Site Code: 502499
Site Description: "Location: The 420 Kent Avenue site is located in an urban area in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of South 8th Street to the north (paper street), Kent Avenue to the east, what would be an extension of South 9th Street (paper street) followed by Schaeffer Landing (a new residential development) to the south, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 79,800 square feet (1.83 acres) and is occupied by three vacant buildings and an associated parking area. When construction is completed, the Site will be improved with two 22-story mixed use residential and retail buildings with shared cellar and ground floor levels. The development will include cellar and partial first floor parking, residential units on floors 1 through 22, retail and residential amenity space along Kent Avenue, and a waterfront esplanade along the East River. Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravelly sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appears to flow to the west-northwest toward the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and a submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use

restrictions and engineering controls for the site and details and steps and media-specific requirements, including groundwater monitoring, necessary to ensure these controls/remedy remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravelly sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appears to flow to the west-northwest toward the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and a submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements, including groundwater monitoring, necessary to ensure these controls/remedy remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

MAP FINDINGS

420 KENT AVENUE (Continued)

S117234304

Site Description: "Location: The 420 Kent Avenue site is located in an urban area in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of South 8th Street to the north (paper street), Kent Avenue to the east, what would be an extension of South 9th Street (paper street) followed by Schaeffer Landing (a new residential development) to the south, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 79,800 square feet (1.83 acres) and is occupied by three vacant buildings and an associated parking area. When construction is completed, the Site will be improved with two 22-story mixed use residential and retail buildings with shared cellar and ground floor levels. The development will include cellar and partial first floor parking, residential units on floors 1 through 22, retail and residential amenity space along Kent Avenue, and a waterfront esplanade along the East River. Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravelly sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appears to flow to the west-northwest toward the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and a submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements, including groundwater monitoring, necessary to ensure these controls/remedy remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Tank Info:

Tank Number: 1
Tank Id: 53846
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

C00 - Pipe Location - No Piping
D02 - Pipe Type - Galvanized Steel
F00 - Pipe External Protection - None
G04 - Tank Secondary Containment - Double-Walled (Underground)
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
B04 - Tank External Protection - Fiberglass
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I02 - Overfill - High Level Alarm
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Fiberglass Coated Steel
Tank Status: Closed - Removed
Pipe Model: Not reported

Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 20058
Latitude: 40.7226133
Longitude: -73.9593366
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II 5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II
Remarks: also ground water affected - repts says that site is contaminated with petro and heavy metals. Also see spill # 9401167.

	DEC Memo:	<p>6/5/23 - Kim - Desk Duty - Yu Associates performed a site investigation as this is an OER E-designated site. The Phase II investigation was performed on 5/15 and 5/16. During the field investigation, it was noted that soil sampled during boring installation exhibited petroleum odors. Yu Assoc. collected soil and groundwater samples. Based on their review, soil samples contained BTEX exceeding residential SCOs and groundwater samples contained BTEX exceeding TOGS standards. Copy of lab report and, when available, Phase II report were requested via email. chang@yu-associates.com 06/06/23-Hiralkumar Patel. downloaded Phase I from NYC OER EPIC database. 10:30 AM:- DEC Kim forwarded email from Chengyu Hang including site map and sample results. Chengyu Hang YU & Associates PH. (201) 873-7543 email: chang@yu-associates.com</p>

06/13/13-Hiralkumar Patel.
alternate address: 211-215 N 8th St no PBS or other spills found.
summary of Phase I dated Aug.
2021: - as per historical maps, the subject site consisted of one (1)
3-story residential building,
one (1) 2-story wagon shed building and one (1) 3-story retail store
building from 1887-1942.
between 1942 and 1951, there was a 2-story building with a gasoline
UST (near N 8th St) and a
3-story retail store building. the 2-story building was maintained
from 1951 until now. the 2-story
building was used as a manufacturer from 1951 to 1965 and became a
wastepaper recycling facility
between 1965 and 2007, the 3-story retail store building was
demolished after 1965 and used as a
parking lot until 1991 and became part of building addition.
currently, the site is a
winery/restaurant - site has 'E' designation - nearest surface water
body is East River which is
about 0.5 mile away to the west 08/04/23-Hiralkumar Patel. received
email from Chengyu (at 3:39 PM
on 08/03/23) including link to RIR and draft RAWP. summary of RIR
dated July 2023: - currently, the
site is vacant and contains a partial basement located at the
south-east portion of the site -
proposed future use of the site will consist of a six-story mixed use
commercial-residential
building with a full cellar - existing building will be demolished
prior to redevelopment - the
entire lot will be excavated to the groundwater level, which is
approx. 9-10 ft bg for the
construction of the cellar - elevation of property ranges from 15 to
15.9 ft - GPR survey did not
identify any USTs - installed six (6) soil borings (SB-1 through SB-6)
were advanced to the
groundwater level, which is approx. 9-10 ft bg - stratigraphy of the
site, from surface down,
consists of approx. 5 ft of fill material underlain by 5-10 ft of
brown fine silty sand - soil
samples from each boring were collected at surface level (0-2 ft bg)
and subsurface level (highest
PID or 2 ft above groundwater interface) - elevated PID readings were
detected in SB-1, SB-2 and
SB-5 with max readings at the groundwater smear zone - strong
petroleum odors and higher PID
readings (79.4 to 280.7 ppm with max at 8-9 ft bg) were noted in
boring SB-1 - strong petroleum
odors and higher PID readings (94.6 to 238.7 ppm with max at 9-10 ft
bg) were noted in boring SB-2
- strong petroleum odors and higher PID readings (62.5 to 176 ppm with
max at 9-10 ft bg) were
noted in boring SB-5 - total twelve (12) soil samples were analyzed
soil analyticals (in ppb):
-----SB-2-----SB-3-----SB-5 8-10 ft 7-9
ft 7-9 ft
Ethylbenzene-----3,500-----2,700-----8,300
Xylene-----2,600-----5,100-----18,000

213 NORTH 8TH STREET (Continued)

S130464691

1,2,4-Trimethylbenzene-----15,000-----18,000 - installed three (3) 1-inch diameter temporary wells (GW-1 through GW-3) with 10 ft of screen - temporary wells were installed by over-drilling soil borings approx. 4-5 ft below the groundwater table - well GW-1 was installed in boring SB-1 - well GW-2 was installed in boring SB-6 - well GW-3 was installed east of boring SB-2 - depth to groundwater ranges from 8.77 to 9.74 ft bg - groundwater flow is generally to south-west - total three groundwater samples were analyzed groundwater analyticals (in ppb):
-----GW-3 Ethylbenzene-----360
Xylene-----320
1,2,4-Trimethylbenzene-----320 - installed five (5) soil-vapor probes to the two ft above groundwater level interval (approx. 7-9 ft bg) and collected five soil-vapor samples for analysis - detected 1,1,1-Trichloroethane (540 ug/m3) and TCE (12 ug/m3) in sample SV-1 the draft RAWP proposes: - excavation of entire footprint of site to the groundwater level for development purposes - over-excavation in area where petroleum-impacted soil is observed from the excavation bottom extending up to 3-5 ft below groundwater level - excavation of small portion of property to the depth of 15 ft bg for elevator pits - removal of any USTs found during excavation - application of ORC for in-situ bioremediation to treat on-site groundwater contamination - on-site groundwater monitoring after ORC application - collection and analysis of endpoint samples - construction of 6-inch thick concrete building slab - installation of 46-mil vapor barrier beneath the building slab and 32-mil vapor barrier outside all sub-grade foundation sidewalls review of available data indicates presence of petroleum contamination in soil near the groundwater interface and in groundwater along the upgradient side of the site, which could be result of off-site release. as such, further groundwater investigation is needed via installation of permanent monitoring wells (including one upgradient of SB-5, one at GW-3, one at SB-3 and at least one downgradient of the site/grossly contaminated zone) prior to any comment on proposed ORC application/on-site monitoring (off-site monitoring may also be needed based on delineation data/endpoint sampling results). 11:21 AM:- spoke with Chengyu and asked him to provide property owner's contact info. 11:38 AM:- received email from Chengyu including property owner's contact info. LC & LH Realty Corp. **property owner** 923 60th Street Brooklyn, NY 11219 Attn: Cheng Kin Chau PH. (917) 642-0899 email: kincheng668@yahoo.com 1:54 PM:- sent email to Chengyu. informed him that review of available sampling data indicates presence of petroleum contamination in soil

S130464691

near the groundwater interface and in groundwater along the upgradient side of the site, but source of such contamination has not been defined yet. as such, the Department requires further subsurface soil and groundwater investigation via installation of permanent monitoring wells (including one upgradient of SB-5, one at GW-3, one at SB-3 and at least one downgradient of the site/grossly contaminated zone) prior to finalizing a remedial action work plan. asked him to submit an investigation work plan, including schedule for field work/report submission. email copied to OER Shaminder, Mr. Chau and Sixuan Wang (swang@yu-associates.com). 10/17/23-Hiralkumar Patel. received email from Chengyu (at 3:31 PM on 09/27/23) including a supplemental investigation work plan. Chengyu didn't propose permanent wells since the owner will demolish and redevelop the site later. if permanent monitoring wells are warranted after the supplemental remedial investigation, they will be installed in the basement of the proposed new building after the construction is completed. the regional groundwater flow direction is obtained from the adjacent properties investigation reports. summary: - as per the remedial investigation reports for the adjacent properties (207 N 8th St, 219-233 N 8th St and 212-218 N 9th St), regional groundwater flow direction is towards northwest ----- - five test borings will be advanced to the groundwater level - depth of groundwater is expected at approx. 9-10 ft bg - boring MW-1/B-1 is proposed at upgradient of previous boring SB-4 - boring MW-2/B-2 is proposed at previous boring SB-5 - boring MW-3/B-3 is proposed at previous well GW-3 - boring MW-4/B-4 is proposed at previous boring SB-3 - boring MW-5/B-5 is proposed at downgradient of the site/grossly contaminated zone - upto two soil samples will be collected from each five test boring: one sample will be collected at the groundwater smear zone (approx. 8-10 ft bg) and second soil sample may be collected from above groundwater level if elevated PID readings and/or visual and olfactory observations are noted - five 2-inch diameter temporary monitoring wells will be installed in five test borings - wells will be installed to approx. 5 ft below the water table with 10 ft of screen the work plan needs to be revised as missing collection of soil samples at highest PID/observation of contamination and more specific schedule for report submission. 10/20/23-Hiralkumar Patel. 1:15 PM:- sent email to Chengyu and asked him to submit a revised work plan including collection of soil samples at highest PID/observation of contamination and deepest dry, and more specific schedule for submission of investigation report. email copied to OER

Shaminder, Ms. Wang and Mr. Chau. 10/27/23-Hiralkumar Patel. received email from Chengyu (at 4:15 PM on 10/26/23) including a revised work plan. 11/03/23-Hiralkumar Patel. 9:14 AM:- sent email to Mr. Chau including approval letter for work plan dated 10/26/23. asked him to submit investigation report by COB 12/22/2023. email copied to OER Shaminder, Chengyu and Ms. Wang. 12/15/23-Hiralkumar Patel. received email from Chengyu (at 3:17 PM on 12/14/23) including copy of supplemental investigation report. 12/21/23-Hiralkumar Patel. 10:59 AM:- received email from Chengyu including link to a draft RAWP. 01/04/24-Hiralkumar Patel. reviewed previously submitted investigation report and draft RAWP. summary of supplemental investigation report dated 12/14/23: - geophysical survey was performed on 11/10/23 - total of five (5) soil borings (B-1 through B-5) were advanced - borings B-1 to B-4 were installed to 15 ft bg - boring B-5 was installed to 5 ft below basement slab - soil samples were collected at 2 ft above groundwater (8-10 ft bg) interval and at the location of the highest PID reading - total of seven (7) soil samples were analyzed - SVOCs detected in majority of samples, with higher level in samples from boring B-3 - found some contamination in soil samples from boring B-3 (7,20 ppb Xylene, 72,000 ppb Naphthalene) - five (5) 2-inch diameter temporary monitoring wells (MW-1 to MW-5) were installed with 10 ft of screen and 5 ft of riser - one groundwater sample was collected from each of the temporary well groundwater analyticals (in ppb):

	MW-2	MW-3	MW-4	MW-5
Benzene	22	72	37	
Toluene	9	76		
Ethylbenzene	33	500	11	11
Xylene	160	750	28	44
1,2,4-Trimethylbenzene	100	200	40	54
1,3,5-Trimethylbenzene	20	50		
Naphthalene	1,100	5,100	120	920

summary of draft RAWP dated Dec. 2023: - proposed future use of the site will consist of a six-story mixed use commercial-residential building with a full cellar - retail space, sprinkler room, utility/gas meter rooms, and storage rooms in the cellar - retail space, residential lobby, an office and a car elevator on the first floor - 14 parking spaces on second floor - residential units on the third-sixth floor - existing building will be demolished prior to redevelopment - the entire lot will be excavated to the groundwater level, which is approx. 9-10 ft bg, for the construction of the cellar - over excavation will be performed where petroleum-impacted soil is observed from the excavation bottom extending up to 3-5 ft below groundwater level -

S130464691

petroleum-stained soils in the northeast portion of the site should be over-excavated to approx. 3-5 ft below groundwater level or to the extent practical - small portion of the property will be excavated to the depth of 15 ft below for elevator pits - removal of all USTs that encounters during construction - confirmatory endpoint sampling of soil and groundwater should be conducted - in-situ enhanced aerobic bioremediation will be implemented to treat the on-site groundwater petroleum contamination - ORC will be directly applied at the excavation bottom where petroleum-impacted soils are observed - on-site groundwater monitoring after in-situ chemical oxidation will be implemented - total of three monitoring/injection wells will be constructed at the site - construction of a 6-inch thick concrete building slab for the entire site - 46-mil vapor barrier will be installed beneath the slab - 32-mil vapor barrier will be installed outside all sub-grade foundation sidewalls - dewatering will occur - a 7-month remediation period is anticipated

1:07 PM:- spoke with Chengyu. informed him about missing geoprobe number in boring logs included in the supplemental investigation report. asked him to submit revised logs. also informed him about missing site-specific SCOs in section 4.2 of the draft RAWP. also discussed use of ORC. informed him that ORC application will be discussed after review of endpoint soil and groundwater sample results.

1:22 PM:- sent email to Chengyu and asked him to submit revised boring logs and signed/dated RAWP. email copied to OER Shaminder and Mr. Chau. Madeleine Frank NYC OER PH. (212) 442-8342 email: mfrank@dep.nyc.gov 01/17/24-Hiralkumar Patel. received email from Chengyu (at 4:22 PM on 01/16/24) including revised boring logs and signed RAWP. RAWP proposes track 2 residential use soil cleanup objectives, but will use track 4 restricted residential use if track 2 SCO's can't be achieved. RAWP also proposes ORC application if over-excavation confirmatory endpoint sampling of soil and groundwater still indicates elevated petroleum contamination. the RAWP proposes submission of a remedial action report in seven (7) months from beginning of remedial action (which is not specified in the plan). 01/30/24-Hiralkumar Patel. 1:48 PM:- sent email to Mr. Chau. informed him that based on review of all available information the Department approves the proposed work plan except implementation of bioremediation measures. asked him to submit results of post-excavation samples for review prior to any comments/discussion on the proposed bioremediation. also asked him to submit more specific schedule for field activities and report submission as the work plan

DEC Memo: 7/28/2015 - Feng - Duty Desk. Talked to Kim Somers of EBC (631-504-6000). The site is being developed under the OER BCP program. OER has approved the RAWP already. They have installed borings/wells and found soil and groundwater contamination. Soil consist of historical fill and 1,000 ppb benzene, 1,600 ppb toluene at 1-2 feet. Groundwater was found to have 420 ug/L MTBE and SVOCs. DTW is at 5-7 feet. They probably start the excavation in 1 month pending the Notice to Proceed letter from OER and the DOB's permit. The investigation was done in 2/2015 and EBC reported it to OER and reported to DEC now. The RAWP calls for excavation of 10 feet in the north portion, 3 feet in the south portion and no excavation in the 25 feet of midsection. The RAWP calls for vapor barrier also. They are building a 4-story mixed use building which expand the existing building. Partial cellar to 10 feet for the 25 feet of the new building. Contact: EBC, Kim Somers, KSomers@EBCIncNY.com NYCOER, Shaminder Chawla, ShaminderC@dep.nyc.gov Horase Zhang, 212-788-8484 Discussed with the runner K. Patel and spill is assigned to K. Patel.

Kimberly Somers
Environmental Business Consultants Ph. (631) 504-6000 Fax (631)
924-2870 email:
ksomers@ebcincny.com 07/29/15-Hiralkumar Patel. received reports from
Kim. abstract of Phase I: -
according to the sanborn maps, the site appears to have been
originally developed sometime between
1887 and 1905 with two, one-story structures identified as sheds with
an office, and an attached
two-story structure in the southern rear portion of the lot - site
appears to have been redeveloped
in 1970 with the currently existing, one-story industrial warehouse
building - the building is
slab-on-grade - site was identified as a private garage (1951, 1965),
an auto repair use (1978) and
a warehouse (2007) - no ASTs or evidence of USTs were observed - site
was assigned an E-designation
hazmat ----- abstract of RIR: - proposed future use of
the site will consist of the
redevelopment of the existing structure in two, 4-story mixed use
(commercial and residential)
buildings with a mezzanine level and partial cellars - the cellar
level will require excavation to
a depth of approx. 11 ft bg across the first 36 ft of the site from N
10th St - the first floor
sunken level in the rear 50 ft portion of the building will require
excavation of at least 3 ft bg
- elevation of the site is approx. 14 ft - water table is present at a
depth of approx. 7 ft bg -
installed nine borings (SB1 through SB4 on 07/19/14 and SB5 through
SB9 on 02/11/15) - borings SB1
through SB4 were installed to a depth of 16 ft bg; borings SB5 through
SB7 were installed to a
depth of 15 ft bg; boring SB8 was installed to a depth of 7 ft bg and
boring SB9 was installed to a
depth of 10 ft bg - borings installed in Feb. 2015 were at or in close
proximity to previous
borings installed in Jul. 2014 (SB5 near SB4, SB6 near SB3, SB8 near
SB2, SB9 near SB1) -
stratigraphy of the site consists of 3 to 5 ft of historic fill,
underlain by native brown sand -
no PID readings above background concentrations were detected (but as
per borings logs, PID values
and odors were detected in borings SB5 and SB7) - total of fourteen
(14) soil samples were
collected for VOC and SVOC analyses: one from borings SB1 through SB4
(shallow soil samples from
SB1 through SB4 were not analyzed for VOC/SVOC) and two from borings
SB5 through SB9 - three (3)
temporary 1-inch diameter groundwater monitoring wells (MW1 through
MW3) were installed to a depth
of 15 ft bg; with 20 ft screen at MW2 and 10 ft screen at MW1 and MW3,
set to intersect the water

MAP FINDINGS

(Continued)

S118141503

table - free product was noted in GW2 (or MW-2???) during the Feb. 2015 sampling. the thickness of the product layer was not measured - well GW2 installed in boring B7 where contamination noted in shallow soil ----- installed four soil gas implants to a depth of approx. 5 to 6 ft bg and collected four soil vapor samples - found some VOC contamination in soil samples, with maximum at 0-2 ft in boring SB7 but no contamination noted on deeper soil sample (at 11-13 ft bg) in SB7. the deeper soil sample was collected from below the water table and free phase product noted in well GW2 which was installed at/near SB7 ----- found SVOC contamination in almost all soil samples, mostly in shallow soil samples - free phase product noted in well GW2 ----- some VOCs detected in soil vapor samples (maximum: 47.9 ug/m3 in SG-3) soil analyticals:

-----B1-----B2-----B7 13-14 ft 8-10
ft 0-2 ft
Benzene-----340*-----1,000
Toluene-----1,600
Xylene-----540-----940-----1,640
MTBE-----680*-----570*

