Longitude:	-73.9593366
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II 5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II
Remarks:	also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167.

DEC Memo:	6/5/23 - Kim - Desk Duty - Yu Associates performed a site investigation as this is an OER E-designated site. The Phase II investigation was performed on 5/15 and 5/16. During the field investigation, it was noted that soil sampled during boring installation exhibited petroleum odors. Yu Assoc. collected soil and groundwater samples. Based on their review, soil samples contained BTEX exceeding residential SCOs and groundwater samples contained BTEX exceeding TOGS standards. Copy of lab report and, when available, Phase II report were requested via email. chang@yu-associates.com 06/06/23-Hiralkumar Patel. downloaded Phase I from NYC OER EPIC database. 10:30 AM:- DEC Kim forwarded email from Chengyu Hang including site map and sample results. Chengyu Hang YU & Associates PH. (201) 873-7543 email: chang@yu-associates.com

213 NORTH 8TH STREET (Continued) **S130464691**

06/13/13-Hiralkumar Patel.
alternate address: 211-215 N 8th St no PBS or other spills found.
summary of Phase I dated Aug.
2021: - as per historical maps, the subject site consisted of one (1)
3-story residential building,
one (1) 2-story wagon shed building and one (1) 3-story retail store
building from 1887-1942.
between 1942 and 1951, there was a 2-story building with a gasoline
UST (near N 8th St) and a
3-story retail store building. the 2-story building was maintained
from 1951 until now. the 2-story
building was used as a manufacturer from 1951 to 1965 and became a
wastepaper recycling facility
between 1965 and 2007, the 3-story retail store building was
demolished after 1965 and used as a
parking lot until 1991 and became part of building addition.
currently, the site is a
winery/restaurant - site has 'E' designation - nearest surface water
body is East River which is
about 0.5 mile away to the west 08/04/23-Hiralkumar Patel. received
email from Chengyu (at 3:39 PM
on 08/03/23) including link to RIR and draft RAWP. summary of RIR
dated July 2023: - currently, the
site is vacant and contains a partial basement located at the
south-east portion of the site -
proposed future use of the site will consist of a six-story mixed use
commercial-residential
building with a full cellar - existing building will be demolished
prior to redevelopment - the
entire lot will be excavated to the groundwater level, which is
approx. 9-10 ft bg for the
construction of the cellar - elevation of property ranges from 15 to
15.9 ft - GPR survey did not
identify any USTs - installed six (6) soil borings (SB-1 through SB-6)
were advanced to the
groundwater level, which is approx. 9-10 ft bg - stratigraphy of the
site, from surface down,
consists of approx. 5 ft of fill material underlain by 5-10 ft of
brown fine silty sand - soil
samples from each boring were collected at surface level (0-2 ft bg)
and subsurface level (highest
PID or 2 ft above groundwater interface) - elevated PID readings were
detected in SB-1, SB-2 and
SB-5 with max readings at the groundwater smear zone - strong
petroleum odors and higher PID
readings (79.4 to 280.7 ppm with max at 8-9 ft bg) were noted in
boring SB-1 - strong petroleum
odors and higher PID readings (94.6 to 238.7 ppm with max at 9-10 ft
bg) were noted in boring SB-2
- strong petroleum odors and higher PID readings (62.5 to 176 ppm with
max at 9-10 ft bg) were
noted in boring SB-5 - total twelve (12) soil samples were analyzed
soil analyticals (in ppb):
----------SB-2---------SB-3--------SB-5 8-10 ft 7-9
ft 7-9 ft
Ethylbenzene----------3,500--------2,700-------8,300
Xylene----------2,600--------5,100------18,000

213 NORTH 8TH STREET (Continued) **S130464691**

1,2,4-Trimethylbenzene----------15,000------18,000 - installed three (3) 1-inch diameter
temporary wells (GW-1 through GW-3) with 10 ft of screen - temporary wells were installed by
over-drilling soil borings approx. 4-5 ft below the groundwater table - well GW-1 was installed in
boring SB-1 - well GW-2 was installed in boring SB-6 - well GW-3 was installed east of boring SB-2
- depth to groundwater ranges from 8.77 to 9.74 ft bg - groundwater flow is generally to south-west
- total three groundwater samples were analyzed groundwater analyticals (in ppb):
----------GW-3 Ethylbenzene----------360
Xylene----------320
1,2,4-Trimethylbenzene-------320 - installed five (5) soil-vapor probes to the two ft above
groundwater level interval (appox. 7-9 ft bg) and collected five soil-vapor samples for analysis -
detected 1,1,1-Trichloroethane (540 ug/m3) and TCE (12 ug/m3) in sample SV-1 the draft RAWP
proposes: - excavation of entire footprint of site to the groundwater level for development
purposes - over-excavation in area where petroleum-impacted soil is observed from the excavation
bottom extending up to 3-5 ft below groundwater level - excavation of small portion of property to
the depth of 15 ft bg for elevator pits - removal of any USTs found during excavation - application
of ORC for in-situ bioremediation to treat on-site groundwater contamination - on-site groundwater
monitoring after ORC application - collection and analysis of endpoint samples - construction of
6-inch thick concrete building slab - installation of 46-mil vapor barrier beneath the building
slab and 32-mil vapor barrier outside all sub-grade foundation sidewalls review of available data
indicates presence of petroleum contamination in soil near the groundwater interface and in
groundwater along the upgradient side of the site, which could be result of off-site release. as
such, further groundwater investigation is needed via installation of permanent monitoring wells
(including one upgradient of SB-5, one at GW-3, one at SB-3 and at least one downgradient of the
site/grossly contaminated zone) prior to any comment on proposed ORC application/on-site monitoring
(off-site monitoring may also be needed based on delineation data/endpoint sampling results). 11:21
AM:- spoke with Chengyu and asked him to provide property owner's contact info. 11:38 AM:- received
email from Chengyu including property owner's contact info. LC & LH Realty Corp. **property owner**
923 60th Street Brooklyn, NY 11219 Attn: Cheng Kin Chau PH. (917) 642-0899 email:
kincheng668@yahoo.com 1:54 PM:- sent email to Chengyu. informed him that review of available
sampling data indicates presence of petroleum contamination in soil

213 NORTH 8TH STREET (Continued) **S130464691**

near the groundwater interface
and in groundwater along the upgradient side of the site, but source of such contamination has not
been defined yet. as such, the Department requires further subsurface soil and groundwater
investigation via installation of permanent monitoring wells (including one upgradient of SB-5, one
at GW-3, one at SB-3 and at least one downgradient of the site/grossly contaminated zone) prior to
finalizing a remedial action work plan. asked him to submit an investigation work plan, including
schedule for field work/report submission. email copied to OER Shaminder, Mr. Chau and Sixuan Wang
(swang@yu-associates.com). 10/17/23-Hiralkumar Patel. received email from Chengyu (at 3:31 PM on
09/27/23) including a supplemental investigation work plan. Chengyu didn t propose permanent wells
since the owner will demolish and redevelop the site later. if permanent monitoring wells are
warranted after the supplemental remedial investigation, they will be installed in the basement of
the proposed new building after the construction is completed. the regional groundwater flow
direction is obtained from the adjacent properties investigation reports. summary: - as per the
remedial investigation reports for the adjacent properties (207 N 8th St, 219-233 N 8th St and
212-218 N 9th St), regional groundwater flow direction is towards northwest --------- - five test
borings will be advanced to the groundwater level - depth of groundwater is expected at approx.
9-10 ft bg - boring MW-1/B-1 is proposed at upgradient of previous boring SB-4 - boring MW-2/B-2 is
proposed at previous boring SB-5 - boring MW-3/B-3 is proposed at previous well GW-3 - boring
MW-4/B-4 is proposed at previous boring SB-3 - boring MW-5/B-5 is proposed at downgradient of the
site/grossly contaminated zone - upto two soil samples will be collected from each five test
boring: one sample will be collected at the groundwater smear zone (approx. 8-10 ft bg) and second
soil sample may be collected from above groundwater level if elevated PID readings and/or visual
and olfactory observations are noted - five 2-inch diameter temporary monitoring wells will be
installed in five test borings - wells will be installed to approx. 5 ft below the water table with
10 ft of screen the work plan needs to be revised as missing collection of soil samples at highest
PID/observation of contamination and more specific schedule for report submission.
10/20/23-Hiralkumar Patel. 1:15 PM:- sent email to Chengyu and asked him to submit a revised work
plan including collection of soil samples at highest PID/observation of contamination and deepest
dry, and more specific schedule for submission of investigation report. email copied to OER

213 NORTH 8TH STREET (Continued) **S130464691**

Shaminder, Ms. Wang and Mr. Chau. 10/27/23-Hiralkumar Patel. received email from Chengyu (at 4:15
PM on 10/26/23) including a revised work plan. 11/03/23-Hiralkumar Patel. 9:14 AM:- sent email to
Mr. Chau including approval letter for work plan dated 10/26/23. asked him to submit investigation
report by COB 12/22/2023. email copied to OER Shaminder, Chengyu and Ms. Wang. 12/15/23-Hiralkumar
Patel. received email from Chengyu (at 3:17 PM on 12/14/23) including copy of supplemental
investigation report. 12/21/23-Hiralkumar Patel. 10:59 AM:- received email from Chengyu including
link to a draft RAWP. 01/04/24-Hiralkumar Patel. reviewed previously submitted investigation report
and draft RAWP. summary of supplemental investigation report dated 12/14/23: - geophysical survey
was performed on 11/10/23 - total of five (5) soil borings (B-1 through B-5) were advanced -
borings B-1 to B-4 were installed to 15 ft bg - boring B-5 was installed to 5 ft below basement
slab - soil samples were collected at 2 ft above groundwater (8-10 ft bg) interval and at the
location of the highest PID reading - total of seven (7) soil samples were analyzed - SVOCs
detected in majority of samples, with higher level in samples from boring B-3 - found some
contamination in soil samples from boring B-3 (7,20 ppb Xylene, 72,000 ppb Naphthalene) - five (5)
2-inch diameter temporary monitoring wells (MW-1 to MW-5) were installed with 10 ft of screen and 5
ft of riser - one groundwater sample was collected from each of the temporary well groundwater
analyticals (in ppb):
----------MW-2------MW-3------MW-4------MW-5
Benzene----------22--------72--------37
Toluene----------9--------76
Ethylbenzene----------33-------500--------11--------11
Xylene----------160-------750--------28--------44
1,2,4-Trimethylbenzene---------100-------200--------40--------54
1,3,5-Trimethylbenzene----------20--------50
Naphthalene----------1,100-----5,100-------120-------920
summary of draft RAWP dated Dec.
2023: - proposed future use of the site will consist of a six-story mixed use
commercial-residential building with a full cellar - retail space, sprinkler room, utility/gas
meter rooms, and storage rooms in the cellar - retail space, residential lobby, an office and a car
elevator on the first floor - 14 parking spaces on second floor - residential units on the
third-sixth floor - existing building will be demolished prior to redevelopment - the entire lot
will be excavated to the groundwater level, which is approx. 9-10 ft bg, for the construction of
the cellar - over excavation will be performed where petroleum-impacted soil is observed from the
excavation bottom extending up to 3-5 ft below groundwater level -

213 NORTH 8TH STREET (Continued) **S130464691**

petroleum-stained soils in the
northeast portion of the site should be over-excavated to approx. 3-5 ft below groundwater level or
to the extent practical - small portion of the property will be excavated to the depth of 15 ft bg
for elevator pits - removal of all USTs that encounters during construction - confirmatory endpoint
sampling of soil and groundwater should be conducted - in-situ enhanced aerobic bioremediation will
be implemented to treat the on-site groundwater petroleum contamination - ORC will be directly
applied at the excavation bottom where petroleum-impacted soils are observed - on-site groundwater
monitoring after in-situ chemical oxidation will be implemented - total of three
monitoring/injection wells will be constructed at the site - construction of a 6-inch thick
concrete building slab for the entire site - 46-mil vapor barrier will be installed beneath the
slab - 32-mil vapor barrier will be installed outside all sub-grade foundation sidewalls -
dewatering will occur - a 7-month remediation period is anticipated
1:07 PM:- spoke with Chengyu.
informed him about missing geoprobe number in boring logs included in the supplemental
investigation report. asked him to submit revised logs. also informed him about missing
site-specific SCOs in section 4.2 of the draft RAWP. also discussed use of ORC. informed him that
ORC application will be discussed after review of endpoint soil and groundwater sample results.
1:22 PM:- sent email to Chengyu and asked him to submit revised boring logs and signed/dated RAWP.
email copied to OER Shaminder and Mr. Chau. Madeleine Frank NYC OER PH. (212) 442-8342 email:
mfrank@dep.nyc.gov 01/17/24-Hiralkumar Patel. received email from Chengyu (at 4:22 PM on 01/16/24)
including revised boring logs and signed RAWP. RAWP proposes track 2 residential use soil cleanup
objectives, but will use track 4 restricted residential use if track 2 SCO's can't be achieved.
RAWP also proposes ORC application if over-excavation confirmatory endpoint sampling of soil and
groundwater still indicates elevated petroleum contamination. the RAWP proposes submission of a
remedial action report in seven (7) months from beginning of remedial action (which is not
specified in the plan). 01/30/24-Hiralkumar Patel. 1:48 PM:- sent email to Mr. Chau. informed him
that based on review of all available information the Department approves the proposed work plan
except implementation of bioremedial measures. asked him to submit results of post-excavation
samples for review prior to any comments/discussion on the proposed bioremediation. also asked him
to submit more specific schedule for field activities and report submission as the work plan

213 NORTH 8TH STREET (Continued) **S130464691**

proposes submission of a remedial action report within twenty-eight (28) weeks from beginning of
remedial action, but it does not specify when the remedial action will start. email copied to OER
Shaminder, OER Madeleine, Chengyu and Ms. Wang. 02/07/24-Hiralkumar Patel. 10:57 AM:- received
email from Mr. Chau including a revised RAWP with some minor edits required by NYC OER, but no
changes in remediation part. 02/15/24-Hiralkumar Patel. 10:39 AM:- sent email to Mr. Chau and
Chengyu. informed them that based on review of all available information, the Department agrees
with the proposed scope of work except implementation of bioremedial measures. asked them to submit
post-excavation endpoint sample results for review prior to any discussion/comment on bioremedial
measures. also asked to provide more specific work schedule for field activities and report
submission. email copied to OER Shaminder, OER Madeleine and Ms. Wang. 02/16/24-Hiralkumar Patel.
11:25 AM:- received email from Ms. Wang including a re-revised RAWP with more specific remediation
schedule. she mentioned that construction will begin in early March and an approx. 4 month
remediation period is anticipated. **construction has not begun as of end of July 2024**

DEC Memo:	7/28/2015 - Feng - Duty Desk. Talked to Kim Somers of EBC (631-504-6000). The site is being developed under the OER BCP program. OER has approved the RAWP already. They have installed borings/wells and found soil and groundwater contamination. Soil consist of historical fill and 1,000 ppb benzene, 1,600 ppb toluene at 1-2 feet. Groundwater was found to have 420 ug/L MTBE and SVOCs. DTW is at 5-7 feet. They probably start the excavation in 1 month pending the Notice to Proceed letter from OER and the DOB's permit. The investigation was done in 2/2015 and EBC reported it to OER and reported to DEC now. The RAWP calls for excavation of 10 feet in the north portion, 3 feet in the south portion and no excavation in the 25 feet of midsection. The RAWP calls for vapor barrier also. They are building a 4-story mixed use building which expand the existing building. Partial cellar to 10 feet for the 25 feet of the new building. Contact: EBC, Kim Somers, KSomers@EBCIncNY.com NYCOER, Shaminder Chawla, ShaminderC@dep.nyc.gov Horase Zhang, 212-788-8484 Discussed with the runner K. Patel and spill is assigned to K. Patel.

Environmental Business Consultants Ph. (631) 504-6000 Fax (631) 924-2870 email:
ksomers@ebcincny.com 07/29/15-Hiralkumar Patel. received reports from Kim. abstract of Phase I: -
according to the sanborn maps, the site appears to have been originally developed sometime between
1887 and 1905 with two, one-story structures identified as sheds with an office, and an attached
two-story structure in the southern rear portion of the lot - site appears to have been redeveloped
in 1970 with the currently existing, one-story industrial warehouse building - the building is
slab-on-grade - site was identified as a private garage (1951, 1965), an auto repair use (1978) and
a warehouse (2007) - no ASTs or evidence of USTs were observed - site was assigned an E-designation
hazmat ---------- abstract of RIR: - proposed future use of the site will consist of the
redevelopment of the existing structure in two, 4-story mixed use (commercial and residential)
buildings with a mezzanine level and partial cellars - the cellar level will require excavation to
a depth of approx. 11 ft bg across the first 36 ft of the site from N 10th St - the first floor
sunken level in the rear 50 ft portion of the building will require excavation of at least 3 ft bg
- elevation of the site is approx. 14 ft - water table is present at a depth of approx. 7 ft bg -
installed nine borings (SB1 through SB4 on 07/19/14 and SB5 through SB9 on 02/11/15) - borings SB1
through SB4 were installed to a depth of 16 ft bg; borings SB5 through SB7 were installed to a
depth of 15 ft bg; boring SB8 was installed to a depth of 7 ft bg and boring SB9 was installed to a
depth of 10 ft bg - borings installed in Feb. 2015 were at or in close proximity to previous
borings installed in Jul. 2014 (SB5 near SB4, SB6 near SB3, SB8 near SB2, SB9 near SB1) -
stratigraphy of the site consists of 3 to 5 ft of historic fill, underlain by native brown sand -
no PID readings above background concentrations were detected (but as per borings logs, PID values
and odors were detected in borings SB5 and SB7) - total of fourteen (14) soil samples were
collected for VOC and SVOC analyses: one from borings SB1 through SB4 (shallow soil samples from
SB1 through SB4 were not analyzed for VOC/SVOC) and two from borings SB5 through SB9 - three (3)
temporary 1-inch diameter groundwater monitoring wells (MW1 through MW3) were installed to a depth
of 15 ft bg; with 20 ft screen at MW2 and 10 ft screen at MW1 and MW3, set to intersect the water

(Continued) **S118141503**

table - free product was noted in GW2 (or MW-2??) during the Feb. 2015 sampling. the thickness of
the product layer was not measured - well GW2 installed in boring B7 where contamination noted in
shallow soil ------- - installed four soil gas implants to a depth of approx. 5 to 6 ft bg and
collected four soil vapor samples - found some VOC contamination in soil samples, with maximum at
0-2 ft in boring SB7 but no contamination noted on deeper soil sample (at 11-13 ft bg) in SB7. the
deeper soil sample was collected from below the water table and free phase product noted in well
GW2 which was installed at/near SB7 ---------- - found SVOC contamination in almost all soil
samples, mostly in shallow soil samples - free phase product noted in well GW2 --------- - some
VOCs detected in soil vapor samples (maximum: 47.9 ug/m3 in SG-3) soil analyticals:
----------B1----------B2----------B7 13-14 ft 8-10 ft 0-2 ft
Benzene----------340*----------1,000
Toluene----------1,600
Xylene----------540---------940--------1,640
MTBE----------680*--------570*
* - higher reporting limit the submitted RIR has following information incorrect, confusing or
missing: - as per table 1, monitoring wells were installed to a depth of 15 feet below grade; but
as per text on page #8, wells were installed with 20 feet of screen at MW2 - as per text on page
iii, groundwater flow is west-northwest; but as per figure 9, groundwater flows to the east - as
per text on page 8, no PID readings above background concentrations were detected; but as per
borings logs, PID values and odors were detected in borings SB5 and SB7 - report missing detailed
boring logs for soil borings SB1 through SB4 and well installation logs - as per table 6, 420 ppb
of MTBE was detected in groundwater sample from well MW2 during sampling in July 2014; but as per
the lab report, MTBE was non-detect abstract of RAWP: - will remove any USTs encountered during
excavation - will collect and analyze endpoint samples - dewatering will occur - will install
waterproofing/vapor barrier system below the concrete slab of the building as well as behind
foundation walls 08/04/15-Hiralkumar Patel. 11:07 AM:- spoke with Kim. informed her about
missing/confusing/incorrect information in the remedial investigation report. asked her to submit a
revised report. also asked her about status of monitoring wells. informed her that the department
requires re-gauging of existing wells to confirm depth of groundwater and product thickness. 11:11
AM:- spoke with Mr. Finnican. he leased this property. inquired him about reason for not reporting
spill in July 2014 when contamination was detected first time. he

(Continued) **S118141503**

mentioned that EBC was handling
this case from beginning and NYC OER was aware of the findings. asked him to provide contact
information for property owners. Thomas Finnican **leasee** 202 North 10th LLC. 144 North 7th
Street, Suite # 408 Brooklyn, NY 11249 Ph. (646) 688-5144 email: tfinnican@patoma.com 11:33 AM:-
sent email to Kim and Mr. Finnican. asked Kim to submit revised remedial investigation report
including correct/missing information and results of re-gauging of existing wells to confirm depth
of groundwater and product thickness. asked Mr. Finnican to submit contact information for property
owners. email copied to OER Chawla and Charles Sosik. 11:48 AM:- sent email to Kim and Mr. Finnican
and asked them to submit signed copy of RAWP. email copied to OER Chawla and Charles.
08/06/15-Hiralkumar Patel. 8:57 AM:- sent email to OER Chawla requesting call back to discuss spill
notification issue. 08/07/15-Hiralkumar Patel. received message from Hanna Moore (at 5:36 PM on
08/06/15) from OER. she mentioned that OER was informed about contamination at the site in Mar.
2015 and since then they have asked property owner/operator to report spill. 08/19/15-Hiralkumar
Patel. 9:05 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised report and signed
copy of RAWP along with results of re-gauging of existing monitoring wells. asked Mr. Finnican to
submit property owners' contact information. email copied to OER Chawla and Charles.
09/16/15-Hiralkumar Patel. 10:49 AM:- spoke with Kim and inquired her about revised RAR and signed
RAWP. she mentioned that she has sent link to those documents on 08/28/15, but I have not received
it. asked her to resend it. also asked her about product thickness in impacted the well. during
regauging, they found 0.03 ft of product. Kim mentioned that they have received Notice to Proceed
from NYC OER. 10:56 AM:- spoke with Mr. Finnican and asked him to provide property owner's contact
info. 10:56 AM:- received email from Kim including copy of OER's Notice to Proceed letter. searched
online and found number for property owner. 11:14 AM:- spoke with Ms. Dorto (516-887-1006) and
informed her about open spill case at the site. she mentioned that the site has been leased out and
she asked to contact leasee. 11:24 AM:- received email from Kim including GW elevation table and
map. as per the map, groundwater flows to the north and well MW2 is the downgradient well. there is
typo in GW elevation table. as per depth to water and depth to product data, 7.85 ft of product
noted in well MW-2. 11:32 AM:- spoke with Kim and informed her about typo in elevation table. she
will submit revised one. also asked her to submit RIR and RAWP via mail. 11:51 AM:- received email

(Continued) **S118141503**

from Mr. Finnican including Mr. Dorto's phone number. Shirley Dorto / Joseph A. Dorto **property owners** 39 Linden Street Malverne, NY 11565 Ph. (516) 887-1006 (516) 643-0133 received revised RIR and signed copy of RAWP. 12:11 PM:- received email from Kim including revised GW elevation table and map. after using correct information from field notes, groundwater flow found towards the northeast. 11/20/15-Hiralkumar Patel. 11:02 AM:- spoke with Kim inquiring updates. she was out of office and will call back next week after reviewing file. 12/08/15-Hiralkumar Patel. 1:49 PM:- sent email to OER Hannah inquiring update. email copied to OER Shaminder. 12/10/15-Hiralkumar Patel. 2:53 PM:- spoke with Kim. she mentioned that the developer has received notice to proceed from NYC OER, but project has not started yet. 2:56 PM:- tried Mr. Finnican's phone number multiple times, but no response. 2:58 PM:- spoke with OER Hanna. she has not heard from property developer yet. she checked NYC DOB record and noted that the developer has not received required DOB permit yet. 03/31/16-Hiralkumar Patel. 8:58 AM:- spoke with Kim and inquired her about current status. she mentioned that site redevelopment is on hold. asked her to re-gauge existing wells. 04/01/16-Hiralkumar Patel. 2:54 PM:- received email from Kim. she mentioned that they are going to the site next week to re-gauge the monitoring well. she inquired if product sample needs to be collected for fingerprint analysis, if found in monitoring well. 3:42 PM:- sent email to Kim and asked her to collect product sample for fingerprint analysis, if found. 04/26/16-Hiralkumar Patel. 9:21 AM:- received report from EBC. abstract: - three monitoring wells (MW-1 through MW-3) were gauged on 04/04/16 - found approx. 1-inch product in well MW-2 - depth to groundwater ranges in depth from 5.85 to 7.94 ft bg - depth to groundwater in MW-2 could not be determined due to thickness of product present - product sample from MW-2 was collected for fingerprint anslysis - lab findings for the petroleum ID on the oil sample from MW-2 was inconclusive, with majority of mass listed as unidentified . the chromatogram in general, however was noted to resemble that of motor oil ---------- 12:05 PM:- spoke with OER Hannah inquiring about current status of project in OER file. she will talk to project manager (Horace Zhang) and will call back. 04/28/16-Hiralkumar Patel. 9:31 AM:- spoke with Kim. inquired her about current status of the site. she mentioned that the developer is revising redevelopment plans due to revised floodplain maps. 12:58 PM:- spoke with Mr. Finnican. he mentioned that they have not received required permit from NYCDOB yet. due to revised floodplain maps, now they will not create a cellar and on-site

(Continued) **S118141503**

building will not be
demolished. a new footings will be installed to extend existing
one-story building into four-story
building. as redevelopment plan changed and there will be no basement,
need a revised RAWP. 2:38
PM:- sent letter to Mr./Ms. Dorto and Mr. Finnican requiring
implementation of interim remedial
measures (weekly well gauging/product removal) and determination of
site-specific groundwater flow
direction (via installation of additional well). also asked them to
collect endpoint samples, if
soil excavation occurs. asked them to submit report, including plans
for remediation of all
contaminated media and vapor mitigation details, by the end of
07/01/16. letter emailed to Mr.
Finnican, OER Shaminder and Kim. 05/26/16-Hiralkumar Patel. received
email from OER Horace Zhang
(at 5:21 PM on 05/25/16) including summary of meeting between OER,
property owner and property
owner’s consultant. he mentioned that additional investigation
scheduled for Friday 5/27 to -
install 1 additional groundwater well (MW4) to determine flow
direction - convert MW2 to a 2 inch
well for increased product recovery - collect soil samples to
delineate the extent of contamination
in 10 increments outward from MW2 he mentioned that because the
development plans don t require
site-wide excavation, owner is also exploring the possibility of
conducting test pits to delineate
the contamination/ potentially identify source.
construction/remediation is expected to begin in 2
to 3 months. the partial cellar is being eliminated to comply with DOB
flood zone requirements. new
plans with finalized excavation depths will be submitted when the
foundation design is completed.
11:40 AM:- received email from Kim. she mentioned that the following
steps will be implemented at
the site to address the free-phase petroleum identified in monitoring
well MW2: 1) installation of
a permanent groundwater monitoring well in the vicinity of MW2 2)
replacement of existing
monitoring well MW2 with a 2-inch diameter well to improve product
recovery efforts 3) gauging all
monitoring wells on-site and implementing product recovery of any
free-phase product present 4)
installation of test borings around MW2 at 10ft intervals to delineate
the extent of the
contamination. soils from each test boring will be screened with a PID
and inspected for physical
evidence of petroleum contamination. test borings will extend from the
location of MW2 in 10-ft
intervals until field conditions/PID readings do not indicate evidence
of petroleum contamination
5) soil samples will be collected from the driest deepest depth of the
test borings where visible
contamination is not present to confirm the horizontal extent of the
petroleum-impacted soils. 6)

(Continued) **S118141503**

soils from the well installations will be screened continuously with a PID. soils samples from the deepest driest interval and the interval with the highest PID reading will be retained for laboratory analysis of VOCs and SVOCs (CP-51) Kim mentioned that the above work is scheduled to commence at the site tomorrow, Friday 5/27. well gauging and product recovery efforts will continue on a weekly basis. documentation of the weekly gauging/product removal will be submitted to NYSDEC and OER for review. Kim submitted a site map with proposed well and test pit locations.
05/27/16-Hiralkumar Patel. 12:30 PM:- visited site and met Tom from EBC. he drilled couple of borings, including proposed well MW4, around existing well MW2. well MW4 is installed west of well MW2, where some oil staining noted. Trans Boro Fuel Oil is located to the west of the subject site.
Trans Boro Fuel Oil 481 Driggs Ave (alternate address: 198-200 N 10th St) Brooklyn, NY PH. (718) 389-1466 no PBS or spill record found for 481 Driggs Ave.
06/02/16-Hiralkumar Patel. received email from Kim (at 10:04 AM on 06/01/16) including summary of observations during well/borings installation on 05/27/16. stained soils/odors were detected in four test borings west of MW2 at approximately 8-10 ft bg and extending to the western site boundary. PID readings were highest in the boring where MW4 was installed, approximately 10 ft west of MW2, 40 ppm at 8-10 ft bg. borings installed 10 ft north and south of MW2 contained minor staining at the 8-10 ft interval and PID readings were low (0.0-1.8 ppm). test boring to the east of MW2 did not have any visual or olfactory evidence of petroleum-impacted soils and PID readings at the 8-10 ft interval were 0.0 ppm. total of 12 soil samples were retained for laboratory analysis of VOC and SVOCs. the four monitoring wells at the site were gauged and sampled on May 31, 2016. a less than 1 layer of thick free-phase petroleum product was detected in MW2 and MW4. four groundwater samples were retained for laboratory analysis of VOC and SVOCs. groundwater flow direction was reassessed and appears to flow towards the northeast. 9:44 AM:- spoke with a person (who did not provide his name) at Trans Boro Fuel. he mentioned that they only park fuel oil truck at the site and don’t have any storage tanks or repair shop at 481 Driggs Ave. 06/10/16-Hiralkumar Patel. 8:53 AM:- received email from Kim including results of weekly product removal conducted on 05/27/16 and 06/08/16. 0.03 ft of product found in well MW2 on 05/27/16. on 06/08/16, depth of product in MW2 could not be determined because the probe was coated with product. total of 24 oz of product/water mix was removed from MW2 on 06/08/16. 06/17/16-Hiralkumar Patel. 1:24 PM:- received email from

(Continued) **S118141503**

Kim including results of
weekly well gauging conducted on 06/16/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of
product in MW2 could not be determined because the probe was coated with product. total of 28 oz of
product/water mix was removed from MW-2. 06/28/16-Hiralkumar Patel. received email from Kim (at
4:32 PM on 06/27/16) including results of weekly well gauging conducted on 06/23/16. wells MW-1,
MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe
was coated with product. total of 1/2 gal of product/water mix was removed from MW-2. faint reading
indicating product noted in well MW-4. 06/30/16-Hiralkumar Patel. 8:12 AM:- received email from Kim
including sampling report for delineation work conducted on 05/27/16. abstract: - installed total
of eight soil borings (SBD1 through SBD8) within the vicinity of MW2 to horizontally delineate
extent of petroleum-impacted soils - soil borings were installed to a depth of 10 ft bg - visually
contaminated soil (grey/black stained) and PID readings were identified in three soil borings
(SBD4, SBD6 and SBD7), all of which are located west of MW2 ----------- as per site map, boring
SBD2 was installed to replace well MW2 - total of 12 soil samples were collected for analysis: two
each from SBD1, SBD3, SBD4, SBD6 and SBD7; and one each from SBD5 and SBD8 - installed a new 2-inch
well MW4 west of existing well MW2 - existing 1-inch well MW2 was replaced with a 2-inch well -
wells were installed with 10 ft of screen - depth to groundwater is approx. 7 ft bg - direction of
groundwater flow appears to flow towards the east/northeast ---------- - four groundwater samples
were collected - free-phase product is present in wells MW2 and MW4 - petroleum-impacted soils
appear to be concentrated in the area of MW2, extending west towards the property line at the 6-10
ft bg interval - found sandy silt with clay with ash in soil borings - less than 10 ppm recorded on
PID in soil borings, excepts SBD4 (40 ppm at 8 ft bg) and SBD7 (29.6 ppm at 8 ft bg) - no
contamination noted in groundwater samples - found VOC contamination in deeper soil samples from
SBD1, SBD4, SBD6 and SBD7 - highest contamination noted in boring SBD6 which is along the western
boundary of the site soil analyticals:

recommendations from contractor: -
continuation of product removal effort on a weekly basis until site redevelopment begins -
excavation to a depth of groundwater in the area of MW2 and MW4, without compromising integrity of
existing structure or the adjacent structure, during site excavation activities for the proposed
new building footings - collection and analysis of endpoint samples
the report does not include any
details about vapor mitigation efforts. 07/01/16-Hiralkumar Patel.
1:33 PM:- received email from
Kim including results of weekly well gauging conducted on 06/30/16.
wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no product. but when the probe
was removed, there was trace amount of product on probe for both MW-2 and MW-4. 07/05/16-Hiralkumar
Patel. reviewed weekly well gauging data and soil/gw delineation results. based on well gauging
reports, groundwater found at around 8 ft bg in well MW-1; and between 5 and 6 ft bg in wells MW-2,
MW-3 and MW-4. based on these, heaviest soil contamination noted in soil boring SBD6 was noted
below water table and no contamination noted in groundwater sample from well MW-4, which is less
than 10 ft away from borings SBD6. 10:42 AM:- sent email to Kim and asked her to submit a revised
RAWP as redevelopment plan has changed. email copied to Mr. Finnican. 10:45 AM:- received email
from Kim. she mentioned that RAWP will be revised once the finalized plans are received from the
developer. 07/11/16-Hiralkumar Patel. received email from Kim (at 1:53 PM on 07/08/16) including
results of weekly well gauging conducted on 07/07/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged.
no solid tone was detected for either well, indicating no product. but when the probe was removed,
there was trace amount of product on probe for MW-2. MW-4 had no trace product. 07/18/16-Hiralkumar
Patel. 9:53 AM:- received email from Kim including results of weekly well gauging conducted on
07/13/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well,
indicating no product. but when the probe was removed, there was trace amount of product on probe
for MW-2. MW-4 had no trace product. 07/22/16-Hiralkumar Patel. 9:18 AM:- received email from Kim
including results of weekly well gauging conducted on 07/21/16. wells MW-1, MW-2, MW-3 and MW-4
were gauged. no solid tone was detected for either well, indicating no product. but when the probe
was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product.
08/05/16-Hiralkumar Patel. received email from Thomas Gallo (at 4:15 PM on 08/04/16) from EBC
including results of weekly well gauging conducted on 08/03/16. wells

(Continued) **S118141503**

MW-1, MW-2, MW-3 and MW-4
were gauged. thick product encountered in MW-2. product coated interface meter probe preventing
depth to water reading in MW-2. trace product noted in MW-4.
08/31/16-Hiralkumar Patel. received
email from Thomas Gallo (at 8:12 PM on 08/14/16) including results of weekly well gauging conducted
on 08/11/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered below
groundwater interface and in bottom 3 ft (12-15 ft bg) in MW-2. trace product noted in MW-4.
received email from Thomas Gallo (at 8:06 PM on 08/21/16) from EBC including results of weekly well
gauging conducted on 08/19/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product
encountered in MW-2. trace product noted in MW-4. 09/01/16-Hiralkumar Patel. 9:31 AM:- received
email from EBC including results of weekly well gauging conducted on 08/26/16. wells MW-1, MW-2,
MW-3 and MW-4 were gauged. thick product encountered in MW-2. trace product noted in MW-4.
09/12/16-Hiralkumar Patel. received email from EBC (at 8:52 PM on 09/11/16) including results of
weekly well gauging conducted on 09/02/16 and 09/09/16. wells MW-1, MW-2, MW-3 and MW-4 were
gauged. thick product coated probe at MW-2 and trace product noted in MW-4 during both events.
09/23/16-Hiralkumar Patel. received email from EBC (at 5:40 PM on 09/22/16) including results of
weekly well gauging conducted on 09/15/16 and 09/22/16. wells MW-1, MW-2, MW-3 and MW-4 were
gauged. thick product coated probe at MW-2 and some light staining on tubing from well MW-4 during
both monitoring events. 10/13/16-Hiralkumar Patel. received email from EBC (at 7:09 PM on 10/12/16)
including results of weekly well gauging conducted on 09/29/16. 0.03 ft of product noted in MW-2
and some light staining on tubing from well MW-4. 11/01/16-Hiralkumar Patel. received email from
EBC (at 1:36 PM on 10/31/16) including results of weekly well gauging conducted on 10/12/16. 0.05
ft of product noted in MW-2 and some yellow staining on tubing from well MW-4. 11:45 AM:- received
email from Kim including results of weekly well gauging conducted on 10/28/16. thick product coated
probe at MW-2 and some yellow staining on tubing from well MW-4. 11/16/16-Hiralkumar Patel. 8:34
AM:- received email from Kim including results of weekly well gauging conducted on 11/04/16 and
11/11/16. thick product coated probe at MW-2 and some yellow staining on tubing from well MW-4
during both monitoring events. 11/23/16-Hiralkumar Patel. 11:08 AM:- received email from Kim
including results of weekly well gauging conducted on 11/22/16. no product was detected with
interface probe in MW-2, but mostly yellow oil mix in purged groundwater and thick product coated

(Continued) **S118141503**

outside of tubing. no product in purged groundwater from MW-4, but some yellow staining on tubing.
12/05/16-Hiralkumar Patel. 12:30 PM:- received email from Kim including results of weekly well
gauging conducted on 12/02/16. no product was detected with interface probe in MW-2, but mostly
yellow oil mix in purged groundwater and thick product coated outside of tubing. no product in
purged groundwater from MW-4, but some yellow staining on tubing.
12/13/16-Hiralkumar Patel. 2:44
PM:- received email from Kim including results of weekly well gauging conducted on 12/09/16. no
product was detected with interface probe in MW-2, but thick product coated bottom and sides of
tubing. no product in purged groundwater from MW-4, but some thick product at the tip of tubing.
12/27/16-Hiralkumar Patel. 9:33 AM:- received email from Kim including results of weekly well
gauging conducted on 12/16/16. light film of product on interface probe in well MW-2. product seen
on bailer at 4 ft below groundwater interface in MW-2. MW-4 had no product in purged groundwater,
but some yellow staining on bailer and tubing. 01/10/17-Hiralkumar Patel. 10:44 AM:- received email
from Kim including results of weekly well gauging conducted on 01/09/17. 0.02 ft of product was
detected in MW-2 including thick film of product coated on interface probe. also thick product
lined inside and outside of tubing during purging of well. MW-4 had small amount of staining on
bottom, inside tubing from purging. 02/01/17-Hiralkumar Patel. 2:34 PM:- received email from Kim
including results of weekly well gauging conducted on 01/18/17 and 01/26/17. during both events, no
product detected with interface meter, but small particles of product in purged groundwater from
MW-2. also thick product lined inside and outside of tubing during purging of well MW-2. MW-4 had
small amount of staining on bottom, inside tubing during purging. 02/14/17-Hiralkumar Patel. 9:23
AM:- received email from Kim including results of weekly well gauging conducted on 02/02/17. small
amount of product in purged groundwater from wells MW-2 and MW-4. 02/27/17-Hiralkumar Patel. 9:03
AM:- received email from Kim including results of weekly well gauging conducted on 02/17/17 and
02/24/17. 0.01 ft of product noted in well MW-2 during both gauging events. no product found in
MW-4. 03/21/17-Hiralkumar Patel. 9:51 AM:- received email from Kim including results of weekly well
gauging conducted on 03/03/17 and 03/16/17. 0.01 ft of product noted in well MW-2 during both
gauging events. no product found in MW-4. 04/25/17-Hiralkumar Patel. received email from Kim
including results of weekly well gauging conducted on 03/23/17, 03/30/17, 04/06/17 and 04/20/17.
during all four gauging events, trace amount of product noted around

(Continued) **S118141503**

casing in well MW-2. based on
gauging results, Kim proposes to install a filter sock in the well to reduce the frequency of
product removal. 05/04/17-Hiralkumar Patel. 2:31 PM:- spoke with Kim. informed her that based on
review of available information, the Department agrees with proposal of installation of filter sock
in affected well MW-2, but recommends sock in well MW-4 also as had product in past. Kim agrees
with it and proposes to monitor wells twice a month at beginning and modify frequency based on
monitoring results. asked Kim to send email including proposed well monitoring frequency. also
asked her to submit revised RAWP as site development plans have changed. 05/10/17-Hiralkumar Patel.
3:51 PM:- received email from Kim. she mentioned that based on the recent inspections at the site,
the majority of free-phase petroleum product has been removed via weekly purging efforts. remnants
of free-phase product are visible on product removal tubing over the last four rounds of removal,
which appears to be only from product coating on the PVC piping. Kim proposed installation of an
absorbent sock for monitoring wells MW2 and MW4 where free-phase product has previously been
detected. the socks at each well will be inspected on a bi-monthly basis. during each inspection, a
groundwater interface probe will be used to identify the presence of any free-phase product within
each of the wells. any free-phase product will subsequently be pumped out and drummed on-site. Kim
mentioned that there is no proposed cellar in the revised redevelopment plans; therefore, she will
be submitting a revised Remedial Action Workplan shortly. 3:58 PM:- received email from Kim
including link to revised redevelopment plans. 05/11/17-Hiralkumar Patel. 8:39 AM:- received email
from Kim including results of weekly well gauging conducted on 05/05/17. found 0.02 ft of product
in well MW2. Kim mentioned about report dated 04/27/17, but email included report for 03/16/17.
05/19/17-Hiralkumar Patel. 2:10 PM:- sent email to Kim and asked her to submit missing well
monitoring report for 04/27/17. 05/22/17-Hiralkumar Patel. 7:57 AM:- received email from Kim
including well gauging report for 04/27/17. found 0.01 ft of product in well MW2. 1:36 PM:- left
message for Kim. informed her that based on all available information, the Department agrees with
proposal to place absorbent socks in wells MW2 and MW4 and monitor those on bi-monthly basis.
inquired her about revised remedial action work plan. 06/14/17-Hiralkumar Patel. 9:41 AM:- received
email from Kim including well gauging report for 06/07/17. found 0.02 ft of product in well MW2.
absorbent socks were installed in wells MW2 and MW4. 07/11/17-Hiralkumar Patel. received email from

(Continued) **S118141503**

Kim (at 4:31 PM on 07/10/17) including link to revised redevelopment plans (previously submitted).
received email from Kim (at 4:37 PM on 07/10/17) including copy of a revised stipulation list (OER
document). summary: - revised stipulation list serves as an addendum to the RAWP - proposed
building will no longer feature a cellar level - excavation will be limited to approx. 3 ft bg
across the site for structural footings/pile caps, and to a 5 ft for an elevator pit - first floor
will feature a residential lobby and a retail/commercial unit - the mezzanine level above the first
floor will feature a mechanical room, retail space and an outdoor retail terrace - second through
fourth floors will features residential units - delineation and remediation of two hotspots: 1)
mercury hotspot at sample B6, and 2) SVOC hotspot at sample B8 - a composite cover (comprised of
concrete foundation/slabs) will be placed over the entire footprint of the site - collection and
analysis of four (4) end-point samples from the bottom of the excavation to evaluate the
performance of the remedy with respect to attainment of Track 4 SCOs - a 20-mil waterproofing
membrane/vapor barrier will be installed beneath the structure's slab and along foundation
sidewalls the revised stipulation list (addendum to RAWP) does not include any discussion about
remediation of petroleum contaminated materials noted in area around wells MW2 and MW4. 12:18 PM:-
spoke with OER Shaminder and OER Horace and discussed submitted revised stipulation list. informed
Shaminder that the department requires remediation of petroleum contaminated materials noted in
area around MW2/MW4, collection of endpoint samples after remediation in area around MW2/MW4 and
installation of SSDS (if required by NYSDOH) based on known petroleum impact beneath the site.
12:31 PM:- sent email to OER Shaminder and OER Horace including above discussion. asked them to
provide a revised RAWP including the missing info. 07/13/17-Hiralkumar Patel. received email from
OER Shaminder (at 12:28 PM on 07/12/17) including updated briefing. he has asked EBC to prepare a
new RAWP including DEC requirements listed in email dated 07/11/17. email was copied to DOH Nathan
inquiring about SSDS requirement. 3:38 PM:- received email from DOH Nathan. he mentioned that SSDS
is not needed based on the fact that the structure will be slab on grade, proposed excavation of
hot spots, minimal detects in GW and soil vapor results.
08/04/17-Hiralkumar Patel. 11:09 AM:-
received email from OER Shaminder including revised draft RAWP. plan proposes excavation for
development to 3 feet across entire site; three hotspots removal for mercury, SVOCs and petroleum
soil; collection/analysis of endpoint samples; and installation of

(Continued) **S118141503**

vapor barrier and an active
SSDS. 09/20/17-Hiralkumar Patel. 9:58 AM:- sent email to OER Shaminder and informed him that no
comments from DEC. asked him to submit final copy of RAWP and work schedule. email copied to OER
Horace. 09/28/17-Hiralkumar Patel. 10:36 AM:- received email from Kim. she mentioned that
developers will be commencing excavation in near future, but they are concerned about structural
integrity of existing foundation wall (which will remain as part of redevelopment) during
excavation of petroleum impacted soils. Kim proposed to either excavate soil in slope (which will
leave contamination in area of SBD6 in-place) or dug near the foundation wall to a depth of
groundwater and immediately backfill the excavation. Kim inquired about any further remediation
needed if excavation extends to the groundwater and chemical oxidant applied in excavation prior to
backfilling. 12:48 PM:- spoke with Kim and recommended her to excavate to water table near the
foundation, only if it is safe (or using shoring). informed her that remediation of any remaining
soil contamination beneath the water table may not be needed based on available soil and
groundwater data. Kim will discuss excavation options with site developer. 11/01/17-Hiralkumar
Patel. 1:07 PM:- received email from Kim including soil sample results summary table. she mentioned
that the area of petroleum soil was excavated last week. soil endpoint samples were collected from
the base of the excavation (10.5ft) and sidewalls. the excavation was extended to the north by 2-3
ft where initial endpoint samples failed to meet soil cleanup objectives. soil endpoint samples
from the western sidewall and bottom sample also failed to meet soil cleanup objectives; these
locations could not be excavated further without compromising the structural integrity of the
adjacent foundation wall. the final depth of the excavation was completed to 10.5 ft. no staining
was apparent on soils from the 10 ft below grade interval. prior to backfilling, a chemical oxidant
was applied to the base of the excavation. report will be submitted soon. as per sample result
summary table, endpoint sample from north sidewall showed presence of contamination which was
removed via further excavation. some contamination noted in endpoint sample from west sidewall
(3,390 ppb total BTEX) and bottom (305 ppb total BTEX).
11/30/17-Hiralkumar Patel. 12:33 PM:- Kim
sent spill closure report via DEC's file transfer service.
12/06/17-Hiralkumar Patel. after
reviewing all available information (product removal from impacted wells, removal of contaminated
soil, results of endpoint samples, proposed installation of vapor barrier and an active SSDS), no

(Continued) **S118141503**

further investigation/remediation is required in area around well MW2 where petroleum impact was noted. spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and SSDS, unless contamination noted in other areas during site's redevelopment. 10:07 AM:- left message for Kim. 10:17 AM:- sent email to Kim. informed her that no further investigation/remediation is required in the area around well MW2 where petroleum impact was noted. also informed her that the subject spill case can be closed upon receipt of confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact noted in other areas during site s redevelopment. asked her to provide estimated schedule for installation of vapor barrier/SSDS. email copied to Mr. Finnican, OER Shaminder and DOH Nathan. 10:30 AM:- received email from Kim stating that Patrick Recio will be managing this project. Patrick Recio EBC Ph. (631) 504-6000 email: precio@ebcincny.com 08/09/18-Hiralkumar Patel. 10:59 AM:- sent email to Patrick inquiring project update. email copied to Mr. Finnican, OER Shaminder and OER Samantha. 12:04 PM:- received email from Patrick. he mentioned that there has not been much activity at the site since December of 2017. there was minimal excavation of the elevator pits towards the front of the site that were lined with Graceprufe 300R waterproofing/vapor barrier and inspected by EBC. a few trucks of soil were removed from the site since beginning of 2018 and that material had no evidence of petroleum contamination. the SSDS and the vapor barrier have not yet been installed. 07/16/20-Hiralkumar Patel. 11:31 AM:- sent email to Patrick inquiring updates. email copied to OER Shaminder, OER Samantha, Kim and Mr. Finnican. 11:48 AM:- received email from Charlie Sosik from EBC stating that Robert Bennett is currently managing project at EBC. 07/21/20-Hiralkumar Patel. 9:51 AM:- sent email to Robert inquiring updates. email copied to Charlie, OER Shaminder and OER Samantha. Robert Bennett EBC Ph. (631) 504-6000 Ext. 116 email: rmbennett@ebcincny.com 07/22/20-Hiralkumar Patel. 9:07 AM:- received email from OER Shaminder. he mentioned that remediation at the site started in October 2017 and development work was completed by January 2020. OER recently (July 10th) reviewed final report and sent back comments. OER will send revised report once available. 02/25/21-Hiralkumar Patel. 2:08 PM:- sent email to Robert and asked him to submit report. email copied to OER Shaminder and Charlie. 2:21 PM:- received email from OER Shaminder stating that they have provided comments on revised RAR last month and waiting on final report soon. 04/14/21-Hiralkumar Patel. received email from OER Shaminder (at

(Continued) **S118141503**

3:52 PM on 04/13/21)
including link to remedial action report and requesting spill closure. he mentioned that following
activities occurred at the site: - performed Waste Characterization on July 17, 2017 - following
excavations were performed: excavation to 3 ft bg across the site. the elevator pit was excavated
to a final depth of 5 ft. in addition, a 6 ft by 6ft area around EP 1 (mercury hotspot) was
excavated an additional 6 inches and a 6 ft by 6 ft area around EP2 (SVOC hotspot) was excavated an
additional foot. - free product removal: from May 27 2016, to June 7, 2017, monitoring wells MW2
and MW4 were gauged weekly and any free-phase product present in the monitoring wells was removed
by bailer and containerized in a 55-gallon drum. absorbent socks were installed in both monitoring
wells on June 7, 2017, and weekly product removal efforts were decreased to bi-monthly until Site
excavation commenced - petroleum impacted soil removal: on October 23, 2017, the area delineated as
the petroleum hotspot was excavated using a track-mounted excavator to the fullest extent possible.
a 3 ft setback from the western foundation wall was required in order not to compromise the
integrity of the adjacent foundation wall. the final excavation area was approximately 22 ft by 22
ft. petroleum impacted soil was excavated to approximately 4 to 10.5 ft below grade. no odors or
staining were observed at the 8-10 ft below grade interval. EBC collected four sidewall endpoint
soil samples (Hot Spot S, Hot Spot W, Hot Spot E, Hot Spot N) and a bottom endpoint soil sample
(Hot Spot Bottom) from the petroleum hotspot excavation. to address the residual VOCs detected in
the endpoint soil samples, a powdered chemical oxidant was applied directly to the residual soil
and raked in with the excavator before backfilling - collected and analyzed seventeen (17) endpoint
samples from bottom of excavations and from hotspot areas to determine the performance of the
remedy with respect to attainment of Track 4 Site-Specific SCOs - track 4 remedy was achieved -
Composite cover - Vapor barrier; and - site management plan as per the report, a 20-mil thick vapor
barrier was installed beneath the building/elevator pits. the report also states that on
05/16/2019, OER determined that an active SSDS was no longer required at the site.
---------- 04/19/21-Hiralkumar Patel. 5:04 PM:- sent email to OER Shaminder and asked him
to call back to discuss reason for not installing SSDS. email copied to OER Samantha.
04/23/21-Hiralkumar Patel. 12:38 PM:- received email from OER Shaminder. he mentioned that OER
reevaluated soil and soil vapor contamination and agreed with development team that implemented

(Continued) **S118141503**

remedy (only vapor barrier and no SSDS) is protective of environment and public health. he also
stated that the development team will obtain one round of indoor and outdoor air samples prior to
spill closure. OER plans to issue Notice of Satisfaction this week for building occupancy and
Notice of Completion will be issued after spill is closed.
04/30/21-Hiralkumar Patel. as per the
RAR, remedial actions begun on 10/13/2017 and was completed on 01/06/2020. all endpoint samples
were collected in Oct. 2017 and those results were previously submitted in spill closure report
dated Nov. 2017. based on those samples results, the property owner/consultant were informed via
email on 12/06/2017 that no further investigation/remediation is required in the area around well
MW2 where petroleum impact was noted, and the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment . OER reevaluated sample results and agreed not to
install a SSDS. a vapor barrier has been installed beneath the building. 10:25 AM:- sent email to
OER Shaminder. informed him that the submitted Remedial Action Report dated March 2021 includes
result of endpoint samples collected in/around Oct. 2017 and these sample results were already
submitted in the Spill Closure Report dated Nov. 2017. based on these sample results and other
information available at that time, an email was sent to Kim at EBC (copied to NYSDOH, NYCOER and
property owner) on 12/06/2017 stating Based on review of all available information, the Department
does not require further investigation/remediation in the area around well MW2 where petroleum
impact was noted. Please note that the subject spill case can be closed upon receipt of
confirmation for installation of proposed vapor barrier and an active SSDS, unless petroleum impact
noted in other areas during site s redevelopment. informed OER Shaminder that as NYCOER determined
no need for SSDS and a vapor barrier has been installed beneath the building, the Department will
wait for results of indoor/outdoor air sampling during the next heating season prior to considering
spill closure. asked him to provide air sampling schedule, once available. email copied to OER
Samantha and Kevin (EBC). 12:37 PM:- received copy of Notice of Satisfaction from NYC OER.
08/04/21-Hiralkumar Patel. 9:05 AM:- received email from OER Shaminder including an indoor air
sampling report. summary: - one indoor air (IA1) and one outdoor air (OA1) were collected - sample
IA1 was collected in the breathing zone at a height of 3-4 ft above the floor, from the rear of the
commercial space of the 202 N 10th St building - petroleum VOCs (max.

