EXECUTIVE SUMMARY

Brussee Environmental Corporation (BEC) prepared this Phase I Environmental Site Assessment (ESA) for the industrial property located on the southern side of North 1st Street, between Kent Avenue to the west, and Wythe Avenue to the east, in the Williamsburg section of the Borough of Brooklyn, New York City, Kings County, New York (hereinafter the “subject property”). The subject property is identified by the street addresses of 58-64 North 1st Street, and as Borough 3 – Block 2378 – Lot No. 14 on the New York City (NYC) tax maps.

The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions. Recognized environmental conditions are defined as (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-21 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and BEC’s proposal for services.

BEC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property is shown as developed with several 1- to 3-story commercial/ industrial buildings, including a sugar box factory, a cooperage and several storage warehouses. By 1904, the buildings were occupied by a paint manufacturer, an iron manufacturer, a tailor, and a storage facility. By 1918, the site was occupied by a blacksmith, a fur dresser and a China decorating facility. The fur dresser was also occupied by a China decorating facility by the mid-1930s. By the late-1940s, the site was redeveloped with a “U”-shaped structure and identified as a lumber yard. The “U”-shaped structure was replaced with the existing 2-story structure between 1951 and 1965, also identified as a lumber company. City directory listings reveal the building was occupied by a lumber company through the early-1990s. A grocery company and several food companies/restaurants occupied the site from 2000 through 2017.

The property is currently developed with a 2-story commercial building with no basement. The building occupies the entire parcel footprint and fronts north along N. 1st Street. Sidewalks are north of the property

along N. 1st Street. The building is currently vacant/unoccupied but was most recently utilized as a restaurant (Pasta Wiz) and music school/rehearsal studio.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No historic recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs) were identified. The identified REC is summarized below:

- Information obtained from multiple historic sources revealed that the subject property was historically utilized for various industrial/manufacturing operations, including paint manufacturing, iron manufacturing, a cooperage, a blacksmith, fur dressing, and china decorating/manufacturing from at least 1887 through the mid-1930s. Based on the nature of historical use of the subject property, the former site operations may have resulted in spills or releases which may have impacted the subsurface beneath the subject property, as well as a potential soil vapor intrusion risk. As such, the historic use of the subject property represents a REC.

Based upon the above findings and conclusions, BEC recommends following:

- To evaluate potential impacts related to the historic usage of the subject and surrounding properties, a subsurface investigation should be performed. At a minimum, the investigation should include the installation of soil borings with the collection of representative soil, soil gas, and/or groundwater samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the site.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having an E-HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The HazMat E-designation requires the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-Designation is considered a BER.

- Information obtained from multiple historic sources revealed that the subject property was formerly developed with one or more commercial/industrial buildings from at least 1887 through 1950. As such, there is a potential for fill material to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill material was available for review, there is a potential for contaminated and/or structurally unsuitable fill material to be present on the site. The potential presence of fill material is considered a BER.

Experience with similar projects shows that typical urban fill material (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, due to the presence of the HazMat E-designation, any further redevelopment would require sampling to arrange for proper disposal off-site disposal of soil/fill.

- Fluorescent light ballasts were observed within inspected portions of the building, which based on the age of the building, may contain polychlorinated biphenyls (PCBs). BEC recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by the United States Environmental Protection Agency (USEPA), BEC recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.
- Suspect asbestos-containing vinyl floor tile, sheetrock/wallboard/plaster were observed throughout the inspected portions of the building. Most of the suspect asbestos-containing materials (ACMs) were in good condition at the time of the site inspection, although some areas of water-stained and damaged materials were identified on the second floor (former music school/rehearsal space. BEC notes that most of the exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. Further, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a New York City (NYC) and New York State

(NYS)-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

- Several areas of water-staining and water damage, including peeling paint, damaged/missing sheetrock/plaster, damaged floor tile, were observed throughout the second floor (former music school/rehearsal space). Visible mold growth was also observed on second floor walls and ceilings. This damage appears related to roof/skylight leaks.

As future plans for the subject property are unknown, BEC provides the following recommendations: If the building is to be demolished, then no repairs and/or mold abatement is warranted at this time. However, if future plans include the use/renovation of the existing structure, then roof repairs should be made to the satisfaction of the New York City Department of Buildings (NYCDOB). Further, any areas affected by continual water leaks should be repaired and subsequently inspected for the presence of mold growth. Any evidence of mold should be cleaned and removed in accordance with the New York State Department of Health (NYSDOH) Guidelines on Assessment & Remediation of Fungi in Indoor Environments prior to occupancy. Finally, sheetrock, ceiling tiles, and other water damaged building materials should be removed from the building and properly disposed.

1.0 INTRODUCTION

1.1 Purpose

This document is a Phase I Environmental Site Assessment (ESA) prepared to determine recognized environmental conditions (RECs) and/or potential environmental concerns (PECs) in connection with the industrial property located on the southern side of North 1st Street, between Kent Avenue to the west, and Wythe Avenue to the east, in the Williamsburg section of the Borough of Brooklyn, New York City, Kings County, New York (hereinafter the “subject property”). The subject property is identified by the street addresses of 58-64 North 1st Street, and as Borough 3 – Block 2378 – Lot No. 14 on the New York City (NYC) tax maps (Figures 1 through 4). Representative site photographs are included in Appendix A.

1.2 Detailed Scope of Services

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions and American Society of Testing and Materials (ASTM) Practice E1527-21, inclusive of the United States Environmental Protection Agency (USEPA) “all appropriate inquiry” requirement published in the Federal Register on November 1, 2005. The USEPA “all appropriate inquiry” requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The purpose of ASTM Practice E1527-21 is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of CERCLA and petroleum products. As such, the practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability; that is, the practices that constitute “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in 42 U.S.C. §9601 (35)(B).

As stated in ASTM Practice E1527-21, the purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the process established by ASTM Practice E1527-21, “*recognized environmental conditions in connection with the subject commercial parcel.*”

The term *recognized environmental conditions*, as defined by ASTM Practice E1527-21 means “...*the (1) the presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the property due to a release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the property under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*”

“The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions. A material threat is a physically observable or obvious threat which is reasonably likely to lead to a release that is threatening and might result in impact to human health and the environment.”

This Phase I Environmental Site Assessment, as required by ASTM Practice E1527-21, specifically consists of the following four components:

1. Records Review;
 - a. Physical settings document review;
 - b. Regulatory database records search;
 - c. Local municipal agency records search; and
 - d. Historic use records search.
2. Site Reconnaissance;
3. Interviews with Past and Present Owners and Occupants; and
4. Evaluation and Reporting.

As stated in Practice E1527-21, there may be environmental issues or conditions at the property, which may be requested by the user to be addressed as part of the Phase I ESA, which are not covered within the scope of ASTM Practice E1527-21. The issues are referred to as non-scope considerations. The following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-Based Paint;
- Asbestos-Containing Materials;
- Wetlands; and
- Mold and Water Damage.

1.3 Significant Assumptions

In preparation of the Phase I Environmental Site Assessment, it is assumed that information provided within the Environmental Database, regulatory agency records, municipal agency records, as well as information obtained from the user is accurate.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the subject property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the subject property, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report;
2. The data reported, and the findings, observations, and conclusions expressed are limited by the scope of work and defined in ASTM Practice E1527-21. Any deviations from this scope are defined below. Furthermore, the scope of work was defined and developed pursuant to the request of the Client;
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by Brussee Environmental Corporation (BEC);
4. BEC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report will not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, or regulations, or policies of federal, state, or local government agencies. BEC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document;
5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the subject property and should not be interpreted as such. An evaluation of subsurface soil and groundwater conditions was not performed as part of

this investigation. As at any site, the actual condition of the groundwater and sub-surface soil cannot be determined without further investigation;

6. This report is based, in part, on information supplied to BEC by third-party sources. While efforts have been made to substantiate this third-party information, BEC cannot attest to the completeness or accuracy of information provided by others; and
7. The Phase I ESA practice does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

1.5 User Reliance

This report was prepared in December 2024 by BEC at the request of Mr. David Halberstam representing Brooklyn Builders, Inc., for use by Brooklyn Builders, Inc., their legal and consulting representatives and other agents authorized to act on their behalf, in conjunction with the sale, lease, or financing of the subject property. BEC assumes no liability for the use of this report by any person or entity other than those for which it was prepared.

2.0 SITE DESCRIPTION

2.1 Property and Address Location

The subject property consists of a single tax parcel located on the southern side of North 1st Street, between Kent Avenue to the west, and Wythe Avenue to the east, in the Williamsburg section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street addresses of 58-64 North 1st Street (Figures 1 through 4).

2.1.1 Tax Map Number

The subject property is designated as Borough 3 – Block 2378 – Lot No. 14 on the NYC tax maps.

2.1.2 Acreage and Building Size

According to New York City Tax Maps, the subject property consists of a single, 0.23-acre (10,000 square foot) tax parcel. The property is currently developed with a 2-story commercial building with no basement. The building occupies the entire parcel footprint, fronts north along N. 1st Street, and has a reported area of 12,987 square feet. Sidewalks are north of the property along N. 1st Street.

2.1.3 Ownership

According to information maintained by the New York City Department of Finance, the current property owner is identified as AG Realty LLC.

2.1.4 Zoning

According to the City of New York Zoning Maps, the subject property is zoned for mixed (MX-8) manufacturing (M1-2) and residential (R6A) use (Figures 5A and 5B).

2.2 Current Occupancy and Property Use

The property is developed with the aforementioned 2-story commercial with no basement. The building is currently vacant/unoccupied but was most recently utilized as a restaurant (Pasta Wiz) and music school/rehearsal studio. The restaurant occupied the first floor of the building, as well as portions of the second floor with a bar and dining area overlooking the first-floor dining room. The rehearsal studio space also occupied portions of both floors and is divided into numerous small rooms with common corridors and several restrooms. Some rooms contained mattresses and were likely utilized as illegal apartments and/or formerly occupied by squatters.

3.0 USER PROVIDED INFORMATION

3.1 Title Records

As of the date of this report the Client did not engage BEC to perform a Chain of Title review nor was a Chain of Title provided for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws. The user has not made BEC aware of any environmental liens against the subject property and has not requested that BEC perform an environmental lien search for the subject property.

3.3 Specialized Knowledge

The user has not made BEC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the subject or surrounding properties.

3.4 Commonly Known or Reasonably Ascertainable Information

The user has not made BEC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Subject property, specific chemicals in use at the Subject property or any spills, chemical releases, or environmental cleanups at the Subject property.

3.5 Valuation Reduction for Environmental Issues

The user has not made BEC aware of any valuation reduction regarding the sale price of the property.

3.6 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the subject property as part of the due diligence to support the acquisition/financing of the property by Brooklyn Builders, Inc.

4.0 SITE GEOLOGY AND HYDROGEOLOGY

4.1 Topography and Site Characteristics

4.1.1 Elevation

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, NY Quadrangle (Figure 4). The elevation of the subject property is approximately 25 feet above mean sea level (amsl). The subject property is relatively flat with the general topographic gradient sloping downward to the north-northwest.

4.1.2 Surface Water Bodies

There are no surface water bodies on or adjacent to the subject property, and nearest surface water is the East River, located approximately 650 feet to the west-northwest at its closest point

4.1.3 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining, and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the subject property is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinate soil types may be present in the general vicinity of the subject property. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix D).

4.2 Groundwater Characteristics

4.2.1 Depth to the Water and Groundwater Flow Direction

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the

Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2013 (Figure 6), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 25 feet amsl, the depth to groundwater in the vicinity of the subject property is approximately 22 feet below grade surface (bgs). Groundwater is expected to flow to the north-northwest, toward the East River and consistent with the regional trend.

A review of well data available from the USGS indicates that the nearest USGS monitoring well with groundwater measurement data (K1301.1) is located approximately one-half mile south-southeast of the subject property. The well has an unspecified grade elevation and is screened in the Upper Glacial at a depth of 92 feet. A total of 232 groundwater measurements were collected from this well between January 1961 and February 2005. These data indicate the depth to groundwater fluctuated between -0.62 and 6.08 feet amsl.

4.3 Geology

According to the USGS Ground Water Atlas of the United States, New York region (1995) and the USGS Hydrogeologic Framework of Long Island, New York, the site is situated within the Coastal Plain physiographic province. The Coastal Plain physiographic province is characterized by layers of Cretaceous age sediments (primarily clay, sand, and gravel) overlying igneous and metamorphic rocks that crop out in Connecticut. The surface of these rocks slope to the southeast, and the overlying Coastal Plain sediments slope and thicken in the same direction. Quaternary glacial deposits (primarily outwash sand and gravel) cover the Coastal Plain sediments on Long Island to depths of as much as 600 feet. In the area of the site, bedrock is present at a depth of approximately 150 feet below grade and is overlain by the Upper Glacial Aquifer, with the Lloyd Aquifer, Raritan Confining Unit and Magothy Aquifers absent from the geologic sequence. In addition, the site is located near the northern extents of the Gardiners Clay, which may also be present beneath the site (between the bedrock and the Upper Glacial Aquifer).

5.0 SITE HISTORY

5.1 Municipal Records Review

As the subject property is located in the Borough of Brooklyn, New York City, Kings County, on-line records searches were conducted or Freedom of Information Act (FOIA) requests were sent to the following agencies: New York City Department of Finance, New York City Registrar, New York City Department of Buildings, the New York City Fire Department, the New York City Department of Environmental Protection (NYCDEP), the New York City Department of Health (NYCDOH), and the New York State Department of Environmental Conservation (NYSDEC) requesting available regulatory information regarding the subject property. Regulatory agencies usually take six to eight weeks to process FOIA requests. Responses/information received to date are included in Appendix B. Any additional responses will be reviewed and forwarded upon receipt. As of the date of this report, the following information has been received:

New York City Department of Finance

The following is a summary of pertinent information obtained:

Tax Lot:	Borough 3 – Block 2378 – Lot No. 14
Address:	58-64 North 1 st Street
Owner:	AG Realty LLC
Lot Size:	75.17 by 138.33 feet – irregular
Building Class:	O5 – Office with commercial – 1 to 6 stories
Zoning:	Mixed (MX-8) Manufacturing (M1-2) and Residential (R6A)

New York City Department Buildings

Computerized Property Profile Overviews (PPOs) available from the New York City Department of Buildings (NYCDOB) Building Information System (BIS) website were reviewed for information regarding the subject property. Pertinent information regarding the subject property is summarized below:

According to the PPO, no Actions are listed for this parcel.

Four DOB violations and ten Environmental Control Board (ECB) violations are listed for this parcel. However, each of the listed DOB and ECB violations are identified as closed/resolved.