* - higher reporting limit the submitted RIR has following information incorrect, confusing or missing: - as per table 1, monitoring wells were installed to a depth of 15 feet below grade; but as per text on page #8, wells were installed with 20 feet of screen at MW2 - as per text on page iii, groundwater flow is west-northwest; but as per figure 9, groundwater flows to the east - as per text on page 8, no PID readings above background concentrations were detected; but as per borings logs, PID values and odors were detected in borings SB5 and SB7 - report missing detailed boring logs for soil borings SB1 through SB4 and well installation logs - as per table 6, 420 ppb of MTBE was detected in groundwater sample from well MW2 during sampling in July 2014; but as per the lab report, MTBE was non-detect abstract of RAWP: - will remove any USTs encountered during excavation - will collect and analyze endpoint samples - dewatering will occur - will install waterproofing/vapor barrier system below the concrete slab of the building as well as behind foundation walls 08/04/15-Hiralkumar Patel. 11:07 AM:- spoke with Kim. informed her about missing/confusing/incorrect information in the remedial investigation report. asked her to submit a revised report. also asked her about status of monitoring wells. informed her that the department requires re-gauging of existing wells to confirm depth of groundwater and product thickness. 11:11 AM:- spoke with Mr. Finnican. he leased this property. inquired him about reason for not reporting spill in July 2014 when contamination was detected first time. he

mentioned that EBC was handling this case from beginning and NYC OER was aware of the findings. asked him to provide contact information for property owners. Thomas Finnican **leasee** 202 North 10th LLC. 144 North 7th Street, Suite # 408 Brooklyn, NY 11249 Ph. (646) 688-5144 email: tfinnican@patoma.com 11:33 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised remedial investigation report including correct/missing information and results of re-gauging of existing wells to confirm depth of groundwater and product thickness. asked Mr. Finnican to submit contact information for property owners. email copied to OER Chawla and Charles Sosik. 11:48 AM:- sent email to Kim and Mr. Finnican and asked them to submit signed copy of RAWP. email copied to OER Chawla and Charles. 08/06/15-Hiralkumar Patel. 8:57 AM:- sent email to OER Chawla requesting call back to discuss spill notification issue. 08/07/15-Hiralkumar Patel. received message from Hanna Moore (at 5:36 PM on 08/06/15) from OER. she mentioned that OER was informed about contamination at the site in Mar. 2015 and since then they have asked property owner/operator to report spill. 08/19/15-Hiralkumar Patel. 9:05 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised report and signed copy of RAWP along with results of re-gauging of existing monitoring wells. asked Mr. Finnican to submit property owners' contact information. email copied to OER Chawla and Charles. 09/16/15-Hiralkumar Patel. 10:49 AM:- spoke with Kim and inquired her about revised RAR and signed RAWP. she mentioned that she has sent link to those documents on 08/28/15, but I have not received it. asked her to resend it. also asked her about product thickness in impacted the well. during regauging, they found 0.03 ft of product. Kim mentioned that they have received Notice to Proceed from NYC OER. 10:56 AM:- spoke with Mr. Finnican and asked him to provide property owner's contact info. 10:56 AM:- received email from Kim including copy of OER's Notice to Proceed letter. searched online and found number for property owner. 11:14 AM:- spoke with Ms. Dorto (516-887-1006) and informed her about open spill case at the site. she mentioned that the site has been leased out and she asked to contact leasee. 11:24 AM:- received email from Kim including GW elevation table and map. as per the map, groundwater flows to the north and well MW2 is the downgradient well. there is typo in GW elevation table. as per depth to water and depth to product data, 7.85 ft of product noted in well MW-2. 11:32 AM:- spoke with Kim and informed her about typo in elevation table. she will submit revised one. also asked her to submit RIR and RAWP via mail. 11:51 AM:- received email

S118141503

building will not be demolished. a new footings will be installed to extend existing one-story building into four-story building. as redevelopment plan changed and there will be no basement, need a revised RAWP. 2:38
PM:- sent letter to Mr./Ms. Dorto and Mr. Finnican requiring implementation of interim remedial measures (weekly well gauging/product removal) and determination of site-specific groundwater flow direction (via installation of additional well). also asked them to collect endpoint samples, if soil excavation occurs. asked them to submit report, including plans for remediation of all contaminated media and vapor mitigation details, by the end of 07/01/16. letter emailed to Mr. Finnican, OER Shaminder and Kim. 05/26/16-Hiralkumar Patel. received email from OER Horace Zhang (at 5:21 PM on 05/25/16) including summary of meeting between OER, property owner and property owner's consultant. he mentioned that additional investigation scheduled for Friday 5/27 to - install 1 additional groundwater well (MW4) to determine flow direction - convert MW2 to a 2 inch well for increased product recovery - collect soil samples to delineate the extent of contamination in 10 increments outward from MW2 he mentioned that because the development plans don t require site-wide excavation, owner is also exploring the possibility of conducting test pits to delineate the contamination/ potentially identify source. construction/remediation is expected to begin in 2 to 3 months. the partial cellar is being eliminated to comply with DOB flood zone requirements. new plans with finalized excavation depths will be submitted when the foundation design is completed.
11:40 AM:- received email from Kim. she mentioned that the following steps will be implemented at the site to address the free-phase petroleum identified in monitoring well MW2: 1) installation of a permanent groundwater monitoring well in the vicinity of MW2 2) replacement of existing monitoring well MW2 with a 2-inch diameter well to improve product recovery efforts 3) gauging all monitoring wells on-site and implementing product recovery of any free-phase product present 4) installation of test borings around MW2 at 10ft intervals to delineate the extent of the contamination. soils from each test boring will be screened with a PID and inspected for physical evidence of petroleum contamination. test borings will extend from the location of MW2 in 10-ft intervals until field conditions/PID readings do not indicate evidence of petroleum contamination
5) soil samples will be collected from the driest deepest depth of the test borings where visible contamination is not present to confirm the horizontal extent of the petroleum-impacted soils. 6)

soils from the well installations will be screened continuously with a PID. soils samples from the deepest driest interval and the interval with the highest PID reading will be retained for laboratory analysis of VOCs and SVOCs (CP-51) Kim mentioned that the above work is scheduled to commence at the site tomorrow, Friday 5/27. well gauging and product recovery efforts will continue on a weekly basis. documentation of the weekly gauging/product removal will be submitted to NYSDEC and OER for review. Kim submitted a site map with proposed well and test pit locations.

05/27/16-Hiralkumar Patel. 12:30 PM:- visited site and met Tom from EBC. he drilled couple of borings, including proposed well MW4, around existing well MW2. well MW4 is installed west of well MW2, where some oil staining noted. Trans Boro Fuel Oil is located to the west of the subject site. Trans Boro Fuel Oil 481 Driggs Ave (alternate address: 198-200 N 10th St) Brooklyn, NY PH. (718) 389-1466 no PBS or spill record found for 481 Driggs Ave.

06/02/16-Hiralkumar Patel. received email from Kim (at 10:04 AM on 06/01/16) including summary of observations during well/borings installation on 05/27/16. stained soils/odors were detected in four test borings west of MW2 at approximately 8-10 ft bg and extending to the western site boundary. PID readings were highest in the boring where MW4 was installed, approximately 10 ft west of MW2, 40 ppm at 8-10 ft bg. borings installed 10 ft north and south of MW2 contained minor staining at the 8-10 ft interval and PID readings were low (0.0-1.8 ppm). test boring to the east of MW2 did not have any visual or olfactory evidence of petroleum-impacted soils and PID readings at the 8-10 ft interval were 0.0 ppm. total of 12 soil samples were retained for laboratory analysis of VOC and SVOCs. the four monitoring wells at the site were gauged and sampled on May 31, 2016. a less than 1 layer of thick free-phase petroleum product was detected in MW2 and MW4. four groundwater samples were retained for laboratory analysis of VOC and SVOCs. groundwater flow direction was reassessed and appears to flow towards the northeast. 9:44 AM:- spoke with a person (who did not provide his name) at Trans Boro Fuel. he mentioned that they only park fuel oil truck at the site and don't have any storage tanks or repair shop at 481 Driggs Ave. 06/10/16-Hiralkumar Patel. 8:53 AM:- received email from Kim including results of weekly product removal conducted on 05/27/16 and 06/08/16. 0.03 ft of product found in well MW2 on 05/27/16. on 06/08/16, depth of product in MW2 could not be determined because the probe was coated with product. total of 24 oz of product/water mix was removed from MW2 on 06/08/16. 06/17/16-Hiralkumar Patel. 1:24 PM:- received email from

Kim including results of weekly well gauging conducted on 06/16/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe was coated with product. total of 28 oz of product/water mix was removed from MW-2. 06/28/16-Hiralkumar Patel. received email from Kim (at 4:32 PM on 06/27/16) including results of weekly well gauging conducted on 06/23/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe was coated with product. total of 1/2 gal of product/water mix was removed from MW-2. faint reading indicating product noted in well MW-4. 06/30/16-Hiralkumar Patel. 8:12 AM:- received email from Kim including sampling report for delineation work conducted on 05/27/16. abstract: - installed total of eight soil borings (SBD1 through SBD8) within the vicinity of MW2 to horizontally delineate extent of petroleum-impacted soils - soil borings were installed to a depth of 10 ft bg - visually contaminated soil (grey/black stained) and PID readings were identified in three soil borings (SBD4, SBD6 and SBD7), all of which are located west of MW2 -----
- as per site map, boring SBD2 was installed to replace well MW2 - total of 12 soil samples were collected for analysis: two each from SBD1, SBD3, SBD4, SBD6 and SBD7; and one each from SBD5 and SBD8 - installed a new 2-inch well MW4 west of existing well MW2 - existing 1-inch well MW2 was replaced with a 2-inch well - wells were installed with 10 ft of screen - depth to groundwater is approx. 7 ft bg - direction of groundwater flow appears to flow towards the east/northeast -----
- four groundwater samples were collected - free-phase product is present in wells MW2 and MW4 - petroleum-impacted soils appear to be concentrated in the area of MW2, extending west towards the property line at the 6-10 ft bg interval - found sandy silt with clay with ash in soil borings - less than 10 ppm recorded on PID in soil borings, excepts SBD4 (40 ppm at 8 ft bg) and SBD7 (29.6 ppm at 8 ft bg) - no contamination noted in groundwater samples - found VOC contamination in deeper soil samples from SBD1, SBD4, SBD6 and SBD7 - highest contamination noted in boring SBD6 which is along the western boundary of the site soil analyticals:

recommendations from contractor: -
continuation of product removal effort on a weekly basis until site
redevelopment begins -
excavation to a depth of groundwater in the area of MW2 and MW4,
without compromising integrity of
existing structure or the adjacent structure, during site excavation
activities for the proposed
new building footings - collection and analysis of endpoint samples
the report does not include any
details about vapor mitigation efforts. 07/01/16-Hiralkumar Patel.
1:33 PM:- received email from
Kim including results of weekly well gauging conducted on 06/30/16.
wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no
product. but when the probe
was removed, there was trace amount of product on probe for both MW-2
and MW-4. 07/05/16-Hiralkumar
Patel. reviewed weekly well gauging data and soil/gw delineation
results. based on well gauging
reports, groundwater found at around 8 ft bg in well MW-1; and between
5 and 6 ft bg in wells MW-2,
MW-3 and MW-4. based on these, heaviest soil contamination noted in
soil boring SBD6 was noted
below water table and no contamination noted in groundwater sample
from well MW-4, which is less
than 10 ft away from borings SBD6. 10:42 AM:- sent email to Kim and
asked her to submit a revised
RAWP as redevelopment plan has changed. email copied to Mr. Finnican.
10:45 AM:- received email
from Kim. she mentioned that RAWP will be revised once the finalized
plans are received from the
developer. 07/11/16-Hiralkumar Patel. received email from Kim (at 1:53
PM on 07/08/16) including
results of weekly well gauging conducted on 07/07/16. wells MW-1,
MW-2, MW-3 and MW-4 were gauged.
no solid tone was detected for either well, indicating no product. but
when the probe was removed,
there was trace amount of product on probe for MW-2. MW-4 had no trace
product. 07/18/16-Hiralkumar
Patel. 9:53 AM:- received email from Kim including results of weekly
well gauging conducted on
07/13/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone
was detected for either well,
indicating no product. but when the probe was removed, there was trace
amount of product on probe
for MW-2. MW-4 had no trace product. 07/22/16-Hiralkumar Patel. 9:18
AM:- received email from Kim
including results of weekly well gauging conducted on 07/21/16. wells
MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no
product. but when the probe
was removed, there was trace amount of product on probe for MW-2. MW-4
had no trace product.
08/05/16-Hiralkumar Patel. received email from Thomas Gallo (at 4:15
PM on 08/04/16) from EBC
including results of weekly well gauging conducted on 08/03/16. wells

S118141503

casing in well MW-2. based on gauging results, Kim proposes to install a filter sock in the well to reduce the frequency of product removal. 05/04/17-Hiralkumar Patel. 2:31 PM:- spoke with Kim. informed her that based on review of available information, the Department agrees with proposal of installation of filter sock in affected well MW-2, but recommends sock in well MW-4 also as had product in past. Kim agrees with it and proposes to monitor wells twice a month at beginning and modify frequency based on monitoring results. asked Kim to send email including proposed well monitoring frequency. also asked her to submit revised RAWP as site development plans have changed. 05/10/17-Hiralkumar Patel. 3:51 PM:- received email from Kim. she mentioned that based on the recent inspections at the site, the majority of free-phase petroleum product has been removed via weekly purging efforts. remnants of free-phase product are visible on product removal tubing over the last four rounds of removal, which appears to be only from product coating on the PVC piping. Kim proposed installation of an absorbent sock for monitoring wells MW2 and MW4 where free-phase product has previously been detected. the socks at each well will be inspected on a bi-monthly basis. during each inspection, a groundwater interface probe will be used to identify the presence of any free-phase product within each of the wells. any free-phase product will subsequently be pumped out and drummed on-site. Kim mentioned that there is no proposed cellar in the revised redevelopment plans; therefore, she will be submitting a revised Remedial Action Workplan shortly. 3:58 PM:- received email from Kim including link to revised redevelopment plans. 05/11/17-Hiralkumar Patel. 8:39 AM:- received email from Kim including results of weekly well gauging conducted on 05/05/17. found 0.02 ft of product in well MW2. Kim mentioned about report dated 04/27/17, but email included report for 03/16/17. 05/19/17-Hiralkumar Patel. 2:10 PM:- sent email to Kim and asked her to submit missing well monitoring report for 04/27/17. 05/22/17-Hiralkumar Patel. 7:57 AM:- received email from Kim including well gauging report for 04/27/17. found 0.01 ft of product in well MW2. 1:36 PM:- left message for Kim. informed her that based on all available information, the Department agrees with proposal to place absorbent socks in wells MW2 and MW4 and monitor those on bi-monthly basis. inquired her about revised remedial action work plan. 06/14/17-Hiralkumar Patel. 9:41 AM:- received email from Kim including well gauging report for 06/07/17. found 0.02 ft of product in well MW2. absorbent socks were installed in wells MW2 and MW4. 07/11/17-Hiralkumar Patel. received email from

Kim (at 4:31 PM on 07/10/17) including link to revised redevelopment plans (previously submitted).
received email from Kim (at 4:37 PM on 07/10/17) including copy of a revised stipulation list (OER document). summary: - revised stipulation list serves as an addendum to the RAWP - proposed building will no longer feature a cellar level - excavation will be limited to approx. 3 ft bg across the site for structural footings/pile caps, and to a 5 ft for an elevator pit - first floor will feature a residential lobby and a retail/commercial unit - the mezzanine level above the first floor will feature a mechanical room, retail space and an outdoor retail terrace - second through fourth floors will features residential units - delineation and remediation of two hotspots: 1) mercury hotspot at sample B6, and 2) SVOC hotspot at sample B8 - a composite cover (comprised of concrete foundation/slabs) will be placed over the entire footprint of the site - collection and analysis of four (4) end-point samples from the bottom of the excavation to evaluate the performance of the remedy with respect to attainment of Track 4 SCOs - a 20-mil waterproofing membrane/vapor barrier will be installed beneath the structure's slab and along foundation sidewalls the revised stipulation list (addendum to RAWP) does not include any discussion about remediation of petroleum contaminated materials noted in area around wells MW2 and MW4. 12:18 PM:- spoke with OER Shaminder and OER Horace and discussed submitted revised stipulation list. informed Shaminder that the department requires remediation of petroleum contaminated materials noted in area around MW2/MW4, collection of endpoint samples after remediation in area around MW2/MW4 and installation of SSDS (if required by NYSDOH) based on known petroleum impact beneath the site. 12:31 PM:- sent email to OER Shaminder and OER Horace including above discussion. asked them to provide a revised RAWP including the missing info. 07/13/17-Hiralkumar Patel. received email from OER Shaminder (at 12:28 PM on 07/12/17) including updated briefing. he has asked EBC to prepare a new RAWP including DEC requirements listed in email dated 07/11/17. email was copied to DOH Nathan inquiring about SSDS requirement. 3:38 PM:- received email from DOH Nathan. he mentioned that SSDS is not needed based on the fact that the structure will be slab on grade, proposed excavation of hot spots, minimal detects in GW and soil vapor results. 08/04/17-Hiralkumar Patel. 11:09 AM:- received email from OER Shaminder including revised draft RAWP. plan proposes excavation for development to 3 feet across entire site; three hotspots removal for mercury, SVOCs and petroleum soil; collection/analysis of endpoint samples; and installation of

vapor barrier and an active
SSDS. 09/20/17-Hiralkumar Patel. 9:58 AM:- sent email to OER Shaminder
and informed him that no
comments from DEC. asked him to submit final copy of RAWP and work
schedule. email copied to OER
Horace. 09/28/17-Hiralkumar Patel. 10:36 AM:- received email from Kim.
she mentioned that
developers will be commencing excavation in near future, but they are
concerned about structural
integrity of existing foundation wall (which will remain as part of
redevelopment) during
excavation of petroleum impacted soils. Kim proposed to either
excavate soil in slope (which will
leave contamination in area of SBD6 in-place) or dug near the
foundation wall to a depth of
groundwater and immediately backfill the excavation. Kim inquired
about any further remediation
needed if excavation extends to the groundwater and chemical oxidant
applied in excavation prior to
backfilling. 12:48 PM:- spoke with Kim and recommended her to excavate
to water table near the
foundation, only if it is safe (or using shoring). informed her that
remediation of any remaining
soil contamination beneath the water table may not be needed based on
available soil and
groundwater data. Kim will discuss excavation options with site
developer. 11/01/17-Hiralkumar
Patel. 1:07 PM:- received email from Kim including soil sample results
summary table. she mentioned
that the area of petroleum soil was excavated last week. soil endpoint
samples were collected from
the base of the excavation (10.5ft) and sidewalls. the excavation was
extended to the north by 2-3
ft where initial endpoint samples failed to meet soil cleanup
objectives. soil endpoint samples
from the western sidewall and bottom sample also failed to meet soil
cleanup objectives; these
locations could not be excavated further without compromising the
structural integrity of the
adjacent foundation wall. the final depth of the excavation was
completed to 10.5 ft. no staining
was apparent on soils from the 10 ft below grade interval. prior to
backfilling, a chemical oxidant
was applied to the base of the excavation. report will be submitted
soon. as per sample result
summary table, endpoint sample from north sidewall showed presence of
contamination which was
removed via further excavation. some contamination noted in endpoint
sample from west sidewall
(3,390 ppb total BTEX) and bottom (305 ppb total BTEX).
11/30/17-Hiralkumar Patel. 12:33 PM:- Kim
sent spill closure report via DEC's file transfer service.
12/06/17-Hiralkumar Patel. after
reviewing all available information (product removal from impacted
wells, removal of contaminated
soil, results of endpoint samples, proposed installation of vapor
barrier and an active SSDS), no

further investigation/remediation is required in area around well MW2 where petroleum impact was noted. spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and SSDS, unless contamination noted in other areas during site's redevelopment. 10:07 AM:- left message for Kim. 10:17 AM:- sent email to Kim. informed her that no further investigation/remediation is required in the area around well MW2 where petroleum impact was noted. also informed her that the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment. asked her to provide estimated schedule for installation of vapor barrier/SSDS. email copied to Mr. Finnican, OER Shaminder and DOH Nathan. 10:30 AM:- received email from Kim stating that Patrick Recio will be managing this project. Patrick Recio EBC Ph. (631) 504-6000 email: precio@ebcincny.com 08/09/18-Hiralkumar Patel. 10:59 AM:- sent email to Patrick inquiring project update. email copied to Mr. Finnican, OER Shaminder and OER Samantha. 12:04 PM:- received email from Patrick. he mentioned that there has not been much activity at the site since December of 2017. there was minimal excavation of the elevator pits towards the front of the site that were lined with Graceprufe 300R waterproofing/vapor barrier and inspected by EBC. a few trucks of soil were removed from the site since beginning of 2018 and that material had no evidence of petroleum contamination. the SSDS and the vapor barrier have not yet been installed. 07/16/20-Hiralkumar Patel. 11:31 AM:- sent email to Patrick inquiring updates. email copied to OER Shaminder, OER Samantha, Kim and Mr. Finnican. 11:48 AM:- received email from Charlie Sosik from EBC stating that Robert Bennett is currently managing project at EBC. 07/21/20-Hiralkumar Patel. 9:51 AM:- sent email to Robert inquiring updates. email copied to Charlie, OER Shaminder and OER Samantha. Robert Bennett EBC Ph. (631) 504-6000 Ext. 116 email: rmbennett@ebcincny.com 07/22/20-Hiralkumar Patel. 9:07 AM:- received email from OER Shaminder. he mentioned that remediation at the site started in October 2017 and development work was completed by January 2020. OER recently (July 10th) reviewed final report and sent back comments. OER will send revised report once available. 02/25/21-Hiralkumar Patel. 2:08 PM:- sent email to Robert and asked him to submit report. email copied to OER Shaminder and Charlie. 2:21 PM:- received email from OER Shaminder stating that they have provided comments on revised RAR last month and waiting on final report soon. 04/14/21-Hiralkumar Patel. received email from OER Shaminder (at

