Health Problem: "People will not come into contact with contaminated soil or groundwater unless they dig below the ground surface. People are not drinking the groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is vacant and environmental sampling indicates that the potential for exposure to site contaminants due to soil vapor intrusion is not a concern on-site or off-site"

DEC Memo: 7/28/16 - Obligado - Desk Duty - I spoke to Matt Carrol. They are actively digging for foundation for a development. Found soil contamination while digging. Assigned Santosh Mahat. 8/9/16 - Obligado - CSL sent cc to Matt Carrol via email. 8/10/16: Mahat e/c: DEC Mahat received an email update on the spill case. The ground water sample result were below CP 51 Guidance value. A complete report will be submitted to the Department once the excavation is completed. Matthew Carroll, PE ***** Retained Contractor Tenen Environmental 646.606.2332 x103 DEC is waiting for a report. 9/12/2016 - V. Brevdo Spill Case is transferred from Spill Prevention and Response to Remediation Section B due to project manager Santosh Mahat departure to the other DEC Program, as per 9/9/16 discussion between Randall Austin and Vadim Brevdo. VB 9/12/16 - Raphael Ketani. The spill case was assigned to me due to a caseload realignment. I checked the ACRIS property database for the ownership. The block and lot were 2358 and 6. I found a deed dated 10/15/15. The buyer was 125 Metropolitan Owner, LLC, c/o David Kramer, the Hudson Companies, Inc., 826 Broadway, NY, 10003. The latest documents in ACRIS have Hudson Metropolitan, LLC at the same address. I checked for any PBS records using alternate addresses I had found in the NYC DOB website. These alternative addresses were 123-125 Metropolitan Avenue and 92-94 North 3rd Street. I tried to reach Matthew Carroll, PE, by phone at Tenen Environmental (646) 606-2332 x103, but I could only leave a voice message. 9/23/16 - Raphael Ketani. Mr. Carroll called me back. He said that they excavated to the design depth and took soil end point samples and what they thought was a groundwater sample. No petroleum contamination was found in any of the samples. The case is with the NYC OER and so they put in a vapor barrier. The foundation slab has been installed and building will commence. The closer report will be sent soon. 2/21/17 - Raphael Ketani. I spoke to Mr.Carroll today and asked him when he will submit the closer report. He said that he thought it had been sent a long time ago. He added that the will check and try to resend it. He will let me know by email when he will

be sending the document. 2/24/17 - Raphael Ketani. I reviewed the Tenen Environmental September 2016 Spill Closure Report. The work was performed for Hudson Metropolitan, LLC. The remedial actions were performed as per a Remedial Action Plan dated 4/9/15 which was approved by the DEC. The property is located at 125 Metropolitan Avenue in the Williamsburg neighborhood of Brooklyn. The total area comprising the property is 20,350 square feet. The property is bounded by North 3rd Street, a 5 story commercial building and a 4 story mixed use building to the north. Metropolitan Avenue, 2 one story industrial/commercial buildings, a vacant lot and a restaurant border the site to the south. A 6 story residential building exists to the east and a one story industrial building is located to the west. The site itself will contain commercial businesses on the first floor and 75 apartments on the floors above. A full basement with parking and other services will be constructed. There will be 2 elevators. Fill containing asphalt, concrete, brick, ash, cinders, coal, sand, silt and clay extends to about 5 feet below grade. Soil consisting of sand, cobbles, silt and rock fragments (glacial till) underlies the fill. Bedrock is greater than 100 feet below grade. Groundwater is present at 30 feet below grade. Flow is believed to be towards the west where the East River lies 1100 feet from the site. A 550 gallon UST which had contained #2 oil was present at the site. A release was noted, but it did not penetrate down far enough to contact the water table. Remedial activities took place from July 28, 2016 to August 22, 2016. The tank and the contaminated soil were removed. Along the northern border of the site, the fill and soil were excavated down to 2 to 18 feet below grade. Sixteen hundred (1600) tons of excavated material was shipped to Clean Earth of Carteret, NJ. Air monitoring PID meters and personal data ram meters (PDR) were running while the excavation work was taking place. The VOC and particulate concentrations, respectively, were below the action levels. Two end point soil samples were collected from the base of the excavation (about 18 feet bgs). The results were compared to the CP-51 unrestricted residential standards. No VOCs or SVOCs were detected above the unrestricted standards (there were only trace amounts of benzene and several SVOCs). One statement in the report did not make sense. That was the existence of an April 2015 RAP which had been approved by the DEC. As the spill was called in on 7/28/16, the DEC would not have been aware of the site or the contamination until then. I tried to contact Mr. Carroll (646) 606-2332 x103 to discuss this, but could only leave a voice message and send an email. Otherwise, the

report was acceptable. 2/28/17 -
Raphael Ketani. Mr. Carroll (646) 606-2332 x103/mcarroll@tenen-env.com
sent me a response email
today regarding the April 2015 RAP mentioned in the Spill Closure
Report. He stated the following:
The text in the report is incorrect. The RAP dated April 2015 was
approved by NYC OER. In August,
when the spill was reported I spoke with Tosh and indicated that we
were implementing the OER RAP,
which included air monitoring and remedial oversight and had a
provision for closing out petroleum
tanks. Would it be acceptable if we changed the RAP reference to read
the following? Remedial
activities were completed in accordance with an April 9, 2015 Remedial
Action Plan (RAP) approved
by the NYC Office of Environmental Remediation (OER), which included
community air monitoring and
remedial oversight requirements, and in coordination with DEC staff.
For the certification, I would
remove the part that reads and that all activities were performed in
full accordance with the
DER-approved work plan and any DER-approved modifications . I
responded that we will accept the
Spill Closure Report as it has been written since we now have an
explanation by email from Tenen
referring to the misstatement concerning the April 2015 RAP. I added
that we will close the spill
case with this email as part of the case file. Mr. Carroll sent me the
name of the company which
owns the property and the contact person. It was: 125 Metropolitan
Owner LLC 826 Broadway, 11th
Floor New York, NY 10003 Attn: Pedram Mahdavi I reviewed the case
file. Based upon the information
in the case file, I determined that the oil contamination had been
removed and that any residual
contamination, if present, would not be a threat to the public or the
environment. Therefore, I
closed the spill case effective today.

DEC Memo: 12/5/15 TJD Recall - citizens complaints verified, multiple private vehicles impacted by product sprayed from burst hydraulic hose on pile driver at neighboring construction site. No contact personnel available at redevelopment site (125 Metropolitan Avenue). Photos on DECDOCS. 12/6/15 TJD Referral to DLE - ECO Cummings to perform site inspection 12/22/15 TJD Email received from Matthew Carroll @Tenen Environmental - uploaded to DECDOCS 12/23/15 TJD Email response to Tenen Environmental uploaded to DECDOCS. 4/26/16 TJD Email sent to Matt at Tenen Environmental requesting closure documentation. 10/13/16 TJD File review. Closure report has been submitted by Tenen Environmental. As per report, a total of 102.62 tons of fill material was excavated from the site as part of the site redevelopment process. The petroleum contaminated soil associated with the discharge from the pile driver was reported to be included in the total volume of soils excavated, transported and disposed of as part of the site redevelopment process. The consultant has included a map of the grid map of the site depicting those areas impacted by the reported discharge. Based upon the documentation provided the affected spill area has been over excavated during the site redevelopment process. No further action is required associated with the reported spill from pile driver. All documentation has been uploaded to DECDOCS. Spill closed.
Remarks: caller reporting that her vehicle and the parking garage is covered with oil. spill caused by construction company next to talkers residence. Caller is looking for help as to what to do

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CEDRI is a web application used by EPA programs and various stakeholders to manage environmental data transmitted to EPA in order to meet EPA's reporting requirements.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Latitude: 40.7186080
Longitude: -73.9634420
DEC Memo: Sangesland spoke to Hardik Parekh at EEA Inc. He said the site is a vacant lot CSL sent to owner: Joe Matarese, 484 Union Ave, Brooklyn, NY 11211 EEA forwarded to DEC a copy of the Phase 2 report (see E-Docs) Case reassigned from Sangesland to Ahmed 10/27/11 - Austin - Spill Transferred from Ahmed to Rahman - end 07/16/13- Closure report in edocs. Summary from closure report: No VOCs were detected in the soil or ground water. A vapor barrier 20 mil HDPE was installed below the slab of the cellar and behind all foundation walls. A total of approx. 4764.38 tons of non hazardous soil was transported to the Clean Earth of NJ. In accordance with the RAP, EBC collected endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed. As shown in Figure 6, the Site was divided into five zones with the acronyms A, B, C, D, and E. From each of the five zones, EBC collected five endpoint samples. The samples were labeled A1, A2, A3, A4, A5, etc. The endpoint samples collected from Zones A, B and C were analyzed for SVOCs (8270) and metals, and the endpoint samples collected from Zones D and E were analyzed for VOCs, SVOCs, pesticides/PCBs, and metals. A copy of each of the laboratory reports for the endpoint soil samples is attached in Appendix E and the results are summarized in Table 1 - Volatile Organic Compounds, Table 2 - Semi-Volatile Compounds, Table 3 - Pesticides/PCBs, and Table 4 - Metals. No SVOCs

were detected within any of the 25 endpoint samples at a concentration above NYSDEC Part 375.6 Unrestricted Use Soil Cleanup Objectives (SCOs). No metals were detected above Unrestricted Use SCOs within 22 of the 25 endpoint samples. Two of the endpoint samples in Zone B contained chromium at a concentration slightly above Unrestricted Use SCOs, but well below Restricted Residential SCOs. Zinc was detected slightly above Unrestricted Use SCOs within one soil sample collected from Zone A. Soil disturbance and intrusive activities were completed in accordance with the procedures outlined in the site specific CHASP and RAP approved by the NYCDEP in June 2008. No surface soils and/or fill were utilized for backfilling or grading purposes. NFA required.(sr)

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number: 001
Tank Id: 34833
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
E00 - Piping Secondary Containment - None
F01 - Pipe External Protection - Painted/Asphalt Coating
K00 - Spill Prevention - None
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I04 - Overfill - Product Level Gauge (A/G)
C03 - Pipe Location - Aboveground/Underground Combination
L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D035
Waste Description:	Methyl Ethyl Ketone
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
 The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

1011923119

HW Code: C224159
SWIS: 2401
Town: New York City
Record Added Date: 05/01/2012
Record Updated Date: 08/01/2022
Update By: JHOCONNE
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediaton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

 Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were

made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Name: 149 KENT AVENUE
Address: 149 KENT AVENUE
City,State,Zip: BROOKLYN, NY 11211
Site Code: 463657
HW Code: C224159
Control Code: 13
Control Type: ENG
Date Record Added: 10/03/2013
Date Rec Updated: 04/25/2024
Updated By: WYZHENG
Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were

made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and

Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Site Description: "Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The residential building was completed. Current Zoning and Land Use: The current use of the site is commercial/residential. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and it was demolished soon after. Contamination at the site was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site. "

Env Problem: "Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. "

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures."

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

 DEC Memo: 3/28/05 - Austin - Reassigned from O'dowd to Rahman - received report from AKRF, dated March, 2005, entitled Spill closure Investigation for review - end Austin - transferred to Albany for reassignment - end 07/22/05- Called AKRF Inc., as consultant for the USA Waste Inc. to see if there is a spill closure report. S. Scharf 09/16/05- finally got in touch with AKRF person. named Marc Godick (marc_godick@akrf.com)(914-922-2356 and 646-388-9534). Marc forwarded me the spill closure report for my review/closure. Review of spill closure report found that closure was acceptable. GW was tested seven years later and all results were below GW standards. Spill closed via letter on November 23, 2005. S. Scharf 11/29/05. Marc godick AKRF, INC 34 South Broadway Suite 3N White Plains, NY 10601 914-922-2356 during removal of tanks found contaminated soil. At a later date, contaminated soils were reomved. Seven years later, GW testing revealed levels below GW standards.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Update By: AAOBLIGA
Site Description: "Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the east by mixed commercial/residential buildings. Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One sump and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The

second floor consists of 11 residential units. Current Zoning and Land Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. Past Use of the Site: Former Cleaners Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximately 100 feet below ground surface (fbsg). Based on the local topography, groundwater most likely flows in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbsg. "

Env Problem:

"Nature and Extent of Contamination: Limited information about site contamination has been obtained through investigations performed on an adjacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see former site no. 224177). Further investigation of the on-site portions of the site are planned. The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and identified these contaminants in soil, groundwater, and soil vapor. Soil - PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with 6NYCRR Part 375-6.8(a) UUSCO of 0.02 ppm). Groundwater - PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb). Soil vapor - PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3. "

Health Problem:

"Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling identified impacts to the indoor air quality of the on-site building and immediate actions have been taken to minimize exposures. Additional evaluation is needed to determine whether soil vapor intrusion is a concern for off-site buildings. "

 Updated By: BXANDERS

Site Description: "Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank. Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177."
Env Problem: "Nature and Extent of Contamination: Recent sampling was conducted as

S103942699

part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400 g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177. "

Health Problem: "Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures."

Hazardous Waste Summary:

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichloroethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

said the tank failed the test with a dry leak. It's a wrapped tank on concrete with Manhole issue. Protest gave a proposal to the management company to fix the manhole. 10/10/17-TFT letter sent to: Mr. Richard Herbst 315 Berry Street Corporation 5014 16 Avenue Suit 268 Brooklyn NY 11204 11/22/17 TJD File review. ProTest Environmental has submitted a closure report for this spill. On 10/9/17 a 5K #2 FO AST failed tightness test. On October 26th, contractor returned to site and isolated tank and lines - Technicians first replaced and re-bolted the manway cover. Further testing revealed a small wet leak previously masked by the loader dry leak. Technician inspected a lines and tightened a compression fitting on petrometer line. Upon completion above described repairs the tank system was retested with passing test results. Contractor reports no visible contamination was observed. Based upon the information provided there is no further action required. All documentation uploaded to DECDOCS. Spill closed. no release, tank test failure

Environmental Interest/Information System:
 The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Tank Info:

Tank Number: 001
Tank Id: 36978
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1993
Capacity Gallons: 3000

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Waste Line:

Manifest Tracking Number: 200043230CLE
Waste Line Number: 1
U.S. DOT Hazardous Indicator: Y
U.S. DOT ID Number: UN1950
U.S. DOT Description: Un1950, Waste Aerosols 2.1, Erg#126
Non-Hazardous Waste Description: Not reported
Number of Containers: 1
Container Type Code: CF
Container Type Description: Fiber or plastic boxes, cartons, cases
Waste Quantity: 7
Quantity Unit of Measure Code: P
Quantity Unit of Measure Description: Pounds
Waste Quantity, in Tons: 0.0035
Acute Waste Quantity, in Tons: 0
Non-Acute Waste Quantity, in Tons: 0.0035
Waste Quantity, in Kilograms: 3.1746051
Acute Waste Quantity, in Kilograms: 0
Non-Acute Waste Quantity, in Kilograms: 3.1746051
Management Method Code: H141
Management Method Description: STORAGE, BULKING AND/OR TRANSFER OFF SITE
Waste Residue Indicator: N
Quantity Discrepancy Indicator: N
Waste Type Discrepancy Indicator: N
Waste Density: Not reported
Waste Density Unit of Measure Code: Not reported

 Updated By: SMMARTIN
 Site Description: "The site is located in an urban area in Brooklyn. The site is a rectangular shaped parcel along the southern side of South 4th St, between Berry St. and Bedford Ave. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center flanked by two smaller 1 story structures. All three buildings were constructed in the early to mid 1900's and are in varying stages of deterioration. The Site previously had a variety of uses, including an adhesives factory and an electrofoaming laboratory, but always manufacturing. The eastern building has been listed as a warehouse since the 1970s, but also was used as a factory, including a dye factory. The Volunteer was not the property owner and withdrew from the VCP. The owner of the property did an independent renovation of the buildings. "
 Env Problem: "In 1998, the following removals were recommended: Various wastes from the buildings, PBS tanks, contaminated soil with VOCs and SVOCs in excess of recommended soil cleanup objectives in TAGM 4046. Air sampling was also recommended. The building was renovated without of DEC knowledge and/or oversight."