Eighty Complaints are listed for this parcel, dated between March 2017 and April 2024. The Complaints are related to unpermitted construction and demolition, illegal conversion to a bakery/restaurant, unsafe construction, construction during unpermitted hours, inadequate egress, occupancy contrary to the C/O, illegal

conversion to a recording studio/music school, and illegal residential occupancy. Seventy-nine of the 80 listed Complaints are identified as closed/resolved. The remaining open/active Complaint, dated in April 2024 is related to a vacant/open and unsealed building. This Complaint does not appear to represent an environmental concern; however, action should be taken to resolve the Complaint with the appropriate agency.

Sixteen Jobs/Filings and no ARA/LAA jobs are listed for this parcel. A summary of the Jobs/Filings is provided with the DOB records in Appendix B.

New York City Fire Department

Freedom of Information Law (FOIL) application FOIL applications were forwarded to the New York City Fire Department (FDNY) on December 13, 2024. Responses from the FDNY are pending.

New York City Department of Health

A FOIL application was forwarded to the New York City Department of Health (NYCDOH) on December 13, 2024. A response from this agency is pending.

New York City Department of Environmental Protection

A FOIL application was forwarded to the New York City Department of Environmental Protection (NYCDEP) on December 13, 2024. A response from this agency is pending.

5.2 Historical Resources Review

5.2.1 Sanborn Fire Insurance Map Review

EDR conducted a search of available Sanborn Fire Insurance Maps for the subject property and immediate surrounding area. Fire Insurance Maps were provided for the years 1887, 1904, 1905, 1916, 1918, 1922, 1928, 1935, 1942, 1947, 1950, 1951, 1965, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007 (Appendix C). BEC's review of the Sanborn Maps is provided on the following table:

Date	Comments
1887	<p>Subject Property: Shown as two parcels, both developed with multiple 1-, 2-, and 3-story commercial/industrial buildings, including a sugar box factory and office, a cooperage, a stable and warehouses.</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by residences, with several small outbuildings to the northwest. An iron foundry is further to the north-northwest. A residence and a wheel repairing factory are to the west, followed by additional residences, with a lumber shed beyond. Residences and a hardware factory are to the south, followed by Grand Street. An additional hardware factory is to the southeast. A residence and a 1-story structure (use not specified) are to the east, followed by a cooperage, retail stores and a hardware factory, with Wythe Avenue beyond.</p>

<p>1904-1905</p>	<p>Subject Property: Developed generally consistent with the 1887 map depiction, except that the buildings are now identified as occupied by a paint manufacturer (northeast), an unspecified factory (southeast), a storage building and stable (northwest) and an iron manufacturer and tailor (southwest).</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by low-rise retail and residential development, with a lumber shed to the northwest. A residence and a tailor and dyeing shop are to the west, followed by residences and a lumber shed. Retail stores and mixed-use buildings are to the south, followed by Grand Street, with dense, retail development beyond. A steel and iron storage warehouse is to the east, followed by a hardware factory and several retail stores, with Wythe Avenue beyond.</p>
<p>1916-1918</p>	<p>Subject Property: Developed generally consistent with the 1904 map depiction, except that the buildings are now identified as occupied by a blacksmith (northeast), a fur dresser (southeast), a storage shed (northwest) and a China decorating factory (southwest).</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by low-rise retail and residential development, with a lumber shed to the northwest. A laundry is to the west, followed by residences and a lumber shed. Retail stores and mixed-use buildings are to the south, followed by Grand Street, with dense, retail development beyond. A hardware factory is to the east, including a steel and iron storage warehouse, followed by additional hardware factory buildings and retail stores, with Wythe Avenue beyond.</p>
<p>1922-1928</p>	<p>Subject and Surrounding Properties: The 1922 and 1928 maps were obtained from a collection of historic pier maps. The maps only depict areas located along the East River and adjacent areas associated with the freight shipping/storage. As such, the site and adjacent areas are not depicted, except for roadways.</p>
<p>1935-1942</p>	<p>Subject Property: Developed generally consistent with the 1918 map depiction, except that the fur dresser is also occupied by a China decorating facility.</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by undeveloped land, with a lumber shed to the northwest and a mustard factory further to the north. A show polish manufacturer is to the west, followed by an undeveloped lot, with residences and a lumber shed beyond. Retail stores, residences and a broom manufacturer are to the south, followed by Grand Street. An iron and steel storage warehouse is to the east, followed by a hardware manufacturer, with Wythe Avenue beyond.</p>
<p>1947-1951</p>	<p>Subject Property: Developed with a single “U”-shaped structure identified as a lumber yard. The structure occupies the southern, eastern and western portions of the property, with the central areas undeveloped.</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by undeveloped land, with a lumber shed to the northwest and a warehouse and bottling facility to the northeast. A mustard factory is further to the north. A waste paper and rags storage facility is to the west, followed by a residence and another waste paper storage building, with residences and retail stores beyond. An undeveloped lot, an office building and a retail store are to the south, followed by Grand Street. An iron and steel storage warehouse is to the east, followed by a hardware manufacturer, with Wythe Avenue beyond.</p>
<p>1965-1986</p>	<p>Subject Property: The property has been redeveloped with a 1-story commercial/industrial building identified as occupied by a lumber company. The building occupies the entire parcel footprint and is consistent with the existing structure.</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by multiple aboveground vinegar storage tanks associated with the mustard and vinegar manufacturer further to the north. A lumber shed and steel storage warehouse are to the northwest and a warehouse and bottling facility to the northeast. A waste paper and rags storage facility is to the west, followed by another waste paper storage building, with residences and retail stores beyond. Storage building and several vacant structures are to the south, followed by Grand Street. A vacant building is to the east, followed by a non-specific manufacturing facility (former hardware manufacturer), with Wythe Avenue beyond. The eastern adjacent building is identified as a welding shop, the western adjacent waste paper buildings are identified as a single manufacturing operation, and the vacant buildings to the south are identified as warehouses beginning on the 1977 map.</p>

<p>1987-2006</p>	<p>Subject Property: Developed consistent with the 1986 map depiction. Surrounding Properties: Also shown generally consistent with their 1986 map depictions, except that the southern adjacent warehouse buildings are now identified as warehouses with lofts on the upper floors.</p>
<p>2007</p>	<p>Subject Property: Developed consistent with the 2006 map depiction. Surrounding Properties: Also shown generally consistent with their 2006 map depictions, except that the former mustard factory property to the north across N. 1st Street and the western adjacent properties (former manufacturing facility) are shown as undeveloped land.</p>

The Sanborn maps did not identify the presence of gasoline or other storage tanks on the subject property. However, the Sanborn maps from 1887 through 1935 show that the subject property was utilized for various industrial/manufacturing operations, including paint manufacturing, iron manufacturing, a cooperage, a blacksmith, fur dressing, and China decorating/manufacturing. Based on the nature of historical use of the subject property, the former site operations may have resulted in spills or releases which may have impacted the subsurface beneath the subject property. As such, the historic use of the subject property represents a REC.

In addition, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present. As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the subject property. The potential presence of fill materials is considered a Business Environmental Risk (BER).

5.2.2 Historic Aerial Photograph Review

EDR conducted a search and provided copies of available historical aerial photographs showing the subject and surrounding properties. Aerial photographs were provided for the years 1924, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1994, 2002, 2006, 2011, 2015, and 2019 (Appendix C). However, given that the historical use of the site was established through a review of a Sanborn Maps, city directories and topographic maps, BEC determined that the historical use of the site has been properly assessed, and, therefore, the historic aerials were only briefly reviewed for evidence of significant differences and to fill in time gaps (if any).

The photographs do not show any evidence of historic water bodies, significant re-grading, mining, or historic dumping activities, which would indicate a potential environmental risk to the property. In addition, due to the long term, dense urban use of the subject property and surrounding areas, the aerial photographs did not provide significant details regarding potential environmental concerns at the site or surrounding properties.

5.2.3 Historic Topographic Map Review

BEC reviewed the 2023 Brooklyn, NY USGS topographic quadrangle map, as well as available historic topographic quadrangle maps provided by EDR. BEC’s review of the topographic maps is provided on the following table:

Date	Comments
1897-1900	<p>Subject Property: Shaded black, indicating that it is developed with one or more structures, consistent with the commercial/industrial buildings depicted on the 1888 and 1904 Sanborn maps (see Section 5.2.1).</p> <p>Surrounding Properties: Shaded mostly black indicating they are densely developed with buildings. Narrow unshaded areas are in the center of most blocks to depict open yards. N. 1st Street is to the north is adjacent to the north. Grand Street is further to the south, Kent Avenue is further to the west, and Wythe Avenue is further to the east.</p>
1947	<p>Subject Property: Shaded black, indicating that it is developed with one or more structures, consistent with the 2-story building depicted on the 1947 Sanborn map.</p> <p>Surrounding Properties: N. 1st Street is to the north, followed by undeveloped land, with dense development and Metropolitan Avenue beyond. Dense development (black shading) is to the northeast and northwest. Dense development is to the west, followed by Kent Avenue, with several buildings and aboveground storage tanks beyond. Dense development is to the south, followed by Grand Street, with additional dense development beyond. Dense development is to the east, followed by Wythe Avenue.</p>
1956-1995	<p>Subject Property: Shaded pink to indicate dense, urban development, with no improvements depicted.</p> <p>Surrounding Properties: Shaded pink to indicate dense, urban development, with no improvements depicted. N. 1st Street is adjacent to the north. Grand Street is further to the south and Wythe Avenue is further to the east. Kent Avenue is further to the west, followed by several commercial/industrial buildings, with River Street, several large aboveground storage tanks, and the East River beyond. A playground (unshaded area) is further to the southeast, beyond Grand Street.</p>
2013-2023	<p>Subject and Surrounding Properties: The 2013 through 2023 maps do not depict any buildings or other structures, except for the existing school adjacent to the southeast. Surrounding roads are visible, consistent with their current configuration. A school is further to the south-southeast and the East River is further to the west-northwest.</p>

BEC’s historic topographic map review did not reveal evidence of recognized environmental conditions in connection with the site or adjoining properties.

5.2.4 Historical City Directory Search

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (Appendix D) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property. The listings for the subject property are summarized in the following table:

Date	Comments
1928	Subject Property: BeJack Packing Case Corp., S. Domb China, Thoams Alfred Blacksmith, and United China & Decorating Co. (60)
1934	Subject Property: Broadway Home Furnishing Co. (58) and Blacksmith (60)
1940-1960	Subject Property: “Address not Listed in Research Source”
1965-1995	Subject Property: Foremost Lumber Corp. (60)
1997	Subject Property: “Address not Listed in Research Source”
2000	Subject Property: Reich Grocery (60)
2005-2010	Subject Property: Muffins & More (60)
2014	Subject Property: Hoing Food Corp. (60)
2017	Subject Property: Hoing Food Corp. and Pasta Wiz (60)
2020	Subject Property: “Address not Listed in Research Source”

Note: Addresses shown in () are on N. 1st Street unless noted otherwise.

BEC notes that the subject and nearby properties were identified as various commercial/retail, light industrial and/or residential uses since 1928, including lumber yards, glass works, iron and steel works/fabricators, auto parts manufacturers, construction companies/contractors, paint and coatings manufacturers, warehouses, hardware manufacturers, restaurants, and retail stores. Given the time of operation for these facilities and their potential prior use, the area cannot be confirmed of having no subsurface impacts; however, no specific operation or activity was noted that warrants additional investigation at this time. BEC notes that several of the adjacent/surrounding properties were listed on various regulatory databases indicating hazardous waste generation, petroleum storage and/or petroleum releases; however, these listings are further discussed in Section 6 where they were determined unlikely to present a significant environmental concern to the subject property.

5.2.5 Previous Environmental Site Assessments

No previous ESAs or information regarding previous environmental investigations/reports for the subject property were provided to BEC for review by the property owner or their representatives.

5.2.6 Environmental Liens or Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject property, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issues identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an “E” designation, as well as maintained within Chain of Title Records. For a site to be designated with an “E” restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a “Potential” or “Projected” re-development property, and finally, the site must be listed on one or more environmental

regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an “E” designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an “E” designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites.

The City of New York Environmental Quality Review (CEQR) Requirement Declarations and City of New York Zoning maps and website, as well as the EDR database report, indicate that the Site has an E-HazMat, restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The Hazardous Materials designation indicates that there is a potential for soil and groundwater beneath the subject property to be impacted by historic operations at the subject property or adjacent properties. As such, the property requires an environmental investigation and review by the NYCOER to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

The HazMat E-designation requires the issuance of a Notice to Proceed by the NYC Office of Environmental Remediation (OER) before the property can be redeveloped. The presence of the E-Designation is considered a Business Environmental Risk (BER).

5.3 Summary of Site History

BEC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, and historic topographic maps, as well as personal interviews, the subject property is shown as being developed with several 1- to 3-story commercial/ industrial buildings, including a sugar box factory, a cooperage and several storage warehouses. By 1904, the buildings were occupied by a paint manufacturer, an iron manufacturer, a tailor, and a storage facility. By 1918, the subject property was occupied by a blacksmith, a fur dresser and a China decorating facility. The fur dresser was also occupied by a China decorating facility by the mid-1930s. By the late-1940s, the subject property was redeveloped with a “U”-shaped structure and identified as a lumber yard. The “U”-shaped structure was replaced with the existing 2-story structure between 1951 and 1965, also identified as a lumber

company. City directory listings reveal the building was occupied by a lumber company through the early-1990s. A grocery company and several food companies/restaurants occupied the site from 2000 through 2017.

The property is currently developed with a 2-story commercial building with no basement. The building occupies the entire parcel footprint and fronts north along N. 1st Street. Sidewalks are north of the property along N. 1st Street. The building is currently vacant/unoccupied but was most recently utilized as a restaurant (Pasta Wiz) and music school/rehearsal studio.

6.0 REGULATORY AGENCY DATABASE SEARCH

EDR was retained to provide a computerized database search of the project area within an ASTM-standard radius of the subject property. A list of the databases searched, and the search radius is shown on the summary table below. BEC reviewed the database output to determine if the property appears on any of the regulatory agency lists.