3:52 PM on 04/13/21)
including link to remedial action report and requesting spill closure.
he mentioned that following
activities occurred at the site: - performed Waste Characterization on
July 17, 2017 - following
excavations were performed: excavation to 3 ft bg across the site. the
elevator pit was excavated
to a final depth of 5 ft. in addition, a 6 ft by 6ft area around EP 1
(mercury hotspot) was
excavated an additional 6 inches and a 6 ft by 6 ft area around EP2
(SVOC hotspot) was excavated an
additional foot. - free product removal: from May 27 2016, to June 7,
2017, monitoring wells MW2
and MW4 were gauged weekly and any free-phase product present in the
monitoring wells was removed
by bailer and containerized in a 55-gallon drum. absorbent socks were
installed in both monitoring
wells on June 7, 2017, and weekly product removal efforts were
decreased to bi-monthly until Site
excavation commenced - petroleum impacted soil removal: on October 23,
2017, the area delineated as
the petroleum hotspot was excavated using a track-mounted excavator to
the fullest extent possible.
a 3 ft setback from the western foundation wall was required in order
not to compromise the
integrity of the adjacent foundation wall. the final excavation area
was approximately 22 ft by 22
ft. petroleum impacted soil was excavated to approximately 4 to 10.5
ft below grade. no odors or
staining were observed at the 8-10 ft below grade interval. EBC
collected four sidewall endpoint
soil samples (Hot Spot S, Hot Spot W, Hot Spot E, Hot Spot N) and a
bottom endpoint soil sample
(Hot Spot Bottom) from the petroleum hotspot excavation. to address
the residual VOCs detected in
the endpoint soil samples, a powdered chemical oxidant was applied
directly to the residual soil
and raked in with the excavator before backfilling - collected and
analyzed seventeen (17) endpoint
samples from bottom of excavations and from hotspot areas to determine
the performance of the
remedy with respect to attainment of Track 4 Site-Specific SCOs -
track 4 remedy was achieved -
Composite cover - Vapor barrier; and - site management plan as per the
report, a 20-mil thick vapor
barrier was installed beneath the building/elevator pits. the report
also states that on
05/16/2019, OER determined that an active SSDS was no longer required
at the site.
----- 04/19/21-Hiralkumar Patel. 5:04 PM:- sent email
to OER Shaminder and asked him
to call back to discuss reason for not installing SSDS. email copied
to OER Samantha.
04/23/21-Hiralkumar Patel. 12:38 PM:- received email from OER
Shaminder. he mentioned that OER
reevaluated soil and soil vapor contamination and agreed with
development team that implemented

remedy (only vapor barrier and no SSDS) is protective of environment and public health. he also stated that the development team will obtain one round of indoor and outdoor air samples prior to spill closure. OER plans to issue Notice of Satisfaction this week for building occupancy and Notice of Completion will be issued after spill is closed. 04/30/21-Hiralkumar Patel. as per the RAR, remedial actions begun on 10/13/2017 and was completed on 01/06/2020. all endpoint samples were collected in Oct. 2017 and those results were previously submitted in spill closure report dated Nov. 2017. based on those samples results, the property owner/consultant were informed via email on 12/06/2017 that no further investigation/remediation is required in the area around well MW2 where petroleum impact was noted, and the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment . OER reevaluated sample results and agreed not to install a SSDS. a vapor barrier has been installed beneath the building. 10:25 AM:- sent email to OER Shaminder. informed him that the submitted Remedial Action Report dated March 2021 includes result of endpoint samples collected in/around Oct. 2017 and these sample results were already submitted in the Spill Closure Report dated Nov. 2017. based on these sample results and other information available at that time, an email was sent to Kim at EBC (copied to NYSDOH, NYCOER and property owner) on 12/06/2017 stating Based on review of all available information, the Department does not require further investigation/remediation in the area around well MW2 where petroleum impact was noted. Please note that the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment. informed OER Shaminder that as NYCOER determined no need for SSDS and a vapor barrier has been installed beneath the building, the Department will wait for results of indoor/outdoor air sampling during the next heating season prior to considering spill closure. asked him to provide air sampling schedule, once available. email copied to OER Samantha and Kevin (EBC). 12:37 PM:- received copy of Notice of Satisfaction from NYC OER. 08/04/21-Hiralkumar Patel. 9:05 AM:- received email from OER Shaminder including an indoor air sampling report. summary: - one indoor air (IA1) and one outdoor air (OA1) were collected - sample IA1 was collected in the breathing zone at a height of 3-4 ft above the floor, from the rear of the commercial space of the 202 N 10th St building - petroleum VOCs (max.

Updated By: WBBENNET

Site Description: "Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of four parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, commercial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The former building's slab remains and is surrounded by a lockable chain link fence. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park and surrounded by a chain link fence. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential properties are located to the east and south approximately 1 block from the site. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River. "

Env Problem: "The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A

large portion of the former plant footprint lies beneath the former document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River."

Health Problem: "The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

 Control Type: INST
 Dt record added: 11/29/2017
 Dt rec updated: 06/10/2024
 Updated By: GHPRATT
 Site Code: 503484
 Site Description: "Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been

used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem:

"Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m³) PCE (ND-245 ug/m³) and TCA (ND-284 ug/m³) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem:

"Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 503484
Site Description: "Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or

FORMER SUNBELT EQUIPMENT (Continued)

S117535352

commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem:

"Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo: Site is being excavated under an E designation with the city because of lead contamination. One of the dump trucks hit a pylon and ruptured a diesel saddle tank. Area was soil, but was contained as best they could. ABC Pumped out the puddles & scraped up the contaminated soils. The area is being excavated and end point samples will be taken. Kevin Brussee will forward a spill closure report to DEC within the next couple of weeks. 05/21/14-Hiralkumar Patel. found report dated 05/06/10. as per the report, about 100 gal diesel spilled into construction site due to puncture in saddle tank on dump truck. contaminated soil was removed and endpoint samples were collected. no contmaination found in endpoint samples. based on available information, case closed administratively.
Remarks: A dump truck drove over a obstacle puncturing its fuel tank spilling its fuel onto the soil. A vac truck is enroute, and soil will be removed at a later date.

DEC Memo: see also two former closed spills #0801333 & #060249. OER received a community complaint and inspected the site yesterday. There were strong odors present at the site from both an impacted stock pile on the west side of the site as well as creosol and decomposing organics smell on the east side. Doug Harm (consultant) and Tucker (GC) we required immediate actions to be taken to take care of the problem. 5/29/14 - Austin - Reassigned from Rahman to Mahat - end 9/25/14: Mahat T/C :

A phone call was received from the consultant of the potential buyer inquiring about the spill status. OER Voluntary clean up case number : 13CVCP086K DEC is waiting for a closure report from consultant. 10/7/14: Mahat DEC Mahat received a tank closure report from the contractor and it is uploaded on D2 for reference. 12/29/14: Mahat report review : DEC Mahat reviewed the UST. End point samples were below CP 51 guidance value. All contaminated soil were removed from the site. No further investigation for remediation and delineation is warranted by the Department. Hence, the spill case will be closed on the database and OER will continue with their program.
Remarks: possible historic spill - U/G tank also found in concrete - cleanup pending

 Record Upd: 02/02/2024
 Updated By: WBBENNET

Site Description: "Location: The Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7.3-acres in size and is located between Kent Avenue and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3-story office building, a one-story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant and covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is

located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River. "

Env Problem: "Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and metals in soil and groundwater. Both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were encountered in soil borings below the water table and in groundwater wells. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Site Description: "Location: The Williamsburg-Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7 acres in size and is located between Kent Ave. and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3 story office building, a one story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River. "

Env Problem: "Soil sediment and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and total metals in soil and groundwater. PFAS was found in groundwater samples. Nature and Extent Soil: Sampling results indicated that VOCs, SVOCs, pesticides, PCBs, metals and mercury were detected above the applicable restricted residential use soil cleanup objectives (RRSCOs) or protection of groundwater soil cleanup objectives (PGWSCOs) in soil samples. VOCs: Petroleum VOCs consisting of benzene, toluene, ethylbenzene, total xylenes (collectively BTEX), isopropylbenzene, n propylbenzene, 1, 3, 5 trimethylbenzene, 1, 2, 4

WILLIAMSBURG FORMER PRATT REFINERY (Continued)

S121933844

trimethylbenzene, sec butylbenzene, 4 isopropyltoluene, and naphthalene were detected in many samples site wide. The soil boring logs indicate that the petroleum contamination extends from the surface to a depth of approximately 30 ft below ground surface (bgs). Petroleum VOC detections and concentrations increased with depth, a majority of them occurring in the area of the former bulk storage tanks. The highest number of samples containing petroleum VOCs occurred at the water table interface. The highest concentrations occurred at or below the water table (1 to 6 feet bgs) to approximately 25 to 30 ft below grade. Some samples containing BTEX were found at greater depths, which were associated with coal tar, as noted below. 1,2,4 Trimethylbenzene, naphthalene and BTEX (benzene, toluene, ethylbenzene and xylenes) were found most often and had the highest concentrations exceeding RRSCOs and PGWSCOs. 1,2,4 Trimethylbenzene concentrations ranged from 4.4 to 790 parts per million (ppm), exceeding the PGWSCO of 3.6 ppm. Naphthalene concentrations ranged from 17 to 2,500 ppm, exceeding the PGWSCO of 12 ppm. Benzene concentrations ranged from 0.7 to 19 ppm, exceeding the PGWSCO of 0.7 ppm; toluene concentrations ranged from 0.88 to 59 ppm, exceeding the PGWSCO of 0.7 ppm; ethylbenzene concentrations ranged from 1 to 120 ppm, exceeding the PGWSCO of 1 ppm; total xylenes concentrations ranged from 0.28 to 460 ppm, exceeding the PGWSCO of 0.26 ppm. The petroleum contamination is more prevalent along the southern boundary along 12th Street and around the former bulk storage tanks. This suggests that the site has been impacted by the former petroleum storage and fueling operations. SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected in a majority of the soil borings site wide, primarily within the shallow soil samples associated with the historic fill (5 to 10 ft below grade), although some occurred at greater depths and were associated with coal tar. PAHs, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3 c,d)pyrene, accounted for the highest percentage of SVOC samples exceeding RRSCOs or PGWSCOs, as applicable. Concentrations of benzo(a)anthracene (1.1 ppm to 230 ppm) and benzo(a)pyrene (1.1 to 76 ppm) found on site significantly exceed their RRSCO of 1 ppm. Concentrations of benzo(b)fluoranthene (1.1 ppm to 75 ppm) and chrysene (1.1 to 160 ppm) found on site exceed their RRSCO of 3.9 ppm. Concentrations of dibenz(a,h)anthracene (0.36 ppm to 11 ppm) found on site exceed the RRSCO of 0.33 ppm. Concentrations of indeno(1,2,3 c,d)pyrene (0.53 ppm to 34 ppm) found on site exceed the RRSCO of 0.5 ppm. The highest SVOC sample concentrations were phenanthrene, fluorene, fluoranthene, and naphthalene and found within the historic fill. Concentrations of phenanthrene (120 to 3,600 ppm), fluorene (120 to 1,500 ppm), naphthalene (200 to 2,500 ppm) and fluoranthene (160 to 1,600 ppm) found on site significantly exceed their RRSCO of 100 ppm. Coal Tar: The PAH and VOC (BTEX, noted above) analytical results indicate that coal tar was encountered in two borings from 20 to 50 feet, bgs. Coal tar was also identified in the field based upon photoionization detector (PID) readings, olfactory observations, and visual identification. The location of these borings is generally in the southeast and central portion of the site. Metals: Metals consisting of arsenic, barium, cadmium, total chromium, iron, cobalt, copper, lead, mercury, nickel, selenium and zinc were detected above RRSCOs. Metals exceeding the RRSCOs are found primarily within the shallow soils (5 to 10 feet, bgs) site wide within the historic fill. Arsenic, lead, and mercury accounted

WILLIAMSBURG FORMER PRATT REFINERY (Continued)

S121933844

for the highest percentage of metal exceedances of RRSCOs. Concentrations of arsenic (16.3 to 1,110 ppm) found on the site exceed the RRSCO of 16 ppm. Concentrations of lead (448 to 12,100 ppm) found onsite exceed the RRSCO of 400 ppm. Concentrations of mercury (0.856 to 8.43 ppm) found onsite exceed the RRSCO of 0.81 ppm. While many of the metal values were within the range of their typical background concentrations for urban fill, some were well above these values are likely attributable to the petroleum and coal tar releases previously identified. PCBs and Pesticides: PCBs were detected at 8.9 ppm in one shallow soil boring exceeding the RRSCO of 1 ppm. Pesticides were detected in samples, although no pesticides were detected above RRSCOs. Site-related VOC, SVOC, pesticides and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar DNAPL was observed in one sample in the East River. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. This suggests that site contamination has likely migrated off-site into the Bushwick Inlet. Groundwater: Sampling results indicated that VOCs, SVOCs, and metals were detected above the 6NYCRR Part 703 Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater. VOCs: VOCs, including 1,2,4 trimethylbenzene, 1, 3, 5 trimethylbenzene, benzene, chlorobenzene, isopropylbenzene, naphthalene, n propylbenzene, sec butylbenzene, MTBE, and total xylenes were detected at concentrations exceeding AWQSGVs. The following VOCs were the highest: naphthalene at 2,100 part per billion (ppb) which exceeds the AWQSGV of 10 ppb; benzene at 160 ppb which exceeds the AWQSGV of 1 ppb; 1,2,4 trimethylbenzene at 260 which exceeds the AWQSGV of 5 ppb; total xylenes at 1,140 ppb which exceeds the AWQSGV of 5 ppb. SVOCs: SVOCs, including acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3 c,d)pyrene, and phenol were detected at concentrations exceeding NYSDEC AWQSGVs. The following are the maximum concentrations of SVOC found on site in groundwater: acenaphthene at 52 ppb, which exceeds the AWQSGV of 20 ppb; benzo(a)pyrene at 4 ppb, which exceeds the AWQSGV (non detect); benzo(b)fluoranthene at 3 ppb, benzo(k)fluoranthene at 2 ppb, chrysene at 5 ppb and indeno(1,2,3 c,d)pyrene at 2 ppb, which exceed their AWQSGV of 0.002 ppb; and phenol at 2 ppb which exceeds the AWQSGV of 1 ppb. 1,4-Dioxane was not detected above the laboratory reporting limit in any groundwater sample. The elevated concentration of VOCs is likely a reflection of the petroleum contamination as most exceedances occurred in the former petroleum storage and fueling operations. The SVOC contamination is in part the result of the historic fill as most exceedances occurred in the western half of the site. SVOC contamination was also found in borings with observed coal tar in the southeast area of the site along 12th street, suggesting some SVOC groundwater contamination could be attributed to the MGP. Metals: The metals arsenic, barium, beryllium, cadmium, chromium, copper, iron, magnesium, lead, manganese, and sodium were detected at concentrations exceeding AWQSGVs in unfiltered samples. Filtered samples show only iron, magnesium, and sodium exceeding AWQSGVs, which is likely from compounds associated with the East River, which have a hydrogeological connection to groundwater at the Site. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. PCBs and Pesticides: PCBs and pesticides were not detected above the

S121933844

laboratory reporting limit in any groundwater sample. PFAS Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 160 parts per trillion (ppt) and 17 ppt, respectively, exceeding the Maximum Contaminant Level (MCL, drinking water standard) of 10 ppt in groundwater. The maximum concentration of total PFAS in one sample was 706 ppt. The source of these compounds is thought to be from the on site fire suppression system as the compounds were found in samples taken in the immediate vicinity of the foam house. Non Aqueous Phase Liquid-NAPL NAPL was found in both soil and groundwater samples sitewide. Both LNAPL and DNAPL were found in soil borings below the water table and in groundwater wells. Most groundwater observations were non measurable sheens or blebs. However, some had measurable LNAPL, up to 1.5 feet thick. Sediment: Site-related VOC, SVOC, and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar and petroleum was observed in one sample in the East River. Petroleum sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. Contamination has migrated off-site. The VOC most often detected in samples and with the highest concentrations was 1,2,4-Trimethylbenzene, concentrations of which ranged from 0.1 to 10 ppm. The SVOC most often detected in samples and with the highest concentrations was Naphthalene, concentrations of which ranged from 3 to 48 ppm. The source of these VOC and SVOC compounds are associated with the site. Unfiltered metals samples show compounds associated with the East River. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. Sediment gathered show observed coal tar and petroleum contamination in the East River and Bushwick Inlet sediment. Coal tar DNAPL was observed in one sample in the East River adjacent to the site. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick inlet. Based on sediment data below and the tidal influence, contaminated groundwater and LNAPL/DNAPL appear to have migrated off-site into the adjacent waterway. "

Health Problem:

"The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Sampling indicates soil vapor intrusion is a potential concern for off-site buildings, however this may be attributable to contamination from an off-site source."

 Acres: 0.413
 HW Code: C224229
 SWIS: 2401
 Town: New York City
 Record Added Date: 11/02/2015
 Record Updated Date: 10/21/2022
 Update By: JBSWARTO
 Site Description:

"Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building is currently under construction on the site. Current Zoning and Land Use: The site is a parcel currently undergoing redevelopment within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps show that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area."