(Continued) **S118141503**

41.7 ug/m3 of Xylene) and PCE
(1.25 ug/m3) were noted in indoor air sample; similar compounds were also noted in outdoor air
sample 08/05/21-Hiralkumar Patel. 1:36 PM:- forwarded indoor air sampling report to DOH Nathan for
review. 08/06/21-Hiralkumar Patel. 10:28 AM:- received email from DOH Nathan stating that based on
remediation conducted at the site and the low levels of VOCs detected in indoor air, he does not
believe additional sampling will be necessary; however, should odors appear at a later date or
during the heating season, additional sampling may be warranted. 08/12/21-Hiralkumar Patel. case
closed based on review of all available information. 12:14 PM:- sent email to OER Shaminder and
informed him about spill closure. email copied to OER Samantha.

Remarks: Phase 2 revealed contaminated groundwater and soil. Clean up is pending OER approval.

Site Description: "Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of four parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two -story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, commercial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The former building's slab remains and is surrounded by a lockable chain link fence. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park and surrounded by a chain link fence. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential properties are located to the east and south approximately 1 block from the site. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River. "
Env Problem: "The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50 Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A

K - WILLIAMSBURG WORKS (Continued) **S109209078**

	large portion of the former plant footprint lies beneath the former document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River."
Health Problem:	"The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review. "

Updated By:	GHPRATT
Site Code:	503484
Site Description:	"Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."

Health Problem: "Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 503484
Site Description: "Location: The Former Sunbelt Equipment site is located in an urban area in the Williamsburg section of Brooklyn, Kings County. The site is bounded by Wythe Avenue to the east, N 13th Street to the north, Kent Avenue to the west, and N 12th Street to the south. Site Features: The site comprises the full block. The property formerly included two groups of interconnected structures which have been razed. The perimeter of the site is enclosed with 10-ft. tall chain-link, corrugated metal and/or plywood fencing. Concrete block walls, 2-3 feet tall, border portions of the north, east and west property boundaries and are topped by the aforementioned fencing. Current Zoning/Use: The site is currently zoned M1-2 which are often buffers between M2 or M3 districts and adjacent residential or

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

commercial districts. M1 districts include light industrial uses although offices, hotels and most retail uses are also permitted. The property is currently vacant. Surrounding land uses are primarily industrial including a former MGP site and an abandoned major oil storage facility (MOSF); however, both of these sites are slated for redevelopment as parks. Past Use(s) of the Site: Beginning in roughly 1867, the site was part of a large, multi-block petroleum refinery known as the Pratt works. Sanborn fire insurance maps dated 1887 and 1916 show numerous storage tanks related to the Pratt Works, and to paint manufacturing facilities. Subsequent land uses include manufacturing, lumber storage, and a scrap metal yard. Most recently, the property was used for storage and maintenance of heavy construction equipment. Multiple spills have been reported related to petroleum free product observed at the water table near the intersection of Kent Ave and N. 13th St. and in association with underground storage tank (UST) removals. A total of 11 USTs were removed or closed in place and excavation and removal of petroleum contaminated soil was conducted near the northwest corner and at the center of the site. An approximate total of 85 tons of contaminated soil has been excavated and disposed of off-site. Site Geology and Hydrogeology: Regional maps show bedrock as an igneous intrusive known as the Ravenswood granodiorite of middle Ordovician to middle Cambrian age. Soil borings on the site have not encountered bedrock and it is presumed to be in excess of 70 feet below ground surface. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth of approximately 8 to 12 feet below the surface underlain by native brown fine sand with silt and some clay. Groundwater at the site is present under water table conditions at a depth of approximately 5 to 12 feet below grade. Local flow on site appears to be to the southeast; however, it is highly likely that overall flow is westward towards the East River. "

Env Problem: "Prior to Remediation: Sampling data indicate that soil, groundwater and soil vapor have been impacted by on-site and/or off-site contamination. The primary contaminants of concern include metals, VOCs and SVOCs. Soil: Soils contain metals above unrestricted and/or restricted use SCOs including high concentrations of arsenic and lead. Lead concentrations are particularly high in the western portion of the site where concentrations of lead range from 397 to 9,350 parts per million (ppm). Soils throughout the site contain VOCs above unrestricted use SCOs. Visibly petroleum-contaminated soils have been found in several areas near locations where underground storage tanks were once located. SVOCs including benzo(a)anthracene, benzo(a)pyrene and benzo(b)fluoranthene above unrestricted and restricted use SCOs. Benzo(a)pyrene concentrations range from 1 to 13.6 ppm. Site contamination extends to depths of approximately 15 feet. Deeper soils appear to be unimpacted. Groundwater: Groundwater on the site exceeds standards for VOCs. Most notable is benzene at concentrations up to 3,300 parts per billion (ppb). SVOCs include naphthalene at concentrations up to 600 ppb. Both the VOCs and SVOCs appear to be derived from former petroleum tank locations. Soil Vapor: TCE (ND-16.2 ug/m3) PCE (ND-245 ug/m3) and TCA (ND-284 ug/m3) were detected in soil vapor samples collected from the site. These

FORMER SUNBELT EQUIPMENT (Continued) **S117535352**

	COCs have not been identified in soil or groundwater samples collected at the site and therefore no on-site source has been identified. Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were VOCs, SVOCs and metals in soil; VOCs and SVOCs in groundwater; and VOCs in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use over a majority of the site, and restricted residential and commercial use in two small areas of the site. Residual contamination in the soil in these two areas is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place where necessary to control the potential for coming in contact with residual contamination remaining at the site."

DEC Memo:	Site is being excavated under an E designation with the city because of lead contamination. One of the dump trucks hit a pylon and ruptured a diesel saddle tank. Area was soil, but was contained as best they could. ABC Pumped out the puddles & scraped up the contaminated soils. The area is being excavated and end point samples will be taken. Kevin Brussee will forward a spill closure report to DEC within the next couple of weeks. 05/21/14-Hiralkumar Patel. found report dated 05/06/10. as per the report, about 100 gal diesel spilled into construction site due to puncture in saddle tank on dump truck. contaminated soil was removed and endpoint samples were collected. no contmaination found in endpoint samples. based on available information, case closed administratively.
Remarks:	A dump truck drove over a obstacle puncturing its fuel tank spilling its fuel onto the soil. A vac truck is enroute, and soil will be removed at a later date.

DEC Memo:	see also two former closed spills #0801333 & #060249. OER received a community complaint and inspected the site yesterday. There were strong odors present at the site from both an impacted stock pile on the west side of the site as well as creosol and decomposing organics smell on the east side. Doug Harm (consultant) and Tucker (GC) we required immediate actions to be taken to take care of the problem. 5/29/14 - Austin - Reassigned from Rahman to Mahat - end 9/25/14: Mahat T/C :

COMMERCIAL PROPERTY (Continued) **S113817673**

A phone call was received from the consultant of the potential buyer inquiring about the spill
status. OER Voluntary clean up case number : 13CVCP086K DEC is waiting for a closure report from
consultant. 10/7/14: Mahat DEC Mahat received a tank closure report from the contractor and it is
uploaded on D2 for reference. 12/29/14: Mahat report review : DEC Mahat reviewed the UST. End point
samples were below CP 51 guidnace value. All contaminated soil were removed from the site. No
further investigation for remediation and deliniation is warrented by the Department. Hence, the
spill case will be closed on the database and OER will continue with their program.

Remarks: possible historic spill - U/G tank also found in concrete - cleanup pending

Updated By:	WBBENNET

Site Description: "Location: The Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7.3-acres in size and is located between Kent Avenue and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3-story office building, a one-story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant and covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is

FORMER BAYSIDE FUEL OIL DEPOT CORPORATION - N 12TH ST (Continued) **S117564948**

	located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River. "
Env Problem:	"Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and metals in soil and groundwater. Both Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) were encountered in soil borings below the water table and in groundwater wells. "
Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

Updated By: KATHOMPS
Site Description: "Location: The Williamsburg-Pratt Refinery site is located in a commercial/industrial area in the Williamsburg section of Brooklyn. The site comprises a single real estate parcel, Block 2277 Lot 1, at 26 N 12th St. It is approximately 7 acres in size and is located between Kent Ave. and the East River and between N 12th St. and Bushwick Inlet. Site Features: The site formerly included above ground petroleum bulk storage tanks, a 3 story office building, a one story cinder block garage, a fuel dispenser island, and a large asphalt paved area. All above ground structures, buildings and storage tanks, were dismantled and removed during the summer of 2019. Current Zoning and Land Use: Currently the site is vacant covered by concrete slabs and asphalt. The Block and Lot are zoned commercial and future use is anticipated as parkland. The land use in the surrounding area is currently a mix of industrial, commercial, residential, and parkland use. The nearest residential property is located approximately 2 blocks to the south. Past Use of the Site: A petroleum refinery operated on the site from circa 1870 into the early 1900s. Subsequently, the property was utilized as a major petroleum bulk storage facility until the early 2000s. Site Geology and Hydrogeology: The site is underlain by urban fill and varied glacial sediments consisting of outwash sand and gravel, till and lenticular clay more than 100 feet in thickness. The fluvial marsh silty clay to clay is encountered from approximately 5 to 25 feet below ground surface across the site. The groundwater table is approximately 6 feet below ground surface. Groundwater flows to the north northwest, toward Bushwick Inlet and the East River. "
Env Problem: "Soil sediment and groundwater samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), pesticides, metals, and the emerging contaminants per and polyfluorinated substances (PFAS) and 1,4 dioxane. Based on investigations conducted, the primary contaminants of concern include VOCs and SVOCs, and total metals in soil and groundwater. PFAS was found in groundwater samples. Nature and Extent Soil: Sampling results indicated that VOCs, SVOCs, pesticides, PCBs, metals and mercury were detected above the applicable restricted residential use soil cleanup objectives (RRSCOs) or protection of groundwater soi cleanup objectives (PGWSCOs) in soil samples. VOCs: Petroleum VOCs consisting of benzene, toluene, ethylbenzene, total xylenes (collectively BTEX), isopropylbenzene, n propylbenzene, 1, 3, 5 trimethylbenzene, 1, 2, 4

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

trimethylbenzene, sec butylbenzene, 4 isopropyltoluene, and naphthalene were detected in many samples site wide. The soil boring logs indicate that the petroleum contamination extends from the surface to a depth of approximately 30 ft below ground surface (bgs). Petroleum VOC detections and concentrations increased with depth, a majority of them occurring in the area of the former bulk storage tanks. The highest number of samples containing petroleum VOCs occurred at the water table interface. The highest concentrations occurred at or below the water table (1 to 6 feet bgs) to approximately 25 30 ft below grade. Some samples containing BTEX were found at greater depths, which were associated with coal tar, as noted below. 1,2,4 Trimethylbenzene, naphthalene and BTEX (benzene, toluene, ethylbenzene and xylenes) were found most often and had the highest concentrations exceeding RRSCOs and PGWSOCs. 1,2,4 Trimethylbenzene concentrations ranged from 4.4 to 790 parts per million (ppm), exceeding the PGWSCO of 3.6 ppm. Naphthalene concentrations ranged from 17 to 2,500 ppm, exceeding the PGWSCO of 12 ppm. Benzene concentrations ranged from 0.7 to 19 ppm, exceeding the PGWSCO of 0.7 ppm; toluene concentrations ranged from 0.88 to 59 ppm, exceeding the PGWSCO of 0.7 ppm; ethylbenzene concentrations ranged from 1 to 120 ppm, exceeding the PGWSCO of 1 ppm; total xylenes concentrations ranged from 0.28 to 460 ppm, exceeding the PGWSCO of 0.26 ppm. The petroleum contamination is more prevalent along the southern boundary along 12th Street and around the former bulk storage tanks. This suggests that the site has been impacted by the former petroleum storage and fueling operations. SVOCs: SVOCs, primarily polycyclic aromatic hydrocarbons (PAHs), were detected in a majority of the soil borings site wide, primarily within the shallow soil samples associated with the historic fill (5 to 10 ft below grade), although some occurred at greater depths and were associated with coal tar. PAHs, specifically benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3 c,d)pyrene, accounted for the highest percentage of SVOC samples exceeding RRSCOs or PGWSCOs, as applicable. Concentrations of benzo(a)anthracene (1.1 ppm to 230 ppm) and benzo(a)pyrene (1.1 to 76 ppm) found on site significantly exceed their RRSCO of 1 ppm. Concentrations of benzo(b)fluoranthene (1.1 ppm to 75 ppm) and chrysene (1.1 to 160 ppm) found on site exceed their RRSCO of 3.9 ppm. Concentrations of dibenz(a,h)anthracene (0.36 ppm to 11 ppm) found on site exceed the RRSCO of 0.33 ppm. Concentrations of indeno(1,2,3 c,d)pyrene (0.53 ppm to 34 ppm) found on site exceed the RRSCO of 0.5 ppm. The highest SVOC sample concentrations were phenanthrene, fluorene, fluoranthene, and naphthalene and found within the historic fill. Concentrations of phenanthrene (120 to 3,600 ppm), fluorene (120 to 1,500 ppm), naphthalene (200 to 2,500 ppm) and fluoranthene (160 to 1,600 ppm) found on site significantly exceed their RRSCO of 100 ppm. Coal Tar: The PAH and VOC (BTEX, noted above) analytical results indicate that coal tar was encountered in two borings from 20 to 50 feet, bgs. Coal tar was also identified in the field based upon photoionization detector(PID) readings, olfactory observations, and visual identification. The location of these borings is generally in the southeast and central portion of the site. Metals: Metals consisting of arsenic, barium, cadmium, total chromium, iron, cobalt, copper, lead, mercury, nickel, selenium and zinc were detected above RRSCOs. Metals exceeding the RRSCOs are found primarily within the shallow soils (5 to 10 feet, bgs) site wide within the historic fill. Arsenic, lead, and mercury accounted

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

for the highest percentage of metal exceedances of RRSCOs. Concentrations of arsenic (16.3 to 1,110 ppm) found on the site exceed the RRSCO of 16 ppm. Concentrations of lead (448 to 12,100 ppm) found onsite exceed the RRSCO of 400 ppm. Concentrations of mercury (0.856 to 8.43 ppm) found onsite exceed the RRSCO of 0.81 ppm. While many of the metal values were within the range of their typical background concentrations for urban fill, some were well above these values are likely attributable to the petroleum and coal tar releases previously identified. PCBs and Pesticides: PCBs were detected at 8.9 ppm in one shallow soil boring exceeding the RRSCO of 1 ppm. Pesticides were detected in samples, although no pesticides were detected above RRSCOs. Site-related VOC, SVOC, pesticides and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar DNAPL was observed in one sample in the East River. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. This suggests that site contamination has likely migrated off-site into the Bushwick Inlet. Groundwater: Sampling results indicated that VOCs, SVOCs, and metals were detected above the 6NYCRR Part 703 Ambient Water Quality Standards and Guidance Values (AWQSGVs) in groundwater. VOCs: VOCs, including 1,2,4 trimethylbenzene, 1, 3, 5 trimethylbenzene, benzene, chlorobenzene, isopropylbenzene, naphthalene, n propylbenzene, sec butylbenzene, MTBE, and total xylenes were detected at concentrations exceeding AWQSGVs The following VOCs were the highest: naphthalene at 2,100 part per billion (ppb) which exceeds the AWQSGV of 10 ppb; benzene at 160 ppb which exceeds the AWQSGV of 1 ppb; 1,2,4 trimethylbenzene at 260 which exceeds the AWQSGV of 5 ppb; total xylenes at 1,140 ppb which exceeds the AWQSGV of 5 ppb. SVOCs: SVOCs, including acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3 c,d)pyrene, and phenol were detected at concentrations exceeding NYSDEC AWQSGVs. The following are the maximum concentrations of SVOC found on site in groundwater: acenaphthene at 52 ppb, which exceeds the AWQSGV of 20 ppb; benzo(a)pyrene at 4 ppb, which exceeds the AWQSGV (non detect); benzo(b)fluoranthene at 3 ppb, benzo(k)fluoranthene at 2 ppb, chrysene at 5 ppb and indeno(1,2,3 c,d)pyrene at 2 ppb, which exceed their AWQSGV of 0.002 ppb; and phenol at 2 ppb which exceeds the AWQSGV of 1 ppb. 1,4-Dioxane was not detected above the laboratory reporting limit in any groundwater sample. The elevated concentration of VOCs is likely a reflection of the petroleum contamination as most exceedances occurred in the former petroleum storage and fueling operations. The SVOC contamination is in part the result of the historic fill as most exceedances occurred in the western half of the site. SVOC contamination was also found in borings with observed coal tar in the southeast area of the site along 12th street, suggesting some SVOC groundwater contamination could be attributed to the MGP. Metals: The metals arsenic, barium, beryllium, cadmium, chromium, copper, iron, magnesium, lead, manganese, and sodium were detected at concentrations exceeding AWQSGVs in unfiltered samples. Filtered samples show only iron, magnesium, and sodium exceeding AWQSGVs, which is likely from compounds associated with the East River, which have a hydrogeological connection to groundwater at the Site. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. PCBs and Pesticides: PCBs and pesticides were not detected above the

WILLIAMSBURG FORMER PRATT REFINERY (Continued) **S121933844**

laboratory reporting limit in any groundwater sample. PFAS Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 160 parts per trillion (ppt) and 17 ppt, respectively, exceeding the Maximum Contaminant Level (MCL, drinking water standard) of 10 ppt in groundwater. The maximum concentration of total PFAS in one sample was 706 ppt. The source of these compounds is thought to be from the on site fire suppression system as the compounds were found in samples taken in the immediate vicinity of the foam house. Non Aqueous Phase Liquid-NAPL NAPL was found in both soil and groundwater samples sitewide. Both LNAPL and DNAPL were found in soil borings below the water table and in groundwater wells. Most groundwater observations were non measurable sheens or blebs. However, some had measurable LNAPL,up to 1.5 feet thick. Sediment: Site-related VOC, SVOC, and metals were found in Bushwick Inlet and/or East River sediments adjacent to the site. Coal tar and petroleum was observed in one sample in the East River. Petroleum sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick Inlet. contamination has migrated off-site. The VOC most often detected in samples and with the highest concentrations was 1,2,4-Trimethylbenzene, concentrations of which ranged from 0.1 to 10 ppm. The SVOC most often detected in samples and with the highest concentrations was Naphthalene, concentrations of which ranged from 3 to 48 ppm. The source of these VOC and SVOC compounds are associated with the site. Unfiltered metals samples show compounds associated with the East River. The source of the other metals in the unfiltered samples is likely due to the presence of suspended sediments in the sample. Sediment gathered show observed coal tar and petroleum contamination in the East River and Bushwick Inlet sediment. Coal tar DNAPL was observed in one sample in the East River adjacent to the site. Petroleum LNAPL, sheen and odors were observed in three samples in the East River and four samples collected in the Bushwick inlet. Based on sediment data below and the tidal influence, contaminated groundwater and LNAPL/DNAPL appear to have migrated off-site into the adjacent waterway. "

Health Problem: "The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Sampling indicates soil vapor intrusion is a potential concern for off-site buildings, however this may be attributable to contamination from an off-site source."

SWIS:	2401
Town:	New York City
Record Added Date:	11/02/2015
Record Updated Date:	10/21/2022
Update By:	JBSWARTO
Site Description:	"Location: The site is located in an urban area in the Williamsburg section of Brooklyn (Kings County) on the northeast corner of North 10th Street and Roebling Street. Site Features: The site was formerly developed with two single-story industrial buildings and two smaller one-story structures, which are surrounded by parking areas. The buildings were demolished in May 2018. No water bodies are present on site. A mixed-use commercial and residential building is currently under construction on the site. Current Zoning and Land Use: The site is a parcel currently undergoing redevelopment within a special mixed use zoning district (M1-2/R6A), which is characterized by light industrial use (woodworking shops, repair shops, storage facilities) and allows for mixed-use residential buildings. The surrounding parcels are currently used for a combination of residential, commercial, transportation, and open park space. Past Use of the Site: A review of Sanborn Fire Insurance maps show that the site was used for manufacturing and industrial operations that include a dry color and paint storage facility, a varnish research works, and a chemical warehouse. The 1942 Sanborn map also identified one benzene and two gasoline underground storage tanks (USTs). Prior uses of the site that appear to have led to contamination are the varnish research works and USTs, both of which are associated with the use of chlorinated solvents that have potential for release to the environment. Site Geology and Hydrogeology: Site elevation ranges from about 9 to 13 feet above sea level and gradually slopes downward to the east. The subsurface stratigraphy consists of historic fill to about 4 feet below grade surface (bgs), underlain by brown sand, red clay, brown clay, black gravel, and black/brown silt. Predominant geological surface features were not reported and bedrock was not encountered during the 2015 investigation. Depth to groundwater ranges from about 6 to 7 feet bgs and appears to flow towards the west. The site is located within a Zone AE designated flood zone, which is identified as a high risk flood area."
Env Problem:	"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs, trichloroethene, and its breakdown products, zinc, nickel, arsenic, mercury, and lead in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for residential use to 15 feet below ground surface. Residual contamination in the soil and groundwater is being managed under an local groundwater controls. Prior to Completion of Remediation: Nature and Extent of

215 NORTH 10TH STREET (Continued) **S121933762**

Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals during the Remedial Investigation. Polychlorinated biphenyls (PCBs) and pesticides were also analyzed for during the preliminary investigation and were not found to exceed standards. Soil vapor was analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern for the site include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (DCE) and vinyl chloride, lead, mercury, arsenic, and SVOCs (e.g. benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene). Soil-Metals, such as lead, mercury, and arsenic, were found across the Site in shallow and deep soils. Concentrations of arsenic found on Site (maximum of 95.4 parts per million [ppm]) significantly exceeded the soil cleanup objective (SCO) for unrestricted use (UUSCO) and restricted residential use soil cleanup objective (RRUSCO) (13 and 16 ppm respectively). Lead found on-site (maximum concentration of 5,630 ppm) exceeded the UUSCO and RRUSCO (63 and 400 ppm). Concentrations of mercury found on-site (maximum of 160 ppm) significantly exceeded the UUSCO and RRUSCO (0.18 and 0.81 ppm respectively). SVOCs (mostly polycyclic aromatic hydrocarbons (PAHs) were noted mainly in shallow soils throughout the site, and one deep soil location on the northern portion of the site. Concentrations of SVOCs, such as benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene had maximum concentrations ranging from of 5.1 ppm to 6.5 ppm which exceeded the UUSCO and RRUSCO (all contaminants are 1 ppm for both the UUSCO and RRUSCO). TCE was noted on the northern portion of the Site in shallow soils with a maximum concentration of 30 ppm which exceeds the 0.47 ppm UUSCO and the 21 ppm RRUSCO. Vinyl chloride was noted in shallow soils with a concentration of 1.6 ppm; which exceeds the 0.02ppm UUSCO and the 0.9 ppm RRUSCOs. Other volatile organic compounds noted that exceeded the UUSCO include 1,2,4-trimethylbenzene, methyl ethyl ketone, cis-1,2-dichlorothene (DCE), naphthalene, and tetrachloroethene. Groundwater - TCE (maximum concentration of 21 parts per billion [ppb]) and its associated degradation products (DCE at 40 ppb) are found in the groundwater on the central and southern portion of the site, exceeding the groundwater standard of 5 ppb. It is suspected that these contaminants may migrate off-site. Dense Non-Aqueous Phase Liquid (DNAPL) was noted in a central monitoring well (MW-3) during the preliminary investigation, but was not seen during the Remedial Investigation. SVOCs, such as benzo(a)anthracene (maximum of 0.45 ppb), chrysene (maximum of 0.48 ppb), and benzo(b)fluoranthene(maximum of 0.6 ppb), were noted to be greatest at the eastern (most downgradient) monitoring well (exceeding the standard of 0.002 ppb for all named contaminants), and potentially are migrating off-site. Contaminants in this class exceeded the groundwater standards in all wells. Metals, such as lead, mercury, and arsenic, were found across the Site in groundwater. Concentrations of total and dissolved arsenic were found to exceed (maximum of 120.6 ppb) the groundwater standard (25 ppb) in MW4. Concentrations of total lead (maximum of 359 ppb) were found to exceed the groundwater standard (25 ppb) in 16MW2 and 16MW3. Concentrations of total mercury were found to exceed (maximum of 20.05 ppb) the groundwater standard (0.7 ppb) in 16MW2. Additional metals found to exceed the groundwater standard were total and dissolved nickel and zinc. Soil Vapor - TCE was detected at significantly elevated concentrations, up to 243,000 micrograms per cubic meter (ug/m3). PCE was detected at significantly elevated

215 NORTH 10TH STREET (Continued) **S121933762**

concentrations up to 7,730 ug/m3. Carbon tetrachloride was noted at a maximum concentration of 6,350 ug/m3 and 1,1,1-trichloroethane was noted with a maximum concentration of 6,000 ug/m3. Soil vapor samples were collected at 6 feet below sidewalk grade. Additional soil vapor and soil vapor intrusion sampling is being conducted to determine whether actions are needed off-site to address exposures associated with soil vapor intrusion. "

Health Problem:	"Remedial actions are complete, and measures are in place to control the potential for coming in contact with contamination remaining at the site. Investigation and remediation of offsite contamination will be conducted under a separate program."

Site Description: "Location: The site is located at 215 North 10th Street in the Borough of Brooklyn, NY. The site is bordered on the south by North 10th Street with residential buildings on the opposite side of the street, to the west by a parking garage, to the north by a six story residential building, and to the east by Roebling Street with residential buildings on the opposite side of the street Site Features: The Site currently developed with one-story industrial building, two smaller one-story structures and parking areas. The Site is currently partially occupied by a motorcycle sales and service company and a marble importer/manufacturer. Current Zoning and Land Use: The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay. The site has a New York City e designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site appears to have been developed sometime prior to 1887 and has been occupied by various industrial uses including a dry color and paint storage, a varnish research works (which utilized two benzene tanks and a gasoline tank) and a chemical warehouse. The site

215 NORTH 10TH STREET (Continued) **S121933833**

is listed as an inactive facility in the Chemical Bulk Storage database as site no. 2-000052 for storage of muriatic acid, ammonium hydroxide and nitric acid. Site Geology and Hydrogeology: NYSDEC has not received any reports including these details. "

Env Problem: "SEE SITE NO C224229 FOR FUTURE UPDATES Nature and Extent of Contamination: Based on preliminary sampling, contaminants of concern include volatile organic compounds (VOCs) in soil, groundwater and soil vapor. Samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), metals, PCBs and pesticides. Soil A total of eleven (11) soil borings were installed and from which twenty-five (25) soil samples were collected for analysis. Petroleum and chlorinated solvent-related VOCs were identified in soil samples. Benzene was found at a maximum concentration of 5.7 parts per million (ppm), ethylbenzene at a maximum concentration of 10 ppm, 1,3,5-trimethylbenzene at a maximum concentration of 35 ppm, tetrachloroethylene (PCE) at a maximum concentration of 9.4 ppm, trichloroethylene (TCE) at a maximum concentration of 220 ppm, cis-1,2-dichloroethylene (cis-1,2-DCE) at a maximum concentration of 36 ppm, vinyl chloride (VC) at a maximum concentration of 0.46 ppm and naphthalene at a maximum concentration of 100 ppm. Groundwater As per the site map, total of four (4) monitoring wells were installed and sampled. Due to insufficient sample volume, only 3 of the wells were analyzed for VOCs (the likely downgradient well was not analyzed for VOCs). TCE was detected at a maximum concentration of 170 parts per billion (ppb), cis-1,2-DCE at a maximum concentration of 16 ppb, VC at a maximum concentration of 15 ppb and naphthalene at a maximum concentration of 31 ppb. Soil Vapor A total of six (6) soil-vapor probes were installed, including one location beneath the occupied on-site building. Petroleum and chlorinated solvent contamination noted in soil-vapor samples including PCE at a maximum concentration of 7730 micrograms per cubic meter (ug/m3), TCE at a maximum concentration of 243,000 ug/m3, cis-1,2-DCE at a maximum concentration of 11,000 ug/m3 and VC at a maximum concentration of 1650 ug/m3. Significant Threat: Determination of significant threat will be made following completion of the Site Characterization. "

Site Description:	"Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle Park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I 278 (the Brooklyn Queens Expressway (BQE)) adjacent to the park. The former footprint of the Ansbacher Color & Dye Factory was identified to extend to Lot 9, Lot 20, Lot 45, portions of I 278 (Brooklyn Queens Expressway (BQE) and parts of Macri Triangle Park. Current Zoning and Land Use: The site is zoned for residential, manufacturing, and commercial uses. Lot 20 is currently developed with a residential building, Lot 9 is under development as a residential building, and Lot 45 is developed with a Charter School. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color & Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from approximately 1887 to approximately 1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950s, the buildings in the southeastern section of the site were torn down to make room for the construction

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II type investigation was conducted by the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater within the footprint of the BQE. During the reconstruction of the BQE in the early 1990s, NYSDOT completed an IRM (soil removal) within the project's right of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) in 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5-12.5' below grade. Flow direction in shallow groundwater is toward the west southwest, while deeper groundwater appears to flow towards the east. This may be due to the presence of the L train subway tunnel underneath North 7th Street."

Env Problem: "Nature and Extent of Contamination: Soil: Sampling was completed in multiple stages from 1988 to 2016. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. During the Preliminary Site Assessment (PSA) from July to September 1999, the NYSDEC investigated the area of the former Arsenate of Lead building in the southeast portion of the Site in the footprint of the current BQE. Arsenic was found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Lead was found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil was hazardous. Mercury was also found at 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These results are documented in the PSA Report dated March 2000. An additional investigation was completed during 2015 and 2016 under a NYSDEC call out order and documented in the Additional Subsurface Investigation Report, dated May 2016. The investigation identified arsenic in soil up to 97.1 ppm, chromium up to 466 ppm and lead up to 566 ppm located on sidewalk adjacent to Lot 20 (former Lot 9, which was delisted in 2000). In 2018, data was obtained for Lot 45 which was redeveloped into a charter school (Williamsburg Northside School). Arsenic was found up to 67.5 ppm, and barium was found up to 1,160 ppm above the cleanup objective for commercial use (410 ppm), lead up to 383 ppm, and mercury up to 14.6 ppm. Groundwater: Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at

BQE/ANSBACHER COLOR & DYE FACTORY (Continued) **S106780917**

concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the former Arsenate Of Lead building in the southeast area of the site, which is now located in the footprint of the BQE. Significant Threat- The site does not constitute a significant threat to public health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Portions of the former factory have been redeveloped into commercial and/or residential buildings."

Health Problem:	"The site has been investigated. Based on the available data, the site does not pose a significant threat to public health."

Town:	New York City
Record Added Date:	12/07/2015
Record Updated Date:	01/02/2018
Update By:	BXANDERS
Site Description:	"Location: The Former F&S Central Manufacturing site is located at 103 North 13th Street, identified as Block 2279, Lot 34 in the Greenpoint section of Brooklyn. Site Features: The site is comprised of a single tax parcel totaling 12,500 square feet (0.29 acres), and is currently vacant. The exterior walls and concrete slab of a former one-story manufacturing building remain, with the slab approximately 3 feet above sidewalk grade. Current Zoning and Land Use: The site is zoned as a M1-2 district which allows both commercial and light industrial use. The surrounding parcels are used for a combination of commercial and light industrial. Prior to acceptance into the BCP, the site was used for commercial warehouse space. The nearest residential area is approximately 1000 feet to the south. Past Use of the Site: The site was undeveloped prior to 1905. From 1916 to 1930, the site was developed with three small one-story sheds/storage rooms and a portion of a single-story commercial building. The former one-story warehouse/manufacturing building was constructed in 1930. The building was used as an iron pipe warehouse (1940s 1950s), a paper storage warehouse (1960s), metal pipe hanger manufacturing facility (1970s), contractor s storage facility (1990s) and a food storage warehouse (2000s). Site Geography and Hydrogeology: Bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by

FORMER F&S CENTRAL MANUFACTURING CORP. SITE (Continued) **S118372394**

glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the site is described as historic fill material to a depth as great as 13 feet below the existing building slab (10 feet below sidewalk grade), followed by a native grey (wet) sandy silt. Bedrock was not encountered at the site. The elevation of the site is approximately 14 feet above mean sea level and gradually slopes to the northwest. The depth to groundwater beneath the site is approximately 7 feet below sidewalk grade. The groundwater flows to the north-northwest."

Env Problem:
"Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Prior to Remediation: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and PCB/pesticides. Based upon investigations conducted to date, the primary contaminants of concern include benzene, ethylbenzene, total xylene, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benz(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, chromium, lead, arsenic and mercury in soil; and 1,1,1-trichloroethane and trichloroethene (TCE) in soil vapor. Soil - The VOCs found in subsurface soils were predominantly in the shallower soils (0-5 feet bgs). Concentrations were found as high as 0.2 ppm for benzene; 7.1 ppm for ethylbenzene, and 31 ppm for total xylene. Both 1,2,4-trimethylbenzene (24 ppm) and 1,3,5-trimethylbenzene (23 ppm) were found in deeper soils at 7 to 11 feet bgs. Offsite investigations were not conducted as the adjacent properties are fully built out with existing structures. The SVOCs were found in the shallower soils. These were found as high as 2.4 ppm for benz(a)anthracene; benzo(a)pyrene (1.7 ppm); benzo(k)fluoranthene (1.5 ppm); and chrysene (3.8 ppm). The exception to this was in the southwest corner of the site, where the same SVOC constituents were found at concentrations approximately 12 to 15 times higher at 12 to 16 feet bgs. The metal constituents were also found mostly in the shallower soils. Chromium was found as high as 381 ppm; lead at 37,500 ppm; barium at 6,840 ppm; and mercury at 11.4 ppm. Hazardous levels of lead (as high as 14.9 mg/L TCLP) were found between 4 and 13 feet bgs in the western half of the site. All soil borings were drilled to 20 feet bgs, and there were no detections of any contaminant below 13 feet bgs. Bedrock was not encountered during the investigation. Groundwater - Both lead and chromium were found to slightly exceed groundwater standards on-site, as well as naturally occurring metals including, sodium, manganese and iron. There were no VOC or SVOC constituents detected in groundwater. Soil Vapor - Soil vapor was sampled at depths ranging from 5 to 6 feet below ground surface (bgs) and low levels of petroleum-related VOCs were noted. Also, TCE and 1,1,1-trichloroethane were detected as high as 173 micrograms per cubic meter (ug/m3) and 2,090 ug/m3 respectively, and are attributed to a suspected off-site source."

Health Problem:
"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants. "

DEC Memo:	DEC Piper spoke with DEC Jerry Pratt. He was inspecting site yesterday and noticed housekeeping issues. Speedy dry put down but not swept. Puddles of waste oil, etc. Site is a listed site and he will talk with RP to have Tenant clean area and be more aware of spilling. Spill closed. 2/21/18- DEC Piper re-opened case as problem has not been resolved. 2-612201

470 KENT AVENUE - BUILDING A3 (Continued) **S121463718**

11/5/20- DEC Piper spoke with
DEC Pratt. Spill area satisfactory. Site is in BCP. any additional
issues will be addressed through
that program. Spill closed.

Remarks: Loss discovered during inspection. Pictures available

DEC Memo:	1/10/14: Mahat DEC made an attempt to contact Mr. Doug Harm (Brinkerhoff Environmetal @ 732.223.2225 : 732.674.4064) inquiring more information about the site. A voice message was left to Mr. Harm to call back DEC for more information. 8/18/2014: Another voice message was left to Mr. Doug Harm inquring more information about the nature of the spill. 9/17/14: Mahat DEC Mahat received a call from Mr. Shawn Harrison from Brinkerhoff Environmental mentioning that a closure report is ready and will be submitted to the Department. DEC is waiting for a closure report. 6/6/16: Mahat t/c : DEC Mahat contacted Mr. Shawn Harrison inquiring about the closure report on the spill case. He mentioned that the report has been all completed and will be submitted to the Department promptly. 6/9/16: Mahat t/c : DEC Mahat talked to Mr. Shawn

COMMERCIAL LOT (Continued) **S116156582**

and he mentioned that the
Closure Report in under internal review. It will be submitted to the Department as soon as
possible. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad
502 Metropolitan Avenue does not have an alternate address. No additional spills or PBS
registrations found for site. No documents found in D2. Emailed Sean Harrison about status of
closure report. 10/13/2016: Rashad Sean replied on 10/12 and will check the status of report.
11/1/2016: Rashad Received report from Sean Harrison, it has been uploaded to D2. Review of UST
closure report is as follows: During excavation activities on 2/6/14, three fuel oil USTs were
encountered. The site is currently being redeveloped and is E-Designated. Impacted soils and strong
petroleum odors were identified in the northwest corner of the site, adjacent to the intersection
of Rodney Street and Metropolitan Avenue. Brinkerhoff collected five soil samples to delineate the
extent of the petroleum impacted soil. The northern most UST was filled with liquid consisting of a
water-sludge mixture, the two southernmost USTs were filled in with concrete. The tank was pumped,
cleaned and removed, the other 2 USTs were also removed. A total of 280 tons of soil was excavated
and properly disposed of. On 9/29/14 additional impacted soil was identified within the location of
the former USTs. On 10/6/14 the material was excavated, and one sample was taken, almost 25 tons of
soil was removed. The site is currently being redeveloped as a 14 story mixed use building (hotel
rooms and residential apartments). Additionally the site development consists of underground
parking and underground and ground floor retail space. In conclusion, Brinkerhoff is requesting
spill closure. Review of 2/4/14 sample data: Minor SVOC exceedances in SB-2 (5.5-6ft). VOC
exceedances in SB-4 (5.5-6ft): Xylene-2.8ppm, Toluene-.96ppm, benzene-.18ppm Review of 2/28/14
sample data (similar locations to SB): Minor SVOC exceedances in PE-2 (10-10.5ft). Minor SVOC
exceedances in PE-3 (10-10.5ft) Review of 10/6/14 sample S-9 taken at the base of the excavation at
12 ftbgs yielded no exceedances in VOCs or SVOCs. Review of 1/6/15 sample EP-7 taken as Endpoint
bottom sample at 15 ftbgs yielded no exceedances in VOCs and SVOCs. Area of concern SB-4 which
recorded the highest VOC values was further excavated as reflected by sample S-9 and EP-7 which
were in the same area. Spill will be closed as final sampling shows no elevations of VOCs or SVOCs
after excavation activities. In addition USTs have been removed and decommissioned. Closure letter
will be prepared and sent to owner as per tax records: 475 Keap Street, LLC 512 7th Ave Ny, NY

COMMERCIAL LOT (Continued) **S116156582**

10018 Letter will also be emailed to Sean Harrison of Brinkerhoff.
Closure letter uploaded to D2.

Updated By:	DRNIEREN
Site Code:	483489
Site Description:	"Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River."
Env Problem:	"Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic

FORMER DRIGGS PLYWOOD CORP. (Continued) **S108076630**

compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code: 483489
Site Description: "Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings.

FORMER DRIGGS PLYWOOD CORP. (Continued) **S108076630**

Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River."

Env Problem: "Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Groundwater flow is generally westerly toward the East River."

Env Problem: "Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. There were three monitoring wells at the site; one compound, bis(2-ethylhexyl)phthalate, was detected in groundwater just above its groundwater standard. Only one other semi-volatile organic compound (SVOC) and two VOCs (MTBE and PCE) were detected in groundwater, but at concentrations well below their respective standards. In the filtered groundwater samples analyzed for metals, only naturally occurring iron, sodium, magnesium and manganese were above standards."

Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with residual contamination remaining at the site."

Site Code:	483489
Site Description:	"Location: The BCP site is located in the Williamsburg section of Brooklyn (Kings County) at 11 Jackson Street at the intersection with Meeker Avenue where it runs under the Brooklyn-Queens Expressway. Site Features: Prior to redevelopment, the site contained one one-story building covered the entire 0.20 acre site. Redevelopment consisted of construction of a eight-story multi-family apartment building with surface parking behind the building. Current Zoning and Land Use: The site is zoned R6-Residential. In 2005 the site was rezoned from M1-2 industrial to R6-Residential as part of the Greenpoint-Williamsburg Rezoning Action to provide opportunities for the development of residential uses on underutilized and vacant land and legalize existing non-conforming uses. Jackson Street intersects with Meeker Avenue at the southeast corner of the site. Meeker Avenue is a commercial corridor that runs under and parallel to the Brooklyn-Queens Expressway. Immediately north and behind the site is a street of single family homes. Nearby, there is significant redevelopment that is ongoing or has recently been completed that largely consists of multi-story, multi-unit residential buildings. Past Use of the Site: The site was first developed sometime prior to 1887 as three residential lots. Circa 1962 until about 1973, Driggs Plywood operated at the site. From the early 1950s through 2007 the three lots were combined as one and occupied by a building labeled lumber storage that encompassed the entire lot. Arnmart Beer Distributors occupied a portion of the site in the late 1990s and Car Fashion Seat Covers operated on site in the 2000s. Prior to redevelopment, the site was most recently occupied by a bus maintenance facility in the western half of the lot and a metal fabrication shop on the east. Site Geology and Hydrogeology: Subsurface soils at the site include a mixture Groundwater table at the site is approximately 8 feet below surface grade within the native silty-sand. Groundwater flow is generally westerly toward the East River."
Env Problem:	"Nature and Extent of Contamination: Remediation of the site is complete. The remedial action consisted of excavation across the entire site to approximately five feet below grade. Post excavation confirmatory sampling showed that on-site meets Track 2, restricted residential use soil cleanup objectives to a depth of at least 15 feet. Updated By: DKMACNEA
Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds

BROOKLYN NAVY YARD 13 ACRE PARCEL (Continued) **S105586296**

	and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Site Code:	57818
Site Description:	"Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "
Env Problem:	"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."
Health Problem:	"Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

Dt record added: 08/04/2009
Dt rec updated: 05/15/2024
Updated By: KNLILOIA
Site Code: 57818
Site Description: "Location: This site is on the north-east portion of the Brooklyn Navy Yard Development Corp. Industrial Park (BNYDC) and is a portion of the site (224019A) which had been operated by the NYC Sanitation Department is currently being redeveloped by Steiner Studios into a new roadway and elevated parking lot. The site is bordered by the East River on the north and west, by Kent Avenue on the east, and by the rest of BNYDC site on the south. Site Features: The 13-Acre parcel site includes the former Building 419 transformer substation area and two former drum storage areas. The site surrounds Wallabout Channel (barge basin)on three sides. The 224019A site deals with only 5.89 acres of the parcel, and excludes the former coal gasification plant known to have existed at the remaining 3.5 acres of the site. Those 3.5 acres have been designated as a separate site and given the ID number of 224019B. Also excluded from the original 13 acres are an approximate 3.61 acres of land under water, which have been excluded from the original site definition. Current Zoning and Land Use: The site is zoned for commercial and industrial uses, and is currently used for vehicle and materials storage. The surrounding area includes industrial, commercial and residential uses. Past Use of the Site: The site was used in support of ship building and repair activities. Support actions included waste storage at the two drum storage areas, and power distribution at the transformer substation. The railroad siding area was used for the loading and unloading of materials and fuels. These uses, as well as historic filling practices throughout the waterfront, have led to demonstrable levels of lead, Polycyclic Aromatic Hydrocarbons (PAHs) and/or polychloriinated biphenyls (PCB) contamination. Site Geology and Hydrogeology: The site is underlain by historic fill to a depth of approximately fifteen feet in many areas. Beyond the fill material is a silt sand, then sand unit down to a depth of approximately 100 feet where the Gardiners Clay is found. Groundwater occurs at depths of approximately five feet, and flow is generally to the north and west towards the East River. "
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds and PCBs in the soil. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil is being managed under a Site Management Plan."
Health Problem: "Remedial actions are complete and measures are in place to control the potential for coming in contact with contamination remaining at the site."