6.1 Federal Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
National Priorities List Sites, including Proposed and Delisted Sites	NPL	1.0 mile	No	0 NPL 0 Proposed 0 Delisted
Superfund Enterprise Management System (SEMS) and SEMS Archive Sites	SEMS and SEMS-ARCHIVE	0.5 mile	No	1 SEMS 2 SEMS-ARCHIVE
Corrective Action Reports	CORRACTS	1.0 mile	No	1
Federal Facility Site Information	FFSI	1.0 mile	No	0
Resource Conservation and Recovery Act - Treatment, Storage and Disposal Facilities	RCRA-TSD	0.5 mile	No	1
Resource Conservation and Recovery Act – Active and Former Hazardous Waste Generators	RCRA LQG/SQG/VSQG/ NonGen	Site & Adjoining	No	0 LQG 0 SQG 0 VSQG 0 NonGen
Land Use Control Information System	LUCIS	0.5 mile	No	0
Engineering Control Sites	USEC	Site	No	NA
Institutional Control Sites	USIC	Site	No	NA
Emergency Response Notification System	ERNS	Site	No	NA
Federal Brownfields Sites	US Brownfields	0.5 mile	No	0

In addition to the federal databases included on the table above, over 30 additional federal databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional federal databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Superfund Enterprise Management System (SEMS): The SEMS database (formerly known as CERCLIS) is a compilation of known or suspected hazardous waste sites. SEMS contains properties that are proposed to or included on the NPL list. In addition, those properties that are in the screening and assessment for possible inclusion on the NPL are listed on the SEMS database.

One SEMS listing, Fyn Paint & Lacquer Co., Inc., 230 Kent Avenue was identified within a one-half mile radius of the subject property. This property is approximately 240 feet northwest and hydraulically cross- to downgradient of the subject property and is listed as “Removal Only”. Removal Only listings are typically short-term response actions, where actions may be taken to address releases or threatened releases and are generally used to address localized risks such as abandoned drums containing hazardous substances, and contaminated surface soils posing acute risks to human health or the environment. These actions are also typically funded by the USEPA. Based on the information provided in the database, its distance and the presumed hydraulic gradient, this listing is unlikely to present a significant environmental concern to the subject property.

Superfund Enterprise Management System Archive (SEMS Archive): SEMS Archive (formally known as CERCLIS-NFRAP) listings are for properties removed from the SEMS list following an initial investigation because either no contamination was found, or contamination was not serious enough to warrant Superfund Action or NPL consideration. Two SEMS Archive listings were identified within a one-half mile radius of the subject property. These listings are summarized as follows:

- Williamsburg Square (former All Plating Corp.), 154 N. 7th Street, approximately 1,770 feet east-northeast and hydraulically crossgradient of the subject property. The USEPA completed a Removal Assessment of this facility in August 1998, with a Removal Action completed in November 1998. The facility was subsequently archived in 2005. All Plating Corp. was also identified on the RCRA-NonGen, US AIRS, FINDS, LEINS 2, PBS-UST, LTANKS, and NYMANFEST databases. Based on the information in the database report, its distance and hydraulically crossgradient location, it is unlikely that this facility represents a significant environmental concern to the subject property.
- Brooklyn Union Gas/Peoples Works, Kent Avenue between S. 10th and 11th Streets. The database identifies this facility was being located 2,450 feet to the north-northeast; however, it is actually located over 3,000 feet to the south-southwest and hydraulically crossgradient. Therefore, it is unlikely that this facility represents a significant environmental concern to the subject property.

Federal RCRA CORRACTS: CORRACTS identify hazardous waste handlers with RCRA corrective action activity. One CORRACTS facility was identified within a one-mile radius of the subject property. This facility is summarized below:

- Radiac Research Corp., 33 South First Street, approximately 330 feet west-southwest and hydraulically crossgradient of the subject property. The database indicates that a RCRA Facility Assessment for the site was completed in November 1985 and the site was assigned a low corrective action priority. Fifty-one RCRA violations are listed for the site, each of which is listed as closed/resolved. The Radiac site is also listed on the RCRA-TSDF, RCRA-CESQG, 2020 Cor Action, PADS, FTTS, Hist FTTS and MANIFEST databases. Given the absence of open/active violations and the presumed hydraulic gradient, this facility is unlikely to represent a significant environmental concern to the subject property.

Federal RCRA Non-CORRACTS TSD: Non-CORRACTS TSD listings identify RCRA facilities that treat, store or dispose of hazardous waste. One Non-CORRACTS TSD listing, Radiac Research Corp., 33 South First Street, was identified within a one-half mile radius of the subject property. As detailed previously in the CORRACTS database section, this facility was determined unlikely to represent a significant environmental concern for the subject property.

6.2 State Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Inactive Hazardous Waste Disposal Sites, including De-listed Sites	SHWS	1.0 mile	No	17 SHWS 0 Delisted SHWS
Vapor Intrusion Legacy Site List	VAPOR	1.0 mile	No	0
Hazardous Substance Waste Disposal Site	HSWDS	0.5 mile	No	1
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	No	11
Registered Recycling Facility List	SWRCY	0.5 mile	No	3
Registered Waste Tire Storage Facility List	SWTIRE	0.5 mile	No	0
Leaking Underground Storage Tanks	LTANKS	0.5 mile	No	26 LTANKS
Petroleum Bulk Storage - Underground and Aboveground Storage Tank Databases	PBS UST/AST	Site & Adjoining	No	0 UST 1 AST 0 TANKS
Chemical Bulk Storage - Underground and Aboveground Storage Tank Databases	CBS UST/AST	0.25 mile	No	9
Major Oil Storage Facility - Underground and Aboveground Storage Tank Databases	MOSF UST/AST	Site & Adjoining	No	1
Registry of Engineering Controls	NYEC	Site	No	NA
Registry of Institutional Controls	NYEC	Site	No	NA
Voluntary Cleanup Agreements	VCP	0.5 mile	No	51

State Brownfields Site List	Brownfields	0.5 mile	No	12
E-Designation Site List	E-Des	0.125 mile	Yes	49
NYCOER Sites List	NYCOER	1.0 mile	No	268
Per- and Polyfluoroalkyl Substances	NY PFAS	0.25 mile	No	0
Spills Information Database	NYSPILLS	0.125 mile	No	60
Registered Drycleaning Facilities	DRYCLEANERS	0.25 mile	No	0

**BEC notes that according to ASTM E 1527-21, Section 8.1.2.1, the search distance may be reduced at the discretion of the environmental professional. The potential to impact the site, including BEC's decision to reduce the search distances, was based on several factors including, but not limited to regulatory status by applicable agencies, medium impacted, distance from the site, historical use of the site and surrounding properties, estimated direction of groundwater flow, soil/geologic factors, urban setting, and other factors. In this case, there were no databases with reduced search distances.*

The subject property was identified on E-Des database. This listing is summarized as follows:

NYC E-Designated Sites(E-DES): The subject property is listed on the E-Designation database as having an E-HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The Hazardous Materials E-designation indicates that there is a potential for soil and groundwater beneath the subject property to be impacted by historic operations at the subject property or adjacent properties. As such, the property requires an environmental investigation and review by the NYCOER to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

The HazMat E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER.

In addition to the New York State (NYS) databases included on the table above, over, ten additional NYS databases were searched to determine if the subject and/or surrounding properties were listed. The subject property was not listed on the additional State databases included in the EDR search report and no adjacent or surrounding listings were identified with the potential to represent an environmental concern to the subject property.

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

State Inactive Hazardous Waste Sites (SHWS): SHWS records are New York State's equivalent to the CERCLIS. These properties may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where

cleanup will be paid for by potentially responsible parties. These records come from the New York State Department of Environmental Conservation (NYSDEC). Three SHWS listings were identified within a one-quarter mile radius of the site, and they are summarized as follows:

- 134 Metropolitan - OER (ID No. 224154), 134 Metropolitan Avenue, approximately 510 feet east-southeast and hydraulically cross- to upgradient of the site. This facility is formerly occupied by several industrial uses, including a wire works, a machine shop and various manufacturing operations. A soil vapor investigation identified extremely elevated concentrations of chlorinated VOCs and the site was referred to the NYSDEC. A subsurface investigation was subsequently completed. This investigation did not identify any off-site soil or groundwater impacts. Additionally, soil vapor sample results did not identify elevated concentrations of volatile organic compounds (VOCs). The site was subsequently classified “N” – No further action warranted. Based on the information in the database report, it is unlikely that this facility presents a significant environmental risk to the subject property.
- Fyn Paint & Lacquer Co., Inc. (ID No. 224154), 230 Kent Avenue, approximately 240 feet northwest and hydraulically cross- to downgradient of the subject property. This facility is formerly paint and lacquer manufacturer from the 1930s to 2010. Multiple USTs were removed from the property in 1999 and soil/groundwater contamination was identified. The property was entered into the NY Voluntary Cleanup Program in 2001. Sampling completed in 2006 identified floating product in several wells and a groundwater treatment system was installed in 2007 as an Interim Remedial Measure (IRM). The VCP agreement was terminated in 2014 for non-payment. The property was subsequently entered into the Brownfield Cleanup Program (BCP) and remediated. However, off-site and residual impacts remain. Based on the information in the database report and the presumed hydraulic gradient, it is unlikely that this facility presents a significant environmental risk to the subject property.
- Former Cleaners Sales & Equipment Corp. (ID No. 224177), 135 Kent Avenue, approximately 1,210 feet north-northeast and hydraulically crossgradient of the subject property. This facility is a former dry cleaning equipment supplier that operated from 1958 through 2002. The facility also stored dry cleaning solvents and generated hazardous solvent wastes. Sampling conducted in conjunction with the investigation of an adjacent property identified significant solvent impacts to soil vapor. This facility is being investigated and remediated under the NYS BCP. Based on the information in the database report, its distance in a dense urban area, the presumed hydraulic gradient, and that the site and surrounding are utilized municipally-supplied potable water, it is unlikely that this facility presents a significant environmental risk to the subject property.

Fourteen additional SWHS listings were identified between one-quarter and one-mile from the subject property; however, based on the information in the database report, their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Hazardous Substance Waste Disposal Sites (HSWDS): The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

One HSWDS site (Brooklyn Union Gas Peoples Works, Kent Avenue and Brooklyn Union Gas Metropolitan Works, Kent Avenue and N. 12th Street) was identified within a one-half mile radius of the subject property. Based on the information in the database report, its distance (over one-quarter mile) and the presumed hydraulic gradient, it is unlikely that this listing presents a significant environmental concern to the subject property.

Solid Waste Facilities/ Landfill Sites (SWF/LF): This database is an inventory of solid waste disposal facilities or landfills in New York State. Six SWF/LF listings were identified within a one-quarter mile radius of the subject property. These listings are summarized as follows:

- Police Cars Unlimited, 60 south 2nd Street, approximately 650 south, and hydraulically crossgradient of the subject property. This facility is identified as an in inactive vehicle dismantling facility with no violations.
- VM Transfer Ltd., 175 Kent Avenue, approximately 550 feet north-northeast, and hydraulically crossgradient of the subject property. This facility is identified as an in inactive waste transfer with no violations.
- Joral Carting, 157 Kent Avenue, approximately 740 feet north-northeast and hydraulically crossgradient of the subject property. This facility is identified as an inactive waste transfer station with no violations.
- BJR Realty Corp., 60 South 2nd Street, approximately 880 feet southwest and hydraulically cross- to downgradient of the subject property. This facility is identified as an inactive waste transfer station with no violations.
- Demicco Brothers Inc., 2 North 5th Street, approximately 1,180 feet north and hydraulically crossgradient of the subject property. This facility is identified as an inactive construction and demolition (C&D) debris processing facility with no violations.

- Nekboh Recycling, Inc., 2 North 5th Street, approximately 1,180 feet north and hydraulically crossgradient of the subject property. This facility is identified as an inactive transfer station and C&D debris processing facility with no violations.

Based on the information provided in the database report, their distances, and/or the presumed hydraulic gradient, these facilities are unlikely to represent a significant environmental concern to the subject property. Five additional SWF/LF listings were identified between one-quarter and one-mile from the subject property; however, based upon their distances in a dense urban area, the presumed hydraulic gradient, and/or that the site and surrounding area is supplied potable water from a municipal source, it is unlikely that these facilities represent a significant environmental risk to the subject property.

In addition, three Registered Recycling (SWRCY) facilities (BJR Realty Corp., 60 S. 2nd Street; Recycle America Alliance, 2 N. 5th Street; and Waste Management, 2 N. 5th Street) were identified within a one-half mile radius of the subject property. Based on the information in the database report, their distances in a dense urban area (over one-eighth mile) and the presumed hydraulic gradient, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Leaking Underground Storage Tanks (LTANKS): Twenty-six LTANKS listings were identified within a one-half mile radius of the subject property. Each of the 26 LTANKS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. In addition, none of the properties with listed closed LTANKS incidents are located adjacent to the subject property.

Petroleum Bulk Storage – Tank Facility Listings (TANKS) and Underground and Aboveground Storage Tank Databases (PBS-UST/AST): Twenty-three PBS-UST, 28 PBS-AST, and two TANKS sites are listed in the database report. The inclusion on the PBS-UST/AST or TANKS databases means that a site has one or more registered underground/aboveground storage tank(s), regulated under regulated under 6 NYCRR Part 612 (NYSDEC Petroleum Bulk Storage) and/or the New York City Fire Department (FDNY). This database does not indicate leaks, spills, or other violations.

One of the listed PBS-AST sites is located adjacent to the subject property. This listing is summarized as follows:

- Unico Truck Repair (PBS ID No. 2-606972), 274 Wythe Avenue, adjacent to the north, across N. 1st Street, and hydraulically crossgradient of the subject property. This site is listed on the PBS-AST database as having one 250-gallon steel AST containing waste oil, which was removed in October 2006. This property was not cross-referenced on the LTANKS or NYSPILLS databases, and there is

no evidence to suggest that this facility represents a significant environmental concern to the subject property.

Major Oil Storage Facilities (MOSF): The inclusion of a site on the MOSF list means that a site has one or more registered storage tanks, regulated under 6NYCRR Part 612 (NYSDEC Petroleum Bulk Storage) that has a total storage capacity equal to or greater than 400,000 gallons. This database does not indicate leaks, spills, or other violations.

Two MOSF facilities (North First Street Fuel Oil Terminal, 214 Kent Avenue and Domino Sugar Refinery, 316 Kent Avenue) were identified within a one-half mile radius of the site. Both of these facilities are identified as inactive and are hydraulically cross- to downgradient. Based on the information in the database report, their inactive statuses, distances and/or the presumed hydraulic gradient, it is unlikely that these listings represent a significant environmental concern to the site.

State Chemical Bulk Storage Sites (CBS): The inclusion of a facility on the CBS list means that a site has one or more registered storage tanks, regulated under 6NYCRR Part 595 - 599 (NYSDEC Chemical Bulk Storage) and has a total storage capacity equal to or greater than 185 gallons. This database does not indicate leaks, spills, or other violations. Nine CBS facilities were identified within a one-quarter mile radius of the subject property. Eight of these nine facilities are identified as closed/unregulated. The remaining active facility, NY Power Authority, N. 1st and River Street, is identified as having one 10,000-gallon ammonium hydroxide AST. This address was not cross referenced on the LTANKS or NYSPILLS databases. Based on this information, their closed status, the absence of open spills, their distances, and/or the presumed hydraulic gradient, it is unlikely that the listed CBS facilities represent a significant environmental concern to the subject property.