Env Problem:

"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs, trichloroethene, and its breakdown products, zinc, nickel, arsenic, mercury, and lead in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for residential use to 15 feet below ground surface. Residual contamination in the soil and groundwater is being managed under an local groundwater controls. Prior to Completion of Remediation: Nature and Extent of

MAP FINDINGS

215 NORTH 10TH STREET (Continued)

S121933762

Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals during the Remedial Investigation. Polychlorinated biphenyls (PCBs) and pesticides were also analyzed for during the preliminary investigation and were not found to exceed standards. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (DCE) and vinyl chloride, lead, mercury, arsenic, and SVOCs (e.g. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene). Soil-Metals, such as lead, mercury, and arsenic, were found across the Site in shallow and deep soils. Concentrations of arsenic found on Site (maximum of 95.4 parts per million [ppm]) significantly exceeded the soil cleanup objective (SCO) for unrestricted use (UUSCO) and restricted residential use soil cleanup objective (RRUSCO) (13 and 16 ppm respectively). Lead found on-site (maximum concentration of 5,630 ppm) exceeded the UUSCO and RRUSCO (63 and 400 ppm). Concentrations of mercury found on-site (maximum of 160 ppm) significantly exceeded the UUSCO and RRUSCO (0.18 and 0.81 ppm respectively). SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs) were noted mainly in shallow soils throughout the site, and one deep soil location on the northern portion of the site. Concentrations of SVOCs, such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene had maximum concentrations ranging from of 5.1 ppm to 6.5 ppm which exceeded the UUSCO and RRUSCO (all contaminants are 1 ppm for both the UUSCO and RRUSCO). TCE was noted on the northern portion of the Site in shallow soils with a maximum concentration of 30 ppm which exceeds the 0.47 ppm UUSCO and the 21 ppm RRUSCO. Vinyl chloride was noted in shallow soils with a concentration of 1.6 ppm; which exceeds the 0.02ppm UUSCO and the 0.9 ppm RRUSCOs. Other volatile organic compounds noted that exceeded the UUSCO include 1,2,4-trimethylbenzene, methyl ethyl ketone, cis-1,2-dichloroethene (DCE), naphthalene, and tetrachloroethene. Groundwater - TCE (maximum concentration of 21 parts per billion [ppb]) and its associated degradation products (DCE at 40 ppb) are found in the groundwater on the central and southern portion of the site, exceeding the groundwater standard of 5 ppb. It is suspected that these contaminants may migrate off-site. Dense Non-Aqueous Phase Liquid (DNAPL) was noted in a central monitoring well (MW-3) during the preliminary investigation, but was not seen during the Remedial Investigation. SVOCs, such as benzo(a)anthracene (maximum of 0.45 ppb), chrysene (maximum of 0.48 ppb), and benzo(b)fluoranthene(maximum of 0.6 ppb), were noted to be greatest at the eastern (most downgradient) monitoring well (exceeding the standard of 0.002 ppb for all named contaminants), and potentially are migrating off-site. Contaminants in this class exceeded the groundwater standards in all wells. Metals, such as lead, mercury, and arsenic, were found across the Site in groundwater. Concentrations of total and dissolved arsenic were found to exceed (maximum of 120.6 ppb) the groundwater standard (25 ppb) in MW4. Concentrations of total lead (maximum of 359 ppb) were found to exceed the groundwater standard (25 ppb) in 16MW2 and 16MW3. Concentrations of total mercury were found to exceed (maximum of 20.05 ppb) the groundwater standard (0.7 ppb) in 16MW2. Additional metals found to exceed the groundwater standard were total and dissolved nickel and zinc. Soil Vapor - TCE was detected at significantly elevated concentrations, up to 243,000 micrograms per cubic meter (ug/m3). PCE was detected at significantly elevated

S121933762

concentrations up to 7,730 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 6,350 ug/m3 and 1,1,1-trichloroethane was noted with a maximum concentration of 6,000 ug/m3. Soil vapor samples were collected at 6 feet below sidewalk grade. Additional soil vapor and soil vapor intrusion sampling is being conducted to determine whether actions are needed off-site to address exposures associated with soil vapor intrusion. "

Health Problem: "Remedial actions are complete, and measures are in place to control the potential for coming in contact with contamination remaining at the site. Investigation and remediation of offsite contamination will be conducted under a separate program."

Site Description: "Location: The site is located at 215 North 10th Street in the Borough of Brooklyn, NY. The site is bordered on the south by North 10th Street with residential buildings on the opposite side of the street, to the west by a parking garage, to the north by a six story residential building, and to the east by Roebling Street with residential buildings on the opposite side of the street Site Features: The Site currently developed with one-story industrial building, two smaller one-story structures and parking areas. The Site is currently partially occupied by a motorcycle sales and service company and a marble importer/manufacturer. Current Zoning and Land Use: The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay. The site has a New York City e designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site appears to have been developed sometime prior to 1887 and has been occupied by various industrial uses including a dry color and paint storage, a varnish research works (which utilized two benzene tanks and a gasoline tank) and a chemical warehouse. The site

is listed as an inactive facility in the Chemical Bulk Storage database as site no. 2-000052 for storage of muriatic acid, ammonium hydroxide and nitric acid. Site Geology and Hydrogeology: NYSDEC has not received any reports including these details. "

Env Problem: "SEE SITE NO C224229 FOR FUTURE UPDATES Nature and Extent of Contamination: Based on preliminary sampling, contaminants of concern include volatile organic compounds (VOCs) in soil, groundwater and soil vapor. Samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), metals, PCBs and pesticides. Soil A total of eleven (11) soil borings were installed and from which twenty-five (25) soil samples were collected for analysis. Petroleum and chlorinated solvent-related VOCs were identified in soil samples. Benzene was found at a maximum concentration of 5.7 parts per million (ppm), ethylbenzene at a maximum concentration of 10 ppm, 1,3,5-trimethylbenzene at a maximum concentration of 35 ppm, tetrachloroethylene (PCE) at a maximum concentration of 9.4 ppm, trichloroethylene (TCE) at a maximum concentration of 220 ppm, cis-1,2-dichloroethylene (cis-1,2-DCE) at a maximum concentration of 36 ppm, vinyl chloride (VC) at a maximum concentration of 0.46 ppm and naphthalene at a maximum concentration of 100 ppm. Groundwater As per the site map, total of four (4) monitoring wells were installed and sampled. Due to insufficient sample volume, only 3 of the wells were analyzed for VOCs (the likely downgradient well was not analyzed for VOCs). TCE was detected at a maximum concentration of 170 parts per billion (ppb), cis-1,2-DCE at a maximum concentration of 16 ppb, VC at a maximum concentration of 15 ppb and naphthalene at a maximum concentration of 31 ppb. Soil Vapor A total of six (6) soil-vapor probes were installed, including one location beneath the occupied on-site building. Petroleum and chlorinated solvent contamination noted in soil-vapor samples including PCE at a maximum concentration of 7730 micrograms per cubic meter (ug/m3), TCE at a maximum concentration of 243,000 ug/m3, cis-1,2-DCE at a maximum concentration of 11,000 ug/m3 and VC at a maximum concentration of 1650 ug/m3. Significant Threat: Determination of significant threat will be made following completion of the Site Characterization. "

 Updated By: JHOCONNE
 Site Description: "Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle Park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I 278 (the Brooklyn Queens Expressway (BQE)) adjacent to the park. The former footprint of the Ansbacher Color & Dye Factory was identified to extend to Lot 9, Lot 20, Lot 45, portions of I 278 (Brooklyn Queens Expressway (BQE)) and parts of Macri Triangle Park. Current Zoning and Land Use: The site is zoned for residential, manufacturing, and commercial uses. Lot 20 is currently developed with a residential building, Lot 9 is under development as a residential building, and Lot 45 is developed with a Charter School. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color & Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from approximately 1887 to approximately 1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950s, the buildings in the southeastern section of the site were torn down to make room for the construction

MAP FINDINGS

BQE/ANSBACHER COLOR & DYE FACTORY (Continued)

S106780917

of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater within the footprint of the BQE. During the reconstruction of the BQE in the early 1990s, NYSDOT completed an IRM (soil removal) within the project's right of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) in 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5-12.5' below grade. Flow direction in shallow groundwater is toward the west southwest, while deeper groundwater appears to flow towards the east. This may be due to the presence of the L train subway tunnel underneath North 7th Street."

Env Problem:

"Nature and Extent of Contamination: Soil: Sampling was completed in multiple stages from 1988 to 2016. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. During the Preliminary Site Assessment (PSA) from July to September 1999, the NYSDEC investigated the area of the former Arsenate of Lead building in the southeast portion of the Site in the footprint of the current BQE. Arsenic was found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Lead was found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Mercury was also found at 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These results are documented in the PSA Report dated March 2000. An additional investigation was completed during 2015 and 2016 under a NYSDEC call out order and documented in the Additional Subsurface Investigation Report, dated May 2016. The investigation identified arsenic in soil up to 97.1 ppm, chromium up to 466 ppm and lead up to 566 ppm located on sidewalk adjacent to Lot 20 (former Lot 9, which was delisted in 2000). In 2018, data was obtained for Lot 45 which was redeveloped into a charter school (Williamsburg Northside School). Arsenic was found up to 67.5 ppm, and barium was found up to 1,160 ppm above the cleanup objective for commercial use (410 ppm), lead up to 383 ppm, and mercury up to 14.6 ppm. Groundwater: Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at

Map ID

BQE/ANSBACHER COLOR & DYE FACTORY (Continued)

S106780917

concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the former Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE.

Significant Threat- The site does not constitute a significant threat to public health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Portions of the former factory have been redeveloped into commercial and/or residential buildings."

Health Problem: "The site has been investigated. Based on the available data, the site does not pose a significant threat to public health."

 SWIS: 2401
 Town: New York City
 Record Added Date: 12/07/2015
 Record Updated Date: 01/02/2018
 Update By: BXANDERS

Site Description: "Location: The Former F&S Central Manufacturing site is located at 103 North 13th Street, identified as Block 2279, Lot 34 in the Greenpoint section of Brooklyn. Site Features: The site is comprised of a single tax parcel totaling 12,500 square feet (0.29 acres), and is currently vacant. The exterior walls and concrete slab of a former one-story manufacturing building remain, with the slab approximately 3 feet above sidewalk grade. Current Zoning and Land Use: The site is zoned as a M1-2 district which allows both commercial and light industrial use. The surrounding parcels are used for a combination of commercial and light industrial. Prior to acceptance into the BCP, the site was used for commercial warehouse space. The nearest residential area is approximately 1000 feet to the south. Past Use of the Site: The site was undeveloped prior to 1905. From 1916 to 1930, the site was developed with three small one-story sheds/storage rooms and a portion of a single-story commercial building. The former one-story warehouse/manufacturing building was constructed in 1930. The building was used as an iron pipe warehouse (1940s 1950s), a paper storage warehouse (1960s), metal pipe hanger manufacturing facility (1970s), contractor s storage facility (1990s) and a food storage warehouse (2000s). Site Geography and Hydrogeology: Bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by

glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth as great as 13 feet below the existing building slab (10 feet below sidewalk grade), followed by a native grey (wet) sandy silt. Bedrock was not encountered at the site. The elevation of the site is approximately 14 feet above mean sea level and gradually slopes to the northwest. The depth to groundwater beneath the site is approximately 7 feet below sidewalk grade. The groundwater flows to the north-northwest."

Env Problem: "Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCB/pesticides. Based upon investigations conducted to date, the primary contaminants of concern include benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Soil - The VOCs found in subsurface soils were predominantly in the shallower soils (0-5 feet bgs). Concentrations were found as high as 0.2 ppm for benzene; 7.1 ppm for ethylbenzene, and 31 ppm for total xylene. Both 1,2,4-trimethylbenzene (24 ppm) and 1,3,5-trimethylbenzene (23 ppm) were found in deeper soils at 7 to 11 feet bgs. Offsite investigations were not conducted as the adjacent properties are fully built out with existing structures. The SVOCs were found in the shallower soils. These were found as high as 2.4 ppm for benz(a)anthracene; benzo(a)pyrene (1.7 ppm); benzo(k)fluoranthene (1.5 ppm); and chrysene (3.8 ppm). The exception to this was in the southwest corner of the site, where the same SVOC constituents were found at concentrations approximately 12 to 15 times higher at 12 to 16 feet bgs. The metal constituents were also found mostly in the shallower soils. Chromium was found as high as 381 ppm; lead at 37,500 ppm; barium at 6,840 ppm; and mercury at 11.4 ppm. Hazardous levels of lead (as high as 14.9 mg/L TCLP) were found between 4 and 13 feet bgs in the western half of the site. All soil borings were drilled to 20 feet bgs, and there were no detections of any contaminant below 13 feet bgs. Bedrock was not encountered during the investigation. Groundwater - Both lead and chromium were found to slightly exceed groundwater standards on-site, as well as naturally occurring metals including, sodium, manganese and iron. There were no VOC or SVOC constituents detected in groundwater. Soil Vapor - Soil vapor was sampled at depths ranging from 5 to 6 feet below ground surface (bgs) and low levels of petroleum-related VOCs were noted. Also, TCE and 1,1,1-trichloroethane were detected as high as 173 micrograms per cubic meter (ug/m3) and 2,090 ug/m3 respectively, and are attributed to a suspected off-site source."

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants. "

DEC Memo: DEC Piper spoke with DEC Jerry Pratt. He was inspecting site yesterday and noticed housekeeping issues. Speedy dry put down but not swept. Puddles of waste oil, etc. Site is a listed site and he will talk with RP to have Tenant clean area and be more aware of spilling. Spill closed. 2/21/18- DEC Piper re-opened case as problem has not been resolved. 2-612201

and he mentioned that the Closure Report is under internal review. It will be submitted to the Department as soon as possible. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad 502 Metropolitan Avenue does not have an alternate address. No additional spills or PBS registrations found for site. No documents found in D2. Emailed Sean Harrison about status of closure report. 10/13/2016: Rashad Sean replied on 10/12 and will check the status of report. 11/1/2016: Rashad Received report from Sean Harrison, it has been uploaded to D2. Review of UST closure report is as follows: During excavation activities on 2/6/14, three fuel oil USTs were encountered. The site is currently being redeveloped and is E-Designated. Impacted soils and strong petroleum odors were identified in the northwest corner of the site, adjacent to the intersection of Rodney Street and Metropolitan Avenue. Brinkerhoff collected five soil samples to delineate the extent of the petroleum impacted soil. The northern most UST was filled with liquid consisting of a water-sludge mixture, the two southernmost USTs were filled in with concrete. The tank was pumped, cleaned and removed, the other 2 USTs were also removed. A total of 280 tons of soil was excavated and properly disposed of. On 9/29/14 additional impacted soil was identified within the location of the former USTs. On 10/6/14 the material was excavated, and one sample was taken, almost 25 tons of soil was removed. The site is currently being redeveloped as a 14 story mixed use building (hotel rooms and residential apartments). Additionally the site development consists of underground parking and underground and ground floor retail space. In conclusion, Brinkerhoff is requesting spill closure. Review of 2/4/14 sample data: Minor SVOC exceedances in SB-2 (5.5-6ft). VOC exceedances in SB-4 (5.5-6ft): Xylene-2.8ppm, Toluene-.96ppm, benzene-.18ppm Review of 2/28/14 sample data (similar locations to SB): Minor SVOC exceedances in PE-2 (10-10.5ft). Minor SVOC exceedances in PE-3 (10-10.5ft) Review of 10/6/14 sample S-9 taken at the base of the excavation at 12 ftbgs yielded no exceedances in VOCs or SVOCs. Review of 1/6/15 sample EP-7 taken as Endpoint bottom sample at 15 ftbgs yielded no exceedances in VOCs and SVOCs. Area of concern SB-4 which recorded the highest VOC values was further excavated as reflected by sample S-9 and EP-7 which were in the same area. Spill will be closed as final sampling shows no elevations of VOCs or SVOCs after excavation activities. In addition USTs have been removed and decommissioned. Closure letter will be prepared and sent to owner as per tax records: 475 Keap Street, LLC 512 7th Ave Ny, NY

Site Code: 483489

Site Description: "Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River."

Env Problem: "Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic

compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 483489
Site Description:

"Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the

East River."

Env Problem: "Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

 Updated By: DKMACNEA
 Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin) on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychlorinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "
 Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds

Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin) on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site.

Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin) on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychlorinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

 DEC Memo: 12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel and in the top sump of regular there are a mixture of gasoline and

GAS STATION - IND-G LINE (Continued)

S109374210

water. The sensors in the sumps were not placed touching the bottom of the sump. The fuel alarm did not go off because the sensors were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test. The lines are double-walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are wet and there is a petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days Reconciliation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09-Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test. 01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test tanks and passed. The station open to service on 12/10/09. 02/10/09-Vought-Called and spoke to NYCT Varley as per DEC Austin and no further monitoring of station being performed and no complaints received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and necessity of long term remediation. PHASE II Report. A Total of 4 soil borings (B1-B4) were performed during the Subsurface investigation. The location of Groundwater water correspond to the same location of the soil boring. samples were collected by installing temporary wells. SOIL. No VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2ft) and B4(0-2ft) at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene, Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples B1(8-10ft), B2(10-12ft) and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations above TAGM guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft), B3(8-10ft) and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(a)pyrene, Benzo(k)fluorene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, copper and cadmium were detected at elevated concentrations. Zinc in each soil sample except B2(10-12ft) and B4(10-12ft). Copper in B2(0-2ft) and B3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene, Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and

GAS STATION - IND-G LINE (Continued)

S109374210

B4. Free floating product was recovered from B2 and B3. No SVOCs were detected at concentrations above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of 12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Magnesium, Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As per Randy Austin this case has been transferred to Mark Tibbe for long term remediation. 02/24/2009: This spill case was transferred to A. Doronova. - AD 04/09/2009: Received a pdf copies of Orders on Consent: one signed by responsible party and second signed by consultant, who was fined due to failure to report the spill. DL copies to eDocs. AD 04/23/2009: Received an email from V. Brevdo. He forwarded me a copy of the investigation work plan, which was requested in the CAP of the signed Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC (consultant). Requested to re-submit the work plan. Revised WP should state all spill cases associated with this property (spill 0809794 is missing) and references to the consent order and the corrective action plan. They did not performed any weekly gauging and recovery visits required under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site. Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in these temporary wells in December 2008). According to Mr. Sosic, the redevelopment plan includes excavation to 12' bgs for a hotel construction with a full basement, so they proposed wells only along the site borders to monitor off-site migration of the contamination. The revised WP will be submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding submission of the revised WP. According to the information obtained from him today, the start date of a re-development project is unknown. Told him that due to the postponement of the project, two additional permanent monitoring wells should be installed in the vicinity of the temporary wells B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed the site with J. Kolleeny. Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the changes you requested earlier in the week (add subway spill number and consent order info in introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard copy is going out today as well. I do not have the PBS inspection

GAS STATION - IND-G LINE (Continued)

S109374210

report, but as I mentioned you should be able to obtain that from Veronica. Call with questions. Charles B. Sosik, P.G. Principal EBC Will review. AD 05/04/2009: Received the revised work plan. It proposes additional subsurface investigation at the site, including advancing and sampling of seven soil borings and eight temporary groundwater sampling points, and installation of six permanent groundwater monitoring wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is absent. A remedial investigation report summarizing all findings with conclusions and recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC. requested to correct figures and resubmit the work plan. Later received an e-mail from him saying: Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In reviewing again I eliminated the monitoring well within the service bay due to the potential for spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for wells in the vicinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net Spoke with him. Scheduled the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was canceled due some scheduling issues, and promised to inform me on a new date for investigation work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying: Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD 06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.

I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding fieldwork schedule. He told me that it scheduled for week of June 28.
AD 07/2009: The site visit was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is asking for an extension on the field work till September due to issues with the insurance company. Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance with the CAP of the Consent Order. Requested to submit an official letter request for extension. AD 07/17/2009: Received the letter. DL to eDocs. Will review. AD 07/21/2009: Reviewed the letter. EBC asks for 45-day deadline extension. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to eDocs. The Investigation report submission is due September 4, 2009.
AD 08/19/2009: Received an e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to perform soil boring and wells installation. The highest PID reading at MW-1 boring location was 1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5. The investigation summary report will be submitted. Later in the day received an e-mail from C. Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a heavy black film on water in the bailer. Not enough for a sample, but will try again next week after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks. Pea gravel encountered. I'm in the office tomorrow. Call to discuss.
AD 08/26/2009: Called and spoke with C. Sosik. He said that they will return to the site later this week to survey the wells and to collect free product sample if feasible. A soil and GW contamination was also encountered in the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. Sosik saying: Ainura, The RI Report is attached. A hard copy will follow early next week. Let me know if you have any questions or if additional hard copies are needed. Thanks and enjoy the weekend.
Charles B. Sosik, P.G.
Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net DL the report to eDocs. AD

09/14/2009: Received a hard copy of the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009: Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back tomorrow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDoc. Will review. AD 01/25/2010: Reviewed the RAP. It states that the site will be re-developed through the construction of a new 6-story, 53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 12' bsg. The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventive measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5 on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one additional well can be installed at the site. Also clarified statement regarding installation of new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified section 3.1.5 to discuss a waterproofing membrane for the cellar level and a vapor barrier for the sub-cellar level. Building permits, demolition and construction, must be obtained before work can start and MTA must also approve the plans. To obtain building permits we will need a NTP from NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles B. Sosik, P.G. DI the revised RAP to eDocs. Will review. AD 02/11/2010: Reviewed the revised plan. Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued

S109374210

and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring results do not indicate significant improvement of groundwater quality at the site, then additional remedial actions may be required by DEC. DL to eDocs. AD 04/2010: Spoke with Mr. Sosik regarding the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail: Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February 17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212) 341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD 07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any problems with the changes. We intend to re-submit the hard copy with the rest of the OER required submittals (full size architectural plans, letter from waterproofing manufacturer, letter from project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well. Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised version. And as it states in the e-mail, no particular changes were made to the RAP itself, which was approved by DEC in February 2010. It states that the site will be re-developed through the construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventive measure, a waterproof membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010: Called and spoke with Mr. Sosik regarding the soil sampling interval

S109374210

concerns and some typo on page 10 in the work plan. It was agreed that number and locations for soil samples will be decided after excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail. Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying: Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB and they should be able to obtain approved plans. We will be meeting with the developer, architect and general contractor within the next couple of weeks to plan the work sequence and logistics. I'll let you know when they have DOB approvals and when we have a firm schedule. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr. Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that they just cut utility service to the building and expect to begin demolition next week. Tanks removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status update. AD Later in the day received the following response: Ainura, I have been notified that the UST removal is starting on this project. We will have someone on-site today to observe. The plan is to remove the tanks, backfill and demo the building and infrastructure first, close out the demo permit and then install shoring and begin excavation of impacted soil as part of the building foundation. We will send you an update on the short term schedule after we have a chance to confer with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com 04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed. AD 06/12/2012: Sent an e-mail to Mr. Sosik with a request for site status update. Later received

S109374210

the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with C. Sosik regarding site status update reports. He informed that excavation started at the site about a month ago. The site has E designation, so they send also reports to MOER. The project manager in OER for this site is Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil sampling date. Later in the day received a daily reports from Kevin Brussee of EBC. The reports states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open excavation. No soil disturbing activities will be performed while the piles are being installed. According to EBC, significantly contaminated petroleum contaminated soil has not yet been encountered, so odor has not been an issue and the soil is very wet right now, resulting in no on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the Site since those reports. Over the last few weeks, no excavation work has been performed at the Site. Work has been limited to installation of a few steel piles and follow up load tests on the piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday, 4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight (8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil excavation is planned until early next week and planned activities include installation of footings on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder. AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447 Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of

petroleum contaminated soil were sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the building to be finished, to include info on in in the report, as per OER's request. The report will be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000 gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel tanks were then transported to a local metal recycling facility for proper disposal. On April 18, 2013, EBC inspected the soil immediately below the former location of the tanks for evidence of contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of

GAS STATION - IND-G LINE (Continued)

S109374210

tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56.

