

monthly gauging of Site wells to monitor for the presence of free-product. There are no new proposals in this report. AD 12/27/20221: Received the following email from LiRo: Ms. Doronova, The Semi-Annual Monitoring Report for Spill No. 1109339, DSNY Brooklyn East 13, 2012 Neptune Avenue, Brooklyn, New York, has been uploaded for your review to LiRo s website on December 27, 2021. A link to the website is included: https://private.filesanywhere.com/LiRoEngineers/fs/v.aspx?v= 8a6c6b8b9593b0b0a0a5 The report will remain on the website for a period of one year. Please note that unless requested, no hard copies will be mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier, PG Professional Geologist/Project Coordinator The LiRo Group Integrated Construction, Design, and Technology Solutions 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 01/27/2022: Reviewed the report. It states that the site monitoring program (SMP) completed for the period of April 1, 2021, to September 30, 2021, included monthly water level gauging from accessible Site wells and Quarterly EFR and monthly manual (i.e. using a peristaltic pump) product removals at MW-02R, MW-12R, and EW-05. Annual groundwater sampling was completed in the previous monitoring/reporting period in July 2021. The SMP for the upcoming period of October 1, 2021 to March 31, 2022, includes annual water level gauging from accessible site wells; annual groundwater sampling with laboratory analysis at nine locations: MW-02R, MW-05, MW-06, MW-08, MW-12R, MW-13R, MW-14, MW-17, and MW-18, supplemental monthly groundwater gauging to monitor for free-product, quarterly EFR at wells containing measurable free-product and monthly product removal via peristaltic pump at EW-05, MW-02R, and MW-12R and from any locations with measurable product. LiRo performed supplemental groundwater gauging, product removal and/or EFR on wells with free product on April 14, 2021; April 27, 2021; May 6, 2021; May 25, 2021; June 4, 2021; July 9, 2021; July 16, 2021; July 29, 2021; August 3, 2021; August 10, 2021; and September 1, 2021. Annual groundwater sampling was conducted on July 29 and 30, 2021, during the monitoring period. Groundwater Sampling July 2021 There were no CP-51 VOCs reported above NYSDEC AWQSGVs in any of the seven groundwater samples collected. July 2021 Total VOCs range between below the laboratory reporting limit (i.e. non-detect [ND]) in two samples (i.e. MW-08 and MW-13R) to 4 ug/L (MW-02R). A review of TVOCs trends show a continuation of generally very low (i.e. <10 ug/L) concentrations of dissolved phase TVOCs in Site groundwater. During the previous monitoring period, the highest total VOCs was 4 ug/L. Based on the analysis and conclusions presented above, LiRo recommends the following Actions and Proposals: Actions The following actions will be conducted as part of the routine monitoring program: - Prepare and submit Semi-Annual Monitoring Reports with recommendations for changes (as necessary) to the Site Monitoring Program. - Collect annual groundwater samples from accessible Site wells listed in the SMP and submit samples for analysis of the NYSDEC CP-51 list of VOCs. - Continue to remove free-product through a combination of EFR and Peristaltic Pump. - Continue supplemental monthly gauging of Site wells to monitor for the presence of free-product. Proposals There are no new proposals in this report. AD"

DEC Memo:	"December 23, 2005 A Contaminated Soil Letter was sent to: (Verizon Environmental Affairs Verizon New York 221 East 37th St,- 4th Flr New York, NY 10016) 12/29/05 - Raphael Ketani. I left a message for John Quatrale of Verizon ((516) 292-8166; cell (917) 846-4423) to call me regarding the spill site. 1/5/06 - Raphael Ketani. I spoke to Mr. Quatrale. He said that this was a tank removal project. He said the tanks have been removed and a revised PBS application was submitted to Nick Lombardo of PBS. He said that 300 cu. yds. of soil (375 tons)has been dug out and is presently stockpiled awaiting containerization and carting. The work was completed on 12/14. He added that groundwater is impacted and that they will put in wells. Mr. Quatrale said that Joe Sun of DEC Region 2 is the case manager for a number of Verizon sites. A report will be sent to Spills and to Mr. Sun once the analytical is received and all other work regarding the site is completed. 1/26/06 - Raphael Ketani. I spoke to Mr. Quatrale. He said that he was putting many Verizon site reports together. He said that this site's report was partially done. He said he was waiting for the soil and water analyticals. 2/16/06 - Raphael Ketani. I presented the Spill Report to Randall Austin, Chief Spills Engineer of Region 2, and explained that this case was dealing with groundwater contamination and that Mr. Sun of Region 2 Remediation was already dealing with this case. Mr. Austin transfered the case to Koon Tang of Remediation. 3/16/06 - reviewed the closure report from Verizon. Verizon hired ENvirotrac to remove a 4000-gallon diesel UST and found some contaminated soil. 375 tons of petroleum impacted soil was excavated and disposed of properly. End-point soil samples have no VOCs detected, only SVOCs were detected above the TAGM 4046, but consistent with urban backfill. GW sample taken at the bottom of the tank excavation shows all ND, except for a hit of MTBE at about 50 ppb. No sign of significant environmental impact. Spill closed. - KST "