Voluntary Cleanup Program (VCP) Sites: VCP sites are those facilities where the property owner has to investigate and remediate the site. New York's VCP is a cooperative program for lenders, developers, and prospective purchasers to investigate and/or remediate contaminated sites and return them to productive use. Under the VCP, a volunteer performs remedial activities pursuant to one or more NYSDEC approved work plans and agrees to remediate the site to a level that is protective of public health and the environment for the present or intended use of the property. Investigation and remediation are conducted under oversight of the NYSDEC, and the New York State Department of Health (NYSDOH) and the volunteer pays the State's oversight costs. When the volunteer completes work, a release from liability from the Department is provided with standard reservations.

Eighteen VCP sites were identified within a one-eighth mile radius of the subject property. Fourteen of the 18 sites have been issued Notices of Satisfaction/Completion by NYCOER and one site classified “N” – No Further Action warranted by the NYSDEC. As such, it is unlikely that these sites represent a significant environmental concern to the subject property. The remaining three active VCP sites (303 Wythe Avenue, 67 Metropolitan Avenue, and 280 Kent Avenue) are located hydraulically cross- to downgradient of the subject property and are being actively investigated and remediated under NYCOER oversight. As such, these facilities are unlikely to represent a significant environmental concern to the subject property.

Thirty-three additional VCP listings were identified between a one-eighth and one-half mile radius of the subject property. Based on the information in the database report, as well as that available from the NYCOER website, their distance, the presumed hydraulic gradient, and that the subject property and surrounding area is supplied potable water from a municipal source it is unlikely that these facilities represent a significant environmental concern to the subject property.

New York State Brownfields Sites (BROWNFIELDS): In New York State, a Brownfields site is any real property in the State, whose redevelopment or reuse may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant, except those properties which are listed as Class 1 or 2 in the Registry of Inactive Hazardous Waste Disposal Sites (Class 2 sites owned by a Volunteer are eligible until July, 1, 2005); sites on the USEPA NPL; hazardous waste treatment, storage, or disposal facilities (TSDFs) permitted under ECL §27-0901 ("interim status" facilities are eligible); sites subject to a cleanup order or Stipulation under Article 12 of the Navigation Law (oil spill prevention, control, and compensation) or under Title 10 of ECL Article 17 (control of the bulk storage of petroleum); or sites subject to any on-going state or federal enforcement actions regarding solid/hazardous waste or petroleum.

Two BROWNFIELDS sites were identified within a one-eighth mile radius of the subject property. These listings are summarized as follows:

- Fyn Paint & Lacquer Co., Inc. (ID No. C224154), 230 Kent Avenue, approximately 240 feet northwest and hydraulically cross- to downgradient of the subject property. This facility was discussed previously in the SHWS sites section, where it was determined unlikely to represent a significant environmental concern to the subject property.
- Fyn Paint & Lacquer Co., Inc. – Off-Site (ID No. C224154), 230 Kent Avenue, approximately 240 feet northwest and hydraulically cross- to downgradient of the subject property. This listing represents off-site contamination associated with the former Fyn Paint & Lacquer Site. These impacts include chlorinated VOCs dissolved in groundwater and non-aqueous phase liquid (NAPL) identified in off-site monitoring wells. Additional investigation is needed to fully delineate off-site impacts.

Localized groundwater flow is to the west-northwest toward the East River. Based on the information in the database report, its distance and the documented hydraulic gradient (east), this site is unlikely to represent a significant environmental concern to the subject property.

Ten additional BROWNFIELDS listings were identified between one-eighth and one-half mile from the subject property; however, based on the information in the database report, their distance in a dense urban area, the presumed hydraulic gradient, and/or that the subject property and surrounding area utilize municipally-supplied potable water, it is unlikely that this facility presents a significant environmental concern to the subject property.

NYCDP Environmental Designation Sites (E-DES): Environmental "E" designation sites are those sites identified by the NYC Department of City Planning (DCP), which need to be evaluated to address potential issues related to hazardous materials, air quality and/or noise. This designation is typically associated with areas NYC has designated for re-development and/or re-zoning and ensure that sampling and remediation (if warranted) or other measures implemented at the property if demolition, excavation, and construction are proposed to be conducted.

Three types of E-DES listings (HazMat, Air and Noise) exist, although a property can be assigned multiple designations based on known or potential risks to redevelopment. However, only those with a HazMat designation are considered to present a concern based on their historic use/development (i.e., service station, dry cleaner, manufacturing facility, etc.). The HazMat designation indicates that projected and potential development of these sites requires an environmental assessment and review by the NYC Office of Environmental Remediation (NYCOER) to determine if the current and/or historic use of a property has impacted the subsurface and if additional investigation/remediation is warranted.

Forty-nine E-DES listings were identified within a one-eighth mile of the subject property, three of which (52 N. 1st Street, 55 Grand Street, and 69 Grand Street) are adjacent to the subject property. These sites each have E-Designations for Hazardous Materials only. The Hazardous Materials Designation indicates that projected and potential development of this property requires the completion of an environmental assessment and review by the NYCOER to determine if the current and/or historic use of the property impacted the subsurface and if additional investigation and/or remediation is warranted. This designation does not indicate the presence of contamination, nor does it indicate the presence/potential presence of offsite impacts. Therefore, there is no information in the database report that indicates the E-DES listings represent a significant environmental concern to the subject property.

NYC Office of Environmental Remediation Sites (NYCOER): This database is a listing of those properties remediated under the oversight of the NYC Office of Environmental Remediation (OER) as part of either the E-Designation program or NYC VCP. The database includes sites that have been completed or are in-progress. Two hundred sixty-eight NYCOER sites were identified within a one-mile radius, with 23 sites located within a one-eighth mile radius. Based upon a review of the information included in the database report and available from the NYCOER website, remediation has been completed at 19 of the 23 facilities. The remaining four active sites (225 Wythe Avenue, 303 Wythe Avenue, 67 Metropolitan Avenue, 280 Kent Avenue) are each located hydraulically cross- to downgradient of the subject property. As such, there is no information to indicate that these facilities represent a significant environmental concern to the subject property.

New York Spills Information Database (NYSPILLS): Sixty NYSPILLS listings were identified within a one-eighth mile radius of the subject property. Fifty-nine of the 60 NYSPILLS sites listed in the database were issued letters of no further action by the NYSDEC, and there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the subject property. In addition, none of the listed closed NYSPILLS are located adjacent to the subject property.

A review of the information provided regarding the one remaining active NYSPILLS listing (Corner of N. 1st Street and Kent Avenue), including the nature of the releases, their distances and/or presumed hydraulic gradient, indicates that these spills are unlikely to represent an environmental concern to the subject property.

6.3 Tribal Records and EDR Proprietary Databases

Listing Name or Database Searched	Abbreviation	Search Distance	Subject Property Listed?	No. of Sites within the Search Radius
Indian Reservations	IRESERVE	1.0 mile	No	0
Indian Reservation - Leaking Underground Storage Tanks	ILTANKS	0.5 mile	No	0
Indian Reservation - Registered Underground Storage Tanks	IUST	0.25 mile	No	0
Indian Reservation – Voluntary Cleanup Program Sites	IVCP	0.5 mile	No	0
Indian Reservation – Open Dump Inventory Sites	IODI	0.25 mile	No	0
Manufactured Gas Plants	MGP/NY MGP	1.0 mile	No	5/1
Historic Cleaners	HISTCL	Site & Adjoining	No	0
Historic Auto Stations	HISTAS	Site & Adjoining	No	1

The database search generated information on the following listings for the surrounding properties within ASTM radius guidelines that could potentially impact the subject property:

Manufactured Gas Plants (MGPs): Six Manufactured Gas Plant (MGP) sites (Wythe Avenue Station, Wythe Avenue, Berry Street and N. 12th and 13th Streets; Peoples Works, Kent Avenue, South 10th and South 11th Streets; Con Edison E. 11th Street Works, E. 11th and 13th Street; BU-Nassau Branch, Kent Avenue and Cross, Division; Con Edison E. 114th Street Works, E. 14th and 16th Street; and K-Williamburg Works, Kent Avenue and 12th Street) are listed in the database report. MGPs were industrial facilities at which gas was produced from coal, oil, and other feedstocks. The gas was stored, and then piped to the surrounding area, where it was used for lighting, cooking, and heating homes and businesses. The first MGPs were constructed in the early 1800s, prior to the Civil War. Most were closed during the early-to-middle 1900s, and the last one ceased operation in 1972. The production of manufactured gas created wastes including coal tar and purifier waste (lime or wood chips treated with iron oxides and used to remove cyanide and sulfur from the manufactured gas). These materials were often disposed of on the site resulting in soil and groundwater contamination. Given that each of the listed MGP facilities are over one-half mile and/or hydraulically down- to crossgradient, with respect to groundwater flow, it is unlikely that these facilities represent a significant environmental concern to the subject property.

Historical Auto Stations Database (HISTAS):

The HISTAS database provides information compiled by EDR from multiple sources that identify potential sites historically occupied by a filling/gasoline/service station, auto repair shop, auto service station, etc. There are five HISTAS listings in the database report, one of which (P&H Service Station, 280 Wythe Avenue) is associated with an adjacent property. This facility was identified as operating as a service station in 1969 through 1970, and was not cross-referenced on the RCRA, LTANKS or NYSPILLS databases. In addition, this property was recently re-developed with new mixed-use buildings. As such, there is no evidence in database report to indicate that this HISTAS listing represents a significant environmental concern to the subject property.

6.4 Orphan Site Summary

The database report also includes 16 “orphan” sites, which are those properties where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject property. BEC reviewed additional information available from EDR regarding this site, as well as available USEPA and NYS data and

maps to determine if the orphan site presents a significant environmental risk to the subject property. The listed Orphan sites do not appear to represent an environmental concern to the subject property.

7.0 SITE RECONNAISSANCE

7.1 Site Inspection

BEC representative, Keith Butler, inspected the subject property on December 17, 2024, accompanied by Mr. Mendy (last name not provided), the property owner's representative. The property owner's representative provided a brief site history and other general site information.

7.2 Methodology and Limiting Conditions

Site reconnaissance included a visual inspection of the building interior, exterior areas including building systems (HVAC, plumbing, electrical, etc.), the sidewalk areas immediately adjoining the property, and the exteriors of adjacent properties. No limiting conditions were encountered during the survey.

7.3 Site Description

The subject property consists of a single tax parcel located on the southern side of North 1st Street, between Kent Avenue to the west, and Wythe Avenue to the east, in the Williamsburg section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street addresses of 58-64 North 1st Street, and as Borough 3 – Block 2378 – Lot No. 14 on the NYC tax maps (Figures 1 through 4).

The property is currently developed with a 2-story commercial building with no basement. The building occupies the entire parcel footprint, fronts north along N. 1st Street, and has a reported area of 12,987 square feet. The building is currently vacant/unoccupied but was most recently utilized as a restaurant (Pasta Wiz) and music school/rehearsal studio. The restaurant (kitchen, dining room, restrooms, and storage/mechanical space) occupied the first floor of the building, as well as portions of the second floor with a bar and dining area overlooking the first-floor dining room. The rehearsal studio space also occupied portions of both floors and is divided into numerous small rooms with common corridors and several restrooms. Some rooms contained mattresses and were likely utilized as illegal apartments and/or formerly occupied by squatters. Sidewalks are north of the property along N. 1st Street.

7.4 Utilities

Based upon information provided to BEC and/or obtained during the site inspection, the following is a table of utilities supplied to the subject property and the names of the suppliers:

Utility	Provider
Domestic Water	New York City Department of Environmental Protection (NYCDEP)
Sanitary Sewer	NYCDEP
Storm Sewer	NYCDEP
Electricity	Con Edison
Natural Gas	National Grid

7.5 Surrounding Land Use

The subject property is located in a densely developed, mixed-use urban area of Brooklyn, known as Williamsburg. The following surrounding land uses were observed during the Phase I ESA site inspection:

- North:** N. 1st Street, followed by a 3-story residential condominium building (53-69 N. 1st Street), with a 6-story residential condominium building and Metropolitan Avenue beyond.
- South:** A 5-story residential condominium building (57 Grand Street), a 5-story mixed-use building (59 Grand Street) and a 1-story commercial/retail building (69 Grand Street), followed by Grand Street, with low-rise residential and mixed-use development beyond.
- East:** A 5-story residential condominium building (66 N. 1st Street) , followed by a 6-story mixed-use (commercial/retail and residential) building, with Wythe Avenue beyond.
- West:** A 7-story residential apartment building (55 N. 1st Street), followed by multiple 3-story residential and mixed-use (commercial/retail and residential) buildings (223-235 Kent Avenue, with Kent Avenue beyond.

7.6 Interviews

Mr. Mendy (last name not provided), the property owner’s representative provided site access and was present during the site inspection. In addition, the property owner’s representative provided a brief site history and general site information. Pertinent statements made by the property owner’s representative are included throughout this report.

7.7 Summary of Environmental Site Features

7.7.1 Chemical Use and Storage

Small quantities of paints and cleaning chemicals were observed within storage and mechanical rooms throughout the building. The identified materials are stored in retail-size containers and their storage is consistent with normal building cleaning and maintenance activities. In addition, one cylinder of compressed gas was observed within the former restaurant kitchen area, associated with a fire suppression system. The on-site storage of these materials is not considered a REC.

7.7.2 Hazardous and Non-Hazardous Waste Storage and Disposal

No evidence that regulated hazardous materials and/or hazardous wastes are generated, treated, stored, or disposed of at the subject property was observed on the date of the survey. In addition, the regulatory records review and interviews did not reveal evidence of any activities involving the production of hazardous waste at the subject property.

As the subject property is vacant/unoccupied, no solid wastes or recyclables are currently generated. No RECs, associated with solid waste generation, storage, and disposal were identified on the subject property during the reconnaissance or through personnel interviews.

7.7.3 Underground and Aboveground Storage Tanks

The building is heated and supplied hot water by natural gas-fired and electrically powered equipment. Natural gas service connections were noted in the sidewalk areas north of the building (along N. 1st Street). A ceiling-mounted gas heater and multiple electrically-powered mini-split systems were also observed within the former restaurant area. Electric hot water heaters and portable HVAC units were observed throughout the former rehearsal studio spaces.

No evidence of underground storage tanks (i.e., vent or fill pipes) were observed on the property at the time of the site inspection. The EDR database report did not identify any registered petroleum or chemical ASTs or USTs for the subject property, and there are no known spills/releases attributed to the subject property.

Additional information may be available in files maintained by the FDNY, NYCDEP and/or NYCOER, however, no responses to BEC's FOIL requests have been received to date. Any information received from these agencies will be reviewed upon receipt and pertinent information forwarded to the client.

7.7.4 Sanitary and Stormwater Disposal

The subject property is serviced by the NYC municipal sewer system.