DEC Memo:	12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel and in the top sump of regular there are a mixture of gasoline and

GAS STATION - IND-G LINE (Continued) **S109374210**

water. The sensors in the sumps
were not place touching the bottom of the sump. The fuel alarm did not went off becouse the sensors
were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test.
the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are
wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut
the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days
Reconcilation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09-
Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results
showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test.
01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called
Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the
station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test
tanks and passed. The station open to service on 12/10/09.
02/10/09-Vought-Called and spoke to NYCT
Varley as per DEC Austin and no further monitoring of station being performed and no complaints
received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss
with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and
necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were
performed during the Subsurface investigation. The location of Groundwater water correspond to the
same location of the soil boring. samples were collected by installing temporary wells. SOIL. No
VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2fl)and
B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene,
Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples Bi(8-10ft),
B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations aboveTAGM
guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft),
B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene,
Benzo(a)pyrene, Benzo(K)fluorenthene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and
cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and
B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene,
Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and

GAS STATION - IND-G LINE (Continued) **S109374210**

B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations
above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of
12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper, Iron, Lead, Magnesium,
Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As
per Randy Austin this case has been tranferred to Mark TIbbe for long term remediation. 02/24/2009:
This spill case was transferred to A. Doronova. - AD 04/09/2009: Received a pdf copies of Orders on
Consent: one signed by responsible party and second signed by consultant, who was fined due to
falure to report the spill. DL copies to eDocs. AD 04/23/2009: Received an email from V. Brevdo. He
forwarded me a copy of the investigation work plan, which was requested in the CAP of the signed
Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC
(consultant). Requested to re-submit the work plan. Revised WP should state all spill cases
associated with this property (spill 0809794 is missing) and references to the consent order and
the corrective action plan. They did not performed any weekly gauging and recovery visits required
under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site.
Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to
install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in
these temporary wells in December 2008). According to Mr. Sosic, the redevelopmet plan includes
excavation to 12' bgs for a hotel construction with a full basement, so they proposed wells only
along the site borders to monitor off-site migration of the contamination. The revised WP will be
submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding
submission of the revised WP. According to the information obtained from him today, the start date
of a re-development project is unknown. Told him that due to the postponement of the project, two
additional permanent monitoring wells should be installed in the vicinity of the temporary wells
B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this
requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed the site with J. Kolleeny.
Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the
changes you requested earlier in the week (add subway spill number and consent order info in
introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard
copy is going out today as well. I do not have the PBS inspection

GAS STATION - IND-G LINE (Continued) **S109374210**

report, but as I mentioned you
should be able to obtain that from Veronica. Call with questions.
Charles B. Sosik, P.G. Principal
EBC Will review. AD 05/04/2009: Reveiwed the revised work plan. It proposes additional subsurface
investigation at the site, including advancing and sampling of seven soil borings and eight
temporary groundwater sampling points, and installation of six permanent groundwater monitoring
wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples
will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates
only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is
abcent. A remedial investigation report summarizing all findings with conclusions and
recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC.
requested to correct figures and resubmit the work plan. Later
received an e-mail from him saying:
Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In
reviewing again I eliminated the monitoring well within the service bay due to the potential for
spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK
we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But
now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for
wells in the vivinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny
of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site
owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report
is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We
are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with
this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927
csosik2@optonline.net Spoke with him. Scheduled
the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was
canceled due some scheduling issues, and promised to inform me on a new date for investigation
work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying:
Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you
since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD
06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.

GAS STATION - IND-G LINE (Continued) **S109374210**

I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding
fieldwork schedule. He told me that it scheduled for week of June 28. AD 07/2009: The site visit
was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is
asking for an extension on the field work till September due to issues with the insurance company.
Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke
with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance
with the CAP of the Concent Order. Requested to submit an official letter request for extension. AD
07/17/2009: Received the letter. DL to eDocs. Will review. AD 07/21/2009: Reviewed the letter. EBC
asks for 45-day deadline extention. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a
letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to
eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an
e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the
site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to
perform soil boring and wells installation. The highest PID reading at MW-1 boring location was
1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil
and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5.
The investigation summary report will be submitted. Later in the day received an e-mail from C.
Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a
heavy black film on water in the bailer. Not enough for a sample, but will try again next week
after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks.
Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and
spoke with C. Sosik. He said that they will return to the site later this week to survey the wells
and to collect free product sample if feasible. A soil and GW contamination was also encountered in
the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. SosiK saying: Ainura, The RI
Report is attached. A hard copy will follow early next week. Let me know if you have any questions
or if additional hard copies are needed. Thanks and enjoy the weekend. Charles B. Sosik, P.G.
Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell:
631.357.4927 csosik2@optonline.net DL the report to eDocs. AD

GAS STATION - IND-G LINE (Continued) **S109374210**

09/14/2009: Received a hard copy of
the report. Will review. AD 10/20/2009: Reviewed the report. AD
11/02/2009: Called and spoke with
C. Sosik of EBC. Asked him to check all wells for free product and to
sample permanent monitoring
wells. RAP should be submitted with current GW data no later than
December 1, 2009. AD 12/08/2009:
Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is
out of town. He will be back
tommorow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying:
Ainura, See attached Remedial
Plan for the project. We need to coordinate with the NYC Office of
Environmental remediation in
order to obtain building permits as the site also has an
E-designation. I will be sending
hardcopies of the RAP and attachments to you and NYCOER on Monday.
Call me with questions or to
discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental
Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will
review. AD 01/25/2010: Reviewed
the RAP. It states that the site will be re-developed through the
construction of a new 6-story,
53-room hotel. The hotel will have a cellar and a sub-cellar. The
cellar and sub-cellar will
require excavation to a depth of 12' bsg. The RAP proposes removal of
3 USTs, excavation of
contaminated soil, and application of chemical oxidant into the
excavation pit. As a preventine
measure, a vapor barrier will be installed beneath the foundation slab
of the cellar and sub-cellar
areas of the building. Post-remedial groundwater monitoring is
proposed on a quarterly basis via 5
on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC
regarding the RAP. Asked if one
additional well can be installed at the site. Also clarified statement
regarding installation of
new tanks at the property. A revised RAP will be submitted shortly. AD
02/08/2010: Received an
e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1
monitoring well, and changed
section 3.1.4 as discussed. We also added section 2.5 to discuss
dewatering options and modified
section 3.1.5 to discuss a waterproofing membrane for the cellar level
and a vapor barrier for the
sub-cellar level. Building permits, demolition and construction, must
be obtained before work can
start and MTA must also approve the plans. To obtain building permits
we will need a NTP from
NYCOER. We have submitted the RAP to OER and their issuance of an NTP
is contingent upon written
approval of the RAP from DEC. Call to discuss or if you have any other
questions. Thanks. Charles
B. Sosik, P.G. DI the revised RAP to eDocs. Will review. AD
02/11/2010: Reviewed the revised plan.
Discussed it with J. Kolleeny. Will send an approval letter with a
comment. AD 02/17/2010: Issued

GAS STATION - IND-G LINE (Continued) **S109374210**

and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring results do not indicate significant improvement of groundwater quality at the site, then additional remedial actions may be required by DEC. DL to eDocs. AD 04/2010: Spoke with Mr. Sosik regarding the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail: Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February 17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212) 341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD 07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any problems with the changes. We intend to re-submit the hard copy with the rest of the OER required submittals (full size architectural plans, letter from waterproofing manufacturer, letter from project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well. Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised version. And as it states in the e-mail, no particular changes were made to the RAP itself, which was approved by DEC in February 2010. It states that the site will be re-developed through the construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventine measure, a waterproof membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010: Called and spoke with Mr. Sosik regarding the soil sampling interval

GAS STATION - IND-G LINE (Continued) **S109374210**

concerns and some typo on page
10 in the work plan. It was agreed that number and locations for soil samples will be decided after
excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW
in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail.
Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to
eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will
send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying:
Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they
indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB
and they should be able to obtain approved plans. We will be meeting with the developer, architect
and general contractor within the next couple of weeks to plan the work sequence and logistics. I
ll let you know when the have DOB approvals and when we have a firm schedule. Charles B. Sosik,
P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870
Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site
status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr.
Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that
they just cut utility service to the building and expect to begin demolition next week. Tanks
removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status
update. AD Later in the day received the following response: Ainura, I have been notified that the
UST removal is starting on this project. We will have someone on-site today to observe. The plan is
to remove the tanks, backfill and demo the building and infrastructure first,.close out the demo
permit and then install shoring and begin excavation of impacted soil as part of the building
foundation. We will send you an udate on the short term schedule after we have a chance to confer
with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com
04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are
planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples
will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed.
AD 06/12/2012: Sent an e-mail to Mr. Sosic with a request for site status update. Later received

GAS STATION - IND-G LINE (Continued) **S109374210**

the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with C. Sosik regarding site status update reports. He informed that excavation started at the site about a month ago. The site has E designation, so they send also reports to MOER. The project manager in OER for this site is Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil sampling date. Later in the day received a daily reports from Kevin Brusee of EBC. The reports states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open excavation. No soil disturbing activities will be performed while the piles are being installed. According to EBC, significantly contaminated petroleum contaminated soil has not yet been encountered, so odor has not been an issue and the soil is very wet right now, resulting in no on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the Site since those reports. Over the last few weeks, no excavation work has been performed at the Site. Work has been limited to installation of a few steel piles and follow up load tests on the piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday, 4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight (8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil excavation is planned until early next week and planned activities include installation of footings on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder. AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447 Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of

GAS STATION - IND-G LINE (Continued) **S109374210**

petroleum contaminated soil were sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the building to be finished, to include info on in in the report, as per OER's request. The report will be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000 gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel tanks were then transported to a local metal recycling facility for proper disposal. On April 18, 2013, EBC inspected the soil immediately below the former location of the tanks for evidence of contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of

GAS STATION - IND-G LINE (Continued) **S109374210**

tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56.
Construction of the hotel building's cellar level required excavation to a depth of approximately
12 feet below grade for the entire footprint of the building. Soil sampling: In accordance with the
RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed
for the new building's basement. Endpoint soil samples were collected at the approximate rate of
one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed.
Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples
EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl
ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4,
m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and
m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and
EP8, additional excavation of approximately 1 foot was conducted within the collection area of each
of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A,
EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant
decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant
reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW
sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had
accumulated within the open excavation pit. Gasoline related VOCs were detected within the
groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb),
1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13
ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and
toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally
reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as
part of redevelopment was effective in addressing on-site petroleum contamination. Chemical
oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA
powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat
any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9
lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium
persulfate. The activated sodium persulfate powder was thoroughly

GAS STATION - IND-G LINE (Continued) **S109374210**

mixed and worked into the
subsurface soil and groundwater utilizing an excavator bucket.
Waterproofing Membrane: Since the
building's cellar level was installed below the static groundwater level, a waterproofing system
was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane
was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of
the installation of the waterproofing membrane beneath the cellar slab and behind the foundation
walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene
3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products.
The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site
Capping: The entire Site has been capped with concrete. This includes an 8 thick concrete cellar
slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A
work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik
of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a
remainder to submit the RIR and with a request to submit in a timely manner a work plan for
installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the
following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4
2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants
Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review.
AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW
monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring
wells for GW sampling program. It looks like number of the sampling wells was reduced due to the
changes to the footprint of the constructed building. The diamert of the proposed wells is
questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with
J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to
Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2
wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to
Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K.
Brussee regarding report submission. He said that they were not able to install wells due to the
scaffolding at the site till the beginning of October. The wells were installed approximately two

GAS STATION - IND-G LINE (Continued) **S109374210**

weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was able to install two out of four proposed wells. One well was dry and another well was not installed due to the obsticles. EBC sampled GW from two installed wells and in a process of a report preparation. Requested to submit the report. Decision regarding further actions at the site will be based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report submission. He said that it was postponed due to some issues with his client. The newly installed wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As previously discussed, I ve attached a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review and let me know if you have any questions. Thanks, Kevin Brussee Senior Project Manager EB C Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and sampling report. The report states that groundwater quality monitoring was proposed from four monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one monitoring well proposed on the east side of the new hotel building could not be installed due to the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9, 2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1 inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014 groundwater samples was collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No VOCs were detected in MW-7, which is located off the northwest corner of the building. Low concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb), benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene (0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and

GAS STATION - IND-G LINE (Continued) **S109374210**

Recommendations: As previously stated in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater sample was collected from the groundwater within the open excavation. Relatively low concentrations of gasoline related VOCs were detected in the groundwater grab sample. To treat residual soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the source were sampled in October of 2014. Little or no VOCs were detected in either groundwater sample. Therefore, based on the remedial activities performed at the site and post-remediation groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J. Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; - Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone, imported to the site from a NYSDEC Active Registered Construction and Demolition Processing Facilities for use as backfill below the slab. - Installation of a water proofing membrane consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab, and taking into consideration the latest post-remediation groundwater sampling results, which indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD

Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

Longitude:	-73.9516761
DEC Memo:	12/02/08-Zhune visited the site. The Metropolitan Avenue Subway Station has a police precinct. I spoke to Hannay from Transit Brooklyn Task Force he said early in the morning there was a very strong gasoline smell. We noticed gasoline smell for almost a year when the gas station fill up the tanks with gasoline but today it has been the worst. Passengers were complaining. they called 911. By the time that I got there the smell was gone. On 433 Union Ave, Brooklyn NY there is a Getty gasoline station. The station have 3 USTs, one regular, one diesel and one premium. USTs were installed in 1982. One AST installed in 2004. Tanks are steel tanks. In the top sump of premium a leak of apporximately 25 gallons of gasoline was found. In the top sump of diesel there are diesel and in the top sump of regular there are a mixture of gasoline and water. The sensors in the sumps were not place touching the bottom of the sump. The fuel alarm did not went off becouse the sensors were placed incorrectly. The last time the tanks were tested was on 03/11/08 they passed the test.

GAS STATION - IND-G LINE (Continued) **S109374210**

the lines are doubled walled lines. Dispenser 1-2 probably are leaking. The gravel in the sumps are wet and there is petroleum smell. Benjamin Leonen (718)999-2460 from FFD (Bulk Fuel Safety) shut the station down. DEC Requires 1) Tanks tightness test and lines test 2) Copies of 10 Days Reconcilation Report 3) Copies of Corrosion Protection test and stage I and II test. 12/04/09- Zhune. Received the Tank and line test results performed by Certified Tank CTT Testing. The results showed that the three tanks (Diesel, Premium and Regular) and the three lines passed the test. 01/26/09-Zhune. Received the stage I and II test results and passed test. 02/10/09- Zhune called Frank Cifuentes (718)999-2516 (DCI) Deputy Chief Inspector of the Bulk Fuel Safety. He said the station was closed on 12/02/09 by Benjamin Leonen. On 12/08/09 Frank witnessed the precision test tanks and passed. The station open to service on 12/10/09. 02/10/09-Vought-Called and spoke to NYCT Varley as per DEC Austin and no further monitoring of station being performed and no complaints received to date since original spill. Phase II received by DEC. DEC Zhune will review and discuss with DEC Austin for transfer to Petroleum Remediation Unit due to presence of free product and necessity of long term remediation. PHASE II Report. A Total of 4 soil boring (B1-B4) were performed during the Subsurface investigation. The location of Groundwater water correspond to the same location of the soil boring. samples were collected by installing temporary wells. SOIL. No VOCs were detected in any of the four shallow soil samples B1(0-2ft), B2(0-2ft), B3(0-2fl)and B4(0-2ft)at concentrations above TAGM guidance levels. Elevated concentrations of Ethyl-benzene, Toluene, o-Xylene, p&m-xylene, 1,2,4 trimethyl-benzene in the deep soil samples Bi(8-10ft), B2(10-12ft)and B3(10-12ft). No VOCs were detected at B4(10-12ft) at concentrations aboveTAGM guidance levels. SVOCs above the guidance levels were detected in B1(0-2ft), B2(0-2ft), B3(8-10ft)and B4(0-2ft). The elevated compounds include Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(a)pyrene, Benzo(K)fluorenthene, Chrysene and Dibenzo(a,h)anthracene. Metals. Zinc, cooper and cadmiun were detected at elevated concentrations. Zinc in each soil sqmples excep B2(10-12ft) and B4(10-12ft). Cooper in B2(0-2ft) andB3(8-10ft) and Calcium in B2(10-12ft). GROUNDWATER. Benzene, Toluene, Ethyl-benzene and p&M Xylene were detected at concentrations above NYSDEC GQSs in B1 and B4. Free floating product was recovered from B2 and B3. No SVOCs were detewcted at concentrations above NYSDEC CQSs. Only B1-B4 was analyzed for SVOCs PCB-1254 was detected at a concentration of 12.2 ug/L in B2. Metals. Barium, Beryllium, Cadmium, Chromium, Copper,

GAS STATION - IND-G LINE (Continued) **S109374210**

Iron, Lead, Magnesium,
Nickel, Sodium, and Selenium were detected above their respective NYSDEC GQSs. 02/20/09- Zhune. As
per Randy Austin this case has been tranferred to Mark TIbbe for long term remediation. 02/24/2009:
This spill case was transferred to A. Doronova. - AD 04/09/2009: Received a pdf copies of Orders on
Consent: one signed by responsible party and second signed by consultant, who was fined due to
falure to report the spill. DL copies to eDocs. AD 04/23/2009: Received an email from V. Brevdo. He
forwarded me a copy of the investigation work plan, which was requested in the CAP of the signed
Order on Consent. Reviewed the work plan. AD 04/27/2009: Called and spoke with Charles Sosik of EBC
(consultant). Requested to re-submit the work plan. Revised WP should state all spill cases
associated with this property (spill 0809794 is missing) and references to the consent order and
the corrective action plan. They did not performed any weekly gauging and recovery visits required
under Paragraph 1 of the CAP because there are not any permanent monitoring wells at the site.
Discussed locations of the proposed permanent GW monitoring wells. Asked why EBC did not propose to
install permanent wells in the vicinity of soil borings B-2 and B-3 (product sheen was detected in
these temporary wells in December 2008). According to Mr. Sosic, the redevelopmet plan includes
excavation to 12' bgs for a hotel construction with a full basement, so they proposed wells only
along the site borders to monitor off-site migration of the contamination. The revised WP will be
submitted till the end of this week. AD 04/30/2009: Called and spoke with Mr. Sosic regarding
submission of the revised WP. According to the information obtained from him today, the start date
of a re-development project is unknown. Told him that due to the postponement of the project, two
additional permanent monitoring wells should be installed in the vicinity of the temporary wells
B-2 and B-3, or two of the proposed wells should be relocated. Mr. Sosic requested to put all this
requirements in writing. Prepared an e-mail for Mr. Sosic. Discussed the site with J. Kolleeny.
Later received an e-mail from Mr. Sosic saying: Ainyra, Attached is the revised RIWP reflecting the
changes you requested earlier in the week (add subway spill number and consent order info in
introduction section) as well as those requested earlier today (move the locations of 2 MWs). Hard
copy is going out today as well. I do not have the PBS inspection report, but as I mentioned you
should be able to obtain that from Veronica. Call with questions. Charles B. Sosik, P.G. Principal
EBC Will review. AD 05/04/2009: Reveiwed the revised work plan. It proposes additional subsurface

GAS STATION - IND-G LINE (Continued) **S109374210**

investigation at the site, including advancing and sampling of seven soil borings and eight
temporary groundwater sampling points, and installation of six permanent groundwater monitoring
wells. The diameter of the proposed permanent wells planned to be - 1 inch. Groundwater samples
will be analyzed for VOCs. The work plan's Figure 4 (proposed monitoring well locations) indicates
only 5 wells of proposed 6. Figure 3 has two different versions in the same plan and Figure 2 is
abcent. A remedial investigation report summarizing all findings with conclusions and
recommendations will be prepared and submitted to DEC. Called and spoke with Mr. Sosik of EBC.
requested to correct figures and resubmit the work plan. Later received an e-mail from him saying:
Revised as discussed. Corrected spill number on Page 1 and correct Figure 3 and 4 shown. In
reviewing again I eliminated the monitoring well within the service bay due to the potential for
spills. A well was added near the sign as discussed and the text changed from 6 wells to 5. If OK
we will send out new hard copy. Charles B. Sosik, P.G. Principal EBC Figures were corrected. But
now EBC proposes 5 monitoring wells instead of 6 previously proposed due to spill potential for
wells in the vivinity of the service bay. AD 05/05/2009: Discussed the work plan with J. Kolleeny
of DEC. Issued and sent an approval letter with some modifications to Mr. Mohan Dhillon (site
owner) and copies to J. Kolleeny-DEC and C. Sosic (EBC), DL e-copy to eDocs. Investigation report
is due August 6, 2009. AD 05/26/2009: Received an e-mail from C. Sosik of EBC saying: Ainura, We
are attempting to schedule the drilling for tomorrow. Let me know if you have any problems with
this. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph:
631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927
csosik2@optonline.net Spoke with him. Scheduled
the site visit. AD 05/27/2009: Received a phone call from Mr. Sosik. He said that fieldwork was
canceled due some scheduling issues, and promised to inform me on a new date for investigation
work. AD 06/11/2009: Did not receive any notifications from Mr. Sosik. Sent him an e-mail saying:
Hi Charles, Do you already have a new schedule for drilling at the site? I did not hear from you
since you canceled May 27th field work. Please notify me in advance. Thank you. Ainura Doronova AD
06/12/2009: Received an e-mail from C. Sosik of EBC: We expect to reschedule for late next week.
I'll let you know Monday. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants
Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 AD 06/17/2009: Spoke with C. Sosik regarding
fieldwork schedule. He told me that it scheduled for week of June 28.

GAS STATION - IND-G LINE (Continued) **S109374210**

AD 07/2009: The site visit
was canceled again. AD 07/14/2009: Received an e-mail from C. Sosik of EBC: Ainura, The attorney is
asking for an extension on the field work till September due to issues with the insurance company.
Please let me know if this is acceptable. Thank you. Charles B. Sosik, P.G. AD 07/15/2009: Spoke
with Mr. Sosik, told him that deadline extension can be approved by the Department in accordance
with the CAP of the Concent Order. Requested to submit an official letter request for extension. AD
07/17/2009: Received the letter. DL to eDocs. Will review. AD 07/21/2009: Reviewed the letter. EBC
asks for 45-day deadline extention. Discussed it with J. Kolleeny of DEC. AD 07/22/2009: Sent a
letter with 30-day deadline extension approval. CC to J. Kolleeny of DER and J. Urda of DEC. DL to
eDocs. The Investigation report submission is due September 4, 2009. AD 08/19/2009: Received an
e-mail C. Sosik of EBC which stated that EBC will start site investigation tomorrow. Will visit the
site. AD 08/20/2009: Visited the site. Met at the site with C. Sosik. EBC was subcontracted to
perform soil boring and wells installation. The highest PID reading at MW-1 boring location was
1300 ppm (13'), at SB-6 PID was 15 ppm (8'-12') and at SB-5 it was 650 ppm (12'-13'). Observed soil
and groundwater sampling. There was some gasoline odor noted during installation of MW-1 and SB-5.
The investigation summary report will be submitted. Later in the day received an e-mail from C.
Sosik saying: Ainura, All sampling completed. Product was encountered in MW-3. Not measurable but a
heavy black film on water in the bailer. Not enough for a sample, but will try again next week
after it settles. Could not get the boring at b7 due to rejection and proximity to lines and tanks.
Pea gravel encountered. I'm in the office tomorrow. Call to discuss. AD 08/26/2009: Called and
spoke with C. Sosik. He said that they will return to the site later this week to survey the wells
and to collect free product sample if feasible. A soil and GW contamination was also encountered in
the vicinity of well MW-1. AD 09/04/2009: Received an e-mail from Mr. SosiK saying: Ainura, The RI
Report is attached. A hard copy will follow early next week. Let me know if you have any questions
or if additional hard copies are needed. Thanks and enjoy the weekend. Charles B. Sosik, P.G.
Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell:
631.357.4927 csosik2@optonline.net DL the report to eDocs. AD 09/14/2009: Received a hard copy of
the report. Will review. AD 10/20/2009: Reviewed the report. AD 11/02/2009: Called and spoke with
C. Sosik of EBC. Asked him to check all wells for free product and to sample permanent monitoring

GAS STATION - IND-G LINE (Continued) **S109374210**

wells. RAP should be submitted with current GW data no later than December 1, 2009. AD 12/08/2009: Called and spoke with Mr. Sosik of EBC regarding RAP submission. He is out of town. He will be back tommorow. AD 12/19/2009: Received an e-mail from Mr. Sosik saying: Ainura, See attached Remedial Plan for the project. We need to coordinate with the NYC Office of Environmental remediation in order to obtain building permits as the site also has an E-designation. I will be sending hardcopies of the RAP and attachments to you and NYCOER on Monday. Call me with questions or to discuss. Thanks. Charles B. Sosik, P.G. Principal EBC Environmental Business Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 DL to eDosc. Will review. AD 01/25/2010: Reviewed the RAP. It states that the site will be re-developed through the construction of a new 6-story, 53-room hotel. The hotel will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth of 12' bsg. The RAP proposes removal of 3 USTs, excavation of contaminated soil, and application of chemical oxidant into the excavation pit. As a preventine measure, a vapor barrier will be installed beneath the foundation slab of the cellar and sub-cellar areas of the building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 5 on-site wells. AD 02/02/2010: Called and spoke with C. Sosik of EBC regarding the RAP. Asked if one additional well can be installed at the site. Also clarified statement regarding installation of new tanks at the property. A revised RAP will be submitted shortly. AD 02/08/2010: Received an e-mail from Mr. Sosik: Ainura, see revised RAP, attached. We added 1 monitoring well, and changed section 3.1.4 as discussed. We also added section 2.5 to discuss dewatering options and modified section 3.1.5 to discuss a waterproofing membrane for the cellar level and a vapor barrier for the sub-cellar level. Building permits, demolition and construction, must be obtained before work can start and MTA must also approve the plans. To obtain building permits we will need a NTP from NYCOER. We have submitted the RAP to OER and their issuance of an NTP is contingent upon written approval of the RAP from DEC. Call to discuss or if you have any other questions. Thanks. Charles B. Sosik, P.G. Dl the revised RAP to eDocs. Will review. AD 02/11/2010: Reviewed the revised plan. Discussed it with J. Kolleeny. Will send an approval letter with a comment. AD 02/17/2010: Issued and sent a RAP approval letter with a comment that: if post-remediation groundwater monitoring results do not indicate significant improvement of groundwater quality at the site, then additional remedial actions may be required by DEC. DL to eDocs. AD 04/2010:

GAS STATION - IND-G LINE (Continued) **S109374210**

Spoke with Mr. Sosik regarding
the RAP implementations. He said that they are waiting for OER. Asked him to send me an e-mail:
Ainura, the NYCOER project contact is listed below. We sent him your approval letter on February
17. We cannot obtain building permits to remove the tanks without a Notice to Proceed from OER. I
do not know what the hold up is. Andrew M. D'Amico Jr. Project Manager Office of Environmental
Remediation Mayor's Office of Operations 253 Broadway, 14th Floor New York, NY 10007 Tel: (212)
341-2135 Fax: (212) 788-2941 Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net AD
07/27/2010: Called and spoke with C. Sosik of EBC. He told me that they were required to make some
changes in the RAP by OER. A revised RAP will be submitted to us as well. Asked him to send me a
summary e-mail regarding this matter. AD 10/06/2010: Received an e-mail from Mr. Sosik: Ainura, see
revised redline version which incorporates changes requested by NYCOER. Let me know if DEC has any
problems with the changes. We intend to re-submit the hard copy with the rest of the OER required
submittals (full size architectural plans, letter from waterproofing manufacturer, letter from
project architect etc.) by Friday. We will send a hardcopy of the revised plan to you as well.
Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000
Fax: 631.924.2870 Cell: 631.357.4927 csosik2@optonline.net 10/12/2010: Reviewed the revised
version. And as it states in the e-mail, no particular changes were made to the RAP itself, which
was approved by DEC in February 2010. It states that the site will be re-developed through the
construction of a new 5-story, 52-room hotel (instead of 6-story hotel in previous RAP). The hotel
will have a cellar and a sub-cellar. The cellar and sub-cellar will require excavation to a depth
of 13' bsg (instead of 12'). The RAP proposes removal of 3 USTs, excavation of contaminated soil,
and application of chemical oxidant into the excavation pit. As a preventine measure, a waterproof
membrane will be installed beneath the foundation slab of the cellar and sub-cellar areas of the
building. Post-remedial groundwater monitoring is proposed on a quarterly basis via 6 wells. The
proposed sampling interval of 30 feet for end-point soil samples is questionable. AD 10/14/2010:
Called and spoke with Mr. Sosik regarding the soil sampling interval concerns and some typo on page
10 in the work plan. It was agreed that number and locations for soil samples will be decided after
excavation will be completed, based on the site conditions (shorings, shape of final excavation, GW

GAS STATION - IND-G LINE (Continued) **S109374210**

in the pit and such). A revised pdf copy of the RAP with corrected page 10 was submitted by e-mail.
Discussed the RAP with J. Kolleeny. Later issued an approval letter. DL pdf copy of the letter to
eDocs. AD 08/23/2011: Called and spoke with C. Sosik regarding site status update info. He will
send an e-mail with this info shortly. AD 08/25/2011: Received an e-mail from C. Sosik saying:
Ainura, As an update on progress at the site: I met with the developers about 2 weeks ago and they
indicated that the MTA had finally approved the plans. I believe the project can now go back to DOB
and they should be able to obtain approved plans. We will be meeting with the developer, architect
and general contractor within the next couple of weeks to plan the work sequence and logistics. I
ll let you know when the have DOB approvals and when we have a firm schedule. Charles B. Sosik,
P.G. Principal EB C Environmental Business Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870
Cell: 631.357.4927 csosik@ebcincny.com AD 12/22/2011: Sent an e-mail to C. Sosik requesting site
status update. AD 12/29/2011: Did not receive any response. AD 01/17/2012: Sent an e-mail to Mr.
Sosik requesting site status update. AD 01/18/2012: Received an e-mail from Mr. Sosik stating that
they just cut utility service to the building and expect to begin demolition next week. Tanks
removal will follow. AD 03/12/2012: Sent an e-mail to Mr. Sosik with a request for site status
update. AD Later in the day received the following response: Ainura, I have been notified that the
UST removal is starting on this project. We will have someone on-site today to observe. The plan is
to remove the tanks, backfill and demo the building and infrastructure first,.close out the demo
permit and then install shoring and begin excavation of impacted soil as part of the building
foundation. We will send you an udate on the short term schedule after we have a chance to confer
with the tank removal contractor. Charles B. Sosik, P.G. Principal EB C Environmental Business
Consultants Ph: 631.504.6000 ext. 112 Fax: 631.924.2870 Cell: 631.357.4927 csosik@ebcincny.com
04/17/2012: Called and spoke with Mr. Sosik. He said that the tanks were removed, and they are
planning to remove a concrete pad underneath the former tanks to collect soil samples. Soil samples
will be also collected after removal of dispensers and fill lines. Mr. Sosik will keep me informed.
AD 06/12/2012: Sent an e-mail to Mr. Sosic with a request for site status update. Later received
the following response from Mr. Sosic: Ainura, They expect to start excavation this week. I will
get an update from the contractor and get back to you. Charles B. Sosik, P.G. AD 11/14/2012: Called
and left a message to Mr. Sosik. AD 01/14/2013: Called and spoke with

GAS STATION - IND-G LINE (Continued) **S109374210**

C. Sosik regarding site
status update reports. He informed that excavation started at the site about a month ago. The site
has E designation, so they send also reports to MOER. The project manager in OER for this site is
Breanna Gribble. Mr. Sosik will sent update reports to DEC. Requested him to inform me about soil
sampling date. Later in the day received a daily reports from Kevin Brusee of EBC. The reports
states that on December 19, 2012 EBC began excavation of the top 5 feet of the soil from the
northern tip of the lot. On December 21, 2012 limited soil disturbing activities were conducted to
grade the site to allow access of the pile auger rig to the bottom of the 5ft deep excavation. On
December 27, 2012 a total of 5 truck loads of soil were excavated and transported to CEC. For the
next 2 weeks, EBC planned that the auger pile machine will be installing piles within the open
excavation. No soil disturbing activities will be performed while the piles are being installed.
According to EBC, significantly contaminated petroleum contaminated soil has not yet been
encountered, so odor has not been an issue and the soil is very wet right now, resulting in no
on-site dust. AD 02/14/2013: Sent an e-mail to Mr. Sosik with a request for remediation status
update. later in the day received the following e-mail from Kevin Brussee: Ainura, I had previously
sent you copies of all of the Daily Status Reports for 447 Union. No work has been performed at the
Site since those reports. Over the last few weeks, no excavation work has been performed at the
Site. Work has been limited to installation of a few steel piles and follow up load tests on the
piles. Excavation is expected to begin again possibly next week or the following week. I'll be sure
to CC you on any future daily status reports. Kevin Brussee Project Manager AD 04/18/2013: Received
the following e-mail from : Attached is the daily status report for 447 Union Avenue for Wednesday,
4/17/2013. Soil was excavated from the west side of the site down to approximately 16 feet. Eight
(8) truck loads of non hazardous soil were sent to Clean Earth of Carteret. No additional soil
excavation is planned until early next week and planned activities include installation of footings
on the west and north sides of the site. Thanks, Chawinie Miller DL the daily report to the folder.
AD 05/16/2013: Received the following e-mail from EBC: Attached is the daily status report for 447
Union Avenue for Wednesday, 5/16/2013. Four (4) truck loads of petroleum contaminated soil were
sent to Clean Earth of Carteret in NJ. Additional soil transport planned for 5/17. Thanks, Chawinie
Miller Project Manager / Industrial Hygienist EBC DL the report to the folder. AD 10/07/2013: Sent

GAS STATION - IND-G LINE (Continued) **S109374210**

an e-mail to Mr. Sosik with a request for site status update info. Later in the day received the following response from Mr. Sosik: Ainura, 447 Union was completed and the building is under construction. We will send a completion report shortly. 150-17 Cross Island: 1st injection performed and we are planning a second application. Charles B. Sosik, P.G. Principal EB C RAR is due. AD 11/12/2013: Did not received the report. Called and spoke with C. Sosik. Requested to submit the summary report ASAP. The report submission is due 12/01/2013. AD 12/13/2013: Called and spoke with C. Sosik of EBC. He told me that they are waiting for the cement capping around the building to be finished, to include info on in in the report, as per OER's request. The report will be finished and submitted around end of December 2013. AD 02/11/2014: Called and left a message to C. Sosik regarding report submission. AD 03/04/2014: Called and spoke with C. Sosik. Required to submit the remediation summary report ASAP. Later in the day received a link to DL the report. Will review. AD 03/06/2014: The file submitted by EBC is more than 100 Mb. The size of the report should be changed and the report should be re-submitted to DEC. AD 03/26/2014: Reviewed the remedial action report. It states that dispensers, two 3,000 gallon underground gasoline tanks, one 3,000 gallon underground diesel tank and associated piping were removed off-site from April 11, 2012, to April 17, 2012. The product/gasoline was pumped out by the service station owner prior to the UST removal, leaving only tank sludge within the tanks. The tank sludge within the three tanks was thoroughly removed using a wiper blade and containerized in 55-gallon USDOT drums and transported by Aarco Environmental to CleanWater located at 1329 Richmond Terrace, Staten Island, NY. The steel tanks were then transported to a local metal recycling facility for proper disposal. On April 18, 2013, EBC inspected the soil immediately below the former location of the tanks for evidence of contamination. No olfactory of PID evidence of contamination was observed. No USTs excavation endpoint samples were collected following removal of the three underground storage tanks since the area below and around the tanks was planned to be excavated for construction of the new building's cellar. Remedial excavation: From December 19, 2012, to May 29, 2013, contaminated soil was excavated and live loaded into trucks for transport to Clean Earth of Carteret. The total number of tons of non-hazardous soil excavated and transported to Clean Earth of Carteret was 2,819.56.
Construction of the hotel building's cellar level required excavation to a depth of approximately 12 feet below grade for the entire footprint of the building. Soil

GAS STATION - IND-G LINE (Continued) **S109374210**

sampling: In accordance with the
RAP, EBC collected 8 endpoint soil samples from across the Site from the final excavation needed
for the new building's basement. Endpoint soil samples were collected at the approximate rate of
one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed.
Soil data: Gasoline related VOCs were detected above Unrestricted Use SCOs in endpoint soil samples
EP3 through EP8. The highest concentrations were reported in EP3, EP5 and EP8. Only methyl ethyl
ketone (1,200 ppb) and o-xylene (440 ppb) were detected above Unrestricted Use SCOs in EP4,
m&pxylenes(330 ppb) in EP6, and 1,2,4-trimethylbenzene (3,600 ppb), acetone (150 ppb), and
m&pxylenes(260 ppb) in EP7. Based on the elevated results reported in soil samples EP3, EP5 and
EP8, additional excavation of approximately 1 foot was conducted within the collection area of each
of the three samples. Following the additional excavation, EBC collected endpoint samples EP3A,
EP5A and EP8A. The laboratory results of the follow-up endpoint soil samples showed significant
decreases in gasoline related VOCs in the area of endpoint soil sample EP5/EP5A. Significant
reductions were not observed in the area of endpoint soil samples EP3/EP3A and EP8/EP8A. GW
sampling: On June 28, 2013, EBC collected one groundwater grab sample from groundwater that had
accumulated within the open excavation pit. Gasoline related VOCs were detected within the
groundwater sample at concentrations above GQS, including 1,2,4-trimethylbenzene (34 ppb),
1,3,5-trimethylbenzene (8.5 ppb), benzene (16 ppb), ethylbenzene (43 ppb), isopropylbenzene (13
ppb), m&p-xylenes (49 ppb), naphthalene (25 ppb), npropylbenzene (32 ppb), o-xylene (16 ppb), and
toluene (15 ppb). However, these concentrations are lower than the VOC concentrations originally
reported during the 2009 Remedial Investigation, which indicates the contaminated soil removed as
part of redevelopment was effective in addressing on-site petroleum contamination. Chemical
oxidation: Prior to pouring the concrete cellar slab, EBC applied sodium persulfate and FeEDTA
powder directly into the open excavation to reduce VOC concentrations in groundwater and to treat
any residual VOCs in soil below the building slab. The chemical oxidant was added at a ratio of 9
lbs of FeEDTA powder to each 55 lb bag of sodium persulfate for a total of 550 lbs of sodium
persulfate. The activated sodium persulfate powder was thoroughly mixed and worked into the
subsurface soil and groundwater utilizing an excavator bucket. Waterproofing Membrane: Since the
building's cellar level was installed below the static groundwater level, a waterproofing system

GAS STATION - IND-G LINE (Continued) **S109374210**

was required beneath the cellar slab and behind the foundation walls. The waterproofing membrane
was installed by Sunny Builders Corp. An EBC field inspector was on-Site during various stages of
the installation of the waterproofing membrane beneath the cellar slab and behind the foundation
walls. The water proofing membrane installed behind the foundation walls consisted of the Bituthene
3000 self-adhesive polyethylene waterproof membrane manufactured by Grace Construction Products.
The waterproofing membrane installed below the concrete slab consisted of Preprufe 300R. Site
Capping: The entire Site has been capped with concrete. This includes an 8 thick concrete cellar
slab beneath the entire building, and a 4 inch thick concrete slab in grade-level open spaces. A
work plan for monitoring wells installation is due. AD 04/04/2014: called and spoke with C. Sosik
of EBC. Required to re-submit the report. AD 04/09/2014: Sent an e-mail to Mr. Sosik with a
remainder to submit the RIR and with a request to submit in a timely manner a work plan for
installation of monitoring wells for post-remediation GW monitoring. AD 04/17/2014: Received the
following e-mail from K. Brussee: Ainura, As you requested, the following is attached. 1) Figure 4
2) GW Monitoring Plan Kevin Brussee Senior Project Manager EB C Environmental Business Consultants
Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749 Kbrussee@ebcincny.com Will review.
AD 04/20/2014: Reviewed the GW monitoring work plan. It proposes installation of four 1 GW
monitoring wells and quarterly GW sampling. Previously, DEC approved RAP proposed 6 monitoring
wells for GW sampling program. It looks like number of the sampling wells was reduced due to the
changes to the footprint of the constructed building. The diamert of the proposed wells is
questionable. Will discuss work plan with J. Kolleeny. AD 04/22/2014: Discussed the work plan with
J. Kolleeny. Called and spoke with C. Sosik regarding diameter of the proposed wells. According to
Mr. Sosik installation of 1 size wells is common for their company and that they do not install 2
wells. AD 04/23/2014: Approved the work plan. Sent the letter. AD 09/23/2014: Sent an e-mail to
Kevin Brussee with a request to submit the summary report. AD 10/20/2014: Called and spoke with K.
Brussee regarding report submission. He said that they were not able to install wells due to the
scaffolding at the site till the beginning of October. The wells were installed approximately two
weeks ago and the GW samples are in the lab. Report will be submitted in a few weeks. Requested to
send me a summary e-mail. AD 01/14/2015: Called and spoke with Kevin of EBC. He said that EBC was
able to install two out of four proposed wells. One well was dry and

GAS STATION - IND-G LINE (Continued) **S109374210**

another well was not installed
due to the obsticles. EBC sampled GW from two installed wells and in a process of a report
preparation. Requested to submit the report. Decision regarding further actions at the site will be
based on the GW results. AD 06/30/2015: Called and spoke with Kevin Brussee regarding report
submission. He said that it was postponed due to some issues with his client. The newly installed
wells were sampled. He will submit the report in two weeks. AD 07/18/2015: Received the following
e-mail from K. Brussee: Ainura, Sorry for the lengthy delay. As previously discussed, I ve attached
a brief groundwater sampling report requesting closure of NYSDEC Spill No. 0809794. Please review
and let me know if you have any questions. Thanks, Kevin Brussee Senior Project Manager EB C
Environmental Business Consultants Ph: 631.504.6000 ext. 114 Fax: 631.924.2870 Cell: 631.338.1749
Kbrussee@ebcincny.com Will review. AD 08/07/2015: Reviewed the groundwater well installation and
sampling report. The report states that groundwater quality monitoring was proposed from four
monitoring wells in the Post- Remedial Groundwater Monitoring Plan (EBC, April 2014). However, one
monitoring well proposed on the east side of the new hotel building could not be installed due to
the subway and utility connections. The other three monitoring wells (MW-6, MW-7, and MW-8) were
installed on the west side of the building within the Keap Street sidewalk on Thursday, October 9,
2014. All three monitoring wells were installed at a depth of 25 feet and were constructed of 1
inch diameter PVC consisting of 15 feet of screen and 10 feet of riser. On October 17, 2014
groundwater samples was collected from monitoring MW-7 and MW-8 utilizing disposable polyethylene
tubing and a peristaltic pump with disposable peristaltic pump tubing. A groundwater sample could
not be collected from MW-6 because this monitoring well was dry. Lab data: The laboratory results
were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). No
VOCs were detected in MW-7, which is located off the northwest corner of the building. Low
concentrations of VOCs were detected in MW-8, which is located immediately west of the former tank
pad. VOCs detected include 1,2,4-trimethylbenzene (1.5 ppb), 1,3,5-trimethylbenzene (0.45 ppb),
benzene (1.1 ppb), ethylbenzene (1.4 ppb), m&p-xylenes (1.8 ppb), MTBE (0.77 ppb), naphthalene
(0.48 ppb), and n-propylbenzene (0.42 ppb). Conclusions and Recommendations: As previously stated
in the Closure Report (EBC, January 2014), excavation of petroleum contaminated soil from below the
groundwater interface was conducted in the former tank/spill area. During excavation, a groundwater

GAS STATION - IND-G LINE (Continued) **S109374210**

sample was collected from the groundwater within the open excavation. Relatively low concentrations
of gasoline related VOCs were detected in the groundwater grab sample. To treat residual
soil/groundwater, a chemical oxidant was applied into the open excavation and exposed groundwater
prior to backfilling. The two monitoring wells (MW-7 and MW-8) installed down gradient of the
source were sampled in October of 2014. Little or no VOCs were detected in either groundwater
sample. Therefore, based on the remedial activities performed at the site and post-remediation
groundwater sampling results, EBC recommends closure of NYSDEC Spill No. 08-11706. Will discuss the
closure request with J. Kolleeny of DEC. AD 08/18/2015: Discussed the closure request with J.
Kolleeny of DEC. Based on the remedial activities performed at the site such as: - Removal of USTs
and associated piping; - Excavation and removal of approximately 2,819.56 tons of soil; -
Application of chemical oxidant into the open excavation pit; - Cleanfill with crushed stone,
imported to the site from a NYSDEC Active Registered Construction and Demolition Processing
Facilities for use as backfill below the slab. - Installation of a water proofing membrane
consisting of a Bituthene 3000 and Preprufe 300R - Capping the entire site with a concrete slab,
and taking into consideration the latest post-remediation groundwater sampling results, which
indicate very low or non-detect TVOC concentrations, DEC decided to approve the spill closure
request for this site. Case closed. Letter was issued to Verru Dhillon of Union Hotel Park, LLC. AD

Remarks: CALLER STATES THAT THERE IS LEAKING FUEL TANKS THAT ARE LEAKING TO THE SUBWAY LINE. SUBWAY HAS NOT BEEN SHUT DOWN AT THIS TIME. FDNY IS ON SCENE.

Site Description:	"Site Location: The proposed site is located at 9 North 15th Street in Kings County, and is identified as Block 2614, Lot 16 on the New York City Tax Map. Site Features: The site is a 0.145-acre lot including one-story warehouse building. Current Zoning and Land Use: The site is zoned M102 (manufacturing district) and is currently unoccupied. The site was used by Linaire Sheet Metal Corp. between 1994 to 2021. The surrounding parcels are currently used for a combination of light manufacturing, commercial uses, and parking. Past Uses: The existing building was constructed in early 1930 s. Previous industrial uses include manufacturing, a construction company, a garage, and a sheet metal facility. From 1976 to 1995, the site was listed as a RCRA generator (EPA ID no. NYD001486885) of corrosive wastes, chromium, and electroplating treatment sludges. The facility operated as V E 2 Plating and as Presto Electro Plating Corp. Historically the electroplating operations extended onto the adjacent BCP site, 12 Franklin Street (C224286). Site Geology and Hydrogeology: The depth to groundwater is approximately five to nine feet below grade, based on groundwater elevations at sites in the surrounding area. Groundwater flows to the west/southwest through the site toward Bushwick Inlet but may be tidally influenced."
Env Problem:	"Soil, groundwater, soil vapor, and indoor air samples were collected at the site under an investigation overseen by NYC Office of

FORMER PRESTO ELECTROPLATING (Continued) **S130462534**

Environmental Remediation between February and April of 2022. Nineteen soil borings were installed. Elevated levels of tetrachloroethene (PCE) and trichloroethene (TCE) were detected, with maximum concentrations of 100 parts per million (ppm) and 400 ppm respectively compared to their respective protection of groundwater soil cleanup objectives (POGSCOs) of 1.3 ppm and 0.47 ppm. Several semi-volatile organic compounds (SVOCs) and metals were detected above their respective unrestricted use SCOs (UUSCOs). One emerging contaminant, perfluorooctanesufonic acid (PFOS) (max. 9.6 ppb), was found above its protection of groundwater guidance value. Six permanent monitoring wells and three temporary monitoring wells were installed at the site. Groundwater flows west/southwest towards Bushwick Inlet, which is located approximately 250 feet from the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected at concentrations exceeding ambient water quality standards including PCE (max. 570 parts per billion, or ppb), TCE (max. 65 ppb), cis-1,2-dichloroethene (max. 60 ppb), and vinyl chloride (max 55 ppb). Multiple PFAS compounds were also detected at concentrations exceeding guidance values. Two temporary soil vapor points were installed with co-located indoor air (IA) and sub-slab soil vapor (SV) samples taken at each location. Chlorinated VOCs were detected in both soil vapor and indoor air, including PCE (max. 32,000 micrograms per cubic meter, or ?g/m3 in soil vapor, max. 2.9 ?g/m3 in indoor air), TCE (max. 190,000 ?g/m3 SV, max. 4.2 ?g/m3 IA), cis-1,2-dichloroethene, or DCE (max. 1500 ?g/m3 SV, max. 0.1 ?g/m3 IA), and vinyl chloride (9.0 ?g/m3 SV, max. 0.1 ?g/m3 IA). According to NYSDOH decision matrices, the concentrations of PCE, TCE, and cis-1,2-DCE require mitigation. "

Health Problem:	"As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/14/03 REASSIGNED FROM TIBBE TO VOUGHT. 12/1/03 Transferred from Vought to Foley. 10/16/06 reassigned from Foley to Tang. (Sun) 11/06/08: This spill case transferred from K. Tang to J. Kolleeny. Recommended to Vadim Brevdo that this spill be added to MTBE Pilot Project, Vadim agreed. - J. Kolleeny 02/05/09: Contacted Jay Semelmacher (emergency contact on PBS form, #2-247405). He didn't have any information regarding the site and suggested sending a letter to Spartan Petroleum. Spartan Petroleum Corp. 333 New Hyde Park Road Suite 201 New Hyde Park, NY 11042 (JK/KG) 02/09/09: Letter sent to Spartan requiring: 1. Tank closure assessment report, 2. Explanation of the cause of the release, 3. Subsurface investigation report, including a site location map and a site plan showing the former and current locations of underground storage tanks and soil and groundwater sampling locations. A North arrow and scale bar must be included on the site plan. If no tank closure report was prepared or no subsurface investigation previously conducted, the Department requires that a work plan for a site assessment including a soil and groundwater investigation be prepared and submitted. The work plan should include a site location map and a site plan showing proposed soil and groundwater sampling locations, as well as current and former tank

UNDERGROUND (Continued) **S102149558**

locations. A North arrow and
scale bar must be included on the site plan. Report due 03/19/2009.
(JK/KG) 02/12/09: Rec'd letter
dated 02/10/2009 from Kevin Kleaka of Impact Environmental stating
that this spill has already been
closed. Included was the UST Closure Report prepared by Impact dated
10/6/2004 and the No Further
Action Letter dated 10/7/2004. Upon review of the documents, the spill
was closed by Kevin Hale
(central office) in 2004. At that time, this spill was not closed in
the NYSDEC database. The spill
is now closed in the database and the UST closure report and NFA
letter have been uploaded to
eDocs. (JK/KG)

Remarks: GEO PROBE SURVEY ON SITE, FOUND CONTAMINATION.