SWIS: 2401
Town: New York City
Record Added Date: 06/16/2020
Record Updated Date: 08/03/2021
Update By: HMDUDEK
Site Description: "Site Location: The 1.36-acre site is located at 1607 Surf Avenue, in the Coney Island section of Brooklyn. The site occupies Tax Block 7062 Lot 28. The site is bounded to the south by Surf Avenue, followed by MCU Park; to the east by West 16th Street, followed by a vacant lot and several parking lots; to the west by West 17th Street, followed by an office building and parking lot; and to the north by a parking lot. Site Features: The site is a vacant asphalt paved lot. Current Zoning and Land Use: The site is located within the Special Coney Island District (CI). The site is zoned for medium density residential use (R7X) with a commercial overlay (C2-4). The site is currently vacant. Past Use of the Site: By the late 1800s, residential dwellings, a shed, and a store existed on-site. By 1906, the site had been redeveloped with an auditorium, stores and sheds. By 1930, the site was occupied by a theater, storefronts, and an automobile repair facility on the eastern part of the property. On-site businesses include a photo studio (1934-1970), a printing

LOT 28,TAXBLOCK 7062 (Continued) **S109942403**

studio (1934-1970), an exterminator (1934-1945), and a machinist/machine works (1928-1970). Since 2001, the site has been a parking lot. Site Geology and Hydrogeology: The site is underlain with historic fill ranging from 2 and 10 feet below ground surface (bgs). Fill material is underlain by a native tan or gray, fine-grained sand layer with varying amounts of gravel, silt, and clay. The deepest soil borings were 15 feet bgs and the sand layer extends beyond that depth. Bedrock was not encountered during site investigation and minimum expected depth to bedrock is 600 feet bgs. Groundwater occurs between 6 and 8 feet bgs and flows to the southeast. "

Env Problem:

"Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), per- and polyfluoroalkyl substances (PFAS), pesticides and 1,4-Dioxane. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), vinyl chloride, polycyclic aromatic hydrocarbons (PAHs), 1,1-trichlorethane (TCA), and 1,1-dichloroethene , and metals. Soil: Soil data were compared to Restricted Residential Soil Cleanup Objectives (RRSCOs), Unrestricted Use Soil Cleanup Objectives (UUSCOs), and Protection of Groundwater Soil Cleanup Objectives (PGSCO). The contaminants of concern in soil are PCE, PAHs, and metals. PCE was detected at 75 parts per million (ppm) above the RRSCO of 19 ppm. PAHs were detected throughout the site. The PAHs detected include benzo(a)anthracene detected between 1.2-36 ppm above the RRSCO of 1 ppm; benzo(b)fluoranthene between 1.2-43 ppm above the RRSCO of 1 ppm; and indeno(1,2,3-cd)pyrene was detected between 0.57-21 ppm above the RRSCO of 0.5 ppm. Barium was detected between 356-730 ppm above the RRSCO of 400 ppm; cadmium was detected at 10.4 ppm above the RRSCO of 4.3 ppm; lead was detected between 64.2-3,110 ppm above the RRSCO of 400 ppm; and mercury was detected between 0.262-0.54 ppm above the RRSCO of 0.81 ppm. 1,4-dioxane was not detected above the reporting limit. Total PFOA and PFOS concentrations detected ranged between 0.000046-0.00334 parts per trillion (ppt). PFOA, PFOS, and 1,4-dioxane are not considered contaminants of concern at this site. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Groundwater data was compared to the NYS DEC TOGS Ambient Water Quality Standards (NY-AWQS). PCE was detected at 10 parts per billion (ppb) which is above the NY-AWQS of 5 ppb. PAHS were detected throughout the site and include benzo(a)anthracene detected between 0.02-0.07 ppb above the NY-AWQS of 0.002 ppb; benzo(b)fluoranthene detected between 0.02-0.07 above the NY-AWQS of 0.002 ppb; and chrysene detected between 0.04-0.06 ppb above the NY-AWQS of 0.002 ppb. 1,4-dioxane was not detected above the reporting limit. Total PFOA and PFOS were detected between 44.4-99.6 ppt. PFAO, PFOS, and 1,4-dioxane are not considered contaminants of concern at this site. Data indicates potential for off-site impacts to groundwater related to this site. Soil Vapor/Indoor Air: PCE was detected throughout the site ranging from 2.76-23,200 micrograms per cubic meter g/m3. TCE was detected between 3.65-1,900 g/m3. Cis-1,2-DCE was detected between 4.08-2,390 g/m3. 1,1-dichloroethene was detected at 1.36 g/m3. Vinyl chloride was detected at 22.2 g/m3. 1,1,1-TCA was detected between 1.36-8.51 g/m3. Petroleum-related compounds, namely benzene, toluene, ethylbenzene, and xylenes, were

LOT 28,TAXBLOCK 7062 (Continued) **S109942403**

	detected between 3.11-90 g/m3. Data indicates potential for off-site impacts to soil vapor related to this site. "
Health Problem:	"Since the site is a vacant lot covered by asphalt or concrete, people will not come in contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. However, there is a potential for soil vapor intrusion in off-site and future on-site buildings."