Storm drains and floor drains that discharge directly to subsurface soils pose a potential environmental concern because they provide a pathway for impacts to the subsurface and are classified as Class V injection wells under the USEPA's Underground Injection Control (UIC) program. These structures are required to be properly closed or permitted to stay open.

No catch basins or storm drains were observed on the property at the time of the site inspection. Storm water from the subject property drains to curbside drains along N. 1st Street and flows overland to adjacent properties. Curbside drains reportedly discharge to the NYC municipal sewer system.

Floor drains were observed throughout the first floor. The floor drains reportedly discharge to the New York City municipal sewer system and, as such, would be exempt from UIC Program regulations. No chemicals are stored near the floor drains. No significant staining, corrosion, odors or other evidence of potential environmental impairment was observed around the floor drains.

7.7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors, and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil, or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

Fluorescent light ballasts were observed within inspected portions of the building, which based on the age of the building, may contain PCBs. The disposal of leaking PCB ballasts is subject to federal regulations. No evidence of leakage associated with observed light ballasts was apparent as viewed from ground level. Based on the age of the structure and the potential for the fluorescent light ballasts to contain PCBs, the light ballasts are considered an environmental concern for the subject property.

No hydraulic automotive lifts, electrical transformers, hydraulic elevators, or other equipment suspected to contain PCBs were identified on the subject property at the time of the site inspection.

7.7.6 Debris, Dumping and Surficial Staining

No evidence of chemical spills, stains or odors was observed on the property at the time of the site inspection. In addition, based on inspection observations and the review of historical and regulatory records, no evidence of landfills and/or direct burial activities was identified on or proximate to the subject property. However, as the subject property was formerly developed with multiple commercial/industrial buildings, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the subject property. The potential presence of fill materials is considered a BER.

7.7.7 Stressed Vegetation

No stressed vegetation was present at the time of inspection.

7.7.8 Other Environmental Concerns

BEC also inspected the subject properties for evidence of the following potential environmental concerns:

OTHER AREAS OF CONCERN		
Area of Concern	Not Observed	Observed
Chemical/Petroleum Odors	X	
Pools of Liquid	X	
Stains or Corrosion	X	
Unidentified Containers	X	
Pits, Ponds, or Lagoons	X	
Monitoring or Other Wells	X	
Stained Soil or Pavement	X	
Air Quality	X	
Stressed Vegetation	X	

8.0 NON-SCOPE CONSIDERATIONS

8.1 Radon

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate, and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Brooklyn area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 51 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.75 pCi/L (first floor level) and 1.37 pCi/L (basements). Data indicate that approximately two percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level.

Additional data (May 2023) obtained from the NYSDOH indicates that 484 basement radon tests have been conducted in Kings County, with average radon basement concentration of 2.12 pCi/L. Based on these data, radon is not likely to represent an environmental concern for the subject property.

8.2 Lead-Based Paint

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. A visual inspection of painted surfaces conducted during the site inspection indicated the interior paints were generally in fair condition, with some areas water-stained or water-damaged areas. The building exterior walls were finished with painted concrete and stucco. Exterior paints were in good to fair condition. The lead content of the paints is unknown; however, due to the age of the building, the presence of LBP is possible. Since the site improvements are currently vacant/unoccupied and previously utilized for commercial purposes, lead-based paint is not considered an environmental concern. The disposal of lead paint waste resulting from renovation or demolition activities may be subject to federal and State regulations.

8.3 Asbestos-Containing Materials

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). Suspect asbestos-containing vinyl floor tile, sheetrock/ wallboard/

plaster were observed throughout the inspected portions of the building. Most of the suspect ACMs were in good condition at the time of the site inspection, although some areas of water-stained and damaged materials were identified on the second floor (former music school/rehearsal space). BEC notes that most of the exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. Further, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos. No sampling of suspect ACMs was conducted in coordination with this Phase I ESA.

Thermal insulation, surfacing materials, and vinyl/asphalt floor materials installed before 1981 are presumed to contain asbestos. The Occupational Safety and Health Administration (OSHA) asbestos standards (effective October 1995) require owners of commercial or industrial buildings (constructed before 1981) to identify potential asbestos hazards, keep records about potential asbestos hazards, post signs to warn of asbestos hazards, and communicate information about the hazards.

8.4 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn, NY Quadrangle, indicates that there are no NYS freshwater wetlands located within a one-mile radius of the subject property.

Tidal wetlands line much of the saltwater shore, bays, inlets, canals, and estuaries of Long Island and New York City, and Westchester County. The tidal wetlands regulations apply anywhere tidal inundation occurs on a daily, monthly, or intermittent basis, including but not exclusively within the salt wedge. Vegetation in intertidal areas beyond the range of the salt wedge is classified as coastal fresh marsh. In accordance with the New York State Tidal Wetlands Land Use Regulations (6 NYCRR Part 661), sixteen wetland categories are defined in the regulations. Coastal and tidal freshwater wetlands categories are identified by the presence of a tide and the types of vegetation present. The categories of wetlands and the restrictions placed on activities in and around them are defined in detail in 6 NYCRR Part 661.

BEC also reviewed NYSDEC Tidal Wetlands Maps available online. The tidal wetlands map (No. 586-506) showing the subject and surrounding properties indicates that the East River, located approximately 650 feet west-northwest of the subject property, is classified as a Littoral Zone (LZ) tidal wetland. LZ wetlands are defined as the tidal wetland zone that includes all lands under tidal waters which are not included in any other category. There shall be no LZ under waters deeper than six feet at mean low water.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicates that the nearest potential federal wetlands are located approximately 650 feet west-northwest of the subject property and associated with the East River. The wetlands are classified as E1UBL

wetlands, which are defined as subtidal estuarine water bodies with unconsolidated bottoms, which are permanently flooded. Additional information obtained from the FWS website is included in Appendix E.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the subject property is located within the 100-year or 500-year flood zones. The FIRMs showing the property (No. 3604970204F) indicates that entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the subject property.

8.5 Mold and Water Damage

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster, and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. BEC observed several areas of water-staining and water damage, including peeling paint, damaged/missing sheetrock/plaster, damaged floor tile throughout the second floor (former music school/rehearsal space). Visible mold growth was also observed on second floor walls and ceilings. This damage appears related to roof/skylight leaks.

8.6 Vapor Encroachment

As part of this assessment, BEC evaluated the potential for vapor encroachment into onsite structures following the general methodology outlined in ASTM E-2600-10 utilizing professional judgment. The Tier 1 screening assessment was employed to determine if a potential vapor encroachment condition (VEC) exists at the site. The site, adjoining properties and hydraulically upgradient properties were assessed for known or suspected contaminated facilities within approximate minimum search distances. A Tier 1 screening assessment generally consists of the following: a search distance test to identify if there are any known or suspected contaminated sites within the area of concern (AOC); a chemicals of concern (COC) test to determine if chemicals of concern exist at the known or suspected contaminated facilities and a plume test to determine whether or not COC in the contaminated plume may be within the critical distance (or AOC). The critical distance is defined as the linear distance in any direction from the nearest edge of the plume to the site. If the critical distance from the site to the nearest edge of a petroleum hydrocarbon plume is within 528 feet (1/10-mile) or within 1,760 feet (1/3-mile) for non-petroleum COC (e.g., trichloroethylene, perchloroethylene, etc.), then it is assumed that COC are within the AOC and a potential VEC exists, and additional screening

may be necessary. The critical distance and AOC may be modified using professional judgment based on hydraulic gradient direction and contaminant plume width.

The decision to recommend additional screening, even if a potential VEC is determined by distance, is based on other criteria including existing and planned use of the property, type of structures potentially impacted, physical setting, hydraulic gradient, depth to groundwater, soil characteristics, activities in the surrounding area and the presence of natural or manmade conduits. Based on an evaluation of this collective criteria, the potential for a VEC from current and surrounding land use activities is considered moderate to high due to the historic use of the adjacent and surrounding properties as various industrial/manufacturing uses. Regional groundwater quality is also documented to be poor, given the high number of petroleum spills and NYS and NYC remediation sites in the surrounding area. Potential soil vapor intrusion risk is considered a REC and should be evaluated as part of a Phase II investigation. BEC notes that soil vapor sampling is a required part of the NYCOER E-Designation HazMat investigation program.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA has been prepared in conformance with the scope and limitations of ASTM Practice E1527-21 (inclusive of the USEPA all appropriate inquiry requirements) for the industrial property located on the southern side of North 1st Street, between Kent Avenue to the west, and Wythe Avenue to the east, in the Williamsburg section of the Borough of Brooklyn, New York City, Kings County, New York. The subject property is identified by the street addresses of 58-64 North 1st Street, and as Borough 3 – Block 2378 – Lot No. 14 on the NYC tax maps. Any exceptions to, or deletions from, this practice are described in the section of the report entitled Limitations and Exceptions.

Based on the results of the site inspection, records review and interviews, it was determined that there was one REC identified for the subject property. RECs are those conditions, which could adversely affect the environmental integrity of the property. No historic recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs) were identified. The identified REC is summarized below:

- Information obtained from multiple historic sources revealed that the subject property was historically utilized for various industrial/manufacturing operations, including paint manufacturing, iron manufacturing, a cooperage, a blacksmith, fur dressing, and China decorating/manufacturing from at least 1887 through the mid-1930s. Based on the nature of historical use of the subject property, the former site operations may have resulted in spills or releases which may have impacted the subsurface beneath the subject property, as well as a potential soil vapor intrusion risk. As such, the historic use of the subject property represents a REC.

Based upon the above findings and conclusions, BEC recommends following:

- To evaluate potential impacts related to the historic usage of the subject and surrounding properties, a subsurface investigation should be performed. At a minimum, the investigation should include the installation of soil borings with the collection of representative soil, soil gas, and/or groundwater samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present). Since the subject property also has an E-Designation for hazardous materials there is an option to conduct a due diligence Phase II or a more extensive investigation to satisfy the E-Designation requirements in conjunction with the re-development of the site.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/BERs) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The subject property was listed on the E-Designation database as having an E-HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The HazMat E-designation requires the issuance of a Notice to Proceed by the NYCOER before the property can be redeveloped. The presence of the E-Designation is considered a BER.
- Information obtained from multiple historic sources revealed that the subject property was formerly developed with one or more commercial/industrial buildings from at least 1887 through 1950. As such, there is a potential for fill materials to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill materials was available for review, there is a potential for contaminated and/or structurally unsuitable fill materials to be present on the site. The potential presence of fill materials is considered a BER.

Experience with similar projects shows that typical urban fill materials (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, due to the presence of the E-HazMat designation, any further redevelopment would require sampling to arrange for proper disposal off-site disposal of soil/fill.

- Fluorescent light ballasts were observed within inspected portions of the building, which based on the age of the building, may contain PCBs. BEC recommends that a PCB survey be performed prior to demolition and/or renovation activities. Any PCB-containing equipment affected by the development of the site must be properly managed during demolition and/or renovation activities. In addition, while the disposal of non-leaking PCB ballasts is not currently regulated by the USEPA, BEC recommends that the PCB ballasts be packaged in a lined, steel drum containing an absorbent material and disposed of as PCB-waste to reduce the potential for environmental contamination and potential liability for cleanup of any environmental release of PCBs from the ballasts.
- Suspect asbestos-containing vinyl floor tile, sheetrock/wallboard/plaster were observed throughout the inspected portions of the building. Most of the suspect ACMs were in good condition at the time of the site inspection, although some areas of water-stained and damaged materials were identified on the second floor (former music school/rehearsal space. BEC notes that most of the exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. Further, due to the age of

the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a NYC and NYS-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

- Several areas of water-staining and water damage, including peeling paint, damaged/missing sheetrock/plaster, damaged floor tile, were observed throughout the second floor (former music school/rehearsal space). Visible mold growth was also observed on second floor walls and ceilings. This damage appears related to roof/skylight leaks.

As future plans for the subject property are unknown, BEC provides the following recommendations: If the building is to be demolished, then no repairs and/or mold abatement is warranted at this time. However, if future plans include the use/renovation of the existing structure, then roof repairs should be made to the satisfaction of the NYCDOB. Further, any areas affected by continual water leaks should be repaired and subsequently inspected for the presence of mold growth. Any evidence of mold should be cleaned and removed in accordance with the New York State Department of Health (NYSDOH) Guidelines on Assessment & Remediation of Fungi in Indoor Environments prior to occupancy. Finally, sheetrock, ceiling tiles, and other water damaged building materials should be removed from the building and properly disposed.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

This Phase I ESA has been prepared in accordance with procedures established by environmental professionals and in concert with the guidance of regulatory agencies and funding institutions, ASTM Practice E1527-21, inclusive of the USEPA “All Appropriate Inquiry” requirement published in the Federal Register on November 1, 2005. The USEPA “All Appropriate Inquiry” requirement establishes specific regulatory requirements for conducting all appropriate inquiries into the previous ownership, uses, and environmental conditions of a property for the purposes of qualifying for certain landowner liability protections under CERCLA.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 part of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the site referenced above. BEC has developed and performed the “All Appropriate Inquiries” in conformance with the standards and practices set forth in 40 CFR Part 312.

Section 11.0 contains the data gaps and deficiencies of the research data encountered during BEC’s preparation of this report.

**QUALIFICATIONS OF
ENVIRONMENTAL PROFESSIONAL**

Keith W. Butler, Associate Senior Project Manager

PROFILE

Mr. Butler has extensive project management experience with respect to environmental due diligence and subsurface investigations. He is responsible for the preparation of project proposals, Phase I and II Environmental Site Assessments, Work Plans, Health and Safety Plans, Quality Assurance Project Plans, and investigation reports. Additionally, Mr. Butler has conducted and managed numerous Phase I and II ESAs. In these roles, Mr. Butler is responsible for applying the various state and local regulations, which govern environmental compliance and determine the need for additional investigation and/or remediation.

SELECTED PROJECTS

Madison National Bank, Various Sites, New York

Mr. Butler served as the Project Manager and principal contact for Madison National Bank. He was responsible for the preparation of Transaction Screen and Phase I/II Environmental Site Assessments (ESAs) at various sites throughout the New York metropolitan area, as required by the bank to satisfy client mortgage or construction loan requests.

Jewish Home & Hospital, Manhattan, NY

Most recently, Mr. Butler completed a Phase I ESA at their Bronx campus to obtain US. Housing and Urban Development (HUD) funding for a future construction project. Mr. Butler was also responsible for implementing a Remedial Action Work (RAW) Plan at the Bronx facility as required by the NYSDEC under a Voluntary Cleanup Agreement. The RAW included the preparation of contract documents, excavation of over 2,000 tons petroleum contaminated soils, installation of a Soil Vapor Extraction (SVE) system remedial oversight, and sampling.