SHWS:

Name:	KENT AVENUE GENERATING STATION
Address:	500 KENT AVENUE
City,State,Zip:	BROOKLYN, NY 11211
Program:	HW
Site Code:	421905
Classification:	N
Region:	2
Acres:	2.640
HW Code:	224137
Record Add:	11/17/2009
Record Upd:	10/01/2020
Updated By:	DJEATON
Site Description:	"The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment."
Env Problem:	"This site has been successfully remediated. The information on the remedy is included under site V00732. The following description was true during the early stages of work at this site. The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroeum compounds in sediments/ sludge contained in a large concrete structure (known as the ash pit); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined."

Site Description:	"Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site has been sold to a developer but is still currently vacant and open. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers of silt and sand down to roughly 100 feet

KENT AVENUE STATION SITE (Continued) **S102663001**

	below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the site s proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel. "
Env Problem:	"Active Remediation at the site is complete. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) in soil, volatile organic compounds (VOCs) in groundwater and polychlorinated biphenyls (PCBs) in the ash pit sediments. "
Health Problem:	"The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy."

DEC Memo:	201150. see eDocs 12/13/06: Transferred from Breen to O'Connell. Spill submitted for closure by Con Ed. This site was a former Con Ed generating station, and previous investigations (circa 1999 through 2002) have found evidence of metals, SVOCs and VOCs in soil and groundwater, however the site is NOT in any remedial program. See also spill nos. 9910753, 9910993, 9911014 and 9911046. (JHO) 12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 1/9/08: This spill is closed, track under spill no. 9911014. (MA)

DEC Memo:	3/11/03 - SAMUEL- File available in active unassigned spill files. 4/3/06 Diaz - Next Steps - February 2000 Investigation report stated further investigation & possible remedial work recommended. Verify & conduct work or close site. 6/28/07. J.Krimgold reviewed and approved IWP submitted by FPM Group (631-737-6200)on June 27, 2007. The plan calls for 4 soil/gw samples around tanks excavation pit 5/21/08. email from FPM's Ben Cancemi informed that excavation and sampling activities will commence on 5/22/08. 02/12/09-Hiralkumar Patel. contamianted groundwater (with sheen) was discovered under basement floor at 684 Lorimer Street, site located behind subject gas station. based on location of both sites, contamination under house at 684 Lorimer street might be orinigated from subject gas station site. based on recent findings, case transferred from DEC Jacob to DEC Patel. found following documents for the subject site: - tank closure environmental site assessment, Nov. 1999 - subsurface investigation report, Feb. 2000 - subsurface investigation work plan, Jun. 27, 2007 - subsurface investigation report and remedial action plan, Sep. 10, 2007 abstract of tank closure report, Nov. 1999: - total of eight 550 gal and one 3000 gal USTs were removed including all pipings and portions of pump islands - all of the tank in very good condition and exhibited no evidence of corrosion - five of the tanks were empty, and three tanks were filled with concrete - 3000 gal tank contained approx. 1300 gal of water and petroleum products - total of eight soil and water samples were collected after tank removal - depth to groundwater ranged from 14-16 ft bg <--------- - according to fire department record, in Nov. of 1984, the eight 550 gal tanks failed the official 10 year test - in sept. of 1985, three 550 gal were purged and filled with concrete - one pump was removed and all associated lines were sealed - highest PID readings were noted at an average depth of 10 to 15 ft <---------- - fine to medium sized grain sand with clay lenses were found to a level of 12 to 14 ft bg - a layer of one foot in thickness of peat-like material intermixed with clay occurred at about 16 ft bg - found xylene contamination in east and north sidewall samples - found contamination in groundwater samples soil analyticals: --------Xylene North----4,600 East----13,500 groundwater analyticals: ----------west bottom pit------east bottom pit Benzene----------160----------230

700----7,200 abstract of subsurface investigation report, Sep., 2007: - four soil boring were installed to final depth of 15 ft bg - soils encountered at the property generally consisted of fine to medium grained sand with gravel and trace amount of silt and clay from just below grade to the top of blue-green clay layer - the top of the blue-green clay layer was evident in all of the borings at depths ranging from approx. 12.5 to 14.5 ft bg - the blue-green clay layer showed no indications of potential contamination and was not fully penetrated by any of the borings - staining and petroleum odors were generally observed in the soils from all of the borings in an interval near the water table surface, which was generally encountered at 8 to 8.5 ft bg - interval of staining/odor was variable in thickness and ranged from approx. one foot at boring B4 to approx. 7 ft at boring B1 - PID readings in stained soils generally ranged between 10 and 60 ppm - groundwater samples

FROST & MEEKER AVE (Continued) **S102232676**

collected from each borings - no free-phase product was observed in any borings - found contamination in soil and groundwater samples soil analyticals: ----------B1 (7-8 ft depth) Benzene----------7,000 Toluene----------200,000 Ethylbenzene----------110,000 Xylene----------620,000 Naphthalene----------56,000 1,2,4-Trimethylbenzene--510,000 1,3,5-Trimethylbenzene--150,000 groundwater analyticals: ----------B1-AQ---------B2-AQ---------B3-AQ--------- B4-AQ Benzene----------1,500 Toluene----------3,700 Ethylbenzene----------1,100 Xylene----------4,900 Naphthalene----------470----------120 MTBE---------- --300 1,2,4-Trimethylbenzene------1,500----------140----------440 1,3,5-Trimethylbenzene--------370 abstract of remedial action plan, Sept. 2007: - proposed to excavate impacted soils in the vicinity of boring B1 - based on relatively low levels of groundwater impact, its apparently limited extent, and the apparent absence of free-phase product, no groundwater remediation recommended - three groundwater wells are proposed to be installed for groundwater flow direction determination - each well will be installed to a depth of no more than 14 ft, so as not to penetrate the clay underlying the property - each well will be installed with 10 ft of screen summary: - groundwater found at different depths: 14-16 ft during tank removal, 10 ft during subsurface investigation in 2000 and at 8.5 ft during subsurface investigation in 2007 - no groundwater flow direction available - no permanent wells installed at the site - heavy soil and groundwater contamiantion found during each investigation - contamination found in all sides of previous tank location - DEC Jacob issued RAP approval letter on Oct. 4, 2007 <---------- - as per email from Ben Cancemi from FPM group, excavation according to approved RAP was scheduled on 05/22/08 <-------- Paul's LLC **site owner** 318 Grand Street Brooklyn, NY 11211 Attn.: Paul Joffe Ph. (718) 486-6916 (O) (917) 693-3292 (C) email: pauljoffe@pauljoffe.com according to building department permit record, Mr. Joffe applied for permit to convert service station into dinning location. found another spill case reported at the gas station site. - 9806871: spill called in by citizen on 09/04/1998 about abandoned tanks; tipped over. spill closed on 02/26/2003. left message for Mr. Joffe. received call from Mr. Carter from Mr. Joffe's office. informed him about situation. Mr. Carter doesn't know much about this site but will ask Mr. Joffe to call back. Nathan Carter Ph. (718) 486-6804 02/13/09-Hiralkumar Patel. left message for Mr. Joffe. left message for Ben Cancemi, consultant who was going to perform remedial activities. Ben T. Cancemi, CPG FPM Group Ph. (631) 737-6200 Fax (631) 737-2410 email: b.cancemi@fpm-group.com 02/17/09-Hiralkumar Patel. received call from Ben from FPM Group. they excavated contaminated soil to water table in front of stores and installed three monitoring wells in June 2008. but haven't got authorization to sample these wells. Ben mentioned that endpoint sample analyticals were clean. asked Ben to submit sample analytical summary table and scaled site map with locations of endpoint samples and wells. also asked him to include approx. location of tank and dispenser islands. received email from Ben with sample analytical summary table with site plan showing endpoint sample and well locations. site plan shows that wells were installed in front of stores on-site. but no well observed during site visit, but found some fresh patches in concrete

FROST & MEEKER AVE (Continued) **S102232676**

(which could be location of wells). received call from Mr. Joffe. asked him to submit remedial action report by the end of March 06, 2009. he mentioned that area between his property and houses along Lorimer street is a commercial property at 297 Meeker Ave which is a paint shop. 02/18/09-Hiralkumar Patel. received email from Ben. they will do well sampling on 02/20/09. 02/20/09-Hiralkumar Patel. visited site. met Mr. Joffe and John (FPM group). monitoring wells found in front of store. groundwater was found around 6-7 ft bg. found sheen on water from each wells. will submit sample analyticals and groundwater flow direction. during site visit, noticed an auto repair shop at 59 Frost Street. met store manager. site has one 275 gal waste oil AST. tank is not registered. asked manager to register tank. sent email to DEC Jacob regarding un-registered waste oil tank at 59 Frost St. no parts cleaning operation at the auto repair shop. Billy Alex Unique Auto Repair 59 Frost St Brooklyn, NY 11211 PH. (718) 387-7537 Fax (718) 384-6180 email: uniqueauto59@gmail.com during site visit, Mr. Joffe mentioned that site at 297 Meeker Ave runs from Meeker Ave to Frost Street, between the subject gas station and house at 684 Lorimer st where contaminated water was found. Mr. Joffe mentioned that there is painting business at 297 Meeker Ave. owner's address for 297 Meeker Ave, from property shark: Wanda Berry 56 Frost St. Brooklyn, NY 11211 Ph. (516) 627-4245 owner's address for 297 Meeker Ave, from ACRIS: Wanda Berry PO Box 131 Manhasset, NY 11030-0131 02/23/09-Hiralkumar Patel. received email from Mr. Joffe. he found from NYC DOB that site across frost st was dry cleaner and had seven 1000 gal USTs. 03/06/09-Hiralkumar Patel. received remedial action report from Ben. abstract: - 186.34 tons of contaminated soils were excavated from southern portion of the former UST area and in proximity to the location of a reported former fuel dispensing island - two endpoint bottom samples and four endpoint sidewall samples collected from excavation - found some contamination in endpoint bottom sample from north end of excavation - additional soil was removed from the north end and collected additional endpoint bottom sample - sidewall samples were taken at 7 ft bg and bottom samples taken at 11 ft bg (means bottom endpoint samples were taken below water table) - three monitoring wells (MW-1 through MW-3) were installed in proximity to the former soil boring locations B1 through B3 (borings that done during subsurface investigation in 2007) - well MW-2 installed at previous boring B1 and MW-3 installed at previous boring B3 - wells were installed to a depth of approx. 14 ft bg and completed with ten feet of screen - groundwater was found at around 8 ft depth <---------- - site-specific groundwater flow direction is to the northeast <---------- - no free-phase product or other visible indications of potential contamination were observed - found MTBE contamination in all three wells ---------MTBE MW-1------12 MW-2-----150 MW-3------50 report missing scaled site map. 03/13/09-Hiralkumar Patel. spoke with Ben at FPM. asked him to subimt scaled site map with all previous sampling/well locations. asked Ben about any dewatering as soil was removed from below water table also. Ben mentioned that water was coming into excavation so slowly. they were removing soil from excavation and wait till water from excavation bucket drain out before loading soil for disposal. so no dewatering happened. summary: during all previous investigations, highest contamination was found towards the west end of property, in close proximity to existing well MW-2. and MW-2 is the downgradient well at the property edge. based on results of high soil and groundwater contamination in area of MW-2 and groundwater flow

FROST & MEEKER AVE (Continued) **S102232676**

direction, requires off-site groundwater investigation. requires off-site well downgradient from existing well MW-2. spoke with Mr. Joffe. explained him findings of previous investigations and asked him for one more well downgradient from well MW-2. sent letter to Mr. Joffe requiring delineation of possible soil and groundwater contamination, downgradient from well MW-2. letter emailed to Mr. Joffe and Ben. 03/27/09-Hiralkumar Patel. received email from Mr. Cancemi with site map including location of proposed downgradient well. 03/30/09-Hiralkumar Patel. received email from Mr. Cancemi. he is planning to install well on April 08, 2009. sent email to Mr. Cancemi approving proposed location. 05/11/09-Hiralkumar Patel. 1:35 PM:- received report from Mr. Cancemi. abstract: - off-site well installed (MW-4), about 20 ft downgradient from well MW-2 - well installed to a depth of approx. 14 ft bg with 10 ft of screen - soil generally consisted of fine to medium-grained silty sand with gravel and trace amount of clay. brick, wood, coal, ash and concrete fragments were noted in the entire screen interval, but were more abundant in the top five ft of boring - faint petroleum odors and PID responses were noted on soils from 8 to 9 ft interval; no odor or PID noticed in other intervals - groundwater was found at approx. 7.5 ft bg <-------- - one soil sample collected just above water table and one at 8-9 ft depth (below water table) - no free product observed in any wells on site - groundwater flow towards northeast <--------- - 1,400 ppb of MTBE found in soil sample at 8-9 ft depth - 98 ppb of MTBE found in groundwater sample from MW-4 05/29/09-Hiralkumar Patel. 10:46 AM:- sent letter to Mr. Joffe requiring surrounding area site map (with possible off-site source) and quarterly groundwater monitoring and sampling for a period of one year (including wells gauging during each sampling events to define site specific groundwater flow direction). letter emailed to Mr. Joffe and Mr. Cancemi. 09/24/09-Hiralkumar Patel. 3:20 PM:- spoke with Ben. they submitted proposal to Mr. Joffe but hasn't heard back. 3:22 PM:- spoke with Mr. Joffe. he will ask Ben to conduct groundwater sampling. 09/29/09-Hiralkumar Patel. 12:13 PM:- received email from Ben. he will sample wells on 10/01/09. he mentioned that previous samples were analyzed for VOCs only as gasoline spill was the cause. he asked whether SVOC analysis needed for groundwater samples. 12:45 PM:- sent email to Ben to analyze samples for VOCs only. 12/01/09-Hiralkumar Patel. 3:26 PM:- spoke with Mr. Joffe. he spoke with Ben today. Ben is preparing report. asked Mr. Joffe to submit report by the end of 12/11/09. 12/02/09-Hiralkumar Patel. 11:20 AM:- received quarterly groundwater sampling reprt from Ben. sampled all four wells in Oct. 2009. minor MTBE contamination found in samples. will sample all wells again in Jan. 2010. 12:42 PM:- sent email to Ben asking to submit next quarterly report by end of Feb. 2010. email copied to Mr. Joffe. 12/11/09-Hiralkumar Patel. 11:20 AM:- received email from Ben including site map showing surrounding area use. 01/25/10-Hiralkumar Patel. 3:41 PM:- received message from Daniel Cole (212-341-0964) from NYC DEP. he mentioned that subject site is e-designated and currently reviewing closure report. Mr. Cole wants to know spill status. 01/26/10-Hiralkumar Patel. 2:40 PM:- received email from Ben. they collected second round of groundwater sampling last week and will submit second quarterly report once lab data is available. 3:06 PM:- spoke with Mr. Cole. Mr. Cole asked if DEC requires anything more than quarterly monitoring. informed Mr. Cole that the department may require additional work based on quarterly groundwater sampling reports. Mr. Cole mentioned that owner did air

FROST & MEEKER AVE (Continued) **S102232676**

monitoring. asked Mr. Cole to send copy of air monitoring report. he will email the report. 02/11/10-Hiralkumar Patel. 8:23 AM:- received second quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 20 ppb, MW-4: 40 ppb). will sample wells in Apr. 2010. 05/12/10-Hiralkumar Patel. 1:56 PM:- received third quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 23 ppb, MW-4: 57 ppb). will sample wells in July 2010. 08/05/10-Hiralkumar Patel. 8:57 AM:- received fourth quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 20 ppb, MW-4: 25 ppb). based on submitted documents, case closed. 2:50 PM:- spill closure letter emailed to Mr. Joffe. email copied to Ben.

Remarks: caller belives its a bad line - 5 - 550 gal tanks manifolded together

DEC Memo:	3/30/16-Zhune spoke to Edward Iamicelli (845)567-6656. Edward said they were doing geotechnical borings. As they drilled they noticed odor and saw oil in a borehole. The existing building will be demolished and a new building will be developed. A CSL letter was sent to: Ms. Elaine Hsu

264 EAST 7TH STREET (Continued) **S118637212**

GlovalServ Property One, LLC 1202 Lexington Avenue, Suite 255 New York, NY 10028 Spill referred to Rashad Omar (Runner). 3/31/2016: Rashad 264 East 7th Street does not have an alternate address. No additional spills or PBS registrations found for site. 5/2/2016: Rashad Receieved two voice messages from Alla about site, 212-665-4129 or 212-685-2715. Called Alla back, she said they discovered contamination when doing borings and remediation will take place once the demo and redevelopment begins in August (the final tenant leaves in August). Alla will keep me updated once redevelopment begins. She also gave me spill number for previous spill on site: 0608798. Spill 0608790 was called in for 260 East 7th Street which is adjacent property to 264 East 7th Street. During redevelopment on 260 East 7th Street contaminated soil was found, and it was found to be flowing from 262 East 7th Street spill number 0651463, contaminated soil was removed, and a further remediation plan was made to do treatment by injection by Langan Engineering. After the project manager reviewed groundwater analyticals and soil samples, the spill was closed, it should be noted that there was some contamination left behind, as the homeowners could not afford a more thorough investigation/cleanup. Spill 0651463 needs review as well. 7/19/2016: Rashad Received call from Charles of Manhattan Renovations (Charles@manhattanrenovations.com) he was calling to discuss remediation process. He will be taking additional soil sample this week and was wondering if he should send it to the lab. I let him know that if he is doing site wide excavation that the soil that he will encounter will likely be removed and that he should do site wide endpoint samples upon completion of excavation for foundation. I sent him a copy of contractor list to aid in selection. The demolition date is set to begin in Mid December. 11/22/2016: Rashad Received call from HydroTech, they will be doing preliminary investigation, involving soil borings, a few wells, and soil vapor samples to identify extent/any contamination. In addition they will be conducting GPR survey to see if their were any tanks. Site is also E-designated. 1/13/2017 Austin This spill report is being transferred from Rashad Omar to Pratik Lakhani end. 01/31/17 - Lakhani Called HydroTech (6314625866) and found out that the PM is Rachel Ottoman. She is currently out on disability. DEC Lakhani left contact with HydroTech. 03/03/17 - Lakhani Sent the following email to Manhattan Renovation Charles: I am the new project manager for this spill case as Rashad Omar is no longer at the DEC. Before Rashad left, he noted that he spoke to you regarding the remediation process for the site. Have soil samples been taken from the site and

264 EAST 7TH STREET (Continued) **S118637212**

sent to the lab? Is a site
wide excavation taking place? Please provide me with any further updates on the site. I would like
to be aware of all remediation activities. Has a consultant been hired to complete the remediation?
If so, please share their contact with me. 03/06/17 - Lakhani Manhattan Renovation Charles Bagby
responded informing that Manhattan Renovation was asked to halt this project last year, hence the
remediation never started. The client/owner later sold the building. Charles was not in direct
contact with the buyers or the agents and so he has no more information on this project. As per
ACRIS, the property owner still is: GlobalServ Property One, LLC 1202 Lexington Avenue #255 New
York, NY 10028 Managing Agent: Elaine Hsu Manhattan Renovations Barbara informed that the current
owner is no longer GlobalServ Property One. 03/16/17 - Lakhani Called HydroTech. Rachel Ottoman is
out on maternity leave and Erica Johnston has take responsibility of the site. She informed that
HydroTech has not done any work at the site. 03/20/17 - Lakhani Sent CSL to the following address:
264 East 7th Holdings, LLC 555 Madison Avenue, 6th Floor New York, NY 10022 Attn.: Alan Cohen and
required effective removal of contamination, installation of borings/wells, and delineation of soil
and groundwater contamination. 04/17/17 - Lakhani Langan Joe Good (212-479-5448, Cell:
847-971-1972, jgood@langan.com) contacted DEC Lakhani regarding the site. They were recently hired
by the new property owner. Joe informed that the site is E-designated and OER will be involved with
the site. DEC Lakhani sent the following email to Joe: Great speaking with you today. Below is the
information I have regarding the above site: Tectonic Engineering was installing geotechnical
borings on 03/30/16 at the site. As they were drilling, they noticed an odor and saw oil in a
borehole. There were plans to demolish the existing building and redevelop the site. There was a
former spill on the property, reported on 10/31/06, which is now closed after receiving a Site
Screening Report dated 12/17/07 from Langan Engineering. The report included the analytical results
for the groundwater grab samples taken on 04/23/07 and 09/26/07. The 04/23/07 sample had six (6)
very low hits. The 09/26/07 sample had very slight TAGM groundwater. Manhattan Renovations
contacted the DEC in July 2016 informing us that they would be taking additional soil samples.
However, Manhattan Renovations was asked to halt this project due to the change in ownership of the
property. HydroTech was once involved with the site as well but completed no work. Given this
information, I sent a requirement letter requiring the removal of contamination from the site and

264 EAST 7TH STREET (Continued) **S118637212**

the installation of borings and wells to delineate the extent of the soil and groundwater
contamination. Depending on the redevelopment of the site, a soil vapor intrusion study may also be
necessary. Please share your report with me as soon as possible, so I could send you and updated
requirement letter. If you have any questions, please contact me at (718) 482-4038. 04/20/17 -
Lakhani File Review: Geotechnical Evaluation (Tectonic, 10/20/16) - The project site consists of a
three-story brick masonry building with a partially below grade basement. Based on the test pits,
the existing foundations are approx. 7' to 8' below the sidewalk elevation in front of the
building. The building id currently being used for residential space. The site is bound by similar
masonry buildings to east and west; a small courtyard and a single story brick building to the
south; and by 7th Street to the north. The proposed project will consist of demolition of the
existing building and construction of a six-story building with a full basement. Drilling,
sampling, and logging of two (2) additional test borings, at the rear of the existing building, to
depths of approx. 11.5' and 60'bg and excavation of two (2) test pits along the foundations of the
existing building were completed. Groundwater was encountered at a depths between 7.5'-8'bg.
Sampling Summary Report (Tectonic, 10/17/16) - The East River is approx. 1300' east of the site.
Historic mapping of this section of lower Manhattan indicates the area was a tidal marsh with small
streams flowing roughly west to east. On 03/25/16, Tectonic performed a geotechnical soil boring in
the sidewalk in front of the building. During the geotechnical investigation, petroleum sheen and
odor was encountered around 6'-8'bg. Tectonic reviewed spill cases for the neighborhood and found a
previous spill case number 0608798 reported for the private dwelling located at 260 East 7th
Street. The spill report indicated that unknown quantity of #2 fuel oil was released on 10/31/06.
The spill was closed on 12/18/07. 260 East 7th St is located approx. 23' to the east of the subject
property. Another fuel oil spill was reported on 07/03/14 at 243 East 7th St, which is located
approx. 150' northwest of the project site. Tectonic mobilized to the site to collect environmental
soil samples from two (2) test pit locations. Soils in each test pit was screened with a PID. The
test pits were terminated when groundwater was encountered. Then a post hole digger was used to
excavate 1' below the water table and install a 2 PVC well screen, which was backfilled with well
sand. Tectonic mobilized to the site to inspect the performance of two (2) soil borings and collect
environmental soil samples. Boring B-2 was advanced to a depth of

264 EAST 7TH STREET (Continued) **S118637212**

62’bg, while boring B-3 was advanced to 11.5’. One sample was retrieved within boring B-3 at a depth of 8’ to 10’. For the remaining analyses, one (1) composite sample per boring was created via the following methodology: two (2) grab samples from each vertical interval within each boring were collected with a dedicated plastic scoop and placed into a single flood-grade plastic bag. Groundwater was encountered in all of the borings and test pits. Groundwater elevations indicate that there is no measureable gradient across the site. PID readings above background were observed in borings B-2 and B-3 and in test pit TP-1 and TP-2. Additionally, petroleum like odors were observed in all three (3) borings and two (2) test pits and staining was observe in test pits TP-1 and TP-2, indicating the presence of petroleum hydrocarbon compounds. No PID readings are available for B-1 was it was not part of the original geotechnical investigation. BTEX in soil samples were below CP-51 unrestricted use SCOs. n-butylbenzene 6700 ppm(TP-2, 3’bg), sec-butylbenzene 5600 ppm(TP-2, 3’bg), isopropylbenzene 2000 ppm(TP-2, 3’bg), n-propylbenzene 4400 ppm(TP-2, 3’bg). Groundwater: sec-butylbenzene 8 ug/L(TP-1), isopropylbenzene 7.8 ug/L(TP-1), n-propylbenzene 8.4 ug/L(TP-1). The soils and groundwater on the site have likely been impacted by a petroleum spill. The petroleum contamination is at least 2’ below the existing basement elevation, therefore, currently there is no exposure pathway for nearby receptors. Tectonic inspected the basement areas of the subject building including the area around the existing AST. No evidence of a spill source such as staining or odors on the subject property was observed during their investigation. Tectonic recommends the following: 1) the historic fill should be excavated down to at least the groundwater elevation 2) dewatering 08/15/17 - Lakhani Langan Joe Good (212-479-5448) informed that the site will be applied to OER VCP program. 09/25/17 - Lakhani Langan has met with OER to discuss the anticipated site investigation to satisfy the E-designation and spill delineation requirements at 264 East 7th Street. Langan anticipates sending the RIWP to OER this week for review (9/25 - 9/29). 10/30/17 - Lakhani The site was enrolled in the OER VCP program. OER Shaminder emailed DEC Lakhani and NYSDOH Nathan with the RIWP attached. Work is scheduled for next week and involves three (3) groundwater wells, four (4) soil boring and three (3) soil vapor points on the 25’ x 100’ site. Development is only restoration of existing structure and adding one(1) floor on top. Previously, elevated PID readings were observed in borings B-2 and B-3 and in test pits TP-1 and TP-2, and petroleum-like odors were observed in all three (3) borings

264 EAST 7TH STREET (Continued) **S118637212**

and both test pits. Rememdial Investigation Work Plan (Langan, 10/27/17) - GPR will be performed at the site to locate utilities, USTs and subsurface structures or anomalies. A soil investigation will be performed to identify the nature of soil conditions at the site. Four (4) soil borings will be completed. Where possible, a minimum of two (2) discrete soil samples will be collected from all four (4) of the test borings (one from between 0'-2'bg and another from immediately above the groundwater interface. A groundwater investigation will be performed to evaluate groundwater quality at the site and identify potential off-site contamination that may be migrating on to the site. Up to three (3) groundwater monitoring wells will be installed. Approx. one (1) week after the monitoring wells are developed, three (3) groundwater samples will be collected. Soil vapor samples will be collected to evaluate the potential for infiltration of contaminated soil vapor into the proposed building. Three (3) soil vapor points will be installed at the site. An ambient air sample will be collected concurrently with the sub-slab soil vapor samples. 10/31/17 - Lakhani DEC Lakhani approved the RIWP. 11/14/17 - Lakhani OER #17TMP0176M 01/31/18 - Lakhani As per OER Shaminder, the site is not going through the City VCP. On 11/21/17, NAPL was observed in monitoring well MW01 during the Phase II Site Investigation. Langan collected a sample of the NAPL using a dedicated bailer for fingerprint analysis. Analytical results from the fingerprint analysis identified the product as potential weathered #2 fuel oil/diesel oil. TPH was detected at a concentration of 886,000 ppm in the product sample collected. Langan will be directly working with DEC for this site. The Langan contact is: Joseph Good 212-479-5448 jgood@langan.com Phase II Environmental Site Investigation Report (Langan, 01/25/18) - Site development will include renovation of the existing vacant 3-story development into a new 4-story multifamily residence with a full cellar. Work performed under the Phase II Environmental Site Investigation include: 1) conducted a geophysical survey, 2) completed an indoor air chemical inventory, 3) Advanced four soil borings across the site, and collected nine (9) soil samples for chemical analysis, 4) installed three (3) groundwater monitoring wells throughout the site to establish groundwater flow and collected three (3) groundwater samples, and 5) installed two (2) soil vapor and one (1) sub-slab soil vapor probes and collected two (2) soil vapor, one (1) sub-slab soil vapor, one (1) indoor air, and one (1) ambient air samples for chemical analysis. Depth to groundwater ranges from 4.13' - 4.87' below the cellar slab. Groundwater flow is generally

264 EAST 7TH STREET (Continued) **S118637212**

east-northeast. NAPL was identified in off-site monitoring well MW01. Product thickness post well development was 4 . Groundwater results are as follow: isopropylbenzene 7.3 ug/L(MW02), n-propylbenzene 8.9 ug/L(MW02), sec-butylbenzene 7.6 ug/L(MW02). Soil results do not indicate VOCs above CP-51 standards. Soil vapor results are as follow: acetone 65.8 ug/m3(SV03), carbon tetrachloride 0.484 ug/m3(AA01), carbon tetrachloride 0.478 ug/m3(IA01), carbon tetrachloride 1.26U ug/m3(SV01), carbon tetrachloride 2.52U ug/m3(SV02), carbon tetrachloride 2.52U ug/m3(SV03), m/p-xylene 12.3 ug/m3(SV01), m/p-xylene 6.47 ug/m3(SV03), o-xylene 5.08 ug/m3(SV01), PCE 2.71U ug/m3(SV02), PCE 2.71 ug/m3(SV03), PCE 1.36U ug/m3(SV01), TCE 1.07U ug/m3(SV01), TCE 2.15U ug/m3(SV02), TCE 2.15U ug/m3(SV03), vinyl chloride 0.511U ug/m3(SV01), vinyl chloride 1.02U ug/m3(SV02), vinyl chloride 1.02U ug/m3(SV03). 03/14/18 - Lakhani Langan Joe Good sent the following email: Based on our prior conversations regarding NYSDEC Spill No. 15-12347, we will begin bi-weekly NAPL recovery of monitoring well MW01 at the 264 East 7th Street property this week. Purged NAPL and groundwater will be containerized into a NYSDOT-approved 55-gallon drum prior to off-site disposal. If NAPL is not observed in the well following the recovery events, Langan will collect one groundwater sample from MW01 for VOC and SVOC analysis. We will prepare a sampling summary letter and laboratory analytical results for review and consideration for closure of Spill No. 15-12347. 04/27/18 - Lakhani Langan Joe Good informed that the product gauging has been going well with product thickness decreasing from about 20 to about 7 over the past four (4) recovery events. 05/03/18 - Lakhani Four (4) recovery events have taken place: 3/15, 3/28, 4/13, 4/26. LNAPL found in MW01. Product thicknesses prior to recovery were 20 , 13 , 8 and 7 for 3/15, 3/28, 4/13, and 4/26 respectively. 06/18/18 - Lakhani The proposed development includes the proposed renovation of the existing vacant three-story development into a four-story multi-family residence with a full cellar, which will require limited excavation below the existing cellar level for construction go a cellar expansion. Approx. 15 cu. yds. of material are anticipated to be excavated. A vapor barrier will be installed in the cellar as part of the general construction. SMMP uploaded to D2. 08/05/19 - Lakhani - Spill being transferred to Lin. 11/23/2020-Lin-Based based on Phase II report. The spill did not come from 264 E 7th Street, Manhattan. MW-1 in front of the site has 0.25’ of product remaining based on the last gauging event that took place on 2/6/2020. 6/8/23-Lin-Spill closed due

264 EAST 7TH STREET (Continued) **S118637212**

to small volume of product left in a isolated well. The oil is contained and not traveling downgradient.

Remarks: boring done on sidewalk in sidewalk, sheen discovered. Spill was reported at site in 2006

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	01/27/2006 Kuldeep received the Fax from Brumer, but again information not adequate and need more follow up. 01/23/2006 Kuldeep sent a letterfor more information. 01/09/2006 Kuldeep Gupta- Facility Faxed on -01/06/2006 copy of consent Order. Region 2 Nick Lombardo on 01/09/2006 Faxed Report of 5000 gallon Tank Test report of 01/05/2004. 01/06/06 Kuldeep Gupta talked to Ms. Jill Huey and she need a letter in writing what document we need. She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DEC and found Consent order signed on 03/24/2003 for not this spill. Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars. DEC Sigona sent TTF notice on March 14, 2003. 9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to : Jill Huey 498 Leonard Street Brooklyn, NY 11222 09/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the fallowing: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system. What was the cause of the tank test failure on March 3, 2003? Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.

DEC Memo:	Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an e-designation on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site

BRUMAR SHEET METAL INC (Continued) **S108076226**

and come up with a plan to solve the spill problems and close them out. 6/12/13-Vought-Received call from and spoke to OER Chawla (212-442-3007) and the groundwater is 12-13'bg and proposed full excavation to the water table as part of redevelopment however contamination extends down to 30'bg. They are willing to do additional remedial action but would not like to excavate into groundwater and developer needs to decide by today or he will walk away. Three other developers walked away from site (was previously HydroTech). Former use of site is a plating site. Site was discussed with DEC Cozzy as per Chawla and Cozzy noted that it did not qualify for State BCP and Cozzy did talk to Demeo re site as per OER Chawla. Vought spoke to DEC Demeo and this spill transferred from Demeo to Patel for followup. 06/12/13-Hiralkumar Patel. little 'E' desgination for Hazmat ----------
alternate address: 498-502 Leonard Street PBS #: 2-608752. as per PBS record, the site has oe 5,000 gal #2 oil UST, in-service, installed in Jan. 1929. tank system was tested on 01/20/2010. other spills: 0212132, 1206982 spill # 0212132 was reported on 03/10/2003 due to tank test failure. tank system failed test due to bad vent line. lines were changed and system passed. no contamination found. case closed. spill # 1206982 was reported on 10/16/2012 due to tank test failure of 5,000 gal #2 oil UST. case is still open. 2:02 PM:- left message for Mr. Chawla at NYC OER. asked him to submit available reports. 2:39 PM:- received email from William Wong from NYC OER including link to reports. William H. Wong Ph. (212) 341-0659 Fax (212) 788-1482 email: WiWong@dep.nyc.gov reviewed available information:
--*-

BRUMAR SHEET METAL INC (Continued) **S108076226**

subject property was then redeveloped with one 2-story commercial building - sanborn map 1942-1965
shows one 2-story and seven 1-story building used for carpet dyeing and cleaning. a gasoline tank
is located on the southwestern portion of the site --------- 2) 08/17/2012: Phase II Environmental
Site Assessment: - UST found in southwestern of the property and is approx. 12 ft long and 6 ft
wide - installed four borings (SP-1 through SP-4) in vicinity of the existing UST - borings were
installed to 12 ft bg - general soil type consists of fill material - one soil sample was collected
from each boring - found VOC contamination in soil samples - found high PID readings in all borings
PID values (in ppm) depth
(ft)--------SP-1------SP-2------SP-3------SP-4
6-8------------------------1,413
8-10------------------------1,342-------405--------14
10-12-------------896----------610-------702 soil analyticals:
------------------------SP-1-------SP-2-------SP-3-------SP-4 9-11 ft
6-8 ft 10-12 ft 10-12 ft

sec-Butylbenzene------13,000------6,800-----14,000------3,000
n-Propylbenzene--------3,700--------270-----12,000------2,900 3) 12/13/2012: DEC Demeo sent letter
requiring documents regarding tank test failure. 4) 02/12/2013: Phase I Environmental Site
Assessment: - proposed plan is to demolish the existing structure and construct a multi-story
residential building that includes a 65 ft by 74 ft basement - the building was purchased in 1979
and turned into a steel manufacturing company, but this is not indicated on the map
---------- 5) 06/24/2013: Remedial Investigation Report: - Phase II conducted by Hydrotech in
Oct. 2012 identified the presence of elevated SVOCs, metals and pesticides in surficial soil
samples collected from the depth of 0-2 ft bg and elevated VOCs, SVOCs, metals and pesticides in
soil samples collected from 10-12 ft bg - in Oct. 2012, Hydrotech installed 13 wells on the site
and adjacent sidewalk. groundwater table elevations were measured between 14.77 and 15.71 ft
---------- - stratigraphy of the site from surface down consists of a layer of historic fill
material from approx. 0 to 12 ft bg, sand, gravel and silty with heavy petroleum impacts from 12-16
ft bg, visible petroleum staining from 16-30 ft bg in the area of the UST and an impacted layer of
highly compressible organic peat, clay and silt from 16-28 ft bg and

BRUMAR SHEET METAL INC (Continued) **S108076226**

highly compressible layer of
clay/silt at approx. 28-34 ft bg - schools within 0.2 miles to the
south ---------- - in Feb.
2013, GRANT installed five soil borings (SB-01 to SB-05) surrounding
the UST in the southwest
portion of the site and only visual inspection of the borings were
performed (no samples were
collected) ---------- - in Apr. 2013, GRANT installed seven soil
borings (SB-06 to SB-12) across
the entire site and collected 19 soil samples; 7 of 19 soil samples
were analyzed for finger
printing - borings SB-01 through SB-12 exhibited visual evidence of a
petroleum discoloration layer
from approx. 4 to 30 ft bg and free product observed from approx. 10
to 12 ft bg - free product
noted on between 12 and 24 ft bg in borings SB-02, SB-03, SB-04 and
SB-05, these borings were
located around the UST ---------- - elevated PID readings were
observed ranging from 455 ppm to
895 ppm in borings SB-7 through SB-12 - in Apr. 2013, GRANT installed
3 temporary wells (TWP-01 to
TWP-03) towards the northwestern, northeastern and southeastern
portions of the site, respectively
- temporary wells were installed to a depth of 20 ft bg, with 10 ft of
screen (means there were no
screen above water table) ---------- - in Apr. 2013, GRANT installed
3 soil vapor probes (SVP-01
to SVP-03) and collected 3 samples - depth to groundwater was present
at approx. 10 ft bg
---------- - groundwater flow direction is generally from the south
towards the north
---------- - found mostly sec/n/tert-Butylbenzene in soil samples -
high metals found in samples
--*-

BRUMAR SHEET METAL INC (Continued) **S108076226**

address metals in subsurface. Mr. Chawla mentioned that based on new proposed excavation depth, OER
requires endpoint soil sampling and installation of vapor/moisture barrier and SSDS. they will
review soil-vapor data to determine if active or passive SSDS needed. Mr. Chawla will send further
details after meeting with property owner. 12/06/13-Hiralkumar Patel. 10:46 AM:- spoke with Mr.
Chawla. discussed about free product in groundwater. Mr. Chawla will submit a RAWP which discuss
about installation of wells. asked him to submit property owner's contact info, missing appendices
of Feb. 2013 Phase I and investigation report for work done by HydroTech in Oct. 2013. discussed
with DEC Jane regarding metal/PCBs in soil/groundwater samples. she and DEC Cozzy have discussed
data with Mr. Chawla and NYC OER will manage remediation of metal/PCB contamination. 11:20 AM:-
spoke with Mr. Fung, property owner. he mentioned that they are planning to build a four (4) story
apartment building with one-level basement. the basement floor will be at 7.5 ft bg. they will
excavate site to 10 ft bg for foundation work. currently, there is a vacant one-story warehouse at
the site. scheduled a site inspection at 10:30 AM on 12/09/13. East Star Realty LLC. **property
owner** 1740 East 27th Street Brooklyn, NY 11229 Attn.: Tin See Fung PH. (917) 662-3803 email:
jacktinfung@gmail.com 12/09/13-Hiralkumar Patel. 10:20 AM:- visited site. met Mr. Fung. found
multiple wells on-site. the tank is located under the floor, in area of one of the rolling door.
found fill port and vent pipe at the foundation wall. suggested Mr. Fung to pump out the tank and
seal the fill port to prevent any misdelivery and possible spill from tank. asked Mr. Fung to gauge
all the wells and implement IRM, if product exists in well. he will contact his environmental
contractor. found RAWP on NYC OER website. abstract of RAWP: - proposed plan to demolish the
existing structure and construct a multi-story residential building that is expected to include a
65 ft by 74 ft cellar - the proposed building is planned to constructed starting from the property
line along the length of Leonard St and extending east - depth to groundwater was present at
approx. 10 ft bg - HydroTech installed thirteen (13) monitoring wells - wells were surveyed and
groundwater table elevations were measured between 14.77 and 15.71 ft - groundwater flow direction
is generally from the south towards the north - soil excavation below the water table is
anticipated for the area surrounding the UST in the southwest portion of the site - will collect
endpoint samples - will install a vapor barrier and an active SSDS beneath the proposed building
11:13 AM:- spoke with Stephen Morse at Grant Engineering. inquired him

BRUMAR SHEET METAL INC (Continued) **S108076226**

about spill remediation work
plan, that he mentioned as attachement F in RAWP for NYC OER. Steve mentioned that such work plan
is not ready yet. discussed about well gauging and implementation of IRM. Steve will talk to Mr.
Fung and try to conduct well gauging prior to meeting with NYC OER on 12/13/13. Stephen Morse Grant
Engineering Ph. (212) 464-8689 email: smorse@grantpllc.com 11:25 AM:- left message for Mr. Chawla.
12/10/13-Hiralkumar Patel. 11:40 AM:- left message for Steve inquiring about well gauging, prior to
upcoming meeting on 12/13/13. 12/17/13-Hiralkumar Patel. 1:17 PM:- left message for Steve. 1:18
PM:- left message for Mr. Chawla. 12/20/13-Hiralkumar Patel. 10:01 AM:- spoke with Steve. they met
with NYC OER on 12/13/13 and discussed remedial action plan. Steve mentioned that owner has not
hired his firm to gauge wells and remove any product in well(s). 10:05 AM:- spoke with Mr. Fung.
informed him that the Department requires gauging of all existing wells and immediate removal of
any product in well(s). he will talk to Steve. 1:04 PM:- received call from Andrew from Grant
Engineering inquiring about what work needs to be done. informed him that the Department requires
well gauging and removal of any free product from wells, until permanent remediation system is
installed. informed him that well gauging must be done by end of 12/27/13. also recommended
removing oil from the UST. Andrew Rizk Grant Engineering Ph. (212) 464-8689 Ext. 2 email:
arizk@grantpllc.com 01/08/14-Hiralkumar Patel. 10:01 AM:- received call from Andrew. they gauged 12
out of 13 wells installed for the subject project. one well was installed across the site which is
inside construction zone and was not accessible for gauging. out of 12 wells, free phase product
found in 3 wells. about 4 inch product found in one of the well and less than 1 inch product found
in remaining two wells. Andrew will submit memo, once he gets previous well survey data from
record. Andrew confirmed that the on-site tank was also pumped out last week. informed Andrew that
the department requires implementation of interim remedial measures until permanent remedial system
in in operation. 01/09/14-Hiralkumar Patel. received email from Andrew (at 6:59 PM on 01/08/14)
including well gauging data. total of 13 wells (MW-1 through MW-13) were installed previously by
Hydrotech. well MW-7 is located on west sidewalk of Leonard St, across from the site. well MW-7 was
inaccessible due to the presence of green construction fence directly over top of the well. out of
12 remaining wells, product found in three wells (MW-1, MW-2 and MW-8) between 2 and 4 inches.
01/13/14-Hiralkumar Patel. 12:49 PM:- left message for Mr. Fung. 12:50 PM:- left message for Mr.