Site Description:	"The site consists of a warehouse and a parking lot in Coney Island, Brooklyn, NY. The site is adjacent to Coney Island Creek, which borders the site to the north. Hart Place borders the site to the south. The neighborhood is mainly residential even though the zoning is M3 manufacturing. A former MGP site (Coney Island Works) is located to the north of the site on the other side of Coney Island Creek. The current use of the site is commercial. The former Volunteer, Tops Appliance City, has submitted a Phase I Environmental Investigation Report, which showed contaminants common to the fill material in the area. The area is covered with 11-13 feet of mixed urban fill material. The contaminants of concern were metals and Semi Volatile Organic Compounds (SVOCs) above the NYSDEC TAGM 4046 RSCO. The investigation has not been completed. The negotiations for the Voluntary Cleanup Program Agreement were terminated because the Volunteer has not been responsive to the program requirements. "
Env Problem:	"The Phase I Environmental Assessment has revealed contaminants specific to the urban fill material. The entire area is covered by 11-13 feet of fill material. Contaminants of concern were metals (copper, zinc, lead) and semi-volatile organic compounds (SVOCs) which have been found at levels above the NYSDEC TAGM 4046 RSCO. "

Updated By:	JEBROWN
Site Description:	"Location: The former Brooklyn Borough Gas Works site (Site # 224026) is located in the Borough of Brooklyn, Kings County, New York,at 873 Neptune Avenue,Coney Island. The site is bordered by the right of way of the Shore Parkway and the New York Metropolitan Transit Authority (MTA) rail-yard to the north and west, and Coney Island Creek to the south and east. The site is approximately 17.6 acres in size. Site Features: The site is relatively flat and is located in a residential/commercial area of Brooklyn. The site is bordered on the south by Coney Island Creek, to the north by an elevated portion of the Belt Parkway and the MTA rail yard. To the east of the site is the Gill Hodges Little League field (now closed) and to the west are railroad tracks. Current Zoning: The site is zoned for Commercial/Industrial use. Surrounding parcels are a mixture of commercial and industrial uses. Past Use of the Site: Former Manufactured Gas Plant operations ceased at this site in 1951. The gas manufacturer operated a carburated water gas plant which was constructed between 1908 and 1912. The facility included two large-capacity gas holders, a station metering house, two underground and five above ground gas oil tanks, tar conditioners and seal pumps, three tar separators, four generators, a coal storage yard, pump rooms, booster and exhauster rooms, two condensers, eight purifier boxes, two relief holders, an electric tar precipitator, a tar dehydrator system, tar storage tanks, oil pumps, and drip oil tanks. From 1960 to 1966 the site was almost completely decommissioned and demolished. Some components were used for natural gas service until they were demolished in the early 1980's. Operable Units: The site was divided into three operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S105586297**

pathway resulting from the site contamination. Operable unit 1 (OU1) is containment of the upland area by means of a cut-off wall. OU2 consists of excavation of the top 3 feet of Coney Island Creek Sediment, placement of clean fill on a geotextile and fabric, and installation of a 50 foot-wide ecological buffer zone along the creek's bank. OU3 includes removal and disposal of contaminated soil in selected areas, installation of a NAPL recovery trench, and installation of an impermeable cap. Site Geology and Hydrogeology: Site investigations revealed site geology consisting of unconsolidated Pleistocene deposits from 10 to 172 feet below ground surface (BGS) that consist mainly of fine to coarse grained sands with a clay/silt layer from 59 to 60 feet BGS and clay from 170 to 172 feet BGS. The sand, which at some depths contained a trace of gravel, varied with depth in grain size and color. Above the Pleistocene deposits is a thin (5 to 10 feet) layer of near shore and estuary type deposits. The glacial aquifer encountered at the site is composed almost entirely of the sands of the till and out-wash deposits and extends from just below the surface to 170 feet BGS. Coney Island Creek is approximately 1.6 miles long, emerging from a culvert under Shell Road just east of the site. The creek is a small tidal creek which flows in a southwesterly direction, then turns and flows in a northwesterly direction to Gravesend Bay which empties into lower New York Bay and, ultimately the Atlantic Ocean. "

Env Problem: "Post-Remediation: Remediation at the site is complete. All remedial elements, except for the on-site Groundwater Treatment Plant, which was deleted from the remedy in February 2012, have been completed. The remedy included the excavation of the coal tar source area in the upland portions of the site, resulting in the off-site disposal of 86,200 tons of impacted soil. The remedy also included construction of a low permeability cap over the upland portions of the site to minimize exposure pathways and prevent rainwater infiltration, and the installation of coal tar collection wells in a collection trench. The top three feet of contaminated sediments across the entire length and width of the Coney Island Creek adjacent to the site were dredged and replaced with clean sediment. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) was reported at a concentration of 155 parts per trillion (ppt), exceeding the 10 ppt screening level for groundwater. Individual PFAS exceeding the 100 ppt screening level included Perfluorobutanoic Acid (PFBA). Total PFAS, including both PFOA and PFOS, were reported at concentrations of 2,940 ppt, which is above the 500ppt screening level for total PFAS in groundwater. Special Resources Impacted/Threatened: Prior to remediation, the contamination in Coney Island Creek was sufficient to cause an adverse, acute or chronic effect to fish, shellfish, crustacea and other wildlife. This threat has been mitigated. Significant Threat: The significant threat that existed prior to remediation no longer exists at the site. The site is being managed under a Site Management Plan. Prior to Remediation: The main categories of contaminants which exceeded their SCGs in all Operable Units were polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and inorganics. The carcinogenic PAH contaminants of concern were chrysene, dibenzo(a,h)anthracene,benzo(b)fluoranthene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, and Indeno(1,2,3-cd)pyrene. The VOC contaminants of concern included benzene, toluene, ethylbenzene and xylene (BTEX), and acetone. The inorganic contaminants of concern