Construction of the hotel building's cellar level required excavation to a depth of approximately 12 feet below grade for the entire footprint of the building. Soil sampling: In accordance with the RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft² of excavation base as excavation within each section was completed.

Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4, m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and EP8, additional excavation of approximately 1 foot was conducted within the collection area of each of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A, EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had accumulated within the open excavation pit. Gasoline related VOCs were detected within the groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb), 1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13 ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as part of redevelopment was effective in addressing on-site petroleum contamination. Chemical oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9 lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium persulfate. The activated sodium persulfate powder was thoroughly

GAS STATION - IND-G LINE (Continued)

S109374210

mixed and worked into the subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the building's cellar level was installed below the static groundwater level, a waterproofing system was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of the installation of the waterproofing membrane beneath the cellar slab and behind the foundation walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene 3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products. The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site Capping: The entire Site has been capped with concrete. This includes an 8 inch thick concrete cellar slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a remainder to submit the RIR and with a request to submit in a timely manner a work plan for installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4 2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring wells for GW sampling program. It looks like number of the sampling wells was reduced due to the changes to the footprint of the constructed building. The diameter of the proposed wells is questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2 wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K. Brussee regarding report submission. He said that they were not able to install wells due to the scaffolding at the site till the beginning of October. The wells were installed approximately two

GAS STATION - IND-G LINE (Continued)

S109374210

weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was able to install two out of four proposed wells. One well was dry and another well was not installed due to the obstacles. EBC sampled GW from two installed wells and in a process of a report preparation. Requested to submit the report. Decision regarding further actions at the site will be based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report submission. He said that it was postponed due to some issues with his client. The newly installed wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As previously discussed, I've attached a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review and let me know if you have any questions. Thanks, Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and sampling report. The report states that groundwater quality monitoring was proposed from four monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one monitoring well proposed on the east side of the new hotel building could not be installed due to the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9, 2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1 inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014 groundwater samples were collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No VOCs were detected in MW-7, which is located off the northwest corner of the building. Low concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb), benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene (0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and

GAS STATION - IND-G LINE (Continued)

S109374210

Recommendations: As previously stated in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater sample was collected from the groundwater within the open excavation. Relatively low concentrations of gasoline related VOCs were detected in the groundwater grab sample. To treat residual soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the source were sampled in October of 2014. Little or no VOCs were detected in either groundwater sample. Therefore, based on the remedial activities performed at the site and post-remediation groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J. Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; - Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone, imported to the site from a NYSDEC Active Registered Construction and Demolition Processing Facilities for use as backfill below the slab. - Installation of a water proofing membrane consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab, and taking into consideration the latest post-remediation groundwater sampling results, which indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD
Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

DEC Memo: 12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel and in the top sump of regular there are a mixture of gasoline and water. The sensors in the sumps were not place touching the bottom of the sump. The fuel alarm did not went off because the sensors were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test.

the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days Reconciliation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09-Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test. 01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test tanks and passed. The station open to service on 12/10/09. 02/10/09-Vought-Called and spoke to NYCT Varley as per DEC Austin and no further monitoring of station being performed and no complaints received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were performed during the Subsurface investigation. The location of Groundwater water correspond to the same location of the soil boring. samples were collected by installing temporary wells. SOIL. No VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2ft)and B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene, Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples B1(8-10ft), B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations aboveTAGM guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft), B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(a)pyrene, Benzo(K)fluorethene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene, Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of 12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper,

GAS STATION - IND-G LINE (Continued)

S109374210

Iron, Lead, Magnesium, Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSSs. 02/20/09- Zhune. As per Randy Austin this case has been transferred to Mark Tibbe for long term remediation. 02/24/2009: This spill case was transferred to A. Doronova. - AD 04/09/2009: Received a pdf copies of Orders on Consent: one signed by responsible party and second signed by consultant, who was fined due to failure to report the spill. DL copies to eDocs. AD 04/23/2009: Received an email from V. Brevdo. He forwarded me a copy of the investigation work plan, which was requested in the CAP of the signed Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC (consultant). Requested to re-submit the work plan. Revised WP should state all spill cases associated with this property (spill 0809794 is missing) and references to the consent order and the corrective action plan. They did not performed any weekly gauging and recovery visits required under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site. Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in these temporary wells in December 2008). According to Mr. Sosic, the redevelopment plan includes excavation to 12' bgs for a hotel construction with a full basement, so they proposed wells only along the site borders to monitor off-site migration of the contamination. The revised WP will be submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding submission of the revised WP. According to the information obtained from him today, the start date of a re-development project is unknown. Told him that due to the postponement of the project, two additional permanent monitoring wells should be installed in the vicinity of the temporary wells B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed the site with J. Kolleeny. Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the changes you requested earlier in the week (add subway spill number and consent order info in introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard copy is going out today as well. I do not have the PBS inspection report, but as I mentioned you should be able to obtain that from Veronica. Call with questions. Charles B. Sosik, P.G. Principal EBC Will review. AD 05/04/2009: Received the revised work plan. It proposes additional subsurface

GAS STATION - IND-G LINE (Continued)

S109374210

investigation at the site, including advancing and sampling of seven soil borings and eight temporary groundwater sampling points, and installation of six permanent groundwater monitoring wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is absent. A remedial investigation report summarizing all findings with conclusions and recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC. requested to correct figures and resubmit the work plan. Later received an e-mail from him saying: Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In reviewing again I eliminated the monitoring well within the service bay due to the potential for spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for wells in the vicinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net Spoke with him. Scheduled the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was canceled due some scheduling issues, and promised to inform me on a new date for investigation work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying: Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD 06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week. I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding fieldwork schedule. He told me that it scheduled for week of June 28.

AD 07/20/2009: The site visit was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is asking for an extension on the field work till September due to issues with the insurance company. Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance with the CAP of the Consent Order. Requested to submit an official letter request for extension. AD 07/17/2009: Received the letter. DL to eDocs. Will review. AD 07/21/2009: Reviewed the letter. EBC asks for 45-day deadline extension. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to perform soil boring and wells installation. The highest PID reading at MW-1 boring location was 1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5. The investigation summary report will be submitted. Later in the day received an e-mail from C. Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a heavy black film on water in the bailer. Not enough for a sample, but will try again next week after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks. Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and spoke with C. Sosik. He said that they will return to the site later this week to survey the wells and to collect free product sample if feasible. A soil and GW contamination was also encountered in the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. Sosik saying: Ainura, The RI Report is attached. A hard copy will follow early next week. Let me know if you have any questions or if additional hard copies are needed. Thanks and enjoy the weekend. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net DL the report to eDocs. AD 09/14/2009: Received a hard copy of the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring

S109374210

wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009: Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back tomorrow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will review. AD 01/25/2010: Reviewed the RAP. It states that the site will be re-developed through the construction of a new 6-story, 53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 12' bsg. The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventive measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5 on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one additional well can be installed at the site. Also clarified statement regarding installation of new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified section 3.1.5 to discuss a waterproofing membrane for the cellar level and a vapor barrier for the sub-cellar level. Building permits, demolition and construction, must be obtained before work can start and MTA must also approve the plans. To obtain building permits we will need a NTP from NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles B. Sosik, P.G. DL the revised RAP to eDocs. Will review. AD 02/11/2010: Reviewed the revised plan. Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring results do not indicate significant improvement of groundwater quality at the site, then additional remedial actions may be required by DEC. DL to eDocs. AD 04/2010:

Spoke with Mr. Sosik regarding the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail: Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February 17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212) 341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD 07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any problems with the changes. We intend to re-submit the hard copy with the rest of the OER required submittals (full size architectural plans, letter from waterproofing manufacturer, letter from project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well. Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised version. And as it states in the e-mail, no particular changes were made to the RAP itself, which was approved by DEC in February 2010. It states that the site will be re-developed through the construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventive measure, a waterproof membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010: Called and spoke with Mr. Sosik regarding the soil sampling interval concerns and some typo on page 10 in the work plan. It was agreed that number and locations for soil samples will be decided after excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW

S109374210

in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail. Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying: Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB and they should be able to obtain approved plans. We will be meeting with the developer, architect and general contractor within the next couple of weeks to plan the work sequence and logistics. I'll let you know when they have DOB approvals and when we have a firm schedule. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr. Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that they just cut utility service to the building and expect to begin demolition next week. Tanks removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status update. AD Later in the day received the following response: Ainura, I have been notified that the UST removal is starting on this project. We will have someone on-site today to observe. The plan is to remove the tanks, backfill and demo the building and infrastructure first, close out the demo permit and then install shoring and begin excavation of impacted soil as part of the building foundation. We will send you an update on the short term schedule after we have a chance to confer with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com 04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed. AD 06/12/2012: Sent an e-mail to Mr. Sosik with a request for site status update. Later received the following response from Mr. Sosik: Ainura, They expect to start excavation this week. I will get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with

S109374210

C. Sosik regarding site status update reports. He informed that excavation started at the site about a month ago. The site has E designation, so they send also reports to MOER. The project manager in OER for this site is Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil sampling date. Later in the day received a daily reports from Kevin Brussee of EBC. The reports states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open excavation. No soil disturbing activities will be performed while the piles are being installed. According to EBC, significantly contaminated petroleum contaminated soil has not yet been encountered, so odor has not been an issue and the soil is very wet right now, resulting in no on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the Site since those reports. Over the last few weeks, no excavation work has been performed at the Site. Work has been limited to installation of a few steel piles and follow up load tests on the piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday, 4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight (8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil excavation is planned until early next week and planned activities include installation of footings on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder. AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447 Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of petroleum contaminated soil were sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent

S109374210

an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the building to be finished, to include info on in in the report, as per OER's request. The report will be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000 gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel tanks were then transported to a local metal recycling facility for proper disposal. On April 18, 2013, EBC inspected the soil immediately below the former location of the tanks for evidence of contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56. Construction of the hotel building's cellar level required excavation to a depth of approximately 12 feet below grade for the entire footprint of the building. Soil

GAS STATION - IND-G LINE (Continued)

S109374210

sampling: In accordance with the RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft² of excavation base as excavation within each section was completed. Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4, m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and EP8, additional excavation of approximately 1 foot was conducted within the collection area of each of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A, EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had accumulated within the open excavation pit. Gasoline related VOCs were detected within the groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb), 1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13 ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as part of redevelopment was effective in addressing on-site petroleum contamination. Chemical oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9 lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium persulfate. The activated sodium persulfate powder was thoroughly mixed and worked into the subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the building's cellar level was installed below the static groundwater level, a waterproofing system

GAS STATION - IND-G LINE (Continued)

S109374210

was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of the installation of the waterproofing membrane beneath the cellar slab and behind the foundation walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene 3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products. The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site Capping: The entire Site has been capped with concrete. This includes an 8 inch thick concrete cellar slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a remainder to submit the RIR and with a request to submit in a timely manner a work plan for installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4 2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring wells for GW sampling program. It looks like number of the sampling wells was reduced due to the changes to the footprint of the constructed building. The diameter of the proposed wells is questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2 wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K. Brussee regarding report submission. He said that they were not able to install wells due to the scaffolding at the site till the beginning of October. The wells were installed approximately two weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was able to install two out of four proposed wells. One well was dry and

GAS STATION - IND-G LINE (Continued)

S109374210

another well was not installed due to the obstacles. EBC sampled GW from two installed wells and in a process of a report preparation. Requested to submit the report. Decision regarding further actions at the site will be based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report submission. He said that it was postponed due to some issues with his client. The newly installed wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As previously discussed, I've attached a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review and let me know if you have any questions. Thanks, Kevin Brussee Senior Project Manager EBC Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and sampling report. The report states that groundwater quality monitoring was proposed from four monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one monitoring well proposed on the east side of the new hotel building could not be installed due to the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9, 2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1 inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014 groundwater samples were collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No VOCs were detected in MW-7, which is located off the northwest corner of the building. Low concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb), benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene (0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and Recommendations: As previously stated in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

GAS STATION - IND-G LINE (Continued)

S109374210

sample was collected from the groundwater within the open excavation. Relatively low concentrations of gasoline related VOCs were detected in the groundwater grab sample. To treat residual soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the source were sampled in October of 2014. Little or no VOCs were detected in either groundwater sample. Therefore, based on the remedial activities performed at the site and post-remediation groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J. Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; - Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone, imported to the site from a NYSDEC Active Registered Construction and Demolition Processing Facilities for use as backfill below the slab. - Installation of a water proofing membrane consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab, and taking into consideration the latest post-remediation groundwater sampling results, which indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD
CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

 Site Description: "Site Location: The proposed site is located at 9 North 15th Street in Kings County, and is identified as Block 2614, Lot 16 on the New York City Tax Map. Site Features: The site is a 0.145-acre lot including one-story warehouse building. Current Zoning and Land Use: The site is zoned M102 (manufacturing district) and is currently unoccupied. The site was used by Linaire Sheet Metal Corp. between 1994 to 2021. The surrounding parcels are currently used for a combination of light manufacturing, commercial uses, and parking. Past Uses: The existing building was constructed in early 1930 s. Previous industrial uses include manufacturing, a construction company, a garage, and a sheet metal facility. From 1976 to 1995, the site was listed as a RCRA generator (EPA ID no. NYD001486885) of corrosive wastes, chromium, and electroplating treatment sludges. The facility operated as V E 2 Plating and as Presto Electro Plating Corp. Historically the electroplating operations extended onto the adjacent BCP site, 12 Franklin Street (C224286). Site Geology and Hydrogeology: The depth to groundwater is approximately five to nine feet below grade, based on groundwater elevations at sites in the surrounding area. Groundwater flows to the west/southwest through the site toward Bushwick Inlet but may be tidally influenced."
 Env Problem: "Soil, groundwater, soil vapor, and indoor air samples were collected at the site under an investigation overseen by NYC Office of

Environmental Remediation between February and April of 2022. Nineteen soil borings were installed. Elevated levels of tetrachloroethene (PCE) and trichloroethene (TCE) were detected, with maximum concentrations of 100 parts per million (ppm) and 400 ppm respectively compared to their respective protection of groundwater soil cleanup objectives (POGSCOs) of 1.3 ppm and 0.47 ppm. Several semi-volatile organic compounds (SVOCs) and metals were detected above their respective unrestricted use SCOs (UUSCOs). One emerging contaminant, perfluorooctanesulfonic acid (PFOS) (max. 9.6 ppb), was found above its protection of groundwater guidance value. Six permanent monitoring wells and three temporary monitoring wells were installed at the site. Groundwater flows west/southwest towards Bushwick Inlet, which is located approximately 250 feet from the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected at concentrations exceeding ambient water quality standards including PCE (max. 570 parts per billion, or ppb), TCE (max. 65 ppb), cis-1,2-dichloroethene (max. 60 ppb), and vinyl chloride (max 55 ppb). Multiple PFAS compounds were also detected at concentrations exceeding guidance values. Two temporary soil vapor points were installed with co-located indoor air (IA) and sub-slab soil vapor (SV) samples taken at each location. Chlorinated VOCs were detected in both soil vapor and indoor air, including PCE (max. 32,000 micrograms per cubic meter, or ?g/m3 in soil vapor, max. 2.9 ?g/m3 in indoor air), TCE (max. 190,000 ?g/m3 SV, max. 4.2 ?g/m3 IA), cis-1,2-dichloroethene, or DCE (max. 1500 ?g/m3 SV, max. 0.1 ?g/m3 IA), and vinyl chloride (9.0 ?g/m3 SV, max. 0.1 ?g/m3 IA). According to NYSDOH decision matrices, the concentrations of PCE, TCE, and cis-1,2-DCE require mitigation. "

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo: 5/7/2012 - KGH Spoke to Charlie Sossik of EBC. Site is a vacant gas station (over a decade) and the site of closed spill #9414922. Residual soil contamination encountered outside the footprint of former excavation during Phase Two Investigation for prospective buyer. Photo of site from Google Earth entered into EDOCs. According to EBC groundwater beneath the site was clean providing further evidence that remedial efforts at the site were largely successful. For further information please refer to spill # 9414922. Spill Closed. KGH

Remarks: old gas station - large amount in soil - history spill - clean up pending - underground tanks - were removed a while ago old spill # 94-14922

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/14/03 REASSIGNED FROM TIBBE TO VOUGHT. 12/1/03 Transferred from Vought to Foley. 10/16/06 reassigned from Foley to Tang. (Sun) 11/06/08: This spill case transferred from K. Tang to J. Kolleeny. Recommended to Vadim Brevdo that this spill be added to MTBE Pilot Project, Vadim agreed. - J. Kolleeny 02/05/09: Contacted Jay Semelmacher (emergency contact on PBS form, #2-247405). He didn't have any information regarding the site and suggested sending a letter to Spartan Petroleum. Spartan Petroleum Corp. 333 New Hyde Park Road Suite 201 New Hyde Park, NY 11042 (JK/KG) 02/09/09: Letter sent to Spartan requiring: 1. Tank closure assessment report, 2. Explanation of the cause of the release, 3. Subsurface investigation report, including a site location map and a site plan showing the former and current locations of underground storage tanks and soil and groundwater sampling locations. A North arrow and scale bar must be included on the site plan. If no tank closure report was prepared or no subsurface investigation previously conducted, the Department requires that a work plan for a site assessment including a soil and groundwater investigation be prepared and submitted. The work plan should include a site location map and a site plan showing proposed soil and groundwater sampling locations, as well as current and former tank

locations. A North arrow and scale bar must be included on the site plan. Report due 03/19/2009. (JK/KG) 02/12/09: Rec'd letter dated 02/10/2009 from Kevin Kleaka of Impact Environmental stating that this spill has already been closed. Included was the UST Closure Report prepared by Impact dated 10/6/2004 and the No Further Action Letter dated 10/7/2004. Upon review of the documents, the spill was closed by Kevin Hale (central office) in 2004. At that time, this spill was not closed in the NYSDEC database. The spill is now closed in the database and the UST closure report and NFA letter have been uploaded to eDocs. (JK/KG)

Remarks: GEO PROBE SURVEY ON SITE, FOUND CONTAMINATION.