BRUMAR SHEET METAL INC (Continued) **S108076226**

Chawla. 01/27/14-Hiralkumar Patel. 11:12 AM:- received email from Mr. Chawla including owner's
letter and OER briefing. property owner Mr. Fung stated that the entire site will be excavated down
to 13 ft bg (into groundwater table). Mr. Chawla included copy of ORC application plan. 4:09 PM:-
sent email to Mr. Chawla and informed him that the Department has not received any ORC treatment
work plan and such plan is not approved prior to reviewing tank removal report with endpoint sample
results. email copied to Mr. Wong at OER. 01/28/14-Hiralkumar Patel. 9:12 AM:- left message for Mr.
Chawla. 9:41 AM:- received call from Mr. Chawla and Mr. Wong from NYC OER. Mr. Chawla mentioned
that they received a revised RAWP and ready to issue Notice to Proceed letter. he wanted to know
any requirements from DEC, prior to sending letter to property owner. revised RAWP will be
forwarded for review. 12:29 PM:- received email from Mr. Chawla including link to RAWP Stipulation
List. abstract of RAWP Stipulation List to NYC OER: - entire site will be excavated to 13 ft bg,
with additional excavation in locations where further pockets of contamination is observed -
collection and analysis of 22 endpoint samples from the bottom of excavation will be collected - a
minimum of 20-millimeter vapor barrier will be installed beneath te structure's slab and along
foundation wall - dewatering will be performed - excavation of the impacted soil will be performed
following the removal of existing tanks abstract of site-specific groundwater treatment and
monitoring plan dated 01/21/14: - remaining product from 5,000 gal tank was pumped from the tank on
12/27/13 - proposes to mitigate the contamination in three stages: 1) the existing site will be
remediated via purging of product from the existing wells on a monthly basis, 2) site will be
excavated to approx. 13 ft bg, or deeper in locations where contamination is present and the open
excavation will be treated with chemical application, and 3) monitoring wells and contingency
injection wells will be installed in the cellar level of the proposed development to allow for
future chemical injections, if necessary - prior to construction, the assessment of groundwater
quality will include the collection of groundwater samples from the existing wells
01/29/14-Hiralkumar Patel. 12:46 PM:- sent letter to Mr. Fung requiring bi-weekly monitoring of
wells, product removal from impacted wells and monthly submission of well monitoring reports.
informed him that the department only approves tank removal work (as listed in appendix 1 of RAWP
Stipulation List submitted to NYC OER) and required submission of tank removal report. also
informed him that the department may require additional investigation,

BRUMAR SHEET METAL INC (Continued) **S108076226**

after reviewing the tank
removal report, prior to any comment on in-situ remediation, if needed. letter emailed to Mr. Fung,
Mr. Chawla, Mr. Wong, Steve and Andrew. 12:53 PM:- spoke with Mr. Fung and informed him about
letter sent in email. he will discuss with Grant Engineering.
02/20/14-Hiralkumar Patel. 1:06 PM:-
received email from Andrew. he mentioned that while drilling borings for geotechnical
investigation, a second UST was found, directly east of the existing 5,000 gal UST. unknown UST had
about an inch of product. he confirmed that product from 5,000 gal tank was pumped out on 12/27/13.
they pumped out product from impacted wells (MW1, MW2 and MW) on 02/07/14. 03/04/14-Hiralkumar
Patel. 1:32 PM:- received email from Andrew including interim remedial measure letter report.
between 1 and 6 inches of product noted in three wells (MW-1, MW-2 and MW-8). 04/09/14-Hiralkumar
Patel. received email from Steve (at 5:39 PM on 04/08/14) including interim remedial measure letter
report. wells were monitored on 03/07/14 and 03/21/14. between 2.5 and 6.6 inches of product noted
in three wells (MW-1, MW-2 and MW-8). 04/18/14-Hiralkumar Patel. received email from Steve (at 8:09
PM on 04/17/14). he mentioned that bi-weekly groundwater gauging, monitoring and reporting will not
be conducted this week due to the building currently undergoing asbestos abatement activities. he
also mentioned that the existing building will be immediately demolished once the abatement work is
completed. Steve mentioned that well gauging will resume, if demolition does not occur.
04/28/14-Hiralkumar Patel. 3:33 PM:- sent email to Steve inquiring updates. 04/29/14-Hiralkumar
Patel. 10:15 AM:- received email from Steve. he mentioned that currently, the building is under a
stop work order and full vacate order. the owner and asbestos abatement contractor are taking steps
to address this. 08/19/14-Hiralkumar Patel. 11:58 AM:- received message from Ray Kahn from ESPL.
08/22/14-Hiralkumar Patel. 2:39 PM:- spoke with Mr. Kahn. ESPL has been hired for required work at
the site and they are ready to start soil excavation. asked Mr. Kahn to provide work schedule for
site work. he will send email. 11/14/14-Hiralkumar Patel. 10:16 AM:- left message for Mr. Kahn.
11/18/14-Hiralkumar Patel. 12:04 PM:- received call from Mr. Kahn. he mentioned that site
excavation has not begun yet as owner has planned to change design of new building. Mr. Kahn will
talk to property owner about required well gauging/product removal. 12/17/14-Hiralkumar Patel. 1:21
PM:- spoke with Mr. Kahn. he mentioned that property owner has met with NYC OER and planning to
start excavation on 01/05/15. he mentioned that well monitoring/gauging/product removal has not

BRUMAR SHEET METAL INC (Continued) **S108076226**

been conducted yet since Feb. 2014. 1:22 PM:- left message for Mr. Wong at NYC OER. 1:44 PM:- spoke
with Shaminder Chawla at NYC OER and informed him about property owner's failure to comply with the
well monitoring/report submission requirements as per the letter dated 01/29/14. informed him that
the case may be referred for legal enforcement. Mr. Chawla has no objection to DEC's enforcement.
01/07/15-Hiralkumar Patel. 11:52 AM:- spoke with Mr. Kahn. after discussion on 12/17/14, ESPL
installed a test pit next to the UST. the test pit was dug down to 9 ft bg, where groundwater was
found. free phase product was noted on groundwater and product recovered using absorbent pads.
asked Mr. Kahn to submit letter summarizing test pit work and monitoring data. Mr. Kahn mentioned
about chemical treatment of contamination. informed him that the department does not approve
chemical treatment at this time and requires submission of endpoint soil and groundwater samnple
results prior to finalizing a remedial method. 01/21/15-Hiralkumar Patel. 9:08 AM:- received email
from Mr. Kahn including test pit letter report. three test pits were excavate on 12/19/14 to a
depth of 11 ft bg (2 ft below groundwater) and 8 ft wide. product found on water in test pit #1
which is located east of the tank farm. product is being collected using absorbent pads. on
01/12/15, a stop work order was issued by NYC DOB. interim cleanup will continue by capturing the
product using adsorption pads and pump-out methods until the actual tank removal and spill clean-up
can be conducted. 9:11 AM:- sent email to Mr. Kahn and asked him to submit a scaled site map with
existing well, tank and test pit locations. email copied to Mr. Chawla. 01/23/15-Hiralkumar Patel.
received email from Mr. Kahn (at 8:16 PM on 01/22/15) including site map. he also mentioned that
the stop work order was removed and the shoring conctractor is driving the beams into the ground in
the west and north side of the site. 01/28/15-Hiralkumar Patel. received email from Mr. Kahn (at
2:54 PM on 01/25/15) including test pit/UST plan and shoring plan. he mentioned that two USTs were
exposed on 01/23/15 to prepare the site location plan. both tanks were found containing water.
01/29/15-Hiralkumar Patel. 9:58 AM:- received call from Mr. Kahn. today they pumped out and removed
two tanks. excavation was about 9 ft bg and groundwater was not found in the excavation. due to
structural safety of the adjoining building, they have to backfill the excavation. Mr. Kahn
mentioned that contaminated soils will be removed once underpinning for adjoining building is done
(possibly within two weeks depends on weather). 02/05/15-Hiralkumar Patel. 2:14 PM:- received email
from Mr. Chawla. William Wong of OER visited site and noted petroleum

BRUMAR SHEET METAL INC (Continued) **S108076226**

odors while tank piping being
removed. 02/06/15-Hiralkumar Patel. 10:30 AM:- visited site. met with on-site supervisor. crew was
underpining adjacent building in area where the USTs were located. no petroleum odors noted in work
zone. 02/11/15-Hiralkumar Patel. 1:32 PM:- received message from Mr. Kahn. 02/12/15-Hiralkumar
Patel. 10:03 AM:- received call from Mr. Kahn. during underpining operation, crew found set of ten
(10) 1,000 gal tanks in rear portion of the site. Mr. Kahn spoke with neighbours and reviewed
sanborn maps. maps shows location of ten tanks. Mr. Kahn has collected liquid samples from these
ten tanks. asked him to send site map with these tank location, sanborn map and tank removal plan.
also asked him to submit results of liquid samples from the tank, once available.
03/03/15-Hiralkumar Patel. 10:38 AM:- received email from Mr. Kahn including link to UST removal
report. abstract: - previously known USTs # 1 & 2 were removed on 01/29/15 - during underpinning of
the adjacent structure, two additional tanks (UST # 3 & 4 - size: 5.5 ft dia x 7 ft long) were
discovered approx. 3 ft bg on 02/09/15, which were removed - during further work, an additional
eight (8) USTs were identified (UST # 5, 6, 7, 8, 9, 10, 11 & 12) on 02/11/15; these tanks were
buried vertically approx. 2.5 ft bg - USTs # 5-12 were identified on 1942-1965 Sanborn Maps - USTs
5-12 were encased in concrete - based on site history and shape of tanks # 5-12 and interior
structure, it was concluded that the tanks could have been used for mixing operation which is
consistent with the site history of a carpet dying operation during 1940’s and 1960’s - dimensions
of tanks # 5-12 varied: 5 ft dia x 6 ft long (1,000 gal) & 5 ft dia x 4 ft long (500 gal) -
additional soil excavation will continue Mr. Kahn included copy of PBS application form (signed on
02/11/15) to register previously unknown tanks, but no records found in PBS record.
03/31/15-Hiralkumar Patel. 9:06 AM:- received call from Mr. Kahn. he mentioned that soil from
almost entire footprint of the site has been removed to a depth of approx. 11 ft bg. they removed
about 3,028 tons of soil. currently, the site excavation is filled with groundwater. the north and
south sidewall of the excavations are concrete underpining under adjacent buildings and there is a
shoring along the west sidewall to pretect the sidewalk. asked Mr. Kahn to collect endpoint soil
samples from east sidewall, water sample from excavation pool and groundwater samples from
monitoring wells on sidewalk. asked him to analyze all samples for full list VOCs/SVOCs. informed
Mr. Kahn that the department does not approve application of any chemical prior to reviewing

BRUMAR SHEET METAL INC (Continued) **S108076226**

soil/groundwater samples. he mentioned that the new foundation will be at around 9.5 ft bg.
04/01/15-Hiralkumar Patel. 8:45 AM:- went to site for inspection, but site was closed. looked
through opening in construction fence. the entire excavation was filled with water. no petroleum
sheen or odors were observed. 04/09/15-Hiralkumar Patel. 10:55 PM:- received email from Mr. Kahn
including status report. abstract: - composite soil sample was collected from east sidewall -
groundwater samples were collected from excavation pool and wells MW-5 and MW-6 - no contamination
found in any sample based on available documents/information, no further work is needed and case is
closed. 3:01 PM:- spoke with Mr. Chawla at NYC OER and informed him about case closure. Mr. Chawla
confirmed that a moisture/vapor barrier will be installed underneath the new building. 3:19 PM:-
sent spill closure letter to Mr. Fung. letter emailed to Mr. Fung, Mr. Chawla and Mr. Kahn. **also
refer to spill #: 1206982.**

Remarks: tank is in place, soil samples confirm contamination

Latitude:	40.7044210
Longitude:	-73.9215800
DEC Memo:	1/24/08 - Raphael Ketani. I spoke with Jeff Bohlen of EnviroTract (631) 924-3001. He said he represented the potential buyer, Krzysztof Kielan, Millenium Development and Construction, LLC, 57 Ballard Street, Valley Stream, NY, 11580. He said that the site is still an active cabinet making business and is owned by Henryk Zawojek. Mr. Bohlen went on to say that the site is a 1 story commercial building. There is a gas tank (UST) in the building and a dispenser and remote fill outside. All three are out of service. Three borings were performed, one at each part of the fuel system. There are low hits of BTEX in the soil which are below TAGM. Two wells were installed. One well had 0.73 ppb benzene and one well had 1.3 ppb benzene. Total xylenes were 6.80 ppb. The site has an E designation, but no one has been assigned to the case. The contact is Dan Cole, Deputy Director, NYC DEP, 59-17 Junction Blvd., 11 Floor, Flushing, NY, 11373. His phone number is (718) 595-4536. A CSL was sent to Mr. Zawojek with a c-c to Mr. Cole. 3/5/08- DEC Piper - I met Envirotrac and sub contractor AARCO, onsite today. They were uncovering at least 1 550 ust that contained gasoline for motor fueling. They will remove tanks soil and piping and collect endpoints to be submitted in closure report. 3/27/08- DEC Piper recieved and reviewed closure report. Approx

(Continued) **S108076393**

19 tons of soil were removed. Endpoints were below tagm. This spill is closed. See e-docs if warranted.
Remarks: phase two and found contaminated soil

DEC Memo:	3-2-16 - obligado - Desk duty - I spoke to Jennifer Lewis. She said this was part of a limited Phase II. A previous PHase 2 was already performed at the site for OER. They gauged 2 wells and they found free product in one well at 0.09 ft. Another well had a sheen. They suspect the product to be gasoline but are not sure yet. They collected a sample of the product and may send it to a lab for laboratory analysis. She said the neighboring property has an open spill #1411729 - 65 Eckford Street. She will send me an email regarding the product they found today and also the prior

VACANT - PHASE II (Continued) **S118636463**

phase II. 3-3-16 - obligado - I received the Phase II from Jennifer. This spill is assigned to
Kumar Patel. 03/03/16-Hiralkumar Patel. alternate address: none site has little E designation for
'hazmat' (# 14EHAZ403K). ---------- NYC VCP #: 15CVCP034K ---------- no other spills
found. PBS #: 2-607449. as per the PBS record, the site has one (1) 250 gal waste oil AST in
contact with soil, in-service, installed in Jan. 2002. PBS registration expired on 02/25/2007.
03/07/16-Hiralkumar Patel. found remedial investigation report and remedial action work plan on
NYCOER database. RIR included copy of former Phase I and Phase II conducted in 2013 by MIB
Environmental Consulting. abstract of Phase I by MID Env. Consulting dated 08/06/2013: - report
does not include historical use of the property - site has two (2) 275 gal waste oil tanks under
stairway to mezzanine - hydrocarbon stains on concrete slabs - south parcel at #65 (possibly 65
Eckford St) was a metal plating shop for about 30 years ---------- abstract of Phase II dated
07/25/2013: - four soil borings (S1, S2, S4 and S6) were drilled - one soil sample was collected
from each boring at 10 ft depth - groundwater sample was collected from boring S1 and S6, at
11.5-12 ft depth ---------- - report is missing lab report abstract of RIR dated Mar. 2014: - block
#: 2698 / lot #: 25 - elevation of the property ranges from 15 to 20 ft - depth to groundwater
ranges from 11.5 to 12.5 ft bg - groundwater flow is generally from northwest to the East River -
currently, the site is used for an auto repair shop and contains a one-story building, built to the
property lines - the existing one story building will be partially demolished and a four story
building with a penthouse and cellar is to be constructed - proposed future use of the site will
consist of four-story residential building, with the first floor used for retail, a cellar used for
mechanical and storage and a rear yard - cellar will be approx. 10 ft bg and will be used to house
the building's utilities and storage space - excavation is not anticipated to go below the water
table, since the water table is approx. 12 ft bg ---------- - based on the available sanborn
maps dated from 1887 to 2007, the site was developed after to 1887 for use as sash storage in 1905.
from at least 1942 to 1951, the site was a poultry market. the site was developed as a welding and
auto repair from 1965 to present (more details provided in report dated 07/08/16; listed below)
-------- - a GPR survey was conducted on 03/05/14 which identified anomalies in the area near the
front bathroom and office ---------- - installed five (5) soil borings (SB-1 through SB-5) to a
maximum depth of 18-19 ft bg and collected ten soil samples - found

VACANT - PHASE II (Continued) **S118636463**

high PID readings and petroleum
odors in almost all five borings - petroleum odors were detected from 8-16 ft in SB-1; 12-16 ft in
SB-2; and 8-12 ft in SB-3, SB-4 and SB-5 - discrete grab soil samples from 0-2 ft and 16-18 ft were
collected - no petroleum VOCs were detected in shallow soil samples - method detection limits for
petroleum VOCs were much higher than cleanup standard for soil samples from deeper zone except for
boring SB-5 ---------- - found TCE in soil samples (620 ppb in 0-2 ft sample from SB-2 and
1,800 ppb in 0-2 ft sample from SB-5) ---------- - installed two (2) 1-inch diameter
groundwater monitoring wells (MW-1 and MW-2) in soil borings SB-1 and SB-2, with 10 ft of screen -
collected two groundwater samples for analysis - no contamination noted in groundwater samples -
installed three soil-vapor probes (SVP-1 through SVP-3) to a depth of 18 ft bg and collected three
soil-vapor samples (at 0-2 ft from SVP-1, at 0-4 ft from SVP-2 and at 8-12 ft from SVP-3), one
indoor air sample and one ambient sample for analysis - found chlorinated solvent contamination
(TCE: 66 ug/m3 and PCE: 92.2 ug/m3) in sample from SVP-1 (0-2 ft depth) as per RAWP dated Sep.
2014, a minimum 20 mil thick vapor barrier will be installed beneath the building slab and outside
foundation walls below grade. an active SSDS will also be installed.

03/08/16-Hiralkumar Patel. 1:39 PM:- spoke with Jennifer at PW Grosser. she mentioned that Canton K
& J LLC. has recently purchased the property and is modifying the redevelopment plans. as required
by OER, PW Grosser conducted further groundwater investigation via installation of two additional
monitoring wells MW-3 and MW-4. Jennifer believes that contamination was not noted in soil phase
during installation of monitoring wells. they collected groundwater samples for metal analysis as
required by OER. during investigation, 0.09 ft of product noted in well MW-4. product sample was
collected for fingerprint analysis. groundwater sample from MW-4 was collected for VOC analysis
also. informed Jennifer that based on review of all available information, the department requires
resampling of all four monitoring wells at the site for VOCs (full list) and SVOCs; and survey of
existing wells to define site-specific groundwater flow direction. Jennifer will submit results of
recent sampling and schedule for well survey and re-sampling, by end of this week. PW Grosser will
submit revised redevelopment plans and addendum to RAWP. informed Jennifer that the Department may
require a Phase I investigation, as available Phase I report (dated Aug. 2013) is not complete.
Canton K & J LLC. 900 Grand Street Brooklyn, NY 11211 Attn.: Howard Ng PH. (917) 628-3318 email:

VACANT - PHASE II (Continued) **S118636463**

howard.ng@gmail.com Jennifer Lewis P.W. Grosser Consulting PH. (631) 589-6353 Fax (631) 589-8705
email: jenniferl@pwgrosser.com 03/25/16-Hiralkumar Patel. 3:24 PM:- sent email to Jennifer
inquiring updates. 04/12/16-Hiralkumar Patel. 10:04 AM:- left message for Jennifer.
04/18/16-Hiralkumar Patel. received email from Jennifer (at 5:23 PM on 04/15/16). she spoke with
OER and waiting for copy of the RIR for 65 Eckford Street.
06/10/16-Hiralkumar Patel. 12:48 PM:-
left message for Jennifer. 12:54 PM:- sent email to Jennifer inquiring about additional
investigation report. email copied to OER Shaminder. found Mr. Ng's email address on DOB permit.
12:57 PM:- forwarded former email to Jennifer, to Mr. Ng. 1:44 PM:- received email from Jennifer.
she is gathering some additional information regarding the neighboring properties and has FOILed
OER for their files related to 498 Leonard St as this site appeared to be another likely source of
the LNAPL that has migrated onto the subject site. she requested copies of documents that DEC has
related to 498 Leonard St. 1:53 PM:- received call from Jennifer. she mentioned that they got
results of additional investigation required by OER and result of fingerprint analysis. asked her
to submit these results immediately. she mentioned that due to possibilities of off-site source for
LNAPL found in well at the site, they are looking for more information on neighboring properties.
as such they have not re-sampled existing wells or defined site-specific groundwater flow direction
as discussed on 03/08/16. informed Jennifer that the Department requires well survey/re-sampling
prior to commenting on possibilities of off-site source. asked her to submit schedule for well
survey/re-sampling by 06/14/16. also asked her to submit FOIL request for any documents related to
neighboring properties. 2:09 PM:- sent email to Jennifer and asked her to immediately submit
results of additional investigation conducted at the site. also asked her to submit schedule for
well survey/re-sampling by the end of 06/14/16. email copied to Mr. Ng and OER Shaminder.
06/14/16-Hiralkumar Patel. 9:43 AM:- received email from Jennifer. she mentioned that they went to
the site yesterday to collect groundwater samples from all accessible wells and surveyed the wells.
06/22/16-Hiralkumar Patel. received email from Jennifer (at 4:55 PM on 06/21/16). she mentioned
that they have not received SVOC results yet. 06/28/16-Hiralkumar Patel. 11:33 AM:- spoke with
Jennifer. they are still waiting for SVOC results for sampling conducted on 06/14/16. she will
follow-up with the lab. Jennifer mentioned that during well survey, they found 0.02 ft difference
on water table between on-site wells. as such, they will use water

VACANT - PHASE II (Continued) **S118636463**

table data from neighbouring
sites to define regional groundwater flow direction. informed Jennifer that available sampling
results and well survey data should be submitted by tomorrow and SVOC data can be submitted later,
once available. 07/11/16-Hiralkumar Patel. received email from Jennifer (at 4:56 PM on 07/08/16)
including spill closure request report. she mentioned that based upon the investigation work that
was conducted on-site, the evidence points to the LNAPL being from off-site source, likely the
spill at neighbouring property at 65 Eckford St. abstract of spill closure request report: -
construction of cellar has been removed from the renovation plans --------- - on 02/25/16, two
monitoring wells (MW-3 and MW-4) were installed within the existing building - contractor returned
on 03/02/16 for well gauging and sampling. during the well gauging, an unidentified LNAPL was
identified in MW-4 - product sample was collected for lab analysis which indicated that the LNAPL
is an unresolved complex mixture (UCM) similar to a mineral spirits, paint thinner, or Stoddard
solvent type of product. also present was a lesser UCM that was extremely weathered; therefore, a
quantitative identification could not be determined ---------- - after collecting product
sample from MW-4, the well was purged and groundwater sample was collected from MW-3 and MW-4 - all
four wells were surveyed and resampled in June 2016 - during well gauging in June, a thin layer of
LNAPL was identified in MW-4 - after purging wells, groundwater samples were collected from all
four wells for full list VOCs and SVOCs - groundwater flow direction was inconclusive due to the
small size of the property and the relatively flat gradient across the site. based upon regional
groundwater flow direction and the groundwater flow direction indicated on neighbouring sites, the
presumed groundwater flow direction at the site is towards the north or northwest ----------
- as per Sanborn maps, subject site was undeveloped in 1887, used as sash storage in 1905, an
unknown use with a gasoline tank in 1916, a poultry market from at least 1942 through 1951, welding
from at least 1965 through 1991, and an auto repair shop from at least 1993 to when it ceased
operations around 2013 report included summary of record review for neighbouring site at 65 Eckford
St: - site 65 Eckford St was most recently known as Carter Spray Finishing Corp. - site 65 Eckford
St was a conditionally exempt small quantity generator that generated wastes such as spent
halogenated solvents used in degreasing (waste code F001) and spent non-halogenated solvents (waste
codes F003 and F005) - there were two (2) 275 gal ASTs containing TCE at site 65 Eckford St which

VACANT - PHASE II (Continued) **S118636463**

were removed/closed in place in 1998 - air emissions in excess of 9,000 pounds per year of 1,1,1-trichloroethane related to the activities conducted under Carter Spray Finishing Corp. - according to sanborn maps, site 65 Eckford St was undeveloped in 1887, identified as Meisel-Danowitz Company (a manufacturer of millwork and hardwood trim) in 1905, Eckford Garage from at least 1916 to 1942 which contained a gasoline tank near the northern property boundary, wood box manufacturing and lacquer spraying in 1951, and a metal finishing company (Carter Spray Finishing Corp.) from at least 1965 through 1989 - as per certificate of occupancy from 1963 and 1973 indicate that a paint spraying booth for metals were present at 65 Eckford St based on following, PW Grosser recommends closure of the subject spill case: - site 75 Eckford St is located hydraulically down-gradient of site 65 Eckford St - there is no known historic use of mineral spirits, paint thinner, or Stoddard solvent at 75 Eckford St - there is a long historic usage related to lacquering and painting at 65 Eckford St - subject property will continue redevelopment activities, including proper soil management practices and the installation of a SSDS under the oversight of NYC OER reviewed remediation database and found an active BCP case for site 65 Eckford St (#: C224218). 07/12/16-Hiralkumar Patel. 10:57 AM:- sent email to Jennifer and asked her to submit missing boring/well logs for MW3 and MW4. email copied to Mr. Ng and OER Shaminder. 1:07 PM:- spoke with DEC Conor Shea, BCP case manager. informed him about possible off-site impact from site 65 Eckford St. 1:38 PM:- received boring logs and well construction log from Jennifer. total borehole depth during installation of MW-3 and MW-4 was 18.5 ft. soil was screened from 0 to 10 ft bg in both boreholes where no odors or PID readings were noted, and as such soil samples were not collected. after that, wells were installed with direct push method. wells were installed with 10 ft of screen from 8 to 18 ft bg. summary: - during remedial investigation (report dated Mar. 2014), five soil borings (SB-1 through SB-5) were installed - borings SB-1 and SB-2 were installed to a depth of 16 ft bg - borings SB-3, SB-4 and SB-5 were installed to a depth of 12 ft bg - petroleum odors with higher PID readings (112 to 1,180 ppm) were detected in 8-12 ft interval (and below if borings installed to deeper zone) in soil borings SB-1 through SB-4 - two soil samples were collected from all five borings: one from shallow zone (0-2 ft bg) and one from deeper zone (8-12 ft bg) - no petroleum VOCs noted in soil samples from shallow zone - TCE found in shallow samples from two borings: SB-2 (620 ppb) and SB-5 (1,800 ppb) - petroleum VOCs

VACANT - PHASE II (Continued) **S118636463**

were non-detect in deeper
soil samples, but reporting limits were much higher than cleanup standards for soil samples from
SB-1 through SB-4 - chlorinated solvent contamination noted in soil-vapor samples (TCE: 1.34 to 66
ug/m3; PCE: 1.08 to 92.2 ug/m3) - two wells (MW-1 and MW-2) were installed in borings SB-1 and SB-2
- two additional wells (MW-3 and MW-4) were installed during further investigation conducted in
Feb. 2015 - in June 2016, all four wells on the property were surveyed and groundwater was found
between 11.45 and 13.95 ft bg based on available information, petroleum odors/PID readings were
detected at/near/below water table and LNAPL noted in upgradient well (MW-4) on the property.
discussed case with DEC Jane regarding TCE contamination in shallow soil. as site has
e-designation, she is going to discuss with OER on how to handle remediation of TCE impacted
material. she requested site maps with sample analyticals. 2:54 PM:- sent email to DEC Jane
including site maps with sample analyticals. email copied to DEC Austin. 08/01/16-Hiralkumar Patel.
12:09 PM:- received message from Jennifer. discussed with DEC Jane. after discussing with DEC Cozzy
and OER Shaminder, based on available information, DEC Jane asked to transfer case to her name
after sending P-site memo. 3:14 PM:- spoke with Jennifer and asked her to contact DEC Jane.
09/20/16-Hiralkumar Patel. sent p-site memo to DEC Jane.
10/14/16-Hiralkumar Patel. after
discussing with DEC Jane, case assigned to her. 6/7/19: Site was remediated under oversight of
NYCOER's Voluntary Cleanup Program (site no. 15CVCP034K). Site development includes the
construction of a 4-story mixed-use residential and commercial building with commercial space, two
apartments, and two parking spaces. There is no basement and no open space. Remedy included: 1)
Excavation: soil was removed to a depth of 4 feet from grade beneath the full area of the new
building, 4 to 5 feet in the AOC-1 and AOC-3 hotspots, and to a depth of 12 feet in the AOC-2
hotspot. A total of 483.4 tons of soil/fill was excavated and removed from the property. 2)
Collected and analyzed 14 end-point samples (6 in AOC-1, 3 in AOC-2, 4 in AOC-3 and I in general
area) to determine attainment of SCOs. Additional excavation was required in two hotspot areas to
achieve Track 4 SCOs. All end point sample results were below the Site Specific Track 4 SCOs. 3)
Engineering Controls: a. Installed a Vapor Barrier System; b. Constructed an engineered Composite
Cover System consisting of 8 to 14 inches of concrete slab c. Installed and are operating an active
Sub-Slab Depressurization System (SSDS) consisting of one horizontal branch installed beneath the

VACANT - PHASE II (Continued) **S118636463**

centerline of the building, running east to west 5) Institutional Controls: a. Deed Restrictions
are placed on property. b. E Designation for future permits c Site Management Plan Based on the
remediation completed, the spill is closed. (JHO)

Remarks: contamination found during testing

DEC Memo:	6/3/15: Mahat t/c: DEC Mahat left a voice message to Rebecca Tummon @ 212.464.8689 to call back with more information about the spill and its progress. 6/9/15: Mahat DEC Mahat received a call from Rebecca Tummon providing more information about the spill case. The site is a e-designated site. Excavation has been perforemed and end point samples will be taken. A complete report with manifest, lanboratory analysis, conclusion , and recomendation will be submitted to DEC for closure review. DEC is waiting for a report. 8/21/15:Mahat t/c: DEC Mahat left a voice message Steve @ grant engineering to call back with more information on the site. 10/1/15: Mahat DEC Mahat left a phone message with Emily @ Grant for a call back from the case manager. DEC Mahat received a call back from Steve and he will provide a closure report as soon as he can. 10/1/15: Mahat e/c: DEC Mahat received an email update: Email : Hi Santosh Good speaking with you earlier. I am writing this email so you have my contact information. We are working on the Spill Closure memo as discussed over the phone. Thanks, Stephen Morse, PE 139 Fulton Street - Suite 907 - New York, NY 10038 Office - 212.464.8689 Mobile - 917.273.8236 www.GRANTpllc.com DEC is waiting for a spill closure report. 12/08/15: Mahat DEC Mahat left a voice message to Mr. Morse to call back with more information. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/11/2016: Rashad 50 Greenpoint Ave has an alternate address of 50-54 Greenpoint Ave. No additional spills found. PBS# 2-612463 found for site, there are 5 550 gallon gasoline USTs removed in 2015 and 1 550 gallon waste oil UST removed in 2015. No documents found in D2. 11/4/2016: Rashad As per PBS 80 West Street may also be alternate address. Brief review of RIR and RAWP found on OER Repository is as follows: The site is currently undeveloped vacant and uncapped, the lot is currently being used for container storage. The site will be redeveloped with a 6 story apartment building. It will include a full cellar which will be used for parking, storage, and utility rooms. The site will be

OER SITE- 13CVCP155K (Continued) **S117973783**

excavated to a depth of 10.5 feet below grade, elevator pits will extend to 15 ftbgs. A Phase 1 conducted by Hydrotech identified the site as a gas station and repair facility from 1942-1965. Depth to groundwater ranges from 9-10 feet, groundwater flows northeast to southwest. Soil samples detected PCE at 1700ppb and various SVOCs, no VOCs were found above standards. TCE was detected in groundwater at a max of 13ppb, and several SVOCs were also detected. Soil vapor samples recorded a max concentration of PCE-983ug/m3, it was also detected in all 5 samples. TCE was also detected in all 5 samples, with the max being 865-ug/m3. VOCs were also found in soil vapor samples. Brief Review of RAWP is as follows: Site is in NYCVCP program and the remedial plan consists of collecting 5 endpoint samples, installation of an SSDS, a waterproof vapor barrier, and an engineered composite layer. I emailed Stephen Morse to obtain closure report/memo with regards to the tanks and samples found. Email: smorse@grantpllc.com. 11/8/2016: Rashad Received email from Emily of Grant with closure documentation. Closure report, analytical results, and manifests have been uploaded to D2. Review of closure report is as follows: This site is registered NYCVCP and E-designated site. Excavation at the site in grid A1 was ongoing when the first fuel tank was found and punctured by the excavator releasing an estimated 5-15 gallons of fuel into the soil. Excavation of the soil was stopped and three additional tanks were found that day. On June 1, 2015 AB Environmental was on site to drain the contents from the 4 550 gallon USTs. AB removed a total of 1310 gallons of petroleum contaminated water from the tanks. On June 2, 2015 one additional fuel tank was found during excavation in grid A1. AB also drained and removed the 5th tank. End point samples were advanced on June 9, 2015. The samples taken from grid A1 within the excavated area beneath the spill. Nine end point samples were taken from grid A1. Soil sample SC-1: ND VOCs, exceedances in SVOCs SC-2 - SC-5 VOCs, SVOCs ND EPC1-1 - EPC1-4 VOCs, SVOCs ND. Spill will be closed based on the following; site is a NYCOER VCP site as well as E-Designated, the new development will have an SSDS as well as vapor barrier and engineered composite layer. The petroleum spill associated with the 5 discovered tanks has been remediated as per end point samples in submitted closure report and the tanks have been registered with the Department, see PBS#2-612463. Closure letter prepared and mailed to property owner as well as emailed to Stephen Morse. Letter uploaded to D2.

Remarks: 550 gal ust/found 4 tanks during excavation/clean up underway

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024
Date Data Arrived at EDR: 10/01/2024
Date Made Active in Reports: 10/23/2024
Number of Days to Update: 22

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Longitude (West):	73.964673 - 73° 57' 52.82''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	587447.8
UTM Y (Meters):	4507584.0
Elevation:	25 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	14115940 BROOKLYN, NY
Version Date:	2019

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

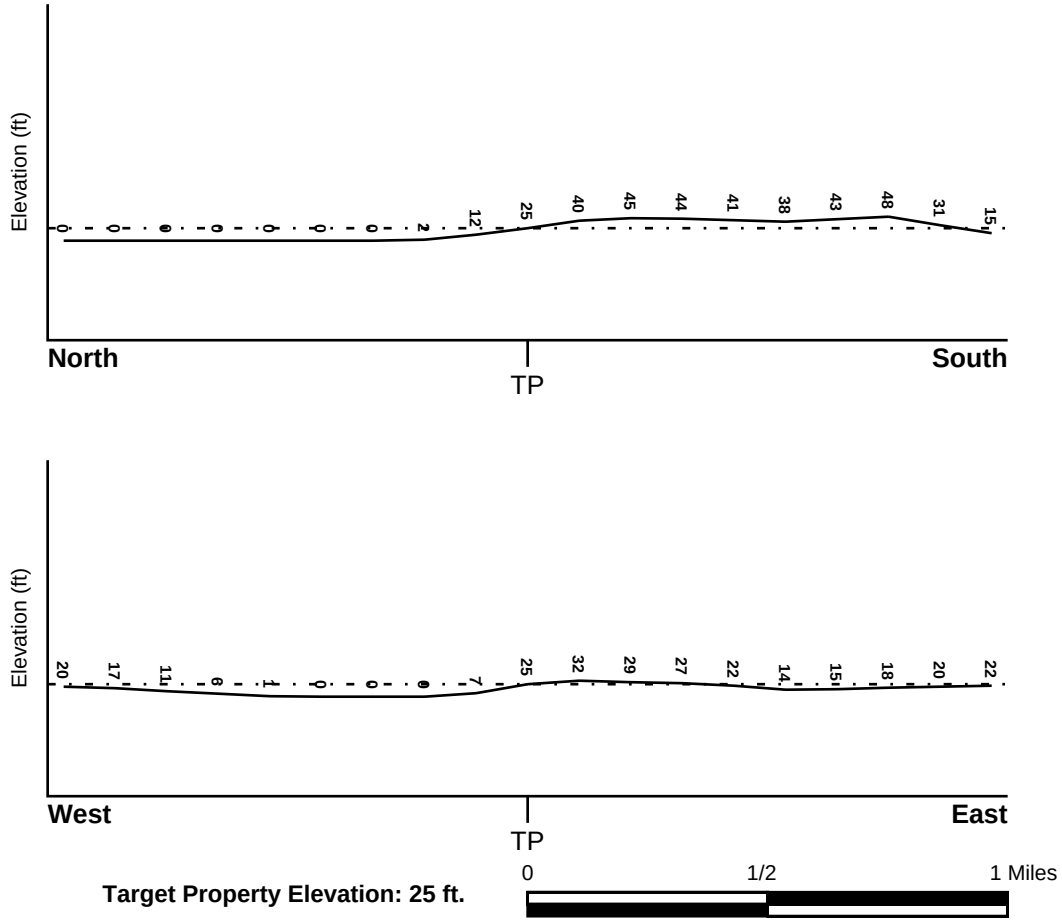
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 25 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970204F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970201F	FEMA FIRM Flood data

3604970203F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, New York
Survey Area Data: Version 15, Aug 29, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 1, 2023—Sep 1, 2023

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

CERTIFICATION

I, Kevin Brussee, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(tt). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located 62 North 1st Street, NY 11249 (OER Project Number: 25TMP0830K, VCP Site TBD). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Kevin Brussee

Qualified Environmental Professional Date Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 62 North 1st Street in the Williamsburg section of the Borough of Brooklyn and is identified as Block 2378, Lot 14 on the New York City Tax Map. The Site is located on the south side of North 1st Street between Kent Avenue to the west and Wythe Avenue to the east. The Site consists of 73.92 ft of street frontage along North 1st Street and a lot depth of 138.33 ft on its longest side for a total area of approximately 9,829.5 square feet (SF). Lot 14 is currently bordered by a 7-story residential apartment building to the west (50 North 1st Street), a 5-story residential condo building to the east (66 North 1st Street), a 5-story mixed use commercial and residential apartment building (57 and 59 Grand Street) and two 1-story commercial/manufacturing buildings (69 Grand Street) to the north, and multiple 3-story residential buildings to the south on the opposite side of North 1st Street (57, 59, 61, 63, 65, and 67 North 1st Street).

The Site is currently developed with a vacant 2-story commercial building with no basement. The building occupies the entire footprint of the Site. The building is currently vacant/unoccupied but was most recently utilized as a restaurant and music school/rehearsal studio.

Summary of Proposed Redevelopment Plan

The Site will be redeveloped with a new 9-story residential apartment building (44 market rate units and 12 affordable units) with a full cellar that will occupy 8,368.5 SF (85%) of the lot. An inner courtyard will be located within the approximate center of the building and will extend to the cellar. The cellar will consist of three mechanical rooms totaling 1,056 SF, a 2,012 SF storage room, a 987 SF residential recreational/exercise room, a 666 SF residential recreation/co-working space, a 350 residential recreation/lounge room, a 274 SF trash collection room, a 513

SF bicycle storage room, and the concrete capped inner courtyard. The 1st floor will consist of the residential lobby/entrance with a package area and mailbox area, three residential recreation rooms totaling 1,442 SF, and a parking garage entrance that leads to an open air parking area constructed both above the cellar (below the 2nd floor of the building) and the at-grade area located behind the cellar. The 2nd through 9th floors will consist of residential apartments. The current building will be demolished before redevelopment. Layout of the proposed site development is presented in Figure 3.

Excavation to a minimum depth of 12 ft below sidewalk grade (bsg) will be required for the 8,368.5 SF cellar with additional deeper excavation to 14 ft bsg for footings/grade beams and 15 ft bsg for the elevator pit. The rear courtyard will be excavated to a minimum depth of 1 ft bsg and sloped excavation will be performed from 1 ft bsg to the depth of the rear cellar wall footing (14 ft bsg). The total amount of soil anticipated for removal is approximately 4,500 cubic yards (6,750 tons).

The Site elevation is 18 ft. The water table is expected to be approximately 20 ft bsg and is therefore not expected to be encountered during excavation. Any dewatering that may be needed will be performed in accordance with local and state requirements. The current zoning designation is residential (R6A) with an overlay M1-2. The proposed use of the new building is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

Phase I Environmental Site Assessment (ESA) – BEC – December 2024

A Phase I Environmental Site Assessment Report was completed by BEC in December of 2024. BEC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, the Site was developed with several 1- to 3-story commercial/ industrial buildings, including a sugar box factory, a cooperage and several storage warehouses. By 1904, the buildings were occupied by a paint manufacturer, an iron manufacturer, a tailor, and a storage facility. By 1918, the Site was occupied by a blacksmith, a fur dresser and a China decorating facility. The fur dresser was also occupied by a China decorating facility by the mid-1930s. By the late-1940s, the Site was redeveloped with a “U”-shaped structure and identified as a lumber yard. The “U”-shaped

structure was replaced with the existing 2-story structure between 1951 and 1965, also identified as a lumber company. City directory listings reveal the building was occupied by a lumber company through the early-1990s. A grocery company and several food companies/restaurants occupied the Site from 2000 through 2017.

BEC identified the following recognized environmental condition (REC) in connection with the Site:

- Information obtained from multiple historic sources revealed that the Site was historically utilized for various industrial/manufacturing operations, including paint manufacturing, iron manufacturing, a cooperage, a blacksmith, fur dressing, and china decorating/ manufacturing from at least 1887 through the mid-1930s. The former operations may have resulted in spills or releases which may have impacted the subsurface beneath the Site, as well as a potential soil vapor intrusion risk. As such, the historic use of the Site represents a REC.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]) for the subject property. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The Site was listed on the E-Designation database as having an E-HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The HazMat E-designation requires the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-Designation is considered a BER.

- Information obtained from multiple historic sources revealed that the Site was formerly developed with one or more commercial/industrial buildings from at least 1887 through 1950. As such, there is a potential for fill material to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill material was available for review, there is a potential for contaminated and/or structurally unsuitable fill material to be present on the Site. The potential presence of fill material is considered a BER.

Experience with similar projects shows that typical urban fill material (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, due to the presence of the HazMat E-designation, any further redevelopment would require sampling to arrange for proper disposal off-site disposal of soil/fill.

- Fluorescent light ballasts were observed within inspected portions of the building, which based on the age of the building, may contain polychlorinated biphenyls (PCBs).

- Suspect asbestos-containing vinyl floor tile, sheetrock/wallboard/plaster were observed throughout the inspected portions of the building. Most of the suspect asbestos-containing materials (ACMs) were in good condition at the time of the site inspection, although some areas of water-stained and damaged materials were identified on the second floor (former music school/rehearsal space. BEC notes that most of the exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. Further, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

  If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a New York City (NYC) and New York State (NYS)-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

- Several areas of water-staining and water damage, including peeling paint, damaged/missing sheetrock/plaster, damaged floor tile, were observed throughout the second floor (former music school/rehearsal space). Visible mold growth was also observed on second floor walls and ceilings. This damage appears related to roof/skylight leaks.

The AOCs identified for this site include:

1. Historic fill layer is present across the site to depths as great as 6 ft below grade.

Summary of the Work Performed under the Remedial Investigation

BEC performed the following scope of work within the boundary of the Site in December of 2024 and January 2025:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed six soil borings (SB1 through SB6) across the Site and collected twelve soil samples and one duplicate for chemical analysis from the soil borings to evaluate soil quality;
3. The three (3) proposed groundwater monitoring wells were not installed due to multiple refusals throughout the Site. Soil borings SB1 and SB3 hit refusal at a depth of approximately 18 ft below grade and soil borings SB2, SB4, and SB6 each reached a depth of approximately 14 to 15 ft below grade before they hit refusal. Refusal was hit at a depth of approximately 12 ft below grade at soil boring SB5. Hence, no groundwater flow was established, and no groundwater samples were collected for chemical analysis to evaluate groundwater quality;
4. Installed five soil vapor implants (SV1 through SV5) across the Site and collected five soil vapor samples for chemical analysis.

Summary of Environmental Findings:

1. The elevation of the Site is approximately 18 ft above mean sea level;
2. Depth to groundwater is expected to be approximately 20 ft below sidewalk grade;
3. Regional groundwater flow is generally to the west;
4. Depth to bedrock at the Site is greater than 100 ft;
5. The stratigraphy of the Site, from the surface down, consists of fill material to depths as great as 3 ft below grade underlain with a native light brown silty sand;
6. Soil/fill samples were collected during the RI and the results were compared to NYSDEC Part 375-6 Unrestricted Use Soil Cleanup Objectives (UUSCOs), NYSDEC Part 375-6 Residential Soil Cleanup Objectives (RSCOs), and Restricted Use Restricted Residential Soil Cleanup Objectives (RRSCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples showed the following:

- No VOCs were detected above their UUSCOs within any of the soil samples. However, two VOCs were detected at trace concentrations below UUSCOs. Tetrachloroethene (180 µg/kg) was detected only within the shallow 0-2 ft soil sample collected from soil boring SB6 and naphthalene (max. of 660 µg/kg) was detected within both the shallow (0-2 ft) and deep (10-12 ft) soil samples collected from soil boring SB6;
- Seven SVOCs including benz(a)anthracene (max of 4,100 µg/kg in SB6 10-12'), benzo(a)pyrene (max. of 3,600 µg/kg in SB6 10-12'), benzo(b)fluoranthene (max. of 4,700 µg/kg in SB6 10-12'), benzo(k)fluoranthene (max. of 1,200 µg/kg in SB6 10-12'), chrysene (max. of 3,900 µg/kg in SB6 10-12'), dibenz(a,h)anthracene (max. of 420 µg/kg in SB6 10-12'), and indeno(1,2,3-cd)pyrene (max. of 1,500 µg/kg in SB6 10-12') were detected above RRSCOs within two of the four shallow (0-2 ft) soil samples and one of the deep soil samples;
- No polychlorinated biphenyls (PCBs) were detected within in any of the soil samples collected at the Site;
- The pesticides 4,4'-DDE (4.4 µg/kg in SB5 0-2') and 4,4'-DDT (7 µg/kg in SB5 0-2') were detected above Unrestricted Use SCOs within one of the six shallow (0-2 ft) soil samples collected at the Site;
- Four Target Analyte List (TAL) metals including copper (max. of 141 mg/kg in SB1 0-2'), lead (max. of 517 mg/kg in SB1 0-2'), mercury (max. of 16 mg/kg in SB6 10-12'), and zinc (max. of 714 mg/kg in SB1 0-2') were detected at concentrations exceeding their UUSCOs. Of these metals, lead and mercury were detected above their respective RRSCOs. Mercury was detected above RRSCOs within two of the six deep soil samples;
- No PFAS compounds were detected above their respective EPA Guidance values within the soil sample retained for analysis; and
- 1,4-Dioxane was not detected within the soil sample retained for analysis; and
- Soil was consistent with historical fill across the Site within the shallow soil samples collected from the 0 to 2 ft interval.

7. Soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 Air Guidance Values derived by the New York State Department of Health

(NYSDOH) located in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006, the revised NYSDOH Decision Matrices dated May 2017, and the revised NYSDOH Decision Matrices dated February 2024.

- The soil vapor results indicated low to moderate levels of BTEX VOCs and chlorinated VOCs (CVOCs);
- The total concentration of BTEX VOCs (BTEX) ranged from non-detect (SV-3) to 38.57 $\mu g/m^3$ (SV-2);
- No petroleum related VOCs were detected above the monitoring level range established within the NYSDOH soil vapor guidance matrices D, E and F;
- Chlorinated VOC 1,1,1-trichloroethane was detected within two of the five soil vapor samples at a maximum concentration of 14.4 $\mu g/m^3$ in SV-5. Chlorinated VOC, tetrachloroethene (PCE) was detected in all five soil vapor samples (ranging from 26.9 $\mu g/m^3$ in SV-1 to 75.9 $\mu g/m^3$ in SV-5). Chlorinated VOC trichloroethene (TCE) was detected in all three soil vapor samples (ranging from 19.8 $\mu g/m^3$ in SV-1 to 37 $\mu g/m^3$ in SV-3);
- Cis-1,2-dichloroethene, 1,1-dichloroethene, carbon tetrachloride, methylene chloride, and vinyl chloride were not detected within any of the soil vapor samples.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

60 North 1st LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate the 10,000 SF Site located at 62 North 1st Street in the Williamsburg section of the Borough of Brooklyn, New York. The Site will be redeveloped into a 7-story residential building. The RI work was performed in late December 2024 / early January 2025. This RIR summarizes the nature and extent of contamination at the Site and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 62 North 1st Street in the Williamsburg section of the Borough of Brooklyn and is identified as Block 2378, Lot 14 on the New York City Tax Map. The Site is located on the south side of North 1st Street between Kent Avenue to the west and Wythe Avenue to the east. The Site location is shown on Figure 1. The Site consists of 73.92 ft of street frontage along North 1st Street and a lot depth of 138.33 ft on its longest side for a total area of approximately 9,829.5 square feet (SF). Lot 14 is currently bordered by a 7-story residential apartment building to the west (50 North 1st Street), a 5-story residential condo building to the east (66 North 1st Street), a 5-story mixed use commercial and residential apartment building (57 and 59 Grand Street) and two 1-story commercial/manufacturing buildings (69 Grand Street) to the north, and multiple 3-story residential buildings to the south on the opposite side of North 1st Street (57, 59, 61, 63, 65, and 67 North 1st Street). The site boundary map is shown on Figure 2 and a map of the surrounding usage is shown on Figure 4.

The Site is currently developed with a vacant 2-story commercial building with no basement. The building occupies the entire footprint of the Site. The building is currently vacant/unoccupied but was most recently utilized as a restaurant and music school/rehearsal studio.

1.2 Proposed Redevelopment Plan

The Site will be redeveloped with a new 9-story residential apartment building (44 market rate units and 12 affordable units) with a full cellar that will occupy 8,368.5 SF (85%) of the lot. An inner courtyard will be located within the approximate center of the building and will extend to the cellar. The cellar will consist of three mechanical rooms totaling 1,056 SF, a 2,012 SF storage room, a 987 SF residential recreational/exercise room, a 666 SF residential recreation/co-working space, a 350 residential recreation/lounge room, a 274 SF trash collection room, a 513 SF bicycle storage room, and the concrete capped inner courtyard. The 1st floor will consist of the residential lobby/entrance with a package area and mailbox area, three residential recreation rooms totaling 1,442 SF, and a parking garage entrance that leads to an open air parking area constructed both above the cellar (below the 2nd floor of the building) and the at-grade area located behind the cellar. The 2nd through 9th floors will consist of residential apartments. The current building will be demolished before redevelopment. Layout of the proposed site development is presented in Figure 3.

Excavation to a minimum depth of 12 ft below sidewalk grade (bsg) will be required for the 8,368.5 SF cellar with additional deeper excavation to 14 ft bsg for footings/grade beams and 15 ft bsg for the elevator pit. The rear courtyard will be excavated to a minimum depth of 1 ft bsg and sloped excavation will be performed from 1 ft bsg to the depth of the rear cellar wall footing (14 ft bsg). The total amount of soil anticipated for removal is approximately 4,500 cubic yards (6,750 tons).

The Site elevation is 18 ft. The water table is expected to be approximately 20 ft bsg and is therefore not expected to be encountered during excavation. Any dewatering that may be needed will be performed in accordance with local and state requirements. The current zoning designation is residential (R6A) with an overlay M1-2. The proposed use of the new building is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area immediately surrounding the Site consists primarily of residential, commercial, and manufacturing/industrial buildings. The adjacent properties are described in the table below. Figure 4 shows the surrounding land usage. No schools, day care facilities or hospitals are

located within a 500-ft radius of the Site.

Surrounding Property Usage

Direction	Property Description
North – *Across North 1st Street*	Block 2483, Lot 7501 (80 Metropolitan Avenue) – A 40,614 SF lot developed with a multiple 3-story residential buildings. Buildings on the immediate north side of North 1st Street have the addresses 57, 59, 61, 63, 65, & 67 North 1st Street.
East – *Adjacent Property*	Block 23783, Lot 7501 (66 North 1st Street) – A 6,475 SF lot developed with a 5-story residential condo building.
West – *Adjacent Property*	Block 2378, Lot 11 (50 North 1st Street) – A 15,800 SF lot developed with a 7-story residential apartment building.
South – *Adjacent Properties*	Block 2378, Lot 29 (69 Grand Street) – An 8,230 SF lot developed with two 1-story commercial/manufacturing buildings. Block 2378, Lot 7503 (57 and 59 Grand Street) – Developed with a 5-story mixed use commercial and residential apartment building.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Phase I Environmental Site Assessment (ESA) – BEC – December 2024

A Phase I Environmental Site Assessment Report was completed by BEC in December of 2024. BEC was able to establish a history for the property dating back to 1887. According to a review of NYC records, Sanborn maps, aerial photographs, historic city directories, the Site was developed with several 1- to 3-story commercial/ industrial buildings, including a sugar box factory, a cooperage and several storage warehouses. By 1904, the buildings were occupied by a paint manufacturer, an iron manufacturer, a tailor, and a storage facility. By 1918, the Site was occupied by a blacksmith, a fur dresser and a China decorating facility. The fur dresser was also occupied by a China decorating facility by the mid-1930s. By the late-1940s, the Site was redeveloped with a "U"-shaped structure and identified as a lumber yard. The "U"-shaped structure was replaced with the existing 2-story structure between 1951 and 1965, also identified as a lumber company. City directory listings reveal the building was occupied by a lumber company through the early-1990s. A grocery company and several food companies/restaurants occupied the Site from 2000 through 2017.