Updated By: JHOCONNE

Site Description: "Location: The 0.49 acre site is located at 98, 100, and 104 South 4th Street in the Borough of Brooklyn, Kings County, NY in an urban area. It was previously known as 98-116 South 4th Street. Site Features: The site consists of three buildings: 98-102 (now 98), 104-114 (now 100) and 116 (now 104) South 4th Street. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center (100 South 4th St.) flanked by two smaller 1 story structures. Two of the buildings were constructed in 1910 and the third was constructed in 1950. All three buildings were renovated in the early 2000s. The 7 story structure is a residential building with approximately 74 units. Current Zoning and Land Use: The site is currently zoned as M1-2/R6 and is surrounded by residential, commercial and industrial uses. It is identified as a single tax lot, Block 2443, Lot 13 and is a rectangular shaped parcel along the southern side of South 4th St., between Berry St. and Bedford Ave. Past Use of the Site: The site previously had a variety of manufacturing uses, including an adhesives factory (98 S. 4th St, formerly 98-102 S 4th St), an electroplating operation, a laboratory (100 S. 4th St, formerly 104-114 S 4th St), and a dye factory (116 S 4th St). Carmin Industries was identified as a Large Quantity Generator of hazardous wastes, including undefined hazardous wastes,

ignitable hazardous wastes, corrosive hazardous wastes, reactive hazardous wastes, chromium, lead and cyanides. Site Geology and Hydrogeology: Soil borings conducted in 1996 identified fill materials to a depth of approximately 7 feet below grade from the first floor of 98 S. 4th St and to a depth of approximately 6 feet below the basement floor of 100 S. 4th St. Beneath the surface fill layer is sand and silt to a depth of at least 17 feet below grade. Groundwater is present at a depth of approximately 15-17 feet below grade."

Env Problem: "Nature and Extent of Contamination: A subsurface investigation was performed in 1997 in support of an application to participate in the Voluntary Cleanup Program (see site no. V00094). Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs). Groundwater samples were analyzed for VOCs only. Soil A total of nine soil borings were advanced throughout buildings 2 and 3 (access to building 1 was precluded by structural deficiencies). Samples were collected from nine soil borings. Various VOCs were detected at concentrations exceeding the unrestricted use soil cleanup objectives (SCOs), including: tetrachloroethylene (PCE) at a maximum concentration of 5.5 parts per million (ppm); trichloroethene (TCE) at 3.7 ppm; and toluene at 1.4 ppm. SVOCs were also detected above the unrestricted use SCOs including: fluoranthene at a maximum concentration of 14 ppm; phenanthrene at 19 ppm; and pyrene at 19 ppm. The majority of the contaminants appear to be found beneath building 3 (the western one-story building). Groundwater Groundwater samples were collected from 3 locations on-site. PCE was detected at a maximum concentration of 86 parts per billion (ppb), TCE at 100 ppb, and toluene at 28 ppb. In addition, groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 71.4 ppb and TCE at 27.2 ppb. Soil Vapor No soil vapor samples were collected. Groundwater samples collected from a property immediately adjacent to the south of the site (BCP site no. C224233) identified PCE at a maximum concentration of 2870 micrograms per cubic meter (ug/m3) and TCE at 3510 ug/m3. Further delineation of the soil vapor was performed at 2 residential buildings located to the west of the Site on Berry Street identified the need for mitigation. See also site no. C224260."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

SWIS: 2401
Investigator: BATTISTA
Referred To: Not reported
Reported to Dept: 1988-05-17
CID: Not reported
Water Affected: Not reported
Spill Notifier: Tank Tester
Last Inspection: Not reported
Recommended Penalty: False
Meets Standard: True
UST Involvement: False
Remediation Phase: 0
Date Entered In Computer: 1988-05-19
Spill Record Last Update: 2005-08-18
Spiller Name: Not reported
Spiller Company: MARIO FIFCHERA(CONTACT)
Spiller Address: 373 WYTHE AV
Spiller County: 001
Spiller Contact: Not reported
Spiller Phone: Not reported
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 85302
Latitude: 40.7119542
Longitude: -73.9661205
DEC Memo: Not reported
Remarks: 5K TANK, L R = UNDETERMINABLE, THEY COULDN'T MAINTAIN LEVEL IN STAND PIPE. INIT PETRO-TITE SYSTEM. 7/19 : RETEST L R = -0.219 GPH. NO ACTION. 8/18/05-Vought-Found letter from Tank Testing Inc (718-789-3770) dated 11/5/93. loos and or weak connections at the top of the tank were discovered and repaired. No evidence of oil leakage during normal operations. Tank was retested and passed.

DEC Memo: Question is this TCE (PERC) or is it Petroleum? Is this managed by DEC Spills? - Depends on the quantity Case is now being worked on by Tyree - Matt Boeckel 631-249-3150 ext 241 04/25/12 Three hydraulic lifts were removed. End point samples were taken from surrounding the lifts. Some SVOCs exceedances observed in lab analytical data. One VOC TCE was detected (1800 ppb) above DEC guidelines (1300 PPB) in one sample. This detected level is not too high. Therefore, case is closed. (sr)
Remarks: 1800ppb on soil samples. No odor no staining

 Site Description: "Location: The site is located at 99-101 South 5th Street aka 337 Berry Street (Block 2443; Lot 6, formerly known as Lots 6, 37 and 41), Williamsburg, Brooklyn; an urban area within New York City and represented by Brooklyn Community Board 1. The site is approximately 15,870 square feet or 0.36 acres. It is bordered on the south by South 5th Street and the Williamsburg Bridge, and on the north, east, and west by apartment buildings, residential structures, and commercial spaces. Site Features: The site has been recently redeveloped with a 12 story apartment building with a commercial business on the first floor. Prior to demolition in August 2016 the site had been improved with an abandoned warehouse that was used by the City of New York's Landmark Preservation Commission (LPC) as a salvage warehouse. Current Zoning and Land Use: This site is a 12-story apartment building and is zoned M1-2/R6, Special Mixed Use District (MX-8) which allows for restricted-residential/commercial/industrial uses. The surrounding parcels are currently used as residential condominiums and/or houses converted to apartment buildings and ground floor commercial spaces. Past Use of the Site: Previous site uses include an architectural salvage warehouse which started in 1980. Salvaged items such as doors, windows, fences, and decorative elements, were sold to the public. The program ended in 2000 due to budgetary constraints. Former lots 37 and 41 were originally improved with two story residential buildings from ca. 1868. All three former lots (6, 37, and 41) have New York City E Designation assigned in the Greenpoint-Williamsburg Rezoning Environmental Impact Statement (EIS) due to the presence of an auto body shop on former Lot 41. Five abandoned underground storage tanks (USTs) were discovered on-site during excavation activities that were part of the Interim Remedial

Measures described in Section 6.2. One UST had a spill case opened due to leaking material that has since been closed. Site Geology and Hydrogeology: Fill material exists to depths between 0-5 feet below ground surface (bgs). Native soils beneath the fill layer consist of well-graded sand (ranging from fine to coarse) with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and mercury in soil, tetrachloroethene and trichloroethene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

It is bordered on the south by South 5th Street and the Williamsburg Bridge, and on the north, east, and west by apartment buildings, residential structures, and commercial spaces. Site Features: The site has been recently redeveloped with a 12 story apartment building with a commercial business on the first floor. Prior to demolition in August 2016 the site had been improved with an abandoned warehouse that was used by the City of New York's Landmark Preservation Commission (LPC) as a salvage warehouse. Current Zoning and Land Use: This site is a 12-story apartment building and is zoned M1-2/R6, Special Mixed Use District (MX-8) which allows for restricted-residential/commercial/industrial uses. The surrounding parcels are currently used as residential condominiums and/or houses converted to apartment buildings and ground floor commercial spaces. Past Use of the Site: Previous site uses include an architectural salvage warehouse which started in 1980. Salvaged items such as doors, windows, fences, and decorative elements, were sold to the public. The program ended in 2000 due to budgetary constraints. Former lots 37 and 41 were originally improved with two story residential buildings from ca. 1868. All three former lots (6, 37, and 41) have New York City E Designation assigned in the Greenpoint-Williamsburg Rezoning Environmental Impact Statement (EIS) due to the presence of an auto body shop on former Lot 41. Five abandoned underground storage tanks (USTs) were discovered on-site during excavation activities that were part of the Interim Remedial Measures described in Section 6.2. One UST had a spill case opened due to leaking material that has since been closed. Site Geology and Hydrogeology: Fill material exists to depths between 0-5 feet below ground surface (bgs). Native soils beneath the fill layer consist of well-graded sand (ranging from fine to coarse) with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and mercury in soil, tetrachloroethene and trichloroethene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to control

and 41) have New York City E Designation assigned in the Greenpoint-Williamsburg Rezoning Environmental Impact Statement (EIS) due to the presence of an auto body shop on former Lot 41. Five abandoned underground storage tanks (USTs) were discovered on-site during excavation activities that were part of the Interim Remedial Measures described in Section 6.2. One UST had a spill case opened due to leaking material that has since been closed. Site Geology and Hydrogeology: Fill material exists to depths between 0-5 feet below ground surface (bgs). Native soils beneath the fill layer consist of well-graded sand (ranging from fine to coarse) with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs and mercury in soil, tetrachloroethene and trichloroethene in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and soil vapor is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 522334
Site Description: "Location: The site is located at 99-101 South 5th Street aka 337 Berry Street (Block 2443; Lot 6, formerly known as Lots 6, 37 and 41), Williamsburg, Brooklyn; an urban area within New York City and represented by Brooklyn Community Board 1. The site is approximately 15,870 square feet or 0.36 acres. It is bordered on the south by South 5th Street and the Williamsburg Bridge, and on the north, east, and west by apartment buildings, residential structures, and commercial spaces. Site Features: The site has been recently redeveloped with a 12 story apartment building with a commercial business on the first floor. Prior to demolition in August 2016 the site had been improved with an abandoned warehouse that was used by the City of New York's Landmark Preservation Commission (LPC) as a salvage warehouse. Current Zoning and Land Use: This site is a 12-story apartment building and is zoned M1-2/R6, Special Mixed Use District (MX-8) which allows for restricted-residential/commercial/industrial uses. The surrounding parcels are currently used as residential condominiums and/or houses converted to apartment buildings and ground floor commercial spaces. Past Use of the Site: Previous site uses include an architectural salvage warehouse which started in 1980. Salvaged items such as doors, windows, fences, and decorative elements, were sold to the public. The program ended in 2000 due to budgetary constraints. Former lots 37 and 41 were originally improved with two story residential buildings from ca. 1868. All three former lots (6, 37, and 41) have New York City E Designation assigned in the Greenpoint-Williamsburg Rezoning Environmental Impact Statement (EIS) due to the presence of an auto body shop on former Lot 41. Five abandoned underground storage tanks (USTs) were discovered on-site during excavation activities that were part of the Interim Remedial Measures described in Section 6.2.  DEC Memo: Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up. 9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf 4/30/08 Sent Old TTF letter to: Jerry Lebedowicz Williamsburg Square LLC 52-47 Browvale Lane Little Neck, NY 11362 Address obtained from tank closure application. bf 5/2/08 Received message from J. Lebedowitz to call him back. bf 5/5/089 Received call from J. Lebedowitz tank was closed. Athena Environmental sampled after tank was removed. bf 6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry

Remarks: Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf 3K TANK FAILED PETRO TITE WITH A LEAK RATE OF -.161GPH.

DEC Memo: 10/25/17 TJD Spill assigned to Rick Lin as per Vought. 10/26/17- Lin - Received emails from Vought with reports. No alternate address or PBS registration found. Review reports with Vought: Remedial Investigation Report (Langan October 2017 Draft) prepared for RedSky Capital, 3 Hope Street, Brooklyn, NY 11211. The Site is 5,000-square feet and is bounded by North 4 Street followed by Public School 017, which consists of a five-story public use building and open air playground, to the north, a four-story mixed use residential/commercial building to the south, a two-story

manufacturing building to the east, and Driggs Avenue followed by an open-air parking lot to the west. Currently, the Site is an asphalt-paved lot used for storage of stone slab building materials and is enclosed by a perimeter fence along the property boundary. The proposed future use of the Site will consist of a six-story mixed-use commercial and residential building, with a single below-grade cellar level. The building's below-grade cellar will be used for storage (including residential tenant storage), pet grooming, and building mechanical equipment rooms. Parking proposed for second floor. Excavation will be performed as part of construction of the cellar to a depth of approximately 15.5-feet below sidewalk grade across the entire Site footprint; an elevator pit in the south-central portion of the lot will be excavated to approximately 19.5-feet below sidewalk grade. Work performed under remedial investigation: Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.). Installed five soil borings across the entire project Site, and collected 10 soil samples for chemical analysis from the soil borings to evaluate soil quality. Installed three temporary groundwater monitoring wells throughout the Site to establish groundwater flow and collected three groundwater samples for chemical analysis to evaluate groundwater quality. Installed three soil vapor probes around Site perimeter and collected three samples for chemical analysis. Environmental findings: Elevation of the property ranges from 24 to 26-feet with respect to the North American Vertical Datum of 1988 (NAVD 88). Depth to groundwater ranges from 18.5- to 21-feet below existing site grade at the Site. Groundwater flow is inferred to be from southeast to northwest beneath the Site. The stratigraphy of the site, from the surface down, consists of approximately 5.5- to 10-feet of historic fill material underlain by native sands with varying amounts of gravel and silt. The bottom of the sand unit and bedrock was not encountered during the RI. Data (Soil) 1,2,4-trimethylbenzene 16,000 ppb (LSB-2, 18-18.5 ft bgs) Ethyl benzene 3,300 ppb (LSB-2, 18-18.5 ft bgs) 2,700 ppb (DUP-1, 18-18.5 ft bgs) o-xylene 1,300 ppb (LSB-2, 18-18.5 ft bgs) 1,100 ppb (DUP-1, 18-18.5 ft bgs) p- & m-xylenes 2,300 ppb (LSB-2, 18-18.5 ft bgs) 2,100 ppb (DUP-1, 18-18.5 ft bgs) Total xylenes 3,600 ppb (LSB-2, 18-18.5 ft bgs) 3,200 ppb (DUP-1, 18-18.5 ft bgs) Acenaphthene 59,000 ppb (LSB-4, 1.5-2.0 ft bgs) Dibenzofuran 39,200 ppb (LSB-4, 1.5-2.0 ft bgs) Fluorene 60,700 ppb (LSB-4, 1.5-2.0 ft bgs) Naphthalene 35,000 ppb (LSB-4, 1.5-2.0 ft bgs) Data (Soil Vapor) 1,3,5-Trimethylbenzene 9.8 ug/m³ (LVS-1, 17.5 ft bgs) PCE 8.3 ug/m³ (LVS-1, 17.5 ft bgs) TCE 170 ug/m³ (LVS-1, 17.5 ft bgs)

A Remedial Action Work Plan to address the hazardous material portion of the E-Designation will be provided within one week of the submittal of this Remedial Investigation Report. DEC possibly requires: 1) Air Monitoring due to adjacent playground/school 2) Submission of Transaction Screen Environmental Site Assessment Report prepared by LCS Inc for M&T bank on behalf of RedSky Capital dated June 2015 as per the RIR. 3) Hotspot excavation, if found, as groundwater is contaminated and no vertical pathway has been found to date in soil sample. 4) Soil vapor mitigation after discussion with NYSDOH Walz due to up to 250 ug/m³ TCE 5) Question on presence of underground gasoline tanks due to consultant review of transaction Screen Environmental Site Assessment Report 11/1/2017- Lin/Vought- Lin and Vought had the conference call with Walz from NYSDOH and Samantha/Shaminder from OER. Per Shaminder, the consultant estimated that only 22" between the foundation and the water table, so there might not be enough room to install a SSDS (subslab depressurization system). Installation of a vapor barrier. PID during excavation and hot spot excavation. Remedial action plan with community air monitoring plan will come in this week. Nathan suggested a permanent air monitoring set up in the direction of the school. 8/23/21-Lin-Depth to groundwater is at 18.5' to 21'. The groundwater flow direction is to the northwest toward east

river. Two (2) 275 gallon and one (1) 550 gallon USTs were removed. Since the tanks were found near the site boundary, three (3) sidewall soil samples toward the site boundary were taken. All three (3) soil samples came back clean. Soil on site was excavated to a depth of 15' to 16' bgs. A hotspot identified during the RI was excavated down to 20' bgs. Five (5) endpoint bottom samples were taken across the site and two of the samples were taken in the hotspot area. All five (5) endpoint soil samples came back clean. Dissolved contamination in the groundwater is expected to attenuate over time as no contaminated soil remains on site. An engineering composite and vapor barrier system were installed. An active SSDS was installed. Case closed.

Remarks: cleanup pending - would like to have assigned to Ricky Linn

reassigned from DeMeo to Patel 03/24/15-Hiralkumar Patel. 10:35 AM:- went to site for inspection, but no one was available to provide access to the basement. found a color coded fill port and vent pipe by the building wall, at the southeast corner of the building (adjacent to building 189 Bedford Ave). 10:43 AM:- spoke with Mr. Wersocki. he mentioned that he doesn't remember the actual cause of test failure in 2003, but the tank system was tested tight after 2003. he confirmed no spill inside building. 10:47 AM:- spoke with Richard (917-647-6475), who maintains the boiler system at the site. he confirmed that the site has an underground tank which was found tight during recent testing. he also confirmed no signs of oil spill within building. in accordance with R2 TTF closure protocol, this spill is being closed due to no indication of a current release, no information indicating that there may have been a historical release, no information that this tank test failure will be an issue in the future and the tank system was found tight during subsequent testing.