SHWS:
 Name: KENT AVENUE GENERATING STATION
 Address: 500 KENT AVENUE
 City,State,Zip: BROOKLYN, NY 11211
 Program: HW
 Site Code: 421905
 Classification: N
 Region: 2
 Acres: 2.640
 HW Code: 224137
 Record Add: 11/17/2009
 Record Upd: 10/01/2020
 Updated By: DJEATON

Site Description: "The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment."

Env Problem: "This site has been successfully remediated. The information on the remedy is included under site V00732. The following description was true during the early stages of work at this site. The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroleum compounds in sediments/ sludge contained in a large concrete structure (known as the ash pit); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined."

Town: New York City
Acres: 2.640
Date Record Added: 06/23/2010
Date Record Updated: 06/18/2021
Updated By: DJEATON
Site Description: "Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site has been sold to a developer but is still currently vacant and open. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet

below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site's proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel. "

Env Problem: "Active Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) in soil, volatile organic compounds (VOCs) in groundwater and polychlorinated biphenyls (PCBs) in the ash pit sediments. "

Health Problem: "The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy."

DEC Memo: 201150. see eDocs 12/13/06: Transferred from Breen to O'Connell. Spill submitted for closure by Con Ed. This site was a former Con Ed generating station, and previous investigations (circa 1999 through 2002) have found evidence of metals, SVOCs and VOCs in soil and groundwater, however the site is NOT in any remedial program. See also spill nos. 9910753, 9910993, 9911014 and 9911046. (JHO) 12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 1/9/08: This spill is closed, track under spill no. 9911014. (MA)

DEC Memo: 3/11/03 - SAMUEL- File available in active unassigned spill files.
4/3/06 Diaz - Next Steps - February 2000 Investigation report stated further investigation & possible remedial work recommended. Verify & conduct work or close site. 6/28/07. J.Krimgold reviewed and approved IWP submitted by FPM Group (631-737-6200) on June 27, 2007. The plan calls for 4 soil/gw samples around tanks excavation pit 5/21/08. email from FPM's Ben Cancemi informed that excavation and sampling activities will commence on 5/22/08. 02/12/09-Hiralkumar Patel. contaminated groundwater (with sheen) was discovered under basement floor at 684 Lorimer Street, site located behind subject gas station. based on location of both sites, contamination under house at 684 Lorimer street might be originated from subject gas station site. based on recent findings, case transferred from DEC Jacob to DEC Patel. found following documents for the subject site: - tank closure environmental site assessment, Nov. 1999 - subsurface investigation report, Feb. 2000 - subsurface investigation work plan, Jun. 27, 2007 - subsurface investigation report and remedial action plan, Sep. 10, 2007 abstract of tank closure report, Nov. 1999: - total of eight 550 gal and one 3000 gal USTs were removed including all pipings and portions of pump islands - all of the tank in very good condition and exhibited no evidence of corrosion - five of the tanks were empty, and three tanks were filled with concrete - 3000 gal tank contained approx. 1300 gal of water and petroleum products - total of eight soil and water samples were collected after tank removal - depth to groundwater ranged from 14-16 ft bg <----- - according to fire department record, in Nov. of 1984, the eight 550 gal tanks failed the official 10 year test - in sept. of 1985, three 550 gal were purged and filled with concrete - one pump was removed and all associated lines were sealed - highest PID readings were noted at an average depth of 10 to 15 ft <----- - fine to medium sized grain sand with clay lenses were found to a level of 12 to 14 ft bg - a layer of one foot in thickness of peat-like material intermixed with clay occurred at about 16 ft bg - found xylene contamination in east and north sidewall samples - found contamination in groundwater samples soil analyticals: -----Xylene North----4,600 East----13,500 groundwater analyticals: -----west bottom pit-----east bottom pit Benzene-----160-----230

Naphthalene-----470-----120
MTBE-----
--300 1,2,4-Trimethylbenzene-----1,500-----140-----440
1,3,5-Trimethylbenzene-----370 abstract of remedial action plan, Sept. 2007: - proposed to excavate impacted soils in the vicinity of boring B1 - based on relatively low levels of groundwater impact, its apparently limited extent, and the apparent absence of free-phase product, no groundwater remediation recommended - three groundwater wells are proposed to be installed for groundwater flow direction determination - each well will be installed to a depth of no more than 14 ft, so as not to penetrate the clay underlying the property - each well will be installed with 10 ft of screen summary: - groundwater found at different depths: 14-16 ft during tank removal, 10 ft during subsurface investigation in 2000 and at 8.5 ft during subsurface investigation in 2007 - no groundwater flow direction available - no permanent wells installed at the site - heavy soil and groundwater contamination found during each investigation - contamination found in all sides of previous tank location - DEC Jacob issued RAP approval letter on Oct. 4, 2007 <----- - as per email from Ben Cancemi from FPM group, excavation according to approved RAP was scheduled on 05/22/08 <----- Paul's LLC **site owner** 318 Grand Street Brooklyn, NY 11211 Attn.: Paul Joffe Ph. (718) 486-6916 (O) (917) 693-3292 (C) email: pauljoffe@pauljoffe.com according to building department permit record, Mr. Joffe applied for permit to convert service station into dinning location. found another spill case reported at the gas station site. - 9806871: spill called in by citizen on 09/04/1998 about abandoned tanks; tipped over. spill closed on 02/26/2003. left message for Mr. Joffe. received call from Mr. Carter from Mr. Joffe's office. informed him about situation. Mr. Carter doesn't know much about this site but will ask Mr. Joffe to call back. Nathan Carter Ph. (718) 486-6804 02/13/09-Hiralkumar Patel. left message for Mr. Joffe. left message for Ben Cancemi, consultant who was going to perform remedial activities. Ben T. Cancemi, CPG FPM Group Ph. (631) 737-6200 Fax (631) 737-2410 email: b.cancemi@fpm-group.com 02/17/09-Hiralkumar Patel. received call from Ben from FPM Group. they excavated contaminated soil to water table in front of stores and installed three monitoring wells in June 2008. but haven't got authorization to sample these wells. Ben mentioned that endpoint sample analyticals were clean. asked Ben to submit sample analytical summary table and scaled site map with locations of endpoint samples and wells. also asked him to include approx. location of tank and dispenser islands. received email from Ben with sample analytical summary table with site plan showing endpoint sample and well locations. site plan shows that wells were installed in front of stores on-site. but no well observed during site visit, but found some fresh patches in concrete

(which could be location of wells). received call from Mr. Joffe. asked him to submit remedial action report by the end of March 06, 2009. he mentioned that area between his property and houses along Lorimer street is a commercial property at 297 Meeker Ave which is a paint shop. 02/18/09-Hiralkumar Patel. received email from Ben. they will do well sampling on 02/20/09. 02/20/09-Hiralkumar Patel. visited site. met Mr. Joffe and John (FPM group). monitoring wells found in front of store. groundwater was found around 6-7 ft bg. found sheen on water from each wells. will submit sample analyticals and groundwater flow direction. during site visit, noticed an auto repair shop at 59 Frost Street. met store manager. site has one 275 gal waste oil AST. tank is not registered. asked manager to register tank. sent email to DEC Jacob regarding un-registered waste oil tank at 59 Frost St. no parts cleaning operation at the auto repair shop. Billy Alex Unique Auto Repair 59 Frost St Brooklyn, NY 11211 PH. (718) 387-7537 Fax (718) 384-6180 email: uniqueauto59@gmail.com during site visit, Mr. Joffe mentioned that site at 297 Meeker Ave runs from Meeker Ave to Frost Street, between the subject gas station and house at 684 Lorimer st where contaminated water was found. Mr. Joffe mentioned that there is painting business at 297 Meeker Ave. owner's address for 297 Meeker Ave, from property shark: Wanda Berry 56 Frost St. Brooklyn, NY 11211 Ph. (516) 627-4245 owner's address for 297 Meeker Ave, from ACRIS: Wanda Berry PO Box 131 Manhasset, NY 11030-0131 02/23/09-Hiralkumar Patel. received email from Mr. Joffe. he found from NYC DOB that site across frost st was dry cleaner and had seven 1000 gal USTs. 03/06/09-Hiralkumar Patel. received remedial action report from Ben. abstract: - 186.34 tons of contaminated soils were excavated from southern portion of the former UST area and in proximity to the location of a reported former fuel dispensing island - two endpoint bottom samples and four endpoint sidewall samples collected from excavation - found some contamination in endpoint bottom sample from north end of excavation - additional soil was removed from the north end and collected additional endpoint bottom sample - sidewall samples were taken at 7 ft bg and bottom samples taken at 11 ft bg (means bottom endpoint samples were taken below water table) - three monitoring wells (MW-1 through MW-3) were installed in proximity to the former soil boring locations B1 through B3 (borings that done during subsurface investigation in 2007) - well MW-2 installed at previous boring B1 and MW-3 installed at previous boring B3 - wells were installed to a depth of approx. 14 ft bg and completed with ten feet of screen - groundwater was found at around 8 ft depth <----- - site-specific groundwater flow direction is to the northeast <----- - no free-phase product or other visible indications of potential contamination were observed - found MTBE contamination in all three wells -----MTBE MW-1-----12 MW-2-----150 MW-3-----50 report missing scaled site map. 03/13/09-Hiralkumar Patel. spoke with Ben at FPM. asked him to submit scaled site map with all previous sampling/well locations. asked Ben about any dewatering as soil was removed from below water table also. Ben mentioned that water was coming into excavation so slowly. they were removing soil from excavation and wait till water from excavation bucket drain out before loading soil for disposal. so no dewatering happened. summary: during all previous investigations, highest contamination was found towards the west end of property, in close proximity to existing well MW-2. and MW-2 is the downgradient well at the property edge. based on results of high soil and groundwater contamination in area of MW-2 and groundwater flow

direction, requires off-site groundwater investigation. requires off-site well downgradient from existing well MW-2. spoke with Mr. Joffe. explained him findings of previous investigations and asked him for one more well downgradient from well MW-2. sent letter to Mr. Joffe requiring delineation of possible soil and groundwater contamination, downgradient from well MW-2. letter emailed to Mr. Joffe and Ben. 03/27/09-Hiralkumar Patel. received email from Mr. Cancemi with site map including location of proposed downgradient well. 03/30/09-Hiralkumar Patel. received email from Mr. Cancemi. he is planning to install well on April 08, 2009. sent email to Mr. Cancemi approving proposed location. 05/11/09-Hiralkumar Patel. 1:35 PM:- received report from Mr. Cancemi. abstract: - off-site well installed (MW-4), about 20 ft downgradient from well MW-2 - well installed to a depth of approx. 14 ft bg with 10 ft of screen - soil generally consisted of fine to medium-grained silty sand with gravel and trace amount of clay. brick, wood, coal, ash and concrete fragments were noted in the entire screen interval, but were more abundant in the top five ft of boring - faint petroleum odors and PID responses were noted on soils from 8 to 9 ft interval; no odor or PID noticed in other intervals - groundwater was found at approx. 7.5 ft bg <----- - one soil sample collected just above water table and one at 8-9 ft depth (below water table) - no free product observed in any wells on site - groundwater flow towards northeast <----- - 1,400 ppb of MTBE found in soil sample at 8-9 ft depth - 98 ppb of MTBE found in groundwater sample from MW-4 05/29/09-Hiralkumar Patel. 10:46 AM:- sent letter to Mr. Joffe requiring surrounding area site map (with possible off-site source) and quarterly groundwater monitoring and sampling for a period of one year (including wells gauging during each sampling events to define site specific groundwater flow direction). letter emailed to Mr. Joffe and Mr. Cancemi. 09/24/09-Hiralkumar Patel. 3:20 PM:- spoke with Ben. they submitted proposal to Mr. Joffe but hasn't heard back. 3:22 PM:- spoke with Mr. Joffe. he will ask Ben to conduct groundwater sampling. 09/29/09-Hiralkumar Patel. 12:13 PM:- received email from Ben. he will sample wells on 10/01/09. he mentioned that previous samples were analyzed for VOCs only as gasoline spill was the cause. he asked whether SVOC analysis needed for groundwater samples. 12:45 PM:- sent email to Ben to analyze samples for VOCs only. 12/01/09-Hiralkumar Patel. 3:26 PM:- spoke with Mr. Joffe. he spoke with Ben today. Ben is preparing report. asked Mr. Joffe to submit report by the end of 12/11/09. 12/02/09-Hiralkumar Patel. 11:20 AM:- received quarterly groundwater sampling report from Ben. sampled all four wells in Oct. 2009. minor MTBE contamination found in samples. will sample all wells again in Jan. 2010. 12:42 PM:- sent email to Ben asking to submit next quarterly report by end of Feb. 2010. email copied to Mr. Joffe. 12/11/09-Hiralkumar Patel. 11:20 AM:- received email from Ben including site map showing surrounding area use. 01/25/10-Hiralkumar Patel. 3:41 PM:- received message from Daniel Cole (212-341-0964) from NYC DEP. he mentioned that subject site is e-designated and currently reviewing closure report. Mr. Cole wants to know spill status. 01/26/10-Hiralkumar Patel. 2:40 PM:- received email from Ben. they collected second round of groundwater sampling last week and will submit second quarterly report once lab data is available. 3:06 PM:- spoke with Mr. Cole. Mr. Cole asked if DEC requires anything more than quarterly monitoring. informed Mr. Cole that the department may require additional work based on quarterly groundwater sampling reports. Mr. Cole mentioned that owner did air

S118637212

GlovalServ Property One, LLC 1202 Lexington Avenue, Suite 255 New York, NY 10028 Spill referred to Rashad Omar (Runner). 3/31/2016: Rashad 264 East 7th Street does not have an alternate address. No additional spills or PBS registrations found for site. 5/2/2016: Rashad Received two voice messages from Alla about site, 212-665-4129 or 212-685-2715. Called Alla back, she said they discovered contamination when doing borings and remediation will take place once the demo and redevelopment begins in August (the final tenant leaves in August). Alla will keep me updated once redevelopment begins. She also gave me spill number for previous spill on site: 0608798. Spill 0608790 was called in for 260 East 7th Street which is adjacent property to 264 East 7th Street. During redevelopment on 260 East 7th Street contaminated soil was found, and it was found to be flowing from 262 East 7th Street spill number 0651463, contaminated soil was removed, and a further remediation plan was made to do treatment by injection by Langan Engineering. After the project manager reviewed groundwater analyticals and soil samples, the spill was closed, it should be noted that there was some contamination left behind, as the homeowners could not afford a more thorough investigation/cleanup. Spill 0651463 needs review as well. 7/19/2016: Rashad Received call from Charles of Manhattan Renovations (Charles@manhattanrenovations.com) he was calling to discuss remediation process. He will be taking additional soil sample this week and was wondering if he should send it to the lab. I let him know that if he is doing site wide excavation that the soil that he will encounter will likely be removed and that he should do site wide endpoint samples upon completion of excavation for foundation. I sent him a copy of contractor list to aid in selection. The demolition date is set to begin in Mid December. 11/22/2016: Rashad Received call from HydroTech, they will be doing preliminary investigation, involving soil borings, a few wells, and soil vapor samples to identify extent/any contamination. In addition they will be conducting GPR survey to see if there were any tanks. Site is also E-designated. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 01/31/17 - Lakhani Called HydroTech (6314625866) and found out that the PM is Rachel Ottoman. She is currently out on disability. DEC Lakhani left contact with HydroTech. 03/03/17 - Lakhani Sent the following email to Manhattan Renovation Charles: I am the new project manager for this spill case as Rashad Omar is no longer at the DEC. Before Rashad left, he noted that he spoke to you regarding the remediation process for the site. Have soil samples been taken from the site and

S118637212

sent to the lab? Is a site wide excavation taking place? Please provide me with any further updates on the site. I would like to be aware of all remediation activities. Has a consultant been hired to complete the remediation? If so, please share their contact with me. 03/06/17 - Lakhani Manhattan Renovation Charles Bagby responded informing that Manhattan Renovation was asked to halt this project last year, hence the remediation never started. The client/owner later sold the building. Charles was not in direct contact with the buyers or the agents and so he has no more information on this project. As per ACRIS, the property owner still is: GlobalServ Property One, LLC 1202 Lexington Avenue #255 New York, NY 10028 Managing Agent: Elaine Hsu Manhattan Renovations Barbara informed that the current owner is no longer GlobalServ Property One. 03/16/17 - Lakhani Called HydroTech. Rachel Ottoman is out on maternity leave and Erica Johnston has take responsibility of the site. She informed that HydroTech has not done any work at the site. 03/20/17 - Lakhani Sent CSL to the following address: 264 East 7th Holdings, LLC 555 Madison Avenue, 6th Floor New York, NY 10022 Attn.: Alan Cohen and required effective removal of contamination, installation of borings/wells, and delineation of soil and groundwater contamination. 04/17/17 - Lakhani Langan Joe Good (212-479-5448, Cell: 847-971-1972, jgood@langan.com) contacted DEC Lakhani regarding the site. They were recently hired by the new property owner. Joe informed that the site is E-designated and OER will be involved with the site. DEC Lakhani sent the following email to Joe: Great speaking with you today. Below is the information I have regarding the above site: Tectonic Engineering was installing geotechnical borings on 03/30/16 at the site. As they were drilling, they noticed an odor and saw oil in a borehole. There were plans to demolish the existing building and redevelop the site. There was a former spill on the property, reported on 10/31/06, which is now closed after receiving a Site Screening Report dated 12/17/07 from Langan Engineering. The report included the analytical results for the groundwater grab samples taken on 04/23/07 and 09/26/07. The 04/23/07 sample had six (6) very low hits. The 09/26/07 sample had very slight TAGM groundwater. Manhattan Renovations contacted the DEC in July 2016 informing us that they would be taking additional soil samples. However, Manhattan Renovations was asked to halt this project due to the change in ownership of the property. HydroTech was once involved with the site as well but completed no work. Given this information, I sent a requirement letter requiring the removal of contamination from the site and

MAP FINDINGS

264 EAST 7TH STREET (Continued)

S118637212

the installation of borings and wells to delineate the extent of the soil and groundwater contamination. Depending on the redevelopment of the site, a soil vapor intrusion study may also be necessary. Please share your report with me as soon as possible, so I could send you an updated requirement letter. If you have any questions, please contact me at (718) 482-4038. 04/20/17 - Lakhani File Review: Geotechnical Evaluation (Tectonic, 10/20/16) - The project site consists of a three-story brick masonry building with a partially below grade basement. Based on the test pits, the existing foundations are approx. 7' to 8' below the sidewalk elevation in front of the building. The building is currently being used for residential space. The site is bound by similar masonry buildings to east and west; a small courtyard and a single story brick building to the south; and by 7th Street to the north. The proposed project will consist of demolition of the existing building and construction of a six-story building with a full basement. Drilling, sampling, and logging of two (2) additional test borings, at the rear of the existing building, to depths of approx. 11.5' and 60'bg and excavation of two (2) test pits along the foundations of the existing building were completed. Groundwater was encountered at depths between 7.5'-8'bg. Sampling Summary Report (Tectonic, 10/17/16) - The East River is approx. 1300' east of the site. Historic mapping of this section of lower Manhattan indicates the area was a tidal marsh with small streams flowing roughly west to east. On 03/25/16, Tectonic performed a geotechnical soil boring in the sidewalk in front of the building. During the geotechnical investigation, petroleum sheen and odor was encountered around 6'-8'bg. Tectonic reviewed spill cases for the neighborhood and found a previous spill case number 0608798 reported for the private dwelling located at 260 East 7th Street. The spill report indicated that unknown quantity of #2 fuel oil was released on 10/31/06. The spill was closed on 12/18/07. 260 East 7th St is located approx. 23' to the east of the subject property. Another fuel oil spill was reported on 07/03/14 at 243 East 7th St, which is located approx. 150' northwest of the project site. Tectonic mobilized to the site to collect environmental soil samples from two (2) test pit locations. Soils in each test pit were screened with a PID. The test pits were terminated when groundwater was encountered. Then a post hole digger was used to excavate 1' below the water table and install a 2" PVC well screen, which was backfilled with well sand. Tectonic mobilized to the site to inspect the performance of two (2) soil borings and collect environmental soil samples. Boring B-2 was advanced to a depth of