BEC identified the following recognized environmental condition (REC) in connection with the Site:

- Information obtained from multiple historic sources revealed that the Site was historically utilized for various industrial/manufacturing operations, including paint manufacturing, iron manufacturing, a cooperage, a blacksmith, fur dressing, and china decorating/ manufacturing from at least 1887 through the mid-1930s. The former operations may have resulted in spills or releases which may have impacted the subsurface beneath the Site, as well as a potential soil vapor intrusion risk. As such, the historic use of the Site represents a REC.

In addition to the aforementioned REC, BEC identified several environmental concerns (ASTM Non-Scope issues/Business Environmental Risks [BERs]) for the Site. The environmental concerns/BERs and BEC's recommendations are summarized as follows:

- The Site was listed on the E-Designation database as having an E-HazMat restriction (E-138), which was determined during the Greenpoint-Williamsburg Rezoning completed by the City in May 2005 (CEQR 04DCP003K). The HazMat E-designation requires the issuance of a Notice to Proceed by the New York City Office of Environmental Remediation (NYCOER) before the property can be redeveloped. The presence of the E-Designation is considered a BER.

- Information obtained from multiple historic sources revealed that the Site was formerly developed with one or more commercial/industrial buildings from at least 1887 through 1950. As such, there is a potential for fill material to be present (utilized to backfill the foundations and/or basements of the former structures following their demolition). As no information regarding the nature or source of the fill material was available for review, there is a potential for contaminated and/or structurally unsuitable fill material to be present on the Site. The potential presence of fill material is considered a BER.

  Experience with similar projects shows that typical urban fill material (impacted or clean) that are not excavated to support construction/redevelopment activities can remain on-site, as such we do not foresee an issue related to undisturbed urban fill. However, due to the presence of the HazMat E-designation, any further redevelopment would require sampling to arrange for proper disposal off-site disposal of soil/fill.

- Fluorescent light ballasts were observed within inspected portions of the building, which based on the age of the building, may contain polychlorinated biphenyls (PCBs).

- Suspect asbestos-containing vinyl floor tile, sheetrock/wallboard/plaster were observed throughout the inspected portions of the building. Most of the suspect asbestos-containing materials (ACMs) were in good condition at the time of the site inspection, although some areas of water-stained and damaged materials were identified on the second floor (former music school/rehearsal space. BEC notes that most of the exposed pipes were either uninsulated or were insulated with fiberglass or foam rubber. Further, due to the age of the buildings, it is possible that roofing, roof flashing and other (inaccessible) building materials may contain asbestos.

If activities in the buildings (i.e., renovation or demolition) will disturb any suspect asbestos material, then BEC recommends that an asbestos survey be performed to determine if ACMs are present prior to the proposed work. If ACMs are present, then a New York City (NYC) and New York State (NYS)-licensed contractor must be retained to remove the asbestos in accordance with federal, NYS and NYC regulations.

- Several areas of water-staining and water damage, including peeling paint, damaged/missing sheetrock/plaster, damaged floor tile, were observed throughout the second floor (former music school/rehearsal space). Visible mold growth was also observed on second floor walls and ceilings. This damage appears related to roof/skylight leaks.

2.2 Previous Investigations

BEC is not aware of any prior investigations performed at the Site.

2.3 Site Inspection

BEC representative Keith Butler inspected the Site on December 17, 2024, accompanied by an owner's representative. Site reconnaissance included a visual inspection of the building interior, exterior areas including building systems (HVAC, plumbing, electrical, etc.), the sidewalk areas immediately adjoining the property, and the exteriors of adjacent properties. No limiting conditions were encountered during the survey. At the time of the inspection, the building developed with a vacant 2-story commercial building. The building is currently vacant/ unoccupied but was most recently utilized as a restaurant (Pasta Wiz) and music school/rehearsal studio. The restaurant (kitchen, dining room, restrooms, and storage/mechanical space) occupied the 1st floor of the building as well as portions of the 2nd floor with a bar and dining area overlooking the first-floor dining room. The rehearsal studio space also occupied portions of both floors and was divided into numerous small rooms with common corridors and several restrooms. The building slab within the restroom consisted of a grouted cobblestone and/or concrete slab with finished tile surface. Some rooms contained mattresses and were likely utilized as illegal apartments and/or formerly occupied by squatters. Small quantities of paints and cleaning chemicals were observed within storage and mechanical rooms throughout the building. The identified materials are stored in retail-size containers and their storage is

consistent with normal building cleaning and maintenance activities. No other hazardous material storage was noted.

2.4 Areas of Concern

The AOCs identified for this Site include:

1. Historic fill layer is present across the site to depths as great as 3 ft below grade.
2. Historic use of the site for various commercial and industrial purposes.

Phase 1 Report is presented in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Professional (QEP) responsible for preparation of this RIR is Mr. Kevin Brussee of Brussee Environmental Corp.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements, and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

BEC performed the following scope of work within the boundary of the Site in December of 2024 and January 2025:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed six soil borings (SB1 through SB6) across the Site and collected twelve soil samples and one duplicate for chemical analysis from the soil borings to evaluate soil quality;
3. The three (3) proposed groundwater monitoring wells were not installed due to multiple refusals throughout the Site. Soil borings SB1 and SB3 hit refusal at a depth of approximately 18 ft below grade and soil borings SB2, SB4, and SB6 each reached a depth of approximately 14 to 15 ft below grade before they hit refusal. Refusal was hit at a depth of approximately 12 ft below grade at soil boring SB5. Hence, no groundwater flow was established, and no groundwater samples were collected for chemical analysis to evaluate groundwater quality;
4. Installed five soil vapor implants (SV1 through SV5) across the Site and collected five soil vapor samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical survey was performed by Coastal Environmental Solutions, Inc. (Coastal) within the portion of the building (dining room) that could be screened. Several rooms/hallways were too small to perform the GPR survey and/or contained too much debris/trash. The GPR survey was performed using a ImpulseRadar PinPointR UWB GPR which utilizes a dual band 400/800 MHz HS antenna mounted to a stroller frame which rolls over the surface. The total depth of penetration achieved with the antenna can be up to 10 feet but widely varies based on site-specific subsurface conditions. Conductive materials in the soil attenuate the GPR signal causing a decrease in effective depth of penetration and clarity. No anomalies indicative of an underground storage tank were noted.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On December 31, 2024, six soil borings (SB1 through SB6) were installed across the Site. The location of each of the soil borings is shown on Figure 5. Each of the six soil borings were performed utilizing a portable Geoprobe™ Model 420M equipped with a 3-ft long macro-core sampler and disposable acetate liners. Refusal was encountered within each soil boring at the following depths: 12 ft (SB5), 14 ft (SB2), 15 ft (SB4, SB6), 18 ft (SB1, SB3). Groundwater was not encountered in any of the six soil borings.

The location of the six soil borings were chosen to gain representative soil quality information for the Site. Access to the rear (southern portion) of the building for sampling was limited due to amount of debris in the hallways/rooms and BEC was unable to utilize the 420M for sampling along the western portion of the building due to a thicker concrete slab along that side of the building. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a PID and visually and olfactorily inspected for evidence of contamination. No PID values above background concentrations were recorded. A shallow soil sample was collected from all six soil borings for laboratory analysis from the interval 0 to 2 ft below sidewalk grade, and a deeper soil sample was collected for laboratory analysis from the intervals 10 to 12 ft below grade from soil borings SB5 and SB6, 12 to 14 ft below grade in soil borings in SB2, SB3 and SB4, and 16 to 18 ft below grade from soil boring SB1.

Soil boring details are provided in Table 1. Boring logs were prepared by a Qualified Environmental Professional and are attached in Appendix B.

Groundwater Monitoring Well Construction

BEC had proposed installation of a temporary monitoring well within any of the attempted soil boring locations. However, groundwater was not encountered within any of the six soil boring locations before refusal was encountered. Refusal was likely due to the limit of the piece of equipment used to perform the soil borings (Geoprobe™ Model 420M) which was required because of the small doorway into the building. Soil boring SB5 achieved a depth of approximately 12 ft below grade, soil boring SB2 achieved a depth of approximately 14 ft below grade, soil borings SB4 and SB6 achieved a depth of approximately 15 ft below grade, and soil

borings SB1 and SB3 achieved a depth of approximately 18 ft below grade. Groundwater is likely present at a depth of 20 ft below grade.

Survey

Soil borings, and soil vapor sampling locations were measured to the nearest 0.10 ft with respect to two or more permanent Site features.

Water Level Measurement

BEC did not encounter groundwater within any of the six soil borings performed at the Site. Therefore, no monitoring wells were installed, and no water level measurements were obtained. Groundwater is likely present at a depth of approximately 20 ft below grade. Regional groundwater flow is likely to the west.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation targeted Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. Media including soil and soil vapor were sampled and evaluated in the RIR. Discrete (grab) samples were used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment and selection of a final remedy.

Soil Sampling

A total of twelve soil samples and one duplicate soil sample was collected for chemical analysis during the RI and one set of trip blanks were included in the submission to the laboratory. Data on soil sample collection for chemical analyses, including dates of collection, analytical results, and sample depths, is reported on Tables 2 through 6. Figure 5 shows the location of samples collected during this RI. Soil exceedances are shown on the attached Figure 6. Laboratories and analytical methods for soil samples collected during the RI are shown below.

The twelve soil samples and duplicate sample were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis with proper chain of custody to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals. Sample analysis for 1,4-dioxane by EPA Method 8270D (SIM) was performed by Phoenix on sample SB1 (9-11'). Sample analysis for PFAs by EPA method 537 was performed by York Analytical Laboratories, Inc. on SB2 (12-14').

Groundwater Sampling

No groundwater samples were collected for chemical analysis during this RI due to refusal encountered within each of the six soil boring locations.

Soil Vapor Sampling

Five soil vapor probes were installed, and five soil vapor samples (SV1 through SV5) were collected for chemical analysis during the RI. The five soil vapor sampling locations are shown on Figure 5. Soil vapor sample analytical data is reported in Table 7, and the soil vapor sampling logs are included in Appendix C. Methodologies used for soil vapor assessment conform to the *NYSDOH Final Guidance on Soil Vapor Intrusion, October 2006 and the revised NYSDOH Decision Matrices dated May 2017.*

The five soil vapor implants were installed on December 31, 2024. The five soil vapor implants were installed using Geoprobe™ equipment and consisted of Geoprobe™ Model 213859, which are constructed of a 6-inch length of double woven stainless-steel wire. The soil vapor implants were installed to a depth of approximately 12 ft below grade. Each implant was attached to ¼-inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼-inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the implant to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Sampling of the five soil vapor implants was conducted on January 2, 2025. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the soil vapor probe was sealed using a 1 ft by 1 ft square sheet of 2-mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the four soil vapor probes. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field notebook. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approximately 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Appendix C). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories -Phyllis Shiller
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil analytical methods: • TAL Metals by EPA Method 6010C (rev. 2007), • VOCs by EPA Method 8260C (rev. 2006) • SVOCs by EPA Method 8270D (rev. 2007) • 1,4-dioxane by EPA Method 8270D (SIM), SB1 (16-18') only • Pesticides by EPA Method 8081B (rev. 2000) • PCBs by EPA Method 8082A (rev. 2000) Soil Vapor analytical methods: • VOCs by TO-15 parameters

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by York Analytical Laboratories – Sarah Widomski
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was York Analytical Laboratories.
Chemical Analytical Methods	Soil analytical methods SB2 (12-14'): • Per- and Polyfluoroalkyl Substances (PFAS) compounds by EPA Method 537 Modified – Full PFAS Target Analyte List (21 compounds)

Results of Chemical Analyses

Laboratory data for soil and soil vapor are summarized in Tables 2 through 7. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix D and E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

All geological and hydrogeological data presented in this section has been interpreted by the QEP responsible for oversight of this RIR.

Stratigraphy

The stratigraphy of the Site, from the surface down, consists of varying depths of fill (as great as 3 ft below grade) underlain with a native light brown silty sand.

Hydrogeology

Due to multiple refusals encountered across the Site, BEC was unable to install any monitoring wells. Therefore, water level data was not obtained. However, based on the elevation of the Site, groundwater is assumed to be present at a depth of approximately 20 ft below grade. Regional groundwater flow is expected to be to the west.

5.2 Soil Chemistry

Data collected during this Remedial Investigation is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. Summary tables of data for chemical analyses performed on soil samples collected during this investigation is included as Tables 2 through 6. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use, Residential, and Restricted Residential Use Soil Cleanup Objectives.

Soil/fill samples were collected during the RI and the results were compared to NYSDEC Part 375-6 Unrestricted Use Soil Cleanup Objectives (SCOs) NYSDEC Part 375-6 Residential Soil Cleanup Objectives (RSCOs), and Restricted Use Restricted Residential Soil Cleanup Objectives (RRSCOs) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples showed the following:

- No VOCs were detected above their UUSCOs within any of the soil samples. However, two VOCs were detected at trace concentrations below UUSCOs. Tetrachloroethene (180 µg/kg) was detected only within the shallow 0-2 ft soil sample collected from soil boring

SB6 and naphthalene (max. of 660 µg/kg) was detected within both the shallow (0-2 ft) and deep (10-12 ft) soil samples collected from soil boring SB6;

- Seven SVOCs including benz(a)anthracene (max of 4,100 µg/kg in SB6 10-12'), benzo(a)pyrene (max. of 3,600 µg/kg in SB6 10-12'), benzo(b)fluoranthene (max. of 4,700 µg/kg in SB6 10-12'), benzo(k)fluoranthene (max. of 1,200 µg/kg in SB6 10-12'), chrysene (max. of 3,900 µg/kg in SB6 10-12'), dibenz(a,h)anthracene (max. of 420 µg/kg in SB6 10-12'), and indeno(1,2,3-cd)pyrene (max. of 1,500 µg/kg in SB6 10-12') were detected above RRSCOs within two of the four shallow (0-2 ft) soil samples and one of the deep soil samples;
- No polychlorinated biphenyls (PCBs) were detected within in any of the soil samples collected at the Site;
- The pesticides 4,4'-DDE (4.4 µg/kg in SB5 0-2') and 4,4'-DDT (7 µg/kg in SB5 0-2') were detected above Unrestricted Use SCOs within one of the six shallow (0-2 ft) soil samples collected at the Site;
- Four Target Analyte List (TAL) metals including copper (max. of 141 mg/kg in SB1 0-2'), lead (max. of 517 mg/kg in SB1 0-2'), mercury (max. of 16 mg/kg in SB6 10-12'), and zinc (max. of 714 mg/kg in SB1 0-2') were detected at concentrations exceeding their UUSCOs. Of these metals, lead and mercury were detected above their respective RRSCOs. Mercury was detected above RRSCOs within two of the six deep soil samples;
- No PFAS compounds were detected above their respective EPA Guidance values within the soil sample retained for analysis; and
- 1,4-Dioxane was not detected within the soil sample retained for analysis; and
- Soil was consistent with historical fill across the Site within the shallow soil samples collected from the 0 to 2 ft interval.

5.3 Groundwater Chemistry

No groundwater samples were collected during the RI as monitoring wells could not be installed due to multiple refusals across the Site.

5.4 Soil Vapor Chemistry

Data collected during this Remedial Investigation is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on all the soil vapor samples collected at the Site is included in Table 7. Figure 7 shows the location and posts the values for soil vapor samples with detected concentrations.

Soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 Air Guidance Values derived by the New York State Department of Health (NYSDOH) located in the NYSDOH Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006 and the revised NYSDOH Decision Matrices dated May 2017, and the revised Decision Matrices dated February 2024.

- The soil vapor results indicated low to moderate levels of BTEX VOCs and chlorinated VOCs (CVOCs);
- The total concentration of BTEX VOCs (BTEX) ranged from non-detect (SV-3) to 38.57 $\mu g/m^3$ (SV-2);
- No petroleum related VOCs were detected above the monitoring level range established within the NYSDOH soil vapor guidance matrices D, E and F;
- Chlorinated VOC 1,1,1-trichloroethane was detected within two of the five soil vapor samples at a maximum concentration of 14.4 $\mu g/m^3$ in SV-5. Chlorinated VOC, tetrachloroethene (PCE) was detected in all five soil vapor samples (ranging from 26.9 $\mu g/m^3$ in SV-1 to 75.9 $\mu g/m^3$ in SV-5). Chlorinated VOC trichloroethene (TCE) was detected in all three soil vapor samples (ranging from 19.8 $\mu g/m^3$ in SV-1 to 37 $\mu g/m^3$ in SV-3);
- Cis-1,2-dichloroethene, 1,1-dichloroethene, carbon tetrachloride, methylene chloride, and vinyl chloride were not detected within any of the soil vapor samples.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected for the Site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Perfluorotridecanoic acid (PFTrDA)	ND	0.128	0.205
Perfluoroundecanoic acid (PFUnA)	ND	0.203	0.205
Combined PFOA and PFOS	**0**		
Combined Total Detections	**101.515**		

Compound	SB1 2024 (16-18') 12/31/2024 µg/Kg	
	Result	RL
1,4-dioxane	< 70	70

Notes:
DL- Detection Limit
RL - Reporting Limit
J- The value is estimated.
ND- Not Detected
The USEPA Health Advisory Level for drinking water is 70 ng/L (ppt) for combined detections of PFOA and PFOs

BUILDING CODE REFERENCES & NOTES

CODE NOTES, REQUIREMENTS & REFERENCES:
IT IS THE CONTRACTOR'S RESPONSIBILITY TO REFERENCE:
- LEGENDS, ABBRV.S & SYMBOLS: SHEET A-000
- GENERAL NOTES: SHEETS A-001 - A-003
- ACCESSIBILITY DTLS & NOTES: SHEETS A-004 - A-005
- BLDG CODE ANALYSIS & NOTES: SHEETS A-006 - A-007

& OTHER MANDATORY NOTES AND REQUIREMENTS THROUGHOUT THE PLANS DURING CONSTRUCTION. ANY DISCREPANCIES BTWN PLANS, DETAILS AND NOTES SHOULD BE NOTIFIED TO ARCHITECT AT AN INITIAL REVIEW PHASE PRIOR TO BEGINNING CONSTRUCTION

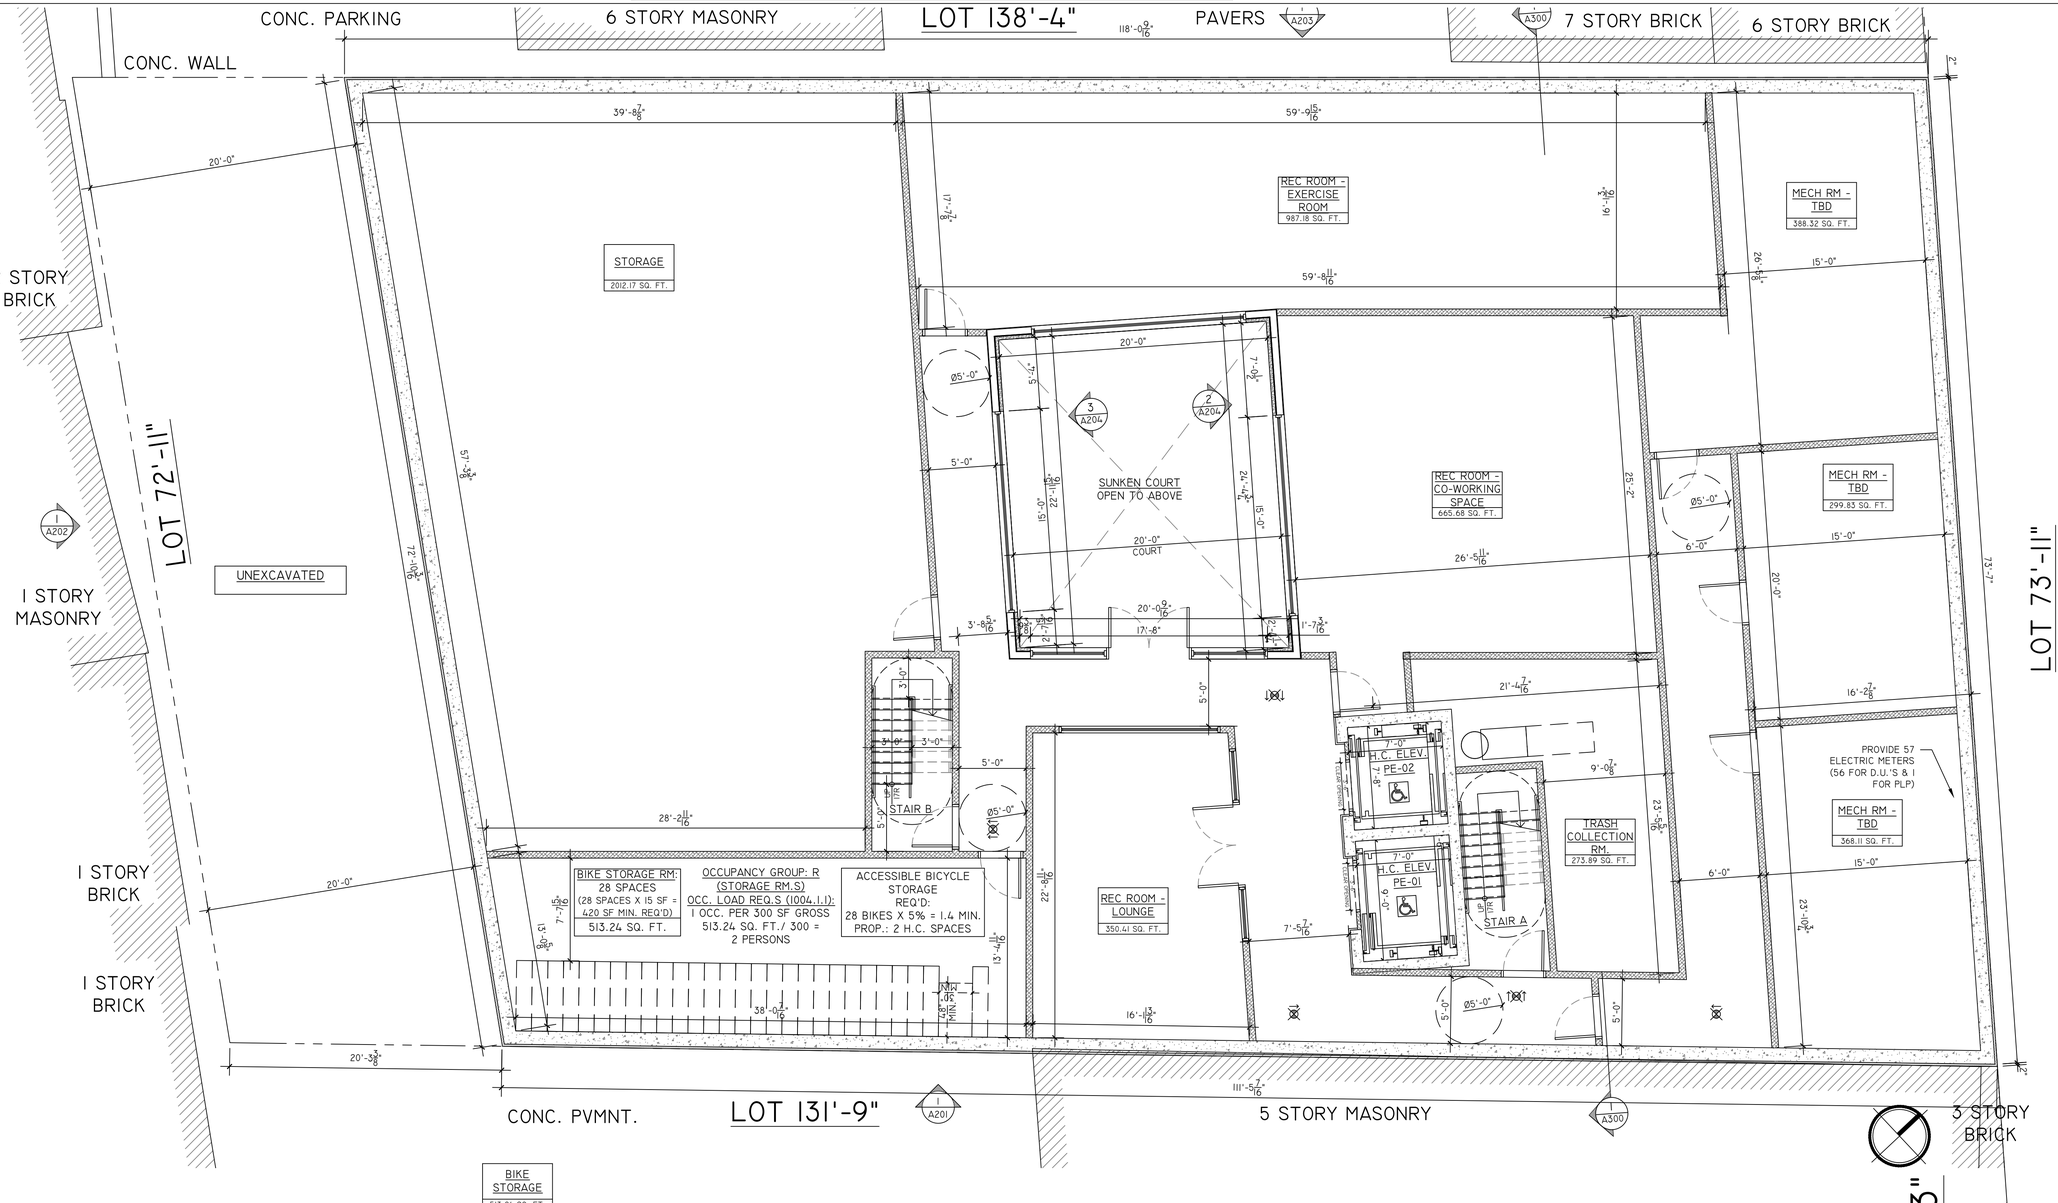
CONTRACTOR IS RESPONSIBLE TO COORDINATE ALL ASPECT OF THESE PLANS WITH PLANS BY OTHERS FOR MECHANICAL, ELECTRICAL, PLUMBING, SPRINKLER, FIRE ALARM, ELEVATOR AND OTHER TRADES AS REQURIED.

LIGHT & AIR CALCULATIONS:
SEE LIGHT & AIR WITHIN EACH HABITABLE SPACE ON ALL FLOOR PLANS SHEETS A-101 - A-105

SEE WINDOW SCH. A500 FOR PROVIDED LIGHT & AIR.

LIGHT AS PER 1205.2.1: MIN. 10% OF HABITABLE SPACE
VENT/AIR AS PER 1203.4.1.2.1: MIN. 5% OF HABITABLE SPACE
(12 SF. MIN. GLAZED AREA W/ 6 SF. MIN. OPENABLE AREA.)

NAME OF SPACE



XX.XX. SQ. FT.	AREA OF SPACE

Laboratory Reports – Phoenix

PHOENIX
Environmental Laboratories, Inc.

Friday, January 17, 2025

Attn: Mr Kevin Brussee
Brussee Environmental Corp
1150 Lincoln Avenue – Suite 4
Holbrook, NY 11741

Project ID: **60 N 1ST STREET BROOKLYN NY**
SDG ID: **GCS37389**
Sample ID#s: **CS37389 - CS37403**

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Volatile Comment:
There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

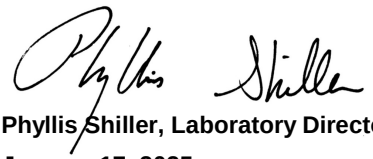
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.



Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

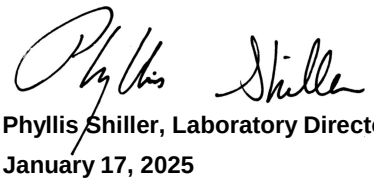
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:



Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

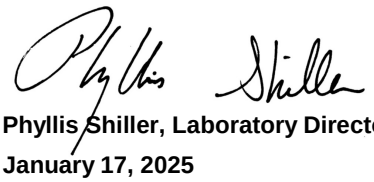
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:



Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

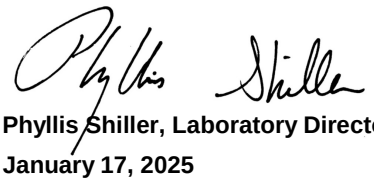
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:



Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

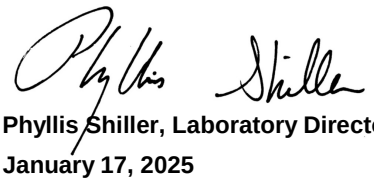
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:



Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

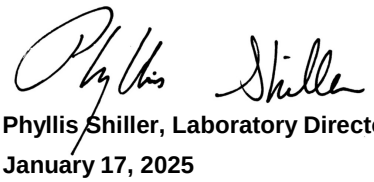
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.



Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Volatile Comment:
There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

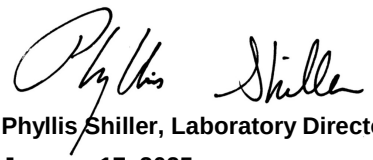
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.



Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

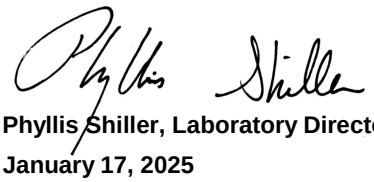
1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.



Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Analysis Comments

January 17, 2025 SDG I.D.: GCS37389

The following analysis comments are made regarding exceptions to criteria not already noted in the Analysis Report or QA/QC Report:

PCB Narration

AU-ECD5 01/13/25-1: CS37391, CS37395, CS37396, CS37399, CS37401

The following Continuing Calibration compounds did not meet % deviation criteria:
Samples: CS37391, CS37395, CS37396, CS37399, CS37401
Preceding CC 113B005 - None.
Succeeding CC 113B016 - DCBP SURR 27%L (20%)

PEST Narration

AU-ECD33 01/10/25-1: CS37389, CS37390, CS37393, CS37398

The following Continuing Calibration compounds did not meet % deviation criteria:
Samples: CS37389, CS37390, CS37393, CS37398
Preceding CC 110B025 - % DCBP 21%L (20%), Endosulfan II 24%L (20%), Methoxychlor 37%L (20%)
Succeeding CC 110B041 - % DCBP 25%L (20%), % TCMX 22%L (20%), Endosulfan II 22%L (20%), Methoxychlor 39%L (20%)
A low "1A" standard was run after the samples to demonstrate capability to detect any compounds outside of the CC acceptance criteria. All reported samples were ND for the affected compounds.

AU-ECD35 01/10/25-1: CS37391, CS37395, CS37397, CS37399

The following Continuing Calibration compounds did not meet % deviation criteria:
Samples: CS37391, CS37395, CS37397, CS37399
Preceding CC 110B025 - Endosulfan I 27%L (20%), Endosulfan II 29%L (20%), Methoxychlor 26%L (20%)
Succeeding CC 110B052 - Endosulfan II 23%L (20%)
A low "1A" standard was run after the samples to demonstrate capability to detect any compounds outside of the CC acceptance criteria. All reported samples were ND for the affected compounds.

AU-ECD4 01/10/25-1: CS37392, CS37394, CS37396, CS37401

The following Continuing Calibration compounds did not meet % deviation criteria:
Samples: CS37392, CS37394, CS37396, CS37401
Preceding CC 110B027 - Endosulfan II 25%L (20%), Endrin aldehyde 23%L (20%)
Succeeding CC 110B041 - None.
A low "1A" standard was run after the samples to demonstrate capability to detect any compounds outside of the CC acceptance criteria. All reported samples were ND for the affected compounds.

AU-ECD4 01/14/25-1: CS37400

The following Continuing Calibration compounds did not meet % deviation criteria:
Samples: CS37400
Preceding CC 114B026 - None.
Succeeding CC 114B040 - Endrin Ketone 21%H (20%)

Analysis Comments

January 17, 2025 SDG I.D.: GCS37389

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

The following Initial Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.058 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

The following Continuing Calibration compounds did not meet % deviation criteria: 2,4-Dinitrotoluene 21%H (20%), 3,3'-Dichlorobenzidine 24%L (20%)
The following Continuing Calibration compounds did not meet Maximum % deviation criteria: None.
The following Continuing Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.062 (0.1)
The following Continuing Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

CHEM06 01/07/25-1: CS37389

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

The following Initial Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.058 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

The following Continuing Calibration compounds did not meet % deviation criteria: 3,3'-Dichlorobenzidine 24%L (20%), 4-Nitrophenol 25%H (20%), Hexachlorocyclopentadiene 23%L (20%)
The following Continuing Calibration compounds did not meet Maximum % deviation criteria: None.
The following Continuing Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.058 (0.1)
The following Continuing Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

CHEM07 01/06/25-1: CS37393, CS37394

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

The following Initial Calibration compounds did not meet recommended response factors: % 2,4,6-Tribromophenol 0.048 (0.05), 2-Nitrophenol 0.061 (0.1), Hexachlorobenzene 0.079 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: % 2,4,6-Tribromophenol 0.048 (0.05)

The following Continuing Calibration compounds did not meet % deviation criteria: Bis(2-chloroethyl)ether 24%L (20%)
The following Continuing Calibration compounds did not meet Maximum % deviation criteria: None.
The following Continuing Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.062 (0.1), Bis(2-chloroethyl)ether 0.649 (0.7), Hexachlorobenzene 0.087 (0.1)
The following Continuing Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

Subject:	60 N. 1st Street - GCS37389 Pest/PCB addition

Good Morning Sarah,

For the 60 N. 1st Street soil samples, can you please add analysis of Pesticides/PCBs for each of the samples and the duplicate?

If you need any additional information, please let me know.

Thanks,

Patrick Recio (he/him)
Senior Project Manager

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Attention: Kevin Brussee

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 03, 2025 and listed below. The project was identified as your project: **WFM2401 60 N. 1st Street, Brooklyn NY**.

The analyses were conducted utilizing appropriate EPA methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

Please contact Client Services at 203.325.1371 with any questions regarding this report or e-mail clientservices@yorklab.com.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received

General Notes for York Project (SDG) No.: 25A0091

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.
MCL	This is the Maximum Contaminant Level in ng/L (ppt) established by the NYSDOH for these compounds where an MCL is reported. Exceedences are flagged accordingly.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northwest, LLC Project Manager.

Project/Site: Mercury SSE

Job ID: 350-1804-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
350-1804-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/10/2025 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

Metals
Method 1631B_SEP: The method blank for preparation batch 350-6408 and analytical batch 350-6533 contained Hg F-4 above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Brusse Environmental Corp
Project/Site: Mercury SSE

Job ID: 350-1804-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	N/A	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

1.0 INTRODUCTION

This Quality Assurance Project Plan (QAPP) has been prepared on behalf of 60 North 1st LLC for the implementation of a Remedial Investigation Work Plan (RIWP) by Vektor Consultants, LLC (Vektor) and their subcontractors at the property located at 60 North 1st Street, Brooklyn, New York (the Site). The Site is identified by the City of New York as Borough of Brooklyn, Block 2378, Lot 14.

This QAPP describes the protocols and procedures to be followed during the implementation of the RIWP. This QAPP was prepared in accordance with the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation and the NYSDEC BCP Guide.

1.1 Scope of Work

The proposed scope of work covered under this QAPP includes the collection and analysis of supplemental remedial soil, groundwater and soil vapor sampling.

The objective of the QAPP is to detail the policies, organization, objectives, functional activities, and specific quality assurance/quality control activities designed to achieve the data quality goals or objectives of the Remedial Investigation Work Plan. This QAPP addresses how the acquisition and handling of samples, as well as the review and reporting of data, will be documented for quality control (QC) purposes. Specifically, this QAPP addresses the following:

- The procedures to be used to collect, preserve, package, and transport samples;
- Field data collection and record keeping;
- Data management;
- Chain-of-custody procedures; and,
- Determination of precision, accuracy, completeness, representativeness, decision rules, comparability and level of quality control effort.

2.0 PROJECT TEAM

Vektor's team of trained and experienced environmental scientists, geologists, and engineers, along with their licensed subcontractors, will perform the below-listed tasks in a manner consistent with DER-10 Technical Guidance for Site Investigation and Remediation (DER-10).

Project Director, QEP	Ezgi Karayel	Vektor Consultants
Project Manager	Alex Keenan	Vektor Consultants
Field Leader	Ben Neumann	Vektor Consultants
Laboratory QA/QC Officer	Sarah Widomski	York Analytical Laboratories, Inc.
Third-party Data Validator	Don Anne	Alpha Geoscience

2.1 Project Director

Ezgi Karayel, Qualified Environmental Professional, will act as the Project Director and Quality Assurance/Quality Control (QA/QC) officer and will ensure the successful implementation of the RIWP.

2.2 Project Manager

Alex Keenan of Vektor will act as the Project Manager. She will oversee the field activities and coordinate for all elements of implementation of the RIWP. She will be responsible for coordinating with the field leader and other field crew as necessary.

2.3 Field Leader

Ben Neumann of Vektor will lead the field activities and ensure the implementation of the Health and Safety Plan (HASP) during all field work. He has the authority to stop all work if unsafe conditions are observed. He will be responsible for coordinating with all subcontractors. He will oversee the subcontractors in the field and collect samples outlined in the RIWP and in this QAPP in coordination with the Project Manager.

2.4 Laboratory Quality Assurance/Quality Control Officer

Laboratory analysis will be completed by York Analytical Laboratories (York) of Stratford, CT. York is a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP) certified laboratory (NY Cert. Numbers 10854 and 12058). Lea Sherman is the Client Manager who will ensure that all glassware including laboratory prepared trip blanks and chain of custodies are properly packaged and shipped. QA/QC

Officer is Sarah Widomski who will ensure that quality assurance procedures are followed. Quality Assurance requirements for analytical laboratory data include accuracy, precision, sensitivity, representativeness, and completeness. Data will be supplied in Analytical Services Protocol (ASP) Category B Data Packages.

2.5 Third-Party Data Validator

Don Anne of Alpha Geoscience will be the third-party validator. Data validation will be performed in accordance with the EPA validation guidelines for organic and inorganic data review. A Data Usability Summary Report (DUSR) will be prepared by Don Anne upon receipt of the analytical laboratory reports. The DUSR will present the results of the data validation, including a summary assessment of laboratory data packages, sample preservation and chain of custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness of each analytical method.

3.0 SAMPLING METHODS PROCEDURES

This section describes the field protocol and procedures to be followed during the collection of endpoint samples during the implementation of the Remedial Investigation Work Plan.

Table 1 provides a copy of the sampling summary rationale. Figure 1 provides a copy of the proposed supplemental remedial investigation sampling plan.

3.1 Soil Sampling

A total of 68 supplemental soil samples are proposed to be collected to fully delineate the vertical extent of contamination associated with historic operations at the Site.

The total number of soil samples in this QAPP is estimated and the total samples collected in the field will rely on field conditions.

- A Geologist will be on Site to log the soils, visually characterize them, and field screen them with a photo ionization detector (PID) equipped with 10.6 electron Volt (eV) lamp for the presence of petroleum contamination.
- All soil samples will be collected with disposable dedicated spoons to prevent cross contamination.
- All soil samples will immediately be placed in laboratory supplied glassware and labeled properly. Sample labels include Site address, sample identification and depth, date and time of sampling, analysis to be performed, and sampler's initials.
- Soil samples will be placed in coolers with ice to maintain a temperature of 4° C.
- A chain of custody that includes Site name and address, sample identification and depth, analysis to be performed, glassware summary, sampler's name and signature, turn-around-time and any additional notes will be prepared.
- All field observations including boring logs and PID readings will be recorded in a field book.
- Sampling equipment will be decontaminated between borings as further described in Section 3.0.
- All samples will be picked up from the Site on a daily basis by the laboratory's courier. The courier will sign the chain of custody upon pick up and provide a copy to Vektor.

The soil samples will be analyzed for:

- Target Compound List (TCL) volatile organic compounds (VOCs) via Environmental Protection Agency (EPA) Method 8260C/5035
- TCL semi-volatile organic compounds (SVOCs) via EPA Method 8270D
- Total analyte list (TAL) metals via EPA Method 6010D/7471B
- Polychlorinated biphenyls (PCBs) via EPA Method 8082A
- Pesticides via EPA Method 8081B

- NYSDEC list per and polyfluoroalkyl substances (PFAS) via EPA 1633
- 1,4-dioxane via EPA Method 8270SIM.

3.2 Groundwater Sampling

Seven pre-existing groundwater monitoring wells and one new groundwater monitoring well, for a total of eight samples, will be sampled as part of the supplemental remedial investigation.

Prior to sampling, each monitoring well will be gauged and purged until groundwater quality parameters such as temperature, dissolved oxygen, oxidation-reduction potential, pH and turbidity stabilize. Samples will then be collected using a peristaltic pump and dedicated tubing in accordance with low-flow sampling procedures. The pump will be decontaminated with Alconox® and water between each monitoring well.

Groundwater samples will be containerized in pre-cleaned laboratory-supplied glassware, stored in a chilled cooler (4°C), and submitted to a New York State Department of Health certified laboratory.

The groundwater samples will be analyzed for:

- Target Compound List (TCL) volatile organic compounds (VOCs) via Environmental Protection Agency (EPA) Method 8260C
- TCL semi-volatile organic compounds (SVOCs) via EPA Method 8270D
- Total analyte list (TAL) metals (filtered and unfiltered) via EPA Method 6010D/7470
- Polychlorinated biphenyls (PCBs) via EPA Method 8082A
- Pesticides via EPA Method 8081B
- NYSDEC list per and polyfluoroalkyl substances (PFAS) via EPA Method 1633
- 1,4-dioxane via EPA Method 8270D SIM.

3.3 Soil Vapor Sampling

Six soil vapor points (26SV-1 through 26SV-6) will be installed using the same direct-push drill rig mentioned above. Soil vapor points will be installed and sampled in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006). Soil vapor points will be installed approximately at 15 feet bgs. Sample points will be constructed of a dedicated stainless-steel screen fitted with ¼-inch outer diameter inert polyethylene, teflon lined, tubing which will be extended above ground surface to allow for purging and sampling. The points will be backfilled using glass beads followed by

environmental grade silica sand and topped with a bentonite layer to seal the tubing in the hole.

Prior to testing, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) technique to verify the integrity of the soil vapor point seal. The integrity of vapor points will be tested by placing a plastic shroud over the vapor points to isolate them from ambient air. Then, a helium tracer gas will be applied into the shroud and will be screened utilizing a helium detector for presence of helium. If no helium is detected in any of the vapor points, then sampling will occur. If helium is detected, then the points will be resealed properly prior to sampling.

After purging approximately three volumes of air from each vapor point at a flow rate less than 200 milliliters per minute, representative samples will be collected for laboratory analysis utilizing 6-liter SUMMA canisters fitted with 8-hour flow controllers set not to exceed 0.2 liters per minute, as established by the NYSDOH Guidance document. Upon completion of the vapor sampling, all canisters will be labeled properly with the sample ID numbers, and vacuum pressure readings in the canisters before and after the sample collection. The vapor samples will then be submitted to a NYSDOH ELAP-certified laboratory under proper chain of custody procedures to be analyzed for VOCs by EPA Method TO-15.

Additionally, as per DEC's request, soil vapor samples will be analyzed for mercury vapor via NIOSH 6009 Mod via a SKC 226-17-1A sorbent tube and sampling pump.

3.4 PFAS Sampling Procedures

- PFAS samples will be collected first in order to prevent cross-contamination since sample containers for other methods may have PFAS present on the containers.
- Nitrile gloves will be using during sampling.
- No food or drink will be present during PFAS sampling.
- No waterproof field notebooks, plastic clipboards, sharpies, or adhesives will be used.
- PFAS samples will be kept in a separate cooler away from other sampling containers that may contain PFAS.
- Coolers will be filled with regular ice only.
- Only Alconox will be used for decontamination.
- Sampler will not wear clothing washed with fabric softener or containing Tyvek or PVC.
- Sampler will not use cosmetics, moisturizer, hand cream or other similar products on the day of the sampling.
- Sampler will not wear sunscreen or insect repellants.

Attachment 1 provides a copy of the NYSDEC Guidance document for sampling and analysis, and assessment of PFAS under NYSDEC's Part 375 Remedial Programs.

Attachment 2 provides a copy of York Analytical Laboratories' Standard Operating Procedure Summary for PFAS in Groundwater, Surface Water, and Soils.

Attachment 3 provides a copy of York Analytical Laboratories' PFOS/PFOA Certification and Reporting Limits for PFAS.

Attachment 4 provides a copy of blank chain of custody samples.

3.5 Quality Assurance (QA)/ Quality Control (QC) Sampling

The accuracy, precision and completeness of the samples will be addressed by the certified laboratory for all data generated. One blind duplicate sample and one matrix spike/matrix spike duplicate (MS/MSD) sample will be collected for every 20 samples media and submitted to the laboratory for analysis of the same parameters. One field blank per sampling media will be collected and analyzed for the same parameters as the respective media. Trip blanks will be included in each cooler whenever samples are collected and transported to the laboratory for analysis of VOCs.

3.5.1 Trip Blanks

A trip blank consisting of two 40-ml vials filled with distilled, deionized water, will be provided by the laboratory. Trip blanks will be included in each cooler and will be analyzed for VOCs.

3.5.2 Field Blanks

Field blanks will be collected at a rate of one per 20 soil samples. Field blanks will be analyzed for the same analysis as the soil samples collected on the day of the sampling.

3.5.3 PFAS Field Blank

A PFAS field blank will be prepared on each day that PFAS sampling occurs. The laboratory will provide PFAS blank bottles as well as pre-filled PFAS field blank water containers. The contents of the PFAS field blank water container will be transferred into the PFAS field blank bottle. Both bottles will be returned to the laboratory along with the PFAS samples that were collected.

3.5.4 Blind Duplicate

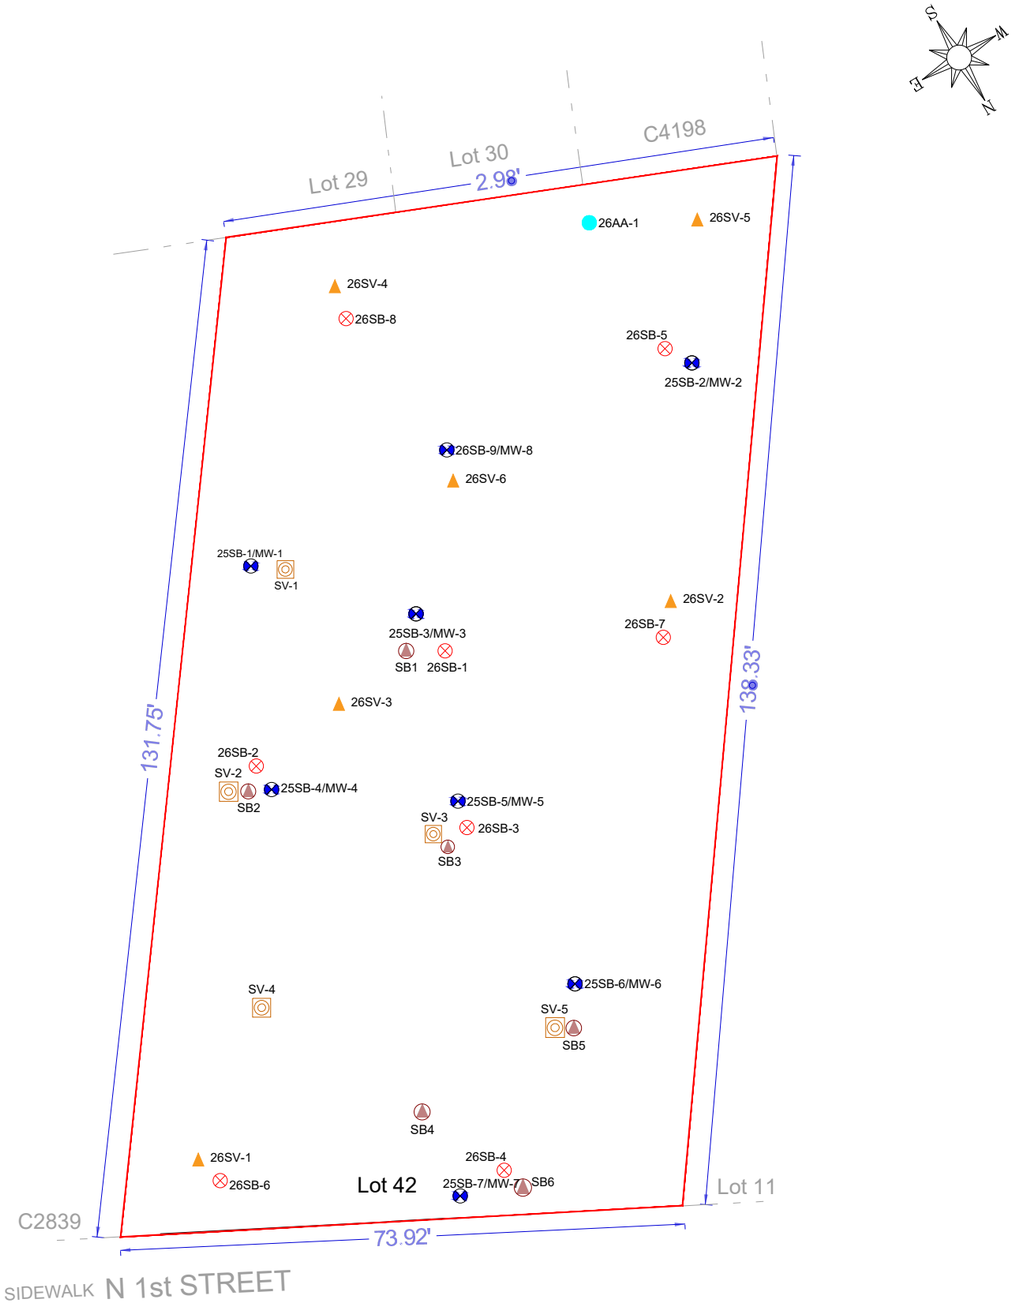
A blind duplicate sample will be collected at a rate of one per 20 soil samples. Blind duplicates will be analyzed for the same analysis as the soil and samples collected on the day of the sampling.