 Town: New York City
 Record Added Date: 06/01/2007
 Record Updated Date: 08/07/2009
 Update By: yywong
 Site Description: "This is a new BCP application which pertains to properties located at 285 and 291 Metropolitan Ave., Brooklyn, Kings County. This site is approximately 0.25 acres in size in an urban area. Surrounding uses are commercial and residential. Directly to the north, across the street from the site on North 4th Street, is a public school. The site consists of an automobile repair facility (former gas station) and a neighboring garage with residential uses on the second floor. The future use for this site is residential and commercial. Suspected and known contaminants are petroleum and metals and MTBE which are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Review of application terminated since the applicant is no longer an entity authorized in NYS to make the application. Following termination of the BCP application, the site was referred back for investigation and remediation under spill no. 0607903. "
 Env Problem: "A limited investigation was performed on 291 Metropolitan Ave in October 2006 and spill number 0607903 was assigned. From four soil borings, one soil sample was collected from each. From another two soil borings, two samples were collected from each. From two borings, a grab groundwater was collected in each. The groundwater was contaminated with BTEX compounds and MTBE. Additional investigation will be required to define the extent of contamination."

DEC Memo: Phase 2 - soil samples have contamination in it - Owner wants to move this to brownfields. 7/23/07
- Raphael Ketani. I have heard nothing in a long time regarding this site as to whether it is part of the voluntary cleanup program (VCP). So I talked to Jocelyn Shapiro, EG I of unit A of DER Region 2, as she is involved in some VCP projects. She said it wasn't her site and directed me to Jane O'Connell or the unit head, Dan Walsh, EG III. I spoke to Mr. Walsh. He said that there was a pre-application meeting in January 2007, but nothing else happened. I looked for the site in the DER database and found nothing. Therefore, I am going to start the process of investigating this

S108294903

site as a spill location and I will send out a CSL. The block and lot are: 02353 and 0013. The main address is 291 Metropolitan Avenue. The alternate addresses are: 146 Roebling Street and 206 to 212 North 4th Street. The site has two PBS records, #2-145726 and #2-455083. #2-145726 is a closed case with the name as Arvy Service Station Inc./Getty. Six 550 gas tanks are listed as administratively closed on 4/1/95. #2-455083 is active with the name G&A Auto Repair. One 250 waste oil tank is in service with the other six gas tanks listed as closed in place. There are two owners: C&H Holding Corp., 1394 Third Avenue, NY, 10021; 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I sent out the CSLs to both owners. 7/26/07 - Raphael Ketani. Eva Krocka of Minnow Associates (291 Metropolitan Avenue, LLC) called to say that the site is part of the brownfield program. I told her that the DEC doesn't have anything confirming this and that their site does not appear in the DEC Remediation database. She said that Advanced Site Restoration Co. (212) 809-1110 was remediating the site and was supposed to take care of everything. She said that DEC was sent reports. I told her that we have nothing in our files regarding the site. She said she will get back to me. A new search of the Remediation database revealed that 291 Metropolitan Avenue has made an application to be part of the BCP. The case number is C224124. The case manager is Sondra Martinkat of DER Region 2 Unit A. I spoke to her and she said that the site is not yet approved for the BCP, but she expected them to be so very soon. She said that she was willing to accept the spill case. I spoke to Randall Austin, Chief of the Spills Unit, and he told me to change the case manager to Ms. Martinkat. I changed the case manager to her name. 8/5/09: BCP termination letter sent by OGC (D. Tuohy) - see eDocs. Management of site reverts back to Region 2 spills. Transferred to R. Ketani. (JHO) 8/6/09 - Raphael Ketani. I was assigned the spill case yesterday. So I talked to the former case manager, Brian (York) Wong from Unit A of Region 2 DER. He said that he was waiting for the project to be accepted into the BCP, but this never happened as the corporation fell apart. He said that no cleanup or development has taken place regarding the case since 2007. I made an unannounced site visit and took several pictures (see E-docs). The site consists of a service station. There is an old, small, three story walk up apartment building to the west of the service station. The service station has a sign that displays G&A Auto Diagnostic Center (718) 486-3700. The apartment building is the other property that the corporation had owned. I met a person who worked at the service station. He said that a waste

S108294903

oil UST and the gas USTs were closed in place with cement. He showed me the many cement filled boring locations that are on site. He said that there were no problems. I asked him who he was, but he just said that he was someone who works here. However, he did say that C&H owned the site. After this I left. 8/7/09 - Raphael Ketani. I tried to contact Chris Tomasello of ASR (212) 809-1110 regarding the site and its ownership, but could only leave a message. I reviewed the October 2006 ISR. The elevation of the site is at 23' above mean sea level. Groundwater was encountered at a depth of 17' to 20' below grade. However, Section 9 of the ISR states that groundwater is 9' to 10' below grade. Groundwater flow direction is unknown. There is a school directly across the street to the northeast. Soil contamination that exceeds TAGM was present at SB-5 at 10' to 16.' Groundwater contamination with high exceedences was found at SB-2 and SB-3. There is also a page with case manager notes that refer to wells marked AOC and TW, but there are no diagrams depicting these wells in the case file. 8/10/09 - Raphael Ketani. Mr. Tomasello returned my call. He talked about the site. He mentioned that the partnership broke up and the property was sold about a year ago. The former owner was Robert Vigorito of C&H Holding Corp., 1394 Third Avenue, NY, 10021. Mr. Tomasello has had no contact with the former or present owners since then. I looked up the property ownership on Property Shark and on ACRIS. The property was sold on 9/6/09 or 9/15/09, respectively. The new owner is: 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I wrote a revised CSL for the sole owner, 291 Metropolitan Avenue, LLC, and sent it out with a green return card. 9/10/09 - Raphael Ketani. The deadline for a response to the CSL was today and there has been no response from the owners of the site. I have not received the green return card, either. I will wait until 9/17/09 before sending a more strongly worded letter to the owners. 9/14/09 - Raphael Ketani. The CSL came back unopened and marked Unclaimed/Unable to Forward on the envelope. I checked PBS record #2-455083 for any contact information. The record showed the name Ismael Cisneros, Jr. (718) 384-4141. I spoke to Mr. Cisneros. He said that the owner had moved to Manhattan. I asked him who the owner was. He didn't want to say. However, he said that if I sent a letter directly to the service station, then he will forward it to the owners. I told him that I will do this. I resent the CSL to G&A Auto Repair, 291 Metropolitan Avenue, Brklyn, 11211 by regular mail and by green return card. However, according to the property database ACRIS, 291

S108294903

Metropolitan Avenue LLC at 861 Manhattan Avenue is still listed as the owner. 9/21/09 - Raphael Ketani. I received the green return receipt card signed by Mendes. 10/29/09 - Raphael Ketani. The owners of the site failed to respond to the CSL by the deadline of October 14, 2009. So I drafted a strongly worded letter stating that the DEC will take legal action if the investigation plan is not received by November 13, 2009. The draft letter was submitted to Randall Austin, Chief of the Spills Unit, for his approval. 11/2/09 - Raphael Ketani. I spoke to Mr. Austin about the case and the letter that I wanted to send. He said that I should submit a Case Initiation Package. 11/3/09 - Raphael Ketani. I put together the Case Initiation Package and submitted it to Mr. Austin for his signature. Mr. Austin signed the CIP and it was hand delivered to the legal department. 4/26/10 - Raphael Ketani. John Urda, Assistant Regional Attorney for Region 2 of DEC, sent Jerrietta Hollinger, a principal of 291 Metropolitan LLC, a STIP agreement today by e-mail. Her address is: Jerrietta R. Hollinger, Esq. Ganz & Hollinger 1394 Third Avenue New York, New York 10075 Ms. Hollinger responded back by e-mail that she will submit the document to her members and get back to Mr. Urda in a week. 5/13/10 - Raphael Ketani. Ms. Hollinger sent the following e-mail to Mr. Urda: I expect to review the Stip with Mr. Cisneros next Tues. I am out of office tomorrow and Monday and will contact you by middle of next week. 5/20/10 - Raphael Ketani. Ms. Hollinger requested a change in the STIP package CAP that was sent to her by Mr. Urda. She wanted the deadline for submission of the Remedial Investigation Work Plan changed from 15 days to 30 days (paragraph one). Mr. Urda agreed to the change and sent her a STIP with a CAP wherein the owners have 30 days to submit the RIWP (see E-docs). 5/24/10 - Raphael Ketani. The owners of the site signed the STIP. 5/25/10 - Raphael Ketani. The Region 2 director signed the STIP and, thus, it was fully executed and in effect (see E-docs). 7/14/10 - Raphael Ketani. To date, the owners of the site have not submitted the RIWP. The deadline was July 9 25, 2010. I drafted a letter to Ms. Hollinger for the review of John Urda of the Office of General Counsel. Mr. Urda reviewed the letter and it was sent out today. 7/15/10 - Raphael Ketani. Ms. Hollinger called me today. She said that P.W. Grosser (the consulting company) is supposed to get back the groundwater analytical data for the site. They will send the DEC a report soon. 7/27/10 - Raphael Ketani. Ms. Hollinger called today. She said that Mr. Wenskus of P.W. Grosser is working on the analytical report for DEC and should submit it in the very near future. The report will state that the soil is alright, but that the

S108294903

groundwater is contaminated. I told Ms. Hollinger that, at the very least, the groundwater contamination needs to be delineated.

8/3/10 - Raphael Ketani. I reviewed the July 30, 2010 P.W. Grosser Phase II ESA report. The scope of the work was based on P.W. Grosser's 6/21/10 proposal and Advanced Site Restoration's October 2006 ISR. The tanks have fuel oil, waste oil, and gasoline. In October 2006, the site was operated only as a car repair shop. Groundwater is at about 18' to 20' below grade and flows north-northwest. ASR found contamination in soil borings at SB-1, 3, 5, and 6. There were also elevated levels of arsenic, cadmium and lead at SB-1. There was elevated groundwater contamination at SB-2 and SB-3. There had been no subsequent investigations or remedial efforts since ASR's 2006 investigation. P.W. Grosser did a Phase II in July 2010. The locations of SB-1, 3, 5, and 6 were utilized for this investigation. P.W. Grosser took soil samples to 20' below grade. Groundwater was sampled from SB-1 to SB-3. The soil results for VOCs and SVOCs were below TAGM RSCOs. Arsenic, cadmium, and lead were below the RSCOs. However, mercury was above its respective RSCO. The groundwater results from SB-6 (downgradient) were completely non-detect. However, there was 22 ppb of naphthalene at SB-3 and 392 ppb of naphthalene at SB-2, with several other low exceedences. MTBE was 421 ppb at SB-1 and 1370 ppb at SB-3. SB-2 had 112,000 ppb of MTBE and 6 other VOC exceedences above 1,000 ppb. P.W. Grosser recommends removing the tanks and quarterly monitoring. I sent an e-mail to Mr. Wenskus (631) 589-6353 with the following questions and comments: 1) why wasn't a boring done in the vicinity of the fuel oil tank to the northwest? 2) is the fuel oil tank a UST or an AST? 3) was staining observed in the vicinity of the fuel oil tank? 4) why wasn't a boring conducted directly to the northwest of the gasoline tanks? 5) why weren't borings conducted next to the waste oil tank? The DEC concurs with the removal of the gas and oil tanks. Groundwater should be collected from SB-2 in order to reduce the MTBE concentration at this location.

8/6/10 - Raphael Ketani. Mr. Wenskus responded back by e-mail today: 1) Due to the presence of debris in the area, PWGC was unable to access the immediate vicinity of the fuel oil tank. During the inspection, PWGC did not see evidence of an AST in the area of the fuel oil tank as identified on the figure. Additionally, PWGC utilized the figure that was provided in the 2006 ASR Phase II for approximate locations of borings and other site conditions. 2) This is unknown at this time; however, according to the ASR report, the fuel oil tank is a UST. As stated above, there was no evidence of an AST in

Map ID

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

that vicinity. PWGC will contact the property owner to confirm the presence of the fuel oil tank.

3) No staining was observed in the area where the fuel oil tank is reportedly located. 4) As stated above, Mr. Cisneros wanted to confirm the findings of the 2006 Phase II and requested that only the impacted borings from that Phase II be re-sampled. 5) The exact location of the Waste oil UST was unknown and PWGC placed the boring SB-1 in the vicinity of the former boring. The location of SB-1 in the PWGC site plan; however, is incorrect. In addition, the tank locations on our site plan are approximate, based upon the ASR Phase II site plan. The site plan will be corrected to show the correct location of boring SB-1. I responded back and stated that the DEC still wants a boring performed to the northwest of the gas USTs, next to the waste oil tank, and next to the fuel oil UST to the northwest. Also, P.W. Grosser must submit a site plan which is to scale and which shows the actual location of all appertenances, tanks and pump islands. Mr. Wenskus replied back that the borings will be performed. 8/12/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that he informed the owners about DEC's request for additional investigative work. However, he has not heard back from them. 8/18/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the drilling for the three additional borings will take place on 8/24/10. 9/27/10 - Raphael Ketani. I received the Supplemental Phase II Environmental Site Assessment report dated 9/22/10 from P.W. Grosser. I began my review. 9/28/10 - Raphael Ketani. I finished my review of the Supp. Phase II. There was no soil contamination above TAGM standards. However, groundwater was found to be impacted. LNAPL was found near the waste oil tank and oil based liquids in the tank. Concentrations of total VOCs were detected up to 128,988 ppb in the immediate vicinity of the gas USTs. SB-2 was the most contaminated groundwater location. SB-3 had elevated groundwater contamination. P.W. Grosser recommends the following: proper closure of the gas and waste oil USTs removal and disposal of all impacted soil injection of oxidants to breakdown the contamination collection of end point samples installation of groundwater wells removal of LNAPL quarterly groundwater monitoring I sent an e-mail to Mr. Wenskus asking him to proceed with the remediation as soon as possible. 11/19/10 - Raphael Ketani. Mr. Wenskus sent the November 2010 Remedial Action Plan by e-mail. I reviewed the plan and it formalized and expanded the remediation plan that was initially described in the Supplemental Phase II. The RAP looked fine, but they weren't planning to install a monitoring well downgradient of the waste oil UST. So I let Mr. Wenskus know that the

DEC wanted a well installed in this location and to submit a revised site map showing this well. Mr. Wenskus responded back that a well will be installed downgradient of the waste oil UST. 2/25/11 - Raphael Ketani. I spoke to Mr. Wenskus (631) 589-6353 and asked him about progress on the site. He said that the owners had received P.W. Grosser's proposal. They told him that they needed to secure funding for the project. However, that was back a couple of months ago. Mr. Wenskus hasn't heard anything since. I asked Mr. Wenskus to contact the owners anyway and to try and find out what is happening. Ms. Hollinger sent me an e-mail asking whether there was any type of funding that could be obtained for doing the additional work. I wrote that there wasn't and to commence the work immediately. 3/2/11 - Raphael Ketani. Today I received the January 27, 2011 investigation and remediation work proposal and cost estimate from Mr. Wenskus at P. W. Grosser. I reviewed the proposal and it seemed to cover the work that the DEC had asked to be performed. I spoke to Mr. Wenskus (631) 589-6353 and told him that the DEC found the proposal to be acceptable. I asked him whether he had heard from Ms. Hollinger. He said that he hadn't. I told him to call her and to let her know that the DEC is concerned that no progress is being made. He said that he will. 3/3/11 - Raphael Ketani. Mr. Wenskus sent Ms. Hollinger an e-mail (with me as a c-c) stating that the DEC had the approved work plan. He also wrote in the e-mail that P.W. Grosser was ready to go to work on the site as soon as a retainer is submitted. 3/7/11 - Raphael Ketani. Mr. Wenskus said that he hasn't received approval yet to start the work. 4/5/11 - Raphael Ketani. I received an e-mail today from Mr. Wenskus as a c-c. In the e-mail, Mr. Wenskus stated that he hasn't heard from Ismael Cisneros, Jr. in two weeks. In response, I sent an e-mail to Mr. Urda of DEC Region 2 stating that it appears as if work at the site has come to a standstill for this spill. 4/22/11 - Raphael Ketani. Mr. Wenskus sent an e-mail to M I Mechanical requesting a startup date for the work at the site. Ms. Hollinger responded back by e-mail that Mr. Cisneros was out of town, but would be back next week. Once he is back, Ms. Hollinger wrote, Mr. Cisneros will set up a starting date. 4/27/11 - Raphael Ketani. I sent an e-mail to Ms. Hollinger asking whether Mr. Cisneros had returned and whether a starting date had been picked. 5/17/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the work will re-start during either later June or early July 2011. 6/6/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that work will resume at the site on July 18. 7/7/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353