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

264 EAST 7TH STREET (Continued)

S118637212

62'bg, while boring B-3 was advanced to 11.5'. One sample was retrieved within boring B-3 at a depth of 8' to 10'. For the remaining analyses, one (1) composite sample per boring was created via the following methodology: two (2) grab samples from each vertical interval within each boring were collected with a dedicated plastic scoop and placed into a single flood-grade plastic bag. Groundwater was encountered in all of the borings and test pits. Groundwater elevations indicate that there is no measureable gradient across the site. PID readings above background were observed in borings B-2 and B-3 and in test pit TP-1 and TP-2. Additionally, petroleum like odors were observed in all three (3) borings and two (2) test pits and staining was observed in test pits TP-1 and TP-2, indicating the presence of petroleum hydrocarbon compounds. No PID readings are available for B-1 as it was not part of the original geotechnical investigation. BTEX in soil samples were below CP-51 unrestricted use SCOs. n-butylbenzene 6700 ppm(TP-2, 3'bg), sec-butylbenzene 5600 ppm(TP-2, 3'bg), isopropylbenzene 2000 ppm(TP-2, 3'bg), n-propylbenzene 4400 ppm(TP-2, 3'bg). Groundwater: sec-butylbenzene 8 ug/L(TP-1), isopropylbenzene 7.8 ug/L(TP-1), n-propylbenzene 8.4 ug/L(TP-1). The soils and groundwater on the site have likely been impacted by a petroleum spill. The petroleum contamination is at least 2' below the existing basement elevation, therefore, currently there is no exposure pathway for nearby receptors. Tectonic inspected the basement areas of the subject building including the area around the existing AST. No evidence of a spill source such as staining or odors on the subject property was observed during their investigation. Tectonic recommends the following: 1) the historic fill should be excavated down to at least the groundwater elevation 2) dewatering 08/15/17 - Lakhani Langan Joe Good (212-479-5448) informed that the site will be applied to OER VCP program. 09/25/17 - Lakhani Langan has met with OER to discuss the anticipated site investigation to satisfy the E-designation and spill delineation requirements at 264 East 7th Street. Langan anticipates sending the RIWP to OER this week for review (9/25 - 9/29). 10/30/17 - Lakhani The site was enrolled in the OER VCP program. OER Shaminder emailed DEC Lakhani and NYSDOH Nathan with the RIWP attached. Work is scheduled for next week and involves three (3) groundwater wells, four (4) soil boring and three (3) soil vapor points on the 25' x 100' site. Development is only restoration of existing structure and adding one(1) floor on top. Previously, elevated PID readings were observed in borings B-2 and B-3 and in test pits TP-1 and TP-2, and petroleum-like odors were observed in all three (3) borings

S118637212

and both test pits. Remedial Investigation Work Plan (Langan, 10/27/17) - GPR will be performed at the site to locate utilities, USTs and subsurface structures or anomalies. A soil investigation will be performed to identify the nature of soil conditions at the site. Four (4) soil borings will be completed. Where possible, a minimum of two (2) discrete soil samples will be collected from all four (4) of the test borings (one from between 0'-2'bg and another from immediately above the groundwater interface). A groundwater investigation will be performed to evaluate groundwater quality at the site and identify potential off-site contamination that may be migrating on to the site. Up to three (3) groundwater monitoring wells will be installed. Approx. one (1) week after the monitoring wells are developed, three (3) groundwater samples will be collected. Soil vapor samples will be collected to evaluate the potential for infiltration of contaminated soil vapor into the proposed building. Three (3) soil vapor points will be installed at the site. An ambient air sample will be collected concurrently with the sub-slab soil vapor samples. 10/31/17 - Lakhani
DEC Lakhani approved the RIWP. 11/14/17 - Lakhani OER #17TMP0176M 01/31/18 - Lakhani As per OER
Shaminder, the site is not going through the City VCP. On 11/21/17, NAPL was observed in monitoring well MW01 during the Phase II Site Investigation. Langan collected a sample of the NAPL using a dedicated bailer for fingerprint analysis. Analytical results from the fingerprint analysis identified the product as potential weathered #2 fuel oil/diesel oil. TPH was detected at a concentration of 886,000 ppm in the product sample collected. Langan will be directly working with DEC for this site. The Langan contact is: Joseph Good 212-479-5448 jgood@langan.com Phase II Environmental Site Investigation Report (Langan, 01/25/18) - Site development will include renovation of the existing vacant 3-story development into a new 4-story multifamily residence with a full cellar. Work performed under the Phase II Environmental Site Investigation include: 1) conducted a geophysical survey, 2) completed an indoor air chemical inventory, 3) Advanced four soil borings across the site, and collected nine (9) soil samples for chemical analysis, 4) installed three (3) groundwater monitoring wells throughout the site to establish groundwater flow and collected three (3) groundwater samples, and 5) installed two (2) soil vapor and one (1) sub-slab soil vapor probes and collected two (2) soil vapor, one (1) sub-slab soil vapor, one (1) indoor air, and one (1) ambient air samples for chemical analysis. Depth to groundwater ranges from 4.13' - 4.87' below the cellar slab. Groundwater flow is generally

264 EAST 7TH STREET (Continued)

S118637212

east-northeast. NAPL was identified in off-site monitoring well MW01. Product thickness post well development was 4 . Groundwater results are as follow: isopropylbenzene 7.3 ug/L(MW02), n-propylbenzene 8.9 ug/L(MW02), sec-butylbenzene 7.6 ug/L(MW02). Soil results do not indicate VOCs above CP-51 standards. Soil vapor results are as follow: acetone 65.8 ug/m3(SV03), carbon tetrachloride 0.484 ug/m3(AA01), carbon tetrachloride 0.478 ug/m3(LA01), carbon tetrachloride 1.26U ug/m3(SV01), carbon tetrachloride 2.52U ug/m3(SV02), carbon tetrachloride 2.52U ug/m3(SV03), m/p-xylene 12.3 ug/m3(SV01), m/p-xylene 6.47 ug/m3(SV03), o-xylene 5.08 ug/m3(SV01), PCE 2.71U ug/m3(SV02), PCE 2.71 ug/m3(SV03), PCE 1.36U ug/m3(SV01), TCE 1.07U ug/m3(SV01), TCE 2.15U ug/m3(SV02), TCE 2.15U ug/m3(SV03), vinyl chloride 0.511U ug/m3(SV01), vinyl chloride 1.02U ug/m3(SV02), vinyl chloride 1.02U ug/m3(SV03). 03/14/18 - Lakhani Langan Joe Good sent the following email: Based on our prior conversations regarding NYSDEC Spill No. 15-12347, we will begin bi-weekly NAPL recovery of monitoring well MW01 at the 264 East 7th Street property this week. Purged NAPL and groundwater will be containerized into a NYSDEC-approved 55-gallon drum prior to off-site disposal. If NAPL is not observed in the well following the recovery events, Langan will collect one groundwater sample from MW01 for VOC and SVOC analysis. We will prepare a sampling summary letter and laboratory analytical results for review and consideration for closure of Spill No. 15-12347. 04/27/18 - Lakhani Langan Joe Good informed that the product gauging has been going well with product thickness decreasing from about 20 to about 7 over the past four (4) recovery events. 05/03/18 - Lakhani Four (4) recovery events have taken place: 3/15, 3/28, 4/13, 4/26. LNAPL found in MW01. Product thicknesses prior to recovery were 20 , 13 , 8 and 7 for 3/15, 3/28, 4/13, and 4/26 respectively. 06/18/18 - Lakhani The proposed development includes the proposed renovation of the existing vacant three-story development into a four-story multi-family residence with a full cellar, which will require limited excavation below the existing cellar level for construction go a cellar expansion. Approx. 15 cu. yds. of material are anticipated to be excavated. A vapor barrier will be installed in the cellar as part of the general construction. SMMP uploaded to D2. 08/05/19 - Lakhani - Spill being transferred to Lin. 11/23/2020-Lin-Based based on Phase II report. The spill did not come from 264 E 7th Street, Manhattan. MW-1 in front of the site has 0.25' of product remaining based on the last gauging event that took place on 2/6/2020. 6/8/23-Lin-Spill closed due

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Latitude: 40.7221226
Longitude: -73.9489246
DEC Memo: 01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letter for more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transferred from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the following: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.
Remarks: RECCOMEND CLEAN TANK DISCONNECT PIPING AND RETEST

DEC Memo: Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site

12/13/2012: DEC Demeo sent letter requiring documents regarding tank test failure. 4) 02/12/2013: Phase I Environmental Site Assessment: - proposed plan is to demolish the existing structure and construct a multi-story residential building that includes a 65 ft by 74 ft basement - the building was purchased in 1979 and turned into a steel manufacturing company, but this is not indicated on the map
----- 5) 06/24/2013: Remedial Investigation Report: - Phase II conducted by Hydrotech in Oct. 2012 identified the presence of elevated SVOCs, metals and pesticides in surficial soil samples collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs, metals and pesticides in soil samples collected from 10-12 ft bg - in Oct. 2012, Hydrotech installed 13 wells on the site and adjacent sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft
----- - stratigraphy of the site from surface down consists of a layer of historic fill material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy petroleum impacts from 12-16 ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of highly compressible organic peat, clay and silt from 16-28 ft bg and

address metals in subsurface. Mr. Chawla mentioned that based on new proposed excavation depth, OER requires endpoint soil sampling and installation of vapor/moisture barrier and SSDS. they will review soil-vapor data to determine if active or passive SSDS needed. Mr. Chawla will send further details after meeting with property owner. 12/06/13-Hiralkumar Patel. 10:46 AM:- spoke with Mr. Chawla. discussed about free product in groundwater. Mr. Chawla will submit a RAWP which discuss about installation of wells. asked him to submit property owner's contact info, missing appendices of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013. discussed with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination. 11:20 AM:- spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at the site. scheduled a site inspection at 10:30 AM on 12/09/13. East Star Realty LLC. **property owner** 1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung PH. (917) 662-3803 email: jacktinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited site. met Mr. Fung. found multiple wells on-site. the tank is located under the floor, in area of one of the rolling door. found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge all the wells and implement IRM, if product exists in well. he will contact his environmental contractor. found RAWP on NYC OER website. abstract of RAWP: - proposed plan to demolish the existing structure and construct a multi-story residential building that is expected to include a 65 ft by 74 ft cellar - the proposed building is planned to constructed starting from the property line along the length of Leonard St and extending east - depth to groundwater was present at approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells - wells were surveyed and groundwater table elevations were measured between 14.77 and 15.71 ft - groundwater flow direction is generally from the south towards the north - soil excavation below the water table is anticipated for the area surrounding the UST in the southwest portion of the site - will collect endpoint samples - will install a vapor barrier and an active SSDS beneath the proposed building 11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him

S108076226

about spill remediation work plan, that he mentioned as attachment F in RAWP for NYC OER. Steve mentioned that such work plan is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr. Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla. 12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18 PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung. informed him that the Department requires gauging of all existing wells and immediate removal of any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant Engineering inquiring about what work needs to be done. informed him that the Department requires well gauging and removal of any free product from wells, until permanent remediation system is installed. informed him that well gauging must be done by end of 12/27/13. also recommended removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email: arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12 out of 13 wells installed for the subject project. one well was installed across the site which is inside construction zone and was not accessible for gauging. out of 12 wells, free phase product found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found in remaining two wells. Andrew will submit memo, once he gets previous well survey data from record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that the department requires implementation of interim remedial measures until permanent remedial system in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14) including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was inaccessible due to the presence of green construction fence directly over top of the well. out of 12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches. 01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr.

Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner's letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:- sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment work plan and such plan is not approved prior to reviewing tank removal report with endpoint sample results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr. Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know any requirements from DEC, prior to sending letter to property owner. revised RAWP will be forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg, with additional excavation in locations where further pockets of contamination is observed - collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along foundation wall - dewatering will be performed - excavation of the impacted soil will be performed following the removal of existing tanks abstract of site-specific groundwater treatment and monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on 12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be remediated via purging of product from the existing wells on a monthly basis, 2) site will be excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open excavation will be treated with chemical application, and 3) monitoring wells and contingency injection wells will be installed in the cellar level of the proposed development to allow for future chemical injections, if necessary - prior to construction, the assessment of groundwater quality will include the collection of groundwater samples from the existing wells
01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of wells, product removal from impacted wells and monthly submission of well monitoring reports. informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP Stipulation List submitted to NYC OER) and required submission of tank removal report. also informed him that the department may require additional investigation,

after reviewing the tank removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung, Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about letter sent in email. he will discuss with Grant Engineering. 02/20/14-Hiralkumar Patel. 1:06 PM:- received email from Andrew. he mentioned that while drilling borings for geotechnical investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13. they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14. 03/04/14-Hiralkumar Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report. between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/09/14-Hiralkumar Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel. received email from Steve (at 8:09 PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not be conducted this week due to the building currently undergoing asbestos abatement activities. he also mentioned that the existing building will be immediately demolished once the abatement work is completed. Steve mentioned that well gauging will resume, if demolition does not occur. 04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL. 08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn. 11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will talk to property owner about required well gauging/product removal. 12/17/14-Hiralkumar Patel. 1:21 PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not

been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement. 01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after discussion on 12/17/14, ESPL installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was found. free phase product was noted on groundwater and product recovered using absorbent pads. asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned about chemical treatment of contamination. informed him that the department does not approve chemical treatment at this time and requires submission of endpoint soil and groundwater sample results prior to finalizing a remedial method. 01/21/15-Hiralkumar Patel. 9:08 AM:- received email from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1 which is located east of the tank farm. product is being collected using absorbent pads. on 01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with existing well, tank and test pit locations. email copied to Mr. Chawla. 01/23/15-Hiralkumar Patel. received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that the stop work order was removed and the shoring contractor is driving the beams into the ground in the west and north side of the site. 01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at 2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water. 01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn. today they pumped out and removed two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to structural safety of the adjoining building, they have to backfill the excavation. Mr. Kahn mentioned that contaminated soils will be removed once underpinning for adjoining building is done (possibly within two weeks depends on weather). 02/05/15-Hiralkumar Patel. 2:14 PM:- received email from Mr. Chawla. William Wong of OER visited site and noted petroleum

odors while tank piping being removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with on-site supervisor. crew was underpinning adjacent building in area where the USTs were located. no petroleum odors noted in work zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr. Kahn. 02/12/15-Hiralkumar Patel. 10:03 AM:- received call from Mr. Kahn. during underpinning operation, crew found set of ten (10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan. also asked him to submit results of liquid samples from the tank, once available.

03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs # 5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior structure, it was concluded that the tanks could have been used for mixing operation which is consistent with the site history of a carpet dying operation during 1940's and 1960's - dimensions of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) - additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on 02/11/15) to register previously unknown tanks, but no records found in PBS record.

03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and south sidewall of the excavations are concrete underpinning under adjacent buildings and there is a shoring along the west sidewall to protect the sidewalk. asked Mr. Kahn to collect endpoint soil samples from east sidewall, water sample from excavation pool and groundwater samples from monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed Mr. Kahn that the department does not approve application of any chemical prior to reviewing

soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg.
04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked through opening in construction fence. the entire excavation was filled with water. no petroleum sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn including status report. abstract - composite soil sample was collected from east sidewall - groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination found in any sample based on available documents/information, no further work is needed and case is closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:- sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also refer to spill #: 1206982.**
Remarks: tank is in place, soil samples confirm contamination

DEC Memo: 1/24/08 - Raphael Ketani. I spoke with Jeff Bohlen of EnviroTract (631) 924-3001. He said he represented the potential buyer, Krzysztof Kielan, Millenium Development and Construction, LLC, 57 Ballard Street, Valley Stream, NY, 11580. He said that the site is still an active cabinet making business and is owned by Henryk Zawojek. Mr. Bohlen went on to say that the site is a 1 story commercial building. There is a gas tank (UST) in the building and a dispenser and remote fill outside. All three are out of service. Three borings were performed, one at each part of the fuel system. There are low hits of BTEX in the soil which are below TAGM. Two wells were installed. One well had 0.73 ppb benzene and one well had 1.3 ppb benzene. Total xylenes were 6.80 ppb. The site has an E designation, but no one has been assigned to the case. The contact is Dan Cole, Deputy Director, NYC DEP, 59-17 Junction Blvd., 11 Floor, Flushing, NY, 11373. His phone number is (718) 595-4536. A CSL was sent to Mr. Zawojek with a c-c to Mr. Cole.
3/5/08- DEC Piper - I met Envirotrac and sub contractor AARCO, onsite today. They were uncovering at least 1 550 ust that contained gasoline for motor fueling. They will remove tanks soil and piping and collect endpoints to be submitted in closure report. 3/27/08- DEC Piper recieved and reviewed closure report. Approx

DEC Memo: 3-2-16 - obligado - Desk duty - I spoke to Jennifer Lewis. She said this was part of a limited Phase II. A previous PHase 2 was already performed at the site for OER. They gauged 2 wells and they found free product in one well at 0.09 ft. Another well had a sheen. They suspect the product to be gasoline but are not sure yet. They collected a sample of the product and may send it to a lab for laboratory analysis. She said the neighboring property has an open spill #1411729 - 65 Eckford Street. She will send me an email regarding the product they found today and also the prior

phase II. 3-3-16 - obligado - I received the Phase II from Jennifer. This spill is assigned to Kumar Patel. 03/03/16-Hiralkumar Patel. alternate address: none site has little E designation for 'hazmat' (# 14EHAZ403K). ----- NYC VCP #: 15CVCP034K ----- no other spills found. PBS #: 2-607449. as per the PBS record, the site has one (1) 250 gal waste oil AST in contact with soil, in-service, installed in Jan. 2002. PBS registration expired on 02/25/2007. 03/07/16-Hiralkumar Patel. found remedial investigation report and remedial action work plan on NYCOER database. RIR included copy of former Phase I and Phase II conducted in 2013 by MIB Environmental Consulting. abstract of Phase I by MID Env. Consulting dated 08/06/2013: - report does not include historical use of the property - site has two (2) 275 gal waste oil tanks under stairway to mezzanine - hydrocarbon stains on concrete slabs - south parcel at #65 (possibly 65 Eckford St) was a metal plating shop for about 30 years ----- abstract of Phase II dated 07/25/2013: - four soil borings (S1, S2, S4 and S6) were drilled - one soil sample was collected from each boring at 10 ft depth - groundwater sample was collected from boring S1 and S6, at 11.5-12 ft depth ----- - report is missing lab report abstract of RIR dated Mar. 2014: - block #: 2698 / lot #: 25 - elevation of the property ranges from 15 to 20 ft - depth to groundwater ranges from 11.5 to 12.5 ft bg - groundwater flow is generally from northwest to the East River - currently, the site is used for an auto repair shop and contains a one-story building, built to the property lines - the existing one story building will be partially demolished and a four story building with a penthouse and cellar is to be constructed - proposed future use of the site will consist of four-story residential building, with the first floor used for retail, a cellar used for mechanical and storage and a rear yard - cellar will be approx. 10 ft bg and will be used to house the building's utilities and storage space - excavation is not anticipated to go below the water table, since the water table is approx. 12 ft bg ----- - based on the available sanborn maps dated from 1887 to 2007, the site was developed after to 1887 for use as sash storage in 1905. from at least 1942 to 1951, the site was a poultry market. the site was developed as a welding and auto repair from 1965 to present (more details provided in report dated 07/08/16; listed below) ----- - a GPR survey was conducted on 03/05/14 which identified anomalies in the area near the front bathroom and office ----- - installed five (5) soil borings (SB-1 through SB-5) to a maximum depth of 18-19 ft bg and collected ten soil samples - found

high PID readings and petroleum odors in almost all five borings - petroleum odors were detected from 8-16 ft in SB-1; 12-16 ft in SB-2; and 8-12 ft in SB-3, SB-4 and SB-5 - discrete grab soil samples from 0-2 ft and 16-18 ft were collected - no petroleum VOCs were detected in shallow soil samples - method detection limits for petroleum VOCs were much higher than cleanup standard for soil samples from deeper zone except for boring SB-5 ----- found TCE in soil samples (620 ppb in 0-2 ft sample from SB-2 and 1,800 ppb in 0-2 ft sample from SB-5) ----- installed two (2) 1-inch diameter groundwater monitoring wells (MW-1 and MW-2) in soil borings SB-1 and SB-2, with 10 ft of screen - collected two groundwater samples for analysis - no contamination noted in groundwater samples - installed three soil-vapor probes (SVP-1 through SVP-3) to a depth of 18 ft bg and collected three soil-vapor samples (at 0-2 ft from SVP-1, at 0-4 ft from SVP-2 and at 8-12 ft from SVP-3), one indoor air sample and one ambient sample for analysis - found chlorinated solvent contamination (TCE: 66 ug/m³ and PCE: 92.2 ug/m³) in sample from SVP-1 (0-2 ft depth) as per RAWP dated Sep. 2014, a minimum 20 mil thick vapor barrier will be installed beneath the building slab and outside foundation walls below grade. an active SSDS will also be installed.