3.5.5 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD samples will be collected at a rate of one per 20 soil samples. MS/MSD samples will be analyzed for the same analysis as the soil samples collected on the day of the sampling.

Table 2 provides laboratory analytical methods, glassware, and holding times for each analysis.

3.6 Field Instrumentation



The field instruments to be used during the implementation of the remedial action work plan will be calibrated at the beginning of each day as per the manufacturers' specifications. Calibration records will be recorded in the field book.

4.0 DECONTAMINATION

All sampling equipment will be decontaminated between sampling locations unless they are dedicated disposable tools. Decontamination of non-dedicated sampling equipment will consist of the following procedure:

- Gently tap or scrape to remove adhered soil
- Rinse with tap water
- Wash with Alconox detergent solution and scrub
- Rinse with tap water
- Rinse with distilled or deionized water

Soil Sample Results, page 10	"The extent of soil contamination for purposes of delineation and remedy selection should be determined by having certain soil samples tested by Synthetic Precipitation Leaching Procedure (SPLP) and the leachate analyzed for PFAS. Soil exhibiting SPLP results above 70 ppt for either PFOA or PFOS (individually or combined) are to be evaluated during the cleanup phase."	"Soil cleanup objectives for PFOA and PFOS will be proposed in an upcoming revision to 6 NYCRR Part 375-6. Until SCOs are in effect, the following are to be used as guidance values. " [Interim SCO Table] "PFOA and PFOS results for soil are to be compared against the guidance values listed above. These guidance values are to be used in determining whether PFOA and PFOS are contaminants of concern for the site and for determining remedial action objectives and cleanup requirements. Site-specific remedial objectives for protection of groundwater can also be presented for evaluation by DEC. Development of site-specific remedial objectives for protection of groundwater will require analysis of additional soil parameters relating to leachability. These additional analyses can include any or all the parameters listed above (soil pH, cation exchange capacity, etc.) and/or use of SPLP. As the understanding of PFAS transport improves, DEC welcomes proposals for site-specific remedial objectives for protection of groundwater. DEC will expect that those may be dependent on additional factors including soil pH, aqueous pH, % organic carbon, % Sand/Silt/Clay, soil cations: K, Ca, Mg, Na, Fe, Al, cation exchange capacity, and anion exchange capacity. Site-specific remedial objectives should also consider the dilution attenuation factor (DAF). The NJDEP publication on DAF can be used as a reference: https://www.nj.gov/dep/srp/guidance/rs/daf.pdf. "	9/15/2020

Citation and Page Number	Current Text	Corrected Text	Date
Testing for Imported Soil Page 11	Soil imported to a site for use in a soil cap, soil cover, or as backfill is to be tested for PFAS in general conformance with DER-10, Section 5.4(e) for the PFAS Analyte List (Appendix F) using the analytical procedures discussed below and the criteria in DER-10 associated with SVOCs. If PFOA or PFOS is detected in any sample at or above 1 µg/kg, then soil should be tested by SPLP and the leachate analyzed for PFAS. If the SPLP results exceed 10 ppt for either PFOA or PFOS (individually) then the source of backfill should be rejected, unless a site-specific exemption is provided by DER. SPLP leachate criteria is based on the Maximum Contaminant Levels proposed for drinking water by New York State's Department of Health, this value may be updated based on future Federal or State promulgated regulatory standards. Remedial parties have the option of analyzing samples concurrently for both PFAS in soil and in the SPLP leachate to minimize project delays. Category B deliverables should be submitted for backfill samples, though a DUSR is not required.	Testing for PFAS should be included any time a full TAL/TCL analyte list is required. Results for PFOA and PFOS should be compared to the applicable guidance values. If PFOA or PFOS is detected in any sample at or above the guidance values then the source of backfill should be rejected, unless a site-specific exemption is provided by DER based on SPLP testing, for example. If the concentrations of PFOA and PFOS in leachate are at or above 10 ppt (the Maximum Contaminant Levels established for drinking water by the New York State Department of Health), then the soil is not acceptable. PFOA, PFOS and 1,4-dioxane are all considered semi-volatile compounds, so composite samples are appropriate for these compounds when sampling in accordance with DER-10, Table 5.4(e)10. Category B deliverables should be submitted for backfill samples, though a DUSR is not required.	9/15/2020

Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs

Objective

New York State Department of Environmental Conservation's Division of Environmental Remediation (DER) performs or oversees sampling of environmental media and subsequent analysis of PFAS as part of remedial programs implemented under 6 NYCRR Part 375. To ensure consistency in sampling, analysis, reporting, and assessment of PFAS, DER has developed this document which summarizes currently accepted procedures and updates previous DER technical guidance pertaining to PFAS.

Applicability

All work plans submitted to DEC pursuant to one of the remedial programs under Part 375 shall include PFAS sampling and analysis procedures that conform to the guidelines provided herein.

As part of a site investigation or remedial action compliance program, whenever samples of potentially affected media are collected and analyzed for the standard Target Analyte List/Target Compound List (TAL/TCL), PFAS analysis should also be performed. Potentially affected media can include soil, groundwater, surface water, and sediment. Based upon the potential for biota to be affected, biota sampling and analysis for PFAS may also be warranted as determined pursuant to a Fish and Wildlife Impact Analysis. Soil vapor sampling for PFAS is not required.

Field Sampling Procedures

DER-10 specifies technical guidance applicable to DER's remedial programs. Given the prevalence and use of PFAS, DER has developed "best management practices" specific to sampling for PFAS. As specified in DER-10 Chapter 2, quality assurance procedures are to be submitted with investigation work plans. Typically, these procedures are incorporated into a work plan, or submitted as a stand-alone document (e.g., a Quality Assurance Project Plan). Quality assurance guidelines for PFAS are listed in Appendix A - Quality Assurance Project Plan (QAPP) Guidelines for PFAS.

Field sampling for PFAS performed under DER remedial programs should follow the appropriate procedures outlined for soils, sediments, or other solids (Appendix B), non-potable groundwater (Appendix C), surface water (Appendix D), public or private water supply wells (Appendix E), and fish tissue (Appendix F).

QA/QC samples (e.g. duplicates, MS/MSD) should be collected as specified in DER-10, Section 2.3(c). For sampling equipment coming in contact with aqueous samples only, rinsate or equipment blanks should be collected. Equipment blanks should be collected at a minimum frequency of one per day per site or one per twenty samples, whichever is more frequent.

Analysis and Reporting

The investigation work plan should describe analysis and reporting procedures, including laboratory analytical procedures for the methods discussed below. As specified in DER-10 Section 2.2, laboratories should provide a full Category B deliverable. In addition, a Data Usability Summary Report (DUSR) should be prepared by an independent, third-party data validator. Electronic data submissions should meet the requirements provided at: https://www.dec.ny.gov/chemical/62440.html.

DER has developed a *PFAS Analyte List* (Appendix G) for remedial programs to understand the nature of contamination at sites. It is expected that reported results for PFAS will include, at a minimum, all the compounds listed. If lab and/or matrix specific issues are encountered for any analytes, the DER project manager, in consultation with the DER chemist, will make case-by-case decisions as to whether certain analytes may be temporarily or permanently discontinued from analysis at each site. As with other contaminants that are analyzed for at a site, the *PFAS Analyte List* may be refined for future sampling events based on investigative findings.

Routine Analysis

EPA Method 1633 is the procedure to use for environmental samples. Reporting limits for PFOA and PFOS in aqueous samples should not exceed 2 ng/L. Reporting limits for PFOA and PFOS in solid samples should not exceed 0.5 µg/kg. Reporting limits for all other PFAS in aqueous and solid media should be as close to these limits as possible. If laboratories indicate that they are not able to achieve these reporting limits for the entire *PFAS Analyte List*, site-specific decisions regarding acceptance of elevated reporting limits for specific PFAS can be made by the DER project manager in consultation with the DER chemist. Data review guidelines were developed by DER to ensure data comparability and usability (Appendix H - Data Review Guidelines for Analysis of PFAS in Non-Potable Water and Solids).

Additional Analysis

Additional laboratory methods for analysis of PFAS may be warranted at a site, such as the Synthetic Precipitation Leaching Procedure (SPLP) and Total Oxidizable Precursor Assay (TOP Assay).

In cases where site-specific cleanup objectives for PFOA and PFOS are to be assessed, soil parameters, such as Total Organic Carbon (Lloyd Kahn), soil pH (EPA Method 9045), clay content (percent), and cation exchange capacity (EPA Method 9081), should be included in the analysis to help evaluate factors affecting the leachability of PFAS in site soils.

SPLP is a technique used to determine the mobility of chemicals in liquids, soils and wastes, and may be useful in determining the need for addressing PFAS-containing material as part of the remedy. SPLP by EPA Method 1312 should be used unless otherwise specified by the DER project manager in consultation with the DER chemist.

Impacted materials can be made up of PFAS that are not analyzable by routine analytical methodology. A TOP Assay can be utilized to conceptualize the amount and type of oxidizable PFAS which could be liberated in the environment, which approximates the maximum concentration of perfluoroalkyl substances that could be generated if all polyfluoroalkyl substances were oxidized. For example, some polyfluoroalkyl substances may degrade or transform to form perfluoroalkyl substances (such as PFOA or PFOS), resulting in an increase in perfluoroalkyl substance concentrations as contaminated groundwater moves away from a source. The TOP Assay converts, through oxidation, polyfluoroalkyl substances (precursors) into perfluoroalkyl substances that can be detected by routine analytical methodology.[1]

[1] TOP Assay analysis of highly contaminated samples, such as those from an AFFF (aqueous film-forming foam) site, can result in incomplete oxidation of the samples and an underestimation of the total perfluoroalkyl substances.

Commercial laboratories have adopted methods which allow for the quantification of targeted PFAS in air and biota. The EPA's Office of Research and Development (ORD) is currently developing methods which allow for air emissions characterization of PFAS, including both targeted and non-targeted analysis of PFAS. Consult with the DER project manager and the DER chemist for assistance on analyzing biota/tissue and air samples.

Data Assessment and Application to Site Cleanup

Until such time as Soil Cleanup Objectives (SCOs) for PFOA and PFOS are published, the extent of contaminated media potentially subject to remediation should be determined on a case-by-case basis using the procedures discussed below and the criteria in DER-10. Preliminary target levels for cleanup of PFOA and PFOS in other media, including biota and sediment, have not yet been established by the DEC.

Water Sample Results

NYSDEC has adopted ambient water quality guidance values for PFOA and PFOS. Groundwater samples should be compared to the human health criteria of 6.7 ng/l (ppt) for PFOA and 2.7 ng/l (ppt) for PFOS. These human health criteria should also be applied to surface water that is used as a water supply. This guidance also includes criteria for surface water for PFOS applicable for aquatic life, which may be applicable at some sites. Drinking water sample results should be compared to the NYS maximum contaminant level (MCL) of 10 ng/l (ppt). Analysis to determine if PFOA and PFOS concentrations are attributable to the site should include a comparison between upgradient and downgradient levels, and the presence of soil source areas, as defined below.

If PFOA and/or PFOS are identified as contaminants of concern for a site, they should be assessed as part of the remedy selection process in accordance with Part 375 and DER-10.

Soil Sample Results

NYSDEC will delay adding soil cleanup objectives for PFOA and PFOS to 6 NYCRR Part 375-6 until the PFAS rural soil background study has been completed. Until SCOs are in effect, the following are to be used as guidance values:

Guidance Values for Anticipated Site Use	PFOA (ppb)	PFOS (ppb)
Unrestricted	0.66	0.88
Residential	6.6	8.8
Restricted Residential	33	44
Commercial	500	440
Industrial	600	440
Protection of Groundwater[2]	0.8	1.0

PFOA and PFOS results for soil are to be compared against the guidance values listed above. These guidance values are to be used in determining whether PFOA and PFOS are contaminants of concern for the site and for determining remedial action objectives and cleanup requirements. Site-specific remedial objectives for protection of groundwater can also be presented for evaluation by DEC. Development of site-specific remedial objectives for protection of groundwater will require analysis of additional soil parameters relating to leachability. These

[2] The Protection of Groundwater values are based on the above referenced ambient groundwater guidance values. Details on that calculation are available in the following document, prepared for the February 2022 proposed changes to Part 375 (https://www.dec.ny.gov/docs/remediation_hudson_pdf/part375techsupport.pdf). The movement of PFAS in the environment is being aggressively researched at this time; that research will eventually result in more accurate models for the behaviors of these chemicals. In the meantime, DEC has calculated the guidance value for the protection of groundwater using the same procedure used for all other chemicals, as described in Section 7.7 of the Technical Support Document (http://www.dec.ny.gov/docs/remediation_hudson_pdf/techsuppdoc.pdf).

additional analyses can include any or all the parameters listed above (soil pH, cation exchange capacity, etc.) and/or use of SPLP.

As the understanding of PFAS transport improves, DEC welcomes proposals for site-specific remedial objectives for protection of groundwater. DEC will expect that those may be dependent on additional factors including soil pH, aqueous pH, % organic carbon, % Sand/Silt/Clay, soil cations: K, Ca, Mg, Na, Fe, Al, cation exchange capacity, and anion exchange capacity. Site-specific remedial objectives should also consider the dilution attenuation factor (DAF). The NJDEP publication on DAF can be used as a reference: https://www.nj.gov/dep/srp/guidance/rs/daf.pdf.

Testing for Imported Soil

Testing for PFAS should be included any time a full TAL/TCL analyte list is required. Results for PFOA and PFOS should be compared to the applicable guidance values. If PFOA or PFOS is detected in any sample at or above the guidance values then the source of backfill should be rejected, unless a site-specific exemption is provided by DER based on SPLP testing, for example. If the concentrations of PFOA and PFOS in leachate are at or above the ambient water quality guidance values for groundwater, then the soil is not acceptable.

PFOA, PFOS and 1,4-dioxane are all considered semi-volatile compounds, so composite samples are appropriate for these compounds when sampling in accordance with DER-10, Table 5.4(e)10. Category B deliverables should be submitted for backfill samples, though a DUSR is not required.

Appendix A - Quality Assurance Project Plan (QAPP) Guidelines for PFAS

The following guidelines (general and PFAS-specific) can be used to assist with the development of a QAPP for projects within DER involving sampling and analysis of PFAS.

General Guidelines in Accordance with DER-10

- Document/work plan section title – Quality Assurance Project Plan
- Summarize project scope, goals, and objectives
- Provide project organization including names and resumes of the project manager, Quality Assurance Officer (QAO), field staff, and Data Validator
    - The QAO should not have another position on the project, such as project or task manager, that involves project productivity or profitability as a job performance criterion
- List the ELAP certified lab(s) to be used for analysis of samples
- Include a site map showing sample locations
- Provide detailed sampling procedures for each matrix
- Include Data Quality Usability Objectives
- List equipment decontamination procedures
- Include an "Analytical Methods/Quality Assurance Summary Table" specifying:
    - Matrix type
    - Number or frequency of samples to be collected per matrix
    - Number of field and trip blanks per matrix
    - Analytical parameters to be measured per matrix
    - Analytical methods to be used per matrix with minimum reporting limits
    - Number and type of matrix spike and matrix spike duplicate samples to be collected
    - Number and type of duplicate samples to be collected
    - Sample preservation to be used per analytical method and sample matrix
    - Sample container volume and type to be used per analytical method and sample matrix
    - Sample holding time to be used per analytical method and sample matrix
- Specify Category B laboratory data deliverables and preparation of a DUSR

Specific Guidelines for PFAS

- Include in the text that sampling for PFAS will take place
- Include in the text that PFAS will be analyzed by EPA Method 1633
- Include the list of PFAS compounds to be analyzed (*PFAS Analyte List*)
- Include the laboratory SOP for PFAS analysis
- List the minimum method-achievable Reporting Limits for PFAS
    - Reporting Limits should be less than or equal to:
        - Aqueous – 2 ng/L (ppt)
        - Solids – 0.5 µg/kg (ppb)
- Include the laboratory Method Detection Limits for the PFAS compounds to be analyzed
-
- Include detailed sampling procedures
    - Precautions to be taken
    - Pump and equipment types
    - Decontamination procedures
    - Approved materials only to be used
- Specify that regular ice only will be used for sample shipment
- Specify that equipment blanks should be collected at a minimum frequency of 1 per day per site for each matrix

Appendix B - Sampling Protocols for PFAS in Soils, Sediments and Solids

General

The objective of this protocol is to give general guidelines for the collection of soil, sediment and other solid samples for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 (http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf), with the following limitations.

Laboratory Analysis and Containers

Samples collected using this protocol are intended to be analyzed for PFAS using EPA Method 1633.

The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

Equipment

Acceptable materials for sampling include stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in to contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- stainless steel spoon
- stainless steel bowl
- steel hand auger or shovel without any coatings

Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

Sampling Techniques

Sampling is often conducted in areas where a vegetative turf has been established. In these cases, a pre-cleaned trowel or shovel should be used to carefully remove the turf so that it may be replaced at the conclusion of sampling. Surface soil samples (e.g. 0 to 6 inches below surface) should then be collected using a pre-cleaned, stainless steel spoon. Shallow subsurface soil samples (e.g. 6 to ~36 inches below surface) may be collected by digging a hole using a pre-cleaned hand auger or shovel. When the desired subsurface depth is reached, a pre-cleaned hand auger or spoon shall be used to obtain the sample.

When the sample is obtained, it should be deposited into a stainless steel bowl for mixing prior to filling the sample containers. The soil should be placed directly into the bowl and mixed thoroughly by rolling the material into the middle until the material is homogenized. At this point the material within the bowl can be placed into the laboratory provided container.

Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at 4 ± 2º Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- Request appropriate data deliverable (Category B) and an electronic data deliverable

Documentation

A soil log or sample log shall document the location of the sample/borehole, depth of the sample, sampling equipment, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate. Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appropriate rain gear (PVC, polyurethane, or rubber rain gear are acceptable), bug spray, and sunscreen should be used that does not contain PFAS. Well washed cotton coveralls may be used as an alternative to bug spray and/or sunscreen.

PPE that contains PFAS is acceptable when site conditions warrant additional protection for the samplers and no other materials can be used to be protective. Documentation of such use should be provided in the field notes.

Appendix C - Sampling Protocols for PFAS in Monitoring Wells

General

The objective of this protocol is to give general guidelines for the collection of groundwater samples for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 (http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf), with the following limitations.

Laboratory Analysis and Container

Samples collected using this protocol are intended to be analyzed for PFAS using EPA Method 1633.

The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

Equipment

Acceptable materials for sampling include: stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including plumbers tape and sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- stainless steel inertia pump with HDPE tubing
- peristaltic pump equipped with HDPE tubing and silicone tubing
- stainless steel bailer with stainless steel ball
- bladder pump (identified as PFAS-free) with HDPE tubing

Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

Sampling Techniques

Monitoring wells should be purged in accordance with the sampling procedure (standard/volume purge or low flow purge) identified in the site work plan, which will determine the appropriate time to collect the sample. If sampling using standard purge techniques, additional purging may be needed to reduce turbidity levels, so samples contain a limited amount of sediment within the sample containers. Sample containers that contain sediment may cause issues at the laboratory, which may result in elevated reporting limits and other issues during the sample preparation that can compromise data usability. Sampling personnel should don new nitrile gloves prior to sample collection due to the potential to contact PFAS containing items (not related to the sampling equipment) during the purging activities.

Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at 4 ± 2º Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- Collect one equipment blank per day per site and minimum 1 equipment blank per 20 samples. The equipment blank shall test the new and decontaminated sampling equipment utilized to obtain a sample for residual PFAS contamination. This sample is obtained by using laboratory provided PFAS-free water and passing the water over or through the sampling device and into laboratory provided sample containers
- Additional equipment blank samples may be collected to assess other equipment that is utilized at the monitoring well
- Request appropriate data deliverable (Category B) and an electronic data deliverable

Documentation

A purge log shall document the location of the sample, sampling equipment, groundwater parameters, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate. Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appropriate rain gear (PVC, polyurethane, or rubber rain gear are acceptable), bug spray, and sunscreen should be used that does not contain PFAS. Well washed cotton coveralls may be used as an alternative to bug spray and/or sunscreen.

PPE that contains PFAS is acceptable when site conditions warrant additional protection for the samplers and no other materials can be used to be protective. Documentation of such use should be provided in the field notes.

Appendix D - Sampling Protocols for PFAS in Surface Water

General

The objective of this protocol is to give general guidelines for the collection of surface water samples for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 (http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf), with the following limitations.

Laboratory Analysis and Container

Samples collected using this protocol are intended to be analyzed for PFAS using EPA Method 1633.

The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

Equipment

Acceptable materials for sampling include: stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials including sample bottle cap liners with a PTFE layer.

A list of acceptable equipment is provided below, but other equipment may be considered appropriate based on sampling conditions.

- stainless steel cup

Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

Sampling Techniques

Where conditions permit, (e.g. creek or pond) sampling devices (e.g. stainless steel cup) should be rinsed with site medium to be sampled prior to collection of the sample. At this point the sample can be collected and poured into the sample container.

If site conditions permit, samples can be collected directly into the laboratory container.

Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at 4 ± 2º Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- Collect one equipment blank per day per site and minimum 1 equipment blank per 20 samples. The equipment blank shall test the new and decontaminated sampling equipment utilized to obtain a sample for residual PFAS contamination. This sample is obtained by using laboratory provided PFAS-free water and passing the water over or through the sampling device and into laboratory provided sample containers
- Request appropriate data deliverable (Category B) and an electronic data deliverable

Documentation

A sample log shall document the location of the sample, sampling equipment, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate. Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appropriate rain gear (PVC, polyurethane, or rubber rain gear are acceptable), bug spray, and sunscreen should be used that does not contain PFAS. Well washed cotton coveralls may be used as an alternative to bug spray and/or sunscreen.

PPE that contains PFAS is acceptable when site conditions warrant additional protection for the samplers and no other materials can be used to be protective. Documentation of such use should be provided in the field notes.

Appendix E - Sampling Protocols for PFAS in Private Water Supply Wells

General

The objective of this protocol is to give general guidelines for the collection of water samples from private water supply wells (with a functioning pump) for PFAS analysis. The sampling procedure used should be consistent with Sampling Guidelines and Protocols – Technological Background and Quality Control/Quality Assurance for NYS DEC Spill Response Program – March 1991 (http://www.dec.ny.gov/docs/remediation_hudson_pdf/sgpsect5.pdf), with the following limitations.

Laboratory Analysis and Container

Drinking water samples collected using this protocol are intended to be analyzed for PFAS by EPA Method 537, 537.1, 533, or ISO Method 25101. The preferred material for containers is high density polyethylene (HDPE). Pre-cleaned sample containers, coolers, sample labels, and a chain of custody form will be provided by the laboratory.

Equipment

Acceptable materials for sampling include stainless steel, HDPE, PVC, silicone, acetate, and polypropylene. Additional materials may be acceptable if pre-approved by New York State Department of Environmental Conservation's Division of Environmental Remediation.

No sampling equipment components or sample containers should come in contact with aluminum foil, low density polyethylene, glass, or polytetrafluoroethylene (PTFE, Teflon™) materials (e.g. plumbers tape), including sample bottle cap liners with a PTFE layer.

Equipment Decontamination

Standard two step decontamination using detergent (Alconox is acceptable) and clean, PFAS-free water will be performed for sampling equipment. All sources of water used for equipment decontamination should be verified in advance to be PFAS-free through laboratory analysis or certification.

Sampling Techniques

Locate and assess the pressure tank and determine if any filter units are present within the building. Establish the sample location as close to the well pump as possible, which is typically the spigot at the pressure tank. Ensure sampling equipment is kept clean during sampling as access to the pressure tank spigot, which is likely located close to the ground, may be obstructed and may hinder sample collection.

Prior to sampling, a faucet downstream of the pressure tank (e.g., washroom sink) should be run until the well pump comes on and a decrease in water temperature is noted which indicates that the water is coming from the well. If the homeowner is amenable, staff should run the water longer to purge the well (15+ minutes) to provide a sample representative of the water in the formation rather than standing water in the well and piping system including the pressure tank. At this point a new pair of nitrile gloves should be donned and the sample can be collected from the sample point at the pressure tank.

Sample Identification and Logging

A label shall be attached to each sample container with a unique identification. Each sample shall be included on the chain of custody (COC).

Quality Assurance/Quality Control

- Immediately place samples in a cooler maintained at 4 ± 2º Celsius using ice
- Collect one field duplicate for every sample batch, minimum 1 duplicate per 20 samples. The duplicate shall consist of an additional sample at a given location
- Collect one matrix spike / matrix spike duplicate (MS/MSD) for every sample batch, minimum 1 MS/MSD per 20 samples. The MS/MSD shall consist of an additional two samples at a given location and identified on the COC
- If equipment was used, collect one equipment blank per day per site and a minimum 1 equipment blank per 20 samples. The equipment blank shall test the new and decontaminated sampling equipment utilized to obtain a sample for residual PFAS contamination. This sample is obtained by using laboratory provided PFAS-free water and passing the water over or through the sampling device and into laboratory provided sample containers.
- A field reagent blank (FRB) should be collected at a rate of one per 20 samples. The lab will provide a FRB bottle containing PFAS free water and one empty FRB bottle. In the field, pour the water from the one bottle into the empty FRB bottle and label appropriately.
- Request appropriate data deliverable (Category B) and an electronic data deliverable
- For sampling events where multiple private wells (homes or sites) are to be sampled per day, it is acceptable to collect QC samples at a rate of one per 20 across multiple sites or days.

Documentation

A sample log shall document the location of the private well, sample point location, owner contact information, sampling equipment, purge duration, duplicate sample, visual description of the material, and any other observations or notes determined to be appropriate and available (e.g. well construction, pump type and location, yield, installation date). Additionally, care should be performed to limit contact with PFAS containing materials (e.g. waterproof field books, food packaging) during the sampling process.

Personal Protection Equipment (PPE)

For most sampling Level D PPE is anticipated to be appropriate. The sampler should wear nitrile gloves while conducting field work and handling sample containers.

Field staff shall consider the clothing to be worn during sampling activities. Clothing that contains PTFE material (including GORE-TEX®) or that have been waterproofed with PFAS materials should be avoided. All clothing worn by sampling personnel should have been laundered multiple times.

Appendix F - Sampling Protocols for PFAS in Fish

This appendix contains a copy of the current SOP developed by the Division of Fish and Wildlife (DFW) entitled "General Fish Handling Procedures for Contaminant Analysis" (Ver. 8). This SOP should be followed when collecting fish for contaminant analysis. Note, however, that the Bureau of Ecosystem Health will not be supplying bags or tags. All supplies are the responsibility of the collector

Procedure Name: General Fish Handling Procedures for Contaminant Analysis

Number: FW-005

Purpose: This procedure describes data collection, fish processing and delivery of fish collected for contaminant monitoring. It contains the chain of custody and collection record forms that should be used for the collections.

Organization: Environmental Monitoring Section
Bureau of Ecosystem Health
Division of Fish and Wildlife (DFW)
New York State Department of Environmental Conservation (NYSDEC)
625 Broadway
Albany, New York 12233-4756

Version: 8

Previous Version Date: 21 March 2018

Summary of Changes to this Version: Updated bureau name to Bureau of Ecosystem Health. Added direction to list the names of all field crew on the collection record. Minor formatting changes on chain of custody and collection records.

Originator or Revised by: Wayne Richter, Jesse Becker

Date: 26 April 2019

Quality Assurance Officer and Approval Date: Jesse Becker, 26 April 2019

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

GENERAL FISH HANDLING PROCEDURES FOR CONTAMINANT ANALYSES

A. Original copies of all continuity of evidence (i.e., Chain of Custody) and collection record forms must accompany delivery of fish to the lab. A copy shall be directed to the Project Leader or as appropriate, Wayne Richter. All necessary forms will be supplied by the Bureau of Ecosystem Health. Because some samples may be used in legal cases, it is critical that each section is filled out completely. Each Chain of Custody form has three main sections:

   1. The top box is to be filled out **and signed** by the person responsible for the fish collection (e.g., crew leader, field biologist, researcher). This person is responsible for delivery of the samples to DEC facilities or personnel (e.g., regional office or biologist).

   2. The second section is to be filled out **and signed** by the person responsible for the collections while being stored at DEC, before delivery to the analytical lab. This may be the same person as in (1), but it is still required that they complete the section. Also important is the **range of identification numbers** (i.e., tag numbers) included in the sample batch.

   3. Finally, the bottom box is to record any transfers between DEC personnel and facilities. Each subsequent transfer should be **identified, signed, and dated**, until laboratory personnel take possession of the fish.

B. The following data are required on each **Fish Collection Record** form:

   1. Project and Site Name.

   2. DEC Region.

   3. All personnel (and affiliation) involved in the collection.

   4. Method of collection (gill net, hook and line, etc.)

   5. Preservation Method.

C. The following data are to be taken on each fish collected and recorded on the **Fish Collection Record** form:

   1. Tag number - Each specimen is to be individually jaw tagged at time of collection with a unique number. Make sure the tag is turned out so that the number can be read without opening the bag. Use tags in sequential order. For small fish or composite samples place the tag inside the bag with the samples. The Bureau of Ecosystem Health can supply the tags.

   2. Species identification (please be explicit enough to enable assigning genus and species). Group fish by species when processing.

   3. Date collected.

   4. Sample location (waterway and nearest prominent identifiable landmark).

   5. Total length (nearest mm or smallest sub-unit on measuring instrument) and weight (nearest g or

smallest sub-unit of weight on weighing instrument). Take all measures as soon as possible with calibrated, protected instruments (e.g. from wind and upsets) and prior to freezing.

6. Sex - fish may be cut enough to allow sexing or other internal investigation, but do not eviscerate. Make any incision on the right side of the belly flap or exactly down the midline so that a left-side fillet can be removed.

D. General data collection recommendations:

1. It is helpful to use an ID or tag number that will be unique. It is best to use metal striped bass or other uniquely numbered metal tags. If uniquely numbered tags are unavailable, values based on the region, water body and year are likely to be unique: for example, R7CAY11001 for Region 7, Cayuga Lake, 2011, fish 1. If the fish are just numbered 1 through 20, we have to give them new numbers for our database, making it more difficult to trace your fish to their analytical results and creating an additional possibility for errors.

2. Process and record fish of the same species sequentially. Recording mistakes are less likely when all fish from a species are processed together. Starting with the bigger fish species helps avoid missing an individual.

3. If using Bureau of Ecosystem Health supplied tags or other numbered tags, use tags in sequence so that fish are recorded with sequential Tag Numbers. This makes data entry and login at the lab and use of the data in the future easier and reduces keypunch errors.

4. Record length and weight as soon as possible after collection and before freezing. Other data are recorded in the field upon collection. An age determination of each fish is optional, but if done, it is recorded in the appropriate “Age” column.

5. For composite samples of small fish, record the number of fish in the composite in the Remarks column. Record the length and weight of each individual in a composite. All fish in a composite sample should be of the same species and members of a composite should be visually matched for size.

6. Please submit photocopies of topographic maps or good quality navigation charts indicating sampling locations. GPS coordinates can be entered in the Location column of the collection record form in addition to or instead for providing a map. These records are of immense help to us (and hopefully you) in providing documented location records which are not dependent on memory and/or the same collection crew. In addition, they may be helpful for contaminant source trackdown and remediation/control efforts of the Department.

7. When recording data on fish measurements, it will help to ensure correct data recording for the data recorder to call back the numbers to the person making the measurements.

E. Each fish is to be placed in its own individual plastic bag. For small fish to be analyzed as a composite, put all of the fish for one composite in the same bag but use a separate bag for each composite. It is important to individually bag the fish to avoid difficulties or cross contamination when processing the fish for chemical analysis. Be sure to include the fish’s tag number inside the bag, preferably attached to the fish with the tag number turned out so it can be read. Tie or otherwise secure the bag closed. **The Bureau of Ecosystem Health will supply the bags.** If necessary, food grade bags may be procured from a suitable vendor (e.g., grocery store). It is preferable to redundantly label each bag with a manila tag tied between the knot and the body of the bag. This tag should be labeled with the project name, collection location, tag number, collection date, and fish species. If scales are collected, the scale envelope should be labeled with

the same information.

F. Groups of fish, by species, are to be placed in one large plastic bag per sampling location. **The Bureau of Ecosystem Health will supply the larger bags.** Tie or otherwise secure the bag closed. Label the site bag with a manila tag tied between the knot and the body of the bag. The tag should contain: project, collection location, collection date, species and **tag number ranges**. Having this information on the manila tag enables lab staff to know what is in the bag without opening it.

G. Do not eviscerate, fillet or otherwise dissect the fish unless specifically asked to. If evisceration or dissection is specified, the fish must be cut along the exact midline or on the right side so that the left side fillet can be removed intact at the laboratory. If filleting is specified, the procedure for taking a standard fillet (SOP PREPLAB 4) must be followed, including removing scales.

H. Special procedures for PFAS: Unlike legacy contaminants such as PCBs, which are rarely found in day to day life, PFAS are widely used and frequently encountered. Practices that avoid sample contamination are therefore necessary. While no standard practices have been established for fish, procedures for water quality sampling can provide guidance. The following practices should be used for collections when fish are to be analyzed for PFAS:

No materials containing Teflon.
No Post-it notes.
No ice packs; only water ice or dry ice.
Any gloves worn must be powder free nitrile.
No Gore-Tex or similar materials (Gore-Tex is a PFC with PFOA used in its manufacture).
No stain repellent or waterproof treated clothing; these are likely to contain PFCs.
Avoid plastic materials, other than HDPE, including clipboards and waterproof notebooks.
Wash hands after handling any food containers or packages as these may contain PFCs.
Keep pre-wrapped food containers and wrappers isolated from fish handling.
Wear clothing washed at least six times since purchase.
Wear clothing washed without fabric softener.
Staff should avoid cosmetics, moisturizers, hand creams and similar products on the day of sampling as many of these products contain PFCs (Fujii et al. 2013). Sunscreen or insect repellent should not contain ingredients with “fluor” in their name. Apply any sunscreen or insect repellent well downwind from all materials. Hands must be washed after touching any of these products.

I. All fish must be kept at a temperature <45° F (<8° C) immediately following data processing. As soon as possible, freeze at -20° C ± 5° C. Due to occasional freezer failures, daily freezer temperature logs are required. The freezer should be locked or otherwise secured to maintain chain of custody.

J. In most cases, samples should be delivered to the Analytical Services Unit at the Hale Creek field station. Coordinate delivery with field station staff and send copies of the collection records, continuity of evidence forms and freezer temperature logs to the field station. For samples to be analyzed elsewhere, non-routine collections or other questions, contact Wayne Richter, Bureau of Ecosystem Health, NYSDEC, 625 Broadway, Albany, New York 12233-4756, 518-402-8974, or the project leader about sample transfer. Samples will then be directed to the analytical facility and personnel noted on specific project descriptions.

K. A recommended equipment list is at the end of this document.

NOTICE OF WARRANTY

By signature to the chain of custody (reverse), the signatory warrants that the information provided is truthful and accurate to the best of his/her ability. The signatory affirms that he/she is willing to testify to those facts provided and the circumstances surrounding the same. Nothing in this warranty or chain of custody negates responsibility nor liability of the signatories for the truthfulness and accuracy of the statements provided.

HANDLING INSTRUCTIONS

On day of collection, collector(s) name(s), address(es), date, geographic location of capture (attach a copy of topographic map or navigation chart), species, number kept of each species, and description of capture vicinity (proper noun, if possible) along with name of Town and County must be indicated on reverse.

Retain organisms in manila tagged plastic bags to avoid mixing capture locations. Note appropriate information on each bag tag.

Keep samples as cool as possible. Put on ice if fish cannot be frozen within 12 hours. If fish are held more than 24 hours without freezing, they will not be retained or analyzed.

Initial recipient (either DEC or designated agent) of samples from collector(s) is responsible for obtaining and recording information on the collection record forms which will accompany the chain of custody. This person will seal the container using packing tape and writing his signature, the time and the date across the tape onto the container with indelible marker. Any time a seal is broken, for whatever purpose, the incident must be recorded on the Chain of Custody (reason, time, and date) in the purpose of transfer block. Container then is resealed using new tape and rewriting signature, with time and date.

EQUIPMENT LIST

Scale or balance of appropriate capacity for the fish to be collected.

Fish measuring board.

Plastic bags of an appropriate size for the fish to be collected and for site bags.

Individually numbered metal tags for fish.

Manila tags to label bags.

Small envelops, approximately 2” x 3.5”, if fish scales are to be collected.

Knife for removing scales.

Chain of custody and fish collection forms.

Clipboard.

Pens or markers.

Paper towels.

Dish soap and brush.

Bucket.

Cooler.

Ice.

Duct tape.

Appendix G – PFAS Analyte List

Appendix H - Data Review Guidelines for Analysis of PFAS in Non-Potable Water and Solids

General

These guidelines are intended to be used for the validation of PFAS using EPA Method 1633 for projects within the Division of Environmental Remediation (DER). Data reviewers should understand the methodology and techniques utilized in the analysis. Consultation with the end user of the data may be necessary to assist in determining data usability based on the data quality objectives in the Quality Assurance Project Plan. A familiarity with the laboratory's Standard Operating Procedure may also be needed to fully evaluate the data. If you have any questions, please contact DER's Quality Assurance Officer, Dana Barbarossa, at dana.barbarossa@dec.ny.gov.

Preservation and Holding Time

Samples should be preserved with ice to a temperature of less than 6°C upon arrival at the lab. The holding time is 28 days to extraction for aqueous and solid samples. The time from extraction to analysis for aqueous samples is 28 days and 40 days for solids.

Temperature greatly exceeds 6ºC upon arrival at the lab*	Use professional judgement to qualify detects and non-detects as estimated or rejected
Holding time exceeding 28 days to extraction	Use professional judgement to qualify detects and non-detects as estimated or rejected if holding time is grossly exceeded

*Samples that are delivered to the lab immediately after sampling may not meet the thermal preservation guidelines. Samples are considered acceptable if they arrive on ice or an attempt to chill the samples is observed.

Initial Calibration

The initial calibration should contain a minimum of six standards for linear fit and six standards for a quadratic fit. The relative standard deviation (RSD) for a quadratic fit calibration should be less than 20%.

The low-level calibration standard should be within 50% - 150% of the true value, and the mid-level calibration standard within 70% - 130% of the true value.

%RSD >20%	J flag detects and UJ non detects

Continuing Calibration Verification

Continuing calibration verification (CCV) checks should be analyzed at a frequency of one per ten field samples. If CCV recovery is very low, where detection of the analyte could be in question, ensure a low level CCV was analyzed and use to determine data quality.

CCV recovery <70 or >130%	J flag results

Blanks

There should be no detections in the method blanks above the reporting limits. Equipment blanks, field blanks, rinse blanks etc. should be evaluated in the same manner as method blanks. Use the most contaminated blank to evaluate the sample results.

Blank Result	Sample Result	Qualification
Any detection	<Reporting limit	Qualify as ND at reporting limit
Any detection	>Reporting Limit and >10x the blank result	No qualification
>Reporting limit	>Reporting limit and <10x blank result	J+ biased high

Field Duplicates

A blind field duplicate should be collected at rate of one per twenty samples. The relative percent difference (RPD) should be less than 30% for analyte concentrations greater than two times the reporting limit. Use the higher result for final reporting.

RPD >30%	Apply J qualifier to parent sample

Lab Control Spike

Lab control spikes should be analyzed with each extraction batch or one for every twenty samples. In the absence of lab derived criteria, use 70% - 130% recovery criteria to evaluate the data.

Recovery <70% or >130% (lab derived criteria can also be used)	Apply J qualifier to detects and UJ qualifier to non detects

Matrix Spike/Matrix Spike Duplicate

One matrix spike and matrix spike duplicate should be collected at a rate of one per twenty samples. Use professional judgement to reject results based on out of control MS/MSD recoveries.

Recovery <70% or >130% (lab derived criteria can also be used)	Apply J qualifier to detects and UJ qualifier to non detects of parent sample only
RPD >30%	Apply J qualifier to detects and UJ qualifier to non detects of parent sample only

Extracted Internal Standards (Isotope Dilution Analytes)

Problematic analytes (e.g. PFBA, PFPeA, fluorotelomer sulfonates) can have wider recoveries without qualification. Qualify corresponding native compounds with a J flag if outside of the range.

Recovery <50% or >150%	Apply J qualifier
Recovery <25% or >150% for poor responding analytes	Apply J qualifier
Isotope Dilution Analyte (IDA) Recovery <10%	Reject results

Signal to Noise Ratio

The signal to noise ratio for the quantifier ion should be at least 3:1. If the ratio is less than 3:1, the peak is discernable from the baseline noise and symmetrical, the result can be reported. If the peak appears to be baseline noise and/or the shape is irregular, qualify the result as tentatively identified.

Reporting Limits

If project-specific reporting limits were not met, please indicate that in the report along with the reason (e.g. over dilution, dilution for non-target analytes, high sediment in aqueous samples).

Peak Integrations

Target analyte peaks should be integrated properly and consistently when compared to standards. Ensure branched isomer peaks are included for PFAS where standards are available. Inconsistencies should be brought to the attention of the laboratory or identified in the data review summary report.

ATTACHMENT 2

Laboratory Standard Operating Procedure Summary for PFAS

Standard Operating Procedure - Summary
PFAS in Groundwater, Surface water and Soils

1.0 Summary

Target PFAS compounds are prepared and analyzed using EPA Method 537.1 modified. Aqueous and Soil samples are fortified with isotopic surrogates of the target PFAS compounds, extracted and concentrated to a known volume. The extracts are then analyzed employing LC-MSMS techniques.

Each preparation batch (per matrix) includes a preparation blank, lab control sample (blank spike), sample matrix spike and matrix spike duplicate and up to 20 samples.

2.0 Sample Preparation

Sample preparation involves extraction/clean-up and final concentration to a known volume before analysis. Isotopic surrogates are added to all preparation batch samples/QC.

2.1 Aqueous Samples

A known volume of sample is spiked with isotopic surrogates and extracted using Solid Phase Extraction (SPE) techniques. The SPE tubes are eluted with solvent and the eluant is then concentrated using nitrogen evaporation to a final volume of 1.0 mL. The final concentrated extract is fortified with Internal Standard and analyzed by LC-MSMS.

2.2 Soil Samples

A known weight of sample is fortified with isotopic surrogates, mixed then extracted in methanolic potassium hydroxide employing vortex mixing, followed by orbital shaking and finally ultrasonic extraction.

The extract is centrifuged and the supernatant solvent is quantitatively poured off and a small volume of PFAS free water is added to the solvent. The solvent mixture is evaporated using nitrogen evaporation and the remaining aqueous extract is brought to a known volume with PFAS free water.

The aqueous extract is then pH adjusted to 6-8 using glacial acetic acid and the resulting aqueous solution is extracted using SPE techniques. The SPE tube is eluted with solvent and the eluant is then concentrated using nitrogen evaporation to a final volume of 2.0 mL. The final concentrated extract is fortified with Internal Standard and analyzed by LC-MSMS.

3.0 **Analysis**

Analysis is conducted utilizing an Agilent Infinity 1290 HPLC system interfaced to an Agilent 6470AAR LC-MSMS with an Agilent Jet Stream-ElectroSpray Ionization (AJS-ESI)interface. The system is operated in the dynamic MRM (multiple reaction monitoring) mode for specific PFAS target isotopes and native analogs.

Where possible, multiple MRM transitions are used for targets and isotopes. Some species only exhibit single MRM transitions. Precursors and product ions are used for Quantitative and Qualitative purposes respectively.

3.1 Initial Calibration

The LC-MSMS is calibrated with 7 standards of a total of 40 isotopes and analog target PFAS compounds. Calibration is conducted from 0.25 to 20 ng/mL. Calibration employs internal standard techniques and either average response factor or quadratic regression is used depending upon the best calibration model based upon accuracy across the calibration range.

3.2 Continuing Calibration Verification

Each analytical sequence includes an opening continuing calibration verification (CCV) and a CCV after every 10 injections and at the end of the analysis sequence.

The CCV acceptance criteria are $\pm$ 30% of the expected value. Internal Standard areas are acceptable when -50% to +50% of the average response in the initial calibration.

3.3 Isotopic Surrogates (Isotope Dilution Analytes (IDA)

18 IDAs are utilized for this procedure. These isotopes are used to correct for recovery of detected target analog PFAS compounds through the preparation/analysis processes. The recovery limits currently are 25-150 % recovery and these limits are adjusted based upon laboratory determined control limits when sufficent data points per matrix are available.

3.4 Method Blanks (MBLK)

Each preparation batch includes a laboratory method blank. Any result greater than the Reporting Limit or 2 ng/L (aqueous) or 0.5 ug/kG (soil) is "B" flagged according with the exception of any detection of PFOA, PFOS or PFNA above the RL will require re-extraction of the batch.

3.5 Blank Spike (LCS)

Each preparation batch includes and BS/LCS. Recoveries are calculated and based upon isotope dilution. Recovery acceptance limits are 50-150% with RPD of 30% for a BSD if performed.

3.6 Matrix Spike/Matrix Spike Duplicates (MS/MSD)

Each preparation batch includes and MS/MSD pair. Recoveries are calculated and based upon isotope dilution. Recovery acceptance limits are 25-150% with RPD of 35% for samples.

4.0 Data Review and Reporting

All quantitation reports and LIMS output files are generated using the Agilent Mass Hunter reporting programs. The Quant reports include all Quantitative data and MRM transition data which are reviewed. The LIMS output file is in a format that allows upload to Element LIMS.

Isotope Dilution calculations are performed using our custom PFAS.mdb program which automatically uploads to the LIMS output file for upload to Element LIMS.

Once uploaded to ELEMENT, any exceptions/outliers are noted, flagged and set to reviewed.

All data reported are isotopically corrected for all QC and samples.

5.0 Revision History

May 1, 2019 Revision 1.0 First Issue

6.0 Approvals:

Laboratory Director Ben Gulizia

Corp. Technical Director Robert Bradley

Corp. QA Officer Sarah Widomski

ARIEL CZEMERINSKI, P.E.
Email: Ariel@AMC-Engineering.com

SUMMARY:

New York State Professional Engineer. Chemical and Environmental Engineer, with 29 years of experience in the chemical and environmental areas. Areas of expertise include inspections and sign off on Large Scale Vapor Barrier Installations at Various NYC schools, Design and inspections of Sub Slab Depressurization Systems, wastewater treatment systems, Large scale dewatering system design for construction, process control and automation, process optimization, productivity improvement, quality systems, environmental compliance, Phase I Environmental Site Assessments, Phase II Environmental Investigations, Phase III: Remedial Activities, process and plant safety, and management of a production facility. Special Inspector with New York City Department of Buildings. Registered PE in NY.

Professional Experience:

AMC: 18 Years
Prior: 6 years

Education

Master of Science in Chemical Engineering, Columbia University, New York, NY, Feb. 1990.
Bachelor of Science in Chemical Engineering, University Of Buenos Aires, Buenos Aires, Argentina, May 1987

Areas of Expertise

- Vapor Intrusion - Barrier and Sub Slab Venting System Design
- Environmental Assessment Statements under CEQR, ULURP
- Remedial Program Design and Management
- Environmental Compliance, Clean Water Act, Clean Air Act, Hazardous Materials
- Dewatering & Treatment System Design
- SWPPP design and implementation. Preparation and Submittal of NOIs.
- NYCDEP Sewer Discharge Permitting
- Transfer Station Permitting and Compliance
- Wastewater Treatment Systems and Permitting, SPDES, LI Well permit, Water Withdrawal Permit.
- Air Permits and Registration
- Zoning Regulations and Permitting
- Safety and Environmental Training
- Waste Management Plans
- Professional Certifications
- OSHA 40-hr HAZWOPER
- OSHA 10-hr Construction Safety and Health

AMC Engineering PLLC
18-36 42nd Street
Astoria, NY 11105
Phone: (516) 417-8588

Project Experience

Project: Bergen Basin Sewer - CS-JA-BBS -Queens, NY
Project Description: NYC infrastructure (sewer, water) upgrade, drainage channel installation. Dewatering Design. Permits with NYCDEP and NYSDEC. Soil contaminated with petroleum requiring excavation, soil management and disposal under a Materials Handling Plan, Construction Health and Safety Plan. SWPPP design and implementation.
Client: JR Cruz - NYCDDC
Regulatory Authority: NYSDEC, NYCDEP
Role: Mr. Czemerinski served as the Environmental Consultant for the project.