Pulte Homes of New York, Patchogue, NY

Mr. Butler served as the Project Manager for the re-development of this six-acre site and was responsible for field oversight and coordination between remediation contractors and various regulatory agencies. Initial phases of the project included the completion of Phase I and II ESAs. Subsequent remediation consisted of UST removal, excavation of petroleum-impacted soils, closure of three NYSDEC spill numbers, removal of contaminated UIC sediment/sludge, the closure of commercial and residential UIC structures and the excavation of arsenic and metals contaminated soil. The project was conducted under approved Remedial Work and Soil Management Plans with oversight from the State, County and Village agencies.

Town of Islip, Blydenburgh Road Landfill, Hauppauge, NY

Mr. Butler served as the Project Manager for the groundwater and leachate monitoring program at the Blydenburgh Road Landfill - Cleanfills 1 and 2 and Leachate Impoundment Area. Mr. Butler was the principal contact for the Town's Resource Recovery Agency. He prepared the quarterly and annual monitoring reports, oversaw sampling efforts, and coordinated with the Town's analytical laboratory and data validation contractors. Mr. Butler was also responsible for preparing quarterly well condition reports and leachate quality reports for compliance with the Town's Suffolk County Discharge Certification Permit.

Ogden Aviation, Various Sites, JFK International Airport, Jamaica, New York

Mr. Butler served as the project manager for the rehabilitation of the satellite fuel farm recovery well system. Recovery wells at the fuel farm had become clogged with iron deposits and bacteria limiting product recovery efforts. Mr. Butler developed and supervised chemical cleaning and redevelopment of recovery wells under the approval of the NYSDEC. The chemical treatment has resulted in significant increases in product recovery volumes.

Brookhaven National Laboratory, Upton, NY

Mr. Butler has worked on a number of remediation system and monitoring well installation projects at BNL. His duties included oversight of installations, system pump tests, performance evaluations, and well development. He also provided oversight of soil borings, temporary well construction, soil and water sampling, and air monitoring for groundwater screening survey of two operable units in hazardous and radioactive waste storage areas. Mr. Butler also provided oversight for groundwater monitoring, well construction, well abandonment, and methane-monitoring wells for landfill closure.

metroPCS, Various Sites, New York

Mr. Butler served as the Project Manager for metroPCS' Long Island region telecommunications site acquisition and expansion program. Mr. Butler was responsible for the preparation of Phase I ESAs, the conduct of Phase II ESAs, including asbestos, lead paint and soil sampling, and coordination of National Environmental Policy Act (NEPA) reports and planning studies at various locations proposed for construction of new cellular telephone facilities. Reports and associated communications were transmitted electronically through metroPCS' data management system.

Dormitory Authority - State of New York, Harlem Hospital Center Modernization Project - Hazardous and Universal Waste Survey, Harlem Hospital, New York, NY

Mr. Butler served as the field team leader for conducting hazardous and universal waste surveys in multiple buildings affiliated with Harlem Hospital Center. The survey included the identification of hazardous and universal waste materials including chemicals, paints, fluorescent bulbs, high intensity discharge bulbs/fixtures, battery operated equipment, above and underground petroleum storage tank identification, PCB containing light ballasts and electrical equipment.

Keith W. Butler, Associate Senior Project Manager

The hospital is comprised of a number of buildings, many that were abandoned and slated for demolition.

SVE Monitoring at Newark International Airport, Elizabeth, NJ

A routine leak detection test indicated that two 10,000-gallon underground storage tanks, which were used to store unleaded gasoline, had failed tightness tests. Follow-up investigation revealed that the product had impacted the subsurface environment. In response to this, a soil vapor extraction system was installed to reduce the residual concentrations of petroleum constituents in soil and groundwater and to minimize vapor migration into subsurface utility vaults. Mr. Butler was responsible for implementing the Remedial Action Work Plan, developed for the site by Ogden and the State of New Jersey. Activities conducted under the RAW include quarterly groundwater monitoring, air sampling, vacuum pressure monitoring, system maintenance and reporting.

Federal Express Site, Newark International Airport, Elizabeth, NJ

Mr. Butler worked with Ogden Aviation and the State of New Jersey to address outstanding environmental issues at the site related to a spill of jet fuel, which occurred during a construction accident. Mr. Butler performed a site assessment, which included groundwater monitoring, product gauging, and groundwater flow modeling. After reviewing these data, Mr. Butler determined that fill material at the site was contributing to soil and groundwater contamination and has petitioned the State for partial site closure. Mr. Butler is continuing to address the remaining area of concern through product recovery and continued monitoring.

Northrop Grumman, Various Sites

Mr. Butler conducted three Phase I ESAs and a Phase II investigation for the presence of PCBs in soil. He also inspected and supervised the removal of underground storage tanks, asbestos abatement projects, and sanitary system closures related to the facility decommissioning. Mr. Butler also conducted groundwater investigations and provided oversight during soil sampling, drilling and soil remediation activities.

New York City Department of Environmental Protection, Various Sites

Mr. Butler served as an Environmental Scientist for hazard investigation at seven sewage pump stations. Mr. Butler addressed a wide range of environmental concerns including asbestos, lead based paints, PCB oil, light ballasts, and other hazardous building materials. He conducted field investigations, sampling, and prepared Hazardous Materials Survey Reports for use during preparation of plans and specifications for proposed pump station construction projects.

Fresh Kills Landfill, Staten Island, New York

Mr. Butler participated in the field operations during pump and yield tests conducted on Cells 1 and 9. The tests were performed to determine the hydraulic properties of the landfill's refuse. He collected groundwater and leachate measurements in recovery wells and in adjacent observation wells under pumping and non-pumping conditions.

EXISTING- ALL NOTICES OF VIOLATION AND VIOLATION ORDERS ISSUED BY THE FIRE PREVENTION

EXISTING- ALL SUMMONSES

Note: This search is limited to outstanding Summonses, Notices of Violation and Violation Orders (VOs) that are reported to be related to a specific address. With respect to VOs this search is limited to VOs issued on January 1, 2008 or thereafter. This search does not contain information on VOs issued by fire companies, unless they were forwarded to the Bureau of Fire Prevention. A requested report will only list the violation numbers. After you have received the Report, you can obtain a copy of any record available for an additional fee of \$0.25 (cents) / per page by filling out the copy of violation request form.

Note: Requests will be responded to within 10 business days.

42-09 28th Street, 14th Floor CN 31
Long Island City, New York 10013

Re: Freedom of Information Request
58-64 North 1st Street
Block 2378, Lot No. 14
Brooklyn, New York 11249

Dear Sir or Madam:

Our firm has been retained to prepare an Environmental Assessment for the above-referenced properties. We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g., asbestos, lead paint), etc. for the facility. We agree with the department's decision to omit any health or personal identification in the records provided.

If you require additional information to respond to this request or if there are costs associated with same, please, do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

Brussee Environmental Corp,

Keith Butler
Associate Senior Project Manager

Contact: Keith Butler

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

<u>Year</u>	<u>Scale</u>	<u>Details</u>	<u>Source</u>
2019	1"=500'	Flight Year: 2019	USDA/NAIP
2015	1"=500'	Flight Year: 2015	USDA/NAIP
2011	1"=500'	Flight Year: 2011	USDA/NAIP
2006	1"=500'	Flight Year: 2006	USDA/NAIP
2002	1"=500'	Flight Date: April 11, 2002	USGS
1994	1"=500'	Acquisition Date: January 01, 1994	USGS/DOQQ
1991	1"=500'	Flight Date: March 09, 1991	NAPP
1984	1"=500'	Flight Date: March 26, 1984	USDA
1980	1"=500'	Flight Date: July 25, 1980	NOAA
1976	1"=500'	Flight Date: October 29, 1976	USGS
1974	1"=500'	Flight Date: October 19, 1974	NOAA
1966	1"=500'	Flight Date: February 23, 1966	USGS
1961	1"=500'	Flight Date: April 12, 1961	EDR Proprietary Aerial Viewpoint

EDR Historical Topo Map Report

12/12/24

Site Name:

Industrial Property
60 North 1st Street
Brooklyn, NY 11249
EDR Inquiry # 7847457.4

Client Name:

KB Environmental Assessment
4 Gail Street
Bay Shore, NY 11706
Contact: Keith Butler

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by KB Environmental Assessment were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	NA	Latitude:	40.716439 40° 42' 59" North

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there

EXECUTIVE SUMMARY

are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/16/2024 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/16/2024 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 13 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/01/2024 has revealed that there are 17 NY SHWS sites within approximately 1 mile of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS UST sites within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

State and tribal institutional control / engineering control registries

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 51 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/03/2024 has revealed that there are 60 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 63 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 07/31/2024 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NAVY FIRE FIGHTING S		NE 1/4 - 1/2 (0.462 mi.)	502	1750

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

RADIAC RESEARCH CORP EPA ID:: NYD049178296	110 OLD ROUTE	SW 0 - 1/8 (0.071 mi.)	C119	417

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there are 4 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 4 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 20 UST FINDER sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 10 E MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

BUG, PEOPLES WORKS Facility Id: HS2016	KENT AVE.	NNE 1/4 - 1/2 (0.463 mi.)	BE504	1752

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there are 95 NY MANIFEST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 08/28/2024 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis notes: approx 15 gallons of oil on 6 of dirt, in TM 851, unable to see any defects at this time, unable to pressure test due to conditions. 1-sample taken, records show 410PPM dated 12/10/98. pressure tested unit, unit not holding pressure, leak appears to be coming from ground switch handle shaft, unit is 15 gallons low on oil. No records to show any sewer connections. We have to deenergize feeder which should be between 7 and 8pm, and will remove transformer monday 10-11-99. DEP is issuing a commissioners order requiring a complete cleanup of the vault by 8:00pm 10-10-99. Also they are issuing a notice of violation for the transformer not having a PCB label. E&S crew arrived at 14:50 hrs to begin excavation. 16:30 ERT reports, chem lab gave ert a verbal that oil sample is over 50ppm, lab seq # 99-10651 370 ppm. SPACE 49874 Dep Nancy Barsoum is back on location and is very satisfied, she will back tomorrow afternoon approx 5:00pm, also transformer is in the process of being drained. removed 460 gallons from transformer, draining is completed. EPA# NYP004044467. transformer in tm851 removed. 9 barrells of solids removed. found clogged drain in nwc of structure--no discharge--sealed drain perm. with garton plug, steamed and double washed with bg-760 and slix, cannot replace transformer at this time due to structural damage to walls. DEC Inspector notes: Duplicate of spill #9908351 transformer in vault leaking material due to faulty equipment clean up unk sample taken coned#128344 pcb test done on 12/10/98 test results 410 ppm no callback necessary

Environmental Interest/Information System:

ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Mitch said a dump truck has an accident with a regular car and punched the saddle tank. Approximately 20 gallons of diesel spilled over the road. The Fire department pumped out the product remaining in the saddle tank approximately 30 gallons and put it in a drum. The company of the dump truck picked the drum. The Fire Department put speedi-dry over the spill. Sanitation Department will clean the spill. There is a storm drain close to the location of the spill and DEP was notified. Spill closed. Steve 516-229-0659 Park trucking 1818 Falmouth Avenue New Hyde Park, NY 11040</p> <p>Unknown if nearby storm drain was affected. C/u complete</p>

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Spiller Company: 999
Contact Name: ERIC WEINSTOCK OR RICHARD IZZO
Latitude: 40.7312820
Longitude: -73.9511440
DEC Memo: DECPiper spoke wiht Eric Weinstock. Phase II Report prepared by the prospective purchaser s consultant Partner Engineering and Science, Inc. noted either free product or possible free product . None of the soil samples were sent to a laboratory for analysis. As discussed, the tanks are installed adjacent to a bearing wall and may not be able to be safely removed. CA Rich plans to install borings around the tank and send soil sample to a lab for CP-51 analysis and compare the results to NYSDEC standards. and also plan to install a monitoring well next to the tanks and check for free product.
Remarks: soil borings show gasoline or heating oil in soil sample. Groundwater not affected

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 7/27/04: Con Ed submitted copy of NOTIFICATION FOR FUEL OIL SPILLS (NOT INVOLVING A PIPELINE);, which states: LEAK DEVELOPED APPROX 12 FROM BOTTOM OF FUEL OIL TANK #500. IN MOAT; MAGNETIC PATCH SUPPLIED BY FIRE DEPT WAS APPLIED & LEAK RATE REDUCED. BARGE ARRANGED TO UNLOAD TANK. VENDOR (MILLER ENV. GROUP) MOBILIZED. TANK CONTAINS 3.6 MILLION GALLONS OF #6 HIGH-POUR OIL. Also submitted copy of internal Con Ed memo, which states: STATUS OF THE INCIDENT: Contained and cleaned. No information given on repairs. 5/12/08: Spill submitted for closure by Con Ed with following information: According to records reviewed Tank #500 along with the other 5 Fuel Oil Storage Tanks were drained and cleaned certified Gas Free and placed Out of Service as of July 22, 1999. Monthly inspections of the exterior tanks have not revealed any oil spillage up to and including the inspection on October 28, 2005. Close. (JHO)
Remarks: MOAT HAS ALL PRODUCT CONTAINED - BEGINING RECOVERY AT THIS TIME

Environmental Interest/Information System:
 The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

 Record Added Date: 06/17/2015
 Record Updated Date: 09/01/2023
 Update By: HMDUDEK
 Site Description: "The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.- Off-Site is located in an urban area in Brooklyn, Kings County.

FYN PAINT AND LACQUER CO., INC. - OFF-SITE (Continued)

S128906188

The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site. "

Env Problem: Not reported
"Nature and Extent of Contamination: The remedial investigation for the C224154 site revealed: a) contamination: the soil, soil vapor and the groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from C224154. b) areal/depth extent: the VOC plume from site C224154 extends across the footprint of the Fyn Paint building under the adjacent sidewalks, parking lot and streets. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells. "

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

Site Description:

"This site has been accepted into the Brownfield Cleanup Program - Site Code C224154. Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer

S108524789

manufacturing until 2010. The site has a RCRA Closure Work Plan which started to be performed in 2011 and continues in 2014. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigation in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system (DPES) was approved. In June 2014, the DPES was operating at the site. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2014. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "

Env Problem:

"See also Site No. V00380. Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP) was approved for off site (OU-2) contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed in May- June 2014. As of November 2014, the SRIWP for OU-2 has not been implemented and the

Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated and the remedial action will be completed under the State Superfund Program. In March 2015, the site was accepted in the Brownfield Cleanup Program (BCP) with the index # C224154."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Env Problem:

Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary." "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor

samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small

Env Problem:

basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary." "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building's basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene

INST CONTROL:

Name: FYN PAINT AND LACQUER CO., INC.
Address: 230 KENT AVENUE
City,State,Zip: BROOKLYN, NY 11249
Site Code: 502562
Control Name: Monitoring Plan
HW Code: C224154
Control Code: 31
Control Type: INST
Dt record added: 03/24/2015
Dt rec updated: 02/07/2024
Updated By: HMDUDEK
Site Code: 502562
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 -

2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building's basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Code: 502562

Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual

phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Code: 502562
Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground

Env Problem: surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Health Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Site Code: 502562

Site Description: "Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019. Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse

grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary."