K - FORMER BROOKLYN BOROUGH GAS WORKS (Continued) **S105586297**

included but were not limited to the following arsenic, lead, manganese, nickel and zinc. Contaminated soil on the site exhibited high levels of benzene. Most of the contaminants were detected primarily at a depth of 4 to 12 feet below ground surface across the entire site. Throughout the entire site, total PAHs were observed in soil at concentrations ranging from less than 1 ppm to over 40,000 ppm and BTEX constituents were detected at concentrations ranging from 0.0014 ppm to 1,600 ppm. Below the groundwater table, total PAHs were observed in soil at concentrations ranging from non detect to 4,500 ppm and total BTEX ranged from no detect to 175 ppm. The majority of the source materials were typically located within the upper six feet of the soil, just above the groundwater table. In the OU2 area, surface sediments, defined as the uppermost four inches of sediments in Coney Island Creek, were contaminated with the same VOC, SVOC and metal contaminants present on-site. BTEX compounds were detected in 11 of 30 surface sediment samples, with benzene,toluene, ethylbenzene and xylenes concentrations ranging between 0.0023 and 13 ppm. Individual PAHs were detected at concentrations ranging from 0.13 to 72 ppm in 29 of the 30 samples collected. The maximum concentrations of TPAHs and cPAHs detected in the surface sediment were 120 and 8 ppm respectively. Twenty-three metals were detected in the surface sediment samples. The highest concentrations of metals, including lead at a concentration of over 2,000 ppm, were detected at sampling locations adjacent to the combined sewer overflow and storm water outfalls and are probably not MGP-related. Subsurface sediments are defined as the sediments between 4 inches and 6 to 10 feet below the sediment surface. Individual BTEX constituents were detected in 34 of the 66 subsurface sediments samples collected with concentrations ranging from 0.0006 to 300 ppm, and a maximum total BTEX of 364 ppm. Individual PAHs were detected, at concentrations ranging from 0.036 to 200 ppm, in 74 of 99 samples. The maximum concentration of TPAH detected in the subsurface sediment was 819 ppm. Elevated concentration of PAHs were detected at depth of 6 to 10 feet below the sediment surface in the source areas adjacent to the southwest portion of the former MGP site. Metals, including arsenic and lead at concentrations ranging from 61 to 3,300 ppm respectively were detected in subsurface sediments. "

Health Problem: "Since the site is fenced and covered with an engineered soil cover system, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater since the area is served by public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant therefore soil vapor intrusion is currently not an issue. However, the potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

PFAS: PFAS Contamination Site Location Listing

DEC surveyed select businesses, fire departments, fire training centers, bulk storage facilities, airports, and Department of Defense (DoD) facilities. The responses to the survey have helped to determine if these entities used or stored materials containing PFOA/PFOS including AFFF and dispersants used in Teflon coating operations. The results of this survey will be updated periodically as additional responses are received..

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/08/2022

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	14071946 THE NARROWS, NY
Version Date:	2019

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

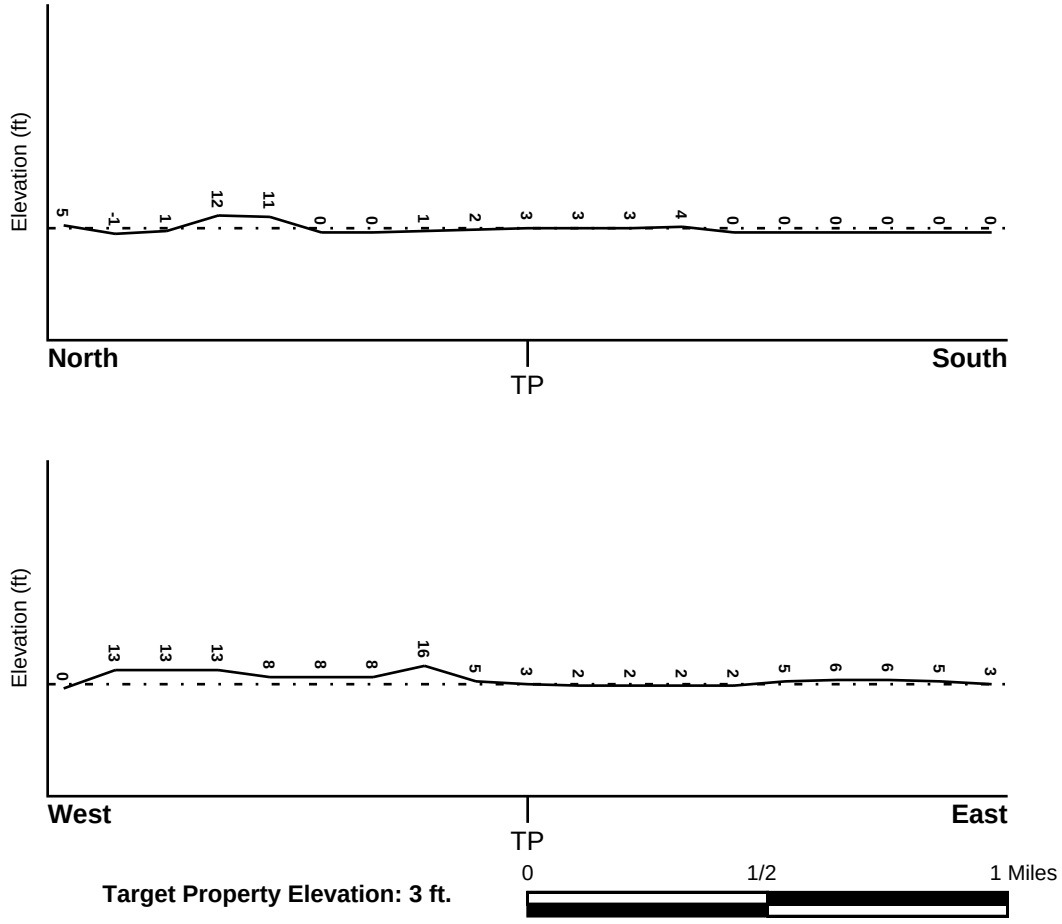
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970353F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970334F	FEMA FIRM Flood data