S108294903

sent me an e-mail that work will start on July 18. He expects the work to take 2 weeks. 7/14/11 - Raphael Ketani. Jerry Hickson of G. Construction Enterprises (631) 206-3700 ext 100 called. His company will be pulling 7 tanks on either tuesday or wednesday. They will remove 3 gas tanks, 3 diesel tanks, and 1 waste oil tank. 7/20/11 - Raphael Ketani. I received the following e-mail today from Mr. Wenskus: The implementation of the approved RAP began today. The site activities today included the following: Expose the seven onsite 550-gallon tanks to determine their current condition, Assess the tanks to determine their contents (each contained oily water) Pump the tanks out approximately 2,200 gallons removed Each tank, with the exception of the waste oil tank was encased in concrete. No tanks were removed from the ground today; excavation of the tanks will continue tomorrow. 7/22/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called me in a conference call with Jen Lewis of P.W. Grosser. He said that the 7 USTs had been removed. There was a concrete slab beneath them. The tanks were all in good shape. However, there were signs of a little associated pipe leaking. The contractor had excavated 15 feet down to remove the contaminated soil, but there still was contamination and he hadn't reached the water table, which is at 18 feet below grade. Mr. Wenskus and Ms. Lewis were asking whether the digging could stop as the contractor would have to get a larger machine, and this would take time, and as he would also have to get special permits for digging deeper. Mr. Wenskus added that the contractor had dug pretty close to the building and the sidewalk and they didn't want to jeopardize their integrity. I told Mr. Wenskus that the contractor could either install shoring to hold up the sides of the hole or backfill and do treatment solution injections where there still is contamination deep down and under the sidewalk. Mr. Wenskus opted to backfill and treat. I asked him whether the contractor could dig out more contamination laterally. Ms. Lewis said that he could. I told Mr. Wenskus and Ms. Lewis to do all of the calculations necessary, including permeability, to determine what it will take to effectively treat the remaining contamination. They said that they will. Later, Mr. Wenskus (631) 589-6353 called me back. He said that he talked to his supervisor about the treatment solution injections proposed for the contaminated dry soil. They agreed that the solutions would work initially, but that they would stop as soon as they would dry out and, therefore, wouldn't be very effective. Mr. Wenskus will have the contractor get a larger excavator and dig deeper. I asked him about the contamination under the sidewalk. I added that this couldn't

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

be left in place. He said that he wasn't sure where the contamination will end. I told him to keep field screening with a PID meter and to eventually take end points to determine whether they needed to excavate further. He said that he will. 9/12/11 - Raphael Ketani. I tried to contact Mr. Wenskus (631) 589-6353, but I could only leave a message regarding progress at the site. 9/13/11 - Raphael Ketani. Mr. Wenskus called me back. He said that the work at the site has stopped as P.W. Grosser isn't getting paid. The owners, 291 Metropolitan LLC, want to save some money with the remediation project and want to put in fewer wells and do less soil removal. He said that 80 tons have already been removed, as best as he can guess (he doesn't have the disposal manifests). A large covered soil pile is sitting at the site. Mr. Wenskus said he told them that the DEC had approved the work plan and so any changes were not likely to be accepted. After this, the conversation ended. 9/15/11 - Raphael Ketani. I reviewed the November 2010 RAP for the work schedule. While the tanks (item 1) had been removed, the soil excavation was not completed by the allotted time as more soil needed to be removed than had been previously estimated. I sent Mr. Wenskus an e-mail requesting a revised work schedule. 10/13/11 - Raphael Ketani. I contacted Mr. Wenskus (631) 589-6353. He said that 291 Metropolitan LLC still hasn't paid P.W. Grosser for the rest of the work. So nothing is happening. Mr. Wenskus said that he had spoken with Ms. Hollinger about a couple of weeks ago, but she gave no indication that payments would be forthcoming. He said that he will try contacting her today. As no work had been taking place for over a month, I drafted a letter to 291 Metropolitan, LLC stating that they were in violation of the STIP and the environmental law. The letter was sent to Mr. Urda and approved. I sent it out today with an October 28 deadline for re-starting the work, or else legal action will be taken. 10/20/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 called regarding the soil excavation and planned well installation. She said that P.W. Grosser dug out a lot more dirt than had been planned and that this has become very expensive. She asked what could be done about this and whether the number of planned groundwater monitoring wells could be reduced in order to save money. I told her that contaminated soil has to be dug out to the extent practical and that if they have to remove the sidewalks to do it, then that's what is necessary. I added that P.W. Grosser should be screening the soil with a PID meter as they go so that they can see whether there is more contaminated soil to remove. Then, once they have very low PID hits or no hits, they

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

can take end point samples and have them analyzed to be sure that they have removed all of the soil with elevated contamination. Ms. Hollinger asked whether one or two wells could be cut out from the plan. I told her that the DEC didn't ask for more wells than were necessary in order to monitor the groundwater contamination. I added that if contaminated soil is left in place and the groundwater starts circulating through it, then the groundwater will carry weathered gasoline and vapors downgradient to the school behind the service station. I said that, so far, there are no vapors in the school, but this can still happen if contaminated soil is left. I mentioned that there are kids in the school. She said that she was just concerned about how much soil was removed because it was truck loads and truck loads. I told her that P.W. Grosser was removing what was necessary and that this is good. Ms. Hollinger said that she will talk to Mr. Wenskus and discuss the issue. Then she will get back to me. Later, Ms. Hollinger sent me the following e-mail: After we spoke, I had a telephone call with Rocky. He said he was in the middle of finishing another project but would review the test results and call you next week to see if it is possible to amend the plan to be more economical and to make certain contamination is cleared. The necessary wells will then be installed. As mentioned the work done to date cost more than twice the estimated amount. Soil Safe carted away 447.2 tons of soil. 10/26/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called with a progress update. He said that, right now, work still has not resumed. He said that he had spoken to Ms. Hollinger about the site and the soil contamination that still exists. He said that the concentrations of the individual analytes is in the hundreds of thousands of parts per billion for the soil in the sidewall of the pit that is next to the sidewalk. I told him that this soil, the soil under the sidewalk and possibly the soil under the street must come out. Mr. Wenskus said that the additional remediation will be performed as in the approved RAP. He mentioned possibly collecting the contaminated groundwater. I told him that it would probably be cheaper to dig out the contaminated soil and get rid of the contamination once and for all. Then he wont have to worry about groundwater contamination. I also told Mr. Wenskus that I will let Mr. Urda know about the impass with Ms. Hollinger. 10/27/11 - Raphael Ketani. I made an unannounced site visit today. I took 3 pictures. I could see a gravel area where the gasoline USTs used to be and a sandy soil area where the waste oil UST used to be. There was no other changes to the site conditions. So I left the site. 10/28/11 - Raphael Ketani. A Case Initiation package was

G&A AUTO REPAIR (Continued)

S108294903

signed by Hassan Hussein, Supervisor of the RCRA-Remediation Unit, and sent to the Office of General Counsel. 11/29/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 sent me an e-mail that the well installations will take place soon. I responded back that the excavation also needed to resume. 12/27/11 - Raphael Ketani. Nick Pressly of Pressly & Associates Inc. (607) 264-9521/cell (607) 435-9589 called. He said that he has been retained by Ms. Hollinger to continue the work at the site. We discussed the present site status and what still needed to be done. Mr. Pressly said that the DEC will receive a work plan by January 9, 2012. 1/18/12 - Raphael Ketani. Mr. Pressly sent me the 1/9/12 work plan by e-mail. The plan called for the installation of 6 soil borings and the construction of 4 monitoring wells. Some of the wells would be constructed in such a manner as to allow their use for SVE or air sparging. I found the locations of two of the proposed wells to be unacceptable as they are not downgradient of the former gasoline UST locations and the waste oil tank location. Also, if some wells are used for SVE or air sparging, then they can't be used for groundwater monitoring. So more wells are needed. They also did not mention continuing the excavation both deeper and under the sidewalk. Lastly, they did not mention sending the DEC the manifests for the soil that has been excavated, nor product collection or quarterly groundwater sampling and reporting. I sent an e-mail to Mr. Pressly indicating the disapproval and the need for including the above comments in a new work plan. Mr. Pressly sent me the manifests for the soil that had already been removed. I spoke to Mr. Pressly (607) 264-9521/cell (607) 435-9589 about the above comments. There is a 1 inch well next to the waste oil tank. He believes that there is a lot of oil on the water table. Due to the waste oil, air sparging will not be possible. The waste oil will be addressed in a separate plan. Mr. Pressly will add two additional wells due to the presence of the LNAPL. The other well positions can be adjusted to be downgradient. SVE wells will be installed near the sidewalk in an upgradient position. Borings will be done right up against the sidewalk. Wells for just monitoring during SVE or air sparging will be installed. He will resubmit the work plan next week. Also, he expects to start the work by January 30, 2012. I told him that will be fine. 1/25/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me the 1/20/12 Revised Subsurface Investigation Work Plan for installing SVE wells, AS wells and monitoring wells. I reviewed the work plan. 1/30/12 - Raphael Ketani. I finished my review of the 1/20/12 work plan. There was one

Map ID

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

proposed monitoring well far upgradient of the waste oil UST and no well directly downgradient of the waste oil UST. I determined that they should install wells at positions that are a short distance downgradient of the waste oil UST and the former tank field. I also stated that there should be separate monitoring wells at P.W. Grosser's SB-7 boring, which had NAPL, and at P.W. Grosser's SB-3, which had contaminated groundwater. I added that groundwater extraction should take place at SB-3 and product collection should take place at SB-7 before AS or SVE takes place. Lastly, I asked for the details of the proposed AS and SVE systems: soil permeability, air flow or vacuum calculations, material specs and the design layouts. I sent a letter disapproving the work plan and including the above comments. The due date for the revised work plan was set at February 29. Mr. Pressly sent me a revised map/plan for the locations of the proposed monitoring wells. I responded back that the well for the waste oil UST should be more upgradient than sidegradient. I asked him to fix this and then the plan would be fine. Also, he will hold off installing the SVE and AS wells for now. 2/1/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me an e-mail containing the second revision of the Revised Subsurface Investigation Work Plan. Four instead of five wells were proposed, but the locations were as requested in DEC's 1/30/12 letter. However, there was no mention of extracting contaminated groundwater at SB-2 and product at SB-7. I responded back and let him know about the deficiencies. Mr. Pressly wrote back that, presently there were no wells at SB-3 and SB-7, these were only former soil boring locations. However, a well will be installed at the former location of SB-3. He asked that installing a well at SB-7 for product collection be put on hold for now so that the work plan can be approved and work can proceed. I responded back that the DEC was approving the 2/1/12 work plan and to proceed with the investigation. Mr. Pressly wrote that the work is tentatively scheduled to start on February 8. 2/3/12 - Raphael Ketani. Mr. Pressly sent me an e-mail that the drilling will definitely start on February 6. 2/6/12 - Raphael Ketani. Mr. Pressly called today. He said that he was at the site, but that there was a problem. He stated that the downgradient well for the waste oil UST would be right against the wall of the building. So it can't be drilled right there. He suggested moving the well's locations to where the A in LNAPL (for SB-7) is on revision 4 of the map which is attached to the 2/1/12 work plan. This would still put the well in a downgradient position. I told him this would be fine. 2/8/12 - Raphael Ketani. Mr. Pressly (607)

S108294903

264-9521/cell (607) 435-9589 called today with an update. First, he stated that P.W. Grosser's boring SB-7 was found to be much closer to the waste oil UST than was drawn on the map. He put in a new well mid-way between the building and the UST about 3 feet from SB-7. However, no oil was found, only a sheen. Mr. Pressly believes that the oil that was found at SB-7 was very localized and that maybe P.W. Grosser hit the edge of the tank pit that was holding the free oil. Once the pit was nicked, the oil flowed to the location of SB-7. I told Mr. Pressly this was possible. He responded by saying that he will re-drill SB-7 and put in a 2 inch recovery well. Also, there was no odor of gasoline at SB-7 and that it looks like there are 2 plumes. One for the gasoline that is flowing due north, and another plume that is flowing more northwest. A boring was done through the sidewalk. It was found to be a gasoline contamination hot spot. So an extra sparge well was installed in the center of the former UST field. A well was put in at SB-3, but no odors of gasoline were found. Another well by the building had gasoline odors. A well couldn't be put in far downgradient inside the building as the geoprobe wouldn't fit. The soil profile is from 6 to 8 feet of silt and clay, then glacial till, and finally at 19 feet below grade there is gravelly brown sand. Groundwater is at about 22 feet below grade. 2/9/12 - Raphael Ketani. Mr. Pressly called me today. He said that they had overdrilled SB-7 and found a black slime on their augers when they pulled them up. He believes that the slime is sludge from the waste oil tank. Next, they moved the rig over to where the waste oil tank used to be and drilled another hole. However, they didn't find oil, but hit a cavernous spot many feet down. When the equipment was pulled out, he could see pieces of metal in the cavern. Another hole was drilled and they hit gasoline contaminated groundwater. Mr. Pressly said that it smelled like weathered gasoline. 3/9/12 - Raphael Ketani. I spoke to Mr. Pressly (607) 264-9521 today. He said that he found 1500 to 2000 ppb of MTBE in the perimeter wells. He recommended to the client to have more wells put in. Two sparge wells have been installed. He also recommended to the client to have the site capped very soon. The other wells don't have MTBE, but do have BTEX. Groundwater appears to go northwest. An upgradient well was installed, but the MTBE is about 1500 ppb. However, the southeast part of the property is full of concrete urban fill. The waste oil tank is above the fill. They broke tools trying to drill in the southeast part of the property. 3/14/12 - Raphael Ketani. I received the 3/8/12 Subsurface Investigation Report from Pressly & Associates. I began my review.

G&A AUTO REPAIR (Continued)

S108294903

3/16/12 - Raphael Ketani. I finished reviewing the SIR. The investigation work took place from 2/6/12 to 2/13/12. Monitoring wells MW-1 to MW-3, SVE-1 and HVE-1 were constructed of 2 inch PVC. MW-4 was constructed of 1 inch PVC. Refusal was hit at 3 locations to the southeast of MW-3. There was native soil at MW-1 to MW-3 and at SVE-1 down to 18 feet bgs. The soil consisted of fine to medium sand with silt and clay. Urban fill was encountered at MW-4 and HVE-1 to 15 feet bgs. Below 15 feet, there was native sand. Groundwater was encountered at 18 feet bgs (elevation 80' to 83'). SB-7 had a 1 inch PVC riser with oil sludge at the bottom. HVE-1 was installed within the footprint of the waste oil UST excavation patch. Waste oil was not detected within the former waste oil tank area (MW-4 and HVE-1). A 3 inch band of oily soil was observed at 19 feet bgs. MW-2 had 113 ppm of total VOC vapors at the 15 to 20 foot interval. SVE-1 had from 173 ppm to 332 ppm of total VOC vapors from 5 to 20 feet below grade. The soil sample from SVE-1 had the highest total VOCs at 112910 ppb. Groundwater total VOC concentrations varied from a low of 927 ppb at MW-1 to a high of 21,169 ppb at SVE-1. NAPL was not seen on the water table at any location. A subsurface release was not detected in the soil and the groundwater within the former waste oil UST area. The elevated VOC concentrations at SVE-1 correspond to the former location of a fill line. The higher concentrations at SVE-1 and lower concentrations at MW-2 suggest that the source is upgradient near the sidewalk. The MTBE concentrations suggest that it has migrated beyond SVE-1 and MW-2. The sludge at SB-7 is considered to be an anomalie by Mr. Pressly. In the report, it is recommended that another monitoring well be installed to the northwest in order to monitor the MTBE. The pavement should be replaced at the location of the excavation in order to prevent groundwater mounding and infiltration. Additional wells should be installed for the SVE/AS system for recovering the MTBE. Lastly, the SVE/AS system should be installed to remove the VOCs. A letter was drafted for the review of Hassan Hussein, EE 3 and head of the Hazardous Materials Unit. The letter was addressed to Mr. Pressly and approved the SIR and the recommendations. However, the DEC requested that soil samples be taken upgradient of SVE-1 in order to fully delineate the extent of the contamination. A deadline of April 20 was set for starting the work. 3/22/12 - Raphael Ketani. The letter was approved by Mr. Hussein and was sent out today to Mr. Pressly and to Ms. Hollinger. 4/25/12 - Raphael Ketani. Mr. Pressly (607) 264-9521 left me a message today. He said that he needed more time to contract a drilling company and mobilize to start the work