Env Problem: "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building s basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property boundaries. "

Health Problem: "Remedial actions are complete and measures are in place to prevent people from coming in contact with residual site contamination."

Site Description: "Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet

below grade. The groundwater flow direction is west towards East River. "

Env Problem: "Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP) was approved for off site (OU-2) contamination plume. In 2014, the Remedial Design for a dual phase extraction system (DPES) was approved and the system was installed. As of November 2014, the SRIWP for OU-2 has not been implemented and the Volunteer stopped paying for the remedial action. As a result, the Voluntary Cleanup Agreement for this site has been terminated. In March 2015, a new owner applied and the site was accepted into the Brownfield Cleanup Program under site no. C224154."

Health Problem: "It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated. "

The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "

Env Problem: "Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated at the site. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2014. In May 2013 the supplemental remedial investigation work plan (SRIWP) was approved for off site (OU-2)contamination plume. In 2014, the Remedial Design for

Site Description: "Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. "

Site Description:	"Location: The Fyn Paint and Lacquer Co., Inc. site is a 0.125 acres site located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, River Street to the west, North First Street to the south, and Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: Prior to demolition, the site consisted of an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contained the heating oil tank, furnace and controls for the sprinkler system. These structures were demolished in March 2019.

Env Problem:

Current Zoning and Land Use: The site land use is currently zoned as Industrial and Manufacturing (M3-1). Past Use of the Site: Past land uses associated with the site included a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York State's Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary." "Nature and Extent of Contamination: Remediation at the site is completed. Prior to remediation, the primary contaminants of concern at the site included volatile organic compounds such as acetone, ethylbenzene, toluene and mixed xylene in soil, and groundwater. Remedial action has successfully achieved a Track 4 restricted residential cleanup. Remaining contamination in soil, groundwater and soil vapor is being managed under a Site Management Plan (SMP). An Environmental Easement will limit the future use of the property, restrict the use of groundwater and require compliance with the SMP. All engineering controls of the remedy will be operated and maintained under the SMP. Prior to remediation: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified the primary contaminants of concern in soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed in place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil - VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater - During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub slab vapor - Sub slab vapor samples were collected beneath the on-site building's basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub slab vapor extend to the property

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

DEC Memo: 2/8/05, 3:43 PM - e-mail from Matthew Madsen, Con Ed project manager:
Remember that 'spill' we
talked about this morning at Kent and Metropolitan? Well, as it turns
out, what they were looking
at was foam glass insulation (the typical configuration for the
pipeline inside to out is pipe,
coal tar, expanded foam glass insulation, and then a canvass wrap as
an outer layer). During

pre-work test pitting and sampling, all of these layers have been sampled in the past. The foam glass and canvas are non-ACM and have not turned up any hazardous constituents (the pore space in the foam glass does contain hydrogen sulfides, so there is an odor when you cut or crush the stuff). Any way you slice it, there is no oil spill/release at this location. Close out. (JHO)

Operable Unit: 01
Material ID: 313057
Material Code: 0003A
Material Name: #6 fuel oil
Case No.: Not reported
Material FA: Petroleum
Quantity: 2.00
Units: G
Recovered: .00
Resource Affected: Soil
Oxygenate: Not reported

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.

ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Tank Info:

Tank Number: 1
Tank Id: 1034
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
E00 - Piping Secondary Containment - None
G10 - Tank Secondary Containment - Impervious Underlayment
H00 - Tank Leak Detection - None
K00 - Spill Prevention - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
J00 - Dispenser - None
D00 - Pipe Type - No Piping
L00 - Piping Leak Detection - None

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel Tank in Concrete
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 1500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 11/01/2007

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F004
Waste Description: The Following Spent Nonhalogenated Solvents: Cresols, Cresylic Acid, And Nitrobenzene; And The Still Bottoms From The Recovery Of These Solvents; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

Waste Code: F007
Waste Description: Spent Cyanide Plating Bath Solutions From Electroplating Operations.

Waste Code: F008
Waste Description: Plating Bath Residues From The Bottom Of Plating Baths From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F009
Waste Description: Spent Stripping And Cleaning Bath Solutions From Electroplating Operations In Which Cyanides Are Used In The Process.

Waste Code: F010
Waste Description: Quenching Bath Residues From Oil Baths From Metal Heat Treating Operations In Which Cyanides Are Used In The Process.

Waste Code:	P015
Waste Description:	Beryllium
Waste Code:	P016
Waste Description:	Dichloromethyl Ether (Or) Methane, Oxybis[Chloro-
Waste Code:	P017
Waste Description:	2-Propanone, 1-Bromo- (Or) Bromoacetone
Waste Code:	P018
Waste Description:	Brucine (Or) Strychnidin-10-One, 2,3-Dimethoxy-
Waste Code:	P020
Waste Description:	Dinoseb (Or) Phenol, 2-(1-Methylpropyl)-4,6-Dinitro-
Waste Code:	P021
Waste Description:	Calcium Cyanide (Or) Calcium Cyanide Ca(Cn) ₂
Waste Code:	P022
Waste Description:	Carbon Disulfide
Waste Code:	P023
Waste Description:	Acetaldehyde, Chloro- (Or) Chloroacetaldehyde
Waste Code:	P024
Waste Description:	Benzenamine, 4-Chloro- (Or) P-Chloraniline
Waste Code:	P026
Waste Description:	1-(O-Chlorophenyl)Thiourea (Or) Thiourea, (2-Chlorophenyl)-
Waste Code:	P027
Waste Description:	3-Chloropropionitrile (Or) Propanenitrile, 3-Chloro-
Waste Code:	P029
Waste Description:	Copper Cyanide (Or) Copper Cyanide Cu(Cn)
Waste Code:	P030
Waste Description:	Cyanides (Soluble Cyanide Salts), Not Otherwise Specified
Waste Code:	P031
Waste Description:	Cyanogen (Or) Ethanedinitrile
Waste Code:	P033
Waste Description:	Cyanogen Chloride (Or) Cyanogen Chloride (Cn)Cl
Waste Code:	P034
Waste Description:	2-Cyclohexyl-4,6-Dinitrophenol (Or) Phenol, 2-Cyclohexyl-4,6-Dinitro-
Waste Code:	P036
Waste Description:	Arsonous Dichloride, Phenyl- (Or) Dichlorophenylarsine
Waste Code:	P037
Waste Description:	2,7:3,6-Dimethanonaphth[2,3-B]Oxirene, 3,4,5,6,9,9-Hexachloro-1a,2,2a,3,6,6a,7,7a-Octahydro-, (1alpha, 2beta, 2aalpha, 3beta, 6beta, 6aalpha, 7beta, 7aalpha)- (Or) Dieldrin

Waste Code:	P039
Waste Description:	Disulfoton (Or) Phosphorodithioic Acid, O,O-Diethyl S-[2-(Ethylthio)Ethyl] Ester
Waste Code:	P040
Waste Description:	O,O-Diethyl O-Pyrazinyl Phosphorothioate (Or) Phosphorothioic Acid, O,O-Diethyl O-Pyrazinyl Ester
Waste Code:	P041
Waste Description:	Diethyl-P-Nitrophenyl Phosphate (Or) Phosphoric Acid, Diethyl 4-Nitrophenyl Ester
Waste Code:	P042
Waste Description:	1,2-Benzenediol, 4-[1-Hydroxy-2-(Methylamino)Ethyl]-, (R)- (Or) Epinephrine
Waste Code:	P043
Waste Description:	Diisopropylfluorophosphate (Dfp) (Or) Phosphorofluoridic Acid, Bis(1-Methylethyl) Ester
Waste Code:	P044
Waste Description:	Dimethoate (Or) Phosphorodithioic Acid, O,O-Dimethyl S-[2-(Methylamino)-2-Oxoethyl] Ester
Waste Code:	P045
Waste Description:	2-Butanone, 3,3-Dimethyl-1-(Methylthio)-, O-[Methylamino)Carbonyl Oxime (Or) Thiofanox
Waste Code:	P046
Waste Description:	Alpha,Alpha-Dimethylphenethylamine (Or) Benzeneethanamine, Alpha, Alpha-Dimethyl-
Waste Code:	P047
Waste Description:	4,6-Dinitro-O-Cresol, & Salts (Or) Phenol, 2-Methyl-4,6-Dinitro-, & Salts
Waste Code:	P048
Waste Description:	2,4-Dinitrophenol (Or) Phenol, 2,4-Dinitro-
Waste Code:	P049
Waste Description:	Dithiobiuret (Or) Thioimidodicarbonic Diamide [(H2n)C(S)]2nh
Waste Code:	P050
Waste Description:	6,9-Methano-2,4,3-Benzodioxathiepin,6,7,8,9,10,10-Hexachloro-1,5,5a,6,9,9a-Hexahydro-,3-Oxide (Or) Endosulfan
Waste Code:	P051
Waste Description:	2,7:3,6-Dimethanonaphth[2,3-B]Oxirene, 3,4,5,6,9,9-Hexachloro-1a,2,2a,3,6,6a,7,7a-Octahydro-, (1alpha, 2beta, 2abeta, 3alpha, 6alpha, 6abeta, 7beta, 7aalpha)- & Metabolites (Or) Endrin (Or) Endrin, & Metabolites

Waste Code:	P056
Waste Description:	Fluorine
Waste Code:	P057
Waste Description:	Acetamide, 2-Fluoro- (Or) Fluoroacetamide
Waste Code:	P058
Waste Description:	Acetic Acid, Fluoro-, Sodium Salt (Or) Fluoroacetic Acid, Sodium Salt
Waste Code:	P059
Waste Description:	4,7-Methano-1h-Indene, 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-Tetrahydro- (Or) Heptachlor
Waste Code:	P060
Waste Description:	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-Hexa-Chloro-1,4,4a,5,8,8a,-Hexahydro-, (1alpha, 4alpha, 4abeta, 5beta, 8beta, 8abeta)- (Or) Isodrin
Waste Code:	P062
Waste Description:	Hexaethyl Tetraphosphate (Or) Tetraphosphoric Acid, Hexaethyl Ester
Waste Code:	P063
Waste Description:	Hydrocyanic Acid (Or) Hydrogen Cyanide
Waste Code:	P064
Waste Description:	Methane, Isocyanato- (Or) Methyl Isocyanate
Waste Code:	P065
Waste Description:	Fulminic Acid, Mercury(2+) Salt (R,T) (Or) Mercury Fulminate (R,T)
Waste Code:	P066
Waste Description:	Ethanimidothioic Acid, N-[[[(Methylamino)Carbonyl]Oxy]-, Methyl Ester (Or) Methomyl
Waste Code:	P067
Waste Description:	1,2-Propylenimine (Or) Aziridine, 2-Methyl-
Waste Code:	P068
Waste Description:	Hydrazine, Methyl- (Or) Methyl Hydrazine
Waste Code:	P069
Waste Description:	2-Methylactonitrile (Or) Propanenitrile, 2-Hydroxy-2-Methyl-
Waste Code:	P070
Waste Description:	Aldicarb (Or) Propanal, 2-Methyl-2-(Methylthio)-, O-[(Methylamino)Carbonyl]Oxime
Waste Code:	P071
Waste Description:	Methyl Parathion (Or) Phosphorothioic Acid, O,O,-Dimethyl O-(4-Nitrophenyl) Ester
Waste Code:	P072
Waste Description:	Alpha-Naphthylthiourea (Or) Thiourea, 1-Naphthalenyl-
Waste Code:	P073
Waste Description:	Nickel Carbonyl (Or) Nickel Carbonyl Ni(Co)4, (T-4)-

Waste Description:	Strontium Sulfide Srs
Waste Code:	P108
Waste Description:	Strychnidin-10-One, & Salts (Or) Strychnine, & Salts
Waste Code:	P109
Waste Description:	Tetraethyldithiopyrophosphate (Or) Thiodiphosphoric Acid, Tetraethyl Ester
Waste Code:	P110
Waste Description:	Plumbane, Tetraethyl- (Or) Tetraethyl Lead
Waste Code:	P111
Waste Description:	Diphosphoric Acid, Tetraethyl Ester (Or) Tetraethyl Pyrophosphate
Waste Code:	P112
Waste Description:	Methane, Tetranitro- (R) (Or) Tetranitromethane (R)
Waste Code:	P113
Waste Description:	Thallic Oxide (Or) Thallium Oxide Tl ₂ O ₃
Waste Code:	P114
Waste Description:	Selenious Acid, Dithallium (1+) Salt (Or) Thallium(I) Selenite
Waste Code:	P115
Waste Description:	Sulfuric Acid, Dithallium (1+) Salt (Or) Thallium(I) Sulfate
Waste Code:	P116
Waste Description:	Hydrazinecarbothioamide (Or) Thiosemicarbazide
Waste Code:	P118
Waste Description:	Methanethiol, Trichloro- (Or) Trichloromethanethiol

Waste Description:	Dichloromethoxy Ethane (Or) Ethane, 1,1'-[Methylenebis(Oxy)]Bis[2-Chloro-
Waste Code:	U025
Waste Description:	Dichloroethyl Ether (Or) Ethane, 1,1'-Oxybis[2-Chloro-
Waste Code:	U026
Waste Description:	Chlornaphazin (Or) Naphthalenamine, N,N'-Bis(2-Chloroethyl)-
Waste Code:	U027
Waste Description:	Dichloroisopropyl Ether (Or) Propane, 2,2'-Oxybis[2-Chloro-
Waste Code:	U028
Waste Description:	1,2-Benzenedicarboxylic Acid, Bis(2-Ethylhexyl) Ester (Or) Diethylhexyl Phthalate
Waste Code:	U029
Waste Description:	Methane, Bromo- (Or) Methyl Bromide
Waste Code:	U030
Waste Description:	4-Bromophenyl Phenyl Ether (Or) Benzene, 1-Bromo-4-Phenoxy-
Waste Code:	U031
Waste Description:	1-Butanol (l) (Or) N-Butyl Alcohol (l)
Waste Code:	U032
Waste Description:	Calcium Chromate (Or) Chromic Acid H ₂ cro ₄ , Calcium Salt
Waste Code:	U033
Waste Description:	Carbon Oxyfluoride (R,T) (Or) Carbonic Difluoride
Waste Code:	U034
Waste Description:	Acetaldehyde, Trichloro- (Or) Chloral
Waste Code:	U035
Waste Description:	Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil
Waste Code:	U036
Waste Description:	4,7-Methano-1h-Indene, 1,2,4,5,6,7,8,8-Octachloro-2,3,3a,4,7,7a-Hexahydro- (Or) Chlordane, Alpha & Gamma Isomers
Waste Code:	U037
Waste Description:	Benzene, Chloro- (Or) Chlorobenzene
Waste Code:	U038
Waste Description:	Benzeneacetic Acid, 4-Chloro-Alpha-(4-Chlorophenyl)-Alpha-Hydroxy-, Ethyl Ester (Or) Chlorobenzilate
Waste Code:	U039
Waste Description:	P-Chloro-M-Cresol (Or) Phenol, 4-Chloro-3-Methyl-
Waste Code:	U041
Waste Description:	Epichlorohydrin (Or) Oxirane, (Chloromethyl)-
Waste Code:	U042