Project: SER002326- Storm and Sanitary Sewers in Wardwell Avenue, Staten Island, New York
Project Description: NYC infrastructure (sewer, water) upgrade.
Dewatering Design. Permits with NYCDEP and NYSDEC. SWPPP design and implementation.
Client: E.E. Cruz - NYCDDC
Regulatory Authority: NYSDEC, NYCDEP
Role: Mr. Czemerinski served as the Environmental Consultant for the project.

Project: HED568-Installation of New 20" Subaqueous water main extension, and new 12" sub-aqueous high pressure gas main from the Bronx to Randall's Island, New York
Project Description: NYC infrastructure (gas, water) upgrade.
Soil contaminated with petroleum requiring excavation, soil management and disposal under a Materials Handling Plan, Construction Health and Safety Plan. Dewatering Design. Permits with NYCDEP and NYSDEC.
Client: E.E. Cruz - NYCDDC
Regulatory Authority: NYSDEC, NYCDEP
Role: Mr. Czemerinski served as the Environmental Consultant for the project.

Project: Domsey Fiber Corp. - 431 Kent Avenue, Brooklyn NY
Project Description: NYS Brownfield cleanup project / NYC E-Designation. Soil contaminated with chlorinated solvents, petroleum and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: Express Builders
Regulatory Authority: NYSDEC, NYCOER
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

Project: SE-807 –Construction of Storm and Sanitary Sewers and Water Main in 20th Ave between 126th St and US Bulkhead Line Area, College Point, Queens, NY
Project Description: NYC Residential infrastructure (sewer, water) upgrade, outfall reconstruction, Soil characterization, soil management and disposal under a Materials Handling Plan, Construction Health and Safety Plan and Community Air Monitoring Plan. SWPPP design and implementation, Public Participation Plan, Marine HASP, Dewatering Design and permit application.

Client: EIC Associates
Regulatory Authority: NYCDDC
Role: Mr. Czemerinski served as the Environmental Consultant for the project.

Project: Springfield Gardens Residential Area BMP - Springfield Gardens, Queens, NY
Project Description: NYC Residential infrastructure (sewer, gas, water) upgrade, drainage channel installation and pond restoration. Soil contaminated with, petroleum and heavy metals requiring excavation, soil management and disposal under a Materials Handling Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: EIC Associates - NYCEDC
Regulatory Authority: NYSDEC, NYCParks
Role: Mr. Czemerinski served as the Environmental Consultant for the project.

Project: Former Domino Sugar Site - Kent Avenue, Brooklyn NY
Project Description: NYC E-Designation. Soil contaminated with semi-volatile organic compounds and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: Two Trees Management
Regulatory Authority: NYCOER
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

Project: Former Uniforms For Industry Site - Jamaica Avenue, Queens NY
Project Description: NYS Brownfield cleanup project / NYC E-Designation. Soil contaminated with chlorinated solvents, petroleum, mop oil and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: The Arker Companies
Regulatory Authority: NYSDEC, NYCOER
Role: Mr. Czemerinski served as the Remedial Engineer for the project

Project: Former Sunbelt Equipment Site – 25 Kent Avenue, Brooklyn, NY
Project Description: NYS Brownfield cleanup project. Soil contaminated with petroleum, and heavy metals and coal tar, requiring deep excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan, Dewatering Design and implementation, SWPPP design and implementation
Client: 19 Kent Acquisition LLC
Regulatory Authority: NYSDEC
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

AMC Engineering PLLC
18-36 42nd Street
Astoria, NY 11105
Phone: (516) 417-8588

Project Experience

Project: Former Charles Pfizer & Co. Site - 407 Marcy Avenue, Brooklyn, NY
Project Description: NYS Brownfield cleanup project / NYC E-Designation. Soil contaminated with chlorinated solvents, petroleum, and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: The Rabsky Group
Regulatory Authority: NYSDEC, NYCOER
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

Project: Former East Coast Industrial Uniforms Site - 39 Skillman Street, Brooklyn, NY
Project Description: NYS Brownfield cleanup project / NYC E-Designation. Soil contaminated with chlorinated solvents, petroleum, and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: Riverside Builders
Regulatory Authority: NYSDEC, NYCOER
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

Project: Former BP Amoco Service Station Site - 1800 Southern Boulevard, Bronx, NY
Project Description: NYS Brownfield cleanup project / NYC E-Designation. Soil contaminated with petroleum, and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: SoBro, Joy Construction
Regulatory Authority: NYSDEC, NYCOER
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

Project: Former Dico G Auto & Truck Repair Site - 3035 White Plains Road, Bronx, NY
Project Description: NYS Brownfield cleanup project. Soil contaminated with petroleum, and heavy metals requiring excavation, soil management and disposal under a Remedial Action Work Plan, Soil / Materials Management Plan, Construction Health and Safety Plan and Community Air Monitoring Plan
Client: The Arker Companies
Regulatory Authority: NYSDEC
Role: Mr. Czemerinski served as the Remedial Engineer for the project.

Ezgi Karayel

Principal

Contact

ezgi@vektorconsultants.com

Ezgi Karayel is an environmental engineer with extensive experience in brownfield redevelopment. She is the founder and Principal of Vektor Consultants and serves as Operations Officer of the firm. Ms. Karayel guides firm's clients through their due diligence processes. She manages all aspects of the firm strongly focusing on brownfield redevelopment and E-Designation projects across New York Metropolitan area. She has worked with major real estate developers and shareholders by developing strategic approaches to the environmental challenges of complex real estate transactions and brownfield redevelopment. Her experience also includes a broad range of environmental services including regulatory compliance, due diligence assessments, acquisition support, design and implementation of engineering controls and remediation systems, excavation support and soil disposal plans, and facility decommissioning.

She is the chair of the Partnership's Scholarship Program and works closely with committee members to support the education and training of students who are pursuing environmental careers.

Education

B.S. Environmental Engineering
University at Buffalo

Professional Registration

OSHA 10-hour Construction and 40-hour General Industry
OSHA 40-hour HAZWOPER and 8-hour HAZWOPER Refresher
Certified Environmental Manager and Certified Environmental Inspector

Affiliations

New York City Brownfield Partnership, President

Brownfield Coalition of the Northeast, Advisory Board Member

Select Projects

Linden Boulevard, Queens, New York – Site Investigation and Remediation of a 7-acre former landfill with a Restrictive Declaration. The scope of work for the project included preparation of a Remedial Investigation Work Plan for review and approval by the NYCOER, NYSDEC and NYCDOH, implementation of Remedial Investigation, preparation of Remedial Investigation Report, Remedial Action Work Plan, preparation and implementation of a waste characterization plan for soils for proper disposal, supervision of site remediation activities, coordination with remediation engineer to design a methane mitigation system as well as vapor barrier system and managing field staff during remediation.

Ezgi Karayel, Principal

Former Tunnel Diner, Jersey City, New Jersey – Remedial Investigation (RI) of a 1⁄2-acre property in accordance with the New Jersey Technical Requirements for Site Remediation. Ms. Karayel worked closely with the Licensed Site Remediation Professional (LSRP) of the project. Followed by the approval of the RAWP prepared by her, Ms. Karayel directed remediation activities at the site and managed field staff on a daily basis. Upon completion of remediation, she has prepared Remedial Action Outcome for review and certification of the LSRP.

249 North 7th Street, Brooklyn, New York – As a Project Director for a Remedial Investigation of a former auto repair shop with an active spill, Ms. Karayel was responsible for remediation of the property under the direct supervision of NYCOER and NYSDEC. Her responsibilities consisted of preparing the required reports and supervision of remediation including excavation, and installation of engineering controls. By successful coordination with NYCOER, she has managed to enroll the project in City's Clean Soil Bank program and saving the client over $160,000 for soil disposal.

9029 Flatlands Avenue, Brooklyn, New York – E-Designation for HazMat. She conducted a Phase I ESA prior to development, followed by remedial investigation and preparation of Remedial Investigation Report and Remedial Action Work Plan for the remediation. Remediation for the project included design and implementation of an active sub-slab depressurization system. For the engineering controls design and implementation, Ms. Karayel worked closely with the Professional Engineer for the project and performed all required pilot tests, initial start-up and inspections.

37-23 33rd Street, Queens, New York – Removal of "P" Designation. Ms. Karayel managed to prevent the property from becoming a Class II site by performing a thorough due-diligence and disproving the prior consultant's findings and recommendations. Furthermore, her due-diligence study and evaluation saved the client over $1,000,000 clean-up costs, regulatory and legal fees.

261 Grand Concourse, Bronx, New York – Brownfield Redevelopment
1-9 Wythe Avenue, Brooklyn, New York – Brownfield Redevelopment
42 Reeve Place, Brooklyn, New York – Spill Closure
21-01 21st Street, Queens, New York – Former Gasoline Station Decommissioning and Storage Tank Removal
260-262 Van Brunt Street, Brooklyn, New York – Brownfield Cleanup
299 East 161st Street, Bronx, New York – Voluntary Cleanup Program
122 East 32nd Street, New York, New York – Community Center, Remediation under Voluntary Cleanup Program
346 Metropolitan Avenue, Brooklyn, New York – Voluntary Cleanup Program
574 Broome Street, New York, New York – Voluntary Cleanup Program
173-175 McGuinness Boulevard, Brooklyn, New York – Voluntary Cleanup Program

1.0 INTRODUCTION

This Health and Safety Plan (HASP) has been prepared on behalf of 60 North 1st LLC for the implementation of a Remedial Investigation Work Plan (RIWP) by Vektor Consultants, LLC (Vektor) and its subcontractors at the property located at 60 North 1st Street, Brooklyn, New York (the Site). The Site is identified by the City of New York as Borough of Brooklyn, Tax Block 2378 and Lot 14.

This HASP describes lines of authority, responsibility, and communication as they pertain to health and safety functions at this site in compliance with *29 CFR 1910.120(b)(2) and 29 CFR 1926.65(b)(2)*. This plan also details key personnel who are responsible for the development and implementation of the HASP. Vektor field personnel will implement this HASP during the implementation of Remedial Investigation Work Plan (RIWP).

1.1 Site Location and Description

The Site is located at 60 North 1st Street within the Williamsburg neighborhood of Brooklyn, NY. It is located on the south side of North 1st Street between Wythe Avenue to the east and Kent Avenue to the west. The site is legally identified as Kings County Tax Block 2378 and Lot 14 on the New York City Tax Map. The Site is bound to the north by a three-story condominium building and a six-story condominium building (80 Metropolitan Avenue) across North 1st Street, a five-story commercial building and a five-story residential building (57 Grand Street), two single-story commercial buildings (69 Grand Street) and a five-story residential building (55 Grand Street) to the south, a five-story residential apartment building (66 North 1st Street) to the east and a seven-story residential apartment building (52 North 1st Street) to the west. A site location map is provided as Figure 1.

The former Site building has been demolished and the Site is capped by concrete slabs and secured with construction fencing.

1.2 Summary of Previous Investigations

The following reports were reviewed during the preparation of this HASP in order to determine potential hazards:

Phase I Environmental Site Assessment by Brussee Environmental Corp., dated December 2025

A Phase I Environmental Site Assessment (ESA) was completed for the Site in December 2024 by Brussee Environmental Corp. (BEC). The ESA was performed in accordance with ASTM E1527-21 and the USEPA's All Appropriate Inquiry requirements. No previous ESAs or environmental investigation reports for the Site were provided to Brussee Environmental for review.

BEC concluded that the historic use of the property represented a REC and additional Business Environmental Risks (BERs) noted the Presence of an E-Designation (E-138) for hazardous materials, as well as the potential presence of fill material, possible PCB-containing ballasts in old light fixtures and suspect ACM and water damage within the former building. The December 2024 Phase I ESA recommended that a subsurface investigation (soil, soil vapor, and/or groundwater sampling) be performed to evaluate potential impacts from historic uses and to satisfy the E-Designation requirements for future redevelopment.

Phase II ESA/Remedial Investigation Report by BEC dated February 2025

BEC performed a Phase II ESA/remedial investigation under NYCOER oversight prior to redevelopment due to the E-Designation on the property. The scope of work included performance of a geophysical survey, installation of six soil borings to depths between 12 feet and 18 feet across the Site, installation of five soil vapor implants to 12 feet across the Site, and collection of twelve (12) soil samples and five (5) soil vapor samples for chemical analysis between December 2024 and January 2025:

- The results of the GPR Survey indicated there were no subsurface anomalies with reflections or signatures consistent with USTs.
- The RIR concluded that a historic fill layer was present extending to approximately 3 feet bgs and that SVOCs were detected above RRSCOs in two shallow interval samples and one deeper interval sample. Two pesticides were detected above UUSCOs, and four total metals including copper (max. of 141 mg/kg in SB1 0- 2'), lead (max. of 517 mg/kg in SB1 0-2'), mercury (max. of 16 mg/kg in SB6 10-12'), and zinc (max. of 714 mg/kg in SB1 0-2') were detected at concentrations exceeding their UUSCOs. Of these metals, lead and mercury were also detected above their respective RRSCOs.
- Groundwater samples were not collected during the RI due to multiple refusals.
- Soil vapor results indicated low to moderate levels of petroleum-related VOCs and chlorinated VOCs (CVOCs).

Due to the presence of elevated concentrations of total mercury identified in soil samples, BEC activated 8 soil samples for speciation analysis to determine the characteristics of mercury. Based on the results, total mercury concentrations initially ranged between 0.039 mg/kg to 1,000 mg/kg. Elemental mercury (F0) was detected in all samples at trace concentrations (<0.01% of total), indicating that the majority of mercury is bound in other forms.

Supplemental Investigation report by Vektor Consultants dated August 2025

Vektor performed a supplemental investigation to evaluate the groundwater conditions at the Site in June 2025. The scope of work included performance of a geophysical survey, installation of seven soil borings to depths between 20 feet and 26 feet across the Site, installation of six permanent monitoring wells, and collection of fourteen (14) soil samples and six (6) groundwater samples for chemical analysis between June and July 2025:

The conclusions of the investigations are as follows:

- The subsurface materials beneath the Site are generally described from surface grade to 7.5 feet below grade surface as general fill consisting of fine to medium-grained brown sand with varying amounts of fine to course gravel, brick, cinder ash, metal, and small amounts of silt.
- Groundwater was encountered at approximately 25 feet.
- No significant PID readings were detected in the soil samples.
- Soil analytical results indicate no VOC exceedances. Limited SVOC exceedances of UUSCOs and RRSCOs were observed in shallow soils, primarily polycyclic aromatic hydrocarbons (PAHs). Metals, including arsenic, lead, and mercury, were detected above UUSCOs, with mercury impacts extending into deeper soils. TCLP analysis of soils with elevated lead and mercury confirmed that the material is not hazardous.
- Groundwater analytical results indicate limited exceedances of AWQS for one chlorinated VOC (trichloroethene) and one SVOC (indeno(1,2,3-cd)pyrene). No pesticides or PCBs were detected above regulatory standards. Several total metals, including arsenic, chromium, lead, nickel, selenium, thallium, iron, manganese, mercury, and sodium, were present above AWQS in multiple monitoring wells. However, dissolved metals (manganese, selenium, and sodium) results were consistent with regional groundwater conditions.

2.0 ORGANIZATIONAL STRUCTURE

Vektor will provide a copy of this HASP to each contractor and subcontractor in accordance with 29 CFR 1910.120(b)(1)(iv) and 29 CFR 1926.65(b)(1)(iv) to inform them of site hazards and emergency procedures. All contractors and subcontractors are solely responsible for the safe and healthful performance of all work by each of its employees and/or support personnel who may enter the Site. Each contractor and subcontractor shall provide its own HASP as required by 29 CFR 1910.120 and 29 CFR 1926.65. However, they need to submit a copy of their HASP to Vektor or they can adopt this HASP during the RI activities.

2.1 Site Supervisor

As required by *29 CFR 1910.120(b)(2)(i)(A) and 29 CFR 1926.65(b)(2)(i)(A)*, a Site Supervisor will be assigned prior to construction activities. The Site Supervisor is responsible for directing all hazardous waste operations. All other site personnel report directly to the Site Supervisor unless otherwise noted. The Site Supervisor is directly responsible for:

- Ensuring the pre-entry briefing and/or tailgate-safety meetings are held prior to initiating any site activity, and at such other times as necessary to ensure that employees are apprised of site hazards
- Ensuring that all work activities conducted are consistent with this HASP and making any modifications as necessary
- Verifying all Job Hazard Analyses and ensuring that ongoing Hazard Analysis is conducted at this Site
- Overseeing the training program and ensuring that employees are trained for all tasks or operations they are asked to perform
- Providing a copy of this HASP to each contractor and subcontractor
- Updating the Site Control Program as needed
- Granting site workers site and zone access approval
- Registering all site visitors
- Establishing and maintaining security measures for this Site
- Directing how each work zone is adjusted
- Notified if emergency assistance is needed
- Supervising PPE use on this Site
- Approving any changes in PPE used on this Site
- Notified when any hazardous-substance spill occurs
- Evaluating the quality and safety of response activities after every emergency incident or evacuation of this Site
- Providing site workers with notifications and training on changes to the emergency response plan

- Evaluating confined spaces and responsible for the confined space permit program
- Performing initial monitoring to identify and evaluate any hazardous atmospheres during confined space operations
- Implementing the thermal stress program
- Authorizing the hot-work plan and cutting and welding operations
- Inspecting the hot-work permit area before work is authorized
- Monitoring site activities as they pertain to health and safety at this site
- Stopping any unsafe acts that pose an immediate or imminent health and safety hazard to anyone at this site
- Ensuring that all elements of this HASP are followed and correctly implemented
- Updating the Site Health and Safety Supervisor and other applicable personnel as to changes or work progress reports that may pertain to health and safety functions at this site
- Setting up decontamination lines and the solutions appropriate for the type of chemical contamination on Site
- Controlling the decontamination of all equipment, personnel, and samples from the contaminated areas
- Ensuring that all required decontamination equipment is available and in working order
- Providing for collection, storage, and disposal of decontamination waste (e.g., rinse water, contaminated sediment, etc.)

2.2 Site Health and Safety Supervisor

As required by *29 CFR 1910.120(b)(2)(i)(B) and 29 CFR 1926.65(b)(2)(i)(B)*, David Klein (or designated alternate) is the Site Health and Safety Supervisor who has the responsibility and authority for all functions that may pertain to health and safety at this site. This is the individual located on a hazardous waste site that is responsible to the Site Supervisor and has the authority and knowledge necessary to implement the HASP and verify compliance with applicable safety and health requirements. The Site Health and Safety Supervisor is directly responsible for:

- Providing a copy of this HASP to each contractor and subcontractor
- Updating the Site Control Program as needed
- Notified if emergency assistance is needed
- Supervising PPE use on this Site
- Approving any changes in PPE used on this Site
- Notified when any hazardous-substance spill occurs
- Providing site workers with notifications and training on changes to the emergency response plan
- Performing initial monitoring to identify and evaluate any hazardous atmospheres during confined space operations
- Developing and implementing the HASP

- Monitoring site activities as they pertain to health and safety at this Site
- Stopping any unsafe acts that pose an immediate or imminent health and safety hazard to anyone at this Site
- Ensuring that all elements of this HASP are followed and correctly implemented
- Verifying compliance of subcontractors with respect to this HASP and reporting deviations to the Site Supervisor
- Evaluating site incidents including spills, releases of hazardous substances
- Determining the appropriate response including site evacuations
- Implementing the Emergency Response Plan
- Coordinating emergency response activities on this Site

2.3 Contractors and Subcontractors

Each contractor and subcontractor shall designate a Contractor Site Representative. The Contractor Site Representative will interface directly with the Site Supervisor, and Vektor Consultants, the Site Health and Safety Supervisor, with regards to all areas that relate to this HASP and safe and healthful performance of work conducted by the contractor and/or subcontractor workforce. Contractor/Subcontractor Site Representatives for this site are listed in the Contact Summary Table at the end of this section.

2.4 Local/State/Federal Agency Representative

Local, state, and/or federal agencies are responsible for ensuring the Site is in compliance with appropriate regulatory requirements, permits, and/or legal ruling(s). Local/State/Federal Agency Representatives for this Site are listed in the Contact Summary Table at the end of this section.

The organizational structure shall be reviewed and updated as necessary to reflect the current status of site operations.

Contact Summary Table

Position	Name	Organization	Phone
Remedial Engineer, P.E.	Hilmi U. Aydin	Vektor Consultants	(347) 871-0750
Project Director, QEP	Ezgi Karayel	Vektor Consultants	(347) 871-0750
Project Manager	Alex Keenan	Vektor Consultants	(347) 871-0750
Site Supervisor	TBD		
Site Health and Safety Supervisor	Alex Keenan	Vektor Consultants	(347) 871-0750
Client Contact	David Halberstam	60 North 1st LLC	(347) 678-5735
Emergency Response		FDNY	911
Spill Hotline		NYSDEC	(800) 457-7362

3.0 HAZARD ANALYSIS

This section describes the safety and health hazards associated with site work and the control measures selected to protect workers in compliance with *29 CFR 1910.120(b)(4)(ii)(A) and 29 CFR 1926.65(b)(4)(ii)(A)*. This is accomplished by creating a specific Job Hazard Analysis for each task and operation to be conducted at the Site.

The purpose of the Job Hazard Analysis is to identify and, to the extent practicable, quantify the health and safety hazards associated with each site task and operation, and to evaluate the risks of each hazard to workers. With this information, appropriate control methods are selected to eliminate the identified risks if possible, or to effectively control them. The control methods are documented in each task-specific Job Hazard Analysis.

Job Hazard Analyses contained in this HASP have been developed by Vektor Consultants, the Site Health and Safety Supervisor. The Site Supervisor is the individual responsible for reviewing and "verifying" that all Job Hazard Analyses are complete and to ensure that ongoing hazard analyses are conducted at this site.

3.1 Hazard Notification Process

The information in the Job Hazard Analysis Worksheets, Hazardous Substance Profiles, and Safety Data Sheets (SDS) is made available to all employees who could be affected in the scope of their work at the Site. This shall be done prior to beginning work activities.

New, or modifications to existing, Job Hazard Analysis Worksheets, Hazardous Substance Profiles, or SDS are communicated during routine briefings.

Consistent with *29 CFR 1910.120(i) and 29 CFR 1926.65(i)*, this information will also be made available to contractors and subcontractors.

The Site Supervisor is the person responsible for providing Site information, this HASP, and any modifications to this HASP to contractors and/or subcontractors working on this Site.

3.2 Phases, Site Tasks and Hazard Analysis

This HASP applies to the RIWP implementation phase at the Site. This HASP will apply to the following Tasks and/or Operations that will be accomplished during the remediation:

- Drilling (installation of soil borings for waste characterization)
- Test pits, if necessary
- Decontamination
- Inspection

3.3 Chemical Hazards

Exposure to chemical hazards should always be avoided. When working around chemical hazards it is important to be protected by administrative and/or engineered controls or, if administrative and/or engineered controls are not practicable or fully protective, by use of proper personal protective equipment (PPE). A direct reading instrument must be used, as necessary, to establish potential worker exposure.

OSHA PEL. OSHA sets permissible exposure limits (PELs) to protect workers against the health effects of exposure to hazardous substances. PELs are regulatory limits on the amount or concentration of a substance in the air. They may also contain a skin designation. PELs are enforceable. OSHA PELs are based on an 8-hour time weighted average (TWA) exposure.

IDLH. Immediately dangerous to life or health (IDLH) is a regulatory value defined as the maximum exposure concentration in the workplace from which one could escape within 30 minutes without any escape-impairing symptoms or any irreversible health effects. This value should be referred to in respirator selection.

More specific chemical information is available in the Hazardous Substance Profiles included in this HASP. The Hazardous Substance Profiles are designed to assist with "chemical guidelines" in which further information may be needed, including but not limited to an SDS. This information is not intended to replace an SDS, rather to augment one.

3.4 Physical Hazards

Below is a list of physical hazards that may be encountered during RI activities at this Site. Personal awareness, strict adherence to all safety requirements, and the use of proper PPE when applicable will help keep this work site safe.

- Hand Tool Use
- Heavy Manual Lifting/Moving
- Material Handling
- Noise (Sound Pressure Level), dBA
- Sharp Objects
- Slips/Trips/Falls
- Traffic - On or Near Site
- Utilities (electrical, gas, water, etc.) – Overhead
- Utilities (electrical, gas, water, etc.) – Underground

3.5 Biological Hazards

Below is a list of biological hazards that may be encountered during the remedial activities at this Site. Personal awareness, strict adherence to all safety requirements, and the use of proper PPE when applicable will help keep this work site safe.

- Heavy metals and PAH SVOCs in soil
- Chlorinated Volatile Organic Compounds in soil vapor

3.6 Radiological Hazards

Job hazard analysis indicates that workers are not expected to encounter radiological hazards at this Site for the phases, tasks and/or operations and work locations covered by this HASP.

3.7 Job Hazard Analysis Worksheets

The site-specific Job Hazard Analysis Worksheet is included in Attachment 1. A single Job Hazard Analysis Worksheet may be used for multiple locations provided that the task or operation, and hazards and control measures, are the same in each location.

The Job Hazard Analysis Worksheet lists the following information:

- Phase description
- Specific task or operation
- Specific location for task or operation
- Hazard analysis date(s) of task or operation
- Task or operation date(s)
- Person responsible for developing Job Hazard Analysis
- Person responsible for reviewing the Job Hazard Analysis
- Chemical, physical, biological, and radiological hazards for each task or operation
- Specific control measures for each task or operation
- Required permit(s), if any

The Job Hazard Analysis Worksheet should be kept updated as information changes and previous copies should be retained.

3.0 TRAINING PROGRAM

The Site Safety and Health Training Program is designed to provide workers with the training necessary to work safely on this Site in compliance with *29 CFR 1910.120(b)(4)(ii)(B) and 29 CFR 1926.65(b)(4)(ii)(B)*. Training requirements for this site are based on the Job Hazard Analysis, contained in Attachment 1 of this HASP, and relevant OSHA requirements. Employees who have not been trained to a level required by their job function and responsibility are not permitted to participate in or supervise field activities.

3.1 Initial HazWoper Training

Initial training requirements for field personnel are based on the personnel's potential for exposure and compliance with the requirements of *29 CFR 1910.120(e)(3) and 29 CFR 1926.65(e)(3)*.

General Site Workers (such as equipment operators, general laborers, and supervisory personnel) engaged in hazardous substance removal or other activities that expose, or potentially expose, them to hazardous substances and health hazards shall receive a minimum of 40 hours of instruction off site, and a minimum of three days of actual field experience under direct supervision of a trained, experienced supervisor as per *29 CFR 1910.120(e)(3)(i) and 29 CFR 1926.65(e)(3)(i)*.

Specific Limited Task Workers on site only occasionally for a specific limited task (such as, but not limited to, field sampling, land surveying, geophysical surveying, or drilling) and who are unlikely to be exposed over permissible exposure limits and published exposure limits shall receive a minimum of 24 hours of instruction off site, and a minimum of one day of actual field experience under direct supervision of a trained, experienced supervisor as per *29 CFR 1910.120(e)(3)(ii) and 29 CFR 1926.65(e)(3)(ii)*.

3.2 Site-Specific Training

In addition to the initial HAZWOPER training requirements outlined above, site personnel shall be trained on the following site-specific elements:

- Names of personnel and alternates responsible for site safety and health
- Health, safety, and other hazards present
- Use of specific personal protective equipment (PPE) detailed in this HASP
- Standard work practices by which the personnel can minimize risks from the hazards detailed in this HASP
- Safe use of administrative and/or engineering controls and equipment detailed in this HASP
- Medical surveillance requirements detailed in this HASP
- Decontamination procedures detailed in this HASP
- The emergency response plan detailed in this HASP
- Heat and cold stress prevention
- Working safely around heavy equipment

3.3 Site Briefings

A site-specific briefing shall be provided to visitors who enter this Site beyond the designated entry point. For visitors, the site-specific briefing shall include information about site hazards, the site layout including work zones and places of refuge, the emergency alarm system and emergency evacuation procedures, and other pertinent safety and health requirements, as appropriate.

4.0 MEDICAL SURVEILLANCE PROGRAM

The Medical Surveillance Program is designed to medically monitor worker health to ensure that personnel are not adversely affected by site hazards in compliance with *29 CFR 1910.120(b)(4)(ii)(D) and 29 CFR 1926.65(b)(4)(ii)(D)*.

Medical surveillance is not required at this site due to:

- There is NO potential for worker exposure to hazardous substances at levels above OSHA permissible exposure limits or other published limits for 30 days or more per year, without regard to use of respiratory protection.
- Personnel DO NOT wear a respirator for 30 days or more a year or as required by *29 CFR 1910.134 and 29 CFR 1926.103*.

Any worker who is injured, becomes ill, or develops signs or symptoms of possible over-exposure to hazardous substances or health hazards on this Site shall receive a medical examination as soon as possible after the occurrence, with follow-up examinations provided as required by the attending physician. Physical Exams shall be consistent with *29 CFR 1910.120(f) and 29 CFR 1926.65(f)*.

5.0 PERSONAL PROTECTIVE EQUIPMENT

Personal protective equipment (PPE) will be used at this Site to protect employees from biological, chemical, and physical hazards in compliance with *29 CFR 1910.120(b)(4)(ii)(C) and 29 CFR 1926.65(b)(4)(ii)(C)*. This includes hazards associated with, but not limited to, remedial activities.

With employee safety being the number one priority, site health hazards will be eliminated or reduced to the greatest extent possible through administrative and/or engineering controls and safe work practices. Where hazards are still present, a combination of administrative and/or engineering controls, work practices, and PPE will be used to protect employees.

The Site Supervisor and/or Health and Safety Supervisor are responsible for PPE use on this Site.

5.1 PPE Selection Criteria

PPE shall be selected and used to protect site workers from the hazards and potential hazards they are likely to encounter, as identified during the site characterization and Job Hazard Analysis (see Attachment 1). A PPE ensemble shall be assigned to each work task or operation.

PPE selection shall be based upon many factors. Materials providing the greatest duration of protection shall be used. Tear and seam strength of the PPE shall also be considered to ensure ensemble durability while work is performed.

When necessary, multiple layers of protection shall be used to accommodate the range of hazards that may be encountered. All PPE shall be properly fitted.

PPE selection criteria shall also include:

- Level of PPE required (Level A, B, C, or D)
- PPE components
- Chemical suit and glove compatibility

All PPE ensembles shall be consistent with Appendix B of *29 CFR 1910.120 and 29 CFR 1926.65* and used in accordance with manufacturers' recommendations.

The following criteria were used to select PPE levels at this Site:

<u>Level D Protection was selected due to the following:</u>

- The atmosphere contains no known or suspected hazardous substances at concentrations that meet or exceed the published exposure limits

- Contact with hazardous levels of any chemicals through splashes, immersion, or by other means will not occur
- There is no potential for unexpected inhalation or contact with hazardous levels of any chemical

Training In Use of PPE

Employees receive general training regarding proper selection, use and inspection of PPE during initial HAZWOPER training and subsequent refresher training. Site-specific PPE requirements, including task-specific PPE, ensemble components, cartridge and canister service times, and inspection and maintenance procedures, as applicable, shall be communicated as identified in the Training Program.

Because chemical exposure levels present do not create a substantial possibility of immediate death, immediate serious illness, or injury, or impair the ability to escape, positive pressure self-contained breathing apparatus or positive-pressure air-line respirators equipped with an escape air supply are not required.

6.0 ENVIRONMENTAL MONITORING

This section of the HASP describes how site worker exposures to hazardous substances will be monitored in compliance with *29 CFR 1910.120(b)(4)(ii)(E) and 29 CFR 1926.65(b)(4)(ii)(E)*.

6.1 Air Monitoring Procedures

Exposures to airborne hazardous substances shall be fully characterized throughout site operations to ensure that exposure controls are effectively selected and modified as needed. Air monitoring shall be used to identify and quantify airborne levels of hazardous substances and safety and health hazards to determine the appropriate level of site worker protection needed on site. Air monitoring procedures shall be consistent with OSHA requirements in *29 CFR 1910.120(c)(6) and 29 CFR 1926.65(c)(6)*.

Air monitoring shall be conducted using direct-reading instruments. Air monitoring includes:

- Initial monitoring prior to the beginning of remedial activities to identify conditions that may cause serious harm and to permit preliminary selection of site controls
- Periodic monitoring throughout remediation (i.e., excavation)

6.2 Initial Monitoring Procedures

Upon initial entry, representative air monitoring shall be conducted to identify any IDLH condition, exposure over permissible exposure limits or published exposure levels, exposure over a radioactive material's dose limits, or other dangerous condition such as the presence of flammable atmospheres or oxygen-deficient environments.

6.3 Periodic Monitoring

Periodic monitoring shall be conducted when the possibility of an IDLH condition or flammable atmosphere has developed, or when there is indication that exposure may have risen over permissible exposure limits or published exposure levels since previous monitoring was conducted. Situations where it shall be considered that the possibility exposures have risen are as follows:

- When work begins on a portion of the Site that has not been previously monitored
- When contaminants other than those previously identified are being handled
- When a change in environmental conditions exist
- When site workers handle leaking drums or containers, or work in areas with obvious liquid contamination
- When site workers report or exhibit signs of exposure

6.4 Direct-Reading Instrument Monitoring Procedures

Direct-reading instrument monitoring will be used on this site as follows:

- VOCs by photoionization detector (PID)

Monitoring equipment calibration and maintenance procedures on this site are:

- Every morning

7.0 DECONTAMINATION

This HASP element describes procedures for decontaminating site workers and equipment when exiting the Exclusion Zone in compliance with *29 CFR 1910.120(b)(4)(ii)(G) and 29 CFR 1926.65(b)(4)(ii)(G)*. This section also describes disposal of waste from decontamination processes. Site decontamination procedures are designed to achieve a safe, logical removal or neutralization of contaminants that may accumulate on site workers and/or equipment. The Site Supervisor is responsible for decontamination procedures at this site.

These procedures are intended to minimize site worker contact with contaminants and protect against the transfer of contamination to clean areas of the site and away from the site. They may also extend the useful life of personal protective equipment (PPE) by reducing the amount of time that contaminants contact and permeate or otherwise affect the surfaces of PPE.

Decontamination procedures shall be communicated to site workers and implemented before any site workers or equipment are permitted to enter areas on site where potential for exposure to hazardous substances exists.

Emergency decontamination procedures are detailed in Section 8, the Emergency Response Plan of this HASP.

The decontamination procedures described below are designed to meet the requirements of *29 CFR 1910.120(k) and 29 CFR 1926.65(k)* and include site-specific information about:

- General and Specific Decontamination Procedures for Personnel and PPE
- General and Specific Decontamination Procedures for Equipment
- Location and Type of Site Decontamination Procedures
- Disposal of Residual Waste from Decontamination
- Monitoring the Effectiveness of Decontamination Procedures

7.1 General and Specific Decontamination Procedures for Site Workers and PPE

All site workers and PPE leaving a contaminated area shall be appropriately decontaminated. General decontamination guidelines for site workers and PPE include:

- Decontamination is required for all site workers exiting a contaminated area. Site workers may only re-enter uncontaminated areas after undergoing the decontamination procedures described in the next section.
- Protective clothing is decontaminated, cleaned, laundered, maintained and/or replaced as needed to ensure its effectiveness.
- PPE used at this site is decontaminated or prepared for proper disposal.

- The site requires and trains site workers that if their permeable clothing is splashed or becomes wetted with a hazardous substance, they will immediately exit the work zone, perform applicable decontamination procedures, shower, and change into uncontaminated clothing.

7.2 General and Specific Decontamination Procedures for Equipment

All contaminated clothing and equipment leaving a contaminated area shall be appropriately disposed of or decontaminated. General decontamination guidelines for equipment include:

- Decontamination is required for all equipment exiting a contaminated area. Equipment may only re-enter uncontaminated areas after undergoing specific decontamination as described in the Job Hazard Analysis Worksheets.
- Particular attention is given to decontaminating tires, scoops, and other parts of heavy equipment that are directly exposed to contaminants and contaminated soil.

7.3 Location and Type of Site Decontamination Procedures

Decontamination shall be performed in areas that will minimize the exposure of uncontaminated site workers or equipment to contaminated site workers or equipment. Decontamination on this site shall be conducted in the Contamination Reduction Zone. The Contamination Reduction Zone acts as a buffer between the Exclusion Zone and Support Zone. The location and design of decontamination stations minimize the spread of contamination beyond these stations.

7.4 Disposal of Waste from Decontamination

Procedures for disposal of decontamination waste shall meet applicable local, State, and Federal regulations.

7.5 Monitoring the Effectiveness of Decontamination Procedures

Decontamination procedures shall be monitored by a representative of Vektor Consultants, the Site Health and Safety Supervisor, to determine effectiveness. If procedures are found to be deficient, appropriate steps shall be taken to correct any deficiencies.

8.0 EMERGENCY RESPONSE PLAN

This section describes the site-specific Emergency Response Plan in compliance with *29 CFR 1910.120(b)(4)(ii)(H) and 29 CFR 1926.65(b)(4)(ii)(H)*. Specifically, the Emergency Response Plan addresses potential emergencies at this site, procedures for responding to these emergencies, roles and responsibilities during emergency response, and training. This element also describes the provisions this site has made to coordinate its emergency response planning with other contractors on site and with off-site emergency response organizations.

This Emergency Response Plan shall be available for inspection and copying by site workers, their representatives, OSHA personnel, and other governmental agencies with relevant responsibilities as required by *29 CFR 1910.120(l)(1)(i) and 29 CFR 1926.65(l)(1)(i)*.

In accordance with *29 CFR 1910.120(l)(3)(ii) and 29 CFR 1926.65(l)(3)(ii)*, this Emergency Response Plan is a separate section of the HASP.

8.1 Pre-Emergency Planning

This Emergency Response Plan is compatible and integrated with the disaster, fire and/or emergency response plans of local, state, and federal agencies.

This Site has been evaluated for potential emergency occurrences based on site hazards, the tasks within the work plan, the site topography, and prevailing weather conditions.

8.2 Personnel Roles, Lines of Authority, and Communication

Anyone may activate the Emergency Response Plan; however, David Klein (or designated alternate), Site Health and Safety Supervisor, is responsible for implementing the Emergency Response Plan and coordinating emergency response activities on this Site. David Klein (or designated alternate) also provides specific direction for emergency action based upon information available regarding the incident and response capabilities, initiates emergency procedures including protection of the public, and ensures appropriate authorities are notified.

In accordance with *29 CFR 1910.38(a) and 29 CFR 1926.35*, in the event of an emergency, site workers are evacuated and do not participate in emergency response activities.

This Site relies upon the off-site emergency response organizations listed in the Emergency Response Contact Information list to respond to site emergencies. These organizations are appropriately trained, staffed, and equipped to provide emergency response to this site.

These organizations are contacted at least annually to verify the accuracy of phone numbers and contact names.

Communication on this site will be conducted by the following methods:

- Face to face
- Cell phone
- Hand signals

8.3 Site Security and Control

In case of an on-site emergency, site security and control for this site shall be provided by:

- Warning Signs
- Barrier Tape
- Locked Doors and Gates

8.4 Emergency Medical Treatment and First Aid

Any site worker who requires medical care and/or is transferred to a medical facility shall be accompanied by Hazardous Substance Profiles included in this HASP and other applicable information to apprise caregivers of the chemicals and hazards to which the victim has potentially been exposed. The emergency medical care facility for this site is:

NYC Health +Hospitals/Woodhull
760 Broadway, Brooklyn, NY 11206
Tel: (844) 692-4692
Open 24 Hrs

The route to the facility is shown in on the map included in Attachment 2 of this HASP.

3.0 VOC Monitoring, Response Levels, and Actions 5

4.0 Particulate Monitoring, Response Levels, and Actions 7

5.0 Mercury Monitoring Plan 8

Appendix A: Action Limit Report

1.0 INTRODUCTION

This site-specific Community Air Monitoring Plan (CAMP) has been prepared on behalf of 60 North 1st LLC for the implementation of a Remedial Investigation Work Plan (RIWP) by Vektor Consultants, LLC (Vektor), and their subcontractors at the property located at 60 North 1st Street, Brooklyn, New York (the Site). The Site is identified by the City of New York as Borough of Brooklyn, Block 2378, Lot 14.

This CAMP was developed in accordance with the New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan included within DER-10 Technical Guidance for Site Investigation and Remediation (May 2010). All instruments will be operated and calibrated as per the manufacturer's specifications.

A CAMP requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind and upwind perimeters of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of investigative and remedial work activities. The action levels specified herein require increased monitoring, corrective actions to abate emissions, and/or work shutdown. Additionally, the CAMP helps to confirm that work activities did not spread contamination off-site through the air.

Reliance on the CAMP should not preclude simple, common-sense measures to keep VOCs, dust, and odors at a minimum around the work areas.

Based on the information that a public school is located southeast of the Site, beyond Wythe Avenue, a robust CAMP will be implemented when intrusive remedial activities are conducted along the eastern boundary area of the site.

A Special Requirements CAMP (SR-CAMP) will need to be implemented when remedial investigation activities are occurring within 20 feet of exposed populations or occupied eastern adjacent buildings.

1.1 Mercury Air Monitoring Plan

Two (2) Jerome 405 Mercury Vapor Analyzers (Jerome 405) will be utilized during invasive work at the site. Work zone monitoring will be performed with an upwind unit and a downwind unit (downwind of the mercury hotspot excavation area), and on a worker within

the work zone. A third, spare unit, will be on standby in the event that one of the two units in service encounters a malfunction.

COMMUNITY AIR MONITORING PLAN

A previous remedial investigation was performed by Brussee Environmental Corp. (BEC) in December and January 2025 and a supplemental investigation was performed by Vektor Consultants, Inc. (Vektor) in June 2025.

Based on the results of the previous assessments the primary contaminant of concern at the Site is PAH SVOCs and heavy metals in soil and low to moderate chlorinated VOCs in soil vapor. Metals, including arsenic, lead, and mercury, were detected above UUSCOs, with mercury impacts extending into deeper soils. TCLP analysis of soils with elevated lead and mercury confirmed that the material is not hazardous.

Therefore, real-time air monitoring for VOCs and/or particulate levels at the perimeter of the exclusion zone or work area will be necessary.

Continuous monitoring will be required for all ground-intrusive activities. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings, soil vapor points, or monitoring wells.

Periodic monitoring for VOCs will be required during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. Periodic monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

Meteorological monitoring including temperature, wind direction and speed will be conducted by the field personnel and the data will be logged in the field book on a daily basis. CAMP station(s) will be relocated based on the direction of the wind.

2.0 COMMUNITY AIR MONITORING PLAN

Previous subsurface investigations were conducted by Brussee Environmental Corp in 2025, with their findings provided in a Remedial Investigation Report in February 2025, and Vektor Consultants Inc., with their findings provided in a Supplemental Remedial Investigation report dated August 2025. Based on the results of the previous assessments and the recent investigation, semi-volatile organic compounds (SVOCs), and metals in soils are the constituents of concern at the Site. Additionally, elevated concentrations of mercury were detected in soil samples. Therefore, real-time air monitoring for VOCs, particulate levels and mercury, at the perimeter of the exclusion zone or work area will be necessary.

Continuous monitoring will be required for all ground-intrusive activities. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pitting or trenching, and the installation of soil borings, soil vapor points, or monitoring wells.

Periodic monitoring for VOCs will be required during non-intrusive activities such as the collection of soil and sediment samples or the collection of groundwater samples from existing monitoring wells. Periodic monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. In some instances, depending upon the proximity of potentially exposed individuals, continuous monitoring may be required during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence.

Meteorological monitoring including temperature, wind direction and speed will be conducted by the field personnel and the data will be logged in the field book on a daily basis. CAMP station(s) will be relocated based on the direction of the wind.

Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures

When work areas are within 20 feet of potentially exposed populations or occupied structures, the continuous monitoring locations for VOCs and particulates will reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. The use of engineering controls such as vapor/dust barriers, temporary negative-pressure enclosures, or special ventilation devices will be considered to prevent exposures related to the work activities and to control dust and odors. Consideration will also be given to implementing the planned activities when potentially exposed populations are at a minimum, such as during weekends or evening hours in non-residential settings.

Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions will be pre-determined, as necessary.

Mercury Monitoring Plan

When working at the Site, work zone monitoring will be performed with two Jerome 405 Mercury Vapor Analyzers (Jerome 405). Work zone monitoring will be performed with an upwind unit and a downwind unit. A third, spare unit, will be on standby in the event that one of the two units in service encounters a malfunction. In addition, MERCON, a mercury vapor suppressant, will be readily available for use should any of the Jerome 405 units indicate elevated levels of mercury vapor in the work zone. Consideration will also be given to plan out the work, properly suppress any vapors and minimize dust generated by soil disturbance work within the hotspot.

3.0 VOC MONITORING, RESPONSE LEVELS, AND ACTIONS

Volatile organic compounds (VOCs) must be monitored at the downwind and upwind perimeters of the immediate work area (i.e., the exclusion zone) on a continuous basis or as otherwise specified. Concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The monitoring work should be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment should be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment should be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.
- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15-minute average.
- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.
- All 15-minute readings must be recorded and be available for the NYSDEC and NYSDOH personnel to review. Instantaneous readings, if any, used for decision purposes should also be recorded.

SR-CAMP

- If total VOC concentrations opposite the walls of occupied structures or next to intake vents exceed 1 ppm, monitoring will occur within the occupied structure(s). Depending upon the nature of contamination, chemical-specific colorimetric tubes of sufficient sensitivity may be necessary for comparing the exposure point concentrations with appropriate pre-determined response levels (response actions will be pre-determined). Background readings in the occupied spaces will be taken

prior to commencement of the planned work. Any unusual background readings will be discussed with NYSDOH prior to commencement of the work.

- If total particulate concentrations opposite the walls of occupied structures or next to intake vents exceed 150 mcg/m^3, work activities will be suspended until controls are implemented and are successful in reducing the total particulate concentration to150 mcg/m^3 or less at the monitoring point.
- Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions will be pre-determined, as necessary.

4.0 PARTICULATE MONITORING, RESPONSE LEVELS, AND ACTIONS

Particulate concentrations should be monitored continuously at the upwind and downwind perimeters of the exclusion zone at temporary particulate monitoring stations (i.e.: DustTrak). The particulate monitoring should be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment must be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

- If the downwind PM-10 particulate level is 100 micrograms per cubic meter (mcg/m^3) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed 150 mcg/m^3 above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than 150 mcg/m^3 above the upwind level, work must be stopped, and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within 150 mcg/m^3 of the upwind level and in preventing visible dust migration.
- All readings must be recorded and be available for the NYSDEC and NYSDOH personnel to review.

Dust suppression will be achieved by applying water as needed.

5.0 MERCURY MONITORING PLAN

Mercury vapor concentrations should be monitored continuously at the upwind and downwind perimeters of the exclusion zone and on a worker within the work area during any invasive work within the hotspot with the Jerome 405 air monitoring units. The mercury vapor monitoring should be performed using real-time monitoring equipment capable of measuring vapor in micrograms per cubic meter (ug/m^3). The equipment must be equipped with an audible and visual alarm to indicate elevated readings.

- If all air monitoring units indicate that mercury vapors are recorded at less than 100 ug/m^3 (per OSHA guidance) within the work zone/breathing areas, the work area is safe to enter, and work can continue.
- If any of the air monitoring units indicate that mercury vapors are recorded at above 100 ug/m^3, work must stop, and the source must be assessed. In the event that mercury vapors are recorded above 100 ug/m^3 (per OSHA guidance), MERCON, a mercury vapor suppressant, must be applied to the work area until the work area breathing conditions are reassessed. Work may continue once all three units confirm that mercury vapor readings are less than 100 ug/m^3. MERCON will be ready and available at the Site during all intrusive work. A product specification sheet can be found in Appendix C.
- Work can resume provided that dust suppression measures, including spraying down the work area with water and other controls (i.e. MERCON) are successful in reducing the mercury vapor concentrations to an acceptable level. Any elevated readings and work stoppage must be reported to NYSDEC and NYSDOH immediately.
- MERCON should be applied to the work area if background readings prior to the start of work for the day are elevated or found to be near the OSHA threshold.
- Dust suppression should be applied to the mercury hotspot work area prior to the start of work to limit the suspension of dust.
- All readings must be recorded and be available for the NYSDEC and NYSDOH personnel to review.

CAMP exceedances will immediately be reported to the NYSDEC and NYSDOH Project Managers at the time of exceedance via email, in addition to inclusion in the daily status reports. The NYSDEC Project Manager and NYSDOH Project Manager for the Site is:

Robert Strang, E.I.T.
Assistant Engineer/Project Manager
NYSDEC Division of Remediation
robert.strang@dec.ny.gov
(518) 402-8642

Megan Rivera
Project Manager
NYSDOH
Megan.Rivera@health.ny.gov