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

that was requested in the 3/22/12 letter. I gave him until 5/25/12 to start the work. 5/9/12 - Raphael Ketani. Mr. Pressly sent me an e-mail. He stated that the additional monitoring wells will be installed on May 29 and the piping and other parts of the SVE/AS system will be installed during the same week. 6/19/12 - Raphael Ketani. Mr. Pressly sent me an e-mail stating that the new monitoring wells and the SVE/AS system had been installed. A report containing the system results will be forthcoming in the near future. 8/7/12 - Raphael Ketani. I reviewed the Pressly & Associates 7/23/12 Supplemental Subsurface Investigation Report. The supplemental investigation took place during 6/5/12 to 6/14/12. MW-5 was installed to the north and downgradient. MW-6 was installed to the southeast of SVE-1 through the sidewalk that runs parallel to Metropolitan Avenue. The SVE system consists of 3 SVE wells (SVE-1 to SVE-3) and 5 AS wells (AS-1 to AS-5). The SVE wells averaged 60 scfm, 40 psi with a ROI of 20 feet. The AS wells averaged 4 scfm, 4 psi with a ROI of 10 feet. Total VOCs at MW-5 were 13.1 ppb. Total VOCs at MW-6 were 22,530 ppb. The system was started on 7/20/12. The AS operating pressure was 3 psi with a flow rate of 4 scfm. The SVE well head vacuum was 45 inches of water and a total flow rate of 120 scfm. A grab air sample was taken with a summa canister and the results will be available in two weeks. Pressly & Associates recommends collecting system PID, flow and pressure data from individual SVE/AS wells on a quarterly basis and the collection of well head vacuum readings from on site wells to evaluate the effective ROI of the system and the collecting of SVE off gas samples on a quarterly basis. Quarterly reporting will be made to the DEC for the system. I found the SSIR to be acceptable and drafted an approval letter for the review of Mr. Hussein. The requirement that confirmatory soil samples be taken once remediation by the SVE/AS is deemed complete was added to the letter. A deadline of October 31, 2012 was set for the submission of the first quarterly SVE/AS system report. The letter was approved and was sent out. 8/16/12 - Raphael Ketani. Jay Stockwell of Blue Zs Realestate, LLC (212) 965-0298 called. He said that he was a real estate developer and he was interested in buying the property. He said that the present owners are trying to sell it again. He said that he was interested in putting up an apartment building with stores in the first floor. He asked how long it would take for the SVE/AS system to remediate the site. I told him that they started the system during July 2012. So it has not been running long. I told him that my best estimate for how long it will take to clean up the site is

Map ID

G&A AUTO REPAIR (Continued)

S108294903

one year. However, every site is different and there is a lot of contamination under the sidewalk and the street. Mr. Stockwell said that this was what he had expected. With that, the conversation ended. 11/9/12 - Raphael Ketani. I tried to contact Mr. Pressly (607) 264-9521 by e-mail regarding the first quarterly SVE/AS remediation report was due on 10/31/12, but the e-mails bounced back. I then left a message on his voice mail. I tried contacting Mr. Pressly at his cell phone (607) 435-9589, but I could only leave a message. Next, I tried to contact Ms. Hollinger (212) 517-5500, but, again, I could only leave a message. Later, Ms. Hollinger called me back. She said that she thought the September 2012 quarterly report had been submitted. She said that he was paid for the report. She will try calling him later to see what happened to the report. 11/12/12 - Raphael Ketani. Ms. Hollinger sent me an e-mail stating that Mr. Pressly was sending me the report. 11/26/12 - Raphael Ketani. I received the 11/26/12 SVE/AS OM&M Status Report. I reviewed the report. An exhaust sample was collected on 7/19/12. There were 8 VOC hits in the sample. Another exhaust sample was collected on 9/22/12. There was only 1 hit of 41 ug/m3 of methylene chloride. The next site visit will be on December 4, 2012. I had no comments and approved the report. 11/28/12 - Raphael Ketani. Ms. Hollinger sent a letter to John Urda, Region 2 Assistant Regional Attorney, stating that the ownership of the property had been transferred to 291 Metropolitan Realty, LLC. Also, Mr. Pressly sent me an e-mail stating that he was still balancing the SVE/AS system. 12/4/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today. He said that he was going to meet with the attorney for the new owner, Joel Grunfeld, 277 Classon Avenue, Brooklyn, 11238, (917) 470-3650, jig@sygrealties.com. He will try to explain to him that the SVE/AS process has to continue and that the DEC wants the site cleaned up. Regarding the SVE and AS system. There is an SVE well and a monitoring well next to the sidewalk hotspot. The radius of influence of each SVE well is assumed to be 20 ft. The radius of influence for each AS well is assumed to be 15 to 20 ft. However, a pilot test was never done to find out the real radius of influence. The estimated radius was taken from information regarding a sandy soil. I told Mr. Pressly to keep the DEC informed regarding what transpires at his meeting and whether he will be retained. I added that Ms. Hollinger should be told that her client is still responsible for the contamination. Mr. Pressly said that he told her this. 12/5/12 - Raphael Ketani. Mr. Pressly called. He met with Mr. Grunfeld. Mr. Grunfeld said that he wanted to

Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

remediate the site as quickly as possible so that he can build a new building there. Mr. Pressly brought up the idea of solution injection to treat the contamination. He also explained that whether solution injection is used or excavation, the additional remedial actions may cost from \$50,000 to \$100,000. Mr. Grunfeld was concerned about the range of pricing, but he told Mr. Pressly that he wanted things to move forward. Mr. Pressly explained to me that he will send a work plan for installing a well in the sidewalk and a well in the road in order to find out what the concentrations of the contaminants are at these locations. He added that the SVE and AS functioning will be modified in order to try and remove more of the contaminants. 12/7/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called. He said that the owner wants to build his building quickly and has contacted the NYC OER in order to move the process along for the remediation of the site. Mr. Pressly stated that the drilling contractor is hesitant to drill in the street due to logistical reasons and would prefer to install wells in the adjacent sidewalk and across the street in the distant sidewalk. Mr. Pressly added that he would like to install additional wells in the sidewalk in order to laterally delineate the contamination. After this, he would install SVE/AS wells in the edge of the sidewalk where it meets the road which have a 20 foot radius of influence (the road is 40 feet wide) in order to remove any contamination under the road. I told him that this sounded fine. He said that he will talk to the owner about this and put together a work plan. 12/27/12 - Raphael Ketani. Shaminder Chawla of the NYC OER (212) 442-3007/ shaminderc@dep.nyc.gov/100 Gold Street, 2nd Floor, New York, NY 10038 sent me the following e-mail: 291 Metropolitan Avenue property has a new developer/owner who has approached us to enter NYC Voluntary Cleanup program. Previous owner has a stip agreement and an approved RAP (with multiple SVE points) from you. Their development/ remedy has changed and includes excavation of entire property to at least 10 to 12 feet depths. OER is sending them back to field to conduct additional soil, soil vapor and groundwater investigation. OER informed them that they need to approach you and get spill approvals exclusively from DEC. We will accept your approved RAP and add additional requirement that we need to issue Notice to Proceed. I forwarded this information to Mr. Pressly and he responded with the e-mail below: Hi Rafiel, The last time I emailed Joel Grunfeld was about a week ago and he said he was going to get back to me regarding a proposal I sent about 2 -3 weeks ago to investigate the road and the

Map ID

G&A AUTO REPAIR (Continued)

S108294903

sidewalk. For this I had proposed 5 soil borings with 3 to be completed as MWs to get lateral and southern extent. I had also advised him to get OER involved sooner than later. I have not heard back from him. since. I also gave him options to clean the on-site groundwater problem quicker using chemical oxidation with direct push (20 points) to facilitate building construction. In addition, I had proposed SVE AS system as possible remedy for sidewalk/ road to be incorporated into any new building construction. NYC VCP may be good to make this an engineering/institutional control? The building design was recommended to include a special XP equipment room for this purpose in the basement. I'll give him a call and let you know what I find out. Best, Nik 12/28/12
- Raphael Ketani. Charles Sosik, PG, Environmental Business Consultants (631) 504-6000, ext 112/csosik@ebcincny.com called me today. 1/2/2013 - Raphael Ketani. I spoke to Mr. Sosik today about the remediation of the site. He said that he has been in contact with the NYC OER and they told him to talk to me about what should be done. We discussed the site history and what Mr. Pressly's company had been doing regarding SVE and AS. Mr. Sosik said that he went to the site to see what the present conditions were and found that the SVE air blower and other equipment was missing. Mr. Sosik also asked for the P.W. Grosser 9/22/10 Supplemental Phase II and the Pressly and Associates 3/8/13 Subsurface Investigation Report. I sent him the reports. Later, he sent me the EBC 12/28/12 Phase II Work Plan. I reviewed the work plan. Four soil borings will be installed: B1 to B4. Soil samples will be taken from 0 to 2 feet below grade and from 10 to 12 feet below grade. The soil and groundwater samples will be tested via methods 8260, 8270, 8082 for PCBs, 8081 for pesticides and methods 6010 and 7471 for metals. Temporary well MW-6 will be installed at boring B4. Wells MW-1 to MW-3 and MW-6 will be sampled for groundwater. Soil vapor testing will be performed at 4 locations at 12 feet below grade. Subslab, soil gas and indoor air sampling will take place for VOCs. I drafted a letter approving the work plan with comments. First, soil sampling should take place at the most contaminated horizon. If no contamination is found at the boring location, then a sample should be taken just above the water table. Soil borings must also be performed at the locations of the Pressly & Associates wells SVE-1 (extremely high total VOCs) and MW-6 (high total VOCs) and to the south of MW-6 to confirm the contaminant concentrations. All results should be compared to the CP-51 standards for soil and the TOGS 1.1.1 standards for groundwater. Additionally, TCLP method 1311 must be used to test for

MAP FINDINGS

G&A AUTO REPAIR (Continued)

S108294903

lead and the results must be compared to the limits in Part 371.3(e). A revised work plan must be submitted by January 31, 2012. The letter was sent to Mr. Hussein for his review. 1/3/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. According to deed dated 11/27/12 shown in ACRIS, the new owner for 291 Metropolitan Avenue, Brooklyn, 11211 (block and lot 2353/13) is 291 Metropolitan Realty, LLC, 199 Lee Avenue, Ste 693, Brklyn, 11211. Another company is also at this address, 64 St. James Realty, LLC. Later, Mr. Sosik sent me an e-mail stating that the boring work will start on 1/4/13. Later, Mr. Sosik sent me a revised Phase II Work Plan dated 1/3/13 which was also a Scope of Work. This work plan incorporated the comments from the DEC 1/3/13 letter. Otherwise, it was the same work plan. However, more comments were generated. These were that the Department still wanted a boring in the street south of MW-6. Also, subslab soil vapor sampling must take place at three (3) locations along the west wall of the garage and at two (2) locations along the east wall of the garage. The extra boring location and the extra soil vapor sampling locations were indicated on two attachments to the DEC work plan approval letter. Lastly, all seven wells must be sampled during the same sampling event and well redevelopment should take place if necessary for the older wells. The letter was submitted to Mr. Hussein for his review. 1/14/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with an attachment indicating where the Department wanted a boring in the street and additional soil vapor samples within the garage footprint. Later, Mr. Sosik sent me the following e-mail: The work plan was approved with conditions on 1/3/13. We accepted those conditions and returned the revised plan as requested the same day. The work has already been completed. Eight soil gas samples is a lot of samples for a property this size. Also we cannot access the 3 western locations you are requesting. As you know the bulk of the contamination is in front of the building in the former tank area. There is no difference between conditions beneath the garage and those outside of the building as all are taken at the basement level depth. The four samples provide good coverage across the site and will be representative of conditions. The highest concentrations will be in the SG2 location and will represent a worst case condition. Subsequent to this, I called Mr. Sosik (631) 504-6000, ext 112. We discussed the soil vapor sampling. He said that the issue was that he could not get a piece of equipment into the garage, due to its low clearance, that can bore down 12 feet to take soil gas samples. I told Mr.

G&A AUTO REPAIR (Continued)

S108294903

Sosik that he didn't need to go down 12 feet. That the Department simply wanted more information regarding what the vapors may be in the shallow subsurface. Mr. Sosik responded that he could have holes drilled by hand and then have samples taken. I told him this would be fine. He said he will do this, but that he thought there were too many vapor sampling locations for a site this size. I told him that, from my professional experience, the number of sampling locations were alright. Mr. Sosik agreed to do the work. 2/6/13 - Raphael Ketani. I spoke to Mr. Sosik today. He said that the vapor sampling took place, but the street boring hasn't been done. A permit is needed to perform this boring. 3/8/13 - Raphael Ketani. I received 3 documents for the site from Shaminder Chawla of the NYC Office of Environmental Remediation. These documents included a pdf containing Tables 2 to 11, which consisted of soil, groundwater and vapor data. The second pdf contained boring logs for borings B1 to B5. The last pdf contained 6 maps with soil, groundwater and soil gas data. I looked at all of the information. The data tables showed that there were significant soil exceedences at borings B1, B2 and B5 for VOCs and SVOCs when compared to the CP-51 standards. Some metals, such as lead and mercury also had significant exceedences in samples from the shallow subsurface, but the results were for total metals, not TCLP analysis. So it was not clear whether these results were a concern. Groundwater exceedences of the TOGS 1.1.1 standards were present in samples from MW-2 and MW-6. Mr. Chawla wrote that the site will be excavated down to 11 feet below grade. However, this doesn't address the contamination under Metropolitan Avenue to the south of MW-6. 3/12/13 - Raphael Ketani. A conference call took place between Mr. Chawla, Hannah Moore (engineer) and myself. We discussed the site and the environmental issues present. It was mentioned that excavation will take place down to 11 or 12 feet below grade. This will remove all of the shallow contamination. However, there is contamination at the water table which is 18 to 20 feet down. Ms. Moore and Mr. Chawla stated that this will be addressed by the injection of treatment solutions at depth. I told them that the most contaminated areas are B1, B2, B5, MW-2 and MW-6. They said that these areas will be targeted. I also stated that more investigation needed to take place south of MW-6 to see how much contamination is under the street. I asked that a treatment and investigation work plan be submitted by Mr. Sosik. They said the DEC will receive the work plan. 3/18/13 - Raphael Ketani. I reviewed the February 2013 Remedial Investigation Report that was submitted by Environmental Business Consultants. It was a compilation of the reports that had

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

been submitted by the previous consultants and also contained many Sanborn maps. The only new information was the soil vapor and sub-slab vapor data. BTEX was found at a maximum of 21.29 ug/m3 in the soil vapor. The sub-slab vapor reached a maximum of 31.07 ug/m3. PCE concentrations at all 4 soil vapor sites and in the 3 sub-slab vapor sites varied from 4.13 ug/m3 to 37.8 ug/m3. TCE was present in 1 of the 4 soil vapor locations at 0.537 ug/m3 and in 1 of the 3 sub-slab vapor locations at 4.89 ug/m3. According to the report, the results were below NYS DOH monitoring levels for the soil vapor guidance matrix. Next, I reviewed the February 2013 Remedial Action Work Plan. They will do community air monitoring, remove all tanks, remove soil and fill exceeding the restricted residential standards, sample and have analyzed all excavated material, collect and analyze the end point samples, install a vapor barrier, generally excavate to 12 feet below grade - though they will excavate deeper in the UST and pump island areas, if necessary, inject chemical oxidants to reduce groundwater contamination. The health and safety plan was included in the document. A Remedial Action Report will be submitted by the EBC. I found both the Remedial Investigation Report and the Remedial Action Work Plan to be acceptable. However, I noted in the letter that they must compare all of the soil analytical results to the unrestricted residential standards in CP-51 and the groundwater results to TOGS 1.1.1. Also, all contaminated soil which is found at 12 feet below grade which exceeds the unrestricted standards will have to be removed. 3/19/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 4/11/13 - Raphael Ketani. I received and reviewed the EBC 4/11/13 additional 3 borings report. The borings were conducted in the vicinity of MW-6. They were designated as B6 to B8. B6 was just to the west of MW-6. B7 was about 17 feet west of B6. B8 was about 13 feet east of MW-6. Sampling was continuous from grade to 20 feet bgs. The sample with the highest PID detection in the respective boring and the sample at the bottom of each boring were retained and sent to the lab for analysis. The total VOCs ranged from 432 ppb in the 18 to 20 foot sample from B7 to 113,100 ppb in the 18 to 20 foot sample from B6. B6 had the most contamination in the 18 to 20 foot sample with the highest analyte concentration as 32,000 ppb of total xylenes. B7 had the most contamination in the 3 to 5 foot sample with the highest analyte concentration as 4160 ppb total xylenes. B8 had the most contamination in the 13 to 15 foot sample with the highest analyte concentration as 8400 ppb of ethylbenzene. The SVOC results were mostly non-detect with

S108294903

many low benzo series hits in the 3 to 5 foot sample from B7. However, naphthalene hits were present in the 18 to 20 foot sample from B6 and in both samples from B8. I drafted a letter approving the report and stating that the Department required the remediation of the contamination at the locations of B6 to B8 and MW-6. The letter was submitted to Mr. Hussein for his approval. 4/17/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with a due date of May 24, 2013 for the submission of the work plan for remediating the contamination under the sidewalk and the street. 4/24/13 - Raphael Ketani. Mr. Sosik submitted an addendum to the 3/2/13 RAWP dated April 24, 2013. The only change from the previous RAWP was that treatment solution injections will take place in the vicinity of MW-6 in order to remediate the soil contamination at this location. I approved the addendum and responded via e-mail, but I strongly warned Mr. Sosik that he and 291 Metropolitan Realty were responsible for obtaining all of the necessary permits to conduct the injections and must consult with Con Edison, the NYC DEP, the NYC DOT and other concerned parties regarding the work he intends to perform. I also warned him that confirmatory soil samples and groundwater samples will need to be taken in each treatment area and that if the results are still well above the CP-51 standards and the TOGS 1.1.1 standards, then solution injections will have to be done again. I told him to make sure that the solutions travel to the contamination under the road. 6/14/13 - Raphael Ketani. I called Mr. Sosik (631) 504-6000, ext 112 regarding progress at the site. He said that the service station building will be demolished next week. This will be followed by the site excavation the following week. 8/12/13 - Raphael Ketani. I called Mr. Sosik today to find out what progress had been made at the site. He said that the building had been demolished and test pits had been performed to characterize the waste. The soil results indicated that they could dispose of the material at either Clean Earth or Soil Safe. However, the excavation contractor has not made contact with Mr. Sosik in some time. The permits are in place and NYC OER has given the go ahead to do the work and to construct the building. I told Mr. Sosik that the permits have expiration dates. So he should get ahold of the contractor and start the work before they expire. Mr. Sosik said that he knows this and he will call the contractor and find out what the hold up is regarding doing the excavation. Mr. Sosik said that he will send an e-mail when he has a definite start date. I told him that will be fine. 8/27/13 - Raphael Ketani. A meeting took place today at the office of the NYC