06/04/10 Spoke with Marc Godick about the spill. He said he would search his records and get back to me. (sr) 12/28/10 Rec'd Phase II report. AKRF conducted a subsurface investigation at the former Domino Sugar Site. The site is located at 264 to 316 Kent Avenue. Phase II report for the site is attached to eDocs. The Phase II was done for the rezoning, and it includes testing for all of the development parcels. The boring conducted in the area of the former ASTs (SB-7) provided visual indication of petroleum contamination. Based upon this finding, the spill was reported to DEC. The laboratory results for soil and groundwater sampling conducted from this location did not show elevated VOCs and SVOCs. Since the Phase II work and spill reporting, the two 275-gal ASTs and associated containment in the vicinity of SB-7 were removed. Documentation from the contractor who performed the removal work attached to eDocs. The PBS registration was also updated to reflect the removal of the tanks. NFA required. Case closed. (sr)

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

 DEC Memo: 9/15/22 - Kim - Desk Duty - This complaint was forwarded to R2 Division of Air Resources. No spill was reported. Closed.
 Remarks: The following information was received through the DEC website "Report an Environmental Violation Online" or sent directly by the complainant to an OPP dispatch mailbox: Who Did It: 47 River Street, Brooklyn, NY 11211 - power station smokestack What Occurred: when the smokestack is active, the entire area surrounding it reeks of natural gas and other noxious odors at street level. This is an extremely densely populated area and the air quality takes your breath away. There is no reason to have such a powerful smokestack right on top of such a dense neighborhood. When Did It Occur: routinely, daily, for several years County: Kings Municipality: Brooklyn Location Or Address: 47 River Street (Williamsburg) How Did It Occur: powerplant, smokestack, emissions Complainants Name: Ben Kemper Complainants Phone: 908-392-6699 Complainants Email: bsk34@cornell.edu Date of Submittal: 09/15/2022

DEC Memo: 5/19/11-HRAHMED-Spoke to Angela at NYPA. Spill happened from a generator which leaked approx. 80 gal of lube oil. They took the generator out-of-service. Spill was contained in secondary containment. They pumped out the oil within 2 hours. Spill has been cleaned. Received email from Angela. As per the email, Yesterday a spill occurred at one of New York Power Authority s Power Plants: Kent 47-79 River Street, Brooklyn NY 11211. The spill occurred around 5:15 PM. The spill occurred at the generator on site. The generator is fully contained within a Package. The package serves as a noise barrier and a containment unit to the generator. The cause of the spill was from a sensing line fitting, which broke. This sensing line fitting is located on the lube oil pump, which is at a 90 degree angle. The lube oil pump is connected to the generator housed in the package. Lube oil is used in the generator to cool bearings and to lube the rotor. A similar spill occurred on 5/3/2011 spill number # 1101209. We have replaced the hard fitting with a flexible fitting. This will ensure that the fitting will remain intact during operations. This case is closed.
Remarks: Spill within a generator and has secondary containment. Supervisor on scene now and starting cleanup. Spill is very similar to the spil on 05/03/2011 Spill # 1101209. Cleanup is in progress.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 9/3/2003 Sangesland received a letter from David Demone of American Sugar Refining, Inc. (718-387-6800). Included is a diagram and writeup showing the Oil Barge Line from the dock, through the bulkhead and into the building. This is the line that caused the initial leak into the river. According to the letter, the line was capped, cleaned and then removed in sections. Approx 225 ft of piping was removed including the stop valve and check valve above the dock at the hose connection. Spill Closed
Remarks: under their dock is a line old line that recvd #6 fuel believes line may have holes in it causing some old #6 to leak into the river they had divers in the water today verifying this they need dec to call

AND THE AMOUNT OF WATER. THIS JOB WILL BE TREATED AS A 50-499, ENV OPS CREW WAS SENT TO LOCATION ALONG WITH A SPILL VAN. ALSO OVER 50 TANKER WAS ORDERED. EPA # NYP 004 110 672. 12:45HRS R. JAMES REPORTS, WHILE UNDER 50 TANKER WAS DRAINING V4048, THEY NOTICED LIQUID MOVEMENT IN V1433 THEREFORE WE WILL CONTINUE DRAINING THE STRUCTURE WITH THE TANKER ON LOCATION. CLEANUP OF TANKER AND DISPOSAL OF LIQUIDS WILL BE BASED ON OIL RESULTS THAT WERE TAKEN IN THE ADJACENT VAULTS. OIL WAS ALSO FOUND IN V2597 AND V1856.VAULT 4048 IS BEING DRAINED. THE LIQUID LEVEL IN ALL VAULTS IS GOING DOWN. THE ESTIMATED OIL IS CHANGED TO THE FOLLOWING, A TOTAL OF 65 GALLONS IN THE THREE VAULTS (V1856,V2597, V1433) Update - 5/5/03 1500hrs R. James Env. ops mgr reports dep inspector Eves St. Jean arrived on location 1300hrs. Was shown spill area and told of clean up plans. At 1430hrs <50 tanker pulled off location and will handle liquids removed as >50 a new > 50 tanker will be sent out. 15:10HRS K. DAVIS (NET) REPORTS, THE TAG FROM VAULT 4048 FROM OLD INCIDENT 147277 WILL BE REMOVED AND A NEW TAG WILL BE PLACED WITH THE SAME TAG# 29637 AS THE THREE VAULTS FROM THIS INCIDENT (V2597,V433,V1856) 5/6/03=0350HRS O.S. B.BROWN ENVIR OPPS REPORTS PARTIAL CLEANUPS OF ALL VAULTS ARE DONE . NETWORKS TO REPLACE UNIT.ENVIR TAG#13474 REMAINS. Update on 5/6/03 by R.James: R. James called transportation at 1600 on 5/5/03 to inform the on duty Tanker supervisor that B/Q will be taking samples of the oil in the structures from which the <50 tanker drew oil. We will also take a sample from within any transformer that is found to be leaking. The transformer in vault 1856 was found to be leaking. Transportation informed R. James that the oil would not be discharged from the tanker until they the next day. They took their own oil samples from the tanker. All results from the structure and the transformer returned less than 50 PPM pcbs (see results above and below).R. James informed Transportation Supervisor J. Poje of the sample results at 0700 on 5/6/03 and e-mailed him those results. Lab Sequence Number: 03-03680-001 Date Approved: 5/05/2003 E2 Incident Number: 148227 Date Received: 5/05/2003 Chain of Custody ID: CC16729 Date Sampled: 5/05/2003

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #149448: P. Tokarz was informed to enter and report a third party spill outside the North First Street Terminal Facility. It is reported that 10gal of motor oil spill from two containers left on River St just north of Metropolitan Ave. Photographs appear to show that oil seeped into the soil and onto the sidewalk. Oil containers were discarded by a third party along with about 20 tires. A cleanup crew is being dispatched to cleanup the oil spill and remove the oil containers. Cleanup vendor expected to be at site at 1600hrs. The cleanup was completed at 16:20 hours on 23-JUL-2003 by Vendor Allstate PowerVac. Oil containers were placed in drums and approximately 2/3's of a drum of contaminated soil was removed from the spill area. Drums were left at the marked and left at the site for sampling and disposal. Additionally, at the opposite end of the pile of tires was debris which appeared to be old 9x9 asbestos floor tile (Kentile?). At 10:30 hours 24-JUL-2003 called Department of Sanitation District 1 and reported the Dumping of tires, Autoparts and Tiles on River Street and Metropolitan Avenue. District Clerk Thatch stated that he will notify the responsible district for cleanup/ pickup.

Remarks: SOMEONE DROPPED OFF 3 5 GALLON CANS OF MOTOR OIL OUTSIDE GATE OF ABOVE - 1 CAN IS EMPTY, 1 1/S FULL, AND THE LAST IS FULL - CLEAN UP

DEC Memo: 04/24/12- Zhune spoke to Liza Lunkshides from Con-Ed ERT. She said hydraulic oil went onto soil. Spill has been cleaned up. 6/15/12 - Austin - The hydraulic demolition sheers on a piece of contractor's construction equipment had a 1 quart hydraulic oil leak from a hose - Con Ed contained and cleaned up the spill, and contractor took care of hose - See eDocs files for further information - Spill closed - end onto grass only, c/u complete

 Updated By: JHOCONNE
 Site Description: "Location: The 2825 square foot site is located at 134 Metropolitan Avenue in the Borough of Brooklyn, Kings County, NY in an urban area. The site is bounded by Metropolitan Avenue to the north, a movie theater to the east, North 1st Street to the south, and a commercial/residential building to the west. Site Features: The Site is approximately 2,825 square-feet and is currently occupied by a two-story commercial building with partial basement (30% of site) and a partial sub-basement. Current Zoning and Land Use: The site is currently zoned as M1-2 (manufacturing) with an R6A (residential) overlay. The on-site building was most recently occupied by a bar/nightclub which closed in 2016. Past Use of the Site: Historic uses at the Site include wire works (prior to 1887), a machine shop (1887-1905), and manufacturing (1951). The current owner plans to add 3 additional floors on the building for residential use. Site Geology and Hydrogeology: According to maps and reports published by the United States Geological Survey (USGS), the Property is situated at approximately 36 feet above mean sea level and is underlain by glaciofluvial deposits of Upper Cretaceous and/or Quaternary age consisting of sand, silt, clay gravel, cobbles and boulders. These deposits rest unconformably on crystalline bedrock of early Paleozoic and/or Precambrian age. Soil borings were completed during the investigation to depths ranging from approximately 20 to 39 feet below land surface. Depth to water readings collected during this investigation indicate shallow groundwater beneath the Site ranges from 19.83 feet below grade at GW-5 to 38.97 feet below grade at GW-1. Based upon regional maps published by the USGS shallow

S108076312

Env Problem: groundwater flow appears to be moving in a westerly direction. "

"Nature and Extent of Contamination: This site was referred to the Department from the NYC Office of Environmental Remediation (OER). A soil vapor intrusion investigation was undertaken on the site under the direction of OER as a result of an environmental e designation on the site. Historic uses at the site include wire works (prior to 1887), a machine shop (1887-1905), and unspecified manufacturing (1951). The site is currently occupied by a two-story commercial building with partial basement and a partial sub-basement. Based on the soil vapor investigation conducted under OER, the chlorinated solvents tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE) and 1,2 dichloroethene (DCE) were detected at maximum concentrations of PCE at 223,000 micrograms per cubic meter (ug/m3), TCE at 203 ug/m3, and DCE at 114 ug/m3. Subsequently, a site characterization (SC) was conducted under a NYSDEC consent order. Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), pesticides and per and polyfluoroalkyl substances (PFAS). Soil vapor was sampled for VOCs. During the SC, the soil vapor concentrations identified in the initial OER investigation were not duplicated. Soil During the site characterization investigation, No PID readings exceeded zero parts per million (ppm) in any of the screened soil samples and no VOCs were detected at concentrations above their respective restricted residential soil cleanup objectives (RRSCOs) and protection of groundwater soil cleanup objectives (PGWSCOs) in soil samples collected at the site. SVOCs were detected at concentrations exceeding the RRSCOs in shallow soil at the site. SVOCs include benzo(a)anthracene (max of 11 ppm; RRSCO is 1 ppm), benzo(a)pyrene (max of 8.7 ppm; RRSCO is 1 ppm), benzo(b)fluoranthene (max of 11 ppm; RRSCO is 1 ppm), dibenzo(a,h)anthracene (max of 1.3 ppm; RRSCO is 0.33 ppm), and Indeno(1,2,3-cd)pyrene (max of 5.5 ppm; RRSCO is 0.5 ppm). Metals were detected above their respective RRSCOs including mercury (max of 1.87 ppm; RRSCO is 0.81 ppm), and lead (max of 475 ppm; RRSCO is 400 ppm). 1,4-dioxane was not detected in any soil samples. PFOA and PFOS were not found at concentrations exceeding either the restricted-residential use or the protection of groundwater guidance values. Data does not indicate any off-site impacts in soil related to this site. Groundwater Chlorinated - VOCs were found in groundwater on the south of the site one off-site well. VOCs exceeding their respective ambient water quality standards (AWQS) include trichloroethene (max 97 parts per billion (ppb); AWQS is 5 ppb), and cis-1,2-Dichloroethene (max 43 ppb; AWQS is 5 ppb). SVOCs detected in groundwater above the AWQS include benzo(a)anthracene at a maximum concentration of 0.12 (AWQS is 0.002 ppb), benzo(a)pyrene at a maximum concentration of 0.11 (AWQS is non-detect), benzo(b)fluoranthene at a maximum concentration of 0.13 (AWQS is 0.002 ppb), benzo(k)fluoranthene at a maximum concentration of 0.04 (AWQS is 0.002 ppb) and chrysene at a maximum concentration of 0.1 (AWQS is 0.002 ppb). In groundwater, lead was detected at a maximum concentration of 45.92 ppb compared to 25 ppb and mercury was at 2.03 ppb compared to 0.7 ppb. Only naturally occurring dissolved metals (manganese, sodium, magnesium) were detected at concentrations exceeding AWQS. PFOS was detected at a maximum concentration of 7.72 parts per trillion (ppt) compared to the Maximum Contaminant Level of 10 ppt, and PFOA at a maximum concentration of 62 ppt (MCL 10 ppt). No Pesticides, PCBs and 1,4 -dioxane were identified above ambient

water quality standards in any groundwater samples. Data does not indicate any off-site impacts in groundwater related to this site. Sub-slab soil Vapor and Indoor Air Low-levels of VOCs were detected in on-site sub slab soil vapor. The maximum concentration of tetrachloroethylene (PCE) and trichloroethylene (TCE) were detected in sub slab soil vapor samples at 6.39 micrograms per cubic meter (ug/m3), and 1.2 ug/m3, respectively. PCE was detected in the indoor air at a maximum concentration of 0.346 ug/m3. No TCE were detected in the indoor air. Data does not indicate any off-site impacts in soil vapor related to this site. "