03/08/16-Hiralkumar Patel. 1:39 PM:- spoke with Jennifer at PW Grosser. she mentioned that Canton K & J LLC. has recently purchased the property and is modifying the redevelopment plans. as required by OER, PW Grosser conducted further groundwater investigation via installation of two additional monitoring wells MW-3 and MW-4. Jennifer believes that contamination was not noted in soil phase during installation of monitoring wells. they collected groundwater samples for metal analysis as required by OER. during investigation, 0.09 ft of product noted in well MW-4. product sample was collected for fingerprint analysis. groundwater sample from MW-4 was collected for VOC analysis also. informed Jennifer that based on review of all available information, the department requires resampling of all four monitoring wells at the site for VOCs (full list) and SVOCs; and survey of existing wells to define site-specific groundwater flow direction. Jennifer will submit results of recent sampling and schedule for well survey and re-sampling, by end of this week. PW Grosser will submit revised redevelopment plans and addendum to RAWP. informed Jennifer that the Department may require a Phase I investigation, as available Phase I report (dated Aug. 2013) is not complete. Canton K & J LLC. 900 Grand Street Brooklyn, NY 11211 Attn.: Howard Ng PH. (917) 628-3318 email:

howard.ng@gmail.com Jennifer Lewis P.W. Grosser Consulting PH. (631) 589-6353 Fax (631) 589-8705
email: jenniferl@pwgrosser.com 03/25/16-Hiralkumar Patel. 3:24 PM:- sent email to Jennifer
inquiring updates. 04/12/16-Hiralkumar Patel. 10:04 AM:- left message for Jennifer.
04/18/16-Hiralkumar Patel. received email from Jennifer (at 5:23 PM on 04/15/16). she spoke with
OER and waiting for copy of the RIR for 65 Eckford Street.
06/10/16-Hiralkumar Patel. 12:48 PM:- left message for Jennifer. 12:54 PM:- sent email to Jennifer inquiring about additional
investigation report. email copied to OER Shaminder. found Mr. Ng's email address on DOB permit.
12:57 PM:- forwarded former email to Jennifer, to Mr. Ng. 1:44 PM:- received email from Jennifer.
she is gathering some additional information regarding the neighboring properties and has FOILED
OER for their files related to 498 Leonard St as this site appeared to be another likely source of
the LNAPL that has migrated onto the subject site. she requested copies of documents that DEC has
related to 498 Leonard St. 1:53 PM:- received call from Jennifer. she mentioned that they got
results of additional investigation required by OER and result of fingerprint analysis. asked her
to submit these results immediately. she mentioned that due to possibilities of off-site source for
LNAPL found in well at the site, they are looking for more information on neighboring properties.
as such they have not re-sampled existing wells or defined site-specific groundwater flow direction
as discussed on 03/08/16. informed Jennifer that the Department requires well survey/re-sampling
prior to commenting on possibilities of off-site source. asked her to submit schedule for well
survey/re-sampling by 06/14/16. also asked her to submit FOIL request for any documents related to
neighboring properties. 2:09 PM:- sent email to Jennifer and asked her to immediately submit
results of additional investigation conducted at the site. also asked her to submit schedule for
well survey/re-sampling by the end of 06/14/16. email copied to Mr. Ng and OER Shaminder.
06/14/16-Hiralkumar Patel. 9:43 AM:- received email from Jennifer. she mentioned that they went to
the site yesterday to collect groundwater samples from all accessible wells and surveyed the wells.
06/22/16-Hiralkumar Patel. received email from Jennifer (at 4:55 PM on 06/21/16). she mentioned
that they have not received SVOC results yet. 06/28/16-Hiralkumar Patel. 11:33 AM:- spoke with
Jennifer. they are still waiting for SVOC results for sampling conducted on 06/14/16. she will
follow-up with the lab. Jennifer mentioned that during well survey, they found 0.02 ft difference
on water table between on-site wells. as such, they will use water

VACANT - PHASE II (Continued)

S118636463

table data from neighbouring sites to define regional groundwater flow direction. informed Jennifer that available sampling results and well survey data should be submitted by tomorrow and SVOC data can be submitted later, once available. 07/11/16-Hiralkumar Patel. received email from Jennifer (at 4:56 PM on 07/08/16) including spill closure request report. she mentioned that based upon the investigation work that was conducted on-site, the evidence points to the LNAPL being from off-site source, likely the spill at neighbouring property at 65 Eckford St. abstract of spill closure request report: - construction of cellar has been removed from the renovation plans ----- - on 02/25/16, two monitoring wells (MW-3 and MW-4) were installed within the existing building - contractor returned on 03/02/16 for well gauging and sampling. during the well gauging, an unidentified LNAPL was identified in MW-4 - product sample was collected for lab analysis which indicated that the LNAPL is an unresolved complex mixture (UCM) similar to a mineral spirits, paint thinner, or Stoddard solvent type of product. also present was a lesser UCM that was extremely weathered; therefore, a quantitative identification could not be determined ----- - after collecting product sample from MW-4, the well was purged and groundwater sample was collected from MW-3 and MW-4 - all four wells were surveyed and resampled in June 2016 - during well gauging in June, a thin layer of LNAPL was identified in MW-4 - after purging wells, groundwater samples were collected from all four wells for full list VOCs and SVOCs - groundwater flow direction was inconclusive due to the small size of the property and the relatively flat gradient across the site. based upon regional groundwater flow direction and the groundwater flow direction indicated on neighbouring sites, the presumed groundwater flow direction at the site is towards the north or northwest ----- - as per Sanborn maps, subject site was undeveloped in 1887, used as sash storage in 1905, an unknown use with a gasoline tank in 1916, a poultry market from at least 1942 through 1951, welding from at least 1965 through 1991, and an auto repair shop from at least 1993 to when it ceased operations around 2013 report included summary of record review for neighbouring site at 65 Eckford St: - site 65 Eckford St was most recently known as Carter Spray Finishing Corp. - site 65 Eckford St was a conditionally exempt small quantity generator that generated wastes such as spent halogenated solvents used in degreasing (waste code F001) and spent non-halogenated solvents (waste codes F003 and F005) - there were two (2) 275 gal ASTs containing TCE at site 65 Eckford St which

VACANT - PHASE II (Continued)

S118636463

were removed/closed in place in 1998 - air emissions in excess of 9,000 pounds per year of 1,1,1-trichloroethane related to the activities conducted under Carter Spray Finishing Corp. - according to sanborn maps, site 65 Eckford St was undeveloped in 1887, identified as Meisel-Danowitz Company (a manufacturer of millwork and hardwood trim) in 1905, Eckford Garage from at least 1916 to 1942 which contained a gasoline tank near the northern property boundary, wood box manufacturing and lacquer spraying in 1951, and a metal finishing company (Carter Spray Finishing Corp.) from at least 1965 through 1989 - as per certificate of occupancy from 1963 and 1973 indicate that a paint spraying booth for metals were present at 65 Eckford St based on following, PW Grosser recommends closure of the subject spill case: - site 75 Eckford St is located hydraulically down-gradient of site 65 Eckford St - there is no known historic use of mineral spirits, paint thinner, or Stoddard solvent at 75 Eckford St - there is a long historic usage related to lacquering and painting at 65 Eckford St - subject property will continue redevelopment activities, including proper soil management practices and the installation of a SSDS under the oversight of NYC OER reviewed remediation database and found an active BCP case for site 65 Eckford St (#: C224218). 07/12/16-Hiralkumar Patel. 10:57 AM:- sent email to Jennifer and asked her to submit missing boring/well logs for MW3 and MW4. email copied to Mr. Ng and OER Shaminder. 1:07 PM:- spoke with DEC Conor Shea, BCP case manager. informed him about possible off-site impact from site 65 Eckford St. 1:38 PM:- received boring logs and well construction log from Jennifer. total borehole depth during installation of MW-3 and MW-4 was 18.5 ft. soil was screened from 0 to 10 ft bg in both boreholes where no odors or PID readings were noted, and as such soil samples were not collected. after that, wells were installed with direct push method. wells were installed with 10 ft of screen from 8 to 18 ft bg. summary: - during remedial investigation (report dated Mar. 2014), five soil borings (SB-1 through SB-5) were installed - borings SB-1 and SB-2 were installed to a depth of 16 ft bg - borings SB-3, SB-4 and SB-5 were installed to a depth of 12 ft bg - petroleum odors with higher PID readings (112 to 1,180 ppm) were detected in 8-12 ft interval (and below if borings installed to deeper zone) in soil borings SB-1 through SB-4 - two soil samples were collected from all five borings: one from shallow zone (0-2 ft bg) and one from deeper zone (8-12 ft bg) - no petroleum VOCs noted in soil samples from shallow zone - TCE found in shallow samples from two borings: SB-2 (620 ppb) and SB-5 (1,800 ppb) - petroleum VOCs

VACANT - PHASE II (Continued)

S118636463

were non-detect in deeper soil samples, but reporting limits were much higher than cleanup standards for soil samples from SB-1 through SB-4 - chlorinated solvent contamination noted in soil-vapor samples (TCE: 1.34 to 66 ug/m³; PCE: 1.08 to 92.2 ug/m³) - two wells (MW-1 and MW-2) were installed in borings SB-1 and SB-2 - two additional wells (MW-3 and MW-4) were installed during further investigation conducted in Feb. 2015 - in June 2016, all four wells on the property were surveyed and groundwater was found between 11.45 and 13.95 ft bg based on available information, petroleum odors/PID readings were detected at/near/below water table and LNAPL noted in upgradient well (MW-4) on the property. discussed case with DEC Jane regarding TCE contamination in shallow soil. as site has e-designation, she is going to discuss with OER on how to handle remediation of TCE impacted material. she requested site maps with sample analyticals. 2:54 PM:- sent email to DEC Jane including site maps with sample analyticals. email copied to DEC Austin. 08/01/16-Hiralkumar Patel. 12:09 PM:- received message from Jennifer. discussed with DEC Jane. after discussing with DEC Cozzy and OER Shaminder, based on available information, DEC Jane asked to transfer case to her name after sending P-site memo. 3:14 PM:- spoke with Jennifer and asked her to contact DEC Jane. 09/20/16-Hiralkumar Patel. sent p-site memo to DEC Jane. 10/14/16-Hiralkumar Patel. after discussing with DEC Jane, case assigned to her. 6/7/19: Site was remediated under oversight of NYCOER's Voluntary Cleanup Program (site no. 15CVCP034K). Site development includes the construction of a 4-story mixed-use residential and commercial building with commercial space, two apartments, and two parking spaces. There is no basement and no open space. Remedy included: 1) Excavation: soil was removed to a depth of 4 feet from grade beneath the full area of the new building, 4 to 5 feet in the AOC-1 and AOC-3 hotspots, and to a depth of 12 feet in the AOC-2 hotspot. A total of 483.4 tons of soil/fill was excavated and removed from the property. 2) Collected and analyzed 14 end-point samples (6 in AOC-1, 3 in AOC-2, 4 in AOC-3 and 1 in general area) to determine attainment of SCOs. Additional excavation was required in two hotspot areas to achieve Track 4 SCOs. All end point sample results were below the Site Specific Track 4 SCOs. 3) Engineering Controls: a. Installed a Vapor Barrier System; b. Constructed an engineered Composite Cover System consisting of 8 to 14 inches of concrete slab c. Installed and are operating an active Sub-Slab Depressurization System (SSDS) consisting of one horizontal branch installed beneath the

DEC Memo: 6/3/15: Mahat t/c: DEC Mahat left a voice message to Rebecca Tummon @ 212.464.8689 to call back with more information about the spill and its progress. 6/9/15: Mahat DEC Mahat received a call from Rebecca Tummon providing more information about the spill case. The site is a e-designated site. Excavation has been performed and end point samples will be taken. A complete report with manifest, laboratory analysis, conclusion, and recommendation will be submitted to DEC for closure review. DEC is waiting for a report. 8/21/15: Mahat t/c: DEC Mahat left a voice message Steve @ grant engineering to call back with more information on the site. 10/1/15: Mahat DEC Mahat left a phone message with Emily @ Grant for a call back from the case manager. DEC Mahat received a call back from Steve and he will provide a closure report as soon as he can. 10/1/15: Mahat e/c: DEC Mahat received an email update: Email: Hi Santosh Good speaking with you earlier. I am writing this email so you have my contact information. We are working on the Spill Closure memo as discussed over the phone. Thanks, Stephen Morse, PE 139 Fulton Street - Suite 907 - New York, NY 10038 Office - 212.464.8689 Mobile - 917.273.8236 www.GRANTpllc.com DEC is waiting for a spill closure report. 12/08/15: Mahat DEC Mahat left a voice message to Mr. Morse to call back with more information. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad 50 Greenpoint Ave has an alternate address of 50-54 Greenpoint Ave. No additional spills found. PBS# 2-612463 found for site, there are 5 550 gallon gasoline USTs removed in 2015 and 1 550 gallon waste oil UST removed in 2015. No documents found in D2. 11/4/2016: Rashad As per PBS 80 West Street may also be alternate address. Brief review of RIR and RAWP found on OER Repository is as follows: The site is currently undeveloped vacant and uncapped, the lot is currently being used for container storage. The site will be redeveloped with a 6 story apartment building. It will include a full cellar which will be used for parking, storage, and utility rooms. The site will be

OER SITE- 13CVCP155K (Continued)

S117973783

excavated to a depth of 10.5 feet below grade, elevator pits will extend to 15 ftbgs. A Phase 1 conducted by Hydrotech identified the site as a gas station and repair facility from 1942-1965. Depth to groundwater ranges from 9-10 feet, groundwater flows northeast to southwest. Soil samples detected PCE at 1700ppb and various SVOCs, no VOCs were found above standards. TCE was detected in groundwater at a max of 13ppb, and several SVOCs were also detected. Soil vapor samples recorded a max concentration of PCE-983ug/m3, it was also detected in all 5 samples. TCE was also detected in all 5 samples, with the max being 865-ug/m3. VOCs were also found in soil vapor samples. Brief Review of RAWP is as follows: Site is in NYCVCP program and the remedial plan consists of collecting 5 endpoint samples, installation of an SSDS, a waterproof vapor barrier, and an engineered composite layer. I emailed Stephen Morse to obtain closure report/memo with regards to the tanks and samples found. Email: smorse@grantpllc.com. 11/8/2016: Rashad Received email from Emily of Grant with closure documentation. Closure report, analytical results, and manifests have been uploaded to D2. Review of closure report is as follows: This site is registered NYCVCP and E-designated site. Excavation at the site in grid A1 was ongoing when the first fuel tank was found and punctured by the excavator releasing an estimated 5-15 gallons of fuel into the soil. Excavation of the soil was stopped and three additional tanks were found that day. On June 1, 2015 AB Environmental was on site to drain the contents from the 4 550 gallon USTs. AB removed a total of 1310 gallons of petroleum contaminated water from the tanks. On June 2, 2015 one additional fuel tank was found during excavation in grid A1. AB also drained and removed the 5th tank. End point samples were advanced on June 9, 2015. The samples taken from grid A1 within the excavated area beneath the spill. Nine end point samples were taken from grid A1. Soil sample SC-1: ND VOCs, exceedances in SVOCs SC-2 - SC-5 VOCs, SVOCs ND EPC1-1 - EPC1-4 VOCs, SVOCs ND. Spill will be closed based on the following; site is a NYCOER VCP site as well as E-Designated, the new development will have an SSDS as well as vapor barrier and engineered composite layer. The petroleum spill associated with the 5 discovered tanks has been remediated as per end point samples in submitted closure report and the tanks have been registered with the Department, see PBS#2-612463. Closure letter prepared and mailed to property owner as well as emailed to Stephen Morse. Letter uploaded to D2.

Remarks: 550 gal ust/found 4 tanks during excavation/clean up underway

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024	Source: EPA
Date Data Arrived at EDR: 10/01/2024	Telephone: N/A
Date Made Active in Reports: 10/23/2024	Last EDR Contact: 12/03/2024
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/06/2025
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Number of Days to Update: 283	Next Scheduled EDR Contact: 12/23/2024
	Data Release Frequency: Every 4 Years

TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2022	Source: EPA
Date Data Arrived at EDR: 11/13/2023	Telephone: 202-566-0250
Date Made Active in Reports: 02/07/2024	Last EDR Contact: 11/14/2024
Number of Days to Update: 86	Next Scheduled EDR Contact: 02/24/2025
	Data Release Frequency: Annually

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

MGP: Manufactured Gas Plants Listing

From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

UTM Y (Meters):	4507584.0
Elevation:	25 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

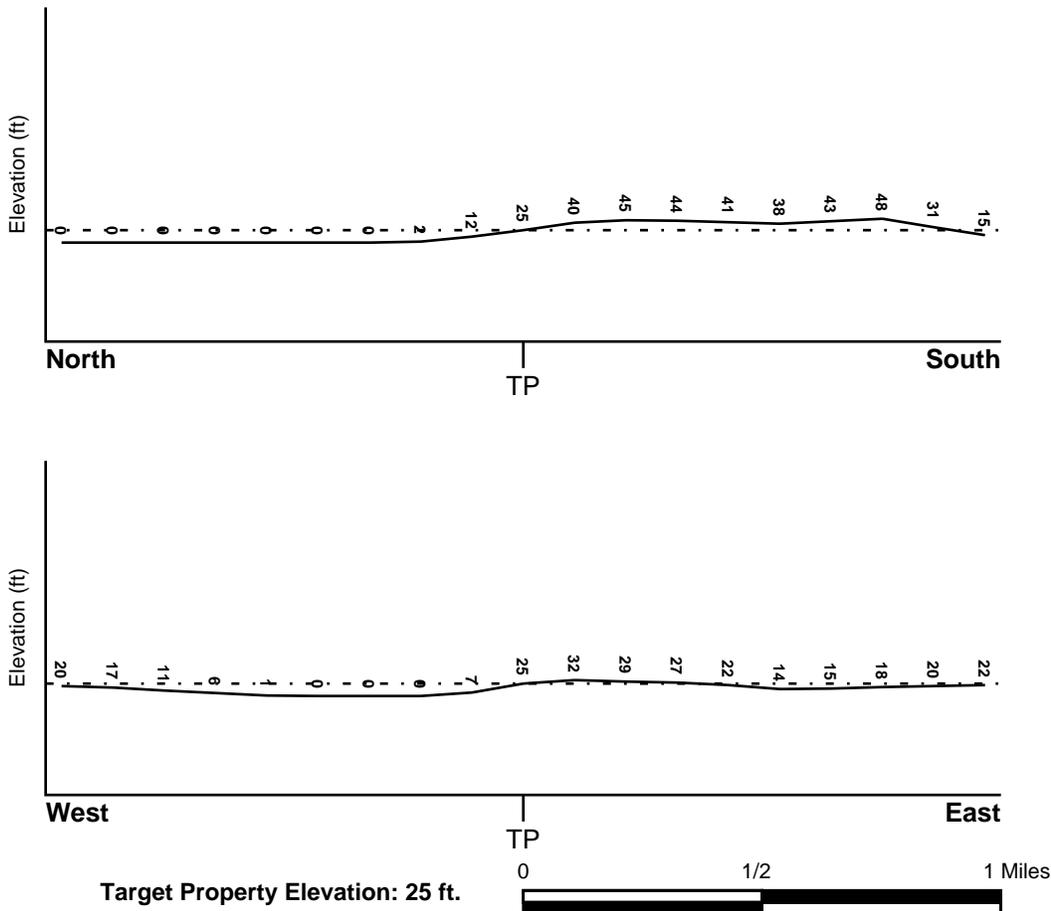

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

3604970203F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Ordovician
Code: Oe (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York

Survey Area Data: Version 15, Aug 29, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
UtB	Urban land, till substratum, 3 to 8 percent slopes	0.7	100.0%
Totals for Area of Interest		0.7	100.0%

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **12/13/2024 at 6:34 AM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.