3604970118B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CONEY ISLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Pleistocene
Code:	Qp *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sand
mucky-peat

Surficial Soil Types: sand
mucky-peat

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: coarse sand
sand
loamy sand
sapric material

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Subject: FOIL Request :: W105546-081922

Dear Joanne:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 8/19/2022 and given the reference number FOIL #W105546-081922 for tracking purposes. You may expect the Department's response to your request no later than **9/20/2022**.

Record Requested: **Records regarding above and underground storage tanks, permits and/or violations, spills, hazardous material and any other information of environmental concern as we are conducting a Phase I Environmental Site Assessment. (My ref#: Z3-4991.3), Time frame: 01/01/1967 - 08/19/2022, 2828 West 28th Street, Brooklyn, NY 11224 - Block: 7011, Lot: 11**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Request Type: Freedom of Information Law Request

Description: A FOIL request is a request for any "record" under NY's Freedom of Information Law (Article 6 of the Public Officers Law). Section 86 defines a "record" as: "any information kept, held, filed, produced or reproduced by, with or for an agency or the state legislature, in any physical form whatsoever including, but not limited to, reports, statements, examinations, memoranda, opinions, folders, files, books, manuals, pamphlets, forms, papers, designs, drawings, maps, photos, letters, microfilms, computer tapes or discs, rules, regulations or codes. NYSDEC maintains records in a variety of forms, or media, such as in hard copy (on paper), as recordings, as photographs, in electronic form, etc.

APPENDIX G

PROJECT PERSONNEL QUALIFICATIONS

HILLMANN
CONSULTING

Etan Hindin

Senior Project Manager

EDUCATION:

B.S. Biology, Bar Ilan University, Ramat Gan, Israel

CERTIFICATIONS:

US EPA AHERA Asbestos Inspector

New York State Asbestos Project Monitor

New York State Air Sampling Technician

NJDEP GIS Training

Environmental Audit and Site Assessments (Rutgers NJAES)

40-hr OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) Training

8-hr OSHA HAZWOPER Refresher Training

YEARS OF EXPERIENCE:

With Hillmann: 4 year

Total: 14 years

PROFESSIONAL EXPERIENCE:

As a Senior Project and Account Manager, Mr. Etan Hindin advises private and public sector clients on a broad range of environmental projects including due diligence (Phase I and II), regulatory compliance, HSE audits, soil and groundwater remediation, and mold investigations and asbestos surveys. Mr. Hindin is responsible for proposing project services, bidding, managing projects, and meeting with clients.

Mr. Hindin has conducted Phase I's of commercial and industrial sites throughout the country and has provided EH&S consulting to Fortune 500 companies. He is particularly well versed in environmental, health and safety regulations and he strives to provide creative, effective, and efficient solutions to complex environmental problems.

Representative experience includes:

Enviro-Sciences (of Delaware), Inc.: From 2011 to 2018, Mr. Hindin served as a Project Manager at Enviro-Sciences (of Delaware), Inc. where he designed sampling programs, oversaw abatement projects, and performed clearance sampling for mold and asbestos. He also managed environmental due diligence projects of commercial and industrial sites, throughout the US. Mr. Hindin often trained entry-level consultants in database review, report writing, and assessment protocols while working to improve report templates to comply with changing regulations and ASTM standards.

NJDEP Watershed Ambassadors Program: From 2010 to 2011, Mr. Hindin worked as a New Jersey Watershed Ambassador for the NJDEP where he monitored water quality utilizing NJDEP protocols and online reporting software, utilized GIS, NJGeoWeb, and DataMiner to research assigned water bodies and surrounding areas. Mr. Hindin also presented on watershed management, resource conservation, sustainability, and environmental regulations.

HILLMANN
CONSULTING

Dominick Aponte

Environmental Scientist

EDUCATION:

B.A. Biological Sciences, Rowan University

CERTIFICATIONS:

40-hr OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) Training

DOT HAZMAT Advanced General Awareness Training

First Aid/CPR Certified

RCRA Hazardous Waste Generator Training

YEARS OF EXPERIENCE:

With Hillmann: 1 year

Total: 4 years

PROFESSIONAL EXPERIENCE:

As an Environmental Scientist, Mr. Aponte advises private and public sector clients on a broad range of environmental projects including due diligence (Phase I and II), regulatory compliance, HSE audits, soil and groundwater remediation, and mold investigations and asbestos surveys.

Mr. Aponte has conducted Phase I's of commercial and industrial sites throughout the country and has provided EH&S consulting to Fortune 500 companies. He is well versed in environmental health and safety regulations and he strives to provide creative, effective, and efficient solutions to complex environmental problems.