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

OER. In attendance were Mr. Grunfeld, Mr. Sosik, and Dan Walsh, Mr. Chawla and Ms. Moore (212) 442-6372 of the NYC OER, and myself. The meeting was held in order to iron out some of the details of the work that will take place and associated matters. The topics discussed included: excavating the site down to 12 feet below grade, treating all of the hot spots (both within the building footprint and under the Metropolitan Avenue sidewalk) with solution injections, monitoring truck traffic and dust, monitoring odors and noise during the excavating and construction, the submission of a work plan for the excavating and solution injections to the DEC for approval and sending progress updates to OER and DEC. Mr. Grunfeld stated that digging should start tomorrow and continue for two to three months. An estimated 3,000 cu. yds. of soil will be removed. The soil will go to Soil Safe in Carteret, NJ and Prospect Park, NJ. Soil Safe will supply all of the trucks. Manifests will be received by EBC for each load of soil. A vapor barrier, VB20, will be installed as part of the building construction. Mr. Sosik stated that there will be 8 injection points. I mentioned that confirmatory soil samples and groundwater samples will need to be taken 1 month after each injection round. Mr. Sosik said that this will be done. One of Mr. Grunfeld's assistants mentioned that the floor of the excavation will remain as open dirt until the soil treatment is finished. After this, a concrete slab will be poured. I mentioned that removing as much of the soil contamination was important because VOCs can get washed down into the groundwater by the rain, make their way under the school which is downgradient and result in vapors coming up into the school. Mr. Grunfeld said that they will make sure that the soil is treated. He also stated that the school will be notified about the excavation plan. I asked whether the community board had been notified about the impending work. Mr. Chawla said that they had been. One of Mr. Grunfeld's assistants stated that the dirt trucks will enter and leave the site from Metropolitan Avenue, not the street next to the school. Work will start at 7:30AM and end at 3:30PM. I suggested that both dust and noise monitoring take place during the excavating in particular. I also added that the soil results must meet the unrestricted residential standards and the groundwater must meet the TOGS 1.1.1 standards for the case to be closed. Everyone agreed that they understood what was to take place and the meeting adjourned. 10/18/13 - Raphael Ketani. I spoke to Kevin Brussee and Mr. Sosik (631) 504-6000, ext 112 by phone regarding progress at the site. They mentioned that the construction

Map ID

G&A AUTO REPAIR (Continued)

S108294903

crew had been working at the site for only 6 full days. They had to do some site preparation work before conducting the excavating. The excavating is taking place starting at the rear of the property and they will work towards the front. Right now, they are digging just to make the pit for the building. They will dig to remove the contamination later. The crew is putting in the footings, but only in the back. Progress reports are being sent to the NYC OER and will be sent to the DEC. I received 9 Daily Status Report documents for the period from 9/11/13 to 10/15/13. They indicated that the contaminated soil was being sent to Soil Safe in New Jersey and that the clean soil was being sent to the Malanka Landfill in New Jersey. Pictures of the clean soil showed red brown glacial till with a few boulders and cobbles and a good percentage of fines. The north half of the site had been excavated by 10/15/13. A vapor barrier was installed under the footings. Concrete buttoning up had been done in the northwest corner where the neighboring building was still standing. Other pictures showed rebar form work taking place in the northeast corner by 10/15/13. I had no comments about the reports. Later, Mr. Brussee sent me the following documents: Soil Safe 8/28/13 approval letter for receiving excavated soil from 0 to 6 feet below grade Fill Material Certification Letter dated 9/3/13 for the Malanka Landfill for soil originating from greater than 6 feet below grade Test Pit location map with the 7/16/13 soil analytical report I reviewed the documents, but had no comments. 10/28/13 - Raphael Ketani. Mr. Brussee sent me some pictures of a previously unknown UST that was uncovered under the southeast corner of the property. He explained in the e-mail that: One 275-gallon UST was encountered at 291 Metropolitan Avenue today. I will prepare an updated PBS application once excavation is completed just in case we find another one later. Although there were some rust holes in the tank, it does not appear as though the tank leaked. The tank is still full and no contaminated soil below the tank was observed. A tank removal company will be retained to cut and clean the tank, and I'll be sure they issue a NYCFD tank removal affidavit. I responded back by e-mail that a site map from ASR dated 8/6/09 shows the existence of a waste oil UST at the same location. I added that people need to look at the old maps and see where other features may be in order to avoid tearing them open and creating a spill. 10/29/13 - Raphael Ketani. I reviewed the October 28, 2013 Daily Status Report. Seventeen truck loads of contaminated soil were sent to Soil Safe. Excavation in the southeast corner of the site went down from 0' to 6' below grade. The foundation wall was installed

G&A AUTO REPAIR (Continued)

S108294903

in the northern part of the site. Troy Cutter came and removed the 275 gal. tank after it had been cleaned out. Picture 4 of the report shows a worker shoveling out thick sludge from the tank. The tank appears to have been filled completely with sludge. The air monitoring results were within ambient air limits. I approved the report. However, I sent an e-mail to EBC stating that the DEC wanted confirmation that the area where the UST had been emptied was clean. Later, Mr. Brussee sent me 3 photos showing the handling of the tank and the work area after the tank was emptied and removed. The floor in the area looked clean. 11/4/13 - Raphael Ketani. Mr. Brussee sent me copies of the tank removal paperwork. 12/2/13 - Raphael Ketani. I spoke to Mr. Brussee (631) 504-6000 regarding progress at the site. He said that they had basically dug down 12 feet below grade throughout the site. However, there is one corner with gray soil. He added that they want to remove this area of gray soil and then bring in a geoprobe to put in the injection wells. The construction crew may be putting in footings now. Otherwise, nothing else significant is happening. 12/18/13 - Raphael Ketani. I had a phone conversation with Mr. Sosik (631) 504-6000, ext 112. He said that the contractor is presently removing the contaminated soil in the excavation pit. Also, a drilling rig was lowered into the pit in order to drill holes for treatment solution injection. I told Mr. Sosik that the contractor should follow the soil contamination in order to remove as much contamination as possible. 2/12/14 - Raphael Ketani. I tried to contact Mr. Sosik regarding progress at the site, but I could only send an e-mail. 2/24/14 - Raphael Ketani. I made an unannounced site visit today to see the physical status of the site. I took a few pictures. A large pit had been excavated. The building was being constructed. The steel frame had been partially completed. Workers were pouring concrete and doing masonry work. The sidewalk did not appear to have been dug up in order to remove the contamination at the location of MW-6 and borings B-6 to B-8. In fact, the plywood wall along the sidewalk obscured the location of MW-6 and B-6 to B-8. There were viewing portals in the plywood walls, but there was nothing else to see except the construction that was taking place. So, I left the site. 2/26/14 - Raphael Ketani. I spoke to Mr. Sosik (631) 504-6000, ext 112 today regarding the submission of the remediation report. He told me that the remediation hadn't been completed yet and that is why DEC didn't get the report. He added that the contaminated soil was dug out from under the sidewalk. End point samples were taken about 2 months ago in the excavation

G&A AUTO REPAIR (Continued)

S108294903

pit. The injection points were installed, but the solution injections have not taken place yet. He wasn't sure why. Mr. Sosik will send the NYC OER Interim report. However, he was not sure when this report will be completed as he has to follow a very specific format and there is a lot of information to include in the report. 5/20/14 - Raphael Ketani. As progress reports have not been submitted. I sent Mr. Sosik (631) 504-6000, ext 112 an e-mail requesting the NYC OER Interim Report. 5/21/14 - Raphael Ketani. Mr. Sosik responded by e-mail stating that there will not be an Interim Report. A Final Report to OER will be submitted. Mr. Sosik added that it will take several weeks to put the report together. 6/23/14 - Raphael Ketani. As I hadn't received the Final Report from Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927, I left a voice message on both of his phones requesting this report. 8/25/14 - Raphael Ketani. Since my last voice message to Mr. Sosik, we had discussed the submission of a final report for the site. He had told me weeks ago that the NYC OER had a rigid format that must be followed regarding report submission and what each report must contain. So, he couldn't submit the final report at the time. However, he had told me that he would send it eventually. As the report still hasn't been received, I sent him [(631) 504-6000, ext 112/csosik@ebcincny.com] an e-mail requesting it. 11/25/14 - Raphael Ketani. As Mr. Sosik hasn't sent the final report, I sent him another e-mail requesting the report. 11/26/14 - Raphael Ketani. Mr. Sosik responded by e-mail today that the site is on his list of projects to finish. He added that there were endpoints taken from the sidewalk and injections performed. 3/10/15 - Raphael Ketani. I sent an email to Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927 /csosik@ebcincny.com requesting the closure report. 6/26/15 - Raphael Ketani. As there has been no response from Mr. Sosik in some time, I sent an email to Ms. Hollinger (jrhollinger@juno.com) stating that the Department was owed the closure report as part of the requirements of the Stipulation Agreement in order to close the spill case. Ms. Hollinger responded back that she was waiting to hear from the R.P.'s attorney. 6/29/15 - Raphael Ketani. I made an unannounced site visit today. The building had been completely constructed. It appeared that they had finished construction just recently as the planting areas between the sidewalks and the street were still just areas of dirt. I saw some construction workers standing outside the front of the building (which faces the school). They were not going into the building and the building itself was locked and dark. I took a picture of the building and the sidewalk along Metropolitan Avenue which still had

access ports for 3 wells. After this, I left the site. 9/16/15 - Raphael Ketani. The excavation within the footprint of the new building was deep enough (about 20 feet) to remove the great majority of the soil contamination and almost all of the groundwater contamination. The only soil contamination which remained was in the area of the former remote fill port, which was under the utilities and could not be removed easily or treated. Given the present condition of the site, I determined that the spill had effectively been remediated and that the residual contamination was not a threat to the public or the environment. Therefore, I closed the spill case effective today. not yet cleaned

 Town: New York City
 Record Added Date: 11/10/2014
 Record Updated Date: 05/29/2021
 Update By: JHOCONNE
 Site Description:

"The area of concern subject to this work is considered off-site from BCP site C224188 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224188 for further information regarding the status of the site in the Brownfield Cleanup program. Site Location: 87 Kent Ave - Off-site is located in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site consists of the areas surrounding by 87 Kent Ave. Current Zoning and Land Use: The site is included in the M1-2/R6A mixed use district. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). Based on information collected during the investigation of C224188, The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "

Env Problem:

"During the on-site Remedial Investigation for site C224188, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for on-site include trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with

Site Description: "Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.39 acres in size. The site will be used for a seven-story, mixed-use residential/commercial building, which is under development. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were trichloroethene, benzo(a)pyrene, chrysene and metals including mercury, copper and lead. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to remediation, the compounds exceeded groundwater standard were trichloroethene, cis-1,2-DCE and metals including mercury, copper and lead. Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.39 acres in size. The site will be used for a seven-story, mixed-use residential/commercial building, which is under development. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were trichloroethene, benzo(a)pyrene, chrysene and metals including mercury, copper and lead. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to remediation, the compounds exceeded groundwater standard were trichloroethene, cis-1,2-DCE and metals including mercury, copper and lead. Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to remediation, the compounds exceeded groundwater standard were trichloroethene, cis-1,2-DCE and metals including mercury, copper and lead. Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "

Health Problem: "Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

Site Description:

"Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.39 acres in size. The site will be used for a seven-story, mixed-use residential/commercial building, which is under development. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction. "

Env Problem:

"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil were trichloroethene, benzo(a)pyrene, chrysene and metals including mercury, copper and lead. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to remediation, the compounds exceeded groundwater standard were trichloroethene, cis-1,2-DCE and metals including mercury, copper and lead. Remedial action taken place at site removed on-Site sources and post-remedial groundwater sampling documented that the concentrations do not require further treatment or monitoring. Although chlorinated volatile organic compounds were detected in groundwater and soils during the remedial investigation, remediation at the Site consisted of removal of approximately 13,000 cubic yards of contaminated soil and approximately 5.5 million gallons of contaminated groundwater. Furthermore, the foundation of the Site building is below the water table which necessitated installation of a 60 mil thick polyethylene/rubberized asphaltic waterproofing material as part of foundation construction. No further actions are needed to address soil vapor intrusion based on post-remedial environmental data and the construction elements of the building. "

Health Problem:

"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants on-site. Additional evaluation is needed to determine whether actions are needed to address soil vapor intrusion off-site. "

DEC Memo: 8/7/14-Vought-Received call from and spoke to Don Carlo (Danny Singh Ph:718-857-1800) who was hired to replace suction and return lines for tank #1 and they found contaminated soil off the return line at one location. Six drums have been generated so far. Site is a DCAS workshop and there are two (4,000-gallon) #2 fuel oil USTs buried beneath the sidewalk. 12/7/16 - Lakhani There are two (2) spills recorded (#9700718 and #8710648) and PBS registration #2-217166 recorded for the addresses at: 374 - 394 Kent Avenue Brooklyn, NY 11249 Alternate addresses include: 2 - 20 South 6 Street. As per PBS, there are two (2) tanks registered at the address: 1) two (2) 4000 gallon #2 fuel oil UST As per PBS, both tanks are in service. The site owner info is: DCAS - Joseph Wagner Chief 1 Centre St New York, NY 10007 Ph: 2123860481 As per spill #8710648, there were two (2) 5000 gallon tanks which failed tightness testing at 390 Kent Ave. The spill number was closed due to lack of recent information. File Review: A-1 Crown Corp Tank Tightness Report (A-1 Crown Corp, 8/4/11) - Both 4000 gallon USTs and their systems were confirmed tight as per A-1 Crown Corp. Expiration date was on 7/2013. 01/09/17 - Lakhani 10:46 AM: Called Danny Singh but he was unavailable. Message was left. 10:51 AM: Called Don Carlo Environmental Services (7188573100) and spoke to Romeo. He informed me that suction and return lines were replaced and the lines were tested and passed. There is a high water table at the location. There was #2 fuel oil soil contamination at the site. Soil was removed and disposed of. Site was backfilled with clean sand and concreted over. Soil samples were collected and analyzed. Soil samples were below standard. DEC Lakhani asked for a copy of soil sample results. Gave Romeo contact information. 6/19/17 TJD File review. Closure report submitted by Don Carlo Environmental Services. As per report, the following is a summary of the remedial work performed: I. Provided labor and

equipment needed to excavate a trench 110-feet running north to south alongside 390 Kent Avenue building exposing the double-walled pipe, where the 2-inch suction and 2-inch return pipes are located, for one 4,000-gallon #2 fuel oil Underground Storage Tank (UST) known as Tank No. 002. The trench was excavated 34-inches deep in front of the building at 100-feet in length and 5-feet deep in the tank area (see Figure 1 attached). 2. During exposing the piping of tank no. 002, petroleum contaminated soil was encountered within 5-feet (east) alongside tank no. 002 and 9-feet deep; as of August 8, 2014, as total of six drums were filled with petroleum contaminated soil and removed from the site by William J. Lauer Corp. and transported to Clean Water of New York, Inc. in Staten Island, NY for legal disposal (see disposal manifest attached as Appendix A). 3. DCES Technicians completed the re-installation and replacement of new double-walled fuel oil piping system, and tested the new lines. Tank piping passed the tightness test. 4. In an attempt to further investigate the extent of the petroleum contaminated soil, DCES Technicians installed four borings (B-1 through B-4) manually within the excavated trench alongside tank no. 002 (see Figure 1 attached). The soil samples were collected from 9-feet below grade surface (bgs) to a termination depth of 13-feet to 14-feet bgs (see Boring Logs attached as Appendix B). Soil samples were collected at 2-foot intervals and field-screened visually and by olfactory methods utilizing a portable Photo Ionization Detector (PID) model PGM-30. Field screened soil samples from bores B-1 through B3 did not depict any signs of petroleum contamination; soil samples from bore B-4 identified petroleum contamination in the three samples retrieved. 5. From the 3rd to 4th day of September 2014, DCES Technicians continued the excavation of petroleum contaminated soil from the areas of bore location B-4 from 9-feet bgs to a termination depth of 14-feet bgs. Contaminated material removed was mainly pea gravel with heavy staining of petroleum. A total of twelve 55-gallon drums were filled with petroleum contaminated pea gravel and transported off site by William J. Lauer Corp. and transported to Clean Water of New York, Inc. in Staten Island, NY for legal disposal (see disposal manifest attached as Appendix A). 6. On the 8th day of September 2014, DCES Technicians mobilized a truck-mounted Geoprobe machine onsite in order to determine the soil and groundwater condition at the site. A soil sample from the bottom of the excavated area was collected, field-screened for petroleum and documented with a PID reading of 88:00ppm; the deepest dry sample was placed into laboratory