Representative experience includes:

RU2 Engineering.: Mr. Aponte worked as an Environmental Scientist for RU2 Engineering where he conducted and oversaw field sampling events for soil and groundwater. In his position, Mr. Aponte was responsible for the oversight of UST closures.

Envocare: Working as an Environmental Scientist for Envocare in Somerset, NJ, Mr. Aponte prepared reports and data tables for clients. He was responsible for field sampling with a concentration on soil, groundwater, and vapor intrusion. Mr. Aponte oversaw subcontractors and remediation projects as well as overseeing disposal of contaminated soil.

Arecon LTD: As an Environmental Scientist for Arecon LTD in Hamilton, NJ, Mr. Aponte prepared reports and data tables for clients. He was responsible for field sampling of soil and groundwater. Mr. Aponte oversaw subcontractors and remediation projects as well as overseeing disposal of contaminated soil.

Certified Environmental Contractors: Mr. Aponte worked as a Staff Scientist for Certified Environmental Contractors from 2017 to 2018 where he supervised the UST excavation of residential UHOT sites. He performed sampling of soil and groundwater and assisted in the preparation of reports.

HILLMANN CONSULTING

Chris Hirschmann, CHMM

Director, Site Investigation & Remediation Services

EDUCATION:

B.S. Environmental Science, Cornell University

M.S., Environmental Science, NJIT – Rutgers University

CERTIFICATION:

OSHA 40-Hour HAZWOPER

OSHA HAZWOPER Supervisor

OSHA 10-Hour Construction

Certified Hazardous Materials Manager (CHMM) #14701

NJDEP Subsurface Evaluator #572258

Hazardous Waste Management Certification

Site Remediation Basics Certification

New York City Office of Environmental Remediation (NYCOER) Brownfield Certification (TurboTraining)

OSHA 30-Hour 1910 General Industry Training

YEARS OF EXPERIENCE:

With Hillmann: 12

Total: 14

PROFESSIONAL EXPERIENCE:

Mr. Hirschmann is currently the Director, Site Investigation & Remediation Services at Hillmann Consulting, LLC. As such, he is responsible for managing and implementing soil, groundwater, and soil vapor subsurface investigations and remediation; regulatory compliance; storage tank closure and install; and third party document review.

Mr. Hirschmann has extensive experience in evaluating and investigating sites for subsurface contamination and instituting remedial activities for commercial and industrial properties (including City & State regulatory & brownfield programs). He also performs SPCC plan preparation and hazardous materials management; and performs Phase I environmental site assessments to meet due diligence requirements under CERCLA, including the quality assurance of technical reports.

Representative experience includes:

The Doe Fund, Bronx, NY:

Identified as a spill case with confirmed soil, groundwater and soil/vapor contamination with the New York State Department of Environmental Conservation (NYSDEC) and brownfield and e-designation site with New York State Office of Environmental Remediation (NYCOER). Mr. Hirschmann functioned as the project director for Hillmann and prepared the remedial investigation work plan (RIWP), conducted remedial investigation activities and prepared a Remedial Investigation Report (RIR). Based on the RIR Hillmann prepared a Remedial Action Work Plan (RAWP) that was subsequently approved by the NYSDEC and NYCOER. Under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities, including implementation of a Community Air Monitoring Plan, during site redevelopment activities.

Women in Need, Brooklyn, NY:

Identified as an e-designation and brownfield case with soil and soil/vapor contamination with NYCOER. Mr. Hirschmann functioned as the project director for Hillmann and prepared the remedial investigation work plan (RIWP), conducted remedial investigation activities and prepared a Remedial Investigation Report (RIR). Based on the RIR Hillmann designed and prepared a Remedial Action Work Plan (RAWP) that was subsequently approved by the NYCOER. Under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities during site redevelopment activities.

TLK Manor, Bronx, NY:

Identified as a contaminated property under the purview of NYCDEP, Hillmann provided investigation and remediation services related to redevelopment activities. Mr. Hirschmann functioned as the project director and conducted the remedial investigation and prepared a Remedial Action Work Plan based on the results of the soil, groundwater and soil/vapor investigation. During redevelopment

HILLMANN CONSULTING

activities, under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities including implementation of a Community Air Monitoring Plan.

BP Real Estate Fund, Queens, NY

Hillmann was retained to address the e-designation on the property for hazardous materials prior to redevelopment activities. Mr. Hirschmann functioned as the project director and prepared a Remedial Investigation Workplan, conducted the Remedial Investigation soil, groundwater and soil vapor sampling activities and issued the Remedial Investigation Report to the NYCOER. The NYCOER subsequently removed the e-designation from the property after review and approval of project documents.

AIG, Bernardsville, NJ:

The Property had a leaking underground storage tank (UST) identified as a spill case with the New Jersey Department of Environmental Protection (NJDEP) and contained widespread soil and groundwater contamination. Hillmann provided investigation and remedial activities at the site including: delineation of soil and groundwater contamination, preparation of remedial action plans for the NJDEP, enhanced fluid recovery for groundwater remediation, injection remediation of groundwater including chemical oxidation material and microbe material to break down and remediate the elevated contaminants found in the groundwater. Mr. Hirschmann was the project manager and NJDEP certified Subsurface Evaluator for the remedial activities.

City of Newark, New Jersey:

Hillmann provided investigation and remediation activities for five City owned brownfield properties. Mr. Hirschmann functioned as the project manager for oversight, design, implementation and management of soil and groundwater remedial investigations at the properties.

Unique People Services, Bronx, New York

Identified as a contaminated property under the purview of NYCDEP, Hillmann provided investigation and remediation services related to redevelopment activities. Mr. Hirschmann functioned as the project director and conducted the remedial investigation and prepared a Remedial Action Work Plan based on the results of the soil, groundwater and soil/vapor investigation. During redevelopment activities, under the direction of Mr. Hirschmann, Hillmann provided oversight and direction of remedial activities including implementation of a Community Air Monitoring Plan.

Notias Construction, NY, NY:

Hillmann provided environmental investigation activities for 5 separate sites in Manhattan, NY. Mr. Hirschmann functioned as the project manager and prepared Phase II Investigation workplans for soil and soil-vapor sampling, directed site investigation activities and prepared Remedial Investigation Reports for each site. Where

HILLMANN CONSULTING

contamination was identified, Mr. Hirschmann prepared Remedial Action Work Plans for slated redevelopment activities.

AIG: Northeastern States: Hillmann provides ongoing environmental consulting for this client including decommissioning of fuel oil storage tanks, investigation and remediation of fuel oil contaminated soil and groundwater. Mr. Hirschmann provides third-party oversight on behalf of this client to ensure the contractors/consultants onsite are performing project activities in accordance with industry and regulatory protocol. When applicable on certain projects, Mr. Hirschmann will also direct full remedial investigation and remedial activities as the project manager.

Soil Vapor Sampling Form

Date: 9/13/2024 **Time:** 8:45
Weather : Partly Cloudy

Temperature:	70 F	Humidity:	78%
Wind Magnitude:	4 MPH	Wind Direction:	NE
Barometric Pressure:	30.26"	Precipitation:	-

Sampling Team: Emery Lovekamp
Sampling Location: 2828 W 28th St, Brooklyn, New York
Site Condition (i.e. any adjacent questionable facilities, vent pipes, tanks, etc. and type of basement present)
Parking Lot & Basketball Courts

Prior to commencing the sampling activity, remove the brass cap from the end of the sample tubing and fit a new brass hose barb fitting onto the sample tubing.

Calibrate the Helium detection meter

Utility Clearance Completed: Yes
Sampling Depth: 3 feet
Sealed at land surface : Yes
Purge Rate: 0.2 L/min Must be less than 0.2 L/min
Purge Time: 2 min
Helium Rate at enclosure: 3.6%
Helium Rate from sample tubing: 0% Is this rate <10% of the rate at the enclosure? **PASS**

If the Helium readings have a greater ratio than 10% the seals should be rechecked and the tracer gas should be reapplied.

Once the tracer gas screening procedures are completed and no short-circuiting is determined to be present at the location the soil vapor sample can be collected in a lab certified clean summa canister at a rate less than 0.2 L/min.

Is the Summa Canister Certified Clean and within the proper holding time ? Yes

Starting Pressure:	-30 in. of Hg		
Starting Time:	9:12	**Date:**	9/13/2024
Ending Time:	11:12	**Date:**	9/13/2024
Ending Pressure:	-10 in. of Hg

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Compliance Statement

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Project/Site: 2828 W 28th Street

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

CASE NARRATIVE

Client: Roux Environmental Eng & Geology DPC

Project: 2828 W 28th Street

Report Number: 200-75119-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 9/14/2024 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANICS (AMBIENT AIR)
Samples RXSV-8 (200-75119-1), RXSV-2 (200-75119-2), RXSV-9 (200-75119-3), RXSV-6 (200-75119-4), RXSV-4 (200-75119-5), RXSV-7 (200-75119-6), RXSV-3 (200-75119-7), RXSV-5 (200-75119-8), RXSV-1 (200-75119-9) and DUP_09132024 (200-75119-10) were analyzed for Volatile Organics (Ambient Air) in accordance with EPA Method TO15. The samples were analyzed on 09/17/2024 and 09/18/2024.

Samples RXSV-8 (200-75119-1)[5X] and RXSV-9 (200-75119-3)[2.5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the VOCs analysis.

All quality control parameters were within the acceptance limits.

Detection Summary

Client: Roux Environmental Eng & Geology DPC
Job ID: 200-75119-1
Project/Site: 2828 W 28th Street

Client Sample ID: RXSV-8
Lab Sample ID: 200-75119-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Dichlorodifluoromethane	1.9	J	2.5	0.54	ug/m3	1		TO-15	Total/NA

Accreditation/Certification Summary

Client: Roux Environmental Eng & Geology DPC
Job ID: 200-75119-1
Project/Site: 2828 W 28th Street

Laboratory: Eurofins Burlington

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10391	03-31-25

The following analytes are included in this report, but the laboratory is not certified by New York NELAP 10391. This list may include analytes for which the agency does not offer certification:

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	4-Ethyltoluene
TO-15		Air	4-Isopropyltoluene
TO-15		Air	Chlorodifluoromethane
TO-15		Air	Methyl Butyl Ketone (2-Hexanone)
TO-15		Air	n-Butane
TO-15		Air	n-Butylbenzene
TO-15		Air	n-Propylbenzene
TO-15		Air	sec-Butylbenzene
TO-15		Air	tert-Butylbenzene
TO-15		Air	Tetrahydrofuran

Ethyl alcohol

CATALOG NUMBER	N-11885-1G
LOT NUMBER	12173500
DATE CERTIFIED	08/21/19
EXPIRATION DATE	08/30/25
CAS NUMBER	64-17-5
MOLECULAR FORMULA	C2H6O
MOLECULAR WEIGHT	46.07
STORAGE	Store at room temperature (20 - 25 °C).
HANDLING	See Safety Data Sheet
INTENDED USE	For laboratory use only.