S113493774

certified glass jars and labeled B-4 (14'). Our Technicians relocated the Geoprobe machine 5-feet south of bore B-4 and installed another boring B-5 from grade, then continuously every 4-feet to a termination depth of 14-feet bgs. Soil samples collected from bore B-5 were field-screened visually and by olfactory methods utilizing a portable Photo Ionization Detector (PID) model PGM-30. Field-screened soil samples (S-1 through S-2) from bore B-5 did not depict any signs of petroleum contamination; soil samples (S-3 through S-4) from bore B-5 identified low levels of petroleum contamination. The deepest dry soil sample was placed into laboratory certified glass jars and labeled B-5 (14.5'). The bore location B-5 was utilized to install a temporary groundwater monitoring well where groundwater was encountered and collected at 15.5'. A total of two soil samples (B-4 and B-5) and one groundwater sample (B-5/WSI) was documented on a Chain of Custody form, packed into a cooler with ice and transported to York Analytical Laboratories Inc. for analysis using EPA Test Methods 8260 for Volatile Organic Compounds (VOCs) and 8270 for Semi-Volatile Organic Compounds (SVOCs). The site was secured and closed pending lab results. 7. Laboratory analytical results of the soil samples identified one exceeding VOC (Acetone) in sample B-4 and two level VOCs (1,2,4-Trimethylbenzene and 1,3,5-Trimethylbenzene) in samples B-4 and B-5; and one low level SVOC (Phenantbrene) was identified in sample B-4. Laboratory analytical results of the groundwater sample identified seven exceeding VOCs (Benzene, Ethylbenzene, n-Propylbenzene, sec-Butylbenzene, 1,2,4-Trimethylbenzene, 1,3,5- Trimethylbenzene and Xylenes); one exceeding SVOC (Naphthalene) and two low level SVOCs (Flourene and Phenanthrene). The remaining contaminants analyzed were not detected. Laboratory analytical results were compared with NYSDEC Part 375 (Unrestricted and Restricted Soil Cleanup Objectives) and lab results are attached as Appendix C. 8. Based on the analytical data received, DCES mobilized onsite and installed a demarcation barrier of 10-mil plastic sheeting over the entire remediated area prior to backfilling with clean fill materials. The entire remediated area including the trench was backfilled with clean fill materials and restored with pour concrete. A review of laboratory data reveals all of target analytes concentrations are with acceptable limits. A total of 18 drums of petroleum impacted soils were excavated, transported and disposed of in accordance with applicable regulations as part of the remedial process. No further action is required at this time. Closure report has been uploaded to DECDOCS. Spill closed.

Site Description: "Location: The CitiStorage site is a 4-acre site located in an urban area of NYC. Site Features: The site is generally flat with a gentle west-northwesterly slope toward the East River. A three-story warehouse occupies most of the site. A Paved parking lot is present on the river side of the warehouse. Current Zoning and Land Use: The site (Block 2294, Lots 1 & 5) is currently inactive and zoned for commercial use. The site and its immediate surrounding areas are zoned Low Performance Manufacturing (M3) by the New York City Department of Planning. Surrounding parcels are currently used for a combination of commercial, light industrial, and parklands. The site is bordered by a NYC park to the south; vacant land known as the former Williamsburg manufactured gas plant (MGP), NYSDEC site number 224055, to the north; various light commercial and hotel operations to the east; and the East River to the west. The nearest residential area is 0.3 miles to the east. Past Use of the Site: Former uses of the site included an oil storage facility operated by the Standard Oil Company Pratt from 1916 to 1954. The site was also occupied by a cooperage, a garage, and a machine shop. The Brooklyn Eastern District Terminal occupied the property from 1942 to 1996 and included several flour storage facilities and their associated structures, chemical storage, and rail lines. The property is currently occupied by the CitiStorage warehouse which was constructed on this lot in the late 1990s. Site Geology and Hydrogeology: Adjacent subsurface investigation show 10-20 feet of historic fill thickening from East to West. Underlain by interbedded silt and sand on the Eastern part of the site and clay and silt on the Western part of the site. "

Env Problem: "Sample results from a 2006 Site Investigation Report showed soil and groundwater contaminate concentrations exceeded NYS cleanup objectives for petroleum-related volatile organic compounds (VOCs)

and semi-volatile organic compounds (SVOCs). A site characterization and investigation is required to determine the presence and nature and extent of contamination at this potential site. The site is located adjacent to parklands, and the anticipated future use of the site is also parkland."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

 Control Code: 13
 Control Type: ENG
 Date Record Added: 08/24/2018
 Date Rec Updated: 03/05/2024
 Updated By: DRNIEREN
 Site Description:

"Location: The 416 Kent Avenue site is located in an urban area along the East River in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of Broadway followed by Block 2467 to the north (paper street), Kent Avenue to the east, what would be an extension of South 8th Street to the south (paper street) followed by Block 2134, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 46,000 square feet (1.056 acres). Currently the site is under construction for a 22-story residential building with subgrade parking and retail space, first- and second-floor amenity space, ground floor retail space with residential use beginning on the second floor. Current Zoning and Land Use: The site is located in zoning districts R7-3 and C4-3. Zone C4-3 encompasses approximately 3,900 square feet of the property, and the remaining approximately 42,100 square feet is in zoning district R7-3 with a C2-4 commercial overlay. The property will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses associated with the site include a ferry terminal (1887), vacant land (1935 to 1965) and a trucking company (2001 to circa 2012). Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by dark gray and brown fine to coarse-grained sand with varying amounts of brick, concrete, gravel, organic clay, coal, and slag extending to depths ranging from 2 to 13 feet below ground surface (bgs) in the majority of the site and up to 24 feet bgs next to the East River. The fill layer is underlain by sand and silt layers with trace gravel and mica schist. Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 75 to 100 feet bgs. Groundwater is between 6 and 15 feet bgs and is flowing to the west, toward the East River."

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a

S117393297

soil cover system and submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Description:

"Location: The 416 Kent Avenue site is located in an urban area along the East River in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of Broadway followed by Block 2467 to the north (paper street), Kent Avenue to the east, what would be an extension of South 8th Street to the south (paper street) followed by Block 2134, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 46,000 square feet (1.056 acres). Currently

the site is under construction for a 22-story residential building with subgrade parking and retail space, first- and second-floor amenity space, ground floor retail space with residential use beginning on the second floor. Current Zoning and Land Use: The site is located in zoning districts R7-3 and C4-3. Zone C4-3 encompasses approximately 3,900 square feet of the property, and the remaining approximately 42,100 square feet is in zoning district R7-3 with a C2-4 commercial overlay. The property will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses associated with the site include a ferry terminal (1887), vacant land (1935 to 1965) and a trucking company (2001 to circa 2012). Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by dark gray and brown fine to coarse-grained sand with varying amounts of brick, concrete, gravel, organic clay, coal, and slag extending to depths ranging from 2 to 13 feet below ground surface (bgs) in the majority of the site and up to 24 feet bgs next to the East River. The fill layer is underlain by sand and silt layers with trace gravel and mica schist. Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 75 to 100 feet bgs. Groundwater is between 6 and 15 feet bgs and is flowing to the west, toward the East River."

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site's residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 502497

Site Description: "Location: The 416 Kent Avenue site is located in an urban area along the East River in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of Broadway followed by Block 2467 to the north (paper street), Kent Avenue to the east, what would be an extension of South 8th Street to the south (paper street) followed by Block 2134, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 46,000 square feet (1.056 acres). Currently the site is under construction for a 22-story residential building with subgrade parking and retail space, first- and second-floor amenity space, ground floor retail space with residential use beginning on the second floor. Current Zoning and Land Use: The site is located in zoning districts R7-3 and C4-3. Zone C4-3 encompasses approximately 3,900 square feet of the property, and the remaining approximately 42,100 square feet is in zoning district R7-3 with a C2-4 commercial overlay. The property will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses associated with the site include a ferry terminal (1887), vacant land (1935 to 1965) and a trucking company (2001 to circa 2012). Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by dark gray and brown fine to coarse-grained sand with varying amounts of brick, concrete, gravel, organic clay, coal, and slag extending to depths ranging from 2 to 13 feet below ground surface (bgs) in the majority of the site and up to 24 feet bgs next to the East River. The fill layer is underlain by sand and silt layers with trace gravel and mica schist. Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 75 to 100 feet bgs. Groundwater is between 6 and 15 feet bgs and is flowing to the west, toward the East River."

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 502497

Site Description: "Location: The 416 Kent Avenue site is located in an urban area along the East River in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of Broadway followed by Block 2467 to the north (paper street), Kent Avenue to the east, what would be an extension of South 8th Street to the south (paper street) followed by Block 2134, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 46,000 square feet (1.056 acres). Currently the site is under construction for a 22-story residential building with subgrade parking and retail space, first- and second-floor amenity space, ground floor retail space with residential use beginning on the second floor. Current Zoning and Land Use: The site is located in zoning districts R7-3 and C4-3. Zone C4-3 encompasses approximately 3,900 square feet of the property, and the remaining approximately 42,100 square feet is in zoning district R7-3 with a C2-4 commercial overlay. The property will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses associated with the site include a ferry terminal (1887), vacant land (1935 to 1965) and a trucking company (2001 to circa 2012). Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by dark gray and brown fine to coarse-grained sand with varying amounts of brick, concrete, gravel, organic clay, coal, and slag extending to depths ranging from 2 to 13 feet below ground surface (bgs) in the majority of the site and up to 24 feet bgs next to the East River. The fill layer is underlain by sand and silt layers with trace gravel and mica schist. Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 75 to 100 feet bgs. Groundwater is between 6 and 15 feet bgs and is flowing to the west, toward the East River."

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. Endpoint samples collected and analyzed across the site confirmed the success of the remedial

action. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements necessary to ensure these controls remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

 Town: New York City
 Record Added Date: 12/03/2014
 Record Updated Date: 12/31/2021
 Update By: RKCORCOR
 Site Description: "Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The site prior to remediation was occupied by a parking lot and an attendant booth. After remediation, the site has been redeveloped with an eight to eleven story building the footprint of which occupies the entire site. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1 2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi story residential buildings. Past use of the Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by a food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with a parking lot parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast."
 Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soils were petroleum VOCs, Chlorinated VOCs (CVOCs) and naphthalene. Non-aqueous phase liquids (NAPL) were present at the site. On site groundwater was contaminated with SVOCs and CVOCs. Pure solvent was detected in groundwater in the

southern portion of the site. CVOCs including vinyl chloride were detected in soil vapor at the site. Remedial actions (excavation and disposal of contaminated soil) have successfully achieved soil cleanup objectives for Unrestricted Residential Use. "

Health Problem: "Remedial actions are complete and no exposures are expected to residual contamination as the site has been remediated to unrestricted use."

Site Description:	"The area of concern subject to this work is considered off-site from BCP site C224203 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224203 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. Driggs Avenue bounds the property to the southeast, N 8th Street bounds the property to the southwest, and N 9th Street bounds the property to the north. The site is bound to the west by various mixed-use

residential buildings. Site Features: The site consists of multiple tax lots including a paved parking lot and mixed-use residential buildings. Current Zoning and Land Use: The site is currently zoned commercial/industrial/high density residential and general residence (M1-2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi-story residential buildings. Past Use of Site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse around 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of about 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at about 12 feet below ground surface, and flows to the northeast."

Env Problem: "Nature and Extent of Contamination: Based upon the remedial investigation at the BCP site #C224203, the primary contaminants of concern are expected to be naphthalene, vinyl chloride, and cis-1,2-dichloroethene which were found in the BCP site soil, groundwater, and soil vapor. The BCP site soils also contained some semi-volatile organic compounds (SVOCs), such as benzo(a)pyrene, benzo(a) anthracene and benzo(b)fluoranthene, chrysene, dibenz[a,h]anthracene. The off-site investigation has not begun, therefore this section will be updated to reflect the investigation results as data become available."

Health Problem: "Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

DEC Memo: Consultant was hired to do a Phase 2 on this property for City Little e designation. They found small amounts of SVOC and Pesticides in shallow soil borings (2ft depth) 3/5/08 - Raphael Ketani. I looked up the site in the PBS, but it wasn't listed. The block and lot are 2312 and 22. According to ACRIS, the owners are Tadeusz and Krystina Zablocki, 75 Berry Street, Brooklyn, 11211-1917, and Michael Lichtman, 132 Greene Street, New York, 10013. The environmental company is Environmental Building Solutions. The contact is Michael Borello (917) 217-7334. I sent a CSL to the owners. 3/11/08 - Raphael Ketani. Today I received a letter from Joseph Horowitz, PE, 76-06 137 St., Flushing, 11367 ((718) 544-5105). The letter stated that a Phase II was currently taking place. Previously, a Phase I was performed for the site and submitted and approved by NYC DEP. NYC DEP is involved because the site has an E designation. Mr. and Mrs. Zablocki plan to construct a four story building. The building will require a foundation which is 10 feet deep. Excavation will be at least to a depth of 10 feet. Clearance sampling will take place and the remediation work will be incorporated into the construction work. Mr. Horowitz stated that DEC will get a copy of the Phase II ESA and the Phase III Work Plan. Mr. Horowitz stated that he, Mr. and Mrs. Zablocki, Michael Borello, Principal, Environmental Building Solutions, LLC, 295 Madison

Avenue, Suite 1826, NY, 10017, and Innocent Taziva, NYC DEP ((718) 595-3585) should all be copied on any correspondence from DEC. The NYC DEP reference number is 08DEPTECH159K/04DCP003K. 3/12/08 - Raphael Ketani. I left a message for Mr. Horowitz that the DEC would like the contaminated soil to be removed immediately and that we would like the end point soil sample analytical results. Mr. Horowitz called me back. He said that the site is half an open yard and half a garage. He said he is waiting for the necessary permits to demolish the garage. Otherwise, they can't move forward. He said that the owners are as anxious as DEC to move forward and get rid of the contaminated soil. Groundwater samples were taken and he is waiting to receive the analytical results. 3/18/08 - Raphael Ketani. Today I received the Phase I for the site from Mr. Horowitz. I reviewed the document. The entire document was lightly reproduced as it may have been printed from a copy of a copy of the Phase I document. The pages in appendices IV and V were too light to read. However, these were mostly maps and neighboring property descriptions, respectively. I had no other comments regarding the Phase I. 3/24/08 - Raphael Ketani. I received a call today from John Zablocki, one of the owners (646) 361-6839. He said that the engineer he had hired was billing him for all kinds of things. He also wanted to know if he needed to contact DEC before doing the site excavation for the contaminated soil. I told him he didn't have to wait for DEC's approval, but he would need to provide DEC with documentation that he had characterized the soil, and had sent it to the appropriate disposal site. I added that DEC would also need manifests for the loads of soil. I told him that soil borings would have to be taken to delineate the extent of the contamination, unless he already knows this. I told him that DEC had already received some information regarding the level of the contamination. He asked whether he can take the soil samples himself in order to save money. I told him he could and I explained the entire process of soil contamination delineation, sending the samples to a laboratory, submitting a soil sampling plan to be approved by DEC before the work starts, the analytical methods to be used and other details. In the end of our 45 minute conversation, I informed him that hiring an environmental professional, particularly a person with a PE might be the best way to go, even if it is expensive. I told him that this person will know what to do and the ins and outs of the process. I added that the bank may cut his funding if a PE doesn't oversee the job. I told him to be careful as regards what he does with his project. He said he plans on

building a 6 family apartment building. I told him that he should be very careful that the work is done properly. He thanked me for all of the information and the conversation ended. 3/26/08 - Raphael Ketani. I received the (Draft) Subsurface Soil and Groundwater Investigation report dated 3/13/08 from Environmental Building Solutions, LLC. I reviewed the report. I finished my review of the report. The soil analyticals showed that there were hits for SVOCs in the soil. These were the combustion series of analytes in the 0' to 2' sample and the 14' to 16' sample for B3. There were low level exceedences of TAGM for the 0' to 2' sample. Only a small number of hits were present in the other samples. The samples were almost entirely non-detect for SVOCs. Almost all of the samples were also non-detect for VOCs. Most of the hits were in B-2 in the 0' to 2' sample. The groundwater sample had only some low level SVOC exceedences of TAGM. The boring location map shows that the drilling sites were widely spaced. I wrote a letter to Mr. Horowitz stating that there should be more borings. 3/27/08 - Raphael Ketani. I spoke to Mr. Horowitz (718) 544-5105 about the site. He said that the Zablockis received the DEC letter requesting 3 additional borings and soil samples. He said that he doesn't want to try to do the borings and get the analytical results for the soil samples as this will take a lot of time. He said that the City program they are involved with gives them a tax break for constructing on their property, but only if they have the foundation under construction before the end of June 2008. He said that what DEC is asking for will take too much time. He said that all of the soil will be dug up anyway and handled as hazardous material due to the pesticide hits. I told him that is fine, but DEC still doesn't know what the subsurface conditions are. I told him that the site is 100 feet long and that 3 borings are just not enough to characterize the subsurface. I told him that he doesn't have to go down any further than 15 feet and that the analytical results just need to show the 12 most common VOCs and the 12 most common SVOCs. I told him that there are dozens of environmental and remediation companies and that someone has to have equipment available to do a few borings on short notice. He said that he will call me back later. Mr. Horowitz called a half hour later and asked how many soil samples would be needed. I told him to send off the 3 dirtiest ones. He said nothing is really dirty. I told him that is fine. He asked that he be allowed to order testing via STARS for VOCs and SVOCs. I told him that will be fine. He said that he will talk to the Zablockis and get back to me. Later, Mr. Horowitz sent me an e-mail memorializing the agreement between him, the

S109060194

Zablockis, and DEC. The agreement stated in the e-mail is: borings will take place March 31 or April 1, 3 borings opposite the existing locations will go down to 16', the dirtiest sample will be collected, analyses will be done via STARS methods 8260 and 8270, results will be presented in an Addendum to the Phase II.