Analytical Test	Value
% PURITY (GC/TCD)	99.5
% PURITY (GC/FID)	100.0
FT-IR SPECTROSCOPY	CONFORMS TO STRUCTURE
PHYSICAL APPEARANCE	COLORLESS LIQUID
% PURITY	99.8
ISO 17034:2016	CERTIFIED REFERENCE MATERIAL

Primary Reference Material intended for the calibration of gas analyzers or instrumentation. General instructions for proper use of gas mixtures are found in "ISO 16664: Gas analysis – handling of calibration gases and gas mixtures".

Contents under pressure, store in secure area and do not expose to temperatures greater than 150 °F.

Recommended Operating temperature within 32°F (0°C) and 125°F (52°C).

Recommended minimum sample size 10 mL.

Except where noted, results are reported in mole/mole ppm as determined by Gas Chromatography using qualified reference standards under ANA-50-741-ALP and ANA-50-742-ALP and meets ISO/IEC 17025 requirements. Every cylinder is analyzed and represents one unique lot.

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor providing a level of confidence of 95% and has been carried out in accordance with ISO/IEC 17025 requirements.

This report is issued in accordance with the laboratory accreditation requirements of ANAB. It provides traceability of measurement to recognized national standards, and to units of measurement realized by the National Institute of Standards and Technology (NIST).

PAGE: 2 of 6
Report ID: 39140
Revision: 0

Sales#:	117495978	**Cylinder Size:**	152 (8" X 47.5")
Production#:	1603549	**Cylinder # :**	CC-524925
Report Date:	Mar-27-2024	**Cylinder Pressure:**	2000 psig
P.O.#:	75737466	**Cylinder Valve:**	CGA 350 / Steel
Blend Type:	ISO-17025	**Cylinder Volume:**	29.5 Liter
Material#:	24104980	**Cylinder Material:**	Aluminum
Traceability:	NIST by weight	**Gas Volume:**	4000 Liters
Expiration Date:	Mar-27-2025	**Blend Tolerance:**	10% Relative
Do NOT use under:	150 psig	**Method of Analysis:**	GC-FID

COMPONENT	CAS Number	Requested Conc	(k @ 95%)	Reported Conc	Uncertainty
Propylene	115-07-1	1.000 ppm	2.571	1.066 ppm	± 0.050 ppm
Chlorodifluoromethane	75-45-6	1.000 ppm	2.571	1.065 ppm	± 0.044 ppm
Freon-12	75-71-8	1.000 ppm	2.571	1.048 ppm	± 0.033 ppm
Chloromethane	74-87-3	1.000 ppm	2.571	1.055 ppm	± 0.050 ppm
Freon-114	76-14-2	1.000 ppm	2.571	1.056 ppm	± 0.055 ppm
Vinyl Chloride	75-01-4	1.000 ppm	2.571	1.052 ppm	± 0.035 ppm
1,3-Butadiene	106-99-0	1.000 ppm	2.571	1.059 ppm	± 0.030 ppm
Methanol	67-56-1	1.000 ppm	2.571	1.213 ppm	± 0.034 ppm
n-Butane	106-97-8	1.000 ppm	2.571	1.051 ppm	± 0.021 ppm
Bromomethane	74-83-9	1.000 ppm	2.571	1.051 ppm	± 0.033 ppm
Chloroethane	75-00-3	1.000 ppm	2.571	1.046 ppm	± 0.028 ppm
Vinyl Bromide	593-60-2	1.000 ppm	2.571	1.058 ppm	± 0.028 ppm
Acetonitrile	75-05-8	1.000 ppm	2.571	1.101 ppm	± 0.036 ppm
Acrolein	107-02-8	1.000 ppm	2.571	1.171 ppm	± 0.038 ppm
Isopentane	78-78-4	1.000 ppm	2.571	1.060 ppm	± 0.038 ppm
Acetone	67-64-1	1.000 ppm	2.571	1.066 ppm	± 0.036 ppm
Freon-11	75-69-4	1.000 ppm	2.571	1.029 ppm	± 0.026 ppm
Isopropyl Alcohol	67-63-0	1.000 ppm	2.571	1.159 ppm	± 0.029 ppm
n-Pentane	109-66-0	1.000 ppm	2.571	1.057 ppm	± 0.026 ppm
Acrylonitrile	107-13-1	1.000 ppm	2.571	1.070 ppm	± 0.034 ppm
Ethyl Ether	60-29-7	1.000 ppm	2.571	1.059 ppm	± 0.043 ppm
1,1-Dichloroethene	75-35-4	1.000 ppm	2.571	1.087 ppm	± 0.034 ppm
Carbon Disulfide	75-15-0	1.000 ppm	2.571	1.083 ppm	± 0.034 ppm
Methylene Chloride	75-09-2	1.000 ppm	2.571	1.063 ppm	± 0.027 ppm
Tert-Butanol	75-65-0	1.000 ppm	2.571	1.084 ppm	± 0.027 ppm
3-Chloropropene	107-05-1	1.000 ppm	2.571	1.047 ppm	± 0.026 ppm
Freon-113	76-13-1	1.000 ppm	2.571	1.082 ppm	± 0.033 ppm