4/1/08 - Raphael Ketani. Mr. Horowitz sent me an e-mail containing a DRAFT letter for Mr. Taziva of NYC DEP. He asked me to comment on the parts of the letter mentioning correspondences between him and me. The statements regarding the correspondences appeared accurate. A made a copy of the DRAFT letter and put it in the paperfile. His DRAFT letter also mentions that the 3 additional borings were performed on April 1, 2008 and soil samples were sent to the laboratory for 24 hour turn around.

4/4/08 - Raphael Ketani. Today I received the final Subsurface Soil and Groundwater Investigation report dated March 13, 2008 from Mr. Horowitz. The report was accompanied by a cover letter to Mr. Taziva of DEP dated 4/2/08. The cover letter states that a vapor barrier will be installed. The report did not include the soil analyses for the 3 additional borings that were requested by DEC. I had no comments regarding the letter, nor the report.

4/8/08 - Raphael Ketani. I received the analytical results for the 3 additional borings that were performed. The respective samples were B-6, B-7, and B-8. All of the results for VOCs and SVOCs were completely non-detect. I spoke to Mr. Horowitz regarding the analytical results. I asked him why the numbering order goes 6, 7, and 8. He said that he was just following the numbering system from the previous reports. He said that no samples were missing. I asked him why the analytical sheets say that the sample type is GRAB when they are supposed to be the soil cores. He said that the samples are from the soil borings.

4/9/08 - Raphael Ketani. Yesterday, I received the Subsurface Soil Investigation Addendum dated 4/4/08 from Mr. Horowitz. I reviewed the document. The analytical results for borings B-6, B-7, and B-8 were the same as the ones I had previously reviewed on 4/8/08. However, borings B-1 and B-3 were in different locations than in the 3/13/08 report. Also, the Addendum depicts boring B-4 at the location of B-2 and boring B-5 is at the location of B-3. The Addendum puts B-3 at the location of B-1 of the 3/13/08 report. Additionally, I never received the analyticals for B-4 and B-5. I tried to contact Mr. Horowitz to discuss this, but could only leave a message.

4/10/08 - Raphael Ketani. Mr. Borello of Environmental Building Solutions, LLC (646) 290-5925, exr 25 called me back. He said he was sorry for the confusion. He e-mailed me the three different site plans

showing the different stages and placements of the series of borings and the well. He also e-mailed me the analytical results for 3 composite samples that were taken to characterize the soil. The analytical results were mostly non-detect with only a handle of low hits of SVOCs. 4/11/08 - Raphael Ketani. Mr. Horowitz sent me the entire analytical package from Environmental Testing Laboratories for the 3 composite samples, along with copies of the Chain of Custody Forms and the 3 different boring location site plans. I reviewed the package and had no comments. Based upon the analytical results in the March 13, 2008 Phase II, the analytical results in the Addendum to the Phase II dated April 4, 2008, and the April 10, 2008 soil characterization testing results package, I am closing the spill case. I sent an NFA letter to Mr. Horowitz, with a c-c to Innocent Taziva of DEP.

Remarks: semi-volatile MATERIAL AND PESTICIDES; SOIL SAMPLE RESULTS; CLEAN UP PENDING FURTHER INVESTIGATION;

Pleaseant St., Apt. 2 Brookline, MA 02446 bf 11/13/06 On 10/12/06, received letter from Sandra Maislen in response to ttf letter. Reviewed letter and the attachments. The fill line, stick line, and vent line failed. I called Petroleum Tanks to see if they remember detecting any contamination when lines were replaced. I was told Mark Salamack was the person in charge of the tank repairs. He was in a meeting at the time of the call and I left a message for him to call me. Mr. Salamack (718-624-4842) called me back and told me that there was no observed contamination and no elevated reading on the PID meter used at the time of the repairs. NFA. bf

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued)

S117394139

for 1216805 and the block/lot maps the most contaminated groundwater flows from 223 North 8th towards 207 North 8th. I would call in a spill for the following reasons: -Down-gradient VOC concentrations are ten times higher at 207 North 8th suggesting an on-site source.-Prior site use of 207 North 8th as a private garage suggesting petroleum use and possible storage. -Groundwater concentrations at 207 North 8th will require at least quarterly monitoring via installation of sidewalk wells (if the site is to be developed) to ensure a decreasing VOC trend attributable to attenuation. -PCE in soil vapor may require DOH review and possible SSDS (unless this site has been reviewed with Jane O or Bob C during OER/DEC routine meetings). As I manage the almost adjacent site, it would make most sense for me to manage 207 North 8th as well. As such I would much appreciate if the spill caller to the hotline was to mention my name be placed in DEC Remarks. Hope this helps and feel free to forward this email onto the developer/responsible parties. Submission of a Remedial Action Report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP, and describes all ECs and ICs to be implemented at the Site. 12/29/14-Vought-Sent email to OER Moore as to if spill at 207 North 8th was called into Spills Hotline. OER Moore replied that she would return call to Vought to discuss. Vought had teleconference with OER Chawla, Moore and Wong and they noted that 207 would be excavated to below groundwater and Vought noted DEC would require collection of groundwater sample from excavation during development of that site under separate spill number. OER Moore will have spill called in to hotline and note Vought as PM so that Vought could manage both spill sites due to proximity. Construction and maintenance of an engineered composite cover consisting of a 4 inch thick concrete slab across the southern 70 feet of the Site and a 4 inch thick concrete patio across the northern 30 feet of the Site to prevent human exposure to residual soil/fill remaining under the Site. The entire Site will be capped, there will be no exposed soils, vegetation, or landscaping; 12/30/14-Vought-Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our

S117394139

requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff 8/19/16-Vought-Sent letter to OER Moore with cc to OER Chawla that Hannah, We just received a FOIL request for the above site and I see there are no updates since my last notes of 12/30/14 where I noted that Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff And my requirements at that time were DEC Requires: 1)Submission of a RAP including collection of bottom groundwater sample and soil sidewalls (if possible) as development of site includes excavation to groundwater as per NYCOER 12/29/14. 2)Submission of reports submitted to NYCOER as per email dated 12/29. 3)Vapor or moisture mitigation into new development. 4)cc to OER Chawla/Moore/Morris and PW Grosser. I have attached the spill notes for your reference as well and would much appreciate any updates you have or resending those updates if already sent. Thanks. OER Moore replied Hi Jeff we re looking into it and will get back to you. Thanks. 8/19/16-Vought-Received email reply from OER Chawla with cc to OER Moore/Glass that Since the spill was called in during investigations back in 2014, development project has been stalled and no work is ongoing. See email from consultant below. Kate Glass is managing this site for us. RIR and RAWP were finalized in 2014. Kate will be voiding their NTP. Give me call if you need any additional info. In below email string was email from PW Grosser Almskog to OER Glass dated 2/17/16 that Katherine, I look forward to working with you on this and other OER projects in the future. The project redevelopment has been on hold for the past few years

and no development or excavation activities have taken place since the remedial investigation and the Remedial Action Plan were submitted to OER. The property owner is evaluating proposed development design plans and is hoping to start construction activities in 2017 at this site. Once the redevelopment plans are finalized, I will be in contact with you to determine if a revised RAWP or addendum is needed based upon modifications. Please let me know if you have any additional questions. Thanks 8/22/16-Vought-Reviewed Remedial Investigation Report (PW Grosser Jennifer Lewis) dated May 2014. Vought added report to D2. Report prepared for: North Eight NY, LLC 900 Grant Avenue Brooklyn, NY 11211 Remedial Investigation Report (PW Grosser)-May 2014: The development project consists of a new six story residential building with a cellar. The lot size of the property is 25 feet by 100 feet and the first through six floors of the building will occupy the south 25 feet by approximately 55 feet. The first floor will be underlain by the cellar which will extend an additional approximate 15 feet north into an open air areaway and sump pump room. The remaining 30 feet north of the cellar will remain near sidewalk grade and will exist as a concrete paved courtyard. The cellar level will consist of utility rooms, a laundry room, a boiler room, the areaway, and an accessory room to a first floor dwelling unit. The site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator pit and step footings. Site E designated with NYCOER. Former oil tank on site as per NYCDOB permit in 1992. Scope of work included five soil borings with collection of eleven soil samples, installation of three monitoring wells and five soil vapor probes with three samples collected for analysis. Water in monitoring wells is 7-11'bg but may be perched. Groundwater flow to the northwest and soils are 3-10'of historic fill underlain by sandy clay. Generally, the soil beneath the site consists of approximately 3 feet of historic fill material overlaying a layer of brown to black sandy clay that extended to a minimum depth of 30 feet. Anomaly noted during GPR survey in rear portion of property. Soil analyses showed up to 460ppb xylene(SB-2 20-23'bg). Groundwater analyses showed up to 1.2ppb benzene(MW1), 31ppb ethylbenzene(MW1), 11ppb xylene(MW2), and 250ppb naphthalene(MW2). Soil vapor analyses show up to: 15ug/m3 PCE(SV002), 19.8ug/m3 benzene(SV001), 144ug/m toluene(SV001), 31.4ug/m3 ethylbenzene(SV001), 113ug/m3 xylene(SV001). PWGC recommends that a Remedial Action Work Plan be prepared and submitted to address the proper handling of on-Site soils and groundwater and the installation of appropriate engineering

S117394139

controls based upon the development plans and the quality of the soil to remain in place following development. In appendix was Phase I from PW Grosser noting performance of GPR survey with detection of anomaly in rear of property. Remedial Action Work Plan Stipulation List (PW Grosser)-10/3/14. Vought added RAWP and Stipulation List to D2. P.W. Grosser Consulting (the consultant) hereby submits a Remedial Action Work Plan (RAWP) Stipulation List for the 207 North 8th Street (the Site) to the New York City Office of Environmental Remediation (OER) on behalf of North Eight NY, LLC. This letter serves as an addendum to the RAWP to stipulate additional content, requirements, and procedures that will be followed during the Site remediation. The contents of this list are added to the RAWP and will supersede the content in the RAWP where there is a conflict in purpose or intent. The Site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator pit and step footings beneath the cellar for an approximate 850 cubic yards of off-site soil removal. Groundwater is estimated at approximately 7 to 11 feet below grade and excavation for the cellar will require excavation into the groundwater. RAWP includes CAMP, establishment of restricted residential SCOs. The rear yard area (northern 30 feet of the Site) will be excavated approximately 0.5 feet below sidewalk grade for the installation of the concrete patio. Approximately, 1,000 tons of soil will be excavated and removed from this Site. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. Installation of a vapor barrier system beneath the building slab and outside foundation sidewalls below grade. The vapor barrier will consist of a combination of Grace Construction Products Preprufe 300R for horizontal applications and Preprufe 160R for vertical applications. Both vapor barriers are constructed of a high density polyethylene film; Preprufe 300R is 46 mils thick and Preprufe 160R is 32 mils thick. A letter from the manufacturer stating the compatibility of the vapor barrier with observed on-Site contaminants and manufacturer's cut sheets for the vapor barrier are included in Appendix B. A RAR will be submitted to OER following implementation of the remedial action defined in this RAWP. The RAR will document that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. 8/22/16-Vought-Sent letter approving of RIR and RAWP and Stipulation list pending inclusion of quarterly groundwater sampling, use of Unrestricted SCOs, and collection of bottom groundwater

OER - PETROLEUM CONTAMINATED GROUNDWATER (Continued)

S117394139

endpoint sample. Letter added to D2 and sent to North Eighth with cc to OER Chawla and Moore with email that Kris, Please see the Department s attached review letter of the RIR and RAWP and Stipulation list for the above referenced site. An original of the letter is in the mail to North Eighth LLC. Please provide an update on the status of the site. Thanks 9/6/16-Vought-Received hardcopy of DEC requirement letter returned to DEC from US postal service and envelope noted insufficient address and unable to forward . No resending of letter via US mail as Vought in active correspondence with consultant. DEC Requires: 1)Confirmation of RP's mailing address as last DEC letter returned as undeliverable . 1)Update on development plans for site as per the RAWP and RIR 2)Continuation of quarterly sampling of groundwater. 3)Use of Unrestricted SCO's as per CP-51 versus NYCOER using Restricted SCOs 4)Collection of groundwater sample from excavation to examine for possible attenuation after source removal 5)cc to OER Chawla/Moore/Morris and PW Grosser (Kris Almskog) as site E designated 12/19/2017 - Austin - Project transferred from Vought to Lakhani - end 08/08/18 - Lakhani OER Shaminder informed that the new project manager for the site is Alysha Alfieri. No work has occurred on the site. The site has been simply fenced in. 08/05/19 - Lakhani - Spill being transferred to Lin. 4/22/2020-Lin-Reviewed August 2018 groundwater results. No exceedances for VOC in groundwater samples. Groundwater contamination attenuated since samples were last taken in 2014. 11/8/21-Lin-Recieved groundwater sample results. There are three groundwater monitoring wells on site. The most recent groundwater sample results (one round of sampling in 2018 and two rounds of sampling in 2021) came back without exceedances of NYSDEC Ambient water quality standards for VOC. Case closed. Remarks: historical spill requesting Jeff out of long island be assigned to this spill

 Control Code: 13
 Control Type: ENG
 Date Record Added: 08/24/2018
 Date Rec Updated: 06/17/2024
 Updated By: DRNIEREN
 Site Description: "Location: The 420 Kent Avenue site is located in an urban area in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of South 8th Street to the north (paper street), Kent Avenue to the east, what would be an extension of South 9th Street (paper street) followed by Schaeffer Landing (a new residential development) to the south, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 79,800 square feet (1.83 acres) and is occupied by three vacant buildings and an associated parking area. When construction is completed, the Site will be improved with two 22-story mixed use residential and retail buildings with shared cellar and ground floor levels. The development will include cellar and partial first floor parking, residential units on floors 1 through 22, retail and residential amenity space along Kent Avenue, and a waterfront esplanade along the East River. Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel

corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravelly sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appears to flow to the west-northwest toward the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and a submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements, including groundwater monitoring, necessary to ensure these controls/remedy remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Description:

"Location: The 420 Kent Avenue site is located in an urban area in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of South 8th Street to the north (paper street), Kent Avenue to the east, what would be an extension of South 9th Street (paper street) followed by Schaeffer Landing (a new residential development) to the south, and the East River to the west. Site Features: The irregularly-shaped site

encompasses an area of approximately 79,800 square feet (1.83 acres) and is occupied by three vacant buildings and an associated parking area. When construction is completed, the Site will be improved with two 22-story mixed use residential and retail buildings with shared cellar and ground floor levels. The development will include cellar and partial first floor parking, residential units on floors 1 through 22, retail and residential amenity space along Kent Avenue, and a waterfront esplanade along the East River. Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site will be mixed-use with residential and commercial spaces. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravelly sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appears to flow to the west-northwest toward the East River. "

Env Problem: "Remediation at the site is complete. Prior to remediation the contaminants of concern included certain metals, volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs). Remedial actions have successfully achieved the restricted residential soil cleanup objectives, which allow for the site s residential and commercial use. The site requires an institutional control, in the form of an environmental easement, and engineering controls in the form of a soil cover system and a submembrane depressurization system. A Site Management Plan (SMP) was completed to manage remaining contamination at the site and includes an Institutional and Engineering Control Plan that identifies all use restrictions and engineering controls for the site and details and steps and media-specific requirements, including groundwater monitoring, necessary to ensure these controls/remedy remain in place and effective."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."
